

The Writings of
Thomas Jefferson

The Richmond Capitol Jefferson

Photogravure from the Bronze Statue on the Washington Monument at Richmond, Va., the work of two sculptors, Thomas Crawford and Randolph Rogers.

This statue of Jefferson is a companion effigy with Henry, Nelson, Marshall, Lewis and Mason—the six celebrated Virginians surrounding the equestrian statue of Washington in the Capitol Square, Richmond, Va. The base of the monument is star-shaped and of native granite. It took nearly twenty years to complete the work; begun by Crawford in 1849 and finished by Rogers in 1868. The monument cost upwards of \$260,000.

JEFFERSON AS A GEOGRAPHER.

Among the associations that in late years have paid tribute to the immortal honor of Thomas Jefferson may be mentioned the National Geographic Society, which in 1896 visited as a body Monticello and the tomb of Jefferson.

It was not in recognition of the political ideas, statesman-like views nor even the patriotic labors of this great American that the pilgrimage was made, but in acknowledgment of his great services to science in general and to American geography in particular.

The reasons that make Monticello a shrine to the intelligent visitor are too well known to need extended comment. As long as the love of liberty abides in American hearts; as long as services in the interest of humanity merit man's admiration; as long as desire for knowledge stirs youthful aspirations, so long will the name and memory of Thomas Jefferson be cherished by the rising generations.

He was a man worthy of honor, whether considered as an individual founding the University of Virginia, as a Virginian shedding lustre on his native State, or as an American, doing, in the broader national field, things of the greatest import for his

countrymen and for oppressed humanity everywhere. Trite may have been the truths he uttered, but they are the bases of human liberty; and he voiced so aptly and clearly the aspirations of the people that his words thrilled mankind, and will do so in ages to come.

The National Geographic Society erred not in making Monticello the scene of its annual field day, for its members realized that of all our Presidents, Jefferson is the only one of whom it can be said:—"He was a geographer."

We do not know how far he aided his father in the surveys or draughting that resulted in the famed Jefferson and Fry map of Virginia, published in London in 1775, under Jeffreys the royal geographer. We can well imagine, however, young Jefferson eagerly studying this valuable chart of Virginia, especially its southwestern and scarcely known frontiers, then given over to the trapper, the Indian and the Spaniard.

Men of genius make all knowledge tributary to their particular interests and ambitions; and doubtless through such studies his comprehending mind, in a manner common to all such men, stored those geographic facts and concrete ideas which better fitted him for his duties in after life.

In the days of travail for this nation, when to Europe America was a land of savages and forests, then it was that Jefferson did his first public geographical work, writing "Notes on Virginia" to

make known to the statesmen of France the resources and possibilities of a struggling colony. We know that the book was timely and effective, and we believe that its preparation broadened the mind of its author.

Jefferson's merit as a geographer is scarcely appreciated by the men of this generation, who are so familiar with the phases of scientific geography which have resulted from the knowledge, labor and genius of Alexander von Humboldt. However Jefferson, 1781, may be said to stand in geographical tendencies between Bernhard Varenius, who in "Geographia generalis," 1650, essayed the interpretation of the climatic conditions and the physical changes of the earth's surface, and Humboldt's "Kosmos," 1845. The latter supplemented Varenius by pointing out the connection of climate and soil formations with the distribution of plant and animal life, and yet more important the relation of geographic environment to the development of mankind, especially as to colonization, commerce and industry.

Jefferson's "Notes on Virginia," fifty years in advance of Humboldt, is along lines definitely formulated by the latter in scientific geography. Jefferson does not confine himself to a mere enumeration of towns, rivers, boundaries, inhabitants, industries, productions and form of government in Virginia. He describes not only its rivers, but their relations to commerce and especially to their possible utility

in trade with Ohio, the Great Lakes and the Mississippi Valley. The plants and trees are classified as to their value for ornamental, medicinal and esculent purposes. Comparative views are given of native birds and animals with those of Europe. The subject of climate is handled admirably for such an early date. The pressure, rain, temperature and wind are treated briefly and clearly in their general aspects. The effect of seawinds on salt-making, the prevalence of sunshine, the temperatures at which frosts occur and their effect on plant-life, and other similar notes evidence the acuteness of Jefferson's observations and his happy powers of generalization. If he had exclusively applied himself to geography there is little doubt that he would have distinguished himself in the science.

Nor does Jefferson's merit as a geographer depend alone on the publication of a book, but there are constantly recurring acts which emphasize his realization of the importance of geography in the evolution of a nation. But for this quality the United States might well to-day be a country cut off from direct access either to the Gulf of Mexico or the Pacific Ocean.

While President he frequently forecast the directions in which the United States must grow. He speaks of it in his first inaugural as "A rising nation spread over a wide and fruitful land, traversing all seas with the rich production of its industry."

Under him the "First Census" was completed,

and he says of it: "We contemplate this rapid growth, and the prospect it holds to us, with a view to the settlement of the extensive country still remaining vacant within our limits."

He realized more keenly—and therein acted more wisely—than other Presidents the value to contiguous nations of exact and definite boundaries, and in frequent messages spoke of work inaugurated by him to mark out the boundaries between the United States, the Indians, and the British possessions.

His greatest geographical measure was his extra-constitutional act of annexation by purchase of the great territory of Louisiana. He realized that the natural and only satisfactory southern boundary of the United States was the Gulf of Mexico, from which we were cut off by the Floridas. While the then western limit was the Mississippi River, his opinion was clear, in his age of ante-steam transportation, that by this route the great crops of the West must pass to Europe and other lands. In regard to Louisiana, not only was the Mississippi Valley vital to the growing interests of the country, but Jefferson realized that the great fur trade of the Northwest should find outlet in the United States to the southward through the accessible Missouri Valley rather than to the northward across the difficult Hudson Bay territory. Within a month after submitting to Congress the convention with France for the cession of Louisiana to the

United States he transmitted an extensive and valuable description of Louisiana, as of utility to Congress in providing for the government of that country.

Nor was his action confined to messages alone, for, Louisiana acquired, Jefferson like a good geographer initiated a survey of its immense and unknown areas, sending Lewis and Clarke to the West, and Pike to the North and then to the Southwest. With unwonted wisdom and courage, even before the territory was formally transferred, he ordered Captains Meriwether Lewis and William Clarke on a long and perilous mission, the first as well as the most important of all American explorations. Their three years' journey won the way to the Pacific overland, and this discovery of the upper valley of the Columbia, conjoined with Gray's entrance at the mouth of that noble waterway in 1792, insured the title of the United States to Oregon territory in 1845. Without Jefferson's original action we might have no foothold on the Pacific to-day.

There are also due to Jefferson's action the explorations of Lieutenant Pike of the upper Mississippi and northwestern Minnesota, and of the extension of our geographical knowledge to the Upper Rio Grande and other parts of the Spanish dominion, then known as New Spain.

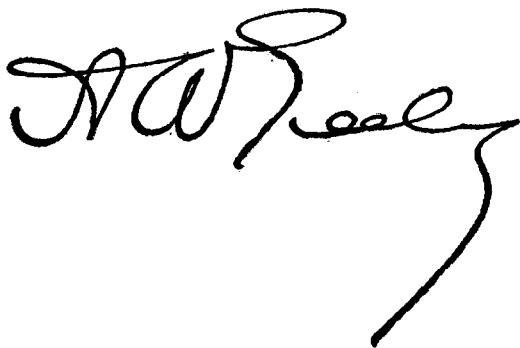

Nor was Jefferson insensible to the geographical conditions of the Southwest. He caused to be com-

piled and submitted to Congress an account by Dr. Sibley of the Red River Valley, including the Washita, and caused these sections to be explored.

Jefferson took an active and conservative interest in the extinction of Indian titles to lands, so that the trans-Allegheny regions might be peaceably opened to enterprising settlers.

It should also be remembered that he was foremost, if not first, in formulating plans and methods whereby the public lands should not lie wild and fallow, but serve their purpose of developing the nation's power by passing systematically and easily into the hands of the settler and the farmer, a policy which has proved to be a dominant factor in our phenomenal growth and prosperity.

While we pay tribute to Jefferson as an individual, as a citizen, as a lover of liberty, and as a President, let us not then forget his special claim to recognition as one of the greatest of American geographers.

A handwritten signature in black ink, appearing to read "A. W. Reay". The signature is written in a cursive style with a long, sweeping tail that extends downwards and to the right.

The Bank of Wisdom publish all works of human interest, we scorn no ideas of serious thought. Ideas and beliefs some may think “dangerous” and would want to hide, we seek to reproduce and distribute for the consideration and intellectual development of every human mind. When peace and understanding is established throughout the world it might be said that humanity has achieved an acceptable degree of civilization, but until that longed for time we must never cease to search for greater truth and a higher morality for humanity.

The wealth of thought hidden in obscure books of past ages makes festinating reading, and as much of this original thought was suppressed by the sheer power of the established systems of the time, these ideas may well be those needed for the future progress. One thing is certain, the belief systems we have are not the ones we need.

New York and New Hampshire Signers

(Declaration of Independence)

The Reproductions are from the Original Paintings in Independence Hall, Philadelphia.

Lewis Morris (1726-1798) was born in Morrisania, N. Y. He entered Yale College at sixteen years of age and was graduated in four years, following the business of agriculture up to the time of taking his seat in Congress in 1775. He served on most of the important committees, and was assigned the difficult task of winning the Western Indians from alliance with the British, which he effected. During the Revolutionary War his beautiful estate was devastated. He left Congress in 1777, and subsequently served in the State Legislature, and rose in the ranks of the army to the post of Major-General. *(Reproduced from the Painting by George W. Flagg after the Original Painting by John Trumbull.)*

William Floyd (1734-1821) was born in Suffolk County, Long Island. He received a scant education, but was naturally intelligent. Early in life he was called upon to manage a large estate left him at his father's death. He was a member of the New York Committee of Correspondence and a delegate to Congress from 1774 to 1777. He served on the boards of Admiralty and the Treasury. From 1777 to 1788 he was a member of the State Senate of New York. He distinguished himself as a military leader when placed in command of the Long Island militia. He was a member of the New York State Constitution Conventions of 1801 and 1820. *(Reproduced from the Painting by Henry after the Original Painting by Polk.)*

Josiah Bartlett (1729-1795) was born at Amesbury, Mass. With only a common school education and a knowledge of medicine, gained through study with an ordinary practitioner, he began his career as a doctor in Kingston, N. H., 1750. He soon became eminent as a physician. From 1765 until the Revolution he was chosen to the Provincial Legislature. In 1775 and 1776 he held a seat in the Continental Congress and was one of the first to sign the Declaration. He served in Congress again in 1778, and the next year was appointed Chief Justice of the Court of Common Pleas. Ten years later he was Chief Justice of the Supreme Court. He was an active member in the convention which adopted the Federal Constitution. In 1790 he was elected President of New Hampshire. Under the new Constitution of that State he became its first Governor in 1793. *(Reproduced from the Painting by Caroline Weeks after the Original Painting by John Trumbull.)*

William Whipple (1730-1785) was born at Kittery, Me. Equipped with a public school education, he went to sea as a boy and rose to command of a West India trading vessel. At the age of twenty-nine he started a mercantile business in Portsmouth, N. H. The citizens of that place elected him a member of the Provincial Congress of 1775, and made him one of the Committee of Safety. He served the Continental Congress through 1776 up to the fall of 1777, when the New Hampshire Assembly put him in command of a brigade sent to oppose General Burgoyne. At the battle of Saratoga he commanded the New Hampshire troops. In 1778 he took part in General Sullivan's expedition to Rhode Island, and went to Congress for another term. From 1780 to 1784 he was a member of the Assembly. In 1782 he was appointed Judge of the New Hampshire Superior Court. *(Reproduced from a Painting after the Original Painting by St. Memin.)*

Phillip Livingston (1716-1778) was born at Albany, N. Y. He was graduated at Yale College in 1737 and at once entered commercial business in New York City. After holding the office of Alderman for nine years he became a member of the Legislature in 1759. He was prominent on the Committee of Correspondence which exchanged letters with Edmund Burke. He went to the Continental Congress in 1774, and figured as one of the most ardent supporters of the Declaration of Independence. In April, 1775, he was made President of Congress and early in 1776 unanimously elected to the Assembly. He served on the Treasury Board and on the Marine Committee. Besides these valuable services, he founded the Professorship of Divinity at his Alma Mater, and was one of the founders of the New York Chamber of Commerce. *(Reproduced from the Original Painting by Charles Wilson Peale.)*

WILLIAM FLOYD

JOSIAH BARTLETT

WILLIAM WHIPPLE

PHILIP LIVINGSTON

WIRT'S EULOGY ON JEFFERSON.¹

Having in this imperfect manner, fellow-citizens, touched rather than traced the incidents by which Mr. Adams was prepared and conducted into the scenes of the Revolution, let us turn to the great luminary of the South.

Virginia, as you know, had been settled by other causes than those which had peopled Massachusetts; and the colonists themselves were of a different character. The first attempts at settlement in that quarter of the world had been conducted, as you remember, under the auspices of the gallant Raleigh, that "man of wit and man of the sword," as Sir Edward Coke tauntingly called him, and certainly one of the brightest flowers in the courts of Elizabeth and James. He did not live to make a permanent establishment in Virginia; but his genius seems, nevertheless, to have presided over the State, and to have stamped his own character on her distinguished sons. Virginia had experienced none of those early and long-continued conflicts which had contributed to form the robust character of the North; on the contrary, during the

¹ From eulogy on Thomas Jefferson and John Adams, delivered by William Wirt at Washington, D. C., on October 19, 1826, in the Hall of the House of Representatives of the United States.

century that Massachusetts had been buffeting with the storm, Virginia, resting on a halcyon sea, had been cultivating the graces of science and literature and the genial elegancies of social life. But her moral and intellectual character was not less firm and vigorous than that of her Northern sister: for the invader came, and Athens as well as Sparta was found ready to do her duty, and to do it too, bravely, ably, heroically.

At the time of Mr. Jefferson's appearance, the society of Virginia was much diversified, and reflected pretty distinctly an image of that of England. There was, first, the landed aristocracy, shadowing forth the order of English nobility; then the sturdy yeomanry, common to them both; and last a foeculum of beings, as they were called by Mr. Jefferson, corresponding with the mass of the English plebeians.

Mr. Jefferson, by birth, belonged to the aristocracy; but the idle and voluptuous life which marked that order had no charms for a mind like his. He relished better the strong, unsophisticated, and racy character of the yeomanry, and attached himself, of choice, to that body. Born to an inheritance then deemed immense, and with a decided taste for literature and science, it would not have been surprising if he had devoted himself, exclusively, to the luxury of his studies, and left the toils and the hazards of public action to others.

But he was naturally ardent and fond of action,

and of action, too, on a great scale; and so readily did he kindle in the feelings that were playing around him, that he could no more have stood still while his country was agitated, than the war horse can sleep under sound of the trumpet. He was a republican and a philanthropist from the earliest dawn of his character. He read with a sort of poetic illusion, which identified him with every scene that his author spread before him. Enraptured with the brighter ages of republican Greece and Rome, he had followed, with an aching heart, the march of history which had told him of the desolation of those fairest portions of the earth; and had seen, with dismay and indignation, that swarm of monarchies, the progeny of the Scandinavian hive, under which genius and liberty were now everywhere crushed. He loved his own country with a passion not less intense, deep, and holy, than that of his great compatriot: and with this love he combined an expanded philanthropy which encircled the globe. From the working of the strong energies within him, there arose an early vision, too, which cheered his youth and accompanied him through life—the vision of emancipated man throughout the world. Nor was this a dream of the morning that passed away and was forgotten. On the contrary, like the heaven-descended banner of Constantine, he hailed it as an omen of certain victory, and girded his loins for the onset, with the omnipotence of truth.

On his early studies we have already touched.

The study of the law he pursued under George Wythe: a man of Roman stamp, in Rome's best age. Here he acquired that unrivaled neatness, system, and method in business, which, through all his future life, and in every office that he filled, gave him, in effect, the hundred hands of Briareus; here, too, following the giant step of his master, he traveled the whole round of the civil and common law. From the same example, he caught that untiring spirit of investigation which never left a subject till he had searched it to the bottom, and of which we have so noble a specimen in his correspondence with Mr. Hammond, on the subject of British debts. In short, Mr. Wythe performed for him what Jeremiah Gridley had done for Mr. Adams; he placed on his head the crown of legal preparation: and well did it become him. Permit me, here, to correct an error which seems to have prevailed. It has been thought that Mr. Jefferson made no figure at the bar: but the case was far otherwise. There are still extant, in his own fair and neat hand, in the manner of his master, a number of arguments which were delivered by him at the bar upon some of the most intricate questions of the law; which, if they shall ever see the light, will vindicate his claim to the first honors of the profession. It is true he was not distinguished in popular debate; why he was not so, has often been matter of surprise to those who have seen his eloquence on paper and heard it in conversation. He

had all the attributes of the mind and the heart and the soul, which are essential to eloquence of the highest order. The only defect was a physical one: he wanted volume and compass of voice for a large deliberative assembly; and his voice, from the excess of his sensibility, instead of rising with his feelings and conceptions, sunk under their pressure and became guttural and inarticulate. The consciousness of this infirmity repressed any attempt in a large body in which he knew he must fail. But his voice was all-sufficient for the purposes of judicial debate; and there is no reason to doubt that, if the service of his country had not called him away so soon from his profession, his fame as a lawyer would now have stood upon the same distinguished ground which he confessedly occupies as a statesman, an author, and a scholar.

It was not until 1764, when the Parliament of Great Britain passed its resolutions preparatory to the Stamp Act, that Virginia seems to have been thoroughly startled from her repose. Her legislature was then in session; and her patriots, taking the alarm, remonstrated promptly and firmly against this assumed power. The remonstrance, however, was, as usual, disregarded, and the Stamp Act came. But it came to meet, on the floor of the House, an unlooked-for champion, whom Heaven had just raised up for the good of his country and of mankind. I speak of that untortured child of nature, Patrick Henry, who had now, for the first time, left

his native forests to show the metal of which he was made, and "give the world assurance of a man."

The Assembly met in the city of Williamsburg, where Mr. Jefferson was still pursuing the study of the law. Mr. Henry's celebrated resolutions against the Stamp Act were introduced in May, 1765. How they were resisted, and how maintained, has been already stated to the world, in terms that have been pronounced extravagant, by those who modestly consider themselves as furnishing a fair standard of Revolutionary excellence. The coldest glow-worm in the hedge is about as fair a standard of the power of the sun. To the present purpose, it is only necessary to remark, that Mr. Jefferson was present at this debate, and has left us an account of it in his own words. He was then, he says, but a student, and stood in the door of communication between the House and the lobby, where he heard the whole of this magnificent debate. The opposition to the last resolution was most vehement; the debate upon it, to use his own strong language, "most bloody:" but he adds, torrents of sublime eloquence from Henry, backed by the solid reasoning of Johnson, prevailed; and the resolution was carried by a single vote. I well remember, he continues, the cry of "treason," by the Speaker, echoed from every part of the House, against Mr. Henry: I well remember his pause, and the admirable address with which he recovered himself and baffled the charge thus vociferated.

He here alludes, as you must perceive, to that memorable exclamation of Mr. Henry, now become almost too familiar for quotation: "Cæsar had his Brutus, Charles the First his Cromwell, and George the Third ('Treason!' cried the Speaker. 'Treason! treason!' echoed the House;) may profit by their example. If this be treason, make the most of it."

While I am presenting to you this picture of Mr. Jefferson in his youth, listening to the almost superhuman eloquence of Henry on the great subject which formed the hinge of the American Revolution, are you not forcibly reminded of the parallel scene which had passed only four years before in the Hall of Justice in Boston: Mr. Adams catching from Otis "the breath of life"? How close the parallel, and how interesting the incident! Who can think of these two young men, destined themselves to make so great a figure in the future history of their country, thus lighting the fires of their own genius at the altars of Henry and of Otis, without being reminded of another picture, which had been exhibited to us by an historian of Rome?—the younger Scipio Africanus, then in his military novitiate, standing a youthful spectator on a hill near Carthage, and looking down upon the battlefield on which those veteran generals, Hamilcar and Massanissa, were driving, with so much glory, the car of war! Whether Otis or Henry first breathed into this nation the breath of life, (a question merely for curious and friendly speculation,) it is

very certain that they breathed into their two young hearers that breath which has made them both immortal.

From this day forth Mr. Jefferson, young as he was, stood forward as a champion for his country. It was now in the fire of his youth, that he adopted those mottos for his seals, so well remembered in Virginia: "Ab eo libertas, a quo spiritus," and "Resistance to tyrants is obedience to God." He joined the band of the brave who were for the boldest measures: and by the light, the contagious spirit and vigor of his conversation, as well as by his enchanting and powerful pen, he contributed eminently to lift Virginia to that height which placed her by the side of her Northern sister. It is an historical fact well known to us all, that these two great States, then by far the most populous and powerful in the Union, led off, as it was natural and fit that they should do, all the strong measures that ended in the Declaration of Independence. Together, and stroke for stroke, they breasted the angry surge, and threw it aside "with hearts of controversy," until they reached that shore from which we now look back with so much pride and triumph.

It was in his thirtieth year, as you remember, that Mr. Adams gave to the world his first great work, the Dissertation on the Canon and Feudal Law; and it was about the same period of his life, that Mr. Jefferson produced his first great political

work, "A Summary View of the Rights of British America." The history of this work is somewhat curious and interesting, and I give it to you on the authority of Mr. Jefferson himself. He had been elected a member of that State Convention of Virginia which, in August, 1774, appointed the first Delegates to the Continental Congress. Arrested by sickness on his way to Williamsburg, he sent forward, to be laid on the table, a draught of instructions to the Delegates whom Virginia should send. This was read by the members, and they published it, under the title of "A Summary View of the Rights of British America." A copy of this work having found its way to England, it received from the pen of the celebrated Burke such alterations as adapted it to the purposes of the opposition there, and it there reappeared in a new edition; an honor which, as Mr. Jefferson afterwards learned, occasioned the insertion of his name in a bill of attainder, which, however, never saw the light. So far Mr. Jefferson. Let me add, that the old inhabitants of Williamsburg, a few years back, well remembered the effect of that work of Lord Dunmore, then the royal Governor of the State. His fury broke out in the most indecent and unmitigated language. Mr. Jefferson's name was marked high on his list of proscription, and the victim was only reprieved until the rebellion should be crushed; but that rebellion became revolution, and the high priest of the meditated sacrifice was sent to howl his

disappointment to the hills and winds of his native Scotland.

In the next year, 1775, Mr. Jefferson young as he was, was singled out by the Virginia legislature to answer Lord North's famous "conciliatory proposition," called, in the language of the day, his "olive branch." But it was an olive branch that hid the guileful serpent, or, in the language of Mr. Adams, "it was an asp in a basket of flowers." The answer stands upon the records of the country. Cool, calm, close, full of compressed energy and keen sagacity, while at the same time it preserves the most perfect decorum, it is one of the most nervous and manly productions even of that age of men.

The second Congress met on the 10th of May, 1775. Mr. Adams was, of course, again a member. Mr. Jefferson having been deputed, contingently, (to supply the place of Peyton Randolph,) did not take his seat at the commencement of the session. Of the political works of this Congress, as well as of the preceding, their petitions, memorials, remonstrances, to the throne, to the Parliament, to the people of England, of Ireland, and of Canada, I have forborne to speak, because they are familiar to you all. Let us suffice to say, that in the estimation of so great a judge as Lord Chatham, they were such as had never been surpassed even in the States of the world, in ancient Greece and Rome; and although they produced no good effect on the unhappy monarch of Britain; though Pharaoh's

heart was hardened so that they moved not him, they moved all heaven and all earth besides, and opened a passage for our fathers through the great deep. The plot of the awful drama now began to thicken.

The sword had been drawn. The battles of Lexington and Concord had been fought; and Warren, the rose of American chivalry, had been cut down, in his bloom, on that hill which his death has hallowed. The blood which had been shed in Massachusetts cried from the ground in every quarter of the Union. Congress heard that cry, and resolved on war. Troops were ordered to be raised. A commander-in-chief came to be appointed, and General Ward, of Massachusetts, was put in nomination. Here we have an incident in the life of Mr. Adams most strikingly characteristic of the man. Giving to the winds all local prepossessions, and looking only to the cause that filled his soul, the cause of his country, he prompted and sustained the nomination of that patriot hero whom the Almighty, in His goodness, had formed for the occasion. Washington was elected, and the choice was ratified in heaven. He accepted his commission on the very day on which the soul of Warren winged its flight from Bunker Hill, and well did he avenge the death of that youthful hero.

Five days after General Washington's appointment, Mr. Jefferson, for the first time, took his seat as a member of Congress; and here, for the first

Wirt's Eulogy on Jefferson

time, met the two illustrious men whom we are endeavoring to commemorate. They met, and at once became friends—to part no more, but for a short season, and then to be reunited, both for time and eternity.

There was now open war between Great Britain and her colonies. Yet the latter looked no farther than resistance to the specific power of the parent country to tax them at pleasure. A dissolution of the Union had not yet been contemplated, either by Congress or the nation; and many of those who had voted for the war, would have voted, and did afterwards vote, against that dissolution.

Such was the state of things under which the Congress of 1776 assembled, when Adams and Jefferson again met. It was, as you know, in this Congress, that the question of American Independence came, for the first time, to be discussed; and never, certainly, has a more momentous question been discussed in any age or in any country; for it was fraught not only with the destinies of this wide extended continent, but as the event has shown, and is still showing, with the destinies of man all over the world.

How fearful that question then was, no one can tell but those who, forgetting all that had since passed, can transport themselves back to the time, and plant their feet on the ground which those patriots then occupied.

“Shadows, clouds, and darkness” then covered

all the future, and the present was full only of danger and terror. A more unequal contest never was proposed. It was, indeed, as it was then said to be, the shepherd boy of Israel going forth to battle against the giant of Gath; and there was yet among us, enough to tremble when they heard that giant say, "Come to me, and I will give thy flesh to the fowls of the air and the beasts of the field." But there were those who never trembled—who knew that there was a God in Israel, and who were willing to commit their cause "to His even-handed justice," and His Almighty power. That their great trust was in Him, is manifest from the remarks that were continually breaking from the lips of the patriots. Thus, the patriot Hawley, when pressed upon the inequality of the contest, could only answer, "We must put to sea—Providence will bring us into port;" and Patrick Henry, when urged upon the same topic, exclaimed, "True, true; but there is a God above, who rules and overrules the destinies of nations."

Amid this appalling array that surrounded them, the first to enter the breach, sword in hand, was John Adams—the vision of his youth at his heart, and his country in every nerve. On the sixth of May, he offered in committee of the whole the significant resolution that the colonies should form governments independent of the crown. This was the harbinger of more important measures, and seems to have been put forward to feel the pulse

of the House. The resolution, after a bloody struggle, was adopted on the 15th day of May following. On the 7th of June, by previous concert, Richard Henry Lee moved the great resolution of Independence, and was seconded by John Adams; and "then came the tug of war." The debate upon it was continued from the 7th to the 10th, when the further consideration of it was postponed to the 1st of July, and at the same time a committee of five was appointed to prepare, provisionally, a draught of a Declaration of Independence. At the head of this important committee, which was then appointed by a vote of the House, although he was probably the youngest member, and one of the youngest men in the House, (for he had served only part of the former session, and was but thirty-two years of age,) stands the name of Thomas Jefferson—Mr. Adams stands next. And these two gentlemen having been deputed a sub-committee to prepare the draught, that draught, at Mr. Adams' earnest importunity, was prepared by his more youthful friend. Of this transaction Mr. Adams is himself the historian, and the authorship of the Declaration, though once disputed, is thus placed forever beyond the reach of question.

The final debate on the resolution was postponed, as we have seen, for nearly a month. In the meantime all who are conversant with the course of action of all deliberative bodies know how much is done by conversation among the members. It is not

often, indeed, that proselytes are made on great questions by public debate. On such questions, opinions are far more frequently formed in private, and so formed that debate is seldom known to change them. Hence the value of the out-of-door talent of chamber consultation, where objections candidly stated are candidly, calmly, and mildly discussed; where neither pride, nor shame, nor anger takes part in the discussion nor stands in the way of a correct conclusion; but where everything being conducted frankly, delicately, respectfully, and kindly, the better cause and the better reasoner are almost always sure of success.

In this kind of service, as well as in all that depended on the power of composition, Mr. Jefferson was as much a master magician as his eloquent friend Adams was in debate. They were, in truth, hemispheres of the same golden globe, and required only to be brought and put together, to prove that they were parts of the same heaven-formed whole.

On the present occasion, however, much still remained to be effected by debate. The first of July came, and the great debate on the resolution for Independence was resumed, with fresh spirit. The discussion was again protracted for two days, which, in addition to the former three, were sufficient, in that age, to call out all the speaking talent of the House. Botta, the Italian historian of our Revolution, has made Mr. Dickinson and Mr. Lee the principal speakers on the opposite sides of this

question; and availing himself of that dramatic license of ancient historians, which the fidelity of modern history has exploded, he has drawn, from his own fancy, two orations, which he has put into the mouths of those distinguished men. With no disposition to touch, with a hostile hand, one leaf of the well-earned laurels of Mr. Lee, (which every American would feel far more pleasure in contributing to brighten and to cherish,) and with no feelings but those of reverence and gratitude for the memory of the other great patriots who assisted in that debate, may we not say, and are we not bound in justice to say that Botta is mistaken in the relative prominency of one, at least, of his prolocutors?

Mr. Jefferson has told us that "the Colossus of that Congress—the great pillar of support to the Declaration of Independence, and its ablest advocate and champion on the floor of the House, was John Adams." How he supported it, can now be only matter of imagination: for the debate was conducted with closed doors, and there was no reporter on the floor to catch the strains living as they rose. I will not attempt what Mr. Adams himself, if he were alive, could not accomplish. He might recall the topics of argument: but with regard to those flashes of inspiration, those bursts of passion, which grew out of the awful feelings of the moment, they are gone forever, with the reality of the occasion: and the happiest effort of fancy to supply their

place, (by me, at least) would bear no better resemblance to the original, than the petty criminations of an artificial volcano, to the sublime explosions of thundering Ætna. Waiving, therefore, the example of Botta, let it suffice for us to know that in that moment of darkness, of terror, and of consternation, when the election was to be made between an attempt **at liberty** and independence on the one hand, and **defeat**, subjugation, and death on the other, the courage of Adams, in the true spirit of heroism, rose in proportion to the dangers that pressed around him; and that he poured forth that only genuine eloquence, the eloquence of the soul, which, in the language of Mr. Jefferson, "moved his hearers from their seats." The objections of his adversaries were seen no longer but in a state of wreck; floating, in broken fragments, on the billows of the storm: and over rocks, over breakers, and amid engulfing whirlpools, that everywhere surrounded him, he brought the gallant ship of the nation safe into port.

It was on the evening of the day on which this great victory was achieved, (before which, in moral grandeur, the trophies of Marengo and the Nile fade away,) and while his mind was yet rolling with the agitation of the recent tempest, that he wrote that letter to the venerable partner of his bosom, which has now become matter of history; in which, after announcing the adoption of the resolution, he foretells the future glories of his country, and the honors

with which the returning anniversary of her Declaration of Independence would be hailed, till time should be no more. That which strikes us on the first perusal of this letter, is, the prophetic character with which it is stamped, and the exactness with which its predictions have been fulfilled. But his biographer will remark in it another character; the deep political calculations of results, through which the mind of the writer, according to its habit, had flashed; and the firm and undoubting confidence with which, in spite of those appearances that alarmed and misled weaker minds, he looked to the triumphant close of the struggle.

The resolution having been carried, the draught of the Declaration came to be examined in detail; and so faultless had it issued from the hands of its author, that it was adopted as he had prepared it, pruned only of a few of its brightest inherent beauties, through a prudent deference to some of the States. It was adopted about noon of the Fourth, and proclaimed to an exulting nation on the evening of the same day.

That brave and animated band who signed it—where are they now? What heart does not sink at the question? One only survives: Charles Carroll, of Carrollton—a noble specimen of the age that is gone by, and now the single object of that age, on whom the veneration and prayers of his country are concentrated. The rest have bequeathed to us the immortal record of their virtue and patriotism,

and have ascended to a brighter reward than man can confer.

Of that instrument to which you listen with reverence on every returning anniversary of its adoption, "which forms the ornament of our halls, and the first political lesson of our children," it is needless to speak. You know that in its origin and object it was a statement of the causes which had compelled our fathers to separate themselves from Great Britain, and to declare these States free and independent. It was the voice of the American nation addressing herself to the other nations of the earth; and the address is, in all respects, worthy of this noble personification. It is the great argument of America in vindication of her course; and as Mr. Adams had been the Colossus of the cause on the floor of Congress, his illustrious friend, the author of this instrument, may well be pronounced to have been its Colossus on the theatre of the world.

The decisive step which fixed the destiny of the nation had now been taken: and that step was irrevocable. "The die was now indeed cast. The Rubicon had been crossed," effectually, finally, forever. There was no return but to chains, to slavery, and death. No such backward step was meditated by the firm hearts that led on the march of the nation; but, confiding in the justice of Heaven and the final triumph of truth, they moved forward in solid phalanx and with martial step, regardless of the tempest that was breaking around them.

Their confidence in the favor and protection of Heaven, however, strong and unshaken as it was, did not dispose them to relax their own exertions, nor to neglect the earthly means of securing their triumph. They were not of the number of those who call upon Hercules, and put not their own shoulders to the wheel. Our adversary was one of the most powerful nations on earth. Our whole strength consisted of a few stout hearts and a good cause. But we were wofully deficient in all the sinews of war: we wanted men, we wanted arms, we wanted money; and these could be procured only from abroad. But the intervening ocean was covered with the fleets of the enemy; and the patriot Laurens, one of their captives, was already a prisoner in the Tower of London. Who was there to undertake this perilous service? He who was ever ready to peril any service in the cause of his country: John Adams. Congress knew their man, and did not hesitate on the choice. Appointed a minister to France, he promptly obeyed the sacred call, and, with a brave and fearless heart, he ran the gantlet through the hostile fleet, and arrived in safety. Passing from court to court, he pleaded the cause of his country with all the resistless energy of truth; and availing himself adroitly of the selfish passions and interests of those courts, he ceased not to ply his efforts with matchless dexterity, until the objects of his mission were completely attained. With the exception of one short interval of a return

home in 1779, when he aided in giving form to the Constitution of his native State, he remained abroad in France, in Holland—wherever he could be most useful—in the strenuous, faithful and successful service of his country, receiving repeated votes of thanks from Congress, till the storm was over, and peace and liberty came to crown his felicity and realize the cherished vision of his youth.

Mr. Jefferson meanwhile was not less strenuously and successfully engaged at home in forwarding and confirming the great objects of the Revolution and making it a revolution of mind as well as of government. Marking, with that sagacity which distinguished him, the series of inventions by which tyranny had contrived to tutor the mind to subjection, and educate it in habits of servile subordination, he proceeded, in Virginia, with the aid of Pendleton and Wythe, to break off the manacles, one by one, and deliver the imprisoned intellect from this debasing sorcery. The law of entails, that feudal contrivance to foster and nourish a vicious aristocracy at the expense of the community, had, at a previous period, been broken up, on their suggestion; and property was left to circulate freely, and impart health and vigor to the operations of society. The law of primogeniture, that other feudal contrivance to create and keep up an artificial inequality among men whom their Creator had made equal, was now repealed, and the parent and his children were restored to their natural relation. And, above

all, that daring usurpation on the rights of the Creator, as well as the creature, which presumes to dictate to man what he shall believe, and in what form he shall offer the worship of his heart, and this, too, for the vile purpose of strengthening the hands of a temporal tyrant, by feeding and pampering the tools of his power, was indignantly demolished, and the soul was restored to its free communion with the God who gave it.

The preamble to the bill establishing religious freedom in Virginia, is one of the most morally sublime of human productions. By its great author it was always esteemed as one of his happiest efforts, and the measure itself one of his best services, as the short and modest epitaph left by him attests. Higher praise cannot and need not be given to it, than to say, it is in all respects worthy of the pen which wrote the Declaration of Independence: that it breathes the same lofty and noble spirit, and is a fit companion for that immortal instrument.

The legislative enactments that have been mentioned, form a small part only of an entire revision of the laws of Virginia. The collection of bills passed by these great men, (one hundred and twenty-six (126) in number,) presents a system of jurisprudence so comprehensive, profound, and beautiful, so perfectly, so happily adapted to the new state of things, that, if its authors had never done anything else, impartial history would have assigned them a place by the side of Solon and Lycurgus.

In 1779, Mr. Jefferson was called to assume the helm of government in Virginia in succession to Patrick Henry. He took that helm at the moment when war, for the first time, had entered the limits of the commonwealth. With what strength, fidelity and ability he held it, under the most trying circumstances, the highest testimonials now stand on the journals of Congress, as well as those of Virginia.

It is true that a poor attempt was made, in after times, to wound the honor of his administration. But he bore a charmed character; and this, like every other blow that has ever been aimed at it, only recoiled to crush his accuser, and to leave him the brighter and stronger for the assault.

In 1781 his alert and active mind, which watched the rising character of his new-born country, with all the jealous vigilance of an anxious father, found a new occasion to call him into the intellectual field. Our country was yet but imperfectly known in Europe. Its face, its soil, its physical capacities, its animals and even the men who inhabited it, were so little known, as to have furnished to philosophers abroad a theme of unfounded and degrading speculation. Those visionaries, dreaming over theories which they wanted the means or the inclination to confront with facts, had advanced, among others, the fantastic notion that even man degenerated by transplantation to America. To refute this insolent position, and to place his country before Europe and the world on the elevated ground

she was entitled to hold, the "Notes on Virginia" were prepared and published. He there pointed to Washington, to Franklin, and to Rittenhouse, as being alone sufficient to exterminate this heresy; and we may now point to Jefferson and to Adams, as sufficient to annihilate it. This pure and proud offering on the altar of his country, the "Notes on Virginia," honored its author abroad not less than at home; and when, shortly afterwards, the public service called him to Europe, it gave him a prompt and distinguished passport into the highest circles of science and literature.

Thus actively and usefully employed in guarding the fame and advancing the honor and happiness of his country, the War of the Revolution came to its close; and on the 19th of October, 1781, of which this day is the anniversary, Great Britain bowed to the ascendancy of our cause. Her last effective army struck her standard on the heights of York, and peace and independence came to bless our land. Mr. Adams was still abroad when this great consummation of his early hopes took place; and, although the war was over, a difficult task still remained to be performed. The terms of peace were yet to be arranged, and to be arranged under circumstances of the most complicated embarrassment.

That the acknowledgment of our independence was to be its first and indispensable condition, was well understood; and Mr. Adams, then at the Hague,

with that decision which always marked his character, refused to leave his post and take part in the negotiation at Paris, until the powers of the British Commissioner should be so enlarged as to authorize him to make that acknowledgment unequivocally. I will not detain you by a rehearsal of what you so well know, the difficulties and intricacies by which this negotiation was protracted. Suffice it to say, that the firmness and skill of the American Commissioners triumphed on every point. The treaty of peace was executed; and the last seal was thus put to the independence of these States.

Thus closed the great drama of the American Revolution. And here for a moment let us pause. If the services of our departed fathers had closed at this point, as it did with many of their compatriots—with too many, if the wishes and prayers of their country could have averted it—what obligations, what honors, should we not owe to their memories! What would not the world owe to them! But, as if they had not already done enough, as if, indeed, they had done nothing, while anything yet remained to be done, they were ready with renovated youth and elastic step, to take a new start in the career of their emancipated country.

The Federal Constitution was adopted, and a new leaf was turned in the history of man. With what characters the page should be inscribed—whether it should open a great era of permanent good to the human family, or pass away like a portent of

direful evil, was now to depend on the wisdom and virtue of America. At this time our two great patriots were both abroad in the public service: Mr. Adams in England, where in 1787 he refuted, by his great work, "The Defence of the American Constitutions," the wild theories of Turgot, DeMalby, and Price; and Mr. Jefferson in France, where he was presenting in his own person a living and splendid refutation of the notion of degeneracy in the American man. On the adoption of the Federal Constitution, they were both called home, to lend the weight of their character and talents to this new and momentous experiment on the capacity of man for self-government. Mr. Adams was called to fill the second office under the new government, the first having been justly conferred by the rule "deter fortiori"; and Mr. Jefferson to take the direction of the highest Executive Department. The office of Vice-President afforded, as you are aware, no scope for the public display of talent. But the leisure which is allowed enabled Mr. Adams to pour out, from his full-fraught mind, another great political work, his Discourses on Davilla; and while he presided over the Senate with unexceptionable dignity and propriety, President Washington always found in him an able and honest adviser, in whom his confidence was implicit and unbounded.

Mr. Jefferson had a theatre that called for action. The Department of State was now, for the first, to be organized. Its operations were all to be moulded

into system, and an intellectual character was to be given to it, as well as the government to which it belonged, before this nation and before the world.

The frequent calls made by Congress for reports on the most abstruse questions of science connected with government, and on those vast and novel and multifarious subjects of political economy, peculiar to this wide extended and diversified continent: discussions with the ministers of foreign governments, more especially with those of France and England and Spain, on those great and agitating questions of international law, which were then continually arising; and instructions to our own ministers abroad, resident at the courts of the great belligerent powers, and who had consequently the most delicate and discordant interests to manage; presented a series of labors for the mind, which few, *very few* men in this or any other country could have sustained with reputation. How Mr. Jefferson acquitted himself you all know.

It is one of the peculiarities of his character to have discharged the duties of every office to which he was called, with such exact, appropriate, and felicitous ability, that he seemed, for the time, to have been born for that alone.

As an evidence of the unanimous admiration of the matchless skill and talent with which he discharged the duties of this office, I hope it may be mentioned, without awaking any asperity of feeling, that when, at a subsequent period, he was put in

nomination by his friends for the office of President, his adversaries publicly objected—"that nature had made him only for a Secretary of State."

President Washington having set the great example, which has ingrafted on the Constitution as firmly as if it had formed one of its express provisions, the principle of retiring from the office of President at the end of eight years, Mr. Adams succeeded him, and Mr. Jefferson followed Mr. Adams in the office of Vice-President.

Mr. Adams came into the office of President at a time of great commotion, produced chiefly by the progress of the revolution in France, and those strong sympathies which it naturally generated here. The spirit of party was high, and in the feverish excitement of the day much was said and done, on both sides, which the voice of impartial history, if it shall descend to such details, will unquestionably condemn, and which the candid and the good on both sides lived, themselves, to regret.

