Winston Churchill's well-known description of Russia as a "riddle wrapped in a mystery inside an enigma" has been widely quoted because it has seemed so apt to Western observers. The Cyrillic alphabet appears mysterious to the uninitiated, as does the odd system of dual dates for key historical events. Russia is huge and geographically remote, with over one hundred ethnic groups and as many languages. Historically, Russia stood on the margin of Europe proper, and Russian society experienced the Renaissance and the Reformation, which shaped modern Europe, only partially and belatedly.

Physical distance and prolonged isolation from Europe would be sufficient to enhance and promote a distinctive Russian culture. Russians have themselves debated whether they are more European, or more Asian, or instead a unique Slavic civilization destined to provide the world with a "third" way. Nikolai Gogol, one of Russia's earliest and most original writers, expressed this messianic view in his novel *Dead Souls*, where he offered a speeding troika, a carriage drawn by three horses, as a metaphor for Russia:

Russia, are you not speeding along like a fiery matchless troika? Beneath you the road is smoke, the bridges thunder, and everything is left far behind. At your passage the onlooker stops amazed as by a divine miracle. . . . Russia, where are you flying? Answer me! There is no answer. The bells are tinkling and filling the air with their wonderful pealing; the air is torn and thundering as it turns to wind; everything on earth comes flying past and, looking askance at her, other peoples and states move aside and make way.

The *Encyclopedia of Russian History* is designed to help dispel the mystery of Russia. It is the first encyclopedia in the English language to comprehend the entirety of Russian history, from ancient Rus to the most recent events in post-Soviet Russia. It is not aimed primarily at specialists in the area but at general readers, students, and scholars who are curious about Russia, have historical events, dates, and persons they wish to explore or papers to write on the widely varying topics and individuals contained herein. Contributors include top scholars in history, Russian studies, military history, economics, social science, literature, philosophy, music, and art history. The 1,500 entries have been composed by over 500 scholars from 16 countries. All were instructed to "historize" their entries, thereby placing them in the larger context of Russian history. Each entry is signed and fea-

A decorative horizontal flourish with intricate, repeating geometric and floral patterns in a light gray color, spanning the width of the page.

PREFACE

tures carefully chosen cross references to related entries as well as a bibliography of print and Internet sources as suggested additional readings. The four volumes contain over 300 black and white maps and photographs illustrating the text, and each volume contains color inserts portraying the beauty and scope of Russian peoples, art, and architecture, as well as important military and political pictorials. Entries are arranged alphabetically, and the first volume includes a topical outline that organizes articles by broad categories, thereby offering teachers and students alike an informed map of Russian history. A comprehensive subject index offers yet another entry point for the set, encouraging readers to explore the four volumes in greater depth.

The encyclopedia is the product of recent scholarship. Russian studies began as a significant field of study in the United States and Europe only during the Soviet era. Although a small number of scholars were active before World War II, particularly in England, the field began to grow in the United States with the onset of the Cold War in the late 1940s. When the Soviet Union launched the first earth satellite, Sputnik, in 1957, a concern for national security became a driving force for development of Russian area studies. All fields grew especially rapidly in the 1960s and 1970s, for it was recognized that study of the contemporary Soviet social system would require in-depth knowledge of the language, history, and culture of Russia. In the United States, for example, both the federal government and private foundations such as the Ford Foundation and the Carnegie Endowment funded graduate Russian studies on an almost “crash” basis. Whereas the Russian Institute of Columbia University and the Russian Research Center at Harvard dominated the field initially, by the end of the 1960s all major research institutions had Russian studies programs and were producing new Ph.D.s in the field. In fact, most of the scholars who have ever received Ph.D.s in the various fields of Russian history, social science, arts, and so forth, are still active scholars. The field of Russian-Soviet studies now has better coverage and higher quality than ever. The 1991 collapse of the Soviet Union ended the ideological constraints that communism had placed on scholarly publication, allowing scholarship to blossom in post-Soviet Russia as well. Researchers now have unprecedented access to archival and other historical materials—and to the Russian people as well. The editors and I have been fortunate, therefore, to be able to select as our contributors—the most outstanding scholars not

only in the United States, but also in Britain, Europe, and Russia. Twenty years ago it would not have been possible to produce such a balanced, high quality, and comprehensive encyclopedia. The last five decades or so of intensive scholarship have greatly increased our knowledge and understanding of Russian history.

RUSSIAN HISTORY

As one views the length and breadth of the Russian historical experience certain continuities and recurring patterns stand out. Autocracy, for example, has ancient and strong roots in Russian history. For most of its history, Russia was led by all-powerful tsars, such as Peter the Great or Nicholas I, who served willingly as autocrats, seemingly conscious of the difficulties inherent in ruling so large and diverse a country. Even those tsars who sought to modify the autocracy, such as Alexander II, who emancipated the serfs, reversed course when confronted with revolutionary or nihilist opponents. Soviet communism lapsed into autocracy under Josef Stalin, who was perhaps the most complete autocrat since Peter the Great. More recently, Russian President, Vladimir Putin, appears to be tolerating a drift back toward autocracy in reaction to the democratic impulses of Mikhail Gorbachev and Boris Yeltsin. He seems to relish comparison of his rule to that of Peter the Great.

With the exception of the years under Soviet communism, Orthodoxy has been autocracy’s twin. Historically, the Russian Orthodox Church has successfully resisted attempts to separate church and state and has offered support and justification for autocracy in return. Consequently, the church and state have not welcomed religious diversity or promoted tolerance. Judaism, Catholicism, and other Christian denominations, Islam, and other religious faiths have suffered persecution and restrictions over the years. The Soviet era differed only in that all religions were persecuted in the name of official atheism. The long-term trend has apparently reasserted itself as the growing strength of the Russian Orthodox Church in the post-Soviet years has featured renewed attempts to exclude religious competition.

Territorial expansion has characterized the development of Russia from the earliest days, usually through warfare and hostile partitions. The Great Northern War brought Russia to the Baltic coast, while the wars of the nineteenth century expanded Russia’s power into Central Asia. Expan-

sion under the tsars included annexing territories occupied by settled peoples, as in Ukraine, Poland, and Finland, and also by nomadic tribes, as in Central Asia, and the Caucasus. The outcome of World War II extended Moscow's reach into Eastern Europe, and during the Cold War Russia supported regimes in Afghanistan, Cuba, and insurgent movements in Central America and Africa.

The process of empire-building brought more than 120 ethnic and national groups under Russian rule. It was a costly exercise requiring a large standing army. Russification versus promoting local languages and cultures in these territories was a recurring issue under tsars and commissars alike, and it remains an issue today in the Russian Federation. The collapse first of the Soviet empire in East-Central Europe in 1988–1989 and then of the USSR itself in 1991 caused an equivalent contraction in Moscow's power and undermined the economy as well. Consequently, although Russia's leaders have sought to maintain and even increase influence in what only Russians call the "near abroad," that is the former republics of the USSR, the empire has shrunk to its smallest extent since the eighteenth century, and the Russia Federation's influence in its former republics, not to mention Eastern and Central Europe, has been severely constrained by a lack of funds as well as by local nationalist feelings.

Successful modernization of Europe has been viewed by Russians as either a possible model for Russia's development or as a threat to her distinctive, peculiar social, political and economic institutions. From Russia's vantagepoint on the periphery of Europe, to modernize has meant to Westernize, with all the political and economic baggage that that implies. Periodically, Russia's leaders have opened the "door" to Europe, as Peter the Great put it, only to have it closed or restricted by those who have sought to maintain and foster Russia's unique civilization and its messianic mission in world history. In one form or another there has been a recurring struggle since the time of Peter the Great between the Slavophiles and the Westernizers, and this was even true during the Soviet era. Lenin and Trotsky and the Old Bolsheviks thought they were opening Russia to a global communist system. Stalin closed it tightly and created an autarkic economy. Nikita Khrushchev, Gorbachev, and Yeltsin opened Russia once again to the West, ultimately with catastrophic consequences for the empire. It has been difficult, however, to overcome the pull of the "Russian idea," and post-Soviet development

policies have been undercut by an ambiguous commitment to democratization and marketization.

These issues, autocracy, Orthodoxy, territorial expansionism, modernization, and cultural uniqueness, have appeared, disappeared, and reappeared throughout Russian history. Western and Russian historians have argued at length about the strength, significance, and permanence of these themes, and the articles contained in this encyclopedia explore these issues as impartially and objectively as possible.

There is no question, however, about the unique, unparalleled contributions of Russian culture to art, music, literature, philosophy, and science. Where would we be without Glinka, Mussorgsky, Tchaikovsky, Pushkin, Gogol, Dostoyevsky, Tolstoy, Chekhov, Rublev, Mendeleev, Sakharov and the many, many other artists, thinkers, and scientists that Russia's citizens of all nationalities have produced? The editors and I hope that the reader will use this encyclopedia to sample the richness of Russian history and be induced to explore Russian culture in depth.

STRUCTURE AND ORGANIZATION OF THE ENCYCLOPEDIA PROJECT

When Macmillan Reference USA approached me seeking an editor in chief for a projected *Encyclopedia of Russian History*, I realized that if I could persuade the best scholars in the field to serve as Associate Editors and on an Editorial Board, and if we could persuade other top scholars to write entries, the experience would be educational and highly worthwhile. I also realized that it would necessarily be a "labor of love" for all involved. Participating scholars would have to believe in the intrinsic value of the project. I first approached Dr. Ann Robertson, who was serving as Managing Editor of my journal, *Problems of Post-Communism*, to see whether she would be willing to contribute her outstanding editorial skills as well as her expertise in political science to work closely with me as Senior Associate Editor on the encyclopedia. Next I approached Professor Nicholas Riasanovsky of University of California at Berkeley. As the leading historian of Russia and director of innumerable Ph.D. dissertations in the field, Professor Riasanovsky represented the keystone in the construction of the editorial committee. I knew that his name would assure other scholars of the serious academic nature of the project. I was soon able to recruit an

awesome set of associate editors: Daniel Kaiser of Grinnell College, Louise McReynolds of the University of Hawaii at Manoa, Donald Raleigh of the University of North Carolina, and Ronald Suny of the University of Chicago. With their assistance we recruited an equally outstanding Advisory Board.

Below are very brief biographies of the distinguished members on the Editorial Board:

Editor in Chief James R. Millar (Ph.D. Cornell University) is professor of economics and international affairs at the Institute for European, Russian and Eurasian Studies at the George Washington University. His primary areas of research are Soviet/Russian economic history and economics of the transition.

Daniel H. Kaiser (Ph.D. University of Chicago) is professor of history at Grinnell College in Iowa. His academic specialty is history and family life in early modern Russia.

Louise McReynolds (Ph.D. University of Chicago) is professor of history at the University of Hawaii. She specializes in Russian intellectual history and cultural studies.

Donald J. Raleigh (Ph.D. Indiana University) is professor of history at the University of North Carolina, Chapel Hill. His research specialization is twentieth-century Russian and Soviet history and the Russian civil war.

Nicholas V. Riasanovsky (D.Phil. Oxford University) is professor emeritus of history at the University of California at Berkeley. He is the author of *A History of Russia* (New York: Oxford University Press, 1963, sixth edition, 1999).

Ann E. Robertson (Ph.D. George Washington University) is managing editor of the journal *Problems of Post-Communism*, National Council for Eurasian and East European Research. She specializes in post-Soviet political science.

Ronald Grigor Suny (Ph.D. Columbia University, 1968) is professor of political science at the University of Chicago. His research specialty is comparative politics and Russian history with special attention to non-Russian peoples.

The editorial board assembled at George Washington University in January 2001 to plan the encyclopedia. The topics we identified eventually totaled 1,500 entries. We decided to create basic article categories in an attempt to capture the range and scope of over 1,000 years of Russian history

and culture. As a result, articles in the Encyclopedia describe:

- Historical Events
- Documents, Declarations, or Treaties
- Military Campaigns or Battles
- The Arts, Literature, Philosophy, or Science
- Economic Developments or Strategies
- Ethnic Groups
- Geographical Regions
- Political or Territorial Units (Cities, Regions, Government Ministries)
- Countries Prominent in Russian History
- Government Policies or Programs
- Organizations, Movements, or Political Parties
- Influential Individuals
- Basic Terms or Phrases

Over the next few months members of the editorial board wrote scope statements and identified word lengths (ranging from 250 to 5,000 words) for the articles in their segment of the table of contents. Our goal was to produce four volumes and one million words, a quota we easily could have exceeded. After authors were commissioned and assignments completed, each article was read by the appropriate member of the Editorial Board and by the Editor in Chief for final approval. Macmillan Reference staff has edited the entries for clarity, consistency, and style.

A number of transliteration systems exist for presenting Russian proper names and terms in the English language. As the main audience for the encyclopedia is not expected to be familiar with the Russian language, strict adherence to any one system could appear artificial and intimidating. The editors decided to use standard American spelling of well-known proper names as they would appear in the *New York Times* (e.g., Boris Yeltsin, not Boris El'tsin). In all other cases transliterations conform to the conventions established by the U.S. Board on Geographic Names. Within this system we made a few exceptions: ligatures, soft signs, and hard signs are omitted; names ending in "-ii," "-yi," or "-yy" are shortened to "-y"; and names of tsars and saints have been Anglicized, as Peter the Great and Saint Basil, not Petr and Vasily. The editors believe that this modified system for transliteration will be more readable and understandable than the alternatives.

Dates in Russian history can be somewhat confusing because tsarist Russia continued to use "Old Style" (O.S.) dates, based on the Julian calendar, up to the 1917 Revolution. In 1917 the Julian calen-

dar was 13 days behind the Gregorian, which had been used in Europe since 1582. The Bolsheviks adopted New Style (N.S.) dates. Thus, the October 25th Revolution was celebrated on November 7th.

ACKNOWLEDGMENTS

I want to thank James Goldgeier, director of the Institute for European, Russian and Eurasian Studies of The George Washington University for institutional support and personal encouragement. The staff of the Institute, especially Vedrana Hadzialic and Jennifer Sieck, have efficiently and cheerfully helped advance this project in many ways.

Leah Markowitz ably served as research assistant in the early phases of the project.

Jill Lectka, Director of Publishing Operations and Joe Clements, Senior Editor for Macmillan Reference USA, and their staff, have simply been superb in providing the managerial, editorial, and promotional support for the creation of the *Encyclopedia of Russian History*. They have been tactful but persistent in encouraging the editors and contributors to meet deadlines and make any necessary editorial changes. Brian Kinsey initiated the project in 2001 and Shawn Corridor joined the editorial team in the spring of 2003 to supervise final author corrections and entry preparation. We have been fortunate to have such outstanding professionals working with us.

This page intentionally left blank

Individual entries are organized by broad category, thereby offering teachers and readers an informed map of the field and an alternate entry point into the content of the encyclopedia. Many subjects studied in Russian history cross thematic and disciplinary lines and articles on this list often appear in more than one category. The outline is divided into twenty-one main parts, some of which are further divided into several sections.

Agriculture
Architecture
Economics
Education
Foreign Relations
Government
Historical Events and People
Journalism
Law and Judiciary
Literature
Military
Music
Political Organizations
Political Policy
Regions, Nations, and Nationalities
Religion
Rulers 1362–1917
Science and Technology
Soviet General Secretaries and Russian Presidents
Tsars, Grand Princes, and Political Leaders
Visual Arts, Drama, and Dance

OUTLINE OF CONTENTS

*This topical outline was compiled by the editors
to provide a general overview of the conceptual
scheme of the Encyclopedia of Russian History.*

AGRICULTURE

ABKHAZIANS

Abkhazians call themselves Apswa (plural Ap-swaa). Abkhazia (capital: Sukhum/Aqw'a) comprises 8,700 square kilometers (between lat. 43°35'–42°27' N and long. 40°–42°08' E) bordering the Black Sea, the Caucasus, Mingrelia, and Svanetia. The early Soviets' drive to eradicate illiteracy saw Abkhaz attain literary status; like Circassian and Ubykh (extinct since 1992), Abkhaz is a northwest Caucasian language. Christianity arrived two centuries before its official introduction under Justinian sixth century. Sunni Islam spread with Ottoman Turkish influence from around 1500. Traditional paganism has never entirely disappeared, making adherence to either major religion relatively superficial, although within Abkhazia most Abkhazians are nominally Christian.

Life revolves around the extended family, morality (including respect for elders) being essentially determined by the dictates of custom (*ak'abz*) and an ever-present sense of "Abkhazianness" (*ap-swara*). Local nobility fostered their offspring among the peasantry to cement societal relations—only captured foreigners served as slaves. English visitor James Bell noted in the 1830s that Abkhazians rendered this concept by their ethnonym for "Mingrelian" (*agərwa*). Milk-brotherhood was another social bond, symbolic establishment of which between two warring families could end vendettas.

A semi-tropical climate with abundant water resources, forests, and mountain-pasturage dictated an economy based on animal husbandry, timber, and agriculture, with fruit, viticulture, and millet (yielding to maize in the nineteenth century) playing dominant roles; tea and tobacco gained importance in the twentieth century. Greece, Rome, Persia, Lazica, Byzantium, Genoa, Turkey, Russia, and Georgia have all influenced Abkhazian history. In the 780s Prince Leon II took advantage of Byzantium's weakness to incorporate within his Abkhazian Kingdom most of western Georgia, this whole territory being styled "Abkhazia" until 975 when Bagrat' III, inheriting Abkhazia maternally and Iberia (eastern Georgia) paternally, became first monarch of a united Georgia. This medieval kingdom disintegrated during the Mongol depredations (thirteenth to fifteenth centuries), and part of Abkhazia's population (the Abazinians, who speak the divergent Abaza dialect and today number around 35,000) settled in the north Caucasus. The Chachbas

 NEWMEDIA INC./CORBIS

controlled Abkhazia, the Dadianis controlled Mingrelia, vying for dominance in the border regions; the current frontier along the River Ingur dates from the 1680s.

Abkhazia became a Russian protectorate in 1810 but governed its own affairs until 1864 when, in the wake of imperial Russia's crushing of North Caucasian resistance (1864) and again after the 1877–1878 Russo-Turkish War, most Abkhazians (along with most Circassians and all the Ubykhs) migrated to Ottoman lands. Soviet power was established in 1921; this Abkhazian SSR was recognized by Georgia, the two then contracting a treaty-alliance that lasted until Abkhazia's 1931 demotion to an "autonomous republic" within Georgia. The Stalin years were characterized by forced (largely Mingrelian) immigration and suppression of the language and culture in an attempted Georgianization.

Post-Soviet Georgian nationalism led to war in August 1992. Abkhazian victory in September 1993 resulted in the mass flight of most of the local Mingrelian population, numerically the largest

group in prewar Abkhazia. The conflict remained unresolved as of the early twenty-first century. Abkhazia declared independence in October 1999 but remains unrecognized. There are roughly 100,000 Abkhazians in Abkhazia (or ex-Soviet territories) and up to 500,000 across the Near East, predominantly in Turkey, where the language is neither taught nor written.

ABORTION POLICY

The Soviet Union was the first country in the world to legalize abortion, but its goal was to protect women's health and promote motherhood, not to advance women's rights.

Abortion was a criminal offense punishable by exile or long prison sentences before the Bolshevik Revolution. As part of its effort to reform Russian society, the Soviet government legalized abortion in a decree issued November 18, 1920. Supporters of the decree believed legal abortions were a necessary evil to prevent women from turning to dangerous and unsanitary back-alley abortions. Their goal was not to protect a woman's individual reproductive rights, but to preserve the health of the mother for the common good. Furthermore, the legalization only applied to abortions performed by trained medical personnel, and in 1924 a system was established that prioritized access to legal abortions according to class position and social vulnerability (unemployed and unmarried working women topped the list).

In 1936, the state recriminalized abortion in an attempt to increase the birth rate and to emphasize the value of motherhood. Although the policy shift temporarily reduced the number of abortions, in the long term repression failed to have the desired effect and abortion rates increased. Abortion was again legalized in 1955 on the premise that women had become sufficiently aware of the importance of their maternal roles. Despite the changes over time, Soviet abortion policy consistently focused on protecting women's health and encouraging motherhood. A lack of alternative methods of contraception, however, ensured that Soviet women relied on abortion as their primary means to control reproduction throughout the Soviet period.

ACADEMY OF ARTS

The idea of founding an Academy of Arts in St. Petersburg was first mooted by Peter the Great, but it was not until 1757, primarily on the initiative of Ivan Shuvalov, that the project was realized. Shuvalov, its first president, commissioned a large, neoclassical edifice on the banks of the Neva to house the institution, and in 1764 Catherine II gave it its first charter, based on that of the Académie de Peinture et de Sculpture, which had been established in Paris in 1648. Following the French example, the Academy developed a system of instruction in painting, sculpture, architecture, and the decorative arts that emphasized the study of old masters and the antique, and which prioritized subjects of historical significance. However, the Academy was not created primarily to fulfill state commissions, as had been the case in France, but aimed instead to professionalize practice in the visual arts. Students followed a regimented system, and all graduates who fulfilled the program were entitled to fourteenth rank in the civil service Table of Ranks. Those who won the major gold medal

competition were also granted the opportunity to study abroad for three to six years with a travel scholarship from the Academy. Students were required to complete regular assignments, which, along with the Academy's growing collection of casts, copies, and original works by western European artists, formed an invaluable teaching resource.

In the nineteenth century, the role of the Academy changed as its activities became increasingly harnessed to state interests. Beginning in 1802, national monuments could only be erected with the approval of the Academy; this had the effect of casting it in the role of an official arbiter of taste. Nicholas I then took an active interest in the Academy's affairs, appointing his favorites as professors and pronouncing on the direction that he felt the work of its students should follow. This growing association between the Academy and the court culminated with the appointment of Nicholas's son-in-law Maximilian, Duke of Leuchtenberg, as president in 1843, after which the institution was continually headed by a member of the imperial family.

By this time, the Academy was being criticized for the rigidity of its training program, particularly since the Moscow School of Painting, Sculpture and Architecture, though partially dependent on the Academy's program, actively supported new trends in art. Opposition came to a head in 1863, when fourteen students led by the painter Ivan Kramskoy requested permission to choose their own subject for the annual gold medal competition. When this was refused, thirteen of them left, working initially in a commune known as the Artel. Subsequently they joined the Association of Traveling Art Exhibitions, a group of realist artists that dominated the artistic scene for the next twenty years. The Academy attempted to counter this threat by launching its own travelling exhibitions in 1886, and in 1893 effected a partial rapprochement with some of the realists, who joined its teaching staff. However, its position of authority had been irredeemably undermined. In the Soviet era, the Academy encompassed teaching institutes in various cities, including the Repin Institute in the original building in St. Petersburg. It became a bastion of Socialist Realism in the 1930s and 1940s, but it has since regained its status as a respected center for the study and practice of the fine arts.

ACADEMY OF SCIENCES

Advised first by the philosopher Gottfried Wilhelm Leibnitz and then by his student Cristian Wolff, Peter the Great founded the Imperial Russian Academy of Sciences in 1725 on the model of the Paris and Berlin institutions of the same kind. All initial members of the new Academy were foreigners. The most outstanding member of the fledgling institution was Leonhard Euler, who in a short time was widely acclaimed as Europe's leading mathematician. He was credited as the founder of a strong mathematical tradition in Russia.

The new Academy was assigned two tasks: to initiate systematic work on the latest developments in science and to train the first Russian scientists. Small and fluid, the training component of the Academy became known as the first Russian secular institution of higher education. Mikhail Vasilievich Lomonosov was the first Russian scientist to become a member of the Academy and was living proof of Russia's readiness to enter the challenging world of advanced science.

Catherine II relied on the Academie Francaise as a model for the Imperial Russian Academy founded in 1783 with the primary task of improving the Russian literary language and preparing a Russian grammar and dictionary. Close relations between the two institutions were facilitated by the fact that a large number of the country's leading scholars belonged to both academies. At this time, the Academy of Sciences increased appreciably the volume of its publications presented in the Russian language.

In the eighteenth century, all presidents of the Academy of Sciences were aristocrats with close ties to the royal family but no interest in scholarship. In 1803, Alexander I granted the Academy a new charter that limited the choice of candidates for presidency to individuals with proven affinity with scientific scholarship. It also granted the Academy extended autonomy in administering its work and choosing individual and group research topics.

Despite the unceasing threats to academic autonomy during the reign of Nicholas I (1825–1855), the Academy recorded substantial progress in contributions to science. Among the most eminent academicians were Karl von Baer, the founder of modern embryology; Frederick G. W. Struve, who not only founded the Pulkovo Astronomical Observatory but made it one of the world's leading institutions of its kind; and Mikhail Vasilievich Ostrogradsky, who was credited by James Clerk Maxwell with contributing to the mathematical apparatus of electromagnetic theory.

For a long time, the foreign members of the Academy formed a community isolated from Russia's social and cultural dynamics. By the 1830s they manifested concrete and multiple signs of expanding and intensifying their Russian connections. Now they contributed articles on scientific themes to popular journals, gave lectures to organized groups, and took part in founding such naturalist societies as the Russian Geographical Society, fashioned on the model of similar organizations in the West. The publications of the Mineralogical Society and the Russian Geographical Society added to the list of scientific journals appealing to the growing public interest in science.

In 1841 the Academy underwent a drastic organizational change: It absorbed the Imperial Russian Academy and made it one of its three departments. This move not only broadened the scholarly concerns of the Academy of Sciences but also strengthened the Russian share of membership. The Natural Science Departments continued to be dominated by foreign members.

The era of Nicholas I ended on a sour note: Overreacting to the revolutionary waves in Western Europe in 1848, the government made it illegal for young Russians to attend Western universities in search of advanced scientific training. The Academy, which traditionally supervised the selection for foreign training, lost one of its prized functions. The government also abrogated Paragraph 33 of the 1836 charter, which stipulated that "scholarly books and journals, subscribed to by the Academy or full members of the Academy are not subject to censorship."

Russia's defeat in the Crimean War in 1855 and 1856 created an atmosphere favoring liberal reforms of a large magnitude in both the political system and social relations. The emancipation of the serfs topped the list of changes that earned the 1860s the title of "The Epoch of Great Reforms."

The restive intelligentsia viewed science and its critical spirit as the safest path to lifting Russia on the scale of social, political, and economic progress.

Among the new members of the Academy were several Russians whose scholarly reputations were firmly established in and outside Russia. The mathematician Pafnuty Lvovich Chebyshev's contributions to number and probability theories made a strong impression on the Paris Academy of Sciences, which elected him an *associé étranger*. In addition to his many other contributions to chemistry, Nikolai Nikolayevich Zinin reduced aniline from nitrobenzene; this introduced the industrial production of paints. The historian Sergei Mikhailovich Soloviev, elected a member of the Academy in 1871, was deeply involved in writing his multivolume *History of Russia since Ancient Times*, a grand synthesis of the nation's political, social, and cultural developments.

The Academy established closer contact with university professors by allowing more space in its journals for their contributions. It also improved its public image through intensive involvement in

the national festivities commemorating the centennial of Lomonosov's death. On this occasion it published a number of books covering the multiple sides of Lomonosov's scientific and literary activities. After the celebrations, Peter Pekarsky, a member of the Academy, wrote a two-volume history of his institution, based exclusively on the archival material and casting penetrating light on the early history of Russian science. For the first time, a Russian was appointed permanent secretary of the Academy, and annual reports were presented in the Russian language. The use of the Russian language in the Academy's publications increased by the establishment of the journal *Zapiski (Memoirs)*.

In the early 1880s, the Academy became a target of public attacks provoked by its refusal to elect Dmitry Ivanovich Mendeleev, the discoverer of the periodic law of elements, to its membership. The Academy was now referred to as a "German institution" and the novelist Fyodor Dostoyevsky went so far as to suggest the establishment of a Free Russian Academy supported by private endowments. The Mendeleev incident helped bring an

end to inviting foreign scholars to fill the vacant positions in the Academy.

All distinguished university professors, the new members of the Academy provided a significant index of rapidly advancing Russian scholarship. At the end of the nineteenth century, the growing fields of science were represented by the neurophysiologist and expert on conditioned reflexes Ivan Petrovich Pavlov, the first Russian recipient of the Nobel Prize; the mathematicians Andrei Andreyevich Markov and Alexander Mikhailovich Lyapunov, who raised the theory of probability to new heights; Alexei Nikolayevich Krylov, an expert in naval architecture and the translator of Newton's *Principia*; and Nikolai Yegorovich Zhukovsky, a pioneer in aerodynamics.

The Academy welcomed the February Revolution in 1917, which brought an end to the autocratic system. The academician Vladimir Ivanovich Vernadsky was the moving spirit behind the law abolishing the multi-ramified system of censorship in all phases of written expression. The Academy acquired a new name—the Russian Academy of Sciences—and the geologist Alexander Petrovich Karpinsky became the first elected president. The organization of the first research institutes heralded the appearance of research focused on the burning questions of modern science. They quickly became the primary units of the Academy. The first institute concentrated on the use of physical methods in chemical analysis.

At the end of Imperial Russia, the Academy had forty-one full members. It had one of the country's richest libraries, several museums, and a small number of underequipped laboratories. A solid majority of academicians worked in the humanities and the social sciences. This distribution was reversed under the Soviet system. The academicians were supported by a staff of specialists in individual fields and laboratory technicians.

The Bolshevik victory in October 1917 brought two instant changes affecting the Academy. The new government reintroduced censorship that in some respects was more comprehensive and rigid than that of the tsarist era. It took some time, however, for the new system of censorship to become an effective system of ideological control, in part because of persisting ambiguity in the definition of its tasks.

The new government acted quickly and resolutely in founding the Socialist Academy (in 1923 renamed the Communist Academy) with the pri-

mary task of preparing dialectical materialism—the Marxist philosophy of science—to serve as an ideological clearinghouse for scientific ideas. Its task was also to create the theoretical base of the social sciences and the humanities. The efficiency of the Socialist Academy, intended to be a competitor to the “conservative” Academy of Sciences, was drastically reduced by deep disagreements among Marxist theorists in interpreting the revolutionary waves in modern science. At this time, the Bolshevik government was not ready to engineer drastic changes in the Academy of Sciences.

In 1925 the government gave financial support to the Academy of Sciences to celebrate the two hundredth anniversary of its founding, an event attended by a large contingent of Western scientists. Now renamed the Academy of Sciences of the USSR, the institution received the first government recognition as the country's supreme scientific body. The next year, the Academy was given a new charter—the first since 1836—which made it an institution open to activities by such “public organizations” as the trade unions and proliferating Communist associations. The new charter abolished the traditional privilege of academicians to be the sole authority in selecting candidates for new members of the Academy.

The process of making the Academy a typical Soviet institution was generally completed in 1929, with Stalin now at the helm of the government and the Communist Party. The first large-scale election of new members included a group of Marxists. Dialectical materialism was proclaimed the only philosophy admitted in the Academy—and in the country—and loyalty to the Communist Party (the so-called *partynost*, or “partyiness”) prescribed behavior. A group of leading historians and an eminent mathematician were exiled to provincial towns.

At the same time, the government approved the Academy's proposal to admit students to work for higher degrees and to acquire research experience. Upon completion of their studies, most of these students were absorbed by the Academy's research staff. Some advanced to the rank of full members of the Academy.

The history of the Academy in the Stalin era (1929–1953) has two dominant characteristics. On the one hand, the Soviet government made vast financial investments in building the Academy into a gigantic network of institutes and laboratories, concentrating on both scientific research and train-

ing new cadres of scientists. On the other hand, Stalin encouraged and patronized Marxist philosophers in their mounting attacks on the leaders of the scientific community accused of violating the norms of Marxist theory. In the years of Stalin's reign of terror in the late 1930s, a long line of Academy personnel landed in political prisons, from which many did not return.

In 1936 the government abolished the Communist Academy and transferred its members to the Academy of Sciences, where they became part of the newly founded Department of Philosophy, the center of an intensified crusade against "idealism" in both Western and Soviet science. For a long time, "physical idealism," as manifested in quantum mechanics and the theory of relativity, was the main target of Marxist attacks.

Even in the peak years of Stalinist oppression, the Academy's physicists—led by Abram Fyodorovich Ioffe, Vladimir Alexandrovich Fock, and Igor Yevgenievich Tamm—made bold efforts to resist philosophical interference with their science. Their basic arguments were that Marxist philosophers were not familiar with modern physics and were guilty of misinterpreting Marxist theory. At a later date, Nikolai Nikolayevich Semenov, a Nobel laureate, stated publicly that only by ignoring Marxist philosophers were the physicists able to add fresh ideas to their science. More general criticism of Marxist interference with science came from the academicians Ivan Petrovich Pavlov and Vladimir Ivanovich Vernadsky: They opposed the monopolistic position of Marxist philosophy.

Physics and biology were the main scientific arena of Stalinist efforts to establish full ideological control over scientific thought. The two sciences, however, did not undergo the same treatment. In physics, Stalin encouraged Marxist philosophers to engage in relentless attacks on the residues of "idealism" in quantum mechanics and the theory of relativity, but refrained from interfering with the ongoing work in physics laboratories.

The situation in biology was radically different. Here, Stalin not only encouraged a sustained ideological attack on genetics and its underlying "bourgeois" philosophy but played a decisive role in outlawing this science and abolishing its laboratories. Academicians Peter Leonidovich Kapitsa and Igor E. Tamm, experienced warriors against Stalinist adverse interference with the professional work of scientists, were among the leading scholars whose sustained criticism swayed the govern-

ment ten years after Stalin's death to abandon its stand against modern genetics.

The process of the de-Stalinization of the Academy began soon after Stalin's death in 1953. By the mid-1960s, there was no science in the outside world that was not recognized and closely followed in the Soviet Union. The Academy played the leading role in reestablishing sociology and the rich national tradition in social psychology dominated by the internationally recognized legacy of Lev Semenovich Vygotsky. At the same time, Marxist philosophers were encouraged to explore paths to a reconciliation with leading Western philosophies of science and to search for "the kernels of truth" in "bourgeois" thought.

In the meantime, the Academy continued to grow at a rapid pace. In 1957 it established a string of research institutes in Novosibirsk—known as the Siberian Department or Akademgorodok (Academic Campus)—concentrating, among other activities, on the branches of mathematics related to the ongoing computer revolution, the latest developments in molecular biology, and the new methodological requirements of the social sciences, particularly economics. In 1971 the Department had forty-four research institutes, fifty laboratories, and a research staff of 5,600. It also supported a new university known for its high academic standards. A new complex of research institutes in nuclear physics was established in Dubna, and another group of institutes engaged in physico-chemical approaches to biological studies was built in Pushkino. A scientific center engaged in geophysical studies was established in 1964 in Krasnaya Pakhta. The scientific center in Noginsk concentrated on physical chemistry. The Academy also helped in guiding and coordinating the work of the Union-Republican academies.

In 1974 the Academy had 237 full members and 439 corresponding members. In the same year the professional staff of the Academy numbered 39,354, including 29,726 with higher academic degrees. The Academy published 132 journals, a few intended to reach the general reading public. It continued the tradition of publishing collections of essays celebrating important events in national history or commemorating major contributors to science. One of the last and most memorable collections, published in 1979, marked the centennial of Einstein's birth.

The Academy produced voluminous literature on its own history. The Soviet period of the Acad-

emy was presented in a glowing light with no place for a critical analysis of the underlying philosophy and internal organization of this gigantic institution. In 1991, with the dismemberment of the Soviet union, the name of the Russian Academy of Sciences was again made official. The new Academy brought an end to the monopoly of a single philosophy of science.

ADMINISTRATION FOR ORGANIZED RECRUITMENT

The Administration for Organized Recruitment (Russian acronym, Orgnabor) was a labor recruitment agency that existed in the USSR from 1931. Its essential feature was that the recruiting organization, not the potential employee, initiated the recruitment process. In the 1930s it was mainly concerned with the recruitment of peasants for seasonal and permanent work in nonagricultural jobs.

During the New Economic Policy (NEP) the USSR had high unemployment, and relied on labor exchanges to bring supply and demand for labor into balance. It also had substantial numbers of peasants migrating to the towns in search of work, and substantial numbers of these peasants found seasonal employment away from their villages. With the abolition of unemployment in 1930, it was thought that there would be no further need for market economy instruments such as labor exchanges.

Given the huge demand for labor in industry and construction, and the collectivization of agriculture, it nonetheless became necessary to establish a procedure for recruiting peasants from collective farms. Hence the creation, in 1931, of a new type

of recruitment for the rapidly growing construction and industrial sectors: organized recruitment. In this new system, state-owned enterprises or administrative organizations such as the People's Commissariats recruited a number of workers for regular or seasonal work by entering into an agreement with a collective farm, group of collective farms, or rural area.

The Administration for Organized Recruitment offered a planned, socialist mechanism for placing workers where they were most needed, and was intended to replace the traditional practice of recruitment from among those peasants who happened to turn up at the factory gate. In many cases the new recruits were promised much better employment conditions than actually existed, which was one of the reasons for the high rate at which the newly recruited workers left their jobs.

According to official statistics, 3.6 million people were recruited by Orgnabor in 1932, an average of 2.6 million per year between 1933 and 1937, 1.7 million in 1938, and 2.2 million in 1939. For many of the peasants concerned, the process was essentially an economic conscription. After 1946 the role of organized recruitment declined. In this later period, organized recruitment often concerned urban workers recruited for coal mining, construction, and as lumberjacks. In 1946 organized recruitment recruited 2.2 million people (mainly to coal mining, textiles, industrial and military construction, and forestry). Between 1947 and 1950, an average of about 0.6 million people were recruited per year, mainly to industrial and military construction, coal mining, and forestry. Organized recruitment remained at about 0.6 million per year between 1951 and 1955, but fell to only 0.1 million per year between 1966 and 1970.

The administrative framework for organized recruitment varied. In the 1930s there were commissions for organized recruitment, but between 1953 and 1956, republican administrations (in the RSFSR and Ukraine chief administrations) for organized recruitment. In the late Soviet period organized recruitment was mainly administered by regional or local authorities. The program of organized recruitment experienced numerous problems, however, and was never the predominant form of labor recruitment in the USSR. Decisions by individual workers as to where they wanted to work were always more important.

MICHAEL ELLMAN

ADMINISTRATION, MILITARY

The term *militiary administration* was used to identify both the techniques and system of state agencies involved in the management of the armed forces.

Russian writers long distinguished between the agencies for military command and those for administration (management), and Soviet theorists added a distinction between those providing leadership of the armed forces as such, and those for overall leadership of the country's defense. Whereas the latter involves participation by the political leadership in decision making, the former deal with the military professionals' implementing of the resulting policies. And if the lines between command and management, and between the two types of leadership, sometimes blur in modern conditions, this was commonplace in the premodern periods of Russia's history.

The Kievan Rus *druzhina*—the warband surrounding a prince—provided an ad hoc administration to the ruler, a core around which a militia of commoners rallied and, in battle, the professional commanders for the commoners. When Rus splintered into local "appanages" in the late 1000s, the *druzhina*'s primitive administrative functions were absorbed by the *puty* (offices) of a princeling's *dvor*, or "court," while selected boyars, the descendants of the warband members, joined him in his *duma* (council) in peacetime and helped provide military leadership in wartime. Thus all command and military administrative functions remained concentrated in the ruler's person, with no distinction between them or, indeed, between the civil and military spheres of state life.

This system served Moscow's grand dukes during the Mongol period. But as their realm expanded and became increasingly centralized, a reorganization was clearly necessary, especially after Ivan III (1462–1505) began creating an army based on a mounted *dvoryane* (gentry) militia, whose members served in return for *pomestie* land grants (or fiefs). The state's more complex administrative needs were met by the creation of *prikazy* (chanceries), headed by civil servant *dyaki* (state secretaries). Of the *prikazy*, the *Razryad* most closely approximated a war ministry, but a host of others had specialized military (e.g., armaments, fortifications) or mixed civil-military (e.g., medical, communications) functions. The boyar aristocracy continued to advise their increasingly autocratic masters in the *duma* and to provide commanders for his armies or "hosts." But the *mestnichestvo* (system of places), which aimed at preserving the social status of the boyar clans, also dictated assignment to military posts. Consequently, while Muscovite military administration initially gained in efficiency, wartime appointments to field armies often reflected social rather than military prowess. This problem finally was resolved by the destruction of the boyars' genealogical records in 1682. Yet by that time the piecemeal reforms introduced by Romanov rulers after 1613 had brought the continuous creation of new, specialized *prikazy* that left the expanded but fragmented administrative system badly in need of modernization and another radical overhaul.

This was provided by Peter I (r. 1689–1725), who founded both the modern Russian Empire and the Imperial Army. He created a European-style regular or standing army (and navy), based on conscription, to fight Sweden (1700–1721). "Leadership of defense" remained concentrated in the ruler and a series of military-court agencies, but in 1718 Peter assigned "leadership the armed forces" to a ramified central administration headed by the Military and Admiralty Colleges, each headed by a president and board, with provincial governors overseeing the local agencies. Despite bureaucratic inefficiency and constant modification, this system remained in place until Alexander I (r. 1801–1825) replaced it with more streamlined ministries, headed by ministers, in 1802. Those for the army and navy now led the armed forces. The two ministers helped lead defense as members of a Council of Ministers, which worked with the State Council and other military-court bodies in peacetime, while an Imperial General Headquarters (*Stavka*) directed the armies in wartime. This system again

was streamlined by Alexander II (r. 1856–1881) and his war minister, Dmitry Milyutin. After 1864 his War Ministry comprised numerous specialized administrations or directorates, developed a professional General Staff, and headed a number of geographically and administratively defined, local military districts. But as before, overall leadership of defense was provided by the emperor and his court agencies. This situation remained in place even after the creation of a State Duma in 1905–1906, and seemingly ended only with the 1917 revolutions. Yet despite changes in terminology, a similar system reemerged during the civil war (1918–1921), after which the new Soviet Union recreated the network of territorial administrative-military districts, headed by People's Commissariats (after 1945, Ministries) which, aided by a powerful General Staff, led the army and fleet. Instead of an emperor and his court, leadership in defense again was provided by some sort of peacetime Defense Council (or wartime Stavka), now dominated by the Communist Party's leader through the Central Committee's Secretariat and Politburo.

DAVID R. JONES

ADMIRALTY

From the beginning, St. Petersburg's docks and associated administrative building, collectively known as the Admiralty, had been an essential part of the city's existence. The shipyard was built by

Peter the Great in 1704, and in the 1730s Ivan Korobov added the central gate and golden spire. By 1806 plans submitted by Andreian Zakharov for reconstruction of the large, and by then, decrepit complex had been approved. Zakharov had attended the Academy of Arts in St. Petersburg and studied extensively in France and Italy. Although he died in 1811, long before the completion of the building in 1823, no significant changes were made in his design.

In reconstructing Korobov's partially destroyed Admiralty, Zakharov expanded the length of the facade from 300 meters to 375. In addition there were two perpendicular wings almost half that long extending to the river. From the perspective of the Neva River, the complex consisted of two p-shaped buildings, one within the other. The inner building served the Admiralty dockyard, which it enclosed on three sides, while the outer contained

The gilded Admiralty Tower rises above St. Petersburg. © CUCHI WHITE/CORBIS

administrative offices. The Admiralty end-blocks, facing the Neva River, are among the most successful neoclassical attempts to achieve a geometric purity of structure.

The main facade, overlooking a large square (now a park), is marked in the center by a grand arch, flanked by statues of nymphs supporting a globe, sculpted by Feodosy Shchedrin. Above the arch, a sculpted frieze portrays Neptune handing Peter the Great the trident, symbol of power over the seas. The corners of the central tower support statues of Alexander the Great, Ajax, Achilles, and Pyrrhus. The tower culminates in a spire resting on an Ionic peristyle, the cornice of which supports twenty-eight allegorical and mythological statues representing the seasons, the elements, and the winds.

The remarkable power of the Admiralty building derives from Zakharov's ability to create visual accents for an immensely long facade. The simplicity of the surfaces provided the ideal background for large, rusticated arches and high-relief sculpture, thus converting a prosaic structure into a noble monument.

ADYGE

The Adyge are the titular nationality of the Republic of Adygeia in the Russian Federation, which lies along the foothills of the northwestern Caucasus Range. In Soviet times, this was an autonomous okrug (district) within Krasnodar Krai, with its capital city of Maikop. The Adyge number 22 percent of the republic, which has 541,000 inhabitants, the remainder being largely Russians. There are considerable Adyge communities living just outside the republic in the Krasnodar Krai. The Adyge are primarily engaged in agriculture and forestry. Health resorts are also an important source of employment and revenue, as is tourism.

The Adyge belong to the same ethnolinguistic family as the Cherkess and the Kabardians, who live in neighboring republics, and they speak various dialects of Western Circassian. Soviet nationalities policies established these three groups as separate peoples and languages, but historical memory and linguistic affinity, as well as post-Soviet ethnic politics, perpetuate notions of ethnic continuity. An important element in this has been the contacts, since the break-up of the Soviet Union, with Adyge living in Turkey, Syria, Israel, Jordan, West Europe, and the United States. These are the descendants of migrants who left for the Ottoman Empire in the late nineteenth century, after the Russian conquest of the Caucasus. In the 1990s, a number of Adyge families from the diaspora migrated back and settled in Maikop, but integration remains somewhat fraught with social and legal problems.

The Adyge are Muslim, although other religious influences, including Greek Orthodox Christianity and indigenous beliefs and rituals, can be discerned in cultural practices. As elsewhere, the Soviet state discouraged Islamic practice and identity among the Adyge, but supported cultural nation-building. In the post-Soviet period, the wars in Abkhazia (1992–1993) and Chechnya (1994–1997; 1999–2000) greatly affected Adyge politics, causing the Russian state to intermittently infuse the republic with resources to prevent the spreading of conflict. In another development, the Shapsoug, who belong to the same ethno-linguistic group and live on the Black Sea shores near the town of Sochi, are lobbying Moscow for their own administrative unit, and for political linkages with the Adygeia Republic.

SETENEY SHAMI

ADZHUBEI, ALEXEI IVANOVICH

(1924–1992), Nikita Khrushchev's son-in-law, and a leading Soviet journalist.

Alexei Adzhubei met Rada Khrushcheva at Moscow State University in 1947 and married her in August 1949, when Khrushchev was party boss of Ukraine. Adzhubei became chief editor of *Komsomolskaya pravda* in 1957 and then, in 1959, of the Soviet government newspaper, *Izvestiya*. In 1961 he was named a member of the party Central Committee. In addition, Adzhubei was a member of Khrushchev's "Press Group," which edited the leader's speeches. He served as an informal adviser to his father-in-law on matters ranging from culture to foreign policy, and he accompanied Khrushchev on trips abroad including the United States (1959), Southeast Asia (1960), Paris (1960), and Austria (1961).

Under Adzhubei, *Komsomolskaya pravda* sharply increased its circulation by adding feature articles and photographs, while *Izvestiya* reduced the amount of predictable political boiler plate, printed more letters from readers, and published boldly anti-Stalinist works such as Alexander Tvardovsky's poem, "Tyorkin in the Other World." In time, Adzhubei began acting as an unofficial emissary for Khrushchev, meeting with foreign leaders such as U.S. president John F. Kennedy and Pope John XXIII, sounding out their views, reporting back to his father-in-law, and writing up his interviews in *Izvestiya*.

Thanks to his special position, Adzhubei was cultivated by other Soviet leaders, including some who eventually conspired to oust Khrushchev. When Khrushchev fell from power in October 1964, Adzhubei was denied the right to write under his own name and forced to live in obscurity until he was rehabilitated during the era of perestroika and glasnost in the late 1980s.

AEROFLOT

Aeroflot, literally "air fleet," is the common name for the state airline of the Soviet Union. It was operated under the jurisdiction of the Ministry of Civil Aviation. The airline was founded in 1928 as Dobroflot and was reorganized into Aeroflot in 1932. During Soviet times, Aeroflot was the world's largest airline, with about 15 percent of all civil air traffic. The first ever nonstop transpolar flight (from Moscow to the United States in 1933) on the ANT-25 aircraft operated by Valery Chkalov, Georgy Baidukov, and Alexander Belyakov was a landmark in the history of the aviation. Aeroflot introduced commercial jet plane service on September 15, 1956, on a flight from Moscow to Irkutsk. Aeroflot developed the world's first supersonic airliner, the TU-144. Its maiden flight took place on December 31, 1968, two months ahead of the Concorde. Regular supersonic cargo flights began in late 1975 and passenger flights in 1977. Supersonic service was suspended in 1978, after 102 flights.

After the breakup of the Soviet Union, Aeroflot was reorganized by the June 1992 resolution of the government of Russian Federation, becoming Aeroflot-Russian International Airlines. Another government resolution appointed Valery Okulov as its first general director in May 1997. Aeroflot-Russian International Airlines is a joint-stock company, with 51 percent of the stock owned by the government as of 2002 and the remaining 49 percent belonging to the employees. With over fourteen thousand employees, as of 2002 Aeroflot-Russian International Airlines was the world's fourth largest commercial airline; with flights to 140 destinations in 94 countries, it provided 70 percent of all the international air transport performed by Russian airlines, and had 151 representatives abroad, as well as branches in the Russian Federation in Novosibirsk,

Khabarovsk, and St. Petersburg. The company's fleet consisted in 2002 of 111 airplanes, including two Boeing-767-300s, eight Airbuses A-310-300, six long-range Iluyshin-96-300s, eighteen Iluyshin-76TD cargo planes and one cargo DC-10/30F, and other jets, illustrating the diversification of aircraft in the post-Soviet period.

AFGHANISTAN, RELATIONS WITH

Afghanistan has played a key role in the foreign policy history of both the Russian Empire and the Soviet Union. During the nineteenth century, Russian and British intelligence and government officials vied for influence in the region, with the final delineation of spheres of influence being the Amu Darya river—north of that was considered Russian and south of that was British. During the Bolshevik Revolution and civil war, opposition forces in Central Asia used Afghanistan as a base of operation against Red Army units. Indeed, Afghanistan was a haven, and then a transit route, for those wanting to escape the Soviet Union at this time.

After a series of treaties, Afghanistan became a neutral neighbor for the Soviet Union and relations focused largely on trade and economic development. Throughout the 1950s and 1960s, Soviet involvement in Afghanistan increased. Soviet assistance was almost equally divided between economic and military forms. Between 1956 and 1978, the Soviet Union gave \$2.51 billion in aid to Afghanistan, compared to U.S. assistance of only \$533 million. This was part of a larger Soviet strategy to increase their presence in South Asia, as the United States was seen as being more influential in Iran and Pakistan. Equally important, although commercial ties always remained modest, the Soviet Union used this relationship as a “positive example” for the rest of the developing world.

The Saur Revolution in April 1978 radically changed the Soviet presence in the region, as the new leaders—first Nur Muhammed Taraki and

then Hafizulla Amin—debated the extent to which they wanted outside powers involved in the country. The leadership in Moscow feared that the Afghan government under Amin was going to drift out of the Soviet Union's orbit, and began to put pressure on it to remain a loyal ally. Finally, as a measure to ensure full subordination, the Soviet Army invaded Afghanistan in December 1979. Amin was killed in the ensuing conflict, to be replaced by Babrak Karmal in 1980.

The Brezhnev administration claimed that it sent troops into Afghanistan to help the current leadership stabilize the country. Within months, Soviet bases were established in a number of cities in the country and Afghanistan was effectively under Soviet occupation. Many states in the international community condemned the invasion and a majority of Western states boycotted the 1980 Summer Olympics in Moscow as a sign of protest.

Within two years, opposition groups—often based on tribal or clan affiliations—began to increase their resistance efforts against the Soviet occupiers. Known collectively as the Mujahedeen, the opposition fought both Soviet units and those of the People's Democratic Republic of Afghanistan army. Although the Mujahedeen fared poorly in the opening campaigns, increased training and support from outside powers, especially the United States, helped turn things around. By the mid-1980s, it was apparent that the Soviet Union was bogged down in a guerrilla war that wore down both troop numbers and morale.

By 1984, Soviet citizens were beginning to get frustrated with this “endless war.” The rise of Mikhail Gorbachev in the following year signaled a new phase in the conduct of the war, as he acknowledged that the Soviet Union ought to look at a way to end their participation in the conflict. Over the next two years, United Nations-mediated negotiations took place, which resulted in a peace settlement and the Soviet withdrawal from the country. The government was finally admitting casualty figures, which became difficult as fighting intensified in 1985 and 1986. By this time, there were between 90,000 and 104,000 Soviet troops in Afghanistan at any one time.

It was not until early 1989 that the last Soviet troops left Afghanistan. In all, the ten-year Afghan War cost the Soviet Union more than 15,000 killed and more than 460,000 wounded or incapacitated due to illnesses contracted while serving in the country (this was an amazing 73 percent of all forces

that served in the country). Such casualties severely damaged the country's international reputation and internal morale. During this period of glasnost by the Gorbachev administration, it was commonplace for Soviet citizens to criticize the government's war effort and the effect it had on returning veterans, the "Afghantsy." Indeed, many observers compared the Soviet experience in Afghanistan with that of the United States in Vietnam.

For the first several years after the Soviet withdrawal, the government of Najibullah, the Soviet-sponsored leader of Afghanistan who succeeded Babrak Karmal, was able to maintain power. However, by 1992, the Mujahedeen forces ousted him and set up their own provisional government. These groups no longer had a single unifying cause (the removal of Soviet forces) to keep them together, and a civil war ensued. This lasted until 1996, at which time the Taliban were able to wrest control of most of the country.

As a result of the United States-led "coalition of the willing" attacks in 2001–2002, Russia ironically became a more active player in the region. Following the al-Qaeda attacks in the United States, Afghanistan quickly came under attack for its support of that terrorist organization and its unwillingness to hand over top al-Qaeda officials. By the beginning of 2002, supportive of the U.S. effort, Afghanistan has been more active in assisting what it sees as the defense of its southern borders.

For more than two decades, Afghanistan has remained a security problem for the Soviet Union and the Russian Federation. Therefore, Russia will undoubtedly continue to place importance on remaining politically involved in future developments in that country, although given its somber experience in the 1980s, it is doubtful that Russia will develop a military or security presence in the country any time soon.

The Afghans are likewise mistrustful of Russian influences in the country. Even in the early twenty-first century, Afghanistan continued to feel the effects of the Soviet campaign in the country. As expected, U.S. troops toppled the Taliban regime and were in the process of establishing a more representative regime in Kabul. Russia, for its part, had seen 1.5 million Afghans killed in the ten-year war, most of whom were civilians. In addition, millions more citizens became refugees in Iran and Pakistan. Finally, hundreds of thousands of landmines remained in place to cause injuries and death on a near-daily basis. On a broader level, the economic

and social disruption caused by the war, and the subsequent civil war and Taliban rule, had resulted in a country completely in ruins.

Perhaps most telling for contemporary Russia is the fact that Afghanistan symbolizes defeat on several levels. It was a failed effort to export socialism to a neighboring state; it was a failure of the Soviet army to defeat an insurgency; it was a failure of confidence by the population in the political leadership; and it was a failure for the economy, as the war created a drain on an already-troubled economy.

ROGER KANGAS

AGANBEGYAN, ABEL GEZEVIKH

(b. 1932), leading Soviet economist and organizer of economic research.

Academician Abel Gezevich Aganbegyan began his professional career as a labor economist and was

an active member of the group of mathematical economists that emerged in the USSR in the 1960s. He was the Director of the Institute of Economics and the Organization of Industrial Production in Novosibirsk (1966–1985) and the creator and first editor of the lively journal *EKO* for many years the best economics journal in the USSR. In 1985 he returned to Moscow and was an important economic adviser to Mikhail Gorbachev. Aganbegyan seems to have played a major role in promoting the ill-fated acceleration (*uskorenienie*) program of 1985–1986. Intended to speed up the national economic rate of growth, the policy mainly resulted in destabilizing the economy by sharply increasing investment in projects without any short-run returns. Aganbegyan was also involved in the preparation of the economic reform announced by Gorbachev in June 1987. This reform did not achieve its objectives but did contribute to the financial crisis and economic destabilization of 1989–1991. In 1990, Gorbachev requested that he produce a compromise economic program out of the rival Five-Hundred-Day Plan of Stanislav Shatalin and Grigory Yavlinsky on the one hand, and the government program of Leonid Abalkin and Nikolai Ryzhkov on the other. During perestroika Aganbegyan became rector of the Academy of the National Economy. He established a consulting firm and founded a bank, of which he served as CEO for five years, then honorary president. A property development deal he made with an Italian firm was a failure, leaving behind a half-finished building.

AGITPROP

Agitprop, the agitation (speech) and propaganda (print, film, and visual art) section of the Central Committee of the Communist Party, was established in August of 1920, under the direction of R. Katanian to coordinate the propaganda work of all Soviet institutions. Agitprop was originally divided

into five subsections, the two most important being the agitation subsection, which directed propaganda campaigns and supervised local press, and the political education subsection, which developed curriculum for Party schools. The three remaining subsections were concerned with publishing Central Committee works, addressing problems with the distribution of propaganda in literature, and coordinating work among the parties of the national minorities. Agitprop, whose activities reached their fullest height during the Stalinist era, was one of the most important Central Committee sections by 1946. The role of Agitprop during the Brezhnev years and beyond included overseeing publishing, television, radio, and sports, directing agitation and propaganda work, guiding political education within the Party, and conducting cultural work with trade unions.

Agitprop techniques, based on the political education of the immediate postrevolutionary period, were basically solidified in the 1920s. Early Agitprop in the cities included parades, spectacles, monumental sculpture, posters, kiosks, films, and agit-stations, located at major railroad stations, which had libraries of propaganda material, lecture halls, and theaters. These varied activities continued throughout the Soviet period. Agitation and propaganda were taken to the countryside during the civil war by agit-trains and agit-ships, a unique Bolshevik method for the political education of rural citizens and front-line troops. These modern conveyances functioned like moving posters with exterior decorations of heroic figures and folk art motifs accompanied by simple slogans. The trains and ships brought revolutionary leaflets, agitators, newsreels, and *agitki* (short propaganda films), among other items. Agit-trains were reinstated during World War II to convey propaganda to forces at the front. After the civil war, and throughout the Soviet period, propaganda continued to be exported to the countryside via radio, traveling exhibitions, posters, literature, and film. Agitprop, like other Central Committee departments, had become relatively stable in its organization by 1948, and remained so until the collapse of the Soviet Union.

K. ANDREA RUSNOCK

AGRARIAN PARTY OF RUSSIA

The Agrarian Party of Russia (APR) was established on February 26, 1993, on the initiative of the parliamentary fraction Agrarian Union, the Agrarian Union of Russia, the *profsoyuz* (trade union) of workers of the agro-industrial complex, and the All-Russian Congress of Kolkhozes. Its chair was Mikhail Lapshin, elected a couple weeks earlier as the vice-chair of the restored Communist Party of the Russian Federation (CPRF). In the 1993 elections, the APR list, headed by the leader of the Agrarian fraction Mikhail Lapshin, *profsoyuz* leader Alexander Davydov, and vice-premier Alexander Zaveryukha, received 4.3 million votes (8.0%, fifth place) and twenty-one mandates in the federal district; sixteen candidates won in single-mandate districts. In 1995 the Agrarians entered the elections with a similar makeup, but a significant portion of the left-wing electorate consolidated around the Communist Party of the Russian Federation, and as a result, the Agrarians' list only won 2.6 million votes (3.8%). In the single-mandate districts, the agrarians brought forth twenty candidates; this allowed them to form their own delegate group, with the addition of delegates from the CPRF dedicated to this task. In the 1999 elections, the APR leadership split over the issue of bloc formation. The majority, with chair Lapshin in the lead, joined the bloc Fatherland-All Russia (OVR); the others, including the leader of the parliamentary fraction Nikolai Kharintonov, went on the CPRF list. As a result of OVR's low results, Lapshin's supporters were unsuccessful in forming their group, and the communists with single-mandate candidates created the Agro-Industrial Group with Kharitonov at the head.

In the regional elections, the APR entered in coalition with the CPRF, and had several serious victories to its credit, including the election of APR leader Lapshin as head of the small Republic of Altai, and head of the Agrarian Union Vasily Starodubtsev as governor in the industrial Tula Oblast (twice).

At the time of registration in May 2002, the APR declared 42,000 members and fifty-five re-

gional branches. While lacking potential as a self-sufficient entity, the APR was quite attractive to the Communist Party, and to the "ruling party," by virtue of the provincial infrastructure, the popularity of the name, and the influence on the rural electorate, traditionally sympathetic toward the left.

On the threshold of the 2003 elections, a struggle for control of the APR arose between the leftist Kharitonovtsy (Kharitonov was the head of the Agro-Industrial Union) and the pro-government Gordeyevtsy (Alexei Gordeyev was the leader of the Russian Agrarian Movement, founded in 2002), both sides trying to put an end to Lapshin's extended leadership.

NIKOLAI PETROV

AGRARIAN REFORMS

The concept of agrarian reform refers to changes implemented in the agricultural economy, changes designed broadly to improve agricultural performance and notably to contribute to the process of economic growth and economic development. The concept of reform implies changes to an existing system or policies, though the interpretation of change and the precise boundaries of the agricultural sector are general and broad. Thus characterized, agrarian reform has been a continuing and important component of the Russian economic experience. Moreover, the nature of agrarian reform has been closely associated with the differing stages of Russian economic development and with the role envisioned for the agrarian economy in the process of industrialization and modernization.

Russia has been an agrarian economy since its beginnings. For this reason, changes in the agrarian economy have been central to any discussion of economic growth and economic development in Russia. Beginning in the era of serfdom and the existence of a premodern agriculture, the focus has been on the nature of agrarian reform necessary to contribute to modernization.

The nature of agrarian reform necessarily depends heavily on the time period considered. In the Russian case, a convenient turning point is 1861, the date of the Emancipation Act, the purpose of which was to eliminate serfdom. Prior to this date, the Russian rural economy was feudal in character, with serfs bound to their landlords, communal landholding, and periodic redistribution of land plots.

Although the Emancipation Act was judicial more than economic in character, it nevertheless introduced a long period of agrarian reform through the Bolshevik Revolution of 1917. During this period, there was gradual reallocation of land, although preservation of the village (*mir*) as a communal form of local decision making limited the extent to which the modernization of agriculture could take place. Peasant mobility was limited, a major reason for political instability in the early 1900s and the implementation of the Stolypin reforms, a series of changes designed to break the communal system, to change land usage, and to introduce individual peasant farming.

The agrarian reform, prior to the Bolshevik revolution, has been the subject of controversy. The traditional agrarian crisis view has supported a negative view of the Russian rural economy, while the revisionist view argues that output and structural changes during the late tsarist era were directionally important for the ultimate development of a modern agricultural sector.

It is perhaps ironic that by the 1920s and the period of the New Economic Policy (NEP), the rural economy would again be at the forefront of attention. Specifically, the focus would be the potential role of agriculture in Soviet economic development. After extensive discussion and experimentation during the NEP, Stalin forcibly changed the institutional arrangements on Soviet agriculture beginning in 1928. The introduction of the collective farms (the *kolkhoz*), the state farms (the *sovkhoz*) and the private subsidiary sector fundamentally changed the manner in which agriculture was organized. Markets were replaced by state control.

Although these changes remained in effect through the end of the Soviet era, there were important changes made in the rural economy during the Soviet years. In effect, there was a continuing search for optimal organizational arrangements. This search led to important changes in the mechanization of agriculture (especially the introduction of the Machine Tractor Stations), the nature of land use (amalgamation of farms seeking scale advantages and the conversion of collective to state farms) and the relations between the state and the farm units in terms of deliveries, financing, and the like. Most important, in the latter years of the Soviet era, the focus became agro-industrial integration, an effort to reap the benefits of Western "agri-business" types of arrangements for production and marketing of agricultural products.

With the collapse of the Soviet Union in 1991, the era of socialist agriculture and socialist agricultural policies came to an end. Much less attention was paid to the rural economy; it was not central to the Russian approach to transition, and yet agrarian reform was once again on the agenda. Throughout the 1990s, the emphasis has been the creation of a corporate (share) structure in farms and the conversion of these farms to various forms of private equity arrangements. However, given the very slow emergence of land reform, and specifically the slow development of a land market in Russia, fundamental change in the Russian rural economy continues to be at best very slow.

AGRICULTURE

Agriculture is that sector of an economy concerned with the production of food and food products both for domestic use, in (industrial) production and (household) consumption, and for export to external markets. Although it is often difficult to define

Peasants sift grain in the village of Shari, 560 miles east of Moscow. © 2002 GETTY IMAGES

the sectoral boundaries of agriculture with precision, agriculture is critical to the process of economic growth and economic development. Less developed economies are typically primarily agricultural in terms of output and resource usage and, appropriately, focus on institutions and policies that encourage the modernization of agriculture as a sector to support the growth of industry and services.

As economic growth and development occur, the relative importance of the major producing sectors changes, usually with a declining relative importance for agriculture and a growing relative importance of industry and services. This means that, in the early stages of economic development, agriculture is an important sector in which productivity growth sustains the growth of output. This process involves the substitution of capital for labor and changes the role of agriculture itself as economic growth and development proceed.

In the Russian case, the agricultural sector has always been surrounded by controversy. The rea-

sons for this controversy are best understood within the context of the individual periods of Russian and Soviet economic growth and development, although there are common threads throughout. Not only are policies and institutions important, but ideology has played a major if not always constructive role in this essential sector.

Prior to the legal end of serfdom in 1861, the Russian rural economy was organized on a communal basis (the *mir*). The premodern agriculture under this feudal-manorial system was characterized by limited mechanization, archaic modes of land usage, and the limited development of human capital.

With the formal end of serfdom in Russia and the emergence of significant economic growth after 1880, attention focused on the extent to which a modern agriculture (emerging market institutions, market policies, investment in both human and physical capital, and so forth) was emerging in Russia and could therefore serve as the underpinning of industrialization. From an ideological

perspective, this would mean the development of capitalism. Two major schools of thought, the agrarian crisis view and the revisionist view, address this issue in different ways. The agrarian crisis view argues that backwardness was sustained prior to the Bolshevik revolution in 1917, while the revisionist view sees significantly greater change in the agricultural and other sectors. These interpretations have both been important for our understanding of the level of economic development in 1917, the ideological options available to Lenin and the Bolsheviks, and the subsequent discussions regarding agriculture during the New Economic Policy (NEP) period.

The second important era in which agriculture became controversial in Russia is the NEP of the 1920s and its termination through mass collectivization. While the role of agriculture in Russian economic development was an issue of major importance in the 1920s, the implementation of collectivization by Josef Stalin in the late 1920s radically changed the institutional arrangements: It attempted to create a mechanism to support rapid industrialization, while at the same time imposing the ideology of collectivism. It has been argued that, from a strategic point of view, the policies and institutions established did not in fact finance Soviet industrialization. Worse, it has also been argued that the legacy of these institutions and related policies, and especially their manner of implementation, led to serious negative long-term consequences for the necessary but unachieved long-term growth of agricultural productivity. In these respects, collectivization has been viewed, in broad perspective, as a mistake.

The third important era for Russian agriculture is the post-collectivization experience through the end of the 1980s. In spite of continuing attention to and controversy surrounding agriculture in this era, it is agreed that agricultural productivity declined from the 1950s through the 1980s to such a degree that significant grain imports became necessary beginning in the 1960s. Thus agriculture became increasingly expensive (an effect of poor productivity performance) and was artificially sustained by large state subsidies. From a structural point of view, agriculture in this era failed in the sense that agricultural productivity change could not support necessary structural change, a legacy that would await the reformers of the transition era.

Finally, when the Soviet system collapsed and Russia faced economic transition to capitalism, agri-

culture as a sector was largely neglected. Whereas it was commonly predicted that agriculture would be a leading sector in transition economies, this was not the case in Russia. From a twenty-first-century perspective, it is evident that during transition agriculture has been a low-priority sector, one in which institutional change has been at best modest. Although markets have emerged and trade patterns have changed, the most fundamental element of market agriculture, namely the pursuit of private property rights along with appropriate institutional support, remains controversial and elusive.

ROBERT C. STUART

AIGUN, TREATY OF

The Treaty of Aigun (May 28, 1858) granted the expanding Russian Empire vast new territories in eastern Siberia at the expense of China, which had entered upon a period of decline. In the late 1840s, after more than a century of stable relations with China, governed by the Treaties of Nerchinsk (1689) and Kiakhta (1728), Russia renewed its eastward expansion under the leadership of Nikolai Muraviev, the governor-general of Eastern Siberia, and Count E. V. Putiatin and General Nikolai Ignatiev, both of whom were diplomatic envoys. The three men shared a vision of Russia as a Pacific power, and operated as quasi-independent agents of an imperial state in this era before modern transportation and communications.

In the early 1850s, Russia sent a naval flotilla down the Amur River, established military settlements along its northern bank, and ignored Chinese protests. Focused on suppressing the Taiping rebellion that threatened the dynasty's hold on power, Chinese officials greatly feared Russian military

power, the strength of which they overestimated. When they failed to persuade the Russians to withdraw from territories they considered part of their own domain, the Chinese had no choice but to negotiate with Muraviev, who had threatened them with war.

In accordance with Muraviev's demands, the Treaty of Aigun established the Russo-Chinese boundary along the Amur, from the Argun River in the west to the Sea of Okhotsk in the east. Russia was accorded navigation rights on the Amur, Ussuri, and Sungari rivers along with China, but third countries were excluded, as Muraviev feared encroachment by the British Navy. Trade, which had been previously been restricted to one point along the border, was now permitted along its entire length. China viewed the Treaty of Aigun as a temporary concession to Russian military pressure, but Muraviev and St. Petersburg correctly understood it as a giant step in Russia's rise as an Asia-Pacific power.

STEVEN I. LEVINE

AJARS

In 1913 Josef Stalin posed the question, "What is to be done with the Mingrelians, Abkhazians, Adjarians, Svanetians, Lezghians, and so forth, who speak different languages but do not possess a literature of their own?" Of the Ajars, however, who call themselves Ach'areli (plural Ach'arlebi), he more accurately observed, two paragraphs later, that they were a people "who speak the Georgian language but whose culture is Turkish and who profess the religion of Islam."

The Ajarian Autonomous Republic was established on July 16, 1921, as a result of Turkey ceding Batumi to Georgia, along with territory to its north, in accordance with the terms of the Russo-Turkish Treaty of March 16, 1921. Ajaria (capital: Batumi) occupies 2,900 square kilometers in southwestern Georgia and borders the provinces of Guria, Meskheta, and (predominantly Armenian) Dzhavakheti; the Black Sea; and Turkey (Lazistan and the old Georgian region of Shavsheti). The last Soviet census (1989) showed 324,806 Ajar residents, constituting 82.8 percent of the autonomous republic's population. The local dialect suggests both Laz and Turkish influence—Islam was introduced here and in other border regions to the east by the Ottoman Turks. Ajarians share with the Abkhazians, some of whom settled the area in late-tsarist times, a subtropical microclimate with similar agriculture, although Ajaria held first place in the USSR for precipitation, with sea-facing slopes experiencing an annual rainfall of 2,500–2,800 millimeters.

When Stalin deported to Central Asia the neighboring Meskhians (usually called "Meskhetaian Turks," though their precise ethnicity is disputed), Hemshins (Islamicized Armenians), and other Muslim peoples in the northern Caucasus in 1943 and 1944, the Ajars escaped this fate. The regional leader, Aslan Abashidze, appointed by Georgian president Zviad Gamsakhurdia in the dying years of Soviet rule, managed, in the turmoil that followed Georgia's 1991 independence, to turn Ajaria into a personal fiefdom to the extent that central government writ was (as of January 2002) no longer running in what had by then effectively become an undeclared but de facto independent state.

B. GEORGE HEWITT

AKAYEV, ASKAR AKAYEVICH

(b. 1944), president of Kyrgyzstan who served in that post throughout the country's first decade of independence.

Askar Akayev was born in the Kyrgyz Soviet Republic (Kyrgyzia) and earned a doctor of sciences degree at the Leningrad Precision Mechanics and Optics Institute. He returned to Kyrgyzia in 1972, assuming a teaching post at the Politechnical Institute in Frunze (now Bishkek). He authored more than one hundred scientific works and articles on mathematics and computers, and in 1989 became president of the Kyrgyz Academy of Sciences. He also served as a department head for the Central Committee of the Kyrgyz Communist Party.

As the Soviet Union began to break apart, he was elected to the presidency of the republic in 1990 by the republic's legislature, and in 1991 Kyrgyzstan gained independence and Akayev was elected president in a popular election. In contrast to other post-Soviet states in Central Asia, whose leaders retained their power from Soviet times, Kyrgyzstan made an attempt to break with the Soviet past. In his first years in office, Akayev won international acclaim as a backer of political and economic liberalization, aiming to turn his country into the "Switzerland of Central Asia." Akayev was reelected president in 1995 and in 2000. In the mid-1990s, however, some called his democratic credentials into question as he launched campaigns against journalists, imprisoned political opponents, and pushed through constitutional amendments to augment the powers of the presidency. In 2000 elections he won 75 percent of the vote, but observers claimed these elections were marred by fraud. Throughout 2002 and 2003, he was the target of protesters in Kyrgyzstan, who blamed him for chronic corruption and mounting economic difficulties. Nonetheless, in February 2003 he won approval of more changes to the constitution that enhanced his powers still further and won support in a referendum to confirm his term of office until December 2005. After these events, critics charged that he had become much like the Central Asian dictators.

While in office, Akayev has tried to assure inter-ethnic harmony in the country (30% of the population is ethnically Uzbek) and cracked down on small groups of Islamic militants. He has maintained good relations with Russia, and in 2001 of-

PAUL J. KUBICEK

AKHMATOVA, ANNA ANDREYEVNA

(1889–1966), leading Russian poet of the twentieth century; member of the Acmeist group.

Anna Akhmatova (Anna Andreyevna Gorenko) was born on June 23, 1889, near Odessa, and grew

up in Tsarskoye Selo, the imperial summer residence, where Pushkin had attended the Lyceum. She studied law in Kiev, then literature in St. Petersburg. She married poet Nikolai Stepanovich Gumilev in 1910, and the couple visited western Europe on their honeymoon. She made a return visit to Paris in 1911, and Amedeo Modigliani, still an unknown artist at the time, painted sixteen portraits of her.

In 1912, Akhmatova published her first collection of poetry, *Večer (Evening)*, and gave birth to her son Lev. The clarity, simplicity, and vivid details of her poetry amazed her contemporaries. For instance, in 1934, Marina Tsvetaeva praised Akhmatova's "Poem of the Last Meeting," extolling the lines "I slipped my left-hand glove/Onto my right hand" as "unique, unrepeatabe, inimitable."

Also in 1912, Gumilev founded the Poets' Guild, a group whose opposition to the Symbolists led to the name "Acmeist," from the Greek *akme*, "perfection." The Acmeists, including Gumilev, Akhmatova, and Osip Mandelstam, advocated simplicity, clarity, and precision over the vagueness and otherworldliness of the Symbolists.

Akhmatova's marriage with Gumilev was unhappy and ended in divorce. Her second collection, *Chetki (Rosary)*, published in 1914, revolves around the decline of the relationship, her sense of repentance, and her identity as a poet. In her following collections, *Belaya Staya (White Flock)*, 1917), *Podorozhnik (Plantain)*, 1921), and *Anno Domini* (1922), Akhmatova assumed the role of poetic witness, responding to the chaos, poverty, and oppression surrounding the Revolution and civil war.

In 1921, Gumilev was charged with conspiracy and executed. None of Akhmatova's work was published in the Soviet Union between 1923 and 1940. Yet, unlike many of her contemporaries, Akhmatova refused to emigrate. Her view of emigration is reflected in her 1922 poem from *Anno Domini*, "I am not one of those who left the land."

Between 1935 and 1940 Akhmatova wrote the long poem *Requiem*, a lyrical masterpiece. Dedicated to the victims of Josef Stalin's terror, and largely a maternal response to her son Lev's arrest and imprisonment in 1937, it recalls the Symbolists in its use of religious allegory, but maintains directness and simplicity. Akhmatova's next long poem, the complex, dense, polyphonic *Poema bez geroya (Poem without a Hero)*, 1943) interprets the suicide of poet and officer Vsevolod Knyazev as a sign of the times.

Some critics place it alongside *Requiem* as her finest work; others see it as the beginning of Akhmatova's poetic decline.

At the outbreak of World War II, Stalin briefly relaxed his stance toward writers, and Akhmatova was published selectively. In 1946, however, Andrei Zhdanov, secretary of the Central Committee, denounced her and expelled her from the Writers' Union. In 1949, her son Lev was arrested again and exiled to Siberia. In a desperate and futile effort to secure his release, Akhmatova wrote a number of poems in praise of Stalin. She later requested the exclusion of these poems from her collected work.

After Stalin's death, Akhmatova was slowly "rehabilitated." Publication of her work, including her essays and translations, resumed. She received international recognition, including an honorary degree from Oxford in 1965. She died on March 5, 1966, and is remembered as one of Russia's most revered poets.

DIANA SENECHAL

AKHROMEYEV, SERGEI FYODOROVICH

(1923–1991), chief of the Soviet General Staff and first deputy minister of defense (1984–1988) and national security advisor to President Mikhail Gorbachev (1988–1991).

Marshal Sergei Akhromeyev played a key role in ending the Cold War and the negotiation of key arms control agreements: the INF (Inter-Mediate Range Nuclear Forces) Treaty (1987) and the CFE (Conventional Forces in Europe) Treaty (1990) between NATO and Warsaw Treaty Organization member states. He also oversaw the Soviet military withdrawal from Afghanistan. According to Admiral William Crowe, his American counterpart, "He was a communist, a patriot and a soldier." Dedicated to the rejuvenation of the Soviet system, Akhromeyev found that perestroika had unleashed deep conflicts within the USSR and undermined the system's legitimacy. After playing a part in the unsuccessful coup of August 1991, he committed suicide in his Kremlin office.

Born in 1923, Akhromeyev belonged to that cohort upon whom the burden of World War II fell most heavily. The war shaped both his career as a professional soldier and his understanding of the external threat to the Soviet regime. He enrolled in a naval school in Leningrad in 1940 and was in that city when the German invasion began. He served as an officer of naval infantry in 1942 at Stalingrad and fought with the Red Army from the Volga to Berlin. Akhromeyev advanced during the war to battalion command and joined the Communist Party in 1943.

In the postwar years Akhromeyev rose to prominence in the Soviet Armed Forces and General Staff. In 1952 he graduated from the Military Academy of the Armor Forces. In 1967 he graduated from the Military Academy of the General Staff. Thereafter, he held senior staff positions and served as head of a main directorate of the General Staff from 1974 to 1977 and then as first deputy chief of the General Staff from 1979 to 1984. As Marshal Nikolai Ogarkov's deputy, Akhromeyev sought to recast the Soviet Armed Forces to meet the challenge of the revolution in military affairs, which involved the application of automated troop control, electronic warfare, and precision strikes to modern combined arms combat.

JACOB W. KIPP

AKHUNDOV, MIRZA FATH ALI

(1812–1878), celebrated Azerbaijani author, playwright, philosopher, and founder of modern literary criticism, who acquired fame primarily as the writer of European-inspired plays in the Azeri-Turkish language.

Akhundov was born in Shaki (Nukha), Azerbaijan, and initially was tutored for the Islamic clergy by his uncle Haji Alaksar. However, as a young man he gained an appreciation for the arts, especially literature. An encounter with famed Azerbaijani lyricist and philosopher Mirza Shafi Vazeh in 1832 is said to have profoundly influenced his career as a writer. In 1834, he relocated to Tbilisi, Georgia, where he worked as a translator in the Chancellery of the Viceroy of the Caucasus. Here he was further influenced in his social and political views through his acquaintance with exiled Russian intellectuals, including Alexander Bestuzhev-Marlinsky.

Akhundov's first published work was entitled "Oriental Poem" (1837), inspired by the death of famous Russian poet Alexander Sergeyevich Pushkin. However, his first significant literary activity emerged in the 1850s, through a series of comedies that satirized the flaws and absurdities of contemporary society, largely born of ignorance and superstition. These comedies were highly praised in international literary circles, and Akhundov was affectionately dubbed "The Tatar Moliere." In 1859 Akhundov published his famous novel *The Deceived Stars*, thus laying the groundwork for realistic prose, providing models for a new genre in Azeri and Iranian literature.

In his later work, such as *Three Letters of the Indian Prince Kamal al Dogleh to His Friend, Iranian Prince Jalal al Dogleh*, Akhundov's writing evolved

from benign satire to acerbic social commentary. At this stage, he demonstrated the typical leanings of the nineteenth-century intelligentsia toward the Enlightenment movement and its associated principles of education, political reform, and secularism. Akhundov's secular views, a by-product of his agnostic beliefs, stemmed from disillusionment with his earlier studies in theology. He perceived Islam's hold on all facets of society as an obstruction to learning. Although assaulting traditional institutions was seemingly his stock in trade, his biting satires were usually leavened with a message of optimism for the future. According to Tadeusz Swietochowski, noted scholar of Russian history, Akhundov believed that "the purpose of dramatic art was to improve peoples' morals" and that the "theater was the appropriate vehicle for conveying the message to a largely illiterate public."

GREGORY TWYMAN

AKKERMAN, CONVENTION OF

By the mid-1820s, the Balkans and the Black Sea basin festered with unresolved problems and differences, including recurring cycles both of popular insurrection and Turkish repression and of various Russian claims and Turkish counterclaims. Most blatantly, in violation of the Treaty of Bucharest (1812), Turkish troops had occupied the Danubian principalities, and the Porte had encroached on Serbian territorial possessions and autonomy. On March 17, 1826, Tsar Nicholas I issued an ultimatum demanding Turkish adherence to the Bucharest agreement, withdrawal of Turkish troops from Wallachia and Moldavia, and entry via plenipotentiaries into substantive negotiations. An overextended and weakened Sultan Mahmud

agreed to negotiations beginning in July 1826 at Akkerman on the Dniester estuary.

On October 7, 1826, the two sides agreed to the Akkerman Convention, the terms of which affirmed and extended the conditions of the earlier Bucharest Treaty. Accordingly, Turkey transferred to Russia several settlements on the Caucasus littoral of the Black Sea and agreed to Russian-approved boundaries on the Danube. Within eighteen months, Turkey was to settle claims against it by Russian subjects, permit Russian commercial vessels free use of Turkish territorial waters, and grant Russian merchants unhindered trade in Turkish territory. Within six months, Turkey was to reestablish autonomy within the Danubian principalities, with assurances that the rulers (*hospodars*) would come only from the local aristocracy and that their replacements would be subject to Russian approval. Strict limitations were imposed on Turkish police forces. Similarly, Serbia reverted to autonomous status within the Ottoman Empire. Alienated provinces were restored to Serbian administration, and all taxes on Serbians were to be combined into a single levy. In long-term perspective, the Akkerman Convention strengthened Russia's hand in the Balkans, more strongly identified Russia as the protector of Balkan Slavs, and further contributed to Ottoman Turkish decline.

BRUCE W. MENNING

AKSAKOV, IVAN SERGEYEVICH

(1823–1886), Slavophile and Panslav ideologue and journalist.

Son of the famous theater critic Sergei Timofeyevich Aksakov, Ivan Aksakov received his early education at home in the religious, patriotic, and literary atmosphere of the Aksakov family in Moscow. He attended the Imperial School of Ju-

risprudence in St. Petersburg, graduating in 1842. After a nine-year career in government service, Aksakov resigned to devote himself to the study of Russian popular life and the propagation of his Slavophile view of it. Troubles with the censorship plagued his early journalistic ventures: *Moskovsky sbornik* (*Moscow Miscellany*) (1852, 1856) and *Russkaya beseda* (*Russian Conversation*); his newspaper, *Parus* (*Sail*), was shut down in 1859 because of Aksakov's outspoken defense of free speech.

In his newspapers *Den* (*Day*) and *Moskva* (*Moscow*), Aksakov largely supported the reforms of the 1860s and 1870s, but his nationalism became increasingly strident, as the historical and critical publicism of the early Slavophiles gave way, in the freer atmosphere of the time, to simpler and more chauvinistic forms of nationalism, often directed at Poles, Germans, and Jews. In 1875 Aksakov became president of the Moscow Slavic Benevolent Committee, in which capacity he pressed passionately for a more aggressive Russian policy in the Balkans and promoted the creation of Russian volunteer forces to fight with the Serbs. He was devastated when the European powers forced Russia to moderate its Balkan gains in 1878. "Today," Aksakov told the Slavic Benevolent Committee, "we are burying Russian glory, Russian honor, and Russian conscience."

In the 1880s Aksakov's chauvinism became more virulent. In his final journal, *Rus* (*Old Russia*), he alleged that he had discovered a worldwide Jewish conspiracy with headquarters in Paris. Aksakov's increasing xenophobia has embarrassed Russians (and foreigners) attracted to the more courageous and generous aspects of his work, but the enormous crowds at his funeral suggest that his name was still a potent force among significant segments of the Russian public at the time of his death.

ABBOTT GLEASON

AKSAKOV, KONSTANTIN SERGEYEVICH

(1817–1860), Slavophile ideologue and journalist.

Konstantin Aksakov was a member of one of the most famous literary families in nineteenth-century Russia. His father was the well-known theater critic and memoirist Sergei Aksakov; his brother, Ivan Aksakov, was an important publicist in the 1860s and 1870s.

During his university years in the early 1830s, Konstantin Aksakov was a member of the Stankevich Circle, along with Mikhail Bakunin and Vissarion Belinsky. He underwent a period of apprenticeship to Hegel, but, like several other Slavophiles, was most influenced by his immediate family circle, which was the source of the communal values he was to espouse and the dramatic division in his thought between private and public.

Toward the end of the 1830s Aksakov drew close to Yuri Samarin, and both of them fell under the direct influence of Alexei Khomyakov. Aksakov's Hegelianism proved a passing phase; he evolved into the most determinedly utopian and ideologically minded of all the early Slavophiles. A passionate critic of statist historical interpretations, Aksakov viewed Russian history as marked by a unique relationship between the state and what he called "the land" (*zemlya*). At one level the division referred simply to the allegedly limited jurisdiction of state power in pre-Petrine Russia over Russian society. At another level "the land" signified the timeless religious and moral truth of Christianity, while the state, however necessary for the preservation of "the land," was external, soulless, and coercive. The Russian peasant's communal existence had to be protected from the contagion of politics. Behind Aksakov's static "Christian people's utopia" lay the romantic hatred of social and political rationalism, a passion that animated all the early Slavophiles. Aksakov died suddenly in the Ionian Islands in the midst of a rare European trip.

ABBOTT GLEASON

ALASH ORDA

Alash Orda is the autonomous Kazakh government established by the liberal-nationalist Alash party in December 1917. Alash was the mythical ancestor of the Kazakhs, and Alash Orda (Horde of Alash) long served as their traditional battle cry. His name was adopted by the Kazakh nationalist journal, *Alash*, that was published by secularist Kazakh intellectuals for twenty-two issues, from November 26, 1916, to May 25, 1917. Alash Orda then was taken as the name of a political party founded in March 1917 by a group of moderate, upper-class Kazakh nationalists. Among others, they included Ali Khan Bukeykhanov, Ahmed Baytursun, Mir Yakub Dulatov, Oldes Omerov, Magzhan Zhumabayev, H. Dosmohammedov, Mohammedzhan Tynyshbayev, and Abdul Hamid Zhuzhdybayev. Initially, the party's program resembled that of the Russian Constitutional-Democrats (Kadets), but with a strong admixture of Russian Menshevik (Social Democrat) and Socialist-Revolutionary (SR) ideas. Despite later Soviet charges, it was relatively progressive on social issues and demanded the creation of an autonomous Kazakh region. This program was propagated in the newspaper *Qazaq (Kazakh)*, published in Orenburg. The paper had a circulation of about eight thousand until it was closed by the Communists in March 1918.

After March 1917, Alash Orda's leaders dominated Kazakh politics. They convened a Second All-Kirgiz (Kazakh) Congress in Orenburg from December 18 through December 26, 1917. On December 23, this congress proclaimed the autonomy of the Kazakh steppes under two Alash Orda governments. One, centered at the village of Zhambeitu and encompassing the western region, was headed by Dosmohammedov. The second, headed by Ali Khan Bukeykhanov, governed the eastern re-

gion from Semipalatinsk. Both began as strongly anti-Communist and supported the anti-Soviet forces that were rallying around the Russian Constituent Assembly (Komuch): the Orenburg Cossacks and the Bashkirs of Zeki Velidi Togan. In time, however, the harsh minority policies of Siberia's White Russian leader, Admiral Alexander Vasilievich Kolchak, alienated the Kazakh leaders. Alash Orda's leaders then sought to achieve their goals by an alignment with Moscow. Accepting Mikhail Vasilievich Frunze's November 1919 promise of amnesty, most Kazakh leaders recognized Soviet power on December 10, 1919. After further negotiations, the Kirgiz Revolutionary Committee (Revkom) formally abolished Alash Orda's institutional network in March 1920. Many Alash leaders then joined the Communist Party and worked for Soviet Kazakhstan, only to perish during Stalin's purges of the 1930s. After 1990 the name "Alash" reappeared, but as the title of a small Kazakh pan-Turkic and Pan-Islamic party and its journal.

DAVID R. JONES

ALASKA

Alaska is the largest state in the United States, equal to one-fifth of the country's continental land mass. Situated in the extreme northwestern region of North America, it is separated from Russian Asia by the Bering Strait (51 miles; 82 kilometers). Commonly nicknamed "The Last Frontier" or "Land of the Midnight Sun," the state's official name derives from an Aleut word meaning "great land" or "that which the sea breaks against." Alaska is replete with high-walled fjords and majestic mountains, with slow-moving glaciers and still-active volcanoes. The state is also home to Eskimos and the Aleut and Athabaskan Indians, as well as about fourteen thousand Tlingit, Tshimshian, and Haida

Cartoon ridiculing the U.S. decision to purchase Alaska from Russia. © BETTMANN/CORBIS

people—comprising about 16 percent of the Alaskan population. (The term *Eskimo* is used for Alaskan natives, while *Inuit* is used for Eskimos living in Canada.) Inupiat and Yupik are the two main Eskimo groups. While the Inupiat speak Inupiaq and reside in the north and northwest parts of Alaska, the Yupik speak Yupik and live in the south and southwest. Juneau is the state's capital, but Anchorage is the largest city.

The first Russians to come to the Alaskan mainland and the Aleutian Islands were Alexei Chirikov (a Russian naval captain) and Vitus Bering (a Dane working for the Russians), who arrived in 1741. Tsar Peter the Great (1672–1725) encouraged the explorers, eager to gain the fur trade of Alaska and the markets of China. Hence, for half a century thereafter, intrepid frontiersmen and fur traders (*promyshlenniki*) ranged from the Kurile Islands to southeastern Alaska, often exploiting native seafaring skills to mine the rich supply of sea otter and seal pelts for the lucrative China trade. In 1784, one of these brave adventurers, Grigory Shelekhov (1747–1795), established the first colony in Alaska, encouraged by Tsarina Catherine II (the Great) (1729–1796).

Missionaries soon followed the traders, beginning in 1794, aiming to convert souls to Christianity. The beneficial role of the Russian missions in Alaska is only beginning to be fully appreciated. Undoubtedly, some Russian imperialists used the missionary enterprise as an instrument in their own endeavors. However, as recently discovered documents in the U.S. Library of Congress show, the selfless work of some Russian Orthodox priests, such as Metropolitan Innokenty Veniaminov (1797–1879), not only promoted harmonious relations between Russians and Alaskans, but preserved the culture and languages of the Native Alaskans.

Diplomatic relations between Russia and the United States, which began in 1808, were relatively cordial in the early 1800s. They were unhampered by the Monroe Doctrine, which warned that the American continent was no territory for future European colonization. Tsar Alexander I admired the American republic, and agreed in April 1824 to restrict Russia's claims on the America continent to Alaska. American statesmen had attempted several times between 1834 and 1867 to purchase Alaska from Russia. On March 23, 1867, the expansion-

ist-minded Secretary of State William H. Seward met with Russian minister to Washington Baron Edouard de Stoeckl and agreed on a price of \$7,200,000. This translated into about 2.5 cents per acre for 586,400 square miles of territory, twice the size of Texas. Overextended geographically, the Russians were happy at the time to release the burden. However, the discovery of gold in 1896 and of the largest oil field in North America (near Prudhoe Bay) in 1968 may have caused second thoughts.

JOHANNA GRANVILLE

ALBANIANS, CAUCASIAN

Albanians are an ancient people of southeastern Caucasia who originally inhabited the area of the modern republic of Azerbaijan north of the River Kur. In the late fourth century they acquired from Armenia the territory that now comprises the southern half of the republic. According to the Greek geographer Strabo (died c. 20 C.E.), the Albanians were a federation of twenty-six tribes, each originally having its own king, but by his time united under a single ruler. The people's name for themselves is unknown, but the Greeks and Romans called their country Albania. The original capital of Albania was the city of Cabala or Cabalaca, north of the River Kur. In the fifth century, however, the capital was transferred to Partaw (now Barda), located south of the river.

According to tradition, the Albanians converted to Christianity early in the fourth century. It is more likely, however, that this occurred in the early fifth century, when St. Mesrob Mashtots, inventor of the Armenian alphabet, devised one for the Albanians. Evidence of this alphabet was lost until

1938, when it was identified in an Armenian manuscript. All surviving Albanian literature was written in, not translated into, Armenian.

The Persians terminated the Albanian monarchy in about 510, after which the country was ruled by an oligarchy of local princes that was headed by the Mihranid prince of Gardman. In 624, the Byzantine emperor Heraclius appointed the head of the Mihrani family as presiding prince of Albania. When the country was conquered by the Arabs in the seventh century and the last of the Mihranid presiding princes was assassinated in 822, the Albanian polity began to break up. Thereafter, the title "king of Albania" was claimed by one or another dynasty in Armenia or Georgia until well into the Mongol period. The city of Partaw was destroyed by Rus pirates in 944.

The Albanians had their own church and its own catholicos, or supreme patriarch, who was subordinate to the patriarch of Armenia. The Albanian church endured until 1830, when it was suppressed after the Russian conquest. The Albanian ethnic group appears to survive as the Udins, a people living in northwestern Azerbaijan. Their Northeast Caucasian language (laced with Armenian) is classified as a member of the Lesguian group. Some Udins are Muslim; the rest belong to the Armenian Church.

ROBERT H. HEWSEN

ALCOHOLISM

Swedish researcher Magnus Huss first used the term "alcoholism" in 1849 to describe a variety of physical symptoms associated with drunkenness. By the 1860s, Russian medical experts built on

Huss's theories, relying on models of alcoholism developed in French and German universities to conduct laboratory studies on the effects of alcohol on the body and mind. They adopted the term "alcoholism" (*alkogolizm*) as opposed to "drunkenness" (*pyanstvo*) to connote the phenomenon of disease, and determined that it mainly afflicted the lower classes.

In 1896, at the urging of the Swiss-born physician and temperance advocate E. F. Erisman, the Twelfth International Congress of Physicians in Moscow established a special division on alcoholism as a medical problem. Within a year the Kazan Temperance Society established the first hospital for alcoholics in Kazan. In 1897, physician and temperance advocate A. M. Korovin founded a private hospital for alcoholics in Moscow, and in 1898 the Trusteeships of Popular Temperance opened an outpatient clinic.

That same year, growing public concern over alcoholism led to the creation of the Special Commission on Alcoholism and the Means for Combating It. Headed by psychiatrist N. M. Nizhegorodtsev, the ninety-five members of the commission included physicians, psychiatrists, temperance advocates, academics, civil servants, a few clergy, and two government representatives. Classifying alcoholism as a mental illness, members of the commission blamed widespread alcoholism on the tsarist government, which relied heavily on liquor revenues and refused to improve the socioeconomic conditions of the lower classes.

Although they accepted the definition of alcoholism as a disease, professionals could not agree on exactly what it was, what caused it, or how to cure it. These were topics of heated debate, and they could not be seriously discussed without critical analysis of the government's social and economic policies. Hence, the range of opinions expressed in professional discourse over alcoholism reflected the fragmentation of middle-class ideologies near the end of the imperial period: the abstract civic values of liberalism and modernization as borrowed from the West; a powerful and persistent model of custodial statehood; and a pervasive culture of collectivism.

With the Bolshevik Revolution of 1917, definitions of alcoholism changed. Seeking Marxist interpretations for most social ills, Soviet health practitioners defined alcoholism as a petit bourgeois phenomenon, a holdover from the tsarist past. Working from the premise that illness could only

be understood in its social context, they determined that alcoholism was a social disease influenced by factors such as illiteracy, poverty, and poor living conditions. In 1926 the director of the State Institute for Social Hygiene, A. V. Molkov, opened a department, headed by E. I. Deichman, for the sole purpose of studying alcoholism as a social disease. Within four years, however, the department was closed and the institute disbanded. By placing blame for alcoholism on social causes, Molkov, Deichman, and others were, in effect, criticizing the state's social policies—a dangerous position in the Stalinist 1930s.

In 1933 Josef Stalin announced that success was being achieved in the construction of socialism in the USSR; therefore, it was no longer plagued by petit bourgeois problems such as alcoholism. For the next fifty-two years, alcoholism did not officially exist in the Soviet Union. Consequently, all public discussion of alcoholism ended until 1985, when Mikhail S. Gorbachev launched a nationwide but ill-fated temperance campaign.

KATE TRANSCHER

ALCOHOL MONOPOLY

Ever since the last quarter of the fifteenth century, Moscovite princes have exercised control over the production and sale of vodka. In 1553 Ivan IV (the Terrible) rewarded some of his administrative elite (*oprichnina*) for loyal service with the concession of owning *kabaks* or taverns. Even so, these tavern owners had to pay a fee for such concessions. Under Boris Godunov (1598–1605), the state exerted

greater control over vodka, a monopoly that was codified in the 1649 Ulozhenie (code of laws).

Disputes over the succession to the throne at the end of the seventeenth century loosened state control over vodka, but Peter I (the Great, r. 1682–1725) reasserted strict control over the state monopoly. Catherine II (the Great, r. 1762–1796) allowed the gentry to sell vodka to the state. Since the state did not have sufficient administrators to collect revenue from sales, merchants were allowed to purchase concessions that entitled them to a monopoly of vodka sales in a given area for a specified period of time. For this concession, merchants paid the state a fixed amount that was based on their anticipated sales. These tax-farmers (*otkupshchiki*) assured the state of steady revenue. The percentage of total revenue derived from vodka sales increased from 11 percent in 1724 to 30 percent in 1795. Between 1798 and 1825, Tsars Paul I and Alexander I attempted to restore a state monopoly, but gentry and merchants, who profited from the tax-farming system, resisted their attempts.

Under the tax-farming system, prices for vodka could be set high and the quality of the product was sometimes questionable. Complaining of adulteration and price gouging, some people in the late 1850s boycotted buying vodka and sacked distilleries. As part of the great reforms that accompanied the emancipation of the serfs, the tax-farming system was abolished in 1863, to be replaced by an excise system. By the late 1890s, it was estimated that about one-third of the excise taxes never reached the state treasury due to fraud.

Alexander III called for the establishment of a state vodka monopoly (*vinnaia monopoliiia*) in order to curb drunkenness. In 1893 his minister of finances, Sergei Witte, presented to the State Council a proposal for the establishment of the state vodka monopoly. He argued that if the state became the sole purchaser and seller of all spirits produced for the internal market, it could regulate the quality of vodka, as well as limit sales so that people would learn to drink in a regular but moderate fashion. Witte insisted that the monopoly was an attempt to reform the drinking habits of people and not to increase revenue. The result, however, was that the sale of vodka became the single greatest source of state revenue and also one of the largest industries in Russia. By 1902, when the state monopoly had taken hold, the state garnered 341 million rubles; by 1911, the sum reached 594 million.

By 1914, vodka revenue comprised one-third of the state's income.

Established in 1894, the monopoly took effect in the eastern provinces of Orenburg, Perm, Samara, and Ufa in 1896. By July 1896, it was introduced in the southwest, to the provinces of Bessarabia, Volynia, Podolia, Kherson, Kiev, Chernigov, Poltava, Tavrida, and Ekaterinoslav. Seven provinces in Belarus and Lithuania had the monopoly by 1897, followed by ten provinces in the Kingdom of Poland and in St. Petersburg, spreading to cover all of European Russia and western Siberia by 1902 and a large part of eastern Siberia by 1904. The goal was to close down the taverns and restrict the sale of alcoholic beverages to state liquor stores. Restaurants would be allowed to serve alcoholic beverages, but state employees in government shops would handle most of the trade. The introduction of the monopoly caused a great deal of financial loss for tavern owners, many of whom were Jews. Because the state vodka was inexpensive and of uniformly pure quality, sales soared. Bootleggers, often women, bought vodka from state stores and resold it when the stores were closed.

In 1895 the state created a temperance society, the Guardianship of Public Sobriety (*Popechitel'stvo o narodnoi trezvosti*), in part to demonstrate its interest in encouraging moderation in the consumption of alcohol. Composed primarily of government officials, with dignitaries as honorary members, the Guardianship received a small percentage of the vodka revenues from the state; these funds were intended for use in promoting moderation in drink. Most of the limited sums were used to produce entertainments, thus founding popular theater in Russia. Only a small amount was used for clinics to treat alcoholics. Private temperance societies harshly criticized the Guardianship for promoting moderation rather than strict abstinence, accusing it of hypocrisy and futility.

With the mobilization of troops in August 1914, Nicholas II declared a prohibition on the consumption of vodka for the duration of the war. At first alcoholism was reduced, but peasants soon began to produce moonshine (*samogon*) on a massive scale. This moonshine, together with the lethal use of alcoholic substitutes, took its toll. The use of scarce grain for profitable moonshine also exacerbated food shortages in the cities. In St. Petersburg, food riots contributed to the abdication of Nicholas in February 1917.

The new Bolshevik regime was a strict adherent to prohibition until 1924, when prohibition was relaxed. A full state monopoly of vodka was reinstated in August 1925, largely for fiscal reasons. While Stalin officially discouraged drunkenness, in 1930 he gave orders to maximize vodka production in the middle of his First Five-Year Plan for rapid industrialization.

The Soviet state maintained a monopoly on vodka. As soon as Mikhail Gorbachev became general secretary of the Communist Party in 1985, he began a major drive to eliminate alcoholism, primarily by limiting the hours and venues for the sale of vodka. This aggressive campaign contributed to Gorbachev's unpopularity. After he launched his anti-alcohol drive, the Soviet government annually lost between 8 and 11 billion rubles (equivalent to 13 to 17 billion U.S. dollars, at the 1990 exchange rate) in liquor tax revenue. After Gorbachev's fall and the dissolution of the Soviet Union, the state vodka monopoly was abolished in May 1992.

Boris Yeltsin attempted to reinstate the monopoly in June 1993, but by that time floods of cheap vodka had been imported and many domestic factories had gone out of business. Although President Vladimir Putin issued an order in February 1996 acknowledging that Yeltsin's attempt to reestablish the vodka monopoly in 1993 had failed, he has also tried to control and expand domestic production and sales of vodka. The tax code of January 1, 1999 imposed only a 5 percent excise tax on vodka in order to stimulate domestic consumption. By buying large numbers of shares in vodka distilleries, controlling their management, and attacking criminal elements in the business, Putin has attempted to reestablish state control over vodka.

PATRICIA HERLIHY

ALEXANDER I

(1777–1825), emperor of Russia from 1801–1825, son of Emperor Paul I and Maria Fyodorovna, grandson of Empress Catherine the Great.

CHILDHOOD AND EDUCATION

When Alexander was a few months old, Catherine removed him from the care of his parents and brought him to her court, where she closely oversaw his education and upbringing. Together with his brother Konstantin Pavlovich, born in 1779, Alexander grew up amid the French cultural influences, numerous sexual intrigues, and enlightened political ideas of Catherine's court. Catherine placed General Nikolai Ivanovich Saltykov in charge of Alexander's education when he was six years old. Alexander's religious education was entrusted to Andrei Samborsky, a Russian Orthodox priest who had lived in England, dressed like an Englishman, and scandalized Russian conservatives with his progressive ways. The most influential of Alexander's tutors was Frederick Cesar LaHarpe, a prominent Swiss of republican principles who knew nothing of Russia. Alexander learned French, history, and political theory from LaHarpe. Through LaHarpe Alexander became acquainted with liberal political ideas of republican government, reform, and enlightened monarchy.

In sharp contrast to the formative influences on Alexander emanating from his grandmother's court were the influences of Gatchina, the court of Alexander's parents. Alexander and Konstantin regularly visited their parents and eight younger siblings at Gatchina, where militarism and Prussian influence were dominant. Clothing and hair styles differed between the two courts, as did the entire tone of life. While Catherine's court was dominated by endless social extravaganzas and discussion of ideas, Paul's court focused on the minutiae of military drills and parade ground performance.

Tsar Alexander I. © MICHAEL NICHOLSON/CORBIS

The atmosphere of Gatchina was set by Paul's sudden bursts of rage and by a coarse barracks mentality.

Alexander's early life was made more complicated by the fact that Catherine, the present empress, and Paul, the future emperor, hated each other. Alexander was required to pass between these two courts and laugh at the insults which each of these powerful personages hurled at the other, while always remaining mindful of the fact that one presently held his fate in her hands and the other would determine his fate in the future. This complex situation may have contributed to Alexander's internal contradictions, indecisiveness, and dissimulation as an adult.

ALEXANDER'S MARRIED LIFE

When Alexander was fifteen, Catherine arranged a marriage for him with fourteen-year-old Princess Louisa of Baden (the future Empress Elizabeth) who took the name Elizabeth Alexeyevna when she converted to Russian Orthodoxy prior to the marriage. Although Alexander's youth prevented him from developing a passionate attachment to his wife, they became confidants and maintained a luke-

warm relationship for the rest of their lives. Their relationship endured Alexander's long-term liaison with his mistress, Maria Naryshkina, his flirtations with a number of noblewomen throughout Europe, and rumors of an affair between Alexander's wife, Elizabeth, and his close friend and advisor, Adam Czartoryski. Czartoryski was reputed to be the father of the daughter born in 1799 to Elizabeth. Alexander and Elizabeth had no children who survived infancy.

THE REIGN AND DEATH OF PAUL

In November 1796, a few weeks before Alexander's nineteenth birthday, Empress Catherine died. There is some evidence that Catherine intended to bypass her son Paul and name Alexander as her heir. However, no such official proclamation was made during Catherine's lifetime, and Paul became the new emperor of Russia. Paul almost immediately began alienating the major power groups within Russia. He alienated liberal-minded Russians by imposing censorship and closing private printing presses. He alienated the military by switching to Prussian-style uniforms, bypassing respected commanders, and issuing arbitrary commands. He alienated merchants and gentry by disrupting trade with Britain and thus hurting the Russian economy. Finally, he alienated the nobility by arbitrarily disgracing prominent noblemen and by ordering part of the Russian army to march to India. Not surprisingly, by March 1801 a plot had been hatched to remove Paul from the throne. The chief conspirators were Count Peter Pahlen, who was governor-general of St. Petersburg, General Leonty Bennigsen, and Platon Zubov—Empress Catherine's last lover—along with his two brothers, Nicholas and Valerian. Alexander was aware of the conspiracy but believed, or told himself that he believed, that Paul would be forced to abdicate but would not be killed. Paul was killed in the scuffle of the takeover. On March 12, 1801, Alexander, accompanied by a burden of remorse and guilt for patricide that accompanied him for the rest of his life, became Emperor Alexander I.

REFORM ATTEMPTS

Alexander's reign began with a burst of reforms and the hope for a substantial overhaul of Russian government and society. Alexander revoked the sentences of about twelve thousand people sentenced to prison or exile by Emperor Paul; he eased restrictions on foreign travel, reopened private printing houses, and lessened censorship. Four of

Alexander's most liberal friends formed a Secret Committee to help the young emperor plan sweeping reforms for Russia. The committee consisted of Prince Adam Czartoryski, Count Paul Stroganov, Count Victor Kochubei, and Nikolai Novosiltsev. During the first few years of his reign, Alexander improved the status of the Senate, reorganized the government into eight departments, and established new universities at Dorpat, Kazan, Kharkov, and Vilna. He also increased funding for secondary schools. Alexander did not, however, end serfdom or grant Russia a constitution. This series of reforms was brought to an end by Russian involvement in the Napoleonic Wars.

In 1807, following the Treaty of Tilsit, Mikhail Speransky became Alexander's assistant, and emphasis was again placed on reform. With Speransky's guidance, Alexander created an advisory Council of State. Speransky was also responsible for an elementary school reform law, a law requiring applicants for the higher ranks of state service to take a written examination, and reforms in taxation. In addition, Speransky created a proposal for reorganizing local government and for creating a national legislative assembly. Speransky's reforms aroused a storm of criticism from Russian conservatives, especially members of the imperial family. Alexander dismissed Speransky in 1812 just prior to resuming the war against Napoleon. In his place Alexander chose Alexei Arakcheyev, an advisor with a much different outlook, to assist him for the remainder of his reign.

NAPOLEONIC WARS

The most momentous event of Alexander's reign was Russia's involvement in the Napoleonic Wars. Alexander began his reign by proclaiming Russian neutrality in the European conflict. However, during 1804 Russian public opinion became increasingly anti-French as a result of an incident in Baden—the homeland of Empress Elizabeth. The Duc d'Enghien, a member of the French royal family, was kidnapped from Baden, taken to France, and executed by the French government. Alexander and the Russian court were outraged by this act. The following year the Third Coalition was formed by Britain, Russia, and Austria. On December 2, 1805, Napoleon defeated a combined Russian and Austrian army at the Battle of Austerlitz. The Russians suffered approximately 26,000 casualties. After two major losses by their Prussian ally, the Russians were again resoundingly defeated at the Battle of Friedland in June 1807. This

battle resulted in about 15,000 Russian casualties in one day. Following the defeat at Friedland, the Russians sued for peace.

The terms of the resulting Treaty of Tilsit were worked out by Alexander and Napoleon while they met on a raft anchored in the Nieman River. According to the agreement, Russia and France became allies, and Russia agreed to participate in the Continental System, Napoleon's blockade of British trade. A secondary Franco-Prussian treaty, also agreed upon at Tilsit, reduced Prussian territory, but perhaps saved Prussia. The Treaty of Tilsit was extremely unpopular with the Russian nobility, who suffered economically from the loss of exports to Britain. In addition, Russian and French foreign policy aims differed over the Near East, the Balkans, and Poland.

By June 1812, the Tilsit agreement had broken down, and Napoleon's army invaded Russia. Initially, the Russian forces were under the command of General Barclay de Tolley. The Russians suffered several defeats, including the loss of the city of Smolensk, as Napoleon's forces moved deeper into Russia. Alexander then gave command of the Russian army to Field Marshal Mikhail Kutuzov. Kutuzov continued the policy of trading space for time and keeping the Russian army just out of reach of Napoleon's forces. Finally, under pressure from Russian public opinion, which was critical of the continuous retreats, Kutuzov took a stand on September 7, 1812, at the village of Borodino, west of Moscow. The ensuing Battle of Borodino was one of the epic battles of European history. Napoleon's forces numbering about 130,000, faced about 120,000 Russian troops. During the one-day battle some 42,000 Russian casualties occurred, with about 58,000 casualties among the Napoleonic forces. Each side claimed victory, although the Russian forces retreated and allowed Napoleon to enter Moscow unchallenged.

Napoleon believed that the occupation of Moscow would bring an end to the war with Russia. Instead, Napoleon's forces entered the city to find that most of Moscow's inhabitants had fled and that Alexander refused to negotiate. To make matters worse, a few hours after the Napoleonic army arrived in Moscow, numerous fires broke out in the city, causing perhaps three-quarters of the city's structures to burn down. Responsibility for the burning of Moscow has been disputed. Napoleon apparently believed that the fires were set on the orders of Count Fyodor Rostopchin, the governor-general of the city. The Russian public, on

the other hand, blamed careless French looters. The burning of Moscow had the effect of creating a swell of Russian patriotism and solidifying the determination of the Russians to resist Napoleon's forces.

After little more than a month in occupation, faced with insufficient food and shelter, Napoleon abandoned the burned-out shell of Moscow and retreated westward. The Russian army was able to maneuver the Napoleonic forces into retreating along the same route by which they had entered Russia, thus ensuring that there would be little or no fodder available for the horses and a shortage of supplies for the men. The shortage of provisions, combined with the onslaught of winter and continued harassment by Cossacks and peasant guerillas, resulted in the destruction of Napoleon's army without Kutuzov subjecting the Russian troops to another pitched battle.

Alexander insisted upon continuing the war after the last French troops had left Russian soil. A new coalition was formed among Russia, Austria, and Prussia. Their combined forces defeated Napoleon at the Battle of Leipzig in October 1813. By March 1814, Russian troops were in Paris. Alexander played a central role in the diplomatic negotiations that determined the form of the Bourbon restoration in France and the initial disposition of Napoleon on Elba. Alexander was also a key figure at the Congress of Vienna where the boundaries of the European states were redrawn.

HOLY ALLIANCE AND MYSTICISM

In September 1815, Russia, Austria, and Prussia signed the Holy Alliance at Alexander's urging. The Holy Alliance envisioned a Europe in which Christian principles would form the basis for international relations. Although the Holy Alliance had no practical effect, it provides a picture of Alexander's state of mind at that time.

Alexander had been a religious skeptic since his days as a student of Samborsky and LaHarpe. However, in November 1812, Alexander joined the Russian Bible Society headed by his friend Prince Alexander Golitsyn. The Russian Bible Society sought to translate and distribute Russian language scriptures. During 1814 Empress Elizabeth introduced Alexander to the mystic Johann Jung-Stilling. However, Alexander's immersion into mysticism began in earnest when he met Livonian Baroness Julie von Krudener in 1815. The height of her influence occurred in September 1815, when

Alexander staged a massive review of Russian troops on the plain of Vertus in France. As part of the ceremony, seven altars were erected and a Te Deum was celebrated. The Holy Alliance was signed a few weeks later. Alexander lost interest in von Krudener when he returned to Russia late in 1815.

MILITARY COLONIES AND LATTER YEARS

Alexander relied increasingly on Arakcheyev to oversee the day-to-day business of running the Russian empire. Arakcheyev's notable, though dubious, achievement was the creation of military colonies. The military colonies were an experiment in regimented agriculture. The underlying idea was to create a military reserve by organizing villages of peasant-soldiers who would be ready to fight when needed but who would also be self-supporting. The peasants were to wear uniforms, live precisely regimented lives in identical cottages, and farm their fields with parade ground precision. Individual preference was not taken into consideration when marriage partners were selected, and women were ordered to bear one child per year. Brutal penalties deterred deviations from the rules.

The last years of Alexander's reign were marred by uprisings in Arakcheyev's military colonies and the rebellion of the Semenovsky Regiment. Alexander's government became increasingly repressive. Censorship was intensified, tighter control was placed over the universities, and landlords were given more power over the fate of their serfs. Under the influence of Archimandrite Photius, Alexander moved away from mysticism and closer to the Russian Orthodox Church. Masonic lodges were closed, and the Russian Bible Society was blocked from its goal of distributing Bibles in Russian. The reign which had begun with the hope of liberal reforms had moved full circle and ended as a bastion of repression.

In the fall of 1825 Alexander accompanied Empress Elizabeth to Taganrog when her doctors ordered her to leave St. Petersburg and move to a warmer climate. Alexander became ill on October 27 while touring the Crimea. He died on December 1, 1825, in Taganrog. Although Alexander's body was returned to St. Petersburg for burial, the closed casket gave rise to rumors that Alexander had not died. A legend developed that a Siberian holy man by the name of Fyodor Kuzmich was Alexander living incognito.

JEAN K. BERGER

ALEXANDER II

(1818–1881), tsar and emperor of Russia from 1855 to 1881.

Alexander Nicholayevich Romanov is largely remembered for two events—his decision to emancipate the serfs and his assassination at the hands of revolutionaries. That the same tsar who finally ended serfdom in Russia would become the only tsar to be assassinated by political terrorists illustrates the turbulence of his time and its contradictions.

EDUCATION AND THE GREAT REFORMS

Alexander was born in Moscow on April 17, 1818, the oldest son of Nicholas I. His education, unlike that of his father, prepared him for his eventual role as tsar from an early age. Initially his upbringing consisted primarily of military matters. Nicholas had his son named the head of a hussar regiment when Alexander was a few days old, and he received promotions throughout childhood. When he was six, Captain K. K. Merder, the head of a Moscow military school, became his first tutor. Merder was a career army man who combined a love for the military with a compassion for others. Both qualities attracted the tsarevich and shaped his outlook. Alexander also received instruction from Vasily Zhukovsky, the famous poet, who crafted a plan for education that stressed virtue and enlightenment. The young tsarevich

Alexander II, the Tsar Liberator. © ARCHIVE PHOTOS, 530 WEST 25TH STREET, NEW YORK, NY 10001.

made journeys throughout the Russian Empire and in Europe, and in 1837 he became the first emperor to visit Siberia, where he even met with Decembrists and petitioned his father to improve their conditions. During his trip to Europe in 1838 Alexander fell in love with a princess from the small German state of Hesse-Darmstadt. Although Nicholas I desired a better match for his son, Alexander married Maria Alexandrova in April 1841. They would have eight children, two of whom died young. Their third child, Alexander, was born in 1845 and eventually became the heir.

Nicholas I included his son in both the symbolic and practical aspects of governing. Nicholas had not received training for his role and believed that he was unprepared for the responsibilities of a Russian autocrat. He did not want Alexander to have a similar experience, and he included his son in the frequent parades, military spectacles, and other symbolic aspects central to the Nicholavan political system. Alexander loved these events and he took pleasure in participating at the numerous exercises held by Nicholas I. In several important respects, this military culture shaped Alexander's beliefs about ruling Russia.

Alexander also became a member of imperial councils, supervised the operation of military schools, and even presided over State Council meetings when his father could not. In 1846, Nicholas named Alexander chairman of the Secret Committee on Peasant Affairs, where the tsarevich demonstrated support of the existing socio-political order. In short, Alexander grew up in a system that stressed the necessity of an autocrat for governing Russia and he learned to worship his father from an early age. His education and training gave no indication of the momentous decisions he would make as tsar.

Few would have predicated the circumstances in which Alexander became emperor. Nicholas I died in 1855 amidst the disastrous Crimean War. Russia's eventual loss was evident by the time of Nicholas's death, and the defeat did much to undermine the entire Nicholaven system and its ideology of Official Nationality. Alexander had absorbed his father's belief in the autocracy, but he was forced by the circumstances of war to adopt policies that would fundamentally change Russia and its political system.

Alexander became emperor on February 19, 1855, a day that would reappear again during the course of his reign. His coronation as Russian Emperor took place in Moscow on August 26, 1856. Between these two dates Alexander grappled with the ongoing war, which went from bad to worse. Sevastopol, the fortified city in the Crimea that became the defining site of the war, fell on September 9, 1855. Alexander began peace negotiations and signed the resulting Treaty of Paris on March 30, 1856. Russia lost its naval rights in the Black Sea in addition to 500,000 soldiers lost fighting the war. The prestige of the Russian army, which had acquired almost mythical status since 1812, dissipated with defeat. The events of the first year of his reign forced Alexander's hand—Crimea had demonstrated the necessity for reform, and Alexander acted.

Immediately after the war, Alexander uttered the most famous words of his reign when he answered a group of Moscow nobles in 1856 who asked about his intention to free the serfs: "I cannot tell you that I totally oppose this; we live in an era in which this must eventually happen. I believe that you are of the same opinion as I; therefore, it will be much better if this takes place from above than from below." Alexander's words speak volumes about the way in which the tsar conceived of reform—it was a necessity, but it was better to

enact change within the autocratic system. This blend of reform-mindedness with a simultaneous commitment to autocracy became the hallmark of the era that followed. Once he had decided on reform, Alexander II relied on the advice of his ministers and bureaucracies. Nevertheless, Alexander did much to end serfdom in Russia, an act his predecessors had failed to enact.

The process of emancipation was a complicated and controversial affair. It began in 1856, when Alexander II formed a secret committee to elicit proposals for the reform and did not end until 1861, when the emancipation decree was issued on February 19. In between these two dates Alexander dealt with a great deal of debate, opposition, and compromise. Emancipation affected twenty million serfs and nearly thirty million state peasants, or 8 percent of the Russian population. By contrast, four million slaves were freed in the United States in 1863. Although the end result did not fully satisfy anyone, a fundamental break had been made in the economy and society of Russia. Even Alexander Herzen, who had labeled Nicholas I as a "snake that strangled Russia," exclaimed: "Thou hast conquered, Galilean!" Because of Alexander's role, he became known as the Tsar-Liberator.

Once emancipation had been completed, Alexander proceeded to approve further reforms, often referred to by historians as the Great Reforms. The tsar himself did not participate as much in the changes that came after 1861, but Alexander appointed the men who would be responsible for drafting reforms and gave the final approval on the changes. Between 1864 and 1874 Alexander promulgated a new local government reform (creating the *zemstvo*), a new judicial reform, educational reforms, a relaxed censorship law, and a new military law. All were carried out in the new spirit of *glasnost*, or "giving voice," that Alexander advocated. The tsar relied on officials who had been trained during his father's years on the throne, and thus the reforms are also associated with the names of Nicholas Milyutin, Petr Valuev, Dmitry Milyutin, and other "enlightened bureaucrats." Additionally, Russians from all walks of life debated the reforms and their specifics in an atmosphere that contrasted starkly with Nicholas I's Russia.

This new spirit brought with it a multitude of reactions and opinions. Alexander, a committed autocrat throughout the reform era, had to deal with rebellions and revolutionaries almost immediately after launching his reforms. These reactions were

a natural product of the more relaxed era and of the policies Alexander advocated, even if he did not foresee all of their consequences. In particular, Alexander's decision to reform Russia helped to fuel a revolt in Poland, then a part of the Russian Empire. Polish nationalism in 1863 led to a Warsaw rebellion that demanded more freedoms. In the face of this opposition, Alexander reacted in the same manner as his father, brutally suppressing the revolt. Unlike his father, however, Alexander did not embark on a policy of Russification in other areas of the Empire, and even allowed the Finnish parliament to meet again in 1863 as a reward for loyalty to the empire.

At home, the reform era only served to embolden Russians who wanted the country to engage in more radical changes. The educated public in the 1850s and 1860s openly debated the details of the Great Reforms and found many of them wanting. As a result of his policies, Alexander helped to spawn a politically radical movement that called for an end to autocracy. A group that called itself "Land and Liberty" formed in Russia's universities and called for a more violent and total revolution among the Russian peasantry. A similar group known as the Organization made calls for radical change at the same time. On April 6, 1866, a member of this group, Dmitry Karakazov, fired six times at Alexander while he walked in the Summer Garden but spectacularly missed. Although the reform era was not officially over, 1866 marked a watershed in the life of Alexander II and his country. The tsar did not stay committed to the path of reform while the opposition that the era had unleashed only grew.

LATER YEARS

Alexander had let loose the forces that eventually killed him, but between 1866 and 1881 Russia experienced many more significant changes. Karakazov's attempt on Alexander's life came during a period of domestic turmoil for Alexander. The year before, the tsar's eldest son, Nicholas, died at the age of twenty-two. Three months after the assassination attempt, Alexander began an affair with an eighteen-year-old princess, Ekaterina Dolgorukaia, which lasted for the remainder of his life (he later married her). Responding to the growing revolutionary movement, Alexander increased the powers of the Third Section, the notorious secret police formed by Nicholas I. The reform era and the initial spirit associated with it had changed irrevocably by 1866 even if it had not run its course.

Tsar Alexander II. © HULTON-DEUTSCH COLLECTION/CORBIS

Alexander began to concentrate on his role as emperor during the late 1860s and 1870s. In particular, he engaged in empire building and eventually warfare. He oversaw the Russian conquest of Central Asia that brought Turkestan, Tashkent, Samarkand, Khiva, and Kokand under Russian control. The gains in Central Asia came with a diplomatic cost, however. Expansion so near to the borders of India ensured that England looked on with increasing alarm at Russian imperialism, and during this period a "cold war" developed between the two powers.

Russia also pursued a more aggressive stance toward the Ottoman Empire, in part fueled by the rise of pan-Slavism at home. When Orthodox subjects rebelled against Turkey in 1875, numerous Russians called on the tsar to aid their fellow Slavs. Alexander, reluctant at first, eventually gave in to public opinion, particularly after Ottoman forces in 1876 slaughtered nearly thirty thousand Bulgarians who had come to aid the insurgents. Russia declared war on April 12, 1877. Although Russia experienced some difficulty in defeating the Turks, particularly at the fortress of Plevna, the

war was presented to the Russian public as an attempt to liberate Orthodox subjects from Muslim oppression. Alexander's image as liberator featured prominently in the popular prints, press reports, and other accounts of the war. When Russian forces took Plevna in December 1877, they began a march to Istanbul that brought them to the gates of the Turkish capital. In the Caucasus, the final act took place on February 19, 1878, when Russian forces "liberated" the Turkish city of Erzerum. Russia and the Ottoman Empire signed the Treaty of San Stefano in March, which guaranteed massive Russian gains in the region. Alexander once more appeared to fulfill the role of Tsar-Liberator.

Alarmed by these developments, the European powers, including Russia's Prussian and Austrian allies, held an international conference in Berlin. Alexander saw most of his gains whittled away in an effort to prevent Russian hegemony in the Balkans. The resulting confusions helped to sow the seeds for the origins of World War I, but also provoked widespread disillusionment in Russia. Alexander considered the Berlin Treaty to be the worst moment in his career.

Alexander's domestic troubles only increased after 1878. The revolutionaries had not given up their opposition to the progress and scope of reform, and many Russian radicals began to focus their attention on the autocracy as the major impediment to future changes. A new Land and Freedom group emerged in the 1870s that called for all land to be given to the peasants and for a government that listened to "the will of the people." By the end of the decade, the organization had split into two groups. The Black Repartition focused on the land question, while the People's Will sought to establish a new political system in Russia by assassinating the tsar. After numerous attempts, they succeeded in their quest on March 1, 1881. As Alexander rode near the Catherine Canal, a bomb went off near the tsar's carriage, injuring several people. Alexander stepped out to inspect the damage when a second bomb landed at his feet and exploded. He was carried to the Winter Palace, where he died from massive blood loss.

Ironically, or perhaps fittingly, Alexander II was on his way to discuss the possibility of establishing a national assembly and a new constitution. This final reform would not be completed, and Alexander's era ended with him. The tsar's son and grandson, the future Alexander III and Nicholas II, were at the deathbed, and the sight of the autocrat

dying as a result of his reforms would shape their respective rules. As Larissa Zakharova has concluded, the act of March 1 initiated the bloody trail to Russia's tragic twentieth century. Alexander II's tragedy became Russia's.

STEPHEN M. NORRIS

ALEXANDER III

(1845–1894), Alexander Alexandrovich, emperor of Russia from March 1, 1881 to October 20, 1894.

The second son of Alexander Nikolayevich (Alexander II), the heir to the Russian throne, the future Alexander III was born in the Winter Palace in St. Petersburg in February 1845. He was one of six brothers and was educated alongside Nicholas (b. 1843) who, after the death of Nicholas I in 1855, became the heir to the throne. One of the most im-

portant parts of their education was schooling in military matters. This was especially important for Alexander, who was expected to occupy his time with the army and never to have to undertake anything other than ceremonial duties. His situation changed dramatically in 1865 when Nicholas died from meningitis and Alexander became heir to his father, Alexander II. The prospect of the twenty-year-old Alexander becoming emperor horrified his tutors. He had been a dogged pupil, displaying no great spark of intelligence, and had shown no real maturity during his studies. But after his brother's death, a major effort was made to enhance Alexander's education to prepare him properly to become emperor. His contemporaries commented on his honesty and decency, but they also noted Alexander's obstinacy and his reluctance to change his mind. For Alexander himself, his marriage in 1866 to the Danish princess Dagmar was more important than education. She had been engaged to his brother Nicholas before his death, and marriage to Alexander was seen by both sides as an "alliance," rather than being a love-match. But the marriage turned out to be extremely happy and Maria Fyodorovna (as his wife was known in Russia) became an important support to her husband. Alexander was devoted to his family and enjoyed being with his five children: Nicholas (b.1868), George (b. 1871), Xenia (b. 1875), Mikhail (b. 1878), and Olga (b. 1882).

An assassination attempt on Alexander II in 1866 brought home to the new heir to the throne the gravity of his status. He did not relish the prospect of becoming emperor, but nevertheless engaged in the official duties that were required of him with determination and interest. While his father was implementing the Great Reforms of the 1860s and 1870s, the heir to the throne was developing views that conflicted fundamentally with those of Alexander II. The young Alexander believed firmly in the dominance of the Russian autocracy and was deeply opposed to any attempt to weaken the autocrat's grip on the country. He was especially keen to see Russian interests prevail across the empire and wanted severe treatment for national minority groups, such as the Poles, that tried to assert their autonomy. These views were reinforced by Alexander's experience of the Russo-Turkish War of 1877–1878. He argued strongly in favor of Russian intervention in support of the Slav population of the Ottoman Empire and fought alongside Russian troops. The war strengthened his belief in the danger of weak

Tsar Alexander III. © ARCHIVO ICONOGRAFICO, S.A./CORBIS

authority and this was especially relevant to Russia itself at the end of the 1870s. Terrorist activity was increasing and Alexander wrote in his diary of the "horrible and disgusting years" that Russia was going through. There were repeated attempts on the emperor's life and, in March 1881, terrorists from the People's Will group threw a bomb at Alexander II and succeeded in killing him. The emperor died, horribly injured, in the arms of his wife and son.

The assassination of the Tsar-Liberator confirmed the new Alexander III in his deeply conservative views. He moved very swiftly to distance himself from the policies and ethos of his father. The new emperor showed no mercy toward his father's killers, rejecting all appeals for clemency for them. In the immediate aftermath of the assassination, legislation was introduced giving the government wide use of emergency powers. At the time of his death, Alexander II had been about to approve the establishment of a national consultative assembly, but the new emperor very quickly made it clear that he would not permit limitations on autocratic rule, and the project was abandoned. The new emperor and his family moved out of St.

Petersburg to live in the palace at Gatchina, a grim fortress-like building associated with Paul I. It was clear that the whole tone of Alexander III's reign was to be different. Instead of the European-orientated reforms of Alexander II, the new emperor was determined to follow the "Russian path," which he understood to be a forceful autocracy, proudly national in its actions and with the Orthodox Church providing a link between emperor and the people. Many of Alexander II's ministers and advisers were rapidly removed from office and were replaced by men with impeccable conservative credentials. Prime amongst them were Konstantin Pobedonostsev, officially only procurator-general of the Holy Synod (the lay official who governed the Orthodox Church), but who played a key role in guiding policy across a wide range of areas, and Dmitry Tolstoy, minister of internal affairs for most of the 1880s. The non-Russian nationalities of the empire were subjected to cultural and administrative Russification. This was especially fierce in the Baltic provinces of the empire, where the use of the Russian language was made compulsory in the courts and in local government and where the local German-speaking university was compelled to provide teaching in Russian. This approach also included encouraging non-Orthodox peoples to convert to the Orthodox religion, sometimes by offering them incentives in the form of land grants. In Poland, most education had to be provided in Russian and the Roman Catholic Church could only exist under considerable restrictions.

Alexander III and his ministers also tried to claw back some elements of the Great Reforms of the 1860s that had seemed to set Russia on the path toward a more open political system. The post of justice of the peace, established by the legal reform of 1864, was abolished in most of Russia in 1889 and its legal functions transferred to the new post of land captain. This official had very wide powers over the peasantry and was intended to strengthen the hold that the government had over its rural population. The land captain became a much-disliked figure in much of peasant Russia. The government also limited the powers of the zemstvos that had been established in the 1860s. These elected local councils had been given responsibility for the provision of many local services and "zemstvo liberalism" had become a thorn in the side of the autocracy, as some local councils had pressed for the principle of representative government to be extended to national government. Alexander III acted to narrow the franchise for zemstvo elections and

to restrict the amount of taxation that the zemstvo could levy. These moves were intended to neuter the zemstvo and reduce the influence they could have on the population, but Alexander never dared go so far as to actually abolish the local councils. This typified the problems facing Alexander III. While he wanted to return to the traditional ethos of Russian autocracy, he was forced to recognize that, in practical terms, he could not turn the clock back. The reforms of the 1860s had become so firmly embedded in Russian society that they could not simply be undone. All that the emperor could do was to ensure that the iron fist of autocracy was wielded as effectively as possible.

Some of Alexander's policies made matters more difficult for the autocracy. At the end of the 1880s, the government's economic policies became oriented toward stimulating industrial growth. A major part in this was played by Sergei Witte, who had made his career in the railway industry before coming to work in government, and who became minister of finance in 1892. Witte deeply admired Alexander III and believed that Russia could be both an autocracy and a successful industrial power. The government, however, failed to recognize the social and political consequences of the industrial boom that Russia enjoyed during the 1890s and the new industrial working class began to flex its muscles and to demand better working conditions and political change. The emperor also had a personal interest in Russia's foreign policy. His Danish wife helped him develop an instinctive distrust of Germany and the 1880s witnessed Russia's gradual disengagement from its traditional alliance with Germany and Austria. There were important economic reasons for Russia's new diplomatic direction: Industrial growth required investment from abroad and the most promising source of capital was France. In 1894 Russia and France signed an alliance that was to be significant both for its part in stimulating Russian industry and for the way in which it began the reshaping of Europe's diplomatic map as the continent began to divide into the two groups that would sit on opposite sides during World War I. Alexander III did not live long enough to see the results of his work. Despite his large frame and apparent strength, he developed kidney disease and died at the age of forty-nine in October 1894.

MARTIN DIMNIK

ALEXANDER MIKHAILOVICH

(1301–1339), prince of Tver and grand prince of Vladimir.

Alexander Mikhailovich was the second son of Michael Yaroslavich. In 1326, after Khan Uzbek had executed Alexander's elder brother Dmitry, Alexander became prince of Tver and received the patent for the grand princely throne of Vladimir. The Novgorodians also welcomed him as their prince. The following year Uzbek sent his cousin Chol-Khan to Tver, but the latter's oppressive measures incited the citizens to revolt. Other towns joined them in massacring Tatar agents, troops, and merchants. In 1328 the khan therefore punished Alexander for the revolt of his subjects by making his rival for Vladimir, Ivan I Danilovich "Kalita" of Moscow, grand prince. The khan also gave him a large Tatar force with which he devastated Tver. Alexander sought refuge in Novgorod but on this occasion the townspeople turned him away. He fled to Pskov where the citizens, who were seeking independence from Novgorod, invited him to be their prince and refused to hand him over to the khan. Kalita, who was determined to destroy Tver as a political rival, had Metropolitan Feognost excommunicate Alexander and the people of Pskov. In 1329 Alexander fled to Lithuania in order to free Pskov from the Church's ban. But after some two years he returned to Pskov, where he ruled until 1337. In that year the khan summoned him to the Golden Horde and reinstated him in Tver. Subsequently many boyars deserted him and fled to Moscow to help Kalita fight for the grand princely throne. In 1339 the khan summoned Alexander to Saray and executed him on October 22nd or 28th of that year. After Alexander's death, Tver declined in importance, and the prince of Moscow became the most powerful ruler in northeast Russia.

ALEXANDER YAROSLAVICH

(1220–1263), known as Alexander Nevsky, prince of Novgorod, grand prince of Vladimir, grand prince of Kiev, and progenitor of the princes of Moscow.

Born around 1220, Alexander was the grandson of Vsevolod Yurevich "Big Nest." Between the years 1228 and 1233 he and his elder brother, Fyodor, ruled Novgorod in the name of their father Yaroslav of Pereyaslavl Zalesky. After Fyodor's death in 1233, Alexander's younger brother Andrei helped him to expand Novgorod's lands and to increase the prince's control over the town. In 1238 the Tatars invaded Suzdalia but bypassed Novgorod. Nevertheless, the town's expansion into the neighboring Finnish lands was challenged by the Swedes and by German Knights (the Order of Livonian Swordbearers, joined later by the Teutonic Order). In 1240, when the Swedes marched against Novgorod, Alexander and a small force confronted the enemy at the river Neva and routed them. He thereby secured Novgorod's outlet to the Baltic Sea and earned the sobriquet "Nevsky" (of the Neva). After his brilliant victory, he quarreled with the Novgorodians and withdrew to Pereyaslavl Zalesky. But less than a year later the Germans seized Pskov and threatened Novgorod's commerce, therewith forcing the citizens to bring back Nevsky on his terms. He arrived in 1241 and began reclaiming Novgorod's lost territories, including neighboring Pskov. He confronted the main force of Teutonic Knights on the frozen Lake Chud (Lake Peypus) where, on April 5, 1242, he defeated them in the famous "battle on the ice." The next year the Knights and the Novgorodians concluded peace. This allowed Nevsky to continue asserting Novgorod's jurisdiction over the Finns and to wage war against the encroaching Lithuanians.

After his father died in 1246, Nevsky visited Khan Batu in Saray who sent him to the Great Khan at Karakorum in Mongolia. He came home in 1249 as the grand prince of Kiev and of all Rus, including Novgorod, to which he returned. However, his younger brother Andrei received the patrimonial domain of Vladimir on the Klyazma. After Nevsky visited the Golden Horde in 1252, the khan sent a punitive force against Andrei because he had rebelled against the khan. The Tatars drove him out of Vladimir. Nevsky succeeded him and gained jurisdiction over Suzdalia and Novgorod. Because he was a subservient vassal, the khan let him centralize his control over the other towns of Suzdalia. He also served the khan faithfully by suppressing opposition to the khan's policies, with the help of the Tatar army. Nevertheless, after the citizens of many towns rebelled against the Tatar census takers, Nevsky interceded, evidently successfully, on behalf of his people. In 1262, on his fourth visit to the Golden Horde, he fell ill. While returning home he became a monk and died at Gorodets on the Volga on November 14, 1263.

Although Nevsky's valor was generally admired, his collaboration with the Tatars was criticized by his contemporaries and by historians. Metropolitan Cyril, however, exonerated the prince in his "Life of Alexander Nevsky," and the church canonized him during the reign of Tsar Ivan IV (the Terrible).

MARTIN DIMNIK

ALEXANDRA FEDOROVNA

(1872–1918), wife of Tsar Nicholas II and last empress of Russia.

Alexandra Fedorovna Romanova was at the center of the political drama that led to the down-

fall of the Russian monarchy in 1917. A princess of the grand duchy of Hesse-Darmstadt in Germany and granddaughter of England's Queen Victoria, she lost her mother and younger sister to diphtheria when she was still a child, and she responded to this loss by turning inward. This tendency toward isolation intensified after her 1894 marriage to Nicholas, when her principles came into conflict with the reality of Russian court life. Scandalized by the seeming decadence of the aristocracy, she withdrew from society, eliciting the scorn of the Russian social elite.

Alexandra dedicated most of her time to her four daughters (Olga, Tatiana, Maria, and Anastasia) and her son, Alexei, who was born in 1904. Soon after the birth of this long-awaited male heir to the throne, it was discovered that Alexei had hemophilia. His illness became Alexandra's primary concern. Grigory Yefimovich Rasputin, a self-styled holy man, managed to stop Alexei's bleeding and thus became important to the royal family. Rasputin's closeness to the ruling family led to speculation about his influence over political decisions and to disdain for the royal family among the educated layers of society. With the start of World War I, which pitted Russia against Germany, Alexandra's German background further contributed to her unpopularity. Many accused her of heading a German faction in the government. Although these charges were groundless, they served to undermine the authority of the monarchy, thus helping pave the way for the February Revolution of 1917. The Bolsheviks brutally murdered the entire royal family in July 1918.

The negative image of Alexandra shaped by her detractors has given way to more objective, though not always dispassionate, accounts of her life. She is most often portrayed as a tragic figure and as a dedicated wife and mother. In 1981, the Russian Orthodox Church Abroad canonized Alexandra, along with her family, for accepting death with faith in God and humility, and the Moscow Patriarchate of the Russian Orthodox Church followed suit in 2000.

NICHOLAS GANSON

ALEXANDROV, GRIGORY ALEXANDROVICH

(1903–1983), pseudonym of Grigory A. Mormonenko, Soviet film director.

The leading director of musical comedies in the Stalin era, Alexandrov began his artistic career as a costume and set designer for a provincial opera company. By 1921, he was a member of the Proletkult theater in Moscow, where he met Sergei Mikhailovich Eisenstein. Alexandrov served as assistant director on all of Eisenstein's silent films and took part in an ill-fated trip to Hollywood and Mexico, which lasted from 1929 to 1932 and ended in Eisenstein's disgrace and the entourage's forced return home.

After this debacle, Alexandrov found it prudent to strike out on his own as a film director. By returning to his artistic roots in musical theater, he found a way to work successfully within the strictures of Socialist Realism by adapting the conventions of the Hollywood musical comedy to Soviet realities. His films from this era were *The Jolly Fellows* (1934), *The Circus* (1936), *Volga, Volga* (1938), and *The Shining Path* (1940), all of which enjoyed great popularity with Soviet audiences at a time when entertainment was sorely needed. Central to the success of these movies were the cheerful songs by composer Isaak Dunaevsky's and the comedic talents of Liubov Orlova, Alexandrov's leading lady and wife.

Alexandrov was a great favorite of Stalin's, and was named People's Artist of the USSR in 1948, the country's highest award for artistic achievement. Although Alexandrov continued to direct feature films until 1960, his most notable post-war venture was the Cold War classic, *Meeting on the Elba* (1949). This film was quite a departure from his oeuvre of the 1930s. Alexandrov's final two projects were tributes. He honored the mentor of his youth by restoring and reconstructing the fragments of Eisenstein's *Que Viva Mexico!* (1979), and he commemorated his wife's life and art in *Liubov Orlova* (1983).

DENISE J. YOUNGBLOOD

ALEXEI I, PATRIARCH

(1877–1970), patriarch of the Russian Orthodox Church from January 31, 1945, to April 17, 1970.

Sergei Vladimirovich Simansky took monastic vows in 1902. He served as rector in several seminaries and was subsequently made a bishop. He became metropolitan in Leningrad in 1933 and endured the German siege of that city during World War II. According to eyewitness accounts of his situation in 1937, he anticipated arrest at any moment, for virtually all of his fellow priests had been seized by then. He celebrated the liturgy with the only deacon left in Leningrad, and even that coreligionist soon died. During the siege of the city he lived on the edge of starvation. The members of the cathedral choir were dying around him, and the choirmaster himself died in the middle of a church service. Alexei himself barely had the strength to clear a path to the cathedral through the snow in winter.

Under war-time pressures, Stalin permitted the election of a patriarch, but the one chosen soon died. Alexei was elected in January 1945. He reopened a few seminaries and convents and consecrated some new bishops. Of the parishes that were still functioning at the time, most were in territories that had been recently annexed or reoccupied by the USSR. In fact, one could travel a thousand kilometers on the Trans-Siberian Railroad without passing a single working church. The later anti-religious campaign of communist general secretary Nikita Khrushchev resulted in the closing of almost half of those churches still functioning in the 1950s.

Alexei reached out to Orthodox religious communities abroad. He was active in the World Peace movement, supporting Soviet positions. The Russian Church joined the World Council of Churches, and Alexei cultivated good relations with Western Protestants. He was criticized for his cooperation with the Soviet regime, but no doubt believed that

collaboration was necessary for the church's survival.

NATHANIEL DAVIS

ALEXEI II, PATRIARCH

(b. 1929), secular name Alexei Mikhailovich Ridiger, primate of the Russian Orthodox Church (1990–).

Born in Tallinn, of Russian and Baltic German extraction, Alexei graduated from the Leningrad Theological Seminary in 1949 and was ordained in 1950. In 1961 he was consecrated bishop of Estonia, and later appointed chancellor of the Moscow Patriarchate (1964). In 1986 he became metropolitan of Leningrad, and was elected patriarch on June 7, 1990.

From his election to early 2003, over 13,000 parishes and 460 monasteries were established. A decade after his enthronement, nearly three-quarters of Russians considered themselves members of the church (although only 6% were active churchgoers), and the patriarch enjoyed high approval ratings as the perceived spokesman for Russia's spiritual traditions.

Alexei, a former USSR people's deputy, envisioned a partnership between church and state to promote morality and the popular welfare. He met regularly with government officials to discuss policy, and signed agreements with ministries detailing plans for church-state cooperation in fields such as education. His archpastoral blessing of Boris Yeltsin after his 1991 election began a relationship between patriarch and president that continued under Vladimir Putin. Alexei saw the church as essential for preserving civil peace in society, and used his position to promote dialogue among various parties, gaining much credibility after trying to mediate the 1993 standoff between Yeltsin and the Supreme Soviet.

Alexei's leadership was not without controversy. Some have voiced concerns that the church was too concerned with institutional status at the expense of pursuing genuine spiritual revival. Busi-

ness ventures designed to raise funds for a cash-strapped church were called into question. Alexei was criticized for his role in promoting the 1997 legislation On Religious Freedom which placed limitations on the rights of nontraditional faiths. Allegations surfaced about KGB collaboration (under the codename Drozdov), something he consistently denied. He justified his Soviet-era conduct (one CPSU document described him as "most loyal") as necessary to keep churches from closing down. Defenders note that he was removed as chancellor after appealing to Mikhail Gorbachev to reintroduce religious values into Soviet society.

Alexei was outspoken in his determination to preserve the Moscow Patriarchate as a unified entity, eschewing the creation of independent churches in the former Soviet republics. Although most parishes in Ukraine remained affiliated to Moscow, two other Orthodox jurisdictions competed for the allegiance of the faithful. When the Estonian government turned to Ecumenical Patriarch Bartholomew to restore a church administration independent of Moscow's authority, Alexei briefly broke communion with him (1996), but agreed to a settlement creating two jurisdictions in Estonia.

The patriarch worked to preserve a balance between liberal and conservative views within the church. The Jubilee Bishops' Council (2000) ratified a comprehensive social doctrine that laid out positions on many issues ranging from politics (offering a qualified endorsement of democracy) to bioethics. Compromises on other contentious questions (participation in the ecumenical movement, the canonization of Nicholas II, and so forth) were also reached. In the end, the council reaffirmed Alexei's vision that the church should emerge as a leading and influential institution in post-Soviet Russian society.

NIKOLAS K. GVOSDEV

ALEXEI MIKHAILOVICH

(1629–1676), the second Romanov tsar (r. 1645–1676) and the most significant figure in Russian history between the period of anarchy known as the “Time of Troubles” (*smutnoye vremya*) and the accession of his son, Peter I (the Great).

The reign of Tsar Alexei Mikhailovich was notable for a codification of Russian law that was to remain the standard until the nineteenth century, for the acquisition of Kiev and eastern Ukraine from Poland-Lithuania, and for church reforms. Alexei also laid the foundations for the modernization of the army, introduced elements of Western culture to the court, and, despite a series of wars and rebellions, strengthened the autocracy and the authority of central government. He anticipated directions his son Peter would take: He substituted ability and service for hereditary and precedent as qualifications for appointments and promotions; engaged Dutch shipwrights to lay down the first Russian flotilla (for service in the Caspian); and introduced other forms of Western technology and engaged many military and civil experts from the West. Not all of his initiatives succeeded, however. His attempt to seize the Baltic port of Riga was thwarted by the Swedes, and his flotilla based at Astrakhan was burned by rebels. Nevertheless Russia emerged as a great European power in his reign.

REPUTATION AND ITS ORIGINS

Despite his importance, Alexei’s reputation stands low in the estimation of historians. Earlier works, by Slavophiles, religious traditionalists, and those nostalgic for the old Russian values, depict him as pious, caring, ceremonious, occasionally angry, yet essentially spiritual, distracted from politics and policy-making. Vladimir Soloviev concluded that he was indecisive, afraid of confrontation, even sly. Vasily Klyuchevsky, Sergei Platonov, and most later historians, Russian and Western, also conclude that he was weak, dominated by favorites. This erroneous view derives from several sources: from the Petrine legend created by Peter’s acolytes and successors; from his soubriquet *tishaysheyshy*, the diplomatic title *Serenissimus* (Most Serene Highness), which was taken out of context to mean “quietest,” “gentlest,” and, metaphorically, even “most underhanded”; from the fact that the surviving papers from Alexei’s Private Office papers were not published until the first decades of the twentieth century (even though registered in the

Tsar Alexei Mikhailovich holding symbols of Russian state power. THE ART ARCHIVE/RUSSIAN HISTORICAL MUSEUM MOSCOW/DAGLI ORTI

early eighteenth century by order of Peter himself) and were ignored by most historians thereafter.

EDUCATION AND FORMATION

Alexei was brought up as a prince and educated as a future ruler. In 1633 an experienced minister, Boris Ivanovich Morozov, soon to be promoted to the highest rank (boyar), and to membership of the tsar’s Council (*duma*), was given charge of the boy. He chose the tsarevich’s tutors, provided an entourage for him of about twenty boys of good family who were to wait on and play with him. The brightest of these, including Artamon Matveyev, who was to serve him as a minister, were also to share his lessons. Miniature weapons and a model ship figured prominently among his toys. Leisure included tobogganing and fencing, backgammon and chess.

The tsarevich’s formal lessons began at the age of five with reading. Writing was introduced at seven, and music (church cantillation) at eight. Alexei also memorized prayers, learned Psalms and

the Acts of the Apostles, and read Bible stories (chiefly Old Testament). Exemplary models were commended to him: the learned St. Abraham, the Patriotic St. Sergius, St. Alexis, who was credited with bringing stability to the Russian land, and the young Tsar Ivan IV (the Terrible), conqueror of the Tatar khanates of Kazan, Astrakhan, and Siberia.

At nine his education became more secular and practical, as his tutors were seconded from government offices rather than the clergy. Morozov himself could explain the governmental machine, finance, and elements of statecraft. Books on mathematics, hydraulics, gunnery, foreign affairs, cosmography, and geography were borrowed from government departments. From the age of ten, Alexei was an unseen witness of the reception of ambassadors from east and west. At thirteen he made his first public appearance, sitting on an ivory throne beside his father at a formal reception; and thereafter he played a very visible role. This familiarized him with some of his future duties; it also reinforced his right to rule. The Romanov dynasty was new. Alexei would be the first to succeed. Hence the urgency, when his ailing father died in July 1645, with which oaths of loyalty were extracted from every courtier, bureaucrat, and soldier. Even so, the reign was to be difficult.

FIRST YEARS AS TSAR

Morozov headed the new government, taking personal charge of key departments; the coronation was fixed for November 1645 (late September O.S.), and a new program was drawn up, including army modernization and financial, administrative, and legal reform. The young tsar's chief interest, however, was church reform. There were three reasons for giving this priority:

1. In Russia, as in the later Roman Empire, church and state were mutually supportive. The church acted as the ideological arm of the state, proclaimed its orders, helped administer rural areas, and provided prisons, welfare services, and resources when the state called for them.
2. Since Russia was the richest, most powerful state in the Orthodox communion, large Orthodox populations in neighboring Poland, which was Catholic, looked to it for support, and many churchmen in the Ottoman sphere, including the Balkans, came to Moscow for financial support and were therefore receptive to Moscow's political influence. This gave the church some clout in foreign affairs. However,

since Russian liturgical practice differed from that of other communities, Alexei thought it important to reform the liturgy to conform to the best Greek practice. (In doing so he was to take erroneous advice, but this was discovered too late.)

3. The rapid exploitation of Siberia had made up most of the economic damage of the Time of Troubles, but the legacy of social and moral dislocation was still evident. A program similar to that which the Hapsburg rulers had mounted in Central Europe to combat Protestantism and other forms of dissent had to be implemented if the increasingly militant Catholicism of Poland was to be countered, and pagan practices, still rife in Russia's countryside, stamped out.

The Moscow riots of 1648 underscored the urgency. The trigger was a tax on salt that, ironically, had only recently been rescinded, but as the movement grew, demands broadened. Alexei confronted the crowd twice, promising redress and pleading for Morozov's life. Morozov was spirited away to the safety of a distant monastery, but the mob lynched two senior officials, looted many houses, and started fires. Some of the musketeer guards (*streltsy*) sympathized with the crowd, and seditious rumors spread to the effect that the tsar was merely a creature of his advisers. Alexei had to undertake to redress grievances and call an Assembly of the Land (*zemskii sobor*) before order could be restored (and the Musketeer Corps purged).

The outcome was a law code (*Ulozhenie*) in 1649, which updated and consolidated the laws of Russia, recorded common law practices, and included elements of Roman Law and the Lithuanian Statute as well as Russian secular and canon law. Alexei was patently acquainted with its content, and he would subsequently refer to its principles, such as justice (the administration of the law) being "equal for all."

PATRIARCH NIKON AND THE RUSSIAN CHURCH

In April 1652 when the Russian primate, Patriarch Joseph, died, Alexei had already decided on his successor. He had met Nikon, now in his early fifties and an impressive six feet, five inches tall, seven years before. He had since installed him as abbot of a Moscow monastery in his gift and thereafter met him regularly. He had subsequently proposed him

to the metropolitan see of Novgorod, the second most senior position in the Russian church. However, Nikon insisted on conditions for accepting nomination as patriarch. His demand that the tsar obey him in all matters relating to the church's spiritual authority was not as unacceptable as might appear. Nikon had to impose discipline on laity and clergy alike, and the tsar felt a duty to give a lead, to demonstrate that patriarch and tsar were working in symphony. But Nikon's second demand was more difficult.

One way to improve observance and conformity was to create new saints and transfer their remains to Moscow in gripping public ceremonies. The new saints included two patriarchs who had suffered during the Polish intervention: Job, who had been imprisoned by the False Dmitry, and Hermogen, who had been starved to death by the Poles in 1612. But Nikon also insisted that the former metropolitan Philip, strangled on Tsar Ivan's orders, be canonized and that Alexei express contrition in public for Ivan's sin. Though Ivan was patently unbalanced in his later years, he was a model for Alexei, who set out to pursue Ivan's strategic objectives.

The "Prayer Letter" Alexei eventually gave Nikon to read aloud over Philip's grave at Solovka was cleverly ambivalent. Often interpreted as a submission by the tsar to the church, it asserts that the acknowledgement of Ivan's sin has earned him forgiveness, and is, in effect, a rehabilitation of Ivan. Nikon was duly installed as patriarch. The reforms went ahead.

WAR WITH POLAND-LITHUANIA

When the war over Ukraine began in 1654, Alexei joined his troops on campaign, leaving Nikon to act as regent in Moscow in his absence. The city of Smolensk was retaken, and Khmelnytsky, leader of the Ukrainian Cossack insurgents, whom Moscow had been supplying for some time, made formal submission to the tsar's representative. Glittering success also attended the 1655 campaign. Operations were unaffected by an outbreak of bubonic plague in Moscow, with which Nikon coped efficiently. Most of Lithuania, including its capital Vilnius, fell to Russian troops that summer. This opened the road to the Baltic, and in 1656 the army moved on to besiege the Swedish port of Riga. But Riga held out, there was a Polish resurgence, and part of the Ukrainian elite abandoned their allegiance to the tsar. The war was to drag on for an-

other decade, bringing chaos to Ukraine and mounting costs to Moscow. It also occasioned the breach with Nikon.

To consolidate his rule of Ukrainian and Belarus territory, formerly under Poland, Alexei urgently needed to fill the vacant metropolitan see of Kiev. The last incumbent had died in 1657 (the same year as Khmelnytsky) but Nikon refused to sanction the appointment, arguing that Kiev came under the jurisdiction of the superior see of Constantinople. The tsar made his disapproval public. Nikon relinquished his duties but refused to resign, and the matter remained unresolved until 1666 when Nikon was impeached by a synod attended by the patriarchs of Alexandria and Antioch, the tsar acting as prosecutor. The synod found against Nikon and deposed him, but endorsed his liturgical reforms, which were unpopular with Avvakum and other Old Believers. However, Nikon had been set up as a scapegoat for the unpopular measures against Old Belief. Although Alexei failed to persuade Avvakum to conform, he retained the rebellious archpriest's respect. The church was to remain at an uneasy peace for the remainder of the reign.

Reforms occasioned by the demands of war included three significant developments.

1. *The formation of the tsar's Private Office.* Staffed by able young bureaucrats, it kept the tsar closely and confidentially informed, intervened at the tsar's behest in both government and church affairs, and supervised the conduct of the war, when necessary overriding generals, ministers, and provincial governors. Those who served in the Office often went on to occupy the highest posts; several entered the Duma. The Private Office became an effective instrument for personal, autocratic rule.
2. It hastened *military modernization.* The tsar regularly engaged foreign officers to drill Russian servicemen in the latest Western methods. Weaponry and artillery were improved and their production expanded. By the end of the reign, except for the traditional cavalry (still useful for steppe warfare), the army had been transformed. Aside from the crack musketeer guards, commanded by Artamon Matveyev, the musketeer corps was sidelined, and "regiments of new formation" became the core of the army.
3. Though *the war provided economic stimulus*, especially to mining, metallurgy, and textiles, it also occasioned insoluble financial problems.

With expenditure soaring above income, and being short of specie, Alexei sanctioned the issue of copper coins instead of silver. Ukrainian servicemen, finding their pay would not buy them necessities of life, became rebellious; and, as inflation increased, dismay and anger infected the cities. A crowd from Moscow reached the tsar at his summer palace at Kolomenskoye. The rising was ruthlessly suppressed, but in 1663 the copper coinage was withdrawn, though other financial demands were to be made of the people.

ECONOMIC POLICY

Alexei was never to solve the fiscal problem, although he did adopt some positive economic policies. He improved productivity on his own estates; encouraged peasants to take profitable initiatives; sponsored trading expeditions to farthest Siberia, China, and India; protected the profitable trade with Persia; established a glass factory, encouraged prospectors, and brought in Western manufacturers as well as experts in military technology; and in 1667 introduced a new trade statute designed to protect Russian merchants from foreign competitors and from intrusive officialdom. Yet he also encouraged transit trade within Russia, helping develop a common Russian market.

The year 1667, which saw the condemnation of Nikon, also saw the conclusion, at Andrusovo, of the long war with Poland. Under its terms Russia kept all Ukraine east of the Dnieper River and temporary control of Kiev (which soon became permanent). This was a huge accretion of territory, providing a launching pad for future expansion both westward and to the south. The cost had been heavy, but Poland had suffered more. Broken as a great power, it ceased to be a threat to Russia. Alexei had ensured that neither the hereditary nobility nor the church would impede the free exercise of autocratic, centralizing power.

Both strategic policy and church reform directed Moscow's attention westward. Alexei became interested in acquiring the crown of Catholic Poland and his eldest surviving son, Tsarevich Alexei, was taught Polish and Latin. The boy's tutor, Simeon Polotsky, who was also the court poet, had been brought to Moscow with other bearers of Western learning and culture from occupied Belarus and Ukraine. Insulated from the mass of Russians, their influence was confined to court. Similarly, foreign servicemen and experts were confined to Moscow's Foreign Suburb when off duty.

Nevertheless they were the basis of Russia's Westernization; and the tsar chose his second wife, Natalia Naryshkina, from the suburb. Their child, Peter, was to be reviled as the son of Nikon. But as Wuchter's portrait of Alexei demonstrates, he was clearly Peter's father, and in spirit as well as genetically.

Through his policies of modernization, his church reforms, his introduction of Ukrainian learning (and hence elements of Catholic learning), Alexei had, wittingly and unwittingly, pierced Russia's isolationism. But he was not to see all the fruits of this work. Worn down by three decades of political and military crises for which as autocrat he bore sole responsibility, Alexei died of renal and heart disease on January 29, 1676.

PHILIP LONGWORTH

ALEXEI NIKOLAYEVICH

(1904–1918), last of the Romanov dynasty of Russia.

Alexei Nikolayevich Romanov was the only son of Tsar Nicholas II and Empress Alexandra and the youngest member of Russia's last royal family. The Romanovs' elation over the birth of an heir to the throne quickly turned to worry, when doctors diagnosed Alexei with hemophilia, a hereditary disorder preventing the proper clotting of blood. Despite bouts of severe physical pain, Alexei was a happy and mischievous boy. Nonetheless, the unpredictable ebbs and flows in his condition dictated the mood of the tightly knit royal family. When Alexei was not well, melancholy reigned in the Romanov home.

Tsarevich Alexei Nikolayevich, age 11, and his mother, Tsarina Alexandra Fedorovna. © HULTON-DEUTSCH COLLECTION/CORBIS

After the doctors admitted that they could find no way to ease the boy's suffering, Empress Alexandra turned to a Siberian peasant and self-styled holy man, Grigory Yefimovich Rasputin. Rasputin somehow managed to temporarily stop Alexei's hemorrhaging, thus gaining the trust of the tsar's family. Believing Rasputin to be their son's benefactor and clinging to hope for Alexei's recovery, Nicholas and Alexandra rejected rumors of the mysterious peasant's debauched lifestyle.

Their patronage of Rasputin caused outrage in court circles and educated society, which contributed to the declining authority of the monarchy and its eventual collapse in 1917.

In July 1918, just days before his fourteenth birthday, Alexei was murdered, along with his parents, four sisters, and several royal servants, by a Bolshevik firing squad. In 1981, the Russian Orthodox Church Abroad canonized Alexei, along with the rest of the royal family, for accepting

death with faith in God and humility. The Moscow Patriarchate canonized the royal family in 2000.

NICHOLAS GANSON

ALEXEI PETROVICH

(1690–1718), tsarevich, son of Emperor Peter I of Russia and his first wife Yevdokia Lopukhina.

Peter raised Alexei as his heir, making him study a modern curriculum with foreign tutors and taking him to visit battlefields and naval displays to teach him to “love everything that contributes to the glory and honor of the fatherland.” When Alexei was in his twenties, Peter entrusted him with important duties on the home front in the war against Sweden. Peter’s correspondence reveals little affection for Alexei, who in turn felt intimidated by his demanding and unconciliatory father (Peter had banished Alexei’s mother in 1699). Alexei was intelligent, devout, often sick, and indifferent to military affairs. In 1712 Peter married him off to the German princess Charlotte of Wolfenbüttel, whom he quickly abandoned for a peasant mistress. After the birth of Alexei’s son Peter (the future Peter II) in 1715, Peter accused Alexei of neglecting the common good and threatened to disinherit him: “Better a worthy stranger [on the throne] than my own unworthy son.” Under increasing pressure, in 1716 Alexei fled and took refuge with the Habsburg emperor, but in 1718 Peter lured him back home with the promise of a pardon, then disinherited him and demanded that he reveal all his “accomplices” in a plot to assassinate his father and seize the throne. Evidence emerged that Alexei hated Peter’s cherished projects and that some Russians from elite circles viewed him as an alternative. Tried by a special tribunal, Alexei confessed to treason under torture and was condemned to death, dying two days later following further torture. His fate and the witch hunt unleashed by his trial have disturbed even ardent admirers of Peter, who was willing to sacrifice his son for rea-

sons of state. Soviet historians dismissed Alexei as a traitor, but he has been viewed more sympathetically since the 1990s.

LINDSEY HUGHES

ALEXEYEV, MIKHAIL VASILIEVICH

(1857–1918), Imperial Russian general staff officer, commander, Stavka chief of staff and White Army leader.

General-Adjutant Mikhail Alexeyev was born in Vyazma, the son of a noncommissioned officer who had fought at Sevastopol in the Crimean War, then attained officer rank. Alexeyev completed the Moscow Junker School (1876) and the Nicholas Academy of the General Staff (1890). He taught at the latter between 1898 and the Russo-Japanese War, in which he served at Sandepu and Mukden as chief of staff for the Third Manchurian Army. A believer in limited monarchy, Alexeyev rose in 1908 to become acting quartermaster general of the General Staff, then served from 1908 to 1912 as chief of staff of the Kiev Military District. Until 1911, Alexeyev continued to advise War Minister Vladimir Aleksandrovich Sukhomlinov on war planning. Alexeyev’s General Plan of Actions subsequently became a precursor for Mobilization Schedule 19A, the foundation for Russia’s entry into World War I. Alexeyev began the war as chief of staff of the Southwestern Front, then commanded the Northwestern Front in 1915 during its successful but costly withdrawal from the Polish salient.

As Stavka chief of staff for Tsar Nicholas II after August 1915, Alekseyev functioned as *de facto* supreme commander, but was tainted in 1916 by the ill-conceived Naroch operation and by failure to support the more successful Brusilov Offensive. While maintaining contact with the liberal opposition, he left Stavka in December 1916 for reasons of health, then returned in March to June 1917 as

supreme commander. An ardent anti-Bolshevik between the two Russian revolutions of 1917, he fought against the disintegration of the army, even agreeing to serve temporarily as the army's commander-in-chief after the Kornilov Affair of September 1917. Following the Bolshevik coup of November 1917, Alexeyev and Lavr Georgievich Kornilov became the military nucleus around which a White counterrevolutionary movement in the Don and Kuban organized the Volunteer Army. Alexeyev's death in October 1918 at Yekaterinodar deprived the Whites of perhaps their most talented commander and planner. He left the legacy of a keen military professional who consistently rendered impressive service as commander and staff officer under extraordinarily challenging military and political circumstances.

OLEG R. AIRAPETOV

ALIYEV, HEIDAR

(b. 1923), Soviet Azerbaijani statesman, president of Azerbaijan (1993–).

Heidar Alirza Oglu Aliyev was born in Nakhichevan, Azerbaijani SSR. Aliyev studied architecture and history in Baku. In 1944 he joined the KGB of Soviet Azerbaijan and became its director in 1967. In 1969 Aliyev became first secretary of the Communist Party (thus effective leader) of Soviet Azerbaijan. In 1982 he was invited to Moscow as a full member of the Communist Party of the Soviet Union (CPSU) Politburo and first deputy chairman of the USSR Council of Ministers. He also served as a member of the Supreme Soviet of the USSR for twenty years.

Following Mikhail Gorbachev's accession to power, Aliyev was forced to resign from his positions in the Party in 1986 and in the government in 1987. Aliyev resigned from the CPSU in July 1990 citing, among other reasons, his objections to the use of the Soviet army units against demonstrators in Baku earlier that year. He returned to

Nakhichevan, where he relaunched his career as the chairman of the Supreme Soviet of the Nakhichevan and deputy chairman of the Azerbaijani Supreme Soviet. In 1993 he was asked by the embattled President Abulfaz Elchibey of independent Azerbaijan to return to Baku. By October 1993 Aliyev was elected president of Azerbaijan. He was reelected in 1998.

Aliyev's main priority as leader of independent Azerbaijan was to secure domestic stability and effective control and exploitation of the country's hydrocarbon resources. Aliyev was able to neutralize unruly elements that threatened internal peace, as well as others who could challenge him politically, while pursuing a policy of selective political and economic liberalization.

In foreign affairs Aliyev adopted a supple and pragmatic approach. He moderated his predecessor's excessively pro-Turkish, anti-Russian, and anti-Iranian policies. Aliyev used the country's hydrocarbon resources to increase Azerbaijan's international stature and, working closely with Georgia, secured the West's political support to balance Russia's influence.

Aliyev's initial policy of continuing military operations in the Nagorno-Karabakh war caused further territorial losses to Armenian forces as well as a new wave of internally displaced persons. In 1994 he agreed to a cease-fire. Aliyev has supported the Organization for Security and Cooperation in Europe's mediation efforts for a permanent solution to the problem of Nagorno-Karabakh as well as direct negotiations.

His administration continues to be plagued by charges of authoritarianism, widespread corruption, and tampering with elections. Eight years into his administration, Aliyev's main challenges—the problems of Karabakh, of succession, and of securing new major routes for the export of Caspian hydrocarbon resources—remain largely unresolved.