One incident I will mention, because it is equally honorable to both the great men whom we are uniting in these obsequies. In Virginia, where the opposition ran high, the younger politicians of the day, taking their tone from the public journals, have, on more occasions than one, in the presence of Mr. Jefferson, imputed to Mr. Adams a concealed design to sap the foundations of the Republic, and to supply its place with a monarchy, on the British

model. The uniform answer of Mr. Jefferson to this charge will never be forgotten by those who have heard it, and of whom (as I have recently had occasion to prove) there are many still living, besides the humble individual who is now addressing you. It was this: "Gentlemen, you do not know that man: There is not upon this earth a more perfectly honest man than John Adams. Concealment is no part of his character; of that he is utterly incapable: it is not in his nature to meditate anything that he would not publish to the world. The measures of the General Government are a fair subject for difference of opinion. But do not found your opinions on the notion that there is the smallest spice of dishonesty, moral or political, in the character of John Adams: for I know him *well*, and I repeat it, that a man more perfectly honest never issued from the hands of his Creator." And such is now, and has long been, the unanimous opinion of his countrymen.

Of the measures adopted during his administration you do not expect me to speak. I should offend against your own sense of propriety, were I to attempt it. We are here to mingle together over the grave of the departed patriot, our feelings of reverence and gratitude for services whose merit we all acknowledge: and cold must be the heart which does not see and feel, in his life, enough to admire and to love, without striking one string that could produce one unhallowed note.

xxxviii Wirt's Eulogy on Jefferson

History and biography will do ample justice to every part of his character, public and private; and impartial posterity will correct whatever errors of opinion may have been committed to his prejudice by his contemporaries. Let it suffice for us, at this time, to know, that he administered the government with a pure, and honest, and upright heart, and that whatever he advised flowed from the master passion of his breast, a holy and all-absorbing love for the happiness and honor of his country.

Mr. Jefferson, holding the Vice-Presidency, did not leave even that negative office, as, indeed, he never left any other, without marking its occupancy with some useful and permanent vestige. For it was during this term that he digested and compiled that able manual which now gives the law of proceeding, not only to the two Houses of Congress, but to all the legislatures of the States throughout the Union.

On Mr. Adams' retirement, pursuing the destiny which seems to have tied them together, Mr. Jefferson again followed him in the office which he vacated, the Presidency of the United States: and he had the good fortune to find, or to make a smoother sea. The violence of the party storm gradually abated, and he was soon able to pursue his peaceful course without any material interruption. Having forborne, for the obvious reasons which have been suggested, to touch the particulars of Mr. Adams' administration, the same forbearance, for the same

reasons, must be exercised with regard to Mr. Jefferson. But, forbearing details, it will be no departure from this rule to state, in general, the facts: that Mr. Jefferson continued at the helm for eight years, the term which the example of Washington had consecrated; that he so administered the government as to meet the admiration and applause of a great majority of his countrymen, as the overwhelming suffrage at his second election attests: that by that majority he was thought to have presented a perfect model of a republican administration, on the true basis, and in the true spirit of the Constitution; and that, by them the measures of all the succeeding administrations have been continually brought to the standard of Mr. Jefferson's, as to an established and unquestionable test, and approved or condemned in proportion to their accordance with that standard.

These are facts which are known to you all. Another fact I will mention, because it redounds so highly to the honor of his magnanimous and patriotic rival. It is this: that that part of Mr. Jefferson's administration, and of his successor treading in his steps, which was most violently opposed, the policy pursued towards the British Government subsequent to 1806, received the open, public and powerful support of the pen, as well as the tongue, of the great sage of Quincy. The banished Aristides never gave a nobler proof of pure and disinterested patriotism. It was a genuine

emanation from the altar of the Revolution, and in perfect accordance with the whole tenor of the life of our illustrious patriot sage.

Waiving all comment on Mr. Jefferson's public measures, there is yet a minor subject, which, standing where we do, there seems to be a peculiar propriety in noticing: for, small as it is, it is strikingly characteristic of the man, and we have an immediate interest in the subject. It is this: the great objects of national concern, and the great measures which he was continually projecting and executing for the public good, on a new and vast scheme of policy wholly his own, and stamped with all the vigor and grandeur of his Olympic mind, although they were such as would not only have engrossed but overwhelmed almost any other man, did not even give full employment to him; but with that versatile and restless activity which was prone to busy itself usefully and efficaciously with all around him, he found time to amuse himself and to gratify his natural taste for the beautiful, by directing and overlooking in person, (as many of you can witness) the improvements and ornaments of this city of the nation: and it is to his taste and industry that we owe, among other things which it were needless to enumerate, this beautiful avenue¹ which he left in such order as to excite the admiration of all who approached us.

Having closed his administration, he was followed

¹ Pennsylvania avenue.

by the applause, the gratitude, and blessings of his country, into that retirement which no man was ever better fitted to grace and enjoy. And from that retirement, together with his precursor, the venerable patriarch of Quincy, could enjoy, that supreme of all earthly happiness, the retrospect of a life well and greatly spent in the service of his country and mankind. The successful warrior, who had desolated whole empires for his own aggrandizement, the successful usurper of his country's rights and liberties, may have their hours of swelling pride, in which they may look back with a barbarous joy upon the triumph of their talents, and feast upon the adulation of the sycophants that surround them; but, night and silence come; and conscience takes her turn. The bloody field rises upon the startled imagination. The shades of the slaughtered innocent stalk in terrific procession before the couch. The agonizing cry of countless widows and orphans invades the ear. The bloody dagger of the assassin plays, in airy terror, before the vision. Violated liberty lifts her avenging lance, and a down-trodden nation rises before them, in all the majesty of its wrath. What, what are the hours of a splendid wretch like this, compared with those that shed their poppies and their roses upon the pillows of our peaceful and virtuous patriots! Every night bringing to them the balm and health of repose, and every morning offering to them "their history in a nation's eyes!" This, this it is to be

greatly virtuous: and be this the only ambition that shall ever touch an American bosom!

Still unexhausted by such a life of service in the cause of his country, Mr. Jefferson found yet another and most appropriate employment for his old age: the erection of a seat of science in his native State. The University of Virginia is his work. His, the first conception: his, the whole impulse and direction; his, the varied and beautiful architecture, and the entire superintendence of its erection: the whole scheme of its studies, its organization, and government, are his. He is therefore, indeed, the father of the University of Virginia. That it may fulfill to the full extent the great and patriotic purposes and hopes of its founder, cannot fail to be the wish of every American bosom. This was the last and crowning labor of Mr. Jefferson's life: a crown so poetically appropriate, that fancy might well suppose it to have been wreathed and placed on his brow by the hand of the epic muse herself.

It is the remark of one of the most elegant writers of antiquity, in the beautiful essay which he has left us, "on old age," that "to those who have not within themselves the resources of living well and happily, every age is oppressive; but that to those who have, nothing is an evil which the necessity of nature brings along with it." How rich our two patriots were in these internal resources, you all know. How lightly they bore the burden of increasing years was apparent from the cheerfulness and

vigor with which, after having survived the age to which they properly belonged, they continued to live among their posterity. How happy they were in their domestic relations, how beloved by their neighbors and friends, how revered and honored by their country and by the friends of liberty in every quarter of the world, is a matter of open and public notoriety. Their houses were the constant and thronged resort of the votaries of virtue, and science, and genius, and patriotism, from every portion of the civilized globe; and no one ever left them without confessing that his highest expectation had been realized, and even surpassed, in the interview.

Of "the chief of the Argonauts," as Mr. Jefferson so classically and so happily styled his illustrious friend of the North, it is my misfortune to be able to speak only by report. But every representation concurs, in drawing the same pleasing and affecting picture of the Roman simplicity in which that Father of his Country lived; of the frank, warm, cordial, and elegant reception that he gave to all who approached him; of the interesting kindness with which he disbursed the golden treasures of his experience, and shed around him the rays of his descending sun. His conversation was rich in anecdote and characters of the times that were past; rich in political and moral instruction; full of that best of wisdom, which is learnt from real life, and flowing from his heart with that warm and honest

frankness, that fervor of feeling and force of diction, which so strikingly distinguished him in the meridian of his life. Many of us heard that simple and touching account given of a parting scene with him, by one of our eloquent divines: when he rose up from that little couch behind the door, on which he was wont to rest his aged and weary limbs, and with his silver locks hanging on each side of his honest face, stretching forth that pure hand, which was never soiled even by a suspicion, and gave his kind and parting benediction. Such was the blissful and honored retirement of the sage of Quincy. Happy the life which, verging upon a century, had met with but one serious political disappointment! And even for that, he had lived to receive a golden atonement "even in that quarter in which he had garnered up his heart." Let us now turn for a moment to the patriot of the South. The Roman moralist, in that great work which he has left for the government of man in all the offices of life, has descended even to prescribe the kind of habitation in which an honored and distinguished man should dwell. It should not, he says, be small, and mean, and sordid: nor, on the other hand, extended with profuse and wanton extravagance. It should be large enough to receive and accommodate the visitors which such a man never fails to attract, and suited in its ornaments, as well as its dimensions, to the character and fortune of the individual. Monticello has now lost its great charm. Those of you

who have not already visited it, will not be very apt to visit it hereafter: and from the feelings which you cherish for its departed owner, I persuade myself that you will not be displeased with a brief and rapid sketch of that abode of domestic bliss, that temple of science. Nor is it, indeed, foreign to the express purpose of this meeting, which in looking to "his life and character," naturally embraces his home and domestic habits. Can anything be indifferent to us, which was so dear to him and which was a subject of such just admiration to the hundreds and thousands that were continually resorting to it, as to an object of pious pilgrimage?

The mansion house at Monticello was built and furnished in the days of his prosperity. In its dimensions, its architecture, its arrangements and ornaments, it is such a one as became the character and fortune of the man. It stands upon an elliptic plain, formed by cutting down the apex of a mountain; and on the west, stretching away to the north and the south, it commands a view of the Blue Ridge for a hundred and fifty miles, and brings under the eye one of the boldest and most beautiful horizons in the world; while on the east, it presents an extent of prospect, bounded only by the spherical form of the earth, in which nature seems to sleep in eternal repose, as if to form one of her finest contrasts with the rude and rolling grandeur of the west. In the wide prospect, and scattered to the north and south, are several detached mountains,

which contribute to animate and diversify this enchanting landscape; and among them to the south, Williss' Mountain, which is so interestingly depicted in his notes. From this summit the philosopher was wont to enjoy that spectacle, among the sublimest of Nature's operations, the looming of the distant mountains; and to watch the motions of the planets, and the greater revolution of the celestial sphere. From this summit, too, the patriot could look down with uninterrupted vision upon the wide expanse of the world around, for which he considered himself born; and upward to the open and vaulted heavens which he seemed to approach, as if to keep him continually in mind of his high responsibility. It is, indeed, a prospect in which you see and feel at once that nothing mean or little could live.

It is a scene fit to nourish those great and high-souled principles which formed the elements of his character and was a most noble and appropriate post, for such a sentinel, over the rights and liberties of man. Approaching the house on the east, the visitor instinctively paused to cast around one thrilling glance at this magnificent panorama; and then passed to the vestibule, where, if he had not been previously informed, he would immediately perceive that he was entering the house of no common man. In the spacious and lofty hall which opens before him, he marks no tawdry and unmeaning ornaments: but before, on the right, on the left,

all around, the eye is struck and gratified with objects of science and taste so classed and arranged as to produce their finest effect. On one side, specimens of sculpture set out, in such order, as to exhibit at a *coup d'oeil* the historical progress of that art; from the first rude attempts of the aborigines of our country, up to that exquisite and finished bust of the great patriot himself, from the master hand of Ciracchi. On the other side the visitor sees displayed a vast collection of specimens of Indian art, their paintings, weapons, ornaments, and manufactures; on another, an array of the fossil productions of our country, mineral and animal; the polished remains of those colossal monsters that once trod our forests, and are no more; and a variegated display of the branching honors of those "monarchs of the waste," that still people the wilds of the American continent.

From this hall he was ushered into a noble salon, from which the glorious landscape of the west again burst upon his view; and which, within, is hung thick around with the finest productions of the pencil—historical paintings of the most striking subjects from all countries and all ages; the portraits of distinguished men and patriots, both of Europe and America, and medallions and engravings in endless profusion. While the visitor was yet lost in the contemplation of these treasures of the arts and sciences, he was startled by the approach of a strong and sprightly step, and turning with

instinctive reverence to the door of entrance, he was met by the tall and animated and stately figure of the patriot himself—his countenance beaming with intelligence and benignity, and his outstretched hand, with its strong and cordial pressure, confirming the courteous welcome of his lips. And then came that charm of manner and conversation that passes all description—so cheerful—so unassuming—so free, and easy, and frank, and kind, and gay—that even the young and overawed and embarrassed visitor at once forgot his fears, and felt himself by the side of an old and familiar friend. There was no effort, no ambition in the conversation of the philosopher. It was as simple and unpretending as nature itself. And while in this easy manner he was pouring out instruction, like light from an inexhaustible solar fountain, he seemed continually to be asking, instead of giving information. The visitor felt himself lifted by the contact into a new and nobler region of thought, and became surprised at his own buoyancy and vigor. He could not, indeed, help being astounded, now and then, at those transcendent leaps of the mind, which he saw made without the slightest exertion, and the ease with which this wonderful man played with subjects which he had been in the habit of considering among the *argumenta crucis* of the intellect. And then there seemed to be no end to his knowledge. He was a thorough master of every subject that was touched. From the details of

the humblest mechanic art, up to the highest summit of science, he was perfectly at his ease and everywhere at home. There seemed to be no longer any *terra incognita* of the human understanding: for, what the visitor had thought so, he now found reduced to a familiar garden walk; and all this carried off so lightly, so playfully, so gracefully, so engagingly, that he won every heart that approached him, as certainly as he astonished every mind.

Mr. Jefferson was wont to remark, that he never left the conversation of Dr. Franklin without carrying away with him something new and useful. How often, and how truly, has the same remark been made of him. Nor is this wonderful, when we reflect that that mind of matchless vigor and versatility had been, all his life, intensely engaged in conversing with the illustrious dead, or following the march of science in every land, or bearing away on its own steady and powerful wing into new and unexplored regions of thought. Shall I follow him to the table of his elegant hospitality, and show him to you in the bosom of his enchanting family? Alas! those Attic days are gone; that sparkling eye is quenched; that voice of pure and delicate affection, which ran with such brilliancy and effect through the whole compass of colloquial music, now bright with wit, now melting with tenderness, is hushed forever in the grave! But let me leave a theme on which friendship and gratitude have, I fear, already been tempted to linger too long. There

1 Wirt's Eulogy on Jefferson

was one solace of the declining years of both of these great men, which must not be passed. It is that correspondence which arose between them, after their retirement from public life. That correspondence, it is to be hoped, will be given to the world.¹

If it ever shall, I speak from knowledge when I say, it will be found to be one of the most interesting and affecting that the world has ever seen. That "cold cloud" which had hung for a time over their friendship, passed away with the conflict out of which it had grown, and the attachment of their early life returned in all its force.

They had both now bid adieu, a final adieu, to all public employments, and were done with all the agitating passions of life. They were dead to the ambitious world; and this correspondence resembles, more than anything else, one of those conversations in the Elysium of the ancients, which the shades of the departed great were supposed by them to hold, with regard to the affairs of the world they had left. There are the same playful allusions to the points of difference that had divided their parties: the same mutual, and light, and unimpassioned raillery on their own past misconceptions and mistakes; the same mutual and just admiration and respect for their many virtues and services to mankind. That correspondence was, to

¹The most interesting part of the correspondence here referred to by the orator (William Wirt) has been incorporated in the present work. See Contents of Volumes XIII, XIV, XV, XVI.

them both, one of the most genial employments of their old age: and it reads a lesson of wisdom on the bitterness of party spirit, by which the wise and the good will not fail to profit.

Besides this affectionate intercourse between them, you are aware of the extensive correspondence which they maintained with others, and of which some idea may be formed by those letters which, since their death, have already broken upon us through the press, from quarters so entirely unexpected. They were considered as the living historians of the Revolution and of the past age, as well as oracles of wisdom to all who consulted them. Their habit in this particular seems to have been the same; never to omit answering any respectful letter they received, no matter how obscure the individual, or how insignificant the subject. With Mr. Jefferson this was a sacred law, and as he always wrote at a polygraphic desk, copies have been preserved of every letter. His correspondence travelled far beyond his own country, and embraced within its circle many of the most distinguished men of his age in Europe. What a feast for the mind may we not expect from the published letters of these excellent men! They were both masters in this way, though somewhat contrasted. Mr. Adams, plain, nervous, and emphatic, the thought couched in the fewest and strongest words, and striking with a kind of epigrammatic force. Mr. Jefferson, flowing with easy and careless melody, the language

at the same time pruned of every redundant word, and giving the thought with the happiest precision, the aptest words dropping unbidden and unsought into their places, as if they had fallen from the skies; and so beautiful, so felicitous, as to fill the mind with a succession of delightful surprises, while the judgment is, at the same time, made captive by the closely compacted energy of the argument.

Mr. Jefferson's style is so easy and harmonious, as to have led superficial readers to remark, that he was deficient in strength: as if ruggedness and abruptness were essential to strength. Mr. Jefferson's strength was inherent in the thoughts and conceptions, though hidden by the light and graceful vestments which he threw over them. The internal divinity existed and was felt, though concealed under the finely harmonized form of the man; and if he did not exhibit himself in his compositions with the insignia of Hercules, the shaggy lion's skin and the knotted club, he bore the full quiver and the silver bow of Apollo; and every polished shaft that he loosened from the string, told with unerring and fatal precision: *Δεινὴ δὲ κλαγγὴ γένητ' ἀργυρέοιο βιοῖο.*

These two great men, so eminently distinguished among the patriots of the Revolution, and so illustrious by their subsequent services, became still more so, by having so long survived all that were most highly conspicuous among their coevals. All the stars of first magnitude in the equatorial and

tropical regions had long since gone down, and still they remained. Still they stood full in view, like those two resplendent constellations near the opposite poles, which never set to the inhabitants of the neighboring zones.

But they, too, were doomed at length to set: and such was their setting as no American bosom can ever forget!

In the midst of their fast-decaying strength, and when it was seen that the approach of death was certain, their country and its glory still occupied their thoughts, and circulated with the last blood that was ebbing to their hearts. Those who surrounded the death-bed of Mr. Jefferson report that, in the few short intervals of delirium that occurred, his mind manifestly relapsed to the age of the Revolution. He talked in broken sentences of the Committees of Safety, and the rest of that great machinery which he imagined to be still in action. One of his exclamations was, "Warn the Committee to be on their guard;" and he instantly rose in his bed, with the help of his attendants, and went through the act of writing a hurried note. But these intervals were few and short. His reason was almost constantly on her throne, and the only aspiration he was heard to breathe, was the prayer that he might live to see the Fourth of July. When that day came, all that he was heard to whisper was the repeated ejaculation,—"*Nunc Domine dimittis*," Now, Lord, let Thy servant depart in peace!

And the prayer of the patriot was heard and answered.

The patriarch of Quincy, too, with the same certainty of death before him, prayed only for the protraction of his life to the same day. His prayer also was heard: and when a messenger from the neighboring festivities, unapprized of his danger, was deputed to ask him for the honor of a toast, he showed the object on which his dying eyes were fixed, and exclaimed with energy, "Independence forever!" His country first, his country last, his country always! "O save my country—Heaven!" he said, and died.

Hitherto, fellow citizens, the Fourth of July had been celebrated among us, only as anniversary of our Independence, and its votaries had been merely human beings. But at its last recurrence—the great jubilee of the nation—the anniversary, it may well be termed, of the liberty of man—Heaven itself mingled visibly in the celebration, and hallowed the day anew by a double apotheosis. Is there one among us to whom this language seems too strong? Let him recall his own feelings, and the objection will vanish. When the report first reached us, of the death of the great man, whose residence was nearest, who among us was not struck with the circumstance that he should have been removed on the day of his own highest glory? And who, after the first shock of the intelligence had passed, did not feel a thrill of mournful delight at the char-

acteristic beauty of the close of such a life? But while our bosoms were yet swelling with admiration at this singularly beautiful coincidence, when the second report immediately followed, of the death of the great sage of Quincy, *on the same day*, I appeal to yourselves—is there a voice that was not hushed, is there a heart that did not quail, at this close manifestation of the hand of Heaven in our affairs? Philosophy, recovered of her surprise, may affect to treat the coincidence as fortuitous. But Philosophy herself was mute, at the moment, under the pressure of the feeling that these illustrious men had rather been translated than had died. It is in vain to tell us that men die by thousands every day in the year, all over the world. The wonder is not that two men have died on the same day, but that two such men, after having performed so many and such splendid services in the cause of liberty—after the multitude of other coincidences which seemed to have linked the destinies together—after having lived so long together, the objects of their country's joint veneration—after having been spared to witness the great triumph of their toils at home—and looked together from Pisgah's top on the sublime effort of that grand impulse which they had given to the same glorious cause throughout the world, should on this fiftieth anniversary of the day on which they had ushered that cause into light, be both caught up to Heaven together, in the midst of their rap-

tures! Is there a being, of heart so obdurate and sceptical as not to feel the hand and hear the voice of Heaven in this wonderful dispensation? And may we not, with reverence, interpret its language? Is it not this? "These are My beloved servants, in whom I am well pleased. They have finished the work for which I sent them into the world: and are now called to their reward. Go ye, and do likewise!"

One circumstance alone remains to be noticed. In a private memorandum found among some other obituary papers and relics of Mr. Jefferson, is a suggestion, in case a memorial over him should ever be thought of, that a granite obelisk, of small dimensions, should be erected, with the following inscription:

Here was buried
 THOMAS JEFFERSON,
 Author of the Declaration of American Independence,
 of
 The Statute of Virginia for Religious Freedom,
 and
 Father of the University of Virginia.

All the long catalogue of his great and splendid and glorious services, reduced to this brief and modest summary!

Thus lived and thus died our sainted Patriots! May their spirits still continue to hover over their countrymen, inspire all their counsels, and guide

Wirt's Eulogy on Jefferson

them in the same virtuous and noble path! And may that God in whose hands are the issues of all things, confirm and perpetuate to us the inestimable boon which through their agency He has bestowed, and make our Columbia the bright exemplar for all the struggling sons of liberty around the globe.

Announcement of Declaration of Independence

(From the Steps of the State House, Philadelphia)

Reproduced from an Old Engraving

After the Declaration had been approved and accepted by the Congress, it was ordered printed as a broadside for distribution throughout the colonies. Furthermore, it was publicly proclaimed in the principal cities and towns of the new United States. This reproduction depicts the moment of the announcement of the adoption of the Declaration of Independence from the Philadelphia State House.

CORRESPONDENCE.

**LETTERS WRITTEN AFTER HIS RETURN
TO THE UNITED STATES.**

1789-1826.

(CONTINUED.)

JEFFERSON'S WORKS.

LETTERS WRITTEN AFTER HIS RETURN TO THE UNITED STATES.

1789-1826.

TO DOCTOR BENJAMIN RUSH.

MONTICELLO, January 16, 1811.

DEAR SIR,—I had been considering for some days, whether it was not time by a letter, to bring myself to your recollection, when I received your welcome favor of the 2d instant. I had before heard of the heartrending calamity you mention, and had sincerely sympathized with your afflictions. But I had not made it the subject of a letter, because I knew that condolences were but renewals of grief. Yet I thought, and still think, this is one of the cases wherein we should “not sorrow, even as others who have no hope.”

* * * * *

You ask if I have read Hartley? I have not. My present course of life admits less reading than I wish. From breakfast, or noon at latest, to dinner, I am

mostly on horseback, attending to my farm or other concerns, which I find healthful to my body, mind and affairs; and the few hours I can pass in my cabinet, are devoured by correspondences; not those with my intimate friends, with whom I delight to interchange sentiments, but with others, who, writing to me on concerns of their own in which I have had an agency, or from motives of mere respect and approbation, are entitled to be answered with respect and a return of good will. My hope is that this obstacle to the delights of retirement, will wear away with the oblivion which follows that, and that I may at length be indulged in those studious pursuits, from which nothing but revolutionary duties would ever have called me.

I shall receive your proposed publication and read it with the pleasure which everything gives me from your pen. Although much of a sceptic in the practice of medicine, I read with pleasure its ingenious theories.

I receive with sensibility your observations on the discontinuance of friendly correspondence between Mr. Adams and myself, and the concern you take in its restoration. This discontinuance has not proceeded from me, nor from the want of sincere desire and of effort on my part, to renew our intercourse. You know the perfect coincidence of principle and of action, in the early part of the Revolution, which produced a high degree of mutual respect and esteem between Mr. Adams and myself. Cer-

tainly no man was ever truer than he was, in that day, to those principles of rational republicanism which, after the necessity of throwing off our monarchy, dictated all our efforts in the establishment of a new government. And although he swerved, afterwards, towards the principles of the English constitution, our friendship did not abate on that account. While he was Vice-President, and I Secretary of State, I received a letter from President Washington, then at Mount Vernon, desiring me to call together the Heads of departments, and to invite Mr. Adams to join us (which, by-the-by, was the only instance of that being done) in order to determine on some measure which required despatch; and he desired me to act on it, as decided, without again recurring to him. I invited them to dine with me, and after dinner, sitting at our wine, having settled our question, other conversation came on, in which a collision of opinion arose between Mr. Adams and Colonel Hamilton, on the merits of the British constitution, Mr. Adams giving it as his opinion, that, if some of its defects and abuses were corrected, it would be the most perfect constitution of government ever devised by man. Hamilton, on the contrary, asserted, that with its existing vices, it was the most perfect model of government that could be formed; and that the correction of its vices would render it an impracticable government. And this you may be assured was the real line of difference

between the political principles of these two gentlemen. Another incident took place on the same occasion, which will further delineate Mr. Hamilton's political principles. The room being hung around with a collection of the portraits of remarkable men, among them were those of Bacon, Newton and Locke, Hamilton asked me who they were. I told him they were my trinity of the three greatest men the world had ever produced, naming them. He paused for some time: "the greatest man," said he, "that ever lived, was Julius Cæsar." Mr. Adams was honest as a politician, as well as a man; Hamilton honest as a man, but, as a politician, believing in the necessity of either force or corruption to govern men.

You remember the machinery which the federalists played off, about that time, to beat down the friends to the real principles of our Constitution, to silence by terror every expression in their favor, to bring us into war with France and alliance with England, and finally to homologize our Constitution with that of England. Mr. Adams, you know, was overwhelmed with feverish addresses, dictated by the fear, and often by the pen, of the *bloody buoy*, and was seduced by them into some open indications of his new principles of government, and in fact, was so elated as to mix with his kindness a little superciliousness towards me. Even Mrs. Adams, with all her good sense and prudence, was sensibly flushed. And you recollect the short suspension of our inter-

course, and the circumstance which gave rise to it, which you were so good as to bring to an early explanation, and have set to rights, to the cordial satisfaction of us all. The nation at length passed condemnation on the political principles of the federalists, by refusing to continue Mr. Adams in the Presidency. On the day on which we learned in Philadelphia the vote of the city of New York, which it was well known would decide the vote of the State, and that, again, the vote of the Union, I called on Mr. Adams on some official business. He was very sensibly affected, and accosted me with these words: "Well, I understand that you are to beat me in this contest, and I will only say that I will be as faithful a subject as any you will have." "Mr. Adams," said I, "this is no personal contest between you and me. Two systems of principles on the subject of government divide our fellow citizens into two parties. With one of these you concur, and I with the other. As we have been longer on the public stage than most of those now living, our names happen to be more generally known. One of these parties, therefore, has put your name at its head, the other mine. Were we both to die to-day, to-morrow two other names would be in the place of ours, without any change in the motion of the machinery. Its motion is from its principle, not from you or myself." "I believe you are right," said he, "that we are but passive instruments, and should not suffer this

matter to affect our personal dispositions." But he did not long retain this just view of the subject. I have always believed that the thousand calumnies which the federalists, in bitterness of heart, and mortification at their ejection, daily invented against me, were carried to him by their busy intriguers, and made some impression. When the election between Burr and myself was kept in suspense by the federalists, and they were meditating to place the President of the Senate at the head of the government, I called on Mr. Adams with a view to have this desperate measure prevented by his negative. He grew warm in an instant, and said with a vehemence he had not used towards me before, "Sir, the event of the election is within your own power. You have only to say you will do justice to the public creditors, maintain the navy, and not disturb those holding offices, and the government will instantly be put into your hands. We know it is the wish of the people it should be so." "Mr. Adams," said I, "I know not what part of my conduct, in either public or private life, can have authorized a doubt of my fidelity to the public engagements. I say, however, I will not come into the government by capitulation. I will not enter on it, but in perfect freedom to follow the dictates of my own judgment." I had before given the same answer to the same intimation from Gouverneur Morris. "Then," said he, "things must take their course." I turned the conversation to something else, and soon took my

leave. It was the first time in our lives we had ever parted with anything like dissatisfaction. And then followed those scenes of midnight appointment, which have been condemned by all men. The last day of his political power, the last hours, and even beyond the midnight, were employed in filling all offices, and especially permanent ones, with the bitterest federalists, and providing for me the alternative, either to execute the government by my enemies, whose study it would be to thwart and defeat all my measures, or to incur the odium of such numerous removals from office, as might bear me down. A little time and reflection effaced in my mind this temporary dissatisfaction with Mr. Adams, and restored me to that just estimate of his virtues and passions, which a long acquaintance had enabled me to fix. And my first wish became that of making his retirement easy by any means in my power; for it was understood he was not rich. I suggested to some republican members of the delegation from his State, the giving him, either directly or indirectly, an office, the most lucrative in that State, and then offered to be resigned, if they thought he would not deem it affrontive. They were of opinion he would take great offence at the offer; and moreover, that the body of republicans would consider such a step in the outset as auguring very ill of the course I meant to pursue. I dropped the idea, therefore, but did not cease to wish for some opportunity of renewing our friendly understanding.

Two or three years after, having had the misfortune to lose a daughter, between whom and Mrs. Adams there had been a considerable attachment, she made it the occasion of writing me a letter, in which, with the tenderest expressions of concern at this event, she carefully avoided a single one of friendship towards myself, and even concluded it with the wishes "of her who *once* took pleasure in subscribing herself your friend, Abigail Adams." Unpromising as was the complexion of this letter, I determined to make an effort towards removing the cloud from between us. This brought on a correspondence which I now enclose for your perusal, after which be so good as to return it to me, as I have never communicated it to any mortal breathing, before. I send it to you, to convince you I have not been wanting either in the desire, or the endeavor to remove this misunderstanding. Indeed, I thought it highly disgraceful to us both, as indicating minds not sufficiently elevated to prevent a public competition from affecting our personal friendship. I soon found from the correspondence that conciliation was desperate, and yielding to an intimation in her last letter, I ceased from further explanation. I have the same good opinion of Mr. Adams which I ever had. I know him to be an honest man, an able one with his pen, and he was a powerful advocate on the floor of Congress. He has been alienated from me, by belief in the lying suggestions contrived for electioneering purposes, that I perhaps mixed in

the activity and intrigues of the occasion. My most intimate friends can testify that I was perfectly passive. They would sometimes, indeed, tell me what was going on; but no man ever heard me take part in such conversations; and none ever misrepresented Mr. Adams in my presence, without my asserting his just character. With very confidential persons I have doubtless disapproved of the principles and practices of his administration. This was unavoidable. But never with those with whom it could do him any injury. Decency would have required this conduct from me, if disposition had not; and I am satisfied Mr. Adams' conduct was equally honorable towards me. But I think it part of his character to suspect foul play in those of whom he is jealous, and not easily to relinquish his suspicions.

I have gone, my dear friend, into these details, that you might know everything which had passed between us, might be fully possessed of the state of facts and dispositions, and judge for yourself whether they admit a revival of that friendly intercourse for which you are so kindly solicitous. I shall certainly not be wanting in anything on my part which may second your efforts, which will be the easier with me, inasmuch as I do not entertain a sentiment of Mr. Adams, the expression of which could give him reasonable offence. And I submit the whole to yourself, with the assurance, that whatever be the issue, my friendship and respect for yourself will remain unaltered and unalterable.

TO JOHN LYNCH.

MONTICELLO, January 21, 1811.

SIR,—You have asked my opinion on the proposition of Mrs. Mifflin, to take measures for procuring, on the coast of Africa, an establishment to which the people of color of these States might, from time to time, be colonized, under the auspices of different governments. Having long ago made up my mind on this subject, I have no hesitation in saying that I have ever thought it the most desirable measure which could be adopted, for gradually drawing off this part of our population, most advantageously for themselves as well as for us. Going from a country possessing all the useful arts, they might be the means of transplanting them among the inhabitants of Africa, and would thus carry back to the country of their origin, the seeds of civilization which might render their sojournment and sufferings here a blessing in the end to that country.

I received, in the first year of my coming into the administration of the General Government, a letter from the Governor of Virginia, (Colonel Monroe,) consulting me, at the request of the legislature of the State, on the means of procuring some such asylum, to which these people might be occasionally sent. I proposed to him the establishment of Sierra Leone, to which a private company in England had already colonized a number of negroes, and particularly the fugitives from these States during the

Revolutionary War; and at the same time suggested, if this could not be obtained, some of the Portuguese possessions in South America, as next most desirable. The subsequent legislature approving these ideas, I wrote, the ensuing year, 1802, to Mr. King, our Minister in London, to endeavor to negotiate with the Sierra Leone company a reception of such of these people as might be colonized thither. He opened a correspondence with Mr. Wedderburne and Mr. Thornton, secretaries of the company, on the subject, and in 1803 I received through Mr. King the result, which was that the colony was going on, but in a languishing condition; that the funds of the company were likely to fail, as they received no returns of profit to keep them up; that they were therefore in treaty with their government to take the establishment off their hands; but that in no event should they be willing to receive more of these people from the United States, as it was exactly that portion of their settlers which had gone from hence, which, by their idleness and turbulence, had kept the settlement in constant danger of dissolution, which could not have been prevented but for the aid of the Maroon negroes from the West Indies, who were more industrious and orderly than the others, and supported the authority of the government and its laws. I think I learned afterwards that the British government had taken the colony into its own hands, and I believe it still exists. The effort which I made with Portugal, to

obtain an establishment for them within their claims in South America, proved also abortive.

You inquire further, whether I would use my endeavors to procure for such an establishment security against violence from other powers, and particularly from France? Certainly, I shall be willing to do anything I can to give it effect and safety. But I am but a private individual, and could only use endeavors with private individuals; whereas, the National Government can address themselves at once to those of Europe to obtain the desired security, and will unquestionably be ready to exert its influence with those nations for an object so benevolent in itself, and so important to a great portion of its constituents. Indeed, nothing is more to be wished than that the United States would themselves undertake to make such an establishment on the coast of Africa. Exclusive of motives of humanity, the commercial advantages to be derived from it might repay all its expenses. But for this, the national mind is not yet prepared. It may perhaps be doubted whether many of these people would voluntarill consent to such an exchange of situation, and very certain that few of those advanced to a certain age in habits of slavery, would be capable of self-government. This should not, however, discourage the experiment, nor the early trial of it; and the proposition should be made with all the prudent cautions and attentions requisite

to reconcile it to the interests, the safety and the prejudices of all parties.

Accept the assurances of my respect and esteem.

TO MONSIEUR DESTUTT DE TRACY.

MONTICELLO, January 26, 1811.

SIR,—The length of time your favor of June the 12th, 1809, was on its way to me, and my absence from home the greater part of the autumn, delayed very much the pleasure which awaited me of reading the packet which accompanied it. I cannot express to you the satisfaction which I received from its perusal. I had, with the world, deemed Montesquieu's work of much merit; but saw in it, with every thinking man, so much of paradox, of false principle and misapplied fact, as to render its value equivocal on the whole. Williams and others had nibbled only at its errors. A radical correction of them, therefore, was a great desideratum. This want is now supplied, and with a depth of thought, precision of idea, of language and of logic, which will force conviction into every mind. I declare to you, Sir, in the spirit of truth and sincerity, that I consider it the most precious gift the present age has received. But what would it have been, had the author, or would the author, take up the whole scheme of Montesquieu's work, and following the correct analysis he has here developed, fill up all its parts according to his sound views of them? Montes-

quieu's celebrity would be but a small portion of that which would immortalize the author. And with whom? With the rational and high-minded spirits of the present and all future ages. With those whose approbation is both incitement and reward to virtue and ambition. Is then the hope desperate? To what object can the occupation of his future life be devoted so usefully to the world, so splendidly to himself? But I must leave to others who have higher claims on his attention, to press these considerations.

My situation, far in the interior of the country, was not favorable to the object of getting this work translated and printed. Philadelphia is the least distant of the great towns of our States, where there exists any enterprise in this way; and it was not till the spring following the receipt of your letter, that I obtained an arrangement for its execution. The translation is just now completed. The sheets came to me by post, from time to time, for revisal; but not being accompanied by the original, I could not judge of verbal accuracies. I think, however, it is substantially correct, without being an adequate representation of the excellences of the original; as indeed no translation can be. I found it impossible to give it the appearance of an original composition in our language. I therefore think it best to divert inquiries after the author towards a quarter where he will not be found; and with this view, propose to prefix the prefatory epistle now enclosed. As soon

as a copy of the work can be had, I will send it to you by duplicate. The secret of the author will be faithfully preserved during his and my joint lives; and those into whose hands my papers will fall at my death, will be equally worthy of confidence. When the death of the author, or his living consent shall permit the world to know their benefactor, both his and my papers will furnish the evidence. In the meantime, the many important truths the work so solidly establishes, will, I hope, make it the political rudiment of the young, and manual of our older citizens.

One of its doctrines, indeed, the preference of a plural over a singular executive, will probably not be assented to here. When our present government was first established, we had many doubts on this question, and many leanings towards a supreme executive council. It happened that at that time the experiment of such an one was commenced in France, while the single executive was under trial here. We watched the motions and effects of these two rival plans, with an interest and anxiety proportioned to the importance of a choice between them. The experiment in France failed after a short course, and not from any circumstance peculiar to the times or nation, but from those internal jealousies and dissensions in the Directory, which will ever arise among men equal in power, without a principal to decide and control their differences. We had tried a similar experiment in 1784, by establishing a com-

mittee of the States, composed of a member from every State, then thirteen, to exercise the executive functions during the recess of Congress. They fell immediately into schisms and dissensions, which became at length so inveterate as to render all cooperation among them impracticable; they dissolved themselves, abandoning the helm of government, and it continued without a head, until Congress met the ensuing winter. This was then imputed to the temper of two or three individuals; but the wise ascribed it to the nature of man. The failure of the French Directory, and from the same cause, seems to have authorized a belief that the form of a plurality, however promising in theory, is impracticable with men constituted with the ordinary passions. While the tranquil and steady tenor of our single executive, during a course of twenty-two years of the most tempestuous times the history of the world has ever presented, gives a rational hope that this important problem is at length solved. Aided by the counsels of a Cabinet of heads of departments, originally four, but now five, with whom the President consults, either singly or all together, he has the benefit of their wisdom and information, brings their views to one centre, and produces an unity of action and direction in all the branches of the government. The excellence of this construction of the executive power has already manifested itself here under very opposite circumstances. During the administration of our first President, his Cabinet of

four members was equally divided by as marked an opposition of principle as monarchism and republicanism could bring into conflict. Had that Cabinet been a directory, like positive and negative quantities in Algebra, the opposing wills would have balanced each other and produced a state of absolute inaction. But the President heard with calmness the opinions and reasons of each, decided the course to be pursued, and kept the government steadily in it, unaffected by the agitation. The public knew well the dissensions of the Cabinet, but never had an uneasy thought on their account, because they knew also they had provided a regulating power which would keep the machine in steady movement. I speak with an intimate knowledge of these scenes, *quorum pars fui*; as I may of others of a character entirely opposite. The third administration, which was of eight years, presented an example of harmony in a Cabinet of six persons, to which perhaps history has furnished no parallel. There never arose, during the whole time, an instance of an unpleasant thought or word between the members. We sometimes met under differences of opinion, but scarcely ever failed, by conversing and reasoning, so to modify each other's ideas, as to produce an unanimous result. Yet, able and amicable as these members were, I am not certain this would have been the case, had each possessed equal and independent powers. Ill-defined limits of their respective departments, jealousies, trifling at first, but nourished and strengthened

by repetition of occasions, intrigues without doors of designing persons to build an importance to themselves on the divisions of others, might, from small beginnings, have produced persevering oppositions. But the power of decision in the President left no object for internal dissension, and external intrigue was stifled in embryo by the knowledge which incendiaries possessed, that no division they could foment would change the course of the executive power. I am not conscious that my participations in executive authority have produced any bias in favor of the single executive; because the parts I have acted have been in the subordinate, as well as superior stations, and because, if I know myself, what I have felt, and what I have wished, I know that I have never been so well pleased, as when I could shift power from my own, on the shoulders of others; nor have I ever been able to conceive how any rational being could propose happiness to himself from the exercise of power over others.

I am still, however, sensible of the solidity of your principle, that, to insure the safety of the public liberty, its depository should be subject to be changed with the greatest ease possible, and without suspending or disturbing for a moment the movements of the machine of government. You apprehend that a single executive, with eminence of talent, and destitution of principle, equal to the object, might, by usurpation, render his powers hereditary. Yet I think history furnishes as many examples of a

single usurper arising out of a government by a plurality, as of temporary trusts of power in a single hand rendered permanent by usurpation. I do not believe, therefore, that this danger is lessened in the hands of a plural executive. Perhaps it is greatly increased, by the state of inefficiency to which they are liable from feuds and divisions among themselves. The conservative body you propose might be so constituted, as, while it would be an admirable sedative in a variety of smaller cases, might also be a valuable sentinel and check on the liberticide views of an ambitious individual. I am friendly to this idea. But the true barriers of our liberty in this country are our State governments; and the wisest conservative power ever contrived by man, is that of which our Revolution and present government found us possessed. Seventeen distinct States, amalgamated into one as to their foreign concerns, but single and independent as to their internal administration, regularly organized with a legislature and governor resting on the choice of the people, and enlightened by a free press, can never be so fascinated by the arts of one man, as to submit voluntarily to his usurpation. Nor can they be constrained to it by any force he can possess. While that may paralyze the single State in which it happens to be encamped, sixteen others, spread over a country of two thousand miles diameter, rise up on every side, ready organized for deliberation by a constitutional legislature, and for action by their governor, constitutionally the

commander of the militia of the State, that is to say, of every man in it able to bear arms; and that militia, too, regularly formed into regiments and battalions, into infantry, cavalry and artillery, trained under officers general and subordinate, legally appointed, always in readiness, and to whom they are already in habits of obedience. The republican government of France was lost without a struggle, because the party of "*un et indivisible*" had prevailed; no provincial organizations existed to which the people might rally under authority of the laws, the seats of the directory were virtually vacant, and a small force sufficed to turn the legislature out of their chamber, and to salute its leader chief of the nation. But with us, sixteen out of seventeen States rising in mass, under regular organization, and legal commanders, united in object and action by their Congress, or, if that be in *duresse*, by a special convention, present such obstacles to an usurper as forever to stifle ambition in the first conception of that object.