GERARD J. LIBARIDIAN

ALLIED INTERVENTION

The Russian Revolution of 1917, occurring in the third year of World War I, initially inspired great hopes in the countries engaged in the brutal struggle against the Central Powers that was exacting so terrible a carnage and so enormous a financial drain. The prospect of a new ally, the United States, seemed bright, since a war without the Romanov autocracy as an ally could now be claimed to be truly one of democracy against the old order of Europe, of which Russia had been one of the bastions. Unfortunately, Russia was already severely weakened by the war, both on the battlefield and on the home front. It was left to the United States to provide direct aid and a moral presence, but time was running out, and opposition to the war, with its huge human sacrifices and economic burdens, was a persistent trend in the new "democratic" Russia. The inability of the Provisional Government, headed by Alexander Kerensky, to deal with the situation led to a victory of the left wing of the revolution in the form of a Bolshevik seizure of power in October 1917.

This created a dilemma for the Allies, because the Bolsheviks were largely committed to ending the war. If the new Soviet government withdrew from the war, considerable German military forces would be shifted from the Eastern Front to the Western Front in 1918, thus nullifying the mounting American presence there. Opinion was sharply divided on a course of action. Some Allied agents in Russia believed that Bolshevik leaders could be persuaded to delay a peace or even to continue a military effort in return for desperately needed aid. Others advocated direct military intervention to maintain an Eastern Front, especially because of evidence that some units of the old Russian army remained intact and committed to continuing the war. American and British representatives in Russia, such as Raymond Robins and Robert Bruce Lockhart, campaigned for the former course, while influential political leaders urged direct military intervention, some maintaining that an American force of 100,000, could not only maintain a viable Eastern Front but also destroy the "communist threat."

The crisis came in March 1918 with the Soviet government's negotiation of terms for a peace with Germany at Brest-Litovsk. Since there had been no forthright pledge of assistance, Vladimir Lenin felt that ratification of the treaty was necessary, but about the same time, due to deteriorating conditions in the major ports that contained large amounts of Allied supplies for Russia, detachments of marines from Allied warships in the harbors landed to safeguard personnel and reestablish order in the old port of Archangel on the White Sea, in the new one of Murmansk in March 1918, and at Vladivostok on the Pacific in April. Doing anything more at the time was precluded by the concentration of available men and supplies on the Western Front to stem a surprisingly successful German offensive. The Treaty of Brest-Litovsk gave Germany access to a large part of the Russian Empire and to valuable military supplies, much of Allied origin. Moreover, a large number of liberated German and Austro-Hungarian prisoners of war were able to return to combat in the West or control large areas of Russia, such as Siberia.

With the German offensive in the West stopped, but the Russian situation continuing to deteriorate, the Allies considered a more substantial military intervention. President Woodrow Wilson was reluctant to interfere in another country's affairs, especially because it might result in dividing the old Russian Empire and its resources among the other Allies. But, in the interests of Allied harmony (and their commitment to a future League of Nations), he agreed in July 1918 to send American forces to northern Russia and Siberia. About 4,600 American troops, dubbed the Polar Bears, arrived in Murmansk and Archangel in August 1918, accompanied by a slightly larger British force and smaller Allied units (a total of about 12,000). The expeditionary force was under British command, much resented by the Americans throughout the campaign. Its mission was to protect the supplies in the ports, but also to secure lines of communication by water and rail into the interior. The latter resulted in a number of skirmishes with Red Army units during the winter of 1918 to 1919 and several casualties (though the influenza epidemic would claim many more). This intervention on Russian territory was supported by much of the local population, which was represented by a non-Bolshevik but socialist soviet at Archangel, thus complicating the question of what kind of Russia the Allied forces were fighting for. The end of the war challenged the legitimacy of an Allied inter-

vention and provoked opposition among the troops there and at home.

The opening of a Second Russian Front in Siberia was rather different, since it involved a more substantial American expeditionary force (around 9,000) under its own command and a much larger Japanese army of approximately 70,000, along with 4,000 Canadians and token "colonial" units of French, Italian, Chinese, and British. Their ill-defined mission was to assist the transfer to the Western Front of a Czecho-Slovak Legion consisting of 60,000 former prisoners-of-war who supported the Allies, to protect munitions in and around Vladivostok, and to guard against one another's imperialist ambitions. On the long way to the Western Front, the Czech Legion managed to seize most of the Trans-Siberian Railroad to prevent released German and Austro-Hungarian prisoners-of-war in the area from forming a "German front" in Siberia; and to provide aid to what at first seemed a viable anti-Bolshevik government centered in Omsk under the leadership of Admiral Alexander Kolchak. For the United States, limiting Japanese ambitions for a more permanent occupation was a major factor. In any event, the American commander, General William S. Graves, was under strict orders from Washington not only to avoid coming under the control of the larger Japanese army, but also to desist from direct hostility with any Russian military units, of which there were several of various political orientations. Most of the Allied expeditionary force remained in the vicinity of Vladivostok and at a few points along the Chinese Eastern and Trans-Siberian railroads until the decision to withdraw in May–June 1919.

Another commitment of men, supplies, and financial assistance came to the south of Russia but only late in 1918, when the end of war allowed passage through the Straits into the Black Sea. The catalyst here was the existence of substantial White armies under Anton Denikin and his successor, General Peter Wrangel. In the spring and summer campaigns of 1919, these forces won control of extensive territory from the Bolsheviks with the support of about 60,000 French troops (mostly Senegalese and Algerians), smaller detachments of British soldiers with naval support, and an American destroyer squadron on the Black Sea. Divided command, low morale, vague political objectives, the skill and superiority of the Red Army, and, finally, Allied reluctance to provide major aid doomed their efforts. This "crusade" came to a dismal end in late 1920. Besides a direct but limited

military presence in Russia, the interventionist powers provided financing, a misleading sense of permanent political and economic commitment to the White opposition, but also medical and food relief for large areas of the former Russian Empire.

Allied intervention in Russia was doomed from the beginning by the small forces committed, their unclear mission and divided command, the low morale of the Allied soldiers and their Russian clients, the end of the war of which it was a part, and the superiority of Soviet military forces and management. Throughout, it seemed to many that the Allied interventionists were on the wrong side, defending those who wanted either to restore the old order or break up Russia into dependent states. To many Americans, for instance, the Japanese posed more of a threat to Siberia than did the Bolsheviks. In the aftermath, genuinely anti-Bolshevik Russians felt betrayed by the failure of the Allies to destroy their enemy, while the new Soviet power was born with an ingrained sense of hostility to the interventionist states, marking what could be claimed as the beginnings of the Cold War. An immediate tragedy was the exodus of desperate refugees from the former Russian Empire through the Black Sea and into Manchuria and China, seeking assistance from erstwhile allies who had failed to save the world for democracy.

NORMAN E. SAUL

ALLILUYEVA, SVETLANA IOSIFOVNA

(b. 1926), daughter of Soviet general secretary Josef Stalin and his second wife, Nadezhda Alliluyeva.

The daughter of an old Georgian revolutionary friend, Sergo Alliluyev, Nadezhda Alliluyeva was sixteen when Stalin married her on March 24, 1919. In addition to Svetlana Iosifovna, she had one son in 1919, Vasily. Svetlana also had an older half-brother Yakov (Jacob), the son of Stalin's first wife, Yekaterina Svanidze, a simple peasant girl, whom he married in June 1904 at the age of 25, but who died on April 10, 1907.

Nadezhda Alliluyeva's death in 1932, apparently a suicide following a quarrel with Stalin, deeply affected both her husband and her daughter. Morose, Stalin withdrew from Party comrades with whom he had socialized with his wife. Some believe her suicide contributed to his paranoid distrust of others.

Svetlana was twenty-seven when Georgy Malenkov summoned her to Blizhny, the nickname for Stalin's dacha at Kuntsevo, just outside of Moscow. In her first book, *Twenty Letters to a Friend* (1967), she poignantly described Stalin's three-day death from a brain hemorrhage. "The last hours were nothing but a slow strangulation. The death agony was horrible. He literally choked to death as we watched." Although she had lived apart from Stalin, who had always been "very remote" from her, she nevertheless experienced a "welling up of strong, contradictory emotions" and a "release from a burden that had been weighing on [her] heart and mind." After her father's death, Svetlana taught and translated texts in the Soviet Union. In late 1966, while in India to deposit the ashes of her late husband Brajesh Singh, she asked Ambassador Chester Bowles in the U.S. Embassy in New Delhi, India, for permission to defect to the United States.

She left a grown son (Josef) and daughter (Katie) from two earlier marriages in the Soviet Union. Svetlana's defection caused an international sensation. "I could not continue the same useless life which I had for fourteen years," she told reporters on March 9, 1967. Settling in Locust Valley, New York, she wrote the abovementioned memoir describing the deaths of her two parents, and a second one two years later (*Only One Year*), in which she described her decision to defect. Upon becoming a U.S. citizen, she married an American architect, William Peters, in 1970 and had a daughter by him. After separating from Peters, she returned to the Soviet Union in 1984 and settled in Tbilisi. She again left the USSR in 1986 and returned to the United States, but then settled in England during the 1990s.

ALTAI

The Altai people comprise an amalgamation of Turkic tribes who reside in the Altai Mountains and the Kuznetsk Alatau. Their origins lie with the earliest Turkic tribes (Uighurs, Kypchak-Kimaks, Yenisey Kyrgyz, Oguz, and others). In 550 C.E., the Tugyu Turks settled in the Altai Mountains along the headwaters of the Ob River and in the foothills of the Kuznetsk Alatau, where around 900 C.E. they formed the Kimak Tribal Union with the Kypchak

Turks. From this union sprang the ethnonyms Kumanda, Teleut, and Telengit.

In the seventh century, the Telengit lived with another would-be Altai tribe, the Telesy, on the Tunlo River in Mongolia, whence they both migrated to Tyva. By the eighth century they had gravitated to the Altai Mountains and eastern Kazakhstan. The Russians arrived in the 1700s and proceeded to sedentarize many of the nomadic Altai. The Soviet government gave the Altai nominal recognition with the establishment of the Gorno-Altai (Oiro) Autonomous Oblast in 1922. In 1991 it became the Altai Republic.

In 1989 there were 70,800 Altai worldwide, 69,400 in Russia alone, and 59,100 in the Altai Republic. A few lived in Central Asia. The internal divisions among the Altai are distinguished ethnographically and dialectically. The northern group comprises the Tubulars who live on the left-bank of the Biya River and on the shores of Lake Teletskoye, the Chelkans who live along the Lebed River, and the Kumandas who live along the middle course of the Biya. Each of these tribes speaks an Altai dialect that belongs to the Eastern division of the Ural-Altai language family. The southern groups, including the Altai-Kizhi, Telengits, Telesy, and Teleuts, live in the Katun River Basin and speak an Altai dialect closely related to the Kyrgyz language.

Although the ethnogenesis of the southern Altai took place among the Oiro Mongols, consolidation of the northern groups and overall consolidation between the northern and southern Altai has been difficult. The Teleuts, for example, have long considered themselves distinctive and have sought separate recognition. In 1868 the Altai Church Mission tried, but failed, to establish an Altai written language based on Teleut, using the Cyrillic alphabet. In 1922, the Soviets succeeded in creating an Altai literary language, and, since 1930, the Altais have had their own publishing house.

In spite of internal differences, Altai societies share certain general traits. They are highly patriarchal, for example: Women do domestic work, whereas men herd horses and dairy cows. Since the 1750s, most Altai have been Russian Orthodox, but a minority practices Lamaism and some practice shamanism.

ALTYN

Monetary unit used in Russia from the last quarter of the fourteenth century until the eighteenth century.

The altyn's first use was directly connected with the appearance of the denga, another monetary unit and coin that came into existence at the same time. Six dengi (pl.) equaled one altyn. The word *altyn* was a lexicological borrowing into Russian from Mongol, meaning "six." From its origins, the altyn was mainly used in the central and eastern lands of Russia (Moscow, Ryazan, Tver), but spread to the lands of Novgorod and Pskov by the early sixteenth century. In the early eighteenth century, the altyn became synonymous with a silver coin that equaled about three kopeks.

ROMAN K. KOVALEV

AMALRIK, ANDREI ALEXEYEVICH

(1938–1980), Russian political activist, dissident, publicist, playwright, exiled to Siberia from 1965 to 1966 and imprisoned in labor camps from 1970 to 1976.

Born in Moscow, Amalrik studied history at Moscow University; he was expelled in 1963 for a paper featuring unorthodox views on Kievan Rus. Amalrik wrote several absurdist plays such as *Moya tetya zhivet v Volokolamske* (My Aunt Lives in Volokolamsk), *Vostok-Zapad* (East-West), and *Nos! Nos? No-s!* (The Nose! The Nose? The No-se!), the

latter referring to Gogol's famous short story. In 1965, Amalrik was arrested for lacking official employment ("parasitism") and charges that his—yet unpublished—plays were "anti-Soviet and pornographic."

Exiled to Siberia for two and a half years, he was released in 1966 and subsequently described his experiences in *Nezhelannoye puteshestvie v Sibir* (Involuntary Journey to Siberia, 1970). Amalrik's essay *Prosushchestvuyet li Sovetsky Soyuz do 1984 goda?* (Will the Soviet Union Survive Until 1984?), an astute and prophetic analysis of Soviet society's dim prospects for the future, brought him worldwide fame. It was completed in 1969, published the same year by the Herzen Foundation in Amsterdam, and translated into many languages. As a result, Amalrik was put on trial and sentenced to three years in Siberian camps, with another three years added in 1973. Protests in the West led to a commutation of the sentence from hard labor to exile and ultimately to permission to leave the Soviet Union in 1976. In the West, Amalrik was involved in numerous human rights initiatives.

In 1980, Amalrik died in a car crash in Guadalajara, Spain. He was legally rehabilitated in 1991.

AMERICAN RELIEF ADMINISTRATION

As World War I ended, the United States helped many countries around the world recover from the effects of war through the American Relief Administration (ARA). Herbert Hoover headed the ARA and had opened numerous missions in Europe by 1919. The primary goal of the ARA was to provide food relief, but it also provided medical aid, relocation services, and much else. The ARA attempted to open a mission in Russia in 1919 and 1920, but they were unsuccessful because the Bolsheviks suspected that the Americans had intervened in the Russian Civil War. However, after the

horrible famine of the winter of 1920 and 1921, and after writer Maxim Gorky petitioned Vladimir Lenin to provide relief, the new Soviet government recognized the need for the ARA in Russia. By the summer of 1921, the ARA director for Europe, Walter Lyman Brown, and Soviet assistant commissar of foreign affairs Maxim Litvinov reached an agreement for an ARA mission in Russia. One of the primary concerns for the Soviets was the potential for American political activity in Russia. Brown assured Litvinov that their mission was solely to save as many lives as possible, and he appointed Colonel William N. Haskell to head the ARA in Russia.

The ARA opened kitchens in Petrograd and Moscow by September 1921, serving tens of thousands of children. The ARA spread into smaller cities and rural areas over the next several months, but in several places faced opposition from local village leaders and Communist Party officials. Most rural local committees consisted of a teacher and two or three other members who would serve the food to the children from the local schools. This fed the children, paid and fed the teacher, and continued some measure of education. In addition to feeding programs, the ARA employed thousands of starving and unemployed Russians to unload, transport, and distribute food to the most famine-stricken areas. The ARA also established a medical division that furnished medical supplies for hospitals, provided treatments to tens of thousands of people, and conducted sanitation inspections. It was estimated that the ARA provided about eight million vaccinations between 1921 and 1923.

By the summer of 1922, disputes within the ARA administration in the United States and between the ARA and the Soviet government placed the mission's future in doubt. Hoover and Haskell disagreed about the duration and tactics of the mission in Russia. In September 1922, the chairman of the All-Russian Famine Relief Committee, Lev Kamenev, announced that the ARA was no longer needed, despite the reports that showed many areas in worse condition than before. Over the next few months, the Soviet government urged the ARA to limit its operations, even though about two million children were added to those eligible for relief in 1922. Several leading Bolsheviks had taken a stronger anti-American stance during the course of the ARA operations, and Lenin was less integrally involved because of illness. The ARA was gradually marginalized and officially disbanded in July 1923, after nearly two years of work. The Soviet gov-

ernment took over feeding its own starving and undernourished population, while also trying to dispel the positive impression the ARA had left among the Russian population.

WILLIAM BENTON WHISENHUNT

ANARCHISM

Anarchism, derived from the Greek word meaning “without rule,” rose to prominence in the nineteenth century and reached well into the twentieth century as a significant political force in Europe and Russia. Anarchists sought the overthrow of all forms of political rule in the name of a new society of voluntary federations of cooperative associations or syndicates. Anarchism also fought Marxism for revolutionary leadership.

Russian anarchism, in particular, inspired anarchist movements in Russia and Europe. Three Russians were progenitors of modern anarchism: Mikhail Alexandrovich Bakunin (1814–1876), Petr Alexeyevich Kropotkin (1842–1921), and Leo Nikolayevich Tolstoy (1828–1910). The three, however, were contrasting personalities, each taking different slants on anarchist doctrine. Bakunin

was ever the firebrand of revolutionary violence in word and deed; Kropotkin the philosophical and scientific propounder of a society based on cooperation and mutual aid; and Tolstoy the proponent of a Christ-inspired anarchism of nonviolence and nonresistance to evil in the sense of not answering another's evil with evil.

Despite the wide intellectual influence of Kropotkin and Tolstoy, Bakunin epitomized the strategy of violence to end all political power. Bakunin put the brand on anarchism as a doctrine of violence.

Kropotkin's followers objected to anarchist factions in Russia that turned to violence and terrorism as their characteristic mode of operation. Among the names they assumed were the Black Banner Bearers, Anarchist Underground, Syndicalists, Makhayevists (followers of Makhaysky), and the Makhnovists (followers of Makhno in the Ukraine).

In the wake of the 1917 revolution, Kropotkin returned to Russia from exile in Europe with high hopes for an anarchist future. Vladimir Lenin's Bolsheviks soon dashed them. His funeral in 1921 was the last occasion in which the black flag of anarchism was raised in public in Sovietized Russia. The new regime executed anarchist leaders and destroyed their organizations.

CARL A. LINDEN

ANDREI ALEXANDROVICH

(d. 1304), prince of Gorodets and grand prince of Vladimir (1294–1304).

Andrei Alexandrovich's father, Alexander Yaroslavich "Nevsky," gave him Gorodets; after his uncle, Grand Prince Vasily Yaroslavich, died, he also received Kostroma. In 1277, when Andrei's elder brother, Grand Prince Dmitry, went to Novgorod, Andrei ingratiated himself to Khan Mangu Temir by campaigning with him in the Caucasus. In 1281 Andrei visited the Golden Horde, and Khan Tuda Mangu gave him troops to evict Dmitry from

Vladimir. Andrei deposed his brother, but in 1282, after learning that Dmitry had returned from abroad and was assembling an army in his town of Pereyasavl Zalessky, he was forced to ask the khan in Saray for reinforcements. Dmitry, meanwhile, solicited auxiliaries from Nogay, a rival khan, and defeated Andrei. The latter remained hostile. In 1293 he visited the Golden Horde again, and the khan despatched an army, which invaded Suzdalia and forced Dmitry to abdicate. After Dmitry died in 1294, Andrei became the grand prince of Vladimir. Soon afterward, a coalition of princes challenged his claim to Dmitry's Pereyasavl. In 1296 all the princes met in Vladimir and, after refusing to give Pereyasavl to Andrei, concluded a fragile agreement. Thus, in 1299, when the Germans intensified their attacks against the Novgorodians, Andrei refused to send them help because he feared that if he did, the other princes would attack him. In 1300 they rejected his claim to Pereyasavl at another meeting. Three years later, after appealing to the khan and failing yet again to get the town, he capitulated. Andrei died in Gorodets on July 27, 1304.

MARTIN DIMNIK

ANDREI YAROSLAVICH

(d. 1264), grand prince of Vladimir (1249–1252) and progenitor of the princes of Suzdal.

The third son of Yaroslav Vsevolodovich and grandson of Vsevolod Yurevich "Big Nest," Andrei Yaroslavich survived the Tatar invasion of Suzdalia in 1238. Three years later the Novgorodians rejected him as their prince, but on April 5, 1242, he assisted his elder brother Alexander Yar "Nevsky" in defeating the Teutonic Knights at the famous "battle on the ice" on Lake Chud (Lake Peypus). There is no clear information about Andrei's activities after their father died and their uncle Svyatoslav occupied Vladimir in 1247. Andrei may

have usurped Vladimir. In any case, he and Alexander went to Saray separately, evidently to settle the question of succession to Vladimir. But Khan Baty sent them to Mongolia, to the Great Khan in Karakorum. They returned in 1249, Alexander as the grand prince of Kiev and of all Rus, and Andrei as the grand prince of their patrimonial domain of Vladimir. In 1252 Andrei defiantly refused to visit Saray to renew his patent for Vladimir with the new great khan, Mongke, but Alexander went, evidently to obtain that patent for himself. The khan sent troops against Andrei, and they defeated him at Pereyaslavl Zalesky. After he fled to the Swedes, Alexander occupied Vladimir. Later, in 1255, Andrei returned to Suzdalia and was reconciled with Alexander, who gave him Suzdal and other towns. In 1258 he submissively accompanied Alexander to Saray, and in 1259 helped him enforce Tatar tax collecting in Novgorod. Andrei died in Suzdal in 1264.

MARTIN DIMNIK

ANDREI YUREVICH

(c. 1112–1174), known as Andrei Yurevich "Bogolyubsky," prince of Suzdalia (Rostov, Suzdal, and Vladimir).

Although historians disagree on Andrei Yurevich's objectives, it is established that he defended the traditional order of succession to Kiev but chose to live in his patrimony of Vladimir, whose political, economic, cultural, and ecclesiastical importance he attempted to raise above that of Kiev.

In 1149 Andrei's father, Yuri Vladimirovich "Dolgoruky," gave him Vyshgorod, located north of Kiev, and then transferred him to Turov, Pinsk, and Peresopnitsa. Two years later Andrei returned to Suzdalia. In 1155 Yuri gave him Vyshgorod once again, but Andrei returned soon afterward to Vladimir on the Klyazma. After Yuri died in Kiev

in 1157, the citizens of Rostov, Suzdal, and Vladimir chose Andrei as their prince. He had autocratic ambitions for Suzdalia and, according to some, for all of Rus. He weakened the power of the *veche* (popular assembly), treated boyars like vassals, and, in 1161, evicted his brothers and two nephews from Suzdalia. Moreover, he spurned the powerful boyars of Rostov and Suzdal by making the smaller town of Vladimir his capital. He lived at nearby Bogolyubovo, after which he obtained his sobriquet "Bogolyubsky." He beautified Vladimir by building its Assumption Cathedral, its Golden Gates modeled on those of Kiev, his palace at Bogolyubovo, and the Church of the Intercession of Our Lady on the river Nerl. He successfully expanded his domains into the lands of the Volga Bulgars and asserted his influence over Murom and Ryazan. However, Andrei failed to create an independent metropolitanate in Vladimir.

In 1167 Rostislav Mstislavich of Kiev died, and Andrei became the senior and most eligible of the Monomashichi (descendants of Vladimir Monomakh, reign 1113–1125) to rule Kiev. Mstislav Izyaslavich of Volyn preempted Andrei's bid for Kiev and appointed his son to Novgorod. Andrei saw Mstislav's actions as a violation of the traditional order of succession to Kiev and as a challenge to his own interests in Novgorod. Thus in 1169 he sent a large coalition of princes to evict Mstislav. They fulfilled their mission and plundered Kiev in the process. Some historians argue that this event marked a turning point in the history of Rus; Kiev's capture signaled its decline and Andrei's attempt to subordinate it to Vladimir. Others argue that Andrei sought to recover the Kievan throne for the rightful Monomashich claimants because Kiev was the capital of the land, thereby affirming its importance even after it was plundered.

Andrei broke tradition by not occupying Kiev in person. He appointed his brother, Gleb, to rule it in his stead. Even though Andrei was able to summon troops from Suzdalia, Novgorod, Murom, Ryazan, Polotsk, and Smolensk, he failed to assert his control over Kiev. Its citizens evidently poisoned Gleb. In 1173 Andrei ordered the Rostislavichi (descendants of Rostislav Mstislavich of Smolensk) to vacate Kiev, but later they succeeded in evicting his lieutenants and taking them captive. Andrei organized a second campaign with Svyatoslav Vsevolodovich of Chernigov, to whom he agreed to cede control of Kiev, but the coalition failed to take the city. While Andrei was waiting to receive approval from Svyatoslav to hand over Kiev to the

Rostislavichi, his boyars murdered him on June 29, 1174.

MARTIN DIMNIK

ANDREYEV, LEONID NIKOLAYEVICH

(1871–1919), Russian prose writer, playwright, and publicist whose works, internationally acclaimed in his lifetime, are infused with humanistic protest against social oppression and humiliation.

Born on August 21, 1871, in the town of Oryol (Orel), Leonid Nikolayevich Andreyev studied law at St. Petersburg University and briefly practiced as a lawyer. A volume of stories, published in 1901 by Maxim Gorky's "Znanie" enterprise, made him famous. After the death of his first wife in 1906 and the violent oppression of the anti-autocratic mutinies that occurred between 1905 and 1907, Andreyev entered a period of deep resignation, abandoning radical leftist ideas but failing to develop viable alternatives. His political confusion resonated with the liberal intelligentsia, for whose he became the most fashionable of authors in the 1910s.

In Andreyev's narratives, crass images of irrationality and hysteria are often blended with crude melodrama, yet they also reveal persistent social sensitivities. Thus, the short story "Krasnyi smekh" ("Red Laughter," 1904) depicts the horror of war, whereas "Rasskaz o semi poveshennykh" ("The Seven Who Were Hanged," 1908) attacks capital punishment while idealizing political terrorism. Andreyev's plays, closely associated with Symbolism, caused scandals and enjoyed huge popularity. His unfinished novel *Dnevnik Satany* (*Satan's Diary*, 1918) was inspired by the death of U.S. million-

aire Alfred Vanderbilt on the *Lusitania* in 1915, and seeks to convey the doom of bourgeois society.

In addition to his writing, Andreyev was also an accomplished color photographer and painter. He displayed pro-Russian patriotism in World War I, but welcomed the February Revolution of 1917. Later that year, he radically opposed the Bolshevik coup and emigrated to Finland. In his last essay, "S.O.S." (1919), he called upon the president of the United States to intervene in Russia militarily. Andreyev died on September 12th of that same year.

PETER ROLLBERG

ANDREYEVA, NINA ALEXANDROVNA

(b. 1938), teacher, author, political activist, and social critic.

Born on October 12, 1938, in Leningrad, Nina Alexandrovna Andreyeva joined the Communist Party of the Soviet Union (CPSU) in 1966, and became a teacher of chemistry at the Leningrad Technical Institute in 1973. A self-styled Stalinist and devotee of political order, she wrote an essay that defended many aspects of the Stalinist system, assailed reformists' efforts to provide a more accurate picture of the history of the USSR, and implied that General Secretary Mikhail Gorbachev and his closest supporters were not real communists. Her essay "I Cannot Forsake My Principles" was published in the orthodox newspaper *Sovetskaia Rossiya* at a time when Gorbachev and Alexander Nikolayevich Yakovlev were abroad, and cited (without attribution) an orthodox report by the secretary of the Party's Central Committee, Yegor Kuzmich Ligachev, in February 1988. Officials in the ideological department of the Central Committee evidently edited her original letter, and Ligachev reportedly ordered its dissemination throughout the party. Ligachev repeatedly denied responsibility for its publication.

Orthodox party officials applauded the essay, whereas members of the liberal intelligentsia feared

that it represented a major defeat for the intellectual freedom supported by the general secretary. Gorbachev subsequently revealed that many members of the Politburo seemed to share Andreyeva's views, and that he had to browbeat them into approving the publication of an official rejoinder. The published response appeared in *Pravda* on April 5, 1988, and was not nearly as forceful as its authors have claimed. In the aftermath of this discussion, the General Secretary at least temporarily tightened his own control over the Secretariat of the Central Committee. The entire episode may have contributed to his decision to reform the Secretariat in the fall of 1988.

Andreyeva subsequently played a leadership role in the formation of orthodox communist organizations. She headed the organizing committee of the Bolshevik Platform of the CPSU that "expelled" Gorbachev from the party in September 1991. In November 1991, she became the general secretary of the small but militant All-Union Communist Party of Bolsheviks. In October 1993, the party was temporarily suspended along with fifteen other organizations after President Yeltsin's repression of the attempted coup against his regime. In May 1995 she was stripped of her post as the head of the St. Petersburg Central Committee of the party for "lack of revolutionary activity."

JONATHAN HARRIS

ANDROPOV, YURI VLADIMIROVICH

(1914–1984), general secretary of the Communist Party of the Soviet Union (1982–1984).

Yuri Andropov was born on June 15, 1914, in the southern Russian region of Stavropol. He rose rapidly through the ranks of the Young Communist League (Komsomol). During World War II he

Official portrait of Yuri Andropov, CPSU general secretary, 1982–1984. © BETTMANN/CORBIS

worked with the partisan movement in Karelia, and after the war he became second secretary of the regional Party organization. He was transferred to the Party apparatus in Moscow in 1951 and was the ambassador to Hungary at the time of the Soviet invasion in 1956. He played a key role in encouraging the invasion.

In 1957 Andropov returned to Moscow to become head of the Central Committee's Bloc Relations Department. There he inherited a group of some of the most progressive thinkers of the Brezhnev era, many of the leading advocates for change who were working within the system. This contributed later to Andropov's reputation as a progressive thinker. He continued to oversee relations with other communist countries after he was promoted to Central Committee secretary in 1962. In 1967 he was appointed the head of the Committee on State Security (KGB) and a candidate member of

the ruling Politburo. He was promoted to the rank of full Politburo member in 1971. As the head of the KGB, Andropov led active efforts against dissidents at home and enhanced the KGB collection efforts abroad. To be in a better position to succeed Leonid Brezhnev, Andropov gave up the chairmanship of the KGB in May 1982 and returned to the Central Committee as a senior member of the Secretariat. His chief rival in the succession struggle was Konstantin Chernenko, who was being actively promoted by Brezhnev. However, Chernenko lacked Andropov's broad experience, and when Brezhnev died in November 1982, Andropov was elected general secretary by a plenum of the Communist Party of the Soviet Union (CPSU). In June 1983 he was elected chairman of the Presidium of the USSR Supreme Soviet—the head of state.

When Andropov was elevated to the head of the Party, there were great hopes that he would end the stagnation that had characterized the Brezhnev years and that he would reinvigorate the Party and its policies. From his years as head of the KGB, Andropov had an excellent perspective on the depth of the problems facing the Soviet Union. There was also an active effort to promote his image as a progressive thinker. During his very brief tenure as Party leader, Andropov was able to begin diverging from the norms of the Brezhnev era. This was a time of rapid personnel turnover. In addition to making key changes in the top Party leadership, he replaced a large number of ministers and regional party leaders with younger leaders. Most important, Andropov actively advanced the career of the youngest member of the Politburo, Agriculture Secretary Mikhail Gorbachev, giving him broad authority and experience in the Party that helped pave the way for his ascent to Party leadership. All signs indicate that Andropov was hoping to make Gorbachev his successor.

Andropov's brief tenure was not sufficient to make a similar impact on policy. While he was much more open than Brezhnev in recognizing the country's problems, particularly in the economic sphere, Andropov was cautious by nature and did not come to office with any plan for tackling them. He did, however, begin a serious discussion of the need for economic reform, spoke positively about economic innovation in Eastern Europe, and began to take some cautious steps to improve the situation. His regime is best remembered for the discipline campaign: an effort to enforce worker discipline, punishing workers who did not report for duty on time or were drinking on the job. He

also introduced other minor reforms aimed at improving productivity. Andropov began to tackle the problem of corruption at higher levels and expelled two members of the Central Committee who had been close associates of Brezhnev. He also introduced somewhat greater openness in Party affairs, publishing accounts of the weekly Politburo meetings and deliberations of the CPSU plenum. These measures, together with his personnel moves, created a positive sense of cautious change, as well as a hope that the Soviet leadership would start to address the problems facing the country, now that it was aware of them. Probably the most notable event of Andropov's tenure was the accidental shooting down by the Soviet military of a Korean Airlines plane that strayed into Soviet airspace in the Far East in September 1983.

The contest to succeed Andropov appears to have been the main preoccupation of the party leadership following his election. Only three months into his tenure, Andropov's health began to deteriorate sharply as a result of serious kidney problems, and he was regularly on dialysis for the rest of his life. He dropped out of sight in August 1983 and did not appear again in public. He died in February 1984. Andropov was not in office long enough for his protégé, Gorbachev, to gain the upper hand in the succession struggle, and he was succeeded by seventy-two-year-old Konstantin Chernenko, who was closely associated with the status quo of the Brezhnev era.

ANDRUSOVO, PEACE OF

The Peace of Andrusovo (1667) concluded a thirteen-year period of conflict between Muscovy, Poland-Lithuania, and Sweden, known as the Thirteen Year's War (1654–1667). It marked the end of Poland-Lithuania's attempts at eastward expansion, and divided the Ukraine into Polish (right

bank) and Russian (left bank) spheres of influence on either side of the Dnieper River. The treaty allowed Muscovy to maintain temporary hold over the two key cities of Smolensk (thirteen and a half years) and Kiev (two years); but Muscovy defied those provisions and retained these cities permanently, paying only a token indemnity to the Poles. The agreement at Andrusovo, though originally intended to be provisional, was confirmed by the so-called "Eternal Peace" of 1686. Thus, the treaty marked Muscovy's ascendance over Poland-Lithuania in the region.

The Peace of Andrusovo is significant in that it defined relations between Muscovy and Poland-Lithuania for much of the remainder of the century. Subsequent treaties extended, clarified, or confirmed the 1667 Peace of Andrusovo. Largely because of this treaty, Muscovy and Poland-Lithuania developed a mutual defensive stance against the Crimean Tatars and the Ottoman Empire in the south. It also affected how the two nations defined other aspects of their relationship, such as the status of Kiev, the Zaporozhian Cossacks, and of Orthodox populations in Polish-held territories.

The creation of Polish and Russian spheres of influence had a far-reaching impact on their subject populations. The Poles pursued a policy of Polonization of Belarus, forbidding the use of the Belarussian language, and restricting the political involvement of the Orthodox believers. The Russians limited the power of the hetmans and returned the practice of serfdom to the Left Bank region. The divided Ukrainians sought to gain advantage by playing Muscovy, Poland, and the Ottomans against one another, with the result that continuous warfare reduced their population and destroyed their lands. Still, the division remained in effect and contributed to Muscovy's predominance.

W. M. REGER IV

ANNA IVANOVNA

(1693–1740), empress of Russia (1730–1740).

Anna Ivanovna was a daughter of Peter the Great's half-brother and co-ruler Ivan V. When Peter's young grandson, Peter II, died unexpectedly the Romanov male line came to an end. The Supreme Privy Council faced the problem of deciding to

which of the five female pretenders the Russian crown was to be passed.

Two powerful aristocratic families, the Golitsyns and Dolgorukys, dominated the Council. They hoped to limit the powers of the autocratic monarch, a plan that required a docile and passive figure on the throne. Anna seemed to fit their needs perfectly. She was a widow in near impoverishment, wishing to escape her difficult circumstances in Courland (Latvia). The Council believed that given her essentially weak character and probable gratitude toward the Council for the offer of the crown, she would prove malleable enough to accept restrictions on her power. In a signed document Anna agreed not to make any decisions on war or peace, taxes, promotions, deprivation of titles and property, remarrying, appointment of an heir, or spending of state revenues without approval of the Supreme Privy Council. The Council had in effect executed a *coup d'état*. Real power had moved from the autocrat to the oligarchy in the Council.

As word began to spread about these conditions, lesser nobles began to form opposition against the Golitsyn and Dolgoruky conditions. These lesser nobles, dependent on the monarch for their positions, privileges, and material well-being, preferred the absolute power of a monarch, believed to be above petty personal interests, to what they considered to be the despotism of a small clique of aristocratic families.

Anna entered Moscow on February 15, 1730. Taking advantage of the opposition among the nobles and Imperial Guards to the limiting of her power, at an audience she tore up the document she had signed after accepting petitions asking her to reclaim her autocratic power. Some historians regard this as a lost opportunity for Russia to break from its autocratic past. They believe that the granting of legal rights to the nobility as a whole would have led to dramatic changes in the sociopolitical structure, thereby removing many obstacles created by the autocratic system to Russia's further economic and political development.

In return for their support against the Council, these nobles pressed Anna for concessions and privileges that she eventually granted. She repealed the 1714 Law on Primogeniture, shortened military service, allowed entrance for nobles into the military at officer rank and gave them more control over their serfs. These moves represented the beginning of an upgrading of the Russian nobility's status.

Anna had little inclination for ruling, preferring gossip, trivia, and matchmaking. Her lover from Courland, Count Ernst-Johann Biron, exercised a decisive influence on her. The great resentment Russians felt towards him and the other foreigners Anna placed in key posts and to whom she granted much patronage became a leitmotiv of her reign. This resentment, which continued after her reign, had other roots as well. As Russian identity among the upper classes began to solidify, the influx of foreigners, whose expertise was regarded as important for modernization, came to be seen as an affront to Russian dignity. The damaged belief in Russian superiority, combined with the frequently bad behaviour of foreigners, added to the complexity of this problem.

Anna took several steps to consolidate her rule. She founded the powerful Izmailovsky Guards, whose head was a former lover. The intelligence service was reestablished, providing an effective mechanism for surveillance and control over society. Finally, in order to bypass the Supreme Privy Council, in 1731 Anna established a Cabinet of Ministers, which in reality governed the Empire. This was not a limitation on the autocratic power, since Anna willingly granted these powers to the Cabinet of Ministers and was able to take them back at will.

Anna's foreign policy reinforced the general line set by Peter and thereby set the tone for Russian foreign policy for the rest of the century. With Austria she fought the War of Polish Succession (1733–1735) to prevent the resurgence of French influence in Poland and to promote the election of a pro-Russian king, thereby adding to the security of the Empire's western borders. Continuing Russia's push southward to the Black Sea, Anna with Austrian support declared war on the Ottoman Empire. The war ended in 1739 with the defeat of the Crimean khanate, Russia's regaining of Azov, and the understanding that St. Petersburg would deal decisively with rivals on Russia's Black Sea coast. Anna failed, however, to gain the right to maintain a Russian fleet in the Black Sea, a recurring issue in Imperial Russian history. The policy of working with Austria in regard to Poland and the Ottoman Empire was adopted by Catherine II.

Anna died on October 7, 1740.

ZHAND P. SHAKIBI

ANTHONY KHRAPOVITSKY, METROPOLITAN

(1863–1936), metropolitan of Kiev, theologian, church reformer, and leader of the Russian Orthodox Church in exile after the Russian revolution.

Through early study of Dostoyevsky and Slavophilism, Anthony became convinced that faith and philosophy were closely intertwined. His *Psychological Data in Favor of Free Will and Moral Responsibility* (1887) extended this earlier insight, established his reputation as a theologian, and inspired many young men to become monastic missionaries so as to combat the rebellious ideas current in society and to relieve human suffering.

To build the Kingdom of God in society, Anthony believed, the church must be free from dependence on the state (although he always remained a staunch monarchist in politics). In August 1917 he advanced his ideas on church reform at a council (sobor) of the Russian church. He argued that the church should be governed at the top by a patriarch and a council of bishops, a structure favored by many bishops in attendance. For a time it looked as if the council would elect Anthony as patriarch. In the first round of balloting, he was the most popular of the three finalists for the patriarchal office. However, the final selection by drawing lots resulted in the selection of Tikhon (Bellavin).

In the confused political and religious turmoil in Ukraine during the last months of German occupation (World War I), Anthony became metropolitan of Kiev. During the civil war, he supported the losing side and was forced to leave Russia for a life of exile, first in Constantinople, then at Srem-

ski Karlovci in Yugoslavia. In 1920, as senior among the bishops who had left Russia, he took the lead in creating a Higher Church Administration and a Synod of the Russian Church in Constantinople. The next year, he convened a council in Yugoslavia that declared the new Synod as the central church authority in emigration, expressed its desire to see a restoration of monarchy in Russia, and proclaimed Anthony as "Vice Regent of the All-Russian Patriarch." The new organization declared unconditional loyalty to Patriarch Tikhon, but came to fear that the patriarch was acting on behalf of the Communist government in Russia. In the two years following Patriarch Tikhon's death in 1925, Anthony broke off relations with the Moscow patriarchate and declared the Synodal church in Yugoslavia to be the sole heir of the historic Orthodox church in Russia. His followers expected him to be elected patriarch of this fully autonomous church that claimed jurisdiction over the entire Russian diaspora. Such a claim caused a rupture in relations with Metropolitan Evlogy, whom Patriarch Tikhon had placed in charge of the Russian parishes in western Europe. Eventually, in 1931, the ecumenical patriarch Vasilios III intervened and permitted Evlogy to place the exarchate of the Russian church in western Europe under Constantinople's jurisdiction. Anthony's influence in the Orthodox emigration diminished thereafter.

ROBERT L. NICHOLS

ANTHONY VADKOVSKY, METROPOLITAN

(1846–1912), metropolitan of St. Petersburg, moderate church reformer.

Anthony began his career at the Kazan Theological Academy as a scholar and editor of the academy's widely read journal *Orthodox Interlocutor* (*Pravoslavny sobesednik*). His scholarly life ended abruptly with the sudden illness and death of his wife and two children. He became a monk, thereby

contributing to the notable revival in the 1880s of the "learned monasticism" that had characterized the church hierarchy in Russia before the Great Reforms of the 1860s.

Anthony soon became rector of the St. Petersburg Theological Academy and bishop of Vyborg, vicar to the metropolitan of St. Petersburg. Some of Anthony's favorite students at the academy subsequently became prominent churchmen: Sergei Stragorodsky, the future leader of the Russian church during the communist era, and Anthony Khrapovitsky, Sergei's rival and leader of the Russian church in exile after 1920. While promoting monasticism, Anthony also sought to reform the monasteries, particularly those whose economic activities harmed the material welfare of the parish clergy. The parish clergy, he felt, must be accorded a more secure livelihood if they were to rescue the church's failing parishes. Anthony used his influence as bishop to advance these reforms. In 1892 Anthony became the archbishop of a newly created Finnish diocese aimed at encouraging Russian patriotic feeling and devotion to the Russian Orthodox Church among the Finnish Orthodox population.

When the revolutionary disturbances in 1905 generated a new law on religious toleration, Anthony, as ranking member of the Holy Synod, entered the broader struggle for church reform. He argued that the new law put the church at a disadvantage because other religious faiths were freed from state interference in their internal affairs in a way not permitted to Orthodoxy. These sentiments, transmitted to Nicholas II by Sergei Witte, chairman of the Council of Ministers, decisively advanced the popular reform movement that culminated in an all-Russian council (*sobor*) of the church and reestablishment of the patriarchate after the fall of the Russian monarchy in 1917. At the same time, fearing that the church might be swept into a political maelstrom, he warned against clerical participation in the newly forming political parties of post-1905 Russia. During these years, Anthony courageously, if ultimately unsuccessfully, resisted the harmful influence of Rasputin in church affairs, and there is some evidence to suggest that he tried to intervene personally with Nicholas II in order to quell Rasputin's potential influence on the Tsarevich Alexis. Following Anthony's death in 1912, Rasputin's influence in the Holy Synod grew rapidly.

ANTI-BALLISTIC MISSILE TREATY

The Anti-Ballistic Missile Treaty (usually referred to as "the ABM Treaty") was signed by U.S. president Richard Nixon and Soviet leader Leonid Brezhnev in Moscow on May 26, 1972. It entered into force on October 3, 1972. Under its terms, the United States and the Soviet Union agreed to limit sharply both development and deployment of ballistic missile defenses in order to constrain the arms race in strategic nuclear weapons and to enhance the stability of the strategic balance. The ABM Treaty was the principal achievement of the Strategic Arms Limitation Talks (SALT), which also produced an Interim Agreement limiting strategic offensive missiles, pending negotiation of a more comprehensive treaty limiting such weapons. The ABM Treaty was of indefinite duration, although it could be amended by mutual agreement and either party could withdraw at any time on six months' notice.

The ABM Treaty was the centerpiece of the Nixon–Brezhnev Moscow summit of 1972, and the SALT negotiation was seen as the icebreaker for a broader political détente, as well as a stabilizing element in strategic arms control. Strategic arms control and the ABM Treaty enjoyed wide support for most of the next two decades. This was true despite the prolonged and ultimately inconclusive efforts to reach agreement on a SALT II treaty on offensive arms.

By the time Ronald Reagan became president in 1981, American concerns over the strategic balance had risen. In 1983 President Reagan announced a Strategic Defense Initiative (SDI) to develop strate-

gic antiballistic missile defense systems. Deployment, and even testing and development, of such a system would have required radical revision or abrogation of the ABM Treaty. In 1985 the Reagan administration announced a unilateral revised interpretation of the ABM Treaty loosening restrictions on testing new ABM technologies. This revised "broad interpretation" of the ABM Treaty was highly controversial and was never applied to actual testing; in 1994 it was officially repudiated by the Clinton administration. The SDI program greatly increased expenditures on U.S. ballistic missile defense research and development, but it did not lead to a deployable system.

In the 1990s and afterward, following the end of the Cold War and agreed reductions in U.S. and Soviet strategic offensive arms, the United States renewed its pursuit of ballistic missile defense. On December 15, 2001, President George W. Bush officially gave notice that the United States was withdrawing from the ABM Treaty in six months. Discussions had been held with the Russians on possible amendments to the treaty, but the United States decided that it wished an open slate for development and deployment decisions and opted to withdraw.

The Anti-Ballistic Missile Treaty thus had a thirty-year life. The ABM Treaty alone had been unable to restrain a buildup in strategic offensive arms in the 1970s and 1980s, and it was less needed in the post–Cold War world, although many in the United States (and the Western allies, Russia, and China) had urged its retention. In any event, the ABM Treaty did contribute to greater certainty of mutual nuclear deterrence for nearly two decades of the Cold War, and even the fact of its successful negotiation had borne witness to the ability of the nuclear superpowers, even as adversaries, to agree on such a measure to reduce the dangers of the nuclear confrontation.

RAYMOND L. GARTHOFF

ANTI-COMINTERN PACT

The Anti-Comintern Pact was signed by Germany and Japan on November 25, 1936, and joined by Italy on November 6, 1937. Disguised as an effort to combat the influence of the Communist International (Comintern), the treaty was intended to serve as a military alliance aimed at the Soviet Union. In reality, the treaty did not result in any coordinated German-Japanese military action, but instead became the foundation for growing distrust and betrayal between the two fascist allies themselves.

The text of the treaty was brief and to the point. It asserted that the Communist International was a threat to world peace and that the signatories planned to “keep each other informed concerning the activities” of the Comintern and cooperate in their mutual defense, and invited other nations to join their efforts. A Supplementary Protocol empowered Germany and Japan to “take stringent measures against those who at home or abroad work” for the Comintern, authorizing repressive measures against members of the Communist Party in Germany, Japan, or countries under their influence. Finally, both promised not to sign a separate agreement with the Soviet Union without the other being informed. Viscount Kintomo Mushakoji, the Japanese ambassador to Germany, and Joachim von Ribbentrop, German ambassador to London, signed the treaty. It went into force immediately and was valid for five years.

The Anti-Comintern Pact threatened the USSR and seemed to be one more aspect of Germany’s aggressive policy. Nevertheless, the German and Japanese military staffs did not coordinate their actions, and each country pursued its own interests irrespective of the Anti-Comintern Pact.

In 1939, while the Soviet army was defeating the Japanese military in Manchuria along the Mongolian border, Ribbentrop traveled to Moscow and negotiated the Nazi-Soviet Non-Aggression Pact, leaving the Japanese out of these deliberations. Japan could not trust Hitler. In 1941, again without notice, Germany invaded the USSR. Japan de-

clared not to assist its ally in the Anti-Comintern Pact and eventually attacked the United States instead of the USSR.

HAROLD J. GOLDBERG

ANTI-PARTY GROUP

The Anti-Party Group, so called by Nikita Khrushchev, whom it tried to oust from power in June 1957, was neither opposed to the Communist Party nor really a group. Rather, it consisted of three of Khrushchev’s main rivals in the party leadership, Georgy Malenkov, Vyacheslav Molotov, and Lazar Kaganovich, themselves hardly united except in their wish to oust Khrushchev, plus a diverse set of allies who supported them at the last minute: titular head of state Klimenty Voroshilov; chairman of the Council of Ministers Nikolai Bulganin; central economic administrators Mikhail Pervukhin and Maxim Saburov; and Dmitry Shepilov, Khrushchev’s protégé whom he had recently promoted to foreign minister.

When Josef Stalin died in March 1953, Malenkov seemed the heir apparent, but Molotov also appeared to be a contender for supreme power. Khrushchev joined with both of them to bring down secret police chief Lavrenty Beria, who was arrested in June 1953 and executed in December. Khrushchev turned next against Malenkov, who was demoted from prime minister to minister of electrification in February 1955, and then against Molotov, who was soon dropped as foreign minister. However, both Malenkov and Molotov were allowed to remain full members of the Party Presidium, leaving them in position to seek revenge against Khrushchev.

The logic of power in the Kremlin, in which there was no formalized procedure for determining leadership succession, largely accounted for this struggle. So did certain policy differences: Molotov, Kaganovich, and Voroshilov were particularly dismayed by Khrushchev's "secret speech" attacking Stalin at the Twentieth Party Congress in February 1956, as well as by the de-Stalinization process he began in domestic and foreign policy. Malenkov had seemed more open to reform during his stint as prime minister, but although his and Khrushchev's skills could have complemented each other, personal animosity drove them apart. Despite choosing Bulganin to replace Malenkov as prime minister, Khrushchev disdained Bulganin. Perukhin and Saburov felt threatened by Khrushchev's proposed reorganization of economic administration, which jeopardized their jobs. Shepilov probably betrayed his patron because he thought Khrushchev was bound to lose.

Including seven full members of the Presidium, the plotters constituted a majority. When they moved against Khrushchev on June 18, 1957, they counted on the Presidium's practice of appointing its own leader, leaving the Party Central Committee to rubber-stamp the result. Instead, however, Khrushchev insisted that Central Committee itself, in which his supporters dominated, decide the issue. While Khrushchev and his enemies quarreled, the KGB (Committee on State Security) and the military ferried Central Committee members to Moscow for a plenum that took place from June 22 to 28.

Khrushchev's opponents had no chance once the plenum began. Molotov, Malenkov, and Kaganovich were subjected to a barrage of charges about their complicity in Stalin's terror, including details about Stalinist crimes that were not fully publicized until the late 1980s. Following the plenum, Molotov was exiled to Outer Mongolia as Soviet ambassador, Malenkov to northern Kazakhstan to direct a hydroelectric station, Kaganovich to a potash works in Perm Province, and Shepilov to head the Kyrgyz Institute of Economics. So as not to reveal how many had opposed him, Khrushchev delayed his punishment of the rest of the Anti-Party Group: Bulganin remained prime minister until 1958; Voroshilov was not deposed as head of state until 1960. After the Twenty-second Party Congress in October 1961, in which Khrushchev intensified his all-out attack on Stalin and Stalinism, Molotov, Malenkov, and Kaganovich were expelled from the Communist Party.

WILLIAM TAUBMAN

ANTONOV UPRISING

The Antonov Uprising (1920–1921) was a large, well-organized peasant revolt in the Tambov province of Central Russia. Part of the Green Movement, the uprising threatened Communist power in 1921 and was a major reason for the abandonment of War Communism.

Alexander Antonov (1889–1922) was a Socialist Revolutionary (SR) whom the February Revolution rescued from a long prison sentence for robbing railroad station ticket offices. He returned to Tambov province in 1917 to become a district police official under the Provisional Government. He left this post in April 1918 and went underground, organizing an armed guerrilla group to resist the new Communist government.

Increasingly severe food-procurement and conscription policies, along with a drought, pushed Tambov peasants into a spontaneous rebellion against the Communist government in August 1920. Seizing the opportunity, Antonov put himself at the head of the rebellion. He organized a territorially-based army divided into regiments, which he recruited from the many local World War I and civil war veterans. Local socialists created a strong network of local committees (STK—*soiuz trudovogo krestian'stva*, Union of the Working Peasantry) that created an alternative, noncommunist government in the province. While they fought the Communist government, they did have wider plans. Their program (which survives in various versions) called for an end to civil war, the convening of a freely

elected Constituent Assembly, land to the peasants, and workers' control of industry.

Initial attempts to suppress this rebellion were failures. The few troops in the province were unreliable, and often went over to the insurgents. By spring 1921 the insurgents controlled much of the countryside, had halted grain procurement, and threatened rail communications through the province. The central government responded with reforms and repression. Forced grain procurement and conscription were curtailed, removing the greatest irritants to the peasantry. The end of the Polish-Russian war enabled the Communist government to move fifty thousand troops to the province, including crack cavalry brigades, automobile detachments, airplanes, and artillery. By the end of July 1921 the insurgency was crushed. Its regiments were run to ground and annihilated by the larger, better-armed Red Army forces. The Cheka rooted out the STKs and shot or exiled thousands of insurgents. Antonov himself remained at large for another year, but died in a Cheka ambush on June 24, 1922.

APPANAGE ERA

Most historians since the nineteenth century—Russian, Soviet, and Western—have used the phrase "appanage era" to designate the period between the collapse of Kievan Russia and the emergence of a centralized Russian state. It is dated from the Mongol conquest of Kievan Russia between 1237 and 1240 to either the accession of Ivan III (1462) or Basil III (1505), or to the beginning of the reign of Ivan IV (1533). It was characterized by the emergence of a multiplicity of independent principalities (*udeli* or appanages). Princes treated appanage holdings as private property, conveying them to their heirs by wills that divided the lands

between all their sons. This practice meant that holdings were increasingly fragmented in each generation. As the principalities were weakened, internal conflict escalated and external attacks came not only from the Mongols, but also from Lithuanians, Germans, Poles, and Swedes. This tumultuous situation ended only as Moscow fashioned an autocracy capable of "gathering the Russian lands."

In the later twentieth century, a new interpretation of the age emerged. New, broadly based archeological evidence refuted the traditional view that Kiev itself was in economic decline from the mid-twelfth century, and suggested instead a general economic expansion. The new interpretation proposes that the eleven or twelve appanages that developed between 1150 and 1240 represented a rational division of labor and delegation of authority within the Rurikid dynasty, and that they were designed to respond to economic and political expansion. It maintains that the principalities should be understood as components of a dynastic realm, not as private property. As proof, it offers detailed evidence to argue that the frequent wars of the late twelfth and early thirteenth centuries were fought to defend the principle of lateral succession developed in the Kievan period. It argues at length that this principle continued to underlie succession decisions and legitimacy issues to one degree or another during much of the Mongol period, and remained important as late as the civil wars of the second quarter of the fifteenth century. The interpretation also set a new initial date for the era—the mid 1100s—which has become increasingly accepted by scholars in the field, and a number of new publications since the late 1980s minimize the use of the term "appanage era," but most still retain much of the traditional interpretation associated with it.

ELVIRA M. WILBUR

APPARAT

An informal term used to describe a part or the whole of a bureaucratic structure, such as the Communist Party.

The literal translation of *apparat* is apparatus. The Bolsheviks began as an underground movement, and, to survive, the party machine demanded solidarity and discipline. Members were known as *apparatchiki*, that is, men of the apparat, or as *komitechiki*, members of the underground committees. As time passed, the term came to refer to any part, or the whole, of the Soviet bureaucratic system. It was frequently used in later years as a term of denigration and contempt, as was the term *apparatchik*.

APRIL THESES

Vladimir Ilich Lenin's "April Theses" was one of the most influential and important documents of the Russian Revolution and Bolshevik history. The main ideas of Lenin's April Theses were first delivered in speeches immediately after his arrival in Petrograd on April 16, 1917, and then formalized in a newspaper article ("The Tasks of the Proletariat in the Present Revolution") in the Bolshevik newspaper *Pravda* on April 20. The Theses refused any support for the Provisional Government, attacked the Petrograd soviet (council) leadership's policy of cooperation with the Provisional Government, and declared that the soviets should be the basis for a new, revolutionary government. This latter position soon aligned the Bolsheviks with popular sentiment, which by summer was demanding "all power to the soviets," that is, a government based on the soviets. The Theses also called for immediate radical social and economic reforms and for transforming the international war into civil war. Although Lenin's theses were too radical for the optimistic and cooperative mood of April, they positioned the Bolsheviks to benefit from the discontentment and disillusionment that summer and fall

as the Provisional Government failed to solve the war, economic, and other issues. Lenin's April Theses also called for a Bolshevik party congress to revise the party program and to change the party name to communist. Lenin's ideas initially shocked most Bolsheviks as much as other political leaders, but Lenin soon brought the Bolshevik Party to accept them. The Theses, especially those calling for immediate passage into the next stage of revolution and a soviet-based government, significantly redefined Bolshevism.

ARCHITECTURE

The architecture of medieval Rus, initially influenced by Byzantine architecture, developed a distinct set of styles between the eleventh and fourteenth centuries. As Moscow established its dominance and as contacts with western European culture increased in the late fifteenth century, Russian motifs began to blend with Western ones. By the eighteenth century the design of Russia's public buildings followed Western styles. Rapid social change at the turn of the twentieth century and the establishment of Soviet power after 1917 generated new bursts of architectural experimentation.

MEDIEVAL AND MUSCOVITE

ARCHITECTURE (C. 1000–1700)

Little is known of pre-Christian architecture among the eastern Slavs, but with the acceptance of Christianity by Grand Prince Vladimir of Kiev in 988, the construction of masonry churches spread throughout Rus. The largest and most complex of

these early churches was Kiev's Cathedral of Divine Wisdom (1037–1050s), commissioned by Prince Yaroslav the Wise and built with the direction of Greek masters. The interior contained extensive mosaics as well as frescoes. Other major churches of this period include the Sophia Cathedral in Novgorod (1045–1052), the Cathedral of the Transfiguration of the Savior in Chernigov (1031–1050s), and the Cathedral of the Dormition at the Kiev Cave Monastery (1073–1078; destroyed in 1941).

Regardless of size, the churches adhered to a plan known as the "inscribed cross": a cuboid structure with a dome marking the intersection of the main aisles. The dome was elevated on a cylinder supported by the four main piers. The facades usually culminated in curved gables known as *zakomary*.

In addition to Kiev, Novgorod, and neighboring cities, the third center of architecture in pre-Mongol Rus was the Vladimir-Suzdal principality, whose limestone churches were distinguished by carved decoration and precision of design. Grand Prince Yury Dolgoruky commissioned the first of these churches, such as the Transfiguration in Pereslavl-Zalessky (1152–1157). His son Andrei Bogolyubsky began the great era of limestone building in this area with the Cathedral of the Dormition in Vladimir (1158–1160); his palace church at Bogolyubovo (1158–1165) of which only fragments remain; and the Church of the Intercession on the Nerl (1165). His successor, Vsevolod III, enlarged the Dormition Cathedral (1185–1189) and built the Cathedral of St. Dmitry in Vladimir (1194–1197), whose upper tier is covered with elaborate carving representing Biblical and secular motifs.

After the Mongol invasion of 1237–1241, church construction sharply declined; but by the middle of the fourteenth century, masonry construction revived, particularly in Novgorod, with the support of wealthy merchants and neighborhood craft guilds. The Church of St. Theodore Stratilates on the Brook (1360–1361) and the Church of Transfiguration on Elijah Street (1374; frescoes by Theophanes the Greek) exemplified a distinct local style with steeply pitched roofs. Moscow also enjoyed an architectural revival in the construction of limestone churches, but not until the last quarter of the fifteenth century did the major churches of the Kremlin take shape under the direction of Italian masters imported by Ivan III.

During the sixteenth century, Moscow's brick churches displayed boldly inventive designs, also

with Italian influence. The culmination of this period occurs in the most famous of Russian churches, the Intercession on the Moat, popularly known as Basil the Blessed (1555–1561). Built on what later became known as Red Square, in celebration of Ivan IV's conquest of Kazan and Astrakhan, the structure consists of a central tent tower surrounded by eight tower churches. The latter part of the sixteenth century also witnessed the building of major brick fortresses, most notably the citadel at Smolensk (1595–1602) by Fyodor Kon. With the restoration of order after the Time of Troubles (1605–1612), the building of brick churches occurred on an unprecedented scale, especially during the reign of Alexei (1645–1676).

THE IMPERIAL PERIOD (C. 1700–1917)

The assimilation of Western architectural styles, which had begun in the late seventeenth century, increased radically during the reign of Peter I (1682–1725). In 1703 Peter founded St. Petersburg, which became the Russian capital in 1711. Western European architects Jean Baptiste Le Blond (1679–1719) and Domenico Trezzini (1670–1734) submitted plans for its development. At this stage Petersburg's architecture owed much to the northern European baroque, particularly in Sweden and Holland. The stuccoed brick walls of the city's baroque buildings were painted, with white trim for window surrounds and other details. Bartolomeo Francesco Rastrelli (1700–1771) defined the high baroque style during the reigns of Anna (1730–1740) and Elizabeth (1741–1762). Among his major projects are the Stroganov Palace (1752–1754), the final version of the Winter Palace (1754–1764), and the Smolny Convent with its Resurrection Cathedral (1748–1764). In addition Rastrelli greatly enlarged the existing imperial palaces at Peterhof (1746–1752) and Tsarskoye Selo (1748–1756).

During the reign of Catherine the Great (1762–1796), imperial architecture moved from the baroque to neoclassicism. With the support of Catherine, a constellation of architects endowed the city during the second half of the eighteenth century with a grandeur inspired by classical Rome. Charles Cameron (ca. 1740–1812), the leading proponent of neoclassicism, designed the palace at the imperial estate of Pavlovsk (1780–1796), a gift from Catherine to her son Grand Duke Paul. Andrei Voronikhin (1759–1814) created a still more obvious example of the Roman influence in his Cathedral of the Kazan Mother of God (1801–1811),

with its sweeping colonnade reminiscent of the Basilica of Saint Peter in Rome.

The reign of Alexander I (1801–1825) witnessed a new campaign to create an interconnecting system of architectural ensembles and public space throughout the center of Petersburg. The rebuilding of the Admiralty (1806–1823) by Andreyan Zakharov (1761–1811) reaffirmed that structure and its spire as dominant elements in the city plan. The culmination of the imperial design fell to Carlo Rossi (1776–1849), who created four major ensembles, including the General Staff Building and Arch (1819–1829), facing Palace Square. Neoclassicism in Moscow appeared primarily in houses and other institutions built by the nobility and wealthy merchants. Of particular note are mansions and churches designed by Matvei Kazakov (1738–1812).

During the reign of Nicholas I (1825–1855), classical unity in Petersburg yielded to eclectic styles and innovations in construction engineering, both of which are evident in the final version of St. Isaac's Cathedral (1818–1858) by Auguste Montferrand (1786–1858). Of special significance was the Russo-Byzantine style, supported by Nicholas I and implemented by Constantine Thon (1794–1881), builder of the Great Kremlin Palace (1838–1849). The major work in this style was Ton's Church of Christ the Redeemer (1837–1883; destroyed in 1931 and rebuilt in the 1990s), created as a memorial to Russian valor in the 1812 war.

By the 1870s there arose a new national style based on decorative elements from sixteenth- and seventeenth-century Muscovy as well as on motifs from folk art and traditional wooden architecture. Major examples of the Russian style in Moscow include the Historical Museum (1874–1883), built on the north side of Red Square to a design by Vladimir Shervud (1833–1897); the Moscow City Duma (1890–1892) by Dmitry Chichagov (1835–1894); and the Upper Trading Rows (1889–1893) by Alexander Pomerantsev (1848–1918), assisted by the construction engineer Vladimir Shukhov (1853–1939). In Petersburg the Russian style was used by Alfred Parland (1845–1892) for the Church of the Resurrection of the Savior "on the Blood" (1883–1907).

The "new style," or *style moderne*, that arose in Russian architecture at the turn of the century emphasized the innovative use of materials such as glass, iron, and glazed brick in functional yet

highly aesthetic designs. The style flourished in Moscow primarily, where its leading practitioner was Fyodor Shekhtel (1859–1926), architect for patrons among Moscow's entrepreneurial elite, such as the Ryabushinskys. In Petersburg the *style moderne* appeared primarily in the design of apartment buildings. In contrast to their American contemporaries, Russian architects did not design large buildings with steel frames, but became experts at the use of reinforced concrete construction.

SOVIET ARCHITECTURE (1917–1991)

The economic chaos engendered in Russia by World War I proved catastrophic for building activity, and the ensuing revolution and civil war brought architecture to a standstill. With the recovery of the economy in the 1920s, bold new designs—often utopian in concept—brought Russia to the attention of modern architects throughout the world. Constructivism, the most productive modernist movement, included architects such as Moisei Ginzburg (1892–1946), Ilya Golosov (1883–1945), Grigory Barkhin (1880–1969), and the Vesnin brothers: Leonid (1880–1933), Viktor (1882–1950), and Alexander (1883–1959). Their designs, primarily in Moscow, set a standard for functional design in administrative and apartment buildings, as well as social institutions such as workers' clubs. Another modernist active during the same period, but not a part of Constructivism, was Konstantin Stepanovich Melnikov (1890–1974), known for his bold designs for exposition pavilions and workers' clubs.

During the 1930s more conservative trends asserted themselves, as designs inspired by classical, Renaissance, and historical models received the party's approval. After World War II architectural design became still more firmly locked in traditional, often highly ornate eclectic styles, epitomized by the postwar skyscrapers in Moscow and other Soviet cities. After 1953 pressing social needs, particularly in housing, led to a return to functionalism, heavily dependent on standardized designs and prefabricated components. With the demise of the communist system in Russia, the revival of private practice in architecture seems likely to change the face of the profession, even as new problems arise in zoning and resource allocation.

WOODEN ARCHITECTURE

Throughout Russian history wood has been used for almost every type of construction, from churches and fortress walls to peasant dwellings and grand

country villas. Fire and rot have destroyed most wooden structures from the distant past, and there is no extensive evidence that wooden structures appeared before the late sixteenth century. Yet the basic forms of wooden architecture are presumably rooted in age-old traditions. Remarkable for their construction logic, wooden churches also display elaborate configurations. One example is the Church of the Transfiguration at Kizhi (1714), whose pyramid of recessed levels supports twenty-two cupolas. Although such structures achieved great height, the church interior was usually limited by a much lower ceiling. Log houses also ranged from simple dwellings to large three-story structures peculiar to the far north, with space for the family as well as shelter for livestock during the winter. Wooden housing is still used extensively, not only in the Russian countryside, but also in provincial cities (particularly in Siberia and the Far East), where the houses often have plank siding and carved decorative elements.

WILLIAM CRAFT BRUMFIELD

ARCHIVES

Research access to and knowledge about archives in the Russian Federation since 1991 have been key factors in the opening of historical and cultural inquiry in what had previously been a predominantly closed society. Yet the opening of archives would have had much less impact on society and history had it not been for the central attention given to archives under Soviet rule. And Russian archives

would hardly be so rich in the early twenty-first century had it not been for the early manuscript repositories in the church and the long tradition of preserving the records of government and society in Russian lands. For example, the “Tsar’s Archive” of the sixteenth century paralleled archives of the government boards (*prikazy*) of the Muscovite state. Peter the Great’s General Regulation of 1720 decreed systematic management of state records. During the late nineteenth century, the Moscow Archive of the Ministry of Justice became the most important historical archive. Before the revolutions of 1917, however, most recent and current records were maintained by state agencies themselves, such as the various ministries, paralleled, for example, by the archive of the Holy Synod, the governing body of the Orthodox Church. The Imperial Archeographic Commission, provincial archival commissions, the Academy of Sciences, major libraries, and museums likewise contributed to the growth of archives and rich manuscript collections.

The Bolshevik seizure of power in October 1917 had as revolutionary an impact on archives as it did on most other aspects of society and culture, and stands as the single most important turning point in the history of Russian archives. To be sure, the turmoil of the revolution and civil war years brought considerable disruption, and indeed destruction, to the archival and manuscript legacy. Yet it brought with it the most highly centralized state archival system and the most highly state-directed principles of preservation and management of documentary records that the world had ever seen. Deeply grounded in historical theory and committed to its own orthodoxy of historical interpretation, Marxism-Leninism as an ideology gave both extensive philosophical justification and crucial political importance to documentary control. As the highly centralized political system established firm rule over of state and society, the now famous archival decree of Vladimir Lenin (June 1, 1918) initiated total reorganization and state control of the entire archival legacy of the Russian Empire.

One of the most significant Soviet innovations was the formation of the so-called State Archival Fond (*Gosudarstvennyi arkhivnyi fond*—GAF), a legal entity extending state proprietorship to all archival records regardless of their institutional or private origin. With nationalization, this theoretical and legal structure also extended state custody and control to all current records produced by cur-

rent agencies of state and society. Subsequently a parallel Archival Fond of the Communist Party emerged with proprietorship and custody of Party records.

A second innovation was the establishment of a centralized state agency charged with the management of the State Archival Fond, enabling the centralization, standardization, and planning that characterized Soviet archival development. Indicative of the importance that Stalin attributed to control of archives and their utilization, from 1938 through 1960 the Main Archival Administration of the USSR (Glavarkhiv SSSR) was under the Commissariat and later (after 1946), Ministry of Internal Affairs (NKVD, MVD). Subsequently it was responsible directly to the Council of Ministers of the USSR.

A third innovation saw the organization of a network of archival repositories, although with substantial reorganizations during the decades of Soviet rule. A series of central state archives of the USSR paralleled central state archives for the union republics, with a hierarchical network of regional archives, all controlled and adopting standardized organizational and methodological guidelines dictated by Glavarkhiv in Moscow. Strict disposal and retention schedules regulated what went into the archives. A parallel network of Communist Party archives emerged. Records of the Ministry of Foreign Affairs remained separate, as did those of the security services and other specialized repositories ranging from geological data to Gosfilmofond for feature films. The Academy of Sciences maintained its own archival network, and archival materials in libraries and museums remained under their own controlling agencies.

Public research availability of the nation's documentary legacy was severely restricted during the Soviet era, although there was a brief thaw after 1956, and more significant research possibilities starting in the Gorbachev era of glasnost after the mid-1980s. But while limited public access to archives was a hallmark of the regime, so was the preservation and control of the nation's documentary legacy in all spheres.

In many ways, those three Soviet innovations continue to characterize the archival system in the Russian Federation, with the most notable innovation of more openness and public accessibility. Already in the summer of 1991, a presidential decree nationalized the archival legacy of the Communist

Party, to the extent that the newly reorganized state archival system was actually broader than its Soviet predecessor. The Soviet-era Glavarkhiv was replaced by the Archival Service of the Russian Federation (Rosarkhiv, initially Roskomarkhiv). Russia's first archival law, the Basic Legislature of the Russian Federation on the Archival Fond of the Russian Federation and Archives, enacted in July 1993, extended the concept of a state "Archival Fond." Although it also provided for a "non-State" component to comprise records of non-governmental, commercial, religious, and other societal agencies, it did not permit re-privatization of holdings nationalized during the Soviet period. Nor did it provide for the apportionment of archival records and manuscript materials gathered in central Soviet repositories from the union republics that after 1991 emerged as independent countries. The latter all remained legally part of the new Russian "Archival Fond."

In most cases, the actual archival repositories that developed during the Soviet era continue to exist, although almost all of their names have changed, with some combined or reorganized. As heir to Soviet-period predecessors, fourteen central state archives constitute the main repositories for governmental (and former Communist Party) records in different historical, military, and economic categories, along with separate repositories for literature and art, sound recordings, documentary films, and photographs, as well as technical and engineering documentation. As a second category of central archives, a number of federal agencies still have the right to retain their own records, including the Ministries of Foreign Affairs, Defense, Internal Affairs, and the security services. Municipal archives in Moscow and St. Petersburg comprise a third category. As there were in the Soviet period, there are also many archival repositories in institutes and libraries under the Russian Academy of Sciences, and libraries and museums under the Ministry of Culture and other agencies. The extensive network of regional state (including former Communist Party) archives for each and every subject administrative-territorial unit of the Russian Federation, all of which have considerable more autonomy from Moscow than had been the case before 1991.

The most important distinction between Russian archives in the early twenty-first century and those under Soviet rule is the principle of openness and general public accessibility. Significantly, such openness extends to the information sphere, whereby

published directories now identify all major repositories and their reference systems. New archival guides and specialized finding aids reveal the holdings of many important archives (many with foreign subsidies). And since 1997, information about an increasing number of archives is publicly available in both Russian and English-language versions on the Internet.

Complaints abound about continued restrictions in sensitive areas, such as the contemporary archives of the Ministries of Foreign Affairs, Defense, and the security services. Declassification has been all too slow in many areas, including more recent Communist Party records, and new laws governing state secrets often limit the otherwise proclaimed openness. Yet often the most serious research complaints stem from economic causes—closures due to leaking roofs or lack of heat, slow delivery time, and high copying fees. While Russia has opened its archives to the world, there have been more dangers of loss due to inadequate support for physical facilities and professional staff, leading to commercialization and higher service charges, because the new federal government has had less ideological and political cause than its Soviet predecessors to subsidize new buildings, physical preservation, and information resources adequately for the archival heritage of the nation.

PATRICIA KENNEDY GRIMSTED

ARMAND, INESSA

(1874–1920), née Elisabeth Stefan, revolutionary and feminist, first head of the *zhenotdel*, the women's section of the Communist Party.

Born in France, Inessa Armand came to Russia as a child when her parents died and her aunt took a job as governess in the wealthy Armand merchant family. At age nineteen she married Alexander Armand, who was to support her and her numerous Bolshevik undertakings throughout his life. In 1899 she became involved in the Moscow Society for Improving the Lot of Women, a philanthropic organization devoted to assisting prostitutes and other poor women. By 1900 she was president of the society and working hard to create a Sunday school for working women.

In 1903, disillusioned with philanthropic work, she joined the Social Democratic Party and became active in revolutionary propaganda work. In exile in Europe from 1909 to 1917, with a brief illegal return to Russia, she helped Vladimir Lenin establish a party school at Longjumeau, France, in 1911; she taught there herself. When Russian women workers gained the right to vote and be elected to factory committees in 1912, Armand, Nadezhda Krupskaya, and others persuaded Lenin to create a special journal *Rabotnitsa (Woman Worker)*. Although Armand and other editors insisted that women workers were not making special demands separate from those of men, they did recognize the importance of writing about women's health and safety issues in the factories.

During World War I Armand was one of Lenin's and the party's principal delegates to international socialist conferences, especially those of women protesting the war. In April 1917 Armand returned to Petrograd with Lenin and Krupskaya. Soon she was made a member of the Executive Committee of the Moscow Provincial Soviet and of the All-Russian Central Executive Committee (VtsIK), as well as chair of the Moscow Provincial economic council. Her crowning achievement, however, was her role in founding the women's section of the Communist Party, the *zhenotdel*.

In that role she worked on problems as diverse as supporting legislation legalizing abortion, combating prostitution, creating special sections for the protection of mothers and infants in the Health Commissariat, working with the trade unions, and developing agitation methods for peasant women. In all of these, Armand advocated the creation of

special methods for work among women, given women's historical backwardness and the prejudices of many men towards women's increased participation in the workforce and in society.

However, Armand's tenure as director of the *zhenotdel* was short-lived. On September 24, 1920, while on leave in the Caucasus, she succumbed to cholera and died.

ELIZABETH A. WOOD

ARMENIA AND ARMENIANS

Armenia is a landlocked, mountainous plateau that rises to an average of 3,000 to 7,000 feet (914 to 2,134 meters) above sea level. It extends to the Anatolian plateau in the west, the Iranian plateau in the southwest, the plains of the South Caucasus in the north, and the Karadagh Mountains and the Moghan Steppe in the south and southeast. The Armenian highlands stretch roughly between longitudes 37° and 48.5° east, and 38° and 41° north latitudes, with a total area of some 150,000 square miles (388,500 square kilometers). In present-day terms, historic Armenia comprises most of eastern Turkey, the northeastern corner of Iran, parts of the Azerbaijan and Georgian Republics, as well as the entire territory of the Armenian Republic.

GEOLOGY, GEOGRAPHY, AND CLIMATE

The Kur (Kura) and Arax (Araxes) Rivers separate the Armenian highlands in the east from the lowlands that adjoin the Caspian Sea. The Pontus Mountains, which connect to the Lesser Caucasus mountain chain, separate Armenia from the Black Sea and Georgia and form the region's northern boundary. The Taurus Mountains, which join the upper Zagros Mountains and the Iranian Plateau, form the southern boundary of Armenia and separate it from Syria, Kurdistan, and Iran. The western boundary of Armenia has generally been between the western Euphrates River and the northern stretch of the Anti-Taurus Mountains. Armenians also established communities east of the Kur as far as the Caspian Sea, and states west of the Euphrates as far as Cilicia on the Mediterranean Sea.

Lying on the Anatolian fault, the Armenian plateau is subject to seismic tremors. Major earthquakes have been recorded there since the ninth century, some of which have destroyed entire cities. The most recent earthquake in the region, occurring on December 7, 1988, killed some 25,000 people and leveled numerous communities.

Some fifty million years ago, the geological structure of Armenia underwent many changes, creating great mountains and high, now-inactive, volcanic peaks throughout the plateau. The larger peaks of Mount Ararat (16,946 feet; 5,279 meters), Mount Sipan (14,540 feet; 4,432 meters), and Mount Aragats (13,410 feet; 4,087 meters), and the smaller peaks of Mount Ararat (12,839 feet; 3,913 meters), and Mount Bingol (10,770 feet; 3,283 meters), from which the Arax and the Euphrates Rivers originate, are some examples. Tufa, limestone, basalt, quartz, and obsidian form the main composition of the terrain. The mountains also contain abundant deposits of mineral ores, including copper, iron, zinc, lead, silver, and gold. There are also large deposits of salt, borax, and obsidian, as well as volcanic tufa stone, which is used for construction.

Armenia's mountains give rise to numerous rivers, practically all unnavigable, which have created deep gorges, ravines, and waterfalls. The longest is the Arax River, which starts in the mountains of western Armenia, joins the Kur River, then empties into the Caspian Sea. The Arax flows through the plain of Ararat, which is the site of the major Armenian cities. Another important river is the Euphrates, which splits into western and

eastern branches. Both branches flow westward, then turn south toward Mesopotamia. The Euphrates was the ancient boundary dividing what became Lesser and Greater Armenia. The Kur and the Tigris and their tributaries flow briefly through Armenia. Two other rivers, the Akhurian, a tributary of the Arax, and the Hrazdan, which flows from Lake Sevan, provide water to an otherwise parched and rocky landscape devoid of forests.

A number of lakes are situated in the Armenian highlands, the deepest and most important of which is Lake Van in present-day Turkey. Van's waters are charged with borax, and hence undrinkable. Lake Sevan is the highest in elevation, lying some 6,300 feet (1,917 meters) above sea level. It is found in the present-day Armenian Republic.

Armenia lies in the temperate zone and has a variety of climates. In general, winters are long and can be severe, while summers are usually short and very hot. Some of the plains, because of their lower altitudes, are better suited for agriculture, and have fostered population centers throughout the centuries. The variety of temperatures has enabled the land to support a great diversity of flora and fauna common to western Asia and Transcaucasia. The generally dry Armenian climate has necessitated artificial irrigation throughout history. The soil, which is volcanic, is quite fertile and, with sufficient water, is capable of intensive farming. Farming is prevalent in the lower altitudes, while sheep and goat herding dominates the highlands.

Although Armenians have been known as artisans and merchants, the majority of Armenians, until modern times, were engaged primarily in agriculture. In addition to cereal crops, Armenia grew vegetables, various oil seeds, and especially fruit. Armenian fruit has been famous from ancient times, with the pomegranate and apricot, referred to by the Romans as the Armenian plum, being the most renowned.

THE EARLIEST ARMENIANS

According to legend, the Armenians are the descendants of Japheth, a son of Noah, who settled in the Ararat valley. This legend places the Armenians in a prominent position within the Biblical tradition. In this tradition, the Armenians, as the descendants of Noah (the "second Adam") are like the Jews, chosen and blessed by God. Greek historians, writing centuries after the appearance of the Armenians in their homeland, have left other ex-

Armenia, 1992 © MARYLAND CARTOGRAPHICS. REPRINTED WITH PERMISSION

planations of the origins of the Armenian people. Two of the most quoted versions are provided by Herodotus, the fifth century B.C.E. historian, and Strabo, the geographer and historian writing at the end of the first century B.C.E. According to Herodotus, the Armenians had originally lived in Thrace, from where they crossed into Phrygia, in Asia Minor. They first settled in Phrygia, and then gradually moved west of the Euphrates River to what became Armenia. Their language resembled that of the Phrygians, while their names and dress was close to the Medes.

According to Strabo, the Armenians came from two directions: one group from the west, or Phrygia; and the other from the south, or the Zagros region. In other words, according to the ancient Greeks, the Armenians were not the original in-

habitants of the region. They appear to have arrived sometime between the Phrygian migration to Asia Minor that followed the collapse of the Hittite Empire in the thirteenth century B.C.E., and the Cimmerian invasion of the Kingdom of Urartu (existed ca. 900–590 B.C.E.) in the eighth century B.C.E. In 782 B.C.E., the Urartian king, Argishti I, built the fortress-city of Erebuni (present-day Erevan, capital of Armenia). The decline of Urartu enabled the Armenians to establish themselves as the primary occupants of the region. Xenophon, who passed through Armenia in 401 B.C.E., recorded that, by his time, the Armenians had absorbed most of the local inhabitants.

THE LINGUISTIC EVIDENCE

Modern archeological finds in the Caucasus and Anatolia have presented sketchy and incomplete evidence of the possible origins of the Armenians. Until the 1980s, scholars unanimously agreed that the Armenians were an Indo-European group who either came into the area with the proto-Iranians from the Aral Sea region, or arrived from the Balkans with the Phrygians after the fall of the Hittites. Some scholars maintain that *Hay* or *Hai* (pronounced *high*), the Armenian word for “Armenian,” is derived from *Hai-yos* (Hattian). Hence, it is argued, the Armenians adopted the name of that empire as their own during their migration over Hittite lands. Others maintain that the Armeno-Phrygians crossed into Asia Minor, took the name *Muskhi*, and concentrated in the Arme-Shupria region east of the Euphrates River, where non-Indo-European words became part of their vocabulary. They stayed in the region until the Cimero-Scythian invasions altered the power structure. The Armenians then managed to consolidate their rule over Urartu and, in time, assimilated most of its original inhabitants to form the Armenian nation. According to this theory, the names designating Armenia and Armenians derive from the Perso-Greek: *Arme-Shupria*.

More recent scholarship offers yet another possibility—that the Armenians were not later immigrants, but were among the original inhabitants of the region. Although this notion gained some credibility since the mid-1980s, there remain a number of unresolved questions: What was the spoken language of the early Armenians? Are the Armenians members of a non-Indo-European, Caucasian-speaking group who later adopted an Indo-European dialect, or are they, as many believe, one of the native Indo-European speaking groups? A

number of linguists maintain that the Armenians, whom they identify with the Hayasa, together with the Hurrians, Kassites, and others, were indigenous Anatolian or Caucasian people who lived in the region until the arrival of the Indo-Europeans. The Armenians adopted some of the vocabulary of these Indo-European arrivals. This theory explains why Armenian is a unique branch of the Indo-European language tree and may well explain the origin of the word *Hayastan* (“Armenia” in the Armenian language). As evidence, these scholars point to Hurrian suffixes, the absence of gender, and other linguistic data. Archeologists add that the images of Armenians on a number of sixth-century Persian monuments depict physical features similar to those of other people of the Caucasus.

Other scholars, also relying on linguistic evidence, believe that Indo-European languages may have originated in the Caucasus and that the Armenians, as a result of pressure from large empires such as the Hittite and Assyrian, merged with neighboring tribes and adopted some of the Semitic and Kartvelian vocabulary and legends. They eventually formed a federation called *Nairi*, which became part of the united state of Urartu. The decline and fall of Urartu enabled the Armenian component to achieve predominance and, by the sixth century B.C.E., establish a separate entity, which the Greeks and Persians, the new major powers of the ancient world, called Armenia.

Further linguistic and archeological studies may one day explain the exact origins of the Indo-Europeans and that of the Armenian people. As of the early twenty-first century, Western historians maintain that Armenians arrived from Thrace and Phrygia, while academics from Armenia argue in favor of the more nationalistic explanation; that is, Armenians are the native inhabitants of historic Armenia.

CENTURIES OF CONQUERORS

Located between East and West, Armenians from the very beginning were frequently subject to invasions and conquest. The Armenians adopted features of other civilizations, but managed to maintain their own unique culture. Following the demise of Urartu, Armenia was controlled by the Medes, and soon after became part of the Achaemenid Empire of Persia. The word Armenia is first mentioned as *Armina* on the Behistun Rock, in the Zagros Mountains of Iran, which was inscribed by Darius I in about 520 B.C.E. Armenia formed one of the Per-

sian satrapies governed by the Ervandids (Orontids). Alexander the Great's conquest of Persia enabled the Ervandids to become autonomous and to resist the Seleucids. The Roman defeat of the Seleucids in 190 B.C.E. encouraged Artahses, a general of the Ervandids, to take over the land and establish the first Armenian dynasty, the Artashesid (Artaxiad). in 189 B.C.E.

The Artashesids faced Rome to the west and Parthia to the east. During the first century B.C.E., when both powers were otherwise engaged, Armenia, with the help of Pontus, managed to extend its territory and for a short time, under Tigranes the Great, had an empire stretching from the Caspian to the Mediterranean. By the first century of the common era, however, the first Armenian dynasty came to an end, and Armenia fell under successive Roman and Parthian rule. The struggle between Rome and Parthia to install their own government in Armenia was finally settled by the peace of Rhandaia, in 64 C.E. The brother of the Persian king became king of Armenia, but had to travel to Rome and receive his crown from Nero. Originally Parthian, the Arsakids (Arsacids) became a distinctly Armenian dynasty. During their four-century rule, Armenia became the first state to adopt Christianity and developed its own, unique alphabet.

The accession of the Sasanids in Persia posed new problems for Armenia. The Sasanids sought a revival of the first Persian Empire. They eradicated Hellenism and established Zoroastrianism as a state religion. The Sasanids not only attacked Armenia, but also fought Rome. By 387, the two powers partitioned Armenia. Four decades later, the second Armenian dynasty came to an end. Another partition occurred between Persia and the eastern Roman Byzantine empire (Byzantium) in 591. Armenia was ruled by local magnates who answered to Persian or Byzantine governors. Despite all this, Armenians not only maintained their national character, but also produced major historical and religious works and translations. Their church separated itself from Rome and Constantinople and assumed a national character under its supreme patriarch, the *catholicos*.

The advent of Islam and the arrival of the Arabs had a major impact on Armenia. The Arabs soon accepted a new Armenian dynasty, the Bagratids, who ruled parts of Armenia from 885 to 1045. Cities, trade, and architecture revived, and a branch of the Bagratids established the Georgian Bagratid house, which ruled parts of Georgia until the nine-

teenth century. The Bagratids, the last Armenian kingdom in historic Armenia, finally succumbed to the Byzantines, who under the Macedonian dynasty had experienced a revival and incorporated Armenia into their empire. By destroying the Armenian buffer zone, however, the Byzantines had to face the Seljuk Turks. In 1071, the Turks defeated the Byzantines in the battle of Manzikert and entered Armenia.

The Turkish invasion differed in one significant respect from all other previous invasions of Armenia: The Turkish nomads remained in Armenia and settled on the land. During the next four centuries, the Seljuk and the Ottoman Turks started the Turkification of Anatolia. The Armenians and Greeks slowly lost their dominance and became a minority. Emigration, war, and forced conversions depleted the Anatolian and Transcaucasian Christian population. Mountainous Karabagh, Siunik (Zangezur), Zeitun, and Sasun peoples, and a few other pockets of settlement were the only regions where an Armenian nobility and military leaders kept a semblance of autonomy. The rest of the Armenian population, mostly peasants, lived under Turkish or Kurdish rule. A number of Armenian military leaders who had left for Byzantium settled in Cilicia. The arrival of the Crusaders enabled these Armenians to establish a kingdom in 1199. This kingdom became a center of east-west trade and, thanks to the Mongol campaigns against the Muslims, lasted until 1375, when the Egyptian Mamluks overrun the region. From then until 1918, historic Armenia was first divided between the Persians and Ottomans, and then between the Ottomans and Russians. Although Armenian diasporas were established in western Europe, South Asia, and Africa, the largest and most influential communities rose in the major cities of the Ottoman, Persian, and Russian empires.

ARMENIANS IN TURKEY AND RUSSIA

Following the Russian conquest of Transcaucasia, the Armenians in Russia adopted Western ideas and began their national and political revival. Soon after, the Armenians in Turkey also began a cultural renaissance. Armenians in Baku and Tiflis (Tbilisi) wielded economic power, and Armenians in Moscow and St. Petersburg associated with government officials. Armenian political parties emerged in the last two decades of the nineteenth century. Beginning as reformist groups in Van (Turkey), the Armenians soon began to copy the programs of the Russian Social Democratic Labor Party and the Russian Populists (*Narodniks*), the Hnchakian Social Democratic

Party, and the Armenian Revolutionary Federation (*Dashnaktsutian*).

Armenian political activities angered both the Russians and the Turks. The Russians issued a decree in 1903 which confiscated the property of the Armenian Church. They arrested and executed some leaders and began a general Russification program. The Armenian armed response and the 1905 revolution abrogated the decree. Meanwhile, the Turkish sultan Abdul-Hamid II ordered Armenian massacres from 1895 to 1896. Armenian hopes were raised when, in 1908, the Young Turks overthrew the sultan and promised a state where all citizens would be equal. Unfortunately, the Young Turks became increasingly nationalistic. Pan-Islamism and Pan-Turkism, combined with chauvinism and social Darwinism, eroded the Armeno-Turkish cooperation. The defeat of the Turkish army in the winter campaign of 1914 and 1915 gave them the excuse to rid Turkish Armenia of its Armenian population. Some 1.5 million Armenians perished in the first genocide of the twentieth century. The small number of survivors, mostly women and children, managed to reach Syria or Russia.

The Russian revolution and civil war initially established a Transcaucasian Federated Republic in 1918. On May 26 of that year, however, Georgia, under German protection, pulled out of the federation. Azerbaijan, under Turkish protection, followed the next day. On May 28, Armenia was forced to declare its independence. The small, backward, and mountainous territory of Yerevan Gubernya housed the new nation. Yerevan, with a population of thirty thousand, was one-tenth the size of Tiflis or Baku. It had no administrative, economic, or political structure. The affluent Armenians all lived outside the borders of the new republic. A government composed of Dashnak party members controlled the new state.

Armenia was immediately attacked by Turkey, but resisted long enough for World War I to end. The republic also had border disputes over historic Armenian enclaves that had ended up as parts of Georgian and Azerbaijani republics. Despite a blockade, terrible economic and public health problems, and starvation, the Armenians hoped that the Allied promises for the restoration of historic Armenia would be carried out. The Allies, however, had their own agenda, embodied in the Sykes-Picot Agreement. Armenia was forgotten in the peace conferences that divided parts of the Ottoman Empire between the French and the British. Although

the United States, led by President Woodrow Wilson, tried its best to help Armenia, the American mandate did not materialize. Armenia was invaded by both republican Turkey, under the leadership of Mustafa Kemal (Ataturk), and by the Bolsheviks. In December 1920, it became a Soviet state.

ARMENIA UNDER THE SOVIETS

Bolshevik rule began harshly for Armenia. Armenian political leaders were either arrested or fled to Iran. Not only did Karabagh and Ganja remain part of Azerbaijan, but Nakhichevan, which had always been part of Persian and Russian Armenia, together with the adjoining district of Sharur, was handed over to Azerbaijan as well. The Armenian regions of Akhalkalaki remained part of Georgia. Armenian regions of Kars and Ardahan, captured by Russia in 1878, were returned to Turkey. As a final slap, Mt. Ararat, which had never been part of Turkish Armenia, was given to Turkey. Armenia thus became the junior member of the Soviet Transcaucasian Federation.

The history of Soviet Armenia paralleled that of the Soviet Union. Armenians experienced the harshness of war communism, and breathed a sigh of relief during the years of New Economic Policy (NEP). Mountainous Karabakh, with its predominantly Armenian population, was accorded autonomy within Azerbaijan. Nakhichevan, separated from Azerbaijan by Zangezur, remained part of the constituent republic of Azerbaijan, but as an autonomous republic.

The task of the Armenian communists was to build a new Armenia that would attract immigrants from Tiflis, Baku, and Russia and thus compete with the large Armenian diaspora. Modernization meant urbanization. The small, dusty town of Yerevan was transformed into a large city that, by 1990, had more than one million inhabitants. Armenia, which had had primarily an agricultural economy, was transformed into an industrial region. Antireligious propaganda was strong, and women were encouraged to break the male domination of society. Ancient traditions were ignored and the new order praised. The idea of *ko-renizatsiia* (indigenization) enabled Armenian communists to defend Armenian national aspirations within the communist mold. Like their counterparts in other national republics, Armenian leaders were purged by Josef Stalin and Lavrenti Pavlovich Beria between 1936 and 1938. Beria installed his protege, Grigor Arutiunov, who ruled Armenia until 1953.

The so-called Thaw begun under Nikita Khrushchev (1953–1964) benefited Armenia. Anastas Mikoyan came to Armenia to rehabilitate a number of Armenian authors and to signal the end of the Stalin era. After 1956, therefore, Armenians built new cadre of national leaders and were empowered to run their local ministries. For the next thirty-five years, Armenia was ruled by only four heads of state. Armenian industrial output surpassed that of Georgia and Azerbaijan. Seventy percent of Armenians lived in urban centers, and more than 80 percent had a secondary education or higher, making them one of the best educated groups in the USSR, along with the Jews and ethnic Russians.

Armenians vastly outnumbered all other ethnic groups living in their republic, comprising 98 percent of the population. Ironically, however, Armenians also had the largest numbers living outside their republic. More than 1.5 million lived in the other Soviet republics, and more than 2.5 million had participated in the diaspora. After the Jews, Armenians were the most dispersed people in the USSR. A million lived in Georgia and Azerbaijan alone.

The two decades of the Leonid Brezhnev era were years of benign neglect that enabled the Armenian elite to become more independent and nationalistic in character. Removed from the governing elite, Armenian dissident factions emerged to demand major changes. They even managed to remove the Armenian Communist chief, Anton Kochinian, on charges of corruption, and replaced him with a new leader, Karen Demirjian. Ironically, much of the dissent was not directed against the Russians, but against the Turks and the Azeris. Russia was viewed as a traditional friend, the one power that could redress the wrongs of the past and reinstate Armenia's lost lands. Since Armenian nationalism did not threaten the USSR, the Armenians were permitted, within reason, to flourish. The fiftieth anniversary of the Armenian genocide (1965) was commemorated in Armenia and a monument to the victims was erected. The status of Karabakh was openly discussed. Armenian protests shelved the idea, proposed during the 1978 revision of the Constitution of the USSR, of making Russian the official language of all republics.

Mikhail Gorbachev's glasnost and perestroika had a major impact on Armenia. Russia anticipated problems in the Ukraine and the Baltic states, but no one predicted the great eruption of Armenian nationalism, primarily over Karabakh. On Febru-

ary 28, 1988, the Karabakh Soviet passed a resolution for the transference of Karabakh to Armenia. Gigantic peaceful demonstrations followed in Yerevan. The Azeris reacted by carrying out pogroms against the Armenians in Azerbaijan. Gorbachev's inaction soured Russo-Armenian relations, and dissident leaders, known as the Karabakh Committee, gained credibility with the public.

In May 1988, Demirjian was replaced by Suren Harutiunian, who promised to take the Karabakh issue to the Supreme Soviet. Moscow rejected the transfer, and a crackdown began in Karabakh and Yerevan. The terrible earthquake of December 7, 1988, Moscow's inept handling of the crisis, and Azeri attacks upon Karabakh resulted in something extraordinary. Armenians, the most pro-Russian of all ethnic groups, demanded independence. Harutiunian resigned, and after declaring its intent to separate from the USSR, the Armenian National Movement, under the leadership of Levon Ter-Petrossian, a member of the Karabakh Committee, assumed power in Armenia. On September 21, 1991, the Armenian parliament unanimously declared a sovereign state outside the Soviet Union and two days later, on September 23, Armenia declared its independence.

INDEPENDENT, POST-SOVIET ARMENIA

On October 16, 1991, barely a month after independence, Armenians went to the polls. Levon Ter-Petrossian, representing the Armenian National Movement (ANM), won 83 percent of the vote. Neither the Dashnaks nor the Communists could accept their defeat and, ironically, they found common cause against Levon Ter-Petrossian's government.

Receiving a clear mandate did not mean that the government of Levon Ter-Petrossian would be free from internal or external pressures. The major internal problem was the virtual blockade of Armenia by Azerbaijan, exacerbated by the plight of the hundreds of thousands of Armenian refugees from Azerbaijan and the earthquake zone. Other domestic issues involved the implementation of free-market reforms, the establishment of democratic governmental structures, and the privatization of land. The external concerns involved future relations with Russia, Turkey, Georgia, and Iran. The immediate concern, however, was the conflict with Azerbaijan over mountainous Karabakh and the political uncertainties in Georgia, which contained 400,000 Armenians.

Ter-Petrossian attempted to assure Turkey that Armenia had no territorial claims against it and

that it desired neighborly diplomatic and economic relations. Rather than espousing an ideologically dogmatic and biased outlook, Armenia was to have a pragmatic and flexible foreign policy. In the long run, however, Armenian efforts to establish political and economic relations with Turkey did not materialize. The Turks not only maintained their blockade of Armenia, but also insisted that the issue of Karabakh had to be resolved before anything else could be discussed. The Azeri blockade had resulted in food and fuel shortages and, since 1989, had virtually halted supplies for earthquake reconstruction. The closing down of the Medzamor Nuclear Energy Plant in 1989 meant that Armenian citizens, including the many refugees, would have to face many difficult winters.

The presidential election of 1996 was marred by accusations of fraud. A broad coalition supported Vazgen Manoukian, the candidate of the National Democratic Union, but the election results gave Ter-Petrosian a victory with 51 percent of the vote. The opposition accused the ruling party of massive frauds in the counting of the ballots. Foreign observers cited some irregularities, but concluded that these did not significantly affect the outcome. Continued rallies, riots, and some shootings resulted in arrests and the ban on all public gatherings for a short time. By early 1998, a major split over Karabakh had occurred between Levon Ter-Petrosian and members of his own cabinet. Prime Minister Robert Kocharian, Defense Minister Vazgen Sargisian, and the Interior and National Security Minister Serge Sargisian joined forces against the president, who was forced to resign. Kocharian succeeded him.

The parliamentary elections of May 1999 reshaped the balance of power. The Unity Coalition, led by Vazgen Sargisian, and the People's Party of Armenia, led by Karen Demirjian, won the elections and left Kocharian without any control over the parliamentary majority. Sargisian became prime minister, and Demirjian became the speaker of Parliament. They removed Serge Sargisian, a Karabakhi and Kocharian's closest ally, from his post of minister of the interior. Karen Demirjian, meanwhile, became the speaker of Parliament. But on October 27, five assassins entered the building of the National Assembly of Armenia and killed Sargisian and Demirjian, as well as two deputy speakers, two ministers, and four deputies. With the government in the hands of Kocharian, the economy at a standstill, and the Karabakh conflict unresolved, Armenians by the tens of thousands voted with their feet and emigrated from the country.

ARMENIAN APOSTOLIC CHURCH

The Armenian Apostolic Church has a long and ancient history. Its received tradition remembers the apostolic preaching of Saint Bartholomew and Saint Thaddeus among the Armenians of Edessa and sur-

rounding territories. It is likely that there were Armenian Christians from early times, such that Saint Gregory the Illuminator, in the fourth century, who worked among people who had previous contact with Christianity. The Armenian Church celebrates the year 301 as the time when Gregory converted King Trdat. The king, in turn, made Christianity the state religion. There is disagreement among scholars about this date. It should also be remembered that the idea of Christianity as state religion was an innovation at that time.

Events of the fifth century were critical to the making of a distinctively Armenian Christian culture and identity. The foremost of these was the invention of the Armenian alphabet by the monk Mesrob Mashtots and his community. Translations of scripture, commentaries, liturgy, theology, and histories were made. Greek and Syriac literature were important sources. In addition, the fifth century witnessed the first flowering of original Armenian literature. An example is Eznik Koghbatsi's doctrinal work, *Refutation of the Sects*. The Battle of Avarayr in 451 against Persia, although a defeat for the Armenians under Vartan, has been remembered as critical for winning the Armenians the right to practice their Christian belief.

The fact that the Armenians eventually rejected the Christology of the Council of Chalcedon (451) has defined their communion with the Oriental Orthodox churches and their schism from the Orthodox churches that grew out of Constantinople (that is, the Orthodox churches of the Greeks, Georgians, and Russians, among others). The dispute concerned the way in which the natures of Christ were properly described. The Armenian Church believed that the language of Chalcedon, defining the person of Jesus Christ as "in two natures," destroyed the unity of divinity and humanity in Christ.

Throughout much of its history, the Armenian Orthodox Church has been an instrument of the Armenian nation's survival. The head of the church, called catholicos, has been located in various Armenian cities, often in the center of political power. In the early twenty-first century the supreme catholicos is located in the city of Echmiadzin, near the Armenian capital, Yerevan. Another catholicos, descended from the leaders of Sis in Cilicia, is located in Lebanon. During the existence of Cilician Armenia (from the eleventh to fourteenth centuries), when Crusaders were present in the Middle East, the Armenian Church had close ties

with Rome. Nerses Shnorhali, known as "the Graceful" (1102–1173), was an important catholicos of this period.

The Armenian Church played a significant role in the succession of Muslim empires in which its faithful were located. Because some of these were divided according to religious affiliation, the leaders of the Armenian were, in fact, also politically responsible for their communities. The Armenian Church was greatly affected by two phenomenon in the twentieth century: the genocide in Turkey, in which 1.5 million died, and the Sovietization of eastern Armenia, which ushered in seven decades of official atheism. The genocide essentially destroyed the church in Turkey, where only a remnant remains. It has also profoundly affected the way in which the Armenian Church approaches the idea of suffering in this world.

The church thrived in many parts of the Armenian diaspora, and is regaining its strength in newly independent Armenia. In the post-Soviet period, the church has struggled to define itself in society, having to overcome the decades of persecution and neglect, as well as making adjustments in a political culture in which it is favored but must still coexist in an officially pluralistic society.

The liturgy of the Armenian Church (the eucharistic service is called *patarag*) with Syriac and Greek roots, has been vastly enriched by the hymnody of Armenian writers. Contact with Rome has also been important in this context. Armenians, preserving an ancient Eastern tradition, celebrate Christmas and Epiphany together on January 6.

ARMORY

The Armory (*Oruzheinaia palata*) was a Muscovite state department that organized the production of arms, icons, and other objects for the tsars and their household; later it became a museum.

An Armory chancery (*prikaz*) was established in the Moscow Kremlin at the beginning of the sixteenth century to supervise the production and storage of the tsars' personal weapons and other objects, such as saddles and banners. By the middle of the seventeenth century, it encompassed a complex of studios, including the Gold and Silver Workshops and the Armory Chamber itself, which employed teams of craftsmen to produce a wide variety of artwork and artifacts and also stored and maintained items for the palace's ceremonial and liturgical use and for distribution as gifts. The chancery commanded considerable funds and a large administrative staff, presided over by such

leading boyars as Bogdan Khitrovo, who was director of the Armory from 1654 to 1680, during which time it emerged as a virtual academy of arts.

From the 1640s onward, the Armory had dedicated studios for icon painting and, beginning in 1683, for nonreligious painting. Its most influential artist was Simon Ushakov (1626–1686), whose images demonstrate a mixture of traditional compositions and more naturalistic use of light, shade, and perspective. Characteristic examples include his icons “The Planting of the Tree of the Muscovite Realm” (1668) and “Old Testament Trinity” (1671). He also made charts and engravings and painted portraits. The development of portrait painting from life by artists such as Ivan Bezmin and Bogdan Saltanov was one of the Armory's most striking innovations, although surviving works show the influence of older conventions of Byzantine imperial portraits and Polish “parsuna” portraits, rather than contemporary Western trends. Teams of Armory artists also restored and painted frescoes in the Kremlin cathedrals and the royal residences: for example, in the cathedrals of the Dormition (1632–1643) and Archangel (1652).

Russian Armory artists worked alongside foreign personnel, including many from the Grand Duchy of Lithuania, who specialized in woodcarving, carpentry, and ceramics. Other foreigners worked as gunsmiths and clock- and instrument-makers. A handful of painters from western Europe encouraged the development of oil painting on canvas and introduced new Biblical and historical subjects into the artistic repertoire. By the late 1680s secular painters began to predominate: Armory employment rolls for 1687–1688 record twenty-seven icon painters and forty secular painters. Nonreligious painting assignments included making maps, charts, prints and banners, and decorating all manner of objects, from painted Easter eggs and chess sets to children's toys. Under the influence of Peter I (r. 1682–1725) and his circle, in the 1690s artists were called upon to undertake new projects, such as decorating the ships of Peter's new navy and constructing triumphal arches. In the early eighteenth century Peter transferred many Armory craftsmen to St. Petersburg, and by 1711 the institution was virtually dissolved, surviving only as a museum and treasury. From 1844 to 1851 the architect Karl Ton designed the present classical building, which houses and displays Muscovite and Imperial Russian regalia and treasures, vestments, carriages, gifts from foreign delegations, saddles, and other items.

ARMS CONTROL

Russia's governments—tsarist, Soviet, and post-Soviet—have often championed arms limitation. Power and propaganda considerations as well as ideals lay behind Russian and Soviet proposals. Because Russia and the USSR usually lagged behind its Western adversaries in military technology and economic strength, Russian leaders often called for banning new weapons or abolishing those they did not yet possess. Russia sought to bring the weapons of all countries to the same qualitative level. If that happened, Russia's large size would permit it to field larger armies than its rivals. By contrast, the United States often led the world in military technology and economic strength. Accordingly, U.S. diplomats often called for freezing the existing military balance of power so that the United States could maintain its advantages. Such measures, if implemented, would often have put Russia at a disadvantage.

FUNDAMENTAL BARRIERS

TO DISARMAMENT

Besides its large size, Russia had the advantage of secrecy. Both tsars and commissars exploited the closed nature of their society to hide weaknesses and assets. With its open society, the United States had fewer secrets to protect, so it advocated arms treaties that permitted onsite inspection. The usual pattern was that the United States wanted inspection first; disarmament later. The Soviets wanted disarmament first; inspection later, if ever.

Language differences magnified these difficulties. While English has just one word for disarmament, Russian has two, and thus distinguishes between voluntary and coerced disarmament. Voluntary disarmament, as the outcome of self-

restraint or negotiation, is *razoruzhenie*, whereas disarmament by force is *obezoruzhit*. Vladimir Ilich Lenin, however, believed that *razoruzhenie* was a pacifist illusion. The task of revolutionaries, he argued, was to disarm its enemies by force. Soviet diplomats began calling for wide-scale disarmament in 1922. They said that Western calls for "arms limitation"—not full *razoruzhenie*—masked the impossibility for capitalist regimes to disarm voluntarily. Soviet ideologists averred that capitalists needed arms to repress their proletariat, to fight each other, and to attack the socialist fatherland.

Seeking a more neutral term, Western diplomats in the 1950s and 1960s called for "arms control," a term that included limits, reductions, and increases, as well as the abolition of arms. But *kontrol* in Russian means only verification, counting, or checking. Soviet diplomats said "arms control" signified a Western quest to inspect (and count) arms, but not a willingness actually to disarm. After years of debate, Soviet negotiators came to accept the term as meaning "control over armaments," rather than simply a "count of armaments." In 1987, when the USSR and United States finally signed a major disarmament agreement, President Ronald Reagan put the then-prevailing philosophy into words, saying: "*Veriat no proveriat*" (trust, but verify).

THE MAKING OF ARMS POLICY

A variety of ideals shaped tsarist and Soviet policy. Alexander I wanted a Holy Alliance to maintain peace after the Napoleonic wars. Like Alexander I, Nicholas II wanted to be seen as a great pacifist, and summoned two peace conferences at The Hague in an effort to achieve that end. Lenin, however, believed that "disarmament" was a mere slogan, meant only to deceive the masses into believing that peace was attainable without the overthrow of capitalism. When Lenin's regime proposed disarmament in 1922, its deep aim was to expose capitalist hypocrisy and demonstrate the need for revolution. From the late 1920s until his death in 1953, Stalin also used disarmament mainly as a propaganda tool.

Nuclear weapons changed everything. The Kremlin, under Nikita Sergeyevich Khrushchev, recognized that nuclear war could wipe out communist as well as noncommunist countries. Whereas Lenin and Stalin derided "bourgeois pacifists" in the West, the Soviet government under Khrushchev believed it must avoid nuclear war at all costs. Sobered by the 1962 Cuban missile confrontation, Khrushchev's regime

admonished the Chinese Communists in 1963: "The atomic bomb does not respect the class principle."

Nuclear weapons also gave Moscow confidence that it could deter an attack. The USSR tested a nuclear bomb in 1953, and a thermonuclear device in 1953. By 1954, the Kremlin had planes capable of delivering Soviet bombs to America. In 1957 the USSR tested the world's first intercontinental ballistic missile (ICBM), leading Khrushchev to claim the Soviet factories were producing ICBMs "like sausages." He tried to exploit the apparent Soviet lead in missiles to extract Western concessions in Germany.

By 1962, increased production in the United States had reversed the so-called missile gap. By 1972 the United States had also produced a warhead gap, as it placed multiple warheads on ICBMs and submarine missiles. Still, by 1972 each nuclear superpower had overkill capability: more than enough weapons to absorb a first-strike and still destroy the attacker. Having ousted Khrushchev in 1964, Soviet Communist Party leader Leonid Brezhnev signed the first strategic arms limitation treaty (SALT I) with President Richard Nixon in 1972 and a second accord (SALT II) with President Jimmy Carter in 1979. Each treaty essentially sought to freeze the Soviet-U.S. competition in strategic weapons—meaning weapons that could reach the other country. SALT I was ratified by both sides, but SALT II was not. The United States balked because the treaty enshrined some Soviet advantages in "heavy" missiles and because the USSR had just invaded Afghanistan.

The 1972 accords included severe limits on antiballistic missile (ABM) defenses. Both Moscow and Washington recognized that each was hostage to the other's restraint. Displeased by this situation, President Ronald Reagan sponsored a Strategic Defensive Initiative (SDI, also called Star Wars) research program meant to give the United States a shield against incoming missiles. If the United States had such a shield, however, this would weaken the deterrent value of Soviet armaments. The Soviets protested Reagan's program, but at the same time it secretly tried to expand the small ABM system it was allowed by the 1972 treaty.

NEW TIMES, NEW THINKING

When Mikhail Sergeyevich Gorbachev succeeded Konstantin Chernenko as top Soviet leader in 1985, he advocated "new thinking" premised on the need for mutual security in an interdependent world. Be-

tween the two great powers, he said, security could only be "mutual." Gorbachev said Soviet policy should proceed not from a class perspective, but from an "all-human" one.

Gorbachev's commitments to arms control were less tactical and more strategic than his predecessors—more dedicated to balanced solutions that accommodated the interests of both sides of the debate. In contrast, Khrushchev often portrayed his "peaceful coexistence" policy as a tool in the struggle to defeat capitalist imperialism, and Brezhnev demanded "coequal security" with the United States. Gorbachev, on the other hand, initiated or agreed to a series of moves to slow or reverse the arms competition:

- a unilateral moratorium on underground nuclear testing from 1985 to 1987, with acceptance of U.S. scientists and seismic equipment near Soviet nuclear test sites in Kazakhstan
- agreement in 1987 to the INF treaty, requiring the USSR to remove more warheads and to destroy more intermediate-range and shorter-range missiles than the United States (after which Reagan reiterated "*veriat no proveriat*")
- opening to U.S. visitors in September 1987 a partially completed Soviet radar station that, had it become operational, would probably have violated the 1972 limitations on ABM defenses
- a pledge in December 1988 to cut unilaterally Soviet armed forces by 500,000 men, 10,000 tanks, and 800 aircraft
- withdrawing Soviet forces from Afghanistan by February 15, 1989
- supporting arrangements to end regional conflicts in Cambodia, southern Africa, the Persian Gulf, and the Middle East
- acceptance in 1990 of a Final Settlement with Respect to Germany setting 1994 as the deadline for Soviet troop withdrawal from Germany
- in 1990 a Soviet-U.S. agreement to reduce their chemical weapons stocks to no more than 5,000 tons each.

All members of NATO and the Warsaw Treaty Organization signed the Conventional Forces in Europe (CFE) treaty in 1990. It limited each alliance to 20,000 battle tanks and artillery pieces, 30,000 armored combat vehicles, 6,800 combat aircraft, and 2,000 attack helicopters. In 1991, however, members of the Warsaw Pact agreed to abolish their alliance. Soon, Soviet troops withdrew from Poland,

U.S. president Richard Nixon and Soviet general secretary Leonid Brezhnev sign the SALT I Treaty in Moscow, 1972. © WALLY McNAMEE/CORBIS

Czechoslovakia, and Hungary. Trying to compensate for unexpected weaknesses, the USSR tried to reclassify some military units to exempt them from the CFE limits. NATO objected, but Soviet power was shrinking and minor exemptions such as these mattered little.

In 1991 Gorbachev and U.S. president George Herbert Walker Bush signed the first Strategic Arms Reduction Treaty (START I). It obliged Washington and Moscow within seven years to cut their forces by more than one-third to sixteen hundred strategic delivery vehicles (ICBMs, submarine missiles, heavy bombers) and six thousand warheads. When the USSR dissolved later that year, the Russian Federation (RF) took the Soviet Union's place in START and other arms control regimes. START I became legally binding in 1994, and each party began steps to meet the ceilings set for seven years hence, in 2001.

In September 1991, after an attempted coup against Gorbachev in the previous August, President Bush announced the unilateral elimination of some 24,000 U.S. nuclear warheads and asked the USSR to respond in kind. Gorbachev announced unilateral cuts in Soviet weapons that matched or exceeded the U.S. initiative. He also took Soviet

strategic bombers off alert, announced the deactivation of 503 ICBMs covered by START, and made preparations to remove all short-range nuclear weapons from Soviet ships, submarines, and land-based naval aircraft.

POST-SOVIET COMPLICATIONS

In November 1990 the U.S. Senate had voted \$500 million of the Pentagon budget to help the USSR dismantle its nuclear weapons. In December 1991, however, the USSR ceased to exist. Its treaty rights and duties were then inherited by the Russian Federation (RF). However, Soviet-era weapons remained not just in Russia but also in Ukraine, Belarus, and Kazakhstan. These three governments agreed, however, to return the nuclear warheads to Russia. The United States helped fund and reward disarmament in all four republics.

President Bush and RF President Boris Yeltsin in 1993 signed another treaty, START II, requiring each side to cut its arsenal by 2003 to no more than 3,500 strategic nuclear warheads. The parties also agreed that ICBMs could have only one warhead each, and that no more than half the allowed warheads could be deployed on submarines. START II was approved by the U.S. Senate in 1996, but

the RF legislature ratified it only on condition that the United States stand by the ABM treaty. As a result, START II never became law. Confronted by the expansion of NATO eastward and by deteriorating Russian conventional forces, Russian military doctrine changed in the mid-1990s to allow Moscow “first use of nuclear arms” even against a conventional attack.

Ignoring RF objections, NATO invited three former Soviet allies to join NATO in 1999 and three more in 2002, plus three former Soviet republics, plus Slovenia. The Western governments argued that this expansion was aimed at promoting democracy and posed no threat to Russia. The RF received a consultative voice in NATO. Following the September 11, 2001, terrorist attacks on America, Presidents Vladimir Putin and George W. Bush found themselves aligned against terrorism. Putin focused on improving Russia’s ties with the West and said little about NATO.

The RF and U.S. presidents signed the Strategic Offensive Reductions Treaty (SORT) in May 2002. Bush wanted to reduce U.S. strategic weapons to the level needed for a “credible deterrent,” but preferred to do so without a binding treaty. Putin also wanted to cut these forces but demanded a formal contract. Bush agreed to sign a treaty, but it was just three pages long, with extremely flexible commitments. START I, by contrast, ran to more than seven hundred pages.

SORT required each side to reduce its operationally deployed strategic nuclear warheads to between 1,700 and 2,200 over the next decade, with a target date of December 31, 2012. At the insistence of the United States, the warheads did not have to be destroyed and could be stored for possible reassembly. Nor did SORT ban multiple warheads—an option that had been left open because START II had never become law. SORT established no verification procedures, but could piggyback on the START I verification regime until December 2009, when the START inspection system would shut down. Putin signed SORT even though Moscow objected to Bush’s decision, announced in 2001, to abrogate the ABM treaty. Bush wanted to build a national defense system, and Putin could not stop him.

ARTEK

The first, largest, and most prestigious Soviet Young Pioneer camp, Artek began life in 1925 as a children’s sanatorium, created on the Black Sea’s Crimean shore near Suuk-Su on the initiative of Old Bolshevik Zinovy Soloviev, vice-commissar for public health. Most of the early campers came for medical treatment. Soon, however, a trip to Artek became a reward for Pioneers who played an exemplary role in various Stalinist campaigns. In 1930 the camp became a year-round facility; in 1936 the government gave it the buildings of a nearby tsarist-era sanatorium. During World War II, the camp was evacuated to the Altai. In 1952 Artek instituted an international session each summer, in which children from socialist countries, as well as “democratic children’s movements” elsewhere, mingled with Soviet campers. In 1958, during Khrushchev’s campaign to rationalize the bureaucracy, Artek was transferred from the health ministry to the Komsomol and officially became a school of Pioneering. The next year, architects and

engineers began redesigning the camp, replacing the old buildings with prefabricated structures based on an innovative combinatory system. The largest resort complex ever built exclusively for children, this New Artek, nearly the size of New York City's Central Park and with a staff of about 3,000, hosted tens of thousands of children annually. It was a workshop for teachers and adult Pioneer leaders, a training ground for the country's future elite, and a font of propaganda about the USSR's solicitousness for children. After 1991, Artek, now in Ukraine, became a private facility.

ARTICLE 6 OF 1977 CONSTITUTION

Article 6 of the 1977 Brezhnev Constitution established the Communist Party of the Soviet Union as the sole legitimate political party in the country. The Party was declared to be the "leading and guiding force of Soviet society and the nucleus of its political system, of all state organizations and public organizations," and it imparted a "planned, systematic, and theoretically substantiated character" to the struggle for the victory of communism.

As Gorbachev's reforms of *glasnost*, *perestroika*, and *demokratizatsiya* unfolded in the late 1980s and early 1990s, interest groups became increasingly active, and proto-political parties began to organize. Pressures built to revoke Article 6. Bowing to these pressures and with Gorbachev's acquiescence, the USSR Congress of People's Deputies voted in February 1990 to amend Article 6 to remove the reference to the Party's "leading role" and prohibitions against forming competing parties. The amended Article 6 read: "The Communist Party of the Soviet Union [and] other political parties, as well as trade union, youth, and other public organizations and mass movements, participate in shaping the policies of the Soviet state and in run-

ning state and public affairs through their representatives elected to the soviets of people's deputies and in other ways." Article 7 was also amended to specify that all parties must operate according to the law, while Article 51 was altered to insure all citizens the right to unite in political parties and public organizations.

Within months of the Congress's action amending Article 6, fledgling political parties began to register themselves. Within one year, more than one hundred political parties had gained official recognition. The proliferation of political parties itself became problematic as reformers sought to establish stable democratic governing institutions and voters were presented with a bewildering array of choices of parties and candidates in national, regional, and local elections.

ASSEMBLY OF THE LAND

Assembly of the Land is the usual translation of the Russian *Zemsky sobor*, a nineteenth-century term for a proto-parliamentary institution that was summoned irregularly between 1564 and 1653. One of the problems of studying the Assembly of the Land is defining it. The contemporary definition was *sobor*, which means "assembly" and could refer to any group of people anywhere, such as a church council or even an assembly of military people. Loosely defined, *sobor* could include almost any street-corner gathering in Muscovy in the sixteenth and seventeenth centuries, but it will be defined more strictly here as an assemblage called by the tsar and having both an upper and a lower chamber.

Some Soviet scholars, such as Lev Cherepnin, advocated the loose definition of *sobor*, by which he discussed fifty-seven assemblies between 1549 and 1683, thereby supporting the claim that Muscovy

was an “estate-representative monarchy” not much different from contemporary central and western European states.

The great Russian historian Vasily Klyuchevsky initiated the view that the Assembly of the Land should be seen in terms of a sixteenth-century and seventeenth-century reality. In the former period the Assembly of the Land was definitely a consultative body called by the tsar when he needed advice. Delegates were rounded up from men who happened to be in Moscow for some reason, such as the start of a military campaign. After the collapse of the country in the Time of Troubles, the Assembly of the Land retained its former advisory functions, but delegates (especially to the lower chamber) sometimes were directly elected to voice the concerns of their constituents.

The earliest ancestor of the Assembly of the Land was an assemblage (*sobor*) of military figures convoked on the eve of Moscow’s invasion of Novgorod in 1471. The purpose was presumably to advise Grand Prince Ivan III about tactics for the campaign. No one claims that this was a real Assembly of the Land, but it was a *sobor* and had military linkages, as did many of the later real Assemblies of the Land.

Advice was one of the major functions of the Assembly of the Land. This role became critical after the abolition of the feeding system of provincial administration in 1556. The feeding system’s governors (*namestniki*, *kormlenshchiki*) served on rotation in the provinces for terms of three years. While in the provinces, they represented Moscow in matters such as tax collection and the holding of trials. While in the countryside “feeding,” these officials were expected to skim enough off from their receipts to support them when they returned to Moscow. When they were not on duty in the provinces, they were in the capital Moscow and could be summoned by the tsar and his officials to gain relatively fresh information about the condition of the provinces: for instance, whether the country could afford to go to war, whether the army was willing to fight, and so forth. With the abolition of the feeding system, this source of information was lost. Thus it is not accidental that in 1566 (June 25–July 5), during the period of the Livonian War (1558–1583) when the fighting had begun to go badly for the Muscovites, the government rounded up and sought the advice of people who happened to be in Moscow. They were grouped into two chambers: The upper chamber typically

consisted of members of the upper service class (the Moscow military elite cavalrymen) and the top members of the church, while the lower chamber consisted of members of the middle service class (the provincial cavalry) and the townsmen. The government presumed that these people understood the fundamentals of the country: whether sufficient wealth and income existed to continue the war and whether the cavalry was able to continue fighting.

Summary records of the first Assembly of the Land still exist and have been published. Its members advised the government that the country was able to continue the war, that there was no need to pursue peace with the Rzeczpospolita. They also gratuitously criticized Ivan the Terrible’s paranoid Oprichnina (1565–1572), Ivan’s mad debauch that divided Muscovy into two parts, the Oprichnina (run by Ivan himself) and the Zemshchina (run by the seven leading boyars). Ivan’s servitors in the Oprichnina, called oprichniki, looted and otherwise destroyed nearly all the possessions they were given. The criticism aroused Ivan to fury and led him to launch a second, ferocious hunt for “enemies.” Thus the first Assembly of the Land conveyed the two basic messages to the government that were to be constants throughout the institution’s history: First, the Assembly was a quick and relatively inexpensive way to determine the country’s condition; second, the assembled Russians might well do things that the government would have preferred not be done. When the consequences of the latter outweighed the value of the former, the institution was doomed.

The next real Assembly of the Land occurred in 1598 (February and March, July and August) for the purpose of electing Boris Godunov as tsar on the expiration of the seven-century-old Rurikid dynasty. This election was probably rigged by Boris, who had been ruling during the reign of Fyodor Ivanovich (1584–1598); nevertheless, the members of the Assembly, all government agents in one way or another, properly advised the government (Boris) that he (Boris, again) should be the new tsar.

During the Time of Troubles sundry meetings were held in 1605–1606 and in 1610, 1611, and 1612; these, by loose definitions, have been called Assemblies of the Land, but they really were not. In 1613, however, a real Assembly of the Land was convoked to choose Mikhail Fyodorovich as the new tsar, the first tsar of the Romanov dynasty,

which lasted until the February Revolution of 1917. The cossacks constituted a new element in the lower chamber.

Some scholars, holding to a loose definition, allege that, after the election of Mikhail, Assemblies of the Land met annually from 1614 to 1617 to deal with taxes (especially so-called fifth taxes, 20% levies of all wealth) needed to pay military forces to drive out the Poles and Swedes. The tsar's father, Patriarch Filaret, returned to Moscow from Polish captivity in 1619 and began to take command of the Muscovite government and to restore the Muscovite state. Delegates were elected in September 1619 to attend to the restoration of the Muscovite state, especially the revitalization of the tax system and the issue of getting tax-exempt individuals back on the tax rolls. A Petitions Chancellery was established to receive complaints from the populace.

The Smolensk War (1632–1634) provoked the assembling of people to discuss both the beginning of the war and its ending, as well as taxes to pay for it. On neither occasion were delegates elected; the 1634 session was called on January 28 and met the next day. Cossacks seized Azov (Azak) at the mouth of the Don River from the Crimean Tatars in 1637, and there may have been meetings about that in 1637 and again in 1639 (on July 19). Unquestionably unelected men, in Moscow for court sessions, were convoked for several days in January 1642 to discuss Azov, whence the cossacks were ordered to withdraw out of fear of provoking Turkey, with whom the Russians were unable and unwilling to go to war. Some historians allege that there was an Assembly in 1645 after the death of Mikhail, but others point out that contemporaries alleged that his successor Alexei was illegitimate because he had not been elected. The latter perspective seems correct because there was no Assembly of the Land in 1645.

The most significant Assembly of the Land was the one taking place from October 1, 1648, to January 29, 1649, convoked to discuss the Odoyevsky Commission's draft of the new Law Code of 1649, the *Sobornoe ulozhenie*. This Assembly, organized following riots in Moscow and a dozen other towns in June 1648 demanding governmental reforms, was a true two-chambered assembly with delegates in the lower chamber from 120 towns or more. Evidence survives about contested elections in several places. Although the records of the meetings were probably deliberately destroyed because the

government did not like what eventuated, the identity of most of the delegates is known. Most of them signed the *Ulozhenie*, and most of them submitted petitions for compensation afterward. The demands of the delegates were met in the new law code: the enserfment of the peasantry; the granting of monopolies on trade, manufacturing, and the ownership of urban property to the legally stratified townsmen; and a reigning in and further secularization of the church. This marked the beginning of the end of a proto-parliamentary institution in Russia. The government saw firsthand what could happen when the delegates got their way, which occasionally ran contrary to what the ruling elite desired. In 1653 the government convoked another assembly, about which very little is known, on the issue of going to war to annex Ukraine. That was the last such meeting.

For about ninety years, Assemblies of the Land dealt with issues of war and peace, taxation, succession to the throne, and law. When the 1648–1649 session got out of hand, the government resolved to do without the Assemblies, having realized that its new system of central chancelleries could provide all the information it needed to make rational decisions.

ASSORTMENT PLANS

Assortment plans were state-generated documents that specified the composition of output to be produced by Soviet enterprises. Each year a comprehensive plan document, the *techpromfinplan* (the technical, industrial, and financial plan) was issued, containing approximately one hundred targets that

Soviet businesses were legally required to achieve. This annual enterprise plan was part of a five-year plan that established the long-term objectives of central planners.

The most important component of the annual plan sent to enterprises involved the production plan, which disaggregated annual production targets into their component parts, breaking them out in terms of both volume and value goals. The assortment plans also incorporated demand conditions set by consumers or firms, as identified by planners. For example, a shoe factory would be given an aggregate output target—the total number of units of footwear to produce in a given year. The assortment plan then specified the type of footwear to be produced: the number of children's and adults' shoes, the number of men's and women's shoes, the number of shoes with buckles and ties, the number of brown and black leather shoes, and so forth. Planners constructed the assortment plan to capture demographic characteristics as well as to reflect the tastes and preferences of Soviet consumers. Similarly, the assortment plan component of the *techpromfinplan* sent to a steel-pipe manufacturing plant would identify the quantities of pipes of different dimensions and types, based on the needs of firms which would ultimately use the pipe.

Typically, Soviet managers gave less priority to fulfilling the assortment plan than to the overall quantity of production, because fulfilling the aggregate output plan targets formed the basis for the bonus payment. Adjustments made within the assortment plan enabled managers to fulfill quantity targets even when materials did not arrive in a timely fashion or in sufficient quantity. For example, managers could "overproduce" children's shoes relative to adults' shoes, if leather was in short supply, thereby generating a shortage in adult footwear relative to the needs of the population. This practice of adjusting quantities within the assortment plan imposed higher costs when steel pipes and other producer goods were involved, because producing three-inch pipe instead of the requisite six-inch pipe obliged recipient firms to reconfigure or adapt their equipment to fit the wrong-sized pipe.

SUSAN J. LINZ

ASTRAKHAN, KHANATE OF

The Khanate of Astrakhan was a tribal union of Sunni Muslim pastoral nomadic Turkic-speaking peoples, located in the lower Volga region, with the capital of Astrakhan (Citracan) situated at the confluence of the river into the Caspian Sea. Traditionally, it is believed that the khanate of Astrakhan was formed sometime in the mid-1400s (certainly by 1466), when the tribe seceded from the Golden (or Great) Horde, probably under Mahmud Khan (died c. 1466). Many scholars attribute the foundation of the khanate to Qasim I (1466–1490), perhaps Mahmud Khan's son. However, a recent study argues that the khanate was formed only after 1502. Specifically, from the 1450s to the 1470s, Astrakhan was one of the centers of the Great Horde and after the destruction of Saray (the old capital), not earlier than the 1480s, became its new capital. Astrakhan continued to be the capital of the Great Horde until its collapse in 1502 at the hands of the Crimean Khanate and, thereafter, remained its political heir in the form of the Astrakhan Khanate. There was no change of dynasty, nor was there any internal structural transformation to the state. The only major difference with its predecessor is that its borders were probably smaller.

The peoples of the Astrakhan Khanate mostly retained their nomadic lifestyles as they seasonally migrated in north–south directions in search of grasslands for their livestock, reaching as far north as the southern borders of Muscovy. Due to the small territory it occupied, the khanate did not have sufficient lands for grazing large numbers of animals and sustaining large human resources. For these reasons, the khanate was relatively weak militarily and prone to political interference in its affairs from its more powerful neighbors, including the successor Mongol khanates and Muscovy. The khanate also offered little by way of natural resources, aside from salt, fish, and hides.

Astrakhan, while a busy, wealthy, and large port city in the early Mongol era, fell into relative neglect after its destruction by Tamerlane in around 1391, as noted by Barbaro (d. 1494). Other Western visitors to Astrakhan, such as Contarini (1473) and Jenkinson (1558), noted the paucity of trade

coming through the city, despite the presence of Russian, Tatar, Persian, Transcaucasian, and Central Asian merchants. Both Contarini and Afanasy Nikitin, the latter a Russian merchant from Tver who traveled to India via Astrakhan sometime between 1468 and 1471, noted instability in the steppe near Astrakhan, general danger, and excessive tariffs (more properly, extortion payments) imposed on merchants. However, their travel through the khanate shows that while the trans-Volga-Caspian-Central Asian trade may have declined, because of the ideal location of the city of Astrakhan at key crossroads, international commerce continued to function. Although the volume and frequency of this trade is difficult to determine, Contarini relates that “a great many Tartar merchants” traveled in a caravan to Muscovy along with an annual embassy sent by the Astrakhan khans and brought along with them Iranian silks and fustian that they exchanged for furs, saddles, swords, bridles, and other items. With Ivan IV’s (r. 1533–1584) conquest and incorporation of the Astrakhan Khanate into Muscovy in 1556, coupled with his annexation of the Kazan Khanate in 1552, the entire course of the Volga with its Astrakhan link into the Caspian Sea came under Moscow’s direct control. Thereafter, trade via Astrakhan as well as Muscovite commerce with Persia, Central Asia, China, and India flourished.

ROMAN K. KOVALEV

ATOMIC ENERGY

The Soviet Union had an extensive atomic energy program. The program included the use of isotopes as tracers for agricultural research and as ionizing sources for food irradiation, extensive applications in medicine, so-called peaceful nuclear explosions, and an ambitious effort to build scores of reactors to produce electrical energy. Under the regime of Josef Stalin, the military side of atomic energy was significantly more developed than its civilian ap-

plication. Scientists and workers were gathered into closed cities to build the first Soviet atomic bomb, detonated in 1949, and to design and assemble tens of thousands of nuclear warheads. It is not certain what percentage of the nuclear program was civilian and what percentage was military, but it is clear that the military needs predominated during the Cold War. It is also difficult to draw a line between military and civilian programs. Nikita Khrushchev and Leonid Brezhnev made the peaceful atom a centerpiece of their economic development programs. The peaceful atom found expression in art and music, on stamps and lapel pins, and even in literary works. For instance, the Exhibition of the Achievements of the Socialist Economy (VDNKh) had a large hall devoted to atomic energy. However, even when the technology was ostensibly dedicated to peaceful goals, there were often military interests at stake as well. For example, Soviet scientists conducted 120 peaceful nuclear explosions (PNEs) for excavation, dam construction, and other purposes that were connected with the 1963 ban against atmospheric testing of nuclear devices.

COLD WAR DEVELOPMENTS

Atomic energy was a prominent fixture of the Cold War, as part of competition with the United States for military superiority and for economic and ideological influence. In a propaganda coup in 1954, Soviet officials announced the opening of the Obninsk five-thousand kilowatt reactor, the first station to provide electrical energy for peaceful purposes (it remained open and operational until 2002). Over the next three decades, each subsequent Soviet achievement received extensive media coverage. Soviet scientists actively participated in the Geneva Conferences on the Peaceful Uses of Atomic Energy. The first, in 1956, enabled Soviet physicists to appear as equals of their American and European counterparts.

The conferences were crucial in allowing Soviet physicists to participate in the broader scientific community, an opportunity that had been denied them during the Stalin era because of its extreme commitment to secrecy. At conferences, scientists from the USSR could enter into serious discussions with their international colleagues, and these interactions often eased Cold War tensions. For instance, Igor Kurchatov, the head of the atomic bomb project, spent the last years of his life promoting peaceful nuclear programs and sought a test ban treaty of some sort.

DEVELOPMENT OF NUCLEAR REACTORS

Soviet engineers developed five major kinds of nuclear reactors. One design focused on compactness, and was intended to be used for propulsion, especially for submarines. The USSR also employed compact reactors on aircraft carriers, container ships, freighters, and icebreakers, such as the icebreaker *Lenin*, which was launched in 1959. Scientists also worked on reactor propulsion for rockets and jets, and nuclear power packs for satellites. There were several prototype land-based models, including the TES-3, built in Obninsk, that could be moved on railroad flatbed cars or on tank treads. In the 1990s, Russian nuclear engineers designed a barge-based, floating nuclear unit for use in the Far North and Far East.

There was also an extensive breeder reactor program. The most common type was the liquid metal fast breeder reactor (LMFBR). Breeder reactors are so called because they use “fast” neutrons from fissile uranium (U235) to transmute non-fissile U238 into plutonium (Pu239). The plutonium

can then be used to power other breeder reactors, or as fuel for nuclear weapons. Breeder reactors are highly complex. They have a liquid metal, usually sodium, coolant, which must be kept separate from the water used for power generation, because the sodium will burst into flame when mixed with water.

The physicists A. I. Leipunsky and O. D. Kazachkovsky established the LMFBR program in 1949, over the years building a series of increasingly powerful experimental reactors. In the late 1960s, they built the BOR-60 with the hope that it would double (or breed) plutonium every eight years. Like its predecessors and subsequent models, the BR-60 had an extended operational lifespan, but also required long periods of repair time because of pump breakdowns, ruptured fuel assemblies, sodium leaks, and fires.

Leipunsky and Kazachko were determined to build industrial prototype reactors as well. In 1979 they built the BN-350 on the Mangyshlak Peninsula on the shore of the Caspian Sea. The reactor

provided both electrical energy and desalinated 120,000 cubic meters of water daily for the burgeoning petrochemical industry. At Beloiarsk they built a 600 megawatt model (the BN-600), followed by an 800 megawatt model (the BN-800), and aimed to create a network of 1,600 megawatt LMFBRs that would be capable of producing plutonium sufficient for all military and civilian ends. Cost overruns and accidents left the program weakened, however.

OTHER ACHIEVEMENTS

AND PROBLEMS

The mainstay of the Soviet (and Russian) atomic energy effort has been the development of 440 and 1,000 megawatt pressurized water reactors, known by the Russian designation as VVER reactors. Also important were the channel-graphite reactors (RBMK in Russian), such as the one built at Chernobyl. The USSR supported the diffusion of VVERs beyond its borders, especially into Eastern Europe (Hungary, Czechoslovakia, and Bulgaria), and two 1,500 MW RBMKs in Lithuania. The VVERs have been largely reliable by Soviet standards, although the first generation facilities lack any containment buildings or other safety equipment that has become standard in the West.

Reactors had to include more expensive containment design features if they were to be competitive in Western markets, as when the USSR sold its VVER-440s to Finland. In an effort to reduce costs, speed construction, and limit chances for worker error in the field, the nuclear industry built the Atom mash Factory in Volgograd on the lower Volga River. Atom mash was intended to construct eight reactor pressure vessels and associated equipment annually by 1983. The massive factory required the investment of millions of rubles and employed tens of thousands of workers. Yet it never operated as intended, producing only three vessels in all before one wall of the main foundry collapsed.

RBMKs have been even more problematic. Anatoly Alexandrov, later the president of the Academy of Sciences and Kurchatov's successor, pushed the RBMK reactor. Their advantages are that they continue to operate during constant refueling, theoretically could be built in sizes up to 2,400 megawatts (forecast, not built), and produce plutonium, which is coveted by military planners. Yet they use ordinary factory structures and have no containment whatsoever. On the other hand, they have suffered from premature aging. Worse still,

the RBMK is highly unstable at low power, an inherent fault that contributed to the Chernobyl disaster. The flagship of the RBMK is the Leningrad station, with four units built between 1973 and 1984. In 2002 the Ministry of Atomic Energy (MinAtom) announced plans to attempt to prolong the operational lives of these four reactors and to build another two units on the site. This continues the Soviet practice of building reactors in close proximity to populated areas and industrial centers in so-called parks that have been designed to share equipment and thus to keep costs down.

Initially, the public enthusiastically embraced atomic energy as a symbol of Soviet scientific prowess and cultural achievement. However, the inherent weaknesses of the RBMK and the dangers of the mindset of Soviet engineers who believed in the perfectibility of their technology and the desirability of unlimited reactor construction became painfully clear at Chernobyl in April 1986. As a result of an experiment that was poorly designed and even more poorly carried out, the Chernobyl facility's unit four (of four operating, with six others planned) exploded, spewing roughly 120 million curies of radioactivity into the atmosphere. This led to a fire that killed thirty-one firefighters outright, and required the evacuation of all people within a thirty-kilometer radius of the station. Soviet officials hesitated to announce the extent of the crisis at Chernobyl for several days after the event. This hesitation revealed that Mikhail Gorbachev himself was unsure how far to pursue his policy of glasnost ("openness") and seriously damaged the public image of the atomic energy program.

A major research program centered on controlled thermonuclear synthesis, or fusion. Andrei Sakharov and Igor Tamm developed the idea for the electromagnetic containment of a plasma in a toroid-shaped reactor at millions of degrees temperature. The plasma would fuse two lighter elements into a heavier one, releasing tremendous amounts of energy that could then be used to generate electricity. This model has come to be known throughout the world by its Russian name, *tokamak*, and has been the most successful fusion device developed by the end of the twentieth century. Soviet scientists remained world leaders in this field, with programs at institutes in Leningrad, Kharkiv, Akademgorodok, Moscow, and elsewhere. Cost efficiency has been a problem however. Since the program commenced in the early 1950s, it has yet to achieve the break-even point where the cost to operate fusion devices has been offset by the

returns gained through energy production. In 1985, Mikhail Gorbachev suggested a Soviet-American alliance in fusion research to President Ronald Reagan at their Geneva summit.

PROGRAM LEGACIES

One of the legacies of atomic energy in the USSR has been the production of thousands of tons and millions of gallons of high- and low-level radioactive waste. The waste has been stored haphazardly, often in open areas, and for a number of years the Soviets dumped waste, including spent reactor vessels, into the world's oceans. The waste has been spreading throughout the world's ecosystems for decades. There have been a series of disasters connected with waste disposal, including the explosion of a waste dump at Kyshtym in 1957, a disaster at Lake Karachai in 1953, and several others. As of 2002, Russia faced financial and technical difficulties in complying with international agreements regarding the disposal of radioactive waste and in destroying obsolete military equipment such as decommissioned nuclear submarines. The human and environmental costs of the Soviet atomic energy program thus remain extremely high. In spite of this, the Russian Ministry of Atomic Energy has established plans to expand the nuclear enterprise significantly by the year 2020, with the construction of up to forty additional reactors and the diffusion of floating nuclear power stations.

PAUL R. JOSEPHSON

AUGUST 1991 PUTSCH

The August 1991 Putsch (August 19–August 21) was a hard-line communist attempt to overthrow Mikhail Gorbachev, triggering the collapse of the USSR.

On the morning of August 19, 1991, Soviet state television suddenly and ominously switched to playing classical music, a programming change

that usually preceded a significant political announcement. Soviet vice president Gennady Yanayev issued a statement that President Mikhail Gorbachev had been removed for health reasons and that he, as vice president, was now acting president. In reality, Gorbachev was under house arrest at his vacation home in Foros. Yanayev and seven other hard-line communists, under the rubric of the State Committee for the State of Emergency, had seized power to prevent a major reorganization of the Soviet Union.

Gorbachev's policies of glasnost, democratization, and perestroika had set in motion a process of reconfiguring the relationship between the central party-state and the fifteen constituent republics of the USSR. Glasnost, for example, had resulted in the publication of the 1939 Molotov-Ribbentrop Pact's secret protocols, revealing that Estonia, Latvia, and Lithuania had been illegally annexed by Moscow. While these three republics sought outright independence from the Soviet Union, other republics issued decrees announcing their intent to take more control over their local political and economic affairs. This parade-of-sovereignties gained momentum when Boris Yeltsin declared the sovereignty of the Russian Soviet Federated Socialist Republic (RSFSR) in June 1990.

Gorbachev and the Communist Party initially tried to control the restructuring process. On April 26, 1990, the Supreme Soviet adopted the law, "On the Delineation of Powers Between the USSR and the Subjects of the Federation," to redefine center-periphery relations. The newly established Federation Council, consisting of Gorbachev and leaders of the fifteen republics, announced on June 12, 1990, that a completely new union treaty was needed to clarify the changing authority structure of the country. Four separate Union treaties were drafted in 1990 and 1991. Critically, Gorbachev primarily negotiated with the elected presidents of the republics, not the republic Party leaders, a move that would alarm die-hard communists in the months to come. Gorbachev's two closest allies in the reform process, Eduard Shevardnadze and Alexander Yakovlev, began to warn that a reactionary coup was imminent.

After many rounds of negotiation and a popular referendum, a final draft was issued on June 17, 1991, and a signing ceremony was announced for August 20. The treaty created a Union of Soviet Sovereign Republics and tacitly acknowledged that the six republics absent from the negotiations

(Armenia, Estonia, Georgia, Latvia, Lithuania, and Moldova) were free to enter or decline this new political union. Gorbachev departed for vacation in the Crimea on August 4.

However, key Soviet leaders feared the new treaty would mean the end of the great Soviet state—and their own power. Plans had already been drawn up and were implemented once Gorbachev had left Moscow. The plotters' "Appeal to the Soviet People" was full of warnings about the imminent demise of the USSR, and court documents and testimony have since revealed that the desire to preserve the Union was a direct precipitant of the coup. The eight-man Emergency Committee represented the traditional bastions of power in the Soviet system. They included: Gennady Yanayev (USSR vice president), Valentin Pavlov (prime minister), Vladimir Kryuchkov (head of the KGB), Dimitri Yazov (minister of defense), Boris Pugo (minister of interior), Alexander Tizyakov (head of the Association of State Enterprises), Oleg Baklanov (head of the military-industrial complex and deputy chair of the Defense Council), and Vasil Starodubsev (chair of the Soviet farmers' union). Although Yanayev was the reluctant public face of the Committee, Kryuchkov was the real architect. Key leaders such as parliamentary speaker Anatoly Lukyanov and Gorbachev's long-time chief of staff Valery Boldin supported the Committee, although they were not formal members. In the end, the coup was thwarted by its planners' incompetence, popular resistance, and Russian Republic (RSFSR) president Boris Yeltsin.

On Monday, August 19, the Emergency Committee dispatched troops to key positions around Moscow, shut down all independent media outposts, banned all non-Communist political organizations, and proclaimed a state of emergency. They failed to shut off telephones, e-mail, and fax machines, however, and the independent media merely went underground.

Inexplicably, the Emergency Committee did not arrest Boris Yeltsin, who had become the popularly elected president of the Russian Republic only two months earlier. Yeltsin, at his dacha outside Moscow, was soon joined by key leaders of Russia, including Prime Minister Ivan Silayev, parliamentary speaker Ruslan Khasbulatov, Leningrad mayor Anatoly Sobchak, Moscow deputy mayor Yuri Luzhkov, and General Konstantin Kobets, chair of the Russian parliament's military affairs committee.

The Russian leaders drafted their own appeal, "To the Citizens of Russia," and then dispersed. Although the KGB's elite Alpha unit had surrounded the dacha, they did not move to arrest Yeltsin and company. In hindsight, participants have attributed this critical error to internal bickering among Alpha commanders or the lack of a direct order from the Emergency Committee. Whatever the explanation, Yeltsin slipped away and immediately went to the Russian parliament building, known as the White House. Climbing atop one of the tanks surrounding the White House, Yeltsin denounced the coup as illegal, read his appeal, and called for a general strike. He also declared that military and police forces on Russian territory now reported to him. Yeltsin's team began circulating alternative news reports, faxing them out to Western media for broadcast back into the USSR. Soon Muscovites began to heed Yeltsin's call to defend democracy.

Tens of thousands of Russian citizens assembled outside the White House, constructing barricades out of trees, trolley cars, building materials, even old bathtubs, to hold off an expected attack by Soviet troops. But instead of attacking on Monday, troops from the Tamanskaya Division switched sides to defend the White House, turning their turrets away from the building.

Outside Moscow, the reaction was mixed. Many local leaders hastened to support the Emergency Committee. Republics with noncommunist leaders, such as Estonia, Latvia, Lithuania, Moldova, and Kyrgyzstan, immediately denounced the coup. Iraq and Libya backed the plotters, while Western leaders cautiously observed events unfold. United States diplomats had issued three separate coup warnings to Gorbachev that summer, but President George H. W. Bush was initially reluctant to back the maverick Yeltsin.

That evening, Acting President Yanayev held a press conference that was a public-relations disaster. His quivering hands, constant sniffing, and stilted delivery suggested his lack of conviction—

or his inebriation. Reporters laughed at his lame answers about the day's events. From the outset, the Emergency Committee inspired little fear.

On Tuesday, August 20, citizens continued to gather at the White House. Students, private security firms, priests, and grandmothers defended the building, organized by veterans of the Afghanistan war. Yeltsin emerged to rally the crowd. Waving Russia's pre-communist flag, he exhorted citizens to ignore decrees from the Emergency Committee. Members of the Russian and Western media entered the White House and provided eyewitness reports. Some 250 RSFSR Supreme Soviet deputies alternately holed up with Yeltsin or went into the crowds to convert Soviet soldiers to their cause. Pro-democracy figures such as Eduard Shevardnadze, Yelena Bonner, and Mstislav Rostropovich addressed the crowd.

Defying a curfew and drenching rain, people stayed at the barricades Tuesday night. When troops began to stir just after midnight, the crowds tried to halt them, shouting "Shame! Shame!" Three civilians, Volodya Usov, Dima Komar, and Ilya

Krichevsky, were killed in the confusion, becoming the coup's martyrs. No further advance was made on the White House, as military and KGB troops refused to fire on their countrymen.

The Emergency Committee effectively surrendered at 10:00 A.M. on Wednesday, August 21. As the troops withdrew, two competing delegations raced to reach Gorbachev first. One group, consisting of Baklanov, Kryuchkov, Tizyakov, and Yazov, primarily wanted to plead their case to Gorbachev and avoid arrest. Yeltsin's group, led by Russian vice president Alexander Rutskoi and Prime Minister Silayev, wanted to assure Gorbachev's safety. They took Western media and Russian security forces with them. Yeltsin's team arrived first, and Gorbachev had the other group arrested immediately upon arrival. Gorbachev and his family flew back to Moscow, arriving in the early hours of Thursday. However, the people had sided with Yeltsin, not Gorbachev, and power began to shift accordingly.

Gorbachev was slow to read the new mood among his populace. He believed a new union treaty was still possible, praised Lenin and socialism upon his return, and hesitated to resign from the Communist Party. Meanwhile, people took to the streets, tearing down statues of Lenin, hammers and sickles, and even the statue of Felix Dzerzhinsky outside KGB headquarters, the organization he had founded. Lenin's Mausoleum closed indefinitely. At an August 23 session of the Russian parliament, members jeered at Gorbachev, then forced him to fire his entire cabinet. Yeltsin compelled a stunned Gorbachev to read aloud the minutes of an August 19 meeting of the coup plotters. Yeltsin then banned the Party from Russian territory. On August 24, Gorbachev resigned as Party general secretary, turned its assets over to parliament, and curbed its activities in the dwindling USSR. Ukraine, Belarus, Estonia, and Latvia declared their independence, followed by Moldova.

Seven members of the Emergency Committee were arrested immediately following the coup's collapse. Interior Minister Pugo committed suicide. In the immediate aftermath of the putsch, staff at the Central Committee headquarters destroyed thousands of documents. The Russian Duma amnestied the plotters in February 1994, and several were elected to that institution.

The degree of Gorbachev's complicity in the putsch remains a source of controversy. The KGB placed him under arrest on Sunday evening, August 18, after he refused to resign. Gorbachev in-

sists that he was isolated, betrayed, and fearful for his life. Lukyanov and Yanayev, however, insist that Gorbachev was in on the plans from the beginning and merely waiting to gauge popular reaction. History is still being written on this key event in Russian politics.

ANN E. ROBERTSON

AUSTERLITZ, BATTLE OF

The Battle of Austerlitz, which occurred on December 2, 1805, was the climactic battle of the War of the Third Coalition (August–December 1805). Having forced an Austrian army to surrender at Ulm in September, Napoleon then chased the Russian army of Mikhail Ilarionovich Kutuzov from the Austrian border on the River Inn to Moravia. There Kutuzov's army linked up with reinforcements from Russia and Tsar Alexander I joined his troops. Also known as the Battle of the Three Emperors, because Napoleon, Emperor Franz of Austria, and Alexander I were all present on the field, Austerlitz was a crushing French victory that sealed the fate of the Third Coalition (Russia, Austria, Great Britain, Naples, and Sweden).

Napoleon's forces were inferior to those of the coalition, so the French emperor developed a ruse. Having initially seized the dominant Pratzen Heights in the middle of the battlefield, he withdrew from that position, feigning weakness, in order to entice the allies to attack his right flank. When they did so, Napoleon's forces retook the

Pratzen Heights, where Kutuzov and Alexander himself urged their troops to resist, and then surrounded the remnants of the allied army, inflicting approximately 30 percent casualties on the Russian and Austrian troops.

The victory was so one-sided that Alexander withdrew his army from the campaign altogether, retreating rapidly back to Russian Poland. His departure compelled Emperor Franz to sue for peace, resulting in the lopsided Treaty of Pressburg (1806), that formally ended the war and dissolved the coalition. Although little studied by Russians and Austrians (for reasons of national pride), Austerlitz elsewhere became the paradigm of decisive battles in the nineteenth century, and generals across the continent and even in the United States sought to emulate Napoleon's accomplishment.

FREDERICK W. KAGAN

AUSTRIA, RELATIONS WITH

As they gained control of the Russian lands during the fifteenth and sixteenth centuries, the princes of Moscow became a factor in international relations. An Austrian nobleman, Sigismund von Herberstein, twice led embassies from the Habsburg Holy Roman emperor to Basil III (1505–1533) in Moscow. Herberstein's *Rerum moscoviticarum commentarii* (Notes on Muscovite Affairs, 1549) helped shape European attitudes to Russia for generations. More sustained relations between Austria and Russia began during the reign of Peter the Great (1689–1725), who made the Russian Empire a permanent force in the European balance of power.

Austria maintained an alliance with Russia for most of the eighteenth century, because its rival, France, was seeking aid from Russia's neighbors Poland and Turkey. Austria and Russia prevented Stanislaw Leszczyński, a French-supported candi-

date to the Polish throne, from unseating the Saxon dynasty in the War of the Polish Succession (1733–1735). Russia supported Maria Theresa's claim to the inheritance of her father, Emperor Charles VI, in the War of the Austrian Succession (1740–1748) and the Seven Year's War (1756–1763).

Austria and Russia joined with Prussia in the First Partition of Poland (1772), a cynical but effective attempt to preserve regional equilibrium by compensating the three powers at Poland's expense. Austria then supported Empress Catherine II's ambitions in the Balkans, but, concerned by the threat of the French Revolution, withdrew from the war with Turkey in 1791. While Austria was preoccupied with France, Russia and Prussia cooperated in the Second Partition of Poland (1793), but Austria joined them in the Third Partition following Kosciuszko's revolt (1795).

During the Revolutionary and Napoleonic Wars, Russia and Austria were allies in the War of the Second Coalition (1798–1801, Russia withdrew in 1799) and the War of the Third Coalition (1805–1807). French victories forced Austria to make an alliance with Napoleon, sending troops to join his invasion of Russia in 1812. When the invasion failed, however, Austria joined Russia, Prussia, and Great Britain in the final coalition that defeated Napoleon in 1814 and occupied Paris.

Following the Congress of Vienna (1815), Austria signed Alexander I's Holy Alliance, and the two states generally cooperated to support the conservative order and prevent revolution. Nicholas I (1825–1855) sent a Russian army to help Austria defeat the Hungarian bid for independence in 1849. This was poorly repaid by Austria's malevolent neutrality during the Crimean War (1853–1856).

After the unification of Italy and Germany, Austria turned its ambitions exclusively to the Balkans, where it clashed with Russia. The Balkan crises in 1875 to 1878 and in 1885 destroyed Otto von Bismarck's Three Emperors' League. Subsequent Austro-Russian success at keeping the Balkans "on ice" ended after Russia's disastrous war with Japan in 1904 to 1905. As Russia turned from the Far East to a more active Balkan policy, Austria in 1908 annexed Bosnia and Herzegovina (occupied since the Congress of Berlin in 1878), leaving Serbia bitter and Russia humiliated. Russia responded by encouraging Balkan cooperation to thwart further Austrian penetration, but instead the Balkan League turned on Turkey in two wars in 1912 and 1913. At the peace conference in Lon-

don in 1913, Austria blocked Serbian access to the Adriatic, again to Russia's chagrin.

This accumulation of tension set the stage for the assassination of the Austrian archduke Francis Ferdinand in Sarajevo in June 1914, touching off World War I. Austria was determined to punish Serbia for the assassination. Russia's support for Serbia drew in Germany, Austria's ally. The German war plan called for an attack on France, Russia's ally since the 1890s, before Russia could mobilize. The attack, through neutral Belgium, provoked Great Britain's entry. During the war, the Russian and Austro-Hungarian empires both collapsed.

The empire's diminished successor, the Republic of Austria, and the Soviet Union did not enjoy significant relations between the wars. Absorbed into Hitler's Germany in 1938, Austria regained its independence after World War II because the Allies had decided in 1943 to treat it as liberated, not enemy, territory. Nevertheless, Austria was occupied in four zones, with Vienna, also divided, located in the Soviet zone. On the fault line of the developing Cold War, Austria emerged united, neutral, and free of Soviet domination when the State Treaty was signed in 1955. Vienna was often a site for international meetings, such as the summit between Nikita S. Khrushchev and John F. Kennedy in 1961, prior to the Berlin and Cuban crises. Austria's entry into the European Union ended its neutrality and placed its relations with Russia on a new footing as part of Russia's relationship with the EU.

HUGH LECAINE AGNEW

AUTOCRACY

Autocracy was the form of government in Russia until 1905 when, in theory, a constitutional monarchy was established. The Russian autocratic order can date its origins to the rise of Moscow during the Mongol occupation. The official conception of the autocracy stressed that all political power and legitimacy emanated from the autocrat, who claimed to be God's representative on earth. According to Russia's Fundamental Laws of 1832, "The All-Russian Emperor is an autocratic and unlimited monarch." He had the ability to overcome society more easily than most of his counterparts to the west of Russia simply because the tenets of autocratic thought did not accept the notion that the monarch should consult social groups or other forms of organized societal elements, and institutional constraints on monarchical power did not exist.

One of the justifications for autocracy was its perceived position as being above all classes. It was portrayed as the ideal arbiter between the various self-interested groups in society, ensuring that exploitation did not take place between them and implementing supreme truth and justice. In addition, autocracy was stressed as Russia's prime and unique historical force, pushing the country towards greatness and providing for national unity in a multi-ethnic empire and internal stability. The emergence of Russia as an empire and a great European power symbolized for many the autocracy's achievements.

At the base of autocratic ideology was the idea of a strong union between the people and the autocratic tsar, whose paternalistic image was stressed. While carrying the title of autocrat, he was also known as the "little father" who protected his people from the bureaucracy and worked for their ultimate benefit. There is considerable debate over the extent to which the Soviet political system, and specifically Stalinism, was rooted in this heritage of autocracy.

The autocracy was dependent on the character and modus operandi of the autocrat. As the coordinating pivot of the entire system, he determined

the autocracy's actions and reactions. If the autocrat failed to ensure a degree of harmony and unity among the highest servants of the state, or could not fulfil this role and refused to support a minister to act as the coordinating point of the government, he contributed greatly to disorder and paralysis within the autocracy. This scenario was played out during the reign of the last emperor, Nicholas II.

The educated upper classes did not believe that the autocracy was without some constraints. These, however, were not legal, but moral, and based on history, culture, religion, and tradition. From the beginning of the nineteenth century, debate over the future of autocracy increased. The Decembrist Revolt of 1825 was the first sign of open dissatisfaction with autocracy. Forced to embark on a policy of modernization in the middle of the nineteenth century, the autocracy struggled to deal with its consequences. By the end of the nineteenth century, the autocracy was seen more as an obstacle than a positive force. After the Revolution of 1905, the tsar was still called autocratic, but a parliamentary system now existed. Autocracy's ultimate failure to incorporate to any sufficient degree the greatly enlarged educated and working classes, a step which would have in theory put an end to autocracy, became of the major causes of the collapse of the monarchy.

ZHAND P. SHAKIBI

AVARS

The Avars are one of the many people of the Dagestan Republic of the Russian Federation. Numbering

496,077 within Dagestan at the 1989 Soviet census, they formed 28 percent of this republic's population. This made them the largest ethnic group in Dagestan (the Dargins were second, with 15.8 percent), but still far from a majority. There were a total of 600,989 Avars in the Soviet Union in 1989. Of this total, 97 percent spoke Avar as their first language. Nearly 61 percent, a significant number of the adults, claimed fluency in Russian as a second language.

The Avar language is a member of the Avaro-Andi-Dido group of the Northeast Caucasian family of languages. In Soviet times this would have made them a part of the larger Ibero-Caucasian family, a classification now seen as a remnant of Soviet *druzhba narodov* politics. It is written in a modified Cyrillic alphabet that was introduced in 1937. A Latin alphabet had been used previously, from 1928 to 1937. Before that an Arabic script was used. A modest number of books have been published in Avar. From 1984 to 1985, fifty-eight titles were published. Being without their own eponymous ethnic jurisdiction, the Avars were less privileged in this category than the Abkhaz, for example, whose jurisdiction was the Abkhazian Soviet Socialist Republic (ASSR). With only one-sixth of the population of the Avars, the Abkhazians nonetheless published some 149 books in their language in the same period.

The most prominent leader of Caucasian resistance against the encroachment of the Russian Empire in the nineteenth century was an Avar man named Shamil. Curiously, his power base was centered not among his own people, but among the Chechens immediately to the west.

In the delicate multiethnic balance of Dagestani politics, the Avars have occupied a preeminent, if not a dominant, status, especially in the post-Soviet period. The Avar language is often spoken by members of other ethnic groups within the Dagestan Republic as a means of gaining access to power structures. One of the disputes in Dagestan involves the Chechens. Part of the Chechen Republic's territory that had been absorbed by Dagestan after the Chechen deportation in 1944 was never returned. Avars occupied some of this territory, and the return of Chechens seeking their land has resulted in ongoing conflict.

The ethnogenesis of the Avars is often linked to the people of the same name who appeared with the Hunnic invasions of late antiquity. These Avars original from East Central Asia with other Turkic-

speaking peoples, and so the connection with a people speaking a vastly different language is difficult to make.

AVIATION

Defined as the science and practice of powered, heavier-than-air flight, aviation made its first great strides in the early twentieth century, after decades of flights in lighter-than-air gliders and balloons had been achieved in several countries. As acknowledged in reference books worldwide, including those of Soviet Russia, the first successful flight of an airplane was performed one hundred years ago by Orville and Wilbur Wright on December 17, 1903. Throughout the nineteenth century, however, designers and engineers in many countries were working on plans for powered human flight.

In Russia, Sergi Alexeyevich Chaplygin (1869–1942) and Nikolai Yegorovich Zhukovsky (1847–1921) made major contributions in their study of aerodynamics, founding a world-famous school in St. Petersburg, Russia. In 1881, Alexander Fyodorovich Mozhaisky (1823–1890) received a patent for a propeller-driven, table-shaped airplane powered by a steam engine, which crashed on take-off in 1885. From 1909 to 1914, however, Russia made significant strides in airplane design. Progress included several successful test flights of innovative aircraft. For instance, the Russian aircraft designer Yakov M. Gakkel (1874–1945) achieved worldwide attention among aviation experts for developing a single-seat, motor-powered biplane that attracted world attention among aviation experts. In 1910, Boris N. Yuriev (1889–1957) designed one of the world's first helicopters, which were known in aviation's earlier days as autogyros.

A major breakthrough in world aviation occurred in 1913, with the development of the four-motored heavy Russian aircraft, the *Ilya Muromets*. This huge airplane far outstripped all other planes of its time for its size, range, and load-carrying capability. Russian ice- and hydroplane development was also outstanding in the years 1915 and 1916. One of the world famous Russian aircraft designers of this period, and the one who built the *Muromets*, was Igor Ivanovich Sikorsky (1889–1972), who emigrated to the United States in 1919 and established a well-known aircraft factory there in 1923.

Before and during World War I, Russian military aircraft technical schools and aviation clubs blossomed. In the war, the Russians deployed thirty-nine air squadrons totaling 263 aircraft, all bearing a distinctive circular white, blue, and red insignia on their wings. With the coming to power of the Communists in late 1917, Lenin and Stalin, who stressed the importance of military production and an offensive strategy, strongly supported the development of the Red Air Force. Civilian planes, too, were built, for what became the world's largest airline, Aeroflot.

By the time of World War II, the Soviets had made significant strides in the development of all types of military aircraft, including fighters and bombers, gliders and transport planes, for both the Red Army and Red Navy. By the time of the German invasion of the USSR in June 1941, various types of Soviet aircraft possessed equal or superior specifications compared to the planes available to their Nazi German counterparts. This achievement was possible not only because of the long, pre-revolutionary Russian and postrevolutionary Soviet experience in designing and building aircraft and participating in international air shows. Progress in this field also stemmed from Soviet strategic planning, which called for offensive air-ground support in land battle.

During World War II, such aircraft as the Shturmoviks, Ilyushins, and Polikarpovs became world famous in the war, as did a number of male and female Soviet war aces. With the coming of jet-powered and supersonic aircraft in the 1950s and beyond, the Soviets continued their quest for air supremacy, and again showed their prowess in aviation.

ALBERT L. WEEKS

AVVAKUM PETROVICH

(1620–1682), one of the founders of what came to be called Old Belief.

Avvakum was a leading figure in the opposition to Patriarch Nikon and the program of church reform he directed. Nikon's removal from his post did not placate Avvakum. He continued to agitate against the program of church reform and its supporters until his execution.

Avvakum was born on November 20, 1620, to a priest and his wife in the village of Grigorovo in the Nizhny Novgorod district. In 1638 he married Anastasia Markovna, the daughter of a local blacksmith. She was a devoted wife and true companion to Avvakum until his death. Following in the footsteps of his father, Avvakum entered the secular clergy. In 1642 he was made a deacon at a village church in the Nizhny Novgorod district. Two years later he was ordained a priest.

Avvakum was appalled by the ignorance, disorderliness, and impiety of popular religious practices and early in his career manifested a zeal for reform. By 1647 Avvakum was associated with the Zealots of Piety, a Moscow-based group led by Tsar Alexis Mikhailovich's confessor, the archpriest of the Annunciation Cathedral, Stefan Vonifatiev. Avvakum's enthusiasm for religious and moral reform was not matched by that of his provincial parishioners and soon brought him into conflict with the local authorities. His house was burned, and he was compelled to flee with his family to Moscow. There he found refuge with Stefan Vonifatiev. Avvakum returned to his parish in the Nizhny Novgorod district to continue his work, but by 1652 was obliged to flee to Moscow again. Avvakum soon was assigned to Yurevets-Povol'sky and elevated to archpriest, but by the end of 1652 he was back in Moscow, serving at the Kazan Cathedral with Ivan Neronov, a man Avvakum recognized as his mentor.

Avvakum was an ardent supporter of religious and spiritual reform, but not of the liturgical reforms advocated by other members of the Zealots of Piety. In early 1653 Avvakum joined Neronov and others in protest against some changes and simplifications made in the Psalter, recently printed under the direction of Patriarch Nikon. Vocal and adamant in opposition, Ivan Neronov was arrested on August 4, 1653. The arrest of Avvakum and other supporters followed on August 13. Thanks to the personal intervention of the tsar, Avvakum

escaped defrocking and exile to a monastery. Instead he and his family were transferred to the distant and less desirable post of Tobolsk in Siberia, where he served as archpriest until the end of July 1655. In Tobolsk, despite the support and protection of Governor Vasily Ivanovich Khilkov and Archbishop Simeon, Avvakum's abrasive approach ignited conflict and contention. In 1656, to remove him from the scene of contention, the tsar ordered Avvakum to accompany an expeditionary force led by Commander Afanasy Pashkov, intended to pacify and bring Christianity to the native tribes of northern Siberia. The assignment was not a success. Avvakum's religious zeal alienated many of the soldiers and enraged the commander. In his *Life*, Avvakum vividly recounted the multiple humiliations and torments inflicted upon him by Pashkov. In 1657 Pashkov sent a petition to Moscow, ostensibly written by several of the soldiers, accusing Avvakum and his supporters of fomenting rebellion and requesting that the archpriest be condemned to death. Once again, Avvakum's friends in high places came to his aid. Archbishop Simeon of Tobolsk intervened, and in 1658 Pashkov was replaced as commander of the expedition.

In the spring of 1661 Avvakum was directed to return to Moscow with his family. Difficulties along the way and a stop in Ustiug Veliky slowed the journey. The family did not arrive in Moscow until the beginning of 1664. Much had changed. In 1658 Patriarch Nikon had quarreled with the tsar and abandoned the patriarchal throne. The unprecedented act caused consternation and confusion, but it did not shake the commitment to church reform, including liturgical reform. The tsar and his closest associates received Avvakum graciously. The zealous archpriest met and conversed with the leading figures behind the continuing reform program, including Simeon Polotsky and Epifany Slavinetsky. He debated changes introduced into the rituals by the new liturgical books with Fyodor Rtishchev, arguing that, among other things, the sign of the cross must be made with three fingers, rather than two. The three-fingered sign of the cross would become a visible symbol for those who opposed the so-called Nikonian reforms. Further, Avvakum challenged the assertions of Rtishchev and others that "rhetoric, dialectic, and philosophy" had a role to play in religious understanding. In this period, Avvakum was even offered a post as corrector (*spravshchik*) at the Printing Office, the center of activity for the revision and printing of the new church service books and other religious works.

If such efforts were intended to mollify Avvakum, bring him back into the circle of reformers, and gain his talents for the ongoing process of church reform, they failed. Avvakum remained intransigent in his opposition to all changes introduced in the religious rituals and in the printed service books, petitioning the tsar to intervene and preaching his dissident views publicly. In this same period he became the confessor to the noblewoman Feodosia Morozova and her sister, Princess Yevdokia Urusova, convincing them of the correctness of his position. Both sisters accepted Avvakum's views and in 1675 suffered martyrdom rather than recant.

In August 1664 Avvakum and his family once again were dispatched into exile in Siberia, arriving in Mezen at the end of the year. A year later, Avvakum was recalled to Moscow to appear before a church council (1666). At this important council Nikon officially was removed as patriarch, but the reform program itself was affirmed. Those who actively opposed the reforms, including the revised service books, were tried. Some, such as Ivan Neronov, recanted. Others, led by Avvakum, stood firm. Following the council, Avvakum was defrocked, placed under church ban, and imprisoned in chains in a monastery. Subsequent attempts to persuade him to repent failed. In August 1667, Avvakum and his supporters were sentenced to exile in Pustozersk in the remote north. Two of Avvakum's friends and supporters, Lazar and Epifany, also exiled, had their tongues cut out; Avvakum was spared this punishment. By the end of the year the prisoners reached their destination.

Exile and prison did not deter Avvakum from indefatigably petitioning the tsar and communicating with his followers. In the 1670s repression of religious dissidents increased. Avvakum, his family, and the small band of prisoner-exiles in Pustozersk were subjected to new afflictions. Moreover, the colony increased with the addition of those seized after the suppression in 1676 of a rebellion at the Solovetsky monastery, ostensibly against the new service books. In the meantime, religious dissenters incited disturbances in Moscow and other towns and villages. Frustrated in all attempts to silence the dissidents, in 1682 the church council transferred jurisdiction to the secular authorities. An investigation was ordered, and on April 14, 1682, Avvakum was burned at the stake, "for great slander against the tsar's household."

Avvakum is remembered primarily as a founding father of the movement known in English as Old Belief, a schismatic movement that assumed a coherent shape and a growing following from the beginning of the eighteenth century. In Avvakum's lifetime, however, he was engaged in a relatively esoteric dispute with other educated members of the clerical and lay elites. He attracted a circle of devoted disciples and supporters, but not a mass following. His position as one of the founding fathers of Old Belief rests on the lasting influence of his writings, which were collected, copied, and disseminated. Avvakum was a prolific writer of petitions to the tsar, letters of advice and exhortation to his acquaintances, sermons, polemical tracts, and pamphlets. All contributed to the shape of Old Belief as an evolving movement. An important example of Avvakum's dogmatic and polemical work is *The Book of Denunciation, or the Eternal Gospels* (c. 1676). Written by Avvakum as part of a dispute with one of his disciples, this tract clarified his position on several dogmatic issues. This work continued to be a focal point of criticism for spokesmen of the official church into the early eighteenth century.

In addition to their religious significance, Avvakum's writings are of considerable interest to linguists and literary historians. His writing style was forceful and dramatic. He juxtaposed great erudition with penetrating direct observation and mixed the tonalities and phraseology of the popular spoken Russian of his day with the traditional ornate and formal rhetorical style. Perhaps Avvakum's best-known work is his autobiographical *Life*. Three versions were written between 1672 and 1676. Of the two later versions, the copies written by Avvakum himself, along with numerous others, are preserved. Building on traditional genres such as hagiography, sermons, chronicles, folktales, and others, Avvakum created not only a new genre, but a new mentality that, according to some scholars, manifests the seeds of modern individual self-consciousness.

CATHY J. POTTER

AZERBAIJAN AND AZERIS

The Republic of Azerbaijan is a country located in the Caucasus region of west Asia. Azerbaijan has a total area of 86,600 square kilometers and shares borders with the Russian Federation in the north (284 kilometers), Georgia to the northwest (322 kilometers), Armenia on the west (566 kilometers), Iran to the south (432 kilometers), and the Caspian Sea on the east (800 kilometers). Geographically, Azerbaijan is considered part of the Middle East. However, it is a border country and not part of the heartland. This borderland quality has had a profound impact on the country's history.

From the time of ancient Media (eighth to seventh century B.C.E.) and the Achaemenid (Persian) period, Azerbaijan has mainly shared its history with Iran. In 300 B.C.E., Alexander the Great conquered the Achaemenid Kingdom, retaining Persian satraps to govern as his forces advanced eastward. According to one account, the name Azerbaijan is derived from the name of Alexander's original satrap, Atropatanes. Another explanation traces the origin of the name to the Persian word for fire keepers, "Azerbaycan." This is in reference to the fires burning in local Zoroastrian temples, fed by abundant sources of crude oil.

Azerbaijan maintained its Iranian character even after its subjugation by the Arabs in the mid-seventh century and the conversion to Islam. During the eleventh century, the migrations of Oghuz tribes under the Seljuk Turks settled into the region. These Turkic-speaking newcomers merged with the original population so that over time, the Persian language was supplanted by a Turkic dialect that eventually developed into a distinct Azeri–Turkish language.

Under Shah Ismail (1501–1524), first among the Safavid line of rule, the Shiasect of Islam be-

came the "official and compulsory religion of the state" (Cleveland, p. 58), and remains the majority faith in Azerbaijan in the early twenty-first century. When the two hundred-year Safavid Dynasty ended in 1722, indigenous tribal chieftains filled the void. Their independent territories took the form of khanates (principalities). The tribal nature of these khanates brought political fragmentation and eventually facilitated conquest by Russia. Russia's interest in the region was primarily driven by the strategic value of the Caucasian isthmus. Russian military activities have been recorded as early as Peter the Great's abortive Persian expedition to secure a route to the Indian Ocean (1722). However, penetrations into Persian territory were more successful under Catherine II (1763–1796).

Russo-Iranian warfare continued into the nineteenth century, ending with the Treaty of Turkmanchai (February 10, 1828). As a result, Azerbaijan was split along the Araxes (Aras) River with the majority of the population remaining in Iran. This frontier across Iran was laid for strategic purposes, providing Russia with a military avenue of approach into Iran while outflanking rival Ottoman Turkey.

The Turkmanchai settlement also had far-reaching economic consequences. With Russia as the established hegemon, exploitation of Azerbaijan's substantial petroleum resources increased rapidly after 1859.

Over time, haphazard drilling and extraction led to a decline in oil production. By 1905 Azerbaijan ceased to be a major supplier to world energy markets. In 1918, with the great powers preoccupied by World War I and Russia in the throes of revolution, Azerbaijan proclaimed its independence on May 28, 1918. However, the independent Democratic Republic of Azerbaijan lasted only two years before Bolshevik forces invaded and overthrew the nascent government.

With its new status as a Soviet republic, Azerbaijan experienced the same transition as other parts of the Soviet Union that included an industrialization process focused on the needs of the state, collectivization of agriculture, political repression, and the Great Purges.

During World War II, Azerbaijan's strategic importance was again underscored when the Transcaucasian isthmus became an objective of Nazi Germany's offensive. Hitler hoped to cut Allied supply lines from their sources in the Persian Gulf.

Azerbaijan was also coveted as a valuable fuel source for the German military. This operation was thwarted by the battle of Stalingrad.

Azerbaijan was also the scene of an early Cold War confrontation. On March 4, 1946, Soviet Army brigades deployed into Azerbaijan. The United States perceived this provocation as the first step in a Soviet strategy to penetrate the Middle East. In the face of shrewd Iranian diplomacy backed by Western resolve, the Soviet forces withdrew, averting an international crisis.

The limitations of the Soviet command economy coupled with the Western strategy of containment contributed to political and economic stagnation, especially in the last decades of the Soviet regime. A rekindled nationalism ignited by an outbreak of ethnic violence occurred in 1988 when neighboring Armenia voiced its claim to the district of Karabakh. As violence escalated, a national emergency ensued and new political groups, such as the People's Front of Azerbaijan emerged to challenge the predominant Communist Party of Azerbaijan (CPAz) upon the dissolution of the USSR. On August 30, 1991, Azerbaijan, once again became an independent republic.

However, the early years of independence were marred by political instability, exacerbated by the ongoing Karabakh conflict. The hostilities contributed to the fall of several administrations in the fledgling government with a favorable solution to the conflict taking precedence over the achievement of key political and economic reforms. On October 3, 1993, Heidar Aliyev, a former Communist Party secretary, filled the power vacuum. Signing a tentative cease-fire agreement with Armenia over the Karabakh conflict allowed him to concentrate reform efforts in Azerbaijan's government and economy.

In the early twenty-first century, the Republic of Azerbaijan is a secular democracy with a government based on a separation of powers among its three branches. The executive power is vested with the president, who serves as head of state, bearing ultimate responsibilities for domestic and foreign matters. The president of the republic also serves as the commander in chief of the armed forces and is elected for a term of five years with the provision to serve a maximum of two consecutive terms. The legislative power is executed by the National Parliament (Milli Majlis), a unicameral body consisting of 125 members. The Parlia-

Azerbaijan, 1992 © MARYLAND CARTOGRAPHICS. REPRINTED WITH PERMISSION

ment holds two regular sessions—the spring session (February 10–May 31) and the fall session (September 30–December 30).

The judicial branch includes a Supreme Court, an economic court, and a constitutional court. The president, subject to approval by the parliament, nominates the judges in these three courts.

Azerbaijan's economy has been slow to emerge from its Soviet era structuring and decay. The *CIA World Fact Book* (2002) indicates that the agricultural sector employs the largest segment of the working population at 41 percent. Recognizing the significance of the petroleum industry in stimulating the economy, the Azerbaijani government has promoted investment from abroad to modernize its deteriorated energy sector. A main export pipeline

from the capital, Baku, to the Turkish port of Ceyhan will facilitate transport of oil to Western markets.

GREGORY TWYMAN

BABEL, ISAAC EMMANUYELOVICH

(1894–1940), regarded as one of the finest writers of fiction of the twentieth century.

Babel was born to a middle-class Jewish family in Odessa. Though nonobservant, he remained interested in Jewish culture—he translated Shalom Aleichem—and Jewish identity became a central interest of his art. Odessa was a vibrant port city, without a heritage of serfdom, more cosmopolitan than was the custom in Russia. Babel saw it as fertile ground for a southern school of Russian literature—sunny, muscular, centered on sensuous experience, free of the metaphysical yearnings and somber seriousness of the Russian tradition. French literature attracted him. He had a Flaubertian dedication to his craft; Maupassant’s skill in depicting the surface of things was a model. Babel’s playful side is most evident in his first cycle of short stories, *The Odessa Tales* (1921–1924). But an age of war, revolution, and terror demanded sterner stuff. Babel responded with his tragic *Red Cavalry* (1923–1925) and his study of the complexities of growing up Jewish, *The Story of My Dovecot* (1925–1931).

Babel was sympathetic to the aims of the Russian Revolution and served it in several capacities, including a stint as translator for the secret police (Cheka). For a long time he enjoyed the benefits and celebrity of a Soviet writer, though he eventually became a victim of Soviet terror. In 1920 he signed on as correspondent with the First Cavalry Army, a leading unit of the Reds in the civil war, at the time engaged in battle with Poland. His summer with this largely Cossack army gave him the material for his great book of revolution and war.

Success brought pressures to conform. With the ascendancy of Josef Stalin and the mobilization of society commencing with the First Five-Year Plan (1928–1932), writers could no longer feel safe pursuing their private visions as long as they avoided criticism of communist rule. They were now expected to produce work useful to the state. Babel made abortive attempts to conform but mostly sought the safety of seclusion and silence. As he said at the First Congress of Soviet Writers: “I have so much respect for [the reader] that I am struck dumb.” Nevertheless, he produced some outstanding work in the thirties, including “Guy de Maupassant” (1932) and “Di Grasso” (1937)—two parables of the life of the artist. He was arrested as a spy on May 15, 1939. Like millions of

innocent men and women, he fell victim to Soviet tyranny; he was shot on January 27 of the following year.

Babel wrote many fine stories and several interesting plays. Among his best work are his cycles. *The Odessa Tales* treat a crew of Damon Runyon-like gangsters and their cohorts of the Jewish ghetto of Moldavanka. They are not clothed in realism's ordinary dress but in the colorful garments of romance or the crazy garb of comedy. The stories are designed to charm, not move the reader, though their rejection of Jewish resignation to suffering is a common theme for Babel. The four tales comprising *The Story of My Dovecot* have greater depth. They tell of the breaking away of a Jewish boy from his highly pressured home—the father is compensating for the indignities wrought by anti-Semitism. *Red Cavalry* is a masterpiece. It weaves its complex ways between irreconcilable antagonisms—of constancy and change, action and culture, revolution and tradition—to offer an image of the tragic character of human life.

MILTON EHRE

used by the peasants to oppose state policy, and sometimes led to the temporary dissolution of newly formed collective farms. Their frequent use in the winter of 1929–1930 likely played a role in the party leadership's decision to slow the pace of collectivization in March 1930.

The gendered aspect of *babi bunty* was very important. The Bolsheviks considered peasant women to be an especially backward social group, one incapable of organized political action. They believed that *babi bunty* were incited by kulaks and other anti-Soviet elements, who were manipulating the women. Because of this belief, the Bolsheviks responded with propaganda instead of force. Peasant men who resisted Soviet policies during this period, on the other hand, were treated with great violence. The peasants' recognition that participants in *babi bunty* would be treated leniently made these actions a favored form of resistance to collectivization. Although *babi bunty* only slowed the collectivization process, their frequency likely played a role in the state's decision eventually to grant peasants some concessions, such as the right for each family to retain one cow.

BRIAN KASSOF

BABI BUNTY

A set of actions used by peasant women to resist collectivization between 1928 and 1932.

It derives from the words *baba*, a pejorative term describing uncultured peasant women, and *bunt*, a spontaneous demonstration or protest. *Babi bunty* encompassed a range of actions intended to disrupt collectivization, including interrupting village meetings, harassing Soviet officials, and reclaiming seed, livestock, or household goods that previously had been seized by the collective farm. These actions were among the more effective means

BABI YAR MASSACRE *See* WORLD WAR II.

BAIKAL-AMUR MAGISTRAL RAILWAY

Traversing eastern Siberia and the Russian Far East, the Baikal-Amur Magistral Railway (BAM) runs north of and parallel to the Trans-Siberian Railway. The "BAM Zone," the term used to describe the territory crossed by the railroad, includes regions within the watersheds of Lake Baikal and the Amur River, the latter of which forms a major part of the Russian border with China. An area crisscrossed by

a number of formidable rivers, the BAM Zone presented seismic, climatic, and epidemiological challenges to builders from the 1930s until the early 1990s.

The Soviet government conceived of BAM as a second railway link (the Trans-Siberian Railway being the first) to the Pacific Ocean that would improve transportation and communications between the European and Asian sectors of the USSR. The initial BAM project was built from Komsomolsk on the Amur River to Sovetskaya (now known as Imperatorskaya) Gavan on the Pacific coast by labor camp and prisoner-of-war labor from 1932 to 1941 and again from 1945 to 1953, when it was abandoned in March of that year after Stalin's death.

In March 1974, Soviet General Secretary Leonid Brezhnev proclaimed that the construction of a new and much longer BAM project would fall to the Young Communist League, known as the Komsomol. In Brezhnev's mind, experience on what the state heralded as the "Path to the Future" would instill a sense of inclusion among the Soviet Union's younger generations. In addition, the USSR undertook the new BAM to bolster Soviet trade with the dynamic economies of East Asia and to secure an alternative route between the nation's European and Asian sectors in the event that the Trans-Siberian Railway was seized by China. At its height, BAM involved more than 500,000 Komsomol members who severely damaged the ecology of the BAM Zone while expending some 15 to 20 billion dollars in a highly wasteful and inefficient endeavor that reinforced the inadequacies of Soviet-style state socialism among BAM's young constructors.

In October 1984, a golden spike was hammered into place in a ceremony that marked the official completion of the "Project of the Century." In reality, however, only one-third of BAM's 2,305-mile-long track was fully operational by the early 1990s, although the railroad was declared complete in 1991. BAM remains one of the Russian Federation's least profitable railways.

CHRISTOPHER J. WARD

BAKATIN, VADIM VIKTOROVICH

(b. 1937), Russian and Soviet political and Communist Party figure, Soviet Minister of Internal Affairs, 1988–1990; last chairman of KGB, 1991; first chairman of Inter-Republic Security Service from 1991.

Vadim Bakatin was born in Kemerovo Oblast. Educated at the Novosibirsk Construction Engineering Institute, he worked as an engineer in construction in Kemerovo from the early 1960s until the early 1970s. He joined the Communist Party in 1964 and in the mid-1970s served as a local party official, rising to the position of Secretary of the Kemerovo Oblast Committee in 1977. Bakatin attended the High Party School and in 1985 joined the Inspectorate of the Central Committee of the Communist Party of the Soviet Union (CPSU). In 1986 he served on the Central Committee. After brief service as First Secretary of the Kemerovo Oblast Committee, Bakatin was appointed Minister of Internal Affairs in 1988, and he served in that post until 1990. In 1991 he was an unsuccessful candidate for the presidency of Russia, warning about the dangers of overly rapid reform. Campaigning in May 1991 he stated that "Making capitalism out of socialism is like making eggs out of an omelette." Bakatin opposed the August 1991 coup attempt and then was appointed director of the KGB. He undertook the purge of the KGB senior leadership that had supported Vladimir Kryuchkov, the former director and coup plotter. With the collapse of Soviet power in the fall of 1991, Bakatin oversaw the breakup of the KGB and then briefly served as the first chairman of the Inter-Republic Security Service. In 1992 he published a personal memoir of his role in the break-up of the KGB under the title, *Izbavlenie ot KGB: Vremya - sobytiya - lyudi* (Deliverance from the KGB: The time, the events, the people). Later he went into business and became the director of the Baring Vostok Capital Partners, a direct investment company. He remained loyal to Mikhail Gorbachev and has spoken favorably of his efforts at reform.

JACOB W. KIPP

BAKHTIN, MIKHAIL MIKHAILOVICH

(1895–1975), considered to be Russia's greatest literary theoreticians, whose work has had an important influence, in Russia and abroad, on several other fields in the social sciences and humanities.

Born in Orel into a cultured bourgeois family, Bakhtin earned a degree in classics and philology. During the Civil War, he moved to Nevel, where he worked as a schoolteacher and participated in study circles, and later moved to Vitebsk. In 1924 Bakhtin and his wife moved back to Leningrad, but he found it difficult to obtain steady employment. He was arrested in 1929 and charged with participation in the underground Russian church, but managed nevertheless to live most of the 1930s and 1940s in productive obscurity, publishing regularly. He and his work were rediscovered during the 1950s, and over the years his writings have continued to influence the development of philology, linguistics, sociology, and social anthropology, to name just a few related disciplines.

Many of Bakhtin's contemporary systematizers of Russian thought sought to discover laws of society or history and to formulate models designed to explain everything. Bakhtin, however, sought to show that there could be no such comprehensive system. In this sense he set himself against the main currents of European social thought since the seventeenth century, and especially against the traditional Russian intelligentsia. Drawing upon literary sources, he tried to create pictures of self and society that contained, as an intrinsic element, what he called surprisingness. In his view, no matter how much one knows of a person, one does not know everything and cannot unfailingly predict the future (even in theory). Instead, he argued, there is always a surplus of humanness, and this is what makes each person unique. Like Fyodor Dostoyevsky,

Leo Tolstoy before 1880, and Anton Chekhov, Bakhtin belongs to the great anti-tradition of Russian thought that, unlike the dominant groups of the intelligentsia, denied that any system could explain, much less redeem, reality.

In his earliest work, Bakhtin developed various models of self and the other, and attempted to develop an approach to ethics. He believed that ethics could not be a matter of applying abstract rules to particular situations, but comes instead from careful observation and direct participation in ultimately unrepeatable circumstances. He argued that through a reliance on rules and ideology, rather than really engaging oneself with a given situation, one is using an alibi and, thus, abdicating responsibility. He countered this approach by saying that, in life, there is no alibi.

As an enemy of all comprehensive theories, Bakhtin opposed formalism and structuralism, although he learned a good deal from them. Basically, he accepted the usefulness of certain formal approaches and methods employed by these theoretical schools, but insisted that human purposefulness and intentionality lay behind these formal models. Unlike the formalists and structuralists, he developed a theory of language and the psyche that was based on the concrete utterance (what people actually say), and on open-ended dialogue. This latter is perhaps the most famous of the concepts he introduced.

Bakhtin developed a theory of polyphony, which he elaborated in his book on Dostoyevsky (1929). With this theory, he tries to show how an author deliberately creates without knowing what his or her characters will do next, and, in so doing, the author also creates a palpable image of true freedom. Bakhtin equated that freedom to that which is enjoyed by God, who did not foresee the outcome of the creatures made by God. In taking this stance, he argued against the determinists or predestinarians, for he believed that people are truly free and ever-surprising, if they are as the polyphonic novel represents them.

Bakhtin's work on the novel during the 1930s and 1940s is justly renowned. It is certainly his most durable contribution to semiotics. He identifies how novelistic language works; how the self and plot are tied to concepts of time and becoming; and how elements of a parodic (or carnivalistic) spirit have infused the novel's essence. This theory, as well as in theories of culture that he developed during the 1950s, emphasized dialogue,

temporal openness, surprisingness, the uniqueness selfhood, and fundamental principles of ethical responsibility.

GARY SAUL MORSON

BAKU

Baku is the capital of Azerbaijan and a major port on the Caspian Sea. The city was first taken by Peter I in the 1710s and held for two decades. The entire region of Caucasia was conquered by Russian forces in a war against Iran in the 1800s and confirmed by the 1813 Treaty of Gulistan.

Baku has meant two things to Russia: oil and strikes. The former has had the more enduring significance. The Baku oil fields were the object of Russian desire since the occupation by Peter I. Significant output began only with drilling in the 1870s. The oil rush of the last third of the nineteenth century brought thousands of Russian peasants to the Baku region to work in the oil fields. By the imperial census of 1897, the Russians were nearly as numerous as the native Azerbaijani Turks (approximately 37,400 to 40,000). By the 1903 city census, the Russians outnumbered them (57,000 to 44,000). Other national groups came to Baku. Armenians were a small but economically powerful minority with long-established communities, mostly involved in trade. Iranian Azerbaijanis crossed the border in large numbers. They were

part of the same ethnic and religious group, speaking the same language as did the local residents. There were also communities of Georgians, Jews, Germans, and peoples from the Caucasus Mountains. Europeans arrived as investors, engineers, and skilled technicians. By 1900, Baku had a telephone system, European-style buildings, and an active City Council (Duma). It had a relatively high crime rate and a reputation akin to that of the Wild West in North America.

In the dangerous conditions of the oil fields, a labor movement emerged around the turn of the century. The Russian Social Democrats regarded Baku's activity as an alarm bell for the strike movement across the southern part of the empire. Baku provided a training ground for such future luminaries as Grigory Ordzhonikidze and Josef Stalin. For a time under Menshevik leadership, the Baku Committee of the party permitted the formation of a special party only for the Muslim workers, the Hummet. Class solidarity usually broke down along national lines, however, and the violence occasionally led to arson in the oil fields. In 1918 a Bolshevik-led government, known as the Baku Commune, ran the city briefly before the city fell to the invading Turkish army. Baku was the capital of the independent Republic of Azerbaijan (1918–1920) and, from April 1920 to 1991, of the Soviet Republic of Azerbaijan.

Although Baku's oil was largely depleted by the 1920s, the city was a target of Nazi advances in World War II. The Soviet Gosplan invested very little in the oil industry in Baku after the war and left its infrastructure to languish.

In the post-Soviet period, offshore drilling has taken the place of the old wells as a prize for foreign investors. Russia has tried, again, to maintain access to the oil and has fought proposals by Azerbaijan and foreign oil companies that seek to route the oil around Russian pipelines and Black Sea ports.

AUDREY ALTSTADT

BAKUNIN, MIKHAIL ALEXANDROVICH

(1814–1876), world-famous revolutionary and one of the founders of Russian anarchism and revolutionary populism.

Although born into a nobleman's family, Mikhail Alexandrovich Bakunin was hostile toward the tsarist system and the traditional socioeconomic and political order. An extreme materialist, he was bitterly antireligious and saw organized religion as oppressing people.

Despite his revolutionary passion, Bakunin, as a contemporary Western philosophical encyclopedia puts it, "was learned, intelligent, and philosophically reflective." By contrast, a Soviet-period philosophical dictionary describes Bakunin as a "revolutionary-adventurer [who] blindly believed in the socialist instincts of the masses and in the inexhaustibility of their spontaneous revolutionary feeling, especially as found among the peasantry and *lumpen*-proletariat."

The "reign of freedom," Bakunin insisted, could come for the masses and for everyone only after the liquidation of the status quo of traditional bourgeois society and the state. Bakunin soon fell out with the Marxists, with whom he had originally been tenuously allied in the First International in Geneva. He denounced the Marxist teaching of the necessity of a dictatorship of the proletariat in order to usher in the new order of socialism. He also disagreed with those Russian revolutionists who advocated terrorism and various forms of postrevolutionary authoritarianism and dictatorship, such as the Russian Jacobins. "Every act of official authority," Bakunin once wrote, "necessarily awakens within the masses a rebellious feeling, a legitimate counterreaction."

In a letter to the 1860s revolutionary terrorist Sergei Geradievich Nechayev, Bakunin once wrote: "You said that all men should follow your revolutionary catechism, that the abandonment of self and renunciation of personal needs and desires, all feelings, all attachments and links should become a normal state of affairs, the everyday condition of all humanity. Out of that cruel renunciation and extreme fanaticism you now wish to make this a general principle applicable to the whole community. You want crazy things, impossible things, the total negation of nature, man, and society!" Here Bakunin seemed to be renouncing his own, earlier brief leanings toward authoritarianism before adopting his anarchist philosophy.

For Bakunin, government of any kind, like religion, is oppressive. The church, he said, is a "heavenly tavern in which people try to forget about their daily grind." In order for people to gain freedom, religion and the state must be swept away along with all forms of "power over the people." Their place will be taken by a "free federation" of agricultural and industrial cooperative associations in which science reigns.

Bakunin spent much of his life abroad. He emigrated from Russia in 1840 to live in central and western Europe. There he formed close ties with other famous Russian émigrés, such as Alexander Herzen and Nikolai Ogarev.

Bakunin's relations with the First International and Karl Marx were stormy. Resenting Marx's high-handedness and authoritarian political ideology, Bakunin was finally expelled from the communist world organization in 1870. Soon after this, his *The State and Anarchy* was published in several languages. In this work, in quasi-Hegelian terms, he describes the historical process by which mankind evolves from "bestiality" to freedom.

ALBERT L. WEEKS

BALAKLAVA, BATTLE OF

On October 25, 1854, Prince A. S. Menshikov, commander of Russian ground forces in Crimea, launched an attack on the British supply base at Balaklava to divert an allied attack on Sevastopol. The battlefield overlooked the Crimean Uplands, which dropped steeply onto the Plain of Balaklava. The plain was divided into two valleys by the Causeway Heights, occupied by a series of Turkish-held redoubts.

The British cavalry was camped at the foot of the escarpment. The Russians, led by Prince R. R. Liprandi, captured four redoubts at dawn on October 25. Although the British Commander, Lord Raglan, had a commanding view, he was short of infantry. Russian hussars advancing toward Balaklava were driven off by his only infantry regiment. Another large Russian cavalry force was driven off by the British Heavy Brigade, leaving the battle stalled. When the Russians began to remove captured guns from the redoubts, Raglan, still lacking infantry reinforcements, ordered the cavalry to stop them.

In error, the 661-strong Light Brigade under Lord Cardigan advanced down the valley toward the main Russian batteries. British troopers came under fire from fifty-four cannons to the front and on both flanks. Reaching the guns at a charge, the brigade drove off the Russian cavalry before retreating slowly back to their starting line, having suffered grievous losses: 118 killed, 127 wounded, and 45 taken prisoner. This astonishing display of cool courage demoralized the Russians. Total battle casualties included 540 Russians killed and wounded; 360 British, 38 French, and 260 Turks. It was little more than a skirmish in the much larger war.

BALALAIKA

The balalaika is one of a family of Eurasian musical instruments with long necks, few strings, and a playing technique based on rapid strumming with the index finger. First mentioned in written records in 1688 in Moscow, the balalaika existed in various forms with triangular and oval bodies, differing numbers of strings, and movable tied-on string frets, and was mainly used for playing dance tunes.

The traditional balalaika's popularity may have peaked in the last decades of the eighteenth century, when foreign travelers reported seeing one in every home, although as numerous references in the works of Leo Tolstoy, Nikolai Gogol, Fyodor Dostoyevsky, and others attest, it remained in widespread if diminishing use during the nineteenth century. Most closely associated with the Russians, the instrument, likely a borrowing from the Tatars, was used to a lesser extent by Ukrainians, Gypsies, Belarussians, and other ethnic groups.

The modern balalaika originated from the work of Vasily Andreyev (1861–1918), who in the 1880s created a standardized, three-string chromatic triangular-bodied instrument with fixed metal frets and other innovations. Andreyev went on to develop the concept of the balalaika orchestra consisting of instruments of various sizes, for which he later reconstructed the long-forgotten *domra*, a favorite instrument of the *skomorokhi*, or minstrels.

The modern balalaika is a hybrid phenomenon incorporating elements of folk, popular, and art or classical music and is widely taught from music school through conservatory. In addition to its use in traditional-instrument orchestras and ensembles, the balalaika's repertoire includes pieces with piano and other chamber works, a number of concertos with symphony orchestra, and occasional appearances in opera. A vanishing contemporary village folk tradition, while possibly preserving some pre-Andreyev elements, utilizes mass-produced balalaikas played with a pick. Throughout much of its history the instrument has been used as a symbol of Russian traditional culture.

SERGE ROGOSIN

BALKAN WARS

Following the Bosnian crisis of 1908 to 1909 and the formal annexation of Bosnia-Herzegovina by Austria-Hungary, Russia abandoned its policy of reaching a *modus vivendi* with Vienna on the Balkans. Weakened by the Russo-Japanese War of 1904 to 1905 and the Revolution of 1905, it now sought a

Residents of Gumurdjina, Macedonia, drive away invading Bulgarians, c. 1913. © MARY EVANS PICTURE LIBRARY

defensive alliance with Serbia and Bulgaria as a way to regain influence in the region. Although the diplomatic discussions that ensued were not intended to further the already fractious nature of Balkan rivalries, events soon ran counter to Russia's intentions.

The Young Turk Revolution of 1908 had sought to revitalize the Ottoman Empire but instead hastened its dismemberment. In 1911 the Italian annexation of Tripoli laid bare the weakness of the Turks, and the remaining Ottoman holdings in Europe suddenly became inviting targets for the states in the region. With Russian encouragement, Serbia and Bulgaria joined in a pact in March 1912, the genesis of a new Balkan League. Two months later Albania revolted and called upon Europe for support. That same month, May 1912, Bulgaria and Greece entered into an alliance, and in October, Montenegro joined the partnership.

What Russian foreign minister Sergei Sazonov saw as an alliance to counter Austro-Hungarian in-

fluence in the Balkans was now a league bent upon war. The March pact between Serbia and Bulgaria had already presaged the conflict by calling for the partition of Macedonia. Reports of impending war in the Balkans during the summer and fall of 1912, and also of a belief that Russia would come to the aid of its Slavic brethren, led Sazonov to inform Sofia and Belgrade that theirs was a defensive alliance. Nonetheless, by autumn public sentiment in southeastern Europe left the Balkan allies little choice.

On October 8, 1912, Montenegro attacked Turkey. On October 17 Serbia and Bulgaria joined the conflict, followed two days later by Greece. The Balkan armies quickly defeated the Turks. Bulgarian forces reached the outskirts of Istanbul, and in May 1913 the Treaty of London brought the First Balkan War to a close. The peace did not last long, however, as the creation of a new Albanian state and quarrels among the victors over the spoils in Macedonia led to embitterment, especially on the part of Sofia, which felt cheated out of its Macedonian claims.

On the night of June 29–30, 1913, one month following the peace treaty, Bulgarian troops moved into the north-central part of Macedonia. The other members of the coalition, joined by Romania and, ironically, the Turks, joined in the counterattack. Bulgaria was quickly defeated and, by the Treaty of Bucharest, August 10, 1913, was forced to cede most of what it had gained in Macedonia during the First Balkan War. In addition, the Ottoman Empire regained much of eastern Thrace, which it had lost only months earlier. Romania's share of the spoils was the southern Dobrudja.

Serbia was the principal victor in the Balkan Wars, gaining the lion's share of Macedonia as well as Kosovo. Bulgaria was the loser. In many respects, Russia lost as well because the continuing instability in the Balkans undermined its need for peace in the region, a situation clearly demonstrated by the events of the summer of 1914.

BALKARS

The Balkars are a small ethnic group in the northwest Caucasus. They are one of the titular nationalities of the autonomous Karbardino-Balkar Republic in the Russian Federation. In the 1989 Soviet Census, they numbered 85,126. Of that number, 93 percent considered Balkar to be their native language, while 78 percent considered themselves fluent in Russian as a second language. This means that nearly all adults spoke Russian to some extent.

The Balkar language is essentially identical to the Karachay language, spoken in the Karachay-Cherkess Republic. This split is an example of the way in which some languages were fractured into smaller groups for the sake of creating smaller ethnic identities. The Karachay-Balkar language itself is a member of the Ponto-Caspian group of western Turkic languages. Other languages closely related are Kumyk in Dagestan, Karaim in Lithuania, and the Judeo-Crimean Tatar language of Uzbekistan.

Following the general pattern of alphabet politics in the Soviet Union, Balkar was written with an Arabic script until 1924, from 1924 to 1937 with a Latin alphabet, and finally from 1937 to the present in a modified Cyrillic. A modest number of books were published in Balkar during the Soviet period. From 1984 to 1985, for example, fifty-eight titles were published. This is a reasonable number in the Soviet context for the size of their group and for sharing an ethnic jurisdiction. This number is higher than some of the Dagestani peoples who had larger populations, but no jurisdiction of their own.

The Balkar people, as Turks, find themselves surrounded by Circassians and their close neighbors in the northwest Caucasus. They are linguistically a remnant of Turkish groups who migrated along the Eurasian steppe. Historically, in addition to the disruptions of the nineteenth-century Russian conquest of the Caucasus, the Balkars were one of the peoples who suffered deportation at the end of World War II for their alleged collaboration with the Nazis. They were allowed to return in the

1950s, but only after experiencing a significant diminution of their population. The alienation of exile has been compounded by the ongoing difficulty of returning to territory that had, in the meantime, been occupied by outsiders. Post-Soviet ethnic conflict has followed along these contours.

PAUL CREGO

BALLET

The origins of the Russian ballet, like those of most other Western art forms, can be traced to eighteenth-century St. Petersburg, where Empress Anna Ivanovna established the first dancing school in Russia in 1738. This school, whose descendant is the present-day Academy of Russian Ballet, was headed by a series of European dancing masters, the first of whom was Jean-Baptiste Landé.

By the 1740s, Empress Elizabeth employed three balletmasters. The continued presence of ballet in Russia was assured by Catherine II, who established a Directorate of Imperial Theaters in 1766, saw to the construction of St. Petersburg's Bolshoi Theater in 1783, and incorporated Landé's school into the Imperial Theater School she founded in 1779.

The tenure of French balletmaster Charles-Louis Didelot (1767–1837) in St. Petersburg (1801–1831) marked the first flowering of the national ballet. The syllabus of the imperial school began to assume its present-day form under Didelot, and his use of stage machinery anticipated the exploitation of stage effects to create atmosphere and build audiences for the ballet across Europe in the first half of the nineteenth century. After Didelot's departure, Jules Perrot led the Petersburg ballet from 1848 to 1859. Arthur Saint-Léon succeeded Perrot and choreographed in St. Petersburg until 1869.

Dancers from the Kirov Ballet in St. Petersburg perform on stage in the 1990s. © BOB KRIST/CORBIS

Russian ballet began to assume its familiar form during the decades of Marius Petipa's (1818–1910) work in the Imperial Theaters. Petipa came to Petersburg as a dancer in 1847, and became balletmaster in 1862. The ballets Petipa choreographed in Russia functioned as a choreographic response to nineteenth-century grand opera; they featured as many as five acts with numerous scene changes. If Perrot is identified primarily with the development of narrative in Russian ballet, and Saint-Léon could be accused of overemphasizing the ballet's *divertissement* at the expense of the story line, Petipa combined the two trends to make a dance spectacle with plots as complex as their choreography. The ballets Petipa staged in St. Petersburg still serve as cornerstones of the classical ballet repertory: *Sleeping Beauty* (1890), *Swan Lake* (1895) (with Lev Ivanov), *Raymonda* (1898), *Le Corsaire* (1869), *Don Quixote* (1869), and *La Bayadère* (1877).

The distinctive features of nineteenth-century dance represent developments of the Russian school of dancing under Petipa's leadership. The new focus on the female dancer was the result of recent developments in point technique, which allowed the ballerina not only to rise up on the tips of her toes, but to remain posed there, and eventually to dance on them. Petipa's choreography emphasizes two nearly opposite facets of the new technique that these technical advances afforded: first, the long supported adagio, in which the woman is supported and turned on point by her partner; second, the brilliant allegro variations (solos) Petipa created for his ballerinas, to exploit the steel toes of this new breed of female dancer.

The work of two ballet reformers characterize the late- and post-Petipa era. Alexander Gorsky became the chief choreographer of Moscow's Bolshoi Theater in 1899 and attempted to imbue the ballet with greater realism along the lines of the dramas of Konstantin Stanislavsky's Moscow Art Theater. Gorsky's ballets featured greater cohesion of design elements (sets and costumes) and an unprecedented attention to detail. In Petersburg, Michel Fokine fell under the spell of dancer Isadora Duncan and theater director Vsevolod Meyerhold. Influenced by the free dance of the former, and by the latter's experiments in stylized symbolist theater, Fokine pioneered a new type of ballet: typically a one-act work without the perceived expressive confines of nineteenth-century mime and standard ballet steps.

Fokine and his famed collaborators, Vaslav Nijinsky and Anna Pavlova, achieved their greatest fame in Europe as charter members of Sergei Diaghilev's *Ballets Russes*, which debuted in Paris in 1909. Fokine's ballets (*Les Sylphides*, *Petrushka*, *Spectre de la Rose*) were the sensations of the early Diaghilev season. The Diaghilev ballet not only announced the Russian ballet's arrival to the European avant-garde, but also the beginning of a rift that would widen during the Soviet period: the rise of a Russian émigré ballet community that included many important choreographers, dancers, composers, and visual artists, working outside Russia.

The 1917 revolution posed serious problems for the former Imperial Theaters, and not least to the ballet, which was widely perceived as the bauble of the nation's theater bureaucracy and former rulers. Nonetheless, the foment that surrounded attempts to revolutionize Russian theater in the years following the October Revolution had limited impact on the ballet. With most important Russian

choreographers, dancers, and pedagogues already working outside of Russia in the 1920s (Fokine, George Balanchine, Vaslav Nijinsky, Bronislava Nijinska, Anna Pavlova, and Tamara Karsavina, to name a few), experimentation in the young Soviet ballet was borne of necessity.

The October Revolution and the subsequent shift of power, both political and cultural, to Moscow, led to the emergence of Moscow's Bolshoi Ballet. The company that had long occupied a distinct second place to the Petersburg troupe now took center stage—a position it would hold until the breakup of the Soviet Union. The creative leadership of the company had traditionally been imported from Petersburg, but in the Soviet period, so would many of its star dancers (Marina Semyonova, Galina Ulanova).

A new genre of realistic ballets was born in the Soviet Union in the 1930s, and dominated Soviet dance theater well into the 1950s. The *drambalet*, shorthand for dramatic ballet, reconciled the ballet's tendency to abstraction (and resulting lack of ideological content) to the new need for easily understandable narrative. The creative impotence of Soviet ballet in the post-Stalin era reflected the general malaise of the so-called period of stagnation of the Brezhnev years. When Russian companies dramatically increased the pace of moneymaking Western tours in the 1980s, it became clear that the treasure-chest of Russian classic ballets had long ago been plundered, with little new choreography of interest to refill it. As the history of the two companies would suggest, the loss of Soviet power resulted in the speedy demotion of the Moscow troupe and the rise of a post-Soviet Petersburg ballet.

TIM SCHOLL

BALTIC FLEET

The Baltic Fleet, which controls the Kronstadt and Baltiysk naval bases, is headquartered in Kaliningrad Oblast (formerly called Königsberg), a region that once formed part of East Prussia. Today Kaliningrad is a Russian enclave completely cut off from the rest of Russia by Lithuania and Poland (now a NATO member). Thus, although the fleet is defended by a naval infantry brigade, its location is potentially the most vulnerable of the major Russian naval fleets. While the Baltiysk naval base is located on Kaliningrad's Baltic Sea coast to the west, the Kronstadt base is situated on Kotlin Island in the Gulf of Finland, about 29 kilometers (18 miles) northwest of St. Petersburg. The naval base occupies one half of the island, which is about 12 kilometers (7.5 miles) long and 2 kilometers (1.25 miles) wide. Mutinies at Kronstadt took place in 1825 and 1882 and played a part in the revolutions of 1905 and 1917. In March 1921, a revolt of the sailors, steadfastly loyal to the Bolsheviks during the revolution, precipitated Vladimir Lenin's New Economic Policy. Kronstadt sailors also played a major role in World War II in the defense of St. Petersburg (then Leningrad) against the Germans.

When the Soviet Union collapsed, the independence of Estonia, Latvia, and Lithuania deprived the new Russian state of key bases on the Baltic Sea. The 15,000-square-kilometer (5,800-square-mile) Kaliningrad Oblast between Poland and Lithuania remained as the fleet's only ice-free naval outlet to the Baltic Sea. One of the first steps taken in the late 1990s to reform the Baltic Fleet was to incorporate air defense units into the Baltic Fleet structure. A second step was to restructure ground and coastal troops on the Baltic Fleet units. As of 2000, these forces consisted of the Moscow-Minsk Proletarian Division, a Marine Brigade, Coastal Rocket Units, and a number of bases at which arms and equipment were kept. The Baltic Fleet did not include any strategic-missile submarines, but as of mid-1997 it included thirty-two major surface

combatants (three cruisers, three destroyers, and twenty-six frigates), more than 230 other surface vessels, roughly two hundred naval aircraft, nine tactical submarines, and a brigade of naval infantry.

As of mid-2000 the Baltic Fleet included about one hundred combat ships of various types, and the fleet's Sea Aviation Group units were equipped with a total of 112 aircraft. Operational forces as of 1996 included nine submarines, twenty-three principal surface combatants (three cruisers, two destroyers, and eighteen frigates), and approximately sixty-five smaller vessels. The Baltic Fleet included one brigade of naval infantry and two regiments of coastal defense artillery. The air arm of the Baltic Fleet included 195 combat aircraft organized into five regiments and a number of other fixed-wing aircraft and helicopters. Generally, armed forces comparable in size to the entire Polish army have been stationed in Kaliningrad Oblast.

In 1993 pressure for autonomy from the Russian Federation increased. Seventy-eight percent of the population (about 900,000) is Russian. Some claimed that, although Königsberg was awarded to the Soviet Union under the Potsdam Accord in 1945, the Russian Federation held no legal title to the enclave. Polish critics and others claimed that the garrison should be reduced to a level of reasonable sufficiency. Since Poland was admitted to NATO in 1999, however, Russian nationalists have argued that Kaliningrad is a vital outpost at a time when Russia is menaced by Poland or even Lithuania, if that country is also admitted to NATO.

BANKING SYSTEM, SOVIET

In the Soviet economy, the role of money was basically passive: Planning was primarily in physical quantities. Therefore, the banking system lacked most of the tasks it has in market economy.

Money circulation was strictly divided into two separate spheres. Households lived in a cash economy, facing mostly fixed-price markets for consumer goods and labor. Inside the state sector, enterprises could legally use only noncash, monetary transfers through a banking system closely controlled by the planners, for transactions with other enterprises. Wages were paid out by a bank representative, and retail outlets were tightly supervised.

The banking system basically consisted of a single state bank (Gosbank), which combined the roles of a central bank and a commercial bank. Such an arrangement is often called a monobank. Gosbank had no autonomy, but was basically a financial control agency under the Council of Ministers. As a central bank, Gosbank created narrow money (cash in circulation outside the state sector) by authorizing companies to pay wages in accordance with accepted wage bills. If government expenditure exceeded government revenue, and sufficient household savings were not available to cover the budget deficit, state sector wage bills still had to be paid, which would contribute to imbalance in the consumer goods markets. This was probably the case at least toward the end of the Soviet period, though the relation between the state budget, Gosbank, and money supply was among the best-kept secrets in the USSR. Gosbank also managed the currency reserves of the country.

As a commercial bank, Gosbank issued short-term credit to enterprises for working capital. Household savings were first kept by a formally separate Savings Bank, which was incorporated into the Gosbank in 1963. Household savings were an important source of finance for the state. Gosbank also controlled Stroibank, the bank for financing state investment, and Vneshekonombank, the bank for foreign trade. There were also several Soviet-owned banks abroad. In the perestroika period, the number of specialized formally independent banks increased, but no competition between them was allowed. The emergence of cooperative banks in 1988 and afterward had a key role in the informal privatization of the Soviet economy and the emergence of a market-based banking system.

The key role of the Soviet banking system was in controlling plan fulfillment. The financial plan was an essential component of enterprise planning. All legal inter-enterprise payments had to go through Gosbank, which only authorized payments that were supported by a relevant plan document. Thus the banking system was primarily a control agency. This also meant that money was not a binding constraint on enterprises: Any plan-based transactions were authorized by Gosbank. The banking system thus facilitated a soft budget constraint to enterprises: The availability of finance did not constrain production or investment.

PEKKA SUITELA

BANKING SYSTEM, TSARIST

From the time of Emancipation onward, Russian banks developed into the most important financial intermediaries of the empire. They performed the classic banking functions of collecting savings from the population and allocating loans to creditworthy borrowers. Initially Russian banks reflected the backwardness of the economy and society in many ways. The economy was still predominantly rural, and mining and manufacturing enterprises competed for resources with the government's needs for war finance and infrastructure and the nobility's hunger for loans. Commercial honesty was often unreliable, and therefore bankers had to be cautious in making loans to strangers, even for the short term.

Russian banks were more specialized than banks elsewhere. At the center was the State Bank (*Gosudarstvenny Bank*), established in 1860 to replace the more primitive State Commercial Bank (founded in 1817) and informal arrangements among merchants and industrialists. It stabilized

the ruble's foreign exchange value, issued paper currency, and accepted deposits from the treasury, whose tax sources were mostly seasonal. Because the government remained in deficit through the 1880s, in spite of the efforts of Finance Minister Mikhail von Reutern, the State Bank also accommodated the treasury with loans of cash. The State Bank helped further Russian interests in China and Persia. As time went on, it served as lender of last resort of the emerging private banks. When they experienced illiquidity as a result of unexpected withdrawals, the State Bank discounted their notes and securities so the private bankers could pay depositors. Such episodes were common during the recession of 1900–1902. Besides these central banking functions, the State Bank did some ordinary lending, discreetly favoring government projects such as railroad lines, ports, and grain elevators, as well as some private engineering, textile, and sugar ventures. For instance, the State Bank bought shares of the Baltic Ironworks on the premise that such firms, albeit private, had state significance.

The tsar's government also sponsored Savings Banks, which were frequently attached to post offices. These institutions expanded their urban branches during the 1860s and their rural outposts two decades later. They accepted interest-bearing accounts from small savers and invested in mortgages or government loans, notably for railroads.

Most Russian lending up to 1914 was backed by land mortgages, the most secure collateral at this time of rising land prices. Both the Peasants' Land Bank (founded 1882–1883) and the Nobility Bank (1885) made such loans to the rural classes by issuing bonds to the public with government guarantees of their interest payments. In addition to these banks, a large number of credit cooperatives made small loans to peasants and artisans.

Private commercial banks were the last to emerge in Russia. The founders of the main Moscow banks were textile manufacturers, while the directors of the St. Petersburg banks were often retired officials, financiers, or rich landowners. By 1875 there were thirty banks in St. Petersburg and Moscow; by 1914 the capital had 567 banks and Moscow had 153. In 1875 the five major banks had total assets of only 247 million rubles; by 1914 they would increase that figure nearly tenfold. Like all other Russian banks, private and joint-stock banks were subject to strict regulation by the Ministry of Finance, but after 1894 statutes were liberalized, and state funds were put at their disposal. Dealing at first with short-term commercial paper

for business working capital, they gradually began to lend for mortgages on urban land and industrial projects. They also offered checking accounts to business customers, thereby reducing transaction costs over this vast empire. With interregional deliveries to make over long distances in difficult conditions, manufacturers might have to wait months for payments from merchants, who themselves had widely separated customers. For all of them short-term credit was crucial, as cash payments were inconvenient.

Instead of the British-type commercial banks typical of Moscow, which continued to deal in short-term loans, St. Petersburg's banks increasingly resembled the universal bank model typical of Germany. They helped float securities for urban improvements, mines, and other private enterprises against bonds and other securities as collateral without government guarantees. They also opened accounts secured by preferred shares with first call on dividends for investors who formerly might have demanded only fixed-interest obligations for their portfolios. The largest of the joint-stock banks attracted foreign capital, particularly from France and Belgium, as well as from the State Bank. Some of the larger heavy industrial projects so financed were profitable, like the South Russian Dniepr Metallurgical Company, but many others were overpromoted. According to Olga Crisp's calculation, based on data from Pavel Vasilievich Ol', foreigners held 45 percent of the total capital of the ten largest joint-stock banks by 1916.

As in central Europe, each large bank had special client companies on whose managing boards the bankers sat. They facilitated discounting of the affiliates' bills and marketing of their common stock. For example, Alexander Putilov, chairman of the famous Russo-Asiatic Bank, was also head of the Putilov engineering company, the historically famous Lena Goldfields Company, the Nikolayev Shipbuilding Company, and the Moscow-Kazan railways, and director of at least three petroleum companies. About 80 percent of the Russo-Asiatic Bank's equity capital was French-owned. The Azov-Don Bank, based in St. Petersburg after 1903, was heavily involved in coal, sugar, cement, and steel enterprises. The International Bank, heavily involved in shipbuilding, was 40 percent German-owned. Occasionally these banks helped reorganize and recapitalize failing enterprises, thus extending their ownership control.

While demand for credit from private businessmen increased during the 1890s, the great ef-

florescence of tsarist banking came with the boom following the war and revolutions of 1904 to 1906. By 1913 there were more than one thousand private and joint-stock banks in the country, still mostly in the capitals, Warsaw, Odessa, and Baku. Securities held by the Russian public more than tripled between 1907 and World War I. Lending was increasingly for heavy industry and the highly profitable consumer goods industries, although the latter could often rely on retained profits. The role of the government thus declined as the main organ of capital accumulation to be replaced by the banks, as Alexander Gerschenkron has remarked.

As happened elsewhere, the Russian banks became somewhat more concentrated. In 1900 the six biggest commercial banks controlled 47 percent of deposits and other liabilities. By 1913 that share had risen to 55 percent. Marxists such as Vladimir Lenin believed concentration of finance capital, and these big capitalists' underwriting of the cartels, would bring on revolution. It seems highly doubtful that this would have happened in absence of war, however. In any case, all the tsarist banks were nationalized by the Bolsheviks in 1917.

MARTIN C. SPECHLER

BANYA

A Russian steam sauna or bathhouse, which served as the primary form of hygiene and was consid-

ered a source of great pleasure and a cure of maladies.

According to the seventeenth-century account of Adam Olearius, "in all towns and villages, they have many public and private baths, in which they [the Russians] may often be found." Because it was warm and had an abundant water supply, the banya also served as a place for childbearing. While the word *banya* is a Latin borrowing (from *banea*), the traditional Russian banya had Finno-Ugrian origins. The earliest written source to mention banya dates to the eleventh century and is made in connection to Novgorod. Archaeologists have also unearthed wooden bani (pl.) dating to the same period in the city. Masonry bani, built according to Byzantine traditions, were known in the southern Rus lands (in Pereyaslavl and Kiev) dating to the late eleventh century.

Medieval and modern accounts all agree about the practice of washing in the banya. After exposing the body to high-heat vapors, and consequently heavily perspired, people lashed their bodies with bundles of young tree branches (usually of birch) that had been soaked in boiling water, thus providing a massaging effect and anointing the skin with oils from the leaves. Following this, people often immersed themselves in cold water or snow and, thereafter, proceeded to wash with soap and water. Traditionally, bani in Russia were either private or public. Both types can still be found in Russia. Despite attempts by the Russian government (e.g., *Stoglav* of 1551, Elizabeth in 1743, and Catherine II in 1783) to separate women from men in the public bani, some city bani remained unisex as late as the early nineteenth century. The only separation of the sexes that occurred in these bani was in the dressing rooms.

ROMAN K. KOVALEV

BARANNIKOV, VIKTOR PAVLOVICH

(1940–1995), minister of internal affairs of the USSR; minister of internal affairs, minister of security.

Born in Primorsky Krai of the Soviet Far East, Barannikov joined the militia organs of the Ministry of Internal Affairs in 1961. A graduate of the Higher School of the Militia, he rose to prominence under President Boris Yeltsin and was appointed minister of Internal Affairs of the Russian Soviet Federated Socialist Republic in September 1990, a post he held until August 1991. In the aftermath of the unsuccessful August coup in 1991, he was appointed minister of Internal Affairs of the Soviet Union. After the end of the Soviet Union, Barannikov was appointed director-general of the Federal Security Agency of the Russian Republic in December 1991 and held that post briefly until he was appointed minister of security and head of the Federal Counter-Intelligence Service of the Russian Republic in January 1992. He held that post until July 1993, when he broke with Yeltsin over the emerging struggle between the president and the Russian parliament. In October 1993 he was arrested as one of the conspirators of the White House revolt against Yeltsin. Barannikov was freed from prison in 1994 by an act of the State Duma and died of a heart attack in 1995. Barannikov held the rank of General of the Army in the Ministry of Internal Affairs.

JACOB W. KIPP

BARONE, ENRICO

(1859–1924), Italian soldier, politician, and economist with strong mathematical training.

Enrico Barone was a contemporary and interlocutor of both Leon Walras and Vilfredo Pareto, best known for his careful formulation of the equilibrium system that would have to be solved by central planners in a socialist economy. Published in 1908 as "Il Ministro della Produzione nello Stato Collettivista" in the journal *Giornale delgi Economisti*, and reprinted in English in F. A. Hayek's edited volume, *Collectivist Economic Planning*, his formulation provided an analytic foundation for arguments supporting the feasibility of socialist calculation, socialist central planning, and ultimately "market socialism." In it he provided a Walrasian (general equilibrium) system of equations whose solutions would resolve the valuation and coordination quandary for socialist central planners—a system of economic rationality without markets for production inputs and capital. Socialist economists such as Oscar Lange, Fred Taylor, and Maurice Dobb, have taken this as a refutation of Ludwig von Mises's critique of the possibility of economic rationality under socialist planning. In particular, it is argued that his formulation shows how modern high-speed multiprocessor computing can be used to find optimal scarcity valuations and prices for all products and assets in an economy, thereby allowing rational formulation of an economic plan by social planners.

Barone also contributed to general equilibrium theory by showing Walras how to incorporate variable production techniques into his equilibrium system of equations (the Walrasian system). This contributed to the development of marginal productivity theory, a central part of neoclassical economic analysis. Finally, he made notable contribution to the economics of taxation in his three studies of public finance in 1912.

RICHARD E. ERICSON

BARSHCHINA

Labor dues; corvée.

Barshchina referred to unpaid labor dues (corvée) owed by a peasant to his lord, most commonly la-

bor on the land. It may have emerged in Russia in the Kievan period, but most Western scholars maintain it developed in the late fifteenth century, as similar labor forms emerged in most east European countries. Associated with direct production for markets by large, especially lay, estates, it first became important in the sixteenth and seventeenth centuries. It survived in somewhat modified form at least into the 1880s.

Barshchina varied according to location and time period. By the last third of the eighteenth century, it was increasingly associated with the rich black soils of the seven Central Agricultural provinces south of Moscow. Only 45 percent of the serfs were subject to labor service in the thirteen nonblack soil provinces, where soils were poor and the climate harsh, but the rate was 74 percent in the Central Agricultural Region. By the middle of the nineteenth century, labor dues were at their highest in Ukraine and New Russia, where 97 to 99.9 percent of the male serfs owed barshchina to produce grain for the European market.

In the nineteenth century, the typical obligation apparently slowly rose to three or four days per week in regions where the dues were heaviest, although during the harvest six-day weeks could be required. Viewed as an inefficient form of labor, landlords began to attempt to require specific labor tasks instead of days worked. Peasants considered it far more onerous than *obrok* (rents in kind or in money), because it put them directly under the control of the steward or landlord.

ELVIRA M. WILBUR

BARSOV, ALEXANDER ALEXANDROVICH

(1921–1991), Soviet economist.

Alexander Alexandrovich Barsov (b. Shparlinsky) served in World War II in frontline intelligence as a military interpreter and translator and was awarded a number of decorations. From 1965 to 1989 he was a senior researcher at the Institute of

Economics of the USSR Academy of Sciences. Author of a number of publications, he was best known for his 1969 book *Balans stoimostnykh obmenov mezhdru gorodom i derevnei* (The Balance of Payments between the Town and the Countryside), in which he argues against the assumption, widespread in the West, that the huge increase in investment in the USSR in the First Five-Year Plan had been financed by an increase in unequal exchange between town and countryside. The underlying statistical basis for his argument was the Soviet national accounts for the period from 1928 to 1930—a landmark in the history of national income accounting. These were then unpublished archival documents.

According to Barsov, there was unequal exchange between agriculture and industry during the First Five-Year Plan, but this unequal exchange did not increase. Hence the resources for the huge increase in investment in the First Five-Year Plan were not provided by an increase in the agricultural surplus. Barsov's work directed attention to the fall in urban real wages as a source of investment resources. In addition, it led to increased recognition of the interdependence of the agricultural and industrial sectors. It also led to a lively debate in the West about the economics of collectivization.

MICHAEL ELLMAN

BARYATINSKY, ALEXANDER IVANOVICH

(1815–1879), Viceroy of the Caucasus.

Prince Alexander Ivanovich Baryatinsky, a close friend of Tsar Alexander II (1855–1881) from childhood, was appointed Viceroy (*namestnik*) of the Caucasus in August 1856. This exalted office gave him military and political command of both the mountainous North Caucasus and the lands to the south bordering on Iran and the Ottoman Empire. A courageous veteran of Caucasian wars and former chief of staff to a previous viceroy, Prince Mikhail Vorontsov, Baryatinsky had grandiose ambitions for the Caucasus. He wrote to the tsar, "Russia had become for Asia what Western Europe had represented for so long in Russia—the source and bearer of the world's most advanced civilization. A model administration in the Caucasus would serve as a showcase of Russian colonial policy."

Baryatinsky saw himself as a pacifier (the war with the rebel Shamil still raged in the north) and a modernizer, continuing the civilizing mission of Vorontsov. He was a supporter of the tsar's program for peasant emancipation and negotiated skillfully with the Georgian nobility to convince them to arrange for the liberation of their serfs. But the program of reforms met resistance, not only from Georgian nobles, but from peasants as well, who wanted greater freedom, and Baryatinsky resorted to military repression.

During his years in office the Caucasian wars were brought to an end, and the relations between Georgian nobles and peasants were brought into line with Russian norms. He corresponded with the tsar on military and civilian matters and enjoyed close relations with his sovereign. His health suffered in the next few years, and he asked to be relieved of his post. In 1863 the Grand Duke Mikhail Nikolayevich became Viceroy. The legacy of the first three viceroys was peace and security in the Caucasus and the effective binding of the Georgian nobility to the Russian autocracy as loyal, privileged servants.

RONALD GRIGOR SUNY

BASHKORTOSTAN AND BASHKIRS

Bashkortostan is a constituent republic of the Russian Federation, located between the Middle Volga and the Ural mountains, with its capital at Ufa. The Bashkirs are the official indigenous nationality of the republic, although they made up only 21.9 percent of its population in 1989 (compared to 39.3 percent Russians and 28.4 percent Tatars). There were 1,449,157 Bashkirs in the former Soviet Union in 1989, with close to 60 percent (863,808) living in Bashkortostan proper and most of the remainder in neighboring provinces. The Bashkir language belongs to the Kipchak group of the Turkic language family. Despite some modest efforts around the turn of the twentieth century, Bashkir was developed as a literary language only after 1917. The Arabic script was used until Latinization in 1929, followed by adoption of the Cyrillic alphabet in 1939. Most Bashkirs are Sunni Muslims of the Hanafi legal school.

Throughout history the hills and plains of Bashkortostan have been closely linked to the great Eurasian steppe to the south. Successive settlement by Finns, Ugrians, Sarmatians, Alans, Magyars, and Turkic Bulgars had already created a complex situation before the arrival of the Turkic *badzhgard* and *burdzhan* nomadic unions of Pechenegs in the ninth century c.e. At this point these groups began to coalesce into a nomadic tribal confederation headed by the Turkic Bashkirs (*bashkort*). Later arrivals of Oguz and Kipchak Turks further Turkified the early Bashkir people.

By the sixteenth century, Bashkirs were dependent variously on the Kazan Khanate to the west, the Khanate of Siberia to the east, and the Nogai khans to the south. Constriction of migration routes had forced many Bashkirs to limit their nomadizing to summer months and to turn toward hunting, beekeeping, and in some places agriculture. In 1557 several Bashkir groups acknowledged Russian suzerainty, seeking protection from the Nogai khans. Subsequent years saw gradual expansion of Russian control over other Bashkir tribes, imposition of a tax (*yasak*) in fur, construction of Russian defensive lines to repel nomadic incursions, and infiltration of Bashkir lands by Russian peasants and other peoples fleeing serfdom and taxation. The years from the mid-seventeenth to mid-eighteenth centuries saw five major Bashkir revolts against Russian rule, usually directed against both peasant settlement and high Russian taxes. In addition, Bashkirs participated

with other discontented peoples of the region in Emelian Pugachev's great rebellion (1773–1775).

Like many native peoples in the Russian Empire, nomadic Bashkirs belonged to a specific estate category with particular privileges and responsibilities. Bashkirs were relatively privileged compared to other natives in the region, with lower tax rates and (theoretically) a guarantee to the land they had held when they joined the empire. In 1798 Russian authorities gave new content to Bashkir identity by establishing the Bashkir-Meshcheriak Host (later simply Bashkir Host), an irregular military force modeled on the Cossacks. Male Bashkirs were required to serve in units apportioned among twelve self-governing cantons. The Bashkir Host was abolished during the Great Reforms (1863), but it later served as a symbol of Bashkir independence. In the late nineteenth century, a vast increase in Russian settlement and occupation of Bashkir lands and expansion of mining and metallurgy concerns in the Urals rapidly and traumatically accelerated processes of Bashkir sedentarization. In the closing decades of the century the local Russian press debated whether the Bashkirs were dying out.

During the Russian Revolution, Bashkirs unexpectedly emerged as one of the most activist peoples in the empire. The expectation of many Tatars that Bashkirs would assimilate into the emerging Tatar nation, the Tatar and later Soviet plans for a large territorial republic that would integrate Bashkortostan with Tatarstan, and the increasingly violent confrontations between Bashkirs and Russian settlers encouraged Bashkir activism and separatism in 1917 and 1918. Ahmed Zeki Validov (known as Togan in his later Turkish exile) led a nationalist movement that sought to establish a Bashkir republic even while Red and White armies battled back and forth across the region and Bashkirs fought Russian settlers. The Bashkir republic was established by treaty between the Soviet government and Validov's group in 1919. In 1922 the republic was expanded to include most of the former Ufa province, bringing in the large numbers of Russians and Tatars that now outnumber the Bashkirs in their own republic.

Soviet rule brought many contradictions to Bashkortostan and the Bashkirs. Famine in 1921 and 1922, accompanied by banditry and rebellion, was barely overcome before the trauma of collectivization, crash industrialization, and the emergence of Josef Stalin's police state. Outright statements of nationalist sentiment were long taboo. Yet the Soviet government oversaw the de-

velopment of Bashkir written language, literature, historiography, and other cultural forms that solidified Bashkir identity and may have prevented its submergence in a larger Tatar or Turkic identity. Suspicion of some Tatars that the Bashkir nation is a recent and relatively artificial creation of the Soviet state rather than an old and authentic nation challenged the legitimacy of the Republic of Bashkortostan itself and often underlay post-Soviet debates between Bashkirs and Tatars over the treatment of Tatars in Bashkortostan.

DANIEL E. SCHAFER

BASIL I

(1371–1425), grand prince of Vladimir and Moscow (from 1389).

The eldest son and successor to grand prince Dmitry Ivanovich ("Donskoi"), Basil assumed the power as the obedient servant of Khan Tokhtamysh. In 1392, when the latter was engaged in the war with emir Timur and needed financial resources, Basil visited the Horde and bought patents for the principalities of Nizhny Novgorod, Murom, Gorodets, Tarusa, and Meshchera. Using his armed force and the khan's support, Basil I seized Nizhny Novgorod. But Suzdalian princes did not give up, and the struggle for Nizhny Novgorod was resumed in the 1410s.

In 1397 Basil attempted to annex the Dvina land (in the valley of the Northern Dvina River), a

province of Great Novgorod. In order to gain the support of the inhabitants, Basil gave a special charter to this land, but his rule there did not last long. In 1498 the Novgorodians recovered their province.

In the 1390s, Basil I entered into alliance with the mighty duke of Lithuania, Vytautas (in 1391 Basil married his daughter, Sophia). The Muscovite prince allowed his ally and father-in-law to conquer Vyazma (1403) and Smolensk (1404); only when Vytautas marched on Pskov (1406) did Basil I declare war on Lithuania. However, during this war (1406–1408) no decisive battles took place. Peaceful relations with Lithuania were restored (1408), and later in his testament (1423) Basil I entrusted his minor son and heir, Basil II, to the protection of Vytautas.

After the final defeat of Tokhtamysh by Timur (1395), Basil I broke relations with the Golden Horde and stopped paying tribute. In 1408 Moscow suffered a severe blow from emir Edigey, the ruler of the Horde, who besieged the capital for three weeks, and, having taken an indemnity of three thousand rubles, withdrew, ravaging the land and leading away thousands of captives. Basil I made no attempt to face the enemy: He retired to Kostroma and waited there for the invasion to pass.

One of consequences of Edigey's raid was that Suzdalian princes recovered Nizhny Novgorod (c. 1410), and only in 1414 did Basil I manage to recapture this city.

It is characteristic of Basil's relations with the Tartars that he did not acknowledge the power of Edigey, who was not a Chingizid; but as soon as the legitimate khan Jelal-ad-din (son of Tokhtamysh) seized power in the Horde (1412), Basil immediately paid him a visit and resumed the payment of tribute.

For the lack of evidence, the last decade of Basil's I rule remains obscure. For the same reason, it is hardly possible to assess his personality. As Robert Crummey aptly remarked, Basil I "is a shadowy figure. The sources on his long reign give us little sense of his character, except to hint that he was a cautious and indecisive man" (p. 62).

MIKHAIL M. KROM

BASIL II

(1415–1462), grand prince of Moscow from 1425 to 1462 (with intervals).

Basil II, third son and successor to Basil I (two elder sons of the latter died in childhood), ascended the Muscovite throne at the age of ten. Until he attained his majority, three persons shared the real power: his mother Sophia (the daughter of Vitautas, the grand prince of Lithuania), metropolitan Photius, and a boyar, Ivan Vsevolozhsky. In 1425 the intercession of Photius stopped the outbreak of dynastic war: When Basil's uncle Yuri Dmitrievich, the prince of Galich and Zvenigorod, laid claim to the grand-princely throne, the metropolitan made Yuri reconcile with his nephew. Basil II also owed much to Vsevolozhsky. When in 1431 the dispute over the Muscovite throne was transferred to the Golden Horde, this boyar managed to obtain the judgment of the khan favorable to Basil II.

Basil's first actions on his own were far less successful. In spring 1433 he could not stop his uncle Yuri's march on Moscow, and in the battle at Klazma River on April 25 Basil was completely defeated. Yuri seized grand-princely power, and only his unexpected death on June 5, 1434, allowed Basil II to supersede this strong rival.

Having grown up in the atmosphere of dynastic war, Basil II became suspicious and ruthless: He ordered the blinding of Vsevolozhsky, suspecting him of contacts with prince Yuri's party. In 1436, having captured his rebellious cousin Basil the Cross-Eyed, Basil II also had him blinded. Later, the same means of political elimination was applied to Basil II.

The mid-1440s were the most troublesome years in Basil's life. On July 7, 1445, in the battle at Kamenka River (near Suzdal), the Kazan Tatars defeated his army; he was wounded and captured. Having gotten this news, his cousin Dmitry Shemyaka proclaimed himself the grand prince of Moscow. Only in October 1445 was Basil II released (on condition of paying a huge ransom) and returned to Moscow. Shemyaka fled but was prompt

enough to organize a broad opposition to the grand prince, spreading rumors about the commitments undertaken by Basil II in captivity. As a result of a conspiracy, in February 1446 Shemyaka occupied Moscow, and Basil II was captured in the Trinity monastery (where he went for prayers) and blinded. Though exiled to Uglich (later to Vologda), the blind prince in February 1447 managed to return to Moscow as a victor.

The causes of Basil's II final victory are open to debate. Alexander Zimin, the author of the most detailed account of his reign (1991), maintained that Basil was "a nobody" and that the victory of the blind prince was entirely due to his loyal servicemen. This social explanation seems highly probable, but the personal role of Basil II in the events should not be neglected. Though he lacked the abilities of a military leader, his courage, persistence, and devotion to his cause must be taken into account.

MIKHAIL M. KROM

BASIL III

(1479–1533), grand prince of Moscow, sovereign of all Russia (since 1505), the eldest son of Ivan III and Sophia Paleologue.

Basil III continued the policy of his father in unifying Russian lands; under his rule, the last semi-autonomous polities, such as Pskov (1510), Ryazan (c. 1521), and Novgorod Seversk (1522), lost the remainder of their independence and were incorporated into the Russian state. Basil's reprisals against Pskov resemble that of Ivan III against Great Novgorod: The Pskov veche (assembly) was abolished, three hundred families of townspeople were evicted from the city, and their homes were occupied by servicemen and merchants from Muscovy. The only important difference is that, unlike his father, Basil III

did not need to resort to military force: The Pskov inhabitants bemoaned their fate but made no attempt to resist.

An Austrian diplomat, Sigismund von Herberstein, who visited Moscow twice (in 1517 and 1526) and left a detailed and reliable account of Muscovite affairs in the reign of Basil III, noted that “in the sway which he holds over his people, [the grand prince] surpasses the monarchs of the whole world . . .” (Herberstein, 1851, 1:30). Herberstein was especially impressed by the tight control that Basil III had over the nobility, including his own brothers. This system of permanent surveillance included special oaths of loyalty, encouraging denunciations, and inflicting political disgrace upon anyone suspected of disloyalty. Those who dared criticize the grand prince’s policy underwent harsh punishment, like Ivan Bersen-Beklemishev, who was executed in 1525.

Several factors contributed to Basil III’s ability to control the aristocratic elite. First, the composition of the elite changed dramatically during his reign due to numerous princely families from annexed Lithuanian lands who now entered Muscovite service. The growing tensions between the newcomers and hereditary Muscovite servitors precluded any possibility of united aristocratic opposition to the power of the grand prince. Second, Basil III relied on an increasing corps of state secretaries (*dyaki* and *podyachie*), and trusted upstarts, like the majordomo of Tver, Ivan Yurevich Shigona Podzhogin. Thus, the growth of bureaucracy and autocracy went hand in hand.

In foreign policy as well as in domestic affairs, Basil III followed in the footsteps of his father, Ivan III, though with less success. In the west, he tried to tear away from the Grand Duchy of Lithuania its frontier territories inhabited by east Slavic Orthodox populations. In two wars with Lithuania (1507–1508, 1512–1522) his only though important prize was the city of Smolensk (1514).

In the east, Basil’s major concern was to pacify or subjugate the bellicose khanate of Kazan on the Middle Volga, a splinter of the Golden Horde. In 1519 he managed to put on Kazan throne his vassal, Shah-Ali. But this achievement of Muscovite diplomacy irritated another Moslem polity, the Crimean khanate. In 1521 the khan of Crimea, Mohammed-Girey, invaded Russia. His unexpected raid threw the whole country into a panic. No defensive measures were taken, and the khan without hindrance reached the outskirts of Moscow.

Then the Tartars withdrew, looting towns and villages on their way and carrying off thousands of captives.

Basil III married twice. His first wife, Solomonia, descended from the Muscovite boyar family of Saburov. When, after twenty years of conjugal life, no child was born, the grand prince forced Solomonia to take the veil and confined her to a convent (1525). In spite of opposition among the clergy and courtiers caused by this divorce, Basil III married again (1526); his new choice was Elena, the daughter of a Lithuanian émigré to Muscovy, prince Basil Glinsky. Four years later this marriage produced a long-awaited heir, son Ivan (future tsar Ivan IV the Terrible).

Basil III contributed significantly to building autocracy in Russia, but his unexpected death in December 1533 revealed the implicit weakness of this system: With a three-year-old heir on the throne, the country inevitably entered a period of political crisis.

BASMACHIS

The Basmachi were anti-Soviet rebels in Turkestan between the Russian Revolution and the early 1930s. The term, derived from the Turkic word *basmak* (to attack or raid), connotes banditry and was originally a pejorative term used by Russians. Soviet scholarship characterized the Basmachi as mere brigands and counterrevolutionaries in the pay of British imperialists. Émigré memoirs and many scholarly works characterize the movement as a struggle for national liberation against a colonial power, although the extent to which participants overcame localism and factionalism is unclear. The Russian war in Afghanistan from 1979 to

1989 and subsequent events have renewed interest in the Basmachi rebels and given their struggle broader resonance.

The military humiliation and massacres that accompanied Russian conquest and occupation of Central Asia from the 1860s to the 1880s were still living memories in the region as Russia moved toward the revolution. Tsarist policies enforced cotton cultivation at the expense of food crops, permitted Russians to settle on nomadic grazing land, and encouraged the building of railroads and textile mills. All this contributed to dissatisfaction and fueled several major revolts, most notably at Andijan in 1898.

Some scholars date the Basmachi revolt to 1916, when rebellion broke out in Tashkent and elsewhere in Central Asia in opposition to the first nonvoluntary conscription of Central Asians into the Russian army. Despite the imposition of martial law, summary executions, and arming of Russian settlers, this revolt still simmered when the Bolshevik revolution broke out in 1917. Russian settlers completely dominated the Tashkent Soviet and other local soviets, so that Soviet power was largely identified as Russian power and fueled continued intercommunal violence. The Soviet destruction of the Muslim-led autonomous government in Kokand (February 1918) and of the Emirate of Bukhara (September 1920) also encouraged recruitment for the Basmachi movement. At their height in 1920 through 1922, some sources claim that the rebels had twenty to thirty thousand men under arms, controlled the Ferghana valley and most of Tajikistan, and enjoyed widespread popularity among the indigenous non-Russian population.

The Basmachi rebellion was never a unified movement. Lack of organization, conflicting agendas, and internal divisions complicated efforts to coordinate military operations against Soviet forces. Some secular intellectuals joined the movement (Jadid reformers, Young Bukharans, populist socialists), though Mustafa Chokay and other prominent figures kept their distance. Islamic ulama and traditional rulers such as the Emir of Bukhara played significant roles. However, the backbone of the movement seems to have been local village and clan leaders and in many cases actual brigands who terrorized Russians and Muslims alike. The most famous participant was the mercurial Enver Pasha, former Ottoman minister of war, who joined the Basmachis in October 1921 and tried to direct it toward a pan-Turkic and pan-

Islamic vision before his death in a skirmish with Russian forces in July 1922.

The Soviet campaign against the Basmachi was largely successful by 1924, although some groups remained active in mountainous border regions near Afghanistan until the early 1930s. The Soviets benefited from a better armed and more disciplined military force; they also learned to deploy Tatar and Central Asian soldiers so the army would not appear solely Russian. Concessions encouraged defections from Basmachi ranks: The Soviets co-opted Central Asians into state institutions, reopened closed markets, promised land reform, granted food and tax relief, relaxed anti-Islamic measures, and generally promoted the return of stability and prosperity under the New Economic Policy reforms. Eventually, Russian cultivation of good relations with Afghanistan denied the Basmachis a cross-border refuge.

DANIEL E. SCHAFER

BATU

(c. 1206-1255), Mongol prince, the second son of Genghis Khan's eldest son Jochi.

Batu commanded the army that conquered the northeastern Rus principalities (1237-1238) and

subsequently that conquered the southern Rus principalities and invaded eastern Europe (1240–1241). Batu was the first khan to rule in the Khanate of Qipchaq (Ulus of Jochi; desht-i-Qipchaq), which he is credited with having founded. His father, Jochi, to whom the lands had been granted “as far as Mongol hooves trod” in the western part of the Mongol Empire (i.e., west of the Irtysh River), died before ruling there. Batu is also credited with building the city of Sarai (Old Sarai, Sarai-Batu) on the Akhtuba channel of the lower Volga River.

Batu was present at the *quriltai* (assembly) that chose Ögödei as qaghan (grand khan) in 1229 and most likely also at the *quriltai* of 1234, which planned the campaign against the Qipchaqs, as well as the *quriltai* of 1237, which planned the campaign against the Rus principalities and eastern Europe. Disagreements over Batu’s leadership developed during the campaigns in Rus and eastern Europe (1237–1241). Güyüg, a son of Ögödei, and Büri, a grandson of Chaghadai, challenged Batu’s authority, possibly on the basis of the questionable legitimacy of Batu’s father. When Qaghan Ögödei died in 1241, Batu opposed and apparently managed to delay the elevation of Güyüg to become qaghan until 1246. Claiming ill health, Batu refused to attend any *quriltais*. His presence at the *quriltai* was needed to give legitimacy to Ögödei’s successor because, after Chaghadai’s death in 1242, Batu was considered a senior-ranking member of the Chinghissids. When Güyüg was declared qaghan by a *quriltai* despite Batu’s absence (although Batu was ostensibly represented by his five brothers), he mounted a campaign against Batu but died on the way to Batu’s ulus in 1248.

This time Batu succeeded in getting a *quriltai* of 1251 to select his own candidate, Möngke, who was the son of Tolui (Chinghis Khan’s youngest son). Batu had apparently reached agreement with Sorghaqtani, the widow of Tolui, thus forming an alliance of Jochids and Toluids against the Ögödeids. Möngke and Batu then launched a joint attack on the Ögödeids and their supporters, the Chaghadaids. As a result of Batu’s role in elevating Möngke to qaghan and in helping him to consolidate his hold on that position, Batu had a relatively free hand in ruling his own khanate.

A sky worshiper, Batu followed a policy of religious toleration, but seems not to have been pleased by the conversion of his brother Berke to Islam, for, according to William of Rubruck, Batu

changed Berke’s yurt to the eastern part of the Khanate beyond the Volga River to reduce his contacts with Muslims, which he thought harmful. The Mongol and Turkic sources refer to Batu as *sain*, which means “good” or “wise,” and in the Rus sources before c. 1448, Batu is depicted as a powerful tsar to whom the Rus princes had to pay obeisance. After 1448, the Russian sources increasingly depict Batu as a cruel plunderer and enslaver of the Rus land.

DONALD OSTROWSKI

BAUER, YEVGENY FRANTSEVICH

(1865–1917), film director.

Yevgeny Bauer was the most original and important film director in prerevolutionary Russian cinema. In addition to directing, he frequently wrote, designed, and shot his films.

Bauer was born into an artistic family and graduated from the Moscow College of Painting, Sculpture, and Architecture. He worked as a theater artist and set designer before making films. Soon after going to work for the Khanzhonkov studio, he became their best-paid director with an alleged salary of 40,000 rubles. His life came to an early end in 1917: While preparing for an acting

role near Yalta, he broke his leg in a fall, caught pneumonia, and died.

Bauer's films rank among the best early cinema melodramas, comedies, and psychological thrillers. His greatest films complicate melodramatic conventions to tell stories about people caught amid the cultural changes and political instability of the late-tsarist era. Bauer also specialized in the neo-Gothic psychological drama, exploring the dreams and obsessions of urban middle-class characters in an increasingly commercialized world. Typical Bauer characters search futilely for love and meaning in a chaotic world, in which adults lack authority and moral leadership and young people are willful, egocentric, and morally adrift.

Bauer delighted in inventing new ways for the film camera to tell stories. His experiments with camera movement, lighting, and set design created complex three-dimensional spaces. He employed furniture, architecture, fashionable clothing, special effects, and layers of gauzy curtains to animate the social world in which his characters lived and to penetrate the psychological worlds that contained their private visions. He used lighting particularly effectively to enhance the beauty and talent of his actors and the drama of a scene.

His films include *Twilight of a Woman's Soul* (1913), *Child of the Big City* (1914), *Daydreams* (1915), *The Dying Swan* (1916), *A Life for a Life* (1916), and *To Happiness* (1917).

JOAN NEUBERGER

BAZAROV, VLADIMIR ALEXANDROVICH

(1874–1939), Marxist philosopher and economist.

Born Vladimir Alexandrovich Rudnev in Tula and educated at Moscow University, Vladimir Bazarov (his chosen pseudonym) joined the Bolsheviks in 1904 and produced a Russian translation of *Capital* between 1907 and 1909. Before 1917 his most important works were philosophical, and his key associate was Alexander Bogdanov; after 1917 his most important contributions were economic, and his key associate was Vladimir Groman. Attacked by Vladimir Lenin in 1908 as an idealist and for criticizing Georgy Plekhanov's materialism, in fact Bazarov was of positivist philosophical persuasion. After 1900, Bogdanov and Bazarov had attempted to defend their interpretation of Marx against the Legal Marxist revisionists. Instead of the neo-Kantian notion that the individual person must always be treated as an end, never solely as a means, Bazarov championed the collectivist ideal and the proletarian-class perspective, the fusion of human souls as the supreme outcome of communism. Even so Lenin labeled Bazarov a "Machist."

After the introduction of the New Economic Policy (NEP) in 1921, Bazarov became a leading Gosplan (State Planning Commission) commentator on the restoration process occurring in the Soviet economy and on the principles of drafting perspective plans as the first specification of the general plan. He advocated a combination of two methods of planning, one teleological (focusing on ultimate goals), the other genetic (focusing on existing trends), the former predominating in industry, the latter in agriculture. Bazarov analyzed cyclical and secular economic development using models imported from natural science, namely wave mechanics and chemical equilibrium, and he warned of a tendency toward relative underproduction in Soviet-type economies. He also proposed criteria for optimal plans and methods for estimating the structure of consumer demand. Bazarov was arrested in 1930 and bracketed with Menshevik wreckers.

VINCENT BARNETT

BEARD TAX

The beard tax is the best known of a series of measures enacted by Tsar Peter I to transform and regulate the appearance of his subjects. As early as 1698 the tsar ordered many of his prominent courtiers to shave their beards, and in 1699 he began to mandate the wearing of European fashions at court functions. In subsequent years a series of regulations ordered various groups to adopt German (i.e., European) dress. In 1705 decrees were issued prohibiting the buying, selling, and wearing of Russian dress by courtiers, state servitors, and townspeople. In the same year the wearing of beards, which was favored by Orthodox doctrine, was prohibited and the beard tax was instituted. With the exception of the Orthodox clergy, anyone who wanted to wear a beard was ordered to pay a special tax and obtain a token (*znak*) from government officials. Although no extensive studies have examined the implementation of the beard tax and related decrees, the fact that they had to be repeated upon subsequent occasions would indicate that compliance was far from universal. Old Believers (Orthodox Church members who rejected reforms in ritual and practice) were disproportionately affected by the beard tax and they alone were ordered by law to wear old-style Russian dress (to separate them from the mainstream of society). The beard tax was never a major component of state revenue, and by the reign of Catherine II even the regulations on Old Believers began to be relaxed.

BRIAN BOECK

BEDNYAKI

A traditional Russian term denoting a poor peasant household, one without enough land or capital to support itself without hiring out family members to work on neighbors' fields.

During the Black Repartition, which occurred during the revolutionary events of 1917 and 1918, Russian peasants seized land owned by noble and absentee landlords and the more substantial peasants, some of whom had consolidated holdings during the Stolypin reforms of 1906–1914. Thus the number of peasant holdings increased markedly, and the size of the average plot declined. Many villages returned to the scattered strips and primitive tools characteristic of tsarist times. Use of the wooden plow, sickle, or scythe were common among the poorer peasants. These subsistence agriculturists typically had one cow or draft animal, along with a small wooden house and naturally had little or nothing to sell in the market. Many poor peasants had been proletarian *otkhodniki* (migrants) or soldiers before and during the war, but the economic collapse forced them to return to their ancestral villages. The village community (*obshchina* or *mir*) resumed its authority over the timing of agricultural tasks and occasional repartition. Hence the Bolshevik Revolution constituted a social and economic retrogression in the countryside.

Considering their economic plight, the *bednyaki*, along with the landless *batraki*, were expected to be rural allies of the proletariat. According to Bolshevik thinking in the period of War Communism and the New Economic Policy, these lower classes would support the government's policy and would eventually be absorbed into collective or communal farms. Those middle peasants (*serednyaki*) with slightly more land and productive capital were expected to tolerate Bolshevik policy only, while the so-called kulaks would oppose it. In reality the various peasant strata lacked any strong class lines or reliable political orientation.

BELARUS AND BELARUSIANS

Bounded by Poland, Lithuania, Latvia, Russia, and Ukraine, Belarus is an independent country of about the size of Kansas. In 2000 its population was about 10.5 million. Over the course of its

Belarus, 1992. © MARYLAND CARTOGRAPHICS. REPRINTED WITH PERMISSION

history, this territory has been of part of Kievan Rus, the Grand Principality of Lithuania, Poland-Lithuania, the Russian Empire, interwar Poland (western Belarus only), and the Soviet Union.

The origin of the name Belarus is obscure. Its territory, encompassing much of the drainage systems of the Pripyat River and upper reaches of the Nieman, Western Dvina, and Dnieper Rivers, comprises the medieval Polotsk and Turov principalities, with the addition of the western lands of Smolensk and Chernigov around Mogilev and Gomel, but minus the territory south of Pinsk.

Some specialists consider the forests and swamps of southwestern Belarus part of the original homeland of Slavic speakers and possibly the Indo-Europeans. Baltic speakers inhabited much of Belarus before Slavic speakers migrated there after 500 C.E. Around 900 the Slavic Dregovich and Radmichi inhabited the eastern half of Belarus,

while Baltic Iatvingians dwelled in the northwest. Specialists' opinions differ as to when and where a distinct Belarusian language and people formed and the degree to which they represent a Baltic and eastern Slavic mixture.

Around 980 Polotsk was under a separate Varangian prince, the non-Riurikid Rogvolod, whom Vladimir of Novgorod slew en route to seizing Kiev. Vladimir's son Iziaslav, by Rogvolod's daughter Ragneda, founded there the first lasting Rus territorial subdynasty, and the latter's son and grandson, Briachislav and Vseslav Briachislavich (d. 1101), built up Polotsk. Vseslav's granddaughter St. Evfrosynia founded a noted convent there.

In the 1100s Polotsk split into subprincipalities and by 1200 Volhynia controlled the Brest region, while Germans were eliminating Polotsk's traditional loose overlordship over the tribes of modern Latvia. In the early 1200s the Smolensk princes spearheaded commercial agreements with the Baltic Germans and Gotland Swedes, which included Vitebsk and Polotsk.

By the mid-1200s, Lithuanian princes—some Orthodox Christians, some pagans controlled—Polotsk, Novogrudok, and nearby towns. With the pagan Lithuanian absorption of all the former Polotsk and Turov lands in the 1300s, the surviving local Rus princes transformed into territorial aristocrats. Rus institutions spread into ethnic Lithuania, and Rus became the domestic chancery language of the ethnically mixed realm. For about half of the fourteenth century, a separate Western Rus metropolitanate was located in Novogrudok. Minsk grew in importance at this time near the divide between the Nieman and Dnieper watersheds. The Orthodox Lithuanian prince Andrei of Polotsk (d. 1399) fought at Kulikovo against Mamai in 1380.

The 1385 Polish-Lithuanian dynastic Union of Krevo (in western Belarus) privileged nobles who converted to Catholicism. After a civil war in the 1430s, the local Orthodox Rus nobility obtained these same, Polish-inspired rights, but Orthodox prelates never acquired the same political privileges as their Catholic counterparts. Starting with Brest in 1390, several Rus towns obtained a form of Neumarkt-Magdeburg, the most prevalent form of medieval autonomous city law to spread into east-central Europe. After the misfired Church Union of Florence of 1439, Moscow's authority split with the metropolitanate of Kiev, which retained the dioceses in Belarus.

With the dynastic union, some Rus acquired a genuine Western education, and Rus writers created a set of Lithuanian chronicles with a legendary foundation of the leading families and the realm. Jewish culture flourished, and some holy scripture and other Jewish books were translated directly from Hebrew into the local Rus dialect. In 1517 Frantishek Skoryna of Polotsk initiated systematic Kirillic and Slavic printing with his Gospels.

During the 1500s, with growing estate agriculture, a form of serfdom binding peasants to the land with about two days of labor dues per week became the dominant peasant status, but the Rus-language First Lithuanian Statute of 1529 was one of the most advanced law codes in Europe at that time. Moscow's occupation of Polotsk in 1563 led to the stronger Polish-Lithuanian Union of Lublin in 1569, whereby Lithuania transferred its Ukrainian lands to Poland, but retained the Belarusian territories. The brilliant, Orthodox-turned-Catholic Leo Sapieha (Leu Sapega) compiled the Rus-language Third Lithuanian Statute in 1588, which remained in use for more than two centuries. He also organized the renowned state archive or *Metrika*.

Under the impact of the Protestant Reformation, the Lithuanian Radvilas (Radzivil) family turned their central Belarusian fortress town of Nesvizh into a center of Calvinist learning and printing, but with the arrival of the Counter Reformation, Nesvizh became a Roman Catholic stronghold. Jesuits founded schools there and in six other Belarusian towns and helped cause the polonization of the local Rus nobility.

In 1596 the Polish crown, but not the Sejm (parliament), tried to force the Church Union of Brest on the Orthodox in 1596, creating at first an Eastern Rite Uniate hierarchy without many faithful, and leaving most of the faithful without a hierarchy. Over the course of time, however, the Uniate Church grew and a Catholic-influenced Uniate Basilian Order of monks took over the great monasteries in Belarus. In 1623 angry Vitebsk Orthodox murdered their fanatic Uniate bishop Iosafat Kunchvich, who had confiscated their churches and monasteries, and the crown responded with mass executions. In 1634 the Orthodox Church regained its legality but not much property. Some talented Orthodox clerics, such as Simeon Polotsky (1629–1680), made splendid careers in Moscow. A 1697 decree banned the use of Rus in official state documents. By the late eighteenth century, the Uniate Church was far stronger than the Orthodox in

Belarus and in the western regions many commoners had become Roman Catholic.

Belarusians constituted perhaps one-eighth of the insurgents in the mid-seventeenth century who rebelled against the serfdom and Catholic-Uniate privileges in Poland-Lithuania, but then suffered heavily from the Muscovite invasions in 1654–1655 and 1659. Ethnic Belarus urban life declined, and Jews, despite some heavy losses in the uprisings, became more prominent in many towns. Brest, however, lost its regional cultural preeminence among the Litvak Jews to Vilnius in Lithuania.

The Belarus lands suffered again during the Great Northern War, especially during the period from 1706 to 1708, due to the Swedish-Russian fighting there. Later in the eighteenth century the economy recovered, stimulated by domestic and international markets and led by enlightened estate management and manufactures.

Polish-language serf theaters appeared in 1745, and Poland's educational reforms of 1773 established an ascending network, with divisional schools in Brest, Grodno, and Novogrudok, and a university in Vilnius. Several Belarusians were active in the Polish Enlightenment.

The three-stage annexation of Belarus by Russia during the partitions of Poland (1772, 1793, 1795) had profound effects. The emperors respected Polish culture and educational and religious institutions only until the Polish uprising of 1830–1831. Subsequently, cooperative Belarusians played a major role in weakening Catholicism, suppressing the Uniate Church, restoring Orthodoxy and Russianizing education, as well as publishing historical documents and doing normal administrative work.

Though not a main center of heavy industry, Belarus shared in the Russian Empire's social and economic development in the nineteenth century and had many small enterprises.

Belarusian national consciousness developed relatively late. Polish and Polish-language intellectuals promoted the idea of a separate, non-Russian, Belarusian (or White Ruthenian) folk. After Belarusians did not support Poles in the 1863–1864 uprising, interested Russians became more sympathetic to the notion of Belarusians as a distinct provincial group and started to collect local folklore. Genuine Belarusian-language literature started only in the 1880s. Circles of Belarusian students and intellectuals in St. Petersburg, Moscow, Dorpat, and other university cities sprung up in the

1890s. Only after the Revolution of 1905 was publication in Belarusian legalized. Hramada, the socialist and largest Belarusian political organization, could not compete with the more developed Russian, Polish, and Jewish parties or elect a delegate to any of the four Dumas.

The German advances and defeat in World War I and the Russian Revolution and Civil War stimulated a dozen competing projects for reorganizing Belarus, including a restoration of a federated prepartition Lithuania and/or Poland. The revived Poland and Communist Russia divided Belarus in 1921, the eastern portion becoming the Belarusian Soviet Socialist Republic (BSSR) of the USSR in 1923–1924. In western Belarus, Polish authorities favored polonization, suppressing a variety of national and autonomist strivings. The BSSR authorities, including Russians there, at first promoted belarusianization of domestic life, and national, cultural, and educational institutions grew apace, including a university and academy of sciences in the capital Minsk. However, the rhythms of interwar Soviet development—New Economic Policy, collectivization, five-year plans, bloody purges, and reorientation to a Russian-language—dominated all-union patriotism—affected the BSSR.

The Soviet-German Pact of 1939 and World War II brought a quick unification of an expanded BSSR, a harsh Nazi occupation and requisition of labor, the extermination of most Belarusian Jews, widespread partisan activity, and the total death of maybe a million inhabitants—about one eighth of the population. Allied diplomacy resulted in the BSSR (and the Ukrainian Soviet Socialist Republic) acquiring a separate seat in the United Nations General Assembly in 1945.

The BSSR also followed the rhythm of postwar Soviet developments, becoming heavily industrialized with its own specialty tractors and heavy-duty trucks, as well as a variety of other basic goods. The country achieved virtual universal literacy, but the Russian language and culture predominated in the cities and in higher education. Due to prevailing winds, Belarus suffered heavily from the Chernobyl explosion in 1986.

The BSSR played a secondary role in reform and national movements leading to the end of the USSR and an independent Belarus. Its first leader, Stanislav Shushkevich tried to balance between Russia and the West, but lost the 1994 presidential election to the Alexander Lukashenko, who proved adept in using referendum tactics and police measures to establish an authoritarian regime with a neo-Soviet orienta-

tion, and perpetuate his power. Dependence on Russian energy resources and markets have cemented close ties, but plans for a state union with Russia have faltered over Russian demands that Belarus liberalize its economy and Lukashenko's insistence that Belarus be an equal partner.

DAVID M. GOLDFRANK

BELINSKY, VISSARION GRIGORIEVICH

(1811–1848), Russian literary critic whose framework of aesthetic judgment influenced Russian and Soviet critical standards for almost two centuries; he established a symbiotic relationship between the writer and the critic whose creative interaction he considered a tool of societal self-exploration.

Belinsky's father was a navy physician, his mother a sailor's daughter, making the future critic a *raznochinets* (person of mixed class background). He was born in the fortress of Sveaborg (today Suomenlinna, Finland) and spent his childhood in the town of Chembar (Penza region), where his father worked as a district doctor. Belinsky enrolled at Moscow University in 1829 but was expelled in 1832 due to frail health and a reputation as a troublemaker. Often on the verge of poverty and dependent on the support of devoted friends, Belinsky became a critic for Nikolai Ivanovich Nadezhdin's journals, *Telescope* and *Molva*, in 1834. His extensive debut, *Literaturnye mechtaniya: Elegiya v proze* (Literary Daydreams: An Elegy in Prose), consisted of ten chapters. At this stage, Belinsky's understanding of literature featured a lofty idealism inspired by Friedrich Schiller, as well as the notion of popular spirit (*narodnost*), which signified the necessity of the "idea of the people" in any work of art. This concept was adopted from the German

Volkstuemlichkeit that was developed by Johann Gottfried Herder and Friedrich Wilhelm Schelling.

Belinsky's participation, since 1833, in Nikolai Vladimirovich Stankevich's Moscow Hegelian circle, as well as his close friendship with Mikhail Alexandrovich Bakunin, had by 1837 caused him to make a radical move toward an unconditional acceptance of all reality as reasonable. However, Belinsky's habitual tendency toward extremes turned his interpretation of Georg Wilhelm Friedrich Hegel's dialectic rationalism into a passive acceptance of everything that exists, even serfdom and the tsarist system. Such fatalism became evident in Belinsky's surveys and reviews for Andrei Alexandrovich Kraevsky's journal *Otechestvennye zapiski* (Notes of the fatherland), the criticism department of which he headed since 1839. Subsequently, in the early 1840s, a more balanced synthesis of utopian aspirations and realistic norms emerged in Belinsky's views, as evidenced by his contributions for Nikolai Alexeyevich Nekrasov's and Ivan Ivanovich Panaev's *Sovremennik* (Contemporary), a journal that had hired him in 1846.

Belinsky met all leading Russian authors of his day, from Alexander Sergeyevich Pushkin and Mikhail Yurievich Lermontov to Ivan Andreyevich Krylov and Ivan Sergeyevich Turgenev, befriending and deeply influencing many of them. In 1846, he coined the critical term *Natural School*, thereby providing a group of writers with direction and a platform for self-identification. Even those who did not share his strong liberal persuasions were in awe of his personal integrity, honesty, and selflessness. Belinsky's passionate, uncompromising nature caused clashes that gave rise to major intellectual debates. For example, in his famous letter to Nikolai Vasilievich Gogol, written on July 15, 1847, the critic took this once so admired writer to task for his mysticism and conservatism; the letter then circulated widely, in hundreds of illegal copies.

In his last years, Belinsky attempted to create a theory of literary genres and general philosophical definitions of the essence and function of art. After his early death from tuberculosis, his name became synonymous with dogmatism and anti-aesthetic utilitarianism. Yet this reputation is largely undeserved; for it resulted from the critic's canonization by liberal and Marxist ideologues. Still, from his earliest works Belinsky did betray a certain disposition toward simplification and systematization at any cost, often reducing complex entities to binary concepts (e.g., the classic opposition of form versus content). Indeed, Belinsky de-

voted little time to matters of literary language, rarely engaging in detailed textual analysis. However, his theories and their evolution, too, were simplified, both by his Soviet epigones and their Western antagonists.

Belinsky has undoubtedly shaped many views of Russian literature that remain prevalent, including a canon of authors and masterpieces. For example, it was he who defended Lermontov's 1840 novel, *Geroi nashego vremeni* (Hero of Our Time), as a daringly innovative work and who recognized Fyodor Dostoyevsky's supreme talent. (At the same time, he ranked Walter Scott and George Sand higher than Pushkin). Belinsky, the first major professional Russian literary critic, stood at the cradle of Russia's literary-centric culture, with its supreme social and ethical demands. His ascetic persona and quest for martyrdom became archetypal for the Russian intelligentsia's sense of mission. Lastly, Belinsky defined the ideal image of the Russian writer as secular prophet, whose duty is to respond to the people's aspirations and point them toward a better future.

PETER ROLLBERG

BELOVEZH ACCORDS

This treaty, also known as the Minsk Agreement, brought about the end of the Soviet Union. It was concluded on December 8, 1991, by President Boris Yeltsin of Russia, President Leonid Kravchuk of Ukraine, and Chairman of the Supreme Soviet of Belarus Stanislav Shushkevich, who met secretly in a resort in Belovezhaska Pushcha, just outside of Brest, Belarus. According to most reports, the three leaders had no common consensus on the future of the Soviet Union prior to the meeting, but, once

they assembled, they decided to shelve plans to preserve some sort of reformed Soviet state, as preferred by Soviet President Mikhail Gorbachev, and instead pressed for its dissolution. In the days that followed, Gorbachev would try in vain to preserve the USSR, but there was little mass or elite support for its continued existence, at least in these three republics.

The treaty noted that “the USSR has ceased to exist as a subject of international law and a geopolitical reality” and stated that the activities of bodies of the former USSR would be henceforth discontinued. Its drafters asserted the authority to do this by noting that Russia, Ukraine, and Belarus were the three surviving original founders of the Soviet state in 1922. In its stead, these three republics agreed to form a new organization, the Commonwealth of Independent States (CIS), which was designed to foster a variety of forms of economic, political, social, and military cooperation. Specifically, the accords guaranteed equal rights and freedoms to all residing in those states, provided for the protection of ethnic and linguistic minorities, recognized each state’s borders, emphasized the need for arms control, preserved a united military command and common military-strategic space, and pledged cooperation on the Chernobyl disaster. Later that December, eight more former Soviet republics would join the CIS, and by December 25, 1991, the Soviet flag was at last removed from the top of the Kremlin.

No participant has produced a definitive and detailed account of the meeting in Belovezhskaya Pushcha, and the accords remain the subject of some controversy, particularly in Russia. At the time of its signing, the agreement was widely celebrated, with only five deputies in the Russian legislature voting against its ratification, and Ukraine adding twelve reservations to its ratification, directed toward weakening any sort of new union or commonwealth. However, over the course of time, many, especially in Russia and Belarus, have disputed the right of the three leaders to conclude this treaty and have lamented the lack of open debate and popular input into its conclusion. In March 1996, the Russian Duma voted overwhelmingly to annul it, and this action led many to fear possible Russian attempts to reestablish the Soviet Union or some other form of authority over other republics. Moreover, in the 1990s the accord began to lose popularity among the Russian population, which, public opinion polls repeatedly revealed, began to regret the breakup of the Soviet Union.

PAUL J. KUBICEK

BELY, ANDREI

(1880–1934), symbolist poet, novelist, essayist.

Andrei Bely was born Boris Nikolayevich Bugayev on October 26, 1880, in Moscow. His father, Nikolai Bugayev, was a professor of mathematics at Moscow University and a renowned scholar; his mother, Alexandra, was dedicated to music, poetry, and theater. This dichotomy was to influence and torment Boris throughout his life: He would resist both parents’ influences while continually seeking syntheses of disparate subjects.

At age fifteen, Boris met the intellectually gifted Soloviev family. Vladimir Soloviev was a philosopher, poet, theologian, and historian whose concept of the “Eternal Feminine” in the form of “Sophia, the Divine Wisdom” became central to Symbolist thought. Vladimir’s younger brother Mikhail took Boris under his wing, encouraging him as a writer and introducing him to Vladimir Soloviev’s metaphysical system.

From 1899 to 1906 Boris studied science, then philosophy at Moscow University. However, his absorption in his writing and independent research interfered with his formal studies. Restless and erratic, he took interest in all subjects and confined himself to none. His idiosyncratic writing style derives in part from his passionate, undisciplined approach to knowledge, a quality that would later

be deemed decadent by socialist critics, including Leon Trotsky.

Mikhail Soloviev applauded Boris's early literary endeavors and suggested the pseudonym Andrei Bely ("Andrew the White"). Bely's four *Symphonies* (1902–1908) combine poetry, music, and prose. Bely's first poetry collection, *Gold in Azure* (*Zoloto v lazuri*, 1904), uses rhythms of folk poetry and metrical innovations. Like Alexander Blok and other Symbolists, Bely saw himself as a herald of a new era. The poems of *Gold in Azure* are rapturous in mood and rich in magical, mythical imagery. Bely's next poetry collections move into murkier territory: *Ashes* (*Pepel*, 1909) expresses disillusionment with the 1905 revolution, while *Urn* (*Urna*, 1909) reflects his affair with Blok's wife, Lyubov, which caused hostility, even threats of duels, between the two poets.

Bely followed his first novel, *The Silver Dove* (*Serebryany golub*, 1909), with *Petersburg* (1916), which Vladimir Nabokov considered one of the four greatest novels of the twentieth century (*Strong Opinions*, 1973). It concerns a terrorist plot to be performed by Nikolai Apollonovich against his father, Senator Apollon Apollonovich Ableukhov. The novel's nonsensical dialogue, ellipses, exclamations, and surprising twists of plot, while influenced by Nikolai Gogol and akin to the work of the Futurists, take Russian prose in an unprecedented direction. The novel's main character is Petersburg itself, which "proclaims forcefully that it exists."

While writing *Petersburg*, Bely found a new spiritual guide in Rudolf Steiner, whose theory of anthroposophy—the idea that each individual, through training, may access his subconscious knowledge of a spiritual realm—would inform Bely's next novel, the autobiographical *Kitten Letayev* (*Kotik Letayev*, 1917–1918).

Like other Symbolists, Bely welcomed the October Revolution of 1917. He moved to Berlin in 1921, but returned in 1923 to a hostile literary climate. Bely tried to make room for himself in the new era by combining Marxism with anthroposophy, but to no avail.

A prolific and influential critic, Bely wrote more than three hundred essays, four volumes of memoirs, and numerous critical works, including his famous *Symbolism* (1910), which paved the way for Formalism, and *The Art of Gogol* (*Masterstvo Gogolya*, 1934). He died of arterial sclerosis on August 1, 1934.

DIANA SENECHAL

BERDYAYEV, NIKOLAI ALEXANDROVICH

(1874–1948), philosopher.

Nikolai Berdyayev, a scion of the landed gentry, was born on an estate near Kiev. The Russian philosopher best known in the West, he moved from Marxism to Kantian Idealism to a Christian existentialism meshed with leftist political views. A lifelong opponent of bourgeois society and bourgeois values, in emigration he called capitalism and communism equally unchristian.

As a leader in the religious and philosophical renaissance of the early twentieth century, he decried the atheism and dogmatism of the revolutionary intelligentsia, while also polemicizing against the otherworldliness and passivity enjoined by historical Christianity. He believed that a Third Testament would supersede the Old and the New Testaments.

Expelled from Russia by the Bolshevik government in late 1922, in 1924 he settled near Paris and played an active role in émigré and French intellectual and cultural life. His books were translated into many languages. His critique of the revolutionary intelligentsia and his articulation of the Russian idea had a profound impact on late Soviet and post-Soviet thought.

Berdyayev's philosophy is anthroposophic, personalistic, subjective, and eschatological. He emphasized the supreme value of the person, opposed all forms of objectification, and exalted a freedom

unconstrained by norms or laws, including the laws of nature. Rejecting all dogmas, orthodoxies, systems, and institutions, and all forms of determinism, he linked freedom with creativity, which he considered man's true vocation, and taught that man is a co-creator with God. By "man" he meant men; he regarded "woman" as "generative but not creative." He interpreted the Bolshevik Revolution as part of a pan-European crisis, the imminent end of the civilization that began in the Renaissance, and looked forward to a period he called the new middle ages.

The literature on Berdyayev is extensive and varied. Some authors exalt him as a philosopher of freedom, others emphasize his utopianism, and still others consider him a heretic.

BERNICE GLATZER ROSENTHAL

BERIA, LAVRENTI PAVLOVICH

(1899–1953), Soviet politician and police official, chief of the NKVD 1938–1946.

Born in Merkheuli, a village in the Georgian Republic, Lavrenti Beria enrolled in the Baku Polytechnic for Mechanical Construction in 1915 and graduated four years later. Meanwhile, after joining the Bolshevik wing of the Russian Social Democratic Labor Party in March 1917, he participated in the Russian Revolution as an underground soldier and counterintelligence agent in the Caucasus. Beria's career with the Soviet secret police began in early 1921, when the ruling Bolsheviks assigned him to the notorious Cheka (Extraordinary Commission for Fighting Revolution and Sabotage) in the Soviet Republic of Azerbaijan. As a deputy to the ruthless Cheka chief in that republic, Mir Dzhafar Bagirov, Beria engaged in bloody reprisals against the opponents of Bolshevik rule, even drawing criticism from some Caucasian Bolshevik leaders for the violent methods he used. By late 1922, with the anti-

Bolshevik rebels in Azerbaijan subdued, Beria was transferred to Georgia, where there were still serious challenges to the Soviet regime. He assumed the post of deputy chairman of the Georgian Cheka, throwing himself into the job of fighting political dissent among his fellow Georgians. Beria's influence grew as the political police played an increasing role in Georgian politics. His career was successful because he helped to engineer the defeat of the national communists, who wanted Georgia to retain some form of independence from Moscow, and the consequent victory of those who favored strong centralized control by the Bolsheviks.

By 1926 Beria had risen to the post of chairman of the Georgian GPU (State Political Administration, the successor organization to the Cheka). Beria was the consummate Soviet politician. His political fortunes were furthered not only by his effectiveness in using the secret police to enforce Soviet rule, but also by his ability to win favor with Soviet party leader Josef Stalin, a Georgian by nationality, by playing on Stalin's suspicions of the native Georgian party leadership. Having extended his influence into the party apparatus, Beria was elected in 1931 to the post of first secretary of the Georgian party apparatus, a remarkable achievement for a man of only thirty-two years. Henceforth Beria would continue to ingratiate himself with Stalin by furthering Stalin's personality cult in Georgia. In 1935 Beria published a lengthy treatise, *On the History of Bolshevik Organizations in Transcaucasia*, which greatly exaggerated Stalin's role in the revolutionary movement in the Caucasus before 1917. The book was serialized in the major party newspaper, Pravda, and made Beria a figure of national stature.

When Stalin embarked on his policy of terrorizing the party and the country through his bloody purges of the Communist Party apparatus from 1936 through 1938, Beria was a willing accomplice. In Georgia alone, thousands perished at the hands of the secret police, and thousands more were condemned to prisons and labor camps, as part of a nationwide Stalinist vendetta against the Soviet people. Although many party leaders perished in the purges, Beria emerged unscathed, and in 1938 Stalin rewarded him with the post of head of the NKVD (People's Commissariat of Internal Affairs, as the secret police was then called) in Moscow. After carrying out a full-scale purge of the NKVD leadership, Beria brought in his associates from the party and police in Georgia to fill the top NKVD posts, thereby creating an extensive power base in

the NKVD and increasing his political influence in the Kremlin.

After the German attack on the Soviet Union in June 1941, Beria, as a deputy Soviet premier, oversaw the enormous job of evacuating defense industries from western regions and converting peacetime industry to war production. He drew upon the NKVD's vast forced labor empire, under the Main Administration of Corrective Labor Colonies, or gulag, to produce weapons and ammunition for the Red Army, as well as to mine coal and metals and construct railway lines. The NKVD was also responsible for internal security, foreign intelligence, and counterintelligence, and its thousands of border and internal troops performed rear security functions. Under Beria's direct supervision, NKVD troops deported to Siberia hundreds of thousands of non-Russian nationals within the Soviet Union who were suspected of disloyalty to the regime.

By the war's end, Beria had earned a reputation as a ruthless but highly effective administrator. Stalin made him a full member of the party's ruling Politburo in 1946 and placed him in charge of developing the Soviet atomic bomb in 1945. Although Beria relinquished his post as head of the NKVD in early 1946, his protégés were still in charge, and he continued to oversee the police and intelligence apparatus as a deputy chairman of the Council of Ministers. Beria threw himself into work on the bomb, enlisting top Soviet scientists, ensuring the availability of raw materials like uranium, and using secret intelligence on atomic bomb production in the West. As a result of his efforts, the Soviets surprised the West by successfully producing and testing their first atomic bomb (plutonium) in August 1949.

Although Beria was one of Stalin's closest advisors, he nonetheless fell victim to Stalin's intense paranoia in the early 1950s and suffered a series of attacks on his fiefdom in Georgia and in the secret police. Had it not been for Stalin's sudden death in March 1953, Beria might have been removed from power altogether. Instead Beria formed an alliance with Georgy Malenkov, who became party first secretary, and took direct control of the police and intelligence apparatus (known at this time as the MVD). He also embarked on a series of liberal initiatives aimed at reversing many of Stalin's policies. The changes he introduced were so bold and far-reaching that they alarmed his colleagues, in particular Nikita Khrushchev, who aspired to become the Soviet leader. A bitter power struggle en-

Lavrenti Beria led Stalin's purges until Nikita Khrushchev ordered his execution in 1953. © HULTON-DEUTSCH COLLECTION/CORBIS

sued, and Beria was outmaneuvered by Khrushchev, who managed to have Beria arrested in June 1953. Charged with high treason, Beria was executed in December 1953, along with six others. Although Beria was best known for being a ruthless police administrator and a loyal follower of Stalin, archival materials released in 1990s have made it clear that Beria's role went far beyond this and that he was one of the most influential politicians of the Soviet period.

AMY KNIGHT

BERING, VITUS JONASSEN

(1681–1741), Russian explorer of Danish descent.

Vitus Bering was the captain-commander of two expeditions exploring the relative positions of the coasts of Siberia and North America. Bringing back the valuable sea otter and other pelts from the islands of the North Pacific to Siberia, the second of these expeditions sparked the fur rush that resulted in the Russian conquest of the Commander and Aleutian Islands and, eventually, all of Alaska, which was claimed by the Russian Empire until it was sold to the United States in 1867.

On the first expedition, which sailed in 1728 from the coast of Kamchatka northward well into the Arctic Ocean, passed through what is now known as the Bering Strait, and discovered St. Lawrence Island and the Diomed Islands, Bering did not sight the coast of North America; but he was convinced that Asia and North America were not joined by land. However, when Bering arrived in St. Petersburg, his critics at the Admiralty found the results of his exploration inconclusive, and a second expedition was ordered.

On the second expedition, Bering, commanding the *St. Peter*, and his second officer, Alexei Chirikov, commanding the *St. Paul*, left the Kamchatka coast together; but their ships lost sight of each other in the Pacific Ocean. Consequently, Chirikov's party sighted the coast of southeast Alaska (apparently anchoring off of Cape Addington, around latitude 58°28'), and Bering's party sighted Mt. St. Elias several days later, both in July 1741. On the return voyage the two ships separately sighted and explored a few of the Aleutian Islands. Chirikov's party returned successfully to the Siberian shore, but Bering's wrecked on what today is known as Bering Island, where Bering and nineteen of his men died. The survivors built a small boat out of the wreckage and sailed successfully for Kamchatka the following year.

ILYA VINKOVETSKY

BERLIN, BATTLE OF *See* WORLD WAR II.**BERLIN BLOCKADE**

In 1945 the victorious World War II allies—the United States, Great Britain, France, and the Soviet Union divided Germany into four occupation zones, an arrangement that was reflected in the division of Berlin, as the national capital, into four sectors. Despite these divisions, the country was supposed to be treated as a single economic unit by the Allied Control Council, and an Allied Kommandatura (governing council) was likewise supposed to manage affairs in Berlin.

For a variety of political and economic reasons, these aims never came close to realization. In January 1948 the Soviets bitterly criticized Anglo-American moves to combat the economic paralysis of the country by integrating the Western zones of Germany into the Western Bloc, and in March the Soviet delegation walked out of the control council, which was never to meet again. This meant that any chance of a four-power agreement on a desperately needed currency reform had vanished. On March 31 the Soviet military government announced that for so-called administrative reasons Soviet officials would henceforth inspect passengers and baggage on trains from the West bound for Berlin, which was wholly surrounded by what would become East Germany—which was at this point occupied by the Soviet Union—and the Russians went on to clamp restrictions on freight service and river traffic.

On June 18, matters took a new turn when, abandoning attempts to reach agreement with the Russians on steps to combat the soaring German inflation, the Western powers introduced their new deutsche mark into their zones. Fearing the impact of the D-mark on their Eastern-zone currency, the Soviets introduced their own new mark, and on the same day (June 23) they cut off electricity to the Western zones and stopped all deliveries of coal, food, milk, and other supplies. The next day all traffic, land and water, between West Berlin and the West came to a stop—the blockade was now complete—and the Soviets declared that the Western powers no longer had any rights in the administration of Berlin.

Rejecting a proposal by General Lucius D. Clay, the U.S. commander in Germany, to send an armed

highway convoy to Berlin, his superiors in Washington decided to react to the Soviet pressure not by force or by abandoning Berlin but by mounting an attempt to supply the city by air. Nobody saw this as more than a temporary effort to be tried while Allied representatives negotiated with the Russians to solve the overall problem. By July 20, however, the airlift was bringing in about six times as much cargo daily as had been the case three weeks earlier, and the people of the city, supporting the effort, were drawing their belts tight.

When Josef Stalin told the Western ambassadors in Moscow in a meeting in August that he had no intention of forcing the Allies out of Berlin, he was simply indulging in an exercise in disinformation. On March 26 he had told the Soviet Zone Communist leader, Wilhelm Pieck, that the Soviets and their German dependents should try to ensure victory in the coming municipal election by expelling the Allies from the city. This discussion made it plain that the currency issue was only one of the motives behind the establishment of the blockade.

By November the airlift, under the expert management of Maj. Gen. William H. Tunner, had become an established success, bringing in 4,000 tons a day regardless of the weather, and early in 1949 the Soviets began to backpedal. On April 26 the Soviet press agency TASS announced that the government would lift the blockade if the Western powers would simultaneously abandon their countermeasures (one important economic factor among these countermeasures had been the toll taken by the embargo placed on a range of exports from the East) and would agree to convene a meeting of the Council of Foreign Ministers to discuss all issues relating to Germany. At 12:01 A.M. on May 12 the blockade came to its end.

The status quo ante did not return to Berlin. With the Communist coup in Prague in February, the passage of the European Recovery Program (the Marshall Plan) in March, and the Soviet blockade of Berlin, the year 1948 proved to be the turning point in the development of the Cold War. The year 1949 would see the creation of two Germanys, East and West; until the end of the Cold War four decades later, Berlin would exist as two cities, with two governments.

THOMAS PARRISH

BERLIN, CONGRESS OF

The diplomatic conclusion to the Russo-Turkish War of 1877–1878 and postwar crisis.

Before the war, Russian diplomats promised Austria-Hungary that no “large, compact Slavic or other state” would result from the expected reorganization of the Balkans, and that Russia would allow Austrian occupation of Bosnia-Herzegovina and prevent Montenegro from acquiring a seaport in return for Russia’s reacquisition of Southern Bessarabia and annexation of Batum (Reichstadt, July 1876; Budapest, April 1877). Russian councils, however, were divided. Court factions and generals backed the more ambitious ambassador to Istanbul, Nikolai P. Ignatiev, over Foreign Minister Alexander Gorchakov and Russia’s cautious envoys in Vienna and London, Yevgeny Novikov and Peter Shuvalov.

The initial bilateral Treaty of San Stefano, forced upon Istanbul in March 1878, followed Ignatiev’s line. It stipulated a large Bulgaria with an Aegean coast and an indefinite occupation by fifty thousand Russian troops until the Bulgarians established their own army. In addition, it called for an enlarged Montenegro with the three small Adriatic ports she had occupied; a less enlarged Serbia with most of the Sanjak of Novi Bazar divided between the two Serbian states; and the Russian acquisition of Batum and most of Turkish Armenia east of Erzerum down to Bayazid, as well as Southern Bessarabia, in place of most of the huge indemnity assessed at 1.4 billion rubles.

As the Turks expected, both the British, who had already sent a naval squadron inside the Sea of Marmora, and the Austro-Hungarians objected, as did the Serbians and Romanians, who felt cheated. Russia’s weak financial situation (the ruble had fallen 40%) rendered war with Britain unthinkable, so Gorchakov agreed with the Austro-Hungarian proposal for a Berlin congress under Otto von Bismarck’s leadership to settle outstanding issues. Shuvalov worked out the essential compromises in

London before the congress met, and joined Pavel P. Oubril, the ambassador to Berlin, and the now senior Gorchakov as Russia's delegates there.

The congress was a resounding success for the British led by Benjamin Disraeli, whose threats to leave ("waiting train" tactics) forced a division of Bulgaria into three parts—only the northern one being truly autonomous under Russian tutelage with far fewer Russia troops there—and made Russia limit its acquisitions in Asiatic Turkey, while he stood by London's separate arrangements with Istanbul regarding the Straits and Cyprus. Shuvalov did salvage the port of Varna for autonomous Bulgaria and one Adriatic port for Montenegro, as well as Southern Bessarabia, Kars, Ardahan, and Batum (nominally an open port) for Russia.

The Treaty of Berlin, signed by Britain, France, and Germany, as well as Russia, Turkey, and Austria-Hungary, achieved a tenuous Balkan peace lasting thirty-four years, but left Serbian and Russian nationalists seething—a catalyst for the secret Austro-German Dual Alliance of 1879 and mounting German distrust of Russia. Russia and Austria-Hungary dared agree on the latter's eventual annexation of Bosnia-Herzegovina only by a secret agreement (1881), which caused a storm when implemented in 1908. The southern Balkan settlement collapsed in 1885, when Bulgarians on their own, in defiance of the Russians, united the southern third with the north.

DAVID M. GOLDFRANK

BERLIN, CONVENTION OF

Concluded June 18, 1881, this Convention of Berlin recreated the Three Emperors' League between the Great Powers: Austria-Hungary, Germany, and

Russia. Each power pledged to remain neutral if one of the signatories were to become involved in a war with another Great Power. The closing of the Straits to all warships was reconfirmed. A separate protocol recognized Austria's right to annex Bosnia-Herzegovina (an option exercised in 1908) and reiterated the Bulgarian territorial settlement imposed by the 1878 Congress of Berlin.

The treaty reflected Otto von Bismarck's strategy of keeping France isolated following the Franco-Prussian war, in part by binding Russia to Germany. The Russian government viewed the convention as a necessary evil to give Russia a period of peace on its western frontiers, to counter the Austro-German alliance, and to avoid a repetition of 1878, when a coalition of other Great Powers had prevented Russia from fully exploiting its victory over Turkey. A December 1879 Foreign Ministry conference chaired by Minister Nikolai Karlovich Giers concluded that a nonaggression pact with Vienna and Berlin was absolutely essential to obtain "the repose of which [Russia] has the most imperious need." Faced with growing internal social unrest and the need to slash military spending, Russia could not afford renewed military competition.

Alexander III renewed the alliance in 1884, but it expired in 1887. The convention failed to provide any mechanism for regulating Austro-Russian rivalries in the Balkans, especially because Germany was unable to function as an honest broker between Vienna and St. Petersburg. Nor was Russia inclined to permanently accept a status quo predicated on its post-1878 weakness. Bismarck concluded a nonaggression pact (the Reinsurance Treaty) when the convention lapsed, but Germany abrogated this agreement in 1890 when Bismarck was retired. This paved the way for the 1894 Franco-Russian alliance.

NIKOLAS GVOSDEV

BESCHESTIE

The practice of compensation for a humiliating insult or dishonor.

Beschestie meant “dishonor” in early modern Russia and referred both to humiliating insult and to the amount of compensation awarded to victims of insult. There is ample evidence in law codes in other East Slavic societies (Kievan Rus, Novgorod, Pskov) before the fifteenth century for the principle of compensation for humiliating insult, but this term and legal norms for defense of honor were first systematized in the Grand Principality of Muscovy. The major Muscovite law codes of 1550, 1589, and 1649 cite *beschestie* specifically and provide schedules of compensation for dishonor.

Beschestie was socially inclusive (applying to all social ranks) but also socially hierarchical (the amount of compensation was determined by social status). In the most detailed account in the Law Code of 1649, compensation for insult between individuals in the lowest social ranks was a simple, paltry fine. As the social rank of litigants rose, fines rose; and for the very highly placed, physical punishment was levied on the offender in addition to a high fine. At the same time, dishonor litigation provided protection for all social ranks, from the highest secular and clerical ranks to slaves, serfs, and (in the 1589 *sudebnik*) witches and minstrels.

Muscovite laws do not define honor; its content has to be reconstructed from complaints in litigations. Insult to honor in practice was primarily verbal; most physical assault was litigated separately. But those forms of physical assault considered humiliating (such as pulling a man’s beard, or uncovering a woman’s hair by knocking off her headdress) were deemed dishonor. Dishonoring verbal insults included accusations of criminal behavior or of disloyalty to the tsar, aspersions on sexual probity or religious faith, insults to an individual’s station in life, no matter how lowly, and insults to their heritage and kinsmen. Women played a pivotal role in this code of social values: Their behavior reflected on family honor, and thus their dishonor compensation was reckoned higher than men’s. A wife, for example, received twice her husband’s dishonor compensation, while an unmarried daughter received four times.

Litigations show that men and women in all social ranks litigated for dishonor, even non-Russians and non-Orthodox. Judges took dishonor suits seriously, and were concerned primarily not

with the truth of an allegation, but whether an insulting phrase was uttered or a humiliating assault carried out. People could use dishonor litigation to pursue quarrels and vendettas, but overall the practice of defense of honor probably worked to enhance social stability by protecting individual and family dignity. Most broadly, the consciousness of honor constituted a form of social integration across the empire, although limited by the ethnic, religious, and cultural diversity of Muscovy.

Case law on dishonor litigations survives only sparsely from the late sixteenth century, but the number of recorded suits rose steadily in the seventeenth century, even accounting for accidents of document survival. In the eighteenth century, terminology changed (*obida* and *oskorblenie* came to replace *beschestie* for “insult”), but the consciousness of personal honor and the right to litigate to defend it endured into the Imperial period.

BESSARABIA

The region of Bessarabia lies between the Prut and Dniester Rivers and constitutes the rump of what is today the Republic of Moldavia. Although the historical region of Bessarabia stretched to the coast of the Black Sea, southeastern Bessarabia is presently incorporated in Ukraine.

The region formed part of the broader Principality of Moldavia, which first emerged as a distinct area of rule in the fourteenth century. This territory was brought into the Ottoman sphere of influence in 1538, following conquests led by Süleyman the Magnificent. The region was allowed a measure of self-government until 1711, when

Constantinople appointed Greek-speaking *phanariots* to govern the region more directly.

The first clear, political separation between Bessarabia and western Moldavia (now incorporated into Romania) came with the Russian occupation of Bessarabia in 1806. This move precipitated a six-year war, after which the victorious Russian Tsar Alexander I was able to formally annex the land between the Prut and Dniester Rivers from the Ottoman Empire.

After a short period of relative autonomy from Moscow, Bessarabia underwent a process of Russification, and the use of the Romanian language was barred from official use. The 1871 shift in Bessarabia's status from that of imperial *oblast* to Russian *rayon* saw further restrictions on cultural and political autonomy in the region.

Due to significant immigration following the annexation of 1812, Bessarabia had become culturally cosmopolitan by the end of the nineteenth century. However, the region was an economic backwater; literacy remained very low and, despite the presence of some small-scale industry in the region's capital—Chişinău—the area remained largely agricultural.

The collapse of tsarist rule during World War I enabled elites drawn from the Bessarabian military to act on growing nationalist sentiments by declaring full autonomy for the region in November 1917. Romanian forces capitalized further on the confused state of rule in Bessarabia and moved in to occupy the territories lost to Russia in 1812. A vote by the newly formed Bessarabian National Council saw the region formally unite with Romania on March 27, 1918.

During the interwar period, Bessarabia formed the eastern flank of Greater Romania. This period was characterized by an acceleration of public works, which combined with agricultural reform to stabilize the region's economy. However, the significant minority populations (Russians, Ukrainians, Bulgarians, Turks) suffered under Romanian rule and were denied basic cultural rights, such as education in their native tongues.

The clandestine carve-up of Europe planned under the Ribbentrop-Molotov pact of 1939 implied that Germany had no interest in Bessarabia. This afforded the Soviet Union an opportunity to retake the region. In June 1940 the Soviet government issued an ultimatum to Romanian King Carol II, demanding that Bessarabia and northern Bukovina be

brought under Soviet control. Although Carol II acquiesced in this demand, Romania's alliance with Germany during World War II saw the land return to Romanian hands. Control was again returned to the Soviet Union following the collapse of the Axis. The six counties of Bessarabia were then merged with the Transnistrian region, east of the Dniester, to form the Moldavian Soviet Socialist Republic.

Although Bessarabia dominated Soviet Moldavia geographically and demographically, communist elites from the Transnistrian region enjoyed the majority of political weight in the republic, due to their membership in the Soviet community since 1917 and the presence of a significant pro-Russian, Slavic minority. With Soviet industrial development concentrated in Transnistria, a growing socioeconomic divide emerged between this region and Bessarabia.

The collapse of Soviet rule and declaration of Moldavian independence in 1991 was followed shortly thereafter by a declaration of Transnistrian independence from the Republic of Moldavia. Although unrecognized, Transnistria remains tacitly independent in the early twenty-first century, leaving Bessarabia as the sole region under the control of the government of the Republic of Moldavia.

JOHN GLEDHILL

BESTUZHEV-RYUMIN, ALEXEI PETROVICH

(1693–1766), count, chancellor, diplomat, statesman.

Second son of a Muscovite noble family, Alexei Bestuzhev-Ryumin went abroad in 1708 with his older brother, Mikhail Petrovich (1688–1760), to study at the Danish noble academy and transferred to Berlin in 1710. Before diplomatic service in 1712 at the Congress of Utrecht, he concentrated on foreign languages, traveled in Europe, and presumably had a Muscovite education befitting offspring

of an eminent father, Count Pyotr Mikhailovich Bestuzhev-Ryumin (1664–1743). With Tsar Peter's permission he joined Hanover's foreign service in 1713, visited England in connection with George I's selection as king, and returned to Russia to announce the new British sovereign. Bestuzhev-Ryumin then spent four years in England. From 1717 he served the court of dowager Duchess Anna Ivanovna of Courland without pay for two years under his father. In 1721 he became minister-resident to the Danish court, where he followed Peter I's rivalry with George I of England, Denmark's competition with Holstein, and celebration of the peace ending Russo-Swedish hostilities, and received a miniature of Peter with diamonds that he proudly wore thereafter. He also helped develop a nerve- tonic known as "Bestucheff's drops"; the formula sold several times until published by Catherine II in 1780.

In the years after Peter I's death, Bestuzhev-Ryumin occupied diplomatic posts in northern Europe. At Kiel he discovered a copy of Catherine I's testament supporting the Duke of Holstein's rights to the Russian throne; for this he received the Order of Saint Alexander Nevsky. He cultivated favor with Anna Ivanovna's new regime, the empress serving as godmother to his three sons. He had married Anna Yekaterina Böttiger (d. 1762), daughter of the Russian envoy to Hamburg. As Countess Bestuzheva-Ryumina she became court mistress in 1748, accompanied her husband into exile in 1758, and was buried at the old Lutheran church in Moscow.

Bestuzhev-Ryumin returned to Petersburg in 1740 and was promoted to actual privy councillor, named a cabinet minister, and awarded the Polish Order of the White Eagle. He apparently supported Ernst Johann Biron's brief regency and, although sentenced to be quartered after the regent's overthrow, he survived with the loss of all privileges and property before exile. Reinstated five months later, Bestuzhev-Ryumin assisted Elizabeth's coup of December 1741 by composing the manifesto that proclaimed her reign. He was made senator and vice chancellor of foreign affairs and received his predecessor Andrei Osterman's house in Moscow, back salary, and 6,000 rubles per year. At Elizabeth's coronation in the spring of 1742 he joined father and brother as counts of the Russian Empire. Bestuzhev-Ryumin reached the pinnacle of power with promotion to chancellor in 1744 and count of the Holy Roman Empire, with an annual salary of 7,000 rubles and estates with 4,225 male serfs.

He likewise received pensions and loans from foreign powers, Britain in particular.

Bestuzhev-Ryumin pursued a policy against Prussia and France while cultivating the maritime powers of Britain, Holland, and Denmark. He intervened in dynastic politics, too, initially opposing Sophia of Anhalt-Zerbst as consort for crown prince Peter Fyodorovich. When the Seven Years' War scrambled European international politics, Bestuzhev-Ryumin pressed a militantly anti-Prussian policy while countering French intrigues and secretly conspiring with Grand Princess Catherine to seize power in the event of Elizabeth's sudden death. These involvements resulted in his arrest for treason in February 1758. He managed to warn Catherine and escaped death although banished to his estate of Goretovo, where his wife died on January 5, 1762, the same day Elizabeth expired. Peter III did not pardon him, but Catherine did, although she did not name any chancellor.

Bestuzhev-Ryumin returned to court in July 1762 and regained honors and property, the Holstein Order of Saint Anna, and an annual pension of 20,000 rubles. He twice proposed to proclaim Catherine "the Great," but she declined the honor and soon cooled to his anti-Prussian views and quarreled with his sole surviving son, Andrei, whose death in 1768 ended the male line. Bestuzhev-Ryumin's long and tumultuous career in high politics resulted in ambivalent assessments. The German soldier Manstein praised his industry while predicting his final downfall and denouncing despotic power, arrogance, avarice, dissolute lifestyle, treacherous character, and vindictiveness. In final exile and late in life Bestuzhev-Ryumin turned to religion.

JOHN T. ALEXANDER

BIRCHBARK CHARTERS

Birchbark documents constitute the most significant set of early Rus written sources to have been discovered since 1950, when the first such document was discovered by archaeologists in Novgorod. As of the early twenty-first century, the total number of Novgorodian documents was close to one thousand. Smaller quantities of birchbark documents have also been unearthed in Staraya Russa, Smolensk, Pskov, Vitebsk, Mstislavl, Torzhok, Tver, Zvenigorod in Galicia, and Moscow. Besides being of fundamental importance to the study of early Rus writing itself, and to the study of early Rus language, the birchbark documents shed new light on a wide range of historical issues, including social and family relations, commerce and trade, taxation, law, and administration. They provide direct insight into the lives and concerns of groups of people who are underrepresented in traditional written sources: the non-princely, non-ecclesiastical urban elites (though churchmen and princes do figure in the birchbark documents as well); women; and to some extent even sections of the peasantry.

Birchbark was the available, cheap, disposable writing material in the forests of Rus. Paper was virtually unknown before the fourteenth century, and manuscript books were written on parchment (treated animal skins), which was relatively expensive to procure and cumbersome to prepare. The typical birchbark document consists of a single piece of the material (just one birchbark book—made from three folded leaves—has been discovered). The letters were not written in ink but incised in the soft surface with a pointed stylus of metal, wood, or bone. Hundreds of such styluses turn up in excavations, suggesting that this type of writing was even more widespread than the extant documents might suggest. It has become conventional to refer to them as Novgorod birchbark documents, but there is no reason to suppose that their production and use was in fact a specifically or predominantly Novgorodian speciality. The preponderance of Novgorodian discoveries is due in part to the intensity of Novgorodian archaeological investigation, but in part also to the favorable conditions for birchbark survival, because organic materials are preserved almost indefinitely in the saturated, anaerobic (oxygen-free) Novgorodian mud.

Few, if any, of the birchbark documents can be dated with absolute precision. However, approxi-

mate datings to within two or three decades can often be supplied by means of dendrochronology by fixing the location of their discovery in relation to the chronological scale produced by the study of the tree rings on the logs that formed Novgorod's roads. In addition, birchbark paleography (the study of the shapes of letters) has now developed to the extent that it, too, can be used to indicate relative chronology. A small number of the birchbark documents probably date from the first half of the eleventh century and are thus among the oldest known specimens of East Slav writing, but the vast majority of the documents date from the twelfth to fifteenth centuries.

The language of the birchbark documents was at first something of a puzzle. The spelling, grammar, and, to some extent, the vocabulary differ in some respects from the presumed norms of correct writing on parchment. This discrepancy was initially attributed to the presumed insufficient education and resulting semiliteracy of the writers. However, it is now clear that birchbark linguistic deviations from parchment norms are not random errors. Indeed, in most cases they are not errors at all. Birchbark literacy is consistent with its own conventions, and the documents reflect a vibrant and functional urban literacy with a strong local vernacular accent. The birchbark documents therefore add a vital new dimension to our understanding of the history of the Russian language.

The contents of the birchbark documents are remarkably varied. Many of them are concerned with money or (especially among the later letters) property. These range from brief lists of private debtors—just a sequence of names and the sums they owe—to fairly systematic registers of tax or tribute obligations from a village or region. Sometimes payment is a matter of dispute, and the documents reveal much about the processes of conflict resolution, whether informal (through family and associates) or formal (through judicial process and administrative enforcement). Although birchbark was mainly for ephemeral communication, not designed for official use, a few of the documents appear to contain drafts of texts whose official versions were destined for parchment, such as testaments for the disposal of property. Among the later documents are even found formal petitions sent from outlying settlements to their urban-dwelling lords. Yet it would be misleading to characterize the birchbark documents as merely a form of unsystematic unofficial business and financial archive. Their delight, for the modern researcher,

lies in their apparent randomness, in the serendipitous, unexpected nature of their contents: love letters, fragments of folksy wisdom, amuletic incantations, family squabbles, childish doodles, drafts of designs for icons, a correspondence between nuns, practice alphabets, prayers. Each fresh season produces novelties, and even after more than half a century of discoveries there is no reason to suppose that birchbark is close to exhausting its capacity to surprise, and to add continually to the understanding of early Rus history.

At the end of the fifteenth century the continuous tradition of regular writing on birchbark came to an end. No contemporary commentator mentions this, so the reasons are subject to speculation. Perhaps the birchbark simply lost out in competition with paper, as a less fragile and more adaptable material. Or perhaps there were also structural factors, such as the spread of bureaucratic administration, which expanded the market for paper and pushed down its price while highlighting the comparative crudity of the traditional local alternative. Whatever the explanation for its demise, the age of birchbark literacy, in a country where written sources in general are notoriously scarce, has provided researchers with an expanding body of writing unique in medieval Europe.

SIMON FRANKLIN

BIROBIDZHAN

Beginning in 1928 the Soviet Union set aside a territory the size of Belgium for Jewish settlement, located some five thousand miles east of Moscow along the Soviet-Chinese border near Khabarovsk. Believing that Soviet Jewry, like other national minorities, deserved a territorial homeland, the regime decided to create a Jewish enclave that would become the Jewish Autonomous Region in 1934 and is popularly known as Birobidzhan, the region's capital city. The Soviet leadership hoped that Birobidzhan would serve as an alternative to Palestine by fostering the development of a secular, Jewish culture rooted in socialist principles. Yiddish, and not Hebrew, was intended to serve as the bedrock of a proletarian Soviet Jewish culture and community. Birobidzhan would promote the national-cultural consolidation of Soviet Jewry. The establishment of Birobidzhan was the first instance of an officially acknowledged Jewish national territory since ancient times.

During Birobidzhan's first decade of existence, the study of Yiddish was obligatory in all schools; along with Russian, Yiddish had been made an official language of the region. Consequently, all government and party documents appeared in both Russian and Yiddish. In addition, a Jewish theater and a library with a sizable Judaica collection were established. In 1935 the local authorities decreed that all government documents had to appear in both Yiddish and Russian. Many left-wing Jews and pro-Soviet organizations in the United States, Canada, and elsewhere closely followed events in Birobidzhan; many sent money and machinery, while perhaps one thousand to two thousand Jews decided to move to the purported Soviet Zion during in the 1930s.

Despite efforts to encourage Jews to resettle in the region during the first decade of its existence and again for a few years after the end of World War II, the Birobidzhan experiment failed dismally. Not only did the region fail to attract many Jews because of its remoteness from the center of Jewish population, but the harsh conditions kept significant numbers of Jews from migrating. By 1939 just less than 18,000 of the region's approximately 109,000 inhabitants were Jews. Soviet Jews were more inclined to move to one of the major cities of the western Soviet Union, such as Minsk, Leningrad, Kiev, Moscow, or Odessa, than to uproot themselves to the marshes of Birobidzhan,

where there were limited educational and job opportunities. Moreover, the Kremlin's attitude toward Jews turned hostile by the time of the Great Purges of 1936–1938, when the regime clamped down on Jewish settlement. The government closed almost all the Yiddish schools in the region, dismantled agencies dealing with Jewish resettlement, shut down many cultural and social Jewish institutions, and promoted the cultural assimilation of Jews. While retaining Yiddish as an official language and maintaining the fiction that Birobidzhan embodied the national and cultural aspirations of Soviet Jewry, the regime nonetheless stifled the emergence of Jewish culture and society.

In the wake of World War II, the Kremlin revived in 1946 and 1947 Jewish migration to Birobidzhan and resuscitated Yiddish culture. But the emergence of government-sponsored anti-Semitism during the last years of Josef Stalin's life destroyed any hope that Birobidzhan would develop into the center of Soviet Jewish life. Still, Yiddish remains one of the official languages of the region to this day, and since the early 1930s a Yiddish newspaper, one of the few of its kind, has been published continuously, except when World War II disrupted publication for several years. Indeed, in the early 1990s the offices of the KGB displayed plaques in both Russian and Yiddish, as did all other government buildings, despite the fact that Jews numbered no more than several thousand out of a total population of more than 200,000. Even fewer Jewish inhabitants knew Yiddish, and even fewer know it today. Nevertheless, Birobidzhan's continued existence is a curious legacy of Soviet nationality policy.

ROBERT WEINBERG

BIRON, ERNST JOHANN

(1690–1772), count, duke of Courland, regent of Russia, imperial favorite, alleged kingpin of the dark era of foreign dominance, or *Bironovshchina*, a term invented long afterwards.

Of Baltic German origins, Ernst Johann Biron (von Bühren or Bieren) rose through court service to Anna Ivanovna in her capacity as the widowed duchess of Courland after 1711 and then as empress of Russia (1730–1740). One of three sons and five daughters, Biron gained status by marriage (c. 1723) to Benigna Gotlib Trott von Treyden (1703–1782) and by court service at Mitau. The couple had two sons, Peter (1724–1800) and Karl (1728–1801), and one daughter, Hedvig (1727–1796). Upon Anna Ivanovna's accession in 1730, Biron became grand chamberlain and count of the Holy Roman Empire, his wife became lady-in-waiting, and his brothers Karl (1684–1746) and Gustav (1700–1746) entered the Russian army. Although elected Duke of Courland in 1737, Biron rarely visited it, instead supervising the court stables and a training school in St. Petersburg. He was reputed to address people like horses, and horses like people. He also patronized visiting theatrical troupes.

Biron allegedly dominated Empress Anna emotionally. She took up horseback riding to spend more time with him, whereas he supposedly tried to marry a son into the ruling family. When the empress collapsed on October 16, 1740, and died twelve days later, Biron reluctantly became regent for infant Ivan VI. As regent he tried to conciliate the Brunswick heirs (Anna Leopoldovna and her family) with an annual allowance of 200,000 rubles and an additional 50,000 to Princess Yelizaveta Petrovna. On the night of October 18/19, 1740, Biron and his wife were roughly arrested by troops under Field Marshal Burkhard von Münnich and imprisoned for interrogation. The accusations against Biron included insulting the Brunswick family, defrauding the treasury, and offending officials. Eventually he admitted insulting the Brunswick family but denied threatening to bring Peter of Holstein, another Romanov heir, to Russia. Sentenced on April 25, 1741, with explicit parallel to the usurper Boris Godunov, Biron avoided

death by quartering, and the entire family was exiled to Siberia. They all arrived at Pelym in November, but were partially pardoned in 1742 by Empress Elizabeth, who allowed their transfer to Yaroslavl. Peter III permitted Biron's return to court, and Catherine II restored him in Courland, visiting him at Mitau in 1764. Aged and ill, Biron ceded the duchy to his son Peter in 1769; he died on December 18, 1772. Biron's career exemplifies some vagaries behind the rise and fall of aristocratic families enmeshed in the dynastic politics of early modern Russia. He is now seen as more victim than victimizer.

BLACK EARTH

The black earths, or mollisols (Seventh Approximation), are the richest soils on the planet. Known as *chernozems* in the Russian language (*chernaya*, meaning "black," and *zemlya*, meaning "earth"), they are found in semiarid grasslands, or steppes, which are wedged between arid deserts and humid forests. In the Soviet successor states, black earths stretch west to east from Moldavia and Volynopodolia in western Ukraine to the Russian North Caucasus and deep into Siberia as a steadily narrowing wedge to Irkutsk near Lake Baikal. Transitional between areas with a soil moisture surplus (forests) and areas with a conspicuous soil moisture deficit (deserts), grassland soils are only slightly leached during sporadic thunderstorms. The relative lack of precipitation ensures that solubles like calcium (Ca), sodium (Na), potassium (K), and magnesium (Mg) are accessible to the uppermost humus layer (horizon) of the soil. The A-horizon consists of grass litter and extensive root systems that draw on a thick black to chestnut-brown humus zone that is rich in ionized colloids and natural fertility. The underlying B-horizon of-

ten possesses nodules of calcium carbonate, which during frequent droughts rises to the A-horizon through capillary action. Windblown silts known as loess further enrich chernozems by imparting a loamy soil texture.

Chernozems form in areas of cold winters and hot summers that are conducive to rapid evaporation. The resultant imbalance encourages the capillary rise of soluble nutrients from the B- to the A-horizon. Grasses thrive in these conditions, but their matted root systems create a sod that could not be breached by early wooden plows. Accordingly, until the invention of the steel-tipped plow in the 1800s, settlers considered grasslands useless. Requiring irrigation, the black earths now make up the great commercial grain belts.

VICTOR L. MOTE

BLACK HUNDRED

The Black Hundred was a far-right monarchist movement that emerged during the 1905 Revolution in an effort to defend the autocracy against increasing civil unrest. Some Black Hundred groups were composed of upper-class officials and nobles who concentrated on lobbying the tsar and the government to resist demands for liberal reform. A more radical tendency was prevalent among right-wing lower- and middle-class urban elements such as shopkeepers, merchants, and workers, who staged pogroms against Jews and attacked perceived revolutionaries.

The movement grew rapidly with the creation of the main Black Hundred organization, the Union of the Russian People (URP; *Soyuz russkogo naroda*). This group was formed by the physician Alexander Dubrovin after continuing unrest forced the tsar to issue the October Manifesto, which conceded most basic civil liberties and provided for power sharing with an elected Duma. The URP subsumed many other monarchist organizations and smaller pogrom groupings and succeeded in uniting upper-class nobles, middle-class professionals, and lower-class workers in a common organization. Although

estimates of the URP's membership vary widely, it probably totaled several hundred thousand at its peak from late 1905 to 1907.

The URP propagated its ideology through its newspaper, *Russkoye Znamya* (The Russian banner). Coarsening the ideas of previous generations of pan-Slavs and Slavophiles, the URP mixed Russian chauvinism with virulent anti-Semitism, hostility to the intelligentsia and capitalism, and die-hard support for the autocracy. The fight against revolutionaries was always a paramount task, relegating international issues to a relatively unimportant role. The URP's anti-Semitic message drew the most support in Russia's western provinces of the Pale of Settlement, where many Jews resided.

Under Dubrovin's direction, the URP headquarters in St. Petersburg created a paramilitary force that assassinated two Jewish-born Duma members from the liberal Kadet Party, Mikhail Gertsenshtein and Grigory Iollos, and undertook a failed attempt to kill former finance minister Sergei Witte. Local branches also formed paramilitary forces that engaged in violent crimes like pogroms. In cities like Odessa, the state used URP groups as a virtual auxiliary police force to help fight revolutionaries in the streets.

The URP was vehemently opposed to the First Duma, which was dominated by socialists and liberals. It nevertheless organized a campaign and got a handful of deputies elected to the Second Duma. The election of a loyalist majority to the Third Duma thanks to a change in the electoral law caused the Black Hundred movement to begin fracturing. URP Vice President Vladimir Purishkevich, who now accepted the Duma, formed a rival organization due to personal and ideological conflicts with Dubrovin, who still opposed the Duma. In 1910 Dubrovin was driven from his own organization by Duma member Nikolai Markov, who gained control of the URP, forcing Dubrovin to form his own splinter group. The schisms cost the Black Hundred much of its power and influence. Membership declined from 1908, although the various factions were kept afloat by substantial subsidies from various state organs, especially from the Internal Affairs Ministry. Public knowledge of these subsidies and their refusal to countenance criticism of the tsar gave Black Hundred leaders the reputation of being government lackeys, even though they often bitterly condemned the government and the bureaucracy for displaying insufficient vigor in fighting revolutionaries.

After 1908 the Black Hundred was mostly active in fighting for right-wing causes in the political arena. Members were key agitators for the anti-Semitic prosecution of the Mendel Beilis case, and Purishkevich gained a final bit of notoriety for the movement when he helped kill Grigory Rasputin, the royal family's spiritual advisor whom Purishkevich believed to be discrediting the tsar. The Black Hundred lost its *raison d'être* when the autocracy was overthrown. Black Hundred branches immediately closed, and some were burnt down. Markov went into hiding and later emigrated to Germany, where he worked with the budding far-right movement there. The Bolsheviks shot Dubrovin after they seized power, while Purishkevich, the only Black Hundred leader to stay politically active in Russia after the February Revolution, died from typhus in 1920 while agitating for the White armies.

BLACK MARKET

A black market was a major structural feature of the Soviet economy throughout the communist era. Having emerged during World War I in response to the regulation of prices and supplies, the black market burgeoned after the Bolshevik seizure of power. In 1918–1919, the Bolsheviks' radical vision of socialism as an economy without capitalists or market mechanisms led to the closure of virtually all private shops. Until their re-legalization in 1921, in connection with the New Economic Policy, the distribution system consisted of a vast, bu-

reaucratized, socialized network of state and cooperative outlets, and an equally vast underground trade.

In subsequent decades, the black market reflected the general condition of the economy. Through the early 1950s, staple foods, clothes, and other necessities predominated. World War II marked the zenith of this tendency, as the urban population was forced to sell off surplus possessions on the black market in order to purchase supplementary food. As survival-threatening crises receded, the array of goods sold on the black market widened to reflect the rising expectations of Soviet consumers. By the 1980s, observers noted the prevalence of such items as automobile spare parts, imported blue jeans, rock-and-roll records, and home decor. Foreign currency (especially U.S. dollars) was also the object of black-market transactions throughout the postwar period, with underground exchange rates for foreign bills greatly exceeding the official rate.

Three factors complicate assessments of the black market. First, a black market by definition eludes data collection and reporting. Quantitative estimates of its aggregate role in the Soviet economy thus necessarily remain speculative.

Second, the Soviet Union's unstable legal environment makes it difficult to track changes over time. The basic juridical rubric for the black market was speculation (buying and reselling goods with the intention of making a profit), which was outlawed in every Soviet criminal code. It was applied sparingly and rather arbitrarily during the New Economic Policy, but Josef Stalin's renewed assault on the private sector in the late 1920s created pressures for a formal redefinition. The law of August 22, 1932, mandated a five-year labor-camp sentence for speculation, including petty sales, but it failed to standardize prosecution, which exhibited the campaign character (extreme fluctuations in prosecution rates) typical of the criminal justice system as a whole. The law was finally softened in 1957 through the redefinition of petty speculation as a noncriminal offense, and then through the reduced prison sentence for criminal speculation in the 1960 RSFSR Criminal Code.

Third, the black market's parameters are blurred by the fact that some private transactions remained legal. Through at least the 1950s, most black-market sales took place at outdoor markets or bazaars. The primary function of these venues, from an official point of view, was to enable farm-

ers to sell surplus produce after all delivery obligations had been met. Their secondary function, however, was to provide a space where any citizens could hawk used clothes and surplus possessions, and where registered artisans could sell certain kinds of handmade goods. These transactions, which eventually came to include the private provision of services, included many shadings of legality. Aron Katsenelinboigen accordingly argued that the Soviet economy should be thought of in terms of a spectrum of colored markets, and not just black versus red.

In sum, the black market was a product of regulated prices, shortages, and geographical disparities in the availability of goods, as well as a legal system that criminalized most private transactions.

JULIE HESSLER

BLACK REPARTITION

To Russian peasants, black repartition (*cherny poredel*) meant the long-anticipated seizure and redistribution of all nonpeasant lands (those held by the gentry, townspeople, the Crown, etc.) by and among the peasants who lived near them. Most peasants desired such a land settlement and exercised it whenever government power weakened, giving them the opportunity. Examples of black repartitions abound in the revolutions of 1905–1906 and especially in 1917–1918. Peasants placed so much priority on seizure of land and permanent expulsion of nonpeasants from the countryside that they often destroyed valuable farm equipment, animals, and buildings in the process.

The term was also claimed by a short-lived Russian Populist revolutionary group, Land and Freedom, the first Populist group, which appeared in the wake of the 1873–1874 Going to the People movement. In October 1879 it foundered on doctrinal issues and broke into two groups. The larger one, called People's Will, focused on a revolutionary terror campaign to bring down the autocracy and spark a socialist revolution. The smaller group, Black Repartition, preferred a path of gradualism

and propaganda to develop a revolutionary consciousness among the people. Just as hostile to the autocracy as People's Will, Black Repartition did not think that a terror campaign could succeed, because merely changing political institutions (if that were possible) would mean nothing without an accompanying social revolution.

Black Repartition's doubts were proved right when the People's Will terror campaign, culminating in the assassination of Emperor Alexander II on March 1 1881, led not to a revolution but instead to popular revulsion toward and severe police repression of all revolutionary groups. These included Black Repartition, which fell apart in Russia as most of its members were arrested and its printing press seized. By the autumn of 1881, Black Repartition had ceased to exist in Russia. Only a few leaders (Georgy Plekhanov, Vera Zasulich, and Pavel Axelrod) escaped abroad to Switzerland. There Black Repartition's leaders turned from doctrinaire populism to Marxist socialism and formed the first Russian Marxist organization, Emancipation of Labor.

Neither Black Repartition nor Emancipation of Labor had significant influence over the small revolutionary movement inside of Russia in the 1880s, though Emancipation of Labor participated as the Russian representatives to the socialist Second International. Isolated in Switzerland, Black Repartition was ill-equipped to build the revolutionary consciousness among workers that they had deemed essential to a real revolution. Their leaders were important, however, in the formation of the Russian Social Democratic Workers Party at the turn of the century.

A. DELANO DUGARM

BLACK SEA FLEET

The Black Sea Fleet came into being in 1783, when naval units were formed in the Bay of Akhtiar (and from 1784 at Sevastopol) to serve in the Sea of Azov and in wars against Turkey. During the Crimean War (1853–1856) it fought several naval battles, and its sailors were deployed on land in the defense of Sevastopol. The Paris Peace Conference in 1856 allowed Russia to have naval units in the Black Sea, a right expanded by the 1871 London Conference. At the start of World War I, the Black Sea Fleet consisted of five battleships, two cruisers, seventeen destroyers, and a number of auxiliary vessels; during the conflict it engaged in several actions against the Germans and Turks.

The fleet also became a center of revolutionary activity. In 1904 socialist cells were organized among its sailors, and this led to the mutiny on the battleship *Potemkin* the following year. In December 1917 Bolsheviks and other factions were active among the sailors. In May 1920 units that had sided with the Bolsheviks were organized as the Black Sea and Azov naval units, both of which took part in the fighting against Peter Wrangel's White forces. The Tenth Party Congress in 1921 decided to form a fleet in the Black Sea and the Sea of Azov using two repaired destroyers and five escort vessels. Over the years these were substantially reinforced by the addition of larger ships and naval aviation. On January 11, 1935, the Council of People's Commissars combined the Azov and Black Sea units to form a new Black Sea Fleet. The Great Terror took a heavy toll among naval officers, and all of the fleet's commanders were purged. In January 1938, I. S. Iumashev was appointed commander, only to be replaced by F. S. Oktiabrsky in August 1939.

At the start of World War II the fleet had one battleship, six cruisers, seventeen destroyers, and numerous cutters, minelayers, mine sweepers, torpedo boats, and auxiliary vessels. It also had 625 aircraft. The Luftwaffe, operating with little opposition in the early days of the war, destroyed many Soviet ships and port facilities, but nonetheless the Black Sea Fleet managed to evacuate Odessa and Sevastopol. Overall, however, the performance of the Red Army in the Crimea in 1941 and 1942 was a succession of defeats at the hands of an outnumbered and outgunned enemy. During October and November 1941, Vice Admiral G. I. Levchenko commanded the defense of the Crimea, but in December he was arrested and sentenced to ten years

(later released). When German forces advanced into the Caucasus, the Black Sea Fleet landed troops behind their lines at Novorossiysk, an inconclusive battle glorified when Leonid Brezhnev was in power because of his participation as a political officer. In 1943, with the German defeat at Stalingrad and retreat from the Caucasus, the navy conducted another landing at Kerch, which also failed. In May 1943 Oktiabrsky was replaced by L. A. Vladimirsky, but he was reinstated in March 1944 and continued as commander until November 1948. In 1944 and 1945, the Black Sea Fleet and the Danube Flotilla supported the Red Army's offensive operations in southeastern Europe.

Beginning in the 1950s, the Black Sea Fleet began to receive new ships and was a major component of the Soviet advance into the Mediterranean and the third world, but its buildup was marred by an explosion on the *Novorossiysk* in October 1955, the greatest peacetime disaster in the history of the Soviet Navy, which cost the commander in chief of the Navy, Admiral N. G. Kuznetsov, his job. The buildup, which even included the introduction of aircraft carriers, continued until the breakup of the Soviet Union. After 1991 both Russia and Ukraine claimed ownership of the fleet. An agreement on May 28, 1997, gave Russia the more modern ships and a twenty-year lease on the Sevastopol naval base. The Black Sea Fleet is now a shadow of its once-proud self, decaying along with other Russian military assets.

MICHAEL PARRISH

BLAT

The use of personal influence to obtain something of value.

Blat, common slang in Soviet times, comes from an older Russian expression, *blatnoy zhargon*, “thieves’ talk”, which accompanied misdemeanors. For example, an industrial *tolkach* (“pusher” or expeditor) might use *blat* to obtain a necessary part or material without a planned allocation order (*naryad*). This could be better than waiting for essential supplies through formal channels, because the monthly and yearly plans had deadlines for fulfillment. One way of accommodating a friendly pusher would be to declare perfectly good output “rejects,” which could be legally sold without an allocation order. Use of *blat* would be more likely if the receiving enterprise were producing a low-priority consumer good. A citizen might also employ *blat* to secure a larger apartment in a favorable location.

Generally speaking, use of *blat* implied a reciprocal obligation in the future, but it could involve a gift of a bottle of vodka or small bribe. *Blat* usually functioned between friends or relations; one hesitated to deal with complete strangers because these transactions were illegal and penalties could be severe. With taut planning, when goods and apartments were always short, a popular folk saying was “*Blat* is higher than Stalin!” Such informal arrangements were vital to offset the many gaps of Soviet planning and to allow managers to fulfill their plans and citizens to survive and live with some comfort. In many cases, then, *blat* may be said to have been functional for the totalitarian order, even if somewhat illicit. On the other hand, it also detracted from the competitive advantage the system’s directors wished to give to important production, which was subject to stringent control.

MARTIN C. SPECHLER

BLOCH, JAN

(1836–1902), Jewish-Polish born industrialist, banker, railroad magnate, and adviser to the Russian Ministry of Finance; author of *Future War in Its Technical, Economic, and Political Relations* (1898).

Jan Bloch, also known as Jean de Bloch and Ivan Stanislavovich Bliokh, was born in Radom, in the kingdom of Poland, to Jewish parents. He converted to Calvinism in the 1850s and to Catholicism upon his marriage into a prominent banking family of Warsaw. Bloch made his fortune in the railway boom of the 1860s, when he funded the construction of rail lines in southwest Russia. He was a strong advocate of liberal reform.

Bloch addressed the technical, economic, and political aspects of modern, industrial war. He combined a detailed analysis of military technology and the changes it was bringing to the battlefield with a strategic-operational assessment of the role of railroads, and concluded that defense would dominate the offense, making impossible a single, decisive battle. Maneuver would give way to firepower and positional warfare. Indecision, when coupled with the capacity of modern economies to generate war materials for the front, would turn a general European war into a protracted and bloody conflict. Modern war in this form would lead to social crisis and revolution. Bloch concluded that a general European war would be so destructive that statesmen would be prudent enough to avoid unleashing one.

Bloch's pacifism was not utopian, but rather was founded upon pragmatism and pessimism. Behind Bloch's analysis of future war stood several decades of sustained study of railroads and their impact on the national economy, national finances, and the study of the so-called Jewish question and modern anti-Semitism. Moreover, his research work rested upon a methodology that was distinctly modern and interdisciplinary, involving the collective research of specialists in a research institute. Bloch's practical influence on the government of Nicholas II was limited and short-lived, culminating in a call for a European disarmament conference. Bloch opposed any military adventure in the Far East. He died in 1902, before the Russo-Japanese War provided a warning of political and military things to come.

JACOB W. KIPP

BLOK, ALEXANDER ALEXANDROVICH

(1880–1921), poet, playwright, essayist.

Alexander Blok, one of Russia's greatest poets and a key figure in the Symbolist movement, was born in St. Petersburg in 1880, into an aristocratic family of German and Russian descent. His father was a professor of law at the University of Warsaw and a talented musician; his mother, a poet and translator. Blok's parents separated shortly after his birth; he spent his childhood with his maternal grandfather, botanist Andrei Beketov, until his mother obtained legal divorce in 1889, remarried, and brought Blok with her into her new apartment. Blok wrote verse from his early childhood on, but his serious poetry began around age eighteen. He studied law without success at the University of Petersburg, transferred to the Historical-Philosophical Division, and received his degree in 1906.

As a young writer, Blok made the acquaintance of Symbolist poets, including Vladimir Soloviev and Andrei Bely. His first poetry collection *Stikhi o prekrasnoy dame* (Verses on a beautiful lady) was published in 1904. Inspired by a mystical experience and his relationship with Lyubov Mendeleyeva, daughter of the famous chemist, whom he married in 1903, the poems, resonant with Romantic influence, depict a woman both earthly and divine, praised and summoned by the poet. Despite the sublime character of these poems, there are early signs of rupture and disturbance; the supplicatory tone itself borders on despair.

Blok followed his first collection with the lyric drama *Balaganchik* (The fair show booth), staged in 1906, and his second poetry collection, *Nechayannaya radost* (Inadvertent joy, 1907). These propelled him to fame. From there he continued to write prolifically, developing a distinctly tumultuous and sonorous style and influencing his contemporaries profoundly. His unfinished verse epic *Vozmezdie* (Retribution, 1910–1921), occasioned by the death of his father, chronicles his family history as an allegory of Russia's eventual spiritual resurrection; the cycle *Na pole Kulikovom* (On the field of kulikovo, 1908), celebrates Russia's victory

in 1380 over the Mongol Tatars. Yet, despite the spiritual optimism of both works, their lyrical heights coincide with expressions of despair.

Blok supported the 1917 Revolution, perceiving it as a spiritual event, a step toward a transformed Christian world. Yet his twelve-part poem *Dvenadtsat* (The twelve, 1918) suggests deep ambivalence. Among the most complex and controversial of Blok's works, it mixes voices and idioms (slogans, war cries, laments, wry remarks) without resolving the discord. The shifts of rhythm and diction, the mimicry of sounds, and the punctuation of the verse with diverse exclamations overwhelm the Christian motif.

Blok's disillusionment with the Soviet bureaucracy and censorship is suggested in his fierce and eloquent essay "On the Poet's Calling" (1921), at one level a short treatise on Alexander Pushkin, at another level, a discussion of the conflict between the poet ("son of harmony") and the "mob" (*chern*). The poet's calling, according to Blok, is to create form (cosmos) out of raw sound (chaos); this goal is opposed by the mob—the officials and bureaucrats, those committed to everyday vanities.

Blok died in 1921 from a mysterious (possibly venereal) disease, in a state of malnutrition, despair, heavy drinking, and mental illness. His work continued to be published in the Soviet Union after his death, with a marked discrepancy between official and unofficial interpretations.

DIANA SENECHAL

BLOODY SUNDAY

On January 22, 1905, a peaceful demonstration of workers in St. Petersburg was dispersed by troops with considerable loss of life. The event triggered the 1905 Revolution.

The demonstration was organized by the Assembly of Russian Factory and Mill Workers of St. Petersburg, a labor organization patronized initially by police authorities and led by an Orthodox priest, Father Georgy Gapon. When four members of the Assembly were fired from the giant Putilov Works just before Christmas, the Assembly felt its very existence threatened and decided to resort to the desperate means of an illegal strike. The Putilov Works was struck on the January 16, but by January 20 the entire city of St. Petersburg was paralyzed by the strike. All eleven branches of the Assembly became perpetual meeting places for the strikers. There was much discussion about the workers presenting a petition to Nicholas II, outlining their grievances. At a meeting with some of his lieutenants, Gapon asked if they should not take their petition directly to the tsar himself. The idea was enthusiastically supported and spread like wildfire. When the petition was finished, copies of "The Most Humble and Loyal Address" were sent to important ministers and the tsar. The address was to be delivered at 2 P.M. on Sunday at the Winter Palace Square.

Before the fateful day, the branches of the Assembly held continuous meetings; the petition was read, and workers cried, fell on their knees, and swore to die for their cause. Wound up by the oratory, they were determined to reach the Palace Square. The Minister of the Interior, not realizing the seriousness of the situation, assured Nicholas II that matters were under control and that he was completely confident a show of force would be sufficient to stop the demonstration.

Each branch made its own arrangement to arrive at the Square by 2 P.M. Members of the farthest branch departed in the early morning hours. The largest procession came from the main branch at the Putilov Works, and was led by Gapon. Efforts were made to give it a religious appearance: Religious paraphernalia, icons, and portraits of tsars were carried at the head of the procession. Shortly after eleven o'clock the immense crowd began to move, singing prayers and the national anthem just as church bells were announcing the end of services. The crowd moved along the main thoroughfare toward the Narva Triumphal Arch, where the road across the river was blocked by troops. The commander tried to disperse the crowd with cavalry; then the bugle sounded a warning, followed by a warning volley over the crowd. This seemed only to encourage workers; they closed ranks and, singing louder, began to run at the

troops. Soldiers lowered their rifles and began shooting at the crowd. Most of the casualties that day occurred during this procession. Similar events unfolded in several other locations. In some areas the crowds were dispersed without the use of firearms; in others, workers were allowed to pass on their own. On one bridge the officer said he could not let them cross but did not stop workers from crossing on the ice below the bridge.

Despite the shootings, many workers reached the Square, where the Guards barred their way. In the crowd were many survivors of earlier shootings; many were wounded, but all anxiously awaited the appointed hour. The hour came and nothing happened. As the demonstrators were becoming unruly, the commander of the Guards decided to disperse them. A volley was fired near Alexander Garden. The crowd was pushed onto Nevsky Prospect, where some officials in uniforms and policemen were attacked. Troops tried to clear the area, and more shots were fired.

In Russia and abroad, there was universal revulsion at the shooting of peaceful demonstrators. The authorities themselves were shocked; nobody had wanted what happened. The press reported thousands killed, but the official count eventually listed 130 killed, including a policeman. Bloody Sunday, as it became known, began the Revolution of 1905.

WALTER SABLINSKY

BOBRIKOV, NIKOLAI IVANOVICH

(1839–1904) governor general of the Grand Duchy of Finland and Russian nationalist.