Dangers of another kind might more reasonably be apprehended from this perfect and distinct organization, civil and military, of the States; to wit, that certain States from local and occasional discontents, might attempt to secede from the Union. This is certainly possible; and would be befriended by this regular organization. But it is not probable that local discontents can spread to such an extent, as to be able to face the sound parts of so extensive

a Union; and if ever they should reach the majority, they would then become the regular government, acquire the ascendancy in Congress, and be able to redress their own grievances by laws peaceably and constitutionally passed. And even the States in which local discontents might engender a commencement of fermentation, would be paralyzed and self-checked by that very division into parties into which we have fallen, into which all States must fall wherein men are at liberty to think, speak, and act freely, according to the diversities of their individual conformations, and which are, perhaps, essential to preserve the purity of the government, by the censorship which these parties habitually exercise over each other.

You will read, I am sure, with indulgence, the explanations of the grounds on which I have ventured to form an opinion differing from yours. They prove my respect for your judgment, and diffidence in my own, which have forbidden me to retain, without examination, an opinion questioned by you. Permit me now to render my portion of the general debt of gratitude, by acknowledgments in advance for the singular benefaction which is the subject of this letter, to tender my wishes for the continuance of a life so usefully employed, and to add the assurances of my perfect esteem and respect.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, March 8, 1811.

DEAR SIR,—On my return from a journey of five weeks to Bedford I found here the two letters now enclosed, which though directed to me, belong, in their matter, to you. I never before heard of either writer, and therefore leave them to stand on their own grounds.

I congratulate you on the close of your campaign. Although it has not conquered your difficulties, it leaves you more at leisure to consider and provide against them. Our only chance as to England is the accession of the Prince of Wales to the throne. If only to the regency, himself and his ministers may be less bold and strong to make a thorough change of system. It will leave them, too, a pretext for doing less than right, if so disposed. He has much more understanding and good humor than principle or application. But it seems difficult to understand what Bonaparte means towards us. I have been in hopes the consultations with closed doors were for taking possession of East Florida. It would give no more offence anywhere than taking the western province, and I am much afraid the Percival ministry may have given orders for taking possession of it before they were put out of power.

We have had a wretched winter for the farmer. Great consumption of food by the cattle, and little

weather for preparing the ensuing crop. During my stay in Bedford we had seven snows, that of February 22, which was of 15 inches about Richmond, was of 6 inches here, and only 3½ in Bedford. Ever affectionately yours.

TO GENERAL JAMES WILKINSON.

MONTICELLO, March 10, 1811.

DEAR SIR,—Your favor of January 21st has been received, and with it the 2d volume of your Memoirs, with the appendices to the 1st, 2d and 4th volumes, for which accept my thanks. I shall read them with pleasure. The expression respecting myself, stated in your letter to have been imputed to you by your calumniators, had either never been heard by me, or, if heard, had been unheeded and forgotten. I have been too much the butt of such falsehoods myself to do others the injustice of permitting them to make the least impression on me. My consciousness that no man on earth has me under his thumb is evidence enough that you never used the expression. Daniel Clarke's book I have never seen, nor should I put Tacitus or Thucydides out of my hand to take that up. I am even leaving off the newspapers, desirous to disengage myself from the contentions of the world, and consign to entire tranquillity and to the kinder passions what remains to me of life. I look back with commiseration on those still buffetting the storm, and sincerely wish your argosy may

ride out, unhurt, that in which it is engaged. My belief is that it will, and I found that belief on my own knowledge of Burr's transactions, on my view of your conduct in encountering them, and on the candor of your judges. I salute you with my best wishes and entire respect.

TO JOHN MELISH.

MONTICELLO, March 10, 1811.

SIR,—I thank you for your letter of February 16th, and the communication of that you had forwarded to the President. In his hands it may be turned to public account; in mine it is only evidence of your zeal for the general good. My occupations are now in quite a different line, more suited to my age, my interests and inclinations. Having served my tour of duty, I leave public cares to younger and more vigorous minds, and repose my personal well-being under their guardianship, in perfect confidence of its safety. Our ship is sound, the crew alert at their posts, and our ablest steersman at its helm. That she will make a safe port I have no doubt; and that she may, I offer to heaven my daily prayers, the proper function of age, and add to yourself the assurance of my respect.

TO COLONEL WILLIAM DUANE.

MONTICELLO, March 28, 1811.

DEAR SIR — I learn with sincere concern, from yours of the 15th received by our last mail, the difficulties into which you are brought by the retirement of particular friends from the accommodations they had been in the habit of yielding you. That one of those you name should have separated from the censor of John Randolph, is consonant with the change of disposition which took place in him at Washington. That the other, far above that bias, should have done so, was not expected. I have ever looked to Mr. Leiper as one of the truest republicans of our country, whose mind, unaffected by personal incidents, pursues its course with a steadiness of which we have rare examples. Looking about for a motive, I have supposed it was to be found in the late arraignments of Mr. Gallatin in your papers. However he might differ from you on that subject, as I do myself, the indulgences in difference of opinion which we all owe to one another, and every one needs for himself, would, I thought, in a mind like his, have prevented such a manifestation of it. I believe Mr. Gallatin to be of a pure integrity, and as zealously devoted to the liberties and interests of our country as its most affectionate native citizen. Of this his courage in Congress in the days of terror, gave proofs which nothing can obliterate from the recollection of those who were

witnesses of it. These are probably the opinions of Mr. Leiper, as I believe they are of every man intimately acquainted with Mr. Gallatin. An intercourse, almost daily, of eight years with him, has given me opportunities of knowing his character more thoroughly than perhaps any other man living; and I have ascribed the erroneous estimate you have formed of it to the want of that intimate knowledge of him which I possessed. Every one, certainly, must form his judgment on the evidence accessible to himself; and I have no more doubt of the integrity of your convictions than I have of my own. They are drawn from different materials and different sources of information, more or less perfect, according to our opportunities. The zeal, the disinterestedness, and the abilities with which you have supported the great principles of our revolution, the persecutions you have suffered, and the firmness and independence with which you have suffered them, constitute too strong a claim on the good wishes of every friend of elective government, to be effaced by a solitary case of difference in opinion. Thus I think, and thus I believe my much-esteemed friend Leiper would have thought; and I am the more concerned he does not, as it is so much more in his power to be useful to you than in mine. His residence, and his standing at the great seat of the moneyed institutions, command a credit with them, which no inhabitant of the country, and of agricultural pursuits only, can have. The two or three

banks in our uncommercial State are too distant to have any relations with the farmers of Albemarle. We are persuaded you have not overrated the dispositions of this State to support yourself and your paper. They have felt its services too often to be indifferent in the hour of trial. They are well aware that the days of danger are not yet over. And I am sensible that if there were any means of bringing into concert the good will of the friends of the "Aurora" scattered over this State, they would not deceive your expectations. One month sooner might have found such an opportunity in the assemblage of our legislature in Richmond. But that is now dispersed not to meet again under a twelve-month. We, here, are but one of a hundred counties, and on consultation with friends of the neighborhood, it is their opinion that if we can find an endorser resident in Richmond, (for that is indispensable,) ten or twelve persons of this county would readily engage, as you suggest, for their \$100 each, and some of them for more. It is believed that the republicans in that city can and will do a great deal more; and perhaps their central position may enable them to communicate with other counties. We have written to a distinguished friend to the cause of liberty there to take the lead in the business, as far as concerns that place; and for our own, we are taking measures for obtaining the aid of the bank of the same place. In all this I am nearly a cypher. Forty years of almost constant absence from the

State have made me a stranger in it, have left me a solitary tree, from around which the axe of time has felled all the companions of its youth and growth. I have, however, engaged some active and zealous friends to do what I could not. Their personal acquaintance and influence with those now in active life can give effect to their efforts. But our support can be but partial, and far short, both in time and measure, of your difficulties. They will be little more than evidences of our friendship. The truth is that farmers, as we all are, have no command of money. Our necessaries are all supplied, either from our farms, or a neighboring store. Our produce, at the end of the year, is delivered to the merchant, and thus the business of the year is done by barter, without the intervention of scarcely a dollar; and thus also we live with a plenty of everything except money. To raise that, negotiations and time are requisite. I sincerely wish that greater and prompter effects could have flowed from our good will. On my part, no endeavors or sacrifices shall be withheld. But we are bound down by the laws of our situation.

I do not know whether I am able at present to form a just idea of the situation of our country. If I am, it is such as, during the *bellum omnium in omnia* of Europe, will require the union of all its friends to resist its enemies within and without. If we schismatize on either men or measures, if we do not act in phalanx, as when we rescued it from the satellites of monarchism, I will not say our *party*,

the term is false and degrading, but our *nation* will be undone. For the republicans are the *nation*. Their opponents are but a faction, weak in numbers, but powerful and profuse in the command of money, and backed by a nation, powerful also and profuse in the use of the same means; and the more profuse, in both cases, as the money they thus employ is not their own but their creditors', to be paid off by a bankruptcy, which whether it pays a dollar or a shilling in the pound is of little concern with them. The last hope of human liberty in this world rests on us. We ought, for so dear a state, to sacrifice every attachment and every enmity. Leave the President free to choose his own coadjutors, to pursue his own measures, and support him and them, even if we think we are wiser than they, honester than they are, or possessing more enlarged information of the state of things. If we move in mass, be it ever so circuitously, we shall attain our object; but if we break into squads, every one pursuing the path he thinks most direct, we become an easy conquest to those who can now barely hold us in check. I repeat again, that we ought not to schismatize on either men or measures. Principles alone can justify that. If we find our government in all its branches rushing headlong, like our predecessors, into the arms of monarchy, if we find them violating our dearest rights, the trial by jury, the freedom of the press, the freedom of opinion, civil or religious, or opening on our peace of mind or personal safety

the sluices of terrorism, if we see them raising standing armies, when the absence of all other danger points to these as the sole objects on which they are to be employed, then indeed let us withdraw and call the nation to its tents. But while our functionaries are wise, and honest, and vigilant, let us move compactly under their guidance, and we have nothing to fear. Things may here and there go a little wrong. It is not in their power to prevent it. But all will be right in the end, though not perhaps by the shortest means.

You know, my dear Sir, that this union of republicans has been the constant theme of my exhortations, that I have ever refused to know any subdivisions among them, to take part in any personal differences; and therefore you will not give to the present observations any other than general application. I may sometimes differ in opinion from some of my friends, from those whose views are as pure and sound as my own. I censure none, but do homage to every one's right of opinion. If I have indulged my pen, therefore, a little further than the occasion called for, you will ascribe it to a sermonizing habit, to the anxieties of age, perhaps to its garrulity, or to any other motive rather than the want of the esteem and confidence of which I pray you to accept sincere assurances.

P. S. Absorbed in a subject more nearly interesting, I had forgotten our book on the heresies of

Montesquieu. I sincerely hope the removal of all embarrassment will enable you to go on with it, or so to dispose of it as that our country may have the benefit of the corrections it will administer to public opinion.

TO B. H. LATROBE.

MONTICELLO, April 14, 1811.

DEAR SIR,—I feel much concern that suggestions stated in your letter of the 5th instant, should at this distance of time be the subject of uneasiness to you, and I regret it the more as they make appeals to memory, a faculty never strong in me, and now too sensibly impaired to be relied on. It retains no trace of the particular conversations alluded to, nor enables me to say that they are or are not correct. The only safe appeal for me is to the general impressions received at the time, and still retained with sufficient distinctness. These were that you discharged the duties of your appointment with ability, diligence and zeal, but that in the article of expense you were not sufficiently guarded. You must remember my frequent cautions to you on this head, the measures I took, by calling for frequent accounts of expenditures and contracts, to mark to you, as well as to myself, when they were getting beyond the limits of the appropriations, and the afflicting embarrassments on a particular occasion where these limits had been unguardedly and greatly

transcended. These sentiments I communicated to you freely at the time, as it was my duty to do. Another principle of conduct with me was to admit no innovations on the established plans, but on the strongest grounds. When, therefore, I thought first of placing the floor of the Representative chamber on the level of the basement of the building, and of throwing into its height the cavity of the dome, in the manner of the Halle aux Bleds at Paris, I deemed it due to Dr. Thornton author of the plan of the Capitol, to consult him on the change. He not only consented, but appeared heartily to approve of the alteration. For the same reason, as well as on motives of economy, I was anxious, in converting the Senate chamber into a Judiciary room, to preserve its original form, and to leave the same arches and columns standing. On your representation, however, that the columns were decayed and incompetent to support the incumbent weight, I acquiesced in the change you proposed, only striking out the addition which would have made part of the middle building, and would involve a radical change in that which had not been sanctioned. I have no reason to doubt but that in the execution of the Senate and Court rooms, you have adhered to the plan communicated to me and approved; but never having seen them since their completion, I am not able to say so expressly. On the whole, I do not believe any one has ever done more justice to your professional abilities than myself. Besides constant

commendations of your taste in architecture, and science in execution, I declared on many and all occasions that I considered you as the only person in the United States who could have executed the Representative chamber, or who could execute the middle buildings on any of the plans proposed. There have been too many witnesses of these declarations to leave any doubt as to my opinion on this subject. Of the value I set on your society, our intercourse before as well as during my office, can have left no doubt with you; and I should be happy in giving further proofs to you personally at Monticello, of which you have sometimes flattered me with the hope of an opportunity.

I have thus, Sir, stated general truths without going into the detail of particular facts or expressions, to which my memory does not enable me to say yea or nay. But a consciousness of my consistency in private as well as public, supports me in affirming that nothing ever passed from me contradictory to these general truths, and that I have been misapprehended if it has ever been so supposed. I return you the plans received with your letter, and pray you to accept assurances of my continued esteem and respect.

TO BARON ALEXANDER VON HUMBOLDT.

MONTICELLO, April 14, 1811.

MY DEAR BARON,—The interruption of our intercourse with France for some time past, has prevented

my writing to you. A conveyance now occurs, by Mr. Barlow or Mr. Warden, both of them going in a public capacity. It is the first safe opportunity offered of acknowledging your favor of September 23d, and the receipt at different times of the III^d part of your valuable work, 2^d, 3^d, 4th and 5th livraisons, and the IVth part, 2^d, 3^d, and 4th livraisons, with the *Tableaux de la nature*, and an interesting map of New Spain. For these magnificent and much esteemed favors, accept my sincere thanks. They give us a knowledge of that country more accurate than I believe we possess of Europe, the seat of the science of a thousand years. It comes out, too, at a moment when those countries are beginning to be interesting to the whole world. They are now becoming the scenes of political revolution, to take their stations as integral members of the great family of nations. All are now in insurrection. In several, the Independents are already triumphant, and they will undoubtedly be so in all. What kind of government will they establish? How much liberty can they bear without intoxication? Are their chiefs sufficiently enlightened to form a well-guarded government, and their people to watch their chiefs? Have they mind enough to place their domesticated Indians on a footing with the whites? All these questions you can answer better than any other. I imagine they will copy our outlines of confederation and elective government, abolish distinction of ranks, bow the neck to their priests, and

persevere in intolerantism. Their greatest difficulty will be in the construction of their executive. I suspect that, regardless of the experiment of France, and of that of the United States in 1784, they will begin with a directory, and when the unavoidable schisms in that kind of executive shall drive them to something else, their great question will come on whether to substitute an executive elective for years, for life, or an hereditary one. But unless instruction can be spread among them more rapidly than experience promises, despotism may come upon them before they are qualified to save the ground they will have gained. Could Napoleon obtain, at the close of the present war, the independence of all the West India islands, and their establishment in a separate confederacy, our quarter of the globe would exhibit an enrapturing prospect into futurity. You will live to see much of this. I shall follow, however, cheerfully, my fellow laborers, contented with having borne a part in beginning this beatific reformation.

I fear, from some expressions in your letter, that your personal interests have not been duly protected, while you were devoting your time, talents and labor for the information of mankind. I should sincerely regret it for the honor of the governing powers, as well as from affectionate attachment to yourself and the sincerest wishes for your felicity, fortunes and fame.

In sending you a copy of my Notes on Virginia, I do but obey the desire you have expressed. They

must appear *chétif* enough to the author of the great work on South America. But from the widow her mite was welcome, and you will add to this indulgence the acceptance of my sincere assurances of constant friendship and respect.

TO MONSIEUR PAGANEL.

MONTICELLO, April 15, 1811.

SIR,—I received, through Mr. Warden, the copy of your valuable work on the French Revolution, for which I pray you to accept my thanks. That its sale should have been suppressed is no matter of wonder with me. The friend of liberty is too feelingly manifested, not to give umbrage to its enemies. We read in it, and weep over, the fatal errors which have lost to nations the present hope of liberty, and to reason for fairest prospect of its final triumph over all imposture, civil and religious. The testimony of one who himself was an actor in the scenes he notes, and who knew the true mean between rational liberty and the frenzies of demagogy, are a tribute to truth of inestimable value. The perusal of this work has given me new views of the causes of failure in a revolution of which I was a witness in its early part, and then augured well of it. I had no means, afterwards, of observing its progress but the public papers, and their information came through channels too hostile to claim confidence. An acquaintance with many of the principal charac-

ters, and with their fate, furnished me grounds for conjectures, some of which you have confirmed, and some corrected. Shall we ever see as free and faithful a tableau of subsequent acts of this deplorable tragedy? Is reason to be forever amused with the *hochets* of physical sciences, in which she is indulged merely to divert her from solid speculations on the rights of man, and wrongs of his oppressors? It is impossible. The day of deliverance will come, although I shall not live to see it. The art of printing secures us against the retrogradation of reason and information, the examples of its safe and wholesome guidance in government, which will be exhibited through the wide-spread regions of the American continent, will obliterate, in time, the impressions left by the abortive experiment of France. With my prayers for the hastening of that auspicious day, and for the due effect of the lessons of your work to those who ought to profit by them, accept the assurances of my great esteem and respect.

TO MONSIEUR DUPONT DE NEMOURS.

MONTICELLO, April 15, 1811.

DEAR SIR,—I have to acknowledge the receipt of your letters of January 20 and September 14, 1810, and, with the latter, your observations on the subject of taxes. They bear the stamps of logic and eloquence which mark everything coming from you, and place the doctrines of the Economists in their

strongest points of view. My present retirement and unmeddling disposition make of this *une question visieuse pour moi*. But after reading the observations with great pleasure, I forwarded them to the President and Mr. Gallatin, in whose hands they may be useful. Yet I do not believe the change of our system of taxation will be forced on us so early as you expect, if war be avoided. It is true we are going greatly into manufactures; but the mass of them are household manufactures of the coarse articles worn by the laborers and farmers of the family. These I verily believe we shall succeed in making to the whole extent of our necessities. But the attempts at fine goods will probably be abortive. They are undertaken by company establishments, and chiefly in the towns; will have little success and short continuance in a country where the charms of agriculture attract every being who can engage in it. Our revenue will be less than it would be were we to continue to import instead of manufacturing our coarse goods. But the increase of population and production will keep pace with that of manufactures, and maintain the quantum of exports at the present level at least; and the imports need be equivalent to them, and consequently the revenue on them be undiminished. I keep up my hopes that if war be avoided, Mr. Madison will be able to complete the payment of the national debt within his term, after which one-third of the present revenue would support the government. Your information

that a commencement of excise had been again made, is entirely unfounded. I hope the death blow to that most vexatious and unproductive of all taxes was given at the commencement of my administration, and believe its revival would give the death blow to any administration whatever. In most of the middle and southern States some land tax is now paid into the State treasury, and for this purpose the lands have been classed and valued, and the tax assessed according to that valuation. In these an excise is most odious. In the eastern States land taxes are odious, excises less unpopular. We are all the more reconciled to the tax on importations, because it falls exclusively on the rich, and with the equal partition of intestate's estates, constitutes the best agrarian law. In fact, the poor man in this country who uses nothing but what is made within his own farm or family, or within the United States, pays not a farthing of tax to the general government, but on his salt; and should we go into that manufacture as we ought to do, we will pay not one cent. Our revenues once liberated by the discharge of the public debt, and its surplus applied to canals, roads, schools, etc., and the farmer will see his government supported, his children educated, and the face of his country made a paradise by the contributions of the rich alone, without his being called on to spare a cent from his earnings. The path we are now pursuing leads directly to this end, which we cannot fail to attain unless our administration should fall into unwise hands.

Another great field of political experiment is opening in our neighborhood, in Spanish America. I fear the degrading ignorance into which their priests and kings have sunk them, has disqualified them from the maintenance or even knowledge of their rights, and that much blood may be shed for little improvement in their condition. Should their new rulers honestly lay their shoulders to remove the great obstacles of ignorance, and press the remedies of education and information, they will still be in jeopardy until another generation comes into place, and what may happen in the interval cannot be predicted, nor shall you or I live to see it. In these cases I console myself with the reflection that those who will come after us will be as wise as we are, and as able to take care of themselves as we have been. I hope you continue to preserve your health, and that you may long continue to do so in happiness, is the prayer of yours affectionately.

TO GENERAL THADDEUS KOSCIUSKO.

MONTICELLO, April 13, 1811.

MY DEAR GENERAL AND FRIEND,—My last letter to you was of the 26th of February of the last year. Knowing of no particular conveyance, I confided it to the Department of State, to be put under the cover of their public despatches to General Armstrong or Mr. Warden. Not having been able to learn whether it ever got to hand, I now enclose a duplicate.

Knowing your affections to this country, and the interest you take in whatever concerns it, I therein gave you a tableau of its state when I retired from the administration. The difficulties and embarrassments still continued in our way by the two great belligerent powers, you are acquainted with. In other times, when there was some profession of regard for right, some respect to reason, when a gross violation of these marked a deliberate design of pointed injury, these would have been causes of war. But when we see two antagonists contending *ad internecionem*, so eager for mutual destruction as to disregard all means, to deal their blows in every direction regardless on whom they may fall, prudent bystanders, whom some of them may wound, instead of thinking it cause to join in the maniac contest, get out of the way as well as they can, and leave the cannibals to mutual ravin. It would have been perfect Quixotism in us to have encountered these Bedlamites, to have undertaken the redress of all wrongs against a world avowedly rejecting all regard to right. We have, therefore, remained in peace, suffering frequent injuries, but, on the whole, multiplying, improving, prospering beyond all example. It is evident to all, that in spite of great losses much greater gains have ensued. When these gladiators shall have worried each other into ruin or reason, instead of lying among the dead on the bloody arena, we shall have acquired a growth and strength which will place us *hors d'insulte*. Peace then has been our

principle, peace is our interest, and peace has saved to the world this only plant of free and rational government now existing in it. If it can still be preserved, we shall soon see the final extinction of our national debt, and liberation of our revenues for the defence and improvement of our country. These revenues will be levied entirely on the rich, the business of household manufacture being now so established that the farmer and laborer clothe themselves entirely. The rich alone use imported articles, and on these alone the whole taxes of the General Government are levied. The poor man who uses nothing but what is made in his own farm or family, or within his own country, pays not a farthing of tax to the general government, but on his salt; and should we go into that manufacture also, as is probable, he will pay nothing. Our revenues liberated by the discharge of the public debt, and its surplus applied to canals, roads, schools, etc., the farmer will see his government supported, his children educated, and the face of his country made a paradise by the contributions of the rich alone, without his being called on to spend a cent from his earnings. However, therefore, we may have been reproached for pursuing our Quaker system, time will affix the stamp of wisdom on it, and the happiness and prosperity of our citizens will attest its merit. And this, I believe, is the only legitimate object of government, and the first duty of governors, and not the slaughter of men and devastation of the

countries placed under their care, in pursuit of a fantastic honor, unallied to virtue or happiness; or in gratification of the angry passions, or the pride of administrators, excited by personal incidents, in which their citizens have no concern. Some merit will be ascribed to the converting such times of destruction into times of growth and strength for us. And behold! another example of man rising in his might and bursting the chains of his oppressor, and in the same hemisphere. Spanish America is all in revolt. The insurgents are triumphant in many of the States, and will be so in all. But there the danger is that the cruel arts of their oppressors have enchained their minds, have kept them in the ignorance of children, and as incapable of self-government as children. If the obstacles of bigotry and priest-craft can be surmounted, we may hope that common sense will suffice to do everything else. God send them a safe deliverance. As to the private matter explained in my letter of February 26, the time I shall have occasion for your indulgence will not be longer than there stated, and may be shortened if either your convenience or will should require it. God bless you, and give you many years of health and happiness, and that you may live to see more of the liberty you love than present appearances promise.

P. S. Mr. Barnes is now looking out for bills for your usual annual remittance.

TO JOEL BARLOW.

MONTECELLO, April 16, 1811.

DEAR SIR,—I felicitate you sincerely on your destination to Paris, because I believe it will contribute both to your happiness and the public good. Yet it is not unmixed with regret. What is to become of our past revolutionary history? Of the antidotes of truth to the misrepresentations of Marshall? This example proves the wisdom of the maxim, never to put off to to-morrow what can be done to-day. But, putting aside vain regrets, I shall be happy to hear from you in your new situation. I cannot offer you in exchange the minutiae of the Cabinet, the workings in Congress, or under-workings of those around them. General views are all which we at a distance can have, but general views are sometimes better taken at a distance than nearer. The working of the whole machine is sometimes better seen elsewhere than at its centre. In return you can give me the true state of things in Europe, what is its real public mind at present, its disposition towards the existing authority, its secret purposes and future prospects, seasoned with the literary news. I do not propose this as an equal barter, because it is really asking you to give a dollar for a shilling. I must leave the difference to be made up from other motives. I have been long waiting for a safe opportunity to write to some friends and correspondents in France. I troubled

Mr. Warden with some letters, and he kindly offered to take all I could get ready before his departure. But his departure seems not yet definitely settled, and should he not go with you, what is in your hands will be less liable to violation than in his. I therefore take the liberty of asking your care of the letters now enclosed, and their delivery through confidential hands. Most of them are of a complexion not proper for the eye of the police, and might do injury to those to whom they are addressed. Wishing to yourself and Mrs. Barlow a happy voyage, and that the execution of the duties of your mission may be attended with all agreeable circumstances, I salute you with assurance of my perfect esteem and respect.

TO ALBERT GALLATIN.

MONTICELLO, April 24, 1811.

DEAR SIR,—A book confided to me by a friend for translation and publication has for a twelvemonth past kept me in correspondence with Colonel Duane. We undertook to have it translated and published. The last sheets had been revised, and in a late letter to him, I pressed the printing. I soon afterwards received one from him informing me that it would be much retarded by embarrassments recently brought on him by his friends withdrawing their aid who had been in the habit of lending their names for his accommodation in the banks. He painted

his situation as truly distressing, and intimated the way in which relief would be acceptable. The course I pursued on the occasion will be explained to you in a letter which I have written to the President, and asked the favor of him to communicate to you.

A difference of quite another character gives me more uneasiness. No one feels more painfully than I do, the separation of friends, and especially when their sensibilities are to be daily harrowed up by cannibal newspapers. In these cases, however, I claim from all parties the privilege of neutrality, and to be permitted to esteem all as I ever did. The harmony which made me happy while at Washington, is as dear to me now as then, and I should be equally afflicted, were it, by any circumstance, to be impaired as to myself. I have so much confidence in the candor and good sense of both parties, as to trust that the misunderstanding will lead to no sinister effects, and my constant prayer will be for blessings on you all.

TO ROBERT SMITH, ESQ.

MONTICELLO, April 30, 1811.

DEAR SIR,—I have learnt, with sincere concern, the circumstances which have taken place at Washington. Some intimations had been quoted from federal papers, which I had supposed false, as usual. Their first confirmation to me was from the National

Intelligencer. Still my hopes and confidence were that your retirement was purely a matter of choice on your part. A letter I have received from Mr. Hollins makes me suppose there was a more serious misunderstanding than I had apprehended. The newspapers indeed had said so, but I yield little faith to them. No one feels more painfully than I do the separation of friends, and especially when their sensibilities are to be daily harrowed up by cannibal newspapers. Suffering myself under whatever inflicts sufferance on them, I condole with them mutually, and ask the mutual permission to esteem all, as I ever did; not to know their differences nor ask the causes of them. The harmony which made me happy at Washington, is as dear to me now as it was then, and I should be equally afflicted were it by any circumstance to be impaired as to myself. I have so much confidence in the candor and liberality of both parties, as to trust that the misunderstanding will not be permitted to lead to any sinister effects, and my constant prayer will be for blessings on you all.

TO COLONEL WILLIAM DUANE.

MONTICELLO, April 30, 1811.

DEAR SIR,—When I wrote you my letter of March 28, I had great confidence that as much at least could have been done for you as I therein supposed. The friend to whom I confided the business here, and who

was and is zealous, had found such readiness in those to whom he spoke, as left no other difficulty than to find the bank responsible. But the Auroras which came on while this was in transaction, changed the prospect altogether, and produced a general revulsion of sentiment. The President's popularity is high through this State, and nowhere higher than here. They considered these papers as a denunciation of war against him, and instantly withdrew their offers. I cannot give you a better account of the effect of the same papers in Richmond than by quoting the letter of a friend who there undertook the same office, and with great cordiality. In a letter to me of April 17, he says, "yours of the 15th, in reply to mine of the 10th instant, has been brought to me from the office this instant. On showing it to ——— the effect of it was to dispose him to lend \$500, and I wrote my letter of the 10th to you in a persuasion produced by that incident, as well as by its effect on my own feelings, that something important might be done for D. in spite of the adverse spirit, or at least distrust, which the equivocal character of his paper has lately excited, equivocal in relation to Mr. Madison. But D.'s three or four last papers contain such paragraphs in relation to Mr. Madison, that even your letter cannot now serve him. The paper is now regarded as an opposition one, and the republicans here have no sympathy with any one who carries opposition colors. Every gentleman who mentions this subject in my hearing, speaks

with the warmest resentment against D. Believe me, Sir, it is impossible to do anything for him here now; and any further attempts would only disable me from rendering any service to the cause hereafter. I am persuaded that you will see this subject in its true light, and be assured that it is the impracticability of serving him, produced by himself, as well as the violation which I feel it would be of my sentiments for Mr. Madison, that prevents me from proceeding." The firm, yet modest character of the writer of this letter gives great weight to what he says, and I have thought it best to state it in his own terms, because it will be better evidence to you than any general description I could give of the impression made by your late papers. Indeed I could give none, for going little from home, I cannot personally estimate the public sentiment. The few I see are very unanimous in support of their executive and legislative functionaries. I have thought it well, too, that you should know exactly the feelings here, because if you get similar information from other respectable portions of the union, it will naturally beget some suspicion in your own mind that finding such a mass of opinion variant from your own, you may be under erroneous impressions, meriting re-examination and consideration. I think an editor should be independent, that is, of personal influence, and not be moved from his opinions on the mere authority of any individual. But, with respect to the general opinion of the political section

with which he habitually accords, his duty seems very like that of a member of Congress. Some of these indeed think that independence requires them to follow always their own opinion, without respect for that of others. This has never been my opinion, nor my practice, when I have been of that or any other body. Differing, on a particular question, from those whom I knew to be of the same political principles with myself, and with whom I generally thought and acted, a consciousness of the fallibility of the human mind, and of my own in particular, with a respect for the accumulated judgment of my friends, has induced me to suspect erroneous impressions in myself, to suppose my own opinion wrong, and to act with them on theirs. The want of this spirit of compromise, or of self-distrust, proudly, but falsely, called independence, is what gives the federalists victories which they could never obtain, if these brethren could learn to respect the opinions of their friends more than of their enemies, and prevents many able and honest men from doing all the good they otherwise might do. I state these considerations because they have often quieted my own conscience in voting and acting on the judgment of others against my own; and because they may suggest doubts to yourself in the present case. Our executive and legislative authorities are the choice of the nation, and possess the nation's confidence. They are chosen because they possess it, and the recent elections prove it has not been abated by the

attacks which have for some time been kept up against them. If the measures which have been pursued are approved by the majority, it is the duty of the minority to acquiesce and conform. It is true indeed that dissentients have a right to go over to the minority, and to act with them. But I do not believe your mind has contemplated that course, that it has deliberately viewed the strange company into which it may be led, step by step, unintended and unperceived by itself. The example of John Randolph is a caution to all honest and prudent men, to sacrifice a little of self-confidence, and to go with their friends, although they may sometimes think they are going wrong. After so long a course of steady adherence to the general sentiments of the republicans, it would afflict me sincerely to see you separate from the body, become auxiliary to the enemies of our government, who have to you been the bitterest enemies, who are now chuckling at the prospect of division among us, and, as I am told, are subscribing for your paper. The best indication of error which my experience has tested, is the approbation of the federalists. Their conclusions necessarily follow the false bias of their principles. I claim, however, no right of guiding the conduct of others; but have indulged myself in these observations from the sincere feelings of my heart. Retired from all political interferences I have been induced into this one by a desire, first, of being useful to you personally, and next of

maintaining the republican ascendancy. Be its effect what it may, I am done with it, and shall look on as an inactive, though not an unfeeling, spectator of what is to ensue. As far as my good will may go, for I can no longer act, I shall adhere to my government executive and legislative, and, as long as they are republican, I shall go with their measures, whether I think them right or wrong; because I know they are honest, and are wiser and better informed than I am. In doing this, however, I shall not give up the friendship of those who differ from me, and who have equal right with myself to shape their own course. In this disposition be assured of my continued esteem and respect.

P. S. Be so good as to consider the extract from my friend's letter as confidential, because I have not his permission to make this use of it.

TO WILLIAM WIRT.

MONTICELLO, May 3, 1811.

DEAR SIR,—The interest you were so kind as to take, at my request, in the case of Duane, and the communication to you of my first letter to him, entitles you to a communication of the second, which will probably be the last. I have ventured to quote your letter in it, without giving your name, and even softening some of its expressions respecting him. It is possible Duane may be reclaimed as to Mr. Madi-

son. But as to Mr. Gallatin, I despair of it. That enmity took its rise from a suspicion that Mr. Gallatin interested himself in the election of their governor against the views of Duane and his friends. I do not believe Mr. Gallatin meddled in it. I was in conversation with him nearly every day during the contest, and never heard him express any bias in the case. The ostensible grounds of the attack on Mr. Gallatin are all either false or futile. 1st. They urge his conversations with John Randolph. But who has revealed these conversations? What evidence have we of them? Merely some oracular sentences from J. R., uttered in the heat of declamation, and never stated with all their circumstances. For instance, that a Cabinet member informed him there was no Cabinet. But Duane himself has always denied there could be a legal one. Besides, the fact was true at that moment, to wit: early in the session of Congress. I had been absent from Washington from the middle of July to within three weeks of their meeting. During the separation of the members there could be no consultation, and between our return to Washington and the meeting of Congress, there really had arisen nothing requiring general consultation, nothing which could not be done in the ordinary way by consultation between the President and the head of the department to which the matter belonged, which is the way everything is transacted which is not difficult as well as important. Mr. Gallatin might therefore have said

this as innocently as truly, and a malignant perversion of it was perfectly within the character of John Randolph. But the story of the two millions. Mr. Gallatin satisfied us that this affirmation of J. R. was as unauthorized as the fact itself was false. It resolves itself, therefore, into his inexplicit letter to a committee of Congress. As to this, my own surmise was that Mr. Gallatin might have used some hypothetical expression in conversing on that subject, which J. R. made a positive one, and he being a duellist, and Mr. Gallatin with a wife and children depending on him for their daily subsistence, the latter might wish to avoid collision and insult from such a man. But they say he was hostile to me. This is false. I was indebted to nobody for more cordial aid than to Mr. Gallatin, nor could any man more solicitously interest himself in behalf of another than he did of myself. His conversations with Erskine are objected as meddling out of his department. Why, then, do they not object Mr. Smith's with Rose? The whole nearly, of that negotiation, as far as it was transacted verbally, was by Mr. Smith. The business was in this way explained informally, and on understandings thus obtained, Mr. Madison and myself shaped our formal proceedings. In fact, the harmony among us was so perfect, that whatever instrument appeared most likely to effect the object, was always used without jealousy. Mr. Smith happened to catch Mr. Rose's favor and confidence at once. We perceived that

Rose would open himself more frankly to him than to Mr. Madison, and we therefore made him the medium of obtaining an understanding of Mr. Rose. Mr. Gallatin's support of the bank has, I believe, been disapproved by many. He was not in Congress when that was established, and therefore had never committed himself, publicly, on the constitutionality of that institution, nor do I recollect ever to have heard him declare himself on it. I know he derived immense convenience from it, because they gave the effect of ubiquity to his money wherever deposited. Money in New Orleans or Maine was at his command, and by their agency transformed in an instant into money in London, in Paris, Amsterdam or Canton. He was, therefore, cordial to the bank. I often pressed him to divide the public deposits among all the respectable banks, being indignant myself at the open hostility of that institution to a government on whose treasuries they were fattening. But his repugnance to it prevented my persisting. And if he was in favor of the bank, what is the amount of that crime or error in which he had a majority save one in each House of Congress as participators? Yet on these facts, endeavors are made to drive from the administration the ablest man except the President, who ever was in it, and to beat down the President himself, because he is unwilling to part with so able a counsellor. I believe Duane to be a very honest man and sincerely republican; but his passions are stronger than his pru-

dence, and his personal as well as general antipathies render him very intolerant. These traits lead him astray, and require his readers, even those who value him for his steady support of the republican cause, to be on their guard against his occasional aberrations. He is eager for war against England, hence his abuse of the two last Congresses. But the people wish for peace. The re-elections of the same men prove it. And indeed, war against Bedlam would be just as rational as against Europe in its present condition of total demoralization. When peace becomes more losing than war, we may prefer the latter on principles of pecuniary calculation. But for us to attempt, by war, to reform all Europe, and bring them back to principles of morality and a respect for the equal rights of nations, would show us to be only maniacs of another character. We should, indeed, have the merit of the good intentions as well as of the folly of the hero of La Mancha. But I am getting beyond the object of my letter, and will therefore here close it with assurances of my great esteem and respect.

TO WILLIAM WIRT.

MONTICELLO, May 3, 1811.

I have rejoiced to see Ritchie declare himself in favor of the President on the late attack against him, and wish he may do the same as to Mr. Gallatin. I am sure he would if his information was full. I have

not an intimacy with him which might justify my writing to him directly, but the enclosed letter to you is put into such a form as might be shown to him, if you think proper to do so. Perhaps the facts stated in it, probably unknown to him, may have some effect. But do in this as you think best. Be so good as to return the letter to Duane, being my only copy, and to be assured of my affectionate esteem and respect

TO JOHN HOLLINS, ESQ.

MONTICELLO, May 5, 1811.

DEAR SIR,—Your favor of April 17th came duly to hand. Nobody has regretted more sincerely than myself, the incidents which have happened at Washington. The early intimations which I saw quoted from federal papers were disregarded by me, because falsehood is their element. The first confirmation was from the National Intelligencer, soon followed by the exultations of other papers whose havoc is on the feelings of the virtuous. Sincerely the friend of all the parties, I ask of none why they have fallen out by the way, and would gladly infuse the oil and wine of the Samaritan into all their wounds. I hope that time, the assuager of all evils, will heal these also; and I pray from them all a continuance of their affection, and to be permitted to bear to all the same unqualified esteem. Of one thing I am certain, that they will not suffer personal dissatisfactions to endanger the republican cause.

Their principles, I know, are far above all private considerations. And when we reflect that the eyes of the virtuous all over the earth are turned with anxiety on us, as the only depositories of the sacred fire of liberty, and that our falling into anarchy would decide forever the destinies of mankind, and seal the political heresy that man is incapable of self-government, the only contest between divided friends should be who will dare farthest into the ranks of the common enemy. With respect to Mr. Foster's mission, it cannot issue but as Rose's and Jackson's did. It can no longer be doubted that Great Britain means to claim the ocean as her conquest, and to suffer not even a cock-boat, as they express it, to traverse it but on paying them a transit duty to support the very fleet which is to keep the nations under tribute, and to rivet the yoke around their necks. Although their government has never openly avowed this, yet their orders of council, in their original form, were founded on this principle, and I have observed for years past, that however ill success may at times have induced them to amuse by negotiation, they have never on any occasion dropped a word disclaiming this pretension, nor one which they would have to retract when they shall judge the times ripe for openly asserting it. Protraction is therefore the sole object of Foster's mission. They do not wish war with us, but will meet it rather than relinquish their purpose.

With earnest prayers to all my friends to cherish

mutual good will, to promote harmony and conciliation, and above all things to let the love of our country soar above all minor passions, I tender you the assurance of my affectionate esteem and respect.

TO COLONEL JAMES MONROE.

MONTICELLO, May 5, 1811.

DEAR SIR,—Your favor on your departure from Richmond, came to hand in due time. Although I may not have been among the first, I am certainly with the sincerest, who congratulate you on your entrance into the national councils. Your value there has never been unduly estimated by those whom personal feelings did not misguide. The late misunderstandings at Washington have been a subject of real concern to me. I know that the dissolutions of personal friendship are among the most painful occurrences in human life. I have sincere esteem for all who have been affected by them, having passed with them eight years of great harmony and affection. These incidents are rendered more distressing in our country than elsewhere, because our printers ravin on the agonies of their victims, as wolves do on the blood of the lamb. But the printers and the public are very different personages. The former may lead the latter a little out of their track, while the deviation is insensible; but the moment they usurp their direction and that of their government, they will be reduced to their

true places. The two last Congresses have been the theme of the most licentious reprobation for printers thirsting after war, some against France and some against England. But the people wish for peace with both. They feel no incumbency on them to become the reformers of the other hemisphere, and to inculcate, with fire and sword, a return to moral order. When, indeed, peace shall become more losing than war, they may owe to their interests what these Quixotes are clamoring for on false estimates of honor. The public are unmoved by these clamors, as the re-election of their legislators shows, and they are firm to their executive on the subject of the more recent clamors.

We are suffering here, both in the gathered and the growing crop. The lowness of the river, and great quantity of produce brought to Milton this year, render it almost impossible to get our crops to market. This is the case of mine as well as yours, and the Hessian fly appears alarmingly in our growing crops. Everything is in distress for the want of rain.

Present me respectfully to Mrs. Monroe, and accept yourself assurances of my constant and affectionate esteem.

TO JOHN SEVERIN VATER, PROFESSOR AT KÖNIGSBERG.

MONTICELLO, May 11, 1811.

SIR,—Your favor of November 4, 1809, did not get to my hands till a twelvemonth after its date.

Be pleased to accept my thanks for the publication you were pleased to send me. That for Dr. Barton I forwarded to him. His researches into the Indian languages of our continent being continued, I hope it will be in his power to make to you communications useful to the object you are pursuing. This will lessen to me the regret that my retirement into an interior part of the country, as well as my age and little intercourse with the world, will scarcely afford me opportunities of contributing to your information. It is extremely to be desired that your researches should receive every aid and encouragement. I have long considered the filiation of languages as the best proof we can ever obtain of the filiation of nations. With my best wishes for the success of your undertaking, accept the assurances of my high consideration and respect.