Nikolai Ivanovich Bobrikov has left a lasting imprint on the collective memory of the Finns as the personification of the oppressive Russification policies toward national minorities. Originally Bo-

brikov, chief of staff of the St. Petersburg military district, was appointed governor general of the Grand Duchy of Finland in August 1898 to bring about closer integration of the separate Finnish army with the Russian armed forces. The new Conscription Act, drafted by the Russian General Staff, not only aroused strong protests in Finland but even failed to receive the sanction of the Russian State Council in 1901. Bobrikov then appealed directly to Nicholas II who ordered, according to Bobrikov's wishes, the total abolition of the Finnish army. Immediately after assuming his duties, the strongly nationalist Bobrikov also changed some Finnish symbols and procedural matters that in his view boosted the "false idea of the separateness of the borderland." In the same vein, Bobrikov made the Finnish Senate and the central administration adopt the Russian language. He also initiated both the abolition of the Finnish tariff and monetary institutions and the governmental supervision of the university. Furthermore, he envisioned but did not accomplish the spreading of the Russian language to local administration, the thorough inspection of the textbooks used in Finnish schools, and the introduction of the autocratic system in Finland. Bobrikov faced opposition in Finland in the form of demonstration and strikes, but he largely succeeded in splitting the opposition by skillfully manipulating it, imposing strict censorship, and strongly curtailing the right of free speech and assembly. To combat emerging activist groups, Bobrikov sought and achieved dictatorial rights in 1903. By that time his original supporters, Minister of War Alexei Kuropatkin and the Minister of the Interior Vyacheslav Plehve, had already shown some weariness of the harsh methods Bobrikov invariably used when dealing with the Finns. Finnish activists had made plans to assassinate Bobrikov but were preempted by an individual malcontent on June 16, 1904.

BOLOTNIKOV, IVAN ISAYEVICH

(c. 1565–1608), outstanding rebel military leader during Russia's Time of Troubles.

Ivan Bolotnikov led the so-called Bolotnikov rebellion (1606–1607) against Tsar Vasily Shuisky. That rebellion was the largest and most powerful uprising in Russian history prior to the twentieth century and has often been compared to the rebellions led by Stepan Razin and Emelian Pugachev. For several generations, scholars erroneously claimed that the Bolotnikov rebellion was a social revolution against serfdom led by a radical former slave, Ivan Bolotnikov. In fact, the rebellion was not a social revolution; serfs did not actively participate in it, and rebel goals never included the abolition of serfdom. Instead, Bolotnikov led rebel forces loyal to Tsar Dmitry against the usurper Tsar Vasily Shuisky. Wrongly believing that Dmitry had escaped Shuisky's assassins, the rebels essentially renewed the civil war that had brought Tsar Dmitry to power. Bolotnikov's forces came from all social classes, and the uprising against Shuisky quickly spread from southwestern Russia to cover half the country.

Little is known about Bolotnikov. In the late sixteenth century, he apparently served the tsar as a cavalryman but fell on hard times and indentured himself to a rich aristocrat as an elite military slave. He later fled to the southern frontier and joined the Volga or Don cossacks. Bolotnikov was eventually captured by Crimean Tatars and sold into slavery; he spent several years working on a Turkish ship before Germans liberated him. On his way back to Russia, he passed through Poland, where he heard about Shuisky's *coup d'état*. Bolotnikov made his way to Sambor (home of Marina Mniszech), where a man claiming to be Tsar Dmitry interviewed him. "Tsar Dmitry" (Mikhail Molchanov) appointed Bolotnikov commander-in-chief of all rebel forces struggling against Shuisky.

Sometime during the summer of 1606, Bolotnikov arrived in Putivl (headquarters of the rebellion in Tsar Dmitry's name), took command of a rebel army, and began marching toward Moscow. He defeated Shuisky's rapidly retreating forces, and town after town welcomed Bolotnikov as a hero. During the siege of Moscow (late fall 1606), however, rivalry between Bolotnikov and another rebel commander, Istoma Pashkov, led to Pashkov's betrayal of the rebels during a decisive battle on December 2, 1606. Forced to break off the siege, Bolotnikov retreated in good order to Kaluga,

where his skillful defense of the fortress frustrated all efforts by Shuisky's commanders to capture the town. After breaking up the siege of Kaluga, Bolotnikov led his men to stone-walled Tula to link up with other rebel forces. Soon Tula came under siege, but once again Bolotnikov's skill and energy frustrated his enemies. Eventually, Tsar Vasily's army built a dam below Tula and flooded the town, forcing the rebels to surrender on October 10, 1607.

Bolotnikov managed to negotiate good terms for the rebels. He gave himself up, but his men (with their weapons) were allowed to go free. Many of them immediately rejoined the civil war against Shuisky by entering the service of the second False Dmitry. Bolotnikov was taken in chains to Moscow as a trophy of Tsar Vasily's victory over the rebels. He was then transferred to Kargopol in north Russia, where he was blinded and drowned in early 1608. So great was his reputation that even some of Shuisky's supporters privately criticized the tsar for executing the brilliant rebel leader.

CHESTER DUNNING

BOLSHEVISM

Bolshevism was a dissenting movement within Russian Marxism before World War I that became the founding political party of the Soviet Union. The Russian word *bolshevik* means literally a person in the majority, as opposed to *menshevik*, a person in the minority. These words originated at

the second party congress of the Russian Social Democratic Workers Party (RSDWP) that convened in 1903 in Brussels, then London. The dominant figure in the Bolshevik faction of the RSDWP was Vladimir Ilich Ulyanov (1872–1924), more commonly known by his revolutionary name, Lenin.

Marxism was a radical ideology that predicted a revolution by the working classes that would seize power from the capitalist class, or bourgeoisie. The Russo-Japanese War of 1904–1905 indeed precipitated a revolution, but the Romanov autocracy of Tsar Nicholas II survived by a combination of reform and repression. The RSDWP originally focused its efforts on the urban working classes in Russia, but Lenin and the Bolsheviks ultimately triumphed because they recognized the need to appeal to the poor peasantry as well.

Bolsheviks were divided between educated intellectuals and factory workers. Some became professional revolutionaries. Others became leaders of the labor movement and strikers in industrial workplaces. The professional revolutionaries favored an illegal conspiracy to seize power, tracing their roots to the Jacobins of the French Revolution and the Populist terrorists of the 1870s in Russia. The working-class Social Democrats favored a revolution that would benefit workers and their families, not intellectuals seeking power.

Russian Social Democrats were inspired by the spontaneous unrest that occurred in Russia in 1905—strikes, peasant violence, and demands for a constitution and a parliament. Neither Bolsheviks nor Mensheviks played a leading role that year. The October Manifesto issued by the tsar promised a constitutional system with an elected parliament, or Duma. After these concessions, the government combined peasant land reform with bloody police repression to quiet the countryside.

After 1905, Bolsheviks and Mensheviks faced new choices. Should they participate in a bourgeois parliament such as the Duma? Or should they boycott its elections and recall their deputies? Should they focus on legal means of achieving power through the system? Or should they engage in illegal actions such as terror, bank robberies, and strikes? Should they limit themselves to the working classes in the towns? Or should they look for support in the peasantry as well?

The Bolsheviks were particularly attentive to the orthodox Marxism of Karl Kautsky in Germany and the radical syndicalism of Georges Sorel and others in France and Italy. Orthodox Marxists

feared any revision of Karl Marx's ideas in favor of reform rather than revolution. The syndicalists believed in forming trade unions and convincing workers to believe in a future general strike. After 1905, the Bolsheviks were deeply divided between those who, like Lenin, claimed to be following Marxist scientific orthodoxy, and those who, like Alexander Bogdanov, believed Marxism was not a set of truths, but a set of useful myths that workers might be convinced to believe. Lenin, in his book *Materialism and Empirio-criticism* (1909), attacked Bogdanov's relativism.

The Bolsheviks fought over who should control the party faction's money and RSDWP schools for workers and revolutionaries in Paris, Bologna, and Capri. Lenin's followers in European exile argued with Bogdanov's followers inside Russia. Although the Bolshevik journal was called *Pravda* (Truth), the Bolsheviks by 1914 were a shrinking group of alienated intellectuals who could agree on little except for their old feud with the Mensheviks, who maintained better ties with factory workers.

When World War I broke out in 1914, there was no great general strike. Russian socialists were divided among defensists who patriotically supported their government at war against Germany and Austria-Hungary, and pacifists who wanted to end the war. Lenin wanted the war transformed into a revolution and civil war, then a workers' revolution. But most Russian socialists, exiled either in Europe or Siberia, hardly affected the war effort.

In 1917 the February Revolution surprised both the government and the revolutionaries. Nicholas II abdicated. A liberal Provisional Government shared power with radical workers' councils, known as *soviets*, that sprang up in the factories, farms, and army units. Returning from exile, Lenin and the Bolsheviks proclaimed war against the Provisional Government. As the unpopular great war dragged on, the Bolshevik program of workers' revolution and land reform gained them majorities in the soviets. By October, the Bolshevik-dominated soviets easily took power in the major cities from the weakened Provisional Government.

The Bolshevik Revolution did not end the dispute between Lenin and the other Bolsheviks. Bogdanov led a proletarian culture movement popular among the masses for a few years. Leon Trotsky became a popular and independent leader of the new Red Army. And Josef Stalin quietly worked to cre-

ate a single-party dictatorship that exiled or killed its enemies. By 1924 the Bolsheviks had become a party in their own right, first the Russian Communist Party (Bolsheviks) in 1918, and then the Communist Party of the Soviet Union in 1924. Ultimately the Bolsheviks led a massive and violent program of industrialization, collectivization of agriculture, and purges that made the Soviet Union as autocratic and unpopular as its imperial predecessor.

BOLSHOI THEATER

Moscow's Bolshoi ("grand") Theater became a kind of national theater and showcase for Russian opera and ballet in the Soviet period. The original Bolshoi Theater opened in 1825, although historians trace the theater's lineage through a series of private theaters operating in Moscow as early as 1776. The Bolshoi Theater stands on the site of the last of

The Bolshoi Theater in Moscow, home to the acclaimed Bolshoi ballet and opera companies. © STEVE VIDLER/SUPERSTOCK

these, which burned in 1805. The drama, opera, and ballet troupes of these older, private Moscow theaters were combined to create the Moscow Imperial Theaters the following year. One year after the drama troupe moved to a new home (the Maly ["small"] Theater) in 1824, the opera and ballet troupes took up residence in the newly constructed Bolshoi Theater. That theater burned in 1853. The present theater opened three years later, retaining the old name.

Moscow's Bolshoi Theater functioned as a poor relation to the better-funded, national stage of St. Petersburg's Maryinsky Theater until the Soviet era. Italian and Russian opera troupes coexisted in the rebuilt house in the nineteenth century, though Russian opera held a distinctly second place, and the theater witnessed few noteworthy premieres of Russian operas. The ballet repertory likewise consisted mostly of restaged works from the repertory of the St. Petersburg ballet. Marius Petipa's 1869 *Don Quixote* furnishes the rare exception. When Peter Tchaikovsky's *Swan Lake* debuted in the Bolshoi Theater in 1877, it was considered a flop (and was reworked in St. Petersburg in 1894 and 1895). The opera's fortunes rose slightly when Sergei Rachmaninoff became its chief conductor from 1904 to 1906. Rachmaninoff debuted two of his own operas in the theater, which then featured such outstanding singers as Fyodor Chalyapin, Leonid Sobinov, and Antonina Nezhdanova.

The Bolshoi Theater became a showcase of Soviet operatic and balletic talent in the Stalin era. Dancers and choreographers from St. Petersburg were transferred to Moscow, much as the repertory had once been. A highly dramatic, athletic style evolved in the ballet in the post-World War II period, as the ballet school began to produce home-grown stars. Dancers such as Maya Pliset-skaya and Vladimir Vasiliev achieved worldwide renown touring the world in new vehicles in the years of the post-Stalin Thaw, though the company's balletmasters and repertory continued to be imported from Leningrad. The opera followed a similar strategy, mostly restaging works that had premiered successfully elsewhere. None of the operas of Dmitri Shostakovich or Sergei Prokofiev had their premieres in the Bolshoi, for example. Instead, the opera specialized in monumental productions of the nineteenth-century Russian repertory, though singers such as Galina Vishnevskaya, Irina Arkhipova, Elena Obraztsova, and Vladimir Atlantov established international careers in them.

The prestige of both the Bolshoi's opera and ballet fell precipitously in the first post-Soviet decade. The era of glasnost revealed that productions, performers, and the theater's management were out of step with the theatrical mainstream of Europe and North America as once-generous state subsidies dwindled. As the theater approached artistic and financial bankruptcy, the Bolshoi ceded its place as a national institution to the more western-oriented Maryinsky Theater in St. Petersburg.

TIM SCHOLL

BONNER, YELENA GEORGIEVNA

(b. 1923), human rights activist and widow of dissident Andrei Sakharov; recipient of the National Endowment for Democracy's 1995 Democracy Award.

Yelena Bonner grew up among the elite of the Communist Party. Her mother, Ruth Bonner, joined the party in 1924. Her stepfather, Gevork Alikhanov, was a secretary of the Communist International. Bonner's childhood ended abruptly with the arrests of her stepfather and mother in 1937. She finished high school in Leningrad and volunteered as a nurse during World War II. After the war, Bonner attended medical school and worked as a pediatrician.

Bonner met physicist and political dissident Andrei Sakharov in 1970, at the trial of human rights activists in Kaluga. They married in 1972. Bonner devoted herself to Sakharov, representing him at the Nobel Peace Prize ceremony in 1975. After Sakharov's exile to Gorky in 1980, Bonner became his sole link to Moscow and the West, until her

own exile in 1984. In December 1986, Mikhail Gorbachev invited the couple to return to Moscow.

Since Sakharov's death in 1989, Bonner has emerged as an outspoken and admired advocate of democracy in Russia. She joined the defenders of the Russian parliament during the attempted coup of August 1991. She withdrew her support of Boris Yeltsin to protest the war in Chechnya, which she condemned as a return to totalitarianism. Accepting the 2000 Hannah Arendt Award, Bonner denounced President Vladimir Putin's unlimited power, the state's expanding control over the mass media, its anti-Semitism, and "the de facto genocide of the Chechen people."

LISA A. KIRSCHENBAUM

BOOK OF DEGREES

The *Book of Degrees of the Royal Genealogy* is the first narrative history of the Russian land. The massive text filling some 780 manuscript leaves composed between 1556 and 1563 is one among various ambitious literary projects initiated by Metropolitan Macarius, archbishop of Moscow and head of the Russian church during the reign of Ivan the Terrible as tsar (1547–1584). Ivan, whose Moscow-based ancestors had ruthlessly appropriated vast tracts of territory for their domain, encouraged writers to craft defenses of his legitimacy. Churchmen responded with a version of the dynasty's history conveying their own perspective on the country's future course. Conflating chronicles, saints' lives, and legends, the book traces the ancestry of the Moscow princes in seventeen steps or degrees from Augustus Caesar and highlights the noble deeds of each ruler from Grand Prince Vladimir I (980–1015) to Tsar Ivan. The book's purpose was not just to praise the tsar. The larger aim of its writers was to portray the Muscovite state as a divinely protected empire whose rulers would flourish as long as they obeyed God's com-

mandments, listened to the metropolitans, and supported the interests of the church.

The *Book of Degrees* is a work of both historiographical and literary significance. As an exercise in historiography, its scope and ideology are comparable to ninth-century compilations of Frankish history glorifying the line of the Carolingian rulers. Like the Carolingian historians, its authors define their country as the "new Israel." By so doing, they legitimize members of a lesser princely clan whose founders had neither political nor dynastic claims to power, but who wished to be treated as the equals of the Byzantine emperors. Elite political circles accepted the book's representations as authoritative proof of the rulers' imperial descent. The portraits of the Moscow princes as champions of their faith commanded no less authority for the church. Lives, newly composed for the book, depicting rulers as saints equal to the apostles or as wonder-workers, served as testimony for the canonization of some Moscow princes and members of their families.

As a literary work, the *Book of Degrees* marks a critical turning point between the predominantly monastic, fragmentary medieval writings and early modern narrative prose. Entries culled from annalistic compilations (primarily the Nikon, Voskresensk, and Sophia chronicles) and saints' lives supplied its building blocks, but the book transcends traditional generic categories and has no single literary model. Guided by the priest Andrei (Metropolitan Afanasy), writers unified their materials in a systematic way, fashioning fragments into expansive tales and integrating each tale into a progressively unfolding story of a tsardom whose course was steered by divine providence. A preface sets forth the book's theological premises in terms of metaphors serving as figures or types for Russia's historical course: the tree (linking the genealogical tree of the rulers, the Jesse Tree, and the tree in King Nebuchadnezzar's prophetic dream); the ladder (a conflation of Jacob's ladder and St. John Climacus's divine ladder of perfection); and water (baptism). Readers are directed to a detailed table of contents, the first of its kind, which sets forth the book's unique design and permits individual chapters to be swiftly located. Comparison of the three earliest surviving copies of the text (the Chudov, Tomsk, and Volkov copies, all dated in the 1560s), shows how original entries were altered, supplemented, and sometimes shifted from their initial textual positions by the editors to support their ideological interests.

The book's value as an authoritative source and a statement of the nation's identity was recognized by Peter the Great, who in 1716 ordered a synopsis to be used for his own planned, but never executed, history of Russia. Because of the book's importance for the canon, the Russian Academy commissioned a printed edition in 1771. As the first cohesive narrative of national history, the *Book of Degrees* served as a model for subsequent histories of Russia and as a sourcebook for mythological and artistic reconstructions of an idealized past.

GAIL LENHOFF

BORETSKAYA, MARFA IVANOVNA

Charismatic leader of the Novgorodian resistance to Muscovite domination in the 1470s.

Marfa Boretskaya ("Marfa Posadnitsa") was born into the politically prominent Loshinsky family, and married Isaac Andreyevich Boretsky, a wealthy boyar, who served as mayor (*posadnik*) of Novgorod from 1438 to 1439 and in 1453. She bore two sons, Dmitry and Fyodor. Marfa was widowed in the 1460s but remained one of the wealthiest individuals in Novgorod who owned slaves and sizable estates. Peasants on her lands to the north of Novgorod engaged in fishing, fur hunting, livestock raising, and salt boiling. Her southern estates produced edible grains and flax.

By the middle of the fifteenth century, the relations between the principalities of Moscow and Novgorod, long strained by chronic disputes over trade, taxes, and legal jurisdiction, intensified into overt hostilities. The campaign of 1471 was purportedly undertaken by Ivan III as a response to the efforts of a party of Novgorodian boyars to ally themselves with King Casimir of Lithuania. Marfa

is accused in an anonymous essay, preserved in a single copy of the Sophia First Chronicle, of plotting to marry the Lithuanian nobleman Michael Olelkovich and rule Novgorod with him under the sovereignty of the Lithuanian king. The Cathedral of St. Sophia, seat of the archbishops and emblem of Novgorodian independence, would have thereby come under Catholic jurisdiction. No other sources corroborate these charges against Marfa, although her son Dmitry, who served as mayor during 1470 and 1471, fought against Moscow in the decisive Battle of Shelon (July 14, 1471) and was executed at the order of Ivan III on July 24, 1471. Her other son Fyodor has also been identified with the pro-Lithuanian faction in Novgorod. The evidence for his activity is ambiguous. Nevertheless, he was arrested in 1476 and exiled to Murom, where he died that same year. Following the final campaign of 1478, Ivan III ordered that Muscovite governors be introduced into Novgorod and that the landowning elite be evicted and resettled. On February 7, 1478, Marfa was arrested. Her property was confiscated, and she was exiled. The date of her death is not known.

GAIL LENHOFF

BORODINO, BATTLE OF

Borodino was the climactic battle of the Campaign of 1812, which took place on September 7. Napoleon had invaded Russia hoping to force a battle near the frontier, but he pursued when the Russian armies retreated. His efforts to force a decisive battle at Smolensk having failed, Napoleon decided to advance toward Moscow, hoping to force the Russian army, now under the command of Field Marshal Mikhail Kutuzov, to stand and fight. Pressed hard by Tsar Alexander to do so, Kutuzov selected the field near the small village of Borodino, some seventy miles west of Moscow, for the battle. He concentrated his force, divided into two armies under the command of Generals Peter Bagration and

Mikhail Barclay de Tolly, and constructed field fortifications in preparation for the fight.

Napoleon eagerly seized upon Kutuzov's stand and prepared for battle. Napoleon's normal practice would have been to try to turn one of the flanks of the Russian army, which Kutuzov had fortified. Mindful of the Russians' retreat from Smolensk when he had tried a similar maneuver, Napoleon rejected this approach in favor of a frontal assault. The extremely bloody battle that ensued centered around French attempts to seize and hold Kutuzov's field fortifications, especially the Rayevsky Redoubt. The battle was a stalemate militarily, although Kutuzov decided to abandon the field during the night, continuing his retreat to Moscow.

Borodino was effectively a victory for the Russians and a turning point in the campaign. Napoleon sought to destroy the Russian army on the battlefield and failed. Kutuzov had aimed only to preserve his army as an effective fighting force, and he succeeded. Napoleon's subsequent seizure of Moscow turned out to be insufficient to overcome the devastating attrition his army had suffered. Russia's losses were, nevertheless, very high, and included Bagration, wounded on the field, who died from an infection two weeks later.

FREDERICK W. KAGAN

BOROTBISTY

"Fighters" (full name: Ukrainian Party of Socialist Revolutionaries, or Communist-Borotbisty), a short-lived Ukrainian radical socialist party, which played an important role in the revolutionary events in Ukraine from 1918 to 1920.

Originally the left wing of the Ukrainian Party of Socialist Revolutionaries, the Borotbisty, who derived their name from the party's weekly, *Borotba* (Struggle), took control of the Central Committee in May 1918 and formally dissolved their parent party. While supporting the Soviet political order, the Borotbisty advocated Ukrainian autonomy and

the existence of an independent Ukrainian army. Although the Borotbisty never had a well-developed organizational structure, the party enjoyed popularity among the poor Ukrainian peasantry. After Bolshevik troops took control of Ukraine in early 1919, Vladimir Lenin sought to quell peasant discontent by including some Borotbisty in the Ukrainian Soviet government. However, as the White and Ukrainian nationalist armies forced the Bolsheviks to retreat, in August 1919 the Borotbisty, together with the Ukrainian Social Democratic Party (Independentists), formed the Ukrainian Communist Party (Borotbisty) and requested admission to the Communist International as a separate party, without success. Although the Bolsheviks were uneasy about the Borotbist national communist stance, the two parties collaborated again during the Red Army offensive in Ukraine in early 1920. At its height, the Borotbist membership may have reached fifteen thousand. In March 1920 the Kremlin pressured the Borotbisty into dissolving their party and joining the Communist Party of Ukraine, which was the Ukrainian branch of the Bolshevik party. The Borotbist leadership agreed to the dissolution with the understanding that this was the only way to preserve a separate Ukrainian Soviet republic. During the early 1920s some former Borotbisty, such as Hryhory Hrynko and Olexandr Shumsky, occupied important positions in the Soviet Ukrainian party leadership and government. Shumsky rose to prominence after 1923 as a leader of the Ukrainization drive, although by the end of the decade he was criticized for his national deviation. During the 1930s most former Borotbisty, including Panas Lyubchenko, who had risen to the position of the head of the republican government, fell victim to the Stalinist terror. Among the very few survivors was the celebrated filmmaker Olexandr (Alexander) Dovzhenko.

SERHY YEKELCHYK

BOYAR

In the broadest sense, every privileged landowner could be called a boyar; in a narrower sense, the term refers to a senior member of a prince's retinue during the tenth through thirteenth centuries, and marked the highest court rank during the fourteenth to seventeenth centuries. The word *boyar* probably stems from a Turkic word meaning "rich" or "distinguished." Coming from a mixed social and ethnic background, boyars served a prince, but they had the right to change their master, and enjoyed full authority over their private lands.

The relationship between a prince and his boyars varied across the regions. In the twelfth to fifteenth centuries, boyars acquired considerable political power in some principalities ruled by members of the Ryurikid dynasty and in Novgorod, where they formed the governing elite. In the Moscow and Tver principalities, boyars acknowledged the sovereignty of the prince and cultivated hereditary service relations with him. In the sixteenth and seventeenth centuries, the rank of boyar became the highest rung in the Muscovite court hierarchy. It was reserved for members of elite families and was linked with responsible political, military, and administrative appointments.

During the seventeenth century, the rank of boyar became open to more courtiers, due to the growing size of the court, and it gradually disappeared under Peter the Great. It is often assumed that all boyars were members of the tsar's council, the so-called Boyar Duma, and thereby directed the political process. This assumption led some historians to assume that Muscovy was a boyar oligarchy, where boyars as a social group effectively ran the state. However, there was always a hierarchy among the boyars: A few boyars were close advisors to the tsar, while most acted as high-ranking servitors of the sovereign.

BOYAR DUMA

Boyar Duma is a scholarly term used to describe the royal council or the upper strata of the ruling elite in the fifteenth through seventeenth centuries. The term *duma* often appears in the sources with the meaning "advice," "counsel," or "a council." The influential Romantic historian Nikolai Mikhailovich Karamzin first used the combination "boyar duma" (*boyarskaya дума*), which is never encountered in the sources.

East Slavic medieval political culture, which relied heavily on scripture, morally obligated every worthy prince to discuss all weighty matters with his advisers. In the tenth through fifteenth centuries, princes often discussed political, military, and administrative issues with other members of the ruling family, senior members of their armed retinue, household officials, church leaders, and local community leaders. The balance of power between the ruler and his counselors, as well as the format and place of their meetings, varied depending on the circumstances. The Muscovite tsars adopted the tradition of consulting with their closest entourage, continuing to do so even during periods of political turmoil, like the Oprichnina and the Time of Troubles. The 1550 Legal Code refers to the tradition of consultation, but there were no written laws regulating the practice of such consultations or limiting the authority of the ruler in favor of his advisers in judicial terms.

The growing social and administrative complexity of the Muscovite state during the sixteenth century resulted in the increasing inclusion of distinguished foreign servitors, high-ranking cavalrymen, and top-level officials at meetings with the tsar. The sources describe the practice of consultations by inconsistently using various terms, including *duma*. From the mid-sixteenth century, the term *blizhnyaya дума* (privy duma) appears in the documents more regularly.

The state school of nineteenth-century Russian historiography interpreted the tradition of consultations between the ruler and his advisers in formal, legal terms. Historians linked the appearance of a clearly structured council, which they termed the boyar duma, with the formation of the court rank system during the fifteenth and sixteenth centuries. It was assumed that the boyar duma included all people holding the upper court ranks of boyar, okolnichy, counselor cavalryman (*dumny dvoryanin*), and counselor secretary (*dumny dyak*).

Students of law treated the boyar *duma* as a state institution by focusing on its functions and competence.

The artificial concept of the boyar *duma* as a group of people entitled to sit on the council because of their status became a basis for various interpretations of the character of the pre-Petrine state and its politics. Vasily Osipovich Klyuchevsky pioneered this trend by describing the boyar *duma* as “the fly-wheel that set in motion the entire mechanism of government.” Klyuchevsky’s concept of the boyar *duma* was developed in the numerous prosopographical and anthropological studies of the Muscovite elite. Vasily Ivanovich Sergeevich questioned the concept of the boyar *duma*, observing that there is no documentary evidence of participation of all holders of the upper court ranks in consultations with the ruler. In line with this approach, other scholars shift their emphasis in the study of the practice of consultations from the court ranks of the sovereign’s advisers to the cultural background of this practice.

BRAZAUSKAS, ALGIRDAS

(b. 1932), Lithuanian political leader.

Algirdas Mykolas Brazauskas emerged as a major public figure in the Soviet Union in 1988. A member of the Central Committee of the Lithuanian Communist Party (LCP) since 1976, a member of the party’s *biuro* (equivalent of Politburo) since

Lithuanian Communist Party leader Algirdas Brazauskas led his republic’s break from Moscow in 1991. © STEPHAN FERRY/LIAISON. GETTY IMAGES.

1977, and by training an engineer, he had been a specialist in construction and economic planning. In 1988 he won note as a party leader who dared to appear on a public platform with the leaders of the reformist Movement for Perestroika (Sajudis) in Lithuania. He became a popular figure, and in October, with the approval of both Moscow and Sajudis leaders, he replaced Ringaudas Songaila as the party’s First Secretary.

In his work as First Secretary of the LCP from 1988 to 1990, Brazauskas became a model for reformers in other republics throughout the Soviet Union. He pursued a moderate program for decentralizing the Soviet system, attempting to loosen Moscow’s control of Lithuania step by step. In this he had to strike a balance between party leaders in Moscow who demanded tighter controls in Lithuania and rival Lithuanians who demanded a sharp

break with Moscow. He experienced sharp criticism from both sides for being too lenient toward the other, yet he remained a popular figure within Lithuania.

Brazauskas presided over the dismantling of the Soviet system in Lithuania. In 1988 and 1989, as First Secretary of the LCP, he held the highest reins of political power in the republic, although he held no post in the republic's government. In December 1989, the Lithuanian parliament ended the Communist Party's supraconstitutional authority in the republic. Then the LCP separated itself from the Communist Party of the Soviet Union. In January 1990 Brazauskas took the post of president of the Lithuanian Supreme Council, Lithuania's parliament. After new elections in February and March 1990 returned a noncommunist majority, Vytautas Landsbergis became the president of the parliament, and Brazauskas lost the reins of power, although he still led the LCP and became deputy prime minister. The Lithuanian government had replaced the party as the seat of power in the republic.

During the Soviet blockade of Lithuania in 1990, Brazauskas headed a special commission that planned the most efficient use of Lithuania's limited energy resources. In January 1991 he resigned as deputy prime minister and remained in the opposition until the Lithuanian Democratic Labor Party (LDLP), the successor to the LCP in independent Lithuania, won the parliamentary elections in the fall of 1992. After serving briefly as president of the parliament, in February 1993, he was elected president of the Republic. As president he could have no party affiliation, and he accordingly withdrew from the LDLP. At the conclusion of his five-year presidential term in 1998, he retired from politics, but in 2000, still a popular figure, he returned, organizing a coalition of leftist parties that won a plurality of seats in parliamentary elections. In 2001 he assumed the post of Lithuanian prime minister.

ALFRED ERICH SENN

BREST-LITOVSK PEACE

The Treaty of Brest-Litovsk between Soviet Russian and Imperial Russia, signed in March of 1918, ended Russia's involvement in World War I.

In the brief eight months of its existence, the Treaty of Brest-Litovsk was labeled an obscene, shameful, and dictated peace by various members of the Soviet government that signed it. Since then, it has been condemned by Western and Soviet historians alike. Under threat of a renewed German military advance, Russia agreed to give up 780,000 square kilometers of territory, fifty-six million people, one-third of its railway network, 73 percent of its iron ore production, and 89 percent of its coal supply. What remained of the former Russian empire now approximated the boundaries of sixteenth-century Muscovy.

An onerous separate peace with an imperialist power was far from what the Soviet regime had hoped to achieve by promulgating Vladimir Lenin's Decree on Peace within hours of the October Revolution. This decree, which appealed to all the peoples and governments at war to lay down their arms in an immediate general peace without annexations or indemnities, was to the Bolsheviks both a political and a practical necessity. Not only had Bolshevik promises of peace to war-weary workers, peasants, and soldiers enabled the party to come to power—but the Russian army was on the verge of collapse after years of defeat by Germany. The Allies' refusal to acknowledge this appeal for a general peace forced the Bolsheviks and their partners in the new Soviet government, the Left Socialist Revolutionaries (SRs), to begin negotiations with the Central Powers.

The German-Soviet armistice signed at German divisional headquarters in Brest-Litovsk in mid-December was only a short-term triumph for the Bolshevik-Left SR government. When negotiations for a formal treaty commenced at the end of the month, the German representatives shocked the inexperienced Russians by demanding the cession of areas already occupied by the German army: Poland, Lithuania, and western Latvia. Debates raged within the Bolshevik Party and the government over a suitable response. Many Left SRs and a minority of Bolsheviks (the Left Communists) argued that Russia should reject these terms and fight a revolutionary war against German imperialism. Leon Trotsky proposed a solution of "neither war nor peace," whereas Lenin insisted that the government accept the German terms to gain a "breathing space" for

exhausted Russia. Trotsky's formula prevailed in Petrograd, but after Trotsky announced it at Brest-Litovsk, the Germans resumed the war and advanced toward Petrograd. With Lenin threatening to resign, the Soviet government reluctantly bowed to Germany's demands, which now became even more punitive, adding the cession of Ukraine, Finland, and all of the Baltic provinces. Soviet representatives signed the treaty while demonstratively refusing to read it; the fourth Soviet Congress of workers', soldiers', and peasants' deputies ratified it, signifying the immense popular opposition to continuing the war. The Left SRs, however, withdrew from the government in protest.

The Brest-Litovsk peace exacerbated the civil war that had begun when the Bolshevik Party came to power in Petrograd in October 1917. The SRs, the dominant party in the Constituent Assembly dissolved by the Soviet government in December 1917, declared an armed struggle against Germany and the Bolsheviks in May 1918. In July 1918 the Left SRs attempted to break the treaty and reignite the war with Germany by assassinating the German ambassador. Various Russian liberal, conservative, and militarist groups received Allied support for their ongoing war against the Bolshevik regime. Thus the effects of the Brest-Litovsk peace continued long past its abrogation by the Soviet government when Germany surrendered to the Allies in November 1918.

BREZHNEV CONSTITUTION *See* CONSTITUTION OF 1977.

BREZHNEV DOCTRINE

Although in its immediate sense a riposte to the international condemnation of the invasion of

Czechoslovakia in August 1968, the “Brezhnev Doctrine” was the culmination of the long evolution of a conception of sovereignty in Soviet ideology. At its core was the restatement of a long-standing insistence on the right of the USSR to intervene in a satellite's internal political developments should there be any reason to fear for the future of communist rule in that state.

Linked to the name of General Secretary of the Communist Party of the Soviet Union (CPSU), Leonid Brezhnev, because of its encapsulation in a speech he read in Warsaw on November 13, 1968, the doctrine had already been expounded by ideologue Sergei Kovalev in *Pravda* on September 26, 1968, and, before the invasion, by Soviet commentators critical of the Czechoslovak reforms. It resembled in most respects the defense of the invasion of Hungary in 1956, and included aspects of earlier justifications of hegemony dating to the immediate postwar period and the 1930s.

Sovereignty continued to be interpreted in two regards: first, as the right to demand that the non-communist world, including organizations such as the United Nations, respect Soviet hegemony in Eastern Europe, and second, as permitting the USSR's satellites to determine domestic policy only within the narrow bounds of orthodox Marxism-Leninism. Any breach of those parameters would justify military intervention by members of the Warsaw Pact and the removal even of leaders who had come to power in the ways that the Soviet political model would consider legitimate.

The elements of the Brezhnev Doctrine reflecting the exigencies of the late 1960s were the intensified insistence on ideological uniformity in the face of a steady drift to revisionism in West European communist organizations as well as factions of ruling parties, and on bloc unity before venturing a less confrontational coexistence with the West. Preoccupied with protecting the Soviet sphere against external challenges and internal fissures, the Brezhnev Doctrine lacked the ambitious, more expansionist tone of earlier conceptions of sovereignty.

Although not officially overturned until Mikhail Gorbachev and Eduard Shevardnadze radically reconceptualized foreign policy in the late 1980s, the future of the Brezhnev Doctrine was already in doubt when the USSR decided not to invade Poland in December 1980, after the emergence of the independent trade union, Solidarity. The debates in the Politburo at that time revealed a shift

in the thinking of even some of its more hawkish members toward a discourse of Soviet national interest in place of the traditional socialist internationalism.

KIERAN WILLIAMS

BREZHNEV, LEONID ILICH

(1906–1982), leading political figure since the early 1960s, rising to Chairman of the Presidium of the Supreme Soviet and leader of the ruling Politburo.

Leonid Illich ("Lyonya") Brezhnev's rise in Soviet politics was slow but sure. He was Secretary of the Central Committee of the Communist Party from 1964, and after April 1966 he took the office of General Secretary. His tenure as Chairman of the Presidium of the Supreme Soviet spanned 1961 to 1963 and from 1977 to 1982. Brezhnev led the ruling Politburo from October 1964, after organizing the ouster of Nikita S. Khushchev, until his death. Although Brezhnev's ultimate successor, the reformer Mikhail S. Gorbachev, would accuse him of presiding over an era of stagnation (*zastoi*, literally a standstill) in the Soviet Union's economic development and political progress, many Russians remember his era as a "golden age" (*zolotoi vek*) when living standards steadily improved. This was the result of his policy of borrowing from the West, combined with the twofold doubling of world oil prices and a deliberate decision after 1971 to reallocate production in favor of consumer products and foods. Together with Brezhnev's policy of vainly trying to achieve military superiority over every possible combination of foreign rivals and the growing corruption that he deliberately encouraged, the reallocation from industrial goods to consumption and agriculture did in fact lead to a slowing of the expansion of output that Soviet leaders deemed to constitute economic growth. It was this slowdown that lent credibility to Gorbachev's later charge of stagnation.

EARLY CAREER

Brezhnev was born on December 19, 1906, in the east Ukrainian steel town of Kamenskoe, later renamed Dneprodzerzhinsk. His grandfather and father had migrated there from an agricultural village in Kursk province, hoping to find work in the local steel mill. Unlike some of his later Politburo colleagues, who joined the Red Army at age fourteen, Brezhnev evidently played no role in the civil war. At the time of collectivization, having trained in Kursk as a land surveyor, he was working in the Urals where there were few peasant villages to collectivize. In 1931 he abruptly returned to his home city, where he enrolled in a metallurgical institute, joined the Communist Party, and accepted low-level political assignments. Completing his studies in 1935, he trained as a tank officer for one year in eastern Siberia, only to return again to Dneprodzerzhinsk. Often accounted a member of the generation whose political careers were launched when the purges of 1937 and 1938 vacated so many high posts in the Communist Party, Brezhnev received only minor appointments. By 1939 he was no more

than a provincial official, supervising the press and party schooling, and he transferred the next year to oversee conversion of the province's industry to armaments production. The German invasion in June 1941 interrupted that uncompleted task, and within a month Brezhnev had been reassigned to the regular army as a political officer. With the rank of colonel, he was charged with keeping track of party enrollments and organizing the troops. Many years later, well into his tenure as General Secretary, efforts were made to glorify him as a war hero, primarily by praising him for regularly visiting the troops at the front; however, he never actually took much part in combat.

Following the war he was recommended to Nikita S. Khrushchev, whom Josef Stalin had assigned to administer the Ukraine as Communist Party chief. Khrushchev presumably approved Brezhnev's assignments, first as Party administrator of the minor Zaporozhe province and later of the more important Dnepropetrovsk province. Although Brezhnev would later claim that Stalin himself had found fault with his work in Dnepropetrovsk, Khrushchev seems to have regarded Brezhnev as an effective troubleshooter and persuaded Stalin to put Brezhnev in charge of the lagging party organization in neighboring Moldavia in 1950. Brezhnev did well enough that he was chosen for membership in the Central Committee, and then inducted into its Presidium, as the ruling Politburo was renamed when Stalin decided to greatly expand its membership. (This expansion, apparently, was the first move in a plan to purge its senior members). But Stalin's death in March 1953 canceled whatever plans he may have harbored. In that same month, Brezhnev was summarily transferred back to the armed forces, where he spent another year supervising political lectures, this time in the navy. Although his postwar political career was temporarily derailed, he had gained the opportunity to form bonds with a number of officials who would take over ranking posts when he became General Secretary. Moreover, his reassignment to the Ministry of Defense enabled him to make additional connections with top military commanders.

Khrushchev's success in the power struggle unleashed by Stalin's death enabled the First Secretary to recall Brezhnev from military duty in 1954. Brezhnev was sent to Kazakhstan to take charge of selecting the Communist Party officials who would execute Khrushchev's plan to turn the so-called Virgin Lands into a massive producer of grain crops. Within eighteen months Brezhnev took the

place of his initial superior and successfully led the transformation of the Virgin Lands. This record, combined perhaps with Brezhnev's previous experience, moved Khrushchev to return Brezhnev to Moscow in June 1957 as the Communist Party's overseer of the new strategic missile program and other defense activities. While Brezhnev could claim some credit for the successful launch of Sputnik in October 1957, he had supervised only the last stages of that program. He did not manage to prevent the failure of the initial intercontinental ballistic missile program, on which Khrushchev had placed such high hopes. By 1960 Brezhnev had been shoved aside from overseer of defense matters to the ceremonial position of Chairman of the Presidium of the Supreme Soviet, where for the first time he came into extensive contact with officials of foreign governments, particularly in what was then becoming known as the Third World. A stroke suffered by his rival, Frol R. Kozlov, enabled Brezhnev to return to the more powerful post of Secretary of the Central Committee, where Khrushchev regarded him as his informal number two man.

LEADER OF THE POLITBURO, 1964–1982

It was Brezhnev who organized the insider coup against his longtime patron, Khrushchev, spending some six months calling party officials from his country seat at Zavidovo and delicately sounding them out on their attitudes toward the removal of the First Secretary. Khrushchev quickly learned about the brewing conspiracy; but the failures of his strategic rocketry, agricultural, and ambitious housing programs, as well as dissatisfaction with his reorganizations of Party and government, had undermined Khrushchev's authority among Soviet officials. The Leningrad official, Kozlov, on whom Khrushchev had relied as a counterweight to Brezhnev, did not recover from his illness. Khrushchev was thus unable to mount any effective resistance when Brezhnev decided to convene the Central Committee in October 1964 to endorse Khrushchev's removal. Brezhnev did not overplay his own hand, taking only the post of First Secretary for himself and gaining rival Alexei N. Kosygin's consent to Khrushchev's ouster by allowing him to assume Khrushchev's post of Chairman of the Council of Ministers (head of the economy).

The contest between Brezhnev and Kosygin for ascendancy dominated Soviet politics over the next period. As a dictatorship, the Soviet regime could not engender the loyalty of the general populace by allowing citizens to reject candidates for the

exercise of power; in other words, it could not let them vote meaningfully. Thus, how to sustain popular allegiance was a recurrent topic of discussion among Soviet leaders, both in public and in private. In the public discussion, Brezhnev took the conventional Soviet stance that the Communist Party could count on the allegiance of workers if it continued its record of heroic accomplishment manifested in the past by the overthrow of tsarism, the industrialization of a backward country, and victory over Germany. He proposed two new heroic accomplishments that the leadership under his guidance should pursue: the transformation of Soviet agriculture through investment in modern technology, and the building of a military power second to none. Kosygin, by contrast, argued that workers would respond to individual incentives in the form of rewards for hard work. These incentives were to be made available by an increase in the production of consumer goods, to be achieved by economic reforms that would decentralize the decision-making process from Moscow ministries to local enterprises, and, not coincidentally, freeing those enterprises from the control of local party secretaries assigned to supervise industrial activity, as Brezhnev had done in his early career.

The contest between these competing visions took almost four years to resolve. Although Kosygin blundered early by interpreting the outcome of the 1964 U.S. presidential election as a sign of American restraint in the Vietnam conflict, Brezhnev equally blundered by underestimating the difficulty, or more likely impossibility, of resolving the Sino-Soviet split. Kosygin sought to protect economic reforms similar to the one he proposed for the Soviet Union, then in progress in the five East European states controlled by the Soviet Union. In Czechoslovakia, economic reforms suddenly brought about political changes at the top of the Communist Party, impelling its new leader, Alexander Dubcek, to begin retreating from the party's monopoly of power. Brezhnev took advantage of this emergency to align himself with military commanders pressing for the occupation of Czechoslovakia and the restoration of an orthodox communist dictatorship. Introduction of a large Soviet army enabled Czechoslovak communists, working under Brezhnev's personal direction, to remove reformers from power, and the replacement of leaders in Poland and East Germany ended economic reforms there as well. By 1971 proponents of economic reform in Moscow became discouraged by the evident signs of Kosygin's inability to protect adherents of their views, and Brezhnev emerged

for the first time as the clear victor in the Soviet power struggle.

According to George Breslauer (1982), Brezhnev used his victory not only to assert his own policy priorities but to incorporate selected variants of Kosygin's proposals into his own programs, both at home and abroad. At home he emerged as a champion of improving standards of living not only by increasing food supplies but also by expanding the assortment and availability of consumer goods. Abroad he now emerged as the architect of U.S.-Soviet cooperation under the name of relaxation of international tensions, known in the West as the policy of *détente*. Yet Brezhnev represented each of these new initiatives as compatible with sustaining his earlier commitments to a vast expansion of agricultural output and military might, as well as to continuing support for Third World governments hostile to the United States. His rejection of Kosygin's decentralization proposals did nothing to address the growing complexity of managing an expanding economy from a single central office.

Although the policy of *détente* and the doubling of world oil prices in 1973 and again by the end of the decade made it financially possible for Brezhnev to juggle the competing demands of agriculture, defense, and the consumer sector, there was not enough left over to sustain industrial expansion, which slowed markedly in the last years of his leadership. As the crucial criterion by which communist officials had become accustomed to judging their own success, the slowdown in industrial expansion undermined the self-confidence of the Soviet elite. Brezhnev's policy of cadre stability—gaining support from Communist Party officials by securing them in their positions—developed a gerontocracy that blocked the upward career mobility by which the loyalty of officials had been purchased since Stalin instituted this arrangement in the 1930s. Brezhnev therefore made opportunities available for corruption, bribe-taking, and misuse of official position at all levels of the government, appointing his son-in-law as chief of the national criminal police to assure that these activities would not be investigated. His encouragement of corruption rewarded officials during his lifetime, but it also further sapped their collective morale, and made some of them responsive to the proposals for change by his ultimate successor, Mikhail Gorbachev.

In foreign policy his initially successful policy of *détente* foundered as his military buildup lent

persuasiveness to objections from American conservatives. Soviet backing for the 1973 attack on Israel and for armed takeovers in Africa discredited the U.S. public's faith in the sincerity of the Soviet Union's peaceful intentions. By 1979 the effort to occupy Afghanistan, in a reprise of the Czechoslovak action, landed the Soviet army in a war it proved incapable of winning while compelling President Jimmy Carter to abandon arms control negotiations and to withdraw from the Moscow Olympics. In the summer of 1980 Polish strikers formed the movement known as Solidarity, demonstrating to Soviet officials that Brezhnev had bet wrongly on the combination of military expansion, improved food supplies, and increases in the availability of consumer goods to secure the allegiance of workers in communist-ruled states.

Under the strain of personal responsibility for preserving the Soviet order, Brezhnev's health deteriorated rapidly after the middle 1970s. In 1976 he briefly suffered actual clinical death before being resuscitated; as a result, he was constantly accompanied by modern resuscitation technology bought from the West (which had to be used more than once). Ill health made Brezhnev lethargic; it is unclear, however, what even a more energetic leader could have done to solve the Soviet Union's problems. Despite Brezhnev's torpor, his colleagues within the Politburo and his loyalists, whom he had placed in key posts throughout the apex of the Soviet party and state, continued to see their personal fortunes tied to his leadership. He remained in power until a final illness, which is thought to have been brought on by exposure to inclement weather during the 1982 celebration of the October Revolution anniversary.

LATER REAPPRAISAL

For Gorbachev and his adherents, Brezhnev came to personify everything that was wrong with the Soviet regime. The popularity of Gorbachev's program among Western specialists, and the interest generated by the new leader's dynamism after the boring stasis of Brezhnev's later years, precluded a reappraisal of Brezhnev's career until 2002, when a group of younger scholars picked up on Brezhnev's growing popularity among certain members of the Russian population. These people remembered with fondness Brezhnev's alleviation of their or their parents' poverty, a relief made all the more striking by the extreme impoverishment experienced by many in the post-Soviet era. This reassessment may appear unwarranted to those who

prize political liberty above marginal increments in material consumption.

RICHARD D. ANDERSON JR.

BRODSKY, JOSEPH ALEXANDROVICH

(1940–1996), poet, translator.

Joseph Alexandrovich Brodsky left school at the age of fifteen, and worked in many professions, including factory worker, morgue worker, and ship's boiler, as well as assisting on geological expeditions. During his early years, Brodsky studied foreign languages (English and Polish). His first foray into poetry occurred in 1957 when Brodsky became acquainted with the famous Russian poet Anna Akhmatova, who praised the creativity of the budding poet. In the 1960s Brodsky worked on translating, into Russian, poetry of Bulgarian, Czech, English, Estonian, Georgian, Greek, Italian, Lithuanian, Dutch, Polish, Serbian-Croatian, and Spanish origins. His translations opened the works of authors such as Tom Stoppard, Thomas Wentslowa, Wisten Oden, and Cheslaw Milosh to Russian readers; John Donne, Andrew Marwell, and Ewrypid were newly translated.

On February 12, 1964, Brodsky was arrested and charged with parasitism and sentenced to five years deportation. In 1965, after serving eighteen months in a labor camp in northern Russia, protests in the USSR and abroad prompted his return from exile.

During the summer of 1972, Brodsky emigrated to the United States and became a citizen in 1980. Before his departure from the Soviet Union, he published eleven poems during the period from 1962 to 1972.

By the 1960s Brodsky was still relatively unknown in the West. "Cause of Brodsky" found scant exposure on the pages of the emigrant press (*Russkaya mysl*, *Grani*, *Wozdushnye Puti*, *Posev*, etc.). Brodsky's first collection of poems was released by the Ardis publishing house in 1972. Throughout the 1970s Brodsky collaborated as a literary critic and essay writer in the *New Yorker* and the *New York Review of Books*, and gained a wider readership in the United States.

Brodsky taught at several colleges and universities, including Columbia University and Mount Holyoke College. In 1987 he won the Nobel prize for literature. He served as Poet Laureate of the United States from 1991 to 1992.

Brodsky died in 1996 of a heart attack in his Brooklyn apartment.

MARIA EITINGUINA

BRUCE, JAMES DAVID

(1669–1735), one of Peter the Great's closest advisers.

A man of many *métiers*, James David Bruce ("Yakov Vilimovich Bruce") served Russia over the course of his lifetime as general, statesman, diplomat, and scholar. Bruce participated in both the Crimean and Azov expeditions. In 1698 he traveled to Great Britain, where he studied several subjects, including Isaac Newton's then-avant-garde philosophy of optics (i.e., that light itself is a heterogeneous mixture of differently refrangible rays) and gravity (i.e., that celestial bodies follow the laws of dynamics and universal gravitation). Upon return to Russia, Bruce enthusiastically established the first observatory in his native country.

In 1700, at the age of thirty-one, Bruce achieved the rank of major general and commanded forces in the Great Northern War against Sweden. After a humiliating defeat by the Swedes near Narva on November 19, 1700, after which Peter reputedly wept, Peter vowed to improve his army and defeat Sweden in the future. He concluded that a modern army needed a disciplined infantry equipped with the latest artillery (rifles). This infantry was supposed to advance while firing and then charge with fixed bayonets. (The Russian army had consisted mostly of cavalry, its officer corps composed of foreign mercenaries.)

Bruce was one of the new trainers Peter employed to improve the quality of the Russian army. On July 8, 1709, Russian artillery defeated Charles's army and sent it into retreat. That year Bruce was awarded the Order of St. Andrew for his decisive role in reforming artillery as master of ordnance in the Great Northern War. In 1712 and 1713 Bruce headed the allied artillery of Russia, Denmark, and Poland-Saxony in Pomerania and Holstein. In 1717 he became a senator and president of Colleges of Mines and Manufacture. He was also placed in charge of Moscow print and St. Petersburg mint. As first minister plenipotentiary at the Aland and Nystad congresses, Bruce negotiated and signed the Russian peace treaty with Sweden in 1721, the same year he became count of the Russian Empire. He retired in 1726 with the rank of field marshal.

Bruce corresponded with Jacobite kinsmen and took pride in his Scottish ancestry. He owned a library of books in fourteen languages and was known by many as the most enlightened man in Russia.

JOHANNA GRANVILLE

BRUSILOV, ALEXEI ALEXEYEVICH

(1853–1926), Russian and Soviet military figure, World War I field commander.

Born in Tiflis (Tbilisi), Alexei Alexeyevich Brusilov entered military service in 1871, graduated from the Corps of Pages in 1872, and completed the Cavalry Officers School in 1883. As a dragoon officer during the Russo-Turkish War of 1877–1878, he fought with distinction in the Trans-Caucasus. Between 1883 and 1906 he served continuously at the Cavalry School, eventually becoming its commandant. Although he did not attend the General Staff Academy or serve in the Russo-Japanese War (1904–1905), he rose during the period from 1906 to 1914 to repeated command assignments, including two postings as a corps commander. At the outset of World War I his Eighth Army won important successes during its advance into Galicia and the Carpathians. Between May and July of 1916, Brusilov's Southwestern Front conducted one of the most significant ground offensives of World War I, in which his troops broke through the Austro-Hungarian defenses to occupy broad expanses of Volynia, Galicia, and Bukovina.

As supreme commander (May–July 1917) of the Russian armies after the February Revolution, Brusilov presided over the ill-fated summer offensive of 1917. After the October Revolution, unlike many of his colleagues, he refused to join the counterrevolutionary cause. Instead, at the outset of the war with Poland in 1920, he entered the Red Army, serving the new Soviet regime in various military capacities (including inspector general of

cavalry) until his death. A consummate cavalryman and a flexible military professional, Brusilov saw his primary career obligation as patriotic service to his country, whether tsarist or revolutionary.

BRUCE W. MENNING

BRYUSOV, VALERY YAKOVLEVICH

(1873–1924), poet, novelist, playwright, critic, translator.

Born in Moscow, Valery Bryusov was an early proponent of Symbolism in Russia. As editor of the almanac *Russkie Simvolisty* (Russian symbolists, 1894–1895), Bryusov presented the first articulation of the tenets of Modernism in Russia. Bryusov's poetry in this almanac illustrated the points set forth in the declarations, with elements of decadence, synaesthetic imagery, and Symbolist motifs.

In 1899 Sergei Polyakov invited Bryusov to participate in the founding of the Skorpion Publishing House. In addition to publishing the works of leading Symbolists, Skorpion Publishing House in 1904 sponsored the literary journal *Vesy* (The scales), which became the leading forum for writers of that time. By 1906 Bryusov became increasingly critical of writers and poets with whom he disagreed, instituting a vitriolic polemic against the proponents of mystical anarchism and the so-called younger generation of Symbolists, especially those involved with the journal *Zolotoye runo* (The golden fleece).

In the 1910s Bryusov continued to work in all aspects of artistic culture, writing plays, a novel, and literary criticism, and engaging the Futurists in a lively debate on poetry. In 1913 Bryusov wrote a book of poems under the pseudonym Nelli, combining an ironic life story of a tragic poet with experimental, Futurist-inspired poems. The ironic mystification met with consternation and derision by the Futurists.

Bryusov was an enthusiastic supporter of the Russian Revolution, believing it to be a transformative event in history. Bryusov became a member of the Communist Party in 1920 and was active in Narkompros (The People's Commissariat for Enlightenment), serving as head of its printing and library divisions. In 1921 Bryusov organized the Higher Institute of Literature and Art and was the director until his death.

MARK KONECNY

BUCHAREST, TREATY OF

The Treaty of Bucharest brought the Turkish war of 1806–1812 to an end. Having advanced the Russian frontier to the Dniester River in 1792, Catherine the Great intended to include Moldavia and Wallachia within a Dacian Kingdom under one of her favorites. The immediate occasion for the war, however, were the intrigues of Napoleon's ambassador at Constantinople, General Horace Sebastiani, who dismissed two pro-Russian princes in violation of protective rights obtained by the tsar in 1802. Catherine's grandson Alexander I opened hostilities in 1806 when sixty thousand men, initially led by General Mikhail Kamensky and later by Mikhail Kutuzov, crossed the Danube. This campaign proved desultory, even though in 1807 a Russian administration replaced the Greek Princes nominated by the Turks. When Napoleon met Tsar Alexander I at Tilsit (1807) and later at Erfurt (1808) to partition the Ottoman Empire, the former was willing to concede control of both principalities to Russia but was unwilling to give up Constantinople, the ultimate prize the French emperor had sought. In consequence, the good relations between the two emperors deteriorated. When it became apparent that Napoleon was planning a coalition for an invasion of Russia in 1812, the tsar, unwilling to fight Turks and French on two fronts, sent a delegation under General Count Alexander de Langeron, General Joseph Fonton, and the Russian ambassador to Constantinople, Count Andrei

Italinsky, to negotiate with the Turks in Bucharest. The latter were represented by the Grand Vizier Ahmed Pasha, the Chief Interpreter (Drogman) Mehmed Said Galid Effendi, and his colleague Demetrius Moruzi. They met at the inn of a wealthy Armenian Mirzaian Manuc. The talks were confrontational: the Turks unwilling to cede one inch of territory, the Russians demanding the whole province of Moldavia. In the end, Sir Stratford Canning, a young English diplomat who replaced the vacationing English ambassador Sir Robert Adair, made a diplomatic debut that earned him a brilliant career on the eve of the Crimean War. He argued that the Turks lacked the resources to continue the war, while the Russians needed the troops of Admiral Pavel Chichagov (taking over Kutuzov's command) who returned to Russia to face the Napoleonic onslaught. In the end, Canning cited an obscure article of the Treaty of Tilsit (article 12) negotiated by the Russian Chancellor Peter Rumyantsev as an acceptable compensation. This territory, misnamed by the Russians "Bessarabia" (a name derived from the first Romanian princely dynasty of Wallachia, which controlled only Moldavia's southern tier), advanced the Russian frontier from the Dniester to the Pruth and the northern mouth of the Danube (Kilia). This represented a gain of 500,000 people of various ethnic stock, 45,000 kilometers, five fortresses, and 685 villages. By sacrificing the coveted prize of both principalities and withdrawing the army from Turkey, the tsar was able to confront Napoleon on a single front. This, according to General Langeron, made a difference at the battle of Borodino (1812).

Not content at having saved most of the Moldo-Wallachian provinces, the Turks, who had no legal right to a territory over which they exercised *de jure* suzerainty, vented their frustration by hacking their chief interpreter Moruzi to pieces and hanging his head at the Seraglio. From a Romanian standpoint, the cession of Bessarabia to Russia in 1812 marked a permanent estrangement in Russo-Romanian relations, which continued in the early twenty-first century with the creation of a Moldavian Republic within the Russian Commonwealth.

RADU R. FLORESCU

BUDENNY, SEMEON MIKHAILOVICH

(1883–1973), marshal of the Soviet Union.

Born near Rostov-on-Don to non-Cossack parents, Budenny served in Cossack regiments during the Russo-Japanese War and in World War I (receiving four St. George's Crosses for bravery as a noncommissioned officer). Having joined the Bolsheviks in 1918 and being an accomplished horseman, he organized cavalry detachments around Tsaritsyn during the civil war before creating and commanding the legendary First Cavalry Army in actions against the Whites and the Poles. From 1924 to 1937 he served as Inspector of Cavalry, reaching the exalted rank of marshal in 1935. He actively helped purge the Red Army in 1937, as commander of Moscow military district, but the Nazi invasion revealed him to be completely out of his depth in modern, mechanized warfare. As commander-in-chief of the South-West Direction of the Red Army in Ukraine and Bessarabia, Budenny was largely responsible for the disastrous loss of Kiev in August 1941. Probably only his closeness to Josef Stalin and Kliment Voroshilov (a legacy of his civil war service at Tsaritsyn/Stalingrad) saved him from execution. Instead, he was removed from frontline posts in September 1941, becoming commander of cavalry in 1943 and deputy minister of agriculture, in charge of horse breeding. He was a member of the Central Committee of the Communist Party of the Soviet Union from 1939 to 1952. Virtually uneducated but with enormous charisma (and even more enormous moustaches), Budenny became a folklore figure, a decorative accoutrement to the grey men of the postwar Soviet leadership, and a museum piece. Present at all parades and state occasions, bedecked with medals and orders, he was a living relic of the heroic days of the Civil War. Several thousand streets, settlements, and collective farms were named in his honor, as was a breed of Russian horses. He lived out his last years quietly in Moscow, pursuing equestrian interests.

JONATHAN D. SMELE

BUKHARA

Established in the sixteenth century, the Bukharan khanate maintained commercial and diplomatic contact with Russia. Territorial conflicts with neighboring Khiva and Kokand prevented formation of a united front against Russia's encroachment in the mid-nineteenth century.

War from 1866 to 1868 ended with Russia's occupation of the middle Zarafshan River valley, including Samarkand, and the grant of trading privileges to Russian merchants. The 1873 treaty opened the Amu Darya to Russian ships; pledged the emir to extradite fugitive Russians and abolish the slave trade; and ceded Samarkand, leaving Russia in control of the water supply of the lower Zarafshan, including that of the capital.

Bukhara as a Russian protectorate was slightly larger than Great Britain and Northern Ireland, with a population of two and a half to three million. Urban residents comprised 10 to 14 percent of the total; the largest town was the capital, with population of 70,000 to 100,000. The dominant ethnic group was the Uzbeks (55–60%), followed by the Tajiks (30%) and the Turkmen (5–10%). Bukhara was ruled by an hereditary autocratic emir. Muzaffar ad-Din (1860–1885) was succeeded by his son Abd al-Ahad (1885–1910) and the latter's son Alim (1910–1920).

In reducing Bukhara to a wholly dependent but internally self-governing polity, Russia aimed to acquire a stable frontier in Central Asia, to prevent Britain alone from filling the political vacuum between the two empires, and to avoid the burdens of direct rule. This policy succeeded for half a century. After 1868 no emir contemplated using his army against his protector; in 1873 Britain and Russia recognized the Amu Darya as separating a Russian sphere of influence (Bukhara) from a British sphere (Afghanistan); and the emirs maintained sufficient domestic order.

Russia's impact increased over the years. In the mid-1880s Bukhara's capital was connected by telegraph with Tashkent; a Russian political agency was established; and the Central Asian Railroad was built across the khanate. In the latter part of the 1880s three Russian urban enclaves, and a fourth at the turn of the century, were established; by the eve of World War I they contained from thirty-five to forty thousand civilians and soldiers. In 1895 the khanate was included in Russia's customs frontier, and Russian troops and customs officials were stationed along the border with Afghanistan.

Russo-Bukharan trade increased sixfold from the coming of the railroad to 1913. Production of cotton, which represented three-fourths of the value of Bukhara's exports to Russia, expanded two and a half times between the mid-1880s and the early 1890s, grew slowly thereafter, but doubled during World War I. Unlike Turkestan, the khanate remained self-sufficient in foodstuffs.

After the fall of the tsarist regime, Emir Alim resisted pressure for reforms from the Provisional Government and the Bukharan Djadids (modernizers). With the Bolsheviks in control of the railroad, the Russian enclaves, and the water supply of his capital from December 1917, the emir maintained strained but correct relations with the Soviet government during the Russian civil war.

In the late summer of 1920 the Red Army overthrew Alim. A Bukharan People's Soviet Republic, led by Djadids, was proclaimed. Russia renounced its former rights, privileges, and property in Bukhara, but controlled the latter's military and economic affairs. The Djadids were purged in 1923, and the following year the Bukharan People's Soviet Republic was divided along ethnic lines between the newly formed Uzbek and Turkmen Soviet Socialist Republics.

SEYMOUR BECKER

BUKHARIN, NIKOLAI IVANOVICH

(1888–1938), old Bolshevik economist and theoretician who was ousted as a Rightist in 1929 and executed in 1938 for treason after a show trial.

The son of Moscow schoolteachers, raised in the spirit of the Russian intelligentsia, Nikolai Ivanovich Bukharin was a broadly educated and humanist intellectual. Radicalized as a high school student during the 1905 Revolution, he was drawn to the Bolshevik faction, which he formally joined in 1906. He enrolled at Moscow University in 1907 to study economics, but academics took second place to party activity. He rose rapidly in the Moscow Bolshevik organization, was arrested several times, and in 1911 fled abroad, where he remained until 1917. These six years of emigration strengthened Bukharin's internationalism; he matured as a Marxist theorist and writer and became known as a radical voice in the Bolshevik party. After a year in Germany, he went to Krakow in 1912 to meet Vladimir Lenin, who invited him to write for the party's publications. Bukharin settled in Vienna, where he studied and drafted several theoretical works. Expelled to Switzerland at the beginning of World War I, he supported Lenin's radical antiwar platform, continuing his activities in Scandinavia and then New York City.

When revolution broke out in Russia in early 1917, Bukharin hastened home. Arriving in May, he immediately took a leading role in the Moscow Bolshevik organization, which was dominated by young radicals. His militant stance brought him close to Lenin. In July 1917 he was elected a full member of the Central Committee, and in December he was appointed editor of the party newspaper, *Pravda*. Bukharin opposed the peace negotiations with the Central Powers at Brest-Litovsk and headed the Left Communists who called for a revolutionary war against capitalism; later he also opposed Lenin's view that state capitalism would be a step forward for Russia. In mid-1918, ending his opposition, he resumed his party positions as the burgeoning civil war led to war communism and rebellion by the Left Socialist Revolutionaries. In 1919, when a five-man Politburo was formally established, Bukharin became one of three candidate members and also became deputy chairman of the newly established Comintern. Serving in various capacities during the civil war, Bukharin also published extensively: including *Imperialism and World Economy* (1918), the popularizing and militant *ABC of Communism* (1920, with Yevgeny Preobrazhen-

sky); *Economics of the Transition Period* (1920), which celebrated the statization of the economy under War Communism but also began to explore how to build a socialist society after the revolution; and *Historical Materialism* (1921), a major analysis of Marxism in the twentieth century.

After Lenin introduced the New Economic Policy in 1921, debate swirled around the question of the relative importance that should be accorded industry and agriculture to achieve economic development within the framework of a socialist economy. Leon Trotsky and the Left Opposition favored rapid industrialization at the expense of agriculture, in what Preobrazhensky termed “primitive socialist accumulation.” Bukharin, disavowing the illusions of War Communism, emphasized the need to find an evolutionary path to socialism based on a strong alliance with Russia’s peasant majority and invoked Lenin’s last writings to legitimize this position. He argued that forcibly appropriating agricultural surpluses would ultimately lead to the disintegration of agriculture because peasants would no longer have an incentive to produce. While agreeing that industrialization was absolutely critical for the construction of socialism, he favored a gradual approach. Bukharin’s path to socialism relied upon a growing consumer market, possible only if there were private merchants to contribute to the growth of domestic trade. He argued for policies that would produce balanced growth at a moderate tempo, speaking of growing into socialism through exchange.

In the mid-1920s Bukharin aligned himself with the Stalinist majority against the Left, becoming a full member of the Politburo in 1924, and played a major role in the government. He was the architect of the pro-peasant policies introduced in 1925 and urged peasants to “enrich yourselves,” a phrase that would later be used against him. As editor of *Pravda* and other party publications, and a member of the Institute of Red Professors, Bukharin moved easily in the world of NEP intellectuals and artists and authored government policies favoring artistic freedom. He became head of the Comintern in 1926 after the ouster of Grigory Zinoviev and saw the collapse of his policy of cooperation with the Chinese Nationalists. In the same period, Bukharin strongly attacked the Left Opposition and helped achieve its total ouster from power in the fall of 1927.

Bukharin supported the 1927 decision of the Fifteenth Party Congress to adopt a five-year plan for Soviet industrialization, but he and the gradualist

Communist leader Nikolai Bukharin in London, June 1931.

© HULTON-DEUTSCH COLLECTION/CORBIS

policies he advocated fell victim to the radical and violent way Josef Stalin carried out the plan. Bukharin opposed Stalin’s harsh measures against the peasants after the amount of grain marketed fell off sharply. In September he published “Notes of an Economist,” criticizing efforts to inflate the industrial goals of the plan and defending the idea of balanced growth; it is impossible, he said, “to build today’s factories with tomorrow’s bricks.” Stalin and his allies counterattacked, labeling Bukharin, Alexei Rykov, and Mikhail Tomsky the “Right Opposition.” His power already undercut by the end of 1928, Bukharin was removed formally from the Politburo, the Comintern, and editorship of *Pravda* during 1929 and systematically vilified. In limbo for the next four years after half-hearted recantations, horrified by the destruction visited on the peasantry by collectivization, he served as research director for the Supreme Economic Council and its successor and wrote extensively on culture and science. In the era of partial moderation from 1934 to 1936, Bukharin became editor of the government newspaper, *Izvestiya*, participated in the commission to prepare a new Soviet constitution, and wrote about the danger of fascism in Europe.

The Great Purges ended the domestic truce. Bukharin was arrested in February 1937. In March 1938, along with the Right Opposition, he was tried for treason and counterrevolution in the last great show trial, the Trial of the Twenty-One, where he was the star defendant. Bukharin confessed to the charges against him, probably to save his young wife Anna Larina and their son Yuri (born 1934), and he was executed immediately. In the Khrushchev years, Bukharin came to symbolize an alternative, non-Stalinist path of development for the Soviet Union. He was rehabilitated in 1988, and Larina made public his last written work, a letter to future party leaders, that she had preserved by memory during years of imprisonment.

CAROL GAYLE
WILLIAM MOSKOFF

BUKOVINA

Bukovina is a region that straddles north-central Romania and southwestern Ukraine. First records

of the region date back to the fourteenth century, when the whole territory was a constituent part of the Moldovan Principality.

From 1504, the region was drawn under indirect Ottoman rule. However, following the Russo-Turkish war of 1768–1774, the Hapsburg Empire annexed the region, in accordance with the 1775 Convention of Constantinople.

During the initial stages of Austrian rule, Bukovina's population expanded rapidly. The region's reputation for religious toleration and relaxed feudal obligations saw a wave of German, Polish, Hungarian, Ukrainian, and Romanian immigrants flood into the area.

The collapse of the Austro-Hungarian Empire in the aftermath of World War I gave rise to a brief period of dispute concerning rights to the region, with both Romania and briefly independent Ukraine claiming sovereignty. The Treaty of Saint Germain awarded the territory to a newly enlarged Romania.

Control over the region shifted following the enactment of the clandestine Ribbentrop-Molotov pact, as the Soviet Union seized northern Bukovina (to the Sereth River) on June 29, 1940. This move precipitated an exodus of the region's German settlers.

Germany's attack on the Soviet Union in 1941 saw the whole territory temporarily revert to Romania. Bukovina's sizable Jewish population suffered during this period. However, the region was retaken by advancing Soviet troops, and in September 1944 northern Bukovina was officially incorporated into the Ukrainian Soviet Socialist Republic.

After a period of territorial stability under Communist rule, focus on the area returned during the 1990s. With an estimated 135,000 ethnic Romanians living in Ukrainian Bukovina, tentative calls were made by the Romanian government for a reversion to territorial arrangements that had existed prior to the Ribbentrop-Molotov pact. The Ukrainian government's unwillingness to engage Romanian demands meant the issue initially reached a stasis. However, Romania's application to join NATO forced a resolution of the dispute and, as such, a 1997 treaty mutually recognized the territorial integrity of the two states.

JOHN GLEDHILL

BULGAKOV, MIKHAIL AFANASIEVICH

(1891–1940), twentieth-century novelist, journalist, short story writer, and playwright; author of internationally acclaimed novel *Master and Margarita*.

Mikhail Afanasievich Bulgakov was born in Kiev. He graduated from the Kiev University Medical School in 1916 and married Tatiana Lappa, his first of three wives. He practiced medicine in provincial villages, then in Kiev, where he witnessed the outbreak of the Russian Civil War and struggled with morphine addiction. In 1920 he abandoned medicine for a writing career and moved to Vladikavkaz, Caucasus, where he wrote feuilletons and studied theater.

Bulgakov moved to Moscow in 1921. There his troubles with censorship began. His satirical (patently science fiction) novel *Heart of a Dog* (*Sobache serdtse*) was deemed unpublishable. His play *Days of the Turbins* (*Dni Turbinykh*), based on his autobiographical novel *White Guard* (*Belaya Gvardiya*), premiered in 1926 and was banned after its 289th performance (although it supposedly numbered among Josef Stalin's favorite plays). Subsequent plays were banned much earlier in the production process. His short story "Morphine" (1927) was his last publication in his lifetime. In 1930 he wrote a long letter (his second) to the Soviet government requesting permission to emigrate. He received in response a telephone call from Stalin, who offered him an assignment as assistant producer at the Moscow Art Theater. Although not subjected to forced labor or confinement, Bulgakov hardly enjoyed privilege. His work remained unpublished and unperformed. His attempts to appease the censors by tackling relatively safe subjects (historical fiction and adaptations) proved futile.

Bulgakov's novel *Master and Margarita* was written between 1928 and 1940. Resonant with the influence of Nikolai Gogol, it concerns the Devil, who, disguised as a professor, travels to Moscow to wreak havoc. This exuberantly irreverent work

swirls with fierce wit, narrative inventiveness, and a myriad of historical, literary, and religious references.

Bulgakov's last play, *Batum* (1939), written in honor of Stalin's sixtieth jubilee, was banned. Bulgakov died of kidney disease in 1940.

DIANA SENECHAL

BULGAKOV, SERGEI NIKOLAYEVICH

(1871–1944), political economist, philosopher, and theologian, whose life and intellectual evolution were punctuated by sharp breaks and shifts in worldview.

Sergei Bulgakov was born into the clerical estate. His father was a rural clergyman in Livny (Orël province); his mother, of gentry background. Like Nikolai Chernyshevsky and Nikolai Dobrolyubov a generation earlier, Bulgakov lost his faith at age fourteen and transferred from the seminary to the secular gymnasium at Elets, and then to Moscow University, where he studied political economy. His book *On Markets in Capitalist Conditions of Production* (1897) established him, together with Nikolai Berdyayev, Peter Struve, and Mikhail Tugan-Baranovsky, as one of Russia's foremost Legal Marxists. While researching his doctoral thesis ("Capitalism in Agriculture") in Europe, Bulgakov experienced a spiritual crisis, breaking down in pious tears before Raphael's canvas of the Sistine Madonna in Dresden. Upon his return to Russia, he spearheaded the movement from Marxism to idealism (including among others Berdyayev, Semen Frank, and Struve). Over the next twenty years he became a key participant in the seminal collections

of articles—*Problems of Idealism* (1902), *Landmarks* (1909), *From the Depths* (1918)—that charted the collective spiritual evolution of an important segment of the Russian intelligentsia. Bulgakov's idealism translated into political involvement in the Union of Liberation (founded in Switzerland in 1903) and included the drafting of the Cadet (Constitutional Democrat) party's agrarian program. During the Revolution of 1905, Bulgakov founded a small but intellectually sophisticated Christian Socialist party and was elected to the Second Duma.

Like his fellow liberals and radicals, Bulgakov experienced severe disappointment following Peter Stolypin's June 3 coup, formulated in his article in *Vekhi*, criticizing the intelligentsia. But by 1912 he had regained his sense of direction, finally completing his doctoral dissertation in a completely new tone. *Philosophy of Economy: The World as Household* (translated into English for the first time in 2000) is a work of social theory, and fully part of the "revolt against positivism" (H. Stuart Hughes) characteristic of European social thought in the period from 1890 to 1920. The book established Bulgakov's prominence as a thinker of the Russian Silver Age. In *Philosophy of Economy* and his next major work, *The Unfading Light* (1917), Bulgakov became a religious philosopher, bringing the insights of Orthodox Christianity, and particularly the concept of Sophia, the Divine Wisdom, to bear on problems of human dignity and economic activity.

Following the February Revolution, Bulgakov became a delegate to the All-Russian Council of the Orthodox Church; in 1918 he was ordained as a priest. Bulgakov was among the two hundred or so intellectuals Vladimir Lenin ordered shipped out of the new Soviet Union, across the Black Sea to Istanbul, in 1922. In his "second life," first in Prague and then in Paris, Bulgakov became arguably the twentieth century's greatest Orthodox theologian, crafting two theological trilogies modeled on the pattern of the liturgy: the "major" (e.g., *Agnets Bozhy*) and the "minor." Bulgakov was founder and dean of the St. Sergius Theological Academy in Paris and active in the ecumenical movement, including the Brotherhood of St. Alban's and St. Sergius and the Russian Christian Student Movement. Sophia, the Divine Wisdom, became a unifying principle in his writing, even leading to the development of a doctrine known as Sophiology. A tragic controversy over Sophia erupted in 1935; Bulgakov's views were condemned by both the Soviet Orthodox Church and the Synod of the Orthodox Church

in Exile in Czechoslovakia. Bulgakov's final work was a commentary on the Apocalypse of St. John the Divine. In 1944 he died of throat cancer in Paris.

Banned for seventy years in the Soviet Union, the writings of Bulgakov and his fellow Silver Age philosophers experienced a resurgence of popularity beginning in 1989.

BULGANIN, NIKOLAI ALEXANDROVICH

(1895–1975), political and military leader.

Nikolai Bulganin was a marshal of the Red Army who rose to the position of Soviet Prime Minister (1955–1958) under Nikita Khrushchev. Bulganin made his career mainly as a security and military official, but he was also an urban administrator. As mayor of Moscow (1931–1937) at a time when the capital was undergoing rapid expansion, he collaborated closely with Khrushchev in the construction of such enduring symbols of Stalinist urbanization as the Moscow metro. Bulganin's career benefited from the purges (1937–1938). Despite his lack of military training, Josef Stalin actively promoted him as a party commissar to oversee the military. He eventually joined Stalin's war cabinet in 1944. In 1947 he succeeded Stalin as minister for the armed forces and was promoted to marshal. A year later he joined the Politburo. Shortly after Stalin's death (1953), he was appointed minister of defense. In the ensuing political confrontation with secret police chief Lavrenti Beria, Bulganin sided with his friend Khrushchev, ensuring the military's loyalty. Bulganin's subsequent support for Khrushchev against Georgy Malenkov, who was advocating reduced spending on heavy industry, led to Bulganin's appointment as prime minister. In this post he actively supported Khrushchev's attempts to defuse

tensions with the West, over both Germany, and Yugoslavia. But he always played second fiddle to party boss Khrushchev. A year after Bulganin sided with the Stalinist Anti-Party Group against Khrushchev (1957), he was dismissed as both prime minister and marshal. Relegated to a minor economic post, he subsequently retired in 1960.

BULGARIANS

The Bulgarians, or Bulgars, belonged to the Turco-Altaic language group and originated from western Siberia, along the valley of the Irtysh River. During the first and second centuries C.E. they migrated in the direction of eastern Europe and settled in the region north of the Caucasus. There, the proto-Bulgarians mingled with local native tribes of Iranian origin, whose cultural achievements and social hierarchy had a substantial impact on their further development. The proto-Bulgarians were called Bulgars for the first time by a Roman chronographer in 354. During the seventh century, they merged with the Slavic tribes inhabiting the territory bordering the Black Sea, between Romania and Turkey, in southeastern Europe, which is present-day Bulgaria.

The Bulgarians took over the newcomers' Slavic language. The Turkish conquest of Bulgaria in 1396 hampered the development of the Bulgarian language for several centuries, but after the Bulgarians achieved independence in 1878, a modern literary language based on the vernacular emerged. Modern Bulgarian, which is generally said to date from the sixteenth century, borrowed words from Greek, Turkish, Russian, French, and German. Although it resembles Slavic languages, Bulgarian has a definite article and has almost completely dropped the numerous case forms of the noun. It uses position and prepositions (like English) to indicate grammatical relationships in a sentence instead of using cases (like Russian).

Once an independent kingdom, Bulgaria was dominated by the communist Party from 1946 until 1990, when a multiparty system was adopted. During the communist period, when Bulgaria was under the control of the Union of Soviet Socialist Republics (USSR), the once dominant agricultural sector was overtaken by manufacturing. After World War II, all industrial enterprises were nationalized and operated under a series of five-year economic plans, modeled after the Soviet system, with financial aid from the USSR. Bulgaria enjoyed one of the most prosperous economies of the Soviet bloc. The transition from the old command economy to a democratic, market-oriented economy, initiated after the collapse of the communist regime, has been slow. Mass privatization of state-owned industry was sluggish, although privatization of small-scale industry, particularly in the retail and service sectors, accelerated. Under communism, Bulgarians became accustomed to free health services, but Bulgaria's post-communist governments have not had the financial resources to maintain these services. In 2003, 52 percent of the population was employed in services, 36 percent in industry, and 12 percent in agriculture. Most Bulgarians (85%) are Bulgarian Orthodox, while 13 percent are Muslim, 0.8 percent are Jewish, 0.5 percent are Roman Catholic, and 0.2 percent are Uniate Catholic. The remainder, about 0.5 percent, are of Protestant, Gregorian-Armenian, and other faiths.

BULGARIA, RELATIONS WITH

Relations between Russia and Bulgaria are marked by their closeness in alphabet, language, culture,

and religion. Between the tenth and eighteenth centuries both nations used a literary language that had emerged originally in Bulgaria together with the Cyrillic alphabet. In the tenth and eleventh centuries, Bulgarian Orthodox culture served as the foundation of Russia's nascent culture and polity (reinforced by a second wave of Bulgarian influences in the fourteenth and fifteenth centuries), whereas the Russian variant of the common cultural tradition played a crucial role in the renaissance of Bulgarian culture and language in the late eighteenth and early nineteenth centuries. From the beginning of modern Bulgarian education in the 1830s, Russian language and literature have had a solid presence in the Bulgarian school curriculum, and the concomitant impact of Russian culture and ideas has dramatically influenced key developments in Bulgarian history, such as the emergence of nationalism, liberalism, and constitutionalism in the nineteenth century, and of communism, forced collectivization and industrialization, and a glasnost-inspired pro-democracy movement in the twentieth.

Political relations can be traced back to Bulgaria's triangular relationship with Kiev and Constantinople in the ninth to eleventh centuries. Bulgaria's repeated loss of independence and the fragmentation of Rus made contacts episodic until the rise of the Russian Empire and its many wars with Turkey in the eighteenth and nineteenth centuries. In the war of 1877 to 1878, Russia liberated Bulgaria from Turkish rule and laid the foundations of its state institutions. Mounting bilateral disagreements led to the severing of diplomatic relations in 1886. Bulgaria's *de facto* independence was recognized by Russia in 1896, after the failure of a protracted campaign of military conspiracies and assassinations backed by Alexander III. Until 1912 Bulgaria maneuvered between the Balkan policies of Austria-Hungary and Russia. In 1912 it entered into an alliance with Serbia and Greece under Russian tutelage. This alliance won the First Balkan War against Turkey, but disagreement between the allies led to the Second Balkan War in 1913, which ended in Bulgaria's defeat and the decline of Russian influence in Sofia. When Bulgaria entered War World I by attacking Serbia in September 1915, Russia declared war on Bulgaria and its fleet bombarded Varna. In 1916 Russian and Romanian troops opened a new front against Bulgaria but were defeated. In March 1918 Russia signed a peace treaty in Brest-Litovsk with the Central Powers, including Bulgaria.

Bulgaria's defeat by the entente in September 1918 led to radicalization and the rise of Bolshevik influence. The Bulgarian Communist Party (BCP) was formed in 1919 as a section of the Comintern. In 1923 the Comintern prompted the unprepared BCP to start an uprising, which ended in defeat, reprisals, and the banning of the party. Bulgaria established diplomatic relations with the USSR in 1934; until then relations had been tense because of Moscow's encouragement of BCP subversion, which culminated in a spectacular explosion in a Sofia cathedral in April 1925, with 123 dead and several hundred wounded. Bilateral relations improved markedly after the conclusion of the Soviet-German nonaggression pact in 1939. In November and December 1940, the USSR attempted to gain German and Bulgarian consent for the inclusion of Bulgaria in the Soviet security sphere, but by that time Bulgaria had effectively joined the German-led coalition. Friction over Bulgaria was one of the reasons behind Hitler's decision to attack the USSR in 1941. Bulgaria served as a supply base for the German army, but was officially neutral in the Soviet-German war and diplomatic relations were preserved. Between 1941 and 1944, with the help of the BCP and noncommunist Bulgarian Rusophiles, the USSR engaged in a relentless espionage, sabotage, and guerrilla campaign against Bulgaria. In September 1944 the USSR declared war shortly after the formation of a pro-Western government in Sofia, and Soviet troops advanced unopposed while a BCP-controlled putsch overthrew the government. The Bulgarian army was mobilized to fight German troops as part of the Soviet war effort, while the BCP killed and imprisoned thousands of its opponents in an attempt to cleanse the country of potential anti-Soviet elements.

When Soviet troops left Bulgaria in 1947 the country had already become a one-party state. Its security services and army, foreign and internal politics, economy, and culture were dominated by Soviet advisers. Every facet of Bulgarian society was forcibly reshaped along Russian-Soviet lines. Destalinization after 1953 led to some relaxation of Soviet controls. While the other satellites all attempted to move away from the Soviet model, Bulgaria came to be perceived as the closest Soviet ally. Under the rule of Todor Zhivkov (1954–1989), the Bulgarian elite enjoyed unique and unparalleled access to Soviet decision-making institutions, Soviet resources, and Soviet society in general. Compared with other European members of the Council for Mutual Economic Assistance (COMECON), the Bul-

garian economy had grown most dependent on the Soviet, with the USSR accounting for more than half of overall Bulgarian trade throughout the 1960s, 1970s, and 1980s.

Glasnost gave a major boost to the creation of a small but vocal pro-democracy movement in Bulgaria in 1988 and 1989. In November 1989 Zhivkov was removed with Soviet connivance, which ushered in the era of multiparty politics in Bulgaria.

After the collapse of the COMECON, the Warsaw Pact, and the USSR in 1991, bilateral trade was limited largely to Russian oil and gas exports to Bulgaria, and political contacts became episodic. Boris Yeltsin visited Bulgaria in August 1992, and Vladimir Putin did so in March 2003.

KYRIL DREZOV

BUND, JEWISH

The term *Bund* is an abbreviation of *der algemeyner yidisher arbeter bund in rusland un poyln* and refers to the General Jewish Labor Union in Russia and Poland (after 1901 the name added Lithuania to Poland and Russia). Founded in Vilna in 1897 by a group of Jewish Social Democrats, it was one of the forces behind the establishment of the Russian Social Democratic Workers Party (RSDWP) in Minsk

in 1898. The Bund was an integral part of the RSDWP in the Russian Empire until it split from the party in 1903, rejoining it in 1906. The Bund pioneered Jewish political activism in the Russian Empire, while making important contributions to the development of a modern, secular Jewish culture in eastern Europe.

The movement originated among russified Jewish intellectuals, the Vilna Group, who were well-grounded in the theories of social democracy circulating in the Russian Empire—including Poland—in the 1890s. As convinced and enthusiastic cosmopolitans, they did not seek to create a specifically Jewish movement. Nor were the masses of Jewish artisans seen as a suitable substitute for an industrial proletariat. Nonetheless, on the Russian model, a few activists founded circles that sought to provide a general and political education for artisans, and to transform them into revolutionary activists. In 1894 the publication of two influential pamphlets, Shmuel Gozhansky's *Letter to Agitators* and Arkady Kremer's *On Agitation*, marked a major change in strategy, a move to mass agitation and the pursuit of specific economic goals. Given that the vernacular language of 97 percent of Jews in the Russian Empire was Yiddish, the move to mass agitation also marked a permanent commitment to the use and development of that language. The movement proved successful at attracting members by engaging in practical work, such as the creation of strike funds and self-help bodies, and publication of a Yiddish-language press and agitational materials. Over time the Bund ideology developed an emphasis on the importance of Yiddish as a central element in Jewish secular culture.

The Bund was formed in 1897 to unite scattered Jewish Social Democratic groups throughout the Pale of Settlement. It combined a central political organization led by professional revolutionaries and a mass movement directed to economic and political change. The organization produced a number of outstanding revolutionary leaders such as John Mill, Vladimir Medem, and Yuli Martov. In 1898 Bund members were major participants in the foundation of the Russian Social Democratic Workers Party. At this meeting the Bund was granted full autonomy as to the geographical area of its activities, and a free hand to deal with the unique problems of the Jewish working class. This autonomy was ostensibly the cause of the split of the Bund from the RSDWP in 1903; in fact, criticism of the Bund's position was only a tactical maneuver on the part of Vladimir Ilich Lenin, in his effort to impose his ideological

agenda upon the RSDWP. There was thus no serious obstacle to the readmission of the Bund to the party in 1906.

One of the most successful elements of the Social Democratic movement in the Russian Empire (in terms of numbers and organizational abilities), the Bund was active in the creation of self-defense groups to resist pogroms. Its commitment to Yiddish did much to foster the development of Yiddish language, literature, and culture. The Bund developed a program that called for Jewish cultural autonomy in a democratic Russian Empire. After 1905 the Bund had to compete with a broad variety of Jewish political activities, including various forms of Zionism, which it sharply opposed. In October 1917 the Bund joined other moderate socialists to oppose the Bolshevik seizure of power, but the outbreak of pogroms in 1918 led many Bundists to welcome the protective role of the Red Army in the Pale. Bundists were a principle source of personnel recruited to the task of bringing the revolution to the Jewish street, through work in the Jewish Sections of the party and the state. The Bund was formally merged with the Russian Communist Party in 1921, while remaining a significant political force outside the Soviet Union, particularly in interwar Poland and the United States.

JOHN D. KLIER

BUNIN, IVAN ALEXEYEVICH

(1870–1953), poet and a master of prose fiction; the first Russian to win the Nobel prize for literature (1933).

Ivan Alexeyevich Bunin was the scion of an ancient aristocratic family from the heartland of Old Russia, the fertile countryside south of Moscow that produced so many writers from the gentry, among them Turgenev and Tolstoy. Much of his early fiction depicts the decline of the class he was born into. The celebratory tone of “Antonov’s Apples” (1900) makes it exceptional. However, it is purely commemorative, a song of praise for a way of life that has passed away. A lyric apprehension of nature is a central feature of Bunin’s art. Without religious faith or political commitment, he finds sustenance in a pantheistic attitude or in aristocratic stoicism. *The Village* (1909–1910), a naturalistic portrait, is more typically grim. Its subject is the barbarity and backwardness of Russian provincial life. “Dry Valley” (1911) is one of the supreme masterpieces of modern fiction. In this haunting novella Bunin’s lyrical reverie attains mythic and tragic resonance. Experience is filtered through layers of memory to evoke an image of the patriarchal estate of Old Russia as a landscape of violence and ruin.

Bunin fled Russia after the Revolution. He settled in Paris but traveled much. Separated from the Russian countryside he knows so intimately, he tends to become abstract—as in his exotic Eastern tales and much of his work in emigration. “Gentleman from San Francisco” is a masterpiece of his international style. A work of cold, jewel-like beauty, it may be read as a satire of bourgeois civilization or an allegory of the vanity of human ambition in the face of death—a favorite theme of Bunin’s, especially in his later years.

MILTON EHRE

BUREAUCRACY, ECONOMIC

Each of the fifteen union republics had its own state apparatus, which paralleled that of the USSR as a whole. Although there was an elected government (the Supreme Soviet), the USSR Council of Ministers (*Sovet Ministrov SSSR*) conducted the business of gov-

ernment and constituted the highest oversight and executive body of the Soviet economic bureaucracy. It was composed of industrial ministers, chairmen of various state committees, and chairmen of agencies with ministerial status. The chairman of the Council occupied the most powerful position in the state apparatus, in effect the position of prime minister. At various stages of Soviet history, the head of the Communist Party of the USSR and the head of the state were the same person, but this was not always the case. The Council of Ministers was responsible for the enactment of the economic policies of the Communist Party by the state bureaucracy. The Council of Ministers was the main source of economic legislation; it coordinated and directed the activities of the state committees and the ministries, and supervised national economic planning, state budget, and credit and currency systems. It was authorized to reverse the decisions of ministries and make and execute the key resource-allocation decisions of the Soviet economy.

State economic committees were subordinated to the Council of Ministries of the USSR in the vast Soviet economic bureaucracy. Gosplan SSSR (the state planning committee) was the most important such agency, followed by more than forty state committees and agencies with ministerial status involved in economic affairs. Gosplan was subdivided into industrial departments, such as coal, ferrous metals, and machinery, and also had summary departments, such as finance, dealing with functions that crossed functional bodies. Gosplan was primarily responsible for executing the directives of the Council of Ministries and preparing annual operational plans for the industrial ministries with the participation of the latter. In addition, Gosplan was charged with the preparation of long-term (five-year) plans and longer-term perspective plans, which had more operational significance for investment planning. Gosplan had considerable responsibilities concerning supply planning and distribution of production (supplies) among ministries; it also arbitrated disputes among ministries or state committees and dealt with the problem of regional coordination.

Other state economic committees can be divided into three groups: Gosstab SSSR (the State Committee for Material Technical Supply), the financial state committees, and other functional state committees. Gosstab SSSR assisted Gosplan with the allocation of key material inputs (funded goods) to the ministries. The reforms of Prime Minister Alexei Kosygin of 1965 assumed, among other things, the assignment to Gosstab of the responsibility for the

allocation of producer goods. The ministerial supply organizations that had dominated the rationing of funded goods largely disappeared. The tasks of Gosstab included honing the operational details for detailed assortments of funded goods according to the general allocations outlined by Gosplan. Gosstab acted as an executive arm of Gosplan in matters of supply planning by maintaining actual warehouses and distribution points from which ministries drew materials. Gosstab applied itself to the creation of a wholesale trade system based on direct contracts between suppliers and users. By the late 1970s Gosstab handled only one-half of the value of rationed goods. Despite reform efforts, markets for producer goods failed to emerge, and the traditional system of material supplies and balances continued to function.

Two financial state committees, the Ministry of Finance and the State Bank (Gosbank), worked directly with enterprises, unlike other economic ministries. The Ministry of Finance monitored the use of credit by enterprises (working with the ministries), and was responsible for collections of revenues for the budget. At the local level, Ministry of Finance officials were interested primarily in collecting profit taxes, fixed payments, and capital charges from enterprises. The ministry played an important role in limiting managerial staff positions in state bureaucratic organizations and monitored compliance. Its responsibility for the development and execution of the state budget authorized the Ministry of Finance to give an independent opinion on the correspondence of economic plans to party economic policy—a right that Gosplan did not have.

Banking services were provided by Gosbank. This bank combined the services of a central bank and a commercial bank, but due to the absence of credit and capital markets Gosbank did not perform some traditional banking functions (open market operations, commercial paper transactions, and so forth). The major functions performed by Gosbank were to make short-term loans for working capital (supply of credits in accordance with credit requirements planned by the Ministry of Finance), to oversee enterprise plan fulfillment, to create money, and to monitor payments to the population as a center for all accounts. Therefore, Gosbank acted as the Finance Ministry's agent by booking the payments of taxes and fees to the state budget through Gosbank accounts while monitoring the flow of wage payments and credit through the economy.

The third group consisted of the State Committee on Prices (*Goskomsen*), the State Committee

on Labor and Wages (*Goskomtrud*), the State Committee on Science and Technology (*Goskomtekhnik*), the State Committee on Construction (*Gosstroy*), and the State Committee on Standards (*Goskomstandart*). These committees worked primarily in setting rules and establishing norms to be observed by the ministries and their subordinate enterprises. For those goods whose prices were to be set centrally, the State Committee on Prices set the prices; for other goods, it established rules for price setting by individual ministries. The State Committee on Labor and Wages established staffing norms and spelled out the rules of compensation and pay. The State Committee on Science and Technology set norms for scientific work and collaborated with Gosplan on science policy. The State Committee on Construction set standards for documenting construction projects and assisted Gosplan in site and project selection. The State Committee on Standards established rules for judging quality standards.

The main function of state committees was the generation of information useful to the Council of Ministries and Gosplan in making planning decisions. Their information on norms, technology, and quality standards gave Gosplan independent data useful for the evaluation of ministry requests. The rules developed by functional state committees helped the Council of Ministries and Gosplan to constrain the activities of the industrial ministries in order to limit their opportunistic behavior.

PAUL R. GREGORY

BURYATS

The Buryats, originally a nomadic herding people of Mongolian stock, live in the South-central region of Siberia, in the territory bordering Mongolia, with Lake Baikal on its western border and Yablonovy Ridge to the east.

The Buryats are one of the nationality groups that was recognized by Soviet authorities and had an autonomous republic of its own, along with the Yakuts, the Ossetians, the Komi, Tuvinians, Kalmyks, and Karelians. Of the five republics located east of the Ural Mountains in Asian Russia, four—Buryatia, Gorno-Altay, Khakassia, and Tuva—extend along Russia's southern border with Mongolia. After the changes of the immediate post-Soviet years, the Buryat Republic, or Buryatia (formerly the Buryat Autonomous Soviet Socialist Republic, or ASSR), continues to exist in the Russian Federation and is recognized in the Russian constitution passed in 1993. Besides the republics, the constitution recognizes ten autonomous regions, whose status, like that of the republics, is based on the presence of one or two ethnic groups. One of these regions is Aga Buryat, in which Buryats make up 55 percent of the population; the rest are Russians.

One of the largest ethnic groups in Siberia, the Buryats number well over one million in the early twenty-first century. In 1994 the population of the republic was about 1.1 million, of which more than one-third lived in the capital city, Ulan-Ude, which lies at the junction of the Uda and Selenga Rivers. Other cities in Buryatia include Babushkin, Kyakhta, and Zakamensk. All are situated by key rivers, including Barguzin, Upper Angara, and Vitim. Occupying 351,300 square kilometers (135,600 square miles), Buryatia has a continental climate and mountainous terrain, with nearly 70 percent of the region covered by forests.

Contrary to popular belief, Buryatia, and Siberia in general, is not a frozen wasteland year-round. The Siberian winter extends from November to March. In fact, the Siberian flag contains the colors green and white in equal horizontal proportions, with the green representing the Siberian taiga (the largest forest in the world) and the white representing the snow of winter. This taiga shelters vast amounts of minerals, plants, and wildlife, some of which are quite rare and valuable. Along with huge hydroelectric reserves, Buryatia possesses rich stores of bauxite, coal, gold, iron ore, uranium, manganese, molybdenum, nickel, tungsten, lignite, graphite, shales, mercury, tin, and rare earth minerals. The main industries derive from coal extraction, timber harvesting, textiles, sugar refining (from beets), engineering (including locomotive building and boat repairs), and food processing (mostly wheat and vegetables, such as potatoes).

The peoples of Siberia fall into three major ethno-linguistic groups: Altaic, Uralic, and Paleo-Siberian. The Buryats are one of the Altaic peoples, speakers of Turkic languages widely distributed in the middle Volga, the southern Ural Mountains, the North Caucasus, and above the Arctic Circle. Buryatia is the center of Buddhism in Russia. In fact, it is a place where three religions coexist peacefully: shamanism, Buddhism, and Orthodoxy. The Siberian region even gave rise to the languages from which the term shaman is derived. Shamanism is a belief in unseen gods, demons, and ancestral spirits responsive only to priests (shamans) with magical and healing powers.

The Buryats have not always been a part of Russia. From 1625 to 1627, the Russian Tsar Mikhail Fyodorovich (first of the Romanov dynasty) sent an expedition to explore the Bratskaya land. This first boat expedition, underestimating the ferocity of the Angara River's rapids, never completed the journey, but nevertheless word spread that Buryat farmers were eager to trade. Later that century, the Russians—in search of wealth, furs, and gold—annexed and colonized the area. Some Buryats, dissatisfied with the proposed tsarist rule, fled to Mongolia, only to return to their native country saying, "Mongolia's Khan beheads culprits, but the Russian Tsar just flogs them. Let us become subjects of the Russian Tsar." In 1923 the Buryat-Mongol Autonomous Soviet Socialist Republic was founded, which consisted of the land on which Buryats lived. Fourteen years later, in 1937, Buryat was forced to split into three parts: the Buryat-Mongol ASSR, and the Irkutsk and the Chita provinces. That population division remains in the post-Soviet era. During the 1970s Soviet authorities forbade Buryats from teaching the Buryat language in schools. In 1996 the Russian Parliament finally passed a bill concerning the nationalities policy of the Russian Federation, allowing the Buryat language and native customs to be taught and preserved.

JOHANNA GRANVILLE

BUTASHEVICH-PETRASHEVSKY, MIKHAIL VASILIEVICH

(1821–1866), Russian revolutionary democrat and political organizer.

A graduate of St. Petersburg University Law Department and a clerk at the Foreign Ministry, Mikhail Butashevich-Petrashevsky founded (in 1844) and headed a clandestine society of educated youth, from moderate to radical, that were opposed to Tsarism and serfdom. The "Petrashevskians" (*petrashevtsy*) held gatherings at his home on Fridays; their members included Fyodor Dostoyevsky, then an upstart story writer, and a future nationalist thinker Nikolai Danilevsky. Petrashevskians engaged in the study of Western democratic and socialist thought, in particular, the works of Charles Fourier, French utopian socialist and advocate of reorganizing society into a federation of grassroots communes (*falanstères*). Petrashevsky apparently organized a falanstère in his own estate, although it was subsequently destroyed by peasants. Petrashevskians authored and published two issues of *The Pocket Dictionary of Foreign Words* (1846, 1849) that included explanations for a number of terms from the "revolutionary" lexicon and was later used against them as incriminating evidence. They also disseminated the *Letter of Belinsky to Gogol* that was banned in Russia. Their circle is viewed as Russia's closest reflection of the revolutionary movements of 1848 in Western and Central Europe. In 1849, with the onset of political repression in Russia after the revolutions in Europe had been crushed, Petrashevsky was arrested together with other members of his circle. Most of them, except himself, pleaded guilty of anti-government activities, and all were sentenced to death, but the sentence was revoked by Nicholas I; the announcement was made at the last moment at the scene of the execution. For Petrashevsky, death penalty was replaced by a lifetime sentence to forced labor in a penal colony in Eastern Siberia. In 1856 he declined the pardon offered by Alexander II to political prisoners as part of the general amnesty.

BYLINA

Oral epic song type.

The term *bylina* is a nineteenth-century scholarly innovation, although it is found with a different meaning (“true happening”) in the *Lay of Igor’s Campaign* and *Zadonshchina*. Folksingers generally called any such songs *starina* or *starinka* (song of olden times). Known first from the seventeenth and eighteenth centuries, the bylinas were mainly collected in the nineteenth and the first half of the twentieth. They had survived on the margins of the Russian state: in the north, the Urals, parts of Siberia, and among cossacks in the south. Since true epics are relatively scarce in world folklore, the Russian repertoire is significant. It is also notable for its relative brevity (typically a few hundred lines) and native subjects and heroes.

Epic composition of some kind probably was practiced in early medieval times, as witness literary reflections in the *Lay of Igor’s Campaign*, *Zadonshchina*, passages of the *Destruction of Ryazan*, and the tale of Kozhemyaka in the *Primary Chronicle*. The first two of these would seem to indicate that epic singing started in princely courts and was performed by professional bards. But the bylina known to researchers it was performed by peasant singers of tales, both men and women. Most of the surviving examples are set in Kievan Rus in the time of a Prince Vladimir (unclear which one), often with the heroes anachronistically fighting Tatar armies, and this suggests that the songs originated in later centuries when Kiev as capital was only a vague memory and circumstances could be confused with those of the Tatar Yoke. Attempts have been made to attach certain of the exploits to historical events, but this remains doubtful. Rather, it seems that bylinas are fictions reflecting wish fulfillment pervasive in Russian folklore; with superhuman strength and prowess, native heroes always win against the steppe enemies, turning history upside down.

Being improvisational, performances differ according to the talents and tastes of performers. It is believed that early practitioners were professionals who chanted to the accompaniment of a stringed instrument, the *gusli*. In modern times the bylinas were often spoken or sung (the latter especially by cossacks). The bylina’s metrical principle is accentual: a fixed number of strong stresses (three or two) per line, usually with the last stress on the third from last syllable (marking the end of the line) and often with the first stress coming on the third syllable of the line. The number of weak syllables between stresses varies. Conventionally, extra syllables and words might be inserted in order to get the desired spacing of stresses.

Approximately one hundred subjects of the bylina are known. Scholars categorize the epic songs either chronologically (old and new) or by region (Kievan and Novgorodian). The older heroes (Volkh, Svyatogor) are called that because they appear to be connected with ancient myths. Characteristic Kievan heroes (bogatyrs) are Ilya Muromets, Dobrynya Nikitich, and Alyosha Popovich, while Dyuk Stepanovich is an aristocratic dandy and Sukhman a rare tragic hero. The few bylinas from Novgorod (Sadko, Vasily Buslayev) reflect the commercial interests of that merchant republic of the North.

Related to the bylinas as epic compositions are the so-called historical songs and spiritual songs.

NORMAN W. INGHAM

BYZANTIUM, INFLUENCE OF

Toward the end of the tenth century—the conventional date is 988—Prince Vladimir Svyatoslavich of Kiev made Christianity the official religion of his people, the Rus. In choosing his faith, he also had to choose between its two institutional structures—that of the Western (Latin) Church under the au-

thority of the pope in Rome, and that of the Eastern (Greek) Church under the authority of the Patriarch of Constantinople (Byzantium). Although the two churches were not formally in opposition at the time—the Great Schism occurred in 1054—nevertheless they had grown apart over the centuries, and each had developed its own distinctive features. Vladimir chose the Byzantine version, a decision with consequences at many levels. However, the nature and extent of Russia's Byzantine heritage has been controversial. Some have argued that, since Christianity was imported into Rus from Byzantium, the culture that grew therefrom cannot be said to have been merely influenced by Byzantium: it simply was Byzantine, a local development from and within the broader Byzantine tradition. Others, by contrast, stress the active nature of cultural borrowing—namely, the adoption and adaptation of selected elements of Byzantine culture to serve local needs and hence to develop a native culture that, while indebted to Byzantium in superficial aspects of form, was indigenous in substance and essence. Such are the crude extremes. The more productive discussion lies in the nuances between the two.

For seven hundred years from the official Conversion, high-status cultural expression among the East Slavs of Rus and then of Muscovy was almost entirely limited to the celebration, affirmation, and exposition of Christianity, and hence was almost entirely limited to the appropriate forms inherited—directly or indirectly—from Byzantium. In painting this was the age of the icon: not really art in the modern sense (as the product of an individual artist's imaginative creativity), but a devotional image, a true and correct likeness according to the approved prototypes. In architecture, public spaces were dominated by churches, whose basic design—most commonly a cross-in-square or domed cross layout—was Byzantine in origin. As for writing, 90 percent or more of all that was written, copied, and disseminated was ultimately derived from Church Slavonic texts translated from Greek. Over time, cultural production in all these media could of course acquire local features—in the development and composition of the full-height iconostasis, for example, or in the elaboration of roof-tiers, the onion-shaped dome, or in the robust styles of native chronicles—and local perceptions of such cultural production could vary widely. Overall, however, the Byzantine links were explicit, and Byzantium remained the acknowledged source of authoritative example and precedent.

A Byzantine churchman visiting Rus would thus have found part of the surroundings familiar; but still he would not have felt entirely at home. Outside the explicitly ecclesiastical, the Rus reception of Byzantine culture was more patchy. For example, Byzantium itself maintained a tradition of classical Greek learning, but there is little or no sign of any Rus interest in this before the late seventeenth century. Byzantium possessed a large corpus of written law. Church law (canon law) was in principal accepted by Rus together with Christianity, but in practice could be assimilated only gradually and partially through accommodation to local custom, while Byzantine civil law (derived from Roman law) seems to have made not made an impact. The Rus did not, therefore, accept Byzantine culture as a complete package. The borrowing was partial, selective, and thus in a sense non-Byzantine.

The continuing Rus reception of Byzantine culture in the later Middle Ages is somewhat paradoxical: as the visual elements (e.g., styles of painting and building) became progressively diluted through local developments, so the non-visual elements (e.g., ideas, ideology) were more assiduously adopted into official culture. The Muscovite State of the sixteenth and seventeenth centuries was more Byzantine in its structures than any of the earlier Rus principalities, in that it was a relatively unitary empire headed by an autocrat supported by a growing administrative bureaucracy. Moreover, since the fall of Constantinople to the Turks in 1453, it was self-consciously the only surviving Orthodox empire and thus could be projected as Byzantium's successor. Emblems of this new status were woven into the fabric of Muscovite self-presentation: in the formal adoption of the title of tsar for the ruler; in the establishment of a patriarchate in place of the old metropolitanate; in the construction of imperial genealogies linking the Muscovite dynasty with Imperial Rome; in tales of the transfer of imperial regalia from Byzantium to ancient Kiev; and in the articulation of the notion that Moscow was—in world-historical terms—the "third Rome."

Ostensibly the reforms of Peter the Great brought about a decisive break. Peter's new capital was a radical statement of non-Byzantinism in the physical environment, and Western Europe became the new model for prestigious cultural production, whether in architecture and painting or in writing, printing, performing, and philosophizing. The Church continued to produce icons and profess the

ancient faith, but it no longer enjoyed its virtual monopoly of the high-status media. However, does this necessarily mean that the Byzantine component of Russian culture disappeared? Perhaps, and perhaps not. The question of the Byzantine legacy in post-Petrine Russia is periodically controversial. Some have regarded Russian Byzantinism as a feature only of the remote past, while others have seen it as pervasive even after Peter (whether in true Russian spirituality or, by contrast, in the long continuation of autocratic, authoritarian theocratic forms of government). Such, once more, are the two poles of a debate that can have no objective resolution, since the terms of reference are more ideological than historical. Yet through such debates Russia's Byzantine heritage remains very much alive, at least as an issue for discussion, after more than a thousand years.

CABARET

Cabaret came late to Russia, but once the French, German, and Swiss culture spread eastward in the first decade of the twentieth century, a uniquely Russian form took root, later influencing European cabarets. While Russian theater is internationally renowned—as just the names Chekhov and Stanislavsky confirm—the theatrical presentations in cabarets are less so, despite the brilliance of the poets and performers involved.

The French word *cabaret* originally meant two things: a plebeian pub or wine-house, and a type of tray that held a variety of different foods or drinks. By its generic meaning a cabaret is an intimate night spot where audiences enjoy alcoholic drinks while listening to singers and stand-up comics. While sophisticates quibble over precise definitions, most will agree on the cabaret's essential elements. A cabaret is performed usually in a small room where the audience sits around small tables, and where stars and tyros alike face no restrictions on the type of music or genre or combinations thereof, can experiment with *avant-garde* material never before performed, and can “personally” interact with the audience. The cabaret removes the “fourth wall” between artist and audience, thus heightening the synergy between the two. Rodolphe Salis—a failed artist turned tavern keeper—established the first *cabaret artistique* called *Le Chat Noir* (*The Black Cat*) in Paris, where writers, artists, and composers could entertain each other with their latest poems and songs in a Montmartre pub.

Cabarets soon mushroomed across Europe, its Swiss and Austrian varieties influencing Russian artists directly. Russian emigrés performed, for example, in balalaika bands at the Café Voltaire, founded by Hugo Ball in 1916 in Zürich, Switzerland. The influence of Vienna-based cabarets such as *Die Fledermaus* (*The Bat*) is reflected in the name of the first Russia cabaret: “Bat.”

This tiny theater was opened on February 29, 1908, by Nikita Baliev, an actor with the Moscow Art Theater (MKhAT) in tune with the prevailing mood in Russia. In the years following the revolution of 1905, Russian intellectual life shifted from the insulated world of the *salon* to the zesty world of the cabaret, the *balagan* (show), and the circus. New political and social concerns compelled the theater to bring art to the masses. Operating perhaps as the *alter ego*—or, in Freudian terms, the *id*—of MkhAT, the “Bat” served as a night spot for

actors to unwind after performances, mocking the seriousness of Stanislavsky's method. This cabaret originated from the traditional "cabbage parties" (*kapustniki*) preceding Lent (which in imperial Russia involved a period of forced abstinence both from theatrical diversion as well as voluntary abstinence from meat). Housed in a cellar near Red Square, the "Bat" had by 1915 become the focal point of Moscow night life and remained so until its closure in 1919.

While the format of the Russian cabaret—a confined stage in a small restaurant providing amusement through variety sequences—owed much to Western models, the uniqueness of the shows can be attributed to the individuality of Nikita Baliev and indigenous Russian folk culture. In one show entitled *Life's Metamorphoses*, Baliev installed red lamps under the tables that blinked in time with the music. In another show, he asked everyone to sing "Akh, akh, ekh, im!"—to impersonate someone sneezing. As Teffi (pseudonym of Nadezhda Buchinskaya), a composer for the "Bat" recalled, "Everything was the invention of one man—Nikita Baliev. He asserted his individuality so totally that assistants would only hinder him. He was a real sorcerer."

The Russian cabaret also flourished due to its links with the conventions of the indigenous folk theater—the *balagan*, the *skomorokhi* (traveling buffoons), and the *narodnoye gulyanie* (popular promenading). It incorporated the folk theater's elements—clowning, quick repartee, the *plyaska* (Russian dance), and brisk sequence of numbers. Baliev employed key writers and producers, including Leonid Andreyev, Andrei Bely, Valery Bryusov, Sergei Gorodetsky, Alexei Tolstoy, Vasily Luzhsky, Vsevolod Meyerhold, Ivan Moskvina, Boris Sadovskoi, and Tatiana Shchepkina-Kupernik. Famous artists performed at the "Bat," including Fyodor Chalyapin, Leonid Sobinov, and Konstantin Stanislavsky. In 1916–1918 Kasian Goleizovsky, the great Constructivist balletmaster of the 1920s, directed performances.

Like most visionaries ahead of their time in the Soviet Union, however, Baliev was arrested. When released in 1919 after five days of confinement, he fled to Paris with the renamed *Chauve-Souris* ("bat" in French), which toured Europe and the United States extensively. In 1922 the Baliev Company moved to New York, where Baliev entertained enthusiastic audiences until his death in 1936. Baliev and the "Bat" inspired many imitations, most no-

tably the "Blue Bird" (*Der Blaue Vogel*), founded in Berlin by the actor Yasha Yuzhny in 1920.

JOHANNA GRANVILLE

CABINET OF MINISTERS, IMPERIAL

Often called the Council of Ministers, this body was convened by Alexander II in 1857 to coordinate legislative proposals from individual ministers. It was chaired by the tsar himself and met irregularly thereafter to consider various of Alexander II's "Great Reforms." In 1881, he submitted to it Count Loris-Melikov's plan for semiconstitutional government, but revolutionaries assassinated the tsar before action could be taken. His successor, Alexander III, determined to reestablish full autocratic rule, did not convene the council, and it played no significant role in the early years of Nicholas II's reign.

Early in the Revolution of 1905 reformers persuaded Nicholas II to revive the Council of Ministers. From February to August 1905 it worked on various projects for administrative and constitutional change. On October 19, two days after publication of the October Manifesto, an imperial decree established a much revamped Council of Ministers, which was structured along lines recommended by Count Sergei Witte, principal architect of the manifesto and its accompanying reforms. The tsar retained the right to name ministers of war, the navy,

foreign affairs, and the imperial court, but a new council chairman appointed, subject to the tsar's approval, the remaining ministers and was empowered to coordinate and supervise the activities of all ministries. The reorganized council was to meet regularly and to review all legislative proposals before their submission to the proposed Duma. Although it resembled a Western-style cabinet in some respects, the new Council of Ministers was not responsible to the about-to-be-formed legislative body and remained heavily dependent on the tsar's support.

Moreover, Count Witte, as council chairman or prime minister, was unable to implement fully the new structure. Several ministers continued to report directly to the tsar. Nevertheless, the council survived Witte's dismissal by Nicholas II in spring 1906, and its power was soon broadened to include consideration of legislation when the Duma was not in session. The Council of Ministers remained the chief executive organ under the tsar until his overthrow in the February Revolution of 1917.

JOHN M. THOMPSON

CABINET OF MINISTERS, SOVIET

The Cabinet of Ministers was the institutional successor to the Council of Ministers, the chief policy-making body of the Soviet government. It existed for only a brief period during the chaotic final year of Communist rule.

In the late Soviet period, the Council of Ministers had grown into an unwieldy executive body with well over one hundred members, who sat atop a bureaucratic phalanx of government agencies. Moreover, the Council of Ministers, having voted to reject the Five-Hundred Day Plan, had emerged as a political obstacle to Mikhail Gorbachev's efforts to reform the centrally planned economy.

In October 1990, the revitalized Supreme Soviet granted President Mikhail Gorbachev extra legislative powers to undertake a transition to a market economy. In November 1990, as part of a larger package of political institutional reforms, the Council of Ministers was dissolved by order of the Supreme Soviet, and the Cabinet of Ministers was created in its place. The Cabinet of Ministers was smaller than its predecessor and more focused on economic policy. The body was directly subordinate to the president, who nominated its chairman and initiated legislation with the consent of the Supreme Soviet. The first and only chairman of the Cabinet of Ministers was Valentin Pavlov, a politically conservative former finance minister.

As events turned radical in 1991, the Cabinet of Ministers began to act independently from President Gorbachev in an effort to stabilize and secure the Soviet regime. In March, the cabinet issued a ban on public demonstrations in Moscow; this order was promptly defied by the Russian democratic movement. In the summer, the Cabinet of Ministers became entangled in a power struggle with President Gorbachev over control of the economic policy agenda. Finally, Prime Minister Pavlov and the cabinet allied with the ill-fated August coup. In response, Russian President Boris Yeltsin demanded the dismissal of the mutinous ministers. In September, Gorbachev was forced to comply and sacked his entire government. The Cabinet of Ministers was replaced by an interim body, the Inter-Republican Economic Committee, which itself ceased to exist following the Soviet collapse in December 1991.

CADETS *See* CONSTITUTIONAL DEMOCRATIC PARTY.

CADRES POLICY

The term *cadres policy* refers to the selection and training of key CPSU (Communist Party of the Soviet Union) personnel. Its importance is indicated by the famous phrase used by Stalin in 1935,

"Cadres decide everything." Generally speaking, cadres were selected in theory according to their degree of loyalty to the CPSU and their efficiency in performing the tasks assigned to them. The appointment of cadres at a senior level in the CPSU hierarchy was made or confirmed by the cadres department of the appropriate Party committee. Scholars have raised questions about the degree to which the cadres selected at any given time by the Soviet leadership were "representative" of the population as a whole or of the constituency that they represented. Other issues raised include the extent to which cadres were adequately trained or had the appropriate expertise. By the time Mikhail Gorbachev came to power in the mid-1980s, accusations were being made that many key Party members, who constituted the leadership at all levels within the CPSU structure, had become corrupt during Leonid Brezhnev's era of stagnation. Hence a new cadres policy was necessary in order to weed out the careerists and replace them with others worthy of acting as a genuine cadre to ensure that the interests of the Party, society, and the people coincided. This led to widespread anti-corruption campaigns against the Party from 1986 onward throughout the former USSR. Famous examples include the arrest of seven Uzbek regional first secretaries in March 1988 and the trial of Brezhnev's son-in-law, Yuri Mikhailovich Churbanov, the former Interior Minister, in 1989.

CHRISTOPHER WILLIAMS

CALENDAR

In Russia, the calendar has been used not only to mark the passage of time, but also to reinforce ideological and theological positions. Until January 31, 1918, Russia used the Julian calendar, while Europe used the Gregorian calendar. As a result, Russian dates lagged behind those associated with contemporary events. In the nineteenth century, Russia

was twelve days behind, or later than, the West; in the twentieth century it was thirteen days behind. Because of the difference in calendars, the Revolution of October 25, 1917, was commemorated on November 7. To minimize confusion, Russian writers would indicate their dating system by adding the abbreviation "O.S." (Old Style) or "N.S." (New Style) to their letters, documents, and diary entries.

The Julian Calendar has its origins with Julius Caesar and came into use in 45 B.C.E. The Julian Calendar, however, rounded the number of days in a year (365 days, 6 hours), an arithmetic convenience that eventually accumulated a significant discrepancy with astronomical readings (365 days, 5 hours, 48 minutes, 46 seconds). To remedy this difference, Pope Gregory XIII introduced a more accurate system, the Gregorian Calendar, in 1582.

During these years Russia had used the Byzantine calendar, which numbered the years from the creation of the world, not the birth of Christ, and began each new year on September 1. (According to this system, the year 7208 began on September 1, 1699.) As part of his Westernization plan, Peter the Great studied alternative systems. Although the Gregorian Calendar was becoming predominant in Catholic Europe at the time, Peter chose to retain the Julian system of counting days and months, not wanting Orthodox Russia to be tainted by the "Catholic" Gregorian system. But he introduced the numbering of years from the birth of Christ. Russia's new calendar started on January 1, 1700, not September 1. Opponents protested that Peter had changed "God's Time" by beginning another new century, for Russians had celebrated the year 7000 eight years earlier.

Russians also used calendars to select names for their children. The Russian Orthodox Church assigned each saint its own specific feast day, and calendars were routinely printed with that information, along with other appropriate names. During the imperial era, parents would often choose their child's name based on the saints designated for the birth date.

Russia continued to use the Julian calendar until 1918, when the Bolshevik government made the switch to the Gregorian system. The Russian Orthodox Church, however, continued to use the Julian system, making Russian Christmas fall on January 7. The Bolsheviks eliminated some confusion by making New Year's Day, January 1, a major secular holiday, complete with Christmas-like traditions such as decorated evergreen trees and a kindly Grandfather Frost who gives presents to

children. Christmas was again celebrated in the post-communist era, in both December and January, but New Year's remained a popular holiday.

CANTONISTS

The cantonist system in the Russian Empire evolved from bureaucratic attempts to combine a solution to two unrelated problems: welfare provision for the families of common soldiers and sailors, and the dearth of trained personnel to meet the multifarious needs of the modernizing imperial state. The evolution of this category was part of the development of social estates (*sosloviia*) in Russia, where membership was tied to service obligations.

The recruitment of peasant men into the Russian armed forces frequently plunged their wives (the *soldatka*) and children into destitution. The state sought to remedy this situation by creating the category of "soldiers' children" (*soldatskie deti*) in 1719. These children were removed from the status of serfs, and assigned to the "military domain," with the expectation that they would eventually serve in the military. Before beginning active service, they were assigned to schools and training institutions attached to military garrisons in order to receive an education of use to the armed forces. The training was provided for children between the ages of seven and fifteen, with an additional three years of advanced training for pupils who proved to be especially talented. They were educated in basic literacy before being given specialized artisan training, musical, or medical instruction, or the numerous other skills required by the military. The most able were given advanced training in fields such as engineering and architecture. Some children resided with their parents while receiving schooling, others were dispatched to training courses far away from home. Upon completion of their education, the soldiers' children were assigned to the military or other branches of state service. Upon completion of their term of service, which ranged from fifteen to twenty-five years, they were given the status of state peasants, or were allowed to choose an appropriate branch of state service.

The garrison schools were permitted to admit, as a welfare measure, the children of other groups, such as impoverished gentry. In 1798 the schools were renamed the "Military Orphanage" (*VoennoSirotskie Otdeleniya*), with 16,400 students. In 1805, the students were renamed "cantonists" (*kantonisty*), and reorganized into battalions. In 1824, the schools were placed under the supervision of the Department of Military Colonies, then headed by Count Alexei Arakcheyev. The cantonist system continued to grow, and to admit diverse social elements under Nicholas I. In 1856, Alexander II freed cantonists from the military domain, and the schools were gradually phased out.

The cantonist system never fulfilled its objectives. Its welfare obligations overwhelmed resources, and it never found training space for more than a tenth of the eligible children. The cantonist battalions themselves became notorious as "stick academies," marked by brutality and child abuse, high mortality rates, and ineffective educational methods. The bureaucracy failed to adequately oversee the category of soldiers' children, who were often hidden in other social estates.

In 1827, the legislation obliging Jews in the Pale of Settlement to provide military recruits permitted communities to provide children for the cantonist battalions in lieu of adult recruits. The fate of these Jewish cantonists was especially harsh. Children were immediately removed from their parents, and often were subjected to brutal measures designed to convert them to Russian Orthodoxy. The provision of child recruits by the Jewish leadership did much to fatally undermine their authority within the community.

JOHN D. KLIER

CAPITALISM

Max Weber offered a value-free definition of modern capitalism: an economic system based on rational accounting for business, separate from the

personal finances of an individual or family; a free market open to persons of any social status; the application of advanced technology, especially in large enterprises that required significant amounts of invested capital; a legal system providing equal treatment under the law, without arbitrary exceptions, and ensuring protection of the right of private property; a flexible labor market free of impediments to social mobility, such as slavery and serfdom, and of legal and institutional restrictions, such as minimum-wage laws and labor unions; and the public sale of shares to amass significant amounts of investment capital. Although no economy in world history has ever attained perfection in any of these six dimensions, social science can determine the extent to which economic institutions in a given geographical and historical situation approached this abstract "ideal type."

The institutions of modern capitalism—corporations, exchanges, and trade associations—evolved in Europe from the High Middle Ages (1000–1300) onward. Corporations eventually appeared in the Russian Empire in the reign of Peter I, and by the late nineteenth century the tsarist government had permitted the establishment of exchanges and trade associations. However, the vast size of the country, its location on the eastern periphery of Europe, the low level of urbanization, the persistence of serfdom until 1861, and the late introduction of railroads and steamship lines slowed the diffusion of capitalist institutions throughout the country.

The autocratic government, which had survived for centuries by wringing service obligations from every stratum of society, viewed capitalist enterprise with ambivalence. Although it recognized the military benefits of large-scale industrial activity and welcomed the new source of taxation represented by capitalist enterprise, it refused to establish legal norms, such as the protection of property rights and equality before the law, that would have legitimized the free play of market forces and encouraged long-term, rational calculation. As Finance Minister Yegor F. Kankrin wrote in March 1836: "It is better to reject ten companies that fall short of perfection than to allow one to bring harm to the public and the enterprise itself." Every emperor from Peter I onward regarded the principle of a state based on the rule of law (*Rechtsstaat*; in Russian, *pravovoye gosudarstvo*) as a fatal threat to autocratic power and to the integrity of the unity of the multinational Russian Empire.

The relatively weak development of capitalist institutions in Russia, their geographical concentration in the largest cities of the empire, and the prominence of foreigners and members of minority ethnic groups (Germans, Poles, Armenians, and Jews, in that order) in corporate enterprises led many tsarist bureaucrats, peasants, workers, and members of the intelligentsia to resent capitalism as an alien force. Accordingly, much of the anticapitalist rhetoric of radical parties in the Russian Revolutions of 1905 and 1917 reflected traditional Russian xenophobia as much as the socialist ideology.

CARPATHO-RUSYNS

Carpatho-Rusyns (also known as Ruthenians or by the regional names Lemkos and Rusnaks) come from an area in the geographical center of the European continent. Their homeland, Carpathian Rus (Ruthenia), is located on the southern and northern slopes of the Carpathian Mountains where the borders of Ukraine, Slovakia, and Poland meet. From the sixth and seventh centuries onward, Carpatho-Rusyns lived as a stateless people: first in the kingdoms of Hungary and Poland; then from the late eighteenth century to 1918 in the Austro-Hungarian Empire; from 1919 to 1939 in Czechoslovakia and Poland; during World War II in Hungary, Slovakia, and Nazi Germany; and from 1945 to 1989 in the Soviet Union, Czechoslovakia, and Poland. Since the Revolution of 1989 and the fall of the Soviet Union, most resided in Ukraine, Slovakia, and Poland, with smaller numbers in neigh-

boring Romania, Hungary, and the Czech Republic; in the Vojvodina region of Yugoslavia; and in nearby eastern Croatia.

As a stateless people, Carpatho-Rusyns had to struggle to be recognized as a distinct group and to be accorded rights such as education in their own East Slavic language and preservation of their culture. As of the early twenty-first century, and in contrast to all other countries where Carpatho-Rusyns live, Ukraine did not recognize Carpatho-Rusyns as a distinct group but rather simply as a branch of Ukrainians, and their language a dialect of Ukrainian.

It was only during the Soviet period (1945–1991) that the majority of Carpatho-Rusyns, that is, those in Ukraine’s Transcarpathian oblast, found themselves within the same state as Russians. It was also during this period that Russians from other parts of the Soviet Union emigrated to Transcarpathia where by the end of the Soviet era they numbered 49,500 (1989).

Reciprocal relations between Rusyns and Russians date from at least the early seventeenth century, when Church Slavonic religious books printed in Moscow and other cities under Russian imperial rule were sought by churches in Carpathian Rus. From the last decade of the eighteenth century several Carpatho-Rusyns were invited to the Russian Empire, including Mikhail Baludyansky, the first rector of St. Petersburg University; Ivan Orlai, chief physician to the tsarist court; and Yuri Venelin, Slavist and founder of Bulgarian studies in Russia. In the nineteenth century Russian panslavists showed increasing interest in the plight of “Russians beyond our borders,” that is, the Rusyns of Galicia and northeastern Hungary. Russian scholars and publicists (Nikolai Nadezhdin, Mikhail Pogodin, Vladimir Lamansky, Ivan Filevich, Alexei L. Petrov, Fyodor F. Aristov, among others) either traveled to Carpathian Rus or wrote about its culture, history, and plight under “foreign” Austro-Hungarian rule. On the eve of World War I, a Galician Russian Benevolent Society was created in St. Petersburg, and a Carpatho-Russian Liberation Society in Kiev, with the goal to assist the cultural and religious needs of the Carpatho-Rusyn population, as well as to keep the tsarist government informed about local conditions should the Russian Empire in the future be able to extend its borders up to and beyond the Carpathian Mountains.

The Carpatho-Rusyn secular and clerical intelligentsia was particularly supportive of contacts

with tsarist Russia. From the outset of the national awakening that began in full force after 1848, many Rusyn leaders actually believed that their people formed a branch of the Russian nationality, that their East Slavic speech represented dialects of Russian, and that literary Russian should be taught in Rusyn schools and used in publications intended for the group. The pro-Russian, or Russophile, trend in Carpatho-Rusyn national life was to continue at least until the 1950s. During the century after 1848, several Carpatho-Rusyn writers published their poetry and prose in Russian, all the while claiming they were a branch of the Russian nationality. Belorussian émigrés, including the “grandmother of the Russian Revolution” Yekaterina Breshko-Breshkovskaya and several Orthodox priests and hierarchs, settled in Carpatho-Rus during the 1920s and 1930s and helped to strengthen the local Russophile orientation. In turn, Carpatho-Rusyns who were sympathetic to Orthodoxy looked to tsarist Russia and the Russian Orthodox Church for assistance. Beginning in the 1890s a “return to Orthodoxy” movement had begun among Carpatho-Rusyn Greek Catholics/Uniates, and the new converts welcomed funds from the Russian Empire and training in tsarist seminaries before the Revolution and in Russian émigré religious institutions in central Europe after World War I.

Despite the decline of the Russophile national orientation among Carpatho-Rusyns during the second half of the twentieth century, some activists in the post-1989 Rusyn national movement, especially among Orthodox adherents, continued to look toward Russia as a source of moral support. This was reciprocated in part through organizations like the Society of Friends of Carpathian Rus established in Moscow in 1999.

CATHEDRAL OF CHRIST THE SAVIOR

The Church of Christ the Savior has a three-phase history: construction, demolition, and reconstruction. In 1812, after the defeat of Napoleon's invading armies in the Fatherland War, Tsar Alexander I decreed that a church in the name of Christ the Savior be built in Moscow as a symbol of gratitude to God for the salvation of Russia from its foes. Early plans called for a church to be built on Sparrow Hills, but due to unsteady ground at the original location, Nicholas I designated a new site near the Kremlin in 1827. Construction of the church was completed under Alexander II, and the cathedral was consecrated in 1883, during the reign of Alexander III. Some of Russia's most prominent nineteenth-century artists and architects worked to bring the project to fruition.

Josef Stalin's Politburo decided to destroy the cathedral and replace it with an enormous Palace of Soviets, topped with a statue of Vladimir Lenin that would dwarf the United States' Statue of Liberty. In December 1931, the Church of Christ the Savior was lined with explosives and demolished; however, plans for the construction of a Palace of Soviets were never realized. The foundation became a huge, green swimming pool. The destruction of the Church of Christ the Savior followed in the spirit of the revolutionary iconoclasm of the late 1910s and early 1920s, when the Bolsheviks toppled symbols of old Russia. But the demolition of the cathedral was also part of an unprecedented alteration of Moscow's landscape, which included the destruction of other churches and the building of the Moscow Metro, overseen by First Secretary of the Moscow Party Committee Lazar Kaganovich.

The process of resurrecting the demolished cathedral began in 1990 with an appeal from the Holy Synod of the Russian Orthodox Church to the Russian government, requesting that permission be granted to rebuild the church on its original site. This project, headed by Patriarch Alexei II and Moscow mayor Yuri Luzhkov, was completed in 1996, and the Church of Christ the Savior was consecrated in 2000.

CATHEDRAL OF ST. BASIL

Located on Red Square, Moscow, the Cathedral of the Intercession on the Moat (the official name of the cathedral) was built for Tsar Ivan IV (1532–1584) between 1555 and 1561 to commemorate his capture of the Tatar stronghold of Kazan, which capitulated after a long siege on October 1 (O.S.) 1552, the feast of the Intercession or Protective Veil (*Pokrov*) of the Mother of God, the protector of the Russian land. The original red brick structure incor-

The colorful onion domes of St. Basil's Cathedral dominate Red Square. © CHARLES O'REAR/CORBIS

porated nine churches, mainly dedicated to feast days associated with the Kazan campaign. Construction began in 1555, but little else is known about the building process as few contemporary documents survive. Not until 1896 were the names of architects Barma and Posnik (also known as Barma and Posnik Yakovlev) discovered. The story that Tsar Ivan had them blinded after they completed their work—to prevent them from building something better for his enemies—is a legend. The church acquired its popular name after the addition in 1588 of a tenth chapel at the eastern end to house the relics of the holy fool St. Basil (Vasily) the Blessed.

The cathedral comprises the central “tent” church of the Intercession, which is surrounded by four octagonal pillar chapels dedicated to the Entry into Jerusalem (west), Saints Kiprian and Ustinia (north), the Holy Trinity (east), and St. Nicholas Velikoretsky (south). There are also four smaller rectangular chapels: St. Gregory of Armenia (northwest), St. Barlaam Khutynsky (southwest), St. Alexander Svirsky (southeast), and the Three Patriarchs (northeast). The remarkable regularity of the ground plan had led to the theory that it was based upon precise architectural drawings, rare in Muscovy, while the irregularly shaped towers were constructed by rule of thumb. They look even more varied when viewed from the outside, as a result of cupolas of different shapes and colors. The building as a whole is unique, though certain elements can be found in earlier Moscow churches (for example, the Ascension at Kolomenskoye [1532] and John the Baptist at Dyakovo [1547]).

The cathedral’s architecture, bizarre to Western eyes, is often attributed to Ivan IV, known as Ivan the Terrible. In fact, the inspiration almost certainly came from the head of the church, Metropolitan Macarius (or Makary), who created a complex sacred landscape to celebrate Muscovy’s status as both a global and a Christian empire: New Rome and New Jerusalem. It was a memorial-monument, to be viewed from the outside, often a focal point for open-air rituals (e.g., the Palm Sunday procession from the Kremlin), but unsuitable for congregational worship. Always a site for popular devotion, it fell into disfavor among the elite in the eighteenth and early nineteenth centuries when Classical tastes branded its architecture “barbaric.” In 1812 Napoleon at first mistook it for a mosque and ordered its destruction. Its fortunes were reversed with the nineteenth-century taste for the Muscovite Revival or “Neo-Russian” style. It survived shelling in 1918, and in 1927 it opened as a museum. The

story that Stalin planned to demolish it may be apocryphal. In the 1990s it was reopened for worship but continued to function chiefly as a museum, probably the best known of all Russian buildings.

great churches of Eastern Christendom. Despite debate about the beginning date of its construction, there is general consensus that the work began in 1037 on the order of grand prince Yaroslav of Kiev and was completed in the 1050s. Although the exterior of the cathedral has been modified by reconstruction in the seventeenth and eighteenth centuries (it had fallen into ruin after the Mongol invasion in 1240), excavations in the 1930s, as well as the study of possible designs, have furnished what is considered a definitive version of the original. In its basic parts, the plan of Kiev's St. Sophia conforms to the cross-domed model. Each of its five aisles has an apse with an altar in the east. The central aisle, from the west entrance to the east, is twice the width of the flanking aisles. This proportion is repeated in the transept aisle that defines the cathedral's main north-south axis.

The focal point of the exterior is the main cupola, elevated on a high cylinder ("drum") over the central crossing and surrounded by twelve cupolas arranged in descending order. The thick *opus mixtum* walls (composed of narrow brick and a mortar of lime and crushed brick) are flanked by two arcaded galleries on the north, south, and west facades, and by choir galleries on the interior. Thus the elevated windows of the cylinders beneath the cupolas are the main source of natural light for the interior space. The interior walls of the main cupola and apse are richly decorated with mosaics. The rest of the interior walls contain frescoes that portray saints as well as members of Yaroslav's family.

WILLIAM CRAFT BRUMFIELD

CATHEDRAL OF ST. SOPHIA, NOVGOROD

The oldest and most imposing surviving monument in Novgorod is the Cathedral of St. Sophia (also known in the Orthodox tradition as "Divine Wis-

Bronze doors at the church of St. Sophia at Novgorod.

dom"), built between 1045 and 1050 and located in the *detinets* (citadel) on the west bank of the Volkhov River. The cathedral was commissioned by the prince of Novgorod, Vladimir Yaroslavich; by his father, Yaroslav the Wise (whose own Sophia Cathedral in Kiev was entering its final construction phase); and by Archbishop Luka of Novgorod. Because masonry construction was largely unknown in Novgorod before the middle of the eleventh century, a cathedral of such size and complexity could only have been constructed under the supervision of imported master builders, presumably from Kiev. The basic material for the construction of the walls and the piers, however, was obtained in the Novgorod: fieldstone and undressed blocks of limestone set in a mortar of crushed brick and lime.

The cathedral has five aisles for the main structure, with enclosed galleries attached to the north, west, and south facades. The Novgorod Sophia is smaller than its Kievan counterpart, yet the two

cathedrals are of approximately the same height. Therein lies an explanation for the much sharper sense of vertical development in the Novgorod cathedral.

Novgorod chronicles indicate that the interior was painted with frescoes over a period of several decades. Fragments of eleventh-century work have been uncovered, as well as early twelfth-century frescoes. Most of the original painting of the interior has long since vanished under centuries of renovations. Although small areas of the interior had mosaic decorations, there were no mosaics comparable to those in Kiev. The exterior facade above the west portal also displays frescoes, but the most distinctive element is the portal itself, with its magnificent bronze Sigtuna Doors, produced in Magdeburg in the 1050s and taken from the Varangian fortress of Sigtuna by Novgorod raiders in 1117.

WILLIAM CRAFT BRUMFIELD

CATHEDRAL OF THE ARCHANGEL

The Cathedral of the Archangel Mikhail, in the Moscow Kremlin, served as the mausoleum of the Muscovite grand princes and tsars until the end of the seventeenth century. The present building (built 1505–1509) was commissioned by Tsar Ivan III (reigned 1462–1505) to replace a fourteenth-century church. The architect was Alvise Lamberti de Montagnano, an Italian sculptor from Venice, known in Russia as Alevizo the New. His design combined a traditional Russian Orthodox five-domed structure with Renaissance decorative features such as pilasters with Corinthian capitals and scallop-shell motifs, which influenced later Russian architects. The cathedral contains the tombs of most of the Muscovite grand princes and tsars from Ivan I (reigned 1325–1341) to Ivan V (reigned

1682–1696), forty-six in all. In addition, shrines contain the relics of St. Dmitry (son of Ivan IV, died 1591) and St. Mikhail of Chernigov (d. 1246). Ivan IV (r. 1533–1584) is buried behind the iconostasis. The present bronze casings were added to the seventeenth-century sarcophagi in 1906. The frescoes on walls, ceilings, and pillars, mainly dating from the mid-seventeenth century, include iconic images of Russian princes and tsars and relate the military exploits of the warrior Archangel Mikhail, keeper of the gates of heaven. His icon was commissioned to celebrate the Russian victory at Kulikovo Pole in 1380. The cycle celebrates Moscow's rulers as successors to the kings of Israel, as God's representatives fighting evil on earth, and as patrons of Russia's ruling dynasty in heaven.

From the 1720s onward, Peter I's Cathedral of Saints Peter and Paul in St. Petersburg became the new imperial mausoleum. Of the later Romanovs, only Peter II (r. 1727–1730) was buried in the Cathedral of the Archangel. However, the imperial family continued to pay their respects at their ancestors' tombs after coronations and on other major state occasions.

LINDSEY HUGHES

CATHEDRAL OF THE DORMITION

The first Kremlin Dormition cathedral, a simple one-domed masonry structure, was built by Prince Ivan I Danilovich of Moscow in 1327 as the seat of the head of the Russian Orthodox church, Metropolitan Peter. In 1472 Metropolitan Filipp of Moscow decided to replace the old church, laying the foundation stone with Grand Prince Ivan III (r. 1462–1505), but in 1474 the new building was destroyed by an earth tremor before it was completed. Ivan then hired the Italian architect Aristotele Fioravanti, ordering him to model his church on the thirteenth-century Dormition cathedral in Vladimir, in the belief that the prototype was designed by Mary

herself. Fioravanti took the traditional five-domed structure, rounded bays, and decorative arcading, but added Renaissance proportions and engineering, “according to his own cunning skill,” as a chronicle related, “not in the manner of Muscovite builders.” The church became the model for a number of other important cathedral and monastery churches, for example in the Novodevichy convent and the Trinity–St. Sergius monastery.

The first frescoes were painted in 1481 to 1515 and restored several times “in the old manner” in the seventeenth to nineteenth centuries. The complex cycles allude to the unity of the Russian land, the celebration of its saints and the history of the cathedral itself, as well as the life and veneration of Christ and the Mother of God. The icons on the lower tier of the iconostasis (altar screen), the most famous of which was the twelfth-century Byzantine “Vladimir” icon of the Mother of God, also referred to the gathering of the Russian lands and the transfer of sacred authority to Moscow from Jerusalem, Byzantium, and Kiev, as did the so-called Throne of Monomachus, made for Ivan IV in 1551, the carvings on which depict scenes of the Byzantine emperor Constantine IX Monomachus presenting imperial regalia to Prince Vladimir of Kiev (1113–1125).

In February 1498 the cathedral saw Ivan III’s grandson Dmitry crowned as heir. From 1547, when Ivan IV was crowned there, it was the venue for the coronations of all the Russian tsars and, from the eighteenth century, the emperors and empresses. It also saw the investitures and most of the burials of the metropolitans and patriarchs, up to and including the last patriarch Adrian (died 1700). Major repair work followed damage caused by the Poles in 1612 and Napoleon’s men in 1812. The cathedral was particularly revered by Nicholas II, in preparation for whose coronation in 1896 a major restoration was carried out. Late tsarist official guides to the cathedral underlined the belief that the formation of the Russian Empire was sanctioned by God and symbolized in the cathedral’s history and its holy objects (e.g. a piece of the robe of Our Lord and a nail from the Cross). In Soviet times it became a museum, but since the 1990s it has been used intermittently for important services.

LINDSEY HUGHES

CATHERINE I

(c. 1686–1727) Yekaterina Akexeyevna, born Martha Skavronska(ya), the second wife of Peter I and empress of Russia from February 8, 1725 to May 17, 1727.

Martha Skavronskaya’s background, nationality, and original religious affiliation are still subject to debate. She encountered the Russian army in Livonia in the summer of 1702, when she was working as a servant, and apparently became the mistress first of a field marshal, then of Peter I’s favorite, Alexander Menshikov, then of Peter himself. By 1704 she was an established fixture in the royal entourage. There were unconfirmed rumors of a secret marriage in 1707, but only in 1711, prior to his departure for war against Turkey, did Peter make Catherine his consort. Their public wedding took place in February 1712 in St. Petersburg. The marriage was deplored by traditionalists, because Peter’s first wife was still alive and Catherine was a foreigner. It is unclear precisely when she converted to Orthodoxy and took the name Catherine.

Catherine established her own patronage networks at court, where she was closely allied with Menshikov, arranging the marriages of elite women, interceding with Peter on behalf of petitioners, and dispensing charity. Peter provided her with a western-style court and in 1714 introduced the Order of St. Catherine for distinguished women and made her the first recipient, in recognition of her courage at the Battle of Pruth in 1711. In May 1724, in a lavish ceremony in the Moscow Kremlin, he crowned her as his consort. In November, however, relations were soured by the arrest and execution of Catherine’s chamberlain Willem Mons on charges of corruption, who was also reputed to be her lover. Despite issuing a new Law on Succession (1722), Peter died in 1725 without naming a successor. It suited many leading men to assume that Catherine would have been his choice. Her supporters argued that not only would she rule in Peter’s spirit, but she had actually been “created” by him. She was the all-loving Mother, caring for orphaned Russia. Such rhetoric won the support of the guards.

Catherine's was a remarkable success story. Not only did she manage, with Peter's help, to invent a new identity as empress-consort, but her short reign also illustrates how the autocracy could continue to operate successfully under an undistinguished female ruler. Her gender proved to be an advantage, for the last thing the men close to the throne wanted was another Peter. The new six-man Supreme Privy Council under Menshikov dismantled some of Peter's unsuccessful experiments in provincial government, downsized the army and navy, and reduced the poll tax. In 1726 an alliance with Austria formed the cornerstone of Russian diplomacy for decades to come. Peter's plans for an Academy of Sciences were implemented, and western culture remained central for the elite.

Catherine bore Peter probably ten children in all, but only two survived into adulthood, Anna (1708–1729) and Elizabeth (1709–1762). Catherine would have preferred to nominate one of them as her successor, but Menshikov persuaded her to name Peter's grandson, who succeeded her as Peter II in May 1727.

LINDSEY HUGHES

CATHERINE II

(1729–1796) Yekaterina Alexeyevna or "Catherine the Great," Empress of Russia from 1762–1796.

Recognized worldwide as a historical figure, Catherine the Great earned legendary status for three centuries. Her political ambition prompted the overthrow and subsequent murder of her husband, Emperor Peter III (1728–1762). Whatever her actual complicity, his death branded her an accessory after the fact. Thus she labored to build legitimacy as autocratrix (independent ruler) of the expansive Russian Empire. When her reign proved long, extravagant praise of her character and im-

pect overshadowed accusation. An outsider adept at charming Russian society, she projects a powerful presence in history. Most associate her with all significant events and trends in Russia's expanding world role. Though she always rejected the appellation "the Great," it endured.

Catherine fostered positive concepts of her life by composing multiple autobiographical portrayals over five decades. None of the different drafts treated her reign directly, but all implicitly justified her fitness to rule. Various versions have been translated and often reissued to reach audiences worldwide. Ironically, the first published version was issued in 1859 by Russian radicals in London to embarrass the Romanov dynasty. Trilingual in German, French, and Russian, Catherine spelled badly but read, wrote, spoke, and dictated easily and voluminously. Keen intelligence, prodigious memory, broad knowledge, and wit enlivened her conversational skill.

Born on April 21, 1729, in Stettin, Prussia, of Germanic parentage, the first daughter of Prince Christian August of Anhalt-Zerbst (1690–1747) and Princess Johanna Elizabeth of Holstein-Gottorp (1712–1760), Sophia Augusta Fredericka combined precocious physical, social, and intellectual traits with great energy and inquisitiveness. A home education through governesses and tutors enabled her by age ten to read voraciously and to converse incessantly with relatives and acquaintances at home and at other German courts that her assertive mother visited. At the court of Holstein-Gottorp in 1739 she met a second cousin, Prince Karl Peter Ulrich, the orphaned grandson of Peter the Great who was brought to Russia in 1742 by his childless aunt, Empress Elizabeth; renamed Peter Fedorovich; and proclaimed heir apparent. Backed by Frederick the Great of Prussia, Sophia followed Peter to Russia in 1744, where she was converted to Orthodoxy and renamed Catherine. Their marriage in 1745 granted her access to the Russian throne. She was to supply a male heir—a daunting task in view of Peter's unstable personality, weak health, probable sterility, and impotence. When five years brought no pregnancy, Catherine was advised to beget an heir with a married Russian courtier, Sergei Saltykov (1726–1785). After two miscarriages she gave birth to Paul Petrovich on October 1, 1754. Presumably fathered by Saltykov, the baby was raised by Empress Elizabeth. Thenceforth Catherine enjoyed greater freedom to engage in court politics and romantic intrigue. In 1757 she bore a daughter by Polish aristocrat Stanislaus

Empress Catherine II in Russian costume. THE ART ARCHIVE/RUSSIAN HISTORICAL MUSEUM MOSCOW/DAGLI ORTI (A)

Poniatowski that only lived sixteen months. During her husband's short-lived reign in 1762 she gave birth to another son, Alexei Bobrinskoy, by Russian aristocrat Grigory Orlov.

Catherine quickly absorbed Russian culture. She mastered the language, customs, and history of the empire. An instinctive politician, she cultivated friendships among the court elite and select foreigners such as Sir Charles Hanbury Williams (who lent her money and political advice). Her certainty that factional alignments would change abruptly upon Elizabeth's death (as foretold by the exile of Chancellor Alexei Bestuzhev-Ryumin in 1758, the banishment abroad of Stanislaus Poniatowski, and her husband's hostility) fueled her motivation to form new alliances. When Elizabeth died suddenly on January 5, 1762, Catherine was pregnant by Orlov. Their partisans were unprepared to contest the throne with the new emperor, Peter III, who undermined his own authority, alienating the Guards regiments, the Orthodox Church, and Russian patriots, through inept policies such as his withdrawal from war against Prussia and declara-

tion of war on Denmark. Peter rarely saw Catherine or Paul, whose succession rights as wife and son were jeopardized as Peter delayed his coronation and flaunted his mistress, Yelizaveta Vorontsova, older sister of Catherine's young married friend, Princess Yekaterina Dashkova.

Peter III was deposed on July 9, 1762, when Catherine "fled" from suburban Peterhof to St. Petersburg to be proclaimed empress by the Guards and the Senate. While under house arrest at Ropsha, he was later strangled to death by noblemen conspiring to ensure Catherine's sovereign power. This "revolution" was justified as a defense of Russian civil and ecclesiastical institutions, prevention of war, and redemption of national honor. Catherine never admitted complicity in the death of Peter III which was officially blamed on "hemorrhoidal colic" a cover-up ridiculed abroad by British writer Horace Walpole. Walpole scorned "this Fury of the North," predicting Paul's assassination, and referring to Catherine as "Simiramis, murderess-queen of ancient times"—charges that incited other scurrilous attacks.

Catherine quickly consolidated the new regime by rewarding partisans, recalling Bestuzhev-Ryumin and other friends from exile, and ordering coronation preparations in Moscow, where she was crowned on October 3, 1762 amid ceremonies that lasted months. Determined to rule by herself, Catherine declined to name a chancellor, refused to marry Grigory Orlov, and ignored Paul's rights as he was underage. Her style of governance was cautiously consultative, pragmatic, and "hands-on," with a Germanic sense of duty and strong aversion to wasting time. Aware of the fragility of her allegedly absolute authority, she avoided acting like a despot. She perused the whole spectrum of state policies, reviewed policies of immigration and reorganization of church estates, established a new central administration of public health, and set up a new commission to rebuild St. Petersburg and Moscow. Count Nikita Panin, a former diplomat and Paul's "governor," assumed the supervision of foreign affairs, and in 1764 Prince Alexander Vyazemsky became procurator-general of the Senate, with broad jurisdiction over domestic affairs, particularly finances and the secret political police.

Catherine's reign may be variously subdivided, depending on the sphere of activity considered. One simplistic scheme breaks it into halves: reform before 1775, and reaction afterward. But this overlooks continuities spanning the entire era and ig-

nores the varying periodizations for foreign affairs, education, and culture. Another approach conceives of her reign as a series of crises. A ruler of wide interests, she dealt simultaneously with diverse matters. The first decade witnessed her mania for legislation and pursuit of an active foreign policy that, in alliance with Prussia from 1764, led to intervention in Poland-Lithuania. This alliance led to pressures on Poland and spilled over into war with the Ottoman Empire which in turn yielded unforeseen complications in the great plague of 1770–1771 and the Pugachev Revolt of 1773–1774. The latter focused public attention on serfdom, which Catherine privately despised while recognizing that it could not be easily changed.

Catherine's government followed a general policy of cultivating public confidence in aspirations to lead Russia toward full and equal membership in Europe. Drawing on the published advice of German cameralist thinkers and corresponding regularly with Voltaire, Diderot, Grimm, and other philosophers, she promoted administrative efficiency and uniformity, economic advance and fiscal growth, and "enlightenment" through expanded educational facilities, cultural activities, and religious tolerance. She expanded the Senate in 1762 and 1763, bolstered the office of procurator-general in 1763 and 1764, and incorporated Ukraine into the empire by abolishing the hetmanate in 1764. The Legislative Commission of 1767–1768 assembled several hundred delegates from all free social groups to assist in recodification of the laws on the basis of recent European social theory as borrowed from Montesquieu and others and outlined in Catherine's *Great Instruction* of 1767—enlightened guidelines translated into many other languages. To stimulate the economy, foreign immigrants were invited in 1763, grain exports were sanctioned in 1764, the Free Economic Society was established in 1765, and a commission on commerce formulated a new tariff in 1766. She also secularized ecclesiastical estates in 1764, founded the Smolny Institute for the education of young women, and eased restrictions on religious schismatics. New public health policies were championed as she underwent inoculation against smallpox in 1768 by Dr. Thomas Dimsdale and then provided the procedure free to the public. Yet her attempts to contain the horrific plague of 1770–1771 could not prevent some 100,000 deaths, triggering bloody riots in Moscow.

The most literate ruler in Russian history, Catherine constantly patronized cultural pursuits,

especially a flurry of satirical journals and comedies published anonymously with her significant participation. Later comedies attacked Freemasonry. In 1768 she founded the Society for the Translation of Foreign Books into Russian, superseded in 1782 by the Russian Academy, which sponsored a comprehensive dictionary between 1788 and 1796. Most strikingly, she founded the Hermitage, a museum annex to the Winter Palace, to house burgeoning collections of European paintings and other kinds of art. To lighten the burdens of rule, Catherine attended frequent social gatherings, including regular "Court Days" (receptions for a diverse public), visits to the theater, huge festivals like St. Petersburg's Grand Carousel of 1766, and select informal gatherings where titles and ranks were ignored.

To embrace the great Petrine legacy, Catherine sponsored a gigantic neoclassical equestrian statue of Peter the Great on Senate Square, "The Bronze Horseman" as the poet Pushkin dubbed it, publicly unveiled in 1782. Dismayed by Peter's brutal militarism and coercive cultural innovations, she saw herself as perfecting his achievements with a lighter touch. Thus Ivan Betskoy, a prominent dignitary of the period, lauded them both in 1767 by stating that Peter the Great created people in Russia but Catherine endowed them with souls. In neoclassical imagery Catherine was often depicted as Minerva. Her "building mania" involved neo-Gothic palaces and gardens, and with Scottish architect Charles Cameron she added a neoclassical wing to the Catherine Palace at Tsarskoye Selo and the nearby Pavlovsk Palace for Paul and his second wife, Maria Fyodorovna, who provided many grandchildren, the males raised directly by the empress.

Through travel Catherine demonstrated vigor in exploring the empire. In June 1763 she returned from Moscow to St. Petersburg, then traveled the next summer to Estland and Livland. She rushed back because of an attempted coup by a disgruntled Ukrainian officer, Vasily Mirovich, to free the imprisoned Ivan VI (1740–1764). Acting on secret orders, guards killed the prisoner before he could be freed. After a speedy trial Mirovich was beheaded on September 26, 1764, and his supporters were beaten and exiled.

While Catherine quickly quashed such inept plots, she worried more about rumors that Peter III was alive and eager to regain power. Some dozen impostors cropped up in remote locales, but all

Empress Catherine II. © HULTON ARCHIVE

were apprehended, imprisoned, or exiled. In 1772 and 1773, amid war with the Ottoman Empire, did fugitive cossack Emelian Pugachev rally the Yaik cossacks under Peter III's banner in a regional rebellion that attracted thousands of motley followers. When Pugachev burned Kazan in 1774, Catherine contemplated defending Moscow in person, but the victorious end of the Russo-Turkish War soon dissuaded her. Upon capture Pugachev underwent repeated interrogation before execution in Moscow on January 21, 1775, in Catherine's demonstrative absence. This embarrassment was overshadowed by elaborate celebrations in Moscow of victory over Pugachev and the Turks, the Peace of Kuchuk-Kainardji of 1774.

Russia's soaring international prestige was further affirmed by the month-long visit of King Gustavus III of Sweden in the summer of 1777 and by Russia's joint mediation of the war of the Bavarian Succession in the Peace of Teschen of May 1779, which made Russia a guarantor of the Holy Roman Empire. Catherine's meeting with Emperor-King Joseph II of Austria at Mogilev in May 1780 led one year later to a secret Russo-Austrian alliance against the Ottoman Empire, the notorious "Greek Project" that foresaw Catherine's grandson

Konstantin on the throne of a reconstituted Byzantine Empire. In 1781 Catherine engineered the Armed Neutrality of 1781, a league of northern naval powers to oppose British infringement of the commercial rights of neutrals amid the conflicts ending the American revolution.

In 1774 Catherine rearranged her personal life and the imperial leadership by promoting the flamboyant Grigory Potemkin, a well-educated noble and supporter of her coup. Installed as official favorite, he dominated St. Petersburg politics as political partner and probable husband until his death in 1791. He assisted with legislation that spawned the Provincial Reform beginning in 1775, the Police Code for towns in 1782, and charters to the nobility and the towns in 1785. A charter for the state peasantry remained in draft form, as did reforms of the Senate.

In charge of the armed forces, settlement, and fortification of New Russia (Ukraine), Potemkin masterminded annexation of the Crimea in 1783 and the Tauride Tour of 1787, an extravagant cavalcade that provoked renewed Russo-Turkish war in August 1787. In alliance with Austria, and despite unforeseen war with Sweden in 1788 and 1790 and troubles in revolutionary France in 1789, Potemkin coordinated campaigns that confirmed Russian triumph and territorial gains in the treaty of Jassy (1792). The last years of Catherine's life saw another triumph of Russian arms in the second and third partitions of Poland and the preparation of expeditionary forces against Persia and France. Internal repercussions of foreign pressures involved the arrest and exile of Alexander Radishchev in 1790 and Nikolay Novikov in 1792, both noblemen charged with publications violating censorship rules in propagating revolutionary and Freemason sentiments.

The death of Potemkin and Vyazemsky left voids in Catherine's government that a new young favorite, Platon Zubov, could not bridge. Her declining health and growing estrangement from Paul insistently raised succession concerns and rumors that she would prevent Paul's accession. Catherine's sudden death on November 16, 1796, from apoplexy inaugurated his reign. Paul's efforts at reversing Catherine's policies backfired, regenerating fond memories that inspired a bogus "Testament of Catherine the Great" later used by aristocratic conspirators to overthrow and murder Paul and replace him with Alexander, Catherine's beloved grandson.

CATHERINE THE GREAT See CATHERINE II.

CATHOLICISM

The Roman Catholic Church established ties to the Russian lands from their earliest history but played only a marginal role. The first significant encounter came during the Time of Troubles, when the Catholic associations of pretenders and Polish interventionists triggered intense popular hostility toward the "Latins" and a hiatus in Russian-Catholic relations. Only in the last quarter of the seventeenth century did Muscovy, in pursuit of allies against the Turks, resume ties to Rome. Peter the Great went significantly further, permitting the construction of the first Catholic church in Moscow

(1691) and the presence of various Catholic orders (including Jesuits).

But a significant Catholic presence only commenced with the first Polish partition of 1772, when the Russian Empire acquired substantial numbers of Catholic subjects. Despite initial tensions (chiefly over claims by the Russian government to oversee Catholic administration), relations improved markedly under emperors Paul (r. 1796–1801) and Alexander I (r. 1801–1825), when Catholic—especially Jesuit—influences at court were extraordinarily strong.

Thereafter, however, relations proved extremely tempestuous. One factor was the coercive conversion of Uniates or Eastern Catholics (that is, Catholics practicing Eastern Rites), who were "re-united" with the Russian Orthodox Church (in 1839 and 1875) and forbidden to practice Catholic rites. The second factor was Catholic involvement in the Polish uprisings of 1830–1831 and 1863; subsequent government measures to Russify and repress the Poles served only to reinforce their Catholic identity and resolve. Hence Catholicism remained a force to be reckoned with: By the 1890s, it had 11.5 million adherents (9.13% of the population), making it the third largest religious group in the Russian Empire. It maintained some 4,400 churches (2,400 in seven Polish dioceses; 2,000 in five dioceses in the Russian Empire proper). The 1905 revolution forced the regime to declare religious tolerance (the manifesto of April 17, 1905); with conversion from Russian Orthodoxy decriminalized, huge numbers declared themselves Catholic (233,000 in 1905–1909 alone).

The 1917 Bolshevik Revolution, however, brought decades of devastating repression. The Catholic Church refused to accept Bolshevik nationalization of its property and the requirement that the laity, not clergy, register and assume responsibility for churches. The conflict culminated in the Bolshevik campaign to confiscate church valuables in 1922 and 1923 and a famous show trial that ended with the execution of a leading prelate. That was but a prelude to the 1930s, when massive purges and repression eliminated all but two Catholic churches by 1939. Although World War II brought an increase in Catholic churches (mainly through the annexation of new territories), the regime remained highly suspicious of Catholicism, especially in a republic like Lithuania, where ethnicity and Catholicism coalesced into abiding dissent.

The “new thinking” of Mikhail Gorbachev included the reestablishment of relations with the Vatican in 1988 and relaxation of pressure on the Catholic church in the USSR. The breakup of the Soviet Union in 1991 turned the main bastions of Catholicism (i.e., Lithuania) into independent republics, but left a substantial number of Catholics in the Russian Federation (1.3 million according to Vatican estimates). To minister to them more effectively, Rome, in February 2002, elevated its four “apostolic administrations” to the status of “dioceses,” serving some 600,000 parishioners in 212 registered churches and 300 small, informal communities.

CAUCASIAN WARS

Russian contacts, both diplomatic and military, with the Caucasus region began during the rule of Ivan IV in the sixteenth century. However, only much later, during the reign of Catherine II in the late eighteenth century, did Russian economic and military power permit sustained, active involvement. Catherine appointed Prince Grigory Potemkin Russia's first viceroy of the Caucasus in 1785, although the actual extent of Russian control reached only as far south as Mozdok and Vladikavkaz. Meanwhile, military campaigns guided by Potemkin and General Alexander Suvorov penetrated far along the Caspian and Black Sea coasts. Russian intrusion energized hostility among much of the predominantly Muslim populace of the northern Caucasus, culminating in the proclamation of a “holy war” by Shaykh Mansur, a fiery resistance leader. Despite military collaboration with the Turks and Crimean Tatars, Mansur was captured by Russian forces at Anapa in 1791. At the time of the Empress' death in 1796, the so-called Caucasian Line, a sequence of forts and outposts tracing the

Kuban and Terek Rivers, marked the practical limits of Russian authority.

Meanwhile, it was Russia's relationship with the small Christian kingdom of Georgia that set the stage for protracted warfare in the Caucasus in the nineteenth century. Pressed militarily by its powerful Muslim neighbors to the south, Persia and Ottoman Turkey, Georgia sought the military protection of Russia. In 1799, just four years after a Persian army sacked the capital of Tiflis, Georgy XII asked the tsar to accept Georgia into the Russian Empire. The official annexation of Georgia occurred in 1801 under Tsar Alexander I.

The acquisition of Georgia created a geopolitical anomaly that all but assured further fighting in the Caucasus. By 1813, following war with Persia, Russia was firmly positioned in the middle of the region with territorial claims spanning from the Caspian to the Black Sea. However, most of the heavily Muslim north central Caucasus was unreconciled to Russian domination. In a practical sense, Georgia constituted an island of Russian power in the so-called Transcaucasus whose lines of communications to the old Caucasian Line were ever precarious. Soon Dagestan, Chechnya, and Avaria in the east and the Kuban River basin in the west emerged as major bastions of popular resistance. Particularly in the interior of the country, among the thick forests and rugged mountains of the northern slopes of the Caucasus Mountains, the terrain as well as throngs of able guerrilla warriors posed a formidable military obstacle. As in any such unconventional conflict, Russia had to stretch its resources both to protect friendly populations and prosecute a complex political-military struggle against a determined opposition. To secure areas under imperial authority, the Russians established a loose cordon of fortified points around the mountains. This, however, proved insufficient to prevent hostile raids. Meanwhile, the Russian effort to subjugate the resistance, widely known as the “mountaineers” or *gortsy*, required the ever increasing application of armed force. In the view of General Aleksei Petrovich Ermolov, commander of the Caucasus, the mountains constituted a great fortress, difficult to either storm or besiege.

Roughly speaking, the Russian subjugation of the mountaineer resistance is divisible into three stages. From 1801 to 1832, Russia's campaigns were sporadic, owing in part to the distraction of intermittent warfare with Persia, Turkey, Sweden, and France. In addition, the threat to Russian rule

View of Caucasus Mountains from Mount Elbrus. © DEAN CONGER/CORBIS

in the Caucasus did not for several decades appear extremely serious. This situation changed in the early 1830s as the resistance assumed increasingly religious overtones. In 1834, a capable and charismatic resistance leader emerged in the person of Shamil, an Avar who headed a spiritual movement described by the Russians as “muridism” (derived from the term *murid*, meaning disciple). Combining religious appeal with military and administrative savvy, Shamil forged an alliance of mountain tribes that fundamentally transformed the character of the war.

Although the true center of Shamil’s strength lay in the mountains of eastern Dagestan, his power was equally dependent upon the support of the Chechen tribes inhabiting the forested slopes and foothills between Georgia and the Terek River. Also important to the eastern resistance were the Lezghian tribes along the fringes of the Caucasian range. Because it was not strongly linked to Shamil, the Russians were less concerned in the short term with resistance in the western Caucasus (the southern Kuban and Black Sea coast), and formally

treated that area as a separate military theater from 1821.

From the early 1830s, the Russians relied increasingly on large, conventional campaigns in an effort to shatter Shamil’s resistance in a single campaign. This strategy did not produce the desired results. Although the tsar’s columns proved repeatedly that they could march deep into the rugged interior of the region to assault and capture virtually any rebel position, Shamil’s forces would not stand still long enough to risk total defeat. Moreover, upon retreating from the mountains, where it was impossible to supply Russian armies for more than a few weeks, Russian forces suffered repeated ambushes and loss of prestige. The last such attempt was the nearly disastrous expedition of 1845. Under the command of the new Viceroy of the Caucasus, Prince Mikhail Vorontsov, a force of about eighteen thousand, including one thousand native militiamen, drove deep into the mountains and stormed a fiercely defended fort at Dargo. Yet, the mountaineers managed to evade total destruction by melting away into the surrounding forests.

Upon their return from the mountains, Russian troops suffered incessant harassment by unseen snipers and were cut off from resupply. Only the arrival of a relief column prevented a complete debacle, but the invaders endured more than three thousand casualties during the campaign.

Finally, in 1846, Russian strategy changed to reflect a more patient and methodical *modus operandi*. Russia refocused its efforts on limited, achievable objectives with the overall intent of gradually reducing the territory under Shamil's influence. The advent of the Crimean War disrupted Russian progress as the diversion of Russian regiments to fighting the Turks served once again to encourage popular resistance. However, with the conclusion of that war in 1856, the empire resolved to finish its increasingly tiresome struggle for dominion over the Caucasus by massing its strength in the region for the first time.

To accomplish this, the new viceroy, General Alexander I. Baryatinsky, retained control of forces assumed committed against Turkey in the Caucasian theater. With approximately 250,000 soldiers at his disposal, Baryatinsky was able to apply relentless pressure against multiple objectives by mounting separate but converging campaigns. He was ably served in this endeavor by Dmitry Mil'yutin, the future War Minister, as chief of staff. Both men were veterans of fighting in the Caucasus and understood the necessity to separate the resistance from the general population. They ruthlessly achieved this end by systematically clearing and burning forests, destroying villages, and forcibly resettling entire tribes, thereby progressively denying Shamil access to critical resources. Following the fall of Shamil's key stronghold at Veden in 1859, the Russians captured the resistance leader himself at Gunib. Then, having gained success in the east, Russian forces liquidated remaining opposition in the west during the next several years. Ultimately, as many as half a million Moslem tribesmen, above all Cherkes in the west, were relocated from their ancestral lands.

CAUCASUS

The Caucasus region is a relatively compact area centered on the Caucasus Mountains. The foothills to the north and some of the steppe connected to them form a northern border, while the southern border can be defined by the extent of the Armenian plateau. The Black Sea in the west and the Caspian Sea in the east form natural boundaries in those directions. It is a territory of immense ethnic, linguistic, and national diversity, and it is currently spread over the territory of four sovereign nations.

The Caucasus region has long been known for the diversity of its peoples. Pliny the Younger in the first century, writing in his *Natural History* (Book VI.4.16), cited an earlier observer, Timosthenes, to the effect that three hundred different tribes with their own languages lived in the Caucasus area, and that Romans in the city of Dioscurias, encompassing land now in the Abkhaz city of Sukhumi, had employed a staff of 130 translators in order for business to be carried out.

The relative remoteness of the Caucasus from the Greek and Roman lands led to erroneous ideas concerning its location, not to mention exotic claims for its people. Some thought that the mountains extended far enough to the east that they joined with the Himalayas in India. The Caucasus was the scene of the legendary Prometheus' captivity, the goal of Jason's Argonauts in their quest for the Golden Fleece, and the homeland of the famous and fantastic fighting women known as Amazons. When Pompey invaded the region, he was said to have wanted to see the mountain where Prometheus had been chained.

The main Caucasus range is often considered part of the boundary that separates the state of mind that is Europe from that of Asia, despite aspirations of people to the south to be a part of Europe. The highest peak is Mount Elbrus at 18,510 feet (5,642 meters), making it the highest in Eu-

rope; other prominent summits include Kazbek (Qazbegi) in Georgia at 16,558 feet (5,047 meters). The lands to the south are protected by the barrier they form against the cold northern winds, to the point that lands along the Black Sea coast, although at latitudes above 40° N, possess a subtropical climate.

To the north of the Caucasus range is the Eurasian steppe, which stretches far to the east and west; it has been the route of countless invasions. To the south are a variety of lesser mountain ranges, plateaus, and plains—an area that has also been a crossroads of military and economic intercourse—Persians from the east, various Greco-Roman states from the west, and Semitic cultures from the south have interacted with the peoples of the South Caucasus.

There are a variety of climates in this region due to the steep gradient in elevation from sea level to mountain peak. Glaciers are nestled at the tops of the mountains only a couple hundred miles from citrus and tea plantations. Fast-moving rivers course along this gradient. By and large, the mountain rivers, cutting steep gorges, for example, the Pankisi in eastern Georgia and the Kodori in Abkhazia, are not navigable, but there are rivers to the south and north—such as the Mtkvari (Kura), which starts in Turkey and flows through Georgia and Azerbaijan to the Caspian Sea, and the Terek to the north, which flows also to the Caspian—that have been important water highways throughout human history. The mountains hold mineral resources such as coal and manganese. The Caucasus is near the oil resources of the Caspian Sea and pipelines run to, or are planned for, the north and south of the mountains.

There is great potential for promoting a prosperous tourist industry. Alpine skiing, pristine mountain lakes, white-water rafting, and the breathtaking scenery of snow-capped mountains juxtaposed with fertile plains are all available to the visitor, and the hospitality of the many peoples of the region, when they are not fighting among themselves, is the stuff of story and legend.

The region, formerly contained within the boundaries of the Soviet Union, is in the early twenty-first century spread over four nations: the Russian Federation to the north; and the three republics of the South Caucasus, also known as Transcaucasia: Armenia, Azerbaijan, and Georgia. The Russian part of this area is divided into several ethnic jurisdictions: Adygea, Karachay-Cherkessia,

Kabardino-Balkaria, North Ossetia, Ingushetia, Chechnya, and Dagestan.

The Northwest Caucasian languages include Abkhazian, spoken in Georgia, and Abaza, Adyghe (or Circassian), and Kabardian in Russia.

Balkar-Karachay is a Turkic language, as is Kumyk of Dagestan. These languages were left behind as Turkic peoples moved along the steppes from Central Asia.

The Ossetes speak an Iranian language, as do the Judeo-Tats of Dagestan. The Tats have the added distinction of being Jews in the midst of a predominantly Muslim territory; many of them reside in Israel.

The Ingush and Chechen languages are fairly closely related and are collectively known as Vainakh languages. They might have been considered one language, but Soviet-era language policy often encouraged a fragmentation in linguistic definition. At the same time, languages that had little or no written expression before the twentieth century were given alphabets and encouraged—principally, of course, to be instruments of communist propaganda. Such was the case with many of the languages of the Caucasus, the two major exceptions being Armenian and Georgian with alphabets dating from the fifth century.

The languages of Dagestan to the southeast are divided into a long list of small groups, including Aghul, Akhvakh, Andi, Archi, Avar, Bagvalal, Bezhta, Botlikh, Chamalal, Dargwa, Dido, Ghodoberi, Hinukh, Hunzib, Karata, Khvarshi, Lak, Lezgi, Rutul, Tabassaran, Tindi, and Tsakhur.

Georgia is also divided by the ethnic autonomies of Abkhazia, Ajra, and South Ossetia; and a number of Georgian and other ethnicities reside in the mountainous regions: the Svanetians to the west, speaking a Kartvelian language related to Georgian; the Khevsurs to the west, speaking a dialect of Georgian; Bats, a small group speaking a Vainakh tongue related to Chechen and Ingush; and the Khists, who are related to the Chechens and who occupy the Pankisi Gorge.

The ethnic and linguistic diversity described by Timosthenes and Pliny in antiquity, continues to be a fact of life in the Caucasus. It is a source of wonder, but also of conflict, as boundaries have continued slowly to shift back and forth over the millennia, but with a greater frequency in the past two centuries, as the Russian Empire appeared to

claim this territory as its own. The spread of Russia southward was not always by military means, and in the case of the Caucasus, the military was preceded by the gradual migration of Cossacks, except along the Caspian coast, where Peter the Great led incursion early in the eighteenth century. Their collective societies lived at the edge of Russian territory and its legalities; in the eighteenth century they began to come into closer contact with the peoples of the Caucasus. Occasional violent conflict turned eventually into organized warfare.

The wars in the Caucasus throughout the nineteenth and twentieth centuries seem to defy any logical reference to a benefit that the Russians may have gained from holding on to the land. The great authors of nineteenth-century Russia have left a vast collection of poetry, short stories, and novels that have the ambiguous heroics of war in the Caucasus as part of their plot. One of the most famous is Leo Tolstoy's novella *Hadji Murad*, set in the central Caucasus. Its prologue, in which the narrator utterly destroys a beautiful yellow flower while attempting to pick it, should be required reading for any who study the Caucasus.

Some of the conflict between Russia and the natives of the Caucasus has traditionally been defined across confessional lines. The North Caucasian peoples were converted to Islam, although some, such as the Abkhaz, have been less intense in their assimilation of that faith. The wars in the nineteenth century came to have religious meaning for both sides, especially with the leadership of the Imam Shamil, from the Avar people of Daghestan, who led the Chechens and others until his capture in 1856. His defeat, and Russia's eventual "pacification" of the region, was followed by a massive migration, not altogether voluntary, of North Caucasian peoples to the Ottoman Empire. Slavs, Georgians, and others often filled the "empty spaces" left behind, adding to the potential for ethnic conflict in later times.

The chaos of Revolution in 1917 was greatly felt in the Caucasus, with Armenia, Georgia, and Azerbaijan all experiencing short periods of independence. The North Caucasian peoples attempted to form a Confederation of Mountain Peoples. All of these, pressed by foreign intervention, as well as White and Red Russian Armies, fell to the Bolsheviks. The shifting realities of ethnic jurisdictions in the Caucasus region is its own study of nationalities policy in the Soviet Union, with the most tragic chapter being written toward the end of World War II when entire groups were forced into

exile, including Ingush and Chechens, and several smaller groups. Although allowed back in the 1950s, these deportations are part of the fuel that has fed the fire of revolt and conflict in the Caucasus during the post-Soviet period.

PAUL CREGO

CAVES MONASTERY

One of the oldest and most important East Slavic monasteries, the Kievan Caves Monastery is located in the southern part of Kiev along the Dnieper River. Its name derives from the tunnels and caves that served first as cells for monks and later as burial crypts. According to the *Primary Chronicle*, the monastery was founded by Saint Anthony of the Caves (died c. 1073) in 1051 after his return from Mount Athos in Greece, where he was tonsured. Anthony's pious life attracted a number of followers, and soon he appointed Varlaam, the son of an influential boyar, as abbot and secluded himself in a nearby cave. In 1062 Varlaam left to lead the St. Demetrius monastery, and the brethren chose Theodosius to replace him. The monastery grew steadily under Theodosius's guidance, and in an attempt to provide an orderly life for the monks, he introduced the Byzantine rule of Theodore of Studion (759–826). Despite the strong coenobitic nature of this rule, which required a common life under the strict guidance of the abbot, the way of life described in the *Primary Chronicle* at the time of Theodosius's death in 1074 is more idiorrhythmic,

in that each monk was left to develop his own method of monastic practice. A hallmark of caves monasticism in the Kievan period was the claim, often repeated in the sources, that the Caves was a monastery founded not by princes or rulers, but through tears, fasting, prayer, and vigils. As a spiritual center, the monastery was a major source of bishops and missionaries in pre-Mongol Rus.

The Caves Monastery was also the center of cultural life in Kievan Rus. *The Primary Chronicle* has been traditionally ascribed to Nestor, a monk of the Caves Monastery writing at the end of the eleventh century, who also wrote the *Life of Theodosius* and the life of the slain princes Boris and Gleb. In addition, the monastery is the setting of the *Kievan Caves Patericon*, a thirteenth-century compilation of stories about caves monks, which was reworked and later reprinted until the nineteenth century.

Theodosius's successors undertook a major building campaign that continued with some minor setbacks until the invasion of the Mongols, who sacked Kiev and destroyed the monastery under Batu Khan in 1240. The monastery began to flourish once again in the fourteenth and fifteenth centuries under Lithuanian rule. By the sixteenth century the Caves had become quite wealthy, although as a citadel of Orthodoxy it still faced some major challenges. After the Treaty of Lublin, which combined Poland and Lithuania, and the Treaty of Brest, which created the Eastern Rite Catholic Uniate Church (1596), there was pressure to subject the monastery to the Uniate metropolitan of Kiev. Only strong resistance by the Caves monks reversed this process. With the acquisition of Kiev by Tsar Alexei Mikhailovich, the monastery and the see of Kiev were placed under the jurisdiction of the Patriarch of Moscow. The Caves was the first (1598), and one of only four monasteries in Russia to be given the special designation *lavra*, which signified a particularly large and influential monastery. The monastery was an important center of Orthodox spirituality until 1926, when it was made a museum by the Soviet government. It was restored to the Orthodox Church in 1988.

CAVIAR

Of the twenty-six species of sturgeon found in the world, those most valued are the four that dwell in the Caspian Sea, including, from largest to smallest in size, the beluga (*Huso huso*), the osetra or Russian sturgeon (*Acipenser gueldenstaedti*), the sevruga or stellate (*Acipenser stellatus*), and the sterlet (*Acipenser ruthenus*). Each is appreciated for the quality and flavor of its roe (fish eggs), otherwise known as caviar (*ikra*). Although they vary in the intensity of their saltiness and flavor, all Caspian caviars have a subtle, buttery taste. Because of the damage induced by the Volga River's cascade of hydroelectric dams, which originally were built without fish ladders for anadromous fish such as the Caspian sturgeons, and subsequent overfishing in the sea itself, the populations of the Caspian sturgeons have plummeted since 1960. Thus connoisseurs have recommended that caviar lovers redirect their palates to the roe of more abundant fish species, such as the cheaper, but tasty American sturgeon, until the Caspian stocks can rebound. With the major decline of their numbers in the Caspian Sea, sevruga and osetra are being farmed in ponds in Europe.

Belugas, which produce the best and most expensive caviar, are the largest freshwater fish in the world, typically weighing more than one ton, measuring 27 feet (9 meters) long, and living for 150 years. The largest on record weighed 4,350 pounds (1,973 kilograms). Beluga eggs are large, bluish gray, and slightly sweet. The caviar is best when it is fresh.

Osetra sturgeon measure up to 9 feet (3 meters) in length and weigh up to 90 pounds (200 kilograms). Osetra caviar is brown in color and stronger in flavor than beluga caviar.

The sevruga sturgeon is smaller still, and yields the smallest eggs. Sevruga caviar possesses the strongest flavor of all the caviars. Because of this, it is cheaper than beluga or osetra, but still quite good.

The exceedingly rare sterlet is the smallest of the Caspian sturgeons, measuring a little under 50 inches (2 meters) long, weighing 7 pounds (16 kilograms), and living on average to the age of 22 years. Sterlet, or imperial, caviar was once the most prized fish roe of all. The eggs are small-grained and golden in color. Valued also as a food species, the sterlet has been fished almost to extinction.

VICTOR L. MOTE

CENSORSHIP

Censorship informally began in Russia when the regime acquired the realm's first printing press about 1560, a century after the invention of movable type. From then until the late 1600s successive tsars confined the use of that press, and the few more imported, to the Russian Orthodox Church.

Peter I (r. 1682–1725) expanded his government's monopoly to include secular publishing when, in 1702, he founded Russia's first newspaper *The St. Petersburg Bulletin* to promote himself and his programs. In 1720, having added the Senate and Academy of Sciences as official publishers, he required the ecclesiastical college to approve in advance every book printed in Russia, a censorship role that he passed the next year to the newly-created Holy Synod. Synod authority over secular publishing ended in 1750 when Empress Elizabeth (r. 1741–1762) gave the Academy of Sciences the right to censor its publications, as she did Moscow University at its founding in 1755.

When Catherine II (r. 1762–1796) finally made private ownership and use of printing presses legal in 1783, her decree governing "free publishing" banned published words against "the laws of God and the state" or of a "clearly-seditious" nature. The police would henceforth supervise "free" presses and

serve as preliminary censors. Alarmed by the French Revolution, Catherine ended her reign by closing private presses and by opening new censorship offices in St. Petersburg and Moscow. Still, Catherine's reign marked a stage in widening limits on the publishing of periodicals and books in Russia.

Sharing Catherine II's early belief in private publishing, Alexander I (r. 1801–1825) reinstated private presses, along with a preliminary censorship system. He set its rules in 1804 in Russia's first, brief censorship statute, a major reform designed to make the exercise of state power more predictable and rational. Napoleon's invasion in 1812, however, caused Alexander I to tighten censorship and to embrace the intense religiosity that spread during the war. Because the tsar resumed peacetime rule as a religious mystic, his choice to head his new Ministry of Spiritual Affairs and Education in 1817 was the president of the Russian Bible Society, A. N. Golitsyn, a zealot who used his role as chief censor to promote his religious views and to disseminate Bibles. Repeated complaints from high officials of the Russian Orthodox Church persuaded the Emperor to dismiss Golitsyn in 1824, the year before Alexander I died.

At the very outset of his reign, Nicholas I (r. 1825–1855) had to put down the Decembrist revolt led by gentry liberals. Blaming alien Western beliefs for discontent, the new tsar resolved to permeate society with Russian ideals and to prove, through paternalistic rule and controlled publishing that autocracy itself was inherently right for Russia.

Nicholas I in June 1826 issued his secular censorship law of June 1826 as a means to "direct public opinion into agreeing with present political circumstances and the views of the government." No less than 230 articles (five times the forty-six in the 1804 law) detailed procedures and made the author, not the censor, responsible should a duly censored text prove unacceptable once published (reversing the 1804 law).

Bowing to criticism among his officials, Nicholas named a new drafting committee and signed a substantially more liberal, but still sweeping, law of April 1828 to govern all works of "Literature, Science, and Art" (under it, responsibility again fell on the approving censor). A Foreign Censorship Committee had to publish monthly a list of the foreign works it had banned. Issued at the same time was a new ecclesiastical censorship statute that confirmed the Holy Synod's right—through censors

chosen from ecclesiastical academies—to ban any book, work of art, ceremony, musical composition, or performance contrary to precepts of the Orthodox Church.

Nicholas also made censors of his new political police, the Third Section. To counter clandestine printing of illegal works and lax censorship of legal ones, he secretly ordered his special police to look for and report anything “inclined to the spread of atheism or which reflects in the artist or writer violations of the obligations of loyal subjects.” One year after the French and Belgian Revolutions of 1830, Nicholas I put down the Polish rebellion. Building on popular support, the tsar in 1833 prescribed a system of ideas—so-called “Official Nationality”—to guide his subjects and his officials, including censors.

With respect to the state’s granting licenses for private periodicals, the tsar himself approved or rejected applications, with the result that the mere forty-two private periodicals that circulated in 1825 had, by 1841, modestly increased to sixty. (Small readerships also forced a number of licensed periodicals to close for lack of profits.) As for books, limited statistics that begin with 1837 show that secular censors in that year approved more titles (838) than in 1845 (804) and 1846 (810), such numbers being minuscule compared to book production in Europe.

Although limits on publishing under Nicholas I from 1825 to 1855 were the most invasive in Imperial history, brilliant writers such as Ivan Turgenev, Nikolai Gogol, Fyodor Dostoyevsky, and Leo Tolstoy won censors’ approval under Nicholas I.

Assuming power in the last stages of the humiliating Crimean War, Alexander II (r. 1855–1881) blamed that debacle on Russia’s backwardness and the archaic enserfment of 40 million peasants. To promote their liberation, in 1857 he lifted the *de facto* ban on publishing proposals for liberation.

On the heels of decreeing Emancipation in February 1861, Alexander II committed to reform of censorship and thirteen months later in March, 1862, ended preliminary censorship for all scientific, academic, and official publications. Then followed, five months after the 1864 judicial reform, the decree of April 6, 1865 to give “relief and convenience to the national press.” Included as transitional for uncensored publications was a system of warnings that could lead to suspensions and closures for any showing a “dangerous orientation.”

Freed from censorship—but only in St. Petersburg and Moscow—were all periodicals, translated books of 320 pages or more, and original books of 160 pages or more. (Short books were not freed, given their greater potential to do harm.) A big change was the statute’s subjecting to judicial prosecution anyone responsible for criminal content in a freed publication.

In December 1866, the State Council declared that full freedom to publish would “take shape under the influence of a series of judicial decisions.” During the next decade, as mounting terrorism made the tsar wary of public opinion, the government all but abandoned press-related trials. New measures against the press included profit-cutting limits on street sales and commercial advertisements. Whereas officials used the warning system from 1865 through 1869 to suspend merely ten freed periodicals, they suspended twenty-seven from 1875 through 1879. On the other hand, the number of active journals rose from twelve in 1865 to twenty in 1879; of newspapers, from forty-one in 1865 to sixty-two in 1879.

That trend reversed after the assassination of Alexander II in 1881, because Alexander III (r. 1881–1894) repressed publishing. As one means, he created a Supreme Commission on Press Affairs in 1882 to silence not just “dangerous” periodicals but also, through temporary banishment from journalism, their editors and publishers. The Commission imposed closure, its harshest penalty, seven times from 1881 to 1889—a period when the overall number of journals and newspapers declined just over 22 and 11 percentage points, respectively.

Given the seeming containment of terrorism by 1890, an easing of restrictions let the number of journals and newspapers rise; and the total stood once more at the 1881 level when Nicholas II (r. 1894–1917) acceded to the throne. Ten years later, during the 1905 Revolution, civil disobedience in printing plants effectively ended state controls that included censorship. In October, following a government decree that no printing plant could operate if it bypassed press regulations, the St. Petersburg Soviet of Workmen’s Deputies ordered members of the Printers’ Union to refuse to work for plant owners who complied.

Not only did Nicholas II issue his Manifesto of October 17, 1905 to promise imminent freedom of expression and other reforms, but he also ordered his new prime minister, Sergei I. Witte, to draft

legislation to effect such changes. New rules for periodicals resulted on November 24, 1905. In issuing them, the tsar claimed to have shifted wholly to judicial controls and thereby to have granted “one of the fundamental freedoms.” Promised new rules on book publishing took effect on April 26, 1906, and they allowed most books simultaneously to reach the public and the governing Committee on Press Affairs. Excepted were works of fewer than seventeen pages (censors had to approve them at least two days before publication), and those from seventeen to eighty pages (censors had to screen them a week in advance). The new rules let officials close an indicted publication pending what could be protracted adjudication.

Book-related trials in the remainder of 1906 mounted to an all-time high of 223, with 175 convictions. Those persons found criminally responsible for circulating or attempting to circulate a work ruled illegal mainly suffered fines, not imprisonment; for the main aim of the government was judicially to identify criminal content and to keep it from the public. Because the publishing industry became so large in the next decade, the tsarist regime found it almost impossible to limit printed opinion. By 1914, Russian citizens enjoyed freedom of expression very nearly equal to Western levels.

War with the Austro-Hungarian and German Empires in 1914 caused the tsar to impose military censorship on private publishing. Then followed the heightening domestic turmoil that culminated in the 1917 revolution, ending Imperial Russia and a relatively free press; for Lenin and his Bolsheviks, who seized power in November, so well knew the power of the printed word that they eliminated privately-controlled publishing companies. Vladimir Nabokov, Russian-American novelist and memoirist, provides a measure of the change in this summation: “Under the Tsars (despite the inept and barbarous character of their rule) a freedom-loving Russian had incomparably more possibility and means of expressing himself than at any time during Vladimir Lenin’s and Josef Stalin’s regime. He was protected by law. There were fearless and independent judges in Russia.” Following Lenin’s death in 1924, Stalin bested all rivals to emerge as the leader of the Party by the next year. Under him in 1936, the Constitution of the Union of Soviet Socialist Republics made clear that publishing was to achieve the objectives of the socialist order as determined by the Communist Party. Harsh penalties awaited violators of laws against “anti-Soviet agitation and propaganda.”

Enforcing limits on the printed word—and all cultural and artistic expression—was maintained by means of a vast censorship apparatus known as Glavlit (the Chief Administration for the Protection of State Secrets) and only official institutions published newspapers (e.g., the Communist Party published *Pravda*). Each publishing house answered to the State Committee for Publishing, Printing, and the Book Trade. Party authorities approved all editors and publishers of newspapers, magazines, and journals.

After Stalin’s death in 1953, Nikita Khrushchev began his eight-year dominance (1956–1964) as first secretary, and his effort to “de-Stalinize” the USSR brought his famous but short-lived “thaw” in censorship, especially with respect to literary and scholarly journals and the newspaper *Izvestiia*. Direct criticisms of the founding principles of the state or of system of government remained illegal, however, until 1986 when Mikhail S. Gorbachev, as general secretary, liberalized publishing practices under the term *glasnost*.

CHARLES A. RUIID

CENTRAL ASIA

The notion of “Central Asia” for Russia was the result of a gradual, often haphazard advance south-

ward during the country's history. The region has been called different terms in the past and it was not until the twentieth century that one saw the term "Central Asia and Kazakhstan" noted. Politically, it still is often restricted to the former Soviet republics of Kazakhstan, the Kyrgyz Republic, Tajikistan, Turkmenistan, and Uzbekistan. However, from a cultural perspective, "Central Asia" often encompasses a broader territorial range, that includes Afghanistan, Xinjiang (China), and the Northwest Territories of Pakistan.

Historically, Central Asia has often been called the last colonial holding of the Russian Empire, a possession acquired during the famed "Great Game" struggle with the British Empire. The region of what is today Kazakhstan was incorporated into the Russian empire as early as the eighteenth century, when the Tsarist government signed treaties with the various nomadic hordes that controlled the vast swaths of steppe territory. The purpose of these agreements was to allow Russian agricultural settlements to develop and, more important, to permit a secure trade route to the Russian holdings in eastern Siberia and the Far East. Indeed, the cities that currently exist in southern Russia and northern Kazakhstan—Orenburg, Omsk, Tomsk, Semipalatinsk, Pavlodar—were initially developed as "fortress towns" to protect the fur trade to and from the Far East.

Farther south, the conquest took more time. Early Russian forays into Central Asia took place in the sixteenth century, when Muscovy traders established contacts with the Emirate of Bukhara and the Khanate of Khiva. However, relations were minimal for the next two centuries. It was not until the 1800s that tensions along the southern border prompted Russian military units to step up their activities. On one hand, the regional khanates were accused of kidnapping Russian settlers farther north and selling them into slavery. More significantly, Russia found itself in competition with the British Empire over control of the larger region between their empires south of Russia and north of India.

Consequently, Russian military units methodically captured one city after another in the 1850s and 1860s, with the fall of Tashkent and Bukhara in 1865 and 1868, respectively, being key events. By the 1870s, the region was either under direct Russian rule or controlled by two Russian protectorates—Bukhara and Khiva. While there were periodic anti-Russian revolts, none were significant enough to threaten stability in the region.

Central Asia was important to Russia for several reasons. First, it became a core supplier of raw materials. Not only were food and livestock important commodities in the region, but so were exportable industrial products. Minerals, coal, and timber from the northern parts of the region and cotton from the central and southern parts were integrated into the Russian economy. In particular, the shortage of cotton on the international market caused by the U.S. Civil War (1861–1865) prompted Russian officials to expand cotton production in Central Asia for domestic use and for international trade purposes.

Second, Central Asia was strategically important. As noted, Russia found it was competing with Great Britain over South Asian possessions in what was often dubbed "the Great Game." As Russia expanded its control over the steppes of Kazakhstan and into the settled regions of Turkestan, attention was directed southward. It was not until the negotiated border agreement of 1895 that Russia and Great Britain came to terms with their respective holdings in Asia-Russian territory being what is today "Central Asia," and British territory being the regions of Pakistan and India. Afghanistan was seen as a "neutral buffer state," albeit under British influence.

Within the Russian-controlled region of Central Asia, major settlements in the north included the strategic Orenburg, Pavlodar, and Semipalatinsk. Further south, the cities of Vernyy, Pishpek, and Tashkent were critical. Some of these cities, such as Tashkent, Bukhara, Samarkand, and Khiva, were ancient cities with large indigenous populations. Others were Russian-dominated settlements. Railway lines connected all of these cities by the early twentieth century, making it easier for Russians to travel through the region.

The Bolshevik Revolution and Civil War were periods of great turmoil in Central Asia. It was not until 1922 that the Red Army forces under General Frunze were able to quell all significant opposition to the regime—both "White Army" forces and nationalist movements representing indigenous groups. The last "Basmachi" incursion into Central Asia took place in 1936, by which time the region was firmly in Soviet hands.

Throughout the Soviet period, Central Asia remained a source of raw materials. A more sinister usage of Central Asia for the Soviet state was the creation of detention camps within the Gulag system. Located in the western regions of Kazakhstan,

Uzbekistan, and Turkmenistan—around the Aral Sea—these camps held thousands of political prisoners through the 1980s. In addition, Central Asia remained a “destination of exile” for other political dissidents who were forced to move from Russia proper. Indeed, this “tradition” predated the Soviet era. Under Josef Stalin, entire ethnic groups were deported to Central Asia, especially in the 1940s. Chechens, Crimean Tatars, Volga German, and others were sent to Central Asia as they were suspected of being Nazi sympathizers during World War II. Koreans that traditionally lived in the Soviet Union near the Korean peninsula were also deported to Central Asia in the 1950s. It was not until the 1980s that many of these peoples were able to return to their native lands.

With the collapse of the Soviet Union in 1991, the independent states of Central Asia have remained important to Russia. For much of the 1990s, indeed, Russian leaders considered it part of their “Near Abroad.” Even in the early twenty-first century, there is a sense that Central Asia is part of the Russian national security interest region. Trade relations, although decreasing since the Soviet era, remain significant. Energy transfer routes often pass through Russia and many communication links are still northward. There is also a cultural link that is somewhat important to Russia. Several million Russians continue to live in Central Asia, particularly in Kazakhstan and the Kyrgyz Republic. While this was often deemed a source of potential conflict, it is more the case that Russians living in Central Asia will become less attached to Russia proper as time passes.

One interesting trend that has taken place since the early 1990s is the change in nomenclature in the region. In Turkmenistan, for example, the city of Krasnovodsk has been renamed Turkmenbashi (after the current Turkmen president). In Uzbekistan, Tajikistan, and the Kyrgyz Republic, there have been some changes of names for mountains (Pik Somoni instead of Pik Kommunizm in Tajikistan) and regions (“wiloyat” instead of “oblast”). One finds the most significant name changes in Kazakhstan. Semipalatinsk has been renamed Semey, Alma-Ata has been renamed Almaty, and Ak-mola has been renamed Astana, to name a few. This sort of “cosmetic change” is important in the development of regional identities and is expected to continue. In addition, the use of Russian language and the Cyrillic alphabet are decreasing, further noting a cultural distancing from Russia.

Ultimately, Central Asia remains important to Russia, but in a limited way. Central Asian countries have increased their ties to other countries, such as China, Turkey, and the United States. In addition, as energy exports from Central Asia increase, Russia will find itself sharing influence in the region.

ROGER KANGAS

CENTRAL BANK OF RUSSIA

The Central Bank of Russia (CBR) is the highest monetary authority in the Russian Federation. It sets

and carries out Russian monetary policy, supervises the commercial banking system, and maintains the payments system. In addition, it holds majority ownership in Vneshtorgbank (Russia's state-controlled foreign trade bank) and Sberbank (the state savings bank). The Russian Constitution (ratified in December 1993) and the "Revised Law on the Central Bank" (passed in April 1995, modifying the 1990 Russian Soviet Federated Socialist Republic "Law on the Central Bank") jointly provide the legal basis for its activities. Both the constitution and the revised law grant the CBR a high degree of formal independence from the government. While scholars disagree over the extent of the CBR's actual political independence during the post-communist transition, all concur that its policies played a pivotal role in Russian economic development.

The Russian Republic founded the CBR in July 1990, and Georgy Matyukhin, an academic, became its first director. This occurred in the context of a fierce sovereignty battle between the Soviet central government led by Mikhail Gorbachev and the Russian republic government led by Boris Yeltsin. Russian authorities transformed a branch of the State Bank of the USSR (Gosbank) into the CBR in an attempt to gain local control over Russian monetary and banking affairs. Both the Soviet and Russian governments subsequently took numerous steps to increase the influence of their respective central banks, and this so-called "war of the banks" represented one of the first efforts by a republic-level institution to pull away from the center. The struggle ended with the dissolution of the USSR in December 1991. On January 1, 1992, the CBR took over the rest of Gosbank's resources in Russia, and Gosbank officially ceased to exist.

In April 1992, the CBR leadership passed from Matyukhin to former Gosbank director Viktor Gerashchenko. Numerous controversial incidents characterized Gerashchenko's first tenure as CBR head (1992–1994), such as the July 1992 decision to wipe out mutually accrued debt among Russian enterprises, thereby formally ending Russia's flirtation with "shock therapy"; the surprise introduction of a new Russian currency in July 1993; and Gerashchenko's support for the Russian parliament after Yeltsin's September 1993 decision to disband it. Gerashchenko lost his job in November 1994 as a consequence of the ruble's exchange rate collapse on "Black Tuesday" (October 11). His deputy Tatiana Paramonova served as acting CBR director until November 1995, when the Russian

Duma confirmed former acting finance minister and commercial banker Sergei Dubinin as CBR head. Dubinin was forced out after the massive Russian financial crisis of August 1998, which many blamed on CBR policy. Gerashchenko replaced Dubinin and enjoyed a second stormy tenure at the CBR until his resignation in March 2002. The Duma confirmed Russia's deputy finance minister, Sergei Ignatiev, as the new director shortly thereafter.

JULIET JOHNSON

CENTRAL COMMITTEE

The Central Committee was one of the central institutions in the Communist Party of the Soviet Union (CPSU), along with the Politburo, Secretariat, party congress, Central Auditing Commission, and Party Control Committee. Given the political system's centralist, monolithic aspirations, these central institutions bore heavy responsibilities. One of the Central Committee's main functions was to elect all Party leaders, including members of the Politburo and Secretaries of the Central Committee. The Committee—whose members included powerful people in the Communist Party—met every six months in plenary session to approve decisions by the top levels of the party.

The Central Committee was also considered to be the highest organ of the party between congresses (the period known as the *sozyv*). According

to the party rules (*Ustav*), the Central Committee was supposed to “direct all the activities of the party and the local party organs, carry out the recruitment and the assignment of leading cadres, direct the work of the central governmental and social organizations of the workers, create various organs, institutions, and enterprises of the party and supervise their activities, name the editorial staff of central newspapers and journals working under its auspices, disburse funds of the party budget and verify their accounting.”

However, the Central Committee was large; in 1989, for example, it consisted of more than three hundred members. In actuality then, there were two Central Committees. One of them was the body of elected representatives of the Communist Party. The other was the name used in documents produced for and by any number of smaller Central Committee bodies, from the Politburo to the temporary commissions. Thus, the decrees of the Central Committee were seldom prepared by that body. Instead, the Politburo often initiated, discussed, and finalized them.

JOHANNA GRANVILLE

were elected as its first members. There was also a network of subordinate local control commissions. During 1921–1922, the Commission was harshly criticized for its part in suppressing factions within the party. On Vladimir Lenin’s initiative, the Twelfth Party Congress in April 1923 expanded the Commission and unified it with the corresponding state control agency Rabkrin (People’s Commissariat of the Workers’ And Peasants’ Inspection). V. V. Kuibyshev, a loyal supporter of General Secretary Josef Stalin, was appointed to head the new joint institution. Meeting in Joint Plenums with the Party’s Central Committee, the Commission henceforth played a major role in formulating policy both on internal party organization and general governmental affairs. In 1927 Grigory K. Ordzhonikidze took over leadership of the unified control agency. The Commission proved a highly effective tool in Stalin’s consolidation of power, gathering information on support for rival leaders among the party’s membership and later conducting disciplinary proceedings and extensive purges to root out oppositionists. Together with Rabkrin, it also played a major role in initiating and supervising economic policy during industrialization. In November 1930, A. A. Andreyev succeeded as head of the party–state control agency. In October 1931 he was replaced by J. E. Rudzutak. Both agencies were dissolved by the Seventeenth Party Congress (January–February 1934), which created a new Commission of Party Control, subordinated to the Central Committee.

CENTRAL CONTROL COMMISSION

The Central Control Commission was the agency of the All-Russian Communist Party (Bolshevik) responsible for supervising party administration and discipline between 1920 and 1934.

The Ninth Party Congress established the Commission in September 1920 to oversee the party’s organization and membership, in particular to act against the growth of bureaucratism. F. E. Dzerzhinskii, E. A. Preobrazhinskii and M. K. Muralov

CENTRAL STATISTICAL AGENCY

The Central Statistical Agency of the Soviet Union and now Russia has had many different names. The latest is Goskomstat Rossiiskovo Federatsii (State Statistical Committee of the Russian Federation). The origins of the institution date from July 25, 1918, when the Council of People’s Commissars decreed the creation of an integrated entity called the

Central Statistical Agency (*Tsentralnoe statisticheskoe upravlenie* [TsSU]) under its jurisdiction. The first director was Pavel Ilich Popov. Late in the 1920s TsSU operated as an independent people's commissariat, but was abolished at the beginning of 1930. Its functions were transferred to the state planning agency (Gosplan), operating under the name TsUNKhU. Later, on August 10, 1948, TsSU was separated from Gosplan, once again becoming a fully independent organ, this time attached to the USSR Council of Ministers. The journal *Vestnik statistiki* was inaugurated at this time, and TsSU began publishing its documents through *Gosstatizdat*. Goskomstat RF's Economic and Statistical Research Institute was created in 1963 under the name Research Institute for Computer Based Forecasting. The main computing center started soon thereafter in 1967. TsSU was transformed into the Gosudarstvennii Komitet SSSR po statistik (Goskomstat SSSR) in 1987.

The quality and reliability of Goskomstat's work has always been controversial among economists East and West. A consensus arose during the Cold War that the statistics were sufficiently accurate to support valid judgments about growth and international comparisons, but this appraisal later appeared misguided. Goskomstat's data showed Soviet GDP and per capita consumption growth exceeding that of the United States through 1988, a claim inconsistent with the USSR's internal collapse.

STEVEN ROSEFIELDE

CHAADAYEV, PETER YAKOVLEVICH

(1794–1856), Muscovite philosopher and social critic.

Peter Yakovlevich Chaadayev is most famous for the publication of his "First Philosophical Letter" in 1836 in the journal *Telescope*, which shockingly provoked the subsequent debate between Slavophiles and Westernizers. The Russian intellectual Alexander Herzen declared Chaadayev's letter to be "a shot that rang out in the dark night" that "shook all thinking Russians." Count Benkendorf, chief of the Third Section (the secret police) under Tsar Nicholas I, considered Chaadayev's work to be that of a madman, and so Nicholas I had Chaadayev officially declared insane and ordered that all copies of the *Telescope* journal be confiscated. Chaadayev was placed under house arrest for about a year. The government ordered him to never publish anything again.

Chaadayev had written his "First Philosophical Letter Addressed to a Lady" as part of a series of eight "Philosophical Letters" not in Russian but in French, which he considered to be "the language of Europe." However, the editors of the journal *Telescope* published only the first letter in a comparatively weak Russian translation. Chaadayev designed his "Philosophical Letters" as a criticism of the history of Russian culture in general, and the effects of religious institutions in his country. He idealized the history and influence of the Roman Catholic Church, in order to point up the shortcomings of the Russian Orthodox Church. In particular, he lashed out at Russian serfdom and autocracy. He declared that Russians had made no impact upon world culture. Russia had no important past or present; it belonged neither to the East nor the West. He worried about the malignant growth of contemporary Russian nationalistic propaganda, which might lead Russians to construct some foolish past "golden age" or "retrospective utopia." In such a case, Russians would not take advantage of their unique cultural situation, and their cultural history might only serve as an example to others of what not to do.

Most Russians know Chaadayev simply as "a friend of Alexander Pushkin," or as a pro-Catholic ideologue. In fact, he did remain Pushkin's friend until the poet's death in 1837, but he never became a Roman Catholic. Chaadayev remained Russian Orthodox all of his life. In 1837 Chaadayev wrote his "Apologia of a Madman," an ironic claim that

Russia did indeed have a genuine history but only since the time of Peter the Great. Despite the fact that Russians had no "golden age" to fall back on, they should retain the ability to submit to outside cultural forces and thus have a potentially great future.

After 1836 Chaadayev continued to write articles on cultural and political issues "for the desk drawer." Chaadayev defies categorization; he was not a typical Russian Westernizer due to his idiosyncratic interest in religion; nor was he a Slavophile, even though he offered a possible messianic role for Russia in the future. He had no direct followers, aside from his "nephew" and amanuensis, Mikhail Zhikharev, who scrupulously preserved Chaadayev's manuscripts and tried to get some of them published after Chaadayev's death. Chaadayev's lasting heritage was to remind Russian intellectuals to evaluate any of Russia's supposed cultural achievements in comparison with those of the West.

RAYMOND T. MCNALLY

CHAGALL, MARC

(1887–1985), (Mark Zakharovich Shagal), artist.

Marc Chagall was born in Vitebsk, Russia (now in Belarus), a major center of Jewish culture. In 1906 he attended Yehuda Pen's School of Drawing and Painting in Vitebsk, moving to St. Petersburg

the next year. Over the next three years, he attended art classes at Nikolai Roerich's Society for the Encouragement of the Arts and at Savely Zeidenberg's private art academy. He also studied under Mstislav Dobuzhinsky at Elizaveta Zvantseva's art school. In 1910 Chagall left for Paris and settled in the Russian artist colony, La Ruche, in Montmartre. After the opening of his first personal exhibition at the gallery Der Sturm in Berlin in 1914, Chagall made a trip to Russia; the outbreak of World War I made a return to Paris impossible.

Chagall was an enthusiastic supporter of the Russian Revolution and was made the first Commissar for Fine Arts in Vitebsk in 1917. He formed the Vitebsk Popular Art School in 1919 and invited Dobuzhinsky, El Lissitzky, Pen, and Ivan Puni (Jean Pougny) to join the faculty. At the same time, Vera Yermolayeva, also teaching at the school, invited Kazimir Malevich to become a member of the staff. Malevich and his followers formed the Unovis (Affirmers of the New Art) group, devoted to Suprematism and essentially hostile to Chagall's leadership. In 1920, after a power struggle, Chagall resigned his directorship and moved to Moscow, where he worked in the Moscow State Yiddish Theater and the Habimah Theater as a set designer and muralist.

Growing increasingly disenchanted with the turmoil of the new communist state, he left Russia in 1922, immigrating to Berlin. After a year, he returned to Paris to find that many of the paintings he had left there were missing. However, he was still able in 1924 to mount his first major retrospective at the Galerie Barbazanges-Hoderbart. He moved to the United States in 1941, fleeing Nazi occupation, returning in 1948.

MARK KONECNY

CHANCELLERY SYSTEM

From the 1470s, new demands (Novgorod's annexation, service and land registration, diplomacy) impinged upon the Muscovite court; its few literate officials multiplied and specialized. Embryonic offices between the 1530s and 1550s evolved into departments, "chancelleries" (*izby*, later *prikazy*), generating their own desiderata, becoming a significant (even dominating) element in Muscovite government—shaping the court and autocracy. From the 1530s to 1700, the "chancellery system" (*prikaznaia sistema*) became a full-fledged early modern state bureaucracy, in some ways more developed than its European counterparts, with differentiated offices and a professional administrative staff. It did not contend with estates, incorporated towns, ecclesiastical institutions, or parliamentary organs.

Warfare was the primary impetus to the chancellery system; its personnel and documentary language were nonecclesiastical, unlike those of medieval Europe. Chancellery parlance (*prikaznoi yazyk*) was basically standard Middle Russian, with some Mongol-Tatar fiscal and diplomatic terminology and very few Latinate words.

The chancelleries' primary interests were military affairs, diplomacy, taxation, and justice; education and social welfare virtually were absent. Seventy-six percent (117) of the chancelleries handled civil administration, 12 percent (18) royal court affairs, 8 percent (12) the tsar's personal matters; and 4 percent (6) the Patriarchate. Tsars and their cliques fashioned new bureaus at the start of a reign, and became acculturated to bureaucratic norms.

The authorities refurbished chancelleries as needed. One hundred thirty-six (90%) of the 153 chancelleries operated during the 1600s. While Ivan IV's military administrative, tax, provincial administrative, and justice reforms caused the chancelleries to flourish, his *Oprichnina* temporarily inflicted harm. Its separate chancelleries suffered a fate similar to that of the regular state (*Zemshchina*) bureaus; in 1570 he murdered the state secretaries and clerks of both after 1572, new military, financial, and judicial chancelleries appeared; the chancellery system broadened its control over the countryside. The Time of Troubles bludgeoned this system as rival throne claimants divided administrators. Moscow lost countryside control; the Poles shut down the chancelleries.

Mikhail Fyodorovich's first years witnessed many new court chancelleries, temporary military chancelleries, and *ad hoc* social grievance bodies (e.g., against dominance by unduly powerful individuals ["strong people"] and tax exemptions for magnates, well-to-do merchants, and monasteries). *Dyak* (clerk) corruption and bribery were conspicuous in the 1630s and 1640s; Alexei Mikhailovich's later reign and the 1649 *Ulozhenie* (Law Code) dampened these excesses.

Alexei's adviser Boris Morozov created several military chancelleries. Fyodor Alexeyevich's gifted courtiers Yuri Dolgoruky and Ilya Miloslavsky engendered financial and publication chancelleries and the May and November 1680 financial- and military-administrative reforms. They streamlined chancelleries by merging subordinate chancelleries into the Military (*Razryad*) and Foreign Affairs (*posolsky prikaz*) Chancelleries and the Chancellery of the Grand Treasury (*prikaz bolshoi kazny*)—the culmination of bureaucratic pyramiding from the 1590s. The 1682 Musketeers' Revolt partially unraveled the 1680 measures. Before 1700, Peter I's regime created six chancelleries; three of them inaugurated the Petrine navy. Peter then dismantled the chancelleries; other institutions, culminating in the colleges, replaced them.

The Kremlin enclosed most chancelleries. They housed tribunal hearings, clerks' writing tables, and document storage. Bigger chancelleries (Military, Foreign Affairs, Service Land [*pomestny prikaz*]) had separate buildings.

Historians have exaggerated in criticizing the Muscovite bureaucracy for its numerous offices and interference in one another's jurisdiction. Red-tape (*volokita*) aside, all knew where to go, though they might petition tribunals many times. Chancelleries of the realm possessed five hierarchies: The Military Chancellery, during interims of no major wars (when it manipulated all chancelleries), directed all military-related chancelleries; the Foreign Affairs Chancellery oversaw territorial chancelleries governing recently annexed non-Russian lands; the Chancellery of the Grand Revenue (*prikaz bolshogo prikhotoda*), supervised Northern Russian tax collection chancelleries (*cheti, chetverti*); the Chancellery of the Grand Court (*prikaz bolshogo dvortsa*) controlled the ill-understood royal court chancelleries; and the Patriarch's Service Chancellery (*patriarshy razryad*) oversaw five bureaus in the Patriarchate.

Nine chancelleries existed in the 1550s, 26 in the 1580s, 35 in the first decade of the 1600s, 57

in the 1610s; and 68 in the 1620s. Sizes of chancelleries varied enormously. The *pomestnyi prikaz* multiplied its staff the most: by 12 in 60 years, from 36 clerks in 1626 to 446 clerks in 1686. The *Razryad* reached 125, and the *posolskii prikaz* 40 clerks; temporary chancelleries (*sysknye prikazy*) had as few as 1 or 2.

At least 24 chancelleries (15%) functioned over a century. Under Romanov rule, 102 bureaus (75%) existed either 20 years or less (at least 80 years), highlighting Muscovite leadership's short-term versatility and perennial "matters of state" preoccupations. Mean chancellery longevity was 33 years, 84 years the median.

Chancellery jurisdiction was territorial or functional: one region, (e.g., Siberia) or one pan-territorial function (e.g., felony administration, collection of prisoner-of-war ransom monies). Larger chancelleries, for division of labor, had territorial or functional "desks" (*stoly*). The 1600s *razryad* had up to 12. Desks could be subdivided into *povytia* (sections).

Muscovy had no serious Roman law tradition. Chancellery officials' scribal virtuosity and ability to plan macro-operations (e.g., fortified lines, fortress construction, land surveys, tax assessment) were impressive, though they lacked the education of European chambers' lawyers and jurists, Ottoman *kapi-kulu* administrators, and Chinese dynastic bureaucrats. Monasteries mostly handled charity (alms and sick relief). Starting in the early 1700s, the state supported education and social welfare.

All chancellery officials from boyar to clerk took rigorous oaths (e.g., personal behavioral issues, secrecy). The chancellery work force was steeply hierarchical. Tribunals (sing. *sudya* or judge) of 2 to 6 men (usually 4) heard court trial cases and decided other business. Counselor state secretary (*dumny dyak*) was the highest, professional tribunal rank. Boyars and *okolnichie*, administrative nonprofessionals, infiltrated tribunals from 1600, subverting joint decision making. Solo decision making by the chief chancellery tribunal director became *de jure* in 1680.

Duma tribunal members by the 1690s garnered at the expense of the *dyak* and *podyachy* a greater share of cash salary entitlements (*oklady*) than in the 1620s. Those of boyars and *okolnichie* ranged between 265 and 1,200 rubles (617-ruble mean), and 300 and 760 rubles (385-ruble mean). War-

dens, bailiffs, watchmen, guards, furnace-men, and janitors were chancellery staff.

Prerevolutionary historiography described the evolution and structure of the chancelleries, their employees, and social interaction. Soviet historiography until the 1950s and 1960s neglected Muscovite administrative history in favor of topics explicitly related to class conflict.

PETER B. BROWN

CHAPAYEV, VASILY IVANOVICH

(1887–1919), soldier and Russian civil war hero.

Were it not for the eponymous novel and movie, historians would not likely have remembered the name of Chapayev, the unlettered commander of the Red Army's Twenty-Fifth Infantry Division during the Russian Civil War. He was instrumental in defeating Alexander Kolchak's "White" forces in the summer of 1919, but was killed in the action.

Dmitry Furmanov, the Chapayev brigade's political commissar, published a thinly-fictionalized memoir about Chapayev in 1923. A proto-Socialist Realist novel, *Chapayev* was an immediate best-seller and turned Chapayev into an overnight hero. Furmanov's book spawned a veritable "Chapayev industry" of songs, games, and jokes. Although *Chapayev* was still in print a decade after its publication and selling well, there can be little doubt that the immense popularity of the 1934 movie *Chapayev* extended the legend's life.

Made by two unknown directors, Georgy Vasiliev and Sergei Vasiliev, *Chapayev* debuted on November 7, 1934, on the seventeenth anniversary of the Russian Revolution. Reputed to be Stalin's favorite movie, *Chapayev* was also the biggest box-office hit of the 1930s, selling over 50 million tickets in a five-year period. Even foreign critics and émigré audiences loved the movie, which starred Boris Babochkin as the brash commander.

Regardless of what the historic Chapayev was "really" like as man and hero, on the printed page and on the screen, he was an antidote to the dreariness and conformity of Soviet life. Furmanov was not a particularly gifted writer. His novella is plainly written and disjointed. The "Vasilyev Brothers" were competent directors but no more than that. Their movie is a rather primitive example of the early sound film. As many critics have noted, Chapayev is an archetypal "cowboy," a free spirit who supports revolution, but in his own way. The paradox is that Chapayev is an unruly model for "homo Sovieticus," especially with the emphasis on man-as-machine in the 1930s. It is important to remember, however, that for Stalin, Chapayev was the perfect hero—a dead one.

CHAPBOOK LITERATURE

Chapbook literature (*Lubochnaya literatura, narodnaya literatura*) refers to inexpensive books produced for lower-class readers, which were often associated with Moscow's Nikolsky Market, center of the chapbook industry in late imperial Russia.

The proliferation of chapbook literature in nineteenth-century Russia was linked to the steady rise of literacy after the emancipation of the serfs in 1861 and the appearance of a mass market for affordable reading material. As had earlier been the case in Britain, France, and the German states, the

growth of the reading public in Russia was paralleled by the expansion of the commercial publishing industry, which produced increasing numbers of titles intended mainly for newly literate lower-class readers. In the first half of the nineteenth century, chapbook publishing was centered in St. Petersburg, but in the second half of the century, the most successful chapbook publishers were the Moscow firms of Sytin, Morozov, Kholmushin, Shaparov, and Abramov. By 1887 over three million copies of 336 chapbook titles were published, and more than 21 million copies of 2,028 titles in 1914. The chapbooks were usually written by people of peasant or lower-class origins, and sold by city hawkers or rural itinerant peddlers.

Folktales, chivalrous tales, spiritual and didactic works, historical fiction, war stories, and stories about merchants were the predominant subjects of commercial chapbooks for most of the nineteenth century, but by the beginning of the twentieth century, stories about crime, romance, and science accounted for a large share of the chapbook market. Lurid tales of criminal exploits were extremely popular, featuring heroes such as the bandit Vasily Churkin or the pickpocket "Light-fingered Sonka." Sonka eventually migrated from the pages of the chapbooks to the silver screen, becoming the heroine of a movie serial. Other stories celebrated individual success in achieving material wealth through education and hard work. Serial detective stories of foreign origin or inspiration, especially those recounting the thrilling adventures of the American detectives Nat Pinkerton and Nick Carter, enjoyed tremendous success in the late 1900s.

Many Russian intellectuals were dismayed at the popularity of the commercial chapbooks, which they viewed as expressions of a degenerate urban culture that was corrupting the hearts and minds of the Russian peasantry. Some, like Leo Tolstoy, tried to combat the chapbooks by producing a special "people's literature," others by publishing low-priced works from the contemporary literary canon. Literacy committees and zemstvos also produced cheap editions of belles lettres and popular science. The most successful commercial chapbook publisher, Ivan Sytin, began printing works by Tolstoy and other literary figures for a mass readership in 1884. The Orthodox Church, while condemning the harmful influence of the commercial chapbooks, published inexpensive editions of saints' lives, prayer books, the scriptures, religious stories, and even some works by secular authors. The state also subsidized the

publication of religious, moralistic, and patriotic literature for soldiers and the common people.

Chapbooks, like other publications, were subject to censorship in tsarist Russia. Although the state was concerned about the potentially subversive impact of commercial chapbooks on the common people, there was never a special censorship of publications intended to be read by the lower classes. The state did, however, impose restrictions on the titles that were available in libraries and reading rooms for the common people, or that could be read to popular audiences. Most restrictions were relaxed after the 1905 Revolution, when the preliminary censorship of publications was abolished.

During World War I, commercial publishers, with the encouragement of the state, produced chapbooks glorifying the exploits of Russian soldiers. After the February Revolution brought an end to the tsarist autocracy, there was a brief upsurge of often lascivious stories about Rasputin and the imperial family. Following the October Revolution, the Bolsheviks nationalized the commercial publishing houses and suppressed the chapbooks as part of their effort to transform popular tastes.

E. ANTHONY SWIFT

CHARSKAYA, LYDIA ALEXEYEVNA

(1875–1937); pseudonym of Lydia Alexeyevna Churilova; Russian novelist, poet, and actress.

Lydia Charskaya worked as an actress at the Alexandrinsky Theater from 1898 to 1924. Between 1901 and 1916 she published about eighty books, several of which became bestsellers, the most popular of which was *Princess Dzhavakha* (*Knyazhna Dzhavakha*, 1903).

The novels fall into four general categories: "institute" stories that take place in boarding schools for elite girls; historical novels about women; "autobiographical" novels that follow the heroine from boarding school to a career; and detective and adventure stories. The main theme throughout most of these stories is friendship among girls; the heroines generally are independent girls and women who seek adventure or some sort of diversion from the routine of everyday life. Later critics have commented that these characteristics account in large part for the books' wide popularity among young girls in early twentieth-century Russia.

Charskaya's reputation began to fade after 1912 when the critic Kornei Chukovsky published an article in which he wrote that her books were formulaic, repetitious, and excessive with respect to female emotions. She ceased publishing in 1916, and in 1920 Narkompros (People's Commissariat of Enlightenment) included her work on the list of "banned" books. From 1924 until her death in 1937 she lived in poverty, supported mostly by loyal friends. Throughout the Soviet period her work was regarded with disdain, although ample evidence exists that young girls continued secretly to read her books, at least through the 1930s. During the late 1980s and 1990s Charskaya's work enjoyed a revival in Russia, as several of her books appeared in new editions.

ELIZABETH JONES HEMENWAY

CHARTER OF THE CITIES

The Charter of the Cities (Charter on the Rights and Benefits for the Towns of the Russian Empire) was

issued by Catherine the Great on April 21, 1785, together with the Charter to the Nobility; its importance is suggested by the fact that the date was Catherine's birthday. Also composed, but never issued, was a Charter for State Peasants. All three charters are parallel in structure, down to individual articles, indicating that they were intended as a single body of legislation establishing definitions, duties, rights, and privileges for three important legal estates.

The Charter has 178 articles, of which article 123 comprises an Artisans' Regulation of 117 articles. Building on earlier laws on urban administration, the Charter instituted an urban corporation comprising six categories of inhabitants: (1) owners of immovable property (houses, shops, land); (2) merchants in three guilds (delineated by self-declared capital); (3) artisans in craft corporations; (4) merchants from other towns or governments; (5) "eminent" citizens (by education, wealth, or public service); and (6) long-time residents unqualified for other categories but earning a living in town. There are detailed instructions for establishing eligibility and compiling registries of all these groups.

Each category elected representatives to a town council and a single delegate to a six-man council that administered affairs between plenary assemblies of the larger body. Towns were given limited rights to raise taxes, although little was said in general about finances.

The Charter applied especially to St. Petersburg and Moscow, less so to small towns often lacking all six categories. Still it was instituted, at least on paper, in the more than four hundred towns in the empire. The Charter was replaced by a command structure of municipal administration by Emperor Paul (1797), but reinstated by Alexander I (1802). As an example of grand principles applied across the board without regard to local circumstances, the Charter remained a poorly functioning basis for urban administration until 1870, when replaced by the reform of Alexander II.

GEORGE E. MUNRO

CHARTER OF THE NOBILITY

The Charter of the Nobility (often referred to as The Charter to the Nobility) was issued by Catherine the Great in 1785. The Charter should not be seen as an isolated document. Rather it is the product of a broad legislative and administrative agenda. Related documents that link the Charter are those that formed the Legislative Commission of 1767, the actual Statute of Local Administration of 1775, and the Charter to the Towns (also called Charter of the Cities) of 1785.

The eighteenth century in Russia, as in Europe, saw substantial advancement in the power, wealth, and prestige of the nobility. In Russia, this impetus came after 1725, the year of Peter the Great's death. Through various means, including personal dictate and the Table of Ranks (1722), Peter was able to enforce considerable adherence to the practice of two things he deemed necessary: compulsory state service and advancement by merit, not lineage. His death signified that the nobility would immediately begin to reclaim its privileges.

This process united the Russian nobility despite its disparate makeup. By 1762, when Peter III was on the throne, just prior to Catherine the Great's accession, a law was passed emancipating the nobles from compulsory service to the state. Catherine's rule (1762-1796) was decidedly pro-aristocracy. Whether the measures she undertook were seen in the context of modernizing Russian administration or in advancing reform, they were not detrimental to the nobility's agenda. The aristocrats were in the ascendancy, Catherine was a supreme pragmatist, and the state was satisfied with being able to partially regularize the affairs of its principal class. Specialists often point out that this regularization led to a semblance of the rule of law in an autocratic state. Specific rights and duties were clearly defined. When one looks at the actual Charter of the Nobility, one sees what appears to be an extension of rights.

Isabel de Madariaga (1990) accurately breaks down the rights by category. In terms of personal rights, the Charter guaranteed the nobles trial by their peers, no corporal punishment, freedom from the poll tax, freedom from compulsory army duty, the right to travel abroad, and the right to enter foreign service. (This is a partial list.) Property rights were enhanced by allowing the nobles to exploit their mineral and forest resources. Manufacturing on their own land was permitted and the right to

purchase serfs was reinforced. As for corporate rights, the nobility's rights of assembly were solidified and they were given the privilege of directly petitioning the empress. Historically, the upper nobility exercised this right anyway, whether it was written or not.

The Charter clearly was not a new concession to the nobility. But it consolidated numerous conditions and prerogatives. It is important to observe that serious advancement in power and prestige was still linked to government service.

The principal effects of the Charter are not always precisely traceable since so many varied elements intersected. Yet, it is safe to say that the aristocracy's role in local and regional affairs was magnified. The central government's apparatus for these political functions could thus be partially trimmed. Some authors indicate a potential distancing between the central and provincial governments. It is not clear how much administrative unification or cohesion resulted at either level of government because of the Charter's promulgation.

CHASTUSHKA

A very popular modern Russian folk lyrical miniature or short song performed solo or by a chorus in a monothematic style.

Deriving from the Russian word *chasto* meaning "rapid," the *chastushka* is very simple in structure, usually consisting of four-line stanzas that are repetitively sung at a rapid tempo. It had its origins in simple and repetitive rhythmic peasant songs, usually based on folk sayings and proverbs and performed as overtures to dance music cycles. The advent of the balalaika (a two- and later three-string musical instrument) in the eighteenth cen-

tury, which was mainly used to accompany dance performances, helped to crystallize the *chastushka* into a new musical genre sometime at the turn of the nineteenth century. From the mid-nineteenth century, the harmonica came to play an increasingly important role as an accompanying instrument and soon became the standard. Today, *chastushki* are of four main types: the four- and six-line lyrical, satirical (sometimes obscene), etc. accompanied choral songs; dance songs; paradoxical and fable songs; and two-line "suffering" or lamentation songs. The satirical *chastushki* have been the most common, in large part because of their amusing and didactic nature as well as their use in expressing socio-political thoughts of the day. The growing social and political grievances, particularly after the Great Reforms of 1861 and industrialization, were commonly expressed in these *chastushki* that satirized the tsarist regime, the nobles, and the Church. In this way, the *chastushka* became a vehicle for venting the growing frustration of the peasants and industrial workers. Its peasant origins and simple structure made the *chastushka* a very attractive form of spreading Soviet propaganda and engineering a new "socially and politically conscious" Soviet citizen after the Revolutions of 1917.

ROMAN K. KOVALEV

CHAYANOV, ALEXANDER VASILIEVICH

(1888–1937), pseudonym Ivan Kremnev, theoretician of the peasant family farm, leading chair of agricultural economics in Soviet Russia in the 1920s.

Born in Moscow, Alexander Chayanov entered the famous Moscow Agricultural Institute in 1906 (known as the Petrovsky Agricultural Academy from 1917 to 1923 and as the Timiryazev Agricultural Academy since 1923) and graduated with a diploma in agricultural economics in 1911. Appointed associate professor in 1913, he became full professor and chair of the agricultural organization in 1918, and worked at the academy until his arrest in 1930. In 1919 he was appointed director of the Seminar of Agricultural Economy. In 1922 this institution became the Research Institute for Agricultural Economics and Politics. As director, Chayanov gathered an illustrious body of re-

searchers. Often traveling abroad from 1911 onward, he became an internationally recognized specialist in his field, forming a network of correspondence in more than sixty countries. Chayanov actively participated in the Russian cooperative movement, filling leading positions during World War I and after the Revolution. From 1917 onward, he also took part in shaping agricultural policy, drafting plans for agricultural development at the Peoples Commissariat for Agriculture and the State Planning Commission.

Accused of being the head of the "Toiling Peasant Party," Chayanov was arrested in 1930. Only in 1987 did details of his further fate become known. Although the planned show trial never took place, he was sentenced to five years in prison in 1931 and exiled to Kazakhstan. Released due to his poor state of health, Chayanov worked from 1933 to 1935 in the Kazakh Agricultural Institute in Alma-Ata, teaching statistics. In connection with the show trial against Bukharin, he was newly arrested in March 1937, sentenced to death October 3, 1937, and shot the same day in Alma-Ata.

Belonging to the "neopopulist tradition," in the 1920s Chayanov became the most eminent theoretician of its Organization and Production School of Agricultural Doctrine. His fundamental work, *Peasant Farm Organization* (1925), was published in an earlier form in 1923 in Berlin. Emphasizing the viability of peasant agriculture and its ability to survive, he posited a special economic behavior of peasant households that relied almost exclusively on the labor of family members. Unlike the capitalist enterprise, the peasant family worked for a living, not for a profit, thus the degree of "self-exploitation" was determined not by capitalist criteria but by a hedonic calculus. He envisioned the modernization of traditional small farming not as part of capitalist or socialist development, but as part of a peasant process of raising the technical level of agricultural production through agricultural extension work and cooperative organization. His vision of a future peasant Russia is described in his utopian novel *Journey of My Brother Alexei to the Land of Peasant Utopia* (1920). This work later became instrumental in his downfall. His studies on the optimal size of agricultural enterprises are of interest even today. Chayanov's theory of the peasant mode of production challenged the Marxist interpretation of differentiation of the peasantry into classes by positing the idea of a cyclical mobility based on the peasant family life cycle.

Chayanov's ideas have survived him. His work after his arrest was rediscovered in the West in the mid-1960s. His pioneering study of the family labor farm now claimed the attention of agricultural sociologists, anthropologists, and ethnologists working on developing countries where the peasant economy remains a predominant factor. In spite of the problematic nature of part of his work, it is generally seen as an important contribution to the development of the theory of peasant economy.

STEPHAN MERL

CHEBRIKOV, VIKTOR MIKHAILOVICH

(b. 1923), Soviet party and police official; head of the KGB from 1982 to 1988.

Born in Ukraine, Viktor Chebrikov, an ethnic Russian, served at the Soviet front during World War II as a battalion commander. He became a member of the Communist Party in 1944 and earned a higher degree in engineering at the Dnepropetrovsk Metallurgical Institute after the war. In 1951 Chebrikov moved from engineering into full-time party work and served in various party administrative posts in the Ukrainian city and region of Dnepropetrovsk, rising to become second secretary of the Dnepropetrovsk Obkom (regional party committee) in 1964. In 1967 Soviet party leader Leonid Brezhnev, a native of Dnepropetrovsk, appointed Chebrikov to the post of head of personnel for the KGB (Committee of State Security) the Soviet security and intelligence apparatus. In 1968 Chebrikov became a deputy chairman of the KGB,

and in early 1982 first deputy chairman, serving under Yuri Andropov. A Brezhnev loyalist, Chebrikov was elected to full membership in the Central Committee of the Soviet Communist Party at the Twenty-sixth Party Congress in 1981. In December 1982, with Andropov having succeeded Brezhnev as party leader, Chernenko took over as chairman of the KGB. He served in this post for the next six years, becoming a full member of the Politburo in 1985, where he remained until party leader Mikhail Gorbachev edged him out in October 1988. Chebrikov moved back into the party apparatus, serving as party secretary responsible for police and legal affairs, but his political conservatism put him at odds with Gorbachev, who had embarked on a program of far-reaching reforms, including limitations on the powers of the KGB. Chebrikov represented the Brezhnevite old guard of the Soviet bureaucracy, and although he apparently favored some sort of economic restructuring to increase the efficiency of the Soviet economy, he was not an advocate of any democratic political reforms. Less than a year later, in September 1989, Chebrikov was abruptly dismissed from his party post; from there he faded into obscurity.

AMY KNIGHT

CHECHNYA AND CHECHENS

The Chechens, who call themselves *noxchii* (singular *noxchi* or *noxchuo*) and their land *Noxchiin moxk* ("Chechen land"), are the largest indigenous nationality of the North Caucasus. They speak a language of the Nakh-Daghestanian, or East Caucasian language family that is native to the Caucasus, and have lived in or near their present locations for millennia.

DEMOGRAPHY AND CUSTOMS

Chechnya is a small territory of about 5,000 sq. mi. (13,000 sq. km.) corresponding to about 85

percent of the historical Chechen lands (the rest is in today's Daghestan), with some non-Chechen steppe land added in the north. The lower North Caucasus foothills and adjacent plain including the capital city of Grozny (*Soelzha-ghaala* "Sunzha City" in Chechen, a name still much in use despite its official renaming to Djohar in 1996) are the most densely populated part of Chechnya. The Chechens numbered just over a million in mid-2000 according to a Danish Refugee Council census. Somewhat over half of the world's Chechens live in Chechnya; most of the others are scattered throughout Russia, several tens of thousands live in Kazakhstan and nearby, and a few tens of thousands in Jordan, Turkey, and Syria.

The ethnonym *noxchii* is the self-designation of all speakers of Chechen on the north slope of the Caucasus Mountains but not of the Chechen-speaking Kisti on the south slope in Georgia. Though the Chechens and the neighboring Ingush have separate languages, national identities, and ethnonyms, they recognize an overarching ethnic unity (which also includes the Kisti) that they call *vai naax*, or "our people." Chechen and Ingush are distinct languages and not mutually intelligible, but because of widespread passive bilingualism the two languages make up a single speech community in which each person speaks his or her own language and understands the other. Chechens recognize a larger supranational ethnic and political identity of *laamanxoi* ("mountain people") that includes all the indigenous peoples of the North Caucasus.

In the nineteenth century, Chechen society consisted of about 130 patrilineal exogamous clans (Chechen *taipa*), most of which fell into one or another of nine clan confederations or tribes (Chechen *tuqam*), each of which had its own dialect. The Noxchmaxxoi (or Ichkerians) of the central and eastern foothills were the largest and most powerful. The confederations had some mutual economic and defense obligations, and as Chechen resistance to Russian conquest solidified in the eighteenth and nineteenth centuries the other confederations began to take on the ethnonym *noxchi* on which the name of the Noxchmaxxoi is based. The charismatic resistance leaders were Muslims, and one result of the war was solidification of a Chechen national consciousness with Sufi-based Sunni Islam as one of its components. The social and religious functions of clans are by now diminished, although the great majority of Chechens still observe clan exogamy. Islam was actively practiced throughout the Soviet period.

Prior to the Russian conquest, Chechen society was prosperous and egalitarian, with no social distinctions other than earned wealth and earned honor. There was no government, though the society was ruled by a strong and uniform code of law. Penalties were set by respected elders, and fines were collected or death penalties carried out by the victim or the offended family. (The misnomers “blood feud,” “vendetta,” and “vengeance” are commonly used of this decentralized system.) Traditional justice has served the Chechens through the Soviet and post-Soviet periods whenever civil justice has failed to function.

Chechen social interaction is based on principles of honor, chivalry, hospitality, and respect, and on formality between certain individuals and families. Relations within the family are close and warm, but in public or when guests are present younger brothers are formal in the presence of older brothers and all are formal in the presence of their father. Behavior of men toward women, whether formal or not, is always chivalrous. Unlike some Muslim societies, Chechen women are and always have been free to associate with men in public, hold positions of responsibility in all lines of work, supervise men at work, and so on, but chivalry is strictly observed and creates social distance between men and women. An individual’s social standing depends largely on how well he or she shows respect and extends hospitality to others.

From the middle ages to the sixteenth or seventeenth century, Chechen families of means built five-story defense towers and two-story dwelling compounds of stone in highland villages, usually one tower per village. Today, each tower is associated with a clan that traces its origin to that village, and each highland village is (or was until deportations in the Soviet era) inhabited by one clan that owns communal fields and pastures, a cemetery, and (prior to the conversion to Islam) one or more shrines. The majority of Chechen clans have such highland roots; a few lowland clans do not, and these are generally assimilated clans originally of other nationalities.

The Chechen highlands, though the center of clan and pre-Muslim religious identity, supported a limited population and therefore traditional Chechen society was vertically distributed, with highlanders (herders) and lowlanders (grain farmers) economically dependent on each other. In cold periods such as the Little Ice Age (middle ages to mid-nineteenth century), highland farming became marginal and downhill movement increased. The

late middle ages were a time of intensification in the forested foothills of Chechnya, when foothill towns were founded, ethnic identity as *noxchi* began to spread through the foothills, and the lowlands became the wealthier and culturally prestigious part of the society. The peak of the Little Ice Age coincided with the beginning of the Russian conquest of the Caucasus in the eighteenth and nineteenth centuries, and the Chechen economy was destroyed as the lowlanders were expelled, their lands seized, and at least half of the lowland population slaughtered or deported to the Ottoman Empire (the Chechens of Jordan, Turkey, and Syria are descendants of these and postwar deportees).

HISTORY, TREATIES, EXTERNAL RELATIONS

In 1859 Imam Shamil, leader of the fierce Dagestani-Chechen resistance to Russian conquest, surrendered to the Russian forces. No nation or government surrendered, and in particular the Chechens did not surrender (and indeed had no government that

A Russian soldier aims his machine gun during Russia's second war with Chechnya. © AFP/CORBIS

could have surrendered) and have essentially never considered themselves legitimately part of Russia. Their best land was seized and given to Cossack or Russian settlers, and perhaps half of their surviving population was deported or coerced or deceived into emigrating to the Ottoman Empire. A large Chechen uprising in 1877–78 was put down by Russian military force. A North Caucasus state, the Mountain Republic, including Chechnya, formed in 1917 and declared its independence in 1918. Individual North Caucasian groups, including the Chechens, fought against the Whites in the Russian civil war. In 1920 the Red Army occupied the North Caucasus lowlands but then oppressed the population and a yearlong war in Chechnya and Daghestan ensued. A Soviet Mountain Republic (the North Caucasus minus Daghestan) in 1921 recognized the Soviet government on the latter's promise (via nationalities commissar Josef Stalin) of religious and internal-political autonomy. But in 1922 the Bolsheviks attacked Chechnya (to "pacify" it), removed it from the Mountain Republic, and in 1924 "liquidated" the rest of the Republic. In 1925

there was another bloody "pacification" of Chechnya. In a 1929 Chechen rebellion against collectivization, the leaders created a provisional government and presented formal demands to the Soviet government, which officially promised Chechen autonomy but attacked again soon after. Probably at least thirty thousand Chechens were killed in purges connected with collectivization. In 1936 Chechnya was merged with Ingushetia into a hybrid Chechen-Ingush ASSR. In 1944 the entire Chechen and Ingush population was deported and the ASSR "liquidated." They were "rehabilitated" in 1956 and the ASSR reinstated in 1957. In 1991 Chechnya declared independence and Ingushetia separated off. The 1994–1996 Russian-Chechen War was initiated in part to prevent Chechnya's secession. The 1997 Khasavyurt treaty after the war promised Russian withdrawal from and noninterference in Chechnya, a decision on independence after five years, and Russian aid in rebuilding the devastated country. (The wording implies Chechen independence; e.g. "The agreement on the fundamentals of relations between Russian Federation

and the Chechen Republic being determined in accordance with generally recognized norms of international law shall be reached prior to December 31, 2001.”) This is the first treaty the Chechens have made as a nation. They honored it; Russia did not, but diverted aid funds, supported radical Islamists and militants, began planning to invade Chechnya in early 1999, and did so on a pretext in late 1999, initiating a destructive war designed to solidify political power in Moscow but otherwise still incompletely understood.

The Chechen demographic losses of the twentieth century are: 1920–1921 Red Army invasion, nearly 2 percent of the population killed; collectivization in 1931, more than 8 percent; 1937 purges, more than 8 percent; mass deportation in 1944, 22 percent killed in the deportation process and another 24 percent dead of starvation and cold in the first two or three years afterward; 1994–1996 Russian-Chechen War, between 2 percent and 10 percent (figures vary), mostly civilians; a similar figure for the second Russian-Chechen War, begun in 1999; conservative total well over 60 percent. In the early twenty-first century many Chechens are war refugees or otherwise displaced. The overarching cause has probably been Russian official hate dating back to the nineteenth century when the Chechens were the largest and most visible of the groups resisting Russian conquest, fueled by continued Chechen nonassimilation and resistance. Besides many civilian deaths and refugees the two wars have brought numerous violations of Chechen human rights by Russian forces, destruction of the economy and infrastructure of Chechnya, open prejudice and violence against southern peoples across Russia, and a small but conspicuous radical Islamist movement in Chechnya.

JOHANNA NICHOLS

CHEKHOV, ANTON PAVLOVICH

(1860–1904), short-story writer and dramatist.

Anton Pavlovich Chekhov was the author of several hundred works of short fiction and of several plays that are among the most important and influential dramatic works of the twentieth century. He was also a noted public figure who in his opinions and actions often challenged notions that were dominant in Russian social thought of the time.

Chekhov was born the grandson of a serf, who had purchased his freedom prior to the emancipation of the serfs, and the son of a shop owner in the Black Sea port of Taganrog, a town with a very diverse population. He received his primary and secondary education there, first in the parish school of the local Greek church, and from 1868 in the Taganrog Gymnasium, where his religion instructor, a Russian Orthodox priest, introduced his students to works of Russian and European literature. In 1876 his father declared bankruptcy, and the family moved to Moscow to avoid creditors. Chekhov remained in Taganrog to finish at the Gymnasium. During this period, he apparently read literature intensively in the Taganrog public library and began to write works of both fiction and drama. In 1879 Chekhov completed the Gymnasium, joined his family in Moscow, and began study in the medical department of Moscow University.

Novelist and playwright Anton Chekhov. © BETTMANN/CORBIS

Chekhov later credited his medical education with instilling in him a respect for objective observation and attention to individual circumstances. While in medical school, at the suggestion of his elder brother Alexander, a journalist, Chekhov began to contribute to the so-called satirical journals, weekly periodicals that appealed primarily to lower-class urban readers with a mix of drawings, humorous sketches, and other brief entertainment items. By the time Chekhov finished his medical courses in 1884, he was already established as a successful writer for the satirical journals and was the primary support for his parents and siblings. Although Chekhov never entirely abandoned medicine, by the mid-1880s he devoted his efforts mainly to his career as a writer, gradually gaining access to increasingly serious (and better-paying) newspapers and journals, most notably in *New Times*, published by the influential newspaper magnate Alexei Suvorin, and then in various "thick journals." Chekhov first appeared in a thick journal in 1888 with his long story "The Steppe," published in the Populist journal *Northern Herald*. From that point on, Chekhov received increasing renown as the most significant, if problematic, author of

his generation. Through his objectivity and techniques of economy and implication, as well as the increasing seriousness and complexity of his themes, Chekhov emerged as a founder of the modern short story and one of the most influential practitioners of the form. Such works as "Sleepy," "The Steppe," "The Name-Day Party" (all 1888), "A Boring Story" (1889), "The Duel" (1891), "The Student" (1894), "My Life" (1896), and "The Lady with a Lapdog" (1899) rank among the greatest achievements of short fiction.

In drama, after hits with several one-act farces but mediocre success with serious full-length plays, Chekhov emerged as an innovator in drama with the first of his four major plays, *The Seagull* (1895). Although the first production in Petersburg in 1896 continued Chekhov's string of theatrical failures, a new production by the newly formed Moscow Art Theater in 1898, based on new principles of staging and acting, won belated recognition as a new departure in drama. Subsequent Moscow Art Theater productions of *Uncle Vanya* (staged 1899), *Three Sisters* (1901), and *The Cherry Orchard* (1904) solidified Chekhov's reputation as a master of a new type of drama and led to the worldwide influence of his plays and of Moscow Art Theater techniques. In addition, Chekhov's association with the Moscow Art Theater led to his marriage to one of the theater's actresses, Olga Leonardovna Knipper, in 1901.

In addition to his strictly literary activity, Chekhov also was engaged in a number of the social issues of his day. For instance, he assisted schools and libraries in his hometown of Taganrog, Melikhovo (the village near his estate), and Yalta, and served as a district medical officer during a cholera outbreak while he was living at Melikhovo. He also initiated practical programs for famine relief during a crop failure in 1891 and 1892. Earlier, in 1890, he undertook the arduous journey across Siberia to the island of Sakhalin, which served at the time as a Russian penal colony. There Chekhov conducted a detailed sociological survey of the population and eventually published his observation as a book-length study of the island and its inhabitants, *The Island of Sakhalin* (1895), a work that eventually brought about amelioration of penal conditions. Most famously, Chekhov broke with his longtime friend, patron, and editor Suvorin over Suvorin's support of Alfred Dreyfus's conviction for espionage in France and opposed the anti-Semitic stance taken by Suvorin's paper *New Times*.

From the 1880s until his death, Chekhov suffered from tuberculosis, a disease that necessitated his move in 1898 from a small estate (purchased in 1892) outside Moscow to the milder climate of Yalta in the Crimea. He also spent time on the French Riviera. Finally in 1904 he went to Germany in search of treatment and died in Badenweiler in southern Germany in July of that year.

ANDREW R. DURKIN

CHERKESS

The Cherkess are one of the two titular nationalities of the north Caucasian Republic of Karachaevo-Cherkessia in the Russian Federation. In the Soviet period this area underwent several administrative reorganizations but was then established as an autonomous oblast (province) within the Stavropol Krai. The capital is Cherkessk and was founded in 1804. The Cherkess form only about 10 percent of the oblast's population, which numbers 436,000 and 62 percent of whom make their livings in agriculture, animal husbandry, and bee-keeping. Health resorts are also an important local source of employment and revenue here, as it is in most of the North-West Caucasian region.

The Cherkess belong to the same ethnolinguistic family as the Adyge and the Kabardians, who live in neighboring republics, and they speak a subdialect of Kabardian, or "Eastern Circassian." Soviet nationalities policies established these three groups as separate "peoples" and languages, but historical memory and linguistic affinity, as well as post-Soviet ethnic politics, perpetuate notions of ethnic continuity. An important element in this has been the contacts, since the break-up of the Soviet

Union, with Circassians living in Turkey, Syria, Israel, Jordan, Western Europe, and the United States. These are mostly the descendents of migrants who left for the Ottoman Empire in the mid- and late nineteenth century after the completion of the Russian conquest of the Caucasus. The long and painful process of conquest firmly established "the idea of Circassians" as "noble savages" in the Russian imagination.

The Cherkess are Muslims, but other religious influences can be discerned in their cultural practices, including Greek Orthodox Christianity and indigenous beliefs and rituals. The Soviet state discouraged the practice of Islam and the perpetuation of Muslim identity among the Cherkess, but it supported cultural nation-building. In the post-Soviet period, interethnic tensions were clearly apparent in the republic's presidential elections. However, Islamic movements, generally termed "Wahhabism," are in less evidence among the Cherkess than with other groups in the North Caucasus. The wars in Abkhazia (from 1992 to 1993) and Chechnya (1994–1997; 1999–2000) have also affected Cherkess sympathies and politics, causing the Russian state to intermittently infuse the North West Caucasus republics with resources to prevent the spreading of conflict.

SETENEY SHAMI

CHERNENKO, KONSTANTIN USTINOVICH

(1911–1985), general secretary of the Communist Party of the Soviet Union (1983–1985).

Konstantin Chernenko was born on September 24, 1911, in a village in the Krasnoyarsk region of Russia. He spent his entire career in the party and worked his way up the ranks in the field of agitation and propaganda. In 1948 he became the head of the Agitation and Propaganda Department in the new Republic of Moldavia. There he got to know the future party leader Leonid Brezhnev, who became the republic's first secretary in 1950. Chernenko rode Brezhnev's coattails to the pinnacle of Soviet power. After Brezhnev became a Central Committee secretary, he brought Chernenko to Moscow in 1956 to work in the party apparatus. When Brezhnev became the chairman of the USSR Supreme Soviet in 1960, he appointed Chernenko the head of its secretariat. After Brezhnev became General Secretary, Chernenko became the head of the Communist Party of the Soviet Union (CPSU) General Department in 1965, a Central Committee secretary in 1976, a candidate member of the Politburo in 1977, and a full member of the Politburo in 1978. In the Secretariat Chernenko oversaw its administration and controlled the paper flow within the party.

At the end of his life, Brezhnev was actively advancing Chernenko to be his successor. In the late 1970s and early 1980s, Chernenko was given a broader role in the party and a higher profile than any of the other contenders: He traveled frequently with Brezhnev and published numerous books and articles. In an apparent effort to show that he would pay attention to the growing pressures for reform of the Soviet system, Chernenko started an active campaign for paying more attention to citizens' letters to the leadership. He also stressed the importance of public opinion and the need for greater party democracy. He warned that dangers similar to those that arose from Poland's Solidarity movement could happen in the Soviet Union if public opinion was ignored. However, his experience in the party remained very limited, and he never held a position of independent authority.

When Brezhnev died in November 1982, Chernenko was passed over, and the party turned to the more experienced Yuri Andropov as its new leader. However, when Andropov died a little over a year later in February 1984, the party chose the seventy-two-year-old Chernenko as its leader. This was a last desperate effort by the sclerotic Brezh-

nev generation to hold on to power and block the election of Mikhail Gorbachev, who was Chernenko's chief rival for the job and had been advanced by Andropov. As had become the practice after Brezhnev became party leader, Chernenko also served as Chairman of the Presidium of the Supreme Soviet, the head of state.

Chernenko served only thirteen months as party leader. During the last few months he was ill, and he rarely appeared in public. This was primarily a period of marking time, and little of note happened in domestic or foreign policy during his tenure. The rapid pace of personnel changes that had begun under Andropov ground to a halt, as did the few modest policy initiatives of his predecessor. Mikhail Gorbachev's active role during this period was marked by intense political maneuvering to succeed the frail Chernenko. When Chernenko died in March 1985, the torch was passed to the next generation with the selection of Gorbachev as his successor.

CHERNOBYL

The disaster at Chernobyl (Ukrainian spelling: Chornobyl) on April 26, 1986 occurred as a result of an experiment on how long safety equipment would function during shutdown at the fourth reactor unit at Ukraine's first and largest nuclear power station. The operators had dismantled safety mechanisms at the reactor to prevent its automatic shutdown, but this reactor type (a graphite-moderated Soviet RBMK) became unstable if operated at low power. An operator error caused a power surge that blew the roof off the reactor unit, releasing the contents of the reactor into the atmosphere for a period of about twelve days.

The accident contaminated an area of about 100,000 square miles. This area encompassed about 20 percent of the territory of Belarus; about

8 percent of Ukraine; and about 0.5-1.0 percent of the Russian Federation. Altogether the area is approximately the size of the state of Kentucky or of Scotland and Northern Ireland combined. The most serious radioactive elements to be disseminated by the accident were Iodine-131, Cesium-137, and Strontium-90. The authorities contained the graphite fire with sand and boron, and coal miners constructed a shelf underneath it to prevent it from falling into the water table.

After the accident, about 135,000 people were evacuated from settlements around the reactor, including the town of Pripyat (population 45,000), the home of the plant workers and their families, and the town of Chernobyl (population 10,000), though the latter remained the center of the cleanup operations for several years. The initial evacuation zone was a 30-kilometer (about 18.6 miles) radius around the destroyed reactor unit. After the spring of 1989 the authorities published maps to show that radioactive fallout had been much more extensive, and approximately 250,000 people subsequently moved to new homes.

Though the Soviet authorities did not release accurate information about the accident, and classified the health data, under international pressure they sent a team of experts to a meeting of the IAEA (The International Atomic Energy Agency) in August 1986, which revealed some of the causes of the accident. The IAEA in turn was allowed to play a key role in improving the safety of Soviet RBMK reactors, though it did not demand the closure of the plant until 1994. A trial of Chernobyl managers took place in 1987, and the plant director and chief engineer received sentences of hard labor, ten and five years respectively.

Chernobyl remains shrouded in controversy as to its immediate and long-term effects. The initial explosion and graphite fire killed thirty-one operators, firemen, and first-aid workers and saw several thousand hospitalized. Over the summer of 1986 up until 1990, it also caused high casualties among cleanup workers. According to statistics from the Ukrainian government, more than 12,000 "liquidators" died, the majority of which were young men between the ages of twenty and forty. A figure of 125,000 deaths issued by the Ukrainian ministry of health in 1996 appears to include all subsequent deaths, natural or otherwise, of those living in the contaminated zone of Ukraine.

According to specialists from the WHO (World Health Organization) the most discernible health im-

An aerial view of the Chernobyl complex shows the shattered reactor facility. A/P WIDE WORLD. REPRODUCED BY PERMISSION.

pact of the high levels of radiation in the affected territories has been the dramatic rise in thyroid gland cancer among children. In Belarus, for example, a 1994 study noted that congenital defects in the areas with a cesium content of the soil of one-five curies per square kilometer have doubled since 1986, while in areas with more than fifteen curies, the rise has been more than eight times the norm.

Among liquidators and especially among evacuees, studies have demonstrated a discernible and alarming rise in morbidity since Chernobyl when compared to the general population. This applies particularly to circulatory and digestive diseases, and to respiratory problems. Less certain is the concept referred to as "Chernobyl AIDS," the rise of which may reflect more attention to medical problems, better access to health care, or psychological fears and tension among the population living in contaminated zones. Rises in children's diabetes and anemia are evident, and again appear much higher

in irradiated zones. The connection between these problems and the rise in radiation content of the soil have yet to be determined.

To date, the rates of leukemia and lymphoma—though they have risen since the accident—remain within the European average, though in the upper seventy-fifth percentile. One difficulty here is the unreliability or sheer lack of reporting in the 1970s. The induction period for leukemia is four to fifteen years, thus it appears premature to state, as some authorities have, that Chernobyl will not result in higher rates of leukemia.

As for thyroid cancer, its development has been sudden and rapid. As of 2003 about 2,000 children in Belarus and Ukraine have contracted the disease and it is expected to reach its peak in 2005. One WHO specialist has estimated that the illness may affect one child in ten living in the irradiated zones in the summer of 1986; hence ultimate totals could reach as high as 10,000. Though the mortality rate from this form of cancer among children is only about 10 percent, this still indicates an additional 1,000 deaths in the future. Moreover, this form of cancer is highly aggressive and can spread rapidly if not operated on. The correlation between thyroid gland cancer and radioactive fallout appears clear and is not negated by any medical authorities.

After pressure from the countries of the G7, Ukraine first imposed a moratorium on any new nuclear reactors (lifted in 1995) and then closed down the Chernobyl station at the end of the year 2000. The key issue at Chernobyl remains the construction and funding of a new roof over the destroyed reactor, the so-called sarcophagus. The current structure, which contains some twenty tons of radioactive fuel and dust, is cracking and is not expected to last more than ten years. There are fears of the release of radioactive dust within the confines of the station and beyond should the structure collapse.

It is fair to say that the dangers presented by former Soviet nuclear power stations in 2003 exceed those of a decade earlier. In the meantime, some 3.5 million people continue to live in contaminated zones. From a necessary panacea, evacuation of those living in zones with high soil contamination today has become an unpopular and slow-moving process. Elderly people in particular have returned to their homes in some areas.

DAVID R. MARPLES

CHERNOMYRDIN, VIKTOR STEPANOVICH

(b. 1938), prime minister of the Russian Federation from December 1992 to March 1998.

Trained in western Siberia as an engineer and later an economist, Viktor Chernomyrdin alternated between working as a communist party official who monitored industrial enterprises and actually running such enterprises in the gas industry. From 1978 he worked in the heavy industry department of the party's central apparatus in Moscow, before becoming minister for the oil and gas industries in 1985. In 1989 he was a pioneer in turning part of his ministry into the state-owned gas company Gazprom. He was the first chairman of the board, and oversaw and benefited from its partial privatization.

In 1990 he ran for the newly formed Russian Republic (RSFSR) Congress of People's Deputies, but lost. In May 1992 President Yeltsin appointed him a deputy prime minister of the newly independent Russian Federation. In December, following an advisory vote of the Congress in which he finished second, a politically besieged Yeltsin made him prime minister. Although a typical Soviet official in most respects, Chernomyrdin gradually adapted to free market processes. His concern not to move too precipitately on economic reform enabled him, with his powers of conciliation and compromise, to appease the communists in some measure throughout the 1990s. They looked to him to moderate the radicalism of the "shock therapist" wing of the government.

In the regime crisis of fall 1993, when, violating the Constitution, Yeltsin dispersed the parlia-

Viktor Chernomyrdin speaks to journalists after the Duma rejected Yeltsin's attempts to reappoint him prime minister in 1998. © SACHA ORLOV/GETTY IMAGES

ment by military force amid much bloodshed, Chernomyrdin supported Yeltsin without wavering. His reputation suffered as a result of both this and his poor handling of the financial crisis of October 1994 (Black Tuesday). Nonetheless, in April 1995 he founded the first avowedly pro-government political party, "Our Home is Russia", which was covertly funded by Gazprom. This was designed to create a reliable, pro-Yeltsin bloc in the parliament elected in December 1995. However, although Chernomyrdin predicted that it would win almost a third of the 450 seats, in the event it got only 55, gaining the support of a mere 10.1 percent of voters. Apart from the fact that he was a weak leader, it had suffered from public allegations by prominent figures that his earlier leadership of Gazprom had enabled him to accumulate personal wealth of some five billion dollars. Apparently his denials did not convince many voters. Later, the public documentation of massive corruption in his government did not evoke even pro forma denials.

In March 1998 Yeltsin dismissed him without explanation, only to nominate him as acting prime minister the following August. However, the parliament twice refused to confirm him, seeing him

as one of the individuals most responsible for the financial collapse of that month. So the floundering president withdrew his nomination. However, Yeltsin named him the next spring as his special representative to work with NATO on resolving the Yugoslav crisis over Kosovo.

In 1999 and 2000 Chernomyrdin chaired the Gazprom Council of Directors, and from 1999 to 2001 he was a parliamentary deputy for the pro-Kremlin party Unity. In 2001 President Putin made him ambassador to Ukraine. Here he supervised a creeping Russian takeover of the Ukrainian gas industry that stemmed from Ukraine's inability to finance its massive gas imports from Russia.

PETER REDDAWAY

CHERNOV, VIKTOR MIKHAILOVICH

(1873–1952), pseudonyms: 'Ia. Vechev', 'Gardenin', 'V. Lenuar'; leading theorist and activist of the Socialist Revolutionary Party.

Viktor Chernov was born into a noble family in Samara province. He studied at the Saratov gymnasium, but was transferred to the Derpt gymnasium in Estonia as a result of his revolutionary activity. In 1892 Chernov joined the law faculty at Moscow University, where he was active in the radical student movement. He was first arrested in April 1894 and imprisoned in the Peter and Paul Fortress for six months. Chernov was exiled to Kamyshin in 1895, but was transferred to Saratov and then to Tambov because of poor health. He married Anastasia Nikolaevna Sletova in 1898. In the same year, he organized the influential "Brotherhood for the Defense of People's Rights" in Tambov, a revolutionary peasants' organisation.

In 1899 Chernov left Russia, and for the next six years he worked for the revolutionary cause in exile. He joined the newly formed Socialist Revolutionary Party in 1901, and from 1903 he was a central committee member. His role in the party was predominantly as a political theorist and writer. He formulated the party's philosophy around a blending of Marxist and Populist ideas, propounding that Russia's communal system offered a "third way" to the development of socialism. He reluctantly supported the use of terror as a means of advancing the revolutionary cause.

Chernov returned to St. Petersburg in October 1905, and proposed that the party follow a moderate line, suspending terrorist activity and opposing further strike action. In July 1906 he again left Russia, this time for Finland. He continued his revolutionary work abroad, not returning to Russia until April 1917. Chernov joined the first coalition Provisional Government as Minister for Agriculture in May 1917, despite misgivings about socialist participation in the Provisional Government. His three months in government raised popular expectations about an imminent land settlement, but his tenure as minister was marked by impotency. The Provisional Government refused to sanction his radical proposals for reform of land use.

Chernov struggled to hold the fractured Socialist Revolutionary Party together, and stepped down from the Central Committee in September 1917. He was made president of the Constituent Assembly, and after the Constituent Assembly's dissolution, was a key figure in leftist anti-Bolshevik organizations, including the *Komuch*. He believed that the Socialist Revolutionary Party needed to form a "third front" in the civil war period, fighting for democracy against both the Bolsheviks and the Whites. He left Russia in 1920, and was a passionate contributor to the emigré anti-Bolshevik movement until his death in 1952 in New York. Chernov was a gifted intellectual and theorist who ultimately lacked the ruthless single-mindedness required of a revolutionary political leader.

SARAH BADCOCK

CHERNUKHA

Pessimistic neo-naturalism and muckraking during and after glasnost.

Chernukha is a slang term popularized in the late 1980s, used to describe a tendency toward unrelenting negativity and pessimism both in the arts and in the mass media. Derived from the Russian word for "black" (*cherny*), *chernukha* began as a perestroika phenomenon, a rejection of the enforced optimism of official Soviet culture. It arose simultaneously in three particular areas: "serious" fiction (published in "thick" journals such as *Novy mir*), film, and investigative reporting. One of the hallmarks of Mikhail Gorbachev's glasnost was the open discussion of the misery and violence that was a part of everyday Soviet life, transforming the form and content of the nation's news coverage. In journalism, *chernukha* was most clearly incarnated in Alexander Nevzorov's evening television program "600 Seconds," which exposed the Soviet viewing audience to some of its first glimpses into the lives of prostitutes and gangsters, never shying away from images of graphic violence.

In literature and film, *chernukha* refers to the naturalistic depiction of and obsession with bodily functions, sexuality, and often sadistic violence, usually at the expense of more traditional Russian themes, such as emotion and compassion. The most famous examples of artistic *chernukha* include Sergei Kaledin's 1987 novel *The Humble Cemetery*, which tells a story about gravediggers in Moscow, and Vasilii Pichul's 1988 *Little Vera*, a film about a dysfunctional family, complete with alcoholics, knife fights, arrests, and virtually nonstop shouting. Also emblematic was Stanislav Govorukhin's 1990 documentary *This Is No Way to Live*, whose very title sums up the general critical thrust of *chernukha* in the glasnost era.

Often condemned by critics across the ideological spectrum as "immoral," *chernukha* actually played an important part in the shift in values and in the ideological struggles concerning the country's legacy and future course. Intentionally or not,

artists, writers, and journalists responded to Gorbachev's call for "openness" with works that exposed the long-repressed underside of Soviet life: the misery of the communal apartment, the daily lives of homeless alcoholics, and the hypocrisy of established authority figures. One of the most prominent themes in the chernukha of the 1980s was Soviet youth, particularly in film and on stage: the new generation was repeatedly depicted as mercantile, hedonistic, and bereft of any moral compass. Yet even if these young people were presented in a fashion calculated to provoke the audience's outrage, blame was almost always attributed to the older generations: to the parents who failed to provide a model worth emulating, and to the system itself, which reduced all human relations to a question of survival and dominance.

Though chernukha was initially a breath of fresh air after decades of sanitized news and entertainment, by the post-Soviet era the majority of the purveyors of "highbrow" culture began to reject it in favor of postmodern playfulness or a return to sentimentality. By contrast, variations on chernukha are still a crucial part of Russian popular culture, from the daily news magazines devoted to violent crime and horrible accidents, to the action films and novels where sadistic violence and rape are taken for granted. Though these forms of entertainment are distant from the ideological struggles that helped spawn the phenomenon in the 1980s, they show that the aesthetic of chernukha is still very much a part of the post-Soviet landscape.

ELIOT BORENSTEIN

CHERNYSHEV, ALEXANDER IVANOVICH

(1786–1857), minister of war for Nicholas I, 1826–1852.

Alexander Ivanovich Chernyshev was born on January 10, 1786, entered the Russian army at

the age of fifteen, and advanced rapidly through the ranks, participating in all of Russia's campaigns against Napoleon. During the Tilsit Period (1807–1812) Alexander I sent Chernyshev to Napoleon to serve as a channel of communications. Napoleon took a liking to Chernyshev and undertook to lecture him in the finer points of war, information that Chernyshev duly brought back to Alexander before the outbreak of hostilities. In November 1812, Chernyshev became an adjutant-general, and commanded various Cossack detachments in the campaigns of 1812 to 1815. In 1819, Chernyshev became a member of the committee Alexander established to reform the organization and legal structures of the Don Cossack host.

Nicholas I promoted Chernyshev to the rank of general-of-cavalry and appointed him minister of war in 1826. From that position, Chernyshev played the leading role in devising and implementing a major reform of the Russian military administration between 1831 and 1836. This reform abolished the position of chief of the main staff and unified control over the entire military administration in the person of the war minister. Chernyshev also presided over the first successful codification of Russian military law, completed in 1838 with the assistance of Mikhail Mikhailovich Speransky. In 1841, Chernyshev was created a prince.

The bases of the enormous mobilization that supported Russia's efforts in the Crimean War, as well as the support of those troops, were largely established by Chernyshev's reforms. The fundamental military structure developed by those reforms, furthermore, especially the predominance of the War Ministry as opposed to a General Staff, remained the basic organization of the Russian Imperial Army down to the collapse of the empire, and continues to serve as the basic structure of the Russian Federation's armed forces. Chernyshev died on June 20, 1857.

FREDERICK W. KAGAN

CHERNYSHEVSKY, NIKOLAI GAVRILOVICH

(1828–1889), Russian radical journalist, writer, literary critic, and thinker.

Nikolai Gavrilovich Chernyshevsky was the son of an Orthodox priest. From 1842 to 1845 he attended the theological seminary in Saratov, and in 1850 he graduated from the Department of History and Philology of the University of St. Petersburg. Chernyshevsky was a polyglot; he knew eight foreign languages. As a student Chernyshevsky impressed his professors with his distinguished knowledge in literature and linguistics, and they predicted that he would have a bright academic career.

After two years of teaching in Saratov from 1851 to 1853, Chernyshevsky returned to St. Petersburg. There Chernyshevsky began to write for the popular journals *Otechestvennye Zapiski* (*Annals of the Fatherland*) and *Sovremennik* (*Contemporary*). In 1859 he became editor in chief of *Sovremennik*. There he published his *Ocherki gogolevskogo perioda russkoi literatury* (*Essays on the Gogolian Period in Russian Literature*), “his first and most important contribution to literary criticism” according to Eugene Lampert (1965, p. 110). Soon Chernyshevsky became very popular among radical youth and was called a “prophet of the young generation” (Irina Paperno, 1988).

However, Chernyshevsky was not satisfied with only doing journalist work; he attempted to continue his academic career and prepared his dissertation, “The Aesthetic Relations of Art to Reality” (1855). This dissertation presented a doctrine about the superiority of reality over art. He believed that nothing could be more beautiful than that which exists in reality; as he wrote, “Beauty is life.” According to Chernyshevsky, art should be a “text-book of life.” He rejected “art for art’s sake.” However, the Academic Board of the University of St. Petersburg did not share Chernyshevsky’s views on art and did not approve his dissertation. According to T. Pecherskaya, Chernyshevsky said that his dissertation was his interpretation of the ideas of the philosopher Ludwig Feuerbach, but the conservative Academic Board could not understand him.

After his unsuccessful attempt to pursue an academic career, Chernyshevsky continued his journalistic work and published many essays on art, literature, philosophy, and radical socialist thought. He was a materialist and followed the

ideas of German philosophers of the early and mid-nineteenth century. Chernyshevsky propounded radical ideas in his essays and criticized the emancipation of serfs by the government from the radical point of view. He believed that the liberation of the serfs without land was inadequate and mockingly cruel to the peasants. Francis B. Randall (*N. G. Chernyshevskii*, 1967, preface) wrote that Chernyshevsky called himself a “socialist” but took his doctrine “not from Marx but from the French radicals of the decades before the revolution of 1848.” Chernyshevsky believed in the peasant commune as the germ of the future socialist society and called for a peasant revolution in his publications. Fearing Chernyshevsky’s growing influence, the government closed *Contemporary* in 1861 and put its editor under secret police surveillance. In July 1862 Chernyshevsky was arrested and imprisoned in the Peter and Paul Fortress in St. Petersburg. During his two years of imprisonment from 1862 to 1864, when Chernyshevsky waited for his sentence, he wrote his most famous novel *What Is to Be Done?* and several other works of fiction. In the novel *What Is to Be Done?* Chernyshevsky described the life of a new type of people, who lived by their own labor and led a new kind of family life, where the enlightened woman was a man’s lifelong companion. The novel popularized the ideas of women’s equality and “cooperative socialism”; it depicted the future society as a society of equality and happiness for all. This novel was a synthesis of Chernyshevsky’s sociopolitical, philosophical, and ethical views. The novel became very popular among the radical youth. Aside from the ideas it contained, this work was not a great literary achievement. Lampert (op. cit., p. 224) states that Chernyshevsky “wrote his novel on a fairly low imaginative plane.” All his heroes speak with the same voice, men and women alike. Chernyshevsky himself did not have any delusions about his literary talent. He wrote his wife from Siberia: “I have not a trace of artistic talent . . . and all [the novel’s] merit consists merely in its truthfulness” (Lampert, op. cit., p. 223).

In spite of the lack of direct evidence of Chernyshevsky’s participation as a member in the revolutionary organizations, he was condemned to fourteen (later reduced to seven) years of forced labor, followed by lifelong exile in Siberia. According to Lampert, “the government had come to realize the extent of Chernyshevsky’s influence on the younger generation; it knew what his views were, and it had taken fright.” The government consid-

ered Chernyshevsky's ideas a danger to the existing order.

On May 19, 1864, the ceremony of "civil execution" was performed on Chernyshevsky in the center of St. Petersburg in Mytninskaya Square. "After sentence has been read out he was forced to kneel, a sword was broken over his head and he was then set in a pillory by a chain," wrote Alexei Suvorin (Lampert, *op. cit.*, p. 130). However, instead the reaction of condemnation anticipated by the authorities, the big crowd stood silent. Then somebody from the crowd threw a bunch of flowers at Chernyshevsky's feet.

Chernyshevsky spent more than twenty-five years in prison, forced labor, and exile. During this time he continued to write fiction, essays, and philosophical works (the most famous of his philosophical works was *The Nature of Human Knowledge*). The last years of his life he devoted to the translation of Georg Weber's *Universal History*. Chernyshevsky refused to ask the authorities for "imperial mercy" even when they encouraged him to do so. Chernyshevsky believed that he was innocent and thus did not need be forgiven by the government. Chernyshevsky's fortitude brought him respect even from among his opponents. The respect for Chernyshevsky and deep sympathy for his misfortune was expressed by the Russian writer Fyodor Dostoyevsky.

Chernyshevsky received permission from the authorities to return to his native city of Saratov only four months before his death. Government persecution fueled the image of Chernyshevsky as a "revolutionary saint." His works were denied publication in Russia until the first Russian revolution in 1905. However, the novels and essays of Chernyshevsky were spread around the country illegally, often in handwritten copies. His novel *What Is to Be Done?* became a table book of several generations of Russian radical youth. This novel was considered a classic of Russian literature in Soviet times. After the collapse of the socialist system, people lost interest in the pro-socialist ideas and works of Chernyshevsky. He died on October 29, 1989.

VICTORIA KHITERER

CHERVONETS

A gold-backed currency introduced by the Soviet government in 1922 as part of the New Economic Policy (NEP).

The Soviet Union did not possess a stable currency at the end of the civil war, and the government realized that it could not achieve its ambitious economic development plans without first solving this pressing monetary problem. Accordingly, a Sovnarkom decree of October 11, 1922, authorized the Soviet state bank to issue the chervonets bank note as the equivalent of the prerevolutionary ten-ruble gold coin (7.74232 grams of pure gold). This legislation required at least 25 percent of *chervontsy* (plural) to be backed by precious metals and hard currency. The first paper *chervontsy* appeared in December 1922, and in 1923 the state bank (Gosbank) also began issuing gold chervonets coins (primarily for use in foreign trade). The chervonets circulated alongside the rapidly depreciating *sovznak* ("Soviet note") ruble until February 1924, when the state bank began to withdraw the *sovznak* ruble from circulation and established the chervonets as the country's sole legal tender, equal to ten "new" rubles. Through the 1920s, the chervonets was officially quoted on foreign exchanges. However, this attempt to maintain a "hard" Soviet currency was controversial almost from its inception and quickly ended along with the NEP itself. On June 9, 1926, the government passed a resolution forbidding the export of Soviet currency abroad, and in February 1930 Soviet currency was withdrawn from foreign exchanges, and private exchanges of foreign currency for *chervontsy* were banned.

JULIET JOHNSON

CHESME, BATTLE OF

The battle of Chesme ("fountain" in Turkish) was fought on the night of July 5–6, 1770 between a Russian squadron under the command of Count Aleksei Grigoryevich Orlov and an Ottoman fleet under Hassan Bey at Chesme bay on the western Anatolian Mediterranean coast. Orlov had nine ships of the line, three frigates, a bomb ship, and a number of smaller vessels under his command. Ottoman forces numbered sixteen line ships, six frigates, six xebecs, thirteen galleys, and thirty-two galliots. Orlov's plan was to send in vessels to attack the tightly clustered Ottoman squadron at anchor in the bay. On the evening of June 26, Orlov sent a detachment of four line ships, two frigates, a bomb ship, and four fire ships under the command of Captain S.K. Greig into the anchorage. A fire ship under the command of Lieutenant Il'in soon set an Ottoman 84-gun line ship alight, and the fire soon spread to other vessels. In total numbers the destruction was the greatest naval victory in the days of sail; the Ottomans lost fifteen line ships, six frigates and about fifty smaller vessels. About ten thousand Ottoman sailors died in the battle, and the Russians captured a number of Ottoman ships, including five galleys and the frigate *Rodos-60*. Empress Catherine the Great awarded Orlov the title of "Count Chesmensky" for his participation in the victory. The strategic result for Russia was command of the sea in the Aegean during the remainder of its war with the Ottoman Empire. When a peace treaty was signed at Küçük Kaynarca in 1774, the Ottoman Empire recognized Russian claims to represent Christian interests in the empire.

JOHN C. K. DALY

CHICHERIN, GEORGY VASILIEVICH

(1872–1936), revolutionary and diplomat.

Georgy Chicherin was born on November 12, 1872, in Karaul, Tambov Province, into an aristocratic family of declining fortunes. He studied in the history and philology faculty at St. Petersburg University. After graduation, he worked in the archives department of the Russian Ministry of Foreign Affairs. Disillusioned with the Romanov regime, Chicherin fled to Western Europe in 1904, spending the next fourteen years immersed in socialist émigré politics. He belonged to the Menshevik wing of Russian socialism, but his strong opposition to World War I aligned him with Vladimir Lenin and his Bolshevik faction.

Returning to Russia in January 1918, Chicherin joined the Bolshevik Party and soon was appointed commissar of Foreign Affairs. He was uniquely qualified for the post, possessing a thorough knowledge of diplomatic history, experience in the tsarist Foreign Ministry, command of several foreign languages, familiarity with European conditions, and considerable negotiating experience from his days in the fractious émigré community. Blockaded by the Allies during the period of Civil War and foreign intervention in Russia, Chicherin used radio and the press to create a novel diplomacy of propaganda. Bolshevik appeals to the governments and peoples of the West for fair treatment of Soviet Russia were mixed with revolutionary calls to overthrow those same imperialist regimes.

The failure of the Bolshevik Revolution to spread abroad convinced Chicherin that a new period of capitalist stabilization had begun. He led the diplomatic component of the USSR's New Economic Policy (NEP), seeking peaceful relationships with the great powers as well as foreign trade, technology, loans, and investment. Chicherin coined the term "peaceful coexistence" to characterize this new era of temporary accommodation with the capitalist world.

Chicherin's major diplomatic successes were the 1921 Anglo-Soviet Trade Treaty and, with Germany, the 1922 Rapallo Treaty and 1925 Berlin Treaty. He saw strong political, economic, and even military ties with Germany as the key to preventing a European-wide anti-Soviet alliance of capitalist powers. He also fought tirelessly against the League of Nations because he saw it as the framework for an anti-Soviet coalition. In the 1920s the USSR received full diplomatic recognition from all the great powers, except

the United States. These successes were offset by a number of failures. The USSR was unable to secure sufficient financial and technological assistance from the West. Britain and France continued to manifest undisguised hostility toward Moscow, causing Kremlin leaders to fear renewed armed intervention against Soviet Russia. Germany moved closer to the Anglo-French camp by signing the Locarno Accords in 1925 and joining the League of Nations.

Chicherin saw opportunities in the national-liberation movements in Asia. Support for anti-colonial struggles, he hoped, would sap the strength of the imperialist powers.

Chicherin was never a significant figure in Kremlin politics, though he was elected to the Party's Central Committee in 1925. He played a significant role in foreign policy formulation because Lenin greatly valued his knowledge, experience, and abilities. After Lenin's incapacitating stroke in 1922, Chicherin began to lose influence, and was eclipsed gradually by his deputy, Maxim Litvinov. A combination of Chicherin's estrangement from the Stalinist elite and his increasingly poor health virtually eliminated his role in foreign affairs after 1928. He was replaced by Litvinov as foreign commissar in 1930 and lived on a pension until his death, of natural causes, in 1936.

TEDDY J. ULDRICKS

CHINA, RELATIONS WITH

From the mid-nineteenth century to the present, one of the core problems in Russian foreign policy has been how to manage relations with China. A vast Eurasian land power, Russia adjoins China, its giant neighbor to the south, along the sparsely populated territories of eastern Siberia and the Maritime Province. Further to the west, the buffer states of Mongolia and Kazakhstan lie between Russia and China. For most of the past century and a half, Russia enjoyed a significant power advantage vis-à-vis China in military and economic terms. The

world recognized Russia as one of the great powers. Meanwhile, China, weakened by domestic turmoil and foreign imperialism, experienced the successive traumas of dynastic collapse, civil wars, revolution, and radical communism. More recently, following the dissolution of the Soviet Union in 1991, the balance of power between the two countries has shifted in favor of China. In the short term, a diminished post-Communist Russia, shorn of its Central Asian territories as well as its western borderlands, has worked out an amicable relationship with China. In the longer term, however, Russian policymakers, like their tsarist and Soviet predecessors, will continue to confront the question of whether an increasingly powerful China is friend, foe, or changeling.

FROM THE SEVENTEENTH CENTURY TO 1917

Russian-Chinese relations date from the seventeenth century. Russia's eastward expansion at the time was driven by a spirit of adventure, the quest for profits in the fur trade, and the dream of state aggrandizement. Unruly bands of freebooting Cossacks led by Russian adventurers such as Yerofei Khabarov established initial contacts along the Amur River with tribal dependents of China's ruling Qing dynasty. Conflicts that flared up within an as-yet-undefined frontier area came to the attention of Chinese officials, who viewed the Russians as the latest in a long series of armed aggressors from Central Asia. Meanwhile, early Russian diplomatic missions to Beijing, intended to promote commerce and to gauge the strength of the Chinese Empire, ran afoul of China's elaborate court ritual that the Russians neither understood nor respected. The Russian exaction of tribute from tribal peoples whom the Qing considered their dependents, and the encroachment of armed Russian settlements along the Amur, led to military clashes between Russian and Chinese forces in the 1680s. In 1689, the Treaty of Nerchinsk, the first modern international treaty between China and a European country, began to define a boundary between the two empires and established rules for regulating commercial intercourse. The Treaty of Kiakhta in 1728 readjusted the commercial relationship, further defined the border, and granted Russia permission to build an Orthodox church in Beijing, which became the nucleus of Russian sinology. Thereafter, relations stabilized for the next century on the basis of equality, reciprocity, limited commerce, and peace along the border.

In the mid-nineteenth century, Russia seized the opportunity afforded by the decline of the Qing dynasty to expand its eastern territories at China's expense. Its ultimate objective was to bolster its status as a European great power by playing an imperial role in East Asia. Nikolai Muraviev, the governor-general of Eastern Siberia, was the most prominent of the new generation of empire builders who were determined to make Russia a Pacific power. Combining the threat of force with skillful diplomacy and blandishments, Muraviev and his peers imposed upon China the Treaties of Aigun (1858), Peking (1860), and Tarbagatai (1864), which added 665,000 square miles (1,722,342 square kilometers) to the Russian Empire in Central Asia, eastern Siberia, and the Maritime Province. In 1896 Russian officials bribed and bullied China to grant permission to build the Chinese Eastern Railway across Manchuria (Northeast China), to connect the Trans-Siberian Railway with Vladivostok, Russia's major port on the Pacific Ocean. Russian occupation of Manchuria in 1900 during the Boxer Rebellion, an antiforeign Chinese nativist movement, and growing tension with imperial rival Japan over Manchuria and Korea, led to the Russo-Japanese War and Russia's humiliating defeat. With the Rising Sun ascendant, Russian influence in China was restricted to northern Manchuria and the Central Asian borderlands.

SOVIET-CHINESE RELATIONS,

1917–1991

The Bolshevik Revolution of 1917 had a profound and lasting impact upon Russian-Chinese relations. In the aftermath of the collapse of the Qing dynasty in 1912, China dissolved into civil war and chaos. A small but determined band of revolutionary Chinese intellectuals, disillusioned with Western liberal democracy, discovered in Russian Bolshevism a template for political action. Desiring to revive China and promote revolutionary social transformation, they responded to Bolshevik appeals by organizing the Chinese Communist Party (CCP) in 1921 and joining the Communist International (Comintern), which ordered the fledgling CCP into alliance with the Chinese Nationalists led by Sun Yat-sen. Moscow dispatched veteran revolutionary Mikhail Borodin and hundreds of military and political advisers to China in the early 1920s to guide the Chinese revolutionary movement to victory. The Comintern dictated strategy and tactics to the CCP. In 1927, Chiang Kai-shek, Sun Yat-sen's successor, severed his alliance with the CCP, slaughtered tens of thousands of com-

munists, and expelled all the Soviet advisers. The revolutionary project lay in ruins.

Meanwhile, playing a complicated game, Bolshevik Russia and, after 1924, the Soviet Union, successfully maneuvered to retain the imperial gains tsarist Russia had wrested from China in the preceding century. In other words, the Soviet Union simultaneously pursued both statist and revolutionary goals vis-à-vis China. Under its new leader, Mao Zedong, the CCP continued to look toward Moscow for ideological and political guidance while pursuing its own path to power.

On July 7, 1937, Japan's creeping aggression against China escalated into a full-scale war. To deflect the threat of Japanese attack against Siberia and the Maritime Province, the USSR provided Chiang Kai-shek substantial military and financial aid in his lonely war of resistance against Japan. Soviet military advisers were attached to Chiang's armies, and Soviet pilots defended Chinese cities against Japanese attack. In 1941, however, Moscow signed a neutrality treaty with Tokyo, and Soviet aid to China dried up.

The renewed civil war in China (1946–1949) that followed hard upon victory in World War II culminated in the victory of the Chinese Communist Party and the establishment of the People's Republic of China on October 1, 1949. Although suspicious of Mao Zedong, the Soviet dictator Josef Stalin quickly extended diplomatic recognition to the new communist government and, after intensive negotiations, signed a thirty-year Treaty of Friendship, Alliance, and Mutual Assistance on February 14, 1950, with the PRC. Mao Zedong proclaimed that the Soviet Union provided a model of socialism for China to emulate. Thousands of Soviet civilian and military experts flooded into China while tens of thousands of Chinese students studied in the USSR and the East European satellite states.

Within a few years, however, a combination of Soviet high-handedness, Chinese suspicion, and differences over international political strategy eroded the bonds of Sino-Soviet friendship. Beijing challenged Moscow's leadership of international communism, claimed huge chunks of Russian territory, and condemned the USSR as a "social imperialist" state. In 1969, fighting broke out along the contested eastern and central Asian borders, and a large-scale war loomed but did not materialize. The Sino-Soviet Cold War gradually dissipated in the 1980s as new leaders came to power in Moscow

Mao Zedong escorts Nikita Khrushchev to the airport, following celebrations marking the tenth anniversary of the People's Republic of China in 1959. © SOVFOTO/EASTFOTO

and Beijing. During Soviet leader Mikhail Gorbachev's summit in Beijing in May 1989, the two countries proclaimed a new era of amity.

AFTER THE FALL

Post-communist Russia suffered a sharp decline in economic and political power just as China was enjoying its greatest period of economic growth that translated into military power and international influence. Yet the two countries soon found common cause in their opposition to the exercise of unilateral American global power. Russian President Boris Yeltsin and his Chinese counterpart Jiang Zemin in 1996 proclaimed a new Russian-Chinese strategic partnership that was largely rhetorical. By that time the border issue between the two countries had been basically settled, and stability restored to the relationship. However, Russians in eastern

Siberia and the Maritime Province objected to an influx of Chinese illegal migrants and traders whose presence, they said, constituted a growing threat to Russia's hold over territories acquired only in the mid-nineteenth century. Levels of Russian-Chinese trade remained quite modest, although Russia became a main supplier of advanced military technology to the newly affluent Chinese who could now afford to pay. Within Russia debate continued over the question of whether China could be trusted as a friendly neighbor or whether growing Chinese power would eventually turn north and seek to reassert dormant historical claims against a weakened Russian state.

In cultural terms, Russian influence upon China peaked in the early to mid-twentieth century, but receded thereafter, leaving very little residue except among the older generation of Chinese who

remember the brief era of Sino-Soviet friendship in the 1950s. Chinese influence upon Russian culture is also considerably less than it is in other Western countries, particularly the United States. Racist and condescending attitudes are present on both sides of the relationship along with genuine admiration and understanding of each society's cultural achievements on the part of educated Russian and Chinese elites.

STEVEN I. LEVINE

CHIRIKOV, ALEXZEI ILICH

(1703–1748), naval officer and explorer.

An instructor at St. Petersburg's Naval Academy, Alexei Ilich Chirikov was selected in 1725 to be one of two assistants to Vitus Bering, recently appointed by Peter the Great to travel to Kamchatka and, from there, determine whether Asia and America were united.

Bering's first Kamchatka expedition (1728–1730) was criticized for not having proven conclusively that Asia and America were not physically linked. Indeed, Chirikov had disagreed with Bering on the question of when the expedition should turn back, arguing that further exploration was needed. In response, Bering proposed an ambitious series of voyages and surveys that, together, became the Great Northern Expedition. Bering undertook a second survey of Russia's northeasternmost waters. His second-in-command was Chirikov.

In the summer of 1740, Bering's ships, the *St. Peter* and *St. Paul*—captained by Bering and Chirikov, respectively—set sail for Petropavlovsk in Kamchatka. From there, the ships departed in June 1741. Shortly after, the ships separated and never reestablished contact. The crew of the *St. Peter* sighted Alaska in July, then wintered on the isle now called Bering Island. Bering himself perished; the survivors returned to Petropavlovsk in the fall of 1742.

In July 1741, Chirikov and the crew of the *St. Paul* discovered Alaska's Alexander Archipelago. Short of food and fresh water, the *St. Paul* returned to Kamchatka in October 1741, having lost eight sailors. The following May, Chirikov sailed east again, searching for Bering and his crew. Unfortunately, the *St. Paul* sailed past Bering Island. In June, after exploring the Aleutians, Chirikov turned back once more. In August 1742, Chirikov sailed into Petropavlovsk—only a few days before the survivors of the *St. Peter* voyage returned.

For his participation in the Great Northern Expedition, Chirikov was promoted to the rank of captain-commander in 1745. In 1746 he helped to compile new Pacific maps, based on data the Expedition had gathered.

JOHN MCCANNON

CHKALOV, VALERY PAVLOVICH

(1904–1938), test pilot and polar aviator.

Born in the Volga town of Vasilevo (now Chkalovsk), Valery Pavlovich Chkalov went on to become the USSR's most famous aviator of the 1930s. Hailed as the "Greatest Pilot of Our Times" and named a Hero of the Soviet Union, Chkalov, often referred to as the "Russian Lindbergh," remains one of the Stalinist era's greatest and best-loved celebrities.

A teenaged Chkalov became an aviation mechanic during the Russian Civil War. He qualified as a pilot by the age of seventeen and joined the air force, where he gained a reputation as a skilled but overly daring flier. Chkalov's rashness caught up with him in 1929, when he caused an accident that killed another pilot. He was reprimanded and briefly discharged. Chkalov returned to the air force in 1930 but resigned in 1933 to work as a test pilot for designer Nikolai Polikarpov.

During the mid-1930s, Chkalov turned to long-distance flying and polar aviation, where he achieved his greatest renown. With Georgy Baidukov as copilot and Alexander Belyakov as navigator, Chkalov set an unofficial world record for distance flying in July 1936, by flying from Moscow to Udd Island, off the coast of Kamchatka. On June 18, 1937, the same team gained international fame by flying from Moscow to Vancouver, Washington, crossing over the North Pole along the way. This was an official world record, and even though it was broken the following month by Mikhail Gromov (who also flew to America over the North Pole), Chkalov's bluff, hearty charm made him the most admired of "Stalin's falcons," the hero-pilots featured so prominently in the propaganda of the 1930s.

Chkalov died on December 15, 1938, testing a prototype of the Polikarpov I-180. He was given a hero's funeral and buried in the Kremlin Wall. Rumors have persisted since Chkalov's death that he was somehow killed on Stalin's orders. Chkalov's family and several prominent journalists have come out in support of this theory, but no concrete proof has emerged to link Stalin with Chkalov's death.

JOHN MCCANNON

CHKHEIDZE, NIKOLAI SEMENOVICH

(1864–1926), revolutionary activist.

Born into a Georgian noble family in the west Georgian district of Imereti, Nikolai, or "Karlo" as he was better known, Semenovich went on to become a prominent figure in the Georgian social democratic movement and the RSDLP (the Russian Social Democratic Labor Party). He played a central role in the February revolution in Russia. His revolutionary career began with his expulsion from Odessa University (now in Ukraine) for participation in a student demonstration. On his return to Georgia, he became involved in local Marxist activities in the west Georgian town of Batumi. Prominent in the 1905 revolution in Georgia, and active in the local social democratic press, in 1907 he was elected as Georgian deputy to the Third State Duma (Russian imperial parliament). He led the RSDLP faction in the Third and Fourth Dumas where he was threatened with expulsion a number of times. He led the faction in refusing to vote war credits to the Russian government in 1914.

Chkheidze made a name for himself as a great orator and was extraordinarily popular among Russian workers. It was no surprise that in February 1917 he was elected the first Chairman of the Petrograd (St. Petersburg) Workers' and Soldiers' Soviet. Given the Soviet's powerful role in the revolution, Chkheidze was a key figure in Russian government policy during 1917. A menshevik, he became increasingly disillusioned with the path of Russian politics, as well as the ineffectiveness of his own Menshevik colleagues and the provisional government. On the eve of the October Revolution in 1917, Karlo returned to Georgia where he became, in 1918, Chairman of the Transcaucasian Seim (parliament). From 1919 to 1921, he was a member of the Georgian Constituent Assembly. After the Red Army invasion of Georgia in February of 1921, Karlo was forced into exile in Paris. He left behind two of his elder daughters; his only son had died in 1917. Unable to bear the petty politics of emigré life, he committed suicide in 1926.

STEPHEN JONES

CHRISTIANIZATION

Christianization was the acceptance of Christianity (in its Eastern Orthodox form) by the political elite of the early Rus principalities and its imposition upon the rest of the population at the end of the tenth century.

The most influential decision in the process of Christianization was made by Saint Vladimir Svyatoslavich, Prince of Kiev (r. 978–1015), to adopt Christianity and forcibly baptize those under his rule in the Dnieper River. His conversion is traditionally associated with the year 988 because the account of it in the Russian Primary Chronicle is recorded under that year, but sources point to either 987 or 989 instead.

This decision by Prince Vladimir was the result of a process of heightened activity by missionary monks and priests from Byzantium among the Slavs as well as increased military, diplomatic, and trade contact between the Rus and Constantinople from the mid-ninth century onward. Shortly after the Muslim invasion stripped much of the eastern provinces from the empire, the Church in Constantinople began to attempt to balance the losses in the east with gains in the north. Such activity brought the Byzantine Church into competition with the Roman Church, which also was active in converting pagan Slavic peoples. The evidence for increased trade between Constantinople and Rus at this time comes both from the Rus Primary Chronicle and from archaeological evidence, such as greater numbers of Byzantine coins found in Rus coin hoards dating from around 970 onward (although Islamic dirhams and silver ingots remained the main monetary medium of exchange throughout this period).

Christianity appeared among the Rus before Vladimir's conversion. The first evidence found for it is from Photios, Patriarch of Constantinople (r. 858–867), who mentions that within a few years after the Rus attack on Constantinople in 860, some Rus converted to Christianity. In addition, Theophanes Continuatus tells us that an archbishop sent by Patriarch Ignatius (r. 847–858, 867–877) was received by the Rus in 876. In the tenth century, three significant occurrences preceded Vladimir's conversion. First, in 911, negotiations in Constantinople over a treaty between the Greeks and the Rus allowed the Greek churchmen an opportunity to tell the Rus envoys about Christianity. Second,

the treaty of 944 between the Rus and Greeks informs us that some Christians were among the Rus envoys. Finally, Princess Olga, the regent for her son Svyatoslav, traveled from Kiev to Constantinople in the 950s and converted to Christianity at that time.

The Russian Primary Chronicle has traditionally been the main source regarding the decision by Vladimir to convert, but now the scholarly consensus is that most of the account appearing in the chronicle is a later invention. The chronicle's account is a compilation of four conversion stories tied loosely together. Three of these stories are similar to, and borrow from, stories told about the conversion of previous rulers in other countries, and thus can be considered literary commonplaces. One of the stories, however, finds independent confirmation in other sources of the time and may provide more reliable information.

In the first story, missionaries from Islam, Judaism, Western Christianity, and Eastern Christianity come to Kiev to convince Vladimir to convert to their particular religion. The most persuasive of these missionaries is a Greek philosopher who exegetically summarizes the Old and New Testaments and shows the prince an icon of the Last Judgment. But Vladimir decides "yet to wait a little." In the second story, Vladimir sends ten "good and wise men" to each of the major neighboring religions. The emissaries are most impressed with what they see in Constantinople—in particular, the sublime church architecture and the beauty of the church service—yet Vladimir continues to wait. In the third story, Vladimir captures the Crimean city of Kherson, after making a vow he will convert to Christianity if successful, and demands the sister of the Byzantine emperor in marriage, but he still does not convert. In the fourth story, Vladimir goes blind in Kherson. Anna (the sister of the Byzantine emperor), who has arrived to marry Vladimir, tells him that when he is baptized he will have his sight restored; he then allows himself to be baptized and is cured of the affliction.

Of these four stories, only the third story, concerning the capture of Kherson, has much value for trying to determine the events of 988–989. In combination with contemporary Arabic, Armenian, and Byzantine sources, historians can create this context for the Primary Chronicle's third story: Following a successful revolt by the Bulgarians and their defeat of the imperial army in August 986, the Byzantine general Bardas Phokas rose up

against the Emperor Basil II (r. 976–1025) in September 987 in Asia Minor. Vladimir, in return for providing six thousand troops directly to the empire and for taking action in the Crimea against those who supported the rebels, was promised by the emperor his sister Anna in marriage, provided Vladimir converted to Christianity. Some scholars think it was at this point (in 987) that Vladimir was baptized. The army of Bardas Phokas was defeated at Abydos on April 13, 989, and Vladimir's capture of Kherson most likely occurred following that event, in the late spring or early summer of the same year. If we accept the contention of the compiler of the *Rus Primary Chronicle*, then Vladimir's conversion occurred in Kherson shortly after Anna's arrival. The baptism of the residents of Kiev in the Dnieper River would then have happened later that summer.

Arguing against a 989 date are three sources. The first is the *Prayer to Vladimir*, which states Vladimir captured Kherson in the third year, and died in the twenty-eighth year, of his conversion, thus dating his baptism to 987 and placing it presumably in Kiev. Interestingly, the *Prayer* is found together with a composition, the *Life of Vladimir*, that indicates he was baptized only after he took Kherson. Neither composition is found in a manuscript copy earlier than the fifteenth century, and their authorship is unknown. The second source dating Vladimir's conversion to 987 is the *Tale and Passion and Encomium of the Holy Martyrs Boris and Gleb*, which, like the *Prayer*, states Vladimir died in the twenty-eighth year after his baptism. The third source (or, at least, three of its nineteen extant manuscript copies), the *Reading about the Life and Murder of the Blessed Passion-sufferers Boris and Gleb*, attributed to an eleventh-century monk, Nestor, provides the date 987 for Vladimir's baptism. In order to resolve this apparent contradiction in the source evidence, some historians have suggested that 987 represents the year Vladimir began his period as a catechumen and 989 represents the year he was formally baptized.

The status of the early Rus Church dating from Vladimir's acceptance of Christianity until 1037 has been a question in the historiography, whether Rus constituted a metropolitanate on its own (with the metropolitan residing either in Kiev or Pereslav) or was subordinate to another metropolitanate such as that of Ohrid, or whether it occupied an autonomous status directly under the patriarch of Constantinople with an archbishop as its head.

That question has been decided in favor of Rus having its own metropolitan in Kiev from the beginning. After the rapid conversion, well-established existing pagan rituals and practices survived, especially in rural areas, for centuries. Such residual paganism existing side-by-side with Christian rituals and practices has been described as a special phenomenon called *dvoyeverie* ("dual belief"), but no solid evidence exists that paganism was any more prevalent here than in other areas of Eurasia that converted to Christianity so precipitously.

The conversion of Rus by Vladimir led to the formulation of a Christian religious culture in Rus based on that of the Eastern Church. It also saw the introduction of writing (including an alphabet based on the Greek alphabet), literature (most of it being translations from the Greek), monastic communities, Byzantine-style art and architecture, and Byzantine Church law. Along with Scandinavian, steppe, and indigenous Slavic elements, this Byzantine influence contributed significantly to the cultural, political, and social amalgamation that constituted the early Rus principalities.

DONALD OSTROWSKI

CHRONICLE OF CURRENT EVENTS

The Chronicle of Current Events (Khronika tekushchikh sobyty) was a clandestine periodical of Soviet dissent. It reported on the activities of dissidents seeking to

expand the sphere of civil freedom and political expression. It appeared at irregular intervals from 1968 to 1983.

The *Chronicle* was put together in Moscow by anonymous editors drawing on a network of informants throughout the Soviet Union. It was produced by *samizdat* ("self-publishing") techniques. Typewritten texts with multiple carbon copies were compiled, the recipients of which retyped additional copies and passed them along in chain-letter fashion. The *Chronicle* documented the views of the dissidents, reported on their arrests and trials, and described their treatment in prisons, labor camps, and mental asylums.

The compilers of the *Chronicle*, like most of the civil liberties activists, came from the educated, professional stratum of Soviet society. The *Chronicle* contained reports not only on their efforts, but on the activities of national minorities and religious groups as well. These included, among others, the campaign of the Crimean Tatars to return to their homeland in the Crimea, from which they had been deported in World War II; the efforts of Soviet Jews to emigrate to Israel; and the demands of Lithuanian Catholics, Ukrainian Uniates, and Baptists for religious freedom. Thus the *Chronicle* drew together hitherto isolated individuals and groups in an informal nationwide organization.

Though forced to publish by conspiratorial methods, the *Chronicle* was committed to the rule of law. It publicized repressive actions by the authorities and called on the government to observe the provisions of Soviet law and international agreements that guaranteed freedom of speech and association and other human rights. It served as an information and communication center for the dissident movement and linked its disparate strands. The publication's existence was always precarious, however, and it was ultimately suppressed.

CHRONICLE OF HUMAN RIGHTS IN THE USSR

The *Chronicle of Human Rights in the USSR* was a journal devoted to the Soviet dissident movement. It was published in New York in English and Russian editions. Forty-eight issues appeared from 1972 to 1983. It was similar in nature to the *Chronicle of Current Events*, a *samizdat* ("self-published," meaning clandestine) periodical compiled by dissidents within the Soviet Union, which was subject to suppression by the Soviet authorities.

The editor of the *Chronicle of Human Rights* was Valery Chalidze, who had been a rights activist in Moscow. Allowed to travel to the United States in 1972, he was deprived of his Soviet citizenship and could not return home.

The *Chronicle* reflected a juridical approach to Soviet dissent, reporting the Soviet government's violations of its own laws in suppressing free expression. It documented arrests and trials of dissidents, conditions in the labor camps and mental asylums where some dissidents were held, and repression of movements defending the rights of national and religious minorities, among other topics. Citing Soviet laws, the Constitution of the USSR, and international covenants to which the Soviet Union was a party, the *Chronicle* sought to persuade the Soviet government to uphold its own guarantees of civil liberties.

For ten years the *Chronicle of Human Rights* gave dissidents a voice the Soviet authorities could not silence. By exposing repressive governmental actions that would otherwise not have come to light, it anticipated the policy of glasnost, or openness, which Mikhail Gorbachev introduced in the late 1980s.

CHRONICLES

Annalistic histories serve as important primary sources for the pre-Petrine period. The earliest chronicle written in Kiev begins with highlights of world history based on the Old and New Testaments (the divisions of the earth into tribes, the story of Christ and his disciples), followed by traditional tales on the founding, first rulers, and Christianization of the Rus lands. Chronologically ordered records organized in yearly entries (hence the Russian title *letopis*, commonly translated as “annal” or “chronicle”) include documents, hagiographical narratives, reports on occurrences of significance for the state and the church; births, illnesses, and deaths of prominent persons; accounts of military and political conflicts; construction of fortifications, palaces, and churches; and notes on meteorological phenomena and wonders. As appanage principalities and ecclesiastical establishments acquired the resources for scriptoria, they initiated new chronicle compilations that borrowed from earlier annals, but devoted special attention to concerns of their own time and locality. Compendious chronicles produced in the central Muscovite scriptorium of the metropolitans include extended hagiographical narratives, correspondence, reports of church councils, details of protocol, and descriptions of important ceremonies involving princes and high-ranking hierarchs.

The editor of a chronicle constructed his compilation (*svod*) from an archive of earlier texts, editing and supplementing them as necessary. Because some sources have not survived and compilations are usually not clearly marked by titles, the origins, sources, and genealogical relationships of chronicles must be reconstructed on the basis of internal evidence, paleographical analysis, and synoptic comparison. Alexei Shakhmatov created the methodological foundations of chronicle scholarship. Shakhmatov’s hypotheses, continually revised during his lifetime and still indispensable, were corrected and refined by his successors, chief among them historians Mikhail D. Priselkov and Arseny N. Nasonov. Iakov S. Lur’e greatly contributed to our understanding of chronicle writing in the fourteenth and fifteenth centuries. Boris Kloss has done important codicological analysis on Muscovite compilations. Alexei Gippius and Alexander Bobrov have continued to research Novgorodian compilations. The evolving views of these chronicle scholars, and their ongoing differences, are registered in the critical apparatus of the contin-

uing series known as the *Complete Collection of Russian Chronicles* (*Polnoye sobranie russkikh letopisei*), founded in 1846 by the Imperial Russian Academy of Sciences, and in entries for individual chronicles in the multivolume *Slovar knizhnikov i knizhnosti Drevnei Rusi*.

Among the most important sources for historians of the period from the founding of Rus through the fourteenth century are the Laurentian Codex (containing the earliest surviving copy of the Kievan Primary Chronicle), copied for Prince Dmitry Konstantinovich of Suzdal in 1377; the Hypatian Codex (containing a Kievan thirteenth-century chronicle and a Galician Volynian compilation, copied in the fifteenth century); and the Novgorod First Chronicle, surviving in several versions: the oldest version (*starshy izvod*) covering up to the mid-fourteenth century and a younger version, preserved in fifteenth-century copies, adding records from the second half of the fourteenth century through the beginning of the fifteenth century.

Two fifteenth-century annals associated with Novgorod’s St. Sophia Cathedral (*Novgorodsko-Sofytsky svod*) but relatively neutral toward the Moscow princes (who were fighting dynastic wars among themselves) were compiled during the 1430s and 1440s. The Sophia First Chronicle, surviving in an early version (*starshy izvod*), preserved in the Karamzin and Obolensky copies, ends in the year 1418. A later version, whose earliest witness is the Balzerov manuscript (late fifteenth century), offers sporadic coverage of historical events up to the year 1471; the Tsarsky copy, dating from the beginning of the sixteenth century, extends to the year 1508. The Novgorod Fourth Chronicle also survives in several versions. The earliest version ends in the year 1437. The later version covers events to the year 1447 (the Frolov copy), extending to 1477 in the Stroyev and Synodal copies. Important primary sources on fifteenth-century Muscovy are the Rogozhsky Chronicle, represented in a single mid-fifteenth-century codex covering the period to 1412; the Simeonov Chronicle, represented in a single sixteenth-century copy covering the period to 1493; and the Uvarov Codex, a sixteenth-century manuscript, extending to the year 1492. The Typography Chronicle contains many entries representing the views of the influential Rostov bishops from the period between 1424 and 1481. The Yermolin Chronicle, connected by Lur’e to the “politically independent” Kirillov-Belozero Monastery, provides some unique details

passed over in mainstream chronicles for the period from 1460 to 1472.

In the sixteenth century, chronicle writing proliferated. The most important compilations were composed in the scriptorium of the Moscow metropolitans and convey their special interests as well as certain biases of the Moscow grand princes. The Sophia Second Chronicle, surviving in manuscripts from the early- and mid-sixteenth century, covers the period between 1398 and 1518. The Nikon Chronicle, compiled in the scriptorium of Moscow Metropolitan Daniel (r. 1522–1539) by 1529, covers the period up to 1520 and lays the foundation for all subsequent chronicles of the sixteenth century. The Voskresenk Chronicle, a key Muscovite source surviving in thirteen copies, was compiled between 1542 and 1544 and contains a number of articles sympathetic to the Shuisky family. These chronicles served as the primary annalistic sources for the first Muscovite narrative history, the *Book of Degrees of the Royal Genealogy*, compiled between 1556 and 1563. The Illustrated Compilation (*litsevoy letopisny svod*), the most extensive medieval Russian chronicle, consists of ten codices with over 16,000 miniature illustrations. Commissioned (and, some believe, edited) by Ivan the Terrible, the Illustrated Compilation was prepared in the capital of his “state within a state” (*oprichnina*), Alexandrovskaya sloboda. Kloss dates its compilation between 1568 and 1576, Alexander Amosov from the late 1570s to the beginning of the 1580s. Among the most valuable seventeenth-century annals are the *Novy letopisets*, surviving in many copies and covering the period from the end of Ivan IV’s reign to 1630; the Novgorod Third Chronicle, surviving in two versions and providing unique coverage of seventeenth-century Novgorodian affairs to 1676; and the Piskarev Codex, which, compiled by an annalist connected with the powerful Golitsyn clan, covers the period up to the reign of Alexei Mikhailovich (r. 1645–1676).

GAIL LENHOFF

CHUBAIS, ANATOLY BORISOVICH

(b. 1955), reform economist and official in Yeltsin government.

Anatoly Borisovich Chubais was born in 1955. In 1977 he graduated from an engineering-economic institute in Leningrad, and in 1983 he defended a thesis on management problems. His early career was linked to the democratic movement in Leningrad. Following the failed coup in August 1991 (against Mikhail Gorbachev), he resigned his membership in the Communist Party.

As one of the most prominent of Russia’s “young reform economists,” in November 1991 he was appointed to serve as chairman of the Russian State Property Committee. From that post he would lead and influence the Russian program of mass privatization, personally favoring the use of special privatization vouchers and privatization via auctions. In 1993 he was also elected to the Russian Duma, representing the liberal party Russia’s Choice.

Following a series of scandals in relation to various privatization deals, in January 1996 Chubais was fired from his post. A month later, however, he returned to the national stage to serve as campaign manager for Boris Yeltsin’s reelection campaign. From there he proceeded to the influential post of head of the presidential administration.

In March 1997 Chubais capped his political career by being appointed first deputy prime minister in charge of the economy, a post that he would hold until March 1998, when Yeltsin chose to dismiss the entire government.

Throughout his various posts in government, Chubais became known as one of the most competent but also one of the most controversial of the reformers. While his popularity in Western business and policy circles seemed to guarantee appointments to prominent posts, his standing with the general population and with the political opposition inside his own country was very poor.

In April 1998 Chubais was appointed to serve as chief executive officer of the Russian power giant Unified Energy Systems (UES). Like his role in government, his way of running UES was surrounded by controversy, earning him much praise but also much criticism.

STEFAN HEDLUND

CHUIKOV, VASILY IVANOVICH

(1900–1982), Marshal of the Soviet Union (1955), twice Hero of the Soviet Union, and Red Army commander renowned during World War II for his stoic and ruthless defense of Stalingrad and vital role in the capture of Berlin.

Josef Stalin routinely employed Vasily Chuikov as a “shock commander” in the most difficult sectors of the front. A regimental commander during the Russian civil war, Chuikov graduated from the Frunze Academy (1925) and the Red Army’s Academy of Motorization and Mechanization (1936).

Elevated to command the 9th Army after its notorious defeat during the Soviet–Finnish War (1939–1940), on Stalin’s orders Chuikov executed all commanders, commissars, and officers involved in the defeat. After serving as attaché to China (1939–1942), Chuikov commanded the 64th Army during the bitter fighting en route to Stalingrad and, later, the 62nd Army in its bloody and tenacious defense of the ruined city, for which his army earned the designation “8th Guards.” Chuikov commanded the Eighth Guards Army from 1943 through the war’s end, fighting in all major battles in the Ukraine and Poland, and spearheading the final Red Army drive on Berlin in April 1945. After the war Chuikov served successively as commander of the Group of Soviet Forces in Germany, the Kiev Military District, and the Soviet Ground Forces; Deputy Minister of Defense of the USSR; and Chief of the USSR’s Civil Defense. After his retirement in 1972, Chuikov authored seven memoirs related to his military exploits.

DAVID M. GLANTZ

CHUKCHI

The Chukchi, one of Russia’s “Northern Peoples,” live in the northeast extreme of Russia. Most (80%) of the approximately fifteen thousand Chukchi live within the Chukchi Autonomous District; small numbers also reside in Sakha Republic (Yakutia) and Koryak Autonomous District. Historically, two general groups were recognized: inland and coastal Chukchi. Inland Chukchi herded domestic reindeer, amassing up to several thousands per (rich) family. Reindeer herding required a nomadic lifestyle: herders lived in tents and moved continuously to avoid pasture degradation. Men herded, hunted, and fished, while women gathered plant foods, sewed, cooked, and moved camp. The sociopolitical unit of the inland Chukchi was the herding camp, consisting of four to five families.

Coastal Chukchi depended on marine mammals for their subsistence, and lived in settled villages. Within villages whaling crews constituted important sociopolitical units. Coastal and inland Chukchi interacted, trading for desired products (e.g. marine mammal fat and hides, reindeer hides).

The Chukchi language is part of the Chukchi-Kamachatkan group of Paleo-Asiatic languages, and is most closely related to Koryak. Perhaps its most interesting attribute is the gender specific pronunciation: women replace the “r” sound with a “ts” sound. Animism characterized Chukchi cosmology. Both men and women served as shamans who mediated with the spirits who guided the animal world and other realms.

Nonnative people—Russian explorers and traders, followed by American traders—began to penetrate Chukchi space in the seventeenth century. The Russians claimed the territory but were unable to subdue it, due to fierce Chukchi resistance. Eventually (1778), the Tsarist government signed a peace treaty with the Chukchi. It was the Soviets who brought massive change, imposing new economic forms on the Chukchi, wresting decision making from them and attempting to settle the nomadic population. Some coastal villages were annihilated and their populations moved to larger centers. Meanwhile the Chukchi homeland underwent extensive mineral exploitation, accompanied by massive immigration. In 1930, natives constituted 96 percent of the population; by 1970 the number was reduced to 13 percent. Since the collapse of the Soviet Union and withdrawal of northern subsidies, many nonnatives have left. The Chukchi have established a local organization to

fight for increased rights, and are attempting to revivify their traditional activities, but they are plagued by high levels of unemployment, high mortality, declining reindeer herds, antiwhaling campaigns, and a moribund local economy.

GAIL A. FONDAHL

CHUKOVSKAYA, LYDIA KORNEYEVNA

(1907–1996), novelist, editor, memoirist, dissident, daughter of writer and critic Kornei Chukovsky.

Born in St. Petersburg, Lydia Chukovskaya studied literature at the Institute of the History of Art. She worked as apprentice editor to Samuil Marshak at the children's literature section of the Leningrad State Publishing House from 1927 until the section was shut down during the purges of the 1930s.

Chukovskaya became one of the most powerful writers to emerge from the Stalinist experience. Chukovskaya's husband, Matvei Petrovich Bronshtein, died in Stalin's purges. Written clandestinely during the winter of 1939 to 1940 and finally published in the Soviet Union in 1988, Chukovskaya's first novel, *Sof'ia Petrovna*, tells the story of a mother who loses her only son in the purges. Chukovskaya's second novel, *Going Under (Spusk pod vodu)* similarly features a female protagonist traumatized by Stalinist repression.

Chukovskaya preserved and edited literary treasures. She saved some of Anna Akhmatova's poems by committing them to memory. Chukovskaya kept a journal of her meetings with her friend during the purges and published *Notes on Anna*

Akhmatova (Zapiski ob Anne Akhmatovoi), a two-volume account of their conversations. In 1960 she published a collection of essays on the art of editing entitled *In the Editor's Workshop (V laboratorii redaktora)*.

Over time, Chukovskaya became active in the dissident movement. Her efforts on behalf of Joseph Brodsky, Andrei Sinyavsky, Yuly Daniel, Andrei Sakharov, and Aleksandr Solzhenitsyn led to her expulsion from the Union of Soviet Writers in 1974, which she chronicled in *The Process of Expulsion (Protsess iskliucheniia)*.

During her final years, she eulogized her father in *To the Memory of Childhood (Pamiati detstva)* and established a museum at the Chukovsky dacha in Peredelkino, outside Moscow.

JACQUELINE M. OLICH

CHUKOVSKY, KORNEI IVANOVICH

(1882–1969); pseudonym of Nikolai Vasilevich Korneichukov; best known as author of children's fairy tales and poetry; also a journalist, translator, editor, and literary critic and scholar.

Kornei Chukovsky grew up in Odessa, where he began his career in 1901 as a correspondent for *Odesskie novosti (Odessa News)*. He spent 1903–1904 in London, where he immersed himself in British and American literature. Returning to Russia, he settled in St. Petersburg and wrote literary criticism for the journal *Vesy (Scales)*, although his satirical publication *Signal* led to his arrest and brief detention. In 1907 he published a translation of Walt Whitman's verse and translated the works of many other English-language writers after 1918. Until the mid-1920s, Chukovsky also wrote numerous books of literary criticism. In 1914 he completed *Poetry of the Coming Democracy*, which for political reasons was not published until 1918. Chukovsky was also the foremost authority on Nikolai Nekrasov, writing approximately eighty publications on the poet and editing the 1926 edition of Nekrasov's collected works.

During the 1920s Chukovsky turned to writing children's literature as a "safe" genre. His first tale *Krokodil* (*The Crocodile*) had been published in 1917, and between 1923 and 1926 he wrote a number of others. Although his tales were widely published and very popular, the author came under attack from writers and educators, including Nadezhda Krupskaya, who called *The Crocodile* "a bourgeois fog." Chukovsky's children's stories were forbidden and, with the exceptions of two new stories in the 1930s, not republished until after Stalin's death. Chukovsky's response to this critique was *Malenkie deti* (*Little Children*, 1928; *From Two to Five* in later editions), a study of children's language, games, and creativity.

While Chukovsky himself did not directly experience persecution during the 1930s, he knew many, such as his son-in-law, who did. Chukovsky worked tirelessly to help those who suffered, writing letters and petitions on their behalf. In 1962, toward the end of his life, he received the Lenin Prize and was awarded an honorary doctor of letters from Oxford University.

CHURCH COUNCIL

In the Orthodox Church, councils (in Greek, *synodos*; in Russian, *sobor*) are the highest form of ecclesiastical authority, the most important of which are the seven ecumenical councils that were held between the years 325 and 787. Since 1500 the Russian Church has convened several "local" or national councils (*pomestnye sobory*), which apply

specifically to the Russian Church itself. Ultimate authority for decision-making at these councils has rested in the hands of the bishops, although, in the twentieth century, clergy and laity have participated in a consultative role with varying degrees of power. Since the rise of Muscovite Russia, the local councils have taken place in Moscow or just northeast of it at the Trinity Monastery in Sergiev Posad (known as Zagorsk during the Soviet period).

The Council of 1503 confronted the conflicting positions of two monastics who were subsequently both glorified by the Church as saints. Joseph of Volotsk advocated the establishment of cenobitic monasteries (in which monks lived in common, sharing everything), church landholdings, and the active involvement of monks in the world. Nil Sorsky promoted a monasticism that separated itself from the world; monks, he thought, should live as hermits and earn income from their own labor. Although the debates between the possessors and nonpossessors, as their two points of view are known respectively, amounted to a difference in emphasis, not of absolute opposition, the Council of 1503 rejected Nil's positions. As a result, sixteenth-century monastic landholding and wealth increased. The assembly also condemned the Judaizer movement as a heresy.

The Council of 1666–1667 was convened amidst Tsar Alexei's efforts to deal with the reforms of the outspoken Patriarch Nikon. With Patriarchs Paissy of Alexandria and Macarius of Antioch in attendance, the assembly endorsed Nikon's reforms of ritual and service books, yet deposed Nikon himself for his attempts to attain supreme authority over the tsar. The Council called for increasing the number of bishops, closing the state's Monastery Office, and restoring the bishops' authority over the clergy; the state resisted such changes in order to preserve its own power. The Council sought to curtail the unregulated recognition of saints and of miracle-working relics, reduced the number of saints' days that were national feasts, and called for a skeptical attitude when considering the validity of "holy fools."

The Council of 1682, convened during the reign of Tsar Theodore, considered questions and proposals that had been raised at the Council of 1666–1667, including the addition of ten dioceses to the existing thirteen. Since only one new diocese had been added, the expansion of ecclesiastical administration still remained an issue. Other decisions concerned the behavior of clergy and the regulation of church services and veneration of relics.

The Council of 1917–1918 represented the culmination of an early-twentieth-century church reform movement. After the February Revolution, it attempted to reconstruct church-state relations in cooperation with and anticipation of the proposed political transformation of Russia through the Constituent Assembly. It also contended with the rise of nationalist movements and Soviet power. The Council had been much anticipated in 1906 but, due to fears of political unrest, had been postponed by Tsar Nicholas II. Its delegates consisted of 265 clerics (bishops, priests, and monks) and 299 laymen; although the assembly's plenary sessions were thereby dominated numerically by non-episcopal members (a departure from tradition), no decree was made official until approved by the Council's episcopal conference, which met in secret session. The Council restored the Moscow Patriarchate to replace the Synodal higher church administration instituted by Peter the Great; decentralized authority in diocesan administration to create an ecclesiastical system more responsive to the needs of clergy and laity; and reformed the parish, which became a legal entity empowered to carry out many decisions on its own. The Council also considered a host of issues concerning church discipline. The Bolsheviks' disestablishment of the institutional church made it difficult or impossible to carry out the Council's decrees. In 1918 the delegates focused increasingly on preserving the church rather than reforming it.

The Council of January 31–February 2, 1945, was convened at the behest of the Soviet government and broke with church tradition and the decrees of the 1917–1918 Council in many ways. Held primarily to elect a new patriarch to succeed Patriarch Sergius, the Council selected Alexei, the sole candidate proposed for the position. Consisting of 46 bishops, 87 priests, and 37 laymen, the Council created a centralized authority in the hands of the patriarch, at the expense of Synodal, diocesan, and parish authority.

The Council of May 30–June 2, 1971, was attended by 236 delegates, including a bishop, priest, and layman from each diocese and guests from outside Russia. The Council elected Metropolitan Pimen as patriarch to replace Alexei, who had died in April 1970, and lifted the seventeenth-century excommunication of the Old Believers. It confirmed the parish reforms of the 1961 Council of Bishops, which had given power to executive committees to control finances, thereby undermining the authority of priests and bishops. The Council also ap-

proved the granting of autocephaly (independence) to Orthodox Churches in America, Poland, and Czechoslovakia, as well as autonomy (self-rule) to Churches in Japan and Finland.

The Church convened the Council of June 6–9, 1988, during the millennium anniversary of the baptism of Rus in 988. The assembly glorified (canonized) nine saints: Grand Prince Dmitry Donskoy, Andrei Rublev, Maximus the Greek, Metropolitan of Moscow Macarius (1482–1563), Paisy Velichkovsky, Xenia of Petersburg, Bishop Ignatius Brianchaninov, Amvrosy of Optina, and Bishop Theofan the Recluse. The Council promulgated a new statute on church administration, which called for a local council to be convened every five years and a bishops' council every two years. It also overturned the parish decrees of the 1961 Bishops' Council by strengthening the position of the priest in the parish, making his signature necessary for all parish council documents and establishing him as chairman of the parish council.

GEORGE T. KOSAR

CHURCH COUNCIL, HUNDRED CHAPTERS

The Hundred Chapters Church Council (known to Russians as the *Stoglav*) was convened in Moscow in February 1551 by Tsar Ivan IV and Metropolitan Makary, and was attended by representatives of the boyar council, nine bishops, and numerous abbots, priors, and priests. The council's purpose was to regulate the church's relationship to the state, reform its internal life, strengthen the authority of the bishops, and eradicate non-Christian folk customs from among the populace. It would not introduce anything new but would purify the Russian church of irregularities.

No complete record of the council's resolutions has survived, but a partial account was preserved in a book (the *Stoglav*) divided into one hundred chapters, from which the council takes its name. Ivan opened the proceedings with a speech in which he confessed his sins and called for national repentance, then asked the council to approve his new law code of 1550 and the statute charters designed to abolish corruption in provincial administration. After this the tsar presented a list of questions, apparently compiled with the help of Metropolitan Makary and the priest Sylvester, relating to deficiencies in church life and heresy among the people, and called on the council to recommend remedies.

By May 1551 the Hundred Chapters Council had completed its deliberations. Ivan's new law code and statute charters were confirmed, but the proposed secularization of church lands for military tenure and subordination of clerics to secular jurisdiction were categorically rejected. When the tsar confirmed the inviolability of church possessions, the bishops compromised by agreeing to limits on the increase of ecclesiastical property. Moreover, the financial privileges of monasteries were reduced, and no new tax-free monastic settlements were to be founded in towns without the tsar's approval, thereby increasing crown tax revenues. The council called for many irregularities in church life to be corrected. Among other things, drunkenness among the clergy was to be eradicated, parish priests were to be better educated, and priests and laity alike were to be protected against rapacious episcopal tax collectors. "Pagan" and foreign practices popular among the laity were prohibited, such as minstrels playing at weddings and the shaving of beards.

The council's decisions made it possible to standardize religious books, rituals, and icon painting and protected the church's possessions and judicial rights against state encroachment. The bishops increased their judicial authority over the monasteries, and likewise extended their supervision of the parish clergy by appointing a network of priest elders. Some of the council's resolutions were not implemented, however, and others proved to be unsuccessful. The series of decrees issued in 1551 throughout the Russian state calling for the purification of religious life had to be regularly reissued, which suggests that the corrections were not enforced and abuses were not extirpated. Despite council demands for upgraded clerical education, there is no evidence of improvement until the second half of the seventeenth century. Alcoholism continued to be a problem, and extortion by tax collectors was never fully eradicated. Attempts to purify the Christianity of the people appear to have failed, and many superstitious practices listed by the council survived until the early twentieth century. The attempt to reform the laity's behavior was impeded by the fact that parish priests were responsible for carrying it out but were not given the education, assistance, or means of enforcement that would have made this possible.

The Hundred Chapters Council affirmed the traditional Byzantine principle of "symphony" (i.e., cooperation) between church and state, yet the proceedings exemplify the ongoing power struggle between Russia's religious and secular authorities. As a historical document, the *Stoglav* casts a unique light on the cultural life of early modern Russia and on the character of Ivan IV. Alongside the *Nomocanon* (a collection of Byzantine ecclesiastical law), it became a fundamental manual of church law until the mid-seventeenth century, when Patriarch Nikon of Moscow reversed some of its decisions on minor religious rituals. Nikon's opponents maintained that the old rituals were correct and that the decisions of the Hundred Chapters council had canonical authority. The ensuing disagreement became one of the chief causes of the schism of the Russian Church.

CHUVASH

The Chuvash (self-name *chavash*) are an indigenous people of the middle Volga basin. According to the 1989 census there were 1.8 million Chuvash in the former Soviet Union. The greatest concentration (906,922) lived in the Chuvash Republic on the west bank of the Volga river between its tributaries the Sura and Sviaga, with most of the remainder living in adjacent republics and provinces. Chuvash made up 67.8 percent of the population of Chuvashia in 1989, with Russians accounting for 26.7 percent.

The ethnonym *chavash* first appears in Russian sources in 1508, so early Chuvash history is not entirely clear. Scholars agree that today's Chuvash are descendants of at least three groups: Turkic Bulgar tribes who arrived on the Volga in the seventh century from the Caucasus-Azov region; the closely-related Suvars (suvaz, perhaps the origin of *chavash*) who migrated from the Caucasus in the eighth century; and Finno-Ugric tribes who inhabited Chuvashia before the Turkic settlement. The Bulgar state dominated the region from the tenth century until conquest by the Mongols in 1236. Chuvash were ruled by the Golden Horde in the thirteenth and fourteenth centuries, then by the Kazan Khanate from the 1440s, and were finally incorporated in the Muscovite state in 1551.

The Chuvash speak a Turkic language that preserves many archaic elements of Old Bulgar and is largely incomprehensible to speakers of other Turkic dialects. Early Chuvash was written with Turkic runes, supplanted by the Arabic alphabet during the time of the Bulgar state. A new Chuvash script

based on the Cyrillic alphabet emerged in the eighteenth century. The first Chuvash grammar, which used this script, was published in 1769. The Chuvash educator Ivan Yakovlev developed a new Chuvash alphabet in 1871. The first Chuvash newspaper, *Khypar* (News), appeared in 1906.

Early Chuvash animism was influenced by Zoroastrianism, Judaism (via the Khazars), and Islam. Chuvash honored fire, water, sun, and earth, and believed in a variety of good and evil spirits. By the middle of the eighteenth century, most Chuvash had converted to Russian Orthodox Christianity under the influence of Russian settlers and missionaries. However, some who lived among Tatar populations converted to Islam and assimilated to Tatar culture and language. Today's Chuvash are predominantly Orthodox Christians, though pagan beliefs survive in scattered settlements.

The second half of the nineteenth century brought significant economic changes, as Chuvash peasants left their villages for railway employment, lumbering and factory work in the Urals, mining in the Donbas, and migrant agricultural labor. Urbanization began in this period and accelerated in the twentieth century, although in 1989 less than half (49.8 percent) of the Chuvash in the Russian Federation lived in cities.

During the Russian Revolution of 1917, Chuvash leaders demonstrated interest in joining the Idel-Ural (Volga-Ural) state proposed by Tatar politicians as a counterbalance to Russian hegemony in the region, and later (March 1918) agreed to join the Tatar-Bashkir Soviet Republic. After this project fell victim to the conflicts of the civil war, the Soviet government formed a Chuvash Autonomous Region (1920), later upgraded to an Autonomous Soviet Socialist Republic (1925). Chuvash leaders declared their republic an SSR (Soviet Socialist Republic, or union republic) in 1990 and renamed it the Chuvash Republic in 1992. Important organizations active since the late Soviet years include the Chuvash Party of National Rebirth, the Chuvash National Congress, and the Chuvash Social-Cultural Center. The Chuvash Republic is a signatory to the March 31, 1992, treaty that created the Russian Federation.

CIMMERIANS

Cimmerians are a nomadic, Iranian-speaking peoples who occupied the North Pontic steppe zone from the Don to the Danube, with their center in the Crimea. Their culture and civilization flourished between about 1000 and 800 B.C.E. Pastoralists had inhabited the North Pontic region since approximately 4000 B.C.E., or some three thousand years prior to the advent of the Cimmerians, but the latter were the first to be mentioned by name in the written sources, and so they were sometimes (inaccurately) seen by historians as the earliest nomadic peoples of southern Russia.

It is not clear whether the term "Cimmerian" represented an ethnic group or simply designated any Iranian-speaking equestrian nomads inhabiting the North Pontic area. There is also no consensus on the origins of these peoples. However, it is most likely that the Cimmerians evolved out of the sedentary Srubnaia ("Timber-Grave") archaeological culture of the second millennium B.C.E. after they took up a pastoral way of life in the steppe. There are reasons to believe that the Cimmerians can be connected to the Belozersk culture, which some scholars believe is derived from the late Srubnaia culture. By about 800 B.C.E., the Cimmerians were supplanted by the Scythians, a closely akin Iranian-speaking nomadic group that arrived in the area and absorbed some of the former into their tribal confederation while expelling the rest. Some Cimmerian tribes who were ejected from the North Pontic steppe zone moved southeast through Transcaucasia into Anatolia and northern Mesopotamia, which they raided for about twenty years.

CIRCASSIANS *See* CHERKESS.

CIRCUS

Circus was first introduced in Russia in 1793 by Charles Hughes of the Royal Circus of London. Established on a permanent basis in 1853, Russian circus was dominated by foreigners in the early years, such as the Salomanskys of Berlin in Moscow and the Cinizellis of Italy in St. Petersburg. Circuses traveled around with tents, but stationary circuses were also built in largely populated areas in Russia. Stationary circuses are more profitable and can also be active during inclement weather. During Soviet times there were about seventy stationary circuses and about forty remain in Russia in the early twenty-first century.

Circus in Russia has deep roots in the rich Russian cultural traditions, but circus performances in Russia are also known for their social comedies. Circus clowns in prerevolutionary Russia created satirical skits about landowners and merchants. The famous Durov brothers, Anatoly and Vladimir, a clown pair whose underlying purpose with their social comedies was to fight the oppressive tsarist regime, mastered this form. The Durov brothers were also animal tamers who developed the well-known Durov method of humane animal care and training.

The satirical nature of the circus and its appeal as a form of mass entertainment translated well into the Soviet world of popular culture. Intellectuals attacked the circus in the wake of the 1917 Revolution and labeled it an institution of superstition, animal cruelty, and vulgarity. Others noted that the circus offered an alternative mode of presenting historical and political themes through satirical clowning. The circus was nationalized in 1919 and the Commissariat of Enlightenment created a new department for it within its theater section. During the civil war the circus was turned to revolutionary uses, and later during World War II circus performers expressed patriotic feelings by staging victorious battles and honoring Russia's wartime allies.

The circus survived the Bolshevik cultural revolution well as circus acts already had a tradition of conveying political messages. In addition to political preaching, Soviet circus successfully mixed comedy and clowning with moralizing. During the

Nikita Khrushchev years, popular routines addressed child upbringing, warned against foreign fashion, excessive drinking, *stilyagi*, and other social menaces. Circus continued to amuse Soviet citizens into the Leonid Brezhnev era, focusing on popular acts such as acrobatics, high wire, dancing bears, Cossack riders, and clowning. Clowns remained the greatest stars of the Russian circus.

Although tiring to the Soviet audience, Russian circus was conservative and continued to present internationally acclaimed ethnic variety shows well into the 1980s. With perestroika the circus abandoned the standard Soviet elements of the circus, such as folk culture, appraisal of World War II heroism, and politics. In the early twenty-first century, pop music and skits devoid of political or moral preaching draw huge crowds as the professionalism of Russian circus artists is widely acclaimed. With changing times, Russian circus has reinvented itself and continues to be a valued form of entertainment in Russia.

CIVIC UNION

The Civic Union was a political movement active in 1992 and 1993, intended to represent the interests of state-owned enterprises and their managers and employees. It was a bloc of several parties and extraparliamentary organizations. One of its leaders was Vice President Alexander Rutskoy; another was Arkady Volsky, president of the Russian Union of Industrialists and Entrepreneurs. Its activities were a reaction against the economic policies of the Yegor Gaidar government (1991–1992).

Russian governments in the Boris Yeltsin era, in accordance with mainstream Western economics, aimed at financial stabilization, specifically of

the price level. The Civic Union was more interested in real stabilization: namely, stabilization of output levels. It primarily aimed to halt, and then reverse, the sharp fall in production and living standards that took place between 1989 and 1992.

Unlike the Gaidar government, the Civic Union, worried about the possible negative consequences of privatization, did not consider it a high priority, and believed that any privatization of large enterprises should adhere to the Soviet tradition of safeguarding the rights of employees.

With respect to liberalization, the Civic Union saw advantages in the partial reintroduction of some elements of the old economic mechanism (state orders, the provision of goods in kind, price controls, and wage controls). For the Gaidar team, the Civic Union's position on this issue exposed its "reactionary essence" and made it "dangerous" for the future of Russia.

In agriculture, during the winter of 1991–1992, the Gaidar government tried to carry out a quick decollectivization policy, ignoring the needs and interests of this remaining large-scale sector. The Civic Union, on the other hand, argued for continued financial support for large-scale agriculture (the former collective and state farms).

The Civic Union played an important role in the emergence of a democratic system in Russia by providing a constitutional channel for criticism of the unpopular economic policies of the Gaidar government. It contributed to undermining them and forcing Gaidar himself from office in December 1992. However, it failed on the whole to provide direction and leadership for government economic policy. The growing political tension of 1993 and the increased privatization of the economy led to the disappearance of the Civic Union.

MICHAEL ELLMAN

CIVIL WAR OF 1425–1450

The Civil War of 1425–1450 was a major formative event in Russian history, the impact of which was evident well into the Soviet period. It began as a dynastic controversy, the sole major civil war in the Moscow princely line (the Danilovichi) until that time. This was only one of the ninety major civil wars in Russia between 1228 and 1462. Moscow's other major rivals for hegemony over the East European plain (especially Tver) were constantly destroying themselves in civil wars, whereas Moscow had a single line of unchallenged rulers between 1300 and 1425. If it would be fair to say that Moscow's ultimate triumph as East Slavic hegemon was determined already in the 1390s, then in the political sphere the civil war of 1425–1450 was almost irrelevant in the long run. In the social sphere, however, the civil war set the ball rolling toward serfdom and, by 1649, to a legally stratified, near-caste society that essentially lasted until the 1950s, when the Soviets finally issued peasants internal passports, putting an end to the serf element of collectivized agriculture. For this reason an understanding of the civil war is both interesting and important.