TO COUNT JOHN POTOCKI.

MONTICELLO, May 12, 1811.

SIR,—I have received your letter of August 19th, and with it the volume of chronology you were so kind as to send me, for which be pleased to accept my thanks. It presents a happy combination of sparse and unconnected facts, which, brought together and fitted to each other, forms a whole of symmetry as well as of system. It is as a gleam of light flashed over the dark abyss of times past. Nothing would be more flattering to me than to

give aid to your inquiries as to this continent, and to weave its ancient history into the web of the old world; and with this view, to accept the invitation to a correspondence with you on the subject. But time tells me I am nearly done with the history of the world; that I am now far advanced in the last chapter of my own, and that its last verse will be read out ere a few letters could pass between St. Petersburg and Monticello. I shall serve you therefore more permanently, by bequeathing to you another correspondent, more able, more industrious, and more likely to continue in life than myself. Dr. Benjamin S. Barton, one of the professors of the College of Philadelphia, is learned in the antiquities of this country, has employed much time and attention on researches into them, is active and punctual, and will, I think, better fulfil your wishes than any other person in the United States. If you will have the goodness to address a letter to him on the subject, with the inquiries you wish to make, he will, I am sure, set a just value on the correspondence proposed, for which I shall take care to prepare him, and in committing to better hands an honor which in earlier life I should have taken a pleasure in endeavoring to merit, I make a sacrifice of my own self-love, which is the strongest proof I can give you of the high respect and consideration of which I now tender you the assurance.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, July 3, 1811.

DEAR SIR,—I have seen with very great concern the late address of Mr. Smith to the public. He has been very ill-advised, both personally and publicly. As far as I can judge from what I hear, the impression made is entirely unfavorable to him. Every man's own understanding readily answers all the facts and insinuations, one only excepted, and for that they look for explanations without any doubt that they will be satisfactory. What is Irving's case? I have answered the inquiries of several on this head, telling them at the same time what was really the truth, that the failure of my memory enabled me to give them rather conjectures than recollections. For in truth, I have but indistinct recollections of the case. I know that what was done was on a joint consultation between us, and I have no fear that what we did will not have been correct and cautious. What I retain of the case, on being reminded of some particulars, will reinstate the whole firmly in my remembrance, and enable me to state them to inquirers with correctness, which is the more important from the part I bore in them. I must therefore ask the favor of you to give me a short outline of the facts, which may correct as well as supply my own recollections. But who is to give an explanation to the public? not yourself, certainly.

The Chief Magistrate cannot enter the arena of the newspapers. At least the occasion should be of a much higher order. I imagine there is some pen at Washington competent to it. Perhaps the best form would be that of some one personating the friend of Irving, some one apparently from the North. Nothing labored is requisite. A short and simple statement of the case will, I am sure, satisfy the public. We are in the midst of a so-so harvest, probably one-third short of the last. We had a very fine rain on Saturday last. Ever affectionately yours.

TO JOEL BARLOW.

MONTICELLO, July 22, 1811.

DEAR SIR,—I had not supposed a letter would still find you at Washington. Yours by late post tells me otherwise. Those of May 2d and 15th had been received in due time. With respect to my books, lodged at the President's house, if you should see Mr. Coles, the President's Secretary, and be so good as to mention it, he will be so kind as to have them put on board some vessel bound to Richmond, addressed to the care of Gibson & Jefferson there, whom he knows. Your doubts whether any good can be effected with the Emperor of France are too well grounded. He has understanding enough, but it is confined to particular lines. Of the principles and advantages of commerce he appears to be

ignorant, and his domineering temper deafens him moreover to the dictates of interest, of honor and of morality. A nation like ours, recognizing no arrogance of language or conduct, can never enjoy the favor of such a character. The impression, too, which our public has been made to receive from the different styles of correspondence used by two of our foreign agents, has increased the difficulties of steering between the bristling pride of the two parties. It seems to point out the Quaker style of plain reason, void of offence:—the suppression of all passion, and chaste language of good sense. Heaven prosper your endeavors for our good, and preserve you in health and happiness.

TO COLONEL WILLIAM DUANE.

MONTICELLO, July 25, 1811.

DEAR SIR,—Your letter of the 5th, with the volume of Montesquieu accompanying it, came to hand in due time; the latter indeed in lucky time, as, enclosing it by the return of post, I was enabled to get it into Mr. Warden's hands before his departure, for a friend abroad to whom it will be a most acceptable offering. Of the residue of the copies I asked, I would wish to receive one well bound for my own library, the others in boards as that before sent. One of these in boards may come to me by post, for use until the others are received, which I would prefer having sent by water, as vessels depart

• almost daily from Philadelphia for Richmond. Messrs. Gibson & Jefferson of that place will receive and forward the packet to me. Add to it, if you please, a copy of Franklin's works, bound, and send me by post a note of the amount of the whole, and of my newspaper account, which has been suffered to run in arrear by the difficulty of remitting small and fractional sums to a distance, from a canton having only its local money, and little commercial intercourse beyond its own limits.

I learnt with sincere regret that my former letters had given you pain. Nothing could be further from their intention. What I had said and done was from the most friendly dispositions towards yourself, and from a zeal for maintaining the Republican ascendancy. Federalism, stripped as it now nearly is, of its landed and laboring support, is monarchism and Anglicism, and whenever our own dissensions shall let these in upon us, the last ray of free government closes on the horizon of the world. I have been lately reading Komarzewski's *coup d'œil* on the history of Poland. Though without any charms of style or composition, it gives a lesson which all our countrymen should study; the example of a country erased from the map of the world by the dissensions of its own citizens. The papers of every day read them the counter lesson of the impossibility of subduing a people acting with an undivided will. Spain, under all her disadvantages, physical and mental, is an encouraging example of this. She

proves, too, another truth not less valuable, that a people having no king to sell them for a mess of pottage for himself, no shackles to restrain their powers of self-defence, find resources within themselves equal to every trial. This we did during the Revolutionary War, and this we can do again, let who will attack us, if we act heartily with one another. This is my creed. To the principles of union I sacrifice all minor differences of opinion. These, like differences of face, are a law of our nature, and should be viewed with the same tolerance. The clouds which have appeared for some time to be gathering around us, have given me anxiety lest an enemy, always on the watch, always prompt and firm, and acting in well-disciplined phalanx, should find an opening to dissipate hopes, with the loss of which I would wish that of life itself. To myself personally the sufferings would be short. The powers of life have declined with me more in the last six months than in as many preceding years. A rheumatic indisposition, under which your letter found me, has caused this delay in acknowledging its receipt, and in the expressions of regret that I had inadvertently said or done anything which had given you uneasiness. I pray you to be assured that no unkind motive directed me, and that my sentiments of friendship and respect continue the same.

TO JAMES OGILVIE.

MONTICELLO, August 4, 1811.

DEAR SIR,—Your favor of May 24th was very long on its passage to me. It gave us all pleasure to learn from yourself the progress of your peregrination, and your prospect of approaching rest for awhile, among our western brethren—of “rest for the body some, none for the mind.” To that, action is said to be all its joy; and we have no more remarkable proof of it than in yourself. The newspapers have kept us informed of the splendid course you have run, and of the flattering impressions made on the public mind, and which must have been so grateful to yourself. The new intellectual feast you are preparing for them in your western retirement, will excite new appetites, and will be hailed like the returning sun, when he re-appears in the East. Your peripatetic enterprise, when first made known to us, alarmed our apprehensions for you, lest the taste of the times, and of our country, should not be up to the revival of this classical experiment. Much to their credit, however, unshackled by the prejudices which chain down the minds of the common mass of Europe, the experiment has proved that, where thought is free in its range, we need never fear to hazard what is good in itself. This sample of the American mind is an additional item for the flattering picture your letter presents of our situation, and our prospects. I firmly believe in them all; and

that human nature has never looked forward, under circumstances so auspicious, either for the sum of happiness, or the spread of surface provided to receive it. Very contrary opinions are inculcated in Europe, and in England especially, where I much doubt if you would be tolerated in presenting the views you propose. The English have been a wise, a virtuous and truly estimable people. But commerce and a corrupt government have rotted them to the core. Every generous, nay, every just sentiment, is absorbed in the thirst for gold. I speak of their cities, which we may certainly pronounce to be ripe for despotism, and fitted for no other government. Whether the leaven of the agricultural body is sufficient to regenerate the residuary mass, and maintain it in a sound state, under any reformation of government, may well be doubted. Nations, like individuals, wish to enjoy a fair reputation. It is therefore desirable for us that the slanders on our country, disseminated by hired or prejudiced travellers, should be corrected; but politics, like religion, hold up the torches of martyrdom to the reformers of error. Nor is it in the theatre of Ephesus alone that tumults have been excited when the crafts were in danger. You must be cautious, therefore, in telling unacceptable truths beyond the water. You wish me to suggest any subject which occurs to myself as fit for the rostrum. But your own selection has proved you would have been aided by no counsel, and that you can best judge of the topics

which open to your own mind a field for development, and promise to your hearers instruction better adapted to the useful purposes of society, than the weekly disquisitions of their hired instructors. All the efforts of these people are directed to the maintenance of the artificial structure of their craft, viewing but as a subordinate concern the inculcation of morality. If we will be but Christians, according to their schemes of Christianity, they will compound good-naturedly with our immoralities.

Cannot your circuit be so shaped as to lead you through our neighborhood on your return? It would give us all great pleasure to see you, if it be only *en passant*, for after such a survey of varied country, we cannot flatter ourselves that ours would be the selected residence. But whether you can visit us or not, I shall always be happy to hear from you, and to know that you succeed in whatever you undertake. With these assurances accept those of great esteem and respect from myself and all the members of my family.

P. S. Since writing the above, an interesting subject occurs. What would you think of a discourse on the benefit of the union, and miseries which would follow a separation of the States, to be exemplified in the eternal and wasting wars of Europe, in the pillage and profligacy to which these lead, and the abject oppression and degradation to which they reduce its inhabitants? Painted by your vivid

pencil, what could make deeper impressions, and what impressions could come more home to our concerns, or kindle a livelier sense of our present blessings?

TO JUDGE ARCHIBALD STUART.

MONTICELLO, August 8, 1811.

DEAR SIR,—I ask the favor of you to purchase for me as much fresh timothy seed as the enclosed bill will pay for, pack and forward, and that you will have the goodness to direct it to be lodged at Mr. Leitch's store in Charlottesville by the waggoner who brings it. You see how bold your indulgencies make me in intruding on your kindness.

I do not know that the government means to make known what has passed between them and Foster before the meeting of Congress; but in the meantime individuals, who are in the way, think they have a right to fish it out, and in this way the sum of it has become known. Great Britain has certainly come forward and declared to our government by an official paper, that the conduct of France towards her during this war has obliged her to take possession of the ocean, and to determine that no commerce shall be carried on with the nations connected with France; that, however, she is disposed to relax in this determination so far as to permit the commerce which may be carried on through the British ports. I have, for three or four years, been confident that,

knowing that her own resources were not adequate to the maintenance of her present navy, she meant with it to claim the conquest of the ocean, and to permit no nation to navigate it, but on payment of a tribute for the maintenance of the fleet necessary to secure that dominion. A thousand circumstances brought together left me without a doubt that that policy directed all her conduct, although not avowed. This is the first time she has thrown off the mask. The answer and conduct of the government have been what they ought to have been, and Congress is called a little earlier, to be ready to act on the receipt of the reply, for which time has been given.

God bless you. From yours affectionately.

TO GENERAL HENRY DEARBORN.

POPLAR FOREST, August 14, 1811.

DEAR GENERAL AND FRIEND,—I am happy to learn that your own health is good, and I hope it will long continue so. The friends we left behind us have fallen out by the way. I sincerely lament it, because I sincerely esteem them all, and because it multiplies schisms where harmony is safety. As far as I have been able to judge, however, it has made no sensible impression against the government. Those who were murmuring before are a little louder now; but the mass of our citizens is firm and unshaken. It furnishes, as an incident, another proof that they are perfectly

equal to the purposes of self-government, and that we have nothing to fear for its stability. The spirit, indeed, which manifests itself among the Tories of your quarter, although I believe there is a majority there sufficient to keep it down in peaceable times, leaves me not without some inquietude. Should the determination of England, now formally expressed, to take possession of the ocean, and to suffer no commerce on it but through her ports, force a war upon us, I foresee a possibility of a separate treaty between her and your Essex men, on the principles of neutrality and commerce. Pickering here, and his nephew Williams there, can easily negotiate this. Such a lure to the quietists in our ranks with you, might recruit theirs to a majority. Yet, excluded as they would be from intercourse with the rest of the Union and of Europe, I scarcely see the gain they would propose to themselves, even for the moment. The defection would certainly disconcert the other States, but it could not ultimately endanger their safety. They are adequate, in all points, to a defensive war. However, I hope your majority, with the aid it is entitled to, will save us from this trial, to which I think it possible we are advancing. The death of George may come to our relief; but I fear the dominion of the sea is the insanity of the nation itself also. Perhaps, if some stroke of fortune were to rid us at the same time from the Mammoth of the land as well as the Leviathan of the ocean, the people of

England might lose their fears, and recover their sober senses again. Tell my old friend, Governor Gerry, that I gave him glory for the rasping with which he rubbed down his herd of traitors. Let them have justice and protection against personal violence, but no favor. Powers and preëminences conferred on them are daggers put into the hands of assassins, to be plunged into our own bosoms in the moment the thrust can go home to the heart. Moderation can never reclaim them. They deem it timidity, and despise without fearing the tameness from which it flows. Backed by England, they never lose the hope that their day is to come, when the terrorism of their earlier power is to be merged in the more gratifying system of deportation and the guillotine. Being now *hors de combat* myself, I resign to others these cares. A long attack of rheumatism has greatly enfeebled me, and warns me that they will not very long be within my ken. But you may have to meet the trial, and in the focus of its fury. God send you a safe deliverance, a happy issue out of all afflictions, personal and public, with long life, long health, and friends as sincerely attached as yours affectionately.

TO DR. BENJAMIN RUSH.

POPLAR FOREST, August 17, 1811.

DEAR SIR,—I write to you from a place ninety miles from Monticello, near the New London of

this State, which I visit three or four times a year, and stay from a fortnight to a month at a time. I have fixed myself comfortably, keep some books here, bring others occasionally, am in the solitude of a hermit, and quite at leisure to attend to my absent friends. I note this to show that I am not in a situation to examine the dates of our letters, whether I have overgone the annual period of asking how you do? I know that within that time I have received one or more letters from you, accompanied by a volume of your introductory lectures, for which accept my thanks. I have read them with pleasure and edification, for I acknowledge facts in medicine as far as they go, distrusting only their extension by theory. Having to conduct my grandson through his course of mathematics, I have resumed that study with great avidity. It was ever my favorite one. We have no theories there, no uncertainties remain on the mind; all is demonstration and satisfaction. I have forgotten much, and recover it with more difficulty than when in the vigor of my mind I originally acquired it. It is wonderful to me that old men should not be sensible that their minds keep pace with their bodies in the progress of decay. Our old revolutionary friend Clinton, for example, who was a hero, but never a man of mind, is wonderfully jealous on this head. He tells eternally the stories of his younger days to prove his memory, as if memory and reason were the same faculty. Nothing betrays

imbecility so much as the being insensible of it. Had not a conviction of the danger to which an unlimited occupation of the executive chair would expose the republican constitution of our government, made it conscientiously a duty to retire when I did, the fear of becoming a dotard and of being insensible of it, would of itself have resisted all solicitations to remain. I have had a long attack of rheumatism, without fever and without pain while I keep myself still. A total prostration of the muscles of the back, hips and thighs, deprived me of the power of walking, and leaves it still in a very impaired state. A pain when I walk, seems to have fixed itself in the hip, and to threaten permanence. I take moderate rides, without much fatigue; but my journey to this place, in a hard-going gig, gave me great sufferings which I expect will be renewed on my return as soon as I am able. The loss of the power of taking exercise would be a sore affliction to me. It has been the delight of my retirement to be in constant bodily activity, looking after my affairs. It was never damped as the pleasures of reading are, by the question of *cui bono?* for what object? I hope your health of body continues firm. Your works show that of your mind. The habits of exercise which your calling has given to both, will tend long to preserve them. The sedentary character of my public occupations sapped a constitution naturally sound and vigorous, and draws it to an earlier close. But it will still last quite as long

as I wish it. There is a fulness of time when men should go, and not occupy too long the ground to which others have a right to advance. We must continue while here to exchange occasionally our mutual good wishes. I find friendship to be like wine, raw when new, ripened with age, the true old man's milk and restorative cordial. God bless you and preserve you through a long and healthy old age.

TO WILLIAM A. BURWELL.

POPLAR FOREST, August 19, 1811.

DEAR SIR,—I am here after a long absence, having been confined at home a month by rheumatism. I thought myself equal to the journey when I set out, but I have suffered much coming, staying, and shall, returning. If I am not better after a little rest at home, I shall set out for the warm springs. The object of this letter is to inform Mrs. Burwell that a ring, which she left where she washed, the morning of leaving Fludd's, is safe and will be delivered to her order or to herself when she passes. I have not seen the President since he came home, nor do I know what has passed with Foster from the fountain head; but through a channel in which I have confidence, I learn he has delivered a formal note in the name of his government, declaring that the circumstances of the war oblige them to take possession of the ocean, and permit no commerce on

it but through their ports. Thus their purpose is at length avowed. They cannot from their own resources maintain the navy necessary to retain the dominion of the ocean, and mean that other nations shall be assessed to maintain their own chains. Should the king die, as is probable, although the ministry which would come in stand so committed to repeal the orders of council, I doubt if the nation will permit it. For the usurpation of the sea has become a national disease. This state of things annihilates the culture of tobacco, except of about 15,000 hogsheads on the prime lands. Wheat and flour keep up. Wheat was at 9s. 6*d.* at Richmond ten days ago. I have sold mine here at the Richmond price, abating 2s., but 8s. a bushel has been offered for machined wheat. Present me respectfully to Mrs. Burwell, and accept assurances of affectionate respect and esteem.

TO CHARLES W. PEALE.

POPLAR FOREST, August 20, 1811.

It is long, my dear Sir, since we have exchanged a letter. Our former correspondence had always some little matter of business interspersed; but this being at an end, I shall still be anxious to hear from you sometimes, and to know that you are well and happy. I know indeed that your system is that of contentment under any situation. I have heard that you have retired from the city to a farm,

and that you give your whole time to that. Does not the museum suffer? And is the farm as interesting? Here, as you know, we are all farmers, but not in a pleasing style. We have so little labor in proportion to our land that, although perhaps we make more profit from the same labor, we cannot give to our grounds that style of beauty which satisfies the eye of the amateur. Our rotations are corn, wheat, and clover, or corn, wheat, clover and clover, or wheat, corn, wheat, clover and clover; preceding the clover by a plastering. But some, instead of clover, substitute mere rest, and all are slovenly enough. We are adding the care of Merino sheep. I have often thought that if heaven had given me choice of my position and calling, it should have been on a rich spot of earth, well watered, and near a good market for the productions of the garden. No occupation is so delightful to me as the culture of the earth, and no culture comparable to that of the garden. Such a variety of subjects, some one always coming to perfection, the failure of one thing repaired by the success of another, and instead of one harvest a continued one through the year. Under a total want of demand except for our family table, I am still devoted to the garden. But though an old man, I am but a young gardener.

Your application to whatever you are engaged in I know to be incessant. But Sundays and rainy days are always days of writing for the farmer. Think of me sometimes when you have your pen in

hand, and give me information of your health and occupations; and be always assured of my great esteem and respect.

TO CHARLES CLAY.

POPLAR FOREST, August 23, 1811.

DEAR SIR,—While here, and much confined to the house by my rheumatism, I have amused myself with calculating the hour lines of an horizontal dial for the latitude of this place, which I find to be $37^{\circ} 22' 26''$. The calculations are for every five minutes of time, and are always exact to within less than half a second of a degree. As I do not know that anybody here has taken this trouble before, I have supposed a copy would be acceptable to you. It may be a good exercise for Master Cyrus to make you a dial by them. He will need nothing but a protractor, or a line of chords and dividers. A dial of size, say of from twelve inches to two feet square, is the cheapest and most accurate measure of time for general use, and would I suppose be more common if every one possessed the proper horary lines for his own latitude. Williamsburg being very nearly in the parallel of Poplar Forest, the calculations now sent would serve for all the counties in the line between that place and this, for your own place, New London, and Lynchburg in this neighborhood. Slate, as being less affected by the sun, is preferable to wood or metal, and needs

but a saw and plane to prepare it, and a knife point to mark the lines and figures. If worth the trouble, you will, of course, use the paper enclosed; if not, some of your neighbors may wish to do it, and the effort to be of some use to you will strengthen the assurances of my great esteem and respect.

TO LEVI LINCOLN.

MONTICELLO, August 25, 1811.

It is long, my good friend, since we have exchanged a letter; and yet I demur to all prescription against it. I cannot relinquish the right of correspondence with those I have learnt to esteem. If the extension of common acquaintance in public life be an inconvenience, that with select worth is more than a counterpoise. Be assured your place is high among those whose remembrance I have brought with me into retirement, and cherish with warmth. I was overjoyed when I heard you were appointed to the supreme bench of national justice, and as much mortified when I heard you had declined it. You are too young to be entitled to withdraw your services from your country. You cannot yet number the *quadraginta stipendia* of the veteran. Our friends, whom we left behind, have ceased to be friends among themselves. I am sorry for it, on their account and on my own, for I have sincere affection for them all. I hope it will produce no schisms among us, no desertions from our ranks;

that no Essex man will find matter of triumph in it. The secret treasons of his heart, and open rebellions on his tongue, will still be punished, while *in fieri*, by the detestation of his country, and by its vengeance in the overt act. What a pity that history furnishes so many abuses of the punishment by exile, the most rational of all punishments for meditated treason! Their great king beyond the water would doubtless receive them as kindly as his Asiatic prototype did the fugitive aristocracy of Greece. But let us turn to good-humored things. How do you do? What are you doing? Does the farm or the study occupy your time, or each by turns? Do you read law or divinity? And which affords the most curious and cunning learning? Which is most disinterested? And which was it that crucified its Saviour? Or were the two professions united among the Jews? In that case, what must their Caiaphases have been? Answer me these questions, or any others you like better, but let me hear from you and know that you are well and happy. That you may long continue so is the prayer of yours affectionately.

TO JAMES L. EDWARDS.

MONTICELLO, September 5, 1811.

SIR,—Your letter of August 20th has truly surprised me. In that it is said that, *for certain services performed* by Mr. James Lyon and Mr.

Samuel Morse, formerly editors of the Savannah Republican, I promised them the sum of one thousand dollars. This, Sir, is totally unfounded. I never promised to any printer on earth the sum of one thousand dollars, nor any other sum, for certain services performed, or for any services which that expression would imply. I have had no accounts with printers but for their newspapers, for which I have paid always the ordinary price and no more. I have occasionally joined in moderate contributions to printers, as I have done to other descriptions of persons, distressed or persecuted, not by promise, but the actual payment of what I contributed. When Mr. Morse went to Savannah, he called on me and told me he meant to publish a paper there, for which I subscribed, and paid him the year in advance. I continued to take it from his successors, Everett & McLean, and Everett & Evans, and paid for it at different epochs up to December 31, 1808, when I withdrew my subscription. You say McLean informed you "he had some expectation of getting the money, as he had received a letter from me on the subject." If such a letter exists under my name, it is a forgery. I never wrote but a single letter to him; that was of the 28th of January, 1810, and was on the subject of the last payment made for his newspaper, and on no other subject; and I have two receipts of his, (the last dated March 9, 1809,) of payments for his paper, both stating to be *in full of all demands,*

and a letter of the 17th of April, 1810, in reply to mine, manifestly showing he had no demand against me of any other nature. The promise is said to have been made to Morse & Lyon. Were Mr. Morse living, I should appeal to him with confidence, as I believe him to have been a very honest man. Mr. Lyon I suppose to be living, and will, I am sure, acquit me of any such transaction as that alleged. The truth, then, being that I never made the promise suggested, nor any one of a like nature to any printer or other person whatever, every principle of justice and of self-respect requires that I should not listen to any such demand.

TO JAMES LYON.

MONTICELLO, September 5, 1811.

SIR,—I enclose you the copy of a letter I have received from a James L. Edwards, of Boston. You will perceive at once its swindling object. It appeals to two dead men, and one, (yourself,) whom he supposes I cannot get at. I have written him an answer which perhaps prevent his persevering in the attempt, for the whole face of his letter betrays a consciousness of its guilt. But perhaps he may expect that I would sacrifice a sum of money rather than be disturbed with encountering a bold falsehood. In this he is mistaken; and to prepare to meet him, should he repeat his demand, and considering that he has presumed to implicate your name in this

attempt, I take the liberty of requesting a letter from you bearing testimony to the truth of my never having made to you, or within your knowledge or information, any such promise to yourself, your partner Morse, or any other. My confidence in your character leaves me without a doubt of your honest aid in repelling this base and bold attempt to fix on me practices to which no honors or powers in this world would ever have induced me to stoop. I have solicited none, intrigued for none. Those which my country has thought proper to confide to me have been of their own mere motion, unasked by me. Such practices as this letter-writer imputes to me, would have proved me unworthy of their confidence.

It is long since I have known anything of your situation or pursuits. I hope they have been successful, and tender you my best wishes that they may continue so, and for your own health and happiness.

TO DR. ROBERT PATTERSON.

MONTICELLO, September 11, 1811.

DEAR SIR,—The enclosed work came to me without a scrip of a pen other than what you see in the title-page—"À Monsieur le President de la Société." From this I conclude it intended for the Philosophical Society, and for them I now enclose it to you. You will find the notes really of value. They embody and ascertain to us all the scraps of new

discoveries which we have learned in detached articles from less authentic publications. M. Gudin has generally expressed his measures according to the old as well as the new standard, which is a convenience to me, as I do not make a point of retaining the last in my memory. I confess, indeed, I do not like the new system of French measures, because not the best, and adapted to a standard accessible to themselves exclusively, and to be obtained by other nations only from them. For, on examining the map of the earth, you will find no meridian on it but the one passing through their country, offering the extent of land on both sides of the 45th degree, and terminating at both ends in a portion of the ocean which the conditions of the problem for an universal standard of measures require. Were all nations to agree therefore to adopt this standard, they must go to Paris to ask it; and they might as well long ago have all agreed to adopt the French foot, the standard of which they could equally have obtained from Paris. Whereas the pendulum is equally fixed by the laws of nature, is in possession of every nation, may be verified everywhere and by every person, and at an expense within every one's means. I am not therefore without a hope that the other nations of the world will still concur, some day, in making the pendulum the basis of a common system of measures, weights and coins, which applied to the present metrical systems of France and of other countries,

will render them all intelligible to one another. England and this country may give it a beginning, notwithstanding the war they are entering into. The republic of letters is unaffected by the wars of geographical divisions of the earth. France, by her power and science, now bears down everything. But that power has its measure in time by the life of one man. The day cannot be distant in the history of human revolutions, when the indignation of mankind will burst forth, and an insurrection of the universe against the political tyranny of France will overwhelm all her arrogations. Whatever is most opposite to them will be most popular, and what is reasonable therefore in itself, cannot fail to be adopted the sooner from that motive. But why leave this adoption to the tardy will of governments who are always, in their stock of information, a century or two behind the intelligent part of mankind, and who have interests against touching ancient institutions? Why should not the college of the literary societies of the world adopt the second pendulum as the unit of measure on the authorities of reason, convenience and common consent? And why should not our society open the proposition by a circular letter to the other learned institutions of the earth? If men of science, in their publications, would express measures always in multiples and decimals of the pendulum, annexing their value in municipal measures as botanists add the popular to the botanical names

of plants, they would soon become familiar to all men of instruction, and prepare the way for legal adoptions. At any rate, it would render the writers of every nation intelligible to the readers of every other, when expressing the measures of things. The French, I believe, have given up their Decada Calendar, but it does not appear that they retire from the centesimal division of the quadrant. On the contrary, M. Borda has calculated according to that division, new trigonometrical tables not yet, I believe, printed. In the excellent tables of Callet, lately published by Didot, in stereotype, he has given a table of logarithmic lines and tangents for the hundred degrees of the quadrant, abridged from Borda's manuscript. But he has given others for the sexagesimal division, which being for every 10" through the whole table, are more convenient than Hutton's, Scherwin's, or any of their predecessors. It cannot be denied that the centesimal division would facilitate our arithmetic, and that it might have been preferable had it been originally adopted, as a numeration by eights would have been more convenient than by tens. But the advantages would not now compensate the embarrassments of a change.

I extremely regret the not being provided with a time-piece equal to the observations of the approaching eclipse of the sun. Can you tell me what would be the cost in Philadelphia of a clock, the time-keeping part of which should be perfect? And

what the difference of cost between a wooden and gridiron pendulum? To be of course without a striking apparatus, as it would be wanted for astronomical purposes only. Accept assurances of affectionate esteem and respect.

TO CLEMENT CAINE.

MONTICELLO, September 16, 1811.

SIR,—Your favor of April 2d was not received till the 23d of June last, with the volume accompanying it, for which be pleased to accept my thanks. I have read it with great satisfaction, and received from it information, the more acceptable as coming from a source which could be relied on. The retort on European censors, of their own practices on the liberties of man, the inculcation on the master of the moral duties which he owes to the slave, in return for the benefits of his service, that is to say, of food, clothing, care in sickness, and maintenance under age and disability, so as to make him in fact as comfortable and more secure than the laboring man in most parts of the world; and the idea suggested of substituting free whites in all household occupations and manual arts, thus lessening the call for the other kind of labor, while it would increase the public security, give great merit to the work, and will, I have no doubt, produce wholesome impressions. The habitual violation of the

equal rights of the colonist by the dominant (for I will not call them the mother) countries of Europe, the invariable sacrifice of their highest interests to the minor advantages of any individual trade or calling at home, are as immoral in principle as the continuance of them is unwise in practice, after the lessons they have received. What, in short, is the whole system of Europe towards America but an atrocious and insulting tyranny? One hemisphere of the earth, separated from the other by wide seas on both sides, having a different system of interests flowing from different climates, different soils, different productions, different modes of existence, and its own local relations and duties, is made subservient to all the petty interests of the other, to *their* laws, *their* regulations, *their* passions and wars, and interdicted from social intercourse, from the interchange of mutual duties and comforts with their neighbors, enjoined on all men by the laws of nature. Happily these abuses of human rights are drawing to a close on both our continents, and are not likely to survive the present mad contest of the lions and tigers of the other. Nor does it seem certain that the insular colonies will not soon have to take care of themselves, and to enter into the general system of independence and free intercourse with their neighboring and natural friends. The acknowledged depreciation of the paper circulation of England, with the known laws of its rapid progression to bankruptcy, will leave that nation shortly with-

out revenue, and without the means of supporting the naval power necessary to maintain dominion over the rights and interests of different nations. The intention too, which they now formally avow, of taking possession of the ocean as their exclusive domain, and of suffering no commerce on it but through their ports, makes it the interest of all mankind to contribute their efforts to bring such usurpations to an end. We have hitherto been able to avoid professed war, and to continue to our industry a more salutary direction. But the determination to take all our vessels bound to any other than her ports, amounting to all the war she can make (for we fear no invasion), it would be folly in us to let that war be all on one side only, and to make no effort towards indemnification and retaliation by reprisal. That a contest thus forced on us by a nation a thousand leagues from us both, should place your country and mine in relations of hostility, who have not a single motive or interest but of mutual friendship and interchange of comforts, shows the monstrous character of the system under which we live. But however, in the event of war, greedy individuals on both sides, availing themselves of its laws, may commit depredations on each other, I trust that our quiet inhabitants, conscious that no cause exists but for neighborly good will, and the furtherance of common interests, will feel only those brotherly affections which nature has ordained to be those of our situation.

A letter of thanks for a good book has thus run away from its subject into fields of speculation into which discretion perhaps should have forbidden me to enter, and for which an apology is due. I trust that the reflections I hazard will be considered as no more than what they really are, those of a private individual, withdrawn from the councils of his country, uncommunicating with them, and responsible alone for any errors of fact or opinion expressed; as the reveries, in short, of an old man, who, looking beyond the present day, looks into times not his own, and as evidences of confidence in the liberal mind of the person to whom they are so freely addressed. Permit me, however, to add to them my best wishes for his personal happiness, and assurances of the highest consideration and respect.

TO JOHN W. EPPES.

MONTICELLO, September 29, 1811.

DEAR SIR,—The enclosed letter came under cover to me without any indication from what quarter it came.

Our latest arrival brings information of the death of the king of England. Its coming from Ireland and not direct from England would make it little worthy of notice, were not the event so probable. On the 26th of July the English papers say he was expected hourly to expire. This vessel sailed from

Ireland the 4th of August, and says an express brought notice the day before to the government that he died on the 1st; but whether on that day or not, we may be certain he is dead, and entertain, therefore, a hope that a change of ministers will produce that revocation of the orders of council for which they stand so committed. In this event we may still remain at peace, and that probably concluded between the other powers. I am so far, in that case, from believing that our reputation will be tarnished by our not having mixed in the mad contests of the rest of the world that, setting aside the ravings of pepper-pot politicians, of whom there are enough in every age and country, I believe it will place us high in the scale of wisdom, to have preserved our country tranquil and prosperous during a contest which prostrated the honor, power, independence, laws and property of every country on the other side of the Atlantic. Which of them have better preserved their honor? Has Spain, has Portugal, Italy, Switzerland, Holland, Prussia, Austria, the other German powers Sweden, Denmark, or even Russia? And would we accept of the infamy of France or England in exchange for our honest reputation, or of the result of their enormities, despotism to the one, and bankruptcy and prostration to the other, in exchange for the prosperity, the freedom and independence which we have preserved safely through the wreck? The bottom of my page warns me it is time to present my homage to

Mrs. Eppes, and to yourself and Francis my affectionate adieux.

TO PAINE TODD.

MONTICELLO, October 10, 1811.

DEAR SIR,—According to promise I send you our observations of the solar eclipse of September 17th. We had, you know, a perfect observation of the passage of the sun over the meridian, and the eclipse began so soon after as to leave little room for error from the time-piece. Her rate of going, however, was ascertained by ten days' subsequent observation and comparison with the sun, and the times, as I now give them to you, are corrected by these. I have no confidence in the times of the first and ultimate contacts, because you know we were not early enough on the watch, deceived by our time-piece which was too slow. The impression on the sun was too sensible when we first observed it, to be considered as the moment of commencement, and the largeness of our conjectural correction (18") shows that that part of the observation should be considered as nothing. The last contact was well enough observed, but it is on the forming and breaking of the annulus that I rely with entire confidence. I am certain there was not an error of an instant of time in either. I would be governed, therefore, solely by them, and not suffer their result to be affected by the others. I have not yet

entered on the calculation of our longitude from them. They will enable you to do it as a college exercise. Affectionately yours.

First contact, oh. 13' 54"

Annulus formed, rh. 53' 0" } central time of annulus, } central time of the two

Annulus broken, rh. 59' 25" } rh. 56' 12½" } contacts, rh. 51' 28"

Ultimate contact, 3h. 29' 2"

Latitude of Monticello, 38° 8'

TO DR. ROBERT PATTERSON.

MONTICELLO, November 10, 1811.

DEAR SIR,—Your favor of September 23d came to hand in due time, and I thank you for the nautical almanac it covered for the year 1813. I learn with pleasure that the Philosophical Society has concluded to take into consideration the subject of a fixed standard of measures, weights and coins, and you ask my ideas on it; insulated as my situation is, I am sure I can offer nothing but what will occur to the committee engaged on it, with the advantage on their part of correction by an interchange of sentiments and observations among themselves. I will, however, hazard some general ideas because you desire it, and if a single one be useful, the labor will not be lost.

The subject to be referred to as a standard, whether it be matter or motion, should be fixed by nature, invariable and accessible to all nations, independently of others, and with a convenience not disproportioned to its utility. What subject in nature fulfils best these conditions? What system shall

we propose on this, embracing measures, weights and coins? and in what form shall we present it to the world? These are the questions before the committee.

Some other subjects have, at different times, been proposed as standards, but two only have divided the opinions of men: first, a direct admeasurement of a line on the earth's surface, or second, a measure derived from its motion on its axis. To measure directly such a portion of the earth as would furnish an element of measure, which might be found again with certainty in all future times, would be too far beyond the competence of our means to be taken into consideration. I am free, at the same time, to say that if these were within our power in the most ample degree, this element would not meet my preference. The admeasurement would of course be of a portion of some great circle of the earth. If of the equator, the countries over which that passes, their character and remoteness, render the undertaking arduous, and we may say impracticable for most nations. If of some meridian, the varying measures of its degrees from the equator to the pole, require a mean to be sought, of which some aliquot part may furnish what is desired. For this purpose the 45th degree has been recurred to, and such a length of line on both sides of it terminating at each end in the ocean, as may furnish a satisfactory law for a deduction of the unmeasured part of the quadrant. The portion resorted to by the French philoso-

phers, (and there is no other on the globe under circumstances equally satisfactory,) is the meridian passing through their country and a portion of Spain, from Dunkirk to Barcelona. The objections to such an admeasurement as an element of measure, are the labor, the time, the number of highly-qualified agents, and the great expense required. All this, too, is to be repeated whenever any accident shall have destroyed the standard derived from it, or impaired its dimensions. This portion of that particular meridian is accessible of right to no one nation on earth. France, indeed, availing herself of a moment of peculiar relation between Spain and herself, has executed such an admeasurement. But how would it be at this moment, as to either France or Spain? and how is it at all times as to other nations, in point either of right or of practice? Must these go through the same operation, or take their measures from the standard prepared by France? Neither case bears that character of independence which the problem requires, and which neither the equality nor convenience of nations can dispense with. How would it now be, were England the deposit of a standard for the world? At war with all the world, the standard would be inaccessible to all other nations. Against this, too, are the inaccuracies of admeasurements over hills and valleys, mountains and waters, inaccuracies often unobserved by the agent himself, and always unknown to the world. The various results of the

different measures heretofore attempted, sufficiently prove the inadequacy of human means to make such an admeasurement with the exactness requisite.

Let us now see under what circumstances the pendulum offers itself as an element of measure. The motion of the earth on its axis from noon to noon of a mean solar day, has been divided from time immemorial, and by very general consent, into 86,400 portions of time called seconds. The length of a pendulum vibrating in one of those portions, is determined by the laws of nature, is invariable under the same parallel, and accessible independently to all men. Like a degree of the meridian, indeed, it varies in its length from the equator to the pole, and like it, too, requires to be reduced to a mean. In seeking a mean in the first case, the 45th degree occurs with unrivalled preferences. It is the mid-way of the celestial arc from the equator to the pole. It is a mean between the two extreme degrees of the terrestrial arc, or between any two equi-distant from it, and it is also a mean value of all its degrees. In like manner, when seeking a mean for the pendulum, the same 45th degree offers itself on the same grounds, its increments being governed by the same laws which determine those of the different degrees of the meridian.

In a pendulum loaded with a bob, some difficulty occurs in finding the centre of oscillation; and consequently the distance between that and the point of suspension. To lessen this, it has been proposed

to substitute for the pendulum, a cylindrical rod of small diameter, in which the displacement of the centre of oscillation would be lessened. It has also been proposed to prolong the suspending wire of the pendulum below the bob, until their centres of oscillation shall coincide. But these propositions not appearing to have received general approbation, we recur to the pendulum, suspended and charged as has been usual. And the rather as the laws which determine the centre of oscillation leave no room for error in finding it, other than that minimum in practice to which all operations are subject in their execution. The other sources of inaccuracy in the length of the pendulum need not be mentioned, because easily guarded against. But the great and decisive superiority of the pendulum, as a standard of measure, is in its accessibility to all men, at all times and in all places. To obtain the second pendulum for 45° it is not necessary to go actually to that latitude. Having ascertained its length in our own parallel, both theory and observation give us a law for ascertaining the difference between that and the pendulum of any other. To make a new measure therefore, or verify an old one, nothing is necessary in any place but a well-regulated time-piece, or a good meridian, and such a knowledge of the subject as is common in all civilized nations.

Those indeed who have preferred the other element do justice to the certainty, as well as superior facilities of the pendulum, by proposing to recur to one

of the length of their standard, and to ascertain its number of vibrations in a day. These being once known, if any accident impair their standard it is to be recovered by means of a pendulum which shall make the requisite number of vibrations in a day. And among the several commissions established by the Academy of Sciences for the execution of the several branches of their work on measures and weights, that respecting the pendulum was assigned to Messrs. Borda, Coulomb and Cassini, the result of whose labors, however, I have not learned.

Let our unit of measure then be a pendulum of such length as in the latitude of 45° , in the level of the ocean, and in a given temperature, shall perform its vibrations, in small and equal arcs, in one second of mean time.

What ratio shall we adopt for the parts and multiples of this unit? The decimal without a doubt. Our arithmetic being founded in a decimal numeration, the same numeration in a system of measures, weights and coins, tallies at once with that. On this question, I believe, there has been no difference of opinion.

In measures of length, then, the pendulum is our unit. It is a little more than our yard, and less than the ell. Its tenth or dime, will not be quite .4 inches. Its hundredth, or cent, not quite .4 of an inch; its thousandth, or mill, not quite .04 of an inch, and so on. The traveller will count his road by a longer measure. 1,000 units, or a kiliad, will

not be quite two-thirds of our present mile, and more nearly a thousand paces than that.

For measures of surface, the square unit, equal to about ten square feet, or one-ninth more than a square yard, will be generally convenient. But for those of lands a larger measure will be wanted. A kiliad would be not quite a rood, or quarter of an acre; a myriad not quite $2\frac{1}{2}$ acres.

For measures of capacity, wet and dry,
The cubic Unit = .1 would be about .35 cubic feet,
.28 bushels dry, or $\frac{7}{8}$ of a ton
liquid.

Dime = .1 would be about 3.5 cubic feet,
2.8 bushels, or about $\frac{7}{8}$ of a
barrel liquid.

Cent = .01 about 50 cubic inches, or $\frac{7}{8}$ of
a quart.

Mill = .001 = .5 of a cubic inch or $\frac{2}{3}$ of
a gill.

To incorporate into the same system our weights and coins, we must recur to some natural substance, to be found everywhere, and of a composition sufficiently uniform. Water has been considered as the most eligible substance, and rain-water more nearly uniform than any other kind found in nature. That circumstance renders it preferable to distilled water, and its variations in weight may be called insensible.

The cubic unit of this = .1 would weigh about 2,165 pounds or a ton between the long and short.