Muscovite grand prince Basil I died in 1425. Surviving him were his ten-year-old son, who became Basil II, and three brothers, Pyotr (d. 1428), Andrei (d. 1432), and Yuri (d. 1434). The general (but not universal) Muscovite practice had been for succession to be vertical, from father to son—a system of limited primogeniture, one of the strengths of the Danilovichi. The issue was complicated by contradictory wills. Dmitry Donskoy had willed the realm to Basil I, then to his next son Yuri—all before Basil II was born. Later, Basil I's will of 1423 passed power to his son.

In 1425 Basil II was only a nominal ruler. Real power was in the hands of the boyars, head of the church Metropolitan Foty, and Basil's mother, Sofia Vitovtovna (daughter of the ruler of Lithuania). This group was opposed by Basil's uncle, Yuri Dmitrievich, appanage prince of Zvenigorod and Galich, who would have been the legitimate heir under the archaic system of lateral succession. While he lived, he was regularly raising armies in Galich in an attempt to seize the throne in Moscow. His brother Andrei, prince of Beloozero, conspired with Yuri to keep their nephew off the throne. Three years of war and plundering ended in 1428,

when Yuri gave up his pretensions to the throne. Warfare continued, however, as Basil II and Yuri continued to fight over the escheated Dmitrov appanage of Peter, who died in 1428 without heirs. In 1432 the Mongol Khan gave the patent (*yarlyk*) to Basil, who was installed as ruler of All Rus in Moscow, which henceforth became the capital of Russia. The khan awarded Dmitrov to Yuri; Dmitrov was then seized by Basil's troops. A temporary calm ensued.

In 1433 Basil II married Maria Yaroslavna, sister of the prince of Serpukhov-Brovsk. In an apparent gesture of clan harmony, Basil's cousins, the sons of Yuri of Galich, Basil Yurievich (Kosoi, d. 1448) and Dmitry Yurievich Shemyaka (poisoned in 1453) attended the wedding. A third son, Dmitry Krasny (d. 1441) was absent. Basil Yurievich wore a gem-studded golden belt, which was alleged to be part of the grand princely regalia that had been stolen from Dmitry Donskoy. Sofia Vitovtovna took the belt, the keystone of subsequent Russian history, from Basil Yurievich, who then with his brother fled to their father Yuri's estate in Galich. Yuri rounded up his army, defeated Basil II, took Moscow, and proclaimed himself grand prince. Basil rounded up an army, and Yuri surrendered Moscow without a fight. Then Yuri rounded up his forces and those of his three sons and defeated Basil II at Rostov, and Basil fled to Novgorod. Yuri took Moscow, but died. This should have ended the civil war, but it was continued by his sons, who had no "legitimate" claims to the throne whatsoever. Basil Yurievich seized the throne and was crowned. His two brothers, Dmitry Krasny and Dmitry Shemyaka, opposed him and joined Basil II, and Basil Yurievich fled. He and his army looted everything along the way, as was the practice throughout the civil war. Then civil war spread throughout nearly all of northeastern Rus. In 1436 Basil Yurievich was captured and blinded, hence his nickname "Kosoi" ("squint"). Dmitry Shemyaka took over leadership of the rebels. The Mongol-Tatars joined the fray, plundering and burning everything in their wake. On July 7, 1445, they captured Basil II, and a week later they burned the Kremlin. Shemyaka wanted Basil II turned over to him, but the Tatars freed him for an enormous ransom, 200,000 silver rubles, in October. The taxes raised to pay the ransom caused further chaos and population dislocation.

This led to the third and worst period of the civil war. Shemyaka and his allies continuously fought Basil II and sacked every place they visited.

Basil II was seized by his enemies at the Trinity Sergiev monastery and blinded (henceforth called *temny*—"the dark"). While this was going on, Shemyaka seized Moscow and became grand prince in 1446. The treasury was looted, and the peasants, even more oppressed than they had been, fled further. Crops were destroyed by the marauding armies, and starvation ensued. Grain was scarce in Novgorod for a decade. Shemyaka, condemned as an oathbreaker by the church, was soon driven out of Moscow. He continued the war for several years in the North (Ustiug, Vologda), then fled to Novgorod, where he was poisoned by his cook, an agent of Basil II.

The Venetian diplomat, merchant, and traveler Josaphat Barbaro observed that Russia was a desert. In an attempt to assure repayment of peasant debts, a few monasteries persuaded rulers to issue laws prohibiting peasant debtors from moving at any time other than around St. George's Day (November 26)—after the harvest, the best time to collect debts. This initiated the enserfment of the Russian peasantry.

RICHARD HELLIE

CIVIL WAR OF 1917–1922

The most decisive chapter of the Russian Revolution, the civil war raged between October 1917 and 1922. The traumatic experience of civil war served as a defining moment for the new Soviet state by embedding itself into both the people's and the state's outlook and behavior.

The origins of the Russian civil war can be found in the discrediting of the tsarist government that took place before World War I; in the social

divisions that shaped politics before and during the Revolution of 1917; and in the Bolshevik leadership's belief in the importance of civil war, in the imminence of world revolution, and in the acceptability of applying coercion in setting up a dictatorship of the proletariat. Although historians disagree over when the civil war began, dating the event to the October Revolution of 1917 makes sense, because that is how contemporaries understood it. Moreover, armed opposition to the new Bolshevik government, the Council of People's Commissars (*Sovnarkom*), arose immediately after October when officers of the Imperial Army, Mikhail Alexeyev, Lavr Kornilov, Anton Denikin, Alexei Kaledin, and others, formed the first counterforce known as the Volunteer Army, based in southern Russia.

During the civil war the Bolsheviks, or Reds (renamed "communists" in 1918), waged war against the Whites. A term used loosely to refer to all factions that battled against the Bolsheviks, the Whites were a more diverse group than the Bolshevik label of "counterrevolution" suggests. Those who represented the country's business and land-owning elite did tend to express monarchist sentiments. In addition, Cossack military units that had enjoyed self-government and other privileges likewise held conservative political views. But many White officers opposed the autocracy and even harbored reformist beliefs.

Much more complicated were the Bolsheviks' relations with Russia's moderate socialists, the Mensheviks and Socialist Revolutionaries (SRs), and with both parties' numerous offshoots, who wished to establish a government that would include all socialist parties. The internecine struggle within the socialist camp persisted throughout the civil war, and flared up after the Bolsheviks routed the Whites in 1920. Fearing a White victory, the moderate socialists complicated this scenario by throwing their support behind the Reds at critical junctures. Moreover, left-wing factions within these parties allied themselves with the Bolsheviks. For instance, until mid-1918 the Bolsheviks stayed afloat in part owing to the support of the Left SRs, who broke from their parent party following the October Revolution of 1917 to join the Bolsheviks.

In some locales the Bolshevik-Left SR coalition even weathered the controversy over the Brest-Litovsk Peace with Germany, signed in March 1918, which otherwise sundered the alliance with the Left SRs, who withdrew from the Lenin

government in protest. The peace ceded eastern Poland, the Baltic states, Finland, and Ukraine to Germany, as well as Transcaucasia to Turkey, in return for an end to hostilities. Ratifying the treaty sparked heated debate within the Communist Party, especially among the so-called Left Communists led by Nikolai Bukharin who backed the idea of a revolutionary war against Germany. Later, from September 1918 until October 1920, renegade Left SRs formed a new party called the Revolutionary Communists (RCs), who participated in a ruling coalition with the Bolsheviks in many Volga provinces and the Urals. The Bolshevik attitude toward the socialist groups that supported the Reds reflected the overall strength of Soviet power at any given time. When vulnerable, the Bolsheviks welcomed their socialist allies; otherwise the Bolsheviks sought to manipulate them through a process of co-optation amid repression.

Political opposition to the Bolsheviks became more resolved after they closed down the Constituent Assembly in January 1918. Elected just days after the October Revolution, the assembly was slated to determine Russia's political future. Although Lenin did not dare cancel the elections, he had no reservations about dispensing with the assembly after the SRs and related populist parties won a plurality of just under half of the votes cast. Capturing roughly a quarter of the popular vote, the Bolsheviks fared best in the cities and within the armed forces. Recognizing the need for a military force more formidable than the worker Red Guards who had backed the Bolsheviks' bid for power in October, Lenin established the Red Army under Leon Trotsky shortly after dispersing the Constituent Assembly. Trotsky recruited ex-tsarist officers to command the Reds, appointing political commissars to all units to monitor such officers and the ideological education of recruits. That spring, support for the Bolsheviks within the proletariat began to erode as the Mensheviks made a comeback.

This early phase of the civil war ended with a spate of armed conflicts in Russian towns along the Volga in May and June 1918 between Bolshevik-run soviets (councils) and Czechoslovak legionnaires. Prisoners of war from the Austro-Hungarian armies, the legionnaires had agreed to be transported across Siberia and from there to the Western front in order to join the Allies in the fight to defeat the Central Powers. The Czechoslovaks' clash with the Soviet government emboldened the SR op-

position to set up an anti-Bolshevik government, the Committee to Save the Constituent Assembly, *Komuch*, in the Volga city of Samara in June 1918. Many delegates elected to the Constituent Assembly congregated there before the city fell to the Bolsheviks that November. Meanwhile, the Bolsheviks expelled Mensheviks and SRs from local soviets, while the Kadets convened in the Siberian city of Omsk in June 1918 to establish a Provisional Siberian Government (PSG). The rivalry between Samara and Omsk resulted in the last attempt to form from below a national force to oppose Bolshevism, a state conference that met in Ufa in September and set up a five-member Directory after its French revolutionary namesake. But in November the military removed the socialists and installed Admiral Kolchak in power. Remaining official leader of the White movement until defeat forced him to resign in early 1920, he kept his headquarters in Siberia.

Although its role is often exaggerated, international ("Allied") intervention bolstered the White cause and fuelled Bolshevik paranoia, providing "evidence" for the party's depictions of the Whites as traitorous agents of imperialist foreign powers. Dispatching troops to Russia to secure military supplies needed in the war against Germany, the Allies deepened their involvement as they came to see Bolsheviks as a hostile force that promoted world revolution, renounced the tsarist government's debts, and violated Russia's commitment to its allies by concluding a separate peace with Germany. Allied intervention on behalf of the Whites became more active with the end of World War I in November 1918, when the British, French, Japanese, Americans, and other powers sent troops to Russian ports and rail junctures. Revolutionary stirrings in Germany, the founding of the Third Communist International in Moscow in March 1919, and the establishment of a soviet republic in Hungary at roughly the same time heightened the Allies' fears of a Red menace. Yet the Allied governments could not justify intervention in Russia to their own war-weary people. Lacking a common purpose and resolve, and often suspicious of one another, the Allies extended only half-hearted support to the Whites, whom they left in the lurch by withdrawing from Russia in 1919 and 1920—except for the Japanese who kept troops in Siberia for several more years.

Both Reds and Whites turned increasingly to terror in the second half of 1918, utilizing it as a substitute for popular support. Calls to overthrow Soviet power, followed by the assassination of the

White Russian troops advance through Siberia on horseback in 1919. © BETTMANN/CORBIS

German ambassador in July, which the Bolsheviks depicted as the start of a Left SR uprising designed to undercut the Brest-Litovsk Peace, provided the Bolsheviks with an excuse to repress their one-time radical populist allies and to undermine the Left SRs' popularity in the villages. Moreover, with Lenin's knowledge, Tsar Nicholas II and his family were executed on July 16, 1918. Following an attempt on Lenin's life on August 30, the Bolsheviks unleashed the Red Terror, a ruthless campaign aimed at eliminating political opponents within the civilian population. The Extraordinary Commission to Combat Counterrevolution and Sabotage (Cheka), set up in December 1917 under Felix Dzerzhinsky, carried out the Red Terror. Seeking to reverse social revolution, the Whites savagely waged their own ideological war that justified the use of terror to avenge those wronged by the revolution. Putting to death communists and their

sympathizers, and massacring Jews in Ukraine and elsewhere, the Whites were determined to sweep the "Germano-Bolsheviks" from power.

The Whites posed a more serious threat to the Red republic after the Allies defeated Germany in late 1918 and decided to back the Whites' cause. Soon, the Whites engaged the Reds along four fronts: southern Russia, western Siberia, northern Russia, and the Baltic region. Until their rout in 1920, White forces controlled much of Siberia and southern Russia, while the Reds, who moved their capital to Moscow in March 1918, clung desperately to the Russian heartland. The Whites' ambitious three-pronged attack against Moscow in March 1919 most likely decided the military outcome of their war against the Reds. Despite their initial success, the Whites went down in defeat that November, after which their routed forces replaced

General Denikin with Petr Wrangel, the most competent of all of the White officers. Coinciding with an invasion of Russia by forces of the newly resurrected Polish state, the Whites opened one final offensive in the spring of 1920. When Red forces overcame Wrangel's army in November, he and his troops evacuated Russia by sea from the Crimea. In the meantime, the Bolsheviks' conflict with the Poles ended in stalemate; the belligerent parties signed an armistice in October 1920, followed by the Treaty of Riga in 1921, which transferred parts of Ukraine and Belorussia to Poland.

Apart from their military encounters with the Whites, the Bolsheviks also had to contend with a front behind their own lines because of the appeal of rival socialist parties and because Bolshevik economic policies alienated much of the working class and drove the peasantry to rise up against the requisitioning of grain and related measures. Known subsequently as war communism, the series of ad hoc policies designed to prosecute the war and to experiment with socialist economic principles was characterized by centralization, state ownership, compulsion, the extraction of surpluses—especially requisitioning of grain, forced location of labor, and a distribution system that rhetorically privileged the toiling classes. Despite the popularity of Bolshevik land reform, which placed all land in the hands of peasants, requisitioning and other measures carried out in 1919 with shocking brutality drove the peasantry into the opposition. The effect of Bolshevik economic policies on the starving and dying cities as well as the party's violations of the political promises of 1917 also turned workers anti-Bolshevik by civil war's end.

Studies tapping long-closed Russian archives underscore the vast scale of workers' strikes and violent peasant rebellions known collectively as the Green movement throughout Russia in early 1921. The enormity of the opposition convinced the communists to replace war communism with the New Economic Policy (NEP), which swapped the hated grain requisitioning with a tax in kind and restored some legal private economic activity. The necessity of this shift in policy from stick to carrot was made clear when, in early March 1921, sailors of the Kronstadt naval fortress rose up against the Bolsheviks whom they had helped bring to power. Demanding the restoration of Soviet democracy without communists, the sailors met with brutal repression that the party's top leaders sanctioned. Although most historians view the Kronstadt uprising, worker disturbances, the peasant move-

ment, and the introduction of the NEP as the last acts of the civil war, after which the party mopped up remaining pockets of opposition in the borderlands, the famine of 1921 can be said to mark the real conclusion to the conflict, for it helped to keep the Bolsheviks in power by robbing the population of initiative. Holding the country in its grip until late 1923, the famine took an estimated five million lives; millions more would have perished without relief provided by foreign agencies such as the British Save the Children Fund and the American Relief Administration.

Moreover, the Bolshevik Party took advantage of mass starvation to end its stalemate with the Orthodox Church. Believing that a materialistic worldview needed to replace religion, the Bolsheviks had forced through a separation of church and state in 1917 and removed schools from church supervision. Once famine hit hard, the party leadership promoted the cause of Orthodox clergy loyal to Soviet power, so-called red priests, or renovationists, who supported the party's determination to use church valuables to finance famine relief. Party leaders allied with the renovationists out of expediency: They had every intention of eventually discarding them when they were no longer needed.

The defeat of the Whites, the end of the war with Poland, and famine made it possible for the Lenin government to focus on regaining breakaway territories in Central Asia, Transcaucasia, Siberia, and elsewhere, where issues of nationalism, ethnicity, religion, class, foreign intervention, and differing levels of economic development and ways of life complicated local civil wars. Russians had composed approximately 50 percent of the tsarist empire's multinational population in which more than a hundred languages were spoken. An increasingly contradictory and even repressive tsarist nationality policies had given rise to numerous grievances among the non-Russian population, but only a minority of intellectuals in the outlying areas before World War I had championed the emergence of independent states. The Revolution of 1917, however, gave impetus to national movements as the provisional government struggled to maintain its authority in the face of potent new challenges from some of the country's minorities.

In January 1918 the Commissariat of Nationalities headed by Joseph Stalin confirmed the Soviet government's support of self-determination of the country's minorities, and characterized the new state as a Federation of Soviet Republics. The first

Soviet constitution of July 1918 reiterated these claims, without specifying the nature of federalism. The cost of survival, however, made it necessary to be pragmatic and flexible. For this reason, Lenin soon made it clear that the interests of socialism were more important than the right of self-determination.

Indeed, by 1918 independent states had arisen on the Soviet periphery. Fostered by intellectuals and politicians, local nationalisms tended to develop into political movements with popular support in territories most affected by industrial development. Often, however, class and ethnic conflicts became entangled as these territories turned into major battlefields of the civil war and arenas of foreign intervention.

For instance, Ukraine, where the activities of peasant rebel Nestor Makhno obscured the intertwining hostilities among Reds, Whites, Germans, and Poles, changed hands frequently. Under the black flag of anarchism, Makhno first formed a loose alliance with the communists, but then battled against Red and White alike until Red forces crushed his Insurgent Army in 1920. In the Caucasus, Georgian Mensheviks, Armenian Dashnaks, and Azeri Musavat established popular regimes in 1917 that attempted a short-lived experiment at federalism in 1918 before hostilities between and within the groups surfaced, leaving them to turn to foreign protectors. By 1922 the Red Army had retaken these territories, as well as the mountain regions of the northern Caucasus, where they fought against religious leaders and stiff guerrilla resistance. In Central Asia the Bolsheviks faced stubborn opposition from armed Islamic guerrillas, *basmachi*, who resisted the Bolshevik takeover until 1923. The Bolsheviks' victory over these break-away territories led to the founding of the Union of Soviet Socialist Republics (USSR) in December 1922. Smaller than its predecessor, the new Soviet state had lost part of Bessarabia, Finland, Estonia, Latvia, and Lithuania, as well as part of Ukraine, Belorussia, and Armenia. Granting statehood within the framework of the Russian state to those territories it had recaptured, the Soviet government set up a federation, a centralized, multiethnic, anti-imperial, socialist state.

In accounting for the Bolshevik victory in the civil war, historians have emphasized the relative discipline, self-sacrifice, and centralized nature of the Bolshevik Party; the party's control over the Russian heartland and its resources; the military

and political weaknesses of the Whites, who, concentrated on the periphery, relied on Allied bullets and misunderstood the relationship between social policy and military success; the local nature of peasant opposition; the inability of the Bolsheviks' opponents to overcome their differences; the tentative nature of Allied intervention; the effectiveness of Bolshevik propaganda and terror; and, during the initial stage of the conflict, the support of workers and the neutrality of peasants. In defeating the Whites, the Bolsheviks had survived the civil war, but the crisis of early March 1921 suggests that mass discontent with party policies would have continued to fuel the conflict if the party had not ushered in the NEP and if the famine had not broken out.

The Russian civil war caused wide-scale devastation; economic ruin; loss of an estimated seven to eight million people, of whom more than five million were civilian casualties of fighting, repression, and disease; the emigration of an estimated one to two million others; and approximately five million deaths caused by the famine of 1921–1923. Moreover, the civil war destroyed much of the country's infrastructure, producing a steep decline in the standard of living as industrial production fell to less than 30 percent of the pre-1914 level and the amount of land under cultivation decreased sharply. The civil war also brought about deurbanization, created a transient problem of enormous proportions, militarized civilian life, and turned towns into breeding grounds for diseases. Furthermore, war communism strengthened the authoritarian streak in Russian political culture and contributed to the consolidation of a one-party state as the population turned its attention to honing basic survival strategies.

The price of survival was the temporary naturalization of economic life, famine, and the entrenchment of a black market and a system of privileges for party members. While the sheer enormity of the convulsion brought about a primitivization of the entire social system, it was not simply a matter of regression, but also of new structuring, which focused on the necessities of physical survival. The social fabric absorbed those everyday practices that had been mediated or modified in these extreme circumstances of political chaos and economic collapse, as the desire to survive and to withdraw from public life created problems that proved difficult to solve and undermined subsequent state efforts to reconfigure society. In

this regard the civil war represented a formative, even defining experience for the Soviet state.

CLASSICISM *See* NEO-CLASSICISM.

CLASS SYSTEM

When the Bolsheviks came to power in October 1917, they did so in the name of Russia's proletariat and to a lesser extent the "toiling masses" of peasants who made up the vast majority of the population. The Bolsheviks' aim—to overthrow the rule of capital (the bourgeoisie) and establish a socialist society—was to be achieved via a "dictatorship of the proletariat." The dictatorship was enshrined in the first Soviet Constitution of 1918, which disenfranchised large property owners, the clergy, and former tsarist officials and gave urban-based voters the advantage over peasants in elections to all-Russian soviet congresses. Ironically, during the civil war, much of Soviet society was declassed: the old privileged classes were expropriated, industrial workers returned to the countryside or were recruited into the Red Army, and millions of other citizens were uprooted and lost their social moorings.

In the course of the 1920s, during the period of the New Economic Policy (NEP), social structures began to resolidify as industrial production and trade expanded. Those whose occupation defined them as workers, and those who could authenticate their social origins in the working class, received privileged access to housing, higher education, health and pension benefits, and perhaps most important of all, party membership. But the upheavals of the First Five-Year Plan years (1928–1932) uprooted millions once again, as whole classes (so-called NEPmen, kulaks, and remnants of the urban bourgeoisie) were "liquidated." Cities and construction sites were overwhelmed with peasant migrants fleeing collectivization, and hundreds of thousands of others were resettled in remote regions of the country or sent to labor camps.

The social structure that emerged from these upheavals was officially characterized as consisting of two classes: one of workers (essentially industrial wage earners and state farm workers) and collective farmers, the other a "stratum" consisting of the intelligentsia. This putative class system remained virtually unchanged throughout the remaining decades of the Soviet Union's existence. In reality, a complex hierarchy, reminiscent of tsarist Russia's estate (*soslovie*) system, developed,

involving highly differentiated access to the state's goods and services. At the top of the Soviet pecking order stood the party elite and other recipients of the Kremlin emolument (*kremlovka*). Next came those who appeared on the party's *nomenklatura*: high military and state officials, People's Artists, Stalin-prize-winning scientists, academicians, writers, and other members of the cultural, scientific-technical, and managerial elites. Lower-level officials—the police, teachers, junior military officers, engineers, and state and collective farm bureaucracies—enjoyed certain privileges, as did outstanding workers (*Stakhanovites* in the 1930s and 1940s, innovators, and “advanced workers” from the 1950s onward). Collective farmers, who were denied the right to internal passports until the mid-1970s, occupied perhaps the lowest rung in the class hierarchy, with the obvious exception of prisoners and inmates of labor camps and colonies.

Cutting across this system were such factors as political geography (capital cities vs. provincial towns; towns vs. villages) and the strategic significance of the enterprise or institute to which one was attached. Scientists living in such closed facilities as Dubna and Akademgorodok enjoyed a particularly high standard of living. The entire structure was mitigated by petitioning, but also by informal connections based on kinship or friendship, exchanges of favors, and other semi-legal transactions that were very much a part of quotidian reality during the Soviet Union's “mature” stage.

LEWIS H. SIEGELBAUM

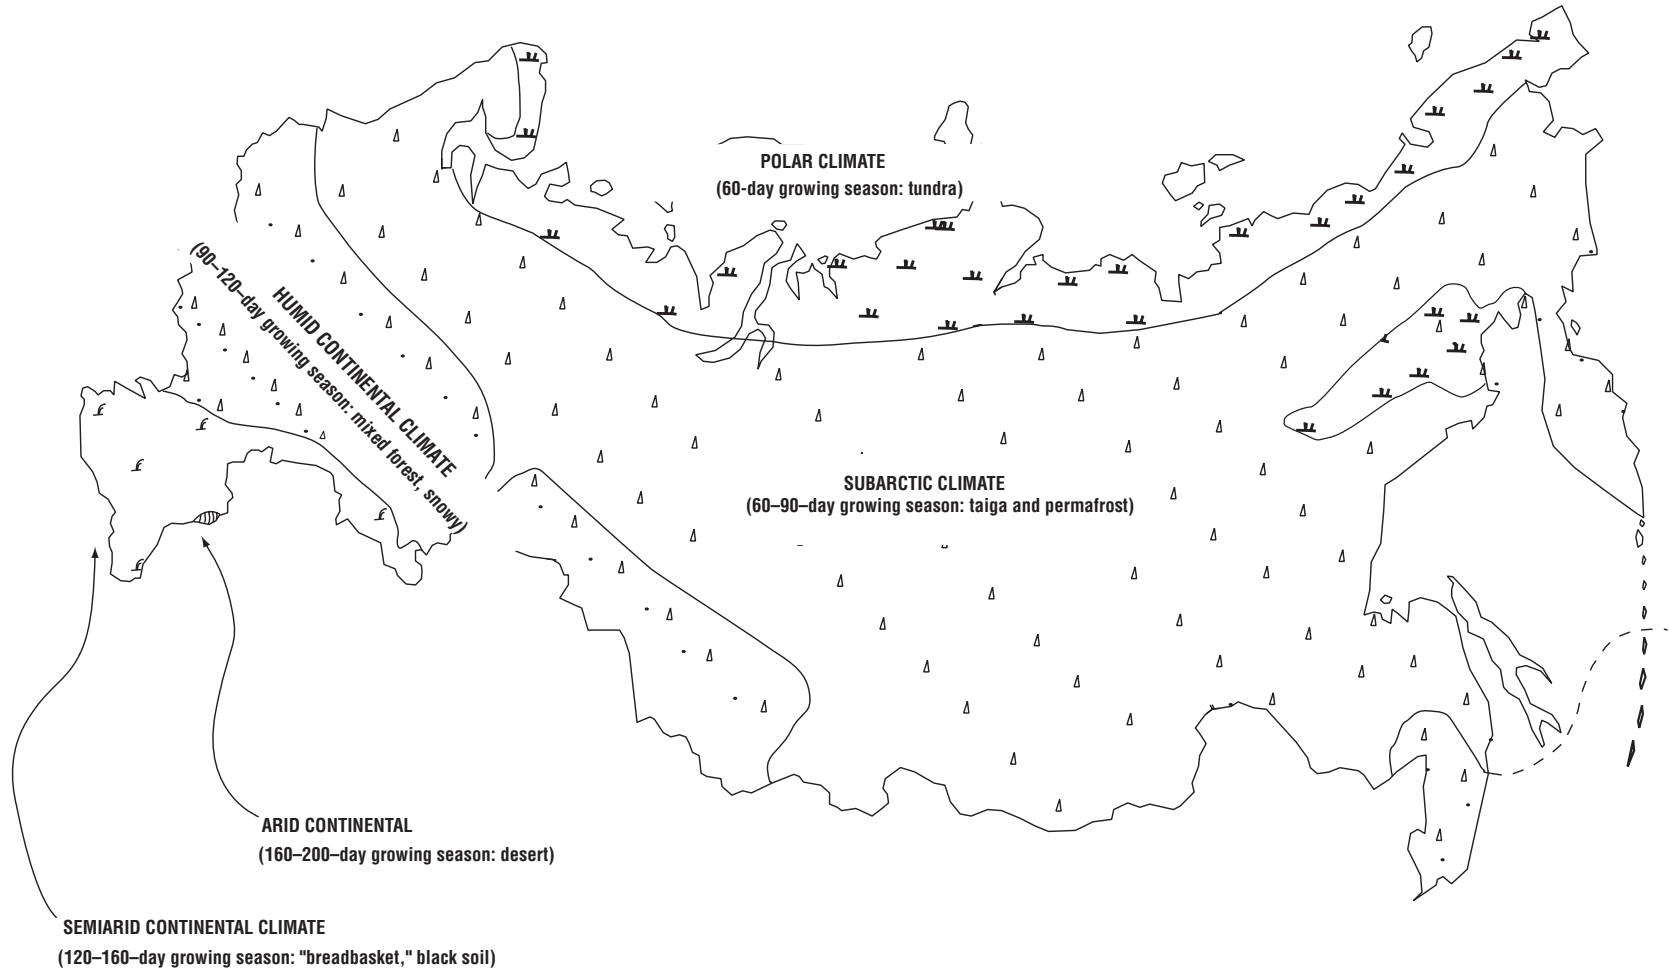

CLIMATE

There are five climates in Russia. The Polar climate hugs the Arctic coast and yields a 60-day growing season, with July and August averaging temperatures over freezing. Tundra vegetation prevails.

South of the tundra, blanketing two-thirds of Russia, is the Subarctic climate with its brief cool summers and harsh cold, mostly dry, winters. With a growing season of sixty to ninety days, the dominant vegetation is taiga (northern coniferous forest), 90 percent of which is underlain by permafrost. In European Russia and Western Siberia, the Subarctic climate merges southward with the Humid Continental Warm-to-Cool Summer climate. Here the winters become less harsh, although much snowier, and the summers become longer and warmer. Growing seasons reach 90 to 120 days, and the vegetation is a temperate mixed forest that joins the broadleaf forests and grasslands to the south. Along the Lower Volga and in the North Caucasus, the climate becomes sub-humid. Here summers become equal to winters, a Semiarid Continental climate prevails, the growing season reaches 120 to 160 days, and grassland, or steppe, vegetation dominates. Particular to Russia's “breadbasket,” a terrain with rich black loams, this climate suffers from insufficient precipitation. A tiny strip of Arid Continental climate fringes the Russian shoreline of the Caspian Sea. With hot, dry summers and rather cold, shorter winters, this climate yields a 160- to 200-day growing season. A true desert, it reflects a severe soil-moisture deficit.

Russia's massive landmass, northerly location, and flat-to-rolling terrain dramatically influence these climates. Because three-fourths of Russia is more than 250 miles (400 kilometers) away from a largely frozen sea, the climates are continental, not maritime. Continental climates exhibit wide ranges of temperature (the difference between the warmest and coldest monthly averages) and low average annual precipitation that peaks in summer instead of spring. Climatic harshness increases from west to east as the moderating influence of the warm North Atlantic Ocean decreases. St. Petersburg on the Gulf of Finland has a 45° F (25° C) difference between the July and January mean temperatures and 19 inches (48 centimeters) of annual precipitation. Yakutsk in Eastern Siberia contrasts with a 112° F (65° C) range of temperature and only 4 inches (10 centimeters) of precipitation.

Russia's high-latitude position enhances continentality. Nine-tenths of the country is north of 50° N Latitude. Moscow is in the latitude of Edmonton, Alberta; St. Petersburg equates with Anchorage, Alaska. Russia thus resembles Canada in climate more than it does the United States. High-latitude countries like Russia and Canada suffer low-angle (less-intense) sunlight and short grow-

ing seasons that range from 60 days in the Arctic to 200 days along the Caspian shore.

Low relief also augments the negative effects on Russia's climates. Three-fourths of Russia's terrain lies at elevations lower than 1,500 feet (450 meters) above sea level. This further diminishes the opportunities for rain and snow because there is less friction to cause orographic lifting. The country's open western border, uninterrupted except for the low Ural Mountains, permits Atlantic winds and air masses to penetrate as far east as the Yenisey River. In winter, these air masses bring moderation and relatively heavy snow to many parts of the European lowlands and Western Siberia. Meanwhile, a semi-permanent high-pressure cell (the Asiatic Maximum) blankets Eastern Siberia and the Russian Far East. This huge high-pressure ridge forces the Atlantic air to flow northward into the Arctic and southward against the southern mountains. Consequently, little snow or wind affects the Siberian interior in winter. The exceptions are found along the east coast (Kamchatka, the Kurils, and Maritime province).

As the Eurasian continent heats faster in summer than the oceans, the pressure cells shift position: Low pressure dominates the continents and high pressure prevails over the oceans. Moist air masses flow onto the land, bringing summer thunderstorms. The heaviest rains come later in summer from west to east, often occurring in the harvest seasons in Western Siberia. In the Russian Far East, the summer monsoon yields more than 75 percent of the region's average annual precipitation. Pacific typhoons often harry Kamchatka, the Kurils, and Sakhalin Island.

Winter temperatures plunge from west to east. Along Moscow's 55th parallel, average January temperatures fall from a high of 22° F (–6° C) in Kaliningrad to 14° F (–10° C) in the capital to 7° F (–14° C) in Kazan to –6° F (–20° C) in Tomsk. Along the same latitude in the Russian Far East, the temperatures reach low averages of –29° F (–35° C). Northeast Siberia experiences the lowest average winter temperatures outside of Antarctica: –50° F (–45° C), with one-time minima of –90° F (–69° C).

In July, the averages cool with higher latitudes. Thus, the Caspian desert experiences averages of near 80° F (25° C), whereas the Arctic tundra records means of 40° F (5° C). Moscow averages 65° F (19° C) in July.

COLD WAR

The term *Cold War* refers to the confrontation between the Soviet Union and the United States that lasted from roughly 1945 to 1990. The term predates the Cold War itself, but it was first widely popularized after World War II by the journalist Walter Lippmann in his commentaries in *The New York Herald Tribune*.

Two features of the Cold War distinguished it from other periods in modern history: (1) a fundamental clash of ideologies (Marxism-Leninism versus liberal democracy); and (2) a highly stratified global power structure in which the United States and the Soviet Union were regarded as "superpowers" that were preeminent over—and in a separate class from—all other countries.

THE STALIN ERA

During the first eight years after World War II, the Cold War on the Soviet side was identified with the personality of Josef Stalin. Many historians have singled out Stalin as the individual most responsible for the onset of the Cold War. Even before the Cold War began, Stalin launched a massive program of espionage in the West, seeking to plant spies and sympathizers in the upper levels of Western governments. Although almost all documents about this program are still sealed in the Russian archives, materials released in the 1990s reveal that in the United States alone, at least 498 individuals actively worked as spies or couriers for Soviet intelligence agencies in the 1930s and early 1940s.

In the closing months of World War II, when the Soviet Union gained increasing dominance over Nazi Germany, Stalin relied on Soviet troops to oc-

copy vast swathes of territory in East-Central Europe. The establishment of Soviet military hegemony in the eastern half of Europe, and the sweeping political changes that followed, were perhaps the single most important precipitant of the Cold War.

The extreme repression that Stalin practiced at home, and the pervasive suspicion and intolerance that he displayed toward his colleagues and aides, carried over into his policy vis-à-vis the West. Stalin's unchallenged dictatorial authority within the Soviet Union gave him enormous leeway to formulate Soviet foreign policy as he saw fit. The huge losses inflicted by Germany on the Soviet Union after Adolf Hitler abandoned the Nazi-Soviet pact and attacked the Soviet Union in June 1941—a pact that Stalin had upheld even after he received numerous intelligence warnings that a German attack was imminent—made Stalin all the more unwilling to trust or seek a genuine compromise with Western countries after World War II. Having been humiliated once, he was determined not to let down his guard again.

Stalin's mistrustful outlook was evident not only in his relations with Western leaders, but also in his dealings with fellow communists. During the civil war in China after World War II, Stalin kept his distance from the Chinese communist leader, Mao Zedong. Although the Soviet Union provided crucial support for the Chinese Communists during the climactic phase of the civil war in 1949, Stalin never felt particularly close to Mao either then or afterward. In the period before the Korean War in June 1950, Stalin did his best to outflank Mao, giving the Chinese leader little choice but to go along with the decision to start the war.

Despite Stalin's wariness of Mao, the Chinese communists deeply admired the Soviet Union and sought to forge a close alliance with Moscow. From February 1950, when the two countries signed a mutual security treaty, until Stalin's death in March 1953, the Soviet Union and China cooperated on a wide range of issues, including military operations during the Korean War. On the rare occasions when the two countries diverged in their views, China deferred to the Soviet Union.

In Eastern Europe, Stalin also tended to be distrustful of indigenous communist leaders, and he gave them only the most tenuous leeway. At Stalin's behest, the communist parties in Eastern Europe gradually solidified their hold through the determined use of what the Hungarian communist

party leader Mátyás Rákosi called "salami tactics." By the spring of 1948, "People's Democracies" were in place throughout the region, ready to embark on Stalinist policies of social transformation.

Stalin's unwillingness to tolerate dissent was especially clear in his policy vis-à-vis Yugoslavia, which had been one of the staunchest postwar allies of the Soviet Union. In June 1948, Soviet leaders publicly denounced Yugoslavia and expelled it from the Cominform (Communist Information Bureau), set up in 1947 to unite European communist parties under Moscow's leadership. The Soviet-Yugoslav rift, which had developed behind the scenes for several months and had finally reached the breaking point in March 1948, appears to have stemmed from both substantive disagreements and political maneuvering. The chief problem was that Stalin had declined to give the Yugoslav leader, Josip Broz Tito, any leeway in diverging from Soviet preferences in the Balkans and in policy toward the West. When Tito demurred, Stalin sought an abject capitulation from Yugoslavia as an example to the other East European countries of the unwavering obedience that was expected.

In the end, however, Stalin's approach was highly counterproductive. Neither economic pressure nor military threats were sufficient to compel Tito to back down, and efforts to provoke a high-level coup against Tito failed when the Yugoslav leader liquidated his pro-Soviet rivals within the Yugoslav Communist Party. A military operation against Yugoslavia would have been logistically difficult (traversing mountains with an army that was already overstretched in Europe), but one of Stalin's top aides, Nikita Khrushchev, later said he was "absolutely sure that if the Soviet Union had had a common border with Yugoslavia, Stalin would have intervened militarily." Plans for a full-scale military operation were indeed prepared, but the vigorous U.S. military response to North Korea's incursion into South Korea in June 1950 helped dispel any lingering notion Stalin may have had of sending troops into Yugoslavia.

The Soviet Union thus was forced to accept a breach in its East European sphere and the strategic loss of Yugoslavia vis-à-vis the Balkans and the Adriatic Sea. Most important of all, the split with Yugoslavia raised concern about the effects elsewhere in the region if "Titoism" were allowed to spread. To preclude further such challenges to Soviet control, Stalin instructed the East European states to carry out new purges and show trials to

remove any officials who might have hoped to seek greater independence. Although the process took a particularly violent form in Czechoslovakia, Bulgaria, and Hungary, the anti-Titoist campaign exacted a heavy toll all over the Soviet bloc.

Despite the loss of Yugoslavia, Soviet influence in East-Central Europe came under no further threat during Stalin's last years. From 1947 through the early 1950s, the East-Central European states embarked on crash industrialization and collectivization programs, causing vast social upheaval yet also leading to rapid short-term economic growth. Stalin relied on the presence of Soviet troops, a tightly woven network of security forces, the wholesale penetration of the East European governments and armies by Soviet agents, the use of mass purges and political terror, and the unifying threat of renewed German militarism to ensure that regimes loyal to Moscow remained in power. By the early 1950s, Stalin had established a degree of control over East-Central Europe to which his successors could only aspire.

The Soviet leader had thus achieved two remarkable feats in the first several years after World War II: He had solidified a Communist bloc in Europe, and he had established a firm Sino-Soviet alliance, which proved crucial during the Korean War. These twin accomplishments marked the high point of the Cold War for the Soviet Union.

CHANGES AFTER STALIN

Soon after Stalin's death in 1953, his successors began moving away from some of the cardinal precepts of Stalin's policies. In the spring of 1953, Soviet foreign policy underwent a number of significant changes, which cumulatively might have led to a far-reaching abatement of the Cold War, including a settlement in Germany. As it turned out, no such settlement proved feasible. In the early summer of 1953, uprisings in East Germany, which were quelled by the Soviet Army and the latest twists in the post-Stalin succession struggle in Moscow, notably the arrest and denunciation of the former secret police chief, Lavrenti Beria, induced Soviet leaders to slow down the pace of change both at home and abroad. Although the United States and the Soviet Union agreed to a ceasefire in the Korean War in July 1953, the prospects for radical change in Europe never panned out.

Despite the continued standoff, Stalin's death did permit the intensity of the Cold War to diminish. The period from mid-1953 through the fall of

1956 was a time of great fluidity in international politics. The United States and the Soviet Union achieved a settlement with regard to Indochina at the Geneva Conference in July 1954 and signed the Austrian State Treaty in May 1955, bringing an end to a decade-long military occupation of Austria. The Soviet Union also mended its relationship with Yugoslavia, an effort that culminated in Nikita Khrushchev's visit to Yugoslavia in May 1955. U.S.-Soviet relations improved considerably during this period; this was symbolized by a meeting in Geneva between Khrushchev and President Dwight Eisenhower in July 1955 that prompted both sides to build on the "spirit of Geneva."

Within the Soviet Union as well, considerable leeway for reform emerged, offering hope that Soviet ideology might evolve in a more benign direction. At the Twentieth Congress of the Soviet Communist Party in February 1956, Khrushchev launched a "de-Stalinization" campaign by delivering a "secret speech" in which he not only denounced many of the crimes and excesses committed by Stalin, but also promised to adopt policies that would move away from Stalinism both at home and abroad.

The condemnation of Stalin stirred a good deal of social ferment and political dissent throughout the Soviet bloc, particularly in Poland and Hungary, where social and political unrest grew rapidly in the summer of 1956. Although the Soviet-Polish crisis was resolved peacefully, Soviet troops intervened in Hungary to overthrow the revolutionary government of Imre Nagy and to crush all popular resistance. The fighting in Hungary resulted in the deaths of some 2,502 Hungarians and 720 Soviet troops as well as serious injuries to 19,226 Hungarians and 1,540 Soviet soldiers. Within days, however, the Soviet forces had crushed the last pockets of resistance and had installed a pro-Soviet government under János Kádár to set about "normalizing" the country.

By reestablishing military control over Hungary and by exposing—more dramatically than the suppression of the East German uprising in June 1953 had—the emptiness of the "roll-back" and "liberation" rhetoric in the West, the Soviet invasion in November 1956 stemmed any further loss of Soviet power in East-Central Europe. Shortly after the invasion, Khrushchev acknowledged that U.S.-Soviet relations were likely to deteriorate for a considerable time, but he said he was more than ready to accept this tradeoff in order to "prove to

the West that [the Soviet Union is] strong and resolute" while "the West is weak and divided."

U.S. officials, for their part, were even more aware than they had been during the East German uprising of the limits on their options in Eastern Europe. Senior members of the Eisenhower administration conceded that the most they could do in the future was "to encourage peaceful evolutionary changes" in the region, and they warned that the United States must avoid conveying the impression "either directly or by implication . . . that American military help will be forthcoming" to anti-Communist forces. Any lingering U.S. hopes of directly challenging Moscow's sphere of influence in East-Central Europe thus effectively ended.

**THE KHRUSHCHEV INTERLUDE:
EAST-WEST CRISES AND THE
SINO-SOVIET RIFT**

The Soviet invasion of Hungary coincided with another East-West crisis—a crisis over Suez, which began in July 1956 when President Gamel Abdel Nasser of Egypt nationalized the Suez Canal Company. The French, British, and U.S. governments tried to persuade (and then coerce) Nasser to reverse his decision, but their efforts proved of no avail. In late October 1956, Israeli forces moved into Suez in an operation that was broadly coordinated with Britain and France. The following day, French and British forces joined the Israeli incursions. Soviet leaders mistakenly assumed that the United States would support its British and French allies. The Soviet decision to intervene in Hungary was based in part on this erroneous assumption, and it also was facilitated by the perception that a military crackdown would incur less international criticism if it occurred while much of the world's attention was distracted by events in the Middle East.

As it turned out, the Eisenhower administration sided against the British and French and helped compel the foreign troops to pull out of Egypt. The U.S. and Soviet governments experienced considerable friction during the crisis (especially when Soviet Prime Minister Nikolai Bulganin made veiled nuclear threats against the French and British), but their stances were largely compatible. The U.S. decision to oppose the French and British proved to be a turning point for the North Atlantic Treaty Organization (NATO), formed in 1949 to help cement ties between Western Europe and the United

States against the common Soviet threat. Although NATO continued to be a robust military-political organization all through the Cold War, the French and British governments knew after the Suez crisis that they could not automatically count on U.S. support during crises even when the Soviet Union was directly involved.

In these various ways, the events of October–November 1956 reinforced Cold War alignments on the Soviet side (by halting any further loss of Soviet control in East-Central Europe) but loosened them somewhat on the Western side, as fissures within NATO gradually emerged. The Warsaw Pact—the Soviet-led alliance with the East European countries that was set up in mid-1955—was still largely a paper organization and remained so until the early 1960s, but the invasion of Hungary kept the alliance intact. In the West, by contrast, relations within NATO were more strained than before as a result of the Suez crisis.

A number of other East-West crises erupted in the late 1950s, notably the Quemoy-Matsu offshore islands dispute between communist China and the United States in 1958 and the periodic Berlin crises from 1958 through 1962. Serious though these events were, they were soon overshadowed by a schism within the communist world. The Soviet Union and China, which had been staunch allies during the Stalin era, came into bitter conflict less than a decade after Stalin's death. The split between the two communist powers, stemming in part from genuine policy and ideological differences and in part from a personal clash between Khrushchev and Mao, developed behind the scenes in the late 1950s. The dispute intensified in June 1959 when the Soviet Union abruptly terminated its secret nuclear weapons cooperation agreement with China. Khrushchev's highly publicized visit to the United States in September 1959 further antagonized the Chinese, and a last-ditch meeting between Khrushchev and Mao in Beijing right after Khrushchev's tour of the United States failed to resolve the differences between the two sides. From then on, Sino-Soviet relations steadily deteriorated. The Soviet Union and China vied with one another for the backing of foreign Communist parties, including those long affiliated with Moscow.

The spillover from the Sino-Soviet conflict into East-Central Europe was evident almost immediately. In late 1960 and early 1961 the Albanian leader, Enver Hoxha, openly aligned his country

U.S. Army tanks, foreground, and Soviet Army tanks, opposite, face each other at Checkpoint Charlie in Berlin, October 28, 1961. ASSOCIATED PRESS. REPRODUCED BY PERMISSION.

with China, a decision that caused alarm in Moscow. The loss of Albania marked the second time since 1945 that the Soviet sphere of influence in East-Central Europe had been breached. Even worse from Moscow's perspective, Soviet leaders soon discovered that China was secretly attempting to induce other East-Central European countries to follow Albania's lead. China's efforts bore little fruit in the end, but Soviet leaders obviously could not be sure of that at the time. The very fact that China sought to foment discord within the Soviet bloc was enough to spark consternation in Moscow.

The emergence of the Sino-Soviet split, the attempts by China to lure away one or more of the

East-Central European countries, the competition by Moscow and Beijing for influence among non-ruling Communist parties, and the assistance given by China to the Communist governments in North Vietnam and North Korea complicated the bipolar nature of the Cold War, but did not fundamentally change it. International politics continued to revolve mainly around an intense conflict between two broad groups: (1) the Soviet Union and other Communist countries, and (2) the United States and its NATO and East Asian allies. The fissures within these two camps, salient as they may have been, did not eliminate or even diminish the confrontation between the Communist East and the democratic West. Individual countries within each bloc acquired greater leverage and room for maneuver, but the U.S.-Soviet divide was still the primary basis for world politics.

THE EARLY 1960S: A LULL IN THE COLD WAR

The intensity of the Cold War escalated in the early 1960s with the arrival of a new U.S. administration headed by John F. Kennedy that was determined to resolve two volatile issues in East-West relations: the status of Cuba, which had aligned itself with the Soviet Union after Communist insurgents led by Fidel Castro seized power in 1959; and the status of Berlin. These issues gave rise to a succession of crises in the early 1960s, beginning with the Bay of Pigs invasion in April 1961 and continuing through the Cuban missile crisis in October 1962. At the Bay of Pigs, a U.S.-sponsored invading force of Cuban exiles was soundly rebuffed, and Castro remained in power. But the Kennedy administration continued to pursue a number of top-secret programs to destabilize the Castro government and get rid of the Cuban leader.

Khrushchev, for his part, sought to force matters on Berlin. The showdown that ensued in the late summer and fall of 1961 nearly brought U.S. and Soviet military forces into direct conflict. In late October 1961, Soviet leaders mistakenly assumed that U.S. tanks deployed at Checkpoint Charlie (the main border point along the Berlin divide) were preparing to move into East Berlin, and they sent ten Soviet tanks to counter the incursion. Although Khrushchev and Kennedy managed to defuse the crisis by privately agreeing that the Soviet forces would be withdrawn first, the status of Berlin remained a sore point.

The confrontation over Berlin was followed a year later by the Cuban missile crisis. In the late

spring of 1962, Soviet leaders approved plans for a secret deployment of medium-range nuclear missiles in Cuba. In the summer and early fall of 1962, the Soviet General Staff oversaw a secret operation to install dozens of missiles and support equipment in Cuba, to deploy some 42,000 Soviet combat forces to the island to protect the missiles, and to send nuclear warheads to Cuba for storage and possible deployment. Operation Anadyr proceeded smoothly until mid-October 1962, when U.S. intelligence analysts reported to Kennedy that an American U-2 reconnaissance flight had detected Soviet missile sites under construction in Cuba. Based on this disclosure, Kennedy made a dramatic speech on October 22 revealing the presence of the missiles and demanding that they be removed.

In a dramatic standoff over the next several days, officials on both sides feared that war would ensue, possibly leading to a devastating nuclear exchange. This fear, as much as anything else, spurred both Kennedy and Khrushchev to do their utmost to find a peaceful way out. As the crisis neared its breaking point, the two sides arrived at a settlement that provided for the withdrawal of all Soviet medium-range missiles from Cuba and a pledge by the United States that it would not invade Cuba. In addition, Kennedy secretly promised that U.S. Jupiter missiles based in Turkey would be removed within “four to five months.” This secret offer was not publicly disclosed until many years later, but the agreement that was made public in late October 1962 sparked enormous relief around the world.

The dangers of the Cuban missile crisis prompted efforts by both sides to ensure that future crises would not come as close to a nuclear war. Communications between Kennedy and Khrushchev during the crisis had been extremely difficult at times and had posed the risk of misunderstandings that might have proven fatal. To help alleviate this problem, the two countries signed the Hot Line Agreement in June 1963, which marked the first successful attempt by the two countries to achieve a bilateral document that would reduce the danger of an unintended nuclear war.

The joint memorandum establishing the Hot Line was symbolic of a wider improvement in U.S.-Soviet relations that began soon after the Cuban missile crisis was resolved. Although neither side intended to make any radical changes in its policies, both leaders looked for areas of agreement that might be feasible in the near term. One consequence of this new flexibility was the signing of the Lim-

ited Test Ban Treaty (LTBT) in August 1963, an agreement that Kennedy had strongly promoted in his June 1963 speech. Negotiations on the test ban had dragged on since the 1950s, but in the new climate of 1963 a number of stumbling blocks were resolved. The resulting agreement permitted the two countries to continue testing nuclear weapons underground, but it prohibited explosions in the atmosphere, underwater, and in outer space.

THE RISE AND FALL OF DÉTENTE

This burst of activity in the wake of the Cuban missile crisis reduced the intensity of the Cold War, but the two core features of the Cold War—the fundamental ideological conflict between liberal democracy and Marxism-Leninism, and the military preeminence of the two superpowers—were left intact through the early to mid-1980s. So long as the conditions underlying the bipolar confrontation remained in place, the Cold War continued both in Europe and elsewhere.

A number of important developments complicated the situation at the same time. The sharp deterioration of Sino-Soviet relations in the 1960s, culminating in border clashes in 1969, intensified the earlier disarray within the communist world and paved the way for a momentous rapprochement between the United States and China in the 1970s. The situation within the communist world also was complicated by the rise of what became known as “Eurocommunism” in the 1970s. In several West European countries, notably Italy, France, Spain, and Portugal, communist parties either had long been or were becoming politically influential. In the aftermath of the Soviet invasion of Czechoslovakia in 1968, several of these parties (the French party was a notable exception) sought to distance themselves from Moscow. This latest fissure within the world communist movement eroded Soviet influence in Western Europe and significantly altered the complexion of West European politics.

The Cold War was also affected—though not drastically—by the rise of East-West détente. In the late 1960s and early 1970s, relations between the United States and the Soviet Union significantly improved, leading to the conclusion of strategic arms control accords and bilateral trade agreements. The U.S.-Soviet détente was accompanied by a related but separate Soviet-West European détente, spurred on by the Ostpolitik of West Germany. A series of multilateral and bilateral

agreements regarding Berlin and Germany in the early 1970s, and the signing of the Helsinki Accords in 1975, symbolized the spirit of the new European détente. Even after the U.S.-Soviet détente began to fray in the mid- to late 1970s, the Soviet-West European rapprochement stayed largely on track.

The growing fissures within the Eastern bloc and the rise of East-West détente introduced important new elements to the global scene, but they did not fundamentally change the nature of the Cold War or the structure of the international system. Even when détente was at its height, in the late 1960s and early 1970s, Cold War politics intruded into far-flung regions of the globe. The Soviet invasion of Czechoslovakia in August 1968, which brought an end to the "Prague Spring," demonstrated the limits of what could be changed in East-Central Europe. Soviet leaders were not about to tolerate a major disruption of the Warsaw Pact or to accept far-reaching political changes that would undercut the stability of the Communist bloc. Similarly, the Vietnam War, which embroiled hundreds of thousands of American troops from 1965 through 1975, is incomprehensible except in a Cold War context.

In the 1970s as well, many events were driven by the Cold War. U.S.-Soviet wrangling in the Middle East in October 1973, and even more the confrontations over Angola in 1975–1976 and Ethiopia in 1977–1978, were among the consequences. Soviet gains in the Third World in the 1970s, coming on the heels of the American defeat in Vietnam, were depicted by Soviet leaders as a "shift in the correlation of forces" that would increasingly favor Moscow. Many American officials and commentators voiced pessimism about the erosion of U.S. influence and the declining capacity of the United States to contain Soviet power.

In the late 1970s, U.S.-Soviet relations took a sharp turn for the worse. This trend was the product of a number of events, including human rights violations in the Soviet Union, domestic political maneuvering in the United States, tensions over Soviet gains in the Horn of Africa, NATO's decision in December 1979 to station new nuclear missiles in Western Europe to offset the Soviet Union's recent deployments of SS-20 missiles, and above all the Soviet invasion of Afghanistan on Christmas Day 1979. Acrimonious exchanges between the two sides intensified.

THE ENDGAME

The collapse of the U.S.-Soviet détente in the late 1970s left no doubt about the staying power of the Cold War. One of the reasons that Ronald Reagan won the U.S. presidency in 1980 is that he was perceived as a stronger leader at a time of heightened U.S.-Soviet antagonism. Although the renewed tensions of the early 1980s did not spark a crisis as intense as those in the early 1950s and early 1960s, the hostility between the two sides was acute, and the rhetoric became inflammatory enough to spark a brief war scare in 1983.

Even before Reagan was elected, the outbreak of a political and economic crisis in Poland in the summer of 1980, giving rise to the independent trade union known as "Solidarity," created a potential flashpoint in U.S.-Soviet relations. The relentless demand of Soviet leaders that the Polish authorities crush Solidarity and all other "anti-socialist" elements, demonstrated once again the limits of what could be changed in Eastern Europe. Under continued pressure, the Polish leader, General Wojciech Jaruzelski, successfully imposed martial law in Poland in December 1981, arresting thousands of Solidarity activists and banning the organization. Jaruzelski's "internal solution" precluded any test of Moscow's restraint and helped prevent any further disruption in Soviet-East European relations over the next several years.

Even if the Polish crisis had never arisen, East-West tensions over numerous other matters would have increased sharply in the early 1980s. Recriminations about the deployment of intermediate-range nuclear forces (INF) in Europe, and the rise of antinuclear movements in Western Europe and the United States, dominated East-West relations in the early 1980s. The deployment of NATO's missiles on schedule in late 1983 and 1984 helped defuse popular opposition in the West to the INF, but the episode highlighted the growing role of public opinion and mass movements in Cold War politics.

Much the same was true about the effect of antinuclear sentiment on the Reagan administration's programs to modernize U.S. strategic nuclear forces and its subsequent plans to pursue the Strategic Defense Initiative (SDI). These efforts, and the rhetoric that surrounded them, sparked dismay not only among Western antinuclear activists, but also in Moscow. For a brief while, Soviet leaders even worried that the Reagan administration might be considering a surprise nuclear strike. In the United States, however, public pressure and the rise

of a nuclear freeze movement induced the Reagan administration to reconsider its earlier aversion to nuclear arms control. Although political uncertainty in Moscow in the first half of the 1980s made it difficult to resume arms control talks or to diminish bilateral tensions, the Reagan administration was far more intent on pursuing arms control by the mid-1980s than it had been earlier.

This change of heart in Washington, while important, was almost inconsequential compared to the extraordinary developments in Moscow in the latter half of the 1980s. The rise to power of Mikhail Gorbachev in March 1985 was soon followed by broad political reforms and a gradual reassessment of the basic premises of Soviet foreign policy. Over time, the new thinking in Soviet foreign policy became more radical. The test of Gorbachev's approach came in 1989, when peaceful transformations in Poland and Hungary brought noncommunist rulers to power. Gorbachev not only tolerated, but actively encouraged this development. The orthodox communist regimes in East Germany, Bulgaria, Czechoslovakia, and Romania did their best to stave off the tide of reform, but a series of upheavals in October–December 1989 brought the downfall of the four orthodox regimes.

The remarkable series of events following Gorbachev's ascendance, culminating in the largely peaceful revolutions of 1989, marked the true end of the Cold War. Soviet military power was still enormous in 1989, and in that sense the Soviet Union was still a superpower alongside the United States. However, Gorbachev and his aides did away with the other condition that was needed to sustain the Cold War: the ideological divide. By reassessing, recasting, and ultimately abandoning the core precepts of Marxism–Leninism, Gorbachev and his aides enabled changes to occur in Europe that eviscerated the Cold War structure. The Soviet leader's decision to accept and even facilitate the peaceful transformation of Eastern Europe undid Stalin's pernicious legacy.

COLLECTIVE FARM

The collective farm (kolkhoz) was introduced in the Soviet Union in the late 1920s by Josef Stalin, who was implementing the controversial process

Combine harvesters at Urozhai Collective Farm in Bashkortosan. © TASS/Sovfoto

of collectivization. The collective farm, along with the state farm (*sovkhoz*) and the private subsidiary sector, were the basic organizational arrangements for Soviet agricultural production, and survived, albeit with changes, through the end of the Soviet era.

The concept of a collective or cooperative model for the organization of production did not originate in the Soviet Union. However, during the 1920s there was discussion of and experimentation with varying approaches to cooperative farming differing largely in the nature of membership, the form of organization, and the internal rules governing production and distribution.

In theory, the collective farm was a cooperative (the *kolkhoz* charter was introduced in 1935) based upon what was termed “*kolkhoz-cooperative*” property, ideologically inferior to state property used in the *sovkhoz*. Entry into and exit from a *kolkhoz* was theoretically voluntary, though in fact the process of collectivization was forcible, and departure all but impossible. Decision making (notably election of the chair) was to be conducted through participation of the collective farm members. Participants (peasants) were to be rewarded

with a residual share of net income rather than a contractual wage. In practice, the collective farm differed significantly from these principles. The dominant framework for decision making was a party-approved chair, and discussion in collective farm meetings was perfunctory. Party control was sustained by the local party organization through the *nomenklatura* (appointment) system and also through the discipline of the Machine Tractors Stations (MTS). Payment to peasants on the collective farm was made according to the labor day unit (*trudoden*), which was divided into the residual after the state extracted compulsory deliveries of product at low fixed prices. As collective farm members were not entitled to internal passports, their geographical mobility was limited. Unlike the *sovkhoz*, the *kolkhoz* was not a budget-financed organization. Accordingly, the state exercised significant power over living levels in the countryside by requiring compulsory deliveries of product. Peasants on collective farms were entitled to hold a limited number of animals and cultivate a small plot of land.

By the early 1940s there were roughly 235,000 collective farms in existence averaging 3,500 acres

per farm, accounting for some 80 percent of total sown area in agriculture. After World War II a program of amalgamation and also of conversion to state farms was implemented along with a continuing program of agroindustrial integration. As a result, the number of collective farms declined to approximately 27,000 by 1988, with an average size of 22,000 acres, together accounting for 44 percent of sown area. By the end of the 1980s, the differences between kolkhozes and sovkhozes were minimal.

During the transition era of the 1990s, change in Russian agriculture has been very slow. Collective farms have for the most part been converted to a corporate structure, but operational changes have been few, and a significant land market remains to be achieved.

contracts. Although the state moved away from the pervasive application of the principle of collective responsibility in the eighteenth century, it was still used in certain situations such as military conscription and collection of delinquent taxes. Even after the Great Reforms, local police officials retained the right to hold large peasant communes collectively responsible for major tax arrears as a measure of last resort. Although theoretically state officials could inventory and sell individual holdings to cover communal arrears, in practice this occurred infrequently. In Soviet legal procedures collectives could be called upon to monitor and vouch for their members, and individuals accused of committing minor legal infractions could be handed over to a collective for corrective measures as an alternative to incarceration.

COLLECTIVE RESPONSIBILITY

Collective or mutual responsibility (*krugovaia poruka*), often reinforced through legal guarantees or surety bonds.

It is first documented in the medieval period in an expanded version of the *Russkaya Pravda* that mandated that certain communities would be collectively responsible for apprehending murderers or paying fines to the prince. In the Muscovite period collective responsibility was frequently invoked to make communities collectively responsible for the actions and financial obligations of their members. In the sixteenth and seventeenth centuries, state officials shifted much of the responsibility for apprehending criminals and preempting misdeeds to groups that could monitor and discipline their members. Surety in the form of financial and legal accountability was frequently demanded by the state from groups to insure that their individual members would not shirk legal obligations or responsibilities such as appearing in court, performing services for the state, or meeting the terms of

COLLECTIVIZATION OF AGRICULTURE

The introduction of the collective farm (kolkhoz) into the Soviet countryside began in the late 1920s and was substantially completed by the mid-1930s. The collectivization of Soviet agriculture, along with the introduction of state ownership (nationalization) and national economic planning (replacing markets as a mechanism of resource allocation), formed the dominant framework of the Soviet economic system, a set of institutions and related policies that remained in place until the collapse of the Soviet Union in 1991.

Following the Bolshevik Revolution in 1917, Lenin attempted to introduce change in the Soviet agricultural sector, and especially to exert state control, through methods such as the extraction of grain from the rural economy by force (the *prodrazverstka*). This was the first attempt under Soviet rule to change both the institutional arrangements governing interaction between the agrarian and industrial sectors (the market) and the terms of trade between the state and the rural economy. The impact of these arrangements resulted in a significant

decline in agricultural output during the period of war communism.

Following the collapse of war communism, the peasant economy predominated during the New Economic Policy (NEP). The relationship between the rural economy and the urban industrial economy was characterized by alliance (*smytchka*), although the issue of the rural economy and its role in socialist industrialization remained controversial. Events such as the Scissors Crisis brought these issues to the fore. In addition, the potential contribution of agriculture to the process of economic development was a major issue in the great industrialization debate.

In 1929 Josef Stalin initiated the process of collectivization, arguing that a "grain crisis" (peasant withholding of grain) could effectively limit the pace of Soviet industrialization. Collectivization was intended to introduce socialist organizational arrangements into the countryside, and to change fundamentally the nature of the relationship between the rural and urban (industrial) sectors of the Soviet economy. Markets were to be eliminated, and state control was to prevail.

The organizational arrangements in the countryside were fundamentally changed, the relations between the state and the rural economy were altered, and the socialist ideology served as the framework for the decision to collectivize. The process and outcome of collectivization remain controversial to the present time.

Why has collectivization been so controversial? First, the process of collectivization was forcible and violent, resulting in substantial destruction of physical capital (e.g., animal herds) and the reduction of peasant morale, as peasants resisted the state-driven creation of collective farms. Second, the kolkhoz as an organization incorporated socialist elements into the rural economy. It was also viewed as a mechanism through which state and party power could be used to change the terms of trade in favor of the city, to eliminate markets, and, specifically, to extract grain from the countryside on terms favorable to the state. The collective farm was, in theory, a cooperative form of organization through which the state could extract grain, leaving a residual for peasant consumption. The mechanism of payment for labor, the labor day (*trudoden*), facilitated this process. Third, peasant resistance to the creation of the collective farms was cast largely within an ideological framework. Thus resistance to collectivization, in whatever form, was blamed largely upon

the wealthy peasants (kulaks). Fourth, the institutions and policies resulting from the collectivization process, even with significant modifications over time, have been blamed for the poor record of agricultural performance in the Soviet Union. In addition to the costs associated with the initial means of implementation, the collective farms lacked sufficient means of finance and were unable to provide appropriate incentives to stimulate the necessary growth of agricultural productivity.

Thus collectivization replaced markets with state controls and, in so doing, used a process and instituted a set of organizational arrangements ultimately deemed to be detrimental to the long-term growth of the agricultural economy in the Soviet Union.

ROBERT C. STUART

COLONIAL EXPANSION

In 1300 Moscow was the capital of a very small, undistinguished principality whose destiny was almost certainly beyond anyone's imaginings at the time: by 1991, it would control more than one-sixth of the earth's landed surface. This expansion was achieved by many means, ranging from marital alliances and purchase to military conquest and signed treaties.

Moscow was already in control of a multiracial, multiethnic region in 1300. The primordial inhabitants were Finnic. Much later Balts moved in, and then around 1100 Slavs migrated to the region, some from the south (from Kievan Rus), perhaps the majority from the west, the area of Bohemia. In 1328 the Russian Orthodox Church established its headquarters in Moscow, giving stability to the Moscow principality at crucial junctures and helping legitimize its annexation of other, primarily Eastern Slavic, principalities. Much of the Muscovite expansion was nearly bloodless, as elites

in other principalities chose to join the elite in Moscow over liquidation or marginalization in small principalities. After 1450 Moscow's rivals became more formidable, especially the Republic of Novgorod in the northwest, with its vast lands in the Russian North (annexed as the result of military campaigns in 1471 and 1478); the eastern entrepot of the Hansa League, at the time perhaps the major fur supplier to much of Eurasia; and Lithuania, the largest state in Europe in the mid-fifteenth century. Moscow unleashed its army against Lithuania and by 1514 had annexed much of its territory (sometimes known as "West Russia").

In the mid-sixteenth century Muscovy pursued colonial expansion full force. In 1552 the Tatar Khanate of Kazan was annexed, and in 1556, after a dash down the Volga, the Tatar Khanate of Astrakhan was conquered. Although Muscovy controlled numerous regions from 1300 onward, the annexations of the 1550s converted Muscovy into a truly multinational empire. Both moves were made for security concerns, only marginally (at best) for economic reasons.

The conquests of Kazan and Astrakhan made it possible for the Russians to move farther east, first into the Urals, then into Siberia. There the Muscovite expansion began to take on hues resembling Western European colonial expansion into the New World and Asia. A pivotal figure was Ermak Timofeyev syn (i.e., son of the commoner Timofei; had Ermak's father been of noble origin, then his patronymic would have been Timofeevich), a cossack ataman who at the end of the 1570s or the beginning of the 1580s (the precise date is unknown) campaigned into Siberia and initiated the destruction of the Tatar Siberian Khanate. Once the Siberian Khanate was annexed, the path was open through Siberia to the Pacific. The Russians garrisoned strategic points and began to collect tribute (primarily in furs, especially sables) from the Siberian natives. Colonial expansion in many parts of the world was not profitable, because administrative costs ate up whatever gains from trade there may have been. In Siberia, however, the opposite has been true for more than four centuries. The conquest, pacification, and continuing administrative costs were low there, while the remittances to Moscow and St. Petersburg in the form of furs, gold and other precious metals, diamonds, timber, and, more recently, oil and gas were all profitable. If one includes the Urals, developed between the reign of Peter the Great and 1800, the trans-Volga push was very profitable for Russia.

The colonists who settled Eurasia between the Urals and the Pacific were certainly among the most motley ever assembled. Leading the pack were cossacks and other adventurers. They were followed by fur traders and perhaps trappers. Government officials and garrison troops were next. They were followed by peasants fleeing serfdom, then by exiles from the center. Even as late as the last years of the Soviet Union, permanent residents of Siberia volunteered aloud their disgust over the fact that Moscow used their land as a dumping ground for criminal and political exiles. In the eighteenth century landlords claimed huge tracts in Siberia and moved all of their peasants from Old Russia to the new lands. Probably the last wave were Soviet professionals who responded to quadruple wages to settle in mineral-rich but climatically unfriendly regions of Siberia.

Moscow's push south of the Oka into the steppe was at least initially a defensive measure. The Crimean Tatars sacked Moscow in 1571 and its suburbs in 1591, and they regularly "harvested" tens of thousands of Slavs into captivity for sale into the world slave trade out of Keefe across the Black Sea. To put a stop to these continuous depredations, the Muscovites paid annual tributes to the Crimeans that were never sufficient, mounted patrols along the southern frontier, and began the process of walling it off from the steppe to keep the nomads from penetrating Eastern Slavdom. A series of fortified lines were built in the steppe, until the Crimean Khanate was surrounded and then finally annexed in 1783. What began as a security measure turned into a great economic boon for Russia. Most of the area annexed was chernozem soil, prairie soil a yard thick that proved to be the richest soil in Europe. The western part of this area had been Ukraine, which was annexed in 1654. The eastern part of the steppe was uninhabited because of continuous Tatar depredations. Once it was secure, it was settled primarily by Russian farmers hoping to improve on their yields from the pitiful podzol soils north of the Oka. This colonization gave the Russians access to the sixty-thousand-square-kilometer Donbass, one of late Russia's and the USSR's major fuel and metallurgical regions. The homeland of the Great Russians, the Volga-Oka mesopotamia, is almost totally lacking in useful minerals and suitable soil and weather for productive agriculture—all of which were supplied by the colonization of Ukraine and Siberia.

One of Russia's good fortunes was that generally it was able to pick its colonization-annexation

targets one at a time. Peter the Great in 1703 annexed the Neva delta, which became the site of the future capital, St. Petersburg, and gave Russia direct access to Baltic and Atlantic seaports of tremendous value during the next three centuries. The next target to the west was Poland, which was divided into three partitions (among Russia, Austria, and Prussia). The first partition, in 1772, involved primarily lands that once had been East Slavic, but the second (1793) and third (1795) engorged West Slavic territories, including the capital of Poland itself, Warsaw. This strategic move netted Russia more intimate access to the rest of Europe, but otherwise gave the Russians nothing but trouble: the enduring hatred of the Poles, rebellions by Poles against Russian hegemony, and dissent by Russians who opposed the annexation of Poland.

After the Napoleonic Wars, the Russian Empire moved against the Caucasus. This move led to the horror of the Caucasian War, which dragged on from 1817 to 1864. Control over the Caucasus had been contested for centuries among the Persians, the Byzantines, the Ottomans, and the Russians. There, Christianity and Islam met head to head. The Islamic Chechens were among the first peoples attacked in 1817, an event that reverberates to this day. The Armenian and Georgian Christians looked to the Russians to save them from Islamic conquest. The Russians ultimately won, but at tremendous cost and for little real gain.

In 1864 Russia turned its attention to Central Asia. Between then and 1895 it defeated and annexed to the Russian Empire the weak khanates of Bukhara, Samarkand, and Khiva. Central Asia was inhabited by primarily Turkic nomads. Silk was the main product manufactured there that the Russians wanted, as well as access via commercial transportation to Balkh, Afghanistan, and India further south. In Soviet times Uzbekistan was foolishly converted into the cotton basket of the USSR at the cost of drying up the Syr Daria and Amu Daria rivers and the Aral Sea, leaching the soil, and converting the region into a toxic dust bowl.

Russia was successful in its colonial empire building efforts because of the weakness and disorganization of its opponents. Areas such as Poland, the Caucasus, and Central Asia benefited Russia little, whereas St. Petersburg, Siberia, and left-bank Ukraine were profit centers for Russia and for the USSR.

RICHARD HELLIE

COLONIALISM

Colonialism is a type of imperial domination of the non-Russian peoples who inhabited the southern and eastern borderlands of the Russian Empire and who subsequently fell under the control of the Soviet Union. It refers specifically to policies to spread Western civilization (a "civilizing mission") among peoples in those territories, and to integrate them into the imperial state and economy. It extends as well to the colonization by Russian and Ukrainian peasant settlers of lands inhabited by pastoral nomadic tribes.

COLONIZATION

The Russian Empire's southern and eastern borderlands became its colonial territories. Russian expansion onto the plains of Eurasia had by the middle of the eighteenth century brought within the boundaries of the empire all the lands south to the Caucasus Mountains and to the deserts of Turkestan, and east to the Pacific Ocean. Much of the area consisted of vast plains (the "steppe") once dominated by confederations of nomadic tribes, who became the subjects of imperial rule and the empire's first colonized peoples. The grasslands where they grazed their flocks along the lower Volga River and in southern Russia (the Ukraine) attracted peasants from European Russia seeking new farmland.

The imperial government encouraged this southward movement of the Russian population (most of whom were serfs owned by noble landlords). Occasionally nomadic tribes fought to re-

A greedy octopus represents Russia's expanding influence in 1877. © CORBIS

tain their lands. Prolonged resistance came first from the Bashkirs, Turkic peoples whose tribes occupied lands east of the Volga and along the Ural Mountains. During the eighteenth century many clans joined in raids on the intruders and battled against Russian troops. They joined in the massive Pugachev uprising of 1772 to 1774 alongside Cossacks and rebellious Russians. But in the end Russian armed forces invariably defeated the rebels.

During the late eighteenth and early nineteenth century, Russia's borders of the empire shifted further southeastward into Eurasian lands, bringing an increasingly diverse population into the empire. Peoples in these borderlands spoke many different languages, mostly of Turkic origin; practiced a wide variety of religions, with the Islamic faith the most widespread; and followed their own time-honored customs and social practices. Russia was becoming a multiethnic, multireligious empire.

THE IMPERIAL CIVILIZING MISSION

In the reign of Empress Catherine II (r. 1762–1796), the empire's leadership began to experiment with new approaches to govern these peoples. These policies drew upon Enlightenment concepts of government that redefined the object of colonial conquests. They became the basis of Russian colonialism. Previously, the Russian state had extended to the princes and nobles of newly conquered eastern territories the chance to collaborate in imperial rule. It had required their conversion to Orthodox Christianity, and had periodically encouraged Orthodox missionaries to conduct campaigns of mass conversion, if necessary by force. Before Catherine II's time, the state had made no concerted effort to alter the social, economic, and cultural practices of the peoples on its southern and eastern borders. This authoritarian method of borderland rule demanded only obedience from the native populations.

In the late eighteenth century, some educated Russians began to argue that their empire, which they believed a civilized Western land, had the duty to spread civilization, as they understood it, to its backward peoples. They had two principal objectives. By spreading Russian culture, legal practices, and opportunities for economic enrichment, the empire could hope to recruit a progressive group from these peoples who would become willing collaborators in Russian domination. Equally important was their belief that Russia's own historical development made the spread of its newly acquired Western culture among "savage" peoples a moral obligation.

Catherine II herself traveled among the empire's eastern peoples at the beginning of her reign. Impressed by what she described as the "differences of peoples, customs, and even ideas" in Asian land, she looked for new ways to win the loyalty of the population. Encouragement of trade, education, and religious toleration appeared to her desirable and useful tools to strengthen the bonds between these colonial peoples and their imperial rulers. These goals suggested practical guidelines by which she and her advisers could build their empire on modern political foundations. These also confirmed in their eyes the legitimacy of their imperial domination of backward peoples.

Catherine II shared the Enlightenment conviction that reason, not religious faith, lay at the core of enlightened government. She did not abandon the policy of maintaining Orthodox Christianity as the state religion of the empire, but ended forced conversion of Muslim peoples to Christianity. In 1773, she formally accorded religious toleration to Islam. Her successors on the imperial throne maintained this fundamental right, which proved a valuable means of maintaining peaceful relations with the empire's growing Muslim population. They encouraged the conversion to Christianity of peoples holding to animist beliefs, for they believed that their duty was to favor the spread of Christianity. They also promoted the commercial exploitation of colonial resources and the increased sale of Russian manufactured goods in their colonial territories. The Western colonialists' slogan of "Commerce and Christianity" described one important aspect to Russia's civilizing mission. Self-interest as well as the belief in spreading the benefits of Western civilization provided the ideological basis for Russian colonialism. This new policy never fully supplanted the old practices of authoritarian rule and discrimination against non-Russians,

which had strong defenders among army officers on the borderlands. But it, too, enjoyed powerful backing in the highest government circles. In the nineteenth century, their vision of an imperial civilizing mission brought Russia into the ranks of great Western empires.

COMMERCE AND CHRISTIANITY IN COLONIAL ALASKA

Alaska was the first area where Russian colonialism guided imperial rule. In the late eighteenth century Russian trappers had appeared there, having crossed the Pacific Ocean along the Aleutian Islands from Siberia in their hunt for fur-bearing sea mammals. The sea otter, whose fur was so highly prized that it was called "soft gold," was their chosen prey. They forced native peoples skilled at the dangerous craft of hunting at sea (mainly Aleutian tribesmen) to trap the animals, whose range extended from the Aleutians along the Alaskan coast and down to California. In 1800, the Russian government created a special colonial administration, the Russian-American Company, to take charge of "the Russian colonies in America." Its main tasks were to expand the commercially profitable fur-gathering activities, and to spread Orthodox Christianity and Russian culture among the subject peoples of this vast territory.

"Commerce and Christianity" defined the Russian Empire's objectives there. It operated in a manner somewhat similar to that of the British Hudson's Bay Company, also established in colonial North America. And like other overseas colonies of European empires, the Russians exploited Alaska's valuable resources (killing off almost all the sea otters), in the process confronting periodic revolts from their subject peoples. Faced with these difficulties, the Russian government finally abandoned its distant colony, too expensive and too distant to retain. In 1867, it sold the entire territory to the United States.

COLONIAL TURKESTAN AND IMPERIAL CITIZENSHIP

In seeking to create a unified, modern state, the Russian Empire moved toward establishing a common citizenship for the peoples in its multiethnic, multireligious borderlands in the late nineteenth century. It began this effort in 1860s and 1870s, at the time when it freed its peasant serf population from conditions of virtual slavery to its nobility. Reformers in the government conceived of an empire founded on a sort of imperial citizen-

ship, extended to former serfs and to native peoples.

That was the period of the empire's last major colonial expansion, when its military forces conquered a large part of Central Asia. The settled and nomadic populations of Turkestan (as the area was then called) spoke Turkic languages and were faithful Muslims who looked to the Ottoman Empire, not Russia, for cultural and religious leadership. The Russian colonial administration was deeply divided on the proper treatment of their unwilling new subjects. Some preferred to rely on the old policies of authoritarian rule, restrictions of the Muslim religion, and the encouragement of Russian colonization. Others took their inspiration from Catherine II's colonialist policies. The latter argued for progressive colonial policies including religious toleration of Islam, respect for the ethnic customs and moral practices of Turkestan's peoples, and the development of new crops (especially cotton) and commercial trade with Russia. They hoped that, as the powerful Minister of Finance Sergei Witte argued in 1900, full equality of rights with other subjects, freedom in the conduct of their religious needs, and non-intervention in their private lives, would ensure the unification of the Russian state.

This progressive colonialist program was notable by according (in theory) "equality of rights" to these imperial subjects. Colonial officials of this persuasion believed that they could extend, within their autocratic state, a sort of imperial citizenship to all the colonial peoples. They withheld, however, the full implementation of this reform until these peoples were "ready," that is, proved themselves loyal, patriotic subjects of the emperor-tsar. Opposition to their policy came from influential civilian leaders who judged that the state's need to support Russian peasants colonizing Turkestan territories had to come first. Their reckless decision led to the seizure from nomadic tribes of vast regions of Turkestan given to the peasant pioneers. Colonization meant violating the right of these subjects to the use of their land, which led directly to the Turkestan uprising of 1916. Coming before the 1917 revolution, this rebellion revealed that the empire's colonialist policies had failed to unify its peoples.

ORIENTALISM IN THE CAUCASUS REGION

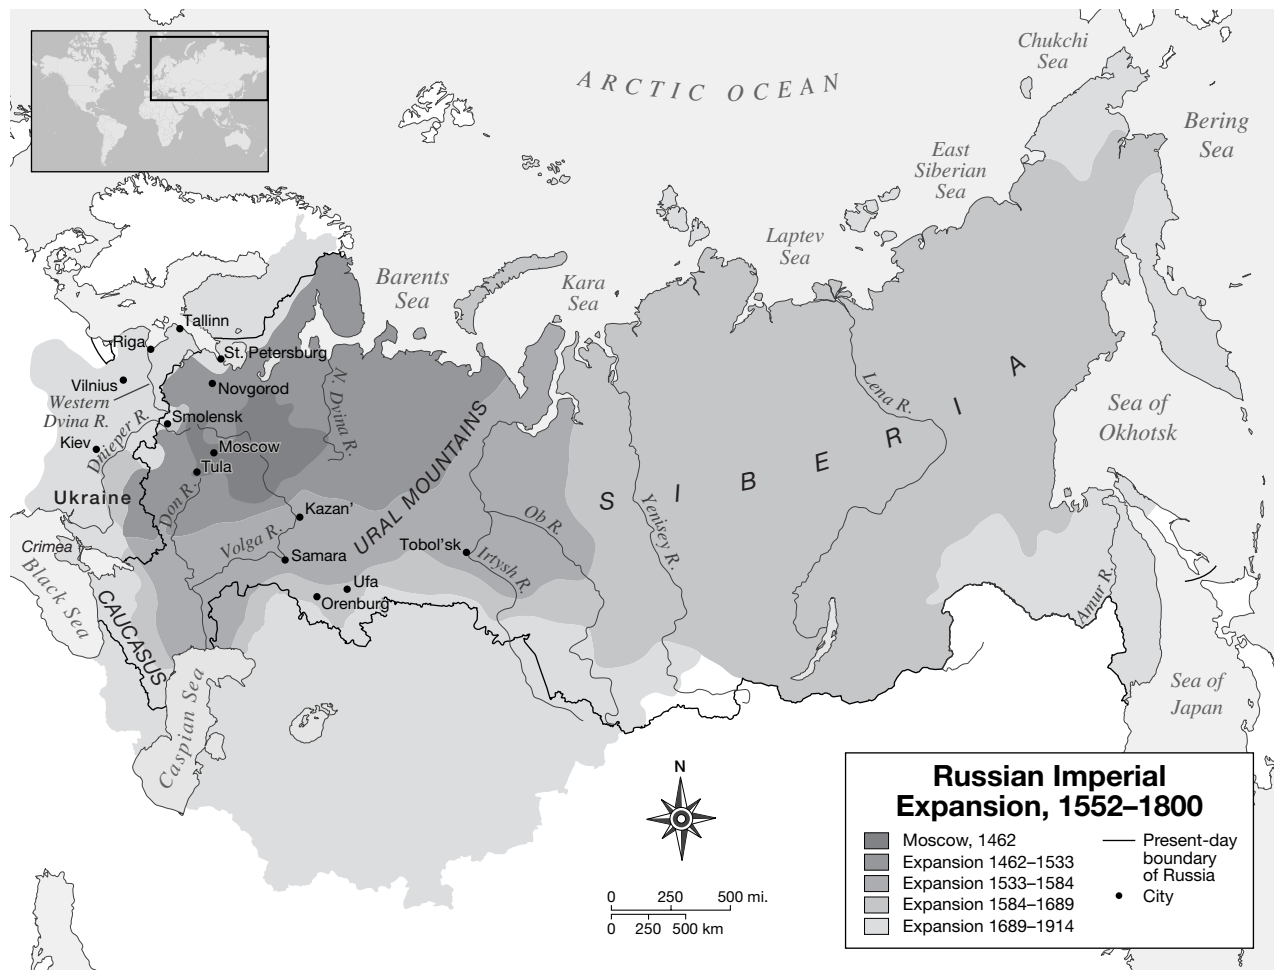

To the end of the empire's existence, colonialism rested on the assumption of Russian cultural su-

periority and often expressed itself in disdain for colonial peoples. Yet not all of these subject groups were treated with equal disregard. In the territories of the Caucasus Mountains (between the Black and Caspian Seas), imperial rule won the support of some peoples, but faced repeated revolts from others. Resistance came especially from Muslim mountain tribes, who bitterly opposed domination by this Christian state. They sustained a half-century war until their defeat in the 1860s, when many were forced into exile or emigrated willingly to the Ottoman Empire. The conquest of the region produced an abundance of heroic tales of exotic adventures pitting valorous Russians against barbaric, cruel, and courageous enemies. These tales created enduring images of "oriental" peoples, sometimes admired for their "noble savagery" but usually disparaged for their alleged moral and cultural decadence.

Russian colonialism had a powerful impact on the population there. The Christian peoples (Georgians and Armenians) of the region found particular benefits from the empire's economic and cultural policies. Armenians created profitable commercial enterprises in the growing towns and cities of the Caucasus region, and were joined by large numbers of Armenian migrants from surrounding Muslim states. Some Georgians used the empire's cultural window on modern Western culture to create their own national literature and history. These quickly became tools in the Georgians' nationalist oppositional movement. In the Muslim lands along the Caspian Sea where Azeri Turks lived, investors from Russia and Europe developed the rich oil deposits into one of the first major sources of petroleum for the European economy, a source of immense profit to them. The port of Baku became a boomtown, where unskilled Azeri laborers worked in the dangerous oil fields. They formed a colonial proletariat living among Russian officials and capitalists, and Armenian merchants and traders. The new colonial cities such as Baku were deeply divided both socially and ethnically, and became places in the early twentieth century of riots and bloodshed provoked by the hostility among these peoples. Nationalist opposition to empire and ethnic conflict among its peoples were both products of Russian colonialism.

COLONIALISM IN THE SOVIET UNION

The fall of the empire in 1917 ended Russian colonialism as a publicly defended ideal and policy. The triumph of the communist revolutionary

By 1914, the Russian Empire controlled more than one-sixth of the Earth's landed surface. XNR PRODUCTIONS. REPRODUCED BY PERMISSION OF THE GALE GROUP

movement in most of the lands once a part of the empire put in place a new political order, called the Union of Soviet Socialist Republics. The communist leaders of the new Soviet state preached the Marxist-Leninist program for human progress. They persecuted all religious movements, and denounced imperialism and colonialism, in Russia as elsewhere in the Western world. Their promise was liberation of all colonial peoples. But they did not permit their own peoples, previously in the empire's colonial lands, to escape their domination. Their idea of "colonial liberation" consisted of organizing these peoples into discreet ethno-territorial units by drawing territorial borders for every distinct people. The biggest of these received their own national republics. Each of these nations of the Soviet Union had its own political leaders and its own language and culture, but the "union" to which they belonged remained under the domina-

tion of the Communist Party, itself controlled from party headquarters in the Kremlin in Moscow.

The empire's eastern peoples experienced a new, communist civilizing mission, which proclaimed the greatest good for backward peoples to be working-class liberation, national culture, and rapid economic development under state control. Colonization reappeared as well when, in the 1950s and 1960s, millions of settlers from European areas moved into Siberia and regions of Central Asia to cultivate, in enormous state-run farms, most of the remaining lands of the nomadic peoples. Colonialism within the lands of the former Russian Empire did not disappear until the Soviet Union in its turn collapsed in 1991.

COMMAND ADMINISTRATIVE ECONOMY

The term *command administrative economy*, or often *administrative command economic system*, was adopted in the late 1980s as a descriptive category for the Soviet type of economic system. Throughout its history, the Soviet Union had a mobilization economy, focused on rapid industrial expansion and growth and the development of economic and military power, under the direction of the Communist Party and its leadership. This command administrative economy evolved from the experiences of earlier Soviet attempts to develop a viable socialist alternative to the capitalist market system that prevailed in the developed Western

world. Thus it was built on the lessons of the non-monetized pure “command economy” of Leninist War Communism (1918–1921), Lenin’s experiment with markets under the New Economic Policy (NEP, 1921–1927), Josef Stalin’s “great Socialist Offensive” (1928–1941), war mobilization (1941–1945) and recovery (1946–1955), and the Khrushchevian experiment with regional decentralization of economic planning and administration (1957–1962). This economic system reached its maturity in the period of Brezhnev’s rule (1965–1982), following the rollback of the Kosygin reforms of 1967–1972. It provides a concise summary of the nature of the economic system of “Developed Socialism” under Brezhnev, against which the radical economic reforms of perestroika under Mikhail Gorbachev were directed.

The concept of the command administrative economy is an elaboration of the analysis of the command economy, introduced to the study of the Soviet Union by Gregory Grossman in his seminal (1963) article, “Notes for a Theory of the Command Economy.” The term became common in the economic reform debates of the late Soviet period, even in the Soviet Union itself, particularly after its use by the General Secretary of the Communist Party of the Soviet Union, Mikhail Gorbachev, at the reform Party Plenums of January and June 1987, in his critique of the functioning of the Soviet economic system. The term highlights the fact that in such an economic system, most economic activity involves the administrative elaboration and implementation of commands from superior authorities in an administrative hierarchy, with unauthorized initiative subject to punishment.

The defining feature of such an economic system is the subordination of virtually all economic activity to state authority. That authority was represented in the Soviet Union by the sole legitimate political body, the Communist Party of the Soviet Union, which necessarily then assumed a leading, indeed determining, role in all legitimate economic activity. This authority was realized through a vast administrative hierarchy responsible for turning the general objectives and wishes of the Party and its leadership into operational plans and detailed implementing instructions, and then overseeing and enforcing their implementation to the extent possible. This involved centralized planning that produced five-year developmental framework plans and one-year operational directive plans containing detailed commands mandatory for implementation

by all subordinate organizations. These plans were elaborated in increasing detail as they were allocated down the hierarchy, eventually becoming direct specific commands to individual firms, farms, stores, and other economic organizations.

The task of directive-based centralized planning in this system was made feasible by aggregation at higher levels and by the delegation of elaboration of details of the plan to subordinate levels in the administrative hierarchy. Thus administrative organs at each level of the hierarchy (central, republic, regional, local, and operational [e.g., firm, farm, etc.]) were responsible for planning, supervision, and enforcement, and engaged in active bargaining with other levels in the hierarchy to develop an agreed plan of activity that in general met the needs and desires of the highest authorities. The result of this administrative process bore the force of law and was not subject to legitimate alteration or deviation by subordinate units, although higher authorities did have the power to alter or reallocate the assignments of their subordinates.

To work properly, this system of administratively enforced implementation of commands requires limiting the discretion and alternatives available to subordinates. Thus the system, within the areas of activity directly controlled by the state, was essentially demonetized. Although money was used as a unit of account and measure of activity, it ceased to be a legitimate bearer of options in the state sectors; it failed to possess that fundamental and defining characteristic of “moneyness”—a universal command over goods and services. Rather it played a passive role of aggregating and measuring the flow of economic activity, while plans and their subsequent allocation documents determined the ability to acquire goods and services within the state sector. Similarly, prices in the command administrative economy failed to reflect marginal valuations, but rather became aggregation weights for the planning and enforcement of the production and distribution of heterogeneous products in a given planned category of activity. Thus in the logic of the command administrative economy, money and prices become mere accounting tools, allowing the administrative hierarchy to monitor, verify, and enforce commanded performance.

The command administrative system in the Soviet Union controlled the overwhelming share of all productive activity. But the experience of war communism, and the repeated attempts to mobilize and inspire workers and intellectuals to work

toward the objectives of the Soviet Party and State, showed that the detailed planning and administration of commands were rather ineffective in dealing with the consumption, career, and work-choice decisions of individuals and households. The variety and variability of needs and desires proved too vast to be effectively managed by directive central planning and administrative enforcement, except in extreme (wartime) circumstances. Thus money was used to provide individual incentives and rewards, realizable through markets for consumer goods and services and the choice of job and profession, subject to qualification constraints. But prices and wages were still extensively controlled, and the cash money allowed in these markets was strictly segmented from, and nonconvertible with, the accounting funds used for measuring transactions in the state production and distribution sectors. This created serious microeconomic disequilibria in these markets, stimulating the development of active underground economies that extended the influence of money into the state sector and reallocated product from intended planned purposes to those of agents with control over cash.

The command administrative economy proved quite effective at forcing rapid industrialization and urbanization in the Soviet Union. It was effective at mobilizing human and material resources in the pursuit of large-scale, quantifiable goals. The building of large industrial objects, the opening of vast and inhospitable resource areas to economic exploitation, and the building and maintenance of military forces second to none were all facilitated by the system’s ability to mobilize resources and focus them on achieving desired objects regardless of the cost. Moreover, the system proved quite adept at copying and adapting new technologies and even industries from the Western market economies. Yet these very abilities, and the absence of any valuation feedback through markets and prices, rendered the operation of the system extremely costly and wasteful of resources, both human and material.

Without the ability to make fine trade-offs, to innovate and to adjust to changing details and circumstances largely unobservable to those with the authority in the system to act, the command administrative economy grew increasingly inefficient and wasteful of resources as the economy and its complexity grew. This became more obvious, even to the rulers of the system, as microeconomic disequilibria, unfinished construction, unusable inventories, and disruptions of the “sellers’ market,”

together with a burgeoning second economy (Grossman, 1977), grew with increasing rapidity through the 1970s and 1980s. These consequences, together with the repeated failure of partial and incremental reforms to improve the situation and a growing gap in technology from the levels of the developed West, inspired the radical economic, and indeed political, reforms of Mikhail S. Gorbachev that soon afterward brought an end to the Soviet Union and its command administrative economy.

COMMANDING HEIGHTS OF THE ECONOMY

As a result of peasant and military revolts in 1920 and early 1921, Vladimir I. Lenin was forced to reverse the extreme policies of War Communism in favor of a temporary expedient, the mixed economy of the New Economic Plan (NEP). The Bolshevik Tenth Party Congress (March 1921) adopted a tax in kind on the peasantry to replace confiscations. The Congress also permitted leasing smaller nationalized workshops back to private individuals, provided they hired no more than ten or twenty workers. But the Bolsheviks retained in state hands

most large-scale industry in the fuel and metallurgical sectors, mines, and military plants, along with all banking, railroads, and foreign trade. These were to constitute the "commanding heights," which were supposed to control and guide the rest of the economy under Soviet power. They were provided subsidies from the budget to pay for wages and supplies. Many of the industrial enterprises were soon organized into trusts or syndicates under the Supreme Council of the National Economy (VSNKh) for operational supervision, though many rehired former managers and experts ("bourgeois specialists") deemed to be loyal to the new regime. By 1922 more than 90 percent of industrial output still came from these nationalized plants, mines, and transportation facilities. By 1928 industrial output had recovered the levels achieved in 1913, but further expansion would depend on new net investments, for which the state budget would be the only significant source, for the "commanding heights" did not generate sufficient profits.

MARTIN C. SPECHLER

COMMISSAR

Soviet government official.

"Commissar" was the title given to the bureaucratic leaders of the Soviet Union, used from 1917 to 1946. The title and rank of commissar was also given to the military-political officers serving with the Red Army during World War II. Also known as People's Commissars, they were the heads of the various people's commissariats (of health, justice, education, internal affairs, and so forth), the central bureaucratic organizations that governed the Russian Republic and the Soviet Union. The commissars were also the members of the Soviet of People's Commissars (*Sovet narodnykh komissarov*—*Sovnarkom*, or SNK), the central organ of state power that coordinated government decisions in the Soviet republics and among the commissariats when the USSR Supreme Soviet was not in session. In 1946, when the commissariats were renamed ministries, the commissars became ministers, and the SNK became the Council of Ministers.

COMMITTEE FOR THE OPERATIONAL MANAGEMENT OF THE NATIONAL ECONOMY

The Committee for Operational Management of the National Economy (COME) and a parallel body, the Interrepublican Economic Committee (IEC), were created in the wake of the failed coup of August 1991, in a vain bid to coordinate economic policy across the territory of the Soviet Union. They were trying to pick up the functions of the government of the USSR, which had disintegrated after the coup. COME was headed by Ivan Silaev, a former deputy prime minister in the Soviet government (1985–1990) who had been appointed by Boris Yeltsin in June 1990 as prime minister of the Russian Socialist Federal Soviet Republic. Silaev struggled to maintain food supplies and deal with Soviet debt obligations, while Yeltsin's reform team, led by Yegor Gaidar, was preparing a radical reform program. Silaev resigned as Russian prime minister on September 27, 1991, after being accused of trying to empower the COME at the expense of the Russian Federation (for example, by taking control over energy supplies). Silaev then became acting prime minister of the Soviet Union—a country that had de facto ceased to exist. Together with Grigory Yavlinsky he worked on a treaty on economic cooperation between the republics, but encountered hostility from the Russian Federation Supreme Soviet and government. He tried to salvage some of the ministries of the Soviet government, whose forty thousand employees were still sitting in Moscow. The COME and IEC were founded on the assumption that some elements of the unified Soviet economic management system would be preserved, but this proved erroneous. Over the course of 1991 all republican governments had progressively ceased to cooperate with federal economic agencies, refusing to pay taxes and ignoring policy directives, and this trend accelerated after the failed

August coup. By the end of 1991 all the republics had declared their complete independence and the COME and IEC were closed down. In the future, economic ties between the newly independent states would be conducted on a bilateral basis without any central coordinating agency such as COME.

COMMITTEE OF SOLDIERS' MOTHERS

The Committee of Soldiers' Mothers of Russia (CSMR) was organized in 1989 at a time when glasnost and perestroika had led to greater information about the abuses within the Soviet military and its conscript system and created opportunities for the actions of nongovernmental organizations. In 1989 the mothers of 300 student-conscripts protested against their draft and lobbied successfully to change the conscription law to allow student deferments. Their successes include the granting of deferments and the early return of 180,000 students from the army to finish their studies. The Committee was also involved in seeking to end abuses in barracks life, especially the bullying of junior conscripts (*dedovshchina*), and in promoting the transition from a conscript system to a volunteer military. The CSMR has worked to expose human rights violations within the military, given legal and material assistance to the families of dead servicemen, consulted on legislation affecting military service, and published research on service-related deaths in the military. It operates hostels in Moscow for AWOL soldiers.

The CSMR actively protested the First Chechen War (1994–1996) and in March 1995 organized the "March for Compassion" from Moscow to Grozny. The March drew attention to the horrific violations of human rights by both sides and sought to draw support from Chechen mothers opposed to the war. Media attention to these efforts, as well as efforts to secure the release of Russian prisoners of war, won broad international praise for the CSMR. In 1995 the committee received the Sean MacBride Peace Prize from the International Peace Bureau and was nominated in the same year for the Nobel Peace Prize.

Between 1996 and 1999, the CSMR continued to lobby the Russian parliament for legislation to protect the rights of servicemen, reform the military, rehabilitate veterans of regional conflicts, and provide support to the families of dead servicemen. It also supported the efforts of deserters to secure amnesty through the military prosecutor's office.

The CSMR has continued its efforts to support the rights of soldiers and their families during the Second Chechen War (September 1999–) but with much more limited success and less public support.

JACOB W. KIPP

COMMITTEES OF THE VILLAGE POOR

Committees of the Village Poor (*komitety derevenskoy bednoty* or *kombedy* in Russian) were peasant organizations created by the Bolshevik government in 1918 to procure grain and create a revolutionary counterweight to the traditional peasant commune.

Bolshevik ideologists viewed peasant communities as divided between a small minority of rich kulaks and a majority of poor peasants. The kulaks controlled local soviets and traditional peasant communes, hoarded grain, and hired poor peasants to till their extensive lands. The *kombedy*, selected by poor peasants, would break this power, distributing food and consumer goods to the rural poor and assisting in expropriating grain from the kulaks for delivery to the city. With their knowledge of local conditions, they would be far more effective at finding hidden grain than food-supply detachments from the city.

In practice, the committees failed to fulfill the hopes communist leaders had for them. Peasants made no firm distinction between the village soviet, the village commune, and the committee of the rural poor, and the committee was rarely more

responsive to central control than the first two had been. Food supply officials complained that the *kombedy* focused too little attention on procuring grain and pursued local interests at the expense of the state. Most grain gathered by the *kombedy* was redistributed within the peasant community. Some committees used their powers to rob fellow peasants or to settle old scores. Bringing the revolution to the countryside did not result in more bread for the city.

Attempts to requisition grain by force, deprivations of the *kombedy*, and an ill-timed attempt at conscription led to uprisings throughout central Russia in November 1918. While Red Army detachments quickly suppressed the poorly organized peasant groups, the 6th Congress of Soviets decided to eliminate the Committees of the Village Poor in November 1918. It ordered new elections to local soviets in which kulaks would not participate. These new, more reliable soviets would replace the committees. This process was little more than a face-saving gesture, as the new soviets were no more pliable than the institutions they replaced. Communist government retreated to the cities, and the only influence it had over rural society was exercised by armed grain-procurement and recruitment detachments.

The *kombedy* experiment failed to create a rural government that was responsive to the center, and failed to procure significant amounts of grain. It did mobilize thousands of peasants to join the Communist Party (including Brezhnev-era ideologue Mikhail Suslov), but without creating a significant Party presence in the countryside. Ambitious, energetic rural party members moved to the cities or joined the Red Army, while most of the members remaining in the villages were soon purged for inactivity.

A. DELANO DUGARM

COMMONWEALTH OF INDEPENDENT STATES

The Commonwealth of Independent States (CIS) was established on December 8, 1991, in the Belovezh Accords, which also brought an end to the Soviet Union. These accords were signed by leaders from Russia, Ukraine, and Belarus, and on December 21, 1991, in the Almaty Declaration and Protocol to these accords, eight additional states (Moldavia, Armenia, Azerbaijan, Kazakhstan, Turkmenistan, Uzbekistan, Tajikistan, and Kyrgyzstan) confirmed their intention to join the CIS and accept the demise of the Soviet state. Georgia joined the CIS in December 1993, bringing total membership to twelve states (the Baltic republics of Estonia, Lithuania, and Latvia never joined). The organization had several goals, including coordination of members' foreign and security policies, development of a common economic space, fostering human rights and inter-ethnic concord, maintenance of the military assets of the former USSR, creation of shared transportation and communications networks, environmental security, regulation of migration policy, and efforts to combat organized crime. The CIS had a variety of institutions through which it attempted to accomplish these goals: Council of Heads of State, Council of Heads of Government, Council of Foreign Ministers, Council of Defense Ministers, an inter-parliamentary assembly, Executive Committee, Anti-Terrorism Task Force, and the Interstate Economic Committee of the Economic Union.

Although in a sense the CIS was designed to replace the Soviet Union, it was not and is not a separate state or country. Rather, the CIS is an international organization designed to promote cooperation among its members in a variety of fields. Its headquarters are in Minsk, Belarus. Over the years, its members have signed dozens of treaties and agreements, and some hoped that it would ultimately promote the dynamic development of ties among the newly independent post-Soviet states. By the late 1990s, however, the CIS lost most of its momentum and was victimized by internal rifts, becoming, according to some observers, largely irrelevant and powerless.

From its beginning, the CIS had two main purposes. The first was to promote what was called a "civilized divorce" among the former Soviet states. Many feared the breakup of the Soviet Union would lead to political and economic chaos, if not outright conflict over borders. The earliest agreements of the

CIS, which provided for recognition of borders, protection of ethnic minorities, maintenance of a unified military command, economic cooperation, and periodic meetings of state leaders, arguably helped to maintain some semblance of order in the region, although one should note that the region did suffer some serious conflicts (e.g., war between Armenia and Azerbaijan and civil conflicts in Tajikistan, Moldova, and Georgia).

The second purpose of the CIS was to promote integration among the newly independent states. On this score, the CIS had not succeeded. The main reason is that while all parties had a common interest in peacefully dismantling the old order, there has been no consensus among these states as to what (if anything) should replace the Soviet state. Moreover, the need to develop national political and economic systems took precedence in many states, dampening enthusiasm for any project of reintegration. CIS members have also been free to sign or not sign agreements as they see fit, creating a hodgepodge of treaties and obligations among CIS states.

One of the clearest failures of the CIS has been on the economic front. Although the member states pledged cooperation, things began to break down early on. By 1993, the ruble zone collapsed, with each state issuing its own currency. In 1993 and 1994, eleven CIS states ratified a Treaty on an Economic Union (Ukraine joined as an associate member). A free-trade zone was proposed in 1994, but by 2002 it still had not yet been fully established. In 1996 four states (Russia, Belarus, Kyrgyzstan, Kazakhstan) created a Customs Union, but others refused to join. All these efforts were designed to increase trade, but, due to a number of factors, trade among CIS countries has lagged behind targeted figures. More broadly speaking, economic cooperation has suffered because states had adopted economic reforms and programs with little regard for the CIS and have put more emphasis on redirecting their trade to neighboring European or Asian states.

Cooperation in military matters fared little better. The 1992 Tashkent Treaty on Collective Security was ratified by a mere six states. While CIS peacekeeping troops were deployed to Tajikistan and Abkhazia (a region of Georgia), critics viewed these efforts as Russian attempts to maintain a sphere of influence in these states. As a "Monroeski Doctrine" took hold in Moscow, which asserted special rights for Russia on post-Soviet territory,

and Russia used its control over energy pipelines to put pressure on other states, there was a backlash by several states against Russia, which weakened the CIS. After September 11, 2001, the CIS created bodies to help combat terrorism, and some hoped that this might bring new life to the organization.

PAUL J. KUBICEK

COMMUNISM

In its broadest meaning communism describes a society in which all its members jointly (communally) own its resources and in which the society's wealth and products are distributed equally to everyone. The term has been applied to premodern social and political constructs, such as communal societies propounded in Plato's *Republic* and in Thomas More's *Utopia*; to proposals of some radicals in the French Revolution of 1787; and to ideal communities advocated by nineteenth-century reformers such as Charles Fourier and Robert Owen, but none of these systems corresponded fully with the principles of communism.

Most often, communism designates the ultimate good society espoused by Karl Marx and Friedrich Engels in their *Communist Manifesto* of 1848 and the ideas and Soviet system in twentieth-century Russia associated with Vladimir Lenin and the Bolshevik Party. The latter usage is a misnomer: Neither Lenin nor later Soviet leaders ever claimed that communism had been established in the Soviet Union. Nevertheless, they willingly adopted the label, since it furthered their revolutionary and propagandistic purposes. As a result, in general discussion and writing, the Soviet state and its post-World War II offshoots in Eastern Europe, China, North Korea, North Vietnam, Cambodia, and Cuba

were generally called "communist." Correspondingly, leaders of the Soviet Union, of other similarly constituted states, and of revolutionary parties worldwide that adhered to Marxist-Leninist doctrine were known as "communists."

MARX'S VIEW OF COMMUNISM

More accurately, however, communism signifies only the very last step in the historical process and the ultimate and highly desirable goal of human development as outlined in Marx's economic, social, and political philosophy. Influenced by egalitarian ideas current in the eighteenth-century Enlightenment, Marx was outraged by what he saw as the unjust nature of the economic system spawned by the Industrial Revolution, which he called capitalism. Marx and Engels portrayed history as determined inevitably by "scientific" laws, which divided human social evolution into five broad stages: "gentilism," sometimes referred to as "primitive communism," with individuals living in clans and holding property in common; "slavery" based on slave labor; "feudalism" dependent on serf labor; "capitalism," in which entrepreneurs or capitalists exploited workers (the proletariat) and controlled the government; and "socialism," with public ownership replacing private capital and the emergence of a classless society providing justice, equity and freedom for all. Since conflict and class struggle, the mechanism for social change, would not exist in this new order, socialism would be the final stage of history and the highest level of human development.

Marx noted, however, that socialism would have two phases: the lower phase, also known as "socialism," and a higher phase, "communism." The latter would be the ultimate good society benefiting all mankind. In the lower, socialist phase, the whole society would own its productive forces, or the economy, but work would still be valued and paid differentially and distribution of the society's goods and wealth would not yet be equal. To reach the higher, communist phase, two requirements had to be met. First, the productive forces of society, restricted by the capitalists in a vain attempt to prop up their profits, would be liberated, and the economy, hugely expanded by modern scientific and technological inputs, would become capable of producing "a superabundance of goods." This enormous output would permit everyone to have whatever they needed. Second, in counterbalance, an individual's needs would be limited and sensible, because society would develop, through

Young communists salute as they pass Lenin's tomb on May Day. © HULTON ARCHIVE

education and by example, "a new-type socialist person." Reoriented individuals would desire only what was truly necessary to sustain life, eschewing ostentation and waste. They would also contribute to the socialist society altruistically, applying their work and varied talents to the common welfare. With the superabundance of goods and the new socialist individual, society could then be organized on the principle: "from each according to his ability; to each according to his needs." Thus, communism would mark an end to coercion, want, and inequality.

LENIN AND COMMUNISM

Circulating in tsarist Russia by the 1880s, Marx's views were adopted by Vladimir Lenin, who soon led the Bolsheviks, a Marxist-oriented revolutionary party. Lenin linked his effort in Russia to the global spread of capitalism, which he labeled "im-

perialism," and counted on aid from successful workers' revolutions in Europe to help the Russian proletariat achieve socialism. He was dismayed, therefore, when, after the "imperialist" World War I broke out, most European workers and their Marxist leaders chose patriotism over revolution and backed their own national governments in the war.

Many Marxists in Russia also rallied to support the tsarist war effort. Determined to keep his party in control after the Bolsheviks came to power in November 1917 and to discredit other Russian Marxist revolutionaries, Lenin in 1918 changed the name of the Bolsheviks to the Russian Communist Party, and a year later he founded an international revolutionary organization called the Communist International. These actions were taken to broaden the appeal of the Bolshevik Revolution and to distinguish Lenin and his followers from other Marx-

ian socialists in Russia and throughout the world, whom he considered insufficiently revolutionary, if not collaborators with the hated imperialists.

Lenin added little to Marx's sketchy ideas on the characteristics of communism, once mentioning cooperatives as a possible organizational basis for the future and another time referring to "accounting and control" and "the administration of things" as keys to establishing a truly communist society. Stalin proclaimed in the 1930s that the Soviet Union had achieved the lower phase, socialism, of Marx's fifth stage of history, and after World War II Soviet theoreticians added that Soviet society had entered "the transition to communism." But what communism would actually look like remained vague, except for speculation about free transportation, state-run boarding schools, and communal eating.

THE DISCARDING OF COMMUNISM

In the 1980s, as the weaknesses of the Soviet economy and system became apparent, the appeal of communism, so closely linked to the Soviet experience, dimmed. In 1989 and 1991, when socialist states in Eastern Europe and the Soviet Union collapsed, many observers declared that communism was dead. Although nominally communist systems still existed in North Korea, China, Vietnam, and Cuba, even these governments made concessions to nonsocialist economic activity. Moreover, none of these regimes argued that it had achieved communism, or even that it was nearing the ultimate good society envisaged by Marx.

JOHN M. THOMPSON

COMMUNIST ACADEMY

The Communist Academy (Akademiya kommunisticheskaya) was founded on June 25, 1918, by order of the All-Russian Central Executive Committee. Known until 1924 as the Socialist Academy, this institution was designed to rival the nearly 200-year-old Academy of Sciences. Indeed, although it was formally established "from above" by government decree, the Communist Academy also answered calls "from below" from the radical wing of the Russian intelligentsia, which had lobbied for an alternative to the conservative Academy of Sciences since the 1880s.

The Communist Academy served to coordinate communist higher education and research alongside the Institute of Red Professors and the Commissariat of the Enlightenment. It consisted of a number of institutes devoted to subjects ranging from philosophy, history, literature, and the natural sciences to economics, socialist construction, and international relations and development. It also boasted a number of specialized sections and commissions, as well as an array of societies revolving around groups such as the Militant Materialist Dialecticians, Marxist Historians, Marxist Orientalists, and Marxist Biologists.

Structurally reminiscent of the older Academy of Sciences, the Communist Academy supplanted its rival's apolitical "bourgeois" approach to science and scholarship with an explicitly political agenda grounded in the tenets of Marxism-Leninism. Moreover, there was a fairly explicit division of labor between the two, with the Communist Academy attempting to monopolize the most important areas in the social and natural sciences and ceding only experimental, abstract work to the Academy of Sciences (along with arcane subjects like archeology and the study of antiquity). Scarcity of resources and the frequent overlapping of scholarly research, however, kept the two institutions in a state of fierce competition for much of the 1920s.

A bastion of party power in science and higher education, the Communist Academy was nevertheless symbiotically linked to the Academy of Sciences. In essence, the Communist Academy thrived as long as its rival was able to preserve its semi-autonomous, apolitical status. But by 1928, the Academy of Sciences—the longest-lasting of the powerful NEP-era bourgeois institutions—found itself under attack. In an effort to bring the Academy of Sciences under state control, the party leadership ordered the institution

to elect Marxist scholars as academicians. Then, during the radical years of the cultural revolution (1928–1932), the Academy of Sciences was terrorized by official harassment and wave after wave of arrests and dismissals, which ultimately forced the institution to adopt a more conformist line. This process was completed in 1934 when the newly cowed Academy of Sciences was uprooted from its historical habitat in Leningrad and moved to Moscow to work alongside the Communist Academy.

Although these changes broke the resistance of the Academy of Sciences, they undermined the very *raison d'être* of the Communist Academy. After all, once the Academy of Sciences had begun to employ Marxist-trained scholars and produce at least nominally Marxist scholarship, it became difficult to justify the continued existence of the Communist Academy. Within two years, the latter institution was subsumed into the newly Sovietized Academy of Sciences by government decree on February 8, 1936.

DAVID BRANDENBERGER

COMMUNIST BLOC

Countries after the end of World War II (i.e., after August 1945), which became linked by adherence to the ideology and practice of communism, as developed by Vladimir Lenin and Josef Stalin and their successors in the Soviet Union.

Before the collapse of the USSR, some of the countries within it were also informally known as the Soviet bloc. Their official name was *Sodruzhestvo sotsialisticheskikh gosudarstv* (Commonwealth of Socialist Countries), for not even the USSR claimed that it had reached the communist stage after socialism. Lenin and his associates, most notably Leon Trotsky and Grigory Zinoviev, had

vainly tried to spread communism throughout the world after the successful October, or Bolshevik, Revolution in Soviet Russia, despite the short-lived communist regime of Bela Kun in Hungary (March–August 1919). The Communist International, or Comintern, in Moscow (March 1919–June 1943), which was dominated by leaders of the Russian Communist Party, helped to train communist revolutionaries from all over the world. They became leaders of their countries in East Central and Southeastern Europe and in Asia after World War II. International links were then provided by the Communist Information Bureau, or Cominform (September 1947–April 1956), the Council for Mutual Economic Assistance (January 1949–June 1991) and the Warsaw Pact (May 1955–July 1991). At the height of its largest extent under Stalin (late 1940s, early 1950s), the communist bloc comprised more than a billion people or one-third of the world's population. In Europe, there was the USSR itself, with Estonia, Latvia, and Lithuania having been incorporated after the Molotov-Ribbentrop Pact (August 23, 1939); the German Democratic Republic; Poland; Czechoslovakia; Hungary; Romania; Bulgaria; Yugoslavia; and Albania. In Asia, the Bloc included: Cambodia (Kampuchea), China (People's Republic of China), Laos, Mongolia, South Yemen (People's Democratic Republic of Yemen), and Vietnam (North Vietnam only from 1946–1975, then all of Vietnam). In America, Cuba joined the Bloc after the Fidel Castro Revolution of January 1959. In Africa, Angola, Benin, Congo, Ethiopia, and Mozambique linked up in the 1960s.

Did Marxist-Leninist socialism advance modernization in the communist bloc, or would modernization have occurred anyway and without the increase in authoritarianism and the use of terror? Zbigniew Brzezinski criticized in *The Grand Failure* "the dogmatic grand oversimplification inherent in the communist claim to a unique grasp of all truth and in the communist quest for a total monopoly of power." Arguably, total monopoly of power presupposed the use of terror, which, as Merle Fainsod put in his *How Russia Is Ruled*, "[was] the linchpin of modern totalitarianism." Stephane Courtois and others implicitly extended Fainsod's insight to the entire communist bloc. When, in the interest of reforms and modernization, Stalin's successor Nikita S. Khrushchev and, even more, Mikhail S. Gorbachev, restricted the use of terror within the USSR and police violence and military intervention in the communist bloc, the bloc began disintegrating in the 1960s and broke apart completely between

1989 and 1991, after the semi-free elections in Poland in June 1989 and the establishment in September 1989 of the first Polish government after World War II that was not dominated by communists from the Polish United Workers' Party.

It is also arguable whether U.S. and Western policy of containment and coexistence helped more to break up the already reforming and modernizing USSR, the key state in the communist bloc, or whether it was U.S. President Ronald Reagan's policy of military containment through rearmament that led to the political transformation and demise of the USSR. Reagan's political war, in turn, was based on U.S. President Jimmy Carter's support of Soviet dissidents.

Finally, it remains to be seen whether Vladimir V. Putin, who was elected president of Russia in March 2000 and whose formative experience had been the breakdown of communist authority in East Germany in 1989, will succeed in attempting to reassert Russia's great power status, particularly in the territory of the former USSR. Russia's weak economy and Western diplomacy may prevent reestablishment of Russia's influence over portions of the old communist bloc.

YAROSLAV BILINSKY

COMMUNIST INFORMATION BUREAU

The Communist Information Bureau was an organization, usually known as the Cominform, created by Stalin in 1947 ostensibly for the purpose of exchanging information among the communist parties of Europe. Actually, the Cominform served two purposes: 1) to solidify relationships among the communist parties of Eastern Europe as tools of Soviet foreign policy; 2) to act as a device for dealing with Tito and the Communist Party of Yugoslavia. The organization's full name was the Information Bureau of the Communist and Workers' Parties, sometimes known by its Russian abbreviation, Informburo.

Following World War II, one of Stalin's primary foreign policy goals for Eastern Europe was to establish friendly (i.e., subservient) states in Eastern Europe as a buffer against a potentially revived Germany. Whereas the western allies did not disagree with that goal in principle, they did find the Soviet Union's revolutionary rhetoric and its aggressive policies in Poland and the Balkans unacceptable, even frightening, as they began to establish their own vision of a liberal world system. In 1947 the British decided to pull back from the international commitments that had characterized their imperial history, and the United States stepped into the breach. Citing the apparent division of the world into two camps, a free one based on "individual liberty" and an unfree one based on "terror and oppression," President Harry Truman endorsed what later became called the policy of containment, that is, limiting communism to those countries where it already existed. Shortly thereafter, the United States introduced the Marshall Plan for the recovery of Europe.

In the summer of 1947, largely in response to these western initiatives, Stalin had Wladyslaw

Gomulka, head of the Polish Workers Party, invite the representatives of Communist parties of nine European countries (USSR, Bulgaria, Czechoslovakia, Hungary, Poland, Romania, Yugoslavia, France, and Italy) to the Polish resort of Szklarska Poreba for a "private conference . . . to exchange information on the situation in the various countries" and perhaps to create a journal. Actually, as documents made available in the 1990s show, Stalin intended to create a mechanism for subordinating the activities of the other parties to Soviet aims.

The main speech at the conference, which convened on September 22, was made by Andrei Zhdanov, second only to Stalin in the Soviet hierarchy. In an aggressive and strongly-worded talk, Zhdanov restated the "two-camp" notion, but this time with the democratic camp (the USSR and its allies) consisting of those "antifascist" countries that had "broken with imperialism and have firmly set foot on the path of democratic development," and the imperialist camp (the U.S. and its allies) consisting of countries that relied on "reactionary, anti-democratic forces." Zhdanov characterized "America's aspirations to world supremacy" as "highly reminiscent of the reckless program . . . of the fascist aggressors," the Hitlerites. Stalin gave the Yugoslav party pride of place at the conference by permitting its representatives to be the harshest critics of the other parties, particularly the French and Italian, which recently had been dropped from their coalition governments. He added to Yugoslavia's prestige by making Belgrade the location of the editorial offices of the new Cominform monthly (later biweekly) publication entitled *For a Lasting Peace, For a People's Democracy!*

It is not clear whether Stalin was rewarding the Yugoslavs at Sklarska Poreba or setting them up. But in the winter and spring of 1948, a serious controversy arose between the Yugoslav party and Stalin that led to an exchange of messages. At one point the Yugoslavs stated that "no matter how much each of us loves the land of socialism, the USSR, he can, in no case, love his own country less." This was exactly what Stalin could not abide. The second meeting of the Cominform, which took place in Bucharest in June 1948, therefore expelled Yugoslavia from the fraternal brotherhood of socialist states (i.e., the Soviet bloc). Because the events leading up to this expulsion had been strictly secret, this expulsion produced a great sensation in Europe and the world. It put a shocked Yugoslavia on a path toward an independent style of self-managed socialism, while at the same time opening a vicious

campaign against alleged "Titoism" in the socialist countries of Eastern Europe.

The Cominform, now excluding Yugoslavia, met only one more time, in November 1949 in Hungary. This meeting was devoted primarily to the "anti-Titoist" campaign. Stalin's death in 1953 and the changes in Soviet policy that ensued made the organization increasingly obsolete. Khrushchev decided in 1956 to restore good relations with Yugoslavia, and the Cominform was dissolved on April 17 of that year.

GALE STOKES

COMMUNIST INTERNATIONAL

Communist International was an organization of communist parties devoted to hastening socialist revolution. During World War I, Vladimir Ilyich Lenin condemned the Second International, a loose coalition of socialist parties, because most of its leaders had voted for war credits and supported the war. He dubbed them traitors to Marxism and the proletariat, and thereafter urged creating a new international, a Third or Communist International, which would lead the world's workers to socialism.

The founding Congress of the Communist International (Comintern) in 1919 was the first step toward realizing Lenin's dream. That Congress did little more than announce the birth of the Comintern—"a unified world Communist Party, specific sections of which were parties active in each country"—and its basic principles. Delegates to the Second Congress in 1920 adopted the Twenty-One Points, which defined membership rules. Certain points deserve note. Each party seeking Comintern affiliation had to remove reformists from its ranks, purge its membership periodically, and adhere to the principles of democratic centralism. Those prin-

General Staff of the Communist International, July 1917. © UNDERWOOD&UNDERWOOD/CORBIS

ciples applied within member parties as well as to each party's relation to the Comintern. All decisions made by Comintern congresses and the Comintern Executive Committee (ECCI) were binding on member parties.

The Comintern's primary function was to identify and enact the proper strategies and tactics to promote international socialist revolution. During its existence, it enacted several policies to achieve that goal. Until 1921, it advocated the united front policy, the goals of which were to win workers away from Social Democratic and radical parties and to seize power in their respective countries. A belief in inevitable revolution drove this policy. But in 1921 the prospects for revolution ebbed, and the Comintern adopted a more flexible set of united front tactics, which allowed for conditional cooperation with Social Democratic parties, preserving the goal of extending Communist Party influence among workers.

At its Sixth Congress in 1928, the Comintern adopted a hard-line policy when it dubbed Social Democrats and reform socialists the main enemy and "social fascists." Any collaboration with "social fascists" became unthinkable. The Comintern urged workers and unions to reject and destroy Social Democrats. Known as the Third Period, this policy proved disastrous.

The Seventh Congress in 1935 rejected this policy and resolved that fascism was the primary enemy. It required member parties to drop their attacks on reformists and to forge broad antifascist coalitions. This policy, the Popular Front, lifted the Comintern's fortunes. Its call for a broad-based, antifascist struggle won many supporters worldwide. Popular Front coalition governments came to power in France and Spain in 1936. The Popular Front's victory in Spain triggered the Spanish Civil War, during which the Comintern organized the International Brigades, a ragtag

army of international volunteers who flocked there to fight fascism.

Following the Nazi–Soviet Non-Aggression Pact of August 1939, the Comintern abandoned its antifascist policy and announced that communists should not support the imperialist war in Europe. After the Nazi invasion of the USSR on June 22, 1941, Comintern policy changed again, calling for antifascist activities to defend the USSR. In 1943, on Josef Stalin's orders, the Comintern disbanded.

Although the Comintern was a collective of fraternal communist parties, the Communist Party (CPSU) wielded unrivalled influence. It did so because it was the only communist party to have seized power, it had organized the Comintern, and it provided the Comintern and member parties with political, organizational, and financial assistance. The Twenty–One Points reflected the CPSU's organizational and operative principles. Party leaders prepared many of the Comintern's major decisions and often decided which tactics and strategies the Comintern would pursue and whom to remove from and appoint to the leadership bodies of the Comintern and fraternal parties.

By the late 1920s the CPSU's values and behaviors had infused the Comintern. A variety of factors accounted for this. Within the ECCI apparatus there were CPSU committees. The removal of those who opposed the party or Comintern line hastened the process. In the 1920s the ECCI removed the followers of Leon Trotsky and Grigory Zinoviev, chairman of the Comintern from 1919 to 1926, and later the followers of Nikolai Bukharin, Zinoviev's successor, for their opposition to party policy.

Nonetheless, the Comintern was an international political institution and therefore possessed some distinctive characteristics. Most members of the ECCI and its apparatus were foreigners; representatives from abroad routinely participated in Comintern activities. The ECCI was responsible for fraternal parties, each of which was assigned to a national or regional section in the ECCI; many members of these parties lived in the USSR.

The Comintern, therefore, existed in two worlds: in the USSR, the socialist world; and in the international arena, the capitalist world. Within the USSR, its roles were to elaborate policies to strengthen the international communist movement, to defend Soviet foreign and domestic policies, and to cooperate with the appropriate party and Soviet offices. In

the capitalist world, the Comintern guided and directed Communist parties, helped to build their organizational structures, educated party members in Marxism–Leninism, and demanded that its followers defend the USSR's policies and leaders.

To manage its various activities, the Comintern had a substantial bureaucracy. Formally, Comintern congresses, held in 1919, 1920, 1921, 1922, 1924, 1928, and 1935, determined its policies. In reality, the congresses approved the policies and nominees put forth by the CPSU delegation and the ECCI. Congresses elected the ECCI, which implemented and interpreted policies between congresses. Within the ECCI apparatus, departments provided the ECCI's leaders with information about the fraternal parties; functional departments attended to routine operations.

Given the Comintern's activities abroad, it cooperated with the Commissariat of Foreign Affairs and with military intelligence and security organs. Originally relations among them provided for some measure of administrative autonomy. But from the mid-1920s cooperation between the Comintern and the Commissariat of Foreign Affairs, security organs, and the military intelligence services deepened.

Although the Popular Front raised the Comintern's international reputation, within the USSR domestic pressures placed it in a vulnerable political position. From the mid-1930s anxieties about foreign threats, a growing spy scare, and fears that foreign agents held CPSU party cards meant that vigilant police and party leaders increasingly scrutinized the Comintern. When mass repression erupted in 1937, Comintern workers and members of fraternal parties living in the USSR were often victims. By 1939 the Comintern apparatus lacked many essential personnel. Although it was not disbanded until 1943, the repression of 1937 and 1938 destroyed the Comintern's ability to function and its reputation abroad.

COMMUNIST PARTY OF THE RUSSIAN FEDERATION

The Communist Party of the Russian Federation (Kommunisticheskaya partiya Rossiiskoi Federatsii), or CPRF, descended from the short-lived Communist Party of the Russian Soviet Federative Socialist Republic (CP RSFSR). This was formed as an anti-perestroika organization within the Communist Party of the Soviet Union (CPSU) in 1990. Boris Yeltsin suspended it for its tacit support of the August 1991 coup and banned it on November 6, 1991. A group of CP RSFSR leaders headed by its First Secretary Valentin Kuptsov successfully achieved the partial repeal of the ban in the Russian Constitutional Court in November 1992, and the party reconstituted itself in February 1993 as the CPRF. Gennady Zyuganov became party chair at the party's refoundation as the candidate most likely to unite differing party trends.

The party was modeled on the template of the CPSU as a communist mass party, from primary party organizations (PPOs) in eighty-eight of Russia's regions, up to a 159-member Central Committee representing divisional leaders, a ruling seventeen-person presidium, and a number of deputy chairmen below Zyuganov. Internally, it operated on a relaxed form of hierarchical Leninist discipline known as "democratic centralism."

The CPRF's financial support incited much controversy. Officially it relied on membership sub-

scriptions and the voluntary work of its membership of some 550,000, but the donations of sympathetic "red businessmen," the material resources of the State Duma, and perhaps even former CPSU funds played a role. Increasingly, as the main opposition party, the CPRF attracted the lobbying of Russia's chief financial-industrial groups such as Gazprom and YUKOS, and, in late 2002, Boris Berезovsky caused a scandal by offering the party material support.

The party's internal composition was no less disputed. Although it was publicly unified, and possessed a consolidated leadership *troika* based around leader Zyuganov and deputy chairmen Kuptsov (in charge of the party's bureaucracy and finances) and Ivan Melnikov, observers identified horizontal and vertical cleavages throughout the party. In terms of the former, Zyuganov's "statist-patriotic communists," who espoused a Great Russian nationalistic position, were the party trend most influential publicly. "Marxist reformers" such as Kuptsov and Melnikov, who espoused an anti-bureaucratic Marxism, were less visible, owing to their vulnerability to allegations of "Gorbachevism." Much of the party professed the more orthodox communist "Marxist-Leninist modernizer" viewpoint. Moreover, whilst the parliamentary leadership was relatively pragmatic, the party's lower ranks were progressively more inclined to traditionalist militancy.

The CPRF program was adopted in January 1995 and only cosmetically modified thereafter. Though there were many concessions made to Russian cultural exceptionalism, the program committed the party to "developing Marxism-Leninism"

and a three-stage transition to a classless society with concessions to parliamentary methods and private ownership seen as temporary. The program was strongly anti-capitalist, promising the socialization of property led by the working class, while also promising the replacement of the 1993 "Yeltsin" constitution with a Soviet-style parliamentary republic, and the "voluntary" resurrection of the USSR. In public proclamations and electoral platforms (usually aimed at alliance with a "national-patriotic bloc"), the party was progressively more moderate, promising a mixed economy, not mentioning programmatic aims such as nationalization, and drawing on populist patriotism and social democracy. The contradictions between public and party faces were controversial within and outside the party.

The party became a significant electoral force in the 1993 Duma election, and by 1995 its greater visibility and organization, along with a deteriorating socio-economic climate, allowed it to become Russia's leading party and parliamentary group. This was confirmed by regional victories between 1996 and 1997, and by the December 1999 parliamentary elections, although better campaigning by pro-government competitors contributed to a loss of Duma seats. The party mobilized a stable electorate, particularly in the rural southern "red belt," but its inability to appeal to many younger urban voters limited its success. Though leader Zyuganov contested the 1996 and 2000 presidential elections (as a national-patriotic candidate), unfriendly media coverage reinforced this trend.

The CPRF was consistently critical of the post-1991 political system and governing elite, particularly liberal figures such as Yeltsin. It was an "anti-system" party in its rejection of many post-1991 political values and institutions, and was often regarded as anti-democratic. However, between 1995 and 1999 it increasingly became a "semi-loyal opposition," selectively supportive of more nationalist or socially orientated policies, notably contributing two ministers to the government of Yevgeny Primakov (September 1998–May 1999). Its failed 1999 attempt to impeach Yeltsin initiated a decline in influence. It was politically marginalized in Vladimir Putin's first presidential term and in April 2002 suffered a schism. Duma chairman Gennady Seleznyov and his supporters were expelled for forming the competitor socialist movement "Russia," although the CPRF's organizational and electoral support was little affected.

LUKE MARCH

COMMUNIST PARTY OF THE SOVIET UNION

The Communist Party of the Soviet Union (CPSU) was the ruling Party in the Soviet Union and, therefore, its most important political institution. The Party experienced a number of name changes during its history from its foundation in 1898 until the dissolution of the USSR and the banning of the Party in 1991: Russian Social-Democratic Labor Party (RSDLP) (March 1898–March 1918), Russian Communist Party (RCP) (March 1918–December 1925), All-Union Communist Party (AUCP) (Bolsheviks) (December 1925–October 1952), and Communist Party of the Soviet Union (CPSU) (October 1952–1991). There were two chief phases in the Party's life: pre-1917, when it was a revolutionary organization seeking the overthrow of the tsarist regime, and after the October Revolution, when it was the ruling Party.

AS REVOLUTIONARY ORGANIZATION

The party formally was founded at a congress in Minsk in March 1898, but because most delegates were arrested soon after, the party did not take on a substantial form until its second congress in

Brussels and London in July–August 1903. From the beginning, the party was split on two major dimensions. First, because of the activities of the tsarist police, the party could not be a legal entity within Russia, with the result that most of the leaders remained in exile abroad until 1917 while “undergrounders” worked to build the party structure inside Russia. Contacts between these two groups were not easy, with the principal channels between them being the party press, and irregular Party meetings. The second major split within the Party was divisions among the leaders at the top of the Party structure. Such divisions were frequent occurrences, arising over a combination of personal ambitions and differences over strategy and tactics. The most important of these divisions was between the Bolsheviks and Mensheviks and began in 1902; despite various attempts to patch it up, the division remained an important factor in Party life until the Mensheviks were banned in 1918.

There was little to distinguish the RSDLP from the range of other parties, cliques, and shadowy organizations that constituted the Russian revolutionary movement at this time. Ultimately what was to differentiate the Party from its competitors and give it an edge in 1917 was the single-mindedness and drive of the person who was generally acknowledged as the leader of the Bolsheviks, Vladimir Ilich Lenin. When the tsarist regime disintegrated in February 1917 and Lenin returned to Russia in April, he set about radicalizing the Party’s stance from that which had been established by the underground leaders who had come to the fore in his absence, including Josef Stalin, Lev Kamenev and Vyacheslav Molotov. This culminated in the decision in September by the Party’s Central Committee to seize power. This they did in October. While the decision to seize power was supported by large numbers of rank-and-file Party members and supporters, it was also opposed by significant elements within the party, including among its leaders (Grigory Zinoviev and Kamenev). The Party was not a tightly disciplined instrument of revolution, but a much looser organization that was able to take advantage of the chaotic conditions late in 1917 to seize power in the capital. Local Party organizations set about replicating this feat throughout the country, but their rule was not to be secure for some years.

AS RULING PARTY

Having claimed power, the Party now set about consolidating it. In its first three years, the Party

banned all other political parties, thereby instituting the single-party state; eliminated independent press organs; sought to institute a radical economic policy (war communism), which would have abolished the basis of independent economic activity; and, principally through the civil war, expanded the geographical area under its control. The failure of war communism forced the Party into a concession, the New Economic Policy, which in turn was replaced by the high-level centralization of economic life through agricultural collectivization and forced pace industrialization beginning in the late 1920s. Throughout this period, too, discipline was consolidated within the party.

In the early years of its rule, the Party was characterized by a continuation of the division and differences within the elite that had been characteristic of the prepower period. All aspects of the Party’s life came under vigorous debate within leading Party circles. However, during Vladimir Lenin’s lifetime, all of these debates ended with the victory of the position that he espoused. Following his death, the maneuvering between different groups of Party leaders for the succession saw conflict between a group around Stalin and, successively, Leon Trotsky, the Left Opposition, the United Opposition, and the Right Opposition. In all cases, Stalin and his supporters were victorious. With the defeat of the Right Opposition in 1929, Stalin emerged as Party leader. He consolidated his position during the 1930s, especially through the Terror of 1936 to 1938, emerging as the *vozhd*, or unquestioned leader of the party and the people. This process of a shift from the collective leadership of the Lenin years to the personal dictatorship of Stalin had direct implications for the Party. In the initial years of power, leading Party organs were real arenas of debate and conflict, and although Lenin manipulated Party organs, the principal basis upon which he was victorious in inner-party conflict was his ability to persuade sufficient members to support the position he advocated. With Stalin’s personal dictatorship, party organs ceased to be the scene of open political debate and instead became stylized assemblies for the laudation of Stalin. While this was not as much the case at the level of the Politburo, even here the cut and thrust of debate was blunted by the personal dominance of Stalin. In this sense, the party’s leading organs were in danger of atrophy.

This process of a shift from a situation in which open conflict and debate was the norm to one in which adherence to strict orthodoxy and the absence of public debate prevailed has been the

Stalin likely faked this photograph of himself at Lenin's summer retreat to suggest his closeness with the Soviet leader.

subject of much debate among scholars. The orthodoxy was for long the view that the emergence of Stalin and the assertion of his personal control was a direct, some even said inevitable, result of the organizational principles and practices that stemmed from Lenin. Lenin was seen to have established a highly authoritarian political structure, said to be symbolized by the principles contained in his 1901 pamphlet entitled "What Is to Be Done?" and the resolution of the Tenth Congress in 1921, entitled "On Party Unity," which closed down discussion and made personal dictatorship highly likely. Alternatively, others argue that a Stalin figure was not inevitable, that there were a number of other possible lines of development available to the party, and that a series of conjunctural developments (including the personality of Stalin) were central to the outcome that emerged. Certainly the authoritarian legacy left by Lenin may have increased the chances of such an outcome, especially in a situation of danger and underdevelopment like that faced by the Bolsheviks, but it was not inevitable. The balance of opinion now favors the second position.

Under Stalin, the party's leading organs were not active bodies; they met when he decided they would meet rather than according to a set timetable, and they exercised little independent initiative. During World War II, important decisions were more often made in the State Defense Committee than in Party bodies, and in the initial seven years of the postwar period, informal groups of leaders organized by Stalin dominated national policy making. When Stalin died, the Party's leading organs became rejuvenated, and for the remainder of the life of the Party, generally they met as scheduled and made most important decisions. At no time during these last almost four decades were these institutions arenas of public contestation, although the publication of some of the Central Committee proceedings under Khrushchev and Gorbachev did provide some sense that there were real differences being aired in some Party forums at some times. Particularly under Gorbachev, and especially from the beginning of 1987, leading Party bodies were often the scene of significant differences of opinion within the elite, with the result that, at least in this regard, leading elite organs returned to something like their Leninist forebears. The return to this situation of a divided elite playing out some of their politics in the leading organs of the Party was one factor contributing to the demise of the USSR and, with it, the CPSU.

Following the attempted putsch in 1991, which discredited the Party even more widely in the people's eyes than it had been in the years leading up to it (see below), General Secretary Gorbachev resigned from the Party and Russian president Boris Yeltsin banned it on the territory of Russia. Although this blanket ban was later overturned in the Constitutional Court, the reversal could not save the CPSU; it was, however, a life giver to the Party's chief successor, the Communist Party of the Russian Federation.

PARTY STRUCTURE

The lowest level of Party organization was the Primary Party organization (PPO), until 1934 called a cell. This was the body that every party member joined. Such an organization had to be established in any institution where there were three Communist Party members. Consequently there were PPOs organized in every institution in the USSR; every factory, farm, university, school, shop, organizational division in the armed forces had their own PPO comprising the members of the Party who worked in that institution. The PPO was thus

the principal representative of the Party throughout the institutional structure of the USSR. The structure of the PPO differed depending upon the size, but all PPOs were to meet regularly and involve the Party membership in Party and public life. In 1986, there were 440,363 PPOs.

Above the PPO, the Party structure followed the administrative structure of the Soviet state. Each republic of the USSR had its own republican-level Party organization, except the RSFSR, which, until 1990, was served by the national Soviet-level. Between the republican and PPO levels, there was a hierarchy of Party organizations shadowing the administrative divisions of the country (e.g., region, city, district). At each of these levels there was an assembly, called a conference (congress at the republican level), with the membership notionally elected by the assembly of the level next down; district bodies were elected by the PPOs. The conference at each level would meet at set times, designed to enable it to elect delegates to the conference at the next level. The timing of these was thus set at the national level by the regularity of national congresses. At each level, the conference/congress would elect a committee that, in turn, would elect a bureau. This structure was also to be found at the national, Soviet level.

At the national level, the congress was held annually until the mid-1920s, at which time the frequency and regularity decreased; there were congresses in 1930, 1934, 1939, and 1952. From the Twenty-Second Congress in 1961, congresses occurred every five years. During the early period Party conferences were also often held. These were national-level meetings, usually smaller and with less authority than the congress, but they, too, became much less frequent after the 1920s; the eighteenth conference was held in 1941 and the nineteenth in 1988. The congress was formally the sovereign body of the Party. It adopted resolutions that constituted the Party's policy on particular issues, and it elected its executive body, the Central Committee (CC), to run the Party in the period between congresses. It also formed the central auditing apparatus, responsible for keeping a check on Party finances and procedures, and until 1939 the Party control apparatus, which exercised disciplinary functions. In practice, after the 1920s the congress was too big to debate issues (there were some five thousand delegates at the last, the Twenty-Eighth Congress held in 1990) and in any case that was not its function. Under Stalin it had been transformed from an assembly in which vigorous de-

bate occurred into a tame body that did little except hear reports and ritually vote to confirm them. Even the voting for membership of the CC was nothing more than ratifying a list handed down by the leadership.

The CC began as a relatively small body. In 1922, there were twenty-seven full and nineteen candidate members, but by 1986 this had grown to 307 full and 170 candidate members, so this body, too, became too big to act as an effective forum for the discussion of ideas, although like the congress, discussion was no longer its function after Stalin gained power. Generally CC plena were held twice per year, with each meeting devoted to a particular area of concern, such as agriculture, ideology, industrial development, education, and so forth. The proceedings were stylized and standardized, with usually the Party general secretary presenting a keynote report and then other speakers presenting set-piece speeches. There was no real debate, merely a presentation of views that rarely provided evidence of much difference between the speakers, or at least of much difference from the position taken by the general secretary. This model was, however, disrupted under Gorbachev when, particularly toward the end of the period, such meetings could see quite significant criticism of the general secretary and the course he was following. The CC formed a series of standing executive organs: the Politburo, Secretariat, until 1952 the Orgburo, and from 1939 the central control apparatus; from 1966, the CC formally elected the general secretary. As with the congress election of the CC, election of these bodies simply constituted the formal ratification of lists of candidates passed down by the leadership. Membership of the CC was of two sorts: full and candidate, with the former having the vote while the latter did not.

The most important of the bodies elected by the CC were the Politburo (1952–1966 the Presidium) and the Secretariat. Simply put, these were respectively the political decision-making center of the Party and the organization that was meant to ensure that those decisions were carried out. The Politburo was a small body, divided like the CC into full and candidate members. It generally had up to twenty members, although nonmembers were often present when something pertaining to their area of responsibility was being discussed. The Politburo met weekly and was the body in which all of the most important decisions were meant to be made. The CC also elected people called CC secretaries who, collectively, formed the Secretariat.

Each secretary had a particular sphere of responsibility, and to assist them in this task they had at their disposal departments of varying sizes. These departments were organized not only so that they could administer the Party's internal affairs (e.g., departments for personnel and ideology), but also so that they could shadow the Soviet government; so, for example, there could be departments for agriculture, industry, and foreign affairs. The personnel within those departments constituted the central machinery of the Party. Some secretaries were generally members of the Politburo, and the leading secretary, the general secretary (1953–1966 the first secretary), was acknowledged as the leader of the Party.

It is clear from the above that the electoral principle was central to the Party's formal procedures with each level being elected by those below. However in practice, electoral democracy was little more than a formality throughout most of the Party's life. From early in the Party's life, this principle was undermined by what was to become the chief power axis in the Party, the nomenklatura system. The nomenklatura was first regularized in 1923. Its essence was a list of responsible positions that needed to be filled and another list (or lists) of names of people who were thought to be competent to fill them. Committees at each level of the Party had their own list of positions to be filled and people who could fill them, but by far the biggest list and the one containing all of the crucial positions was lodged in the Party's central organs. Originally justified as a way of ensuring competence and loyalty in the uncertain times of the regime's early years, under Stalin's control it became a weapon of political conflict, enabling him to fill Party bodies with his supporters. This sort of political loyalty remained a consideration in the operation of the nomenklatura throughout its life, but in terms of running the Party, its importance lay in the power it gave to the leadership to fill positions throughout the structure with people acceptable to them. Thus, when elective positions had to be filled, the nomination would come down from above and Party members would ratify it. Only under Gorbachev was there an attempt to change this system and introduce real competition for Party posts, although even then the changes he sought to make had their limitations.

This power over personnel, and therefore power over people's careers, was a crucial mechanism for maintaining loyalty and orthodoxy and for dis-

couraging heterodox and independent thought. It was consistent with the principle that, from 1906, officially governed discussion in the Party, "democratic centralism." Democratic centralism as originally envisaged provided for full and free discussion of an issue until a decision was reached, and then all were expected to fall in behind that decision and support it regardless of their own personal views about it. The problem with this principle is that, in a situation like the mid-late 1920s where the political leadership was keen to close down discussion, it could announce a decision and then invoke the principle to prevent any debate from taking place. This could be backed up by the exercise of Party discipline. Party members found guilty of breaching Party rules were subject to discipline procedures that could include expulsion from the Party and, in the 1930s, loss of life. In the Soviet Union expulsion from the Party was a significant penalty because it could lead to the person losing his job and housing, making it very difficult to survive.

Formally the Party was governed by a set of rules. These rules prescribed the formal structures and processes of Party life. They were adopted by Party congresses and constituted the effective constitution of the Party. Over the Party's life the rules were changed and modified on a large number of occasions, and although they were an expression of the formal rather than the actual way in which the Party worked, they were not a complete fiction. They did prescribe the rhythms of Party life, when congresses were to be held and so forth, and for much of the Party's existence these formal aspects were adhered to. But the rules do not give an accurate picture of the internal dynamics of the Party; they were formal and legitimizing rather than normative.

PARTY IDEOLOGY

The Party was formally guided by an ideology, a structure of ideas that purports to explain the course of historical development and thereby gives the follower the capacity to make decisions consistent with that understanding. This is a basis for legitimacy since it constitutes the claim to be able to make appropriate decisions for the furtherance of the common aim. Arising from Marxism, which constituted the core of the Soviet ideological belief system, that aim was the achievement of communism. Thus the Party seized power in 1917 in the name of achieving the communist utopia. During its life, the Party continually based itself on its

claimed adherence to those ideological tenets, variously called Marxism, Marxism-Leninism, Marxism-Leninism-Stalinism, and Leninism at different times. The content of that ideology also underwent modification and change over time. The role of ideology is complex. Ideally it should enthuse its believers and persuade them to commit to the achievement of the ultimate ends, and there clearly were very many people for whom the ideology acted in this way. However, there were also many less enthusiastic members, and their numbers grew markedly during the last three decades of the regime's life. These people were cynical of the ideology and its claims, and rather than being true believers hid their lack of belief in a stance of public commitment. For the Soviet system, the ideology was central to its own conception of legitimacy, and for this to remain unimpaired it was important that even if people did not believe, they should not be able openly to proclaim this. This is one of the major reasons why all dissent was harshly dealt with.

The ideology was related to the Party's activities through the Party program. This was a document that purported to lay out the long-term aims of the Party. Party programs were adopted in 1919, 1961, and 1986; the attempt to adopt a new program in 1990 failed because there was too much disagreement, although a draft was adopted for discussion by the CC in June 1991 just before the attempted coup. The 1961 program, adopted at the height of Khrushchev's enthusiasm for the great leap into communism, was the most optimistic of these documents, envisaging the imminent approach of communism within the USSR. But all programs should be seen much more as a set of ideals rather than a specific guide to policy, because in none of them was there a clear indication of policy lines that the political leadership then followed. But the programs were an important stone in the basis of the Party's ideologically based quest for legitimacy.

PARTY FUNCTIONS

According to the 1977 State Constitution, the Party was the "leading and guiding force" of Soviet society, and it, in fact, played this role from the founding of the Soviet state in 1917. In essence, this meant that the Party was the institution in which all major decisions about all aspects of life were to be made. In theory, this is why there were Party bodies in all collectives within Soviet society and

why the Party shadowed the state structure at all levels; if an issue was coming up in a non-Party body, the corresponding Party organ could meet and make a decision that its members, subject to Party discipline and therefore bound to implement that decision, could carry into the non-Party forum. However, in practice, because at all levels all of the chief figures were Party members, separate Party and non-Party meetings were not always needed. Party members were the dominant figures, and, through them, the Party dominated the decision-making process.

This was most important at the central level, where the Party Politburo was the chief decision-making body in the country. It made decisions on all of the major issues of national policy, and, as a result of Party discipline, these decisions were carried forward by Party members at all levels in the institutions within which they worked. In this way, the Party constituted not just the chief decision-making organization, but also the major means of ensuring the enforcement of central decisions. The Party played a crucial role in the way the system as a whole functioned; as both a decision-making organ and the organization that was ultimately responsible for ensuring that policy was carried out by state and other organizations, it was the key to the way the system functioned.

The omnipresence of Party organizations also enabled it to exercise significant control functions throughout society. Through its members, the Party was able to maintain a watching brief on what went on in all parts of Soviet society. One of the tasks of Party members, more important in the early years than later, was to act as the Party's eyes and ears to ensure that any manifestations of oppositionist sentiment were nipped in the bud. The reverse side of this control function was that of education. In principle, this remained a key responsibility of Party organizations and members at all levels, the education of non-Party members in the ethos of the Party and the principles for which it stood. Ideally Party members and organizations were meant to proselytize the Party's ideology and its message, but more realistically they were expected to act as models of appropriate behavior to their non-Party peers. In this sense, the Party was a major educative actor in Soviet society, projecting an idealized image of how good communists should behave and thereby playing a part in the socialization of the Soviet populace with the accepted values.

The all-pervasive nature of the Party plus the highly centralized personnel system means that the Party was the most important element in the staffing of the whole Soviet system. The *nomenklatura* extended not simply to Party posts, but to all of the leading posts in all of the major institutions of the society. In other words, Party bodies determined who would fill the leading posts in all parts of the Soviet system. The Party was therefore the single most important determinant of the filling of all offices throughout the Soviet Union. In this way the Party not only controlled the filling of office, but was also the primary agent of recruitment in the USSR; no one could gain leading office without approval at higher levels of the Party.

It is clear that the Party was the leading institution in the USSR: it made the most important decisions, it ensured that those decisions were carried out, it selected all leading office-bearers, and it played a significant educational/socialization role in the society. Its control was not complete, because it could never overcome both personal idiosyncrasy and the constraints stemming from the combination of large distances and communication deficiencies, but it was probably the most extensive experienced in any political system.

PARTY MEMBERSHIP

The Party was never a body that one could join at a whim; members had to be nominated, their backgrounds checked and, once they had been admitted, serve a candidate stage before being accepted into full membership. In the early years, class background was crucial for entry, but from 1939 the formal preference given to members of the working class was dropped and people were admitted regardless of the class to which they belonged; from 1961, the Party was officially a Party of "all the people." Members were always a minority within Soviet society. In 1986, before membership began to plummet in the late 1980s, there were 18,309,693 full and 728,253 candidate members, constituting 9.7 percent of the adult population. The Party remained heavily male; in 1986 only 28.8 percent of members were women. Members were subject to Party discipline, had to attend regular Party meetings, obey all Party instructions, pay membership dues, and continually conduct themselves according to the rules of the Party and the principles of what it meant to be a good communist. While the tasks were not onerous for non-office bearers, at various times they did impinge on individuals'

lives. This was especially the case if someone became subject to Party discipline, when such an entry on someone's personnel file could have significant future consequences for career advancement; being expelled from the Party was worse than never having been a member.

Party members generally gained few advantages over non-Party citizens. Officeholders were more fortunate in this regard. Just as there was a graduated scale of the power to fill office, there was a similar scale regarding access to privileges and to goods that were not widely available. In a deficit economy like that of the Soviet Union, access to scarce goods was a real bonus, and those who held official positions gained such access. The level and range of availability differed according to the level of position one occupied, but because all of the leading positions were determined by the Party, it was the Party that determined who got access to such goods. The Party was thus the key to access to privilege in the Soviet Union.

PARTY FUNDING

Officially, the Party was funded through the membership dues that all members paid and the revenues generated by sale of the Party's publications. However it is clear that, from the time of the Party's ascension to power, such dues were substantially supplemented by funds from the state. The amount of money that was transferred across in this way is unclear, but it was substantial. The Party owned property in all cities and towns in the Soviet Union, paid salaries to its employees, funded a range of publications, made provision for its own daily functioning, and funded sister parties and movements abroad. The annual budget far exceeded the amount of money brought in through fees and publications. The difference was covered by money obtained from the state. As the Soviet Union fell during the late 1980s to the early 1990s, much of this money was secreted abroad, its whereabouts as uncertain as the dimensions of the Party's real annual budget.

The Party's financial dependence on the state and the way in which it was intertwined with the state at all levels led many to argue that it was not really a political party but more a state organ. There is much to this argument, but it was neither coterminous with the state nor reducible to it. It was the first of the sort of organization that became common during the twentieth century, the ruling single party. As such, the CPSU was the prototype for which many would emulate.

COMMUNIST YOUTH ORGANIZATIONS

The Communist Youth Organization (Komsomol) was the major vehicle of political education and mobilization for Soviet youth. Founded in November 1918, and disbanded in 1991, the All-Union Leninist Communist League of Youth was one of a series of Soviet institutions dedicated to educating and regulating Soviet citizens at every life stage—the Little Octobrists, the Young Pioneers (ten to fourteen), the Komsomol (fourteen to mid-twenties), and the Communist Party.

The Komsomol was founded as an elite and “self-standing” organization of communist youth. Over the course of the 1920s and 1930s the Komsomol was gradually transformed from a select organization of activist proletarian youth into a mass organization subservient to Party policy. By March 1926, there were approximately 1.75 million young people in the Komsomol; more than half of the working-class youth in Leningrad and Moscow were members. A few years later, the Komsomol was almost twice the size of the Party. Nonetheless, as of 1936, still only about 10 percent of eli-

gible youth belonged to the Communist Youth League. In response, and at Josef Stalin’s direction, the Komsomol was formally relegated this same year to the role of a propaganda and education organization open to almost all youth regardless of class background. By 1985, the year Mikhail Gorbachev acceded to general secretary, the Komsomol reported that it had 42 million members between the ages of fourteen and twenty-seven.

Young people joined the Komsomol for many different reasons. In the first decades of Soviet power, the Komsomol provided a community of peers for urban youth, especially as all other youth groups—the Boy Scouts, religious youth organizations—were suppressed. Komsomol clubs in factories, schools, and institutes of higher education organized sports activities, drama groups, and concerts, as well as literacy and antidrinking campaigns. The Komsomol offered a new identity as well as new opportunities; some young people experienced the exhilaration of the Revolution, the struggle of Civil War, and the rapid industrialization of the Stalin era, with a sense of great personal involvement. Like joining the Party, becoming a member of the Komsomol could also confer economic and political benefits. It helped pave the way to eventual Party membership, and Komsomol members were often awarded important political and agitational positions. The Komsomol was not equally relevant or available to everybody, however. Proletariat males were at the top of the ladder of Bolshevik virtue, while peasants, students, and women of all classes were on lower rungs. Women of all classes made up just 20 percent of the Komsomol in 1926. Although their numbers increased throughout the Soviet period, they remained underrepresented in leadership positions.

The energetic participation of some Komsomol members in the dramatic industrialization and collectivization campaigns of the early 1930s did not protect either the rank-and-file or the Komsomol elite from the purges. In 1937 and 1938, the entire Komsomol bureau was purged and the first secretary, Alexander Kosarev, was executed along with several others. During World War II, the Komsomol was deeply involved in patriotic campaigns and was effective in this period of national defense at attracting members and encouraging enthusiastic response to patriotic propaganda. The war was the final high point of the Komsomol, however. After the war, the Komsomol was increasingly trapped between the Party’s demands for political conformism and young people’s increasingly diverse

Young Pioneers march on Red Square. © AFP/CORBIS

and internationally informed desires for relevance and for entertainment. The conservatism of the Komsomol was reflected in the aging of its leadership. In 1920, the median age of a delegate to a Komsomol Congress was twenty. In 1954, it was twenty-seven. By the years of stagnation (the period of Leonid Brezhnev's leadership) the Communist Youth League was mired in bureaucracy and corruption, and unable to remake itself; it had become a mass membership organization to which few truly wanted to belong, but many felt they needed to join in order to advance professionally and politically. The Komsomol's irrelevance to a changing Soviet Union was even more evident during the transition to Mikhail Gorbachev's presidency. The Communist Youth League lost millions of members per year (1.5 million in 1986, 2.5 million in 1987) and disbanded itself at a final Komsomol Congress in September 1991.

CONGRESS OF PEOPLE'S DEPUTIES

The Congress of People's Deputies was a legislative structure introduced in the Soviet Union by CPSU

(Communist Party of the Soviet Union) general secretary Mikhail Gorbachev. Its purpose was to expand elective representation in policy debate and decision making, while leaving final power at the disposal of the top party leadership. The USSR Congress of People's Deputies lasted only from 1989 until 1991. It nevertheless marked an important step in the opening of the Soviet system to competitive electoral politics. A Congress of People's Deputies for the Russian Republic (RSFSR) was also established, but it lasted only from 1990 to 1993.

Under Gorbachev's model, the new USSR Congress of People's Deputies replaced the USSR Supreme Soviet. The old Supreme Soviet had 1,500 deputies, 750 elected in ordinary territorial districts based on equal population, and 750 elected in "national-territorial" districts representing the ethnic territorial subdivisions of the country. To these the new congress added another 750 deputies elected directly from existing recognized "public organizations" such as the CPSU, the trade unions, and the Academy of Sciences, with quotas set for each organization.

The congress elected a smaller full-time Supreme Soviet from among its 2,250 members. This inner parliament had 542 members divided into two chambers of equal size and functioned like a democratic parliament, debating and voting on laws. Most of its organizational and agenda decisions were made, however, by its Presidium. The Presidium structure was a carryover from the old regime, where it had effectively controlled the Supreme Soviet through its large full-time staff. The Presidium and its chair continued to direct the congress and Supreme Soviet into the Gorbachev period as well.

The March 1989 elections to the USSR Congress of People's Deputies proved to be a turning point in the Gorbachev era. The elections stimulated a surge of popular participation in politics, often directed against the Soviet regime itself. Many senior Communist Party officials who ran for election as deputies were defeated. The elections brought a new wave of democratic and nationalist political leaders into politics. Boris Yeltsin, for example, won a landslide victory from an at-large seat in Moscow. When the First Congress convened in May 1989, the televised proceedings, featuring stirring speeches by famous personalities such as Andrei Sakharov, riveted the public. Soon it became clear that the congress was too large and unstructured to be an effective forum for decision making, but it did give a platform to many politicians and ideas. Moreover, the Supreme Soviet that it elected

enacted some significant legislation on such topics as freedom of religion and the press, judicial reform, and local government. A system of competitive political caucuses emerged.

The Russian Soviet Federative Socialist Republic (RSFSR) Congress of People's Deputies formed in 1990. Like the USSR congress, the RSFSR congress elected a Supreme Soviet to serve as a full-time parliament. Yeltsin was initially elected as chair, but left parliament when he was elected president of RSFSR a year later. An intense power struggle between president and parliament followed. Ultimately, in September and October 1993, Yeltsin forcibly dissolved the congress and Supreme Soviet. The new constitution approved by national referendum in December 1993 replaced the congress and Supreme Soviet with a bicameral Federal Assembly.

CONGRESS OF RUSSIAN COMMUNITIES

The Congress of Russian Communities (Kongress Russkikh Obshchin, or KRO), an offshoot of the Union for the Rebirth of Russia, was founded in 1993 by Dmitry Rogozin as the International Congress of Russian Communities for the representation of Russian and Russian-speaking residents of the "nearby foreign lands." It brought together Russian communities and sociopolitical organizations in the national republics of the Russian Federation and in the former republics of the USSR. In the fall of 1994 the Russian KRO was founded for participation in state Duma elections. Later, in January 1995, the electoral bloc of the KRO was

renamed the sociopolitical movement Congress of Russian Communities. Yuri Skokov was elected chair of the National Council. A former secretary of the Security Council (1992–1993), he had once been close to Yeltsin, but fell out with him later. Dmitry Rogozin was elected chair of the Executive Committee. KRO leaders included such famous figures as Stanislav Govorukhin, Yegor Stroyev, Nikita Moiseyev, Viktor Ilyukhin, Sergei Glaziev, and Konstantin Zatulin.

In the 1995 Duma elections, the KRO, enticing the disgraced and highly popular general Alexander Lebed into the second place on its list of candidates (Skokov was first, and Glaziev third), won 3 million votes and almost reached the required threshold to gain a seat (4.3 percent). The KRO program, a mix of statism and patriotic values, impressed many, but its figurehead was not a brave general, rather an unknown apparatchik. Of the ninety candidates proposed by the KRO in single-mandate districts, only five were elected into the Duma, including Lebed and three candidates of Chelyabinsk Oblast, where the KRO collaborated with the Movement for the Rebirth of the Urals and the former governor Petr Sumin. Later, in 1997, Rogozin, now the sole head of the KRO, entered the Duma by-elections with the slogan “We are Russians! God is with us!” His platform included “the fusion of immemorial Russian values with the attainment of advanced technology”; “a federal, lawful, democratic government”; and a “highly effective and socially oriented market economy.” At the beginning of the 1999 Duma electoral campaigns, along with a few little-known political movements, the KRO constituted the organizational basis for Yuri Luzhkov’s Fatherland movement. As the latter gained influence, the KRO and its leader were edged out of key positions, and they left Fatherland in the summer of 1999. As a result, the KRO entered the elections along with the movement of Yuri Boldyrev and suffered a fiasco, winning only 400,000 votes (0.6 percent). Rogozin was re-elected by his majority district, entered the pro-government People’s Deputy group, and headed the Duma committee on international affairs.

An extraordinary session of the KRO elected Glaziev chair; he was at the time cochair of the National Patriotic Front of Russia (NPSR). It was announced that the KRO would not participate in upcoming Duma elections, so as not to promote the “further division” of patriotic forces, but was willing to “act as an organizer of a patriotic coalition.”

NIKOLAI PETROV

CONSISTORY

The consistory was main diocesan administrative and judicial organ in the Russian Orthodox Church from the eighteenth century to the early twentieth. The 1721 *Spiritual Regulation* of Peter I marked a new period in the history of the administrative life of the Orthodox Church. Although the *Regulation* did not refer specifically to a consistory, nineteenth-century Russian church historians cited Clause 5 in the section pertaining to bishops as pointing to the eventual consistory. Diocesan administration changed only gradually in the eighteenth century. In many ways it came to mirror the provincial government administration, as well as the collegial organization of the church’s higher administrative body, the Holy Synod. Although the consistory can be seen as part of the modern institutional church, nineteenth-century churchmen often associated it with an ancient form of church government (a council of presbyters) described in the writings of such early Christians as Ignatius of Antioch, Cyprian of Carthage and Ambrose of Milan.

During the early decades of the eighteenth century, diocesan boards were referred to by various names. A 1744 directive called for a uniform name—“consistory”—for all such diocesan boards. An 1832 directive reiterated this directive for the Kiev, Chernigov, and Kishinev dioceses. The responsibilities and rules governing the consistory were finally standardized in 1841. This statute was revised in 1883 and remained in effect until 1918.

Consistories were organized into two parts: a collegial board (usually three to five members;

more if local circumstances demanded) and a chancery office. The management of the consistory's day-to-day business fell to a chancery office staffed by lay clerks and overseen by a secretary. At first, members of the consistory's board were drawn mostly from the monastic clergy. By 1768, that trend was reversed, and a 1797 directive instructed that at least half of the consistory's members be chosen from among married parish priests. Deacons were not eligible to serve on consistory boards. In theory, the bishop presided over the consistory, and no decision could be put forward without his ratification. In practice, however, the issue of authority was not always so clear. For instance, the diocesan bishop nominated members for the board, but the Holy Synod confirmed them. Similarly, while responsible to the bishop, the secretary was nominated by the ober-procurator and confirmed by members of the Holy Synod.

The consistory oversaw a wide range of affairs. These included the growth and preservation of the Orthodox faith (and the teaching and preaching that helped to achieve these ends); liturgical schedules; the maintenance and decoration of churches; the recommendation of candidates for clerical positions; the dissemination of episcopal and synodal directives; and the collection of records from parishes. As an ecclesiastical court, the consistory was concerned with certain issues relating to marriage and divorce; birth, baptismal and death records; crimes and misdemeanors involving clergy; complaints against clergy for negligence in their liturgical or pastoral responsibilities; and disputes among clergy over the use of church property. Although the consistory's judicial concerns lay primarily with clergy, laity became involved when the issue of penance (*epitemiya*) arose.

The chancery processed numerous requests, petitions, and reports by dividing them among various "tables." Members of the consistory's board were assigned to oversee these tables but, in practice, preparing a case for presentation and resolution depended largely on lay clerks. Once cases were ready for review, members of the board, at least in theory, were supposed to review and decide on them collectively. The secretary oversaw the decision-making process and helped to resolve cases that members could not decide unanimously. The diocesan bishop was to review and ratify all decisions.

The consistory became a subject of debate in the late nineteenth and early twentieth centuries. Churchmen often complained that the consistory's

formalism and lack of efficiency caused ill relations between parish clergy and laity on the one hand and the diocesan administration on the other. Churchmen were also concerned about the bureaucratic quality with which serious issues of Christian life were often decided, with seemingly no attention to scripture or canon law. Low pay for consistory employees did not help matters, and complaints of bribes were not uncommon. Evaluations of the consistory were determined in large part by the evaluator's perspective and understanding of episcopal authority, the relationship between the central, diocesan, and even more regional church administrations, and the involvement of laity in the management of diocesan affairs. Most churchmen maintained that the consistory's judicial and administrative functions should be separated and independently overseen, as they had been in the civil sphere since 1864. In 1918, the All-Russian Church Council carried out sweeping church administrative reforms, and the consistory ceased to exist. In its place, the Council established a separate local diocesan court, a diocesan council and a diocesan assembly.

CONSTITUENT ASSEMBLY

The All-Russian Constituent Assembly, which opened and closed on January 5, 1918, was elected to draft a constitution for the new Russian state. Prior to 1917, most oppositionist parties agreed that a democratically elected assembly should determine Russia's political future. Just after the February Revolution, State Duma and Petrograd Soviet

leaders who created the Provisional Government specifically tasked it with prompt elections to the Constituent Assembly. During 1917, virtually all political parties indicated their intention to participate in them and to abide by the results. Still, moderate Provisional Government ministers, fearing the results of democratic elections and preoccupied with the war, postponed the elections, undercutting the government's legitimacy and precipitating a shift of support to radicals. By the early fall of 1917, Bolshevik, Left Socialist Revolutionary (Left SR), and other supporters of "soviet power" and an "all-socialist government" proclaimed that only the Provisional Government's overthrow would bring about the Constituent Assembly, still viewed as final arbiter of Russia's fate.

The elections, with over 60 percent voter participation, occurred on November 12, 1917, after the overthrow of the Provisional Government, seemingly fulfilling the radicals' predictions. The elections awarded the Socialist Revolutionaries (SRs) a huge vote from the empire's peasants. The Bolsheviks did well among urban laboring populations and soldiers at the fronts, whereas the liberal Constitutional Democrats received support from educated and prosperous middle classes. Far rightist parties did poorly, as did the formerly popular Mensheviks. Overall, the SRs and their Ukrainian, Armenian, and other ethnic allies received more than 50 percent of the votes cast, as opposed to the Bolsheviks' 25 percent. In response, the Bolsheviks and Left SRs alleged that the SR Central Committee had undercut Left SR representation by placing moderate SRs on party candidate lists.

The Constituent Assembly, with its effective SR majority, met on January 5 in Petrograd and elected the SR leader Victor Chernov as chair. After lengthy deliberations and the withdrawal of the Bolshevik and Left SR factions, the Leninist government declared the session closed and placed guards around the locked building. Thus ingloriously ended Russia's most democratic electoral experiment until the 1990s. Presumably, the assembly would have written a constitution in a socialist and democratic spirit. Although some Petrograd workers demonstrated in support of the Constituent Assembly (and were dispersed by deadly fire), the nation's population responded weakly. This passive reaction reflected in part a common misunderstanding of the assembly as a government in competition with the still popular Soviet government. Many SR delegates withdrew to the Volga region, where, by the late summer of

1918, they formed a government in Samara, which they hoped would be based upon a quorum of Constituent Assembly delegates. Like other attempts by moderates during 1918 at state-building, this fledgling government, an alternative to the Communist regime in Moscow, was crushed between the militarily predominant Red and White extremes. Viewed by some as a footnote in the creation of the new socialist state, and by others as the end of democracy for the Russian Revolution, the Constituent Assembly's demise was a perplexing tragedy.

MICHAEL MELANCON

CONSTITUTIONAL COURT

The Constitutional Court was established in July 1991, prior to the breakup of the USSR. The Court was to be made up of fifteen judges, elected by the parliament for a limited life term (until age sixty-five). However, the parliament could agree on only thirteen of the nominees; leaving the other two seats vacant. Modeled on the constitutional courts of Western Europe, especially the German Federal Constitutional Court, it is the only body empowered to review constitutional questions.

Initially, the Constitutional Court, under the leadership of Chief Justice Valery Zorkin, carefully screened the cases it heard, thus attempting to avoid sharp clashes with either the parliament or the president. However, by 1993, Zorkin and several other justices had aligned themselves with the parliament against President Yeltsin. On October 17, 1993, two weeks after his security forces clashed with rioting protestors at the White House (Russia's parliament building), President Yeltsin issued a decree suspending the Constitutional Court pending the adoption of a new constitution.

The Constitution of 1993 and a new "Law on the Constitutional Court" of July 21, 1994, enlarged the court to nineteen members. Under this new legislation, judges were to be nominated by the President and confirmed by the Federation Council. In order to handle the rapidly increasing caseload, the new law permitted the court to consider multiple cases simultaneously. Under the provisions of the new law, judges no longer served for life; rather they have twelve-year terms. Retirement was made mandatory at the age of seventy.

The Constitutional Court is charged with ruling on the constitutionality of federal laws, presidential enactments, republic constitutions, regional charters, international treaties, and republic, regional and local legislative and executive acts. The court also has the responsibility to resolve jurisdictional disputes between state and legislative bodies at the federal and lower levels.

Access to the Court is relatively unrestricted; most cases require no previous hearing. After hearing oral arguments from interested parties, the judges retire to draft opinions (and, more rarely, dissenting options). Rendering a decision is a slow process, often taking two to four weeks. Decisions of the court are final and not subject to appeal. Although the Court agrees to hear only a small portion of all cases filed, it issues many determinations (*opredeleniya*) that, although falling short of official decisions, attempt to revolve disputes by referring to previously rendered decisions.

In contrast to the previous court, the Constitutional Court of the Russian Federation initially focused on cases involving the rights of the individual. In the period from 1995 to 1996, more than 70 percent of the cases considered by the court dealt with individual rights, while only 12 percent dealt with separation of powers and 17.6 percent dealt with questions of federalism. The court appeared to be directing its attention to types of cases that would bolster its legitimacy and solidify its place in the judicial system, while avoiding conflicts with other branches of government and with the powerful regional governors.

With the election of President Vladimir Putin in early 2000, the Constitutional Court adopted a more assertive role again, especially in cases relating to Russia's federal relations. The Constitutional Court ruled that the constitutions of several republics violated the Basic Law of the Russian Federation, forcing them to revise their constitutions to bring them into line with the federal constitution. In contrast, the Court has, with a few notable

exceptions, prudently avoided clashing with the President. The future legitimacy and credibility of the Court will depend on its adroitness in avoiding damaging confrontations with powerful state officials in which it cannot prevail, while still rendering meaningful decisions that uphold the primacy of constitutional principles.

CONSTITUTIONAL DEMOCRATIC PARTY

The liberal Constitutional Democratic Party, or Party of People's Freedom (known as the Cadets, from the initials of its name), was Russia's largest political party before 1917. Founded in October 1905, the party's basic goals were embodied in its name: transformation of Russia into a constitutional, rule-of-law state and democratization of the political and social order. Its program called for civil rights for all citizens, including freedom of speech, assembly, religion, and person; full equality of all before the law; a legislative body elected by equal, direct, universal suffrage (female as well as male); separation of church and state; and greater local self-government. The program also contained important social provisions, including labor protections and the right to unionize and strike, mandatory health insurance and state-funded old age pensions, a progressive income tax, and a state land fund to address peasant land hunger.

At its height, in 1905 and 1906, the Constitutional Democrats had approximately 100,000 members and 346 local party organizations, and was strongest in larger urban areas. Prominent leaders included Peter Struve, Ivan Petrunkevich, Prince Dmitry Shakhovskoy, Vladimir Nabokov, Maxim Vinaver, Andrei Shingarev, and the party head, Paul Miliukov. The composition of the Cadets

was diverse, consisting of educated professionals (professors, lawyers, doctors, engineers), low-level white-collar workers and teachers, petty traders, artisans, shop clerks, and some workers and peasants. The party's commitment to cultural self-determination for minorities was attractive to elements of the empire's large non-Russian population, particularly Ukrainians, Jews, and Armenians. Thanks to their relative indifference to economic development, the Cadets attracted few of the so-called big bourgeoisie.

The Constitutional Democrats enjoyed their greatest success in March 1906 in Russia's first-ever national elections, from which they emerged as the largest party in the First Duma with 179 seats. Mutual lack of trust and cooperation between government and Duma resulted in a speedy dissolution, in July 1906. The Cadets again won the largest number of deputies in the elections to the Second Duma, although fiercer competition from socialists reduced their seats to one hundred. Despite liberal efforts to make the Second Duma productive and less provocative, the lower house was dissolved on June 3, 1907. The government simultaneously issued a restrictive new electoral law that disenfranchised many liberal voters, reducing the Cadets in the Third and Fourth Dumas to around fifty-five deputies.

Over the next seven years the party endured government harassment, shrinking membership, and the defeat of most of its reform bills. World War I helped restore the party's fortunes, as the Cadets wholeheartedly supported the war effort and played a leading role in the Union of Cities and other relief organizations. In the summer of 1915, the Cadets helped orchestrate the Progressive Bloc, a broad, reformist coalition in the Duma that sought to restore public confidence in the war effort.

The Constitutional Democrats enthusiastically welcomed the February 1917 revolution and helped establish the first Provisional Government, in which they held five portfolios; party membership burgeoned. Their newfound popularity quickly waned, however, due to their continued support for the unpopular war and related insistence on postponing social reforms. Determined opponents of the Bolsheviks, the liberal Cadets were the first party outlawed by the new Soviet government, in December 1917, despite their having won only 2 million of the 41.6 million votes cast in the elections to the Constituent Assembly. Much of the

party leadership joined the anti-Bolshevik movement; after the Red victory in the Civil War, many Cadets emigrated to Europe, where they reconstituted the party organizations and debated how to end Bolshevik rule in Russia. The Constitutional Democratic Party split into two separate organizations over this issue in Paris in July 1921; it formally ceased to exist in 1924.

MELISSA K. STOCKDALE

CONSTITUTION OF 1918

Adopted on July 10, 1918, amid violent civil war, the Soviet Constitution of 1918, the first charter of the new Russian Socialist Federated Soviet Republic (RSFSR), was described by Vladimir Lenin as a "revolutionary" document. It was, he said, unlike any constitution drafted by a nation-state. Nor was it derived, he noted, from any traditional Russian or Western juristic principles.

Unlike the three Soviet constitutions to follow (in 1924, 1936, and 1977), the 1918 constitution included the candid statement that absolute power resides in the "dictatorship of the proletariat," as embodied in the ideology of Marxism-Leninism and as specifically derived from the concept of socialist dictatorship developed in Karl Marx's major work, *The Critique of the Gotha Program*. The proletarian dictatorship is described in Soviet ideology as "power not limited by any laws." Although the constitution was proclaimed the "fundamental law of the Soviet State," the constitution was by no means seen as the only source of legal norms. The CPSU(b) Program and the decrees and orders of the Party Central Committee likewise were fully normative. So were decrees issued by the Council of People's Commissars.

Soviet constitutions thus reflected the fact that the Soviet state, the "superstructure" erected upon the economic "base," was the political expression of exclusive, one-party rule by the CPSU(b). Subsequent constitutions omitted specific reference to this dictatorship. Instead, they acknowledged, as did explicitly the last constitution of 1977, that the Communist Party was the "leading core" of all political and social organizations.

Other parts of the 1918 charter differed radically from previous or later constitutions of other states throughout the world. For instance, the 1918 constitution laid out the fundamental ideological goals of the Communist Party. One such goal was the building of a socialist society. Another was the promotion of world revolution. This wording was imitated in the charters of Soviet republics annexed into the union, which was officially proclaimed as the USSR in 1924.

The national legislative body established under the constitution was known as the All-Russian Congress of Soviets, described as the “supreme organ of power,” despite the fact that most key legislation originated in the CPSU(b) bills presented to the congress were almost always passed and enacted unanimously. Moreover, the constitutionally empowered Central Executive Committee, that is, the perpetually meeting executive organ of the congress, was empowered, through its Presidium, to issue major decrees during the long interims between annual (later, less frequent) sessions of the more than two thousand-member plenary congress. Another governing body, the Council of People’s Commissars, whose chairman was head of the government, or premier, likewise had the constitutional power to issue decrees.

In the congress served deputies of workers, peasants, and soldiers chosen and elected on single-list, nonsecret ballots from the provinces and other, smaller political-administrative areas of the RSFSR. In practice, the Congress of Soviets, like the USSR Supreme Soviet to follow as established in subsequent constitutions, became a “rubber-stamp,” or pseudo-parliament whose powers were purely formal.

The first Soviet constitution of 1918 contained no formal listing of constitutionally guaranteed rights. Yet when the rights were eventually itemized in the 1936 constitution, the condition was inserted that the expression of all such rights by the populace must be “in accordance with” the principles laid down by the Communist Party. Constitutions in all sixteen (later fifteen) republics contained this provision, which, in effect, narrowed the expression of traditional civil rights.

ALBERT L. WEEKS

CONSTITUTION OF 1936

The Soviet Constitution of 1936, also known as the “Stalin Constitution,” was approved by the Eighth Congress of Soviets and became law on December 5, 1936. This Constitution remained in force until 1977 when Leonid Brezhnev based his new “Brezhnev Constitution” on the 1936 document. At Josef Stalin’s urging, the Central Committee of the Communist Party had proposed to the Seventh Congress of Soviets in February 1935 that the 1924 Constitution be changed to reflect the profound transformations in Soviet society wrought by the First Five Year Plan (1928–1932). According to the Soviet government, the main goals of the new constitution were to reflect the successful attainment of socialism in the USSR, to institute universal suffrage, and to grant basic civil rights to the entire Soviet population. Former class enemies such as the nobility, the bourgeoisie, priests, and so-called rich peasants or “kulaks” would now be incorporated into Soviet life as equal citizens with full civil rights. The constitution affirmed that “socialist ownership of the instruments and means of production . . . shall constitute the economic foundation of the USSR,” though it did allow “the small-scale private economy of individual peasants and artisans based on their personal labor”; private ownership of small plots of land, houses, and domestic property; and inheritance of private property. The document expanded the state’s role in providing social welfare by guaranteeing the right to work, free secondary education, and medical aid for all toilers and by furnishing social insurance and paid vacations for industrial and white-collar workers. The constitution also reorganized the Soviet government based on direct elections and reshaped the federal structure of the Soviet Union.

In a marked departure from previous Soviet political practice, a draft constitution was circulated beginning in June 1936, and the population was invited to take part in a “nationwide” discussion to propose changes. Throughout the summer and fall of 1936, the Soviet government put

extensive pressure on local officials to organize collective discussions of the draft. Soviet figures claim that as many as seventy-five million people, or 80 percent of the adult population, took part in these discussions. In spite of the dangers of speaking out, the population actively criticized certain aspects of the draft constitution, such as the privileged status of workers in comparison to peasants. Many also protested the granting of equal rights to former class enemies. After polling citizens on their views, the government largely ignored the opinions gathered. Few of the changes proposed by the Soviet population made it into the final version of the constitution.

Given the repressive political climate throughout the 1930s, one of the most striking aspects of the Stalin Constitution is the explicit enumeration of the civil rights of the individual. The constitution guaranteed “universal, equal and direct suffrage by secret ballot” and created new legislative bodies at the all-union, republican, and local levels. The new Supreme Soviet of the USSR, the supreme soviets of the union republics, and various local soviets were all to be directly elected. Paradoxically, the government let loose a barrage of publicity informing citizens about the candidates for the Supreme Soviet elections in December 1937, despite the fact that each district ballot had only one candidate, who had been chosen in advance by Party and government officials. The constitution also guaranteed Soviet citizens equal rights irrespective of gender, nationality, or race; freedom of religious worship (but not religious propaganda); freedom of assembly; freedom of association; freedom of the press; and inviolability of person and of the home (Articles 122–128, 134). These extensive guarantees remained only on paper, however, as the Soviet government trampled on the civil rights of its citizens through censorship, persecution because of religion and nationality, and widespread illegal arrests and executions.

The transformations in the federal structure of the Soviet Union brought about by the Stalin Constitution were more substantive. The constitution named eleven territories (Russian, Ukrainian, Belorussian, Azerbaijan, Georgian, Armenian, Turkmen, Uzbek, Tajik, Kazakh, and Kyrgyz) as union republics and granted other ethnic territories the status of autonomous republics and regions. This administrative structure created a hierarchy of nationalities that gave some groups more privileges than others. The constitution also enumerated a new division of powers between all-union and republican institutions. There is a scholarly consen-

sus that the constitution represented a move toward greater political centralization at the expense of the Soviet republics.

Analysts have sharply diverging views of the importance of the Stalin Constitution. Because of the egregious failure of the Soviet government to respect the civil rights it guaranteed in the constitution, most critics from the 1930s onward have dismissed the constitution as mere propaganda or window-dressing intended to woo Western European allies in the popular front against Fascism. In the early 1990s, a new interpretation (Getty) suggested that the constitution, and the elections that followed in 1937, were a genuine but abortive attempt to democratize the Soviet Union. According to this view, the constitution was both an attempt to tighten political control over the vast Soviet territory and a potential turn toward democracy that Stalin ultimately decided not to take. Stalin’s political intentions and the reasons behind the cancellation of contested elections in late 1937 after several months of preparations for them may never be known, but the remarkably contradictory nature of the document and the disjuncture between Soviet law and life are undeniable.

Scholars writing in the late 1990s have argued that the constitution, despite its many contradictions, should not be dismissed as mere propaganda (Davies; Petrone). They suggest that the constitution introduced Soviet citizens to a new political language and opened up spaces for the discussion of such issues as justice, equality, and civil rights. This political language offered Soviet citizens new ways to articulate demands and means to negotiate with state authorities. While the promulgation of democratic ideals may have provided citizens with ways of envisioning alternatives to Soviet political structures, these alternatives were crushed by the intense repression of the late 1930s.

KAREN PETRONE

CONSTITUTION OF 1977

The 1977 USSR Constitution was a curious mixture of fact and fiction. It gave a correct description of the formal government structure of the USSR and correctly noted in Article Six: "The guiding and directing force of Soviet society, the nucleus of its political system, state, and societal organizations is the Communist Party of the Soviet Union." At the same time, it contained a purely illusory set of promises of basic human rights and the fundamentally false statement that the Communist Party "exists for the people and serves the people." This "Brezhnev" Constitution, adopted when Leonid Brezhnev was General Secretary of the Communist Party, replaced the 1936 "Stalin" Constitution. It did not bring any significant immediate changes in the Soviet system. However, under Mikhail Gorbachev in the 1980s, radical changes began to occur in the USSR, and the 1977 Constitution was amended to advance these changes. As the USSR disintegrated in 1990 and 1991, the constitution lost its practical importance. On December 25, 1991, the USSR was formally dissolved, thus ending the story of the 1977 Constitution.

The opening chapter of the constitution was devoted to the political system. It accurately affirmed the superiority of the Communist Party. But it incorrectly stated that "all bodies of state power are elective from the lowest to the highest." In fact, all important positions were filled by orders from the Communist Party. And it misled when it said that the Soviet state protects "the rights and freedoms of citizens." The next chapter gave a generally accurate description of the economic system based on state ownership and state planning. The following chapter on social development and culture correctly noted the state's role in providing public health and edu-

cation services. However, it failed to note that the economic system provided for extraordinary privileges for members of the Communist Party elite. The chapter misinformed when it said, "the development of professional art and of the artistic creativeness of the people is encouraged in every way," since in fact only creative works that met the narrow tastes of the party leadership were encouraged.

The chapter on basic rights pointed out economic rights that were to a large extent implemented and civil rights that existed only on paper. The economic rights included rights to full employment, education, medical care, housing, and pensions. The political rights included a right to vote that was in fact meaningless because the Communist Party allowed only one candidate for each position, and a right to free speech that was mocked in practice by the sending of dissidents to labor camps and psychiatric institutions. The remaining chapters provided a relatively accurate description of the formal governmental structures of the USSR, though, of course, these structures were all subject to the leading role of the Communist Party as stated in Article Six of the Constitution. Even these chapters contained gross omissions and outright untruths. The provisions on elections did not mention that the party only allowed one candidate to run for each position. The provisions on the Supreme Soviet did not mention that it was controlled so as always to rubber-stamp unanimously anything that had party approval. The provisions on the courts did not mention that judges were expected to obey telephoned instructions from party officials.

Mikhail Gorbachev engineered major amendments in 1988, 1989, and 1990, which reflected and hastened the decline of Communist Party dictatorship. The 1988 amendments provided for relatively free elections to a newly created Congress of People's Deputies, though the election constituencies were structured to favor the Communist Party. Further amendments in 1989 and 1990 abolished the special Constitutional position of the Communist Party, legalized competing political parties, restructured the electoral system to be fully democratic, and created the post of president. Mikhail Gorbachev was chosen president by the Soviet parliament. A constitutional amendment provided that future presidents should be chosen by popular election, but the Soviet Union dissolved before such an election could be held. Also during the period 1988-1990, under Gorbachev's leadership, restrictions on private businesses were swiftly abolished. The constitution was amended to legalize

private business. In the area of civil rights and human rights, Gorbachev greatly liberalized the Soviet system. An amendment to the constitution created a Committee on Constitutional Review empowered to examine legislation for conformity to the constitution. During its brief existence, the committee found unconstitutional a number of the worst features of the Soviet system, such as secret legislation and restrictions on freedom of movement.

PETER B. MAGGS

CONSTITUTION OF 1993

The Constitution of the Russian Federation was enacted on December 12, 1993 by a public plebiscite. With the breakup of the USSR in late 1991, Russia needed a new constitution to enshrine the democratic values of post-communist Russian society and to establish the legal foundations for its governing institutions.

The Constitution was the product of a three-year struggle between President Boris Yeltsin and his parliament. Throughout the period 1991 through 1993, various draft constitutions circulated. Some allocated the majority of power to a new parliament, while others favored a strong presidential system. Sharp differences also erupted between proponents of a strong central government, versus

those who favored the devolution of power to the constituent republics and regions. Finally, the process by which a new constitution would be approved was not clear; some favored the convening of a constitutional congress, while others favored a referendum. The inability to resolve these issues resulted in a stalemate that led to Yeltsin's dissolution of the parliament and attack on the White House (Russia's parliament building) in October 1993.

Once ratified in December 1993, the Constitution established a strong presidential republic; some describe it as a superpresidential system. The Congress of People's Deputies was replaced with a bicameral (two-chamber) Federal Assembly. The upper chamber, the Federation Council, has 178 members—two from each of the eighty-nine republics and regions that comprise the Russian Federation. The Federation Council confirms appointments to the Supreme Court and the Constitutional Court, authorizes the use of armed forces outside Russia, and considers legislation coming from the lower chamber on the budget, taxes and currency matters, international treaties, and domestic policies.

The lower chamber, the State Duma, is comprised of 450 deputies, one half elected by a plurality in each constituency and the other half from party lists on a proportional basis. The Duma confirms nominations for Prime Minister; can pass a bill of "lack of confidence" in the government and, if such a bill is passed twice in a three-month period, can force the president to announce the resignation of the government or dissolve the Duma itself. It also confirms and dismisses the chairman of the Central Bank, Accounting Chamber, and Commissioner on Human Rights; declares amnesties; and adopts federal legislation.

The President, elected to a maximum of two four-year terms, appoints the Prime Minister, subject to consent of the Duma. The President also names other members of the government, as well as the chair of the Central Bank, judges of the Supreme Court and Constitutional Court, and the Procurator-General. The President has primary responsibility for foreign and defense policy and chairs the Security Council.

The President may dismiss the government without consultation or consent of the Duma. The President can call for a national referendum and can issue decrees that are binding, so long as they are not in conflict with federal law or the constitution. The President can veto legislation, which requires

a two-third vote of both houses to be overridden. Under certain circumstances, the President also has the power to dissolve the parliament and force new elections.

The 1993 Constitution establishes federal supremacy over “the subjects” of the Russian Federation. The President has the power to suspend acts of executive officials in the regions and republics. Although Article 72 mentions broad policy areas that are considered “joint federal-regional jurisdiction,” it is the President who mediates disputes between federal and regional governments. No powers or policy matters are designated as exclusively the domain of the subjects of the federation. Despite its flaws, the Constitution of the Russian Federation gained widespread acceptance and provided much needed stability as the country endured wrenching political, economic, and social changes in the decade 1994–2003.

CONSTRUCTIVISM

Influenced by cubism and futurism, constructivism had its roots in the abstract geometric constructions of Vladimir Tatlin. In 1920 the sculptors Antoine Pevsner and Naum Gabo joined Tatlin in the publication of the Realist Manifesto, from which the name constructivism was derived. Like the Futurists, they admired the machine and technology, functionalism, and modern industrial materials. Within architecture the constructivists stressed that form should be determined in the process of construction by the utilitarian aim of the building and the natural characteristics of the building materials. They grouped around the “Union of Contemporary Architects” (OSA) led by the Vesnin brothers

(Alexander, Viktor, and Leonid) and Moisei Ginzburg and its journal *Sovremennaya arkhitektura* (*Contemporary Architecture*). They argued that the construction of a new environment was not simply a matter of art or technology but entailed rebuilding culture from the bottom up. History had entered into a new creative cycle, and in that period of youth, utilitarian and constructive aspects of style were of paramount importance, and aesthetic simplicity and organizational logic must determine the new style.

This in no way signaled the demise of aesthetic emotion, rather its transformation under the influence of modern economics, technology, and the machine. Ginzburg developed what became known as the Functional Method, whereby the functional requirements of a structure, such as the “diagram of movement,” within the building and the siting of individual living units within a structure, were given priority in spatial composition. To achieve the desired goal, adherents used the pavilion method, which divided a complex into blocks according to their intended use and linked these units by walkways or bridges to satisfy the entire ensemble’s ultimate social function as a work of art. Ginzburg put his theory to best use in a housing complex designed and built between 1928 and 1930 for *Narkomfin* (the People’s Commissariat of Finance) on Novinsky Boulevard, now House 25, Tchaikovsky Street.

CONTROL FIGURES

Kontrol'nyi tsyfri, or control figures, were originally the preliminary plan targets prepared by the State Planning Commission (Gosplan, established 1921) in 1925–1926. Soon thereafter these targets were coordinated with the mandatory annual plans of the Supreme Council of the National Economy

(VSNKh) and with the associated material balances, which theoretically provided the necessary inputs to produce the obligatory outputs. From early on and throughout the Soviet period, the control figures were approved by the Politburo of the Communist Party of the Soviet Union, usually in the summer prior to the plan year. (From 1957 to 1964 regional economic councils also had some role in plan formulation.) Prospective plans were usually expressed in percentage increases from the previously achieved level and published in the main newspapers as ranges for the current five-year and yearly plans. Often these priority targets for around a dozen important commodities were expressed in physical units, such as tons or number of vehicles, but where that was not reasonable, the target was in value terms. Supposedly, the annual control figures were coordinated with the five-year plan then in effect and other directives of the Party and Council of Ministers.

During the five-year plan era the control figures were elaborated by ministries and chief administrations (*glavki*) for approximately two hundred to three hundred product groups and disaggregated into still more groups and passed down to the ministries (commissariats) and from there to the enterprises. Simultaneously the superior agencies would estimate the correct data to achieve these targets, often by applying established input-output norms to the targets. The subordinate enterprises would then request necessary supplies of labor, capital, and intermediate inputs such as energy, ores, and parts. Their requests, routinely exaggerated, would be pared down at the *glavk*, ministry, or Gosplan levels according to the authorities' best estimates of necessary minima. Some bargaining would occur at this stage, too. Finally, early in the fall, Gosplan would endeavor to form a feasible national plan close to the original control figures. The eventual directive plan could have as many as sixty thousand separate headings. Usually, the sheer complexity of the task, unavoidable delays, and insufficient information meant that the legally binding enterprise plan (*techpromfinplan*) was neither consistent nor optimal from the planners' point of view, not to mention the needs of the population at large.

CONVENTIONAL FORCES IN EUROPE TREATY

The Conventional Forces in Europe (CFE) Treaty was signed in Paris on November 19, 1990, after less than two years of negotiation, by the members of the North Atlantic Treaty Organization (NATO) and the Warsaw Treaty Organization (WTO). Soviet General Secretary Mikhail Gorbachev's announcement to the United Nations in December 1988 of unilateral Soviet force reductions had presented a challenge to NATO. Negotiations on conventional forces thus began in Vienna in March, 1989.

The Soviet leadership sought to reduce the threat of new western weapons and operational concepts, to create a "breathing space" for internal economic and social restructuring, and to divert manpower and resources to the country's economy. Both superpowers wanted to eliminate capabilities for initiating surprise attacks and large-scale offensive actions. The treaty mandated the reduction to equal levels of NATO and WTO forces from the Atlantic to the Ural Mountains across five categories of weapons: armored combat vehicles (ACVs), artillery, combat aircraft, combat helicopters and tanks. The WTO nations were expected to make the largest cuts, given their numerical superiority. The treaty also provided for an advanced verification regime, including intrusive on-site verification and data exchanges.

The collapse of the USSR and Warsaw Pact in the period 1990–1991 presented problems, however. East European members of the WTO were unilaterally demanding the withdrawal of Soviet forces from their soil. Western critics argued that by focusing on bloc-to-bloc negotiations at a time like this, NATO was constraining itself unnecessarily. The USSR seemed hesitant to complete the CFE agreement, since the WTO hardly constituted a credible bloc. Meanwhile, the Soviet successor states were loath to see their future military forces constrained by a treaty signed by the former regime. Nevertheless, by January 1992, all agreed to ratify the CFE treaty, and three years later, the par-

ties had eliminated some fifty thousand weapons and withdrawn fifteen thousand more.

The CFE treaty was later modified in November 1999, upon Russia's request. As late as 2003, NATO was continuing to press Moscow to reduce the number of tanks, armored combat vehicles (ACVs), and artillery it deployed in its northern and southern "flank" regions, namely Moldova and Georgia, which border Europe and the Black Sea. The Organization for Security and Cooperation in Europe (OSCE) was monitoring Russia's compliance with the CFE treaty.

JOHANNA GRANVILLE

and were thus placed on an equal footing with state enterprises. No longer was the size of a cooperative or the amount of its assets limited. Cooperatives could now engage in any economic activity, except for those prohibited by law. Financial arrangements also moved in a new direction. Shares in a business could be issued. There was no limit on income, the size of which could be based either on one's financial contribution to the cooperative or on the amount of work one performed there. Cooperatives still had to be registered by local authorities, but these administrative organs no longer had the right of approval or disapproval of its activities. Cooperatives were made formally independent of the state sector, and the latter was forbidden to give compulsory state orders to cooperatives. Cooperatives were given the right to form joint ventures with foreign companies. In essence, the Law made cooperatives indistinguishable from capitalist enterprises.

COOPERATIVES, LAW ON

The Law on Cooperatives (hereafter the Law) was adopted in May 1988 to offer greater clarity about the direction of private economic activity during the early period of perestroika. This was necessitated by the fact that the earlier Law on Individual Labor Activity, which went into effect in May 1987 as the first step toward creating a legal private sector, was ambiguous as well as limited in its provisions for privatization. Private economic activity, embodied in organizations called "cooperatives," quickly evolved beyond the provisions of the 1987 Law, and the new Law was intended to reflect the reality of the growing cooperative movement.

In general, the Law liberalized the way in which cooperatives operated. The legal basis for private enterprise was changed, and cooperatives were accorded the status of "basic units" in the economy

COOPERATIVE SOCIETIES

Cooperative societies, as distinguished from the peasant commune and *arteli* (cooperative associations) of peasant migrant laborers, were seen by the liberal and socialist intelligentsia of the mid-nineteenth century as devices to protect the laboring classes from exploitation and empower them (cf. Chernyshevsky's *What Is to Be Done?*). The famine of 1891–1892 and the subsequent intensification of industrial development led the educated classes and some government agencies to foster the growth of cooperatives, although bureaucratic restrictions persisted. The movement burgeoned between the Revolution of 1905 and World War I, with a tenfold increase in the number of cooperative societies, which handled roughly 7 percent

of consumer goods sales by 1914. The main types were urban consumer cooperatives, concerned principally with retail and wholesale trade, and agricultural credit cooperatives, whose primary purpose was to make short-term loans to members. There were also some producer associations, most notably butter cooperatives of Northern Russia and Western Siberia, and artisanal cooperatives. During World War I, cooperatives increased by another 60 percent, helping to produce goods for the war effort and cushion consumers against inflation.

After 1917, Bolshevik policy alternated between tolerating cooperatives as voluntary organizations and making them into quasi-state organs. During war communism, cooperatives became adjuncts of the Commissariat of Supply, to which producers and consumers were required to belong. Agricultural producer cooperatives were few and weak, but valued by the Soviet regime as precursors of collective farming. During the New Economic Policy (NEP), the Communist Party allowed cooperatives to resume their function as voluntary organizations, and Lenin singled them out as the means to lead peasants to socialism. By 1926 and 1927, with the state supporting them as an alternative to private entrepreneurs, cooperatives accounted for as much as half of consumer trade, and a fifth of handicraft and small-scale industrial production. All this ended in 1929 and 1930, when voluntary cooperatives were eliminated during industrialization and collectivization. Although cooperatives nominally persisted, with the *kolkhoz* defined as an *artel* in the 1934 Model Charter, in fact they had lost their independent status and once again became channels for state-imposed economic activity.

With the rise of *perestroika* under Mikhail Gorbachev, cooperatives took on renewed importance, emerging in the late-1980s as a principal structure for private economic activity. On April 1, 1990, on the eve of the collapse of the Soviet Union, there were more than 185,000 operating cooperatives employing almost 4.4 million people.

WILLIAM MOSKOFF

COPPER RIOTS

The Copper Riots (*Medny bunt*) were a series of riots in Moscow in the summer of 1662 in protest against an economic crisis caused by the use of an inflationary copper currency.

The financial demands of the Thirteen Years' War against Poland-Lithuania forced the Russian government to abandon its silver currency in the first year of the war. In addition to debasing the silver ruble, the government introduced a new copper ruble at an artificial 1:1 exchange rate vis-à-vis the old currency. The government assessed its levies in silver while using the copper currency to dispense its own obligations. Only silver currency could be used in foreign trade. Four mints produced small copper coins after 1655, and the total output of copper money clearly exceeded the initial emission of 4 million rubles severalfold.

The unpopular currency reform was followed by other calamities: a devastating cholera epidemic in 1654 and 1655 and disastrous harvests from 1656 to 1658. A two-year campaign against Sweden from 1656 to 1658 failed in its central objective of gaining access to the Baltic. The initially successful campaigns against the Commonwealth turned into a Russian retreat in the years 1659 to 1661. In order to finance the growing military demands, the government imposed extraordinary levies that further increased the pressures facing the population. In addition to several regional levies, a 10 percent tax on townsmen in 1654 was followed by a 20 percent levy in 1662.

By the early 1660s, inflation got out of control, leading to a breakdown of market-driven distribution. A system of parallel silver and copper prices came into existence, and severe shortages of many foodstuffs became commonplace. Counterfeiting was widespread, and rumors circulated about government involvement. Ultimately, there was a flight from money, and the government was forced increasingly to collect taxes in kind.

The growing discontent, which had generated a flood of petitions to the tsar, burst into the open

on July 25, 1662. Following a meeting by discontented townsmen in response to the new 20 percent levy, some four to five thousand people assembled in Red Square to hear merchants and soldiers voice their grievances against speculators. Some degree of organization had preceded the event, although no key group of instigators was identified. During the days leading up to the event, various "proclamations" (*vorovskie listy*) from various parts of the country circulated in the capital. The proclamations singled out various members of the political and economic elite as "traitors," with especially damning criticism directed at the Miloslavskys, Fyodor Rtishchev, Bogdan Khitrovo, Dementy Bashmakov, Vasily Shorin, and Semeon Zadorin. The "traitors" were accused of counterfeiting and pro-Polish sentiments.

Military detachments in the Kremlin failed to respond to the gathering, and some soldiers from their ranks even joined the demonstrators. After a three-hour gathering, the crowd marched on the tsar's residence in Kolomenskoye with a petition that the speculators and counterfeiters be handed over and punished. In addition, the crowds called for lower taxes. After leading boyars failed to appease the crowd, the tsar agreed to address them. Having received a petition, Tsar Alexei Mikhailovich gave a conciliatory speech, in which he promised to reduce the tax burden and investigate the demonstrators' grievances.

In the meantime, a riot broke out in Moscow, and many demonstrators attacked the warehouses of prosperous merchants, especially those belonging to the family of the *gost* (privileged merchant) Vasily Shorin. Shorin's son was captured by the rioters and forced to "confess" his father's guilt. Another crowd of five thousand departed for Kolomenskoye, meeting with the members of the earlier crowd along the way. The gates of the tsar's residence were locked, and six to seven thousand troops massed around the royal residence. The demonstrators demanded that "guilty" boyars be handed over and, failing that, threatened to storm the palace. In response, the tsar ordered the troops to attack, an operation that led to some 900 deaths. At the same time, 225 alleged organizers of the events were arrested in Moscow. Eighteen of those arrested were hanged the following day, a measure that succeeded in restoring calm after a day of rioting. An official investigation was ordered into the events. In the course of a month, large numbers of people were arrested, with several tortured and executed or exiled.

The riots, in spite of their limited duration, appear to have strengthened the government in its resolve to reform the bankrupt monetary system. In order to make possible a return to a silver standard, in 1662 the government collected extraordinary taxes and monopolized for a year the exportation of six key export commodities: potash, hemp, yuft leather, tallow, sable furs, and white ash. A total of 1.4 million copper rubles was spent on requisitioning these goods, and while most of these sold quickly, some remained on the market until 1676. Russia returned to a silver standard in May 1663.

CORPORAL PUNISHMENT

Corporal punishment, a form of criminal punishment usually involving public torture of convicts, began in ancient times and existed in Russia until 1904. It was known in Kievan Rus, but limited to certain groups. From the late thirteenth century onward, corporal punishment was applied more widely and used against individuals of any social group without exclusion. It is believed that this broader application arose under the influence of the Tartar and Mongolian conquerors, who freely practiced corporal punishment. In the sixteenth and seventeenth centuries, as a consequence of the total enslavement of the population to the state, corporal punishment came into extensive use and peaked in the first quarter of the eighteenth century. All known methods of corporal punishment were employed and applied in full view of the public. For speaking disrespectfully of the tsar or speaking in an obscene manner in a church, the convicted offender's tongue was cut out; for attempting to kill one's master, a hand was cut off; for forgery and thievery, fingers were cut off; for brigandage, rebellion, and perjury, the nose or ears were cut off. Criminals were branded so that they could be easily identified. During the reign of Peter I, the

more dangerous criminals had their nostrils slit; less dangerous criminals had their foreheads branded with the letter “V,” for *vor* (criminal). In addition to sentences involving the mutilation of limbs, other painful punishments were meted out: flogging with the knout for the most serious crimes; beating with sticks or the lash for less serious crimes; or, in the case of soldiers, forcing the offender to run the gauntlet. Minors and adults found guilty of less serious offenses were beaten with birch rods. The number of blows began at 500 or more and sometimes extended to infinity—which for all practical purposes meant beating a person to death.

Until the beginning of the eighteenth century, corporal punishment was applied to all classes within the population equally. But in the eighteenth century, the privileged estates successfully sought the repeal of corporal punishment against them. Motivating their opposition was the growing opinion that corporal punishment was a disgrace for those on whom it was imposed. For instance, a soldier who had undergone corporal punishment was unable to become an officer. As a result of this opposition from privileged groups, members of the nobility, distinguished citizens (*pochetnye grazhdane*), and merchants of the first and second guilds were exempted from corporal punishment in the imperial charters of 1785. The clergy was granted the same privilege in 1803, as later were members of other social estates—provided they had an education. However, beating with birch rods remained common until the 1860s as a form of punishment for students in elementary and secondary schools, even though children from the privileged social estates predominated in the latter.

Over time, the severity of sentences was eased, and some forms of punishment were even abolished. For instance, the use of the knout ended in the beginning of the nineteenth century. The knout was the most deadly means of corporal punishment; an experienced executioner could kill a person with three blows. The 1845 Code of Punishments established the upper limit for sentences using the lash and birch rods to 100 blows. Exceptions for the sick and the elderly were under way, as were additional measures to protect the health of individuals undergoing punishment as much as possible. For instance, sentences would not be carried out in extremely cold and windy conditions. Beginning in 1851, a physician was present at the scene of corporal punishment. From 1863

on, corporal punishment was greatly curtailed. Women were entirely exempted. Men were subject to it in only five cases stipulated by law: (1) District courts (*volostnye sudy*) were permitted to sentence peasants to up to twenty blows of the lash, a sentence that earlier had been considered appropriate only for children. (2) With the permission of the governor of the province, prisoners were allowed to be punished with up to 100 blows of the birch rod for various violations of the established order. (3) Those serving sentences of hard labor in exile and those in exile as penal settlers could receive between 100 and 300 blows of the birch rod for various violations. (4) Those serving sentences of hard labor in exile who committed an additional crime could receive up to 100 blows of the lash. (5) Those serving on vessels at sea could be punished with up to five blows of the whip, and apprentices could be given between five and ten blows of the birch rod.

Not until 1903 were all forms of corporal punishment abolished for those serving sentences of exile at hard labor or sentences of exile as penal settlers. The following year, corporal punishment was officially abolished for all peasants, soldiers, sailors, and other categories of the population.

CORPORATION, RUSSIAN

The Russian government chartered the first company, a whaling and fishing enterprise, in 1704.

Although Peter I encouraged the formation of trading companies based on the European model, early Russian companies engaged primarily in fishing, textile production, or mining. The Russian-American Company, formed in 1799, expired in 1868, a year after the United States purchased Alaska.

Limited liability, crucial to corporate enterprise, received legislative sanction in 1805 and 1807. A law promulgated on December 6, 1836, defined the general characteristics and functions of corporations. Each corporate charter (*ustav*) took the form of a law published in the *Complete Collection of Laws* or its supplement from 1863 onward, the *Collection of Statutes and Decrees of the Government*. The government occasionally considered replacing the concessionary system with one permitting incorporation by registration, but it never implemented this reform.

Bureaucratic regimentation and tutelage kept the number of corporations relatively low: 68 in 1847, 186 in 1869, 433 in 1874, 614 in 1892, 1,354 in 1905, and 2,167, plus 262 foreign companies, in 1914 (Owen). Another 1,239 companies were founded between 1914 and 1916. In November 1917, 2,727 Russian and 232 foreign corporations were in operation. Banks, railroads, steamship lines, mines, and machine plants generally maintained their corporate headquarters in major cities, so that, despite the introduction of modern technology by large corporations in the half-century before World War I, most of the population of the Russian Empire considered the corporation an alien form of economic enterprise.

COSMOPOLITANISM

Although in English “cosmopolitan” means a citizen of the world or a person who has no permanent home, “cosmopolitanism” in the Soviet Union meant a rejection of Russian and Soviet values. However, after the founding of the state of Israel in 1948, “cosmopolitanism” became a code word

for “Jewish” and marked a period of lethal state anti-Semitism in the Soviet Union designed to eliminate Yiddish culture, Jewish intellectuals, “nationalists,” and Zionists. After permitting greater freedoms during the war, the Soviet regime in 1945 tried to reimpose control in face of a new Cold War. “Cosmopolitanism” became a “reactionary bourgeois ideology” more akin to capitalism than communism. Artists and intellectuals came under attack for subservience to the West and for not expressing adequate Soviet/Russian patriotism.

During the 1920s “cosmopolitanism” had been synonymous with “internationalism,” one of the basic principles of Marxism-Leninism. However, in the 1930s the regime turned toward Russian nationalism, and cosmopolitanism became more closely associated with capitalism—the antithesis of communism. Before 1948, culture chief Andrei Zhdanov led condemnation of many intellectuals for favorable portrayals of Western culture without mentioning the grand achievements of the Soviet experiment. In literature, architecture, biology, philosophy, and many other disciplines, the regime singled out people for “kowtowing” to the West and not showing adequate patriotism. In biology, for example, this led to the rejection of modern genetics, and reaction in many other disciplines was likewise destructive. Apart from enforcing intellectual conformity, “cosmopolitanism” engulfed internationalists and Jews charged with bourgeois nationalism, such as members of the Jewish Anti-Fascist Committee (JAC), who raised money, awareness, and support abroad during World War II.

In early 1949, a *Pravda* article railed against an “unpatriotic group of theater critics,” signaling the first attempt to assign collective, rather than individual, guilt for not sufficiently glorifying the Soviet system. Because most of the critics named were Jewish, this is often noted as the beginning of the anti-Semitic stage of the antic cosmopolitan campaign. Articles soon followed about “rootless cosmopolitans” and “passportless wanderers,” which clearly referred to the Jewish diaspora outside the new state of Israel. Jews and other cosmopolitans, according to these press attacks, were isolated and/or hostile to Russian and Soviet culture and traditions. The unspoken assumption was that cosmopolitans, because they were allegedly unpatriotic, would not be loyal when the Cold War turned into an armed conflict.

The antic cosmopolitan campaign destroyed the careers and lives of many of the Soviet Union’s intellectual elites and separated Soviet culture and

learning from much of the rest of the world. When combined with the campaign against “bourgeois nationalists,” both assimilated Jewish intellectuals and Yiddish culture suffered irreparable harm. For example, when the JAC collected information on wartime atrocities against the Jews, it led to charges of nationalism. Moreover, contact with Jewish groups abroad and calls for a Jewish homeland in Crimea and contact with foreigners were “unpatriotic” and brought charges of treason. In short, doing the regime’s bidding in World War II led to the imprisonment, execution, and silencing of many of the Soviet Union’s leading Jewish artists and intellectuals between 1949 and 1953 after the JAC was closed in 1948. Moreover, many JAC members were executed in August 1952 in what has been called the Night of the Murdered Poets. The investigation into the activities of these JAC members seems to have been the prelude to the Doctor’s Plot, which aimed at the execution of many Jews and physicians in 1953. The trials and executions were aborted after Josef Stalin’s death in March 1953.

KARL D. QUALLS

COSSACKS

The word *Cossack* (Russian *kazak*) is probably Turkic in origin, and the term dates to medieval times, when it was used to denote wanderers or freebooters of varying Slavic and non-Slavic origins who lived off raids on the Eurasian steppe and jealously guarded their independence. By the fifteenth

century, the term was increasingly applied to a mixture of freemen and fugitives who had fled the serfdom of Poland-Lithuania and Muscovy to live in the seams between encroaching Slavic settlement and receding remnants of the Golden Horde. From these beginnings two distinct traditions gradually emerged to figure in the evolution of the various Cossack groupings in later Russian and Ukrainian history. One tradition witnessed the transformation of these frontiersmen into military servitors, who, in exchange for compensation and various rights and privileges, agreed to discharge mounted military service, usually on the fringes of advancing Slavic colonization. These servitors came to be called “town Cossacks,” and their duties included mounted reconnaissance and defense against nomadic and Tatar incursion.

During the sixteenth and seventeenth centuries, Cossacks of this type in what is now Ukraine appeared often in Polish military service. They also fought stubbornly to retain their autonomy and status as freemen, for which reason in 1654 they sought protection from the Muscovite tsar. However, their autonomous status and sometimes even their existence proved ephemeral, as Muscovite and Imperial Russian rulers gradually either absorbed, abolished, or transplanted various service-obligated Cossack groupings, including the Ukrainians.

A second and related tradition produced the more famous “free Cossack” communities. Like their service brethren, the roots of the free Cossacks lay largely with various wayward Russian and Ukrainian peasants (and town Cossacks) who combined with other migrants of mixed ethnic origins to settle in the open steppe beyond any recognizable state frontiers. They formed what the historian Robert H. McNeill has called “interstitial polities,” autonomous military societies that occupied the great river valleys of the Pontic steppe. Free Cossack communities began to appear in the fifteenth century, and by the mid-sixteenth century, they numbered six distinct groupings, including most prominently the Cossacks of the Don Host (*voisko*) and the Cossacks of the Zaporozhian *Sich*. Living by their wits and warrior skills off the land and its adjoining waters, these free Cossacks plundered traditional Islamic enemies and Orthodox allies alike. However, like their service-obligated brethren, the free Cossacks gradually came to serve as Muscovite allies, fielding light cavalry for tsarist campaigns, pressing Slavic colonization farther into the Pontic steppe, then into the Caucasus and Siberia. Although the free Cossacks formed bul-

Cossacks on the march, 1914. © HULTON-DELITSCH COLLECTION/CORBIS

works against invasion from the south and east, they were also sensitive to infringements of their rights and privileges as free men. From the time of Stepan Razin's revolt in 1670–1671 until the rising of Yemelian Pugachev in 1772–1775, they periodically reacted explosively to encroachments against their status and freebooting lifestyle.

The service and free Cossack traditions gradually merged during the eighteenth and early nineteenth centuries, when the former free Cossack groupings were either abolished (e.g., the Zaporozhian *Sich* in 1775) or brought under the complete control (e.g., the Don Host also in 1775) of imperial St. Petersburg. A series of imperial military administrators from Grigory Alexandrovich Potemkin through Alexander Ivanovich Chernyshev imposed measures that regularized Cossack military service, subordinated local governing institutions to imperial control and supervision, and integrated local elites into the ranks of the Russian nobility. Regardless of origin, by the time of the Crimean War in 1854–1856, all Cossacks had been transformed into a closed military

estate (*sosloviye*) subject to mandatory mounted military service in exchange for collective title to their lands and superficial reaffirmation of traditional rights and privileges. During the Great Reform Era, War Minister Dmitry Alexeyevich Milyutin toyed briefly with the idea of abolishing the Cossacks, then imposed measures to further regularize their governance and military service. The blunt fact was that the Russian army needed cavalry, and the Cossack population base of 2.5 million enabled them to satisfy approximately 50 percent of the empire's cavalry requirements. Consequently, the Cossacks became an anachronism in an age of smokeless powder weaponry and mass cadre and conscript armies.

Reforms notwithstanding, by the beginning of the twentieth century, many traditional Cossack groupings hovered on the verge of crisis, thanks to a heavy burden of military service, overcrowding in communal holdings, alienation of land by the Cossack nobility, and an influx of non-Cossack population. The revolutions of 1917 and the ensuing Russian Civil War seriously divided the Cossacks,

with a majority supporting the White movement, while a stubborn minority espoused revolutionary causes. Following Bolshevik victory, many Cossacks fled abroad, while those who stayed were persecuted, gradually disappearing during collectivization as an identifiable group. During World War II, the Red Army resurrected Cossack formations, while the *Wehrmacht*, operating under the fiction that Cossacks were non-Slavic peoples, recruited its own Cossack formations from prisoners of war and dissidents of various stripes. Neither variety had much in common with their earlier namesakes, save perhaps either remote parentage or territorial affinity. The same assertion held true for various Cossack-like groupings that sprang up in trouble spots around the periphery of the Russian Federation following the disintegration of the Soviet Union in 1991.

COUNCIL FOR MUTUAL ECONOMIC ASSISTANCE

The decision to establish the Council for Mutual Economic Assistance, also known as COMECON and the CMEA, was announced in a joint commu-

niqué issued by Bulgaria, Czechoslovakia, Hungary, Poland, Romania, and the Soviet Union in January 1949. Albania joined in February 1949; East Germany in 1950; Mongolia in 1962; Cuba in 1972, and Vietnam in 1978. Albania ceased participation in 1961.

COMECON members were united by their commitment to Marxism–Leninism, Soviet-style central planning, and economic development. COMECON served as an organizational counterweight first to the Marshall Plan and then to the European Iron and Steel Community and its successor, the European Economic Community.

COMECON was effectively directed by a group outside its formal organization, the Conference of First Secretaries of Communist and Workers' Parties and of the Heads of Government of COMECON Member Countries. The Soviet Union dominated COMECON. From 1949 to 1953, Stalin used COMECON primarily to redirect member trade from outside COMECON to within COMECON and to promote substitution of domestic production for imports from outside COMECON. The COMECON economic integration function was stepped up in 1956, the year of the Soviet invasion of Hungary, with the establishment of eight standing commissions, each planning for a different economic sector across the member countries. Notable real achievements included partial unification of electric power grids across East European members, coordination of rail and river transport in Eastern Europe, and the construction of the Friendship pipeline to deliver Siberian oil to Eastern Europe. In 1971 COMECON initiated a compromise Comprehensive Program for Socialist Economic Integration as a counterweight to integration within the European Economic Community. COMECON continued planning various integration and coordination efforts through the 1970s and 1980s. In 1985–1986 these efforts culminated in the Comprehensive Program for Scientific and Technical Progress to the Year 2000. With the loss of Soviet control over its East European trading partners, COMECON tried to survive as a purely coordinating body but was finally formally disbanded in June 1991.

COMECON's impact on Russia was largely economic. Russia was the largest republic among the Soviet Union's fifteen republics. The Soviet Union was the dominant member of COMECON. The strategic purpose of COMECON was to tie Eastern Europe economically to the Soviet Union. COMECON trade became largely bilateral with the Soviet Union, mostly Russia, supplying raw materials, no-

tably oil, to Eastern Europe in return for manufactured goods, notably machinery and equipment. This is the opposite of the trade flow between historically dominant countries and their colonies and dependents. The historical norm is for raw materials to flow from the colonies and dependents to the dominant center, which exports advanced manufactures and services in return. The comparative advantage for Russia within COMECON was, however, as a raw material and fuel exporter. Russia's loss was that it received in return shoddy and obsolescent COMECON machinery and equipment rather than Western machinery with Western technology embedded in it. The Comprehensive Program for Scientific and Technical Progress to the Year 2000 was only one effort to remedy this problem. Russia also lost out on its potential gains from OPEC's increase in the price of oil beginning in 1973.

COMECON trade was conducted in "transferable rubles," basically a bookkeeping unit good only to buy imports from other COMECON partners. However, most purchases and their prices were bilaterally negotiated between the COMECON trade partners. So, the real value of a country's transferable ruble balance was indeterminate. Russian oil was sold by the Soviet Union to COMECON partners for transferable rubles. OPEC dramatically increased the dollar value of oil exports beginning in 1973. In 1975 COMECON agreed that the transferable ruble price of oil be indexed to the global dollar price, specifically the moving average for the past three years in 1975 and the past five years for every year thereafter. Thus, the prices of Soviet oil exports to COMECON lagged the global price rises through the late 1970s. Only when global oil prices dropped in the early 1980s did the transferable ruble price of Soviet oil catch up. Overall, the Soviet Union paid for its East European "empire" by selling its raw inputs, especially oil, for less than world market prices and by receiving less technologically advanced manufactured goods in return. Much of this cost was borne by Russia.

DANIEL R. KAZMER

COUNCIL OF MINISTERS, IMPERIAL *See* CABINET OF MINISTERS, IMPERIAL.

COUNCIL OF MINISTERS, SOVIET

In 1946, Sovnarkom—Sovet Ministrov, the government of the USSR—was renamed the Council of Ministers to bring the USSR into line with practice in other great powers. Josef Stalin remained as chairperson until 1953. He was followed by Georgy Malenkov until 1955; then Nikolai Bulganin until 1958; Nikita Khrushchev, from 1958 to 1964; Alexei Kosygin, 1964–1980; Nikolai Tikhonov, 1980–1985; and Nikolai Ryzhkov, 1985–1990. Membership of the Council of Ministers consisted of the chairperson, first deputy chairperson, deputy chairpersons, ministers of the USSR and chairpersons of State Committees of the USSR. Chairpersons of Councils of Ministers of Union republics were ex officio members of the Council of Ministers of the USSR. Under the 1977 constitution membership could also include "the heads of other organs and organizations of the USSR." This allowed the chairperson of the Central Council of Trade Unions or the first secretary of the Communist Youth League (Komsomol) to serve on the Council of Ministers. The first Council of Ministers formed under this constitution comprised 109 members.

Ministries and State Committees, as with the commissariats in Sovnarkom, were of two varieties: "union-republican," which functioned through parallel apparatuses in identically named republican ministries, and "all-union," which worked by direct control of institutions in the republics or through organs in the republics directly subordinate to the USSR minister. Groups of related ministries were supervised by senior Party leaders serving as deputy chairpersons of the Council of Ministers. In the early postwar years the tendency toward subdivision of

ministries, apparent in Sovnarkom during the 1930s, continued until 1948, but it was then followed by a period of amalgamation until 1949, and more modest expansion until 1953. Immediately after Stalin's death membership of the Council of Ministers was reduced from eighty-six to fifty-five, groups of economic ministries being amalgamated, but this was only temporary, and by the end of 1954 membership had increased again to seventy-six and continued to increase more slowly from that time.

Theoretically responsible and accountable to the Supreme Soviet of the USSR, with membership supposedly decided by that institution, but in reality by the Politburo, the Council of Ministers was empowered to deal with all matters of state administration of the USSR outside the competence of the Supreme Soviet, issuing decrees and ordinances and verifying their execution. According to the 1936 and 1977 Constitutions, the Council of Ministers was responsible for direction of the national economy and economic development; social and cultural development, including science and technology; the state budget; planning; defense, state security; general direction of the armed forces; foreign policy; foreign trade and economic; and cultural and scientific cooperation with foreign countries.

By a law of 1978, meetings of the Council of Ministers were to be convened every three months and sessions of its Presidium "regularly (when the need arises)." This institution, created in 1953, consisting of the chairperson, first deputy chairperson and deputy chairpersons of the Council of Ministers, functioned only intermittently until 1978. Often described in Western literature as an "inner cabinet," it then became primarily responsible for the directions of economic affairs.

COUNTERREFORMS

The Counterreforms of the 1880s and 1890s refer to the body of domestic policies adopted under Tsar Alexander III as an ideological response and reaction to the transformations of the earlier Great Reforms undertaken by so-called "enlightened" bureaucrats with the tacit approval of the assassinated Tsar Alexander II. They were also a response to radicalism growing out of the reform milieu. The conservatives believed the Empire was threatened. Whereas the Great Reforms of the period 1855–1881 in the broadest sense intended to renovate the body politic and instill new principles of self-government, rule of law, citizenship, and even to introduce at the very end a veiled form of elite representation in the legislative process, the counterreforms of the new Tsar and his conservative advisers within and outside the bureaucracy aimed to reverse such changes and to reassert traditional autocracy and nationhood and the more manageable and corporatist society organized by legal estates. Immediately after Alexander II's assassination in March 1881, the new government moved quickly to remove Loris-Melikov and remaining reformers from the government. On April 29, 1881, the Tsar declared that Russia would always remain an autocracy. The reform era was over.

The counterreforms were ushered in by the laws on state order and the pacification of society of August 14, 1881. These laws, sponsored by Minister of Internal Affairs, N. P. Ignat'ev, provided for two types of martial law (condition of safeguard and extraordinary safeguard) that gave the police and administration enhanced powers above and beyond those residing in the new judicial system. These decrees remained in force until just days before the February Revolution of 1917. On August 27, 1882, the government introduced "temporary rules on the press," which gave more censorship power to the administration. Minister of Internal Affairs D. A. Tolstoy then introduced a new University Statute on August 23, 1884. This effectively repealed university corporate autonomy and bureaucratized the administration of higher education. It also placed limits on higher education for women. Finally a cluster of three major acts placed new administrative restrictions on the institutions of self-government, the zemstvos and town dumas. These laws of June 12, 1890 (zemstvo) and June 11, 1892 (town дума) changed the electoral laws to favor the gentry in the case of the zemstvos and large property owners in the cities. Many recent

voters in town and countryside alike were disenfranchised. In addition new bureaucratic instances were established to shore up administrative control over self-government. This would call forth opposition in the form of a zemstvo movement that would be instrumental in the 1905 Revolution. Perhaps most symbolic of all the counterreforms was the notorious act of July 12, 1889 that created the Land Captains (*zemskie nachal'niki*). These were appointed government officials in the countryside who combined administrative, police, and judicial authority. The aim was once again administrative control, this time over the relatively new peasant institutions and indeed over peasant life in the broadest sense. Control rather than building a new society from the grassroots was the central point of these counterreforms. The counterreforms and their supporting ideology extended into the reign of Nicholas II, making it that much more difficult for the regime to solve its social and political problems. They in fact made revolution more likely. The counterreforms co-existed uneasily with more forward-looking economic policies even during the reign of Alexander III.

COUNTRY ESTATES

Country estates, some dating back to the fifteenth century, originated as land grants from the crown to trusted servitors. The Russian empire expanded rapidly, particularly in the eighteenth century, and along with it the estate network, which ultimately stretched from the Baltic Sea to the Crimean Peninsula, and from the Duchy of Warsaw to the Ural Mountains. During the estate's golden age from the reign of Catherine II to the War of 1812, wealthy nobles who had retired from state service built thousands of magnificent houses, most in neoclassical style, surrounded by elegant formal gardens and expansive landscape parks.

Until the emancipation of the serfs in 1861, estates were private principdoms (owned exclusively by nobles) supported by involuntary labor. Thus in some respects the pre-emancipation estate was comparable to the plantation of the American south. Its uniqueness lay in its scores of highly trained serf craftsmen and artists, some of whom founded dynasties of acclaimed artists. Very

wealthy landowners took pride in having at hand accomplished architects and painters, musicians, actors, and dancers for entertainment, and cabinetmakers, gilders, embroiderers, lace-makers and other skilled craftsmen who produced all the luxury items they needed. Hence the greatest estates, in addition to being economic centers, were also culturally self-contained worlds that facilitated the rapid development of Russian culture.

Estates also served as important places of inspiration and creativity for Russia's most renowned authors, painters, and composers. For the intellectual and artistic elite, country estates were Arcadian retreats, places of refuge from the constraints of city life. Alexander Pushkin's *Eugene Onegin*, Ivan Turgenev's *A Sportsman's Sketches* and *Fathers and Sons*, Leo Tolstoy's *War and Peace* and *Anna Karenina*, and Pyotr Tchaikovsky's *1812 Overture* are among the many Russian masterpieces composed on a country estate.

After 1861 many small estate owners, unable to survive the loss of their unpaid labor, sold their holdings (a situation memorialized in Anton Chekhov's *The Cherry Orchard*). On larger estates a system similar to sharecropping was devised; these estates retained their economic strength until the revolution. Up to World War I Russia exported tons of grains and other agricultural products produced on thousands of country estates. In non-black-earth (non-chernozem) regions, enterprises on estates such as Khmelita (*Smolensk guberniya*), exporting prize-winning cheeses, Glubokoye (*Pskov guberniya*), producing wooden lanterns sold in England, and Polotnyany Zavod (*Kaluga guberniya*), which manufactured the linen paper used for Russian currency, also contributed to the economy.

The Bolshevik revolution destroyed the country estate, and with it much of the provincial economic and cultural infrastructure. Some estate houses have survived as orphanages, sanitariums, institutes, or spas. In the 1970s certain demolished estates associated with famous cultural figures (such as Pushkin's Mikhailovskoye and Turgenev's Spasskoye-Lutovinovo) were rebuilt. A few museum estates such as Kuskovo and Ostankino in Moscow and the battered manor houses of the Crimea still offer tourists a glimpse of Russia's pre-Revolutionary estate splendor.

COURT, HIGH ARBITRATION

The High Arbitration Court is at the top of the system of arbitration courts. These courts were originally created in the Soviet period as informal tribunals to resolve problems in implementing economic plans. In the post-communist era they have been reorganized into a system of courts with exclusive jurisdiction over lawsuits among businesses and between businesses and government agencies. While for historical reasons they are called "arbitration" courts, in fact they are formal state courts with compulsory jurisdiction and have nothing to do with private arbitration of disputes.

The structure of the courts is governed by the 1995 Constitutional Law on Arbitration Courts. Beneath the High Arbitration Court there are ten appellate courts, each with jurisdiction over a separate large area of the country, and numerous trial courts. The High Arbitration Court is responsible for the management of the entire arbitration court system. Procedural rules are provided by the 2002 Arbitration Procedure Code. Cases are heard in the first instance in the trial court. Either party may then appeal to an appellate instance within the trial court, and may further appeal to the appropriate appellate court. There is no right to appeal to the High Arbitration Court; rather, review by the High Arbitration Court is discretionary with the Court. The High Arbitration Court has original jurisdiction over two types of cases: (1) those concerning the legality of acts of the Federation Council, the State Duma, the president, or the government; and (2) economic disputes between the Russian Federation and one of its eighty-nine subjects. The High Arbitration Court also has, and frequently exercises, the power to issue explanations on matters of judicial practice, for the guidance of the lower courts, lawyers, and the public. The Court also publishes many of its decisions in individual cases on the Internet.

PETER B. MAGGS

COURT, SUPREME

The Supreme Court is "the highest judicial body for civil, criminal, administrative and other cases falling within the jurisdiction of courts of general jurisdiction" under Article 126 of the Russian Constitution. The courts of general jurisdiction hear all cases except: (1) lawsuits among businesses and between businesses and government agencies, which are heard by the Arbitration Court system; and (2) certain Constitutional issues, which are heard by the Constitutional Court. Beneath the Supreme Court are the highest courts of each of the eighty-nine subjects of the Russian Federation and the military courts. Beneath the courts of the subjects of the Russian Federation are a large number of district courts. Still lower in the hierarchy are Justice of the Peace Courts, which deal with relatively unimportant cases. The court structure and the relations between the courts are governed by the 1996 Constitutional Law on the Judicial System of the Russian Federation. Procedural rules are provided by the 2001 Criminal Procedure Code and the 2002 Civil Procedure Code.

The Supreme Court has separate divisions for civil cases, criminal cases, and military cases. It has a President and a Presidium consisting of several high officers of the court. It also has a plenary session in which all the judges meet together. The Judicial Department of the Supreme Court handles the administration of all the courts of general jurisdiction. Most cases are heard by the Supreme Court on appeal from or petition for review of lower court decisions. Because the court sits in separate divisions and has a large number of judges, it is able to review a very large number of lower court cases. However, a few very important cases

are heard by the Court in first instance. There is a mechanism for an appeal of these decisions to a higher level of the Supreme Court itself. The plenary session of the Court also has the power to issue interpretations of the law for the guidance of the lower courts. The interpretations and many other Court decisions are published at its web site. As the result of easy availability of these interpretations and decisions, lawyers are increasingly studying and citing Supreme Court rulings.

The Supreme Court has in some cases refused to apply statute laws on the basis that they contradicted the Constitution. Gradually, however, its policy changed. When in doubt on the constitutionality of a law, the Supreme Court has typically referred the question to the Constitutional Court. However, the Supreme Court frequently hears cases concerning the conformity of administrative regulations to the Constitution and laws, and frequently invalidates such regulations. The Supreme Court of the twenty-first century is very different from the Supreme Court of the Soviet period, even though the court structure is little changed. In the Soviet period the Court was subservient to the Party authorities. The court did not control judicial administration, which was managed by the Ministry of Justice. It did cite the Constitution, but never refused to apply a law on the basis of the Constitution alone.

PETER B. MAGGS

CRIMEA

Russian hegemony was established over the Crimea region in 1783 when the Tsarist empire destroyed the Crimean Tatar state. By the second half of the nineteenth century the Crimean population had de-

clined to 200,000, of which half were Tatars. This proportion continued to decline as Slav migration to the region continued in the next century through industrialization, the building of the Black Sea Fleet, and tourism. By the 1897 and 1926 censuses the Tatar share of the population had declined to 34 and 26 percent respectively.

During the civil war of 1917–1922, Crimea was claimed by the independent Ukrainian state, which obtained it under the terms of the 1918 Brest-Litovsk Treaty. But Crimea was also the scene of conflict between the Whites and Bolsheviks. In October 1921 Crimea was included within the Russian Federation (RSFSR) as an autonomous republic with two cities (Sevastopol and Evpatoria) under all-union jurisdiction.

Crimea's ethnic composition changed in May 1944 when nearly 200,000 Tatars and 60,000 other minorities were deported to Central Asia. It is estimated that up to 40 percent of the Tatars died during the deportation. A year later Crimean autonomy was formally abolished, and the peninsula was downgraded to the status of oblast (region) of the Russian Federation. All vestiges of Tatar influence were eradicated.

Crimea's status was again changed in 1954 when Soviet leader Nikita Khrushchev transferred it to the Ukrainian SSR. It remained an oblast until 1991, when a popularly supported referendum restored its status to an autonomous republic within Ukraine. Tatars began to return to Crimea in the Gorbachev era, but they still only accounted for 15 percent of the population, with the remainder of the population divided between Russians (two-thirds) and russified Ukrainians.

The status of Crimea and the city of Sevastopol, and the division of the Soviet Black Sea Fleet stationed on the peninsula, were the object of acrimonious dispute between Ukraine and Russia in the post-Soviet era. The Russian parliament repeatedly voted to demand that Ukraine return both Crimea and Sevastopol. Furthermore, the parliament argued that legally they were Russian territory and that Russia, as the successor state to the USSR, had the right to inherit Sevastopol and the Black Sea Fleet.

This dispute was not resolved until May 1997, when Ukraine and Russia signed a treaty that recognized each other's borders. The treaty was quickly ratified by the Ukrainian parliament (*Rada*), but both houses of the Russian parliament

only ratified it after intense lobbying from Ukraine in October 1998 and February 1999.

The resolution of the question of the ownership of Crimea and Sevastopol between 1997 and 1999 also assisted in the division of the Black Sea Fleet. Russia inherited 80 percent of the fleet and obtained basing rights scheduled to expire in 2017. The situation was also stabilized by Crimea's adoption in October 1998 of a constitution that for the first time recognized Ukraine's sovereignty.

Within Crimea the Tatars have been able to mobilize large demonstrations, but their small size has prevented them from having any significant influence on the peninsula's politics. Between 1991 and 1993 the former communist leadership of Crimea, led by Mykola Bagrov, attempted to obtain significant concessions from Kiev in an attempt to maximize Crimea's autonomy. This autonomist line was replaced by a pro-Russian secessionist movement that was the most influential political force between 1993 and 1994; its leader Yuri Meshkov was elected Crimean president in January 1994. The secessionist movement collapsed between 1994 and 1995 due to internal quarrels, lack of substantial Russian assistance, and Ukrainian economic, political, and military pressure. The institution of a Crimean presidency was abolished in March 1995. From 1998 to 2002 the peninsula was led by Communists, who controlled the local parliament, and pro-Ukrainian presidential centrists in the regional government. In the 2002 elections the Communists lost their majority in the local parliament, and it, like the regional government, came under the control of pro-Ukrainian presidential centrists.

TARAS KUZIO

CRIMEAN KHANATE

One of the surviving political elements of the Golden Horde, the Crimean Khanate comprised all of the Crimean peninsula, except for the southern and western coast, which was a province of the Ottoman Empire after 1475 (Kefe Eyalet), and survived until 1783 when it was annexed by the Russian Empire. The Khanate's ruling dynasty, the Girays, established its residence and "capital" in the valley of Bahçe Saray, from which it ruled most of the peninsula, and conducted relations with the Ottomans in the south.

Among the early Crimean khans, most important were Mengli Giray I (1467–1476 and 1478–1515), who is considered the "founder" of the Khanate; Sahib Giray I (1532–1551), who competed with Ivan IV for control of Kazan and Astrakhan, and lost; and Devlet Giray I (1551–1577), who led a campaign against Moscow. It was Mengli Giray who used Italian architects to build the large khan's palace and the important Zincirli Medrese in Bahçe Saray and, through patronizing artists and writers, establishing the khanate as a Sunni Muslim cultural center.

The khanate had a special relationship with the Ottoman Empire. Never Ottoman subjects, the Khanate's Giray dynasty was considered the crucial link between the Ottomans and the Mongols, particularly Ghenghis Khan. Had the Ottoman dynasty died out, the next Ottoman sultan would have been selected from the Giray family. Throughout the sixteenth and seventeenth centuries, the Girays often provided military support for Ottoman campaigns, in Hungary and in Iran. Crimean mounted archers were considered by the Ottomans to be among the most reliable and effective elements of their armies.

So far as the Russians were concerned, the most important feature of the khanate was the latter's dependence on raiding Muscovite lands for economic benefit. Crimean Tatars frequently "harvested the steppe" and brought Russian, Ukrainian, and Polish peasants to Crimea for sale. Slave markets operated in Kefe and Gozleve, where merchants from the Ottoman Empire, Iran, and Egypt purchased Slavic slaves for export. Several raids reached as far as Moscow itself. Slave market tax records indicate that more than a million were sold in Crimea in the sixteenth and seventeenth centuries.

Eighteenth-century Russian governments tried to bring an end to these raids. An invasion of Crimea in 1736 succeeded in destroying much of the khanate's capital Bahçesaray, including the palace, though the Russian army soon abandoned that effort. The Girays were able to rebuild much of the city over the next ten years.

It was left to Catherine II to bring an end the khanate, in 1783. Russian victories over the Ottomans resulted in, first, the Treaty of Karasu Bazaar between Russia and the Khanate in November 1772, followed by the Treaty of Küçük Kaynarca between Russia and the Ottoman Empire in 1774. Karasu Bazaar established an "alliance and eternal friendship" between the khanate and Russia; the second cut all ties between the khanate and the Ottoman Empire.

For nine years, Catherine II worked with the last Crimean Khan, Şahin Giray, in an experiment in "independence," implementing some of her "enlightened" political ideas in a Muslim, Tatar society. Recognizing failure in this venture, Catherine annexed the khanate and the rest of the Crimean peninsula to the empire in 1783.

CRIMEAN TATARS

A Turkic people who settled the Crimean peninsula over the two hundred years after Batu Khan's conquest, the Tatars of the Crimea came from Central Asia and Anatolia. By 1450, almost the whole of the peninsula north of the coastal mountains was Tatar land. The Tartat language was a combination of the Turkish of the Anatolian Seljuks and the Chagatay Turkic of the Tatar rulers of the Volga region, though by the end of the fifteenth century, Crimean Tatar was a dialect different from both.

In the fifteenth century, the Crimean Tatars established a state (khanate) and a ruling dynasty (Giray) with its political center first in Solhat and later in Bahçesaray. This khanate was closely associated with the Ottoman Empire to the south, though it retained its sovereignty. No Ottoman officials exercised authority within the lands of these Tatars. Crimean Tatar authors wrote histories and chronicles that emphasized distinctions between Tatars and other Turkic peoples, including the Ottomans.

As the Crimean Tatar economy depended on the slave trade and raids into Russian and other Slavic lands, it was inevitable that Russia would strive to gain dominance over the peninsula. But it was only in the eighteenth century that Russia had sufficient power to defeat, and, ultimately, annex the peninsula and incorporate the remaining Tatars into their empire. The annexation took place in 1783.

Russian domination put enormous pressures on the Tatars—causing many to emigrate to the Balkans and Ottoman Empire during the nineteenth century. One of the Tatar intellectuals, Ismail Bey Gaspirali, tried to establish an educational system for the Tatars that would allow them to survive, as Tatars and as Muslims, within the Russian Empire. He had substantial influence over other Turkic Muslims within the empire, an influence that spread also to Turkish intellectuals in Istanbul.

Throughout the nineteenth century the Russian government encouraged Russian and Ukrainian peasants to settle on the peninsula, placing ever greater pressures on the Tatar population. Although the Revolution of 1917 promised some relief to the Tatars, with the emergence of "national communism" in non-Russian lands, the Tatar intellectual and political elites were destroyed during the Stalinist purges.

The German occupation of Crimea after 1941 produced some Crimean Tatar collaboration, though no greater proportion of Tatars fought against the USSR than did Ukrainians or Belorussians. Nevertheless, the entire Crimean Tatar nationality was collectively punished in 1944, and deported en masse to Central Asia, primarily Uzbekistan. In the 1950s, Crimea was assigned to the Ukrainian SSR, at the three hundredth anniversary of Ukraine's annexation to the Russian Empire. Ukrainians and Russians resettled Tatar homes and villages.

Crimean Tatars mark the fifty-fourth anniversary of Stalin's order to deport their ancestors from the Crimean peninsula, May 18, 1998. PHOTOGRAPH BY SERGEI SVETLITSKY/ASSOCIATED PRESS. REPRODUCED BY PERMISSION.

Many Tatars fled to Turkey, where they joined descendants of Tatars who had emigrated from Crimea in the nineteenth and twentieth centuries. In the early 2000s it was estimated that there were more than 5 million Crimean Tatar descendants who were citizens of the Republic of Turkey. They have been thoroughly assimilated as Turks, though they continue Tatar cultural and literary activities.

During the next thirty-five years, Tatars in Central Asian exile continued to maintain their national identity, through cultural and political means. They published, in Tatar, a newspaper in Tashkent, *Lenin Bayragi*, and united their efforts with various Soviet dissident groups. Some attempted to return to the Crimean peninsula, with modest success.

With the collapse of the USSR, and the new independence of the Ukraine, continued efforts have been made by Tatars to reestablish some of their

communities on the peninsula. Crimean Tatars, however, remain one of the many "nationalities" of the former USSR that have not been able to establish a new nation.

ALAN FISHER

CRIMEAN WAR

The Crimean War (1853–1856) was Europe's greatest war between 1815 and 1914, pitting first Turkey, then France and England, and finally Piedmont–Sardinia against Russia.

The incautious and miscalculated decision by Nicholas I to activate his southern army corps and Black Sea fleet in late December 1852 can be attributed to several general misperceptions: the official myth that Russia legally protected the Ottoman Orthodox; disinformative claims of Ottoman perfidy regarding the Orthodox–Catholic dispute over Christian Holy Places; and illusions of Austrian loyalty and British friendship. Attempts to interest the British in a partition of the Ottoman Empire failed. Britain followed France in sending a

fleet to the Aegean to back Turkey, after Russia's extraordinary ambassador to Istanbul, Alexander Menshikov, acted preemptorily, following the tsar's instructions, in March 1852. Blaming Turkish obstinacy on the British ambassador Stratford de Redcliffe, the Russians refused to accept the Ottoman compromise proposal on the Holy Places on the grounds that it skirted the protection issue. Russia broke relations with Turkey in May and occupied Moldavia and Wallachia in July.

While the Ottomans mobilized, European statesmen sought an exit. Russia's outright rejection in September of another Ottoman compromise finessing the protection issue, one which the British found reasonable, emboldened the Turks to declare war and attack Russian positions in Wallachia and the eastern Black Sea (October). Admiral Pavel

Encounter between Russians, nineteenth-century engraving. THE ART ARCHIVE/MUSEO DEL RISORGIMENTO ROME/DAGLI ORTI

Nakhimov's Black Sea squadron destroyed a Turkish supply convoy off Sinope (November 30), and the combined Anglo–French–Turkish fleet entered the Black Sea on January 1, 1854. Russia refused the humiliating allied demand to keep to port, and by early April, Britain and France were at war with Russia.

Russia's million-man army was larger than that of the allies, but had fewer rifles and deployed 600,000 troops from Finland to Bessarabia as insurance against attacks from the west. Anglo–French fleets and logistics far outclassed Russia's.

The war operated on several fronts. The Russians crossed the Danube in March and besieged Silistra, only to retreat and evacuate Wallachia and Moldavia in June in the face of Austro–German threats. Anglo–French naval squadrons entered the Baltic and destroyed Russia's fortifications at Bomarsund and Sveaborg, but did not harm Kronstadt. In Transcaucasia, Russian counterattacks and superior tactics led to advances into Eastern Anatolia and the eventual investment of Kars in September 1855.

The key theater was Crimea, where the capture of Sevastopol was the chief Allied goal. Both sides made mistakes. The Russians could have mounted a more energetic defense against Allied landings, while the Allies might have taken Sevastopol before the Russians fortified their defenses with sunken ships and naval ordnance under Admiral Vladimir Kornilov and army engineer Adjutant Eduard Totleben. The Allies landed at Evpatoria, defeated the Russians at the Alma River (September 20, 1854), and redeployed south of Sevastopol. The Russian attempt to drive the Allies from Balaklava failed even before the British Light Brigade made its celebrated, ill-fated charge (October 25, 1854). The well-outnumbered allies then tried to besiege Sevastopol and thus exposed themselves to a counter-attack at Inkerman on November 5, 1854, which the Russians completely mishandled with their outmoded tactics, negligible staff work, and command rivalries.

Despite a terrible winter, the Allies reinforced and renewed their siege in February 1855. Allied reoccupation of Evpatoria, where the Turks held off a Russian counterattack, and a summer descent on Kerch disrupted the flow of Russian supplies. The death of Nicholas I and accession of Alexander II (March 2) meant little at first. As per imperial wishes, the Russians mounted a hopeless attack on the besiegers' positions on the Chernaya River (Au-

gust 16). The constant Allied bombardment and French-led assaults on Sevastopol's outer defenses led to an orderly evacuation (September 8–9). The Russians in turn captured Kars in Eastern Anatolia (November 26), thereby gaining a bargaining chip. Hostilities soon abated.

Russia lost the war in the Baltic, Crimea, and lower Danube, with the demilitarization of the Åland Islands and the Black Sea and retrocession of southern Bessarabia, but, at the cost of 400,000–500,000 casualties, defended the empire's integrity from maximal Anglo–Ottoman rollback goals and won the war in the Caucasus and Transcaucasia. The evidence of Russia's technological and structural inferiority to the West, as well as the massive turnout of peasant serfs expecting emancipation in return for volunteer service, were major catalysts of the Great Reforms under Alexander II. Russia became more like the other great powers, adhering to the demands of cynical self-interest.

CRONY CAPITALISM

Crony capitalism is a term that describes an economic system where people with good connections to the center of power—the “cronies” of the government—manage to place themselves in positions of undue influence over economic policy, thus deriving great personal gains.

In the case of Russia, the term implies that between the president and the country's business leaders—known as the “oligarchs”—there emerged a tacit understanding. If the oligarchs used their economic power to supply political and financial support for the president, in return they would be allowed to influence for their own benefit the formulation of laws and restrictions on a range of important matters.

A prominent example is that of insider dealings in the process of privatization, which, for example, allowed the transfer of major oil companies into private hands at extremely low prices. Another is the introduction of a system of “authorized banks,” whereby a few select commercial banks were allowed to handle the government’s accounts. Such rights could be abused: for example, by delaying the processing of payments received. Under conditions of high inflation, the real value eventually passed on to the final destination would be greatly diminished. There have also been serious allegations of insider dealings by the cronies in Russian government securities.

The overall consequences for the Russian economy were negative in the extreme. The influence of the so-called crony capitalists over the process of privatization led to such a warped system of property rights that some analysts seriously argued in favor of selective renationalization, to be followed by a second round of “honest” privatization.

Even more important, by allowing the crony capitalists to take over the oil industry for a pittance, the Russian government freely gave up the right to extract rent from the country’s natural resource base. This represented a massive shift of future income streams out of the government’s coffers and into private pockets, with severe implications for the future ability of the state to maintain the provision of public goods.

STEFAN HEDLUND

CUBAN MISSILE CRISIS

The Cuban Missile Crisis was one of the most serious incidents of the Cold War. Many believed that war might break out between the United States and the Soviet Union over the latter’s basing of nuclear-armed missiles in Cuba.

Fidel Castro came to power in Cuba promising to restore the liberal 1940 constitution but immediately took more radical steps, including an eco-

nomie agreement in 1960 with the Soviet Union. In turn, the Soviet premier, Nikita Khrushchev, promised in June to defend Cuba with Soviet nuclear arms. In early 1961, the United States broke relations with Havana, and in April it helped thousands of Cuban exiles stage an abortive uprising at the Bay of Pigs.

Khrushchev was convinced that the United States would strike again, this time with American soldiers; and he believed that Castro’s defeat would be a fatal blow to his own leadership. He decided that basing Soviet missiles in Cuba would deter the United States from a strike against the Castro regime. Moreover, so he reasoned, the Cuba-based medium-range missiles would compensate for the USSR’s marked inferiority to America’s ICBM capabilities. Finally, a successful showdown with Washington might improve Moscow’s deteriorating relations with China.

In April 1962, Khrushchev raised the possibility of basing Soviet missiles in Cuba with his defense minister, Rodion Malinovsky. He hoped to deploy the missiles by October and then inform Kennedy after the congressional elections in November. He apparently expected the Americans to accept the deployment of the Soviet missiles as calmly as the Kremlin had accepted the basing of U.S. missiles in Turkey. Foreign minister Andrei Gromyko, when finally consulted, flatly told Khrushchev that Soviet missiles in Cuba would “cause a political explosion” (Taubman) in the United States, but the premier was unmoved. In late April, a Soviet delegation met with Khrushchev before departing for Cuba. They were told to “explain the plan” to install missiles “to Castro” (Taubman). In fact, their mission was more one of “telling than asking.” Castro was hardly enthusiastic, but was ready to yield to a policy that would strengthen the “entire socialist camp” (Taubman). Later the Presidium voted unanimously to approve the move.

Perhaps most remarkably, Khrushchev believed that the deployment of sixty missiles with forty launchers, not to mention the support personnel and equipment, could be done secretly. General Anatoly Gribkov warned that the installation process in Cuba could not be concealed. And American U-2 spy planes flew over the sites unhindered. The Cubans, too, doubted that the plan could be kept secret; Khrushchev responded that if the weapons were discovered the United States would not overreact, but if trouble arose, the Soviets would “send the Baltic Fleet.”

A U.S. reconnaissance photo reveals a Soviet cargo ship with eight missile transporters and canvas-covered missiles lashed on deck during its return voyage from Cuba to the Soviet Union. © HULTON ARCHIVE

In July 1962, the American government learned that the USSR had started missile deliveries to Cuba. By the end of August, American intelligence reported that Soviet technicians were in Cuba, supervising new military construction. In September, Kennedy warned that if any Soviet ground-to-ground missiles were deployed in Cuba, “the gravest issues would arise.” Rather than calling a halt to the operation, Khrushchev ordered it accelerated, while repeatedly assuring Washington that no build-up was taking place.

On October 14, U.S. aerial reconnaissance discovered a medium-range ballistic missile mounted on a launching site. Such a missile could hit the eastern United States in a matter of minutes. On October 16, Kennedy and his closest advisers met to discuss the crisis and immediately agreed that the missile must be removed. On October 22, Kennedy announced a “quarantine” around Cuba, much to Khrushchev’s delight. The premier thought

the word sufficiently vague to allow for negotiation and exulted, “We’ve saved Cuba!” Despite his apparent satisfaction, Khrushchev fired off a letter to Kennedy accusing him of interfering in Cuban affairs and threatening world peace. He then went to the opera.

The turning point came on October 24, when Attorney General Robert Kennedy told the Soviet ambassador that the United States would stop the Soviet ships, strongly implying that it would do so even if it meant war. Khrushchev reacted angrily, but a letter from President Kennedy on October 25 pushed the premier toward compromise. Kennedy wrote that he regretted the deterioration in relations and hoped Khrushchev would take steps to restore the “earlier situation.” With this letter, Khrushchev finally realized that the crisis was not worth the gamble and began to back down. Another war scare occurred on the twenty-seventh with the downing of a U-2 over Cuba, but by this

point both leaders were ready and even anxious to end the crisis. On October 29, the premier informed Kennedy that the missiles and offensive weapons in Cuba would be removed. Kennedy promised there would be no invasion and secretly agreed to remove America's Jupiter missiles from Turkey.

Khrushchev's Cuban gamble helped convince the Soviet leadership that he was unfit to lead the USSR. This humiliation, combined with failures in domestic policies, cost him his job in 1964.

HUGH PHILLIPS

CUBA, RELATIONS WITH

The Cuban Communist Party began its frequently interrupted existence in 1925. Classically aligned with Moscow, the Cuban communists were among the most active communist parties in Latin America, placing one of their members in the President Batista's cabinet during World War II. The Soviet Union had diplomatic relations with Cuba during the war and for a few years afterward, and reopened them in 1960.

In the mid-1950s Fidel Castro, the leader of a radical nationalist revolutionary movement, organized an armed revolt against Batista's increasingly dictatorial rule. Castro was not a member of the Communist Party; the communists provided little or no support to his movement and openly criticized his tactics and strategies. After Castro seized power in 1959, communists, with a few exceptions, did not staff his new government and fell into obscurity.

In 1960 President Eisenhower concluded that Castro threatened U.S. private and public interests and was not amenable to U.S. direction. Castro was seizing American-owned properties and moving toward one-man rule. In order to protect U.S. public and private interests and to reassert traditional bilateral relationships, the U.S. government embargoed sugar, Cuba's main export, cut off access to oil, and continued an embargo of arms and munitions begun against Batista. These measures, unopposed, would have terminated Castro's rule.

U.S. actions had unexpected results. The USSR seized this chance to establish a toehold in Cuba. Countering U.S. sanctions, the USSR bought Cuba's sugar, sold its oil, and provided arms. U.S. efforts to overthrow Castro at the Bay of Pigs failed, and Cuba's ties with the USSR were strengthened. Castro, his party, and the Cuban state adopted communist models.

The resolve of the three governments in the new triangular relationship was tested in the Cuban Missile Crisis of October 1963. Emboldened by his toehold near Florida and reassured by Castro's anti-Americanism and revolutionary intentions, Khrushchev ordered Soviet missiles to Cuba. President Kennedy, risking war, ordered the Navy to block missile deliveries. In subsequent negotiations Khrushchev agreed to remove the missiles, and Kennedy agreed not to use force against Cuba.

The Cuban Missile Crisis settlement set the framework for the relationships between the three countries. Castro became even more dependent on Soviet largess, as he was deprived of political and economic ties with the United States, previously Cuba's most important economic partner. The United States continued its anti-Castro campaigns short of invasion. The USSR replaced the United States as the hegemonic power over Cuba with all the advantages, costs, and risks involved.

Castro's dependence on the Soviet Union for trade, military equipment, and foreign aid grew steadily over the years. In return for Soviet aid, Castro copied the ideology, political structure, and economic system of the USSR. In 1976 the constitution formalized a communist structure in Cuba that harmonized with communist structures elsewhere, with party control of agriculture, industry, and commerce. Cuba's ties with the USSR facilitated Castro's iron one-man rule for more than thirty years. Castro reciprocated ongoing Soviet assistance through his support of pro-Soviet revolutionary movements in Latin America, including

Nicaragua and El Salvador, and elsewhere, including Angola and Ethiopia. These movements supported the USSR and copied Soviet models.

The Soviet Union's ties with Cuba had global implications. Soviet armed forces had access to the Western Hemisphere, and Cuba could serve as a point of contact for regional revolutionary movements. This alliance, taken together with Communist governments in Eastern Europe and Asia, provided Moscow with an arguable claim to worldwide influence. Moscow also took satisfaction in having a presence in Cuba matching that of the U.S. in Berlin.

Castro proved independent and unruly, not an ideal client by Soviet standards. The leaders of other Communist parties in the hemisphere were under Soviet control through the Foreign Department of the Soviet Communist Party. Unlike most other Communist leaders, Castro manipulated Moscow as much as or more than Moscow manipulated him.

The Soviet Union's ties with Cuba proved very costly over the years. The USSR paid high prices for Cuban sugar, and Cuba paid low prices for Soviet oil. Moscow equipped Cuba with one of the strongest military forces in Latin America. Foreign economic assistance probably far exceeded \$70 billion during the relationship. Cuba became the Soviet Union's largest debtor along with Vietnam. The Soviet leadership kept these huge expenditures secret until the USSR began to collapse.

Soviet economic and military investments in Cuba, including the establishment of a military brigade near Havana, were both a strategic advantage and a vulnerability, the latter because of the preponderance of U.S. power in the region. Soviet leaders were careful to make clear that they did not guarantee Cuba against a US attack. Nor was Cuba admitted to the Warsaw Pact. In that military sense their relationship was more a partnership than an alliance. After the Nicaraguan revolution of 1979, Moscow was even more careful, learning from lessons in Cuba, not to guarantee the Sandinistas economic viability or military security.

General Secretary Mikhail Gorbachev's commitment to glasnost led to public knowledge in Russia of the costly nature of Soviet subsidies to Cuba; perestroika led to a reexamination of the Cuban regime and its relationship to Soviet interests. In his efforts to put the USSR on a more solid footing, particularly with respect to Germany, Gorbachev sought support from the United States. For

their part, President George Bush and Secretary of State James Baker sought Gorbachev's collaboration in ending the Cold War in Latin America. In response to U.S. pressure among other factors, Gorbachev withdrew the Soviet military brigade from Cuba and ended lavish economic aid to Cuba. His actions led to the termination of Soviet and Cuban involvement in revolutionary movements in Central America. To Moscow's advantage, and to the huge impoverishment of Cuba, the Soviet Union and Cuba were set free of their mutual entanglements.

COLE BLASIER

CULT OF PERSONALITY

At the Twentieth Congress of the Communist Party in 1956, Nikita Khrushchev denounced Josef Stalin's "Cult of Personality" in the so-called "Secret Speech." He declared, "It is impermissible and foreign to the spirit of Marxism-Leninism to elevate one person, to transform him into a superman possessing supernatural characteristics akin to those of a god." In addition to enumerating Stalin's repression of the Communist Party during the purges, Khrushchev recounted how in films, literature, his *Short Biography*, and the *Short Course of the History of the Communist Party*, Stalin displaced Vladimir Lenin, the Party, and the people and claimed responsibility for all of the successes of the Revolution, the civil war, and World War II. Khrushchev's speech praised Lenin as a modest "genius," and demanded that "history, literature and the fine arts properly reflect Lenin's role and the great deeds of our Communist Party and of the

Soviet people." Khrushchev's formulation reveals the paradox of the "cult of personality." While denigrating the cult of Stalin, Khrushchev reinvigorated the cult of Lenin.

Analysts have traced the leader cult back to the earliest days of the Soviet Union, when a personality cult spontaneously grew up around Lenin. The cult grew among Bolsheviks because of Lenin's stature as Party leader and among the population due to Russian traditions of the personification of political power in the tsar (Tucker, 1973, pp. 59–60). Lenin himself was appalled by the tendency to turn him into a mythic hero and fought against it. After the leader's death in 1924, however, veneration of Lenin became an integral part of the Communist Party's quest for legitimacy. Party leaders drew on both political and religious traditions in their decision to place a mausoleum containing the embalmed body of Lenin at the geographic and political center of Soviet power in Moscow's Red Square. Once Lenin was enshrined as a sacred figure, his potential successors scrambled to position themselves as his true heirs.

After Stalin consolidated his power and embarked on the drive for socialist construction, he began to build his own cult of personality. Stalin's efforts were facilitated by the previously existing leader cult, and he trumpeted his special relationship with Lenin. Early evidence of the Stalin cult can be found in the press coverage of his fiftieth birthday in 1929, which extolled "the beloved leader, the truest pupil and comrade-in-arms of Vladimir Ilich Lenin" (Brooks, 2000, p. 61). In the early 1930s, Stalin shaped his image as leader by establishing himself as the ultimate expert in fields other than politics. He became "the premier living Marxist philosopher" and an authoritative historian of the Party (Tucker, 1992, pp. 150–151). Stalin shamelessly rewrote Party history to make himself Lenin's chief assistant and adviser in 1917. Soviet public culture of the 1930s and 1940s attributed all of the achievements of the Soviet state to Stalin directly and lauded his military genius in crafting victory in World War II. Stalin's brutal repressions went hand in hand with a near-deification of his person. The outpouring of grief at his death in 1953 revealed the power of Stalin's image as wise father and leader of the people.

Once he had consolidated power, Nikita Khrushchev focused on destroying Stalin's cult. Many consider Khrushchev's 1956 attack on the Stalin cult to be his finest political moment. Al-

though Khrushchev criticized Stalin, he reaffirmed the institution of the leader cult by invoking Lenin and promoting his own achievements. Khrushchev's condemnation of the Stalin cult was also limited by his desire to preserve the legitimacy of the socialist construction that Stalin had undertaken. After Khrushchev's fall, Leonid Brezhnev criticized Khrushchev's personal style of leadership but ceased the assault on Stalin's cult of personality. He then employed the institution of the leader cult to enhance his own legitimacy.

Like Stalin's cult, Brezhnev's cult emphasized "the link with Lenin, [his] . . . role in the achievement of successes . . . and his relationship with the people" (Gill). The Brezhnev-era party also perpetuated the Lenin cult and emphasized its own links to Lenin by organizing a lavish commemoration of the centennial of Lenin's birth in 1970. The association of Soviet achievements with Brezhnev paled in comparison to the Stalin cult and praise of Brezhnev's accomplishments often linked them to the Communist Party as well. Both Khrushchev and Brezhnev sought to raise the status of the Communist Party in relation to its leader. Yet Stalin, Khrushchev, and Brezhnev all conceived of the role of the people as consistently subordinate to leader and Party.

It was not until Gorbachev instituted the policy of glasnost, or openness, in the mid-1980s that the institution of the cult of personality came under sustained attack. The Soviet press revealed Stalin's crimes and then began to scrutinize the actions of all of the Soviet leaders, eventually including Lenin. The press under Gorbachev effectively demolished the institution of the Soviet leader cult by revealing the grotesque falsifications required to perpetuate it and the violent repression of the population hidden behind its facade. These attacks on the cult of personality undermined the legitimacy of the Soviet Union and contributed to its downfall.

In the post-Soviet period, analysts have begun to see signs of a cult of personality growing around Vladimir Putin. Other observers, however, are skeptical of how successful such a leader cult could be in the absence of a Party structure to promote it and given the broad access to information that contemporary Russians enjoy. The cult of personality played a critical role in the development of the Soviet state and in its dissolution. The discrediting of the cult of the leader as an institution in the late Soviet period makes its post-Soviet future uncertain at best.

KAREN PETRONE

CULTURAL REVOLUTION

"Cultural revolution" (*kulturnaya revolyutsiya*) was a concept used by Lenin in his late writings (e.g., his 1923 article "On Cooperation") to refer to general cultural development of the country under socialism, with emphasis on such matters as inculcation of literacy and hygiene, implying gradual transformation out of the backwardness that Lenin saw as the legacy of tsarism.

In the late 1920s, the term was taken up and transformed by young communist cultural militants who sought the party leaders' approval for an assault on "bourgeois hegemony" in culture; that is, on the cultural establishment, including Anatoly Lunacharsky and other leaders of the People's Commissariat of Enlightenment, and the values of the old Russian intelligentsia. For the militants, the essence of cultural revolution was "class war"—an assault against the "bourgeois" intelligentsia in the name of the proletariat—and they meant the "revolution" part of the term literally. In the years 1928 through 1931, the militants succeeded in gaining the party leaders' support, but

lost it again in 1932 when the Central Committee dissolved the main militant organization, the Russian Association of Proletarian Writers (RAPP), and promoted reconciliation with the intelligentsia.

In the late 1950s and 1960s, the concept of cultural revolution received a new lease of life in the Soviet Union. The inspiration came from Lenin's writings, not from the militant episode of 1928 through 1931, which was largely forgotten or suppressed as discreditable. Cultural revolution was now seen as a unique process associated with socialist revolution, which, for the first time, made culture the property of the whole people. The emphasis was on the civilizing mission of Soviet power, particularly in the country's own "backward," non-Slavic republics and regions. Rebutting suggestions from East European scholars that cultural revolution was not a necessary step in the evolution of countries that were not backward when they came to socialism, Soviet writers such as Maxim Kim described cultural revolution as one of the general laws (*zakonomernosti*) of socialism first realized in the Soviet Union but applicable to all nations.

In Western Soviet historiography since the late 1970s, the term has often connoted the militant episode of the Cultural Revolution (in some respects foreshadowing the Chinese Cultural Revolution of the 1960s) described in the 1978 volume edited by Sheila Fitzpatrick. It has also been used in a sense different from any of the above to describe a Bolshevik (or, more broadly, Russian revolutionary) transformationist mentality endemic in the first quarter of the twentieth century (Joravsky; Clark; David-Fox).

Along with collectivization and the First Five-Year Plan, the Cultural Revolution was one of the great upheavals of the late 1920s and 1930s sometimes known as the "Great Break" (*veliky perelom*) or Stalin's "revolution from above." There were two important differences between the Cultural Revolution and other "Great Break" policies, however. The first was that whereas the turn to collectivization, elimination of kulaks, and forced-pace industrialization proved to be permanent, the Cultural Revolution was relatively short-lived. The second was that, in contrast to the collectivization and industrialization drives, Stalin's personal involvement and commitment was limited to a few areas, notably the show trials of "wrecker" engineers and the formation of a new proletarian intelligentsia through worker promotion (*vydvizhenie*), and he

was doubtful of or positively hostile to a number of the militants' initiatives (e.g., in educational policy, literature, and architecture) when they came to his attention. The fact that the Cultural Revolution was followed by what Nicholas S. Timasheff called a "Great Retreat" in cultural and social policy in the mid-1930s strongly suggests that Stalin, like Lenin before him, lacked enthusiasm for the utopianism and iconoclasm that inspired many of the young cultural militants.

The most influential of the militant organizations in culture, RAPP, had been agitating since the mid-1920s for an abandonment of the relatively tolerant and pluralist cultural policies associated with Lunacharsky and his People's Commissariat of Enlightenment, and the establishment of uncompromising "proletarian" (which, in the arts, often meant communist-militant) rule in literature. RAPP's pretensions were rebuffed in 1925, but in 1928 the atmosphere in the party leadership abruptly changed with the staging of the Shakhty trial, in which "bourgeois" engineers—serving as a synecdoche for the noncommunist Russian intelligentsia as a whole—were accused of sabotage and conspiracy with foreign powers. At the same time, Stalin launched a campaign for intensified recruitment and promotion of workers and young communists to higher education, especially engineering schools, and administrative positions, with the purpose of creating a "worker-peasant intelligentsia" to replace the old bourgeois one. The obverse of this policy was purging of "socially undesirable" students and employees from schools, universities, and government departments.

Stalin used the drive against the bourgeois intelligentsia to discredit political opponents, whom he took pains to link with noncommunist intellectuals accused of treason in the series of show trials that began in 1928. "Rightists" like Nikolai Bukharin and Alexei Rykov, who opposed Stalin's maximalist plans for forcible collectivization and forced-pace industrialization, became targets of a smear campaign that linked them with the class enemy, implying that they were sympathetic to, perhaps even in league with, kulaks as well as "wreckers" from the bourgeois intelligentsia.

As an "unleashing" of militants in all fields of culture and scholarship, as well as in the communist youth movement (the Komsomol), the Cultural Revolution generated a host of spontaneous as well as centrally directed radical initiatives. As occurred later in the Chinese Cultural Revolution,

young radicals from the Komsomol launched raids on "bureaucracy" that severely disrupted the work of government institutions. Endemic purging of all kinds of institutions, from schools and hospitals to local government departments, often initiated by local activists without explicit instructions from the center, was equally disruptive.

Among the main loci of Cultural Revolution activism, along with RAPP, were the Communist Academy and the Institute of Red Professors, scholarly institutions whose specific purpose was to train and advance a communist intelligentsia. Although Stalin had contact with some of these activists, and perhaps even toyed with the idea of establishing his own "school" of young communist intellectuals, he was also suspicious of them as a group because of their involvement in party infighting and their admiration for the party's two most renowned intellectuals and theorists, Trotsky and Bukharin. The young communist professors and graduate students did their best to shake up their disciplines, which were almost exclusively in the humanities and social sciences rather than the natural sciences, and to challenge their "bourgeois" teachers. In the social sciences, this challenge was usually mounted in the name of Marxism, but in remote areas such as music theory the challenge might come from an outsider group whose ideas had no Marxist underpinning.

Long-standing disagreements over theory and research took on new urgency, and many visionary schemes that challenged accepted ideas found institutional support for the first time. In architecture, utopian planning flourished. Legal theorists speculated about the imminent dissolution of law, while a similar movement in education for the dissolution of the school did considerable practical damage to the school system. Under the impact of the Cultural Revolution, Russian cultural officials dealing with the reindeer-herding small peoples of the north switched to an interventionist policy of active transformation of the native culture and lifestyle. In ecology, the Cultural Revolution exposed conservationists to attack by militants inspired by the ideology of transforming nature.

In 1931 and 1932, official support for class-war Cultural Revolution came to an end. Professional institutions were in shambles, and little work was being produced. In industry, with so many workers being promoted and sent to university, there was a shortage of skilled workers left in the factories. In June 1931 Stalin officially rehabilitated

the bourgeois engineers; in April 1932, RAPP and other proletarian cultural organizations were dissolved. Many of the radicals who had been instrumental in attacking established authority during the Cultural Revolution were accused of deviation and removed from positions of influence. Bourgeois specialists who had been fired or arrested were allowed to return to work. In education, radical theories were repudiated and traditional norms reestablished, and policies of aggressive proletarian recruitment were quietly dropped.

But although this was the end of the radical antibourgeois Cultural Revolution, it was hardly a return to the way things had been before. Academic freedom had been seriously curtailed, and party control over cultural and scholarly institutions tightened. Thousands of young workers, peasants, and communists (*vydvizhentsy*) had been sent to higher education or promoted into administrative jobs. During the Great Purges of 1937–1938, many activists of the Cultural Revolution perished (often denounced by resentful colleagues), though others survived in influential positions in cultural and academic administration. But the cohort of *vydvizhentsy*, particularly those trained in engineering who graduated in the first half of the 1930s, were prime, albeit unwitting, beneficiaries of the Great Purges. Members of this cohort, sometimes known as “the Brezhnev generation,” entered top party, government, and professional positions at the end of the 1930s and continued to dominate the political elite for close to half a century.

CUSTINE, ASTOLPHE LOUIS LEONOR

(1790–1857), French writer and publicist.

Astolphe de Custine’s fame rests upon his book *Russia in 1839*, a voluminous travelogue depicting the empire of Nicholas I in an unfavorable light; it became an oft-quoted precursor to numerous subsequent works of professional “Sovietologists” and “Kremlinologists.” Custine was born into an old aristocratic family; both his father and grandfather were executed during the French Revolution. Originally a staunch political conservative, Custine traveled to Russia determined to provide French readers with the positive image of a functioning monarchy. However, the three months spent in the empire of Tsar Nicholas I—whom he met in person—turned Custine into a constitutionalist. Russia’s despotic, incurably corrupt order that entitled the state to any intrusions into its citizens’ lives shocked the European observer with its innate violence and hypocrisy. Custine particularly faulted

the Russian establishment for its quasi-military structure introduced by Peter I. Most astounding among his conclusions was the prediction that Russia would face a revolution of unprecedented scope within the next half century.

When *Russia in 1839* was published in four lengthy volumes in 1843, it became an immediate bestseller and was translated into English, German, and Danish. Russian diplomats and secret agents tried their utmost to discredit the book and its author; the tsar himself reportedly had a fit of fury while reading Custine's elaborations. On the other hand, Alexander Herzen and other dissidents praised *Russia in 1839* for its accuracy, and even the chief of Russia's Third Department conceded that the ungrateful French guest merely said out loud what many Russians secretly were thinking in the first place.

Astolphe de Custine, who also wrote other travelogues and fiction, died in 1857.

CUSTOMS BOOKS

Customs books (*tamozhennye knigi*) were official registers of customs and other revenues collected at customs offices between the sixteenth and the mid-eighteenth centuries, and often a source of data on expenditures by the customs administration.

Typical entries in a customs book list the quantities and values of the commodities carried by a given merchant. In addition, they usually give the name, rank, origin, and destination of each merchant. Customs records often include separate sections on particular "special" commodities, such as liquor, horses, cattle, grain, or treasury goods.

All Russian towns, as well as many smaller communities, kept records of all trade passing through them. A total of some 190 seventeenth-century customs books have survived to this day.

Although the collection has been repeatedly decimated over time, varying numbers of customs books still exist for fifty cities in European Russia and for most of the Siberian fortress towns, virtually all of them dated between 1626 and 1686. The best-preserved collections of early modern customs data are for the Southern Frontier, the Northern Dvina waterway, and the Siberian fortress towns. In contrast, practically all the information of the key commercial centers of Moscow, Yaroslavl', Arkhangel'sk, and Novgorod, among others, has been lost.

For the early eighteenth century, customs data pertaining to some 300 towns have survived. Dated from 1714 to 1750, 142 books survive in the collections of the *Kamer-kollegia*. The most important collections are for Moscow, Northern Russia, and the Southern Frontier. The practice of compiling customs books was discontinued following the abolition of internal customs points in 1754.

JARMO T. KOTILAINE

CYRIL AND METHODIUS SOCIETY

The first Ukrainian political organization in the Russian Empire, the Cyril and Methodius Brotherhood existed from late 1845 to early 1847. A secret society with no clear membership criteria, the brotherhood consisted of a core group of some dozen members and a wider circle of an estimated one hundred sympathizers. The society was led by the historian Mykola (Nikolai) Kostomarov, the minor official Mykola Hulak, and the schoolteacher Vasyl Bilozersky. Scholars continue to disagree as to whether the great poet Taras Shevchenko, the most celebrated affiliate of the group, was a formal member. This organization of young Ukrainian patriots was established in Kiev in December 1845 and, during the fourteen months of its existence, its activity was limited to political discussions and the formulation of a program. Kostomarov wrote the society's most important programmatic statement, "The Books of the Genesis of the Ukrainian

People.” Strongly influenced by Polish Romanticism and Pan-Slavism, this document spoke vaguely of the Christian principles of justice and freedom, but also proposed a number of radical reforms: the abolition of serfdom, the introduction of universal education, and the creation of a democratic federation of all the Slavic peoples with the capital in Kiev. The members of the brotherhood disagreed about priorities and ways of implementing their program. Kostomarov, who stressed the Pan-Slavic ideal, expressed the majority opinion that change could be achieved through education and moral example. Hulak and Shevchenko advocated a violent revolution. Shevchenko, together with the writer Panteleimon Kulish, saw the social and national liberation of Ukrainians as the society’s priority. In March 1847 a student informer denounced the society to the authorities, leading to the arrest of all active members. Most of them were subsequently exiled to the Russian provinces, but Hulak received a three-year prison term, while Shevchenko’s poems earned him ten years of forced army service in Central Asia. Soviet historians emphasized the difference between radicals and liberals within the brotherhood, while in post-Soviet Ukraine the group is seen as marking the Ukrainian national movement’s evolution from the cultural stage to a political one.

SERHY YEKELCHYK

CYRILLIC ALPHABET

Russian and other Slavic languages are written using the Cyrillic alphabet. The letter system has been attributed to Cyril and Methodius, two brothers from Greek Macedonia working as Orthodox missionaries in the ninth century. Cyril invented the Glagolitic (from the word *glagoliti*, “to speak”) script to represent the sounds they heard spoken among the Slavic peoples. By adapting church rituals to the local tongue, the Orthodox Church became nationalized and more accessible to the masses. Visually, Glagolitic appears symbolic or

An eighteenth-century carved bone and wood panel with the Cyrillic alphabet. © MASSIMO LISTRI/CORBIS

runic. Later St. Clement of Ohrid, a Bulgarian archbishop who studied under Cyril and Methodius, created a new system based on letters of the Greek alphabet and named his system “Cyrillic,” in honor of the early missionary.

Russian leaders have standardized and streamlined the alphabet on several occasions. In 1710, Peter the Great created a “civil script,” a new typeface that eliminated “redundant” letters. Part of Peter’s campaign to expand printing and literacy, the civil script was designated for all non-church publications. The Bolsheviks made their own orthographic revisions, dropping four letters completely to simplify spelling. As non-Russian lands were incorporated into the Soviet Union, the Communist Party decreed that all non-Russian languages had to be rendered using the Cyrillic alphabet. Following the collapse of the USSR, most successor states seized the opportunity to restore their traditional Latin or Arabic script as a celebration of their national heritage.

Transliteration is the process of converting letters from one alphabet to another alphabet system. There are several widely used systems for transliterating Russian into English, including the Library of Congress system, the U.S. Board of Geographic Names system, and the informally named "linguistic system." Each system offers its own advantages and disadvantages in terms of ease of pronunciation and linguistic accuracy.

This Encyclopedia uses the U.S. Board of Geographic Names system, which is more accessible for non-Russian speakers. For example, it renders the name of the first post-communist president as "Boris Yeltsin," not "Boris El'tsin." The composer of the *Nutcracker Suite* and the *1812 Overture* becomes "Peter Tchaikovsky," not "Piotr Chaikovskii."

ANN E. ROBERTSON

CYRIL OF TUROV

(c. 1130–1182), twelfth-century church writer, bishop.

The facts of Cyril's (Kirill's) life and career are disputable, since contemporary sources for both are lacking. Customarily, it is asserted that he was born to a wealthy family in Turov, northwest of Kiev, about 1130 and died not later than 1182; that he was a monk who rose to be bishop of Turov in the late 1160s; and that he wrote letters to Prince Andrei Bogolyubsky about a rival bishop. Cyril's brief Prolog (Synaxarion) life (translation in Simon Franklin's *Sermons and Rhetoric of Kievan Rus'*), written probably long after his death, is the only "authority" for most of these claims, although it is vague and gives no dates. Whether all of the works attributed to him were his, and whether he was ever in fact a bishop (the texts usually call him simply the "unworthy" or "sinful monk Cyril") are matters of speculation and scholarly convention.

Tradition credits more extant writings to Cyril of Turov than to any other named person thought

to have lived in the Kievan period. They include sermons, parables, and edifying stories. The corpus of texts attributed to Cyril was critically studied and edited in the 1950s by the late philologist Igor Petrovich Yeremin. Simon Franklin considers the "stable core" of the oeuvre to consist of three stories and eight sermons, while various other writings have frequently been added.

The eight sermons, which no doubt are Cyril's most admired works today, form a cycle for the Easter season stretching from Palm Sunday to the Sunday before Pentecost. Like the famous Sermon on Law and Grace of Hilarion, they are heavily dependent on Byzantine Greek sources and, of course, incorporate many Biblical quotations and paraphrases. The original accomplishment of Cyril was to express all this in a fluent and vigorous Church Slavonic language that makes it fresh and living. Cyril's style is elaborate and rich in poetic tropes, particularly metaphors. A familiar example is his extended comparison of the resurrection with the coming of spring in the world of nature, where (in the manner of Hilarion) he quickly resolves the metaphors and reveals explicitly the higher meaning for salvation history.

Another typical feature of Cyril's sermons is the extensive use of dramatic dialogue, very welcome in a church literature otherwise devoid of liturgical drama. Thus the speech of Joseph of Arimathea (with his repeated plea, "Give me body of Christ") and others in the Sermon for Low Sunday both instruct and convey deep emotion.

NORMAN W. INGHAM

CZARTORYSKI, ADAM JERZY

(1770–1861), Polish statesman, diplomat, and soldier.

Prince Adam Jerzy Czartoryski was the scion of an aristocratic Polish family, the son of Prince Adam Kazimierz and Izabella (nee Fleming) Czartoryski.

He fought in the Polish army during the war of the second partition in 1793, after which his father's estates were confiscated by the Russians. In a last-ditch attempt to salvage his property, Czartoryski's father sent Adam and his brother Constantine to the Court of St. Petersburg. Summoning all his courage, Czartoryski befriended the grandson of Empress Catherine II, the Grand Duke Alexander, in the spring of 1796. Hoping that Alexander would soon be tsar, Czartoryski filled his friend's head with ideas about Polish freedom. When Alexander became emperor in 1801, after the murder of his father Paul, he appointed Czartoryski as Russian Minister of Foreign Affairs.

Now one of Tsar Alexander's trusted advisors, Czartoryski intervened on behalf of the Poles whenever he could, repeatedly advocating the restoration of Poland to its 1772 boundaries, a Russian-English alliance, and the diplomatic recognition of Napoleonic France as a method of deterrence. Deeming Austria and Prussia to be Russia's main enemies, Czartoryski resigned in protest when the tsar formed an alliance with Prussia. He nevertheless continued to champion Polish independence after Napoleon's unsuccessful war with Russia, attending the Congress of Vienna (1814) and pleading with British and French statesmen. On May 3, 1815, the Congress of Vienna did establish the so-called Congress Kingdom of Poland, a small state united with Russia but possessing its own army and local self-government. Cruelly, however, Alexander appointed Adam's brother Constantine as commander-in-chief of the Polish army and shunted Adam aside, never to be called again to government service.

Czartoryski participated in the Polish insurrection of 1830 and 1831, and briefly headed a provisional Polish government. However, the Russians crushed the rebellion, and Czartoryski was sentenced to death. Fleeing to Paris, he set up a political forum for Polish émigrés from the Hôtel Lambert, where he resided. Only among the Hungarians, in armed revolt against the Habsburg empire in 1848, did the Hôtel Lambert group find, and give, support. Many Poles joined the Hungarian army as officers and soldiers. Nevertheless, the Hôtel's influence also faded, along with Czartoryski's dream of Polish independence in his lifetime.

CZECHOSLOVAK CORPS *See* CIVIL WAR OF 1917–1922.

CZECHOSLOVAKIA, INVASION OF

Late in the evening of August 20, 1968, Czechoslovakia was invaded by five of its Warsaw-Pact allies: the Soviet Union, East Germany, Poland, Hungary, and Bulgaria. The invasion force, which eventually totaled around half a million soldiers, 6,300 tanks, and 800 airplanes, targeted its entry from the north, northwest, and south to quickly neutralize the outnumbered Czechoslovak army. The immediate objective of the invasion was to prevent any resistance to the seizure of power by collaborators in the Czechoslovak Communist Party (KSČ), who had signaled their agreement with Soviet disapproval of First Secretary Alexander Dubček's reform program and leadership style. Although it caused the deaths of around 100 civilians and is often credited with putting an end to the "Prague Spring," the invasion failed in many political and logistical respects, and its larger aims were met only months later by other means.

The possibility of military intervention in Czechoslovakia had been entertained in the Brezhnev Politburo from at least as early as March 1968, only weeks after Dubček had risen (with Soviet blessing) to the top of the KSČ. At first, the majority of Soviet leaders preferred to pressure Dubček into reimposing censorship over the mass media, silencing critical intellectuals, and removing the bolder reformers within the party. His repeated promises to restore control temporarily prevailed over the demands of Polish, East German, and Bulgarian leaders for Soviet-led military action. The Politburo was also restrained by its lack of personal contacts with, and trust in, other Czech and Slovak functionaries, to whom power would have to be entrusted.

By mid-July 1968, Soviet patience with Dubček had been exhausted, and alternative leaders had

A Czech youth displays a bloodstained flag to Soviet troops sprawled atop a passing tank in Prague, August 21, 1968. © BETTMANN/CORBIS

been identified. Under the cover of war games in and around Czechoslovakia, twenty divisions moved into striking position. After the failure of several last attempts to persuade Dubček to take the initiative in reversing his reforms, the Politburo concluded on August 17 that military intervention was unavoidable. The Czech and Slovak collaborators, however, botched their bid to seize power, and the invading armies' overextended supply lines broke down, forcing soldiers to beg for food and water from a hostile populace engaging in highly effective, nonviolent resistance. In Moscow, the Soviet powers decided to bring Dubček and his closest colleagues to the Kremlin. After three days of talks, a secret protocol was signed that committed the KSČ leadership to the restoration of censorship and a purge of the party apparatus and government ministries. Dubček remained at the helm of the KSČ until April 1969, when Moscow-fueled intrigue led to his replacement by the more amenable Gustáv Husák.

KIERAN WILLIAMS

CZECHOSLOVAKIA, RELATIONS WITH

Both the Soviet Union and Czechoslovakia were born from the collapse of European empires at the

close of World War I. While the USSR rose directly from the rubble of the Russian Empire, the Paris Peace Conference crafted Czechoslovakia from Austro-Hungarian lands. From the outset, the Czech lands (Bohemia and Moravia) and Slovakia had as many differences as similarities, and tensions between the two halves of the state would resurface throughout its lifetime and eventually contribute to its demise in 1992.

Under the leadership of President Tomas G. Masaryk, Czechoslovakia was spared many of the problems of the interwar period. Its higher levels of industrialization helped it weather the financial crises of the 1920s better than its more agrarian neighbors. Czechoslovakia also remained a democracy, ruled by the "Petka"—the five leading political parties. Democracy ended only when Czechoslovakia was seized by Nazi Germany, first through the Munich Agreement of 1938, and later through direct occupation of Bohemia and Moravia in 1939. A separate Slovak state was established under Nazi protection in 1939. Ultimately, Soviet troops liberated Czechoslovakia in 1945.

Following World War II, Stalin moved to first install satellite regimes throughout Eastern Europe and then mold them to emulate Soviet structures. Unlike other future members of the Warsaw Pact, however, Czechoslovakia's communists were homegrown, not installed by Moscow. A Communist Party of Czechoslovakia (CPCz) had been established in 1921 and had a much broader support base than the Soviet party. Communists served in the first post-war government of President Eduard Benes, taking a plurality (38 percent) of the vote in May 1946. They controlled key ministries, including the Interior, Education, Information, and Agriculture. They also acceded to Soviet pressure to not participate in the Marshall Plan reconstruction program. The CPCz seized power in February 1948, when non-Communist cabinet members resigned, hoping to force new elections. A handful of other parties competed in the May 1948 election, but the Communists were in charge. Benes resigned the presidency in June and was replaced by Communist Klement Gottwald.

Gottwald and CPCz First Secretary Rudolf Slansky then began a program of restructuring Czechoslovakia in the Soviet image. Noncommunist organizations were banned, economic planning was introduced, agriculture was collectivized, and media and educational institutions were subjected to ideological controls. Again emulating Stalin, the Czechoslovak communists used terror and purges

to consolidate their rule. Even Slansky succumbed to the purges; he was replaced by Antonin Novotny. Following Gottwald's death in 1953, Antonin Zapotocky became president.

The other major communist death of 1953, Stalin's, had little effect on Czechoslovakia. Like hard-line communist leaders in East Germany, officials in Prague did not embrace Nikita Khrushchev's efforts at liberalization and pluralism. They kept tight control over the Czechoslovak citizenry for the next fifteen years, using the secret police as necessary to enforce their rule. Public protest was minimal, in part due to the relative success—by communist standards—of Czechoslovakia's economy.

In January 1968 the CPCz removed Novotny and replaced him with Alexander Dubcek, who finally brought destalinization to Czechoslovakia. The CPCz now allowed broader political discussion, eased censorship, and tried to address Slovak complaints of discrimination. This new approach, called "socialism with a human face" led to a resurgence in the country's social, political, and economic life—an era that came to be called the Prague Spring. Soon popular demands exceeded the Party's willingness to reform. The CPCz's "Action Plan" was countered by "2,000 Words," an opposition list of grievances and demands.

The Kremlin kept a close eye on all developments in Czechoslovakia. Khrushchev had dispatched tanks to Budapest in 1956 when Hungarian Communists took reform too far. His successor, Leonid Brezhnev, was even less inclined to allow for experimentation. By summer, Moscow worried that Dubcek had lost control. Moscow declared its right to intervene in its sphere of influence by promulgating the Brezhnev Doctrine. On August 21, 1968, Warsaw Pact troops invaded to restore order. Dubcek was summoned to Moscow but not immediately fired.

In 1969 "socialism with a human face" was replaced with a new policy: normalization. Gustav Husak became the CPCz first secretary in April 1969, and Dubcek was dispatched to the forests of Slovakia to chop wood. Husak took orders from Moscow, turning Czechoslovakia into one of the Soviet Union's staunchest allies. The Party purged itself of reformist elements, alternative organizations shut down, and censorship was reimposed. In October 1969, Moscow and Prague issued a joint statement, announcing that their economies would be coordinated for the next six years.

The populace fell in line, quietly accepting the reversal of the Prague Spring. The communist leaders tried to temper the political hard-line by maintaining a high standard of living and plentiful consumer goods. As the shock of the crackdown faded, however, a handful of opposition movements emerged trying to keep alive the spirit of 1968. The best-known of these groups was Charter 77, named for the January 1977 declaration signed by 250 dissidents, including playwright and future president Vaclav Havel.

The rise of Gorbachev in 1985 alarmed the CPCz. The hard-line communist leaders of Czechoslovakia did not embrace Gorbachev's brand of new thinking. They stubbornly held onto their austere rule, while the economy began to skid. They had come to power in 1969 to block reform; they could hardly shift and embrace it now. Gorbachev's first official visit to Czechoslovakia, in 1987, raised hopes—and fears—that he would call for a resurrection of the 1968 reforms, but instead he made rather bland comments that relieved the Czech leaders. They believed they now had Moscow's blessing to ignore perestroika. Husak retired as First Secretary—but not President—in late 1987, apparently for personal reasons rather than on Moscow's order. His replacement, Milos Jakes, was another hard-line communist with no penchant for reform.

Czechoslovakia was one of the last states to experience popular demonstrations and strikes in the cascading events of late 1989. The West German embassy in Prague was overrun by thousands of

East Germans seeking to emigrate. When the other hard-line holdout, East Germany, collapsed in October, suddenly the end of communism in Czechoslovakia seemed possible. Unable to address popular demands, the Czechoslovak Politburo simply resigned en masse, after barely a week of demonstrations. Havel became president; Dubcek returned from internal exile to lead parliament.

The Soviet Union collapsed in December 1991 and the Czech Republic and Slovakia divorced on December 31, 1992. Initially, the new Czech state tilted westward, whereas Slovakia leaned toward Moscow, in part because its economy was still oriented in that direction. As the 1990s unfolded, both countries maintained proper ties with Moscow, but also joined NATO: the Czech Republic in 1999, Slovakia in 2002.

DAGESTAN

Dagestan, part of the ethnically diverse Caucasus region, is an especially rich area of ethnic and linguistic variety. An Autonomous Soviet Socialist Republic of the RSFSR during the Soviet period, it has continued to be an autonomous republic of the Russian Federation since. There are twenty-six distinct languages in the Northeast Caucasian family. The majority of these languages' speakers live in Dagestan. The largest of these are Avar, Dargin, and Lezgin. The total population of the Dagestan A.S.S.R. in 1989 was 1.77 million. Many other nationalities, such as Russians, also live in Dagestan.

The capital of Dagestan is Makhachkala, located on the Caspian Sea. The Terek River is the most important river in Dagestan, flowing from Chechnya and toward the Caspian Sea. There is a small coastal plain that gives rise quickly to the eastern portion of the main Caucasus range. The most intense ethno-linguistic diversity is found in the mountains as a result of the isolation that historically separated groups of people. The northern part of Dagestan connects with the Eurasian steppe.

Many of the people of Dagestan are descendents of the residents of the ancient Caucasian Albanian Kingdom. This kingdom was known for its multiplicity of languages and was Christian for many centuries, having close relations with the Armenian people and their Christian culture.

Dagestanis were traditionally Muslims peoples. Attempts in the post-Soviet period to incite Islam-based rebellion, however, have been generally unsuccessful. These rebellions have come from the direction of the troubled Republic of Chechnya, which is located west of Dagestan. The Islam of Dagestan was traditionally a Sufi-based Islam, one that is inimical to the sort of puritanical Sunni sectarianism that is exported from other parts of the Islamic world. Sufism in this part of the world is not without its militant expression; one of the most famous leaders, Shamil, was an Avar of Dagestan. His power base was mainly in the Central Caucasus among the Chechens.

Unlike many of their other neighbors in the Caucasus, the Dagestanis, for the most part, did not experience the exile and deportation in the nineteenth and twentieth centuries. This makes the narrative of their people much less filled with the anger and alienation that characterizes Chechen, Abkhazian, and other histories. The ethnic fragmentation of

Dagestan has also prevented a unified Dagestani national identity from being formed.

The Russian Empire appeared in this area in two different forms: by the Cossacks who lived at the periphery of the empire in the semiautonomous communities; and by means of the imperial army's movement down the Volga River and to the western shore of the Caspian. Peter the Great captured territory in this area, but Dagestan was not fully brought into the Russian Empire until the mid-nineteenth century.

The Soviet period saw the creation of Cyrillic-based alphabets for the various languages of Dagestan. This strengthened the existence of the larger languages, and may have forestalled the extinction of some of the smallest of the languages. It also served to forestall the creation of a united Dagestani national identity.

In the post-Soviet period, in addition to Islamic agitation from the west, there has also been a certain amount of ethnic conflict. The conflict is generally over who will control the politics and patronage of certain enclaves, while the larger groups jockey for position in the republic's government. Some of the conflicts result from the ethnic mixing that was encouraged and sometimes forced during the Soviet period.

PAUL CREGO

DANIEL, METROPOLITAN

(d. 1547), Metropolitan of Moscow, 1522–1539; leading Josephite and "Possessor."

Daniel was a native of Ryazan with a powerful frame, an encyclopedic turn of mind, a preacher's

bent, and disciplined work habits. He was tonsured by Joseph of Volokolamsk (also known as Iosif or Joseph of Volotsk) around 1500 and designated to succeed him before his death in 1515, when he and his monastery were under virulent attack by Vassian Patrikeyev and out of favor at court.

As abbot, Daniel demonstrably enforced the rule of communal property, and the cloister continued its remarkable growth as a landowner and center of learning, training future prelates, and writing. He oversaw the completion of the extended redactions of Joseph's *Enlightener* and Monastic Rule and masterminded the creation of the *Nikon Chronicle* with its milestone grand narrative, sacralizing Rus history and granting Moscow the contested succession to Kiev.

Selected metropolitan by Basil III, Daniel issued a worthless writ of safe-conduct to a suspect appanage prince (1523) and permitted Basil's controversial divorce and remarriage (1525), which resulted in the birth of the future Ivan IV (1530). In turn Daniel was able to organize synods against Maxim Greek (1525, 1531) and Vassian (1531), and canonize Joseph's mentor Pafnuty of Borovsk. Daniel also placed an enterprising ally, Macarius, on the powerful, long vacant archepiscopal see of Novgorod (1526) and Iosifov trainees as bishops of Tver (1522), Kolomna (1525), and Smolensk (1536). Presiding over Basil III's pre-death tonsure and the oaths to the three-year-old Ivan IV (1533), Daniel remained on his throne through the dowager Helen Glinsky's regency (1533–1538), but could not exercise his designated supervisory role, prevent murderous infighting at top, or keep his post after she died.

Using his office to bolster church authority, Daniel systematized canon law and the metropolitan's chancery, built up its library, and tried to impose Iosifov practices on some other monasteries. He handled dissenting voices in a variety of ways. The 1531 synodal sentences ended Vassian Patrikeyev's career with imprisonment in Iosifov, but permitted the less bellicose and eminently useful Maxim a milder house arrest in Tver. Foregrounding the Orthodox principle of patient endurance in public life, Daniel contested the diplomat Fyodor Karpov's Aristotle-based insistence upon justice, but did not prosecute him. Daniel also utilized Basil III's German Catholic physician Nicholas Bülew and commissioned Russia's first translation of a Western medical work, but obliquely opposed by pen Bülew's astrology and

arguments favoring union of the Orthodox and Catholic Churches.

Daniel left two collections of original writings modeled on the encyclopedist Nikon of the Black Mountain and Joseph of Volokolamsk—one with sixteen discourses, the other with fourteen missives. They cover a variety of theological and ethical issues and evince both Nil Sorsky's and Joseph's influences. Daniel composed six other similar extant pieces and still others now lost. These collections, however, unlike the *Nikon Chronicle* and Daniel's canonic compilation, never achieved the authoritativeness and popularity of Joseph's *Enlightener* or Maxim's works.

DAVID M. GOLDFRANK

DANIEL, YULI MARKOVICH

(1925–1988), translator, author, show-trial defendant.

A native of Moscow, Yuli Daniel fought in World War II, then studied at the Moscow Regional Teachers' Institute. He began his literary career as a translator of poetry.

During the cultural Thaw that followed Nikita Khrushchev's Secret Speech in 1956, Daniel began to write short stories of his own. These include "This Is Moscow Speaking" (1962), "Hands" (1963), and "The Man from MINAP" (1963). Daniel's stories were satirical and absurdist. For example, the protagonist of "The Man from MINAP" is able to choose the sex of any baby he fathers. To create a boy, he thinks about Karl Marx at the point of conception; for a girl, he fantasizes about Klara Zetkin. In "This Is Moscow Speaking," a summer day in 1960 is designated "National Murder Day," an obvious—and bold—reference to Stalinist terror.

Even under Khrushchev, Daniel published not in the USSR, but in the West, under the pseudonym Nikolai Arzhak. Nonetheless, for the time being, Daniel remained safe from actual persecution. However, the ouster of Khrushchev in 1964 and the rise of Leonid Brezhnev brought about a deep cultural retrenchment. Daniel was among the first of its victims.

In 1965 Daniel was arrested, with fellow author Andrei Sinyavsky (who used the *nom de plume*

Abram Tertz). Both were put on trial in February 1966, accused by the prosecution of "pouring mud on whatever is most holy and most pure." The authors were permitted to speak in their own defense, but the trial was conducted in Stalinist style, with its outcome determined in advance. Sinyavsky was sentenced to seven years of hard labor, Daniel to five years. The Sinyavsky–Daniel trial served as the regime's clear sign to the Soviet intelligentsia that Khrushchev's liberalism was at an end.

After serving his sentence, Daniel was forbidden to return to Moscow. He settled in Kaluga for a number of years, before finally being allowed to move back to the capital.

JOHN MCCANNON

DANILEVSKY, NIKOLAI YAKOVLEVICH

(1822–1885), social theorist and pan-Slavist.

Nikolai Danilevsky, a pan-Slavist, introduced into Russian social thought of the early and mid-nineteenth century the utopian-socialist ideas of the French thinker, Charles François Marie Fourier. Danilevsky's major writing was his book *Russia and Europe: An Inquiry into the Cultural and Political Relations of the Slavs to the Germano-Latin World*, published in 1869.

In his interpretation of socialism as applied to peasant Russia, Danilevsky developed the idea of the existing Russian peasant commune, or *obshchina*, as a unique, progressive, specifically Russian institution. It contained, he said, the seeds of cooperative socialism as found in Fourier's "phalanstery," or socialist cooperative.

Into his socialist worldview Danilevsky had added the Russian ingredient of Slavophilism and pan-Russism. This nationalistic concept that influenced some segments of the Russian intelligentsia by the early nineteenth century was derived from German thinkers of Germanophilic persuasion,

such as Herder and Ruckert. In Danilevsky's construction, not Germany but Russia occupies a leading position in the world as the standard-bearer of socialism. At heart, his Slavophilism was not a religious conception but, in his view, a "scientific" one.

Danilevsky gave his cyclic theory of history a specifically Russian twist. In it he incorporated the historiography of Oswald Spengler as found in the latter's *Decline of the West*. For Danilevsky, the West and in particular Germany were in the throes of decadence and demise. Russia, by contrast, was the wave of the future. In his book, he insisted that "even today [in the Balkans] the Slavs prefer the heavy yoke of Islam to the civilized domination of Austria." Danilevsky came to the conclusion that Russia's interests ran parallel to those of Prussia, which needed Russian collaboration more than the other way around. Yet Russia alone, he insisted, could make the best synthesis of all types of civilization worldwide.

Danilevsky's views influenced such writers as Fyodor Dostoyevsky (1821–1881). Moreover, his Slavophilism and pan-Russism became a point of departure for rationalizing tsarist Russian foreign policy. This expansionist motivation allowed Slavs to become united as "brothers" around the Russian core. Polish Slavs, on the other hand, would be excluded in this brotherhood because Poland was said by some to be a collective "old traitor to Slavdom."

Because of his socialist views and his affinity to the revolutionist Petrashevsky Circle of socialists in St. Petersburg, Danilevsky ran afoul of the tsarist police. As the reputed leading Russian expert on Fourierism, he, too, was put on trial and imprisoned along with the other Petrashevtsy, including Dostoyevsky.

Although Bolshevik and Soviet propaganda disavowed Danilevskian Pan-Slavism as a tsarist dogma, Leninism-Stalinism nevertheless reflected, in essence, a good deal of this thought. Lenin had described the Great Russian proletariat as the "vanguard" of world revolution. Stalin, in turn, echoed this idea in his tributes to the Great Russians, placing them above all other peoples in the Soviet victory over Nazi Germany in 1945. Moreover, in its domestic imperial policy, Moscow described the Russians as the elder brother of all nations and national groups composing the USSR.

ALBERT L. WEEKS

DARGINS

The Dargins (or Dargwa) are an ethnic group in the Republic of Dagestan in the Russian Federation. At the 1989 Soviet Census they numbered 280,431, or 15.8 percent of the republic. In the USSR as a whole there were 365,038 Dargins, of whom over 97 percent considered Dargin to be their native tongue. Of that same number 68 percent claimed fluency in Russian as a second language. This would include a significant majority of the adults. The Dargins are situated in the area of Kizlyar, where one of the branches of the Dagestani State University is found.

The Dargin language is a member of the Lak-Dargwa group of the Northeast Caucasian family of languages. In Soviet times it would also have been included in the larger category of Ibero-Caucasian languages. This grouping owed as much to the politics of *druzhba narodov* (the Soviet policy of Friendship of the Peoples) as it did to the reality of linguistic relation in this diverse collection of languages found in the Caucasus region. Following the general pattern of many of the non-Slavic languages of the Soviet Union, Dargin has had a modified Cyrillic alphabet since 1937. A Latin alphabet was utilized from 1926 to 1937 and before that Dargin was written in an Arabic script.

A modest number of books was published in Dargin during the Soviet period. From 1984 to 1985, for example, a total of fifty-one titles appeared. This compares favorably with other ethnic groups of its size, but without an ethnic jurisdiction of its own. A people such as the Abkhaz, with less than a third of the population of the Dargins, had 149 titles published in the same two-year period.

The Dargins have competed with other local nationalities for position within the diverse Dagestan Republic as ethnic politics are manipulated along with religious identity. The Dargins have traditionally been Sunni Muslims, with the strong in-

fluence of Sufism characteristic in the Caucasus region.

DASHKOVA, YEKATERINA ROMANOVNA

(1743–1810), public figure, author, and memoirist.

As director of the St. Petersburg Academy of Sciences and president of the Russian Academy, Princess Yekaterina Romanovna Dashkova (née Vorontsova) was one of the first women to hold public office in Europe. By any standard, Dashkova led a remarkable life: She was born in 1743 to a prominent Russian noble family, the Vorontsovs. After losing her mother at the age of two, Dashkova grew up in the household of her uncle, Count Mikhail Vorontsov, where she received the best instruction available for young women. Yet, as she points out in her *Memoirs*, Dashkova felt compelled to supplement her education with intensive reading of authors such as Voltaire, Montesquieu, and Helvétius, and demonstrated a lively interest in politics from her earliest years. Her passion for learning, and for theories of education, would prove constant throughout her life.

In 1759 Dashkova married Prince Mikhail Ivanovich Dashkov and bore him three children in quick succession: Anastasia (1760–1831), Mikhail (1761–1762), and Pavel (1763–1807). Their marriage was happy, but short-lived: Mikhail died after a brief illness in 1764, leaving Dashkova with the task of paying his debts and rearing their two surviving children. Significantly, Dashkova chose never to remarry. Moreover, her relationship with her children became the source of recurring sorrow to Dashkova, who outlived her son and disinherited her daughter.

By far the most significant figure in Dashkova's life, however, was Empress Catherine II, whom Dashkova met in 1758, while the former was Grand Duchess and twice the age of the fifteen-year-old Dashkova. According to Dashkova,

the attraction between the two was immediate, if only because—as she writes with some exaggeration in her *Memoirs*—“there were no other two women at the time . . . who did any serious reading” (p. 36).

The defining moment in Dashkova's life took place in 1762, when the young princess took part in the palace revolution that overthrew Peter III and brought Catherine, his wife, to power. While historians continue to debate the precise role that Dashkova played in the coup, Dashkova places herself at the center of the revolt in her *Memoirs*. Catherine initially rewarded Dashkova's loyalty with gifts of money and property. Within a short time, however, the relationship between the two women deteriorated—the result, perhaps, of Dashkova's exalted claims for her role in Catherine's ascension to the throne.

Following the death of her husband in 1764, Dashkova spent much of the next two decades in self-imposed exile from the Russian court. From 1769 to 1771, and again from 1775 to 1782, Dashkova traveled abroad, overseeing her son's education in Scotland and meeting with prominent figures of the Enlightenment, such as Diderot, Voltaire, Benjamin Franklin, and Adam Smith. After Dashkova returned to Russia, in 1783 Catherine appointed her director of the Academy of Sciences, which the previous director had left in considerable disarray. Not only did Dashkova restore the fortunes of the Academy—much as she would affairs on her various estates—but she also inspired Catherine to found the Russian Academy, with the goal of compiling the first Russian etymological dictionary and fostering Russian culture. In her role as director of both academies, Dashkova was instrumental in bringing Enlightenment ideas to Russia. Dashkova also wrote and published extensively: She translated works on education, travel, and agriculture; composed verse and several plays; and oversaw the publication of several journals.

After quarrelling with the empress over the publication of the Yakov Knyazhnin's play *Vadim Novgorodsky*, which Catherine claimed was an attack on autocracy, Dashkova requested a leave of absence from the Academy in 1794. Catherine's death in 1796 brought further misfortune to Dashkova: In order to punish her for the role she played in the downfall of his father, Emperor Paul exiled Dashkova to a remote estate in northern Russia. One year later, after Dashkova appealed for clemency on the grounds of ill health, Paul

permitted her to return to Troitskoye, her estate near Moscow. Paul's death and the accession of Alexander I to the throne in 1801 brought an end to Dashkova's exile, but she chose to spend her remaining years at Troitskoye, managing her holdings and writing her celebrated memoirs.

As a historical figure, Dashkova remains significant for her prominent role in the intellectual life of eighteenth-century Russia: She exemplified the Enlightenment ideal of the educated woman, or *femme savante*, and inspired both admiration and anxiety among her contemporaries for her unusual achievements. Furthermore, her accomplishments illuminate central themes in the social and cultural history of Russia: female intrigue and patronage during the era of empresses; the persistence of noble family politics in the emerging bureaucratic state; and the Russian reception of the Enlightenment.

DASHNAKTSUTIUN

The *Hay heghapokhakan dashnaktsutiun* (Armenian Revolutionary Federation, ARF, Dashnak Party, or Dashnaktsutiun) was founded in 1890 in Tbilisi, by Russian Armenian intellectuals, in order to help Armenians in the Ottoman Empire obtain economic and political reforms. The party established branches throughout the Ottoman and Russian Empires as well as in Europe and the United States. At different times the party supported guerrilla activities, political action, and Western intervention as means to achieve its goals in the Ottoman Empire.

In the Russian Empire the Dashnaktsutiun led the opposition to the anti-Armenian policies of the tsarist government (1903–1905) and, subsequently, the militia forces that clashed with Azerbaijani Turks in the Caucasus during the revolution of 1905–1907. In 1914 it supported a Russian plan for reforms in Ottoman Armenia. During World

War I it also organized Russian-supported Armenian volunteer units in Eastern Armenia to help Armenians in the Ottoman Empire.

The genocide committed by the Young Turk government against the Armenian population ended the presence of the party in Turkey. With the disintegration of the Russian Empire, the Dashnaktsutiun led the first independent Armenia, 1918–1920, only to cede power to the Bolsheviks in 1920. The party, along with other noncommunist groups, was banned from Soviet Armenia.

In the diaspora the Dashnaktsutiun focused on community-building, representing Armenians in host countries, and pursuing national aspirations internationally. Until the 1960s that meant a free and independent Armenia. Beginning in the 1970s, the party shifted its focus from an anticommunist and anti-Soviet crusade to an anti-Turkish campaign for the recognition of the genocide and territorial reparations from Turkey, for which Russian and USSR support was considered essential.

The Dashnaktsutiun has claimed a special position in Armenian history through its maximalist demands for the reconstitution of historic Armenia. Having reestablished itself in Armenia in 1990, the party reserved the right to resist by force any government it considered unacceptable; it opposed the leadership of the national movement that rose in Armenia in 1988 and accepted with reluctance the country's declaration of independence in 1991. Vehemently opposed to the first president, Levon Ter-Petrossian, it has been more supportive of the second, Robert Kocharian. Nonetheless, despite substantial contributions from its diasporan segment, the Dashnaktsutiun has been unable to make significant gains in Armenia's elections.

The Dashnaktsutiun is a tightly knit, disciplinary organization with grass roots mechanisms in many communities. It is financed mainly by membership dues and donations by sympathizers.

DECEMBRIST MOVEMENT AND REBELLION

Secret society, active from 1816 to 1825 in Russia, named after its unsuccessful revolt in Saint Petersburg on December 14, 1825.

The Decembrist movement began as a secret society named the Union of Salvation, active from 1816 to 1818 in St. Petersburg. The Union of Welfare, created in 1818, followed. The latter existed until 1821, united more than two hundred members, and had branches in St. Petersburg, Moscow, Kishinev, and other cities of the Russian empire. Both societies were organized by young officers who had recently returned from a foreign military campaign during the Napoleonic wars. Convinced that the Russian army had granted freedom to European people, these liberally minded and well-educated young members of the Russian nobility were disappointed by the politics of Alexander I, whose reforming plans outlined at the beginning of his reign were not realized. Observing the steep growth of nationalism in Europe, and following the tradition of "love for the fatherland" of the Russian educated nobility in the late eighteenth and early nineteenth centuries, the Decembrists were inclined toward extreme patriotism. They imagined the Russian people as a nation and acted in its name. Taking as an example the German *Tugendbund* (Union of Virtue), active in Prussia throughout Napoleon's occupation, members of secret societies claimed the national revival as their main aim. In particular, this nationalistic tendency expressed itself in demands for the discharge of foreigners from Russian positions of authority. Freemasonry, with its idealism and moral imperative on the one hand and secrecy and ritualization on the other, also contributed to the movement. Many participants of Russian secret societies were simultaneously members of Masonic lodges.

The main goal of the Union of Welfare was to influence public opinion. Its members aspired to create favorable conditions for constitutional reforms in Russia aimed at the moral and spiritual improvement of the elite and society as a

whole. Many members were engaged in the establishment of Lancaster's school system in Russia, as they believed it promoted enlightenment among the poor classes and in the army. Literature, playing an important role in Russian public life since the reign of Catherine the Great, was also an important field of activity for the Union of Welfare and other Decembrist societies. Many Decembrists contributed to Russian political lyrics and literary romanticism and were members of various literary societies. The conspirators Kondraty Ryleyev, Alexander Bestuzhev-Marlinsky, and Wilhelm Kuchelbecker were famous writers of their time.

New secret societies created on the basis of the Union of Welfare were more conspiratorial and better organized. The Southern Society, with its absolute leader, colonel Pavel Pestel, appeared in 1820 in Tulchin; and the Northern Society was founded in 1821 in St. Petersburg. Nikita Muraviev and Nikolai Turgenev were the main figures of the latter society. In the summer of 1825 the Southern Society took members of the Society of United Slavs, hoping to create a Pan-Slavic confederation. The conspirators discussed projects of the Russian constitution and ways of performing an armed revolt and regicide.

Pestel's Russian Justice, accepted as a program of the Southern Society, and Muraviev's "Constitution" were the most representative of the Decembrists' constitutional projects. Both projects provided for the abolition of serfdom. Muraviev offered constitutional monarchy, a federal organization of the country, and property qualification at elections. Pestel's radical project provided for creation of a centralized Jacobin-like republic and specific land reform, dividing land into private and public sectors. According to Pestel's project, dictatorship of a provisional government was to last ten to fifteen years after the revolt, whereas the leaders of the Northern Society suggested early election of authority.

Immediate cause for the conspirators to act was the succession crisis. On November 19th, 1825, childless Alexander I died unexpectedly in the south of Russia in Taganrog, far from the capital. According to the law of 1797, the oldest of his brothers, Grand Duke Konstantin, Viceroy of Poland, was to become the successor. However, in 1820 Konstantin had entered a morganatic marriage, and in 1822, in a private letter to Alexander, he had abandoned his right to the Russian throne. In 1823

Alexander signed a manifesto wherein he proclaimed his next eldest brother Nicholas the successor. It is unknown why this document was kept secret from the public. When news of the death of Alexander reached the capital, the general governor of St. Petersburg, Mikhail Miloradovich, convinced Nicholas that the guards were not loyal to him and would consider his accession to the throne a usurpation. Nicholas and the army swore allegiance to Konstantin, who was residing in Poland. The latter was not willing to accept authority, and yet he did not renounce it publicly. In the dangerous situation of interregnum, Nicholas became emperor and set the new oath of allegiance for December 14.

Taking advantage of disorder in the troops and government, members of secret societies decided to persuade soldiers not to swear an oath to Nicholas. The plan of revolt was developed in Ryleyev's apartment on the night of December 13. The conspirators composed a manifesto to the Russian people, in which "the abolition of the former government" was proclaimed. Colonel Prince Sergei Trubetskoy, one of the leaders of the Northern Society, was appointed as the leader of the revolt.

Unfortunately for the conspirators, not all those officers and troops expected to participate in the revolt actually gathered. Trubetskoy seemed to lose nerve and did not lead the mutineers. About three thousand soldiers were lined up in combat readiness on the Senate Square with thirty officers as their leaders. The nearest streets were crowded with people. The troops loyal to Nicholas surrounded the square. For several hours the troops stood opposite each other. A few attempts to persuade the soldiers to return to their barracks were made, and General Governor Miloradovich was fatally wounded by retired lieutenant Pavel Kakhovsky. At last Nicholas gave an order to open fire, and the revolt was suppressed.

Despite the defeat in the capital, and despite Pestel's arrest on December 13, the southern conspirators, including the members of the United Slavs, decided to act. Sergei Muraviev-Apostol and Mikhail Bestuzhev-Ryumin supervised the revolt. On December 29 the conspirators managed to persuade soldiers of the Chernigov regiment to start out for the capital. On January 3, 1826, the government troops stopped the mutineers and defeated them.

A special investigation committee was created to determine the circumstances of the conspiracy. The High Criminal Court condemned to death five Decembrists: Pestel, Ryleyev, Muraviev-Apostol,

Kakhovsky, and Bestuzhev-Ryumin. They were hanged in St. Petersburg on July 13, 1826. Thirty-one officers were sentenced to lifelong hard labor. The other officers and soldiers were sentenced to different terms of hard labor, disciplinary battalions, and exile. By the amnesty declared in 1856 after Alexander II's accession, Decembrists were allowed to reside in the central part of Russia and regained their nobility privileges.

ELENA ZEMSKOVA

DECREE ON LAND

Upon seizing power from the Provisional Government in October 1917, the Bolsheviks immediately issued two decrees. The first decree served to withdraw Russia from World War I. The second decree issued by the new Bolshevik regime was entitled "On Land." The decree abolished property rights of landlords and provided for the confiscation of estates with no compensation. More generally, the Decree on Land abolished private ownership of land and introduced the nationalization of land. Under the terms of the decree, about 150 million hectares of arable land, pasture land, and forest land were confiscated and distributed to 25 million communal households. The October 1917 land decree was followed by legislation in January 1918 that forbade the selling, renting, or mortgaging of land. Nationalized land became the possession of "all the people" and could be used only by those who cultivated it. Although all land was nationalized, individuals or families could obtain allotments of land for small-scale agricultural activities, assuming that they themselves used the land and did not employ hired labor. These land plots included collec-

tive garden plots, private plots, and dacha plots, the size of which was restricted by local norms.

The prohibition on leasing land remained until March 1990, when a USSR law on land came into effect. Legal restrictions on private ownership of land remained in effect until December 1990 when a law was passed in the RSFSR that permitted the ownership of land, subject to certain constraints.

STEPHEN K. WEGREN

DEDOVSHCHINA

A term used for “hazing” in the Russian military from the Russian word for grandfather.

This set of practices, a long-standing feature of Soviet army life, appears to have accelerated dramatically in the 1990s. Observers note that “hazing” is itself a problematic translation, because it fails to grasp the severity of the systematic violence, humiliation, and torture visited upon new conscripts by their elders. Official estimates place the number of conscripts murdered at the hands of their comrades-in-arms at perhaps a thousand per year. Independent organizations, including the well-known advocacy group for military conscripts, Soldiers’ Mothers, estimates that as many as three to four thousand conscripts are murdered each year by other soldiers and believes that a large number die as a result of the collective practices known as *dedovshchina*. The problem has also contributed significantly to the very high rate of suicide evident in the Russian armed forces. Anatol Lieven argues that nothing has done more to destroy morale and cohesion than the problem of *dedovshchina*. The lack of an effective system of non-commissioned officers, capable of providing the disciplinary structure and rule-enforcement

necessary to head off such hazing, contributes significantly to the widespread nature of these abuses. The general lack of resources available to the Russian military in the 1990s, including the basic means of life, such as food, have also contributed to erosion of military morale, which many observers say has contributed to the high level of atrocities committed by Russian forces in the two campaigns in Chechnya, from 1994 to 1996, and from 1999 to the present. Lieven sees *dedovshchina* as a symbiosis between tyranny and anarchy in which rules and restraints are crippled “leaving only a veneer of autocratic but in fact powerless authority over a pit of chaos, corruption, and a host of private tyrannies.”

DEFECTORS, SOVIET ERA

Defectors (*perebezhchiki*) during the Soviet era were people who left the Soviet Union without permission and in violation of Soviet law. Soviet authorities applied the term *defection* more broadly than in the West, where a defector is usually defined as an individual who has committed treason by cooperating with a hostile foreign intelligence service. Because Soviet citizens were prohibited by law from leaving the country to settle elsewhere, anyone who sought political asylum in another country was labeled a defector and a traitor. This included scientists, artists, film directors, dancers, writers, musicians, scholars, journalists, and seamen. (The term did not apply to writer Alexander Solzhenitsyn or cellist Mstislav Rostropovich, who were forcibly exiled; the dissident Vladimir Bukovsky, who was brought to the West as part of an exchange; or former KGB general Oleg Kalygin, now residing in the United States, who criticized the KGB publicly but remained a Soviet citizen.)

Among well-known Soviet defectors who fall into the broader category were Stalin’s daughter, Svetlana Alliluyeva; ballet dancers Rudolph

Nureyev, Natalia Makarova, Mikhail Baryshnikov, and Alexander Godunov; pianist Dmitry Shostakovich; theater director Yuri Lyubimov; and chess grandmaster Viktor Korchnoy.

In addition many Soviet defectors betrayed their country by passing on secrets to Western intelligence. Often they wrote books about their experiences. Among the earliest such defectors was NKVD (People's Commissariat of Internal Affairs) officer Walter Krivitsky, who sought asylum in the United States in 1937, wrote the book *I was Stalin's Agent*, and died under mysterious circumstances in 1941. Another NKVD officer, Viktor Kravchenko, the author of *I Chose Freedom*, defected to the United States in 1944 and died in 1966. Igor Gouzenko, a cipher clerk for Soviet military intelligence (GRU), turned himself over to Canadian authorities in Ottawa, Canada, in 1945. Gouzenko's revelations about the Soviet spy network in the West, supported by documents he brought with him, helped to spark the Cold War. Intelligence officer Peter Deryabin sought American asylum in Vienna in 1953, later writing several books about his career in the Soviet secret services. In 1954 KGB agents Vladimir and Yevdokia Petrov defected in Australia and later settled in the United States, where they published *Empire of Fear* in 1956. KGB officer Anatoly Golitsyn defected to the United States in 1961, reporting that the KGB had placed an agent at the highest levels of American intelligence, but unable to give details to identify the agent. Oleg Lyalin, a KGB officer posing as a trade official, defected to Britain in 1971. Alexei Myagkov, a KGB captain serving in Germany, defected to West Berlin in 1974, later writing *Inside the KGB: An Expose by an Officer of the Third Directorate*. Arkady Shevchenko, a high-ranking Soviet diplomat serving at the United Nations, defected in New York in 1978. In 1985 he published a best-selling book entitled *Breaking with Moscow*. Stanislav Levchenko, a KGB officer posing as a journalist, defected in Japan in 1979 and now resides in the United States. Ilya Dzhirkvelov, a KGB officer now living in Britain, defected while working under cover for the Soviet news agency TASS in Switzerland in 1980. He later wrote *Secret Servant: My Life with the KGB and the Soviet Elite*. Among other KGB officers who defected to Britain in more recent years were Vladimir Kuzichkin, a KGB officer who was working in Iran before he sought asylum in 1982; and Oleg Gordievsky, a high-ranking KGB colonel who had collaborated secretly with British intelligence since 1974 and escaped to the West in 1985.

For Western intelligence services, one challenge was to establish that the Soviet defectors were genuine and were not acting as double agents for the KGB. When Yury Nosenko, a middle-level KGB officer, offered himself to the CIA in Geneva in 1962, a debate ensued over his bona fides that lasted for ten years and seriously impaired CIA operations against the Soviet Union. Another controversial case was that of Alexander Orlov, an agent of the Soviet NKVD, who defected to Spain in 1938 and ended up in the United States. Orlov, whose book *The Secret History of Stalin's Crimes* created a sensation when it appeared in 1953, passed on information to the CIA and the FBI, but some historians have claimed that he remained loyal to the Soviets. When high-ranking KGB officer Vitaly Yurchenko defected to the United States in 1985, it was an enormous blow to the KGB, because he passed on details of KGB secret agents and operations to the CIA. But when Yurchenko apparently became unhappy with his treatment by the CIA and, after a few months, slipped away and re-defected to the Soviet Union, the case was highly embarrassing to American authorities.

AMY KNIGHT

DEMOCRATIC PARTY

The Democratic Party of Russia (DPR) since its founding in 1990 has changed its face radically at least three times. It was created by politicians, including radical anticommunists as well as "communists with a human face," as a counterbalance to the Communist Party of the Soviet Union (CPSU). The first split happened as early as the constituent assembly, and a number of well-known politicians left the party, unhappy with the selection of Nikolai Travkin, leader of the CPSU Democratic platform, as sole chair. In the 1993 elections, the DPR, whose list was headed by Travkin, film director Stanislav Govorukhin, and academician-

economist Oleg Bogomolov, received 3.0 million votes (5.5%, eighth place) and fourteen seats in the Duma. The second split happened in 1994, when Travkin entered the government; the majority of the fraction, charging him with compromise, elected a new leader, economist Sergei Glaziev, who had left Boris Yeltsin's administration in 1993. The DPR changed from "Travkin's party" into "the party of Glaziev-Govorukhin." The DPR did not participate independently in the 1995 elections. Its leaders joined three ballots: Glaziev was third on the KRO list, Govorukhin headed the Stanislav Govorukhin Bloc, and Bogomolov was third on the "Social-Democrat" list. None of the three lists crossed the five-percent barrier. In 1996, with the departure first of Glaziev from the DPR (via the Congress of Russian Communities to the Communist Party of the Russian Federation, or KPRF), then Govorukhin (via the KPRF to Fatherland—All Russia, or OVR), the DPR came to be led by little-known functionaries. In the 1999 elections, the party first became a co-constituent of the bloc "Voice of Russia," then moved into the bloc "All Russia," and vanished completely with the formation of OVR.

When, in the fall of 2001, an attempt was made to restore the former popularity of the old brand, and the Novgorod governor Mikhail Prusak was elected leader of the DPR, many viewed this as an endeavor on the part of the Kremlin to create a tame right-centrist party to replace the Union of Right Forces (SPS), which was not sufficiently compliant. Prusak announced at the time that the "The DPR will most likely become a party of the center, with a clear structure in observance of the principle of single management. This will be a national party, whose tasks will include the construction of a democratic civil society, fortification of the government, preservation of its territorial integrity, formation of a middle class, and development of national product." In 2002, having created forty-nine regional branches with a total of more than 10 million members, the DPR was able to register again as a political party with the Ministry of Justice.

Prusak was not sufficiently dedicated to party matters, and at the 2003 congress the DPR deposed its leader. It was announced that the party would enter federal elections for the first time in ten years but that the position of leader would probably be vacant.

NIKOLAI PETROV

DEMOCRATIC RUSSIA

The movement Democratic Russia (DR) is a relic of the end of the Soviet epoch, when opposition arose to the Communist Party of the Soviet Union (CPSU), the only party at the time. Founded in October 1990, it initially united practically all the anticommunist opposition. Its predecessor was the bloc of candidates "Democratic Russia" in the March 1990 elections for people's deputies to the RSFSR and local soviets. Numbering up to 205 delegates in congresses from 1990 to 1993, the group "Democratic Russia," after the introduction of a prohibition against membership in more than one fraction, split into several fractions, two of which—"Democratic Russia" and "Radical Democrats"—composed the DR movement. In the 1991 presidential elections, DR and the parties belonging to it, including the DPR (Democratic Party of Russia), SDPR (Social-Democratic Party of Russia), Peasant Party of Russia, Russian Christian Democratic Movement, and the Republican Party of the Russian Federation, supported Boris Yeltsin, who won for his first term.

After the "victory over the communists," two tendencies struggled within the movement: One favored turning it into a broad coalition of parties and organizations, the other favored making a single organization of it, allowing collective and individual membership. As a result, parties broke off from DR: first the Democratic Party of Russia, the Constitutional-Democratic Party—Party of People's Freedom, and the Russian Christian-Democratic Movement (1991), then, in 1992 and 1993, the Social-Democratic Party of the RF, the Republican Party of the RF, the People's Party of Russia, and the Free Democratic Party of Russia. In the 1993 elections, DR was one of four co-constituents of the bloc "Russia's Choice," but by the end of

1994, most of the members of the movement, entering the Duma on the lists "Russia's Choice" and "Yabloko," dissociated themselves from the movement, and its co-chairs, delegates Lev Ponomarev and Gleb Yakunin, left the fraction Russia's Choice. At the outset of the 1995 campaign, the DR leaders created a federal party, DemRussia, and, alongside the Movement, established a bloc Democratic Russia and Free Trade Unions, which ultimately bowed out of participation in the elections, to the advantage of Russia's Democratic Choice (DVR) and Yabloko. In 1996 the co-chair of DemRussia, Galina Starovoytova, tried to establish candidacy for the presidential elections; in 1998 she was murdered in St. Petersburg in hazy circumstances.

In 1999 the Movement became one of a number of constituents of the bloc "A Just Cause," and in May 2001 it dissolved along with other democratic parties, becoming part of the Union of Right Forces (SPS). Up to the moment of its dissolution, according to the party's president, Sergei Stankevich, the party had about six thousand members, including two thousand activists. Never having been a leadership-oriented, monolithic, disciplined structure, DemRussia retains its character in its afterlife. Not all regional branches of the movement and party agreed with the idea of dissolution; from time to time the name DemRussia is mentioned in connection with various pickets and meetings (against the war in Chechnya, concerning anniversaries of the founding of the movement, protection of the White House, and so forth), as well as in connection with routine unification initiatives of the democrats.

NIKOLAI PETROV

DEMOCRATIC UNION

The Democratic Union (DS) is a radical liberal party, the first political organization to emerge as an alternative to the Communist Party of the Soviet Union (CPSU), formed out of the dissident movement shortly after the beginning of perestroika. It was established in May 1988 on the basis of the seminar "Democracy and Humanism," which began in the summer of 1987. The Democratic Union's nonconformism distinguishes it from democratic parties that appeared later. Political tendencies that initially coexisted in the DS alongside the liberal—such as social democratic or Eurocommunist tendencies—gradually broke off. Under the strain of numerous ideological and personal disagreements, the DS went through numerous splits. Where internal conflict arose between radical and more moderate elements, the radical always gained the upper hand.

The Democratic Union's political activity consisted mainly of conducting unsanctioned meetings and making sensational announcements. In the words of DS leader Valeria Novgorodskaya (chair of the central coordinating council from 1996), DS activists were "genuine Bolsheviks, albeit with an anticommunist leaning." In December 1992, on the initiative of Novgorodskaya and N. Zlotkin, the party "Democratic Union of Russia" (DSR) was established, declaring itself a constituent of the DS. In the spring of 1993, the DSR supported Boris Yeltsin in the conflict with the Congress of People's Deputies, regarding him as a "fighter against Soviet power," and broke sharply with the DS, which continued to view the president and government as heirs of the Communist regime. Novgorodskaya's group was excluded from the Moscow DS organization, and from that point on, the DS and DSR existed separately. After troops were brought into Chechnya in 1994, the DSR moved into extreme opposition to the government, idealizing the Chechen side in the meantime. In 1996, the DSR first called for a repeal of the presidential elections, in order to avoid a situation in which "the formal observation of democratic procedures leads to the liquidation of democracy," then it supported the candidacy of Grigory Yavlinsky after Yeltsin's second term. During the Yugoslav crisis, the DS unequivocally sided with the U.S. and NATO and announced that it would send a detachment of volunteers to the Balkans as aid to NATO, headed by Novgorodskaya.

Officially the DSR never registered as a party, first because of identification with “opposition from outside the system,” then because of low numbers and lack of organizational structures in the provinces. In 1993 Novgorodskaya entered the ballot in a single-mandate district as a candidate from the bloc Russia’s Choice; in 1995 on the list of the Party of Economic Freedom, which a significant portion of the DSR entered in order to receive official status. In the 1999 elections, the DS joined with “A Just Cause,” but with the registration of the latter, left for the Union of Right Forces (SPS). In the 2000 presidential elections, the DS supported Konstantin Titov. Since then, the DS’s only appearances in the news have been thanks to Novgorodskaya’s activity and high profile.

NIKOLAI PETROV

DEMOCRATIZATION

While modern times have seen more than one, however partial, attempt to democratize Russia, democratization in the narrow sense refers to policies pursued by Mikhail Gorbachev and his closest associates, roughly from 1987 to 1991.

The language of democratization was widely employed within a one-party context by Gorbachev’s predecessors, most notably by Nikita Khrushchev. Yet their interpretations of *demokratizatsiya* and *democratizm* diverged fundamentally from universal definitions of democracy. “Soviet democratization” implied increased public discussions, mostly on economic and cultural issues; increased engagement of Communist Party (CPSU) leaders with ordinary people; and some liberalization, namely, expansion of individual freedoms

and relaxation of censorship. However, electoral contestation for power among different political forces was out of the question. The openly stated goals of democratization Soviet-style included reestablishing feedback mechanisms between the leadership and the masses over the head of the bureaucracy; encouraging public pressure to improve the latter’s performance; and improving the psychological and moral climate in the country, including confidence in the CPSU leadership, with expectations of a resulting increase in labor productivity. Additional, unspoken goals ranged from strengthening a new leader’s position, through public discussion and support, vis-à-vis conservative elements, to promoting Moscow’s international image and its standing vis-à-vis the West.

Gorbachev’s initial steps followed this pattern, relying, at times explicitly, upon the legacy and experience of Khrushchev’s thaw; the official slogan of the time promised “more democracy, more socialism.” Soon, however, Gorbachev pushed democratization toward full-scale electoral democracy. The reforms sparked demands for ideological pluralism and ethnic autonomy. As the momentum of reform slipped from under his control, Gorbachev’s own policies were increasingly driven by improvisation rather than long-term planning. Emerging nonparty actors—human rights organizations, independent labor unions, nationalist movements, entrepreneurs, criminal syndicates, proto-parties, and individual strongmen such as Boris Yeltsin—as well as old actors and interest groups, with new electoral and lobbying vehicles at their disposal, introduced their own goals and intentions, often vaguely understood and articulated, at times misrepresented to the public, into Gorbachev’s original design of controlled democratization.

Preliminary steps toward electoral democracy at the local level were taken in the wake of the CPSU Central Committee plenum of January 1987 that shifted perestroika’s emphasis from economic acceleration to political reform. A subsequent Politburo decision, codified by republican Supreme Soviets, introduced experimental competitive elections to the soviets in multi-member districts. They were held in June 1987 in 162 selected districts; on average, five candidates ran for four vacancies; election losers were designated as reserve deputies, entitled to all rights except voting. Bolder steps toward nationwide electoral democracy—multicandidate elections throughout the country and unlimited nomination of candidates (all this while preserving the CPSU rule, with the stated intent of

increasing popular confidence in the Party)—were enunciated by Gorbachev at the Nineteenth CPSU Conference in June 1988. The Conference also approved his general proposals for a constitutional change to transfer some real power from the CPSU to the representative bodies.

Seeking to redesign the Union-level institutions, some of Gorbachev's advisers suggested French-style presidentialism, while others harked back to the radical participatory democracy of the 1917 soviets, when supreme power was vested in the hands of their nationwide congresses. Idealistically minded reformers envisaged this as a return to the unspoiled Leninist roots of the system. Gorbachev initially opted for the latter, in the form of the Congress of People's Deputies, a 2,250-member body meeting once (and subsequently twice) per year. Yet only 1,500 of its deputies were directly elected in the districts, while 750 were picked by public organizations (from Komsomol to the Red Cross), including one hundred by the CPSU Central Committee, a precautionary procedure that violated the principle of voters' equality. The Congress was electing from its ranks a working legislature, the bicameral Supreme Soviet of 542 members (thus bearing the name of the preexisting institution that had been filled by direct however phony elections). The constitutional authority of the latter was designed to approximate that of Western parliaments, having the power to confirm and oversee government members.

The relevant constitutional amendments were adopted in December 1988; the election to the Congress took place in March 1989. This was the first nationwide electoral campaign since 1917, marked—at least in major urban centers and most developed areas of the country—by real competition, non-compulsory public participation, mass volunteerism, and high (some of them, arguably, unrealistic) expectations. Though more than 87 percent of those elected were CPSU members, by now their membership had little to do with their actual political positions. The full ideological spectrum, from nationalist and liberal to the extreme left, could be found among the rank and file of the Party. On the other hand, wide cultural and economic disparities resulted in the extremely uneven impact of democratization across the Union (thus, in 399 of the 1,500 districts only one candidate was running, while in another 952 there were two, but in this case competition was often phony). And conservative elements of the nomenklatura were able to rig and manipulate the elections, in spite of

the public denunciations, even in advanced metropolitan areas, Moscow included. Besides, the two-tier representation, in which direct popular vote was only one of the ingredients, was rapidly delegitimized by the increasingly radical understanding of democracy as people's power, spread by the media and embraced by discontented citizenry.

The First Congress (opened in Moscow on May 25, 1989, and chaired by Gorbachev), almost entirely broadcast live on national TV, was the peak event of democratization "from above," as well as the first major disappointment with the realities of democracy, among both the reform-minded establishment and the wider strata. Cultural gaps and disparities in development between parts of the Union were reflected in the composition of the Congress that not only was extremely polarized in ideological terms (from Stalinists to radical Westernizers and anti-Russian nationalists from the Baltics), but also bristled with social and cultural hostility between its members (e.g., representatives of premodern Central Asian establishments versus the emancipated Moscow intelligentsia). Advocates of further democratization (mostly representing Moscow, St. Petersburg, the Baltic nations, Ukraine, and the Caucasus, and ranging from moderate Gorbachevites to revolutionary-minded dissidents), who later united in the Interregional Deputies Group (IDG) and were widely described as "the democrats," had less than 250 votes in the Congress and even a smaller proportion in the Supreme Soviet. The bulk of the deputies had no structured political views but were instinctually conservative; they were famously branded by an IDG leader Yuri Afanasiev as "the aggressively obedient majority." The resulting stalemate compelled Gorbachev to abandon legislative experiments and shift to a presidential system, while the democrats (many of them recently high-ranking CPSU officials, with only a handful of committed dissidents) also turned their backs on the Congress to lead street rallies and nascent political organizations, eventually winning more votes and positions of leadership in republican legislatures and city councils.

Thus, democratization's center of gravity shifted away from the all-Union level. The key events of this stage were the unprecedentedly democratic republican and municipal elections (February–March 1990), with all deputies now elected directly by voters, and the abolition of Article 6 of the USSR Constitution that had designated the CPSU as "the leading and guiding force of Soviet society and the nucleus of its political system" with the right to

determine “the general policy of the country.” The elimination of this article, demanded by the IDG and mass rallies and eventually endorsed by Gorbachev, was approved by the Congress on March 13, 1990, thus removing constitutional obstacles for a multi-party system—arguably the major and perhaps the only enduring institutional change of the period achieved through public pressure.