The Dime	= .1 a little more than 2 kentals.
Cent	= .01 a little more than 20 lb.
Mill	= .001 a little more than 2 lb.
Decimmil	= .0001 about $3\frac{1}{2}$ oz. avoirdupoise.
Centimil	= .00001 a little more than 6 dwt.
Millionth	= .000001 about 15 grains.
Decimillionth	= .0000001 about $1\frac{1}{2}$ grains.
Centimillionth	= .00000001 about .14 of a grain.
Billionth	= .000000001 about .014 of a grain.

With respect to our coins, the pure silver in a dollar being fixed by law at $347\frac{1}{4}$ grains, and all debts and contracts being bottomed on that value, we can only state the pure silver in the dollar, which would be very nearly 23 millionths.

I have used loose and round numbers (the exact unit being yet undetermined) merely to give a general idea of the measures and weights proposed, when compared with those we now use. And in the names of the subdivisions I have followed the metrology of the ordinance of Congress of 1786, which for their series below unit adopted the Roman numerals. For that above unit the Grecian is convenient, and has been adopted in the new French system.

We come now to our last question, in what form shall we offer this metrical system to the world? In

some one which shall be altogether unassuming; which shall not have the appearance of taking the lead among our sister institutions in making a general proposition. So jealous is the spirit of equality in the republic of letters, that the smallest excitement of that would mar our views, however salutary for all. We are in habits of correspondence with some of these institutions, and identity of character and of object, authorize our entering into correspondence with all. Let us then mature our system as far as can be done at present, by ascertaining the length of the second pendulum of 45° by forming two tables, one of which shall give the equivalent of every different denomination of measures, weights and coins in these States, in the unit of that pendulum, its decimals and multiples; and the other stating the equivalent of all the decimal parts and multiples of that pendulum, in the several denominations of measures, weights and coins of our existing system. This done, we might communicate to one or more of these institutions in every civilized country a copy of those tables, stating as our motive, the difficulty we had experienced, and often the impossibility of ascertaining the value of the measures, weights and coins of other countries, expressed in any standard which we possess; that desirous of being relieved from this, and of obtaining information which could be relied on for the purposes of science, as well as of business, we had concluded to ask it from the learned societies of other nations, who are especially quali-

fied to give it with the requisite accuracy; that in making this request we had thought it our duty first to do ourselves, and to offer to others, what we meant to ask from them, by stating the value of our own measures, weights and coins, in some unit of measure already possessed, or easily obtainable, by all nations; that the pendulum vibrating seconds of mean time, presents itself as such an unit; its length being determined by the laws of nature, and easily ascertainable at all times and places; that we have thought that of 45° would be the most unexceptionable, as being a mean of all other parallels, and open to actual trial in both hemispheres. In this, therefore, as an unit, and in its parts and multiples in the decimal ratio, we have expressed, in the tables communicated, the value of all the measures, weights and coins used in the United States, and we ask in return from their body a table of the weights, measures and coins in use within their country, expressed in the parts and multiples of the same unit. Having requested the same favor from the learned societies of other nations, our object is, with their assistance, to place within the reach of our fellow citizens at large a perfect knowledge of the measures, weights and coins of the countries with which they have commercial or friendly intercourse; and should the societies of other countries interchange their respective tables, the learned will be in possession of an uniform language in measures, weights and coins, which may with time become useful to other descrip-

tions of their citizens, and even to their governments. This, however, will rest with their pleasure, not presuming, in the present proposition, to extend our views beyond the limits of our own nation. I offer this sketch merely as the outline of the kind of communication which I should hope would excite no jealousy or repugnance.

Peculiar circumstances, however, would require letters of a more special character to the Institute of France, and the Royal Society of England. The magnificent work which France has executed in the admeasurement of so large a portion of the meridian, has a claim to great respect in our reference to it. We should only ask a communication of their metrical system, expressed in equivalent values of the second pendulum of 45° as ascertained by Messrs. Borda, Coulomb and Cassini, adding, perhaps, the request of an actual rod of the length of that pendulum.

With England, our explanations will be much more delicate. They are the older country, the mother country, more advanced in the arts and sciences, possessing more wealth and leisure for their improvement, and animated by a pride more than laudable.¹ It is their measures, too, which

¹ We are all occupied in industrious pursuits. They abound with persons living on the industry of their fathers or on the earnings of their fellow citizens, given away by their rulers in sinecures and pensions. Some of these, desirous of laudable distinction, devote their time and means to the pursuits of science, and become profitable members of society by an industry of a higher order.

we undertake to ascertain and communicate to themselves. The subject should therefore be opened to them with infinite tenderness and respect, and in some way which might give them due place in its agency. The parallel of 45° being within our latitude and not within theirs, the actual experiments under that would be of course assignable to us. But as a corrective, I would propose that they should ascertain the length of the pendulum vibrating seconds in the city of London, or at the observatory of Greenwich, while we should do the same in an equidistant parallel to the south of 45° , suppose in $38^{\circ} 29'$. We might ask of them, too, as they are in possession of the standards of Guildhall, of which we can have but an unauthentic account, to make the actual application of those standards to the pendulum when ascertained. The operation we should undertake under the 45th parallel, (about Passamaquoddy,) would give us a happy occasion, too, of engaging our sister society of Boston in our views, by referring to them the execution of that part of the work. For that of $38^{\circ} 29'$ we should be at a loss. It crosses the tide waters of the Potomac, about Dumfries, and I do not know what our resources there would be unless we borrow them from Washington, where there are competent persons.

Although I have not mentioned Philadelphia in these operations, I by no means propose to relinquish the benefit of observations to be made there. Her science and perfection in the arts would be a

valuable corrective to the less perfect state of them in the other places of observation. Indeed, it is to be wished that Philadelphia could be made the point of observation south of 45° , and that the Royal Society would undertake the counterpoint on the north, which would be somewhere between the Lizard and Falmouth. The actual pendulums from both of our points of observation, and not merely the measures of them, should be delivered to the Philosophical Society; to be measured under their eye and direction.

As this is really a work of common and equal interest to England and the United States, perhaps it would be still more respectful to make our proposition to her Royal Society in the outset, and to agree with them on a partition of the work. In this case, any commencement of actual experiments on our part should be provisional only, and preparatory to the ultimate results. We might, in the meantime, provisionally also, form a table adapted to the length of the pendulum of 45° , according to the most approved estimates, including those of the French commissioners. This would serve to introduce the subject to the foreign societies, in the way before proposed, reserving to ourselves the charge of communicating to them a more perfect one, when that shall have been completed.

We may even go a step further, and make a general table of the measures, weights and coins of all nations, taking their value hypothetically for the present,

from the tables in the commercial dictionary of the encyclopedia methodique, which are very extensive, and have the appearance of being made with great labor and exactness. To these I expect we must in the end recur, as a supplement for the measures which we may fail to obtain from other countries directly. Their reference is to the foot or inch of Paris, as a standard, which we may convert into parts of the second pendulum of 45° .

I have thus, my dear Sir, committed to writing my general ideas on this subject, the more freely as they are intended merely as suggestions for consideration. It is not probable they offer anything which would not have occurred to the committee itself. My apology on offering them must be found in your request. My confidence in the committee, of which I take for granted you are one, is too entire to have intruded a single idea but on that ground.

Be assured of my affectionate and high esteem and respect.

TO DR. ROBERT PATTERSON.

MONTICELLO, November 10, 1811.

DEAR SIR,—I write this letter separate, because you may perhaps think something in the other of the same date, worth communicating to the committee.

I accept, willingly, Mr. Voigt's offer to make me a time-piece, and with the kind of pendulum he

proposes. I wish it to be as good as hands can make it, in everything useful, but no unnecessary labor to be spent on mere ornament. A plain but neat mahogany case will be preferred.

I have a curiosity to try the length of the pendulum vibrating seconds here, and would wish Mr. Voigt to prepare one which could be substituted for that of the clock occasionally, without requiring anything more than unhooking the one and hanging the other in its place. The bob should be spherical, of lead, and its radius, I presume, about one inch. As I should not have the convenience of a room of uniform temperature, the suspending rod should be such as not to be affected by heat or cold, nor yet so heavy as to affect too sensibly the centre of oscillation. Would not a rod of wood not larger than a large wire, answer this double view? I remember Mr. Rittenhouse told me he had made experiments on some occasion, on the expansibility of wood lengthwise by heat, which satisfied him it was as good as the gridiron for a suspender of the bob. By the experiments on the strength of wood and iron in supporting weights appended to them, iron has been found but about six times as strong as wood, while its specific gravity is eight times as great. Consequently, a rod of it of equal strength, will weigh but three-fourths of one of iron, and disturb the centre of oscillation less in proportion. A rod of wood of white oak, *e. g.* not larger than a seine twine, would probably support a spherical bob of lead of

one inch radius. It might be worked down to that size, I suppose, by the cabinet-makers, who are in the practice of preparing smaller threads of wood for inlaying. The difficulty would be in making it fast to the bob at one end, and scapement at the other, so as to regulate the length with ease and accuracy. This Mr. Voigt's ingenuity can supply, and in all things I would submit the whole matter to your direction to him, and be thankful to you to give it. Yours affectionately.

TO H. A. S. DEARBORN.

MONTICELLO, November 15, 1811.

SIR,—Your favor of October 14 was duly received, and with it Mr. Bowditch's observations on the comet, for which I pray you to accept my thanks, and be so good as to present them to Mr. Bowditch also. I am much pleased to find that we have so able a person engaged in observing the path of this great phenomenon; and hope that from his observations and those of others of our philosophical citizens, on its orbit, we shall have ascertained, on this side of the Atlantic, whether it be one of those which have heretofore visited us. On the other side of the water they have great advantages in their well-established observatories, the magnificent instruments provided for them, and the leisure and information of their scientific men. The acquirements of Mr. Bowditch in solitude and unaided by these advantages, do him great honor.

With respect to the eclipse of September 17. I know of no observations made in this State but my own, although I had no doubt that others had observed it. I used myself an equatorial telescope, and was aided by a friend who happened to be with me, and observed through an achromatic telescope of Dollard's. Two others attended the time-pieces. I had a perfect observation of the passage of the sun over the meridian, and the eclipse commencing but a few minutes after, left little room for error in our time. This little was corrected by the known rate of going of the clock. But we as good as lost the first appulse by a want of sufficiently early attention to be at our places, and composed. I have no confidence, therefore, by several seconds, in the time noted. The last oscillation of the two luminaries was better observed. Yet even there was a certain term of uncertainty as to the precise moment at which the indenture on the limb of the sun entirely vanished. It is therefore the forming of the annulus, and its breaking, which alone possess my entire and complete confidence. I am certain there was not an error of an instant of time in the observation of either of them. Their result therefore should not be suffered to be affected by either of the others, The four observations were as follows:

The 1st appulse, oh. 13' 54''			
Annulus formed, 1h. 53' 0''	} central time of annulus, }	} central time of the two	contacts, 1h. 51' 28''
Annulus broken, 1h. 59' 25''			
Last oscillation, 3h. 29' 2''			
Latitude of Monticello. 38° 8'			

Jefferson's Works

I have thus given you, Sir, my observations, with a candid statement of their imperfections. If they can be of any use to Mr. Bowditch, it will be more than was in view when they were made; and should I hear of any other observations made in this State, I shall not fail to procure and send him a copy of them. Be so good as to present me affectionately to your much-esteemed father, and to accept the tender of my respect.

TO MELATIAH NASH.

MONTICELLO, November 15, 1811.

SIR,—I duly received your letter of October 24 on the publication of an Ephemeris. I have long thought it desirable that something of that kind should be published in the United States, holding a middle station between the nautical and the common popular almanacs. It would certainly be acceptable to a numerous and respectable description of our fellow citizens, who, without undertaking the higher astronomical operations, for which the former is calculated, yet occasionally wish for information beyond the scope of the common almanacs. What you propose to insert in your Ephemeris is very well so far. But I think you might give it more of the character desired by the addition of some other articles, which would not enlarge it more than a leaf or two. For instance, the equation of time is essential to the regulation of our clocks and watches, and

would only add a narrow column to your second page. The sun's declination is often desirable, and would add but another narrow column to the same page. This last would be the more useful as an element for obtaining the rising and setting of the sun, in every part of the United States; for your Ephemeris will, I suppose, give it only for a particular parallel, as of New York, which would in a great measure restrain its circulation to that parallel. But the sun's declination would enable every one to calculate sunrise for himself, with scarcely more trouble than taking it from an almanac. If you would add at the end of the work a formula for that calculation, as, for example, that for Delalande, § 1026, a little altered. Thus, to the logarithmic tangent of the latitude (a constant number) add the logarithmic tangent of the sun's declination; taking 10 from the Index, the remainder is the line of an arch which, turned into time and added to six hours, gives sunrise for the winter half and sunset for the summer half of the year, to which may be added three lines only from the table of refractions, § 1028, or, to save even this trouble, and give the calculation ready made for every parallel, print a table of semi-diurnal arches, ranging the latitudes from 35° to 45° in a line at top, and the degrees of declination in a vertical line on the left, and stating, in the line of the declination, the semi-diurnal arch for each degree of latitude, so that every one knowing the latitude of his place and the declination of the day, would find his sunrise or

his sunset where their horizontal and vertical lines meet. This table is to be found in many astronomical books, as, for instance, in Wakeley's Mariner's Compass Rectified, and more accurately in the *Connoissance des tems*, for 1788. It would not occupy more than two pages at the end of the work, and would render it an almanac for every part of the United States.

To give novelty, and increase the appetite for continuing to buy your Ephemeris annually, you might every year select some one or two useful tables which many would wish to possess and preserve. These are to be found in the requisite tables, the *Connoissance des tems* for different years, and many in Pike's arithmetic.

I have given these hints because you requested my opinion. They may extend the plan of your Ephemeris beyond your view, which will be sufficient reason for not regarding them. In any event I shall willingly become a subscriber to it, if you should have any place of deposit for them in Virginia where the price can be paid. Accept the tender of my respects.

TO DR. BENJAMIN RUSH.

POPLAR FOREST, December 5, 1811.

DEAR SIR,—While at Monticello I am so much engrossed by business or society, that I can only write on matters of strong urgency. Here I have

leisure, as I have everywhere the disposition to think of my friends. I recur, therefore, to the subject of your kind letters relating to Mr. Adams and myself, which a late occurrence has again presented to me. I communicated to you the correspondence which had parted Mrs. Adams and myself, in proof that I could not give friendship in exchange for such sentiments as she had recently taken up towards myself, and avowed and maintained in her letters to me. Nothing but a total renunciation of these could admit a reconciliation, and that could be cordial only in proportion as the return to ancient opinions was believed sincere. In these jaundiced sentiments of hers I had associated Mr. Adams, knowing the weight which her opinions had with him, and notwithstanding she declared in her letters that they were not communicated to him. A late incident has satisfied me that I wronged him as well as her, in not yielding entire confidence to this assurance on her part. Two of the Mr. ———, my neighbors and friends, took a tour to the northward during the last summer. In Boston they fell into company with Mr. Adams, and by his invitation passed a day with him at Braintree. He spoke out to them everything which came uppermost, and as it occurred to his mind, without any reserve; and seemed most disposed to dwell on those things which happened during his own administration. He spoke of his *masters*, as he called his Heads of departments, as acting above his control, and often against his opinions. Among

many other topics, he adverted to the unprincipled licentiousness of the press against myself, adding, "I always loved Jefferson, and still love him."

This is enough for me. I only needed this knowledge to revive towards him all the affections of the most cordial moments of our lives. Changing a single word only in Dr. Franklin's character of him, I knew him to be always an honest man, often a great one, but sometimes incorrect and precipitate in his judgments; and it is known to those who have ever heard me speak of Mr. Adams, that I have ever done him justice myself, and defended him when assailed by others, with the single exception as to political opinions. But with a man possessing so many other estimable qualities, why should we be dissocialized by mere differences of opinion in politics, in religion, in philosophy, or anything else? His opinions are as honestly formed as my own. Our different views of the same subject are the result of a difference in our organization and experience. I never withdrew from the society of any man on this account, although many have done it from me; much less should I do it from one with whom I had gone through, with hand and heart, so many trying scenes. I wish, therefore, but for an apposite occasion to express to Mr. Adams my unchanged affections for him. There is an awkwardness which hangs over the resuming a correspondence so long discontinued, unless something could arise which should call for a letter. Time and chance may

perhaps generate such an occasion, of which I shall not be wanting in promptitude to avail myself. From this fusion of mutual affections, Mrs. Adams is of course separated. It will only be necessary that I never name her. In your letters to Mr. Adams, you can, perhaps, suggest my continued cordiality towards him, and knowing this, should an occasion of writing first present itself to him, he will perhaps avail himself of it, as I certainly will, should it first occur to me. No ground for jealousy now existing, he will certainly give fair play to the natural warmth of his heart. Perhaps I may open the way in some letter to my old friend Gerry, who I know is in habits of the greatest intimacy with him.

I have thus, my friend, laid open my heart to you, because you were so kind as to take an interest in healing again revolutionary affections, which have ceased in expression only, but not in their existence. God ever bless you, and preserve you in life and health.

TO DR. JOHN CRAWFORD.

MONTICELLO, January 2, 1812.

SIR,—Your favor of December 17th, has been duly received, and with it the pamphlet on the cause, seat and cure of diseases, for which be pleased to accept my thanks. The commencement which you propose by the natural history of the diseases of the human body, is a very interesting one, and will cer-

tainly be the best foundation for whatever relates to their cure. While surgery is seated in the temple of the exact sciences, medicine has scarcely entered its threshold. Her theories have passed in such rapid succession as to prove the insufficiency of all, and their fatal errors are recorded in the necrology of man. For some forms of disease, well known and well defined, she has found substances which will restore order to the human system, and it is to be hoped that observation and experience will add to their number. But a great mass of diseases remain undistinguished and unknown, exposed to the random shot of the theory of the day. If on this chaos you can throw such a beam of light as your celebrated brother has done on the sources of animal heat, you will, like him, render great service to mankind.

The fate of England, I think with you, is nearly decided, and the present form of her existence is drawing to a close. The ground, the houses, the men will remain; but in what new form they will revive and stand among nations, is beyond the reach of human foresight. We hope it may be one of which the predatory principle may not be the essential characteristic. If her transformation shall replace her under the laws of moral order, it is for the general interest that she should still be a sensible and independent weight in the scale of nations, and be able to contribute, when a favorable moment presents itself, to reduce under the same order, her

great rival in flagitiousness. We especially ought to pray that the powers of Europe may be so poised and counterpoised among themselves, that their own safety may require the presence of all their force at home, leaving the other quarters of the globe in undisturbed tranquillity. When our strength will permit us to give the law of our hemisphere, it should be that the meridian of the mid-Atlantic should be the line of demarkation between war and peace, on this side of which no act of hostility should be committed, and the lion and the lamb lie down in peace together.

I am particularly thankful for the kind expressions of your letter towards myself, and tender you in return my best wishes and the assurances of my great respect and esteem.

TO THOMAS SULLY.

MONTICELLO, January 8, 1812.

SIR,—I have duly received your favor of December 22d, informing me that the society of artists of the United States had made me an honorary member of their society. I am very justly sensible of the honor they have done me, and I pray you to return them my thanks for this mark of their distinction. I fear that I can be but a very useless associate. Time, which withers the fancy, as the other faculties of the mind and body, presses on me with a heavy hand, and distance intercepts all personal inter-

course. I can offer, therefore, but my zealous good wishes for the success of the institution, and that, embellishing with taste a country already overflowing with the useful productions, it may be able to give an innocent and pleasing direction to accumulations of wealth, which would otherwise be employed in the nourishment of coarse and vicious habits. With these I tender to the society and to yourself the assurances of my high respect and consideration.

TO COLONEL JAMES MONROE.

MONTICELLO, January 11, 1812.

DEAR SIR,—I thank you for your letter of the 6th. It is a proof of your friendship, and of the sincere interest you take in whatever concerns me. Of this I have never had a moment's doubt, and have ever valued it as a precious treasure. The question indeed whether I knew or approved of General Wilkinson's endeavors to prevent the restoration of the right of deposit at New Orleans, could never require a second of time to answer. But it requires some time for the mind to recover from the astonishment excited by the boldness of the suggestion. Indeed, it is with difficulty I can believe he has really made such an appeal; and the rather as the expression in your letter is that you have "casually heard it," without stating the degree of reliance which you have in the source of infor-

mation. I think his understanding is above an expedient so momentary and so finally overwhelming. Were Dearborn and myself dead, it might find credit with some. But the world at large, even then, would weigh for themselves the dilemma, whether it was more probable that, in the situation I then was, clothed with the confidence and power of my country, I should descend to so unmeaning an act of treason, or that he, in the wreck now threatening him, should wildly lay hold of any plank. They would weigh his motives and views against those of Dearborn and myself, the tenor of his life against that of ours, his Spanish mysteries against my open cherishment of the western interests; and, living as we are, and ready to purge ourselves by any ordeal, they must now weigh, in addition, our testimony against his. All this makes me believe he will never seek this refuge. I have ever and carefully restrained myself from the expression of any opinion respecting General Wilkinson, except in the case of Burr's conspiracy, wherein, after he had got over his first agitations, we believed his decision firm, and his conduct zealous for the defeat of the conspiracy, and although injudicious, yet meriting, from sound intentions, the support of the nation. As to the rest of his life, I have left it to his friends and his enemies, to whom it furnishes matter enough for disputation. I classed myself with neither, and least of all in this time of his distresses, should I be disposed to add to their pressure. I hope, therefore,

Jefferson's Works

he has not been so imprudent as to write our names in the panel of his witnesses.

Accept the assurances of my constant affections.

TO JOHN ADAMS.

MONTICELLO, January 21, 1812.

DEAR SIR,—I thank you beforehand (for they are not yet arrived) for the specimens of homespun you have been so kind as to forward me by post. I doubt not their excellence, knowing how far you are advanced in these things in your quarter. Here we do little in the fine way, but in coarse and middling goods a great deal. Every family in the country is a manufactory within itself, and is very generally able to make within itself all the stouter and middling stuffs for its own clothing and household use. We consider a sheep for every person in the family as sufficient to clothe it, in addition to the cotton, hemp and flax which we raise ourselves. For fine stuff we shall depend on your northern manufactories. Of these, that is to say, of company establishments, we have none. We use little machinery. The spinning jenny, and loom with the flying shuttle, can be managed in a family; but nothing more complicated. The economy and thriftiness resulting from our household manufactures are such that they will never again be laid aside; and nothing more salutary for us has ever happened than the British obstructions to our

demands for their manufactures. Restore free intercourse when they will, their commerce with us will have totally changed its form, and the articles we shall in future want from them will not exceed their own consumption of our produce.

A letter from you calls up recollections very dear to my mind. It carries me back to the times when, beset with difficulties and dangers, we were fellow laborers in the same cause, struggling for what is most valuable to man, his right of self-government. Laboring always at the same oar, with some wave ever ahead, threatening to overwhelm us, and yet passing harmless under our bark, we knew not how we rode through the storm with heart and hand, and made a happy port. Still we did not expect to be without rubs and difficulties; and we have had them. First, the detention of the western posts, then the coalition of Pilnitz, outlawing our commerce with France, and the British enforcement of the outlawry. In your day, French depredations; in mine, English, and the Berlin and Milan decrees; now, the English orders of council, and the piracies they authorize. When these shall be over, it will be the impressment of our seamen or something else; and so we have gone on, and so we shall go on, puzzled and prospering beyond example in the history of man. And I do believe we shall continue to growl, to multiply and prosper until we exhibit an association, powerful, wise and happy, beyond what has yet been seen by men. As for France and Eng-

land, with all their preëminence in science, the one is a den of robbers, and the other of pirates. And if science produces no better fruits than tyranny, murder, rapine and destitution of national morality, I would rather wish our country to be ignorant, honest and estimable, as our neighboring savages are. But whither is senile garrulity leading me? Into politics, of which I have taken final leave. I think little of them and say less. I have given up newspapers in exchange for Tacitus and Thucydides, for Newton and Euclid, and I find myself much the happier. Sometimes, indeed, I look back to former occurrences, in remembrance of our old friends and fellow laborers, who have fallen before us. Of the signers of the Declaration of Independence, I see now living not more than half a dozen on your side of the Potomac, and on this side, myself alone. You and I have been wonderfully spared, and myself with remarkable health, and a considerable activity of body and mind. I am on horseback three or four hours of every day; visit three or four times a year a possession I have ninety miles distant, performing the winter journey on horseback. I walk little, however, a single mile being too much for me, and I live in the midst of my grandchildren, one of whom has lately promoted me to be a great-grandfather. I have heard with pleasure that you also retain good health, and a greater power of exercise in walking than I do. But I would rather have heard this from yourself, and that, writing a letter

like mine, full of egotisms, and of details of your health, your habits, occupations and enjoyments, I should have the pleasure of knowing that in the race of life, you do not keep, in its physical decline, the same distance ahead of me which you have done in political honors and achievements. No circumstances have lessened the interest I feel in these particulars respecting yourself; none have suspended for one moment my sincere esteem for you, and I now salute you with unchanged affection and respect.

TO HIS EXCELLENCY GOVERNOR JAMES BARBOUR.¹

MONTICELLO, January 22, 1812.

DEAR SIR,—Your favor of the 14th has been duly received, and I sincerely congratulate you, or rather my country, on the just testimony of confidence which it has lately manifested to you. In your hands I know that its affairs will be ably and honestly administered.

In answer to your inquiry whether, in the early times of our government, where the council was divided, the practice was for the Governor to give the deciding vote? I must observe that, correctly speaking, the Governor not being a counsellor, his vote could make no part of an advice of council. That would be to place an advice on their journals which they did not give, and could not give because

¹ Governor of Virginia.

of their equal division. But he did what was equivalent in effect. While I was in the administration, no doubt was ever suggested that where the council, divided in opinion, could give no advice, the Governor was free and bound to act on his own opinion and his own responsibility. Had this been a change of the practice of my predecessor, Mr. Henry, the first Governor, it would have produced some discussion, which it never did. Hence, I conclude it was the opinion and practice from the first institution of the government. During Arnold's and Cornwallis' invasion, the council dispersed to their several homes, to take care of their families. Before their separation, I obtained from them a capitulary of standing advices for my government in such cases as ordinarily occur: such as the appointment of militia officers, justices, inspectors, etc., on the recommendations of the courts; but in the numerous and extraordinary occurrences of an invasion, which could not be foreseen, I had to act on my own judgment and my own responsibility. The vote of general approbation, at the session of the succeeding winter, manifested the opinion of the legislature, that my proceedings had been correct. General Nelson, my successor, staid mostly, I think, with the army; and I do not believe his council followed the camp, although my memory does not enable me to affirm the fact. Some petitions against him for impressment of property without authority of law, brought his proceedings before the next legislature;

the questions necessarily involved were whether necessity, without express law, could justify the impressment, and if it could, whether he could order it without the advice of council. The approbation of the legislature amounted to a decision of both questions. I remember this case the more especially, because I was then a member of the legislature, and was one of those who supported the Governor's proceedings, and I think there was no division of the House on the question. I believe the doubt was first suggested in Governor Harrison's time, by some member of the council, on an equal division. Harrison, in his dry way, observed that instead of one Governor and eight counsellors, there would then be eight Governors and one counsellor, and continued, as I understood, the practice of his predecessors. Indeed, it is difficult to suppose it could be the intention of those who framed the Constitution, that when the council should be divided the government should stand still; and the more difficult as to a Constitution formed during a war, and for the purpose of carrying on that war, that so high an officer as their Governor should be created and salaried, merely to act as the clerk and authenticator of the votes of the council. No doubt it was intended that the advice of the council should control the Governor. But the action of the controlling power being withdrawn, his would be left free to proceed on its own responsibility. Where from division, absence, sickness or other obstacle, no advice could be given, they could not

mean that their Governor, the person of their peculiar choice and confidence, should stand by, an inactive spectator, and let their government tumble to pieces for want of a will to direct it. In executive cases, where promptitude and decision are all-important, an adherence to the letter of a law against its probable intentions, (for every law must intend that itself shall be executed,) would be fraught with incalculable danger. Judges may await further legislative explanations, but a delay of executive action might produce irretrievable ruin. The State is invaded, militia to be called out, an army marched, arms and provisions to be issued from the public magazines, the legislature to be convened, and the council is divided. Can it be believed to have been the intention of the framers of the Constitution, that the Constitution itself and their constituents with it should be destroyed for want of a will to direct the resources they had provided for its preservation? Before such possible consequences all verbal scruples must vanish; construction must be made *secundum arbitrium boni viri*, and the Constitution be rendered a practicable thing. That exposition of it must be vicious, which would leave the nation under the most dangerous emergencies without a directing will. The cautious maxims of the bench, to seek the will of the legislator and his words only, are proper and safer for judicial government. They act ever on an individual case only, the evil of which is partial, and gives time for correction. But an instant of delay

in executive proceedings may be fatal to the whole nation. They must not, therefore, be laced up in the rules of the judiciary department. They must seek the intention of the legislator in all the circumstances which may indicate it in the history of the day, in the public discussions, in the general opinion and understanding, in reason and in practice. The three great departments having distinct functions to perform, must have distinct rules adapted to them. Each must act under its own rules, those of no one having any obligation on either of the others. When the opinion first began that a Governor could not act when his council could not or would not advise, I am uninformed. Probably not till after the war; for, had it prevailed then, no militia could have been opposed to Cornwallis, nor necessaries furnished to the opposing army of La Fayette. These, Sir, are my recollections and thoughts on the subject of your inquiry, to which I will only add the assurances of my great esteem and respect.

TO BENJAMIN GALLOWAY.

MONTICELLO, February 2, 1812.

SIR,—I duly received your favor of the 1st instant, together with the volume accompanying it, for which I pray you to accept my thanks, and to be so kind as to convey them to Mrs. Debutts also, to whose obliging care I am indebted for its transmission. But especially my thanks are due to the

author himself for the honorable mention he has made of me. With the exception of two or three characters of greater eminence in the revolution, we formed a group of fellow laborers in the common cause, animated by a common zeal, and claiming no distinction of one over another.

The spirit of freedom, breathed through the whole of Mr. Northmore's composition, is really worthy of the purest times of Greece and Rome. It would have been received in England, in the days of Hampden and Sidney, with more favor than at this time. It marks a high and independent mind in the author, one capable of rising above the partialities of country, to have seen in the adversary cause that of justice and freedom, and to have estimated fairly the motives and actions of those engaged in its support. I hope and firmly believe that the whole world will, sooner or later, feel benefit from the issue of our assertion of the rights of man. Although the horrors of the French Revolution have damped for awhile the ardor of the patriots in every country, yet it is not extinguished—it will never die. The sense of right has been excited in every breast, and the spark will be rekindled by the very oppressions of that detestable tyranny employed to quench it. The errors of the honest patriots of France, and the crimes of her Dantons and Robespierres, will be forgotten in the more encouraging contemplation of our sober example, and steady march to our object. Hope will strengthen the presumption that what has been

done once may be done again. As you have been the channel of my receiving this mark of attention from Mr. Northmore, I must pray you to be that of conveying to him my thanks, and an assurance of the high sense I have of the merit of his work, and of its tendency to cherish the noblest virtues of the human character.

On the political events of the day I have nothing to communicate. I have retired from them, and given up newspapers for more classical reading. I add, therefore, only the assurances of my great esteem and respect.

TO EZRA SARGEANT.

MONTICELLO, February 3, 1812.

SIR,—Observing that you edit the Edinburgh Review, reprinted in New York, and presuming that your occupations in that line are not confined to that single work, I take the liberty of addressing the present letter to you. If I am mistaken, the obviousness of the inference will be my apology. Mr. Edward Livingston brought an action against me for having removed his intrusion on the beach of the river Mississippi opposite to New Orleans. At the request of my counsel I made a statement of the facts of the case, and of the law applicable to them, so as to form a full argument of justification. The case has been dismissed from court for want of jurisdiction, and the public remain uninformed

whether I had really abused the powers entrusted to me, as he alleged. I wish to convey to them this information by publishing the justification. The questions arising in the case are mostly under the civil law, the laws of Spain and of France, which are of course couched in French, in Spanish, in Latin, and some in Greek; and the books being in few hands in this country, I was obliged to make very long extracts from them. The correctness with which your edition of the Edinburgh Review is printed, and of the passages quoted in those languages, induces me to propose to you the publication of the case I speak of. It will fill about 65 or 70 pages of the type and size of paper of the Edinburgh Review. The MS. is in the handwriting of this letter, entirely fair and correct. It will take between four and five sheets of paper, of sixteen pages each. I should want 250 copies struck off for myself, intended principally for the members of Congress, and the printer would be at liberty to print as many more as he pleased for sale, but without any copyright, which I should not propose to have taken out. It is right that I should add, that the work is not at all for popular reading. It is merely a law argument, and a very dry one; having been intended merely for the eye of my counsel. It may be in some demand perhaps with lawyers, and persons engaged in the public affairs, but very little beyond that. Will you be so good as to inform me if you will undertake to edit this, and what would be the terms on which you can furnish

me with 250 copies? I should want it to be done with as little delay as possible, so that Congress might receive it before they separate; and I should add as a condition, that not a copy should be sold until I could receive my number, and have time to lay them on the desks of the members. This would require a month from the time they should leave New York by the stage. In hopes of an early answer I tender you the assurances of my respect.

TO DR. WHEATON.

MONTICELLO, February 14, 1812.

Thomas Jefferson presents his compliments to Dr. Wheaton, and his thanks for the address he was so kind as to enclose him on the advancement in medicine. Having little confidence in the theories of that art, which change in their fashion with the ladies' caps and gowns, he has much in the facts it has established by observation. The experience of physicians has proved that in certain forms of disease, certain substances will restore order to the human system; and he doubts not that continued observation will enlarge the catalogue, and give relief to our posterity in cases wherein we are without it. The extirpation of the small pox by vaccination, is an encouraging proof that the condition of man is susceptible of amelioration, although we are not able to fix its extent. He salutes Dr. Wheaton with esteem and respect.

TO CHARLES CHRISTIAN.

MONTICELLO, March 21, 1812.

SIR,—I have duly received your favor of the 10th instant, proposing to me to join in a contribution for the support of the family of the late Mr. Cheetham of New York. Private charities, as well as contributions to public purposes in proportion to every one's circumstances, are certainly among the duties we owe to society, and I have never felt a wish to withdraw from my portion of them. The general relation in which I, some time since, stood to the citizens of all our States, drew on me such multitudes of these applications as exceeded all resource. Nor have they much abated since my retirement to the limited duties of a private citizen, and the more limited resources of a private fortune. They have obliged me to lay down as a law of conduct for myself, to restrain my contributions for public institutions to the circle of my own State, and for private charities to that which is under my own observation; and these calls I find more than sufficient for everything I can spare. Nor was there anything in the case of the late Mr. Cheetham, which could claim with me to be taken out of a general rule. On these considerations I must decline the contribution you propose, not doubting that the efforts of the family, aided by those who stand in the relation to them of neighbors and friends, in so great a mart for industry, as they are placed in, will save

them from all danger of want or suffering. With this apology for returning the paper sent me, unsubscribed, be pleased to accept the tender of my respect.

TO F. A. VAN DER KEMP.

MONTICELLO, March 22, 1812.

SIR,—I am indebted to you for the communication of the prospectus of a work embracing the history of civilized man, political and moral, from the great change produced in his condition by the extension of the feudal system over Europe through all the successive effects of the revival of letters, the invention of printing, that of the compass, the enlargement of science, and the revolutionary spirit, religious and civil, generated by that. It presents a vast anatomy of fact and reflection, which if duly filled up would offer to the human mind a wonderful mass for contemplation.

Your letter does not ascertain whether this work is already executed, or only meditated; but it excites a great desire to see it completed, and a confidence that the author of the analysis is best able to develop the profound views there only sketched. It would be a library in itself, and to our country particularly desirable and valuable, if executed in the genuine republican principles of our Constitution. The only orthodox object of the institution of government is to secure the greatest degree of happiness possible to the general mass of those associated under

it. The events which this work proposes to embrace will establish the fact that unless the mass retains sufficient control over those intrusted with the powers of their government, these will be perverted to their own oppression, and to the perpetuation of wealth and power in the individuals and their families selected for the trust. Whether our Constitution has hit on the exact degree of control necessary, is yet under experiment; and it is a most encouraging reflection that distance and other difficulties securing us against the brigand governments of Europe, in the safe enjoyment of our farms and firesides, the experiment stands a better chance of being satisfactorily made here than on any occasion yet presented by history. To promote, therefore, unanimity and perseverance in this great enterprise, to disdain despair, encourage trial, and nourish hope, and the worthiest objects of every political and philanthropic work; and that this would be the necessary result of that which you have delineated, the facts it will review, and the just reflections arising out of them, will sufficiently answer. I hope, therefore, that it is not *in petto* merely, but already completed; and that my fellow citizens, warned in it of the rocks and shoals on which other political associations have been wrecked, will be able to direct theirs with a better knowledge of the dangers in its way.

The enlargement of your observations on the subjects of natural history, alluded to in your letter,

cannot fail to add to our lights respecting them, and will therefore ever be a welcome present to every friend of science. Accept, I pray you, the assurance of my great esteem and respect.

TO THE HONORABLE HUGH NELSON.

MONTICELLO, April 2, 1812.

DEAR SIR,—Your letter of March 22d has been duly received. By this time a printed copy of my MS. respecting the batture has I hope been laid on your desk, by which you will perceive that the MS. itself has been received long enough to have been sent to New York, printed and returned to Washington.

On the subject of the omission of the officers of the Virginia State line, in the provisions and reservations of the cession of Congress, my memory enables me to say nothing more than that it was not through inattention, as I believe, but the result of compromise. But of this the President, who was in Congress when the arrangement was settled, can give the best account. I had nothing to do but execute a deed according to that arrangement, made previous to my being a member. Colonel Monroe being a member with me, is more likely to remember what passed at that time; but the best resource for explanation of everything we did, is in our weekly correspondence with the Governor of Virginia, which I suppose is still among the Executive records. We

made it a point to write a letter to him every week, either jointly, or individually by turns.

You request me to state the public sentiment of our part of the country as to war and the taxes. You know I do not go out much. My own house and our court yard are the only places where I see my fellow citizens. As far as I can judge in this limited sphere, I think all regret that there is cause for war, but all consider it as now necessary, and would, I think, disapprove of a much longer delay of the declaration of it. As to the taxes, they expect to meet them, would be unwilling to have them postponed, and are only dissatisfied with some of the subjects of taxation; that is to say the stamp tax and excise. To the former I have not seen a man who is not totally irreconcilable. If the latter could be collected from those who buy to sell again, so as to prevent domiciliary visits by the officers, I think it would be acceptable, and I am sure a wholesome tax. I am persuaded the Secretary of the Treasury is mistaken in supposing so immense a deduction from the duties on imports. We shall make little less to sell than we do now, for no one will let his hands be idle; and consequently we shall export not much less, and expect returns. Some part will be taken on the export and some on the import. But taking into account the advance of prices, that revenue will not fall so far short as he thinks; and I have no doubt might be counted on to make good the entire suppression of the stamp tax. Yet,

although a very disgusting pill, I think there can be no question the people will swallow it, if their representatives determine on it. I get their sentiments mostly from those who are most in the habit of intercourse with the people than I am myself. Accept the assurance of my great esteem and respect.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, April 17, 1812.

DEAR SIR,—The enclosed papers will explain themselves. Their coming to me is the only thing not sufficiently explained.

Your favor of the 3d came duly to hand. Although something of the kind had been apprehended, the embargo found the farmers and planters only getting their produce to market, and selling as fast as they could get it there. I think it caught them in this part of the State with one-third of their flour or wheat and three-quarters of their tobacco undisposed of. If we may suppose the rest of the middle country in the same situation, and that the upper and lower country may be judged by that as a mean, these will perhaps be the proportions of produce remaining in the hands of the producers. Supposing the objects of the government were merely to keep our vessels and men out of harm's way, and that there is no idea that the want of our flour will starve Great Britain, the sale of the remain-

ing produce will be rather desirable, and what would be desired even in war, and even to our enemies. For I am favorable to the opinion which has been urged by others, sometimes acted on, and now partly so by France and Great Britain, that commerce, under certain restrictions and licenses, may be indulged between enemies mutually advantageous to the individuals, and not to their injury as belligerents. The capitulation of Amelia Island, if confirmed, might favor this object, and at any rate get off our produce now on hand. I think a people would go through a war with much less impatience if they could dispose of their produce, and that unless a vent can be provided for them, they will soon become querulous and clamor for peace. They appear at present to receive the embargo with perfect acquiescence and without a murmur, seeing the necessity of taking care of our vessels and seamen. Yet they would be glad to dispose of their produce in any way not endangering them, as by letting it go from a neutral place in British vessels. In this way we lose the carriage only; but better that than both carriage and cargo. The rising of the price of flour, since the first panic is passed away, indicates some prospects in the merchants of disposing of it. Our wheat had greatly suffered by the winter, but is as remarkably recovered by the favorable weather of the spring. Ever affectionately yours.

TO JOHN ADAMS.

MONTICELLO, April 20, 1812.

DEAR SIR,—I have it now in my power to send you a piece of homespun in return for that I received from you. Not of the fine texture, or delicate character of yours, or to drop our metaphor, not filled as that was with that display of imagination which constitutes excellence in Belles Lettres, but a mere sober, dry and formal piece of logic. *Ornari res ipsa negat*. Yet you may have enough left of your old taste for law reading, to cast an eye over some of the questions it discusses. At any rate, accept it as the offering of esteem and friendship.

You wish to know something of the Richmond and Wabash prophets. Of Nimrod Hews I never heard before. Christopher Macpherson I have known for twenty years. He is a man of color, brought up as a book-keeper by a merchant, his master, and afterwards enfranchised. He had understanding enough to post up his ledger from his journal, but not enough to bear up against hypochondriac affections, and the gloomy forebodings they inspire. He became crazy, foggy, his head always in the clouds, and rhapsodizing what neither himself nor any one else could understand. I think he told me he had visited you personally while you were in the administration, and wrote you letters, which you have probably forgotten in the mass of the correspondences of that crazy class,

of whose complaints, and terrors, and mysticisms, the several Presidents have been the regular depositories. Macpherson was too honest to be molested by anybody, and too inoffensive to be a subject for the mad-house; although, I believe, we are told in the old book, that "every man that is mad, and maketh himself a prophet, thou shouldest put him in prison and in the stocks."