From that time issues of democratization yielded center stage to institutional collapse and economic reforms. A major transitional point was Gorbachev’s decision to become USSR president through a parliamentary vote, instead of running in direct nationwide elections. As a result, his presidency and other Union-wide institutions lagged behind republican authorities in terms of their democratic legitimacy. This was accentuated by Yeltsin’s election as Russian president (June 1991), the first direct popular election of a Russian ruler, which initially endowed him with exceptional legitimacy, but with no effective mechanisms of accountability and restraint. And the disbanding of the Soviet Union (December 1991) had an ambivalent relationship to democratization, for while it was decided by democratically elected leaders, Yeltsin had no popular mandate for such a decision; to the contrary, it nullified the results of the Union-wide referendum of March 1991, where overwhelming majorities in these republics voted for the preservation of the Union.

As a result of the events of the years 1988–1991, Russia acquired and institutionalized the basic facade of a minimalist, or procedural democracy, without providing citizens with leverage for wielding decisive influence over the authorities. The disillusionment with democratization has been shared both in the elite—some viewing it as a distraction or even an obstacle in the context of market reforms—and among the population presented with the impotence and malleability of representative institutions in the face of economic collapse. Lilia Shevtsova describes post-Soviet Russia as “elective monarchy”; others emphasize a gradual reversal of democratic achievements since 1991, under Vladimir Putin in particular. The judgement about the ultimate significance of democratization on its own terms will hinge upon the extent to which a new wave of democratizers learns the accumulated experience and is able to benefit from this knowledge.

DMITRI GLINSKI

DEMOGRAPHY

The demography of Russia has influenced, and been influenced by, historical events. Demographic shifts can be seen in the population pyramid of 2002. The imbalance at the top of the chart indicates many more women live to older ages than men. The small numbers aged 55–59 represents the drastic declines in fertility from Soviet population catastrophes during the 1930s and 1940s, followed by a post-war baby boom aged 40–55. The relatively smaller number of men and women aged 30–34 reflects the echo of the 55–59 year old cohort. The larger cohorts at younger ages reflect the echo effect of Soviet baby boomers. The Russian population pyramid is unique in its dramatic variation in cohort

Table 1

size, and illustrates how population has influenced, and been influenced by, historical events.

Trends in migration, fertility, morbidity and mortality shaped Russia’s growth rate, changed the distribution of population resources, and altered the ethnic and linguistic structure of the population. The implications of demographic change varied by the historical period in which it occurred, generated different effects between individuals of different age groups, and influenced some birth cohorts more than others. Throughout Russia’s history, demographic trends were largely determined by global pandemics, governmental policies and interventions, economic development, public health practices, and severe population shocks associated with war and famine.

As in other countries, population trends provided a clear window into social stratification within Russia, as improvements in public health tended to be concentrated among elites, leaving the poor more susceptible to illness, uncontrolled fertility, and shorter life spans.

Two unique aspects concerning Russia’s demographic history warrant note. During both the Imperial and Soviet periods, demographic data were manipulated to serve the ideological needs of the state. Second, Russia’s demographic profile during the 1990s raised questions concerning the permanence of the epidemiological transition (of high mortality and deaths by infectious disease to low mortality and deaths by degenerative disease). Life expectancies fell dramatically and infectious diseases re-emerged during the 1990s as demographic concerns became significant security issues.

SOURCES OF DEMOGRAPHIC DATA

The Mongols instituted the first population registry in Russia, but few large-scale repositories of demographic information existed before the late Imperial period. Regional land registry (*cadastral*) records provided household size information and could be used with church records, tax assessment documents, serf work assignments, and urban hos-

pital records to provide indirect and localized estimates of population, and in some cases, family formation, fertility, and mortality data. In 1718, the focus of enumeration shifted to an enumeration of individuals, with adjustments or *revizy*, conducted for verification. The move to local self-government, and the creation of *zemstvos* in 1864, also provided a wealth of historical data, particularly regarding the demographic situation within peasant households, but as previous sources, the data were limited to small scale regional indicators. In 1897, across the entire Russian Empire a population census with 100,000 enumerators collected information from 127 million present (*nalichnoye*) and permanent (*postoyanno*) residents on residence, social class, language (but not ethnicity), occupation, literacy, and religion. A second census was planned but not executed due to the outbreak of World War I.

Enumeration and registration of the population was a serious concern in the Soviet period, and censuses of the population supplied important verification of residence, linguistic identity, and ethnic composition. The first comprehensive census in 1926 enumerated 147 million residents of the Soviet Union, 92.7 million of whom resided in the RSFSR. The next full census of 1939 was not published, due to political concerns. Subsequent post-war censuses in the Soviet Union (1959, 1970, 1979, 1989) improved significantly upon previous censuses in terms of quality of coverage. These data provided information that could be evaluated with increasingly comprehensive records on fertility, mortality, migration, and public health indicators collected through various state ministries at the all-union and republic levels.

During the post-Soviet period, scholars agree the quality of population information declined during the early 1990s, as state ministries reorganized, funding for statistical offices became erratic, and decentralization increased burdens for record keeping for individual oblasts. A micro census was carried out in 1994 of a 5 percent population sample. After false starts in 1999 and 2001 and heated debates over questionnaire content, the first post-Soviet census was conducted in October of 2002.

DEMOGRAPHIC TRENDS IN THE RUSSIAN EMPIRE

During the Time of Troubles (1598–1613), Russia experienced a sharp population decline due to declines in mortality and fertility. During the 1600s Russia's population increased, but the rate and sta-

bility of the trend over the century is subject to debate. During the following century substantial efforts to address public health needs were made in Russia's urban areas. Catherine II (the Great) established the first medical administration during the later 1700s, leading to some of the earliest epidemiological records for Russia. During the nineteenth century, mortality rates across age groups were higher than those found in Europe. Infant mortality was problematically high, declining only during the late 1800s due to increased public health campaigns.

Social changes such as the reforms of the 1860s served as catalysts for improved living standards, particularly in rural areas. These in turn improved the population's health. At the same time increases in literacy also improved health practices. Education and improvements in literacy across the empire led to linguistic Russification with members of various ethnic groups identifying primarily with Russian language. The positive influence of improved social conditions on demographic trends was checked by persistently unreliable food production and distribution, leading to widespread famines throughout the imperial period, but most notably in 1890. At the century's close, increased population density, particularly in urban areas, and extremely poor public works infrastructural provided an excellent breeding ground for deadly outbreaks of infectious diseases such as influenza, cholera, tuberculosis, and typhoid. Deaths from infectious diseases were higher in Russia than Europe during the early 1890s. Voluntary Public Health Commissions operated in the last decades of imperial rule. Lacking official state financial support, the commissions were unable to improve the health of the lower classes living in conditions conducive to disease transmission.

The state monitored the collection and dissemination of demographic information throughout the Imperial period. Records indicate that urban population counts, estimated deaths due to infectious disease, and population declines related to famines were, in some cases, corrected in three specific ways in order to minimize negative interpretations of living conditions within Russia and to avoid possible public unrest. First, information was simply not collected or published. In the case of fertility and mortality statistics this avenue was easily followed as most births and deaths took place at home and were not always registered. Secondly, selected information was published for small scale populations who tended to exhibit better health and

survival profiles than the population at large. Focusing upon epidemiological records from large urban hospitals, imperial estimates tend to undercount the health profiles among rural residents and the very poor, which tend to be far worse than those with access to formal urban care. Lastly, records may have been generated, but not published. This appears to be the case in several analyses of the 1890 famine and cholera outbreaks in southern Russian during the 1800s. Rather than utilizing demographic information to assist the development of informed social policy, scholars conclude that national demographic information was often manipulated in order to achieve specific ideological goals.

DEMOGRAPHIC TRENDS DURING THE SOVIET ERA

The early years of Soviet rule were marked by widespread popular unrest, food shortages, civil war, and massive migration movements. The catastrophic effects of World War I, a global influenza epidemic, political and economic upheavals, and a civil war led to steep increases in mortality, declines in fertility, and deteriorations in overall population health. Between 1920 and 1922, famine combined with cholera and typhus outbreaks evoked a severe population crisis. As Soviet power solidified, several policies were enacted in the public health area, specifically in the realm of maternal and child health. Though underfunded, in combination with the expansion of primary medical care through feldshers (basic medical personnel), these programs were associated with declines in infant mortality, increased medical access, and improved population health into the 1930s.

During the late 1920s food instability reappeared in the Soviet Union, followed by a brutal collectivization of agriculture during the early 1930s. Millions of citizens of the Soviet Union perished in the collectivization drive and the famine that followed. Additional population losses occurred as a result of the Stalinist repression campaigns, as mortality was extremely high among the nearly fifteen million individuals sent to forced labor camps during the 1930s, and among the numerous ethnic groups subject to forced deportation and resettlement. These population losses were accelerated by massive civilian and military casualties during World War II. While each of these events is significant in its own right, in combination they produced a catastrophic loss of population that

significantly influenced the age structure of the Russian Federation for decades to come. The population loss consisted of not only those who perished, but also the precipitous declines in fertility in the period, in spite of intense pro-natalist efforts. The precise population loss associated with this series of events is a subject of intense and emotional debate, with estimates of population loss ranging from 12 to nearly 40 million. Even individuals surviving this tumultuous period were affected. Those in their infancy or early childhood during the period exhibited compromised health throughout their lives as a result of the severe deprivation of the period. Even after the end of the war, economic instability and intense shortages exacted a significant toll on living standards, fertility, and health during the 1950s.

The 1959 census documented increasing population growth, improvements in life expectancy, and increases in fertility across Russia. Life expectancy increased to sixty-eight years by 1959, twenty-six years longer than the life expectancy reported in 1926 (forty-two). The total fertility rate in 1956 stood at 2.63, a marked increase from the 1940s. Urbanization increased the proportion of the population with access to modern water and sewer systems, and formal medical care. The following decades were periods of economic stability, improving living standards, expanded social services, improved health and decreased infectious disease prevalence. While overall fertility rates declined, population growth was positive and noticeable improvements were reported for infant and maternal mortality in Russia.

During the late socialist period, improvements in population health stalled, as Russia entered a period of economic and social stagnation. Increased educational and employment opportunities for women, combined with housing shortages and the need for dual income earners in each family, drove fertility below replacement levels by 1970. Life expectancy, which peaked in 1961 at 63.78 for men and 72.35 for women, declined during the 1970s for both sexes. Negative health behaviors such as smoking and drinking appeared to rise throughout the 1970s and early 1980s, and some reports of outbreaks of cholera and typhus were reported, especially in the southern and eastern regions of the country. Official statistics indicate an improvement in all demographic indicators in the mid-1980s, and links to pro-family policies and a strict anti-alcohol campaign could be drawn, but improved mortality and increased fertility were short-lived. By

the late 1980s increased mortality among males of working age was observed.

The Soviet state also manipulated demographic data to serve ideological ends. At best, official publications regarding issues such as life expectancy were often overly optimistic. At worst, the compilation of standard indicators (such as infant mortality rates) was altered to improve the relative standing of the Soviet Union in comparison to capitalist countries. Most significantly, demographic information was withheld from publication, and sometimes not collected. In spite of achieving remarkable improvements in public health and high rates of population growth in decades after World War II, as its predecessor, employed population information to further its ideology as well as to inform policy development.

DEMOGRAPHIC TRENDS DURING THE POST-SOVIET ERA

The post-Soviet era is marked by dire demographic trends. Rapid and wide scale increases in mortality and marked declines in already low fertility and marriage rates generated negative natural rates of increase throughout the 1990s. Population decline was avoided only due to substantial immigration from other successor states during the period. This period has been identified as the most dramatic peacetime demographic collapse ever observed. Aspects of the crisis are linked to long-term processes begun in the Soviet period, but were significantly exacerbated by economic and institutional instability of the later period.

Increasing male mortality, especially among older working-aged males, gained momentum during the 1990s. Estimates vary, but official estimates reported a six-year decline in male life expectancy between 1985 and 1995. Female life expectancy also declined, however more modestly. Deaths from lung cancer, accidents, suicide, poisoning, and other causes related to alcohol consumption underpin the change in mortality, but death rates for heart disease and cancer also increased. Period explanations focus on the stress generated by the economic transition, linking that stress to the mortality increase. Age effect models argue that men at these ages are somehow uniquely susceptible to stress. Cohort explanations point out that men in the later working ages (50–59) in 1990 represent the birth cohorts of 1940s, and the declining mortality of the 1990s is an echo of the deprivations of the post World War II period. Each explanation contributed to ex-

plaining the mortality increase, which took place amidst health care and infrastructural collapse.

The Soviet system of health care was very successful in improving public health during the early years of the regime, and during the initial period after World War II, however the distribution and organization of care led to diminishing return in the later years of the regime and the organizational structure proved ineffective in the post-Soviet period. During the 1990s financial crises lead to serious shortages of medical supplies, wage arrears in the governmental health sector, and the rise of private pay clinics and pharmacies. Increased poverty rates, especially among the growing pension aged population, precluded health care access. Public works (hospitals, prisons, sewer systems, etc.) were poorly maintained during the late Soviet era, and contributed to the resurgence of old health risks such as cholera, typhus, and drug resistant forms of tuberculosis during the 1990s. The reemergence of infectious disease shocked demographers and epidemiologists, who previously contended improvements in mortality were permanent, and that deaths infectious diseases were a unique characteristic of undeveloped societies. The resurgence of infectious diseases includes HIV/AIDS. The numbers of infected were low, but in 2003 HIV infection rates were projected to increase in the near future.

Russia's post-Soviet demographic crises generated concerns over declining population size, especially in the Far East where border security is a concern. Immigration helped maintain population size without shifting the ethnic composition, but anti-immigrant sentiments were strong during the late 1990s. In 2002 government attention had turned to below replacement fertility, but as in the rest of Europe the fertility rate remained very low. During the second decade after Soviet rule, demographic trends were cause for serious concern, but indicators, if not political attitudes, were stabilized.

CYNTHIA J. BUCKLEY

DENGA

Throughout its history, the denga was a small silver coin, usually irregular in shape, with a fluctuating silver content, weighing from 0.53 to 1.3 grams (depending on region and period). The word *denga* was a lexicological borrowing into Russian from Mongol. The unit's origins are traced to Moscow where, beginning in the 1360s and 1370s, for the first time since the eleventh century, Rus princes began to strike coins. By early 1400s, dengi

(pl.) were minted in other eastern Rus lands (Nizhegorod and Ryazan) and by the 1420s in Tver, Novgorod, and Pskov. Thereafter, dengi were minted throughout the Rus lands by various independent princes and differed in weight. However, uniformity in weight, according to Moscow's standards, was introduced to the various principalities as the Muscovite grand princes absorbed them during the course of the second half of the fifteenth century.

For most of its history, six dengi made up an altyn, and two hundred dengi the Muscovite ruble. Novgorod also struck local dengi from the 1420s until the last decades of the fifteenth century, but their weight and value were twice the amount of the dengi minted in Moscow. While the unit denga was discontinued and replaced by the kopek with the monetary reforms of Peter the Great, the Russian word *dengi* came to designate money in general.

ROMAN K. KOVALEV

DENIKIN, ANTON IVANOVICH

(1872–1947), general, commander of White armies in Southern Russia during the Russian civil war.

Anton Denikin was born the son of a retired border guard officer in Poland. His own military career began in the artillery, from which he entered the General Staff Academy. He served in the Russo-Japanese War and the World War I, where he commanded the Fourth, or "Iron," Brigade (later a division). Beginning the war with the rank of major general, following the February 1917 Revolution, he received a rapid series of promotions, from command of the Eighth Corps to command of the Russian Western, and then Southwestern,

Fronts. In September 1917, however, he and a number of other officers were arrested as associates of Commander-in-Chief General Lavr Kornilov in the latter's conflict with Prime Minister Alexander Kerensky. Denikin was released from prison following the Bolshevik coup. He headed to Novocherkassk, where he participated in the formation of the Anti-Bolshevik (White) Army together with Kornilov and General Mikhail Alexeyev. Following the death of Kornilov in April 1918, Denikin took command of the White Army, which he led out of its critical situation in the Kuban Cossack territory. General Alexeyev's death in September of that year left him with responsibility for civil affairs in the White regions as well. With the subordination to him of the Don and Kuban Cossack armies, Denikin assumed the title Commander-in-Chief of the Armed Forces of South Russia (December 1918).

By early 1919, the White Army controlled a territory encompassing the Don and Kuban Cossack territories and the North Caucasus. During the spring and summer, the army advanced in all directions, clearing the Crimea, taking Kharkov on June 11 and Tsaritsyn (now Volgograd) on June 17. On June 20, 1919, Denikin issued the Moscow Directive, an order which began the army's offensive on Moscow. After taking Kiev on August 17, Kursk on September 7, and Orel (some two hundred miles south of Moscow) on September 30, the overextended White Army had reached the limits of its advance. A Bolshevik counteroffensive initiated a retreat that ultimately resulted in the army's evacuation of all its territory with the exception of Crimea. This retreat was accompanied by epidemics of typhus and other diseases, which decimated the ranks of soldiers and the civilian population alike. Denikin handed over command to General Pyotr Wrangel on March 22, 1920, and left Russia for Constantinople (Istanbul), and then France, where he lived until November 1945. His final year and nine months were spent in the United States. He died on August 7, 1947, in Michigan.

The ill-fated Moscow offensive has colored Denikin's reputation, with some, such as General Wrangel, arguing that the directive initiating it was the death knell of the White movement in South Russia. Wrangel advocated a junction with Admiral Kolchak's forces in the east. Denikin himself felt that the conditions of the civil war were such that only a risky headlong rush could unseat the Bolsheviks and put an end to the struggle.

ANATOL SHMELEV

DENMARK, RELATIONS WITH

The earliest evidence of Danish–Russian interaction consists of discoveries in Russia of tenth-century

Danish coins and an eleventh-century chronicle reference to trips by Danish merchants to Novgorod. There are further mentions of Russian vessels to Denmark in the twelfth century. However, the available data is extremely fragmentary, and we have no indication of any direct commerce in the thirteenth through fifteenth centuries.

Danish-Muscovite political relations were first established under a 1493 treaty between King Hans and Ivan III, designed as an offensive agreement against Sweden and Lithuania. The temporary Danish takeover of Sweden in 1497 made the Finnish border a source of contention, yet closer ties were pursued through discussions about a dynastic marriage. Frequent Danish embassies were sent to Russia in the early years of the sixteenth century, at which time Danish merchants also began to visit the Neva estuary and Ivangorod. A Russian embassy attended the coronation of Christian II in 1514 and negotiated a new treaty, again for the purpose of bringing about a Russian attack on Sweden.

Relations began to deteriorate in the second half of the sixteenth century due to Danish interest in Livonia during the Livonian War and intensifying border disputes between northern Norway and Russia. However, the Moscow treaty of 1562 recognized the Danish acquisition of the island of Ösel/Saaremaa off the Estonian coast in 1559. In 1569 Duke Magnus was made the administrator of Russian Livonia and married with Ivan IV's niece, although the couple subsequently was forced to flee to Poland. Further problems were created by Danish efforts to control and tax Western European shipping with Russia's Arctic Sea coast. Nonetheless, Boris Godunov in 1602 proposed a marriage between his daughter and the Danish Prince Hans who, however, died in Moscow soon after his arrival.

Danish economic interests in northern Russia increased after the establishment of the Romanov regime, and shipping on a fairly modest scale was almost annual. A diplomatic crisis ensued from Christian IV's ultimately unsuccessful efforts to set up a special company for illegal direct trade with the fur-rich areas to the east of Arkhangelsk. The Danish navy even raided Kola in 1623. The Danes further rejected overtures for a dynastic marriage in the early 1620s. Relations soon warmed again during Danish involvement in the Thirty Years' War, and the Muscovite government provided grain as a subsidy from 1627 to 1633.

The most serious effort at linking the Danish and Russian ruling families came between 1643 and 1645 when Prince Valdemar Christian was to be married with Tsarevna Irina Mikhailovna. However, differences over relations with Sweden and the refusal of Valdemar to convert to Orthodox ultimately scuttled the project. Attempts to contain Sweden again led to a rapprochement in the 1650s. The same considerations prompted Denmark to join Peter's anti-Swedish alliance to participate—with limited success—in the Great Northern War in 1700. Peter I visited Denmark in 1716 for discussions about a planned reconquest of southern Sweden. Relations deteriorated when the plans remained on paper and the Danes rejected a royal marriage proposal.

The Russian marriage-based alliance in 1721 with the ducal house of Gottorp—an independent-minded Danish vassal—evolved into a lasting source of tension between the two countries, especially under the long reign of Elizabeth Petrovna, who appointed the Gottorpians future Peter III as her successor. Open warfare between the two countries was only averted by Catherine II's *coup d'état*. During her reign, Denmark became a key link in Nikita Panin's Northern system. An alliance was established in 1773, and the end of the century saw a sharp increase in Danish-Russian commerce, making Russia one of Denmark's leading trade partners. Tsar Pavel's desire to seek Swedish support against England constituted the main threat to this alliance.

Denmark reacted to the rise of Napoleon by adopting a neutral position and refused to join in offensive action in northern Germany, fearing the safety of its possessions. Russia diplomatically supported Denmark against English aggression, but Swedish willingness to support Russia in return for the annexation of Norway from Denmark led to a cooling of Danish-Russian relations. Denmark was eventually forced to join the anti-French coalition and to accept the loss of Norway in 1814. Russian efforts to compensate Denmark ultimately resulted only in the acquisition of the small northern German city of Lauenburg.

Political relations in the nineteenth century were to a significant degree driven by a Russian desire to ensure free access to the Baltic through the Danish Sound and to balance off Sweden and Denmark against each other. The rise of Scandinavism was often associated with anti-Russian sentiment, which the government sought to control. In 1849,

Russia put pressure on Prussia to end an occupation of Jutland in order to prevent a Scandinavian alliance. The Russians considered various ultimately unsuccessful plans to neutralize Denmark toward the end of the century. Relations in the second half of the century benefited from a close relationship between the two royal families. Nicholas I in 1852 gave up the Russian claim on Gottorp and a dynastic marriage between Christian IX's daughter and the future Alexander III in 1866. The tsar and his family visited Denmark at least once a year. Russia also supported Denmark against Germany after 1864, following the loss of Schleswig-Holstein and Lauenburg to Prussia and Austria.

Economic ties between the two countries acquired a new dimension with growth in Danish investment and entrepreneurship starting in the late nineteenth century. By 1917, Danish direct investment in Russia was comparable to the kingdom's annual budget. The Danes were especially active in the agricultural and food sector. A Dane—Carl Andreas Koefoed—was one of the driving forces behind the Stolypin reforms. Russia was Denmark's third or fourth most important trade partners and accounted for one-tenth of total Danish imports. Before World War I, Russia was the leading export market for Danish industry.

Following unsuccessful efforts to gain compensation for economic losses in connection with the Bolshevik Revolution, Denmark recognized the Soviet regime in 1923. However, a Bolshevik propaganda representation had operated in Copenhagen already in 1918 and 1919. Danish observance of political neutrality made relations with the communist regime relatively problem-free, in spite of Soviet sponsorship of the Danish Communist Party (DCP) and other revolutionary organizations. The DCP, however, remained throughout a relatively marginal factor in Danish internal politics. Adhering to its neutrality Denmark in 1939 refused to support the expulsion of the Soviets from the League of Nations and refused to join a Nordic defensive alliance thereafter.

The Red Army occupied the Island of Bornholm in 1945 with a view to ensuring free access to the Baltic. The British promise not to continue with the occupation of Denmark led to a Russian departure in 1946. The postwar government, committed to neutrality, sought to acquire a role as a bridge-builder between the East and the West. However, following Norwegian NATO accession in 1949, Denmark followed suit to face a virulent Soviet re-

action. The Soviets sought to foster forces opposed to Danish NATO membership and advocated the neutralization of Scandinavia or, at least, guarantees against the stationing of nuclear weapons there. A gradual rapprochement began under Nikita Khrushchev, but the Brezhnev regime sought to convince Denmark of the new geopolitical realities created by its active armament campaign. The Soviets were particularly enthusiastic about the emergence of a grassroots peace movement in the 1980s, which was viewed as a way of weakening Danish-U.S. ties. The ruling Social Democrats in Denmark became more favorable to a nuclear-free Scandinavia by the mid-1980s, and relations were fairly cordial thereafter, fully normalized after the collapse of the Soviet Union.

DEPORTATIONS

The term *deportation* does not have an exact Russian equivalent (*vyselenie* is the most common, with *deportatsiya* also coming into use in the twentieth century). The term refers to the forced removal of a defined group from a certain territory. The largest cases of mass deportation occurred during the two world wars and were linked in many ways to the practices of ethnic cleansing and nationalist politics that swept through Europe during the dark years of the first half of the century.

But the practice can also be traced to precedents in earlier Russian history. Some of the best-known early attempts to use deportation as an official policy involved repressions of elites after conquest of new regions or in the aftermath of rebellions. After the conquest of Novgorod in the late fifteenth century, the Prince of Muscovy expropriated the

Major Ethnic Deportations, 1937–1944

Nationality	Number Deported	Date of Deportation	Place of Resettlement
Koreans	171,781	8/21/37–10/25/37	Kazakhstan, Uzbekistan
Finns	89,000	8/31/41–9/7/41	Kazakhstan

lands of leading boyars and forcibly took them to Moscow. When Russia conquered the Crimea, there was a mass exodus of Tatars in which the role of Russian officials remains in dispute among historians. During the conquest of the Caucasus in the nineteenth century, the regime turned to extremely violent methods of driving the entire population from given regions, and encouraged mass emigrations of Adygy, Nogai, and other predominantly Muslim and Turkic groups. In the aftermath of both the 1831 and 1861 rebellions the authorities confiscated estates and deported thousands of Polish gentry it accused of participating to Siberia and the Caucasus.

Another important precedent for the twentieth-century deportations was the Russian punitive system, which relied heavily upon the exile of individuals to Siberia and other locations and thereby created a template for officials to apply to entire groups in extraordinary circumstances. Likewise, the myriad of regulations on Jewish rights of res-

idence resulted in a constant stream of forced expulsions of Jews from areas declared off-limits, including the mass expulsion of Jews from Moscow in 1891–1892.

Important as these precedents were, the mass deportations of the period from 1914 to 1945 stand in a category apart. The first major deportations of this period occurred during World War I. In the first months of the war, the regime interned enemy citizen males to prevent them from departing the country to serve in enemy armies. By the end of 1915, the regime had expanded these operations to include large numbers of women, children, and elderly, and by 1917, over a quarter million enemy citizens had been deported to the Russian interior. In a series of other operations, the army extended the mass deportations to Russian subjects. The largest of these operations resulted in the deportation of roughly 300,000 Germans and the expulsion of a half million Jews from areas near the front. In addition to these groups, ten thousand Crimean Tatars and several thousand Adzhars, Laz, gypsies, and others were swept up in the operations.

The motives and explanations for these operations include many different variables, of which two stand out. First were security concerns: The deported groups were accused of disloyalty or potential disloyalty if allowed to fall under enemy occupation. The second was economic nationalism. Demands among local populations to expropriate the lands and businesses of the foreigners, Germans, and Jews resonated with more general campaigns led by Russians during the war to nationalize and nativize the economy. As the war dragged on, security motives tended to give way to the nationalist ones. This was reflected in a series of administrative and legal decisions in 1915 that effectively ensured that the ownership of properties of deported groups would be permanently transferred to Russians, to other favored nationalities, or to the state.

DEPORTATIONS UNDER THE BOLSHEVIKS

After 1917, the Bolshevik regime attempted to use deportation to achieve revolutionary aims. The practice of deporting criminals to Siberia greatly expanded, and several campaigns resulted in attempts to deport entire social population categories. Most dramatic was the 1919–1920 “decossackization” campaign during the civil war, and the

1930–1933 deportation of kulaks (in theory, the relatively affluent peasants in each village).

The next wave of mass deportations was closely linked to World War II, and the international tensions that preceded its outbreak. Fears of foreign influence, hostility toward foreign capitalist states, and insecurity about the loyalty of certain ethnic groups that straddled the border led the Bolsheviks to turn to mass ethnic deportations. Already in 1934, operations to clear the border regions of “unreliable elements” began with a deportations of Finns, Latvians, Estonians, Germans, and Poles from Leningrad, which was considered to be a strategic border city. In February and March 1935, authorities deported more than 40,000 “unreliables” (mostly ethnic Germans and Poles) from Ukrainian border regions. This was the first of a series of mass deportations from border areas, including about 30,000 Finns sent from the Leningrad border regions in 1936 and 170,000 Koreans de-

ported from the Far East to Kazakhstan and Uzbekistan. The latter was the first ethnic cleansing of an entire nationality.

During the Great Purge of 1937–1938, deportation to the Siberian camps was a major part of the operations, which targeted former kulaks, criminals, “anti-Soviet elements,” and in a separate set of “national operations,” a series of ethnic groups, including: Koreans, Poles, Germans, Greeks, Finns, Latvians, Estonians, Afghans, and Iranians. In all, according to Terry Martin (1998, p. 858), approximately 800,000 individuals were arrested, deported, or executed in the national operations from 1935 to 1938. The regime seems to have been motivated in this wave of peacetime mass ethnic deportations by an attempt to secure the border zones in preparation for war, and by the failure of its attempt to spread revolution beyond the Soviet Union by granting wide cultural autonomy and support to ethnic groups that were divided by the Soviet

border. Recognition of the failure of this latter strategy led the regime to turn in the opposite direction, toward prophylactic strikes to remove the same groups from border areas to prevent their own attraction to their co-ethnics abroad.

World War II brought mass deportations on an even greater scale. First, the Soviet occupation of the Baltic states (Latvia, Lithuania, and Estonia) and parts of Poland and Rumania as a result of the Nazi-Soviet agreement of August 1939 was followed by mass deportations of the cultural, political, and economic elites of these states. The scale of the arrests and deportations was remarkable. Pavel Polian estimates that 380,000 people were deported in these operations from early 1940 to June 1941.

After the German invasion of June 1941, Joseph Stalin ordered the mass deportation of entire nationalities. Thirteen national groups in all were rounded up by special police units and deported by train to Central Asia in operations that lasted only a few days each. The first operations occurred in August and September 1941, when 89,000 Finns and 749,613 Germans were deported to Kazakhstan and Siberia. Hitler made no secret of his plans to use the German minority in the Soviet Union as a building block for his new racial order in the East, and his mass evacuation of ethnic Germans from the Baltic states to Germany in 1939 on the eve of the Soviet invasion of those states set the tone for Stalin's deportations of Germans. As in World War I, the regime deported ethnic Germans from the western and southern parts of the empire, but this time added the large German population in the middle Volga region. Germans accounted for nearly half of the wartime ethnic deportations. The Finns were deported largely from the Leningrad region in August 1941 as the Finnish Army was advancing toward the city.

From November 1943 to November 1944, the Kalmyks, Karachai, Chechens, Ingush, Balkars, Crimean Tatars, Crimean Greeks, Meskhetian Turks, Kurds, and Khemshils were all deported *en masse* to Central Asia. These deportations were accompanied by accusations of collaboration while under German occupation, but the long histories of resistance among some of these groups to Russian rule doubtless was an important factor as well. This was particularly true in Chechnya, where an insurgency formed during the war and conducted raids and assassinations against Soviet officials.

In the final analysis, of course, there can be no rational explanation for the mass deportation of entire nationalities. The deportations were recog-

nized as early as the 1950s as one of Stalin's greatest crimes. The conditions of the deported groups were improved and restrictions on their movement were partially lifted between 1954 and 1956. The easing of conditions from 1954 to 1956 led to major unsanctioned return journeys of many of the Caucasus nationalities. This was a factor in the government's decisions from 1956 to 1958 to allow the Karachai, Balkars, Kalmyks, Chechens, and Ingush to return and to restore their local national governmental autonomy. But official rehabilitation for the Germans came only in 1964 and for the Crimean Tatars in 1967, and in neither case were their national autonomous governments restored, nor were these groups given permission to return to their homelands until the late 1980s and early 1990s. The mass deportations of the twentieth century left a bitter legacy that contributed to the determination of national movements from the Baltics to Chechnya to acquire full independence from Moscow.

DERZHAVA *See* PEOPLE'S PARTY OF FREE RUSSIA.

DERZHAVIN, GAVRYL ROMANOVICH

(1743–1816), poet.

Gavryl Derzhavin, one of the most original Russian poets of the eighteenth century, was regarded as the greatest national poet before Alexander Pushkin. Following a period in the army, he worked as a civil servant for more than twenty years. He served first as provincial governor from 1786 to 1788 in Tambov, a city in south-central European

Russia founded in 1636 as an outpost against the Crimean Tatars. A man of the Enlightenment, he became poet laureate and served as minister of justice for Catherine II from 1802 to 1805. Derzhavin also served briefly as Catherine's private secretary.

Derzhavin's most famous works, listed chronologically, include *The Courtier* (1776), *The Death of Prince Meshchersky* (1779–1783), *Felitsa* (1782), *Ode to God* (1784), *To the Potentates and Judges* (1780), and *The Waterfall* (1791–1794). While Derzhavin favored the ode as genre, he differed from the poet Lomonosov in that he did not consider it a laudatory form. His style is more reminiscent of the Roman lyric poet and satirist, Horace (65 B.C.E.–8 B.C.E.). Derzhavin first caught Catherine the Great's attention with his ode to her, *Felitsa*, named after a character in Catherine's own story "The Tale of Prince of Khlror." Here he broke several taboos, praising the sovereign not with awe, but with easy familiarity. She walks "on foot," eats, reads, writes, enjoys jokes, and treats people nicely. Derzhavin then contrasts her to the petty self-centeredness of the nobles surrounding her, with their feasts, fancy dress, and endless entertainments. Derzhavin sharply criticizes court life in *The Courtier* and *To the Potentates and Judges*, lampooning the unjust bureaucrats and parasitic aristocracy.

Derzhavin's poetry and memoirs present a rich and complex portrait of his time, employing a diverse range of topics from war and peace to love and dining. Open to the influence of all contemporary currents and at ease with various philosophical perspectives, Derzhavin is remembered as the poet who loved truth more than he loved kings. In his poetry he was a defender of justice and an independent spirit. Politically, however, Derzhavin remained a staunch monarchist and general opponent of liberal ideas. Along with Admiral Alexander Shishkov (a defender of serfdom), Derzhavin established the Colloquy of Lovers of the Russian Word (*Beseda Lyubitelei Russokogo Slova*, 1811–1816)—a formal literary society with as many as five hundred members whom Derzhavin would invite to his large home on the banks of the Fontanka in St. Petersburg.

In Derzhavin's poetical development, the themes of time and immortality become increasingly more prominent, until the other motifs—the poet's relationship with other people, his memories, and his own life experience—become varying aspects of his central poetic obsession with the element of time. When, on the morning of July 9,

1815, relatives discovered Derzhavin's corpse, they spotted an unfinished poem scrawled on a blackboard. Immortalized as "the slate ode" by Osip Mandelshtam more than a hundred years later, the poem begins:

Time's river carries on its current
All the affairs of men; it flings
To the abyss of oblivion
Drowned nations, kingdoms even as kings.

And if the voice of lyre and trumpet
Awhile holds aught above the spate,
That, too, eternity will swallow,
That, too, await the common fate.

The presence of Derzhavinian time imagery can be detected in the works of later Russian poets such as Pushkin, Tyutchev, Fet, and Mandelshtam. With its emphasis on the ode and on emulation of literary models, Derzhavin's poetry represents the culmination and expansion of Russian Classicism, rather than the first step toward Russian Romanticism. Unlike the Romantics, Derzhavin also demonstrated a Classicist-oriented belief in the stability of the world order, which he as an odist exalted.

JOHANNA GRANVILLE

DE-STALINIZATION

De-Stalinization refers to the attempt to handle the Stalin legacy following Stalin's death. Its chronological boundaries are not clearly defined, but the process began soon after Stalin died in March 1953 and was generally halted in the early years of the Brezhnev period following Khrushchev's ouster in October 1964. There were four principal elements of de-Stalinization.

The first element is official pronouncements. The two most important were Khrushchev's speeches to the Twentieth Congress of the Communist Party of the Soviet Union (CPSU) in 1956 and the Twenty-Second Congress in 1961. The former speech was delivered in closed session to the congress and was not published in the USSR until 1990, although it was published in the West in 1956 and was read to closed party meetings across the country. The second speech was delivered in open session and published in the Soviet press at the time of its delivery. The first speech sought to deflate the exaggerated image of Stalin and to place the responsibility for the terror and repressions upon him alone. Khrushchev sought to argue that Stalin was responsible for the application of terror to the Party (no mention was made of the suffering of anyone outside the party) and that he steered Soviet development off of the healthy course upon which the Party had set it. In the second speech, Khrushchev further attacked the image of Stalin and sought to associate some of his own current political opponents with Stalin's crimes.

Second are his policies. The policies embarked on by the Khrushchev leadership in many respects reversed or modified those pursued by Stalin. Among the most important of these were the formal reaffirmation of the principle of collective leadership; restoration of the Communist Party to the central place in the political system; the elimination of terror as a central aspect of life, including the rehabilitation of some of those who suffered; the opening of some of the labor camps and the return of many of the prisoners and internees to Soviet society; the increased priority given to light industry, without displacing heavy industry as the main priority; and a more flexible foreign policy. Such changes were crucial because of the freeing up of general life that they signified. The removal of the overt threat of terror was particularly important here.

Third is the freeing up of intellectual life. While this was, strictly speaking, a change in policy, its nature and importance warrants separate mention. The tight restrictions upon discussion, literature, and all forms of cultural expression were relaxed. Although censorship, especially self-censorship, remained firmly in place, the boundaries of acceptable expression expanded significantly. Particularly important was the emergence of so-called camp literature, which discussed life in the labor camps and brought a new perspective on the Stalinist experience. The publication of Alexander Solzhenitsyn's

One Day in the Life of Ivan Denisovich (1962) was particularly important in this regard. So was the rewriting of Soviet history to downplay, and at times almost eliminate, Stalin's role.

Fourth is symbolism: The manifestations of the Stalin cult disappeared as soon as Stalin died. His image and person ceased to dominate the Soviet media. And in a process that gathered speed following Khrushchev's 1956 speech, Stalin's name was removed from everything that had been named after him, all statues, busts, and portraits were removed from public display (except in his birthplace, Gori), and his writings were removed from public availability in the libraries. In 1962 his body was removed from the mausoleum on Red Square and buried in a simple plot beneath the Kremlin wall.

The impetus for de-Stalinization came from both above and below. It was widely recognized throughout society that some change would be necessary following Stalin's death, but there was widespread disagreement about how substantial such change should be. At the top of the political system, the issue of de-Stalinization became tangled up with factional conflict among the leaders. From 1956, Khrushchev became the major Soviet leader pressing the cause of de-Stalinization, while others like Kaganovich and Molotov, who had been closer to Stalin, sought to restrict the dimensions of this process. Similar disagreements about how far de-Stalinization should extend were evident within the community as a whole. Many intellectuals, responding to the greater scope for free expression, played an important part in fueling de-Stalinization. Many scholars, writers, artists, poets, and playwrights continually sought to push back the frontiers of what could and could not be said. This process was very uneven; many of the key positions in the artistic and creative worlds were held by conservatives who sought to hold the line against too much innovation and who were in a position to hinder publication and exhibition. In addition, the line coming from the top was not consistent; Khrushchev and his supporters were continually wavering about de-Stalinization, sometimes pushing it forward, at other times winding it back. Everyone was uncertain about how far and how fast the process could be undertaken, and the political elite in particular was concerned to ensure that de-Stalinization did not undermine the power and legitimacy of the system. In this sense even Khrushchev, while recognizing that changes had to be made, was uncertain about their speed and extent.

De-Stalinization constituted a classic case of liberalization. It was designed to bring about change without altering the basic Soviet power structure. In this sense de-Stalinization was limited in its effect and, when a more conservative leadership came to power under Brezhnev and Kosygin, many of these changes were wound back. This was especially clear in the cultural sphere, where the crackdown on free expression was important in generating the dissident movement. However, de-Stalinization left its mark nonetheless. In the short term it was important for the regime's ability to survive the crisis induced by Stalin's death, but in the longer term it was crucial in shaping many of those who were to come to the fore when Gorbachev sought to bring major change to the system in the 1980s. De-Stalinization was an important source of perestroika.

GRAEME GILL

DÉTENTE

By *détente* (a French word for “release from tension”), historians refer to the period of gradually improved relations between the USSR and the West, during the 1960s and early 1970s.

The first signs of *détente* appeared shortly after Josef Stalin's death, with the signature of the peace treaty granting Austrian independence in May 1955 and the Geneva summit in July that opened the way for dialogue between the USSR, the United States, Britain, and France. In March 1956, during the Twentieth Congress of the CPSU, “peaceful co-existence” became the “baseline of Soviet Foreign policy.” Competition with the West

was not over, but, for Nikita Khrushchev, this competition had to be ideological, economic, and technological rather than military. The USSR kept however improving its military potential (it fired its first inter-continental ballistic missile in August 1957 and launched the first Sputnik the following October) and, regarding the Third World, all means of influence were still contemplated. This new approach to international relations led Khrushchev and Nikolai Bulganin to visit Western countries (Britain in 1956, the United States in 1959, and France in 1960) and to participate in the Paris summit meeting in 1960. However, *détente* did not go without tensions and crises, such as the first Berlin Crisis in 1958, the U-2 incident in May 1960, the second Berlin Crisis in August 1961 that led to the construction of the Berlin Wall, and the Cuban Missile Crisis in October 1962.

The Cuban crisis was actually a turning point for *détente*: it led Washington and Moscow to establish a hotline, so as to prevent the risk of a nuclear war that could arise from a lack of communications, and in August 1963 the USSR signed with the United States and Great Britain the first Nuclear Test Ban treaty. Despite Khrushchev's dismissal in October 1964 and the promotion of a new leadership with Leonid Brezhnev, Nikolai Podgorny, and Alexei Kosygin, *détente* was not only maintained but fostered, for the Soviets perceived it as the best way to achieve their two major objectives: obtaining the official recognition of the post-World War II European territorial status quo and improving the standard of living of the population, by devoting more resources to civil production than to the military-industrial complex and by importing Western advanced technologies and products.

And indeed, from the mid-1960s to the mid-1970s, *détente* became a multilateral process as well as a bilateral one.

As a bilateral process between the USSR and the United States, *détente* focused primarily on strategic issues; it first led in July 1968 to the Nuclear Non-Proliferation Treaty and, in May 1972, to the SALT I treaty limiting strategic arms; however, *détente* dealt also with economic matters: During his historical trip to the Soviet Union, President Nixon signed several agreements on cooperation and trade, including grain exports to the Soviet State; one year later, new agreements were signed during Brezhnev's visit of June 1973 to the United States. This Soviet-American *détente* was not lim-

ited to domestic questions, as shown by the active cooperation displayed by the two super-powers in the 1973 Arab-Israeli War.

But détente started involving West-European governments as well. In 1966 the French President Charles de Gaulle visited the USSR to promote “détente, entente, and cooperation” and give détente a broader content, extended to cultural and human questions. Three years later Chancellor Willy Brandt, previously mayor of West Berlin, engaged West Germany in the Ostpolitik, a policy of opening to the East which led to concrete achievements: in 1970, West Germany concluded two treaties, one with Poland and the other with the USSR, that recognized the current German frontiers, notably the Oder-Neisse border, gave up all claims to the lost lands, and implicitly recognized the existence of East Germany. In 1972, the USSR, the United States, Britain, and France signed an agreement on Berlin. These treaties paved the way to the official admission of the two Germanies to the United Nations in 1973.

Détente was also a truly multilateral process: In November 1972, thirty-five European countries, the United States, and Canada opened the Conference on Security and Cooperation in Europe (CSCE). In August 1975, the Helsinki Final Act recognized the post-World War II borders and adopted declarations encouraging Western-Eastern trade and cultural exchanges as well as promoting human rights and freedom of movement.

Despite these successes, détente declined and faded in the second half of the seventies. The active support of the USSR to Marxist revolutionary movements in the Third World, its repeated violations of the Helsinki Final Act, its intervention in Afghanistan in December 1979, the euromissiles question, and the Polish crisis in 1980 all contributed to a revival of the Cold War.

MARIE-PIERRE REY

DEVELOPED SOCIALISM

The concept of developed (“mature,” or “real”) socialism emerged in the offices of the Central Committee of the Communist Party in the late 1960s, soon after the establishment of Leonid Brezhnev’s regime, which reacted to the public ideology of Nikita Khrushchev’s regime. Almost immediately, it was accepted in all Soviet satellites in Eastern Europe as the leading doctrine. As a matter of fact, each new Soviet regime made considerable changes in the public ideology. With Brezhnev’s demise, the concept of developed socialism was almost immediately discarded. Already in the span of Yuri Andropov’s short regime skeptical attitudes toward the previous regime emerged. The new propaganda focused on social justice. Then, with the start of perestroika, this concept associated with Brezhnev’s stagnation was sent to the dustbin of history.

Khrushchev, the most eclectic Soviet leader, who tried to combine the goal of developing military might (his son Sergei Khrushchev aptly named a book about his father *Nikita Khrushchev and the Creation of a Superpower*, 2000) with a naive belief in communist ideals, and also with serious liberalization of society. Khrushchev wanted to reach the standard of living associated with communism without deflecting any resources from the defense of the motherland, the sacred cow of all Soviet leaders. It was Khrushchev who in 1961, just a few years before the coup against him, in the new program of the Communist Party, promised that “the next generations of the Soviet people will live under communism.”

Khrushchev tried to implement this belief through his policy, which had some disastrous consequences. He castigated the personal ownership of cars and private country houses, as well as encouraged collective transportation and vacations. He initiated people’s teams for keeping order as an attempt to diminish the role of the professional police, an idea that goes back to Vladimir Lenin’s utopian vision of socialist society in “State and Revolution,” written before the October revolution. Moved by the same motivation, Khrushchev promoted amateur theaters with the same ridiculous fervor. More serious consequences rose from Khrushchev’s economic policy. He promised a radical jump forward in the production of food by the collective farms. However, he put a limit on the production of milk and meat from private plots. While Khrushchev’s program in collective agriculture failed, the curtailment of food production in

the private sector led to big lines for food products in the state and even in the so-called free collective market.

The leadership who ousted Khrushchev as a demagogue and adventurist (or voluntarist as he was cautiously and indirectly named in the press) who endangered the system searched for more realistic mass propaganda. Preoccupied with military competition with the United States, Brezhnev and his colleagues did not want to spread the illusion that paradise was right around the corner. Such illusions, it was thought, would generate discontent among the people in the near future.

With a sober stance, the leadership looked for an ideological concept that would preserve the communist phraseology ("the building of the material-technological basis of communism"), but instead of waiting for the future, would proclaim that Soviet life could be enjoyed right now. This was the message of developed socialism, which commanded great fanfare in the early 1970s. The leadership's appeal to the masses to be "satisfied"—a famous term, often used by Brezhnev—with life at present seemed all the more reasonable because they were indeed "deeply satisfied" with the military parity with the West in the 1970s, an achievement that had been dreamed about by all the Russian leaders since Peter the Great.

The authors of the concept described the current Soviet society as having already accomplished many of the goals of socialism in the first stage of communism. They depicted Soviet society as based on highly developed productive forces, as a society that was close to eliminating class and ethnic distinctions, and as a new type of human community and socialist personality. Soviet ideologues also talked about the highly developed socialist democracy, and the scientific character of the political management. Most postulates of the concept had few links to reality. The pathetic statements about the technological revolution in the Soviet economy looked absurd against the backdrop of the growing economic gap between the Soviet and Western economies, particularly in the production of civil goods. The thesis about the flourishing of socialist democracy was ridiculous considering the system's harsh persecution of dissidents.

There was, however, one element of the new thinking—that is, the mode of life, or *obraz zhizni*—that held a special place in the concept of developed socialism. The "Soviet mode of life" was closer to reality than most other dogmas. While refusing to

claim that Soviet society can in the foreseeable future surpass the level of material consumption and productivity in the West (which had been promised by Khrushchev) the sophisticated Soviet ideologues focused on other elements of everyday life. They used the concept of "quality of life" with its focus on the subjective evaluation of different components of life that had just emerged in the West in the early 1970s.

While in some ways they followed the spirit of Western studies on the quality of life, the Soviet ideologues avoided the comparison of the material consumption in the USSR and the West. As the most important features of Soviet life, they concentrated on the free education and health care system (the quality of which was quite high by international standards) as well as the high level of science and culture, the relatively low social inequality, the importance of cultural activities in the lives of ordinary people, the big network of institutions for children, the vacations in resort institutions accessible to everybody, full employment, the absence of homeless people, and the impossibility of evicting people from their apartments. The Soviet ideologues also described, and not without reason for the significant part of the Soviet population, the Soviet people as patriots, internationalists, collectivists, and optimists. They depicted life in the West as full of various conflicts and deeply immoral. They also ascribed to the Soviet people mostly fictional properties, such as high labor discipline, temperance, active participation in the management of their factories and offices, and a motivation to work that was not driven by material incentives, but by the general willingness to make their country strong and prosperous.

Despite the permanent grumbling about the lines for consumer goods and services, the majority of the Soviet people accepted the propaganda about the superiority of the Soviet style of life compared to capitalist society. In a national survey, which the author conducted in 1976, the majority of the respondents evaluated the quality of life in the USSR as "four" on a five-point scale; they graded life in the USA as "three," and in the German Democratic Republic as "five."

The concept of developed socialism, which underpinned the anti-Western propaganda, was used also as a tool against "the Great Chinese Proletarian Revolution." Both countries since the late 1960s struggled for the leadership of the international communist movement as well as in the third world in the 1960s and 1970s. The Soviet ideo-

logues denounced the Maoist utopian leftist radicalism of the "Great Chinese Cultural Revolution," opposing it to Soviet "real socialism."

The concept of developed socialism was concocted as an ideological trick by the Soviet propagandists for the justification of the new regime. It was a laughing stock for liberal intellectuals, and the subject of political jokes from the moment of its birth. However, ironically, it became a monument to the period that is considered by many Russians as the happiest time of their lives. In any case, ten years after the demise of the USSR, one-half to two-thirds of the Russians, according to various polls, believed that life during Brezhnev's times was much better than in any other period of Russian history in the twentieth century, and definitely better than in post-Soviet Russia.

VLADIMIR E. SHLAPENTOKH

DEZHNEV, SEMEN IVANOVICH

(c. 1605–1673), Cossack; explorer of northeastern Siberia.

Originally from the Pomor region, on the North Dvina, Semen Dezhnev entered Siberian service with the Cossacks in 1630. His expeditions, particularly that of 1648–1649, were an important part of the great push eastward that Russia made into Siberia during the seventeenth century.

Based in Yakutsk, Dezhnev helped to explore and survey the Alazeya and Kolyma rivers in northeastern Siberia. In 1647 he set out to find and map the Anadyr River, but this attempt proved abortive. Dezhnev began again in June 1648, at the head of ninety men. From Srednekolymsk, Dezhnev's party sailed north, then, upon reaching the Arctic Ocean, turned east, along Russia's northern coast.

During the next one hundred days, Dezhnev's party lost six of seven boats. The surviving vessel

sailed two thousand miles, rounding the Chukotsk Peninsula, Asia's northeastern tip. Thus Dezhnev and his men became, albeit unwittingly, the first Europeans to navigate what later came to be known as the Bering Strait. Dezhnev also discovered the Diomed Islands. Dezhnev had sailed between Asia and North America, but not for another century, with Bering's Great Northern Expedition, would it be proven conclusively that the two continents were not physically linked.

In October 1648, Dezhnev's boat was cast ashore on Russia's Pacific coast, well south of the Anadyr. Before winter set in, the party marched north, locating the river's mouth. Sixteen men, Dezhnev included, survived the winter encampment. In the spring of 1649, they traveled upriver and founded the outpost of Anadyrsk. In 1650 and 1651, Dezhnev consolidated his control over the river basin, aided by Mikhail Stadukhin and Semyon Motora, who had reached the eastern Anadyr overland. Dezhnev was relieved in 1659 and returned to Yakutsk in 1662. In 1672, shortly before his death, he returned to Moscow.

JOHN MCCANNON

DIAGILEV, SERGEI PAVLOVICH

(1872–1929), famed Russian impresario.

Sergei Pavlovich Diaghilev founded and led the Ballets Russes, a touring ballet company that attained an unprecedented level of fame throughout Europe and the Americas from 1909 until 1929. Diaghilev, his company, and his collaborators introduced Russian dancers, choreographers, painters, composers, and musicians to Western audiences that previously had scant knowledge of them. His Ballets Russes single-handedly established the centrality of dance to the artistic culture of the early twentieth century.

A former law student, whose own attempts at musical composition proved a failure, Diaghilev bro-

kered the collaborations of some of his century's most celebrated creative artists, Russian and non-Russian (Stravinsky, Balanchine, Nijinsky, Pavlova, and Chaliapin, as well as Debussy, Ravel, Picasso, and Matisse). A series of art exhibits organized in Russian in 1897 marked the beginning of Diaghilev's career as an impresario. Those led to the founding of an ambitious art journal, *Mir iskusstva* (The World of Art, 1898–1904). As Diaghilev's attentions shifted to Western Europe, the nucleus of Diaghilev's *World of Art* group remained with him. His first European export was an exhibition of Russian paintings in Paris in 1906. A series of concerts of Russian music followed the next year, and in 1908 Diaghilev brought Russian opera to Paris. With designers Alexandre Benois and Léon Bakst, the choreographer Michel Fokine, and dancers of such renown as Vaslav Nijinsky and Anna Pavlova, Diaghilev began to introduce European audiences to Russian ballet in 1909.

The early Ballets Russes repertory included overwrought Orientalist fantasy ballets such as *Schéhérazade* (1910), investigations of the antique (*L'Après-midi d'un Faune*, 1912), and folkloric representations of Russian and Slavic culture (*The Firebird*, 1910). The company also introduced such masterworks as Stravinsky's *Petrushka* (1911, with choreography by Fokine) and *Rite of Spring* (1913, choreographed by Nijinsky). Whatever the lasting value of these early collaborations (the original choreography of many of them has been lost), the Diaghilev ballets were emblematic of Russian Silver Age culture in their synaesthesia (combining music, dance, and décors) and their engagement with the West.

Diaghilev's company toured Europe and the Americas for two decades, until the impresario's death in 1929. And while many of Diaghilev's original, Russian collaborators broke away from his organization in the years following World War I, Diaghilev's troupe became a more cosmopolitan enterprise and featured the work of a number of important French painters and composers in those years. Nonetheless, Diaghilev continued to seek out émigré Soviet artists; the final years of his enterprise were crowned by the choreography of George Balanchine, then an unknown dancer and promising choreographer.

Diaghilev had long suffered from diabetes and died in Venice in 1929. His influence continued to be felt in the ballets presented, the companies established, and the new popularity of dance in the twentieth century. The relatively short, one-act

work, typically choreographed to extant symphonic music, and the new prominence of the male dancer speak to Diaghilev's influence. An astonishing number of dance companies established around the world in the twentieth century owe their existence to Diaghilev's model; many of them boast a direct lineage.

TIM SCHOLL

DIALECTICAL MATERIALISM

A concept in Soviet Marxist–Leninist ideology.

Dialectical materialism was the underlying approach to the interpretation of history and society in Soviet Marxist–Leninist ideology. According to Georg Wilhelm Friedrich Hegel, in the history of philosophy, the clash of contradictory ideas has generated constant movement toward higher levels. Karl Marx poured new content into the dialectic with his materialist interpretation of history, which asserted that the development of the forces of production was the source of the conflicts or contradictions that would demolish each stage of society and lead to its replacement with a higher stage. Marx's collaborator, Friedrich Engels, systematized the three laws of the dialectic that were to figure prominently in the official Soviet ideology: (a) the transformation of quantity into quality; (b) the unity of opposites; and (c) the negation of the negation. According to the first of those laws, within any stage of development of society, changes accumulate gradually, until further change cannot be accommodated within the framework of that stage and must proceed by a leap of revolutionary transformation, like that from feudal society to capitalism. The second law signifies that within any stage, mutually antagonistic forces are built into to the character of the system; for instance, the capitalists and the proletariat are locked in a relationship of struggle, but as long as capitalism survives, the existence of each of those classes presumes the existence of the other. The third law of the dialectic supposedly reflects the reality

that any new stage of society (i.e., capitalism) has replaced or negated a previous stage, but will itself eventually be replaced by still another stage of development (i.e., communism).

In Soviet Marxist-Leninist ideology under successive political leaders, though the insistence on the universal validity of the laws of the dialectic became highly dogmatic, the application of those laws was continually adapted, depending on the political objectives and calculations of the top leaders. Most crucial is the example of Josef Stalin, who insisted that the dialectic took the form of destructive struggle within capitalist societies, but tried to exempt Soviet socialism from the harshness of such internal conflict by arguing that in socialism, the conscious planning and control of change eliminated fundamental inconsistency between the material base and the political-administrative superstructure. Thus in socialism the interplay of nonantagonistic contradictions could open the way to gradual leaps of relatively painless qualitative transformation. Mikhail Gorbachev later repudiated that reasoning as having been the philosophical rationale for evading necessary reforms in political and administrative structures in the Soviet Union from the 1930s to the 1980s.

ALFRED B. EVANS JR.

DICTATORSHIP OF THE PROLETARIAT

The concept of the dictatorship of the proletariat originated with Karl Marx and was applied by Vladimir Lenin as the organizational principle of the communist state after the Russian Revolution. Josef Stalin subsequently adopted it to organize workers' states in Eastern Europe following the Soviet takeover after 1945. In China, Mao Zedong

claimed that the communist revolution of 1949 was the first step to establishing a proletarian dictatorship, even though the peasantry had been largely responsible for the revolution's success.

In *The Communist Manifesto* (1848), Marx gave the reasoning for establishing absolute authority in the name of the working class: "The first step on the path to the workers' revolution is the elevation of the proletariat to the position of ruling class. The proletariat will gain from its political domination by gradually tearing away from the bourgeoisie all capital, by centralizing all means of production in the hands of the State, that is to say in the hands of the proletariat itself organized as the ruling class." In *Critique of the Gotha Program* (1875), he theorized how "between capitalist and communist society lies the period of the revolutionary transformation of the one into the other. There corresponds to this also a political transition period in which the State can be nothing but the revolutionary dictatorship of the proletariat." Marx employed the term, then, as absolutist rule not by an individual but an entire socio-economic class. If capitalism constituted the dictatorship of the bourgeoisie, it would be replaced by socialism—a dictatorship of the proletariat. In turn, socialist dictatorship was to be followed by communism, a classless, stateless society.

In his 1891 postscript to Marx's *The Civil War in France* (1871), Friedrich Engels addressed social-democratic critics of this concept: "Well and good, gentlemen, do you want to know what this dictatorship looks like? Look at the Paris Commune. That was the Dictatorship of the Proletariat." Differences over the principle—and over whether a conspiratorial communist party was to incorporate this idea—were to divide the left into revolutionary (in Russia, Bolshevik) and reformist (Menshevik) wings.

Lenin developed the praxis of proletarian dictatorship in *State and Revolution* (1917): "The proletariat only needs the state for a certain length of time. It is not the elimination of the state as a final aim that separates us from the anarchists. But we assert that to attain this end, it is essential to utilize temporarily against the exploiters the instruments, the means, and the procedures of political power, in the same way as it is essential, in order to eliminate the classes, to instigate the temporary dictatorship of the oppressed class." A dictatorship by and for the proletariat would realize Lenin's dictum that the only good revolution was one that could defend itself. Dictatorship would al-

low the working class to consolidate political power, suppress all opposition, gain control of the means of production, and destroy the machinery of the bourgeois state. Political socialization would follow: "It will be necessary under the dictatorship of the proletariat to reeducate millions of peasants and small proprietors, hundreds of thousands of office employees, officials, and bourgeois intellectuals." Paradoxically, Lenin saw this form of dictatorship as putting an end to "bourgeois-democratic parliamentarism" and replacing it with a system expanding democratic rights and liberties to the exploited classes.

In sum, for Lenin, "only he is a Marxist who extends his acknowledgement of the class struggle to an acknowledgement of the Dictatorship of the Proletariat." Moreover, "the dictatorship of the proletariat is a stubborn struggle—bloody and bloodless, violent and peaceful, military and economic, educational and administrative—against the forces and traditions of the old society" (*Collected Works*, XXV, p. 190).

In *Foundations of Leninism* (1924), Stalin identified three dimensions of the dictatorship of the proletariat: 1) as the instrument of the proletarian revolution; 2) as the rule of the proletariat over the bourgeoisie; and 3) as Soviet power, which represented its state form. In practice, Lenin, and especially Stalin, invoked the concept to rationalize the Communist Party monopoly on power in Russia, arguing that it alone represented the proletariat.

RAY TARAS

DIOCESE

In early Greek sources (eleventh and twelfth centuries), the term signified a province, either secular or ecclesiastical. In Rus', and later in Russia, the

term was used only in the ecclesiastical sense to mean the area under the jurisdiction of a prelate.

Church organization evolved along with the spread of Christianity. The metropolitan of Kiev headed the Church in Rus'. Bishops and dioceses soon were instituted in other principalities. Fifteen dioceses were created in the pre-Mongol period. Compared with their small, compact Greek models centered on cities, these dioceses were vast in extent with vague boundaries and thinly populated, like the Rus' land itself.

The Mongol invasions changed the course of political and ecclesiastical development. The political center shifted north, ultimately finding a home in Moscow. Kiev and principalities to the southwest were lost, although claims to them were never relinquished. Church organization adapted to these changes. In the initial onslaught, several dioceses were devastated and many remained vacant for long periods. Later new dioceses were created, including the diocese of Sarai established at the Golden Horde. By 1488 when the growing division in the church organization solidified with one metropolitan in Moscow and another in Kiev, there were eighteen dioceses. Nine dioceses (not including the metropolitan's see) were subordinated to Moscow; nine dioceses looked to the metropolitan seated in Kiev.

The sixteenth and seventeenth centuries witnessed the elevation of the metropolitan of Moscow to patriarch (1589), periods of reform directed at strengthening church organization and raising the spiritual level of parishioners, and the subordination of the see of Kiev with its suffragans to the Moscow patriarch (1686). Ecclesiastical structure responded to these profound changes. By 1700 the number of dioceses had increased to twenty-one (excluding the Patriarchal see) as the Church struggled to create an effective organization able to meet the spiritual needs of the people and suppress dissident voices that had emerged. Thirteen of these dioceses were headed by metropolitans, seven by archbishops, and one by a bishop.

In 1721 the patriarchate was abolished and replaced by the Holy Synod. Despite this momentous change in ecclesiastical organization, the long-term trend of increasing the number of dioceses continued. In 1800 there were thirty-six dioceses; by 1917 the number had grown to sixty-eight. More and smaller dioceses responded to increased and changing responsibilities, particularly in the areas of education, charity, and missionary activity, but

also in the area of social control and surveillance as servants of the state.

The Bolshevik Revolution destroyed the organization of the Russian Church, making prisoners, fugitives, exiles, and martyrs of its prelates. The catastrophes that characterized the beginning of World War II prompted Stalin to initiate a partial rapprochement with the Church. This permitted a revival of its organization, but under debilitating constraints. In the 1990s, following the collapse of the Soviet Union, the Russian Orthodox Church entered a new period institutionally. Constraints were lifted, the dioceses revived and liberated. By 2003 there were 128 functioning dioceses.

CATHY J. POTTER

DIONISY

(c. 1440–1508), renowned Russian painter.

Dionisy was the first Russian layman known to have been a religious painter and to have run a large, professional workshop. He was associated with the Moscow School and is considered the most outstanding icon painter of the later fifteenth century in Russia. His biographer, Joseph of Volotsk (1440–1515), called him “the best and most creative artist of all Russian lands.” Certainly this can be considered true for his time period.

Dionisy's first recorded works were frescoes in the Church of St. Parfuntiev in the Borovsky

Monastery, completed around 1470 when he was an assistant to the painter Mitrophanes. In 1481 the Archbishop Vassian of Rostov, a close friend of the Great Prince of Moscow Ivan III, asked Dionisy to paint icons for the iconostasis of the Cathedral of the Dormition, Russia's main shrine in the Moscow Kremlin. This cathedral had just been finished by Aristotle Fioravanti, a well-known architect and engineer from Bologna, Italy. In this task Dionisy was assisted by three coworkers: Pope Timothy, Yarete, and Kon. Some fragmentary frescoes in this cathedral are also attributed to Dionisy, painted prior to the icon commission.

In 1484 Paisi the Elder and Dionisy, with his sons Fyodor and Vladimir, painted icons for the Monastery of Volokolamsk. It is generally agreed that the greatest achievement of Dionisy is the group of frescoes in the Church of the Nativity of the Virgin at St. Ferapont Monastery on the White Lake. He signed and dated this work 1500–1502. He was assisted again by his two sons. The entire fresco program centers on the glorification of the

The Theotokos by Dionisy. © RUSSIAN STATE MUSEUM, ST. PETERSBURG, RUSSIA/LEONID BOGDANOV/SUPERSTOCK

Virgin Mary. However, the usual Pantocrator (Christ enthroned, "Ruler of All") appears in the dome, but without the severity of earlier representations. In the apse the enthroned Virgin and Child are represented above the Liturgy of the Church Fathers. The nave walls have frescoes illustrating scenes from the Akathist Hymn praising the Virgin. Some unusual scenes of the life and miracles of Christ also appear (Parables of the Prodigal Son, Widow's Mite, and so forth). Dionisy apparently invented some compositions instead of copying traditional representations.

Stylistically he was very much indebted to the venerated Andrei Rublev who died in 1430. Characteristic of Dionisy's style is the "de-materialized bouyancy" (Hamilton) of his figures, which appear to be extremely attenuated. In addition, his figures have a certain transparency and delicacy that are distinctive to his approach.

Icon panels attributed to Dionisy include a large icon of St. Peter, the Moscow Metropolitan, St. Alexius, another Moscow Metropolitan, St. Cyril of Byelo-Ozersk, a Crucifixion icon, a Hodegetria icon, and an icon glorifying the Virgin Mary entitled "All Creation Rejoices in Thee." The Crucifixion icon especially characterizes his style. Christ's rhythmical, languid body with tiny head (proportions 1:12) dominates the composition while his followers, on a smaller scale, levitate below. A curious addition—perhaps from western influence—are the depictions of the floating personified Church and Synagogue, each accompanied by an angel.

The influence of Dionisy is clearly evident in subsequent sixteenth-century Russian icons and frescoes as well as in manuscript illuminations.

A. DEAN MCKENZIE

DISENFRANCHIZED PERSONS

Soviet Russia's first Constitution of 1918 decreed that the bourgeois classes should be disenfranchised. The categories of people marked for disenfranchisement included those who hire labor for the purpose of profit; those who live off unearned income such as interest money or income from property; private traders and middlemen; monks and other clerics of all faiths and denominations; agents of the former tsarist police, gendarmes, prison organs, and security forces; former noblemen; White Army officers; leaders of counterrevolutionary bands; the mentally ill or insane; and persons sentenced by a court for crimes of profit or depravity. However, many more people were vulnerable to the loss of rights. Vladimir Lenin declared that his party would "disenfranchise all citizens who hinder socialist revolution." In addition, family members of disenfranchised persons shared the fate of their relatives "in those cases where they are materially dependent on the disenfranchised persons."

Also described as *lishentsy*, the disenfranchised were not only denied the ability to vote and to be elected to the local governing bodies or soviets: Under Josef Stalin the disenfranchised lost myriad rights and became effective outcasts of the Soviet state. They lost the right to work in state institutions or factories or to serve in the Red Army. They could not obtain a ration card or passport. The disenfranchised could not join a trade union or adopt a child, and they were denied all forms of public assistance, such as a state pension, aid, social insurance, medical care, and housing. Many *lishentsy* were deported to forced labor camps in the far north and Siberia.

In 1926, the government formalized a procedure that made it possible for some of the disenfranchised to be reinstated their rights. Officially, disenfranchised persons could have their rights restored if they engaged in socially useful labor and demonstrated loyalty to Soviet power. Hundreds of thousands of people flooded Soviet institutions with various appeals for rehabilitation, and some managed to reenter the society that excluded them.

According to statistics maintained by the local soviets, over 2 million people lost their rights, but these figures on the number of people disenfranchised are probably underestimated. In the electoral campaigns of 1926 to 1927 and 1928 to 1929, the Russian Soviet Federative Socialist Republic (RSFSR)

reported roughly 3 to 4 percent of rural and 7 to 8 percent of the urban residents disenfranchised as a percentage of the voting-age population. Rates of disenfranchisement were higher in those areas with large non-Russian populations. Although portrayed as bourgeois elements, the disenfranchised actually included a wide variety of people, such as gamblers, tax evaders, embezzlers, and ethnic minorities. The poor, the weak, and the elderly were especially vulnerable to disenfranchisement.

Disenfranchisement ended with Stalin's 1936 Constitution, which extended voting rights to all of the former categories of disenfranchised people except for the mentally ill and those sentenced by a court to deprivation of rights. Nonetheless, "former people," or those with ties to the old regime, remained vulnerable during subsequent campaigns of Stalinist terror.

DISSIDENT MOVEMENT

Individuals and informal groups opposed to Communist Party rule.

This movement comprised an informal, loosely organized conglomeration of individual and group-based dissidents in the decades following the death of Josef Stalin in March 1953 through the end of the Cold War in the late 1980s. They opposed their posttotalitarian regimes, accepting, as punishment, exile, imprisonment, and sometimes even death. The dissidents subjected their fellow citizens to moral triage. By the year 1991, they helped to bring down

the regimes in Europe, which, for a number of reasons, had already embarked upon a political modernization and democratization process. Dissidents were less successful in the East and Southeast Asian countries of the communist bloc. It may be ironic that with the reversion to authoritarian practices in such former Soviet republics as the Russian Federation, Belarus, and the Ukraine by the turn of the twenty-first century, dissidents have reappeared in the 2000s as individuals, or, at most, small groups, but not as a movement.

DEFINITIONS

The most precise historical usage dates from the late 1960s. The term "dissident" (in Russian, *inakomysliachii* for men or *inakomysliachaia* for women) was first applied to intellectuals opposing the regime in the Soviet Union. Then, in the late 1970s, it spread to Soviet-dominated East Central and Southeast Europe, which was also known as Eastern Europe. Most broadly, a dissident may be defined as an outspoken political and social nonconformist.

The classic definition of dissent in the East Central European context is that by Vaclav Havel, a leading dissident himself and later president of the Czechoslovak and Czech Republics, from December 1989 until his resignation February 2, 2003. Wrote Havel: "[Dissent] is a natural and inevitable consequence of the present historical phase of the [Communist dictatorship—Y.B.] system it is haunting. It was born at a time, when this system, for a thousand reasons, can no longer base itself on the unadulterated, brutal, and arbitrary application of power, eliminating all expressions of nonconformity. What is more, the system has become so ossified politically that there is practically no way for such nonconformity to be implemented within its official structures" (Havel, 1985, p. 23). Havel thus places dissent into the post-Stalinist or posttotalitarian phase of the communist system. The semi-ironic concept of dissent also implies that its practitioners, the dissidents, differed in their thinking from the majority of their fellow citizens and were thus doomed to failure. By making, however, common cause with the party reformers in the governing structures, the dissidents, including Havel, prevailed for good in Eastern Europe, and at least temporarily in the Russian Federation, Belarus, and the Ukraine.

SOVIET LEADERS AND LEADING DISSIDENTS

The party reformer Nikita Khrushchev, who after Stalin's death headed the Soviet regime from March

1953 to October 1964, was committed to building communism in the Soviet Union, in Soviet-dominated Eastern Europe and throughout the world. Paradoxically, he ended by laying the political and legal foundations for the dissident movement. That movement flourished under Khrushchev's long-term successor Leonid Brezhnev (October 1964–November 1982). Being more conservative, Brezhnev wanted to restore Stalinism, but failed, partly because of the opposition from dissidents. After the brief tenure of two interim leaders—the tough reformer Yuri Andropov (November 1982–February 1984) and the conservative Konstantin Chernenko (February 1984–March 1985)—power was assumed by Andropov's young protégé, the ambitious modernizer Mikhail Gorbachev (March 1985–December 1991). Like Khrushchev, Gorbachev both fought and encouraged the dissident movement. Ultimately, he failed all around. By December 1991, the Soviet Union withdrew from its outer empire in Eastern Europe and saw the collapse of its inner empire. It ceased to exist, and Gorbachev resigned from the presidency December 25, 1991.

The most outstanding ideological leaders of the Soviet dissidents were, from the Left to the Right, Roy Medvedev (Medvedev, 1971), Peter Grigorenko (Grigorenko, 1982), Andrei Sakharov (Sakharov, 1968, 1992), and Alexander Solzhenitsyn (Solzhenitsyn: 1963, 1974–1978). The more radical Andrei Amalrik (Amalrik, 1970) cannot be easily classified: he dared to forecast the breakup of the Soviet Union, but he also wrote one of the first critical analyses of the movement. Very noteworthy are Edward Kuznetsov (Kuznetsov, 1975), a representative of the Zionist dissent; Yuri Orlov (Alexeyeva, 1985), the political master strategist of the Helsinki Watch Committees; and Tatyana Mamonova (Mamonova, 1984), the leader of Russian feminists.

A Marxist socialist historian leaning toward democracy, Medvedev helped Khrushchev in his attempt to denounce Stalin personally for killing Communist Party members in the 1930s (Medvedev, 1971). Medvedev also provided intellectual underpinning for Khrushchev's drawing of sharp distinctions between a benevolent Vladimir Lenin and a psychopathic Stalin, between a fundamentally sound Leninist party rank-and-file and the excesses of the Stalinists in the secret police and in the party apparatus. This was better politics than history. Major General Peter Grigorenko, who was of Ukrainian peasant origin, shared with Roy

Medvedev the initial conviction that Stalin had deviated from true Leninism and with Roy's brother Zhores Medvedev, who had protested against the regime's mistreatment of fellow biologists, the wrongful treatment in Soviet asylums and foreign exile. As a dissident, Grigorenko was more straightforward. As early as 1961, he began to criticize Khrushchev's authoritarian tendencies, and under Brezhnev he became a public advocate of the Crimean Tatars' return to the Crimea. He also joined the elite Sakharov–Yelena Bonner circle within the Helsinki Watch Committees movement, having been a charter member of both the Moscow Group since May 1976 and the Ukrainian Group since November 1976 (Reich, 1979; Grigorenko, 1982). Through his double advocacy of the Crimean Tatars and his fellow Ukrainians, Grigorenko helped to sensitize the liberal Russian leaders in the dissident movement to the importance of a correct nationality policy and also of the restructuring of the Soviet federation.

Academician Sakharov, a nuclear physicist, the “father of the Soviet hydrogen bomb,” and an ethnic Russian, was one of the foremost moral and intellectual leaders of the Soviet dissident movement, the other being his antipode, the writer and ethnic Russian Solzhenitsyn. Unlike the Slavophile and Russian conservative Solzhenitsyn, who had expressed nostalgia for the authoritarian Russian past and had been critical of the West, Sakharov belonged to the liberal Westernizing tradition in Russian history and wanted to transform the Soviet Union in accordance with liberal Western ideas (Sakharov 1974, Solzhenitsyn 1974). As a political leader of the dissident movement, Sakharov practiced what he preached, especially after marrying the Armenian–Jewish physician Bonner, whose family had been victimized by the regime. He became active in individual human rights cases or acts of conscience, and thus set examples of civic courage. So long as the dissenter observed nonviolence, Sakharov publicly defended persecuted fellow scientists; Russian poets and politicians; and Crimean Tatars, who wanted to return to their homeland in the Crimea. He even spoke up for persecuted Ukrainian nationalist Valentyn Moroz, whose politics was more rightist than liberal. In 1970, Sakharov had also defended the former Russian–Jewish dissident turned alienated Zionist Kuznetsov, who was initially sentenced to death for attempting to hijack a Soviet plane to emigrate to Israel. To his death in December 1989, Sakharov remained the liberal conscience of Russia.

**DISSIDENT GROUPS, THEIR ACTIONS,
AND SOVIET COUNTERACTIONS**

As to the different groups and newsletters in the Soviet movement, David Kowalewski has counted and categorized as many as forty-three, of which six were religious. Of the thirty-seven secular groups, eleven were general, or multipurpose defenders of rights, nine were ethnic with all-Union membership or aims, seven were political, three each were socioeconomic and social, and one each was economic, artistic, intellectual, and cultural-religious. The inclusion of more regionally based and oriented groups from the Baltic States, Transcaucasia, and the Ukraine would increase the number of ethnic groups by at least four. According to first secretary of the Communist Party of Ukraine Volodymyr V. Sherbytsky, on May 16, 1989, there were about fifteen anti-Socialist groupings in Ukraine.

What did the Soviet dissidents actually do? How did the regime react? What did the dissidents accomplish? Almost two thousand dissidents openly signed various appeals before 1968 (Rubenstein 1985, p. 125) Over time, hundreds took part in public demonstrations during Soviet Constitution Day (December 10), and on special occasions, such as the protest of seven against the USSR-led Warsaw Pact forces marching into Czechoslovakia in August 1968. Poets and writers surreptitiously published their works, which like much of nineteenth-century Russian literature carried a political and social message, in the post-Stalinist Soviet Union (the so-called samizdat, or self-publishing), or even abroad (tamizdat in Russian, meaning literally "published there"). Some of the poems would also be read publicly, in a political demonstration. The documentarists among the dissidents meticulously recorded facts, especially in *The Chronicle of Current Events*. They worked hand in glove with the legalists, who insisted that the regime observe its own laws and the explicit norms of the Stalin Constitution of 1936. In October 1977, Brezhnev had a more factual constitution passed, but it was too late to defeat the legalists. Hundreds of thousands of Soviet Jews insisted on their right to leave the country altogether, and so did tens of thousands of Soviet Germans. Baltic dissidents protested both the current discriminatory policies of the regime and their countries having been forcibly included in the Soviet Union after the Molotov-Ribbentrop Pact of August 1939. Ukrainian dissidents insisted that the linguistic Russification was unconstitutional and that the regime's policies in economics

foreshadowed the abolition of Soviet republics and the merger of the Ukrainian people with the ethnic Russians. The movement was partly self-financed in that professionals donated their services free and the more successful authors of tamizdat such as Solzhenitsyn remitted their earnings to fellow dissidents in the USSR, especially to those that were imprisoned by the regime. Some of the funds were channeled from abroad: They were donations either by private foreign citizens, or by foreign governments.

By a stroke of political genius, in 1976 ethnic Russian Orlov brought the disparate sections of the dissident movement together in the Helsinki Watch Committees. Brezhnev wanted to legitimize his hold over Eastern Europe in the Helsinki accords, and the United States, Canada, and Western Germany insisted on the inclusion of human rights provisions. Taking a leaf from the legalists, Orlov, Bonner, and Sakharov insisted that the regime should be publicly aided in observing its new commitments toward its own citizens. Moreover, Orlov persuaded sympathetic American congresspersons and senators, such as the late Mrs. Millicent Fenwick, that with the support of the U.S. government, the Helsinki Review Process would work. It would advance the global cause of human rights and, on a regional level, would help Yuri Orlov's fellow Soviet citizens and also benefit Mrs. Fenwick's political constituents, who wanted their relatives to be allowed to emigrate to the West and to Israel.

What was the reaction of the Soviet government? At the very least, Brezhnev and his security chief and eventual successor Andropov ordered the disruption of public demonstrations by the dissidents by hiring a brass band or having thugs beat them up. The names of all the petitioners would be recorded and the more persistent letter signers would be talked to by the secret police, stripped of privileges such as foreign travel, and eventually dismissed from their jobs. The next step could be exile from Moscow, such as that of Sakharov from January 1880 to December 1986. Others, as for instance the famous tamizdat authors Andrei Sinyavsky and Yuli Daniel, would be formally tried, sentenced to long terms in prison camps, and expelled abroad after serving their sentences. The show trials led to further protests by dissidents and criticisms in the West. Brezhnev and Andropov tightened the screw by placing professionals with an intellectual bent in asylums, where they were

given mind-altering drugs, and also by authorizing the killing, whether by medical neglect during incarceration or by hired thugs, of carefully chosen dissidents. The most frightening aspect of the regime's policy was that the individual dissident did not know what fate had been decided for him or her. The post-Stalinist system of power was not fully posttotalitarian in that it retained Stalin's option of unpredictability.

THE MOVEMENT'S SUCCESS OR FAILURE

From the perspective of the first years of the twenty-first century, it is not clear whether Gorbachev would have embarked upon reforms and modernization by himself in the expectation that he would be given massive economic aid from the United States and Western Europe, or whether the pro-Western dissidents helped tilt his approach. The Soviet mode of economic and political thinking has been overcome in such East Central European countries as Poland, where after repeated political insurrections in 1956, 1968, 1970, and 1976 the dissidents coalesced in Solidarity in the 1980s (Rupnik 1979, Walesa 1992) in Hungary with its revolution of October 1956 in the Czech and Slovak republics that had benefited from Havel's moral leadership and in all three Baltic states where the dissidents have won political majorities. In the old Soviet Union, within the boundaries of September 1, 1939 (that is, with the probable exception of the Western Ukraine), Soviet attitudes have come back: wholesale in Belarus, where the dissident movement had been weak, and partly in Russia and Ukraine, where the dissidents continue operating as a tolerated political minority within "hybrid" (partly democratic, partly authoritarian) regimes.

In the old Soviet Union, where the citizens had lived under the communist regime for seventy years—as opposed to forty years in East Central Europe—many persons were like walking wounded. The dissident movement submitted their fellow citizens to a moral triage between members of the dissidents and members of the establishment, between the dissidents' foul- and fair-weather friends, between the establishment's decent reformers and its willing executioners. The dissident movement also raised fundamental questions about the future of Russia. Solzhenitsyn wondered whether Russia should return to a humane conservative monarchy, while Sakharov, with the support of U.S. pres-

idents and West European statesmen, chose to work for a liberal democracy and a civic society. Most interesting in view of the resurgence of pro-Soviet thinking in Russia and the Eastern Ukraine in the twenty-first century is the harsh judgment of the Zionist wouldbe emigrant Kuznetsov, who challenged both Solzhenitsyn and Sakharov. Wrote Kuznetsov December 14, 1970: "The essential characteristics of the structure of the regime are to all intents and purposes immutable, and . . . the particular political culture of the Russian people may be classed as despotic. There are not many variations in this type of power structure, the framework of which was erected by Ivan the Terrible and by Peter the Great. I think that the Soviet regime is the lawful heir of these widely differing Russian rulers. . . . It fully answers the heartfelt wishes of a significant—but alas not the better—part of its population" (Kuznetsov, 1975, p. 63; Rubenstein, 1985, pp. 170–171). Was the dissident movement, therefore, bound to fail in the old Soviet Union? The definitive answer may be given later, a generation after the breakup of the USSR, or roughly by the year 2021.

YAROSLAV BILINSKY

DMITRY ALEXANDROVICH

(d. 1294), Grand prince of Vladimir.

In 1260 Dmitry Alexandrovich was appointed to Novgorod by his father Alexander Yaroslavich "Nevsky" who, two years later, ordered him to attack the Teutonic Knights at Yurev (Tartu, Dorpat) in Estonia. But in 1264, after his father died, the Novgorodians evicted Dmitry because of his youth. Nevertheless, in 1268 they requested him to wage war against the castle of Rakovor (Rakvere, Wessenburg) in Estonia. After Dmitry's uncle Yaroslav of Vladimir died in 1271, he occupied Novgorod again, but his uncle Vasily evicted him. Vasily died in 1276, and Dmitry replaced him as grand prince of Vladimir. After that the Novgorodians once again invited him to rule their town. While there he waged war on Karelia and in 1280 built a stone fortress at Kopore near the Gulf of Finland. In 1281, however, Dmitry quarreled with the Novgorodians. He waged war against them and because of this failed to present himself to the new Khan in Saray. His younger brother Andrei, who did visit the Golden Horde, was therefore awarded the patent for Vladimir. Because Dmitry refused to abdicate, the khan gave Andrei troops with which he evicted his brother and seized Vladimir and Novgorod. Dmitry fled to Sweden and later returned to Pereyasavl. In 1283, when Andrei brought Tatar troops against him, Dmitry sought help from Khan Nogay, an enemy of the Golden Horde, who gave him troops. They wreaked havoc on northern Russia. Andrei eventually capitulated but continued to plot Dmitry's overthrow. In 1293, after summoning the Tatars the fourth time, he succeeded in forcing Dmitry's abdication. Dmitry died in 1294 while returning to Pereyasavl Zalesky.

MARTIN DIMNIK

DMITRY, FALSE

(d. 1606), Tsar of Russia (1605–1606), also known as Pretender Dmitry.

Dmitry of Uglich, Tsar Ivan IV's youngest son (born in 1582), supposedly died by accidentally cutting his own throat in 1591; however, many people believed that Boris Godunov had the boy murdered to clear a path to the throne for himself. In 1603 a man appeared in Poland-Lithuania claiming to be Dmitry, "miraculously" rescued from Godunov's assassins. With the help of self-serving Polish lords, the Pretender Dmitry assembled an army and invaded Russia in 1604, intending to topple the "usurper" Tsar Boris. The Godunov regime launched a propaganda campaign against "False Dmitry," identifying him as a runaway monk named Grigory Otrepev. Nevertheless, "Dmitry's" invasion was welcomed by many Russians; and, after Tsar Boris's sudden death in April 1605, "Dmitry" triumphantly entered Moscow as the new tsar. This mysterious young man, who truly believed that he was Dmitry of Uglich, was the only tsar ever raised to the throne by means of a military campaign and popular uprisings.

Tsar Dmitry was extremely well educated for a tsar and ruled wisely for about a year. Contrary to the conclusions of many historians, he was loved by most of his subjects and never faced a popular rebellion. His enemies circulated rumors that he was a lewd and bloodthirsty impostor who intended to convert the Russian people to Catholicism, but Tsar Dmitry remained secure on his throne. In May 1606, he married the Polish princess Marina Mniszecz. During the wedding festivities in Moscow, Dmitry's enemies (led by Prince Vasily Shuisky) incited a riot by claiming that the Polish wedding guests were trying to murder the tsar. During the riot, about two hundred men entered the Kremlin and killed Tsar Dmitry. His body was then dragged to Red Square, where he was denounced as an impostor. Shuisky seized power and proclaimed himself tsar, but Tsar Dmitry's adherents circulated rumors that he was still alive and stirred up a powerful rebellion against the usurper. The civil war fought in the name of Tsar Dmitry lasted many years and nearly destroyed Russia.

CHESTER DUNNING

DMITRY MIKHAILOVICH

(1299–1326), Prince of Tver and grand prince of Vladimir.

Dmitry Mikhailovich ("Terrible Eyes") was born on September 15, 1299. Twelve years later he led a campaign against Yury Danilovich of Moscow to capture Nizhny Novgorod. But Metropolitan Peter, a supporter of Moscow, objected. Dmitry therefore cancelled the attack. In 1318, when Khan Uzbek executed his father Mikhail, Dmitry succeeded him to Tver. Soon afterward, he strengthened his hand against Moscow by marrying Maria, daughter of Grand Prince Gedimin, thereby concluding a marriage alliance with the Lithuanians. In 1321 Yury, now the Grand Prince of Vladimir, marched against Dmitry and forced him to hand over his share of the Tatar tribute and to promise not to seek the grand princely title. In 1322, when Yury delayed in taking the tribute to Khan Uzbek, Dmitry broke his pledge. He rode to Saray to complain to the khan that Yury refused to hand over the tribute and to ask for the grand princely title. For his service, the khan granted him the patent for Vladimir. Because Yury objected to the appointment, Uzbek summoned both princes to Saray, but the khan never passed judgment on them. On November 21, 1325, Dmitry murdered Yury to avenge his father's execution. He therewith incurred the khan's wrath. The latter sent troops to devastate the Tver lands and had Dmitry executed in the following year, on September 13, 1326.

MARTIN DIMNIK

DMITRY OF UGLICH

(1582–1591), youngest son of Ivan the Terrible, whose early death was followed by the appearance of two “False Dmitry” claimants to the throne in the Time of Troubles.

Dmitry Ivanovich, the son of Tsar Ivan IV, was born in 1582 at a time of dynastic crisis. The tsarevich Ivan Ivanovich had been killed in 1581, and his mentally impaired brother Fedor had failed to produce offspring after several years of marriage. Dmitry’s mother, Maria Nagaia, was the last of the many wives taken by Ivan IV. Although their marriage was considered uncanonical, the birth of Dmitry raised hopes that the Rurikid line might continue. Upon the death of Ivan IV in 1584, Boris Godunov moved to protect the interests of his brother-in-law, Tsarevich Fedor, by removing Dmitry and the Nagoi clan from Moscow and exiling them to the town of Uglich. The Nagois were kept under close surveillance, and the young Dmitry, who suffered from epilepsy, grew up in Uglich surrounded by nannies and uncles. On May 15, 1591, the boy’s body was discovered in a pool of blood in a courtyard. Upon hearing the terrible news, the Nagois incited a mob against Godunov’s representatives in Uglich and several were murdered. A commission of inquiry sent from Moscow concurred with the majority of eyewitnesses that Dmitry’s death was an accident caused by severe epileptic convulsions that broke out during a knife-throwing game, causing him to fall on a knife and slit his own throat. Rumors of Godunov’s complicity began to circulate almost immediately, but they were not officially accepted at court until 1606. In that year tsar Vasily Ivanovich Shuisky, who had headed the commission of inquiry that pronounced Dmitry’s death an accident fifteen years earlier, brought the Nagoi clan back to court and proclaimed Dmitry’s death a political murder perpetrated by Godunov. Shuisky also organized the transfer of Dmitry’s remains to Moscow and promoted the cult of his martyrdom for propaganda purposes. During the Time of Troubles,

broad sectors of the population and influential factions at court endorsed the notion that Dmitry had miraculously escaped death. Over a dozen seventeenth-century texts excoriate Godunov for Dmitry’s murder, and historians have debated the events surrounding his death and public resurrection ever since.

BRIAN BOECK

DOCTORS’ PLOT

On January 13, 1953, TASS and *Pravda* announced the exposure of a conspiracy within the Soviet medical elite. Nine doctors—including six with stereotypically Jewish last names—were charged with assassinating Andrei A. Zhdanov and Aleksandr S. Shcherbakov and plotting to kill other key members of the Soviet leadership. These articles touched off an explosion of undisguised chauvinism in the press that condemned Soviet Jews as Zionists and agents of United States and British imperialism. The Doctors’ Plot (*Delo vrachei*) was the product of an intensely russocentric period in Soviet history when non-Russian cultures were routinely accused of bourgeois nationalism. It marked the culmination of state-sponsored anti-Semitism under Josef Stalin and followed in the wake of the 1948 murder of Solomon M. Mikhoels and subsequent anti-Cosmopolitan campaigns.

Much of the Doctors’ Plot remains shrouded in mystery, due to the fact that virtually all relevant archival material remains tightly classified. Even its design and intent are unclear, insofar as the campaign was still evolving when it was abruptly terminated after Stalin’s death in March 1953. Although it was officially denounced shortly thereafter as the work of renegades within the security services, most scholars suspect that Stalin played a major role in the affair. Some believe that the inflammatory press coverage was intended to provoke a massive wave of pogroms that would give

Stalin an excuse to deport the Soviet Jews to Siberia. Adherents of this view differ over what precisely was to catalyze such a wave of popular anti-Semitism. According to some commentators, the court philosopher Dimitry I. Chesnokov was to publicly justify the sequestering of the Jews in Marxist-Leninist terms. Others suggest that the campaign in the press would climax with the show trial and execution of the Jewish “doctor-murderers” on Red Square. But the most common story involves an attempt to publish a collective letter to *Pravda* signed by approximately sixty prominent Soviet Jews that would condemn the traitorous doctors and propose that the entire Jewish community be “voluntarily” deported to Siberia to exculpate its sins. In each of these cases, the exiling of the Jews was to be accompanied by a thorough purge of party and state institutions, a murderous act that would apparently combine elements of the Great Terror with the Final Solution.

Of the three scenarios, only the collective letter to *Pravda* finds reflection in extant archival sources. Composed at Agitprop in mid-January 1953 by Nikita. A. Mikhailov, the collective letter condemned the “doctor-murderers,” conceded that some Soviet Jews had fallen under the influence of hostile foreign powers, and demanded “the most merciless punishment of the criminals.” I. I. Mints and Ia. S. Khavinson circulated this letter within the Soviet Jewish elite and coerced many, including Vasily S. Grossman and S. Ia. Marshak, to sign it. Others, however, refused. Although the letter did not explicitly call for mass deportations, Ilya G. Ehrenburg and V. A. Kaverin read the phrase “the most merciless punishment” to be a veiled threat against the entire Soviet Jewish population.

When Ehrenburg was pressured to sign the letter in late January 1953, he first stalled for time and then wrote a personal appeal to Stalin that urged the dictator to bar *Pravda* from publishing material that might compromise the USSR’s reputation abroad. This apparently caused Stalin to think twice about the campaign and a second, more mildly worded collective letter was commissioned later that February. This letter called for the punishment of the “doctor-murderers,” but also drew a clear distinction between the Soviet Jewish community and their “bourgeois,” “Zionist” kin abroad. It concluded by proclaiming that the Soviet Jews wanted nothing more than to live as members of the Soviet working class in harmony with the other peoples of the USSR. Curiously, although Ehrenburg and other prominent Soviet Jews ultimately

signed this second letter, it never appeared in print. Some commentators believe this to be indicative of ambivalence on Stalin’s part regarding the Doctors’ Plot as a whole during the last two weeks of his life.

Although neither draft of the collective letter explicitly mentioned plans for the Siberian exile of the Jews, many argue that this was the ultimate intent of the Doctors’ Plot. Since the opening of the Soviet archives in 1991, however, scholars have searched in vain for any trace of the paper trail that such a mass operation would have left behind. The absence of documentation has led some specialists to consider the rumors of impending deportation to be a reflection of social paranoia within the Soviet Jewish community rather than genuine evidence of official intent. This theory is complicated, however, by the accounts of high-ranking party members like Anastas I. Mikoyan and Nikolai A. Bulganin that confirm that the Jews risked deportation in early 1953. It is therefore best to conclude that speculative talk about possible deportations circulated within elite party circles on the eve of Stalin’s death, precipitating rumors and hysteria within the society at large. That said, it would be incautious to conclude that formal plans for the Jews’ deportation were developed, ratified, or advanced to the planning stage without corroborating evidence from the former Soviet archives.

DOLGANS

The Dolgans (*Dolgani*) belong to the North Asiatic group of the Mongolian race. They are an Altaic people, along with the Buryats, Kalmyks, Balkars,

Chuvash, Evenks, Karachay, Kumyks, Nogay, and Yakuts. This Turkic-speaking people number today about 8,500 and live far above the Arctic Circle in the Taymyr (or Taimur) autonomous region (332,857 square miles, 862,100 square kilometers), which is one of the ten autonomous regions recognized in the Russian Constitution of 1993. This region is located on the Taymyr peninsula in north central Siberia, which is actually the northernmost projection of Siberia. Cape Chelyuskin at the tip of the peninsula constitutes the northernmost point of the entire Asian mainland. Located between the estuaries of the Yenisei and Khatanga rivers, the peninsula is covered mostly with tundra and gets drained by the Taymyra River. The Taymyr autonomous region also includes the islands between the Yenisei and Khatanga gulfs, the northern parts of the Central Siberian Plateau, and the Severnaya Zemlya archipelago. The capital is Dudinka. On the Taimyr Peninsula the Dolgans are the most numerous indigenous ethnic group. A few dozen Dolgans also live in Yakutia, on the lower reaches of the River Anabar.

Generally, the languages of the indigenous peoples of the Eurasian Arctic and subarctic can be grouped into four classes: Uralic, Manchu-Tungus, Turkic, and Paleo-Siberian. The Dolgan language is part of the northeastern branch of the Turkic language family and closely resembles Yakut. Although Dolgan is particularly active among the twenty-six languages of the so-called Peoples of the Far North in Russia, the small number of speakers (6,000 out of the total population of 8,500) of this rare aboriginal language in Siberia prompted UNESCO to classify Dolgan as a "potentially endangered" language. The demographical and ecological problems of the Taymyr region also work against the language. As for writing, the Dolgans lack their own alphabet and rely on the Russian Cyrillic.

The name Dolgan became known outside the tribe itself only as late as the nineteenth century. The word derives from *dolghan* or *dulghan*, meaning "people living on the middle reaches of the river." Some ethnologists believe the word comes from the term for wood (*toa*) or *toakihilär*, meaning people of the wood. Although originally a nomadic people preoccupied mostly by reindeer hunting and fishing, the advent of the Russians in the seventeenth century led to the near destruction of the Dolgans' traditional economy and way of life. The Taymyr, or Dolgan-Nenets National Territory, was proclaimed in 1930. The next year old

tribal councils were liquidated, the process of collectivization initiated. Taymyr's economy in the early twenty-first century depends on mining, fishing, and dairy and fur farming, as well as some reindeer breeding and trapping.

DOMOSTROI

Sixteenth-century domestic handbook.

The term *domostroi*, which literally means "domestic order," refers to a group of forty-three manuscript books produced in the sixteenth, seventeenth, and eighteenth centuries. Less than a dozen copies explicitly contain the title: "This book called *Domostroi* has in it much that Christian men and women, children, menservants, and maidservants will find useful." All, however, share a basic text that is clearly recognizable despite additions, deletions, and variations.

Where *Domostroi* came from, who wrote it—or, more probably, compiled it—and when, remain matters for debate. So does the process by which the text evolved. Traditionally, it has been linked to the north Russian merchant city of Novgorod and dated to the late fifteenth century, although significant alterations were made until the mid-sixteenth century. This view attributes one version to Sylvester, a priest of the Annunciation Cathedral in the Kremlin, who came from Novgorod and supposedly had a close relationship with Ivan IV the

Terrible (1533–1584). Sylvester has proven to be a shadowy figure, his authorship of *Domostroi* is unlikely, and his friendship with Ivan the Terrible has often been questioned. Nevertheless, the possibility that *Domostroi* could somehow explain the Terrible Tsar continues to fascinate.

More recent research suggests that *Domostroi* was compiled in Moscow, probably in the 1550s, a period when Russian society was undergoing reform and reestablishing its links to Europe. One manuscript refers to an original written in 1552. Two copies (representing different versions) have watermarks from the 1560s or 1570s; and information in Sylvester's letter to his son, usually found at the conclusion of the type of *Domostroi* associated with him, suggests a date for the letter of approximately 1560. One copy of the Sylvester type also includes a reference to Tsaritsa Anastasia, Ivan the Terrible's first wife, who died in 1560. Therefore the text was probably circulating in the capital by the late 1550s.

This early period produced four major variants: a Short Version (associated with Sylvester), a Long Version, and two intermediate stages. All cover the family's obligations from three angles: its duties toward God, relationships between family members, and the practical tasks involved in running a large household. "Family," in *Domostroi*, means not only a husband, a wife, and their children but also dependent members of the extended family and servants, most of whom would have been slaves in the sixteenth century. Although slaves often had their own homes and practiced a craft, they were still considered dependent members of the family that owned them.

Domostroi seems to address not the highest echelon of society—the royal family and the great boyar clans—but a group several steps lower, particularly rich merchants and people working in government offices. In the sixteenth century Russia underwent rapid change; its social system was relatively fluid, and these people had quite varied backgrounds. Whereas boyars could learn essential skills from their parents, groups lower in the social hierarchy required instruction to function successfully in an environment that was new to them. The prescriptions in *Domostroi* are best understood from this standpoint.

The chapters detailing a household's responsibilities before God were mostly copied from standard religious texts and are remarkable primarily

for their unusually practical approach. Men were to attend church several times each day, to supervise household prayers morning and evening, and to observe all religious holidays (which in pre-imperial Russia exceeded one hundred). The text also supplies instructions for taking communion and behavior in church ("do not shuffle your feet"). Women and servants attended services "when they [were] able," but they, too, were to pray every day.

Within the family, *Domostroi* defines sets of hierarchical relationships: husbands, parents, and masters dominate (supervise); wives, children, and servants obey. Disobedience led to scolding, then physical punishment. The master is counseled to protect the rights of the accused by investigating all claims personally and exercising restraint; even so, this emphasis on corporal punishment, the best-known admonition in *Domostroi*, gives modern readers a rather grim view of family life.

This impression is partly undercut by the third group of chapters, which offers rare insight into the daily life of an old Russian household. Exhaustive lists of foodstuffs and materials, utensils and clothing, alternate with glimpses of women, children, and servants that often contradict the stern prescriptions. Wives manage households of a hundred people and must be advised not to hide servants or guests from their husbands; children require extra meals, dowries, training, and other special treatment; servants steal the soap and the silverware, entertain village wise women, and run away, but also heal quarrels and solve problems. These are the stories that won *Domostroi* its reputation as a leading source of information on sixteenth-century Russian life.

CAROLYN JOHNSTON POUNCY

DONATION BOOKS

Donation books first appeared in Muscovite Russia in the middle of the sixteenth century. The "Hundred chapters church council" in 1551 in the presence of Tsar Ivan IV ("the Terrible") obliged monasteries to secure proper liturgical commemoration of donors. This instruction served as an impetus for the composition of numerous Donation books. As for donations from former times, the Donation books relied upon older documentation, particularly deeds and lists of donations in appendices to other books. In addition, many Donation books match names with lists for liturgical commemoration, and indicate the days on which a commemorative meal, a *korm*, was to be held. Since the Books frequently taxed the value of an object, they serve as sources about the development of prices. The order of entries differs: Usually the donations of the tsar are registered at the beginning of the book; other entries are arranged principally in chronological order. Some Donation books from the seventeenth century are strictly organized on the basis of donor families. Eventually monasteries kept different Donation books at the same time, depending on the value of the donations and the expected liturgical services in return. So far one donation book is known in which a clan registered its donations to churches and monasteries over some decades. Donation books from the seventeenth century indicate that donations for liturgical commemoration lost their importance for the elite, while the circle of donors from the lower strata was widening.

LUDWIG STEINDORFF

DONSKOY, DMITRY IVANOVICH

(1350–1389), prince of Moscow and grand prince of Vladimir.

Dmitry earned the name "Donskoy" for his victory over the armies of Emir Mamai at the Battle

of Kulikovo Field near the Don River (September 8, 1380). He is remembered as a heroic commander who dealt a decisive blow to Mongol lordship over the Rus lands and strengthened Moscow's position as the senior Rus principality, preparing the way for the centralized Muscovite tsardom. Unofficially revered since the late fifteenth century, Dmitry was canonized by the Orthodox Church in 1988 for his selfless defense of Moscow. Modern historians have re-examined the sources on the prince's reign to offer a more tempered assessment of his legacy.

Following the death of his father, Ivan II (1326–1359), the nine-year-old Dmitry inherited a portion of the Moscow principality but failed to keep the patent for the grand principality of Vladimir. In 1360 Khan Navruz of Sarai gave the Vladimir patent to Prince Dmitry Konstantinovich of Suzdal and Nizhni Novgorod. A year later, Navruz was overthrown in a coup, and the Golden Horde split into eastern and western sections ruled by rival Mongol lords. Murid, the Chingissid khan of Sarai to the east, recognized Dmitry Donskoy as grand prince of Vladimir in 1362. In 1363, however, Dmitry Donskoy accepted a second patent from Khan Abdullah, supported by the non-Chingissid lord Mamai who had taken control of the western Horde and claimed authority over all the Rus lands. Offended, Khan Murid withdrew Dmitry Donskoy's patent and awarded it to Dmitry Konstantinovich of Suzdal. Dmitry Donskoy's forces moved swiftly into Vladimir where they drove Dmitry Konstantinovich from his seat, then laid waste to the Suzdalian lands. During that campaign Dmitry Donskoy took Starodub, Galich, and possibly Belozero and Uglich. By 1364 he had forced Dmitry Konstantinovich to capitulate and sign a treaty recognizing Dmitry Donskoy's sovereignty over Vladimir. The pact was sealed in 1366 when Dmitry Donskoy married Dmitry Konstantinovich's daughter, Princess Yevdokia. To secure his seniority, Dmitry Donskoy sent Prince Konstantin Vasilevich of Rostov to Ustiug in the north and replaced him with his nephew Andrei Fyodorovich, a supporter of Moscow. In a precedent-setting grant, Dmitry Donskoy gave his cousin Prince Vladimir Andreyevich of Serpukhov independent sovereignty over Galich and Dmitrov. The grant is viewed as a significant development in the seniority system because it established the de facto right of the Moscow princes to retain hereditary lands, while disposing of conquered territory. In 1375, after a protracted conflict with Tver and Lithuania, Dmitry Donskoy forced Prince Mikhail of Tver to sign a treaty acknowledging himself as Dmitry's vassal.

With the defeat of Tver, Dmitry's seniority was recognized by most Russian appanage princes. Growing divisions within the Horde and internecine conflicts in Lithuania triggered by Olgerd's death in 1377 also worked to Moscow's advantage. Dmitry moved to extend his frontiers and increase revenues, imposing his customs agents in Bulgar, as Janet Martin has shown (1986). He also curtailed payment of promised tribute to his patron Mamai. Urgently in need of funds to stop his enemy Tokhtamysh, who had made himself khan of Sarai in that year, and wishing to avenge the defeat of his commander on the River Vozha, Mamai gathered a large army and issued an ultimatum to Dmitry Donskoy. Dmitry made an eleventh-hour effort to comply. But his envoys charged with conveying the funds were blocked by the advancing Tatar forces. On September 8, 1380, the combined armies of Mamai clashed with Dmitry Donskoy's army on Kulikovo field between the Don River and a tributary called the Nepryadva. The Tatars seemed about to prevail when a new force commanded by Prince Vladimir Andreyevich of Serpukhov surprised them. Mamai's armies fled the scene. As Alexander Presniakov and Vladimir Kuchkin point out, the gains made in this battle, though regarded as instrumental in breaking the Mongol hold on Moscow, were quickly reversed. Tokhtamysh, who seized the opportunity to defeat Mamai, reunified the Horde and reasserted his claims as lord of the Russian lands. In 1382 Tokhtamysh's army besieged Moscow and pillaged the city. Dmitry Donskoy, who had fled to Kostroma, agreed to pay a much higher tribute to Tokhtamysh for the Vladimir patent than he had originally paid Mamai.

Dmitry Donskoy skillfully used the church to serve his political and commercial interests. He sponsored a 1379 mission, headed by the monk Stephen, to Christianize Ustiug and establish a new bishop's see for Perm which, Martin documents, secured Moscow's control over areas central to the lucrative fur trade. Metropolitan Alexis (1353–1378) and Sergius (c. 1314–1392), hegumen (abbot) of the Trinity Monastery, supported his policies and acted as his envoys in critical situations. After Alexis's death, Dmitry moved to prevent Cyprian, who had been invested as metropolitan of Lithuania, from claiming authority over the Moscow see. Instead he supported Mikhail-Mityay, who died under mysterious circumstances before he could be invested by the patriarch. Dmitry's second choice, Pimen, was invested in 1380 and with a brief interruption (Cyprian was welcomed back by Dmitry after the Battle of Kulikovo until Tokhtamysh's

siege of 1382) served as metropolitan of Moscow until his death in 1389.

In May 1389 Dmitry Donskoy died. He stipulated in his will that his son Basil should be the sole inheritor of his patrimony, including the grand principality of Vladimir. As Presniakov (1970) notes, the khan, by accepting the proviso, acknowledged the grand principality as part of the Moscow prince's inheritance (*votchina*), even though, in the aftermath of the Battle of Kulikovo, Russia's subservience to the Horde had been effectively restored and the grand prince's power significantly weakened. In contrast to other descendants of the Moscow prince Daniel Alexandrovich, Dmitry Donskoy did not become a monk on his deathbed. Notwithstanding, grand-princely chroniclers eulogized him as a saint. The 1563 *Book of Degrees*, written in the Moscow metropolitan's scriptorium, portrays him and his wife Yevdokia as chaste ascetics with miraculous powers of intercession for their descendants and their land, thereby laying the ground for their canonizations.

GAIL LENHOFF

DOSTOYEVSKY, FYODOR MIKHAILOVICH

(1821–1881), preminent Russian prose writer and publicist.

Fyodor Dostoyevsky was born into the family of a former military physician, Mikhail Andreyevich Dostoyevsky (1789–1839), who practiced at the Moscow Mariinsky Hospital for the Poor. Dostoyevsky's father was ennobled in 1828 and acquired

moderate wealth; he and his wife, Mariya Fyodorovna (1800–1837), had three more sons and three daughters. As a youth, Dostoyevsky lost his mother to tuberculosis and his father to an incident that officially was declared a stroke but purportedly was a homicide carried out by his enraged serfs.

After spending several years at private boarding schools (1833–1837), Dostoyevsky studied Military Engineering in St. Petersburg (1838–1843) while secretly pursuing his love for literature. He worked for less than a year as an engineer in the armed forces and abandoned that position in 1844 in order to dedicate himself fully to translating fiction and writing. Dostoyevsky's literary debut, *Bednye liudi* (*Poor Folk*, 1845), was an immense success with the public; a sentimental novel in letters, it is imbued with mild social criticism and earned enthusiastic praise from Russia's most influential contemporary critic, Vissarion Belinsky. But subsequent short stories and novellas such as "Dvoinik" (*The Double*, 1846)—an openly Gogolesque story of split consciousness as well as an intriguing experiment in unreliable narration—disappointed many of Dostoyevsky's early admirers. This notwithstanding, Dostoyevsky continued to consciously resist attempts to label him politically or aesthetically. Time and time again, he ventured out from grim social reality into other dimensions—the psychologically abnormal and the fantastic—for which St. Petersburg's eerie artificiality proved a most intriguing milieu.

In April 1848, Dostoyevsky was arrested together with thirty-four other members of the underground socialist Petrashevsky Circle and interrogated for several months in the infamous Peter-Paul-Fortress. Charged with having read Belinsky's letter to Gogol at one of the circle's meetings, Dostoyevsky was sentenced to death. Yet, in a dramatic mock-execution, Nikolai I commuted the capital punishment to hard labor and exile in Siberia. A decade later, Dostoyevsky returned to St. Petersburg as a profoundly transformed man. Humbled and physically weakened, he had internalized the official triad of Tsar, People, and Orthodox Church in a most personal way, distancing himself from his early utopian beliefs while reconceptualizing his recent harsh experiences among diverse classes—criminals and political prisoners, officers and officials, peasants and merchants. Dostoyevsky's worldview was now dominated by values such as humility, self-restraint, and forgiveness, all to be applied in the present, while giving up his

faith in the creation of a harmonious empire in the future. The spirit of radical social protest that had brought him so dangerously close to Communist persuasions in the 1840s was from now on attributed to certain dubious characters in his fiction, albeit without ever being denounced completely.

Eager to participate in contemporary debates, Dostoyevsky, jointly with his brother Mikhail (1820–1864), published the conservative journals *Vremya* (*Time*, 1861–63) and *Epokha* (*The Epoch*, –65), both of which encountered financial and censorship quarrels. In his semi-fictional *Zapiski iz mertvogo doma* (*Notes from the House of the Dead*, 1862)—the most authentic and harrowing account of the life of Siberian convicts prior to Chekhov and Solzhenitsyn—Dostoyevsky depicts the tragedy of thousands of gifted but misguided human beings whose innate complexity he had come to respect. One of the major conclusions drawn from his years as a societal outcast was the notion that intellectuals need to overcome their condescension toward lower classes, particularly the Russian *muzhik* (peasant) whose daily work on native soil gave him wisdom beyond any formal education.

An even more aggressive assault on mainstream persuasions was "Zapiski iz podpol'ia" ("Notes from the Underground," 1864); written as a quasi-confession of an embittered, pathologically self-conscious outsider, this anti-liberal diatribe was intended as a provocation, to unsettle the bourgeois consciousness with its uncompromising anarchism and subversive wit. "Notes from the Underground" became the prelude to Dostoyevsky's mature phase. The text's lasting ability to disturb the reader stems from its bold defense of human irrationality, viewed as a guarantee of inner freedom that will resist any prison in the name of reason, no matter how attractive (i.e., social engineering, here symbolized by the "Crystal Palace" that Dostoyevsky had seen at the London World Exhibition).

The year 1866 saw the completion, in a feverish rush, of two masterpieces that mark Dostoyevsky's final arrival at a form of literary expression congenial to his intentions. *Prestuplenie i nakazanie* (*Crime and Punishment*) analyzes the transgression of traditional Christian morality by a student who considers himself superior to his corrupt and greedy environment. The question of justifiable murder was directly related to Russia's rising revolutionary movement, namely the permissibility of crimes for a good cause. On a somewhat lighter note, *Igrok*

(*The Gambler*) depicts the dramatic incompatibility of Russian and Western European mentalities against the background of a German gambling resort. Pressured by a treacherous publisher, Dostoyevsky was forced to dictate this novel within twenty-six days to stenographer Anna Grigor'evna Snitkina (1846–1918), who shortly thereafter became his wife.

Endlessly haunted by creditors and needy family members, the Dostoyevskys escaped abroad, spending years in Switzerland, Germany, and Italy. They often lived near casinos where the writer unsuccessfully tried to resolve his financial ills. Against all odds, during this period Dostoyevsky created some of his most accomplished works, particularly the novel *Idiot* (1868), the declared goal of which was to portray a “perfectly beautiful human being.” The title character, an impoverished prince, clashes with the rapidly modernizing, cynical St. Petersburg society. In the end, although conceptualized as a Christ-like figure, he causes not salvation but murder and tragedy.

Dostoyevsky's following novel, *Besy* (*The Devils*, 1872), was interpreted as “anti-nihilist.” Openly polemical, it outraged the leftist intelligentsia who saw itself caricatured as superficial, naïve, and unintentionally destructive. Clearly referring to the infamous case of Sergei Nechaev, an anarchist whose revolutionary cell killed one of its dissenting members, *The Devils* presents an astute analysis of the causality underlying terrorism, and societal disintegration. Yet it is also a sobering diagnosis of the inability of Russia's corrupt establishment to protect itself from ruthless political activism and demagoguery.

While *The Devils* quickly became favorite reading of conservatives, *Podrostok* (*A Raw Youth*, 1875) appealed more to liberal sensitivities, thus reestablishing, to a certain extent, a balance in Dostoyevsky's political reputation. Artistically uneven, this novel is an attempt to capture the searching of Russia's young generation “who knows so much and believes in nothing” and as a consequence finds itself in a state of hopeless alienation.

In the mid-1870s, Dostoyevsky published the monthly journal *Dnevnik pisatel'ia* (*Diary of a Writer*) of which he was the sole author. With its thousands of subscribers, this unusual blend of social and political commentary enriched by occasional works of fiction contributed to the relative financial security enjoyed by the author and his family in the last decade of his life. Its last issue contained

Fyodor Dostoevsky by Vasily Perov, 1872. © ARCHIVO ICONOGRAFICO, S.A./CORBIS

the text of a speech that Dostoyevsky made at the dedication of a Pushkin monument in Moscow in 1880. Pushkin is described as the unique genius of universal empathy, of the ability to understand mankind in all its manifestations—a feature that Dostoyevsky found to be characteristic of Russians more than of any other people.

Brat'ia Karamazovy (*The Brothers Karamazov*, 1878–1880) became Dostoyevsky's literary testament and indeed can be read as a peculiar synthesis of his artistic and philosophical strivings. The novel's focus on patricide is rooted in the fundamental role of the father in the Russian tradition, with God as the heavenly father, the tsar as father to his people, the priest as father to the faithful, and the *paterfamilias* as representative of the universal law within the family unit. It is this underlying notion of the universal significance of fatherhood that connects the criminal plot to the philosophical message. Thus, the murder of father Fyodor Karamazov, considered by all three brothers and carried out by the fourth, the illegitimate son, becomes tantamount to a challenge the world order *per se*.

Dostoyevsky's significance for Russian and world culture derives from a number of factors,

among them the depth of his psychological perceptiveness, his complex grasp of human nature, and his ability to foresee long-term consequences of human action—an ability that sometimes bordered on the prophetic. Together with his rhetorical and dramatic gifts, these factors outweigh less presentable features in the author's persona such as national and religious prejudice. Moreover, Dostoyevsky's willingness to admit into his universe utterly antagonistic forces—from unabashed sinners whose unspeakable acts of blasphemy challenge the very foundations of faith, to characters of angelic purity—has led to his worldwide perception as an eminently Christian author. But it also caused distrust in certain quarters of the Orthodox Church; as a matter of fact, his confidence in a gospel of all-forgiveness was criticized as “rosy Christianity” (K. Leont'ev), a religious aberration neglecting the strictness of divine law. From a programmatic point of view, Dostoyevsky preached a Christianity of the heart, as opposed to one of pragmatism and rational calculation.

Dostoyevsky's impact on modern intellectual movements is enormous: Freud's psychoanalysis found valuable evidence in his depictions of the mysterious subconscious, whereas Camus' existentialism took from the Russian author an understanding of man's inability to cope with freedom and his possible preference for a state of non-responsibility.

Dostoyevsky was arguably the first writer to position a philosophical idea at the very heart of a fictional text. The reason that Dostoyevsky's major works have maintained their disquieting energy lies mainly in their structural openness toward a variety of interpretative patterns, all of which can present textual evidence for their particular reading.

PETER ROLLBERG

DUDAYEV, DZHOKHAR

(1944–1996), leader of Chechen national movement, first president of Chechnya.

One of ten children in a Chechen family deported to Kazakhstan in 1944 and allowed to return home in 1957, Dzhokhar Dudayev graduated from the Air Force Academy, entered the CPSU in 1966, and eventually became major general of the air force, the only Chechen to climb that high within the Soviet military hierarchy. Reportedly, he won awards for his part in air raids during the Soviet war in Afghanistan. In November 1990, Dudayev, an outsider to the Chechen national movement, was unexpectedly elected by its main organization, the Chechen National Congress, as its leader and commander of the National Guard. Having called for local resistance to the August 1991 coup in Moscow, Dudayev seized the opportunity to overthrow the CPSU establishment of the Checheno-Ingush Autonomous Republic by storming the Supreme Soviet in Grozny, forcing the resignation of key officials, and winning the presidency in a chaotic and irregular vote. On November 1, he decreed the independence of the Chechen Republic, soon ratified by the newly elected Chechen parliament (Ingushetia separated itself from Chechnya via referendum to remain within Russia). Political divisions in Moscow and latent support from sections of its elite helped to thwart a military invasion, while Dudayev bought or obtained most of Moscow's munitions in Chechnya from the federal military. The peaceful half of his rule (1991–1994) was plagued by general post-Soviet anarchy and the looting of assets, collusion between federal and local criminals and officials, and lack of economic brainpower, exacerbated by the outflow of Russ-

General Dzhokhar Dudayev and armed supporters in Chechnya. © Tchetchenie/CORBIS SYGMA

ian-speaking industrial cadres as a result of his ethnocentric policies. In mid-1993, Dudayev disbanded the opposition-minded Constitutional Court and dispersed the parliament (an example that he then advised Yeltsin to follow). From then on, he was faced with armed rebels, aided by Moscow hardliners. Initially a secular ruler, by late 1994 he shifted to Islamist rhetoric. In December 1994, after failed negotiations and a botched attempt by pro-Moscow rebels to dislodge him, Chechnya was invaded by federal troops. Dudayev had to flee Grozny and thereafter led the armed resistance in the mountains, up until his death in a rocket attack by federal forces in April 1996.

DMITRI GLINSKI

DUGIN, ALEXANDER GELEVICH

(b. 1962), head of the Russian sociopolitical movement Eurasia; editor of the journal *Elementy*; and a leading proponent of geopolitics and Eurasianism with a strong Anti-Western, anti-Atlantic bias.

In the late 1970s Dugin entered the Moscow Aviation Institute but was expelled during his second year for what he described as “intensive activities.” He joined the circles associated with a Russian nationalist movement of the 1980s and at the end of the 1980s was a member of the Central Council of the national-patriotic front “Pamyat” (Memory), then led by Dmitry Vasiliev. With the end of

the Soviet Union, Dugin emerged as the chief ideologue of the writer Edvard Limonov's National-Bolshevik Party, a fringe movement that cultivated political ties with alienated youths. Dugin also became a major figure in the "Red-Brown" opposition to the Yeltsin administration. He joined the editorial board of Alexander Prokhanov's *Den* (Day) and then *Zavtra* (Tomorrow) after 1993. Dugin's writings combine mystical, conspiratorial, geopolitical, and Eurasian themes and draw heavily on the notion of a conservative revolution. This ideology emphasizes the Eurasian roots of Russian messianism and its fundamental antagonism with Westernism and globalism, and outlines the way in which Russia can go about creating an alternative to the Western "New World Order." This alternative is totalitarian in its essentials. Drawing heavily upon German geopolitical theory and Lev Gumilev's Eurasianism, Dugin outlined his own position in *Foundations of Geopolitics: The Geopolitical Future of Russia* (1997). In 1999 Dugin campaigned actively for the victory of a presidential candidate who would embrace his ideas of an anti-Western Eurasianism and supported Vladimir Putin as the "ideal ruler for the present period." Working closely with Gleb Pavlovsky, the Kremlin's spin doctor, Dugin actively developed an Internet empire of connections to disseminate his message. In the wake of Putin's alliance with the United States in the war against terrorism, Dugin has called into question the president's commitment to Eurasianism and rejoined the opposition. Dugin has been particularly adept at exploiting the Internet to spread his message through a wide range of media.

JACOB W. KIPP

DUMA

Known officially as the State Duma, this institution was the lower house of the Russian parliamentary system from 1906 to 1917. In Kievan and Muscovite times, rulers convened a "boyars' duma"

of the highest nobles to provide counsel on major policy issues. During the 1600s this institution fell into disuse, but late-nineteenth-century liberals lobbied for establishment of a representative body to help govern Russia. After the Revolution of 1905, Tsar Nicholas II agreed to form an advisory council, the Bulygin Duma of August 1905. However, revolutionary violence increased in the next two months, and in his October 1905 Manifesto the tsar reluctantly gave into the urgings of Sergei Witte to grant an elected representative Duma with full legislative powers.

This promise, plus other proffered reforms, helped split the broad revolutionary movement, winning over a number of moderates and liberals. With violence waning, the tsar weakened the authority of the proposed Duma by linking it with a half-appointed upper house, the State Council; by excluding foreign and military affairs and parts of the state budget from its purview; and by weighting election procedures to favor propertied groups. Moreover, at heart Nicholas never accepted even this watered-down version of the Duma as legitimate, believing it an unwarranted infringement on his divine right to rule. On the other hand many reformers saw the Duma as the first step toward a modern, democratic government and hoped to expand its authority.

FIRST AND SECOND DUMAS, 1906–1907

Based on universal male suffrage over age twenty-five, elections for the First Duma were on the whole peaceful and orderly, although the indirect system favored nobles and peasants over other groups. The revolutionary Social Democrats and Socialist Revolutionaries boycotted the elections, while the liberal Constitutional Democrats (Cadets) conducted the most effective campaign. The latter won a plurality of members, and peasant deputies, though usually unaffiliated with any party, proved anti-government and reformist in their views. Perhaps too rashly, the Cadet deputies pursued a confrontational policy toward the government, demanding radical land reform, extension of the Duma's budgetary authority, and a ministry responsible to the Duma. After three months of bitter stalemate, Nicholas dissolved the Duma.

Elections to the Second Duma in the fall of 1906 worsened the political impasse. Although the Cadets lost ground, radical parties participated and elected several deputies, and the peasants again re-

Nicholas II opens the Duma in St. Petersburg. © HULTON-DEUTSCH COLLECTION/CORBIS

turned oppositionist representatives. Openly hostile to the government, the Second Duma, like the first, proved unable to find a compromise program and was also dissolved after several months.

THIRD AND FOURTH DUMAS, 1907–1917

Under the Fundamental Laws adopted in 1906 as a semi-constitutional structure for Russia, the tsar could dissolve the Duma and enact emergency legislation in its absence. Using this authority, Prime Minister Pyotr Stolypin decreed a new electoral system for the Duma on June 3, 1907. He retained indirect voting but increased the weighting in favor of the nobility from 34 to 51 percent and decreased that of the peasantry from 43 to 22 percent. The new law also reduced the number of non-Russian deputies in the Duma by about two-thirds. Stolypin achieved his goal of a more conservative

assembly, for the 1907 elections to the Third Duma returned 293 conservative deputies, 78 Cadets and other liberals, 34 leftists, and 16 nonparty deputies, giving the government a comfortable working majority. The Octobrists, a group committed to making the October Manifesto work, emerged as the largest single bloc, with 148 deputies. Consequently, the Third Duma lasted out its full term of five years, from 1907 to 1912.

Until his assassination in 1911, Stolypin succeeded for the most part in cooperating with the Third Duma. The deputies supported an existing agrarian reform program first drawn up by Witte and instituted in 1906 by Stolypin that called for dissolution of the peasant commune and establishment of privately owned peasant plots, a complicated procedure that was only partially completed when World War I interrupted it. The government and the Duma joined hands in planning an expansion

of primary education designed to eradicate illiteracy and to have all children complete at least four years of education. Although the State Council blocked this legislation, the Ministry of Education began on its own to implement it. Stolypin, a staunch nationalist, also initiated legislative changes limiting the authority of the autonomous Finnish parliament and establishing zemstvos in western Russia designed to subordinate Polish influence there. Finally, without much success the Third Duma propounded military reform, particularly the improvement of naval administration. By 1912 the Octobrist Party had split, government ministers were at odds, and rightist and nationalist influences dominated at court. Moreover, unrest was growing among the urban population.

Elections to the Fourth Duma in late 1912 returned a slightly more conservative body, but it had hardly begun work when World War I erupted in August 1914. An initial honeymoon between the Duma and the government soon soured as military defeats, administrative chaos, and ministerial incompetence dismayed and irked the deputies. By 1915 a Progressive Bloc, formed under liberal leadership, urged reforms and formation of a ministry of public confidence, but it had little impact on the government or the tsar. Shortly after the February 1917 Revolution broke out, Nicholas dissolved the Duma, but its members reconstituted themselves privately and soon formed a Temporary Committee to help restore order in Petrograd. After the tsar's abdication, this committee appointed the Provisional Government that, though sharing some aspects of power with the Petrograd Soviet, ran the country until the outbreak of the Bolshevik Revolution in the fall of 1917.

The Duma system opened the door to representative government and demonstrated the political potential of an elected parliament. This experience helped legitimize the post-1991 effort to establish democracy in Russia. Yet the four Dumas' record was spotty at best. Useful legislation was discussed and sometimes passed, but divisions among the moderates, the inexperience of many politicians, the reactionary influences of the State Council along with some ministers and the tsar's entourage, and the visceral refusal of Nicholas II to accept an independent legislature made it almost impossible for the Duma to be the engine of reform in old-regime Russia.

JOHN M. THOMPSON

DUNAYEVSKY, ISAAK OSIPOVICH

(1900–1955), composer.

The Soviet composer Isaak Dunayevsky has been compared to Irving Berlin and the other great songsters of the 1930s and 1940s in America. Like Berlin, he was a Russian-born Jewish composer whose musical fertility gained him fame and wealth in the realm of popular songs and musical comedy for film and stage. Unlike the American, he spent his most productive years under the shadow of the Great Dictator, Josef Stalin. This meant walking a tightrope from which a slight breeze could topple him. That tightrope was Soviet mass song, a genre embedded within a larger cultural system known as Socialist Realism, the officially established code of creativity fashioned in the early 1930s. Mass song required both political message and broad popular appeal, a combination usually possible only in moments of urgent national solidarity, as in wartime. Irving Berlin united these elements successfully in the two world wars, and in between settled for the unpolitical forms of love ballads and novelty tunes. Dunayevsky had to sustain the combination before, after, and during World War II.

Dunayevsky, born near Kharkov in Ukraine, began as a student of classical music. After the Russian Revolution, he played with avant-garde forms but eventually settled into composing popular music. His first big hit was the score for *Makhno's Escapades* (1927), a circus scenario that mocked the civil war anarchist leader of a Ukrainian partisan band opposed to the Bolsheviks. Dunayevsky went on to compose some twenty film scores, a dozen operettas, and music for two bal-

lets and about thirty dramas. His lasting legacy is the music from the enormously popular musical films of the 1930s: *Happy-Go-Lucky Guys*, *Circus*, *Volga, Volga*, and *Radiant Road*, all featuring the singing star of the era, Lyubov Orlova, and directed by her husband, Grigory Alexandrov. A fountain of melody, Dunayevsky wove elements of folk song, Viennese operetta styles, and jazz into optimistic declamatory tunes that captivated Soviet listeners for decades. The lyrics of the most famous of these, "Vast Is My Native Land" (1936), from the film *Circus*, celebrated the official image of Russia as a great nation, filled with free and happy citizens. The Dunayevsky mode was overshadowed somewhat during World War II, when more somber and intimate songs prevailed. His postwar hit, the music for *Kuban Cossacks* (1950), enhanced the propaganda value of that film, which idealized the affluence of Cossacks and peasants on the collective farms of the Kuban region. Dunayevsky died in 1955.

RICHARD STITES

DUNGAN

The Dungans (*Dungani*) are descendants of the Hui people who traveled to the northwestern provinces of China, namely the Kansu and Shensi provinces from the seventeenth to thirteenth centuries. Originally scholars, merchants, soldiers, and handicraftsmen, they gradually intermarried with the Han Chinese. Although they learned the Chinese language, they also retained their knowledge of the Arabic language and Muslim faith. From 1862 to 1878 the Hui people rebelled, and the Chinese emperor ruthlessly suppressed them. Three groups of Hui rebels fled across the Tien Shan mountains into Kyrgyzstan and Kazakhstan. Those who lived in

the Kansu province settled in Kyrgyzstan and today number approximately 30,000. Rebels from the Shensi province generally settled in Kazakhstan, where they number roughly 37,000. The third group fled to the Russian Empire later in 1881.

After their exodus, the rebels (named Dolgans by the Russians) cut off all contact with China, but nevertheless continued to refer to themselves as Chinese Muslims (*Hui-Zu*). They settled mainly along the Chu River on the banks of which the Kyrgyz capital of Bishkek (named Frunze in the Soviet period) is situated. This river also forms part of the border between Kazakhstan and Kyrgyzstan.

The Dungan language is Mandarin Chinese, but with heavy influence of Persian (Farsi), Arabic, and Turkish. In addition to Dungan, many speak Kyrgyz, and the younger ones also speak Russian. Dungan is written not in Chinese characters but Cyrillic script, and has three tones rather than four.

Generally, the Dungans in Kyrgyzstan are less devoted as Muslims than their kin in Kazakhstan. All Dungans subscribe to the Hanafite Muslim school of thought, established by the theologian Imam Abu Hanifa (699–767), who has shaped the Central Asian form of Islam. While elderly Dungans strictly observe Islamic law, their younger offspring usually ignore Islam until they reach their forties. Elders run village mosques, and the clergymen are supported by property taxes and the worshipers' donations. At present, although the Bible has been translated into Dungan, no Dungans are Christians. Living mostly in the river valleys, the Dungans are primarily farmers and cattle breeders, although some grow opium.

MARY ZIRIN

DUROVA, NADEZHDA ANDREYEVNA

(1783–1855), cavalry officer and writer.

Nadezhda Durova ("Alexander Alexandrov," "Cavalry Maiden") served in the tsarist cavalry throughout Russia's campaigns against Napoleon. Equally remarkably, in the late 1830s she published memoirs of those years (*The Cavalry Maiden* [*Kavalerist-devitsa*], 1836; *Notes* [*Zapiski*], 1839) and fiction in the Gothic/Romantic vein drawn from her military experience, much of it narrated by a female officer. At first she masqueraded as a boy, but in December 1807 Alexander II learned of the woman soldier in his army and, impressed by accounts of her courage in the East Prussian campaign, gave her a commission in the Mariupol Hussars under his name, Alexandrov. In 1811 Durova transferred to the Lithuanian Uhlans. During the Russian retreat to Moscow in 1812 she served in the rear guard, engaging in repeated clashes with the French. Bored with peacetime service and annoyed at not receiving promotion, Durova resigned her commission in 1816. She became briefly famous after *The Cavalry Maiden* was published, an experience she described laconically in "A Year of Life in St. Petersburg" (*God zhizni v Peterburge*, 1838), before retreating to provincial obscurity in Yelabuga, where she was known as an amiable eccentric woman with semi-masculine mannerisms and dress. Durova's memoirs omit inconvenient facts (an early marriage; the birth of her son), but she was a gifted storyteller, and her tales are rich in astute, humorous observations of military life as an outsider saw it. Her biography, heavily romanticized, became a propaganda tool during World War II, but *The Cavalry Maiden* was reprinted in full in the Soviet Union only in the 1980s.

DVOEVERIE

"Dvoeverie"—"double-belief" or "dual faith"—is a highly influential concept in Russian studies, which began to be questioned in the 1990s. Since the 1860s, historians have used it to describe the conscious or unconscious preservation of pagan beliefs and/or rituals by Christian communities (generally as a syncretic faith containing Christian and pagan elements; a form of peasant/female resistance to elite/patriarchal Christianity; or two independent belief-systems held concurrently). This concept has colored academic perception of Russian medieval (and often modern) spirituality, leading to a preoccupation with identifying latent paganism in Russian culture. It has often been considered a specifically Russian phenomenon, with the medieval origins of the term cited as evidence.

This definition of *dvoeverie* is supported in part by one text, the eleventh-century *Sermon of the Christlover*, but its notable absence in other anti-pagan polemics (including those regularly cited as evidence of double-belief), plus many uses of the word in different contexts, lead one to conclude that the term was not originally understood in this way. *Dvoeverie* probably originated as a calque from Greek, via the translated Nomocanon. While at least six Greek constructions are translated as *dvoeverie* or a lexical derivative thereof, the common thread is that of being "in two minds"; being unable to decide or agree, or being unable to perceive the true nature of something. In the majority of these cases, there is no question of there being two faiths in which the practitioner believes simultaneously or even alternately, and sometimes no question of religious faith at all.

In other pre-Petrine texts, *dvoeverie* means "duplicious" or "hypocritical," or relates to an inability or unwillingness to identify solely with the one true and Orthodox faith. Lutherans and those fraternizing with Roman Catholics, rather than semi-converted heathens, were the target of this pejorative epithet.

STELLA ROCK

DVORIANSTVO

The term *dvorianstvo* is sometimes translated as "gentry," but often historically such a translation is simply incorrect. At other times, such as between the years 1667 and 1700, and again after 1762 (or 1785) until 1917, "gentry" is misleading but not totally wrong.

The term has its origins in the later Middle Ages in the word *dvor*, "princely court." In that historical context, the *dvorianstvo* were those who worked at the court of a prince. Originally such people might be free men, or they might be slaves of the prince or someone else. Moreover, these men, most of whom were cavalymen and a few of whom were administrators, were wholly dependent on the grand prince for their positions, status, and livelihoods. They did not have lands, but lived off booty, funds collected in the line of governmental duty, and funds collected by others for the sovereign's treasury. Their social origins were most diverse. A handful were princes (descendants of one of the princely houses circulating in Rus': the Rus' Riurikids, the Lithuanian Gedemids, or Turkic/Mongol nobility), some were slaves, others were of diverse origins. A prince or nobleman had no right to be a member of the *dvorianstvo*, for such men got their positions because they were selected by the grand prince and served at his pleasure. Promotion within the *dvorianstvo* was meritocratic, however service might be defined. Membership in the *dvorianstvo* conferred no special status, and in law such men could be punished like everyone else, including flogging.

The origins of the early *dvorianstvo* are obscure, but around 1480, the Moscow government began to formalize the situation when it initiated the first service class revolution after the annexation of Novgorod. Moscow initiated the service land system (*pomestie*) on the lands annexed from Novgorod, and then gradually extended it to the entire

Muscovite state. By 1556 most of the inhabited land (which did not belong to the church) in central Muscovy was included in the fund that had to support cavalymen. The cavalymen based in Moscow were the upper service class; those in the provinces were the middle service class. (Members of the lower service class did not have lands for their support and lived off government cash salaries, and their own extra-military employment; they were arquebusiers—later in the seventeenth century musketeers, fortress gatekeepers, artillerymen, some cossacks, and others.) Members of both the upper and middle service classes comprised the *dvorianstvo* and were the core of the army. They had to render military service almost every year, typically on the southern frontier against the Tatars, Nogais, Kalmyks, Kazakhs, and others who raided Muscovy in search of slaves and other booty. The *dvorianstvo* had to render military service on the western frontier whenever called against the Poles, Lithuanians, and Swedes, where the prizes for the victors were landed territory and booty (including slaves) of every sort.

Between 1480 and 1667 the life of the *dvorianstvo* was very hard. Military service was basically for life, from about age fifteen until immobility compelled retirement from service. Those who could no longer serve as cavalymen still could be called upon to render "siege service," which meant standing up in castles and shooting arrows out at besieging enemies. In the seventeenth century gunpowder arms replaced the arrows. Only when the member of the *dvorianstvo* was dead or could only be carried around in a litter was he allowed to retire from service. Members of the provincial *dvorianstvo* had the ranks of provincial *dvorianin* and *syn boyarsky* and were supported primarily by a handful of peasant households (government cash stipends were meant to purchase military goods in the market, such as cavalry horses, sabers, and guns in the seventeenth century and later). In the provinces they lived little better than most of their peasants and until the post-1649 period were as illiterate as their peasants also. The capital *dvorianstvo*, living in Moscow, had the ranks of *boyarin*, *okol'nichii*, *stol'nik*, *striapchii*, and *Moscow dvorianin*, lived the same rigorous lives as did their country cousins, although with higher incomes. Both rose in the *dvorianstvo* on the basis of perceived meritocratic service by petitioning for promotion. Because of their precarious economic positions, the provincial *dvorianstvo* were highly conscious of how many rent-paying peasants they had. Should their peasants depart, they were in

straits. They were the ones who forced the enserfment of the peasantry between the 1580s and 1649.

The *Ulozhenie* of 1649, which completed the enserfment by binding the peasants to the land, was a triumph for the provincial dvorianstvo, and a defeat for the capital dvorianstvo, who profited from peasant mobility. The Thirteen Years' War (1654–1667) delivered the coup de grace to the middle service class provincial dvorianstvo by illustrating definitively the obsolescence of bow-and-arrow warfare. Moreover, much of the dvorianstvo fell into Turkish captivity, where many of them remained for a quarter century. From then until 1700, the dvorianstvo occasionally fought the Turks, but otherwise did little to merit their near-monopoly over serf labor. Reflecting the fact that Russia was a very poor country with a very unproductive agriculture, the dvorianstvo comprised less than 1 percent of the population, a much smaller fraction than in other countries. After the annexation of Poland, the dvorianstvo of the Russian Empire rose by 1795 to 2.2 percent of the population.

At the battle of Narva in 1700 Charles XII defeated Peter the Great, who responded by launching the second service class revolution. This meant putting the dvorianstvo back in harness. In 1722 he introduced the Table of Ranks, which formalized the Muscovite system of promotion based on merit. Rigorous lifetime military or governmental service was compulsory until 1736, when the service requirement for the dvorianstvo was reduced to twenty-five years. In 1740 they could choose between military or civil service. Then in 1762 Peter III freed the dvorianstvo from all service requirements. His wife Catherine II in 1785 promulgated the Charter of the Nobility, whose infamous Article 10 freed the dvorianstvo from corporal punishment and thus made them a privileged caste. The measures of 1762 and 1785 created the conditions for the Russian dvorianstvo to begin to look like gentry living elsewhere in Europe west of Russia.

The years 1762 to 1861 were the "Golden Age" of the dvorianstvo. Its members were the potentially leisured, privileged members of society. Many differed little from peasants; a few were extraordinarily rich. They were the bearers and creators of culture. The Achilles heel of the dvorianstvo was its penchant for debt to finance excessive consumption, including imported goods that were equated with modernization and Westernization. The emancipation of the peasantry in 1861 initiated the decline of the dvorianstvo, whose members lost their slave-owner-like control over their

peasants. The dvorianstvo was compensated (excessively) for the land granted to the peasants, but debts were deducted from the compensation. Other reforms gradually cost the dvorianstvo their control over the countryside. Their inability to manage their funds and estates and in general to cope with a modernizing world is metonymically portrayed in Anton. P. Chekhov's play *The Cherry Orchard*, which came to be the name of the era for the dvorianstvo. By the Revolution of 1917 the dvorianstvo lost control over their initial bastion, the army, and nearly all other sectors of life as well. In the summer of 1917 the peasantry seized much of the dvorianstvo land, which was all confiscated when the Bolsheviks took power. Some members of the dvorianstvo joined the Whites and died in opposition to the Bolsheviks, while others emigrated. Those who remained in the USSR were deprived of their civil rights until 1936.

RICHARD HELLIE

DYACHENKO, TATIANA BORISOVNA

(b. 1960), adviser to her father, President Boris Yeltsin.

Tatiana Dyachenko became an adviser to her father, President Boris Yeltsin, in the last few years of his rule. Trained as a mathematician and computer scientist, she worked in a design bureau of the space industry until 1994. She then worked for the bank *Zarya Urala* (Ural Dawn).

In the early 1990s her father's ghostwriter Valentin Yumashev introduced her to the Mafia-connected businessman Boris Berezovsky. The latter courted her with attention and lavish presents, and handed her father three million dollars that he claimed were royalties on Yeltsin's second volume

of memoirs. This episode launched the rise of the businessmen oligarchs who became highly influential in Yeltsin's administration.

In February 1996, with a popular approval rating in single digits as he began his ultimately successful run for reelection, Yeltsin appointed Dyachenko to his campaign staff. Here she worked closely with key oligarchs and the campaign director Anatoly Chubais. That summer, she facilitated her father's ouster of his hitherto most trusted aide, Alexander Korzhakov, and then the ascent of Chubais to head the Presidential Administration.

In June 1997 Yeltsin formally appointed her one of his advisers, responsible for public relations. In 1998 she was named a director of Russia's leading TV channel, Public Russian Television (ORT), controlled by Berezovsky.

In 1999, as Yeltsin's power ebbed, Dyachenko's lifestyle fell under scrutiny with the unfolding of various top-level scandals. For example, the Swiss firm Mabetex was revealed to have paid major kickbacks to Kremlin figures, with Dyachenko and other Yeltsin relatives allegedly having spent large sums by credit card free of charge.

After her father's resignation in December 1999, Dyachenko continued to be an influential coordinator of her father's political and business clan and an unpaid adviser to the head of Vladimir Putin's Presidential Administration Alexander Voloshin.

Dyachenko has three children, one by each of her three husbands.

PETER REDDAWAY

DYAK

State secretary, professional administrator.

The *dyak* (state secretary) spearheaded Muscovy's bureaucratic transformation from the late 1400s into the Petrine era. Moscow professional ad-

ministrators, seventeenth-century dyaks guaranteed daily chancellery operation, served in the governing tribunals, and supervised the clerks. Dyaks authorized document compilation, verified and signed documents after clerks drafted them, and sometimes wrote up documents.

Technical expertise was the dyak's *sine qua non*. Talent and experience governed promotion and retention of dyaks. Of appanage slave origin, the dyaks were docile, functionally literate, efficient paperwork organizers, and artificers of chancellery document style and formulae. Less than eight hundred dyaks served in seventeenth-century chancelleries, annually between 1646 and 1686; forty-six (or 6%) of all dyaks achieved Boyar Duma rank. The decrees of 1640 and 1658 formally converted dyaks and clerks into an administrative caste by guaranteeing that only their scions could become professional administrators. Dyaks' sons began as clerks, but father-son dyak lineages were uncommon, as few clerks ever became dyaks.

Almost half of the chancellery dyaks (some Moscow dyaks received no administrative postings) worked in one chancellery. Dyaks worked on average 3.5 years per state chancellery, their average earnings decreasing from one hundred rubles in the 1620s to less than ninety rubles in the 1680s. They could also receive land allotments as pay. In contrast, counselor state secretaries could earn two hundred rubles in the 1620s, and their salaries nearly doubled in the 1680s.

Seventeenth-century dyaks' social position declined, although their technical skills did not. Dyaks served also in provincial administrative offices, and numbered between 33 to 45 percent of their chancellery brethren. Few ever entered capital service.

PETER B. BROWN

DZERZHINSKY, FELIX EDMUNDOVICH

(1877–1926), Polish revolutionary; first head of the Soviet political police.

Felix Dzerzhinsky descended from a Polish noble family of long standing, with known paternal roots in seventeenth-century historic Lithuania. His father Edmund taught physics and mathematics at the male gymnasium in Taganrog before retiring to the family estate located in present-day Belarus. His mother, Helena Januszewska, came from a well-connected aristocratic family. After Edmund's death in 1882, she raised Felix in a devout Roman Catholic and Polish patriotic environment. A sheltered child, Dzerzhinsky was earmarked by his mother for the priesthood, but his participation in a series of progressively radical student circles in Vilnius led to his expulsion from the gymnasium two months before graduation in 1896. His subsequent in-

“Iron Felix” Dzerzhinsky, the feared chief of the Bolshevik political police. © BETTMANN/CORBIS

volvement with the fledgling Lithuanian Social Democratic Party ended with his arrest in Kaunas in 1897, the first of six arrests in his revolutionary career.

Dzerzhinsky was exiled to and escaped from Siberia on three different occasions. Following his first escape in 1899, he resurfaced in Warsaw, where he founded the Social Democracy of the Kingdom of Poland and Lithuania (SDKPiL) by merging remnants of previously existing social democratic organizations in Warsaw and Vilnius. Over the next dozen years, despite long periods of confinement, Dzerzhinsky constructed the apparatus of a conspiratorial organization that guided the SDKPiL through and beyond the revolutionary turmoil of 1905–1907. An ideological disciple of Rosa Luxemburg, Dzerzhinsky was a permanent fixture on the party's executive committee and played a principal role in defining the SDKPiL's relations with the Menshevik and Bolshevik factions of the Russian Social Democratic Workers' Party (RSDRP). Following the SDKPiL's formal unification with the Russian party in 1906, Dzerzhinsky represented the former on the RSDRP Central Committee and editorial board.

Dzerzhinsky's final arrest in Warsaw in 1912 resulted in successive sentences to hard labor. He was released from the Moscow Butyrki prison by the March 1917 revolution. Dzerzhinsky was soon caught up in the Russian revolutionary whirlwind, first in Moscow, then in Petrograd, at which time he entered the Bolshevik Central Committee. Dzerzhinsky played a key role in the Military Revolutionary Committee that carried out the October 1917 *coup d'état*, and he assumed responsibility for security of the Bolshevik headquarters at the Smolny Institute. From there it was a logical step for Dzerzhinsky to head an extraordinary commission, the Cheka, to act as the shield and sword of the Bolshevik regime against its enemies and opponents. Under Dzerzhinsky, the Cheka became more than a political police force and instrument of terror. Instead, Dzerzhinsky's obsessive personality and dynamic organizational talents drove the Cheka into almost every area of Soviet life, from disease control and social philanthropy to labor mobilization and management of the railroads. Following the civil war, Dzerzhinsky aligned himself with Bukharin's faction and, as Chairman of the Supreme Economic Council, became a vigorous proponent of the New Economic Policy. Physically weakened by years spent in var-

ious prisons, Dzerzhinsky collapsed and died in July 1926 following an impassioned public defense of the policies of the existing Politburo majority.

ECONOMIC GROWTH, EXTENSIVE

In the quantitative analysis of aggregate economic development, modern economists commonly distinguish extensive from intensive growth. Extensive economic growth comes from the expansion of ordinary inputs of labor, reproducible capital (i.e., machines and livestock) and natural resources. Intensive growth, by contrast, involves increased effectiveness, quality, or efficiency of these inputs—usually measured as a growth of total factor productivity.

The early development of the USSR was primarily of the extensive sort. Increased application of labor inputs came from reduced unemployment, use of women previously engaged within the household, diminished leisure (e.g., communist sabbaticals or *subotniki*), and forced or prison labor. Increased capital investments were a result of forced savings of the population, taxes and compulsory loans, deferred consumption, and a small and varying amount of foreign investment in the country. Natural resources were expanded by new mines and arable acreage, most notably the “virgin lands” opened up in semiarid zones of Kazakhstan during the 1950s. But shifting resources from the backward peasant sector to modern industry, as well as to borrowed technology, also accounted for some intensive growth.

During the 1950s total growth of gross domestic product (GDP) was an impressive 5.7 percent annually, adjusted for inflation, of which approximately 3.3 percent came from increased inputs and only about 2.4 percent from increased productivity. Growth rates declined to 5.1 percent during the 1960s, 3.2 percent during the 1970s, and a mere 1.9 percent during the 1980s. Less than 1 percent of these growth rates came from intensive sources. The increased share of extensive sources meant that growth could not be sustained for several reasons. Population growth was slowing in Russia. Most of the increased labor supplies came from the less educated populations of Soviet Central Asia, where industrial productivity was considerably lower than in the traditional heartland of Russia and Ukraine. These Muslim populations did not move readily to, or were not welcome in, the most productive areas of the USSR,

such as the Baltic states. Some economists, including Martin Weitzman and Stanley Fischer, attributed the slowdown to the difficulty of substituting new investments for labor, as well. Depletion of oil and ore fields also played a role in reduced growth.

For systemic reasons, the Soviet command economy could not develop the new goods, higher quality, and innovative processes that increasingly characterized the economies of the developed West. Nor could it keep up with the newly industrializing economies of southeast Asia, which by the 1980s displayed higher growth rates, predominantly from intensive sources.

MARTIN C. SPECHLER

ECONOMIC GROWTH, IMPERIAL

The economic development of the Russian Empire can be traced back to the reign of Peter the Great (1682–1725), who was determined to industrialize Russia by borrowing contemporary technology from Western Europe and attracting foreign specialists. While military considerations played an important role in this drive, they combined with vast natural resources and large labor pool to develop an increasingly modern industrial sector by eighteenth-century standards. The less progressive policies of Peter's successors lead to a growing gap between Russia and its industrializing European competitors that became evident in the nineteenth century. Peter's most significant policy was his entrenchment of serfdom in the village, which was abolished in 1861. After the Crimean War (1854–1856), especially during the tenure of the Minister of Finance Count Sergei Witte (1892–1903), recognition of the dangers of the economic gap bolstered the accelerated industrialization of the Russian Empire. Large government investments in the rail network development expanded the transportation network from 2,000

kilometers in 1861 to more than 70,000 kilometers in 1913. This development helped to open up the iron and coal resources of the Southern regions (Ukraine) and facilitated the marketing of wheat, the major export commodity of the Russian empire. A vibrant textile industry grew in Moscow, and metalworking blossomed in St. Petersburg.

Government policy favored the influx of foreign capital, primarily from England, France, and Belgium, which were attracted by Russia's vast economic potential. The stabilized ruble exchange rate allowed Russia to join the international gold standard in 1897. The expansion of domestic heavy industries was promoted by government protectionist policies such as high tariffs, profit guarantees, tax reductions and exemptions, and government orders at high prices to insure domestic demand. The ministry of finance was the major agent in this strategy. Bureaucratic intervention into economic matters and bribery were among the numerous limitations on the development of a modern entrepreneurial class in Russia. More recent data suggest that the state was not as pervasive in Russian economic life as was originally thought. Budgetary subsidies were modest, and tariffs and indirect taxes were levied strictly for revenue purposes and played little role in the industrial policy. Russia had active commodity markets and was active in world markets. The state did not engage in economic planning, and both product and factor prices were set by markets. The creation of industrial trusts and syndicates in the early years of the twentieth century implied the existence of some monopolies in Russia.

The success of Russian industrialization before 1917 was evident, but agricultural progress was more modest (agriculture continued to account for more than half the national product). During the industrialization era, the share of agriculture fell from 58 percent in 1885 to 51 percent in 1913. Russian agriculture was characterized by feudal elements and serfdom that provided few incentives for investment, productivity improvements, or better management. Russian serfs had to work the landlords' land (called *barshchina*) or make in-kind or monetary payments from their crops (*obrok*). Peasant land prior to 1861 was held communally and was periodically redistributed. Agricultural reforms were modest or too late to prevent what many contemporary observers feel was a deepening agrarian crisis. The Emancipation Act of 1861 provided the peasants with juridical freedom and transferred to them about half the landholdings of the landed aristocracy. However, peasants had to

“redeem” (buy) their allotted plots of land. The size of land allotments was very small, and backward, unproductive communal agriculture remained the main organizational form in villages. While the production and marketing of grain increased substantially after the Emancipation Act of 1861, the primary objective of the Russian emancipation was not to create a modern agriculture, but to prevent revolts, preserve the aristocracy, and retain state control of agriculture.

Many observers feel that the agrarian crisis was one of the causes of the Revolution of 1905, which necessitated further reforms by the tsarist government. The reforms introduced in 1906 and 1910 by Peter Stolypin allowed the peasants to own land and cultivate it in consolidated plots rather than in small, frequently separated strips. The Stolypin reforms weakened communal agriculture and created the base for a class of small peasant proprietors. These reforms were considered long overdue, and they had a positive effect on the development of agriculture. In spite of persistent regional differences, peasant living standards rose, and productivity and per capita output increased. Overall, agricultural growth during the post-emancipation period was much like that of Western Europe. In spite of the late removal of serfdom, there is evidence of significant peasant mobility, and the completion of an extensive rail network greatly facilitated the marketing of grain. Regional price dispersion fell as transportation costs were lowered, and agricultural marketing and land rents were, in fact, dictated by normal market principles.

Despite scholarly controversy concerning the consequences of active government intervention in economy, the late tsarist era after 1880 is characterized by the significant acceleration of the output growth rate. Between the 1860s and 1880s the average annual rate of growth of net national product was 1.8 percent, while for the period thereafter, up to the 1909–1913 period, the rate of economic growth was 3.3 percent. At the same time, Russia experienced significant population growth, which put the Russian empire in the group of poorer West European countries in per capita terms. Russian economic growth was largely the consequence of the relatively rapid rate of growth of population (1.6% from 1885 to 1913) and labor force (1.7% from 1885 to 1913), pointing to the extensive character of the growth. Less reliable data on the tsarist capital stock suggests that roughly two-thirds of the growth of Russian output was accounted for by the growth of conventional labor and capital in-

puts. With respect to structural change, the decline in the shares of agriculture (from 58% in 1885 to 51% in 1913) and expansion of industry, construction, and transportation (from 23% in 1885 to 32% in 1913) suggests that the Russian economy had indeed embarked on a path of modern economic growth.

Russia's economic power was concentrated in agriculture. In 1861 Russia produced more grain than any other country and was surpassed only by the United States in 1913 (123,000 versus 146,000 metric tons). On a per capita basis, however, Russia ranked well behind major grain producers (the United States and Germany) and was close to the level of such countries as France and Austria–Hungary. Russia's industrial base was even weaker. In 1861 the country was a minor producer of essential industrial commodities such as coal, iron, and steel, and still lagged behind the major industrial powers in 1913. Russia began its modern era with a per capita output that was 50 percent that of France and Germany and 15 percent that of England and the United States. On per capita basis, in 1913 Russia was a poor European country ranking well below Spain, Italy, and Austria–Hungary. The relative backwardness of the Russian empire is explained by rapid population growth and slow output growth in the years before the 1880s. Russia's output growth figures do not paint a picture of a collapsing economy, but rather of an economy that was either catching up or holding its own with the most industrialized countries of the era.

Data on human capital development (in particular, literacy data) suggest that Russia was still a socially backward nation at the turn of the century. In 1897 the illiteracy rate was 72 percent; in 1913 it was still as high as 60 percent, with urban literacy almost three times that of rural literacy. By contrast, in 1900 the illiteracy rate in the United States was 11 percent. Despite this fact, after 1880 investment in primary education rose, and primary school enrollment increased considerably. While Russia's birth and death rates began to decline after 1889, birth rates were still at premodern levels at the time of the 1917 revolution.

Foreign investment played a substantial role in the industrialization of Russia, since the domestic production of capital equipment was limited. In addition to importing technology and equipment, the Russian economy was also aided by the receipt of foreign savings to finance Russian capital formation along with domestic savings. Russia was a

large debtor country during the period from 1880 to 1913, receiving significant capital influx from France, England, and Belgium. It accounted for 15 percent of world international debt by 1913. Foreign capital accounted for nearly 40 percent of Russian industrial investment, 15 to 20 percent of total investment, and about 2 percent of Russian output at the end of tsarist era. The Russian empire was more dependent upon foreign capital in both magnitude and duration than either the United States or Japan during their periods of dependence. The large foreign investments in Russia were a sign of confidence in its potential and responded to traditional signals such as profits sufficient to offset risk.

PAUL R. GREGORY

ECONOMIC GROWTH, INTENSIVE

Increases in aggregate economic activity, or growth, may be generated by adding more labor and capital or by improving skills and technology. Development economists call the latter "intensive growth" because labor and capital work harder. Growth is driven by enhanced productivity (higher output per unit of input) rather than augmented factor supplies. Theory predicts that all growth in a steady-state, long-run equilibrium will be attributable to technological progress (intensive growth). Developing nations may initially grow faster than this "golden mean" rate, benefiting both from rapid capital accumulation (capital deepening) and technological catch-up, but must converge to the golden mean thereafter. During the 1970s many Marxist economists hypothesized that socialist economies were not bound by these neo-classical principles. They forecasted that extensive growth (increased factor supply) would be replaced by socialist-intensive methods ensuring superior performance, but they were mistaken: Growth fell below zero in 1989, heralding the collapse of the Soviet Union two years later.

STEVEN ROSEFELDE

ECONOMIC GROWTH, SOVIET

During the first decade of Soviet rule and up to 1929, the Soviet economy struggled to recover from the damages of World War I, the Revolution, and the civil war, and then to find its way through policy zigzags of the young and inexperienced Soviet leadership. It is commonly accepted that during this decade of the 1920s the Soviet economy more or less managed to regain the level of national product of 1913, the last prewar year. In 1929 the Soviet Union embarked upon a strategy of rapid economic growth focused mainly on industrialization. The main institutional instrument used in order to implement growth was the Five-Year Plan, the key economic tool of the centrally planned system.

The record of Soviet growth since 1928 and the main factors that contributed to it are presented in Table 1. The data reflect mostly Western estimates, based partly on Soviet official data following adjustments to conform to Western definitions and methodology as well as to accuracy. One major methodological difference related to the national product was that, following Marxist teaching, the concept of Net National Product (NNP), the main Soviet aggregate measure for national income, did not include the value of most services, considered nonproductive.

One of the main goals of Soviet communist leadership was rapid economic growth that would equal and eventually surpass the West. The pri-

mary aim was to demonstrate the superiority of the communist economic system and growth strategy, based on the teachings of Marx and Lenin, over capitalism. The goal was needed also in order to build a sufficient military power base to avert the perceived military threat of the capitalist world in general, initially that of Nazi Germany. Indeed the rates of growth of Soviet GNP were initially, during the 1930s and the first Five-Year Plans, exceptionally high by international comparisons for that period; this made the Soviet model a showcase for imitation to many developing countries that became independent in the aftermath of World War II. While the Soviet growth rates were still high during the 1950s and 1960s, they were already matched or exceeded at that time by countries such as Germany and Japan, as well as a number of developing countries. The decade of the 1940s, with the devastation of World War II, witnessed stagnation at first and slow growth during the reconstruction efforts later. Growth somewhat accelerated in the aftermath of the death of Josef Stalin, but from the 1960s onward the rates of economic growth began to fall, declining continuously throughout the rest of the Soviet period down to near zero just before the dissolution of the USSR at the end of 1991. Various efforts at economic reform in order to reverse this trend largely failed. As a result, the entire postwar growth record declined further by international comparisons to below that of most groups of developed as well as

developing countries, especially a number of East Asian and Latin American countries. While many developed market economies suffered from business cycles and oscillations in growth rates, they experienced sustained economic growth in the long run. Per contra the fall in Soviet growth rates proved to be terminal. Thus, although during the early decades the Soviet economy grew fast enough in order to catch up and narrow the gap with the developed countries, during its last decades it fell behind and the gap widened. The growth record with respect to GNP per capita, followed a similar trend of high rates of growth initially, but declined in later decades (Table 1). While in 1928 the Soviet level of GDP per capita stood around 20 percent of that of the United States, it reached about 30 percent in 1990, probably the best record in terms of comparisons with other Western economies. Throughout the period, the share of private consumption in GNP was lower than in most other nonsocialist countries. Consumption levels did go up significantly from very low levels during the two decades or so following Stalin's death. Also, throughout most of the period, there were relatively high public expenditures of education and health services, which helped to raise the comparative level of welfare and the quality of life. The failure of the communist regime to achieve sustained economic growth on a converging path with developed countries is no doubt the most important reason for the fall of the economy.

SOURCE: Ofer, 1987; Laurie Kurtzweg, "Trends in Soviet Gross National Product" in United States Congress, Joint Economic Committee. *Gorbachev's Economic Plans*, Vol. 1, Washington D.C., pp. 126–165; James Noren and Laurie Kurtzweg, "The Soviet Economy Unravels: 1985–91" in United States Congress, Joint Economic Committee. *The Former Soviet Union in Transition*, Vol. 1, Washington D.C. pp. 8–33, 1993; Angus Maddison. *Monitoring the World Economy 1820–1992*, OECD, Paris, 1995; Angus Maddison, *The World Economy: A Millennial Perspective*, OECD, Paris, 2000.

The growth record of the Soviet Union—its initial success and eventual failure—is a joint outcome of the selected growth strategy and the system of central planning, including almost full state ownership of the means of production. The centrally planned system was more effective at the start in mobilizing all needed resources, and directing them to the goals of industrialization and growth. The system is also characterized by using commands instead of incentives and decentralized initiatives: emphasis on fulfillment of quantitative production targets rather than on improvements in quality, technology, and efficiency, routine expansion instead of creativity, and rigidity and “more of the same” instead of flexibility—a very high cost for any change. Some of the above characteristics, while advantageous at the start, turned out to be obstacles when the economy developed and became more complex. Other features, such as difficulties in creating indigenous technological innovations, were less harmful initially, when technology could be transferred from abroad, but more of a hindrance later when more domestic efforts were needed.

The Soviet communist growth strategy, following Marxian doctrine, was based on high rates of investment and a rapid buildup of capital stock. High rates of investment come at the expense of lower shares of consumption, sacrificed at the beginning in exchange for hopes of abundance in the future. Central planning, state ownership, and the dictatorship of the proletariat were the necessary tools needed to impose such sacrifices. Next the regime mobilized the maximum possible number of able-bodied men and women to the labor force. A model of growth based mostly on maximum mobilization of capital and labor is called “extensive.” The increase in output is achieved mainly through the increase in the amounts of inputs. Under an alternative “intensive” model, most of the increase in output is achieved through improvements in the utilization of a given amount of inputs. These include technological changes and improvements in management, organization, and networks, termed *total factor productivity* (TFP). The mobilization of capital in the Soviet growth model assumed that the newly installed equipment would embody also the most advanced technology. While this was the case to some extent during the first decade, with heavy borrowing of technology from abroad, the failure to generate indigenous civilian technology, as well as the mounting inefficiencies of central planning, diminished, eliminated, and turned neg-

ative the intensive contribution (TFP) to Soviet growth. Only during the 1930s TFP was significant and accounted for about 30 percent of total growth. Soviet leaders and economists were aware of the efficiency failure and tried to reverse it through many reforms but to no avail.

The problem with extensive growth is that the ability to mobilize more labor and capital is being exhausted over time; furthermore, in both cases early efforts to mobilize more resources backfire by reducing their availability in the future. Labor was mobilized from the start, by moving millions of people from farms to the cities, by obliging all able-bodied, especially women, to join the active labor force, and by limiting the number of people employed in services, forcing families to self-supply services during after-work hours. Very low wages compelled all adult members of the family to seek work. Table 1 illustrates that until the 1980s employment grew by a higher rate than the population, indicating a growing rate of labor force participation, achieving at the time one of the highest rates, especially for women, in the world. However, the table also shows that over time the rate of growth of employment declined, from nearly 4 percent per year from 1928 to 1940 to almost zero during the late 1980s. In the Soviet Union, birthrates declined far beyond the normal rates accompanying modernization everywhere. This was due to the heavy pressure on women to work outside the household, provide services in off-work hours, and raise children in small, densely inhabited, and poorly equipped apartments. In this way larger labor inputs early on resulted in fewer additions to the labor force in later years, thereby contributing to declining growth. During the 1980s employment increased at even a slower rate than the population.

A similar process affected capital accumulation. Because a labor force grows naturally by modest rates, the main vehicle of growth is capital (equipment and construction). This is especially true if the rate of efficiency growth is modest or near zero, as was the case most of the time in the USSR. It follows that the share of investment out of the national product must increase over time in order to assure a steady growth rate of the capital stock. An increased share of investment leaves less for improvements in consumption, in the supply of social services, and for defense. Indeed the share of (gross) investment increased in the Soviet Union to more than 30 percent of GNP, and this kept down the rate of growth of the capital stock and thus of

output. Furthermore, with the earlier drying up of increments of labor, Soviet growth was driven for a time, still extensively, by capital alone. This in turn forced the system to always substitute capital for labor, a difficult task by itself, more so when no new technology is offered. The outcome was further decline in productivity of capital and of growth.

The early mobilization of labor and capital inputs at the cost of their future decline is part of a general policy of haste by the Soviet leadership, which was frustrated by declining growth, the inability to provide for defense and other needs, and the failure of partial reforms. In addition to the above, there were also overuses of natural resources, over-pumping of oil at the expense of future output, neglect of maintenance of infrastructure and of the capital stock, and imposition of taut plans that forced producers to cut corners and neglect longer-term considerations. Initially this policy of haste produced some incremental growth but at a cost of lower growth later. The results of the policy of haste spilled over to the transition period in the form of major obstacles for renewed economic growth.

The heavy military burden was another significant factor adversely affecting Soviet growth. Early on the Soviet Union was threatened and then attacked by Germany, and following World War II engaged in the Cold War. Throughout the entire period it had to match the military capabilities of larger and more advanced economies, hence to set aside a higher share of its output for defense. During the Soviet system's last decades this share grew to around 15 percent of GNP. This amount was unprecedented in peacetime. The real defense burden was even heavier than shown by the figures because the defense effort forced the leaders to give priority to defense, in both routine production and in technological efforts, thereby disrupting civilian production and depriving it of significant technological innovation.

Additional causes of declining growth over time were the deterioration of work motivation and discipline, increasing corruption and illegal activities, declining improvements in the standard of living, and weakening legitimization of the regime. Collective agriculture, the cornerstone of the communist system, became the millstone around its neck.

GLUR OFER

ECONOMIC REFORM COMMISSION

The State Commission on Economic Reform, chaired by economist and vice premier Leonid Abalkin, was created in July 1989. The first fruit of its work was a background report written for a conference on radical economic reform held October 30–November 1, 1989, in Moscow. This document was very radical by soviet standards. It argued, "We are not talking about improving the existing economic mechanism, nor about merely replacing its outdated parts. One internally consistent system must be dismantled and replaced by another one, also internally consistent and thus incompatible with the previous one."

In April 1990 Abalkin and Yuri Maslyukov (chairman of Gosplan) presented to the Presidential Council a program for a rapid transition to the market. This program drew attention to the costs involved in economic reform (e.g., open inflation, decline in production, closing of inefficient enterprises, fall in living standards, increased inequality). Most likely the program was rejected because of its honesty in discussing the costs of rapid marketization. The program officially adopted in May was substantially more conservative.

From May to August of 1990 two teams were working on economic reform programs, one headed by Abalkin and one headed by Stanislav Shatalin. The latter produced the Five-Hundred-Day Plan. Mikhail Gorbachev did not commit himself to either. He asked Abel Aganbegyan to merge the two documents. This compromise was adopted at the Congress of People's Deputies in December 1990. Abalkin was dissatisfied by these events and resigned effective February 1991.