The Wabash prophet is a very different character, more rogue than fool, if to be a rogue is not the greatest of all follies. He arose to notice while I was in the administration, and became, of course, a proper subject of inquiry for me. The inquiry was made with diligence. His declared object was the reformation of his red brethren, and their return to their pristine manner of living. He pretended to be in constant communication with the Great Spirit; that he was instructed by him to make known to the Indians that they were created by him distinct from the whites, of different natures, for different purposes, and placed under different circumstances, adapted to their nature and destinies; that they must return from all the ways of the whites to the habits and opinions of their forefathers; they must not eat the flesh of hogs, of bullocks, of sheep, etc., the deer and buffalo having been created for their food; they must not make bread of wheat, but of Indian corn; they must not wear linen nor woolen, but dress like their fathers in the skins and furs of animals; they must not drink

ardent spirits, and I do not remember whether he extended his inhibitions to the gun and gunpowder, in favor of the bow and arrow. I concluded from all this, that he was a visionary, enveloped in the clouds of their antiquities, and vainly endeavoring to lead back his brethren to the fancied beatitudes of their golden age. I thought there was little danger of his making many proselytes from the habits and comfort they had learned from the whites, to the hardships and privations of savagism, and no great harm if he did. We let him go on, therefore, unmolested. But his followers increased till the English thought him worth corruption and found him corruptible. I suppose his views were then changed; but his proceedings in consequence of them were after I left the administration, and are, therefore, unknown to me; nor have I ever been informed what were the particular acts on his part, which produced an actual commencement of hostilities on ours. I have no doubt, however, that his subsequent proceedings are but a chapter apart, like that of Henry and Lord Liverpool, in the Book of the Kings of England.

Of this mission of Henry, your son had got wind in the time of the embargo, and communicated it to me. But he had learned nothing of the particular agent, although, of his workings, the information he had obtained appears now to have been correct. He stated a particular which Henry has not distinctly brought forward, which was that the Eastern

States were not to be required to make a formal act of separation from the Union, and to take a part in the war against it; a measure deemed much too strong for their people; but to declare themselves in a state of neutrality, in consideration of which they were to have peace and free commerce, the lure most likely to insure popular acquiescence. Having no indications of Henry as the intermediate in this negotiation of the Essex junto, suspicions fell on Pickering, and his nephew Williams, in London. If he was wronged in this, the ground of the suspicion is to be found in his known practices and avowed opinions, as that of his accomplices in the sameness of sentiment and of language with Henry, and subsequently by the fluttering of the wounded pigeons.

This letter, with what it encloses, has given you enough, I presume, of law and the prophets. I will only add to it, therefore, the homage of my respects to Mrs. Adams, and to yourself the assurances of affectionate esteem and respect.

TO JAMES MAURY.

MONTICELLO, April 25, 1812.

MY DEAR AND ANCIENT FRIEND AND CLASSMATE,—
Often has my heart smote me for delaying acknowledgments to you, receiving, as I do, such frequent proofs of your kind recollection in the transmission of papers to me. But instead of acting on the good

old maxim of not putting off to to-morrow what we can do to-day, we are too apt to reverse it, and not to do to-day what we can put off to to-morrow. But this duty can be no longer put off. To-day we are at peace; to-morrow, war. The curtain of separation is drawing between us, and probably will not be withdrawn till one, if not both of us, will be at rest with our fathers. Let me now, then, while I may, renew to you the declarations of my warm attachment, which in no period of life has ever been weakened, and seems to become stronger as the remaining objects of our youthful affections are fewer.

Our two countries are to be at war, but not you and I. And why should our two countries be at war, when by peace we can be so much more useful to one another? Surely the world will acquit our government from having sought it. Never before has there been an instance of a nation's bearing so much as we have borne. Two items alone in our catalogue of wrongs will forever acquit us of being the aggressors: the impressment of our seamen, and the excluding us from the ocean. The first foundations of the social compact would be broken up, were we definitively to refuse to its members the protection of their persons and property, while in their lawful pursuits. I think the war will not be short, because the object of England, long obvious, is to claim the ocean as her domain, and to exact transit duties from every vessel traversing it. This

is the sum of her orders of council, which were only a step in this bold experiment, never meant to be retracted if it could be permanently maintained. And this object must continue her in war with all the world. To this I see no termination, until her exaggerated efforts, so much beyond her natural strength and resources, shall have exhausted her to bankruptcy. The approach of this crisis is, I think, visible in the departure of her precious metals, and depreciation of her paper medium. We, who have gone through that operation, know its symptoms, its course, and consequences. In England they will be more serious than elsewhere, because half the wealth of her people is now in that medium, the private revenue of her money-holders, or rather of her paper-holders, being, I believe, greater than that of her land-holders. Such a proportion of property, imaginary and baseless as it is, cannot be reduced to vapor but with great explosion. She will rise out of its ruins, however, because her lands, her houses, her arts will remain, and the greater part of her men. And these will give her again that place among nations which is proportioned to her natural means, and which we all wish her to hold. We believe that the just standing of all nations is the health and security of all. We consider the overwhelming power of England on the ocean, and of France on the land, as destructive of the prosperity and happiness of the world, and wish both to be reduced only to the necessity of observing

moral duties. We believe no more in Bonaparte's fighting merely for the liberty of the seas, than in Great Britain's fighting for the liberties of mankind. The object of both is the same, to draw to themselves the power, the wealth and the resources of other nations. We resist the enterprises of England first, because they first come vitally home to us. And our feelings repel the logic of bearing the lash of George the III. for fear of that of Bonaparte at some future day. When the wrongs of France shall reach us with equal effect, we shall resist them also. But one at a time is enough; and having offered a choice to the champions, England first takes up the gauntlet.

The English newspapers suppose me the personal enemy of their nation. I am not so. I am an enemy to its injuries, as I am to those of France. If I could permit myself to have national partialities, and if the conduct of England would have permitted them to be directed towards her, they would have been so. I thought that in the administration of Mr. Addington, I discovered some dispositions toward justice, and even friendship and respect for us, and began to pave the way for cherishing these dispositions, and improving them into ties of mutual good will. But we had then a federal minister there, whose dispositions to believe himself, and to inspire others with a belief, in our sincerity, his subsequent conduct has brought into doubt; and poor Merry, the English minister here, had

learned nothing of diplomacy but its suspicions, without head enough to distinguish when they were misplaced. Mr. Addington and Mr. Fox passed away too soon to avail the two countries of their dispositions. Had I been personally hostile to England, and biased in favor of either the character or views of her great antagonist, the affair of the Chesapeake put war into my hand. I had only to open it and let havoc loose. But if ever I was gratified with the possession of power, and of the confidence of those who had entrusted me with it, it was on that occasion when I was enabled to use both for the prevention of war, towards which the torrent of passion here was directed almost irresistibly, and when not another person in the United States, less supported by authority and favor, could have resisted it. And now that a definitive adherence to her impressments and orders of council renders war no longer avoidable, my earnest prayer is that our government may enter into no compact of common cause with the other belligerent, but keep us free to make a separate peace, whenever England will separately give us peace and future security. But Lord Liverpool is our witness that this can never be but by her removal from our neighborhood.

I have thus, for a moment, taken a range into the field of politics, to possess you with the view we take of things here. But in the scenes which are to ensue, I am to be but a spectator. I have with-

drawn myself from all political intermeddlings, to indulge the evening of my life with what have been the passions of every portion of it, books, science, my farms, my family and friends. To these every hour of the day is now devoted. I retain a good activity of mind, not quite as much of body, but uninterrupted health. Still the hand of age is upon me. All my old friends are nearly gone. Of those in my neighborhood, Mr. Divers and Mr. Lindsay alone remain. If you could make it a *partie quarrée*, it would be a comfort indeed. We would beguile our lingering hours with talking over our youthful exploits, our hunts on Peter's mountain, with a long train of *et cetera*, in addition, and feel, by recollection at least, a momentary flash of youth. Reviewing the course of a long and sufficiently successful life, I find in no portion of it happier moments than those were. I think the old hulk in which you are, is near her wreck, and that like a prudent rat, you should escape in time. However, here, there, and everywhere, in peace or in war, you will have my sincere affections and prayers for your life, health and happiness.

TO JOHN RODMAN.

MONTICELLO, April 25, 1812.

Thomas Jefferson presents his compliments to Mr. Rodman, and his thanks for the translation of Montgalliard's work which he has been so kind as

to send him. It certainly presents some new and true views of the situation of England. It is a subject of deep regret to see a great nation reduced from an unexampled height of prosperity to an abyss of ruin, by the long-continued rule of a single chief. All we ought to wish as to both belligerent parties is to see them forced to disgorge what their ravenous appetites have taken from others, and reduced to the necessity of observing moral duties in future. If we read with regret what concerns England, the fulsome adulation of the author towards his own chief excites nausea and disgust at the state of degradation to which the mind of man is reduced by subjection to the inordinate power of another. He salutes Mr. Rodman with great respect.

TO JOHN JACOB ASTOR.

MONTICELLO, May 24, 1812.

SIR,—Your letter of March 14th lingered much on the road, and a long journey before I could answer it, has delayed its acknowledgment till now. I am sorry your enterprise for establishing a factory on the Columbia river, and a commerce through the line of that river and the Missouri, should meet with the difficulties stated in your letter. I remember well having invited your proposition on that subject, and encouraged it with the assurance of every facility and protection which the government could properly afford. I considered as a great

public acquisition the commencement of a settlement on that point of the western coast of America, and looked forward with gratification to the time when its descendants should have spread themselves through the whole length of that coast, covering it with free and independent Americans, unconnected with us but by the ties of blood and interest, and employing like us the rights of self-government. I hope the obstacles you state are not insurmountable; that they will not endanger, or even delay the accomplishment of so great a public purpose. In the present state of affairs between Great Britain and us, the government is justly jealous of contraventions of those commercial restrictions which have been deemed necessary to exclude the use of British manufactures in these States, and to promote the establishment of similar ones among ourselves. The interests too of the revenue require particular watchfulness. But in the non-importation of British manufactures, and the revenue raised on foreign goods, the legislature could only have in view the consumption of our own citizens, and the revenue to be levied on that. We certainly did not mean to interfere with the consumption of nations foreign to us, as the Indians of the Columbia and Missouri are, or to assume a right of levying an impost on that consumption; and if the words of the laws take in their supplies in either view, it was probably unintentional, and because their case not being under the contemplation of the legislature, has been

inadvertently embraced by it. The question with them would be not what manufactures these nations should use, or what taxes they should pay us on them, but whether we should give a transit for them through our country. We have a right to say we will not let the British exercise that transit. But it is our interest as well as a neighborly duty to allow it when exercised by our own citizens only. To guard against any surreptitious introduction of British influence among those nations, we may justifiably require that no Englishman be permitted to go with the trading parties, and necessary precautions should also be taken to prevent this covering the contravention of our own laws and views. But these once securely guarded, our interest would permit the transit free of duty. And I do presume that if the subject were fully presented to the legislature, they would provide that the laws intended to guard our own concerns only, should not assume the regulation of those of foreign and independent nations; still less that they should stand in the way of so interesting an object as that of planting the germ of an American population on the shores of the Pacific. From meddling however with these subjects it is my duty as well as my inclination to abstain. They are in hands perfectly qualified to direct them, and who knowing better the present state of things, are better able to decide what is right; and whatever they decide on a full view of the case, I shall implicitly confide has been rightly

decided. Accept my best wishes for your success, and the assurances of my great esteem and respect.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, May 30, 1812.

DEAR SIR,—Another *communication* is enclosed, and the letter of the applicant is the only information I have of his qualifications. I barely remember such a person as the secretary of Mr. Adams, and messenger to the Senate while I was of that body. It enlarges the sphere of choice by adding to it a strong federalist. The triangular war must be the idea of the Anglomen and malcontents, in other words, the federalists and quids. Yet it would reconcile neither. It would only change the topic of abuse with the former, and not cure the mental disease of the latter. It would prevent our eastern capitalists and seamen from employment in privateering, take away the only chance of conciliating them, and keep them at home, idle, to swell the discontents; it would completely disarm us of the most powerful weapon we can employ against Great Britain, by shutting every port to our prizes, and yet would not add a single vessel to their number; it would shut every market to our agricultural productions, and engender impatience and discontent with that class which, in fact, composes the nation; it would insulate us in general negotiations for

peace, making all the parties our opposers, and very indifferent about peace with us, if they have it with the rest of the world, and would exhibit a solecism worthy of Don Quixote only, that of a choice to fight two enemies at a time, rather than to take them by succession. And the only motive for all this is a sublimated impartiality, at which the world will laugh, and our own people will turn upon us in mass as soon as it is explained to them, as it will be by the very persons who are now laying that snare. These are the hasty views of one who rarely thinks on these subjects. Your own will be better, and I pray to them every success, and to yourself every felicity.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, June 6, 1812.

DEAR SIR,—I have taken the liberty of drawing the attention of the Secretary of War to a small depot of military stores at New London, and leave the letter open for your perusal. Be so good as to seal it before delivery. I really thought that General Dearborn had removed them to Lynchburg, undoubtedly a safer and more convenient deposit.

Our country is the only one I have heard of which has required a draught; this proceeded from a mistake of the colonel, who thought he could not receive individual offers, but that the whole quota,

241, must present themselves at once. Every one, however, manifests the utmost alacrity; of the 241 there having been but ten absentees at the first muster called. A further proof is that Captain Carr's company of volunteer cavalry being specifically called for by the Governor, though consisting of but 28 when called on, has got up to 50 by new engagements since their call was known. The only inquiry they make is whether they are to go to Canada or Florida? Not a man, as far as I have learned, entertains any of those doubts which puzzle the lawyers of Congress and astonish common sense, whether it is lawful for them to pursue a retreating enemy across the boundary line of the Union?

I hope Barlow's correspondence has satisfied all our Quixotes who thought we should undertake nothing less than to fight all Europe at once. I enclose you a letter from Dr. Bruff, a mighty good and very ingenious man. His method of manufacturing bullets and shot, has the merit of increasing their specific gravity greatly, (being made by composition,) and rendering them as much heavier and better than the common leaden bullet, as that is than an iron one. It is a pity he should not have the benefit of furnishing the public when it would be equally to their benefit also. God bless you.

TO JOHN ADAMS.

MONTICELLO, June 11, 1812.

DEAR SIR,—By our post preceding that which brought your letter of May 21st, I had received one from Mr. Malcolm on the same subject with yours, and by the return of the post had stated to the President my recollections of him. But both your letters were probably too late; as the appointment had been already made, if we may credit the newspapers.

You ask if there is any book that pretends to give any account of the traditions of the Indians, or how one can acquire an idea of them? Some scanty accounts of their traditions, but fuller of their customs and characters, are given us by most of the early travellers among them; these you know were mostly French. Lafitan, among them, and Adair an Englishman, have written on this subject; the former two volumes, the latter one, all in 4to. But unluckily Lafitan had in his head a preconceived theory on the mythology, manners, institutions and government of the ancient nations of Europe, Asia and Africa, and seems to have entered on those of America only to fit them into the same frame, and to draw from them a confirmation of his general theory. He keeps up a perpetual parallel, in all those articles, between the Indians of America and the ancients of the other quarters of the globe. He selects, therefore, all the facts and adopts all

the falsehoods which favor this theory, and very gravely retails such absurdities as zeal for a theory could alone swallow. He was a man of much classical and scriptural reading, and has rendered his book not unentertaining. He resided five years among the Northern Indians, as a Missionary, but collects his matter much more from the writings of others, than from his own observation.

Adair too had his kink. He believed all the Indians of America to be descended from the Jews; the same laws, usages, rites and ceremonies, the same sacrifices, priests, prophets, fasts and festivals, almost the same religion, and that they all spoke Hebrew. For, although he writes particularly of the Southern Indians only, the Catawbas, Creeks, Cherokees, Chickasaws and Choctaws, with whom alone he was personally acquainted, yet he generalizes whatever he found among them, and brings himself to believe that the hundred languages of America, differing fundamentally every one from every other, as much as Greek from Gothic, yet have all one common prototype. He was a trader, a man of learning, a self-taught Hebraist, a strong religionist, and of as sound a mind as Don Quixote in whatever did not touch his religious chivalry. His book contains a great deal of real instruction on its subject, only requiring the reader to be constantly on his guard against the wonderful obliquities of his theory.

The scope of your inquiry would scarcely, I sup-

pose, take in the three folio volumes of Latin of De Bry. In these, facts and fable are mingled together, without regard to any favorite system. They are less suspicious, therefore, in their complexion, more original and authentic, than those of Lafitan and Adair. This is a work of great curiosity, extremely rare, so as never to be bought in Europe, but on the breaking up and selling some ancient library. On one of these occasions a bookseller procured me a copy, which, unless you have one, is probably the only one in America.

You ask further, if the Indians have any order of priesthood among them, like the Druids, Bards or Minstrels of the Celtic nations? Adair alone, determined to see what he wished to see in every object, metamorphoses their Conjurers into an order of priests, and describes their sorceries as if they were the great religious ceremonies of the nation. Lafitan called them by their proper names, Jongleurs, Devins, Sortileges; De Bry *praestigiatores*; Adair himself sometimes Magi, Archimagi, cunning men, Seers, rain makers; and the modern Indian interpreters call them conjurers and witches. They are persons pretending to have communications with the devil and other evil spirits, to foretell future events, bring down rain, find stolen goods, raise the dead, destroy some and heal others by enchantment, lay spells, etc. And Adair, without departing from his parallel of the Jews and Indians, might have found their counterpart much more aptly, among

the soothsayers, sorcerers and wizards of the Jews, their Gannes and Gambres, their Simon Magus, Witch of Endor, and the young damsel whose sorceries disturbed Paul so much; instead of placing them in a line with their high-priest, their chief priests, and their magnificent hierarchy generally. In the solemn ceremonies of the Indians, the persons who direct or officiate, are their chiefs, elders and warriors, in civil ceremonies or in those of war; it is the head of the cabin in their private or particular feasts or ceremonies; and sometimes the matrons, as in their corn feasts. And even here, Adair might have kept up his parallel, with ennobling his conjurers. For the ancient patriarchs, the Noahs, the Abrahams, Isaacs and Jacobs, and even after the consecration of Aaron, the Samuels and Elijahs, and we may say further, every one for himself offered sacrifices on the altars. The true line of distinction seems to be, that solemn ceremonies, whether public or private, addressed to the Great Spirit, are conducted by the worthies of the nation, men or matrons, while conjurers are resorted to only for the invocation of evil spirits. The present state of the several Indian tribes, without any public order of priests, is proof sufficient that they never had such an order. Their steady habits permit no innovations, not even those which the progress of science offers to increase the comforts, enlarge the understanding, and improve the morality of mankind. Indeed, so little idea have they of a regular order of

priests, that they mistake ours for their conjurers, and call them by that name.

So much in answer to your inquiries concerning Indians, a people with whom, in the early part of my life, I was very familiar, and acquired impressions of attachment and commiseration for them which have never been obliterated. Before the Revolution, they were in the habit of coming often and in great numbers to the seat of government, where I was very much with them. I knew much the great Ontasseté, the warrior and orator of the Cherokees; he was always the guest of my father, on his journeys to and from Williamsburg. I was in his camp when he made his great farewell oration to his people the evening before his departure for England. The moon was in full splendor, and to her he seemed to address himself in his prayers for his own safety on the voyage, and that of his people during his absence; his sounding voice, distinct articulation, animated action, and the solemn silence of his people at their several fires, filled me with awe and veneration, although I did not understand a word he uttered. That nation, consisting now of about 2,000 warriors, and the Creeks of about 3,000 are far advanced in civilization. They have good cabins, enclosed fields, large herds of cattle and hogs, spin and weave their own clothes of cotton, have smiths and other of the most necessary tradesmen, write and read, are on the increase in numbers, and a branch of Cherokees is now instituting a

regular representative government. Some other tribes are advancing in the same line. On those who have made any progress, English seductions will have no effect. But the backward will yield, and be thrown further back. Those will relapse into barbarism and misery, lose numbers by war and want, and we shall be obliged to drive them with the beasts of the forest into the stony mountains. They will be conquered, however, in Canada. The possession of that country secures our women and children forever from the tomahawk and scalping knife, by removing those who excite them; and for this possession orders, I presume, are issued by this time; taking for granted that the doors of Congress will re-open with a declaration of war. That this may end in indemnity for the past, security for the future, and complete emancipation from Anglomania, Gallomania, and all the manias of demoralized Europe, and that you may live in health and happiness to see all this, is the sincere prayer of yours affectionately.

TO ELBRIDGE GERRY.

MONTICELLO, June 11, 1812.

DEAR SIR,—It has given me great pleasure to receive a letter from you. It seems as if, our ancient friends dying off, the whole mass of the affections of the heart survives undiminished to the few who remain. I think our acquaintance commenced in

1764, both then just of age. We happened to take lodgings in the same house in New York. Our next meeting was in the Congress of 1775, and at various times afterwards in the exercise of that and other public functions, until your mission to Europe. Since we have ceased to meet, we have still thought and acted together, "*et idem velle, atque idem nolle, ea demum amicitia est.*" Of this harmony of principle, the papers you enclosed me are proof sufficient. I do not condole with you on your release from your government. The vote of your opponents is the most honorable mark by which the soundness of your conduct could be stamped. I claim the same honorable testimonial. There was but a single act of my whole administration of which that party approved. That was the proclamation on the attack of the Chesapeake. And when I found they approved of it, I confess I began strongly to apprehend I had done wrong, and to exclaim with the Psalmist, "Lord, what have I done that the wicked should praise me!"

What, then, does this English faction with you mean? Their newspapers say rebellion, and that they will not remain united with us unless we will permit them to govern the majority. If this be their purpose, their anti-republican spirit, it ought to be met at once. But a government like ours should be slow in believing this, should put forth its whole might when necessary to suppress it, and promptly return to the paths of reconciliation. The

extent of our country secures it, I hope, from the vindictive passions of the petty incorporations of Greece. I rather suspect that the principal office of the other seventeen States will be to moderate and restrain the local excitement of our friends with you, when they (with the aid of their brethren of the other States, if they need it) shall have brought the rebellious to their feet. They count on British aid. But what can that avail them by land? They would separate from their friends, who alone furnish employment for their navigation, to unite with their only rival for that employment. When interdicted the harbors of their quondam brethren, they will go, I suppose, to ask a share in the carrying trade of their rivals, and a dispensation with their navigation act. They think they will be happier in an association under the rulers of Ireland, the East and West Indies, than in an independent government, where they are obliged to put up with their proportional share only in the direction of its affairs. But I trust that such perverseness will not be that of the honest and well-meaning mass of the federalists of Massachusetts; and that when the questions of separation and rebellion shall be nakedly proposed to them, the Gores and the Pickerings will find their levees crowded with silk stocking gentry, but no yeomanry; an army of officers without soldiers. I hope, then, all will still end well; the Anglomen will consent to make peace with their bread and butter, and you and I shall sink to rest, without having been actors or spectators in another civil war.

How many children have you? You beat me, I expect, in that count, but I you in that of our grandchildren. We have not timed these things well together, or we might have begun a re-alliance between Massachusetts and the Old Dominion, faithful companions in the War of Independence, peculiarly tallied in interests, by each wanting exactly what the other has to spare; and estranged to each other in latter times, only by the practices of a third nation, the common enemy of both. Let us live only to see this re-union, and I will say with old Simeon, "Lord, now lettest thou thy servant depart in peace, for mine eyes have seen thy salvation." In that peace may you long remain, my friend, and depart only in the fulness of years, all passed in health and prosperity. God bless you.

P. S. June 13. I did not condole with you on the reprobation of your opponents, because it proved your orthodoxy. Yesterday's post brought me the resolution of the republicans of Congress, to propose you as Vice-President. On this I sincerely congratulate you. It is a stamp of double proof. It is a notification to the factionaries that their nay is the yea of truth, and its best test. We shall be almost within striking distance of each other. Who knows but you may fill up some short recess of Congress with a visit to Monticello, where a numerous family will hail you with a hearty country welcome.

TO JUDGE JOHN TYLER.

MONTICELLO, June 17, 1812.

DEAR SIR,— * * * * *

On the other subject of your letter, the application of the common law to our present situation, I deride with you the ordinary doctrine, that we brought with us from England the *common law rights*. This narrow notion was a favorite in the first moment of rallying to our rights against Great Britain. But it was that of men who felt their rights before they had thought of their explanation. The truth is, that we brought with us the *rights of men*; of expatriated men. On our arrival here, the question would at once arise, by what law will we govern ourselves? The resolution seems to have been, by that system, with which we are familiar, to be altered by ourselves occasionally, and adapted to our new situation. The proofs of this resolution are to be found in the form of the oaths of the judges, 1. Henning's Stat. 169. 187; of the Governor, *ib.* 504; in the act for a provisional government, *ib.* 372; in the preamble to the laws of 1661-2; the uniform current of opinions and decisions, and in the general recognition of all our statutes, framed on that basis. But the state of the English law at the date of our emigration, constituted the system adopted here. We may doubt, therefore, the propriety of quoting in our courts English authorities subsequent to that adoption; still more, the admission of authorities posterior to

the Declaration of Independence, or rather to the accession of that King, whose reign, *ab initio*, was the very tissue of wrongs which rendered the Declaration at length necessary. The reason or it had inception at least as far back as the commencement of his reign. This relation to the beginning of his reign, would add the advantage of getting us rid of all Mansfield's innovations, or civilizations of the common law. For however I admit the superiority of the civil over the common law code, as a system of perfect justice, yet an incorporation of the two would be like Nebuchadnezzar's image of metals and clay, a thing without cohesion of parts. The only natural improvement of the common law, is through its homogeneous ally, the chancery, in which new principles are to be examined, concocted and digested. But when, by repeated decisions and modifications, they are rendered pure and certain, they should be transferred by statute to the courts of common law, and placed within the pale of juries. The exclusion from the courts of the malign influence of all authorities after the *Georgium sidus* became ascendant, would uncanonize Blackstone, whose book, although the most elegant and best digested of our law catalogue, has been perverted more than all others, to the degeneracy of legal science. A student finds there a smattering of everything, and his indolence easily persuades him that if he understands that book, he is master of the whole body of the law. The distinction between these, and those who have

drawn their stores from the deep and rich mines of Coke and Littleton, seems well understood even by the unlettered common people, who apply the appellation of Blackstone lawyers to these ephemeral insects of the law.

Whether we should undertake to reduce the common law, our own, and so much of the English statutes as we have adopted, to a text, is a question of transcendent difficulty. It was discussed at the first meeting of the committee of the revised code, in 1776, and decided in the negative, by the opinions of Wythe, Mason and myself, against Pendleton and Thomas Lee. Pendleton proposed to take Blackstone for that text, only purging him of what was inapplicable or unsuitable to us. In that case, the meaning of every word of Blackstone would have become a source of litigation, until it had been settled by repeated legal decisions. And to come at that meaning, we should have had produced, on all occasions, that very pile of authorities from which it would be said he drew his conclusion, and which, of course, would explain it, and the terms in which it is couched. Thus we should have retained the same chaos of law-lore from which we wished to be emancipated, added to the evils of the uncertainty which a new text and new phrases would have generated. An example of this may be found in the old statutes, and commentaries on them, in Coke's second institute, but more remarkably in the institute of Justinian, and the vast masses explanatory or supple-

mentary of that which fill the libraries of the civilians. We were deterred from the attempt by these considerations, added to which, the bustle of the times did not admit leisure for such an undertaking.

Your request of my opinion on this subject has given you the trouble of these observations. If your firmer mind in encountering difficulties would have added your vote to the minority of the committee, you would have had on your side one of the greatest men of our age, and like him, have detracted nothing from the sentiments of esteem and respect which I bore to him, and tender with sincerity the assurance of to yourself.

TO GENERAL THADDEUS KOSCIUSKO.

MONTICELLO, June 28, 1812.

“*Nous voila donc, mon cher ami, en guerre avec l'Angleterre.*” This was declared on the 18th instant, thirty years after the signature of our peace in 1782. Within these thirty years what a vast course of growth and prosperity we have had! It is not ten years since Great Britain began a series of insults and injuries which would have been met with war in the threshold by any European power. This course has been unremittingly followed up by increasing wrongs, with glimmerings indeed of peaceable redress, just sufficient to keep us quiet, till she has had the impudence at length to extinguish even these glimmerings by open avowal. This would not have been borne

so long, but that France has kept pace with England in iniquity of principle, although not in the power of inflicting wrongs on us. The difficulty of selecting a foe between them has spared us many years of war, and enabled us to enter into it with less debt, more strength and preparation. Our present enemy will have the sea to herself, while we shall be equally predominant at land, and shall strip her of all her possessions on this continent. She may burn New York, indeed, by her ships and congreve rockets, in which case we must burn the city of London by hired incendiaries, of which her starving manufacturers will furnish abundance. A people in such desperation as to demand of their government *aut parcem, aut furcam*, either bread or the gallows, will not reject the same alternative when offered by a foreign hand. Hunger will make them brave every risk for bread. The partisans of England here have endeavored much to goad us into the folly of choosing the ocean instead of the land, for the theatre of war. That would be to meet their strength with our own weakness, instead of their weakness with our strength. I hope we shall confine ourselves to the conquest of their possessions, and defence of our harbors, leaving the war on the ocean to our privateers. These will immediately swarm in every sea, and do more injury to British commerce than the regular fleets of all Europe would do. The government of France may discontinue their license trade. Our privateers will furnish them much more abundantly with colonial

produce, and whatever the license trade has given them. Some have apprehended we should be overwhelmed by the new improvements of war, which have not yet reached us. But the British possess them very imperfectly, and what are these improvements? Chiefly in the management of artillery, of which our country admits little use. We have nothing to fear from their armies, and shall put nothing in prize to their fleets. Upon the whole, I have known no war entered into under more favorable auspices.

Our manufacturers are now very nearly on a footing with those of England. She has not a single improvement which we do not possess, and many of them better adapted by ourselves to our ordinary use. We have reduced the large and expensive machinery for most things to the compass of a private family, and every family of any size is now getting machines on a small scale for their household purposes. Quoting myself as an example, and I am much behind many others in this business, my household manufactures are just getting into operation on the scale of a carding machine costing \$60 only, which may be worked by a girl of twelve years old, a spinning machine, which may be made for \$10, carrying 6 spindles for wool, to be worked by a girl also, another which can be made for \$25, carrying 12 spindles for cotton, and a loom, with a flying shuttle, weaving its twenty yards a day. I need 2,000 yards of linen, cotton and woollen yearly, to clothe

my family, which this machinery, costing \$150 only, and worked by two women and two girls, will more than furnish. For fine goods there are numerous establishments at work in the large cities, and many more daily growing up; and of merinos we have some thousands, and these multiplying fast. We consider a sheep for every person as sufficient for their woollen clothing, and this State and all to the north have fully that, and those to the south and west will soon be up to it. In other articles we are equally advanced, so that nothing is more certain than that, come peace when it will, we shall never again go to England for a shilling where we have gone for a dollar's worth. Instead of applying to her manufacturers there, they must starve or come here to be employed. I give you these details of peaceable operations, because they are within my present sphere. Those of war are in better hands, who know how to keep their own secrets. Because, too, although a soldier yourself, I am sure you contemplate the peaceable employment of man in the improvement of his condition, with more pleasure than his murders, rapine and devastations.

Mr. Barnes, some time ago, forwarded you a bill of exchange for 5,500 francs, of which the enclosed is a duplicate. Apprehending that a war with England would subject the remittances to you to more casualties, I proposed to Mr. Morson, of Bordeaux, to become the intermediate for making remittances to you, which he readily acceded to on liberal ideas

arising from his personal esteem for you, and his desire to be useful to you. If you approve of this medium I am in hopes it will shield you from the effect of the accidents to which the increased dangers of the seas may give birth. It would give me great pleasure to hear from you oftener. I feel great interest in your health and happiness. I know your feelings on the present state of the world, and hope they will be cheered by the successful course of our war, and the addition of Canada to our confederacy. The infamous intrigues of Great Britain to destroy our government (of which Henry's is but one sample), and with the Indians to tomahawk our women and children, prove that the cession of Canada, their fulcrum for these Machiavelian levers, must be a *sine qua non* at a treaty of peace. God bless you, and give you to see all these things, and many and long years of health and happiness.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, June 29, 1812.

DEAR SIR,—I duly received your favor of the 22d covering the declaration of war. It is entirely popular here, the only opinion being that it should have been issued the moment the season admitted the militia to enter Canada. * * * * * To continue the war popular, two things are necessary mainly: 1. To stop Indian barbarities. The con-

quest of Canada will do this. 2. To furnish markets for our produce, say indeed for our flour, for tobacco is already given up, and seemingly without reluctance. The great profits of the wheat crop have allured every one to it; and never was such a crop on the ground as that which we generally begin to cut this day. It would be mortifying to the farmer to see such an one rot in his barn. It would soon sicken him to war. Nor can this be a matter of wonder or of blame on him. Ours is the only country on earth where war is an instantaneous and total suspension of all the objects of his industry and support. For carrying our produce to foreign markets our own ships, neutral ships, and even enemy ships under neutral flag, which I would wink at, will probably suffice. But the coasting trade is of double importance, because both seller and buyer are disappointed, and both are our own citizens. You will remember that in this trade our greatest distress in the last war was produced by our own pilot boats taken by the British and kept as tenders to their larger vessels. These being the swiftest vessels on the ocean, they took them and selected the swiftest from the whole mass. Filled with men they scoured everything along shore, and completely cut up that coasting business which might otherwise have been carried on within the range of vessels of force and draught. Why should not we then line our coast with vessels of pilot-boat construction, filled with men, armed with carronades, and only so much

larger as to assure the mastery of the pilot boat? The British cannot counter-work us by building similar ones, because, the fact is, however unaccountable, that our builders alone understand that construction. It is on our own pilot boats the British will depend, which our larger vessels may thus retake. These, however, are the ideas of a landsman only, Mr. Hamilton's judgment will test their soundness.

Our militia are much afraid of being called to Norfolk at this season. They all declare a preference of a march to Canada. I trust however that Governor Barbour will attend to circumstances, and so apportion the service among the counties, that those acclimated by birth or residence may perform the summer tour, and the winter service be allotted to the upper counties.

I trouble you with a letter for General Kosciusko. It covers a bill of exchange from Mr. Barnes for him, and is therefore of great importance to him. Hoping you will have the goodness so far to befriend the General as to give it your safest conveyance, I commit it to you, with the assurance of my sincere affections.

TO NATHANIEL GREENE.

MONTICELLO, July 5, 1812.

SIR,—Your favor of May 19th, from New Orleans is just now received. I have no doubt that the information you will present to your countrymen on

the subject of the Asiatic countries into which you have travelled, will be acceptable as sources both of amusement and instruction; and the more so, as the observations of an American will be more likely to present what are peculiarities to us, than those of any foreigner on the same countries. In reading the travels of a Frenchman through the United States what he remarks as peculiarities in us, prove to us the contrary peculiarities of the French. We have the accounts of Barbary from European and American travellers. It would be more amusing if Melli Melli would give us his observations on the United States. If, with the foibles and follies of the Hindoos, so justly pointed out to us by yourselves and other travellers, we could compare the contrast of those which an Hindoo traveller would imagine he found among us, it might enlarge our instruction. It would be curious to see what parallel among us he would select for his Veeshni. What you will have seen in your western tour will also instruct many who often know least of things nearest home.

The charitable institution you have proposed to the city of New Orleans would undoubtedly be valuable, and all such are better managed by those locally connected with them. The great wealth of that city will insure its support, and the names subscribed to it will give it success. For a private individual, a thousand miles distant, to imagine that his name could add anything to what exhibits already the patronage of the highest authorities of the State,

would be great presumption. It will certainly engage my best wishes, to which permit me to add for yourself the assurances of my respect.

TO THOMAS COOPER.

MONTICELLO, July 10, 1812.

DEAR SIR,—I received by your last post through Mr. Hall, of Baltimore, a copy of your introductory lecture to a course of chemistry, for which accept my thanks. I have just entered on the reading of it, and perceive that I have a feast before me. I discover from an error of the binder, that my copy has duplicates of pages 122, 123, 126, 127, and wants altogether, pages 121, 124, 125, 128, and foreseeing that every page will be a real loss, and that the book has been printed at Carlisle, I will request your directions to the printer to enclose those four pages under cover to me at this place, *near Milton*. You know the just esteem which attached itself to Dr. Franklin's science, because he always endeavored to direct it to something useful in private life. The chemists have not been attentive enough to this. I have wished to see their science applied to domestic objects, to malting, for instance, brewing, making cider, to fermentation and distillation generally, to the making of bread, butter, cheese, soap, to the incubation of eggs, etc. And I am happy to observe some of these titles in the syllabus of your lecture. I hope you will make the chemistry of these subjects

intelligible to our good house-wives. Glancing over the pages of your book, the last one caught my attention, where you recommend to students the books on metaphysics. Not seeing De Tutt Tracy's name there, I suspected you might not have seen his work. His first volume on Ideology appeared in 1800. I happen to have a duplicate of this, and will send it to you. Since that, has appeared his second volume on grammar and his third on logic. They are considered as holding the most eminent station in that line; and considering with you that a course of anatomy lays the best foundation for understanding these subjects, Tracy should be preceded by a mature study of the most profound of all human compositions, Cabanis's "Rapports du Physique et du moral de l'homme."

In return for the many richer favors received from you, I send you my little tract on the batture of New Orleans, and Livingston's claim to it. I was at a loss where to get it printed, and confided it to the editor of the Edinburgh Review, re-printed at New York. But he has not done it immaculately. Although there are typographical errors in your lecture, I wonder to see so difficult a work so well done at Carlisle. I am making a fair copy of the catalogue of my library, which I mean to have printed merely for the use of the library. It will require correct orthography in so many languages, that I hardly know where I can get it done. Have you read the Review of Montesquieu, printed by Duane? I hope it will

become the elementary book of the youth at all our colleges. Such a reduction of Montesquieu to his true value had been long wanting in political study. Accept the assurance of my great and constant esteem and respect.

TO B. H. LATROBE.

MONTICELLO, July 12, 1812.

DEAR SIR,—Of all the faculties of the human mind that of memory is the first which suffers decay from age. Of the commencement of this decay, I was fully sensible while I lived in Washington, and it was my earliest monitor to retire from public business. It has often since been the source of great regret when applied to by others to attest transactions in which I had been agent, to find that they had entirely vanished from my memory. In no case has it given me more concern than in that which is the subject of your letter of the 2d instant: the supper given in 1807 to the workmen on the Capitol. Of this supper I have not the smallest recollection. If it ever was mentioned to me, not a vestige of it now remains in my mind. This failure of my memory is no proof the thing did not happen, but only takes from it the support of my testimony, which cannot be given for what is obliterated from it. I have looked among my papers to see if they furnish any trace of the matter, but I find none, and must therefore acquiesce in my incompetence to

administer to truth on this occasion. I am sorry to learn that Congress has relinquished the benefit of the engagements of Andrei & Franzoni, on the sculpture of the Capitol. They are artists of a grade far above what we can expect to get again. I still hope they will continue to work on the basis of the appropriation made, and as far as that will go; so that what is done will be well done; and perhaps a more favorable moment may still preserve them to us. With respect to yourself, the little disquietudes from individuals not chosen for their taste in works of art, will be sunk into oblivion, while the Representatives' chamber will remain a durable monument of your talents as an architect. I say nothing of the Senate room, because I have never seen it. I shall live in the hope that the day will come when an opportunity will be given you of finishing the middle building in a style worthy of the two wings, and worthy of the first temple dedicated to the sovereignty of the people, embellishing with Athenian taste the course of a nation looking far beyond the range of Athenian destinies. In every situation, public or private, be assured of my sincere wishes for your prosperity and happiness, and of the continuance of my esteem and respect.

TO COLONEL WILLIAM DUANE.

MONTICELLO, August 4, 1812.

DEAR SIR,—Your favor of the 17th ultimo came duly to hand, and I have to thank you for the military manuals you were so kind as to send me. This is the sort of book most needed in our country, where even the elements of tactics are unknown. The young have never seen service, and the old are past it, and of those among them who are not superannuated themselves, their science is become so. I see, as you do, the difficulties and defects we have to encounter in war, and should expect disasters if we had an enemy on land capable of inflicting them. But the weakness of our enemy there will make our first errors innocent, and the seeds of genius which nature sows with even hand through every age and country, and which need only soil and season to germinate, will develop themselves among our military men. Some of them will become prominent, and seconded by the native energy of our citizens, will soon, I hope, to our force add the benefits of skill. The acquisition of Canada this year, as far as the neighborhood of Quebec, will be a mere matter of marching, and will give us experience for the attack of Halifax the next, and the final expulsion of England from the American continent. Halifax once taken, every cock-boat of hers must return to England for repairs. Their fleet will annihilate our public force on the water, but our privateers will eat out

the vitals of their commerce. Perhaps they will burn New York or Boston. If they do, we must burn the city of London, not by expensive fleets or congreve rockets, but by employing an hundred or two Jack-the-painters, whom nakedness famine, desperation and hardened vice, will abundantly furnish from among themselves. We have a rumor now afloat that the orders of council are repeated. The thing is impossible after Castlereagh's late declaration in Parliament, and the reconstruction of a Percival ministry.

I consider this last circumstance fortunate for us. The repeal of the orders of council would only add recruits to our minority, and enable them the more to embarrass our march to thorough redress of our past wrongs, and permanent security for the future. This we shall attain if no internal obstacles are raised up. The exclusion of their commerce from the United States, and the closing of the Baltic against it, which the present campaign in Europe will effect, will accomplish the catastrophe already so far advanced on them. I think your anticipations of the effects of this are entirely probable, their arts, their science, and what they have left of virtue, will come over to us, and although their vices will come also, these, I think, will soon be diluted and evaporated in a country of plain honesty. Experience will soon teach the new-comers how much more plentiful and pleasant is the subsistence gained by wholesome labor and fair dealing, than a precarious and hazardous depend-

ence on the enterprises of vice and violence. Still I agree with you that these immigrations will give strength to English partialities, to eradicate which is one of the most consoling expectations from the war. But probably the old hive will be broken up by a revolution, and a regeneration of its principles render intercourse with it no longer contaminating. A republic there like ours, and a reduction of their naval power within the limits of their annual facilities of payment, might render their existence even interesting to us. It is the construction of their government, and its principles and means of corruption, which make its continuance inconsistent with the safety of other nations. A change in its form might make it an honest one, and justify a confidence in its faith and friendship. That regeneration however will take a longer time than I have to live. I shall leave it to be enjoyed among you, and make my exit with a bow to it, as the most flagitious of governments I leave among men. I sincerely wish you may live to see the prodigy of its renovation, enjoying in the meantime health and prosperity.

TO GENERAL THADDEUS KOSCIUSKO.

MONTICELLO, August 5, 1812.

DEAR GENERAL,— * * * * *

I have little to add to my letter of June. We have entered Upper Canada, and I think there can be no doubt of our soon having in our possession the whole

of the St. Lawrence except Quebec. We have at this moment about two hundred privateers on the ocean, and numbers more going out daily. It is believed we shall fit out about a thousand in the whole. Their success has been already great, and I have no doubt they will cut up more of the commerce of England than all the navies of Europe could do, could those navies venture to sea at all. You will find that every sea on the globe where England has any commerce, and where any port can be found to sell prizes, will be filled with our privateers. God bless you and give you a long and happy life.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, August 5, 1812.

DEAR SIR,— * * * * *

I am glad of the re-establishment of a Percival ministry. The opposition would have recruited our minority by half way offers. With Canada in hand we can go to treaty with an off-set for spoliation before the war. Our farmers are cheerful in the expectation of a good price for wheat in Autumn. Their pulse will be regulated by this, and not by the successes or disasters of the war. To keep open sufficient markets is the very first object towards maintaining the popularity of the war, which is as great at present as could be desired. We have just had a fine rain of $1\frac{1}{4}$ inches in the most critical time for

our corn. The weather during the harvest was as advantageous as could be. I am sorry to find you remaining so long at Washington. The effect on your health may lose us a great deal of your time; a couple of months at Montpelier at this season would not lose us an hour. Affectionate salutations to Mrs. Madison and yourself.

TO THE HONORABLE ROBERT WRIGHT.

MONTICELLO, August 8, 1812.

DEAR SIR,—I receive and return the congratulations of your letter of July 6 with pleasure, and join the great mass of my fellow citizens in saying, "Well done, good and faithful servants, receive the benedictions which your constituents are ready to give you." The British government seem to be doing late, what done earlier might have prevented war; to wit: repealing the orders in Council. But it should take more to make peace than to prevent war. The sword once drawn, full justice must be done. "Indemnification for the past and security for the future," should be painted on our banners. For 1,000 ships taken, and 6,000 seamen impressed, give us Canada for indemnification, and the only security they can give us against their Henrys, and the savages, and agree that the American flag shall protect the persons of those sailing under it, both parties exchanging engagements that neither will receive the seamen of the other on board their vessels. This done, I should

be for peace with England and then war with France. One at a time is enough, and in fighting the one we need the harbors of the other for our prizes. Go on as you have begun, only quickening your pace, and receive the benedictions and prayers of those who are too old to offer anything else.

TO THOMAS LETRE.

MONTICELLO August 8, 1812.

DEAR SIR,—I duly received your favor of the 14th ultimo, covering a paper containing proceedings of the patriots of South Carolina. It adds another to the many proofs of their steady devotion to their own country. I can assure you the hearts of their fellow citizens in this State beat in perfect unison with them, and with their government. Of this their concurrence in the election of Mr. Madison and Mr. Gerry, at the ensuing election, will give sufficient proof. The schism in Massachusetts, when brought to the crisis of principle, will be found to be exactly the same as in the Revolutionary war. The monarchists will be left alone, and will appear to be exactly the Tories of the last war. Had the repeal of the orders of council, which now seems probable, taken place earlier, it might have prevented war; but much more is requisite to make peace—"indemnification for the past, and security for the future," should be the motto of the war. 1,000 ships taken, 6,000 seamen impressed, savage butcheries of our citizens, and

incendiary machinations against our union, declare that they and their allies, the Spaniards, must retire from the Atlantic side of our continent as the only security or indemnification which will be effectual. Accept the assurances of my great esteem and respect.

TO COLONEL WILLIAM DUANE.

MONTICELLO, October 1, 1812.

DEAR SIR,—Your favor of September the 20th has been duly received, and I cannot but be gratified by the assurance it expresses, that my aid in the councils of our government would increase the public confidence in them; because it admits an inference that they have approved of the course pursued, when I heretofore bore a part in those councils. I profess, too, so much of the Roman principle, as to deem it honorable for the general of yesterday to act as a corporal to-day, if his services can be useful to his country; holding that to be false pride, which postpones the public good to any private or personal considerations. But I am past service. The hand of age is upon me. The decay of bodily faculties apprises me that those of the mind cannot be unimpaired, had I not still better proofs. Every year counts by increased debility, and departing faculties keep the score. The last year it was the sight, this it is the hearing, the next something else will be going, until all is gone. Of all this I was sensible before I left Washington, and probably my fellow

laborers saw it before I did. The decay of memory was obvious; it is now become distressing. But the mind too, is weakened. When I was young, mathematics was the passion of my life. The same passion has returned upon me, but with unequal powers. Processes which I then read off with the facility of common discourse, now cost me labor, and time, and slow investigation. When I offered this, therefore, as one of the reasons deciding my retirement from office, it was offered in sincerity and a consciousness of its truth. And I think it a great blessing that I retain understanding enough to be sensible how much of it I have lost, and to avoid exposing myself as a spectacle for the pity of my friends; that I have surmounted the difficult point of knowing when to retire. As a compensation for faculties departed, nature gives me good health, and a perfect resignation to the laws of decay which she has prescribed to all the forms and combinations of matter.

The detestable treason of Hull has, indeed, excited a deep anxiety in all breasts. The depression was in the first moment gloomy and portentous. But it has been succeeded by a revived animation, and a determination to meet the occurrence with increased efforts; and I have so much confidence in the vigorous minds and bodies of our countrymen, as to be fearless as to the final issue. The treachery of Hull, like that of Arnold, cannot be matter of blame on our government. His character, as an officer of skill and bravery, was established on the trials of the last war,

and no previous act of his life had led to doubt his fidelity. Whether the Head of the war department is equal to his charge, I am not qualified to decide. I knew him only as a pleasant, gentlemanly man in society; and the indecision of his character rather added to the amenity of his conversation. But when translated from the colloquial circle to the great stage of national concerns, and the direction of the extensive operations of war, whether he has been able to seize at one glance the long line of defenceless border presented by our enemy, the masses of strength which we hold on different points of it, the facility this gave us of attacking him, on the same day, on all his points, from the extremity of the lakes to the neighborhood of Quebec, and the perfect indifference with which this last place, impregnable as it is, might be left in the hands of the enemy to fall of itself; whether, I say, he could see and prepare vigorously for all this, or merely wrapped himself in the cloak of cold defence, I am uninformed. I clearly think with you on the competence of Monroe to embrace great views of action. The decision of his character, his enterprise, firmness, industry, and unceasing vigilance, would, I believe, secure, as I am sure they would merit, the public confidence, and give us all the success which our means can accomplish. If our operations have suffered or languished from any want of energy in the present head which directs them, I have so much confidence in the wisdom and conscientious integrity of Mr. Madison, as

to be satisfied, that however torturing to his feelings, he will fulfil his duty to the public and to his own reputation, by making the necessary change. Perhaps he may be preparing it while we are talking about it; for of all these things I am uninformed. I fear that Hull's surrender has been more than the mere loss of a year to us. Besides bringing on us the whole mass of savage nations, whom fear and not affection has kept in quiet, there is danger that in giving time to an enemy who can send reinforcements of regulars faster than we can raise them, they may strengthen Canada and Halifax beyond the assailment of our lax and divided powers. Perhaps, however, the patriotic efforts from Kentucky and Ohio, by recalling the British force to its upper posts, may yet give time to Dearborn to strike a blow below. Effectual possession of the river from Montreal to the Chaudiere, which is practicable, would give us the upper country at our leisure, and close forever the scenes of the tomahawk and scalping knife.

But these things are for others to plan and achieve. The only succor from the old must lie in their prayers. These I offer up with sincere devotion; and in my concern for the great public, I do not overlook my friends, but supplicate for them, as I do for yourself, a long course of freedom, happiness and prosperity.

TO THOMAS C. FLOURNEY.

MONTICELLO, October 1, 1812.

SIR,—Your letter of August 29th is just now received, having lingered long on the road. I owe you much thankfulness for the favorable opinion you entertain of my services, and the assurance expressed that they would again be acceptable in the executive chair. But, Sir, I was sincere in stating age as one of the reasons of my retirement from office, beginning then to be conscious of its effects, and now much more sensible of them. Servile inertness is not what is to save our country; the conduct of a war requires the vigor and enterprise of younger heads. All such undertakings, therefore, are out of the question with me, and I say so with the greater satisfaction, when I contemplate the person to whom the executive powers were handed over. You probably do not know Mr. Madison personally, or at least intimately, as I do. I have known him from 1779, when he first came into the public councils, and from three and thirty years, trial, I can say conscientiously that I do not know in the world a man of purer integrity, more dispassionate, disinterested and devoted to genuine republicanism; nor could I, in the whole scope of America and Europe, point out an abler head. He may be illy seconded by others, betrayed by the Hulls and Arnolds of our country, for such there are in every country, and with sorrow and suffering we know it.

But what man can do will be done by Mr. Madison. I hope, therefore, there will be no difference among republicans as to his re-election, and we shall know his value when we have to give him up, and to look at large for his successor. With respect to the unfortunate loss of Detroit and our army, I with pleasure see the animation it has inspired through our whole country, but especially through the Western States, and the determination to retrieve our loss and our honor by increased exertions. I am not without hope that the western efforts under General Harrison, may oblige the enemy to remain at their upper posts, and give Dearborn a fair opportunity to strike a blow below. A possession of the river from Montreal to the Chaudiere, gives us the upper country of course, and closes forever the scenes of the tomahawk and scalping knife. Quebec is impregnable, but it is also worthless, and may be safely left in their hands to fall of itself. The vigorous minds and bodies of our countrymen leave me no fear as to ultimate results. In this confidence I resign myself to the care of those whom in their younger days I assisted in taking care of, and salute you with assurances of esteem and respect.

TO DR. ROBERT PATTERSON.

MONTICELLO, December 27, 1812.

DEAR SIR,—After an absence of five weeks at a distant possession of mine, to which I pay such visits

three or four times a year, I find here your favor of November 30th. I am very thankful to you for the description of Redhefer's machine. I had never before been able to form an idea of what his principle of deception was. He is the first of the inventors of perpetual motion within my knowledge, who has had the cunning to put his visitors on a false pursuit, by amusing them with a sham machinery whose loose and vibratory motion might impose on them the belief that it is the real source of the motion they see. To this device he is indebted for a more extensive delusion than I have before witnessed on this point. We are full of it as far as this State, and I know not how much farther. In Richmond they have done me the honor to quote me as having said that it was a possible thing. A poor Frenchman who called on me the other day, with another invention of perpetual motion, assured me that Dr. Franklin, many years ago, expressed his opinion to him that it was not impossible. Without entering into contest on this abuse of the Doctor's name, I gave him the answer I had given to others before, that the Almighty himself could not construct a machine of perpetual motion while the laws exist which He has prescribed for the government of matter in our system; that the equilibrium established by Him between cause and effect must be suspended to effect that purpose. But Redhefer seems to be reaping a rich harvest from the public deception. The office of science is to instruct the ignorant. Would it be

unworthy of some one of its votaries who witness this deception, to give a popular demonstration of the insufficiency of the ostensible machinery, and of course of the necessary existence of some hidden mover? And who could do it with more effect on the public mind than yourself?

I received, at the same time, the Abbé Rochon's pamphlets and book on his application of the double refraction of the Iceland Spath to the measure of small angles. I was intimate with him in France, and had received there, in many conversations, explanations of what is contained in these sheets. I possess, too, one of his lunettes which he had given to Dr. Franklin, and which came to me through Mr. Hopkinson. You are therefore probably acquainted with it. The graduated bar on each side is 12 inches long. The one extending to 37' of angle, the other to 3,438 diameter in distance of the object viewed. On so large a scale of graduation, a nonias might distinctly enough subdivide the divisions of 10" to 10" each; which is certainly a great degree of precision. But not possessing the common micrometer of two semi-lenses, I am not able to judge of their comparative merit. * * * * *

TO JOHN ADAMS.

MONTICELLO, December 28, 1812.

DEAR SIR,—An absence of five or six weeks, on a journey I take three or four times a year, must apolo-

gize for my late acknowledgment of your favor of October 12th. After getting through the mass of business which generally accumulates during my absence, my first attention has been bestowed on the subject of your letter. I turned to the passages you refer to in Hutchinson and Winthrop, and with the aid of their dates, I examined our historians to see if Wollaston's migration to this State was noticed by them. It happens, unluckily, that Smith and Stith, who alone of them go into minute facts, bring their histories, the former only to 1623, and the latter to 1624. Wollaston's arrival in Massachusetts was in 1625, and his removal to this State was "some time" after. Beverly & Keith, who came lower down, are nearly superficial, giving nothing but those general facts which every one knew as well as themselves. If our public records of that date were not among those destroyed by the British on their invasion of this State, they may possibly have noticed Wollaston. What I possessed in this way have been given out to two gentlemen, the one engaged in writing our history, the other in collecting our ancient laws; so that none of these resources are at present accessible to me. Recollecting that Nathaniel Morton, in his New England memorial, gives with minuteness the early annals of the colony of New Plymouth, and occasionally interweaves the occurrences of that on Massachusetts Bay, I recurred to him, and under the year 1628, I find he notices both Wollaston and Thomas Morton, and gives with

respect to both, some details which are not in Hutchinson or Winthrop. As you do not refer to him, and so possibly may not have his book, I will transcribe from it the entire passage, which will prove at least my desire to gratify your curiosity as far as the materials within my power will enable me.

Extract from Nathaniel Morton's *New England's Memorial*, pp. 93 to 99, Anno 1628. "Whereas, about three years before this time, there came over one Captain Wollaston,¹ a man of considerable parts, and with him three or four more of some eminency, who brought with them a great many servants, with provisions and other requisites for to begin a plantation, and pitched themselves in a place within the Massachusetts Bay, which they called afterwards by their captain's name, Mount Wollaston; which place is since called by the name of Braintry. And amongst others that came with him, there was one Mr. Thomas Morton, who, it should seem, had some small adventure of his own or other men's amongst them, but had little respect, and was slighted by the meanest servants they kept. They having continued some time in New England, and not finding things to answer their expectation, nor profit to arise as they looked for, the said Captain Wollaston takes a great part of the servants and transports them to Virginia, and disposed of them there, and writes back

¹ This gentleman's name is here occasionally used, and although he came over in the year 1625, yet these passages in reference to Morton fell out about this year, and therefore referred to this place.

to one Mr. Rasdale, one of his chief partners, (and accounted then merchant,) to bring another part of them to Virginia, likewise intending to put them off there as he had done the rest; and he, with the consent of the said Rasdale, appointed one whose name was Filcher, to be his Lieutenant, and to govern the remainder of the plantation until he or Rasdale should take further order thereabout. But the aforesaid Morton, (having more craft than honesty,) having been a petty-fogger at Furnival's-inn, he, in the other's absence, watches an opportunity, (commons being put hard among them,) and got some strong drink and other junkets, and made them a feast, and after they were merry, he began to tell them he would give them good counsel. You see, (saith he,) that many of your fellows are carried to Virginia, and if you stay still until Rasdale's return, you will also be carried away and sold for slaves with the rest; therefore I would advise you to thrust out Lieutenant Filcher, and I having a part in the plantation, will receive you as my partners and consociates, so you may be free from service, and we will converse, plant, trade and live together as equals (or to the like effect). This counsel was easily followed; so they took opportunity, and thrust Lieutenant Filcher out of doors, and would not suffer him to come any more amongst them, but forced him to seek bread to eat and other necessaries amongst his neighbors, till he would get passage for England. (See the sad effect of want of good government.)

“After this they fell to great licentiousness of life, in all prophaneness, and the said Morton became lord of misrule, and maintained (as it were) a school of Atheism, and after they had got some goods into their hands, and got much by trading with the Indians, they spent it as vainly, in quaffing and drinking both wine and strong liquors in great excess, (as some have reported,) ten pounds worth in a morning, setting up a May pole, drinking and dancing about like so many fairies, or furies rather, yea and worse practices, as if they had anew revived and celebrated the feast of the Roman goddess Flora, or the beastly practices of the mad Bacchanalians. The said Morton likewise to show his poetry, composed sundry rythmes and verses, some tending to licentiousness, and others to the detraction and scandal of some persons’ names, which he affixed to his idle or idol May-pole; they changed also the name of their place, and instead of calling it Mount Wollaston, they called it the Merry Mount, as if this jollity would have lasted always. But this continued not long, for shortly after that worthy gentleman Mr. John Endicot, who brought over a patent under the broad seal of England for the government of the Massachusetts, visiting those parts, caused that May-pole to be cut down, and rebuked them for their prophaneness, and admonished them to look to it that they walked better; so the name was again changed and called Mount Dagon.

“Now to maintain this riotous prodigality and pro-

fuse expense, the said Morton thinking himself lawless, and hearing what gain the fishermen made of trading of pieces, powder, and shot, he as head of this consortship, began the practice of the same in these parts; and first he taught the Indians how to use them, to charge and discharge 'em, and what proportion of powder to give the piece, according to the size of bigness of the same, and what shot to use for fowl, and what for deer; and having instructed them, he employed some of them to hunt and fowl for him; so as they became somewhat more active in that imployment than any of the English, by reason of their swiftness of foot, and nimbleness of body, being also quick-sighted, and by continual exercise, well knowing the haunt of all sorts of game; so as when they saw the execution that a piece would do, and the benefit that might come by the same, they became very eager after them, and would not stick to give any price they could attain to for them; accounting their bows and arrows but baubles in comparison of them.

“And here we may take occasion to bewail the mischief which came by this wicked man, and others like unto him; in that notwithstanding laws for the restraint of selling ammunition to the natives, that so far base covetousness prevailed, and doth still prevail, as that the Salvages became amply furnished with guns, powder, shot, rapiers, pistols, and also well skilled in repairing of defective arms: yea some have not spared to tell them how gunpowder is made,

and all the materials in it, and they are to be had in their own land; and would (no doubt, in case they could attain to the making of Saltpeter) teach them to make powder, and what mischief may fall out unto the English in these parts thereby, let this pestilent fellow Morton (aforenamed) bear a great part of the blame and guilt of it to future generations. But lest I should hold the reader too long in relation to the particulars of his vile actings; when as the English that then lived up and down about the Massachusetts, and in other places, perceiving the sad consequences of his trading, so as the Indians became furnished with the English arms and ammunition, and expert in the improving of them, and fearing that they should at one time or another get a blow thereby; and also taking notice, that if he were let alone in his way, they should keep no servants for him, because he would entertain any, how vile soever, sundry of the chief of the stragling plantations met together, and agreed by mutual consent to send to Plymouth, who were then of more strength to join with them, to suppress this mischief; who considering the particulars proposed to them to join together to take some speedy course to prevent (if it might be) the evil that was accruing towards them; and resolved first to admonish him of his wickedness respecting the premises, laying before him the injury he did to their common safety, and that his acting considering the same was against the King's proclamation; but he insolently persisted on in his way, and said the

King was dead, and his displeasure with him, and threatened them that if they come to molest him, they should look to themselves; so that they saw that there was no way but to take him by force; so they resolved to proceed in such a way, and obtained of the Governor of Plimouth to send Capt. Standish and some other aid with him, to take the said Morton by force, the which accordingly was done; but they found him to stand stiffly on his defence, having made fast his doors, armed his consorts, set powder and shot ready upon the table; scoffed and scorned at them, he and his complices being filled with strong drink, were desperate in their way; but he himself coming out of doors to make a shot at Capt. Standish, he stepping to him put by his piece and took him, and so little hurt was done; and so he was brought prisoner to Plimouth, and continued in durance till an opportunity of sending him for England, which was done at their common charge, and letters also with him, to the honorable council for New England, and returned again into the country in some short time, with less punishment than his demerits deserved (as was apprehended). The year following he was again apprehended, and sent for England, where he lay a considerable time in Exeter gaol; for besides his mis-carriage here in New England, he was suspected to have murdered a man that had ventured monies with him when he came first into New England; and a warrant was sent over from the Lord Chief Justice to apprehend him, by virtue whereof, he was by the

Governor of Massachusetts sent into England, and for other of his misdemeanors amongst them in that government, they demolished his house, that it might no longer be a roost for such unclean birds. Notwithstanding he got free in England again, and wrote an infamous and scurrilous book against many godly and chief men of the country, full of lies and slanders, and full fraught with prophane calumnies against their names and persons, and the way of God. But to the intent I may not trouble the reader any more with mentioning of him in this history; in fine, sundry years after he came again into the country, and was imprisoned at Boston for the aforesaid book and other things, but denied sundry things therein, affirming his book was adulterated. And soon after being grown old in wickedness, at last ended his life at Piscataqua. But I fear I have held the reader too long about so unworthy a person, but hope it may be useful to take notice how wickedness was beginning, and would have further proceeded, had it not been prevented timely."

So far Nathaniel Morton. The copy you have of Thomas Morton's New English Canaan, printed in 1637 by Stam of Amsterdam, was a second edition of that "infamous and scurrilous book against the godly." The first had been printed in 1632, by Charles Green, in a quarto of 188 pages, and is the one alluded to by N. Morton. Both of them made a part of the American library given by White Kennett in 1713 to the Society for the propagation of the

Gospel in foreign parts. This society being a chartered one, still, as I believe, existing, and probably their library also, I suppose that these and the other books of that immense collection, the catalogue of which occupies 275 pages quarto, are still to be found with them. If any research I can hereafter make should ever bring to my knowledge anything more of Wollaston, I shall not fail to communicate it to you. Ever and affectionately yours.

TO HENRY MIDDLETON, ESQ.

MONTICELLO, January 8, 1813.

DEAR SIR,—Your favor of November 25th was a month on its passage to me. I received with great pleasure this mark of your recollection, heightened by the assurance that the part I have acted in public life has met your approbation. Having seen the people of all other nations bowed down to the earth under the wars and prodigalities of their rulers, I have cherished their opposites, peace, economy, and riddance of public debt, believing that these were the high road to public as well as to private prosperity and happiness. And, certainly, there never before has been a state of the world in which such forbearances as we have exercised would not have preserved our peace. Nothing but the total prostration of all moral principle could have produced the enormities which have forced us at length into the war. On one hand, a ruthless tyrant, drenching

Europe in blood to obtain through future time the character of the destroyer of mankind; on the other, a nation of buccaneers, urged by sordid avarice, and embarked in the flagitious enterprise of seizing to itself the maritime resources and rights of all other nations, have left no means of peace to reason and moderation. And yet there are beings among us who think we ought still to have acquiesced. As if while full war was waging on one side, we could lose by making some reprisal on the other. The paper you were so kind as to enclose me is a proof you are not of this sentiment; it expresses our grievances with energy and brevity, as well as the feelings they ought to excite. And I see with pleasure another proof that South Carolina is ever true to the principles of free government. Indeed, it seems to me that in proportion as commercial avarice and corruption advance on us from the north and east, the principles of free government are to retire to the agricultural States of the south and west, as their last asylum and bulwark. With honesty and self-government for her portion, agriculture may abandon contentedly to others the fruits of commerce and corruption. Accept, I pray you, the assurances of my great esteem and respect.

TO JAMES RONALDSON.

MONTICELLO, January 12, 1813.

DEAR SIR,—Your favor of November 2d arrived a little before I set out on a journey on which I was absent between five and six weeks. I have still therefore to return you my thanks for the seeds accompanying it, which shall be duly taken care of, and a communication made to others of such as shall prove valuable. I have been long endeavoring to procure the Cork tree from Europe, but without success. A plant which I brought with me from Paris died after languishing some time, and of several parcels of acorns received from a correspondent at Marseilles, not one has ever vegetated. I shall continue my endeavors, although disheartened by the nonchalance of our Southern fellow citizens, with whom alone they can thrive. It is now twenty-five years since I sent them two shipments (about 500 plants) of the Olive tree of Aix, the finest Olives in the world. If any of them still exist, it is merely as a curiosity in their gardens; not a single orchard of them has been planted. I sent them also the celebrated species of Sainfoin,¹ from Malta, which yields good crops without a drop of rain through the season. It was lost. The upland rice which I procured fresh from Africa and sent them, has been preserved and spread in the upper parts of Georgia, and I believe in Kentucky. But we must acknowl-

¹ Called Sulla.

edge their services in furnishing us an abundance of cotton, a substitute for silk, flax and hemp. The ease with which it is spun will occasion it to supplant the two last, and its cleanliness the first. Household manufacture is taking deep root with us. I have a carding machine, two spinning machines, and looms with the flying shuttle in full operation for clothing my own family; and I verily believe that by the next winter this State will not need a yard of imported coarse or middling clothing. I think we have already a sheep for every inhabitant, which will suffice for clothing, and one-third more, which a single year will add, will furnish blanketing. With respect to marine hospitals, which are one of the subjects of your letter, I presume you know that such establishments have been made by the general government in the several States, that a portion of seaman's wages is drawn for their support, and the government furnishes what is deficient. Mr. Galatin is attentive to them, and they will grow with our growth. You doubt whether we ought to permit the exportation of grain to our enemies; but Great Britain, with her own agricultural support, and those she can command by her access into every sea, cannot be starved by withholding our supplies. And if she is to be fed at all events, why may we not have the benefit of it as well as others? I would not, indeed, feed her armies landed on our territory, because the difficulty of inland subsistence is what will prevent their ever penetrating far into the country, and will

confine them to the sea coast. But this would be my only exception. And as to feeding her armies in the peninsula, she is fighting our battles there, as Bonaparte is on the Baltic. He is shutting out her manufactures from that sea, and so far assisting us in her reduction to extremity. But if she does not keep him out of the peninsular, if he gets full command of that, instead of the greatest and surest of all our markets, as that has uniformly been, we shall be excluded from it, or so much shackled by his tyranny and ignorant caprices, that it will become for us what France now is. Besides, if we could by starving the English armies, oblige them to withdraw from the peninsular, it would be to send them here; and I think we had better feed them there for pay, than feed and fight them here for nothing. A truth, too, not to be lost sight of is, that no country can pay war taxes if you suppress all their resources. To keep the war popular, we must keep open the markets. As long as good prices can be had, the people will support the war cheerfully. If you should have an opportunity of conveying to Mr. Heriot my thanks for his book, you will oblige me by doing it. Accept the assurance of my great esteem and respect.

TO JOHN MELISH.

MONTICELLO, January 13, 1813.

DEAR SIR,—I received duly your favor of December the 15th, and with it the copies of your map and

travels, for which be pleased to accept my thanks. The book I have read with extreme satisfaction and information. As to the Western States, particularly, it has greatly edified me; for of the actual condition of that interesting portion of our country, I had not an adequate idea. I feel myself now as familiar with it as with the condition of the maritime States. I had no conception that manufactures had made such progress there, and particularly of the number of carding and spinning machine dispersed through the whole country. We are but beginning here to have them in our private families. Small spinning jennies of from half a dozen to twenty pindles, will soon, however, make their way into the humblest cottages, as well as the richest houses; and nothing is more certain, than that the coarse and middling clothing for our families, will forever hereafter continue to be made within ourselves. I have hitherto myself depended entirely on foreign manufactures; but I have now thirty-five spindles agoing, a hand carding machine, and looms with the flying shuttle, for the supply of my own farms, which will never be relinquished in my time. The continuance of the war will fix the habit generally, and out of the evils of impressment and of the orders of council a great blessing for us will grow. I have not formerly been an advocate for great manufactories. I doubted whether our labor, employed in agriculture, and aided by the spontaneous energies of the earth, would not procure us more than we could make ourselves of

other necessaries. But other considerations entering into the question, have settled my doubts.

The candor with which you have viewed the manners and condition of our citizens, is so unlike the narrow prejudices of the French and English travellers preceding you, who, considering each the manners and habits of their own people as the only orthodox, have viewed everything differing from that test as boorish and barbarous, that your work will be read here extensively, and operate great good.

Amidst this mass of approbation which is given to every other part of the work, there is a single sentiment which I cannot help wishing to bring to what I think the correct one; and, on a point so interesting, I value your opinion too highly not to ambition its concurrence with my own. Stating in volume one, page sixty-three, the principle of difference between the two great political parties here, you conclude it to be, "whether the controlling power shall be vested in this or that set of men." That each party endeavors to get into the administration of the government, and exclude the other from power, is true, and may be stated as a motive of action: but this is only secondary; the primary motive being a real and radical difference of political principle. I sincerely wish our differences were but personally who should govern, and that the principles of our constitution were those of both parties. Unfortunately, it is otherwise; and the

question of preference between monarchy and republicanism, which has so long divided mankind elsewhere, threatens a permanent division here.

Among that section of our citizens called federalists, there are three shades of opinion. Distinguishing between the *leaders* and *people* who compose it, the *leaders* consider the English constitution as a model of perfection, some, with a correction of its vices, others, with all its corruptions and abuses. This last was Alexander Hamilton's opinion, which others, as well as myself, have often heard him declare, and that a correction of what are called its vices, would render the English an impracticable government. This government they wished to have established here, and only accepted and held fast, *at first*, to the present constitution, as a stepping-stone to the final establishment of their favorite model. This party has therefore always clung to England as their prototype, and great auxiliary in promoting and effecting this change. A weighty MINORITY, however, of these *leaders*, considering the voluntary conversion of our government into a monarchy as too distant, if not desperate, wish to break off from our Union its eastern fragment, as being, in truth, the hot-bed of American monarchism, with a view to a commencement of their favorite government, from whence the other States may gangrene by degrees, and the whole be thus brought finally to the desired point. For Massachusetts, the prime mover in this enterprise, is the last State in the

Union to mean a *final* separation, as being of all the most dependent on the others. Not raising bread for the sustenance of her own inhabitants, not having a stick of timber for the construction of vessels, her principal occupation, nor an article to export in them, where would she be, excluded from the ports of the other States, and thrown into dependence on England, her direct, and natural, but now insidious rival? At the head of this MINORITY is what is called the Essex Junto of Massachusetts. But the MAJORITY of these *leaders* do not aim at separation. In this, they adhere to the known principle of General Hamilton, never, under any views, to break the Union. Angloman, y, monarchy, and separation, then, are the principles of the Essex federalists. Angloman, y and monarchy, those of the Hamiltonians, and Angloman, y alone, that of the portion among the *people* who call themselves federalists. These last are as good republicans as the brethren whom they oppose, and differ from them only in their devotion to England and hatred of France which they have imbibed from their leaders. The moment that these leaders should avowedly propose a separation of the Union, or the establishment of regal government, their popular adherents would quit them to a man, and join the republican standard; and the partisans of this change, even in Massachusetts, would thus find themselves an army of officers without a soldier.

The party called republican is steadily for the

support of the present constitution. They obtained at its commencement, all the amendments to it they desired. These reconciled them to it perfectly, and if they have any ulterior view, it is only, perhaps, to popularize it further, by shortening the Senatorial term, and devising a process for the responsibility of judges, more practicable than that of impeachment. They esteem the people of England and France equally, and equally detest the governing powers of both.

This I verily believe, after an intimacy of forty years with the public councils and characters, is a true statement of the grounds on which they are at present divided, and that it is not merely an ambition for power. An honest man can feel no pleasure in the exercise of power over his fellow citizens. And considering as the only offices of power those conferred by the people directly, that is to say, the executive and legislative functions of the General and State governments, the common refusal of these, and multiplied resignations, are proofs sufficient that power is not alluring to pure minds, and is not, with them, the primary principle of contest. This is my belief of it; it is that on which I have acted; and had it been a mere contest who should be permitted to administer the government according to its genuine republican principles, there has never been a moment of my life in which I should have relinquished for it the enjoyments of my family, my farm, my friends and books.

You expected to discover the difference of our party principles in General Washington's valedictory, and my inaugural address. Not at all. General Washington did not harbor one principle of federalism. He was neither an Angloman, a monarchist, nor a separatist. He sincerely wished the people to have as much self-government as they were competent to exercise themselves. The only point on which he and I ever differed in opinion, was, that I had more confidence than he had in the natural integrity and discretion of the people, and in the safety and extent to which they might trust themselves with a control over their government. He has asseverated to me a thousand times his determination that the existing government should have a fair trial, and that in support of it he would spend the last drop of his blood. He did this the more repeatedly, because he knew General Hamilton's political bias, and my apprehensions from it. It is a mere calumny, therefore, in the monarchists, to associate General Washington with their principles. But that may have happened in this case which has been often seen in ordinary cases, that, by oft repeating an untruth, men come to believe it themselves. It is a mere artifice in this party to bolster themselves up on the revered name of that first of our worthies. If I have dwelt longer on this subject than was necessary, it proves the estimation in which I hold your ultimate opinions, and my desire of placing the subject truly before them. In so

doing, I am certain I risk no use of the communication which may draw me into contention before the public. Tranquillity is the *summum bonum* of a Septagenaire.

To return to the merits of your work: I consider it as so lively a picture of the real state of our country, that if I can possibly obtain opportunities of conveyance, I propose to send a copy to a friend in France, and another to one in Italy, who, I know, will translate and circulate it as an antidote to the misrepresentations of former travellers. But whatever effect my profession of political faith may have on your general opinion, a part of my object will be obtained, if it satisfies you as to the principles of my own action, and of the high respect and consideration with which I tender you my salutations.

TO COLONEL WILLIAM DUANE.

MONTICELLO, January 22, 1813.

DEAR SIR,—I do not know how the publication of the Review turned out in point of profit, whether gainfully or not. I know it ought to have been a book of great sale. I gave a copy to a student of William and Mary college, and recommended it to Bishop Madison, then President of the college, who was so pleased with it that he established it as a school-book, and as the young gentleman informed me, every copy which could be had was immediately bought up, and there was a considerable demand

for more. You probably know best whether new calls for it have been made. President Madison was a good whig. * * * * * Your experiment on that work will enable you to decide whether you ought to undertake another, not of greater but of equal merit. I have received from France a MS. work on Political Economy, written by De Tutt Tracy, the most conspicuous writer of the present day in the metaphysical line. He has written a work entitled Ideology, which has given him a high reputation in France. He considers that as having laid a solid foundation for the present volume on Political Economy, and will follow it by one on Moral Duties. The present volume is a work of great ability. It may be considered as a review of the principles of the Economists, of Smith and of Say, or rather an elementary book on the same subject. As Smith had corrected some principles of the Economists, and Say some of Smith's, so Tracy has done as to the whole. He has, in my opinion, corrected fundamental errors in all of them, and by simplifying principles, has brought the subject within a narrow compass. I think the volume would be of about the size of the Review of Montesquieu. Although he puts his name to the work, he is afraid to publish it in France, lest its freedom should bring him into trouble. If translated and published here, he could disavow it, if necessary. In order to enable you to form a better judgment of the work, I will subjoin a list of the chapters or heads, and if

you think proper to undertake the translation and publication, I will send the work itself. You will certainly find it one of the very first order. It begins with * * * * *

Our war on the land has commenced most inauspiciously. I fear we are to expect reverses until we can find out who are qualified for command, and until these can learn their profession. The proof of a general, to know whether he will stand fire, costs a more serious price than that of a cannon; these proofs have already cost us thousands of good men, and deplorable degradation of reputation, and as yet have elicited but a few negative and a few positive characters. But we must persevere till we recover the rank we are entitled to.

Accept the assurances of my continued esteem and respect.

TO DR. ROBERT MORRELL.

MONTICELLO, February 5, 1813.

SIR,—The book which you were so kind as to take charge of at Paris for me, is safely received, and I thank you for your care of it, and more particularly for the indulgent sentiments you are so kind as to express towards myself. I am happy at all times to hear of the welfare of my literary friends in that country; they have had a hard time of it since I left them. I know nothing which can so severely try the heart and spirit of man, and especially of the

man of science, as the necessity of a passive acquiescence under the abominations of an unprincipled tyrant who is deluging the earth with blood to acquire for himself the reputation of a Cartouche or a Robin Hood. The petty larcenies of the Blackbeards and Buccaneers of the ocean, the more immediately exercised on us, are dirty and grovelling things addressed to our contempt, while the horrors excited by the Scelerat of France are beyond all human execrations. With my thanks for your kind attentions, be pleased to accept the assurance of my respect.

TO GENERAL THEODORUS BAILEY.

MONTICELLO, February 6, 1813.

DEAR SIR,—Your favor of January 25th is received, and I have to renew my thanks to you for the map accompanying it. These proofs of friendly remembrance give additional interest to the subjects which convey them. The scenes, too, which compose the map, are become highly interesting. Our first entrance on them has been peculiarly inauspicious. Our men are good, but force without conduct is easily baffled. The Creator has not thought proper to mark those in the forehead who are of stuff to make good generals. We are first, therefore, to seek them blindfold, and then let them learn the trade at the expense of great losses. But our turn of success will come by-and-bye, and we

must submit to the previous misfortunes which are to be the price of it. I think with you on the subject of privateers. Our ships of force will undoubtedly be blockaded by the enemy, and we shall have no means of annoying them at sea but by small, swift-sailing vessels; these will be better managed and more multiplied in the hands of individuals than of the government. In short, they are our true and only weapon in a war against Great Britain, when once Canada and Nova Scotia shall have been rescued from them. The opposition to them in Congress is merely partial. It is a part of the navy fever, and proceeds from the desire of securing men for the public ships by suppressing all other employments from them. But I do not apprehend that this ill-judged principle is that of a majority of Congress. I hope, on the contrary, they will spare no encouragement to that kind of enterprise. Our public ships, to be sure, have done wonders. They have saved our military reputation sacrificed on the shores of Canada; but in point of real injury and depredation on the enemy, our privateers without question have been most effectual. Both species of force have their peculiar value. I salute you with assurances of friendship and respect.

TO THE PRESIDENT OF THE UNITED STATES

(JAMES MADISON).

MONTICELLO, February 8, 1813.

DEAR SIR,—Your favor of the 27th ultimo has been duly received. You have had a long holiday from my intrusions. In truth I have had nothing to write about, and your time should not be consumed by letters about nothing. The enclosed paper, however, makes it a duty to give you the trouble of reading it. You know the handwriting and the faith due to it. Our intimacy with the writer leaves no doubt about his facts, and in his letter to me he pledges himself for their fidelity. He says the narrative was written at the request of a young friend in Virginia, and a copy made for my perusal, on the presumption it would be interesting to me. Whether the word "Confidential" at the head of the paper was meant only for his young friend or for myself also, nothing in his letter indicates. I must, therefore, govern myself by considerations of discretion and of duty combined. Discretion dictates that I ought not so to use the paper as to compromit my friend; an effect which would be as fatal to my peace as it might be to his person. But duty tells me that the public interest is so deeply concerned in your perfect knowledge of the characters employed in its high stations, that nothing should be withheld which can give you useful information. On these grounds I commit it to yourself and the

Secretary of War, to whose functions it relates more immediately. It may have effect on your future designation of those to whom particular enterprises are to be committed, and this is the object of the communication. If you should think it necessary that the minds of the other members of the Cabinet should be equally apprised of its contents, although not immediately respecting their departments, the same considerations, and an entire confidence in them personally, would dictate its communication to them also. But beyond this no sense of duty calls on me for its disclosure, and fidelity to my friend strongly forbids it. The paper presents such a picture of indecision in purpose, inattention to preparation, and imprudence of demeanor, as to fix a total incompetence for military direction. How greatly we were deceived in this character, as is generally the case in appointments not on our own knowledge. I remember when we appointed him we rejoiced in the acquisition of an officer of so much understanding and integrity, as we imputed to him; and placed him as near the head of the army as the commands then at our disposal admitted. Perhaps, still, you may possess information giving a different aspect to this case, of which I sincerely wish it may be susceptible. I will ask the return of the paper when no longer useful to you.

The accession to your Cabinet meets general approbation. This is chiefly at present given to the character most known, but will be equally so to the

other when better known. I think you could not have made better appointments.

The autumn and winter have been most unfriendly to the wheat in red lands, by continued cold and alternate frosts and thaws. The late snow of about ten inches now disappearing, has relieved it. That grain is got to \$2 at Richmond. This is the true barometer of the popularity of the war. Ever affectionately yours.

TO GENERAL JOHN ARMSTRONG.

MONTICELLO, February 8, 1813.

DEAR GENERAL,—I have long ago in my heart congratulated our country on your call to the place you now occupy. But with yourself personally it is no subject of congratulation. The happiness of the domestic fireside is the first boon of heaven; and it is well it is so, since it is that which is the lot of the mass of mankind. The duties of office are a *corvée* which must be undertaken on far other considerations than those of personal happiness. But whether this be a subject of congratulation or of condolence, it furnishes the occasion of recalling myself to your recollection, and of renewing the assurances of my friendship and respect. Whatever you do in office, I know will be honestly and ably done, and although we who do not see the whole ground may sometimes impute error, it will be because we, not you, are in the wrong; or because your views

are defeated by the wickedness or incompetence of those you are obliged to trust with their execution. An instance of this is the immediate cause of the present letter. I have enclosed a paper to the President, with a request to communicate it to you, and if he thinks it should be known to your associates of the Cabinet, although not immediately respecting their departments, he will communicate it to them also. That it should go no further is rendered an obligation on me by considerations personal to a young friend whom I love and value, and by the confidence which has induced him to commit himself to me. I hope, therefore, it will never be known that such a narrative has been written, and much less by whom written, and to whom addressed. It is unfortunate that heaven has not set its stamp on the forehead of those whom it has qualified for military achievement. That it has left us to draw for them in a lottery of so many blanks to a prize, and where the blank is to be manifested only by the public misfortunes. If nature had planted the *fœnum in cornu* on the front of treachery, of cowardice, of imbecility, the unfortunate début we have made on the theatre of war would not have sunk our spirits at home, and our character abroad. I hope you will be ready to act on the first breaking of the ice, as otherwise we may despair of wresting Canada from our enemies. Their starving manufactories can furnish men for its defence much faster than we can enlist them for its assault.

Accept my prayers for success in all your undertakings, and the assurance of my affectionate esteem and respect.

TO DR. BENJAMIN RUSH.

MONTICELLO, March 6, 1813.

DEAR SIR,—I received some time ago a letter signed "James Carver," proposing that myself, and my friends in this quarter, should subscribe and forward a sum of money towards the expenses of his voyage to London, and maintenance there while going through a course of education in their Veterinary school, with a view to his returning to America, and practising the art in Philadelphia. The name, person and character of the writer, were equally unknown to me, and unauthenticated, but as self-declared in the letter. I supposed him an Englishman, from the style in which he spoke of "His Majesty," and because an American, without offence to the laws, could not now be going, nor be sent by private individuals to England. The scheme did not appear to me either the shortest or surest way of going to work to accomplish the object. Because, if the Veterinary institution there be of the celebrity he described, it must already have produced subjects prepared for entering into practice, and disposed to come to a good position, claiming nothing till they should enter into function, or not more than their passage. I did not receive the letter until

the day had elapsed on which the vessel was to depart wherein he had taken his passage, and his desire that the answer should go through you, is my only authority for troubling you with this, addressed to you, whom I know, love, and revere, and not to him, who, for any evidence I have but from himself, may be a zealous son of science, or an adventurer wanting money to carry him to London. I know nothing of the Veterinary institution of London, yet have no doubt it merits the high character he ascribes to it. It is a nation which possesses many learned men. I know well the Veterinary school of Paris, of long standing, and saw many of its publications during my residence there. They were classically written, announced a want of nothing but certainty as to their facts, which granted, the hypotheses were learned and plausible. The coach-horses of the rich of Paris were availed of the institution; but the farmers even of the neighborhood could not afford to call a Veterinary doctor to their plough-horses in the country, or to send them to a livery stable to be attended in the city. On the whole, I was not a convert to the utility of the Institution. You know I am so to that of medicine, even in human complaints, but in a limited degree. That there are certain diseases of the human body, so distinctly pronounced by well-articulated symptoms, and recurring so often, as not to be mistaken, wherein experience has proved that certain substances applied, will restore order, I cannot doubt.

Such are Kinkina in Intermittents, Mercury in Syphilis, Castor Oil in Dysentery, etc. And so far I go with the physicians. But there are also a great mass of indistinct diseases, presenting themselves under no form clearly characterized, nor exactly recognized as having occurred before, and to which of course the application of no particular substance can be known to have been made, nor its effect on the case experienced. These may be called unknown cases, and they may in time be lessened by the progress of observation and experiment. Observing that there are in the construction of the animal system some means provided unknown to us, which have a tendency to restore order, when disturbed by accident, called by physicians the *vis medicatrix nature*, I think it safer to trust to this power in the unknown cases, than to uncertain conjectures built on the ever-changing hypothetical systems of medicine. Now, in the Veterinary department all are unknown cases. Man can tell his physician the seat of his pain, its nature, history, and sometimes its cause, and can follow his directions for the curative process—but the poor dumb horse cannot signify where his pain is, what it is, or when or whence it came, and resists all process for its cure. If in the case of man, then, the benefit of medical interference in such cases admits of question, what must it be in that of the horse? And to what narrow limits is the real importance of the Veterinary art reduced? When a boy, I knew a Doctor Seymour, neighbor

to our famous botanist Clayton, who imagined he could cure the diseases of his tobacco plants; he bled some, administered lotions to others, sprinkled powders on a third class, and so on—they only withered and perished the faster. I am sensible of the presumption of hazarding an opinion to you on a subject whereon you are so much better qualified for decision, both by reading and experience. But our opinions are not voluntary. Every man's own reason must be his oracle. And I only express mine to explain why I did not comply with Mr. Carver's request; and to give you a further proof that there are no bounds to my confidence in your indulgence in matters of opinion.

Mr. Adams and myself are in habitual correspondence. I owe him a letter at this time, and shall pay the debt as soon as I have something to write about: for with the commonplace topic of politics we do not meddle. Where there are so many others on which we agree, why should we introduce the only one on which we differ. Besides the pleasure which our naval successes have given to every honest patriot, his must be peculiar, because a navy has always been his hobby-horse. A little further time will show whether his ideas have been premature, and whether the little we can oppose on that element to the omnipotence of our enemy there, would lessen the losses of the war, or contribute to shorten its duration, the legitimate object of every measure. On the land, indeed, we have been most unfortunate;

so wretched a succession of generals never before destroyed the fairest expectations of a nation, counting on the bravery of its citizens, which has proved itself on all these trials. Our first object must now be the vindication of our character in the field; after that, peace with the *liberum mare*, personal inviolability there, and ouster from this continent of the incendiaries of savages. God send us these good things, and to you health and life here, till you wish to awake to it in another state of being.

TO MONSIEUR DE LOMERIE.

MONTICELLO, April 3, 1813.

SIR,—Your letter of the 26th has been received, as had been that of the 5th. The preceding ones had been complied with by applications verbal and written to the members of the government, to which I could expect no specific answers, their whole time being due to the public, and employed on their concerns. Had it been my good fortune to preserve at the age of seventy, all the activity of body and mind which I enjoyed in earlier life, I should have employed it now, as then, in incessant labors to serve those to whom I could be useful. But the torpor of age is weighing heavily on me. The writing table is become my aversion, and its drudgeries beyond my remaining powers. I have retired, then, of necessity, from all correspondence not indispensably called for by some special duty, and I

hope that this necessity will excuse me with you from further interference in obtaining your passage to France, which requires solicitations and exertions beyond what I am able to encounter. I request this the more freely, because I am sure of finding, in your candor and consideration, an acquiescence in the reasonableness of my desire to indulge the feeble remains of life in that state of ease and tranquillity which my condition, physical and moral, require. Accept, then, with my adieux, my best wishes for a safe and happy return to your native country and the assurances of my respect.

TO THOMAS PAINE McMATRON.

MONTICELLO, April 3, 1813.

SIR,—Your favor of March 24th is received, and nothing could have been so pleasing to me as to have been able to comply with the request therein made, feeling especial motives to become useful to any person connected with Mr. M'Matron. But I shall state to you the circumstances which control my will, and rest on your candor their just estimate. When I retired from the government four years ago, it was extremely my wish to withdraw myself from all concern with public affairs, and to enjoy with my fellow citizens the protection of government, under the auspices and direction of those to whom it was so worthily committed. Solicitations from my friends, however, to aid them in their applications

for office, drew from me an unwary compliance, till at length these became so numerous as to occupy a great portion of my time in writing letters to the President and heads of departments, and although these were attended to by them with great indulgence, yet I was sensible they could not fail of being very embarrassing. They kept me, at the same time, standing forever in the attitude of a suppliant before them, daily asking favors as humiliating and afflicting to my own mind, as they were unreasonable from their multitude. I was long sensible of the necessity of putting an end to these unceasing importunities, when a change in the heads of the two departments to which they were chiefly addressed, presented me an opportunity. I came to a resolution, therefore, on that change, never to make another application. I have adhered to it strictly, and find that on its rigid observance, my own happiness and the friendship of the government too much depend, for me to swerve from it in future. On consideration of these circumstances, I hope you will be sensible how much they import, both to the government and myself; and that you do me the justice to be assured of the reluctance with which I decline an opportunity of being useful to one so nearly connected with Mr. M'Matron, and that with the assurance of my regrets, you will accept that of my best wishes for your success, and of my great respect.

Edmund Randolph

(1753-1813)

Reproduced from the Original Painting

Edmund Randolph was born in Virginia, August 10, 1753; son of John Randolph, Attorney-General and ablest lawyer of his time in Virginia. Edmund followed his father's footsteps and became eminent as a lawyer, though he espoused the cause of the Revolution while his father was a staunch Royalist. This difference of opinion led to the disinheriting of the son. In August, 1775, Edmund Randolph was chosen aide to Washington. The succeeding year found him the delegate of Williamsburg to the convention of May and Attorney-General of the State of Virginia. He was a delegate to Congress between the years 1779 and 1782, and elected Governor of Virginia in 1786. A member of the convention that framed the Federal Constitution, he was the means of introducing what is known as the "Virginia Plan." He was United States Attorney-General under the first Federal administration, and succeeded Jefferson as Secretary of State, assuming the duties of this office January 2, 1794. He resigned as Secretary of State in August of the same year, owing to a supposed intrigue with the French Minister, Baron Fauchet.

TO COLONEL WILLIAM DUANE.

MONTICELLO, April 4, 1813.

DEAR SIR,—Your favor of February 14th has been duly received, and the MS. of the commentary on Montesquieu is also safe at hand. I now forward to you the work of Tracy, which you will find a valuable supplement and corrective to those we already possess on political economy. It is a little unlucky that its outset is of a metaphysical character, which may damp the ardor of perusal in some readers. He has been led to this by a desire to embody this work, as well as a future one he is preparing on morals, with his former treatise on Ideology. By-the-bye, it is merely to this work that Bonaparte alludes in his answer to his Council of State, published not long since, in which he scouts “the dark and metaphysical doctrine of Ideology, which, diving into first causes, founds on this basis a legislation of the people, etc.” If, indeed, this answer be not a forgery, for everything is now forged, even to the fat of our beef and mutton: yet the speech is not unlike him, and affords scope for an excellent parody. I wish you may succeed in getting the commentary on Montesquieu reviewed by the Edinburgh Reviewers. I should expect from them an able and favorable analysis of it. I sent a copy of it to a friend in England, in the hope he would communicate it to them; not, however, expressing that hope, lest the source of it should have been

made known. But the book will make its way, and will become a standard work. A copy which I sent to France was under translation by one of the ablest men of that country.

It is true that I am tired of practical politics, and happier while reading the history of ancient than of modern times. The total banishment of all moral principle from the code which governs the intercourse of nations, the melancholy reflection that after the mean, wicked and cowardly cunning of the cabinets of the age of Machiavelli had given place to the integrity and good faith which dignified the succeeding one of a Chatham and Turgot, that this is to be swept away again by the daring profligacy and avowed destitution of all moral principle of a Cartouche and a Blackbeard, sickens my soul unto death. I turn from the contemplation with loathing, and take refuge in the histories of other times, where, if they also furnish their Tarquins, their Catilines and Caligulas, their stories are handed to us under the brand of a Livy, a Sallust and a Tacitus, and we are comforted with the reflection that the condemnation of all succeeding generations has confirmed the censures of the historian, and consigned their memories to everlasting infamy, a solace we cannot have with the Georges and Napoleons but by anticipation.

In surveying the scenes of which we make a part, I confess that three frigates taken by our gallant little navy, do not balance in my mind three armies

lost by the treachery, cowardice, or incapacity of those to whom they were intrusted. I see that our men are good, and only want generals. We may yet hope, however, that the talents which always exist among men will show themselves with opportunity, and that it will be found that this age also can produce able and honest defenders of their country, at what further expense, however, of blood and treasure, is yet to be seen. Perhaps this Russian mediation may cut short the history of the present war, and leave to us the laurels of the sea, while our enemies are bedecked with those of the land. This would be the reverse of what has been expected, and perhaps of what was to be wished.

I have never seen the work on Political Economy, of which you speak. Say and Tracy contain the sum of that science as far as it has been soundly traced, in my judgment. And it is a pity that Say's work should not, as well as Tracy's, be made known to our countrymen by a good translation. It would supplant Smith's book altogether, because shorter, clearer and sounder.

Accept my friendly salutations and assurances of continued esteem and respect.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, May 21, 1813.

DEAR SIR,—The enclosed letter from Whit was unquestionably intended for you. The subject, the address, both of title and place, prove it, and the mistake of the name only shows the writer to be a very uninquisitive statesman. Dr. Waterhouse's letter, too, was intended for your eye, and although the immediate object fails by previous appointment, yet he seems to entertain further wishes. I enclose, too, the newspapers he refers to, as some of their matter may have escaped your notice, and the traitorous designs fostered in Massachusetts, and explained in them, call for attention.

We have never seen so unpromising a crop of wheat as that now growing. The winter killed an unusual proportion of it, and the fly is destroying the remainder. We may estimate the latter loss at one-third at present, and fast increasing from the effect of the extraordinary drought. With such a prospect before us, the blockade is acting severely on our past labors. It caught nearly the whole wheat of the middle and upper country in the hands of the farmers and millers, whose interior situation had prevented their getting it to an earlier market. From this neighborhood very little had been sold. When we cast our eyes on the map, and see the extent of country from New York to North Carolina

inclusive, whose produce is raised on the waters of the Chesapeake, (for Albemarle sound is, by the canal of Norfolk, become a water of the Chesapeake,) and consider its productiveness, in comparison with the rest of the Atlantic States, probably a full half, and that all this can be shut up by two or three ships of the line lying at the mouth of the bay, we see that an injury so vast to ourselves and so cheap to our enemy, must forever be resorted to by them, and constantly maintained. To defend all the shores of those waters in detail is impossible. But is there not a single point where they may be all defended by means to which the magnitude of the object gives a title? I mean at the mouth of the Chesapeake. Not by ships of the line, or frigates; for I know that with our present enemy we cannot contend in that way. But would not a sufficient number of gun-boats of *small* draught, stationed in Lynhaven river, render it unsafe for ships of war either to ascend the Chesapeake or to lie at its mouth? I am not unaware of the effect of the ridicule cast on this instrument of defence by those who wished for engines of offence. But resort is had to ridicule only when reason is against us. I know, too, the prejudices of the gentlemen of the navy, and that these are very natural. No one has been more gratified than myself by the brilliant achievements of our little navy. They have deeply wounded the pride of our enemy, and been balm to ours, humiliated on the land, where our real strength was felt to lie.

But divesting ourselves of the enthusiasm these brave actions have justly excited, it is impossible not to see that all these vessels must be taken and added to the already overwhelming force of our enemy; that even while we keep them, they contribute nothing to our defence, and that so far as we are to be defended by anything on the water, it must be by such vessels as can assail under advantageous circumstances, and under adverse ones withdraw from the reach of the enemy. These, in shoaly waters, are the humble, the ridiculed, but the formidable gunboats. I acknowledge that in the case which produces these reflections, the station of Lynhaven river would not be safe against land attacks on the boats, and that a retreat for them is necessary in this event. With a view to this there was a survey made by Colonel Tatham, which was lodged either in the War or Navy Office, showing the depth and length of a canal which would give them a retreat from Lynhaven river into the eastern branch of Elizabeth river. I think the distance is not over six or eight miles, perhaps not so much, through a country entirely flat, and little above the level of the sea. A cut of ten yards wide and four yards deep, requiring the removal of forty cubic yards of earth for every yard in length of the canal, at twenty cents the cubic yard, would cost about \$15,000 a mile. But even doubling this to cover all errors of estimate, although in a country offering the cheapest kind of labor, it would be nothing compared

with the extent and productions of the country it is to protect. It would, for so great a country, bear no proportion to what has been expended, and justly expended by the Union, to defend the single spot of New York.

While such a channel of retreat secures effectually the safety of the gunboats, it insures also their aid for the defence of Norfolk, if attacked from the sea. And the Norfolk canal gives them a further passage into Albemarle sound, if necessary for their safety, or in aid of the flotilla of that sound, or to receive the aid of that flotilla either at Norfolk or in Lynhaven river. For such a flotilla there also will doubtless be thought necessary, that being the only outlet now, as during the last war, for the waters of the Chesapeake. Colonel Monroe, I think, is personally intimate with the face of all that country, and no one, I am certain, is more able or more disposed than the present Secretary of the Navy, to place himself above the navy prejudices, and do justice to the aptitude of these humble and economical vessels to the shallow waters of the South. On the bold Northern shores they would be of less account, and the larger vessels will of course be more employed there. Were they stationed with us, they would rather attract danger than ward it off. The only service they can render us would be to come *in a body* when the occasion offers, of overwhelming a weaker force of the enemy occupying our bay, to oblige them to keep their force in a body, leaving the mass of our coast open.

Although it is probable there may not be an idea here which has not been maturely weighed by yourself, and with a much broader view of the whole field, yet I have frankly hazarded them, because possibly some of the facts or ideas may have escaped in the multiplicity of the objects engaging your notice, and because in every event they will cost you but the trouble of reading. The importance of keeping open a water which covers wholly or considerably five of the most productive States, containing three-fifths of the population of the Atlantic portion of our Union, and of preserving their resources for the support of the war, as far as the state of war and the means of the confederacy will admit; and especially if it can be done for less than is contributed by the Union for more than one single city, will justify our anxieties to have it effected. And should my views of the subject be even wrong, I am sure they will find their apology with you in the purity of the motives of personal and public regard which induce a suggestion of them. In all cases I am satisfied you are doing what is for the best, as far as the means put into your hands will enable you, and this thought quiets me under every occurrence, and under every occurrence I am sincerely, affectionately and respectfully yours.

TO MADAME LA BARONNE DE STAËL-HOLSTEIN.

UNITED STATES OF AMERICA, May 24, 1813.

I received with great pleasure, my dear Madam and friend, your letter of November the 10th, from Stockholm, and am sincerely gratified by the occasion it gives me of expressing to you the sentiments of high respect and esteem which I entertain for you. It recalls to my remembrance a happy portion of my life, passed in your native city; then the seat of the most amiable and polished society of the world, and of which yourself and your venerable father were such distinguished members. But of what scenes has it since been the theatre, and with what havoc has it overspread the earth! Robespierre met the fate, and his memory the execration, he so justly merited. The rich were his victims, and perished by thousands. It is by millions that Bonaparte destroys the poor, and he is eulogized and deified by the sycophants even of science. These merit more than the mere oblivion to which they will be consigned; and the day will come when a just posterity will give to their hero the only preëminence he has earned, that of having been the greatest of the destroyers of the human race. What year of his military life has not consigned a million of human beings to death, to poverty and wretchedness! What field in Europe may not raise a monument of the murders, the burnings, the desolations, the famines and miseries it has witnessed from him! And all this to

acquire a reputation, which Cartouche attained with less injury to mankind, of being fearless of God or man.

To complete and universalize the desolation of the globe, it has been the will of Providence to raise up, at the same time, a tyrant as unprincipled and as overwhelming, for the ocean. Not in the poor maniac George, but in his government and nation. Bonaparte will die, and his tyrannies with him. But a nation never dies. The English government, and its piratical principles and practices, have no fixed term of duration. Europe feels, and is writhing under the scorpion whips of Bonaparte. We are assailed by those of England. The one continent thus placed under the grip of England, and the other of Bonaparte, each has to grapple with the enemy immediately pressing on itself. We must extinguish the fire kindled in our own house, and leave to our friends beyond the water that which is consuming theirs. It was not till England had taken one thousand of our ships, and impressed into her service more than six thousand of our citizens; till she had declared, by the proclamation of her Prince Regent, that she would not repeal her aggressive orders *as to us*, until Bonaparte should have repealed his *as to all nations*; till her minister, in formal conference with ours, declared, that no proposition for protecting our seamen from being impressed, under color of taking their own, was practicable or admissible; that, the door to justice

and to all amicable arrangement being closed, and negotiation become both desperate and dishonorable, we concluded that the war she had for years been waging against us, might as well become a war on both sides. She takes fewer vessels from us since the declaration of war than before, because they venture more cautiously; and we now make full reprisals where before we made none. England is, in principle, the enemy of all maritime nations, as Bonaparte is of the continental; and I place in the same line of insult to the human understanding, the pretension of conquering the ocean, to establish continental rights, as that of conquering the continent, to restore maritime rights. No, my dear Madam; the object of England is the *permanent dominion of the ocean*, and the *monopoly of the trade of the world*. To secure this, she must keep a larger fleet than her own resources will maintain. The resources of other nations, then, must be impressed to supply the deficiency of her own. This is sufficiently developed and evidenced by her successive strides towards the usurpation of the sea. Mark them, from her first war after William Pitt, the little, came into her administration. She first forbade to neutrals all trade with her enemies in time of war, which they had not in time of peace. This deprived them of their trade from port to port of the same nation. Then she forbade them to trade from the port of one nation to that of any other at war with her, although a right fully exer-

cised in time of peace. Next, instead of taking vessels only *entering* a blockaded port, she took them over the whole ocean, if destined to that port, although ignorant of the blockade, and without intention to violate it. Then she took them returning from that port, as if infected by previous infraction of blockade. Then came her paper blockades, by which she might shut up the whole world without sending a ship to sea, except to take all those sailing on it, as they must, of course, be bound to some port. And these were followed by her orders of council, forbidding every nation to go to the port of any other, without coming first to some port of Great Britain, there paying a tribute to her, regulated by the cargo, and taking from her a license to proceed to the port of destination; which operation the vessel was to repeat with the return cargo on its way home. According to these orders, we could not send a vessel from St. Mary's to St. Augustine, distant six hours' sail on our own coast, without crossing the Atlantic four times, twice with the outward cargo, and twice with the inward. She found this too daring and outrageous for a single step, retracted as to certain articles of commerce, but left it in force as to others which constitute important branches of our exports. And finally, that her views may no longer rest on inference, in a recent debate her minister declared in open parliament, that the object of the present war is a *monopoly of commerce*.

In some of these atrocities, France kept pace with her fully in speculative wrong, which her impotence only shortened in practical execution. This was called retaliation by both; each charging the other with the initiation of the outrage. As if two combatants might retaliate on an innocent bystander, the blows they received from each other. To make war on both would have been ridiculous. In order, therefore, to single out an enemy, we offered to both, that if either would revoke its hostile decrees, and the other should refuse, we would interdict all intercourse whatever with that other; which would be war of course, as being an avowed departure from neutrality. France accepted the offer, and revoked her decrees as to us. England not only refused, but declared by a solemn proclamation of her Prince Regent, that she would not revoke her orders *even as to us*, until those of France should be annulled *as to the whole world*. We thereon declared war, and with abundant additional cause.

In the meantime, an examination before parliament of the ruinous effects of these orders on her own manufacturers, exposing them to the nation and to the world, their Prince issued a palinodial proclamation, *suspending* the orders on certain conditions, but claiming to renew them at pleasure, as a matter of right. Even this might have prevented the war, if done and known here before its declaration. But the sword being once drawn, the expense of arming incurred, and hostilities in full

course, it would have been unwise to discontinue them, until effectual provision should be agreed to by England, for protecting our citizens on the high seas from impressment by her naval commanders, through error, voluntary or involuntary; the fact being notorious, that these officers, entering our ships at sea under pretext of searching for their seamen, (which they have no right to do by the law or usage of nations, which they neither do, nor ever did, as to any other nation but ours, and which no nation ever before pretended to do in any case,) entering our ships, I say, under pretext of searching for and taking out their seamen, they took ours, native as well as naturalized, knowing them to be ours, merely because they wanted them; insomuch, that no American could safely cross the ocean, or venture to pass by sea from one to another of our own ports. It is not long since they impressed at sea two nephews of General Washington, returning from Europe, and put them, as common seamen, under the ordinary discipline of their ships of war. There are certainly other wrongs to be settled between England and us; but of a minor character, and such as a proper spirit of conciliation on both sides would not permit to continue them at war. The sword, however, can never again be sheathed, until the personal safety of an American on the ocean, among the most important and most vital of the rights we possess, is completely provided for.

As soon as we heard of her partial repeal of her

orders of council, we offered instantly to suspend hostilities by an armistice, if she would suspend her impressments, and meet us in arrangements for securing our citizens against them. She refused to do it, because impracticable by any arrangement, as she pretends; but, in truth, because a body of sixty to eighty thousand of the finest seamen in the world, which we possess, is too great a resource for manning her exaggerated navy, to be relinquished, as long as she can keep it open. Peace is in her hand, whenever she will renounce the practice of aggression on the persons of our citizens. If she thinks it worth eternal war, eternal war we must have. She alleges that the sameness of language, of manners, of appearance, renders it impossible to distinguish us from her subjects. But because we speak English, and look like them, are we to be punished? Are free and independent men to be submitted to their bondage?

England has misrepresented to all Europe this ground of the war. She has called it a new pretension, set up since the repeal of her orders of council. She knows there has never been a moment of suspension of our reclamation against it, from General Washington's time inclusive, to the present day; and that it is distinctly stated in our declaration of war, as one of its principal causes. She has pretended we have entered into the war to establish the principle of "free bottoms, free goods," or to protect her seamen against her own rights over them. We contend for neither of these. She

pretends we are partial to France; that we have observed a fraudulent and unfaithful neutrality between her and her enemy. She knows this to be false, and that if there has been any inequality in our proceedings towards the belligerents, it has been in her favor. Her ministers are in possession of full proofs of this. Our accepting at once, and sincerely, the mediation of the virtuous Alexander, their greatest friend, and the most aggravated enemy of Bonaparte, sufficiently proves whether we have partialities on the side of her enemy. I sincerely pray that this mediation may produce a just peace. It will prove that the immortal character, which has first stopped by war the career of the destroyer of mankind, is the friend of peace, of justice, of human happiness, and the patron of unoffending and injured nations. He is too honest and impartial to countenance propositions of peace derogatory to the freedom of the seas.

Shall I apologize to you my dear Madam, for this long political letter? But yours justifies the subject, and my feelings must plead for the unreserved expression of them; and they have been the less reserved, as being from a private citizen, retired from all connection with the government of his country, and whose ideas, expressed without communication with any one, are neither known, nor imputable to them.

The dangers of the sea are now so great, and the possibilities of interception by sea and land such,

that I shall subscribe no name to this letter. You will know from whom it comes, by its reference to the date of time and place of yours, as well as by its subject in answer to that. This omission must not lessen in your view the assurances of my great esteem, of my sincere sympathies for the share which you bear in the afflictions of your country, and the deprivation to which a lawless will has subjected you. In return, you enjoy the dignified satisfaction of having met them, rather than be yoked with the abject, to his car; and that, in withdrawing from oppression, you have followed the virtuous example of a father whose name will ever be dear to your country and to mankind. With my prayers that you may be restored to it, that you may see it re-established in that temperate portion of liberty which does not infer either anarchy or licentiousness, in that high degree of prosperity which would be the consequence of such a government, in that, in short, which the constitution of 1789 would have insured it, if wisdom could have stayed at that point the fervid but imprudent zeal of men, who did not know the character of their own countrymen, and that you may long live in health and happiness under it, and leave to the world a well-educated and virtuous representative and descendant of your honored father, is the ardent prayer of the sincere and respectful friend who writes this letter.

Correspondence

TO JOHN ADAMS.

MONTICELLO, May 27, 1813.

Another of our friends of seventy-six is gone, my dear Sir, another of the co-signers of the Independence of our country. And a better man than Rush could not have left us, more benevolent, more learned, of finer genius, or more honest. We too must go; and that ere long. I believe we are under half a dozen at present; I mean the signers of the Declaration. Yourself, Gerry, Carroll, and myself, are all I know to be living. I am the only one south of the Potomac. Is Robert Treat Payne, or Floyd living? It is long since I heard of them, and yet I do not recollect to have heard of their deaths.

Moreton's deduction of the origin of our Indians from the fugitive Trojans, stated in your letter of January the 26th, and his manner of accounting for the sprinkling of their Latin with Greek, is really amusing. Adair makes them talk Hebrew Reinold Foster derives them from the soldiers sent by Kouli Khan to conquer Japan. Brerewood, from the Tartars, as well as our bears, wolves, foxes, etc., which, he says, "must of necessity fetch their beginning from Noah's ark, which rested, after the deluge in Asia, seeing they could not proceed by the course of nature, as the imperfect sort of living creatures do, from putrefaction." Bernard Romans' is of opinion that God created an original man and woman in this part of the globe. Doctor Barton

thinks they are not specifically different from the Persians; but, taking afterwards a broader range, he thinks, "that in all the vast countries of America, there is but one language, nay, that it may be proven, or rendered highly probable, that all the languages of the earth bear some affinity together." This reduces it to a question of definition, in which every one is free to use his own: to wit, what constitutes identity, or difference in two things, in the common acceptation of *sameness*? All languages may be called the same, as being all made up of the same primitive sounds, expressed by the letters of the different alphabets. But, in this sense, all things on earth are the same as consisting of matter. This gives up the useful distribution into genera and species, which we form, arbitrarily indeed, for the relief of our imperfect memories. To aid the question, from whence our Indian tribes descended, some have gone into their religion, their morals, their manners, customs, habits, and physical forms. By such helps it may be learnedly proved, that our trees and plants of every kind are descended from those of Europe; because, like them, they have no locomotion, they draw nourishment from the earth, they clothe themselves with leaves in spring, of which they divest themselves in autumn for the sleep of winter, etc. Our animals too must be descended from those of Europe, because our wolves eat lambs, our deer are gregarious, our ants hoard, etc. But, when for convenience we distribute lan-

guages, according to common understanding, into classes originally different, as we choose to consider them, as the Hebrew, the Greek, the Celtic, the Gothic; and these again into genera, or families, as the Icelandic, German, Swedish, Danish, English, and these last into species, or dialects, as English, Scotch, Irish, we then ascribe other meanings to the terms "same" and "different." In some one of these senses, Barton, and Adair, and Foster, and Brerewood, and Moreton, may be right, every one according to his own definition of what constitutes "identity." Romans, indeed, takes a higher stand, and supposes a separate creation. On the same unscriptural ground, he had but to mount one step higher, to suppose no creation at all, but that all things have existed without beginning in time, as they now exist, and may forever exist, producing and reproducing in a circle, without end. This would very summarily dispose of Mr. Moreton's learning, and show that the question of Indian origin, like many others, pushed to a certain height must receive the same answer, "Ignoro."

You ask if the usage of hunting in circles has ever been known among any of our tribes of Indians? It has been practised by them all; and is to this day, by those still remote from the settlements of the whites. But their numbers not enabling them, like Genghis Khan's seven hundred thousand, to form themselves into circles of one hundred miles diameter, they make their circle by firing the leaves

fallen on the ground, which gradually forcing the animals to a centre, they there slaughter them with arrows, darts, and other missiles. This is called fire hunting, and has been practised in this State within my time, by the white inhabitants. This is the most probable cause of the origin and extension of the vast prairies in the western country, where the grass having been of extraordinary luxuriance, has made a conflagration sufficient to kill even the old as well as the young timber.

I sincerely congratulate you on the successes of our little navy; which must be more gratifying to you than to most men, as having been the early and constant advocate of wooden walls. If I have differed with you on this ground, it was not on the principle, but the time; supposing that we cannot build or maintain a navy, which will not immediately fall into the same gulf which has swallowed not only the minor navies, but even those of the great second-rate powers of the sea. Whenever these can be resuscitated, and brought so near to a balance with England that we can turn the scale, then is my epoch for aiming at a navy. In the meantime, one competent to keep the Barbary States in order, is necessary; these being the only smaller powers disposed to quarrel with us. But I respect too much the weighty opinions of others, to be unyielding on this point, and acquiesce with the prayer "*quod felix faustumque sit;*" adding ever a sincere one for your health and happiness.

TO COLONEL JAMES MONROE.

MONTICELLO, May 30, 1813.

DEAR SIR,—I thank you for the communication of the President's Message, which has not yet reached us through the public papers. It is an interesting document, always looked for with anxiety, and the late one is equally able as interesting. I hope Congress will act in conformity with it, in all its parts. The unwarrantable ideas often expressed in the newspapers, and by persons who ought to know better, that I intermeddle in the Executive councils, and the indecent expressions, sometimes, of a hope that Mr. Madison will pursue the principles of my administration, expressions so disrespectful to his known abilities and dispositions, have rendered it improper in me to hazard suggestions to him, on occasions even where ideas might occur to me, that might accidentally escape him. This reserve has been strengthened, too, by a consciousness that my views must be very imperfect, from the want of a correct knowledge of the whole ground.

I lately, however, hazarded to him a suggestion on the defence of the Chesapeake, because, although decided on provisionally with the Secretaries of War and the Navy formerly, yet as it was proposed only in the case of war, which did not actually arise, and not relating to his department, might not then have been communicated to him. Of this fact my memory did not ascertain me. I will now hazard another

suggestion to yourself, which indeed grows out of that one: it is, the policy of keeping our frigates together in a body, in some place where they can be defended against a superior naval force, and from whence, nevertheless, they can easily sally forth on the shortest warning. This would oblige the enemy to take stations, or to cruise only in masses equal at least, each of them, to our whole force; and of course they could be acting only in two or three spots at a time, and the whole of our coast, except the two or three portions where they might be present, would be open to exportation and importation. I think all that part of the United States over which the waters of the Chesapeake spread themselves, was blockaded in the early season by a single ship. This would keep our frigates in entire safety, as they would go out only occasionally to oppress a blockading force known to be weaker than themselves, and thus make them a real protection to our whole commerce. And it seems to me that this would be a more essential service, than that of going out by ones, or twos, in search of adventures, which contribute little to the protection of our commerce, and not at all to the defence of our coast, or the shores of our inland waters. A defence of these by militia is most harassing to them. The applications from Maryland, which I have seen in the papers, and those from Virginia, which I suspect, merely because I see such masses of the militia called off from their farms, must be embarrassing to the Executive, not only

from a knowledge of the incompetency of such a mode of defence, but from the exhausture of funds which ought to be husbanded for the effectual operations of a long war. I fear, too, it will render the militia discontented, perhaps clamorous for an end of the war on any terms. I am happy to see that it is entirely popular as yet, and that no symptom of flinching from it appears among the people, as far as I can judge from the public papers, or from my own observation, limited to the few counties adjacent to the two branches of James river. I have such confidence that what I suggest has been already maturely discussed in the Cabinet, and that for wise and sufficient reasons the present mode of employing the frigates is the best, that I hesitate about sending this even after having written. Yet in that case it will only have given you the trouble of reading it. You will bury it in your own breast, as *non-avenue*, and see in it only an unnecessary zeal on my part, and a proof of the unlimited confidence of yours ever and affectionately.

TO JOHN ADAMS.

MONTICELLO, June 15, 1813.

DEAR SIR,—I wrote you a letter on the 27th of May, which probably would reach you about the 3d instant, and on the 9th I received yours of the 29th of May. Of Lindsay's Memoirs I had never before heard, and scarcely indeed of himself. It

could not, therefore, but be unexpected, that two letters of mine should have anything to do with his life. The name of his editor was new to me, and certainly presents itself for the first time under unfavorable circumstances. Religion, I suppose, is the scope of his book; and that a writer on that subject should usher himself to the world in the very act of the grossest abuse of confidence, by publishing private letters which passed between two friends, with no views to their ever being made public, is an instance of inconsistency as well as of infidelity, of which I would rather be the victim than the author.

By your kind quotation of the dates of my two letters, I have been enabled to turn to them. They had completely vanished from my memory. The last is on the subject of religion, and by its publication will gratify the priesthood with new occasion of repeating their comminations against me. They wish it to be believed that he can have no religion who advocates its freedom. This was not the doctrine of Priestley; and I honored him for the example of liberality he set to his order. The first letter is political. It recalls to our recollection the gloomy transactions of the times, the doctrines they witnessed, and the sensibilities they excited. It was a confidential communication of reflections on these from one friend to another, deposited in his bosom, and never meant to trouble the public mind. Whether the character of the times is justly portrayed or not, posterity will decide. But on one

feature of them they can never decide, the sensations excited in free yet firm minds by the terrorism of the day. None can conceive who did not witness them, and they were felt by one party only. This letter exhibits their side of the medal. The federalists, no doubt, have presented the other in their private correspondences as well as open action. If these correspondences should ever be laid open to the public eye, they will probably be found not models of comity towards their adversaries. The readers of my letter should be cautioned not to confine its view to this country alone. England and its aliamists were equally under consideration. Still less must they consider it as looking personally towards you. You happen, indeed, to be quoted, because you happened to express more pithily than had been done by themselves, one of the mottoes of the party. This was in your answer to the address of the young men of Philadelphia. [See Selection of Patriotic Addresses, page 198.] One of the questions, you know, on which our parties took different sides, was on the improvability of the human mind in science, in ethics, in government, etc. Those who advocated reformation of institutions, *pari passu* with the progress of science, maintained that no definite limits could be assigned to that progress. The enemies of reform, on the other hand, denied improvement, and advocated steady adherence to the principles, practices and institutions of our fathers, which they represented as the consummation

of wisdom, and acme of excellence, beyond which the human mind could never advance. Although in the passage of your answer alluded to, you expressly disclaim the wish to influence the freedom of inquiry, you predict that that will produce nothing more worthy of transmission to posterity than the principles, institutions and systems of education received from their ancestors. I do not consider this as your deliberate opinion. You possess, yourself, too much science, not to see how much is still ahead of you, unexplained and unexplored. Your own consciousness must place you as far before our ancestors as in the rear of our posterity. I consider it as an expression lent to the prejudices of your friends; and although I happened to cite it from you, the whole letter shows I had them only in view. In truth, my dear Sir, we were far from considering you as the author of all the measures we blamed. They were placed under the protection of your name, but we were satisfied they wanted much of your approbation. We ascribed them to their real authors, the Pickerings, the Wolcotts, the Tracys, the Sedgwicks, *et id genus omne*, with whom we supposed you in a state of duress. I well remember a conversation with you in the morning of the day on which you nominated to the Senate a substitute for Pickering, in which you expressed a just impatience under "the legacy of secretaries which General Washington had left you," and whom you seemed, therefore, to consider as under public protection.

Many other incidents showed how differently you would have acted with less impassioned advisers; and subsequent events have proved that your minds were not together. You would do me great injustice, therefore, by taking to yourself what was intended for men who were then your secret, as they are now your open enemies. Should you write on the subject, as you propose, I am sure we shall see you place yourself farther from them than from us.

As to myself, I shall take no part in any discussions. I leave others to judge of what I have done, and to give me exactly that place which they shall think I have occupied. Marshall has written libels on one side; others, I suppose, will be written on the other side; and the world will sift both and separate the truth as well as they can. I should see with reluctance the passions of that day rekindled in this, while so many of the actors are living, and all are too near the scene not to participate in sympathies with them. About facts you and I cannot differ; because truth is our mutual guide. And if any opinions you may express should be different from mine, I shall receive them with the liberality and indulgence which I ask for my own, and still cherish with warmth the sentiments of affectionate respect, of which I can with so much truth tender you the assurance.

TO WILLIAM SHORT.

MONTICELLO, June 18, 1813.

DEAR SIR,—Yours of the 2d is received, and a copy of Higgenbotham's mortgage is now enclosed. The journey to Bedford which I proposed in my last, my engagements here have obliged me to postpone till after harvest, which is now approaching; it is the most unpromising one I have seen. We have been some days in expectation of seeing M. Correa. If he is on the road, he has had some days of our very hottest weather. My thermometer has been for two days at 92 and 92½°, the last being the maximum ever seen here. Although we usually have the hottest day of the year in June, yet it is soon interrupted by cooler weather. In July the heat, though not so great, is more continuous and steady.

On the duration of the war I think there is uncertainty. Ever since the rupture of the treaty of Amiens, the object of Great Britain has visibly been the permanent conquest of the ocean, and levying a tribute on every vessel she permits to sail on it, as the Barbary powers do on the Mediterranean, which they call their sea. She must be conscious she cannot from her own resources maintain the exaggerated fleet she now has, and which is necessary to maintain her conquest; she must, therefore, levy the deficiency of duties of transit on other nations. If she should get another ministry with sense enough to abandon this senseless scheme, the war with us ought to be short, because there

is no material cause now existing but impressment; and there our only difference is how to establish a mode of discrimination between our citizens which she does not claim, and hers which it is neither our wish nor interest ever to employ. The seamen which our navigation raises had better be of our own. If this be all she aims at, it may be settled at Saint Petersburg. My principle has ever been that war should not suspend either exports or imports. If the piracies of France and England, however, are to be adopted as the law of nations, or should become their practice, it will oblige us to manufacture at home all the material comforts.

This may furnish a reason to check imports until necessary manufactures are established among us. This offers the advantage, too, of placing the consumer of our produce near the producer, but I should disapprove of the prohibition of exports even to the enemy themselves, except indeed refreshments and water to their cruisers on our coast, in order to oblige them to intermit their cruises to go elsewhere for these supplies. The idea of starving them as to bread, is a very idle one. It is dictated by passion, not by reason. If the war is lengthened we shall take Canada, which will relieve us from Indians, and Halifax, which will put an end to their occupation of the American seas, because every vessel must then go to England to repair every accident. To retain these would become objects of first importance to us, and of great im-

portance to Europe, as the means of curtailing the British marine. But at present, being merely *in posse*, they should not be an impediment to peace. We have a great and a just claim of indemnifications against them for the thousand ships they have taken piratically, and six thousand seamen impressed. Whether we can, on this score, successfully insist on curtailing their American possessions, by the meridian of Lake Huron, so as to cut them off from the Indians bordering on us, would be matter for conversation and experiment at the treaty of pacification. I sometimes allow my mind to wander thus into the political field, but rarely, and with reluctance. It is my desire as well as my duty to leave to the vigor of younger minds to settle concerns which are no longer mine, but must long be theirs. Affectionately adieu.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, June 18, 1813.

Your kind answer of the 16th entirely satisfies my doubts as to the employment of the navy, if kept within striking distance of our coast; and shows how erroneous views are apt to be with those who have not all in view. Yet as I know from experience that profitable suggestions sometimes come from lookers on, they may be usefully tolerated, provided they do not pretend to the right of

an answer. They would cost very dear indeed were they to occupy the time of a high officer in writing when he should be acting. I intended no such trouble to you, my dear Sir, and were you to suppose I expected it, I must cease to offer a thought on our public affairs. Although my entire confidence in their direction prevents my reflecting on them but accidentally, yet sometimes facts, and sometimes ideas occur, which I hazard as worth the trouble of reading but not of answering. Of this kind was my suggestion of the facts which I recollected as to the defence of the Chesapeake, and of what had been contemplated at the time between the Secretaries of War and the Navy and myself. If our views were sound, the object might be effected in one year, even of war, and at an expense which is nothing compared to the population and productions it would cover. We are here laboring under the most extreme drought ever remembered at this season. We have had but one rain to lay the dust in two months. That was a good one, but was three weeks ago. Corn is but a few inches high and dying. Oats will not yield their seed. Of wheat, the hard winter and fly leave us about two-thirds of an ordinary crop. So that in the lotteries of human life you see that even farming is but gambling. We have had three days of excessive heat. The thermometer on the 16th was at 92° , on the 17th $92\frac{1}{2}^{\circ}$, and yesterday at 93° . It had never before exceeded $92\frac{1}{2}$ at this place; at

least within the periods of my observations. Ever and affectionately yours.

TO COLONEL JAMES MONROE.

MONTICELLO, June 18, 1813.

DEAR SIR — Your favors of the 7th and 16th are received, and I now return you the memoir enclosed in the former. I am much gratified by its communication, because, as the plan appeared in the newspapers soon after the new Secretary of War came into office, we had given him the credit of it. Every line of it is replete with wisdom; and we might lament that our tardy enlistments prevented its execution, were we not to reflect that these proceeded from the happiness of our people at home. It is more a subject of joy that we have so few of the desperate characters which compose modern regular armies. But it proves more forcibly the necessity of obliging every citizen to be a soldier; this was the case with the Greeks and Romans, and must be that of every free State. Where there is no oppression there will be no pauper hirelings. We must train and classify the whole of our male citizens, and make military instruction a regular part of collegiate education. We can never be safe till this is done.

I have been persuaded, *ab initio*, that what we are to do in Canada must be done quickly; because our enemy, with a little time, can empty pickpockets

upon us faster than we can enlist honest men to oppose them. If we fail in this acquisition, Hull is the cause of it. Pike, in his situation, would have swept their posts to Montreal, because his army would have grown as it went along. I fear the reinforcements arrived at Quebec will be at Montreal before General Dearborn, and if so, the game is up. If the marching of the militia into an enemy's country be once ceded as unconstitutional (which I hope it never will be), then will their force, as now strengthened, bid us permanent defiance. Could we acquire that country, we might perhaps insist successfully at St. Petersburg on retaining all westward of the meridian of Lake Huron, or of Ontario, or of Montreal, according to the pulse of the place, as an indemnification for the past and security for the future. To cut them off from the Indians even west of the Huron would be a great future security.

Your kind answer of the 16th, entirely satisfies my doubts as to the employment of a navy, if kept within striking distance of our coast, and shows how erroneous views are apt to be with those who have not all in view. Yet, as I know by experience that profitable suggestions sometimes come from lookers on, they may be usefully tolerated, provided they do not pretend to the right of an answer. They would cost very dear, indeed, were they to occupy the time of a high officer in writing when he should be acting.

TO MATTHEW CARR.

MONTICELLO, June 19, 1813.

SIR,—I thank you for the copy of Mr. Clarke's sketches of the naval history of the United States, which you have been so kind as to send me. It is a convenient repository of cases of that class, and has brought to my recollection a number of individual cases of the Revolutionary war which had escaped me. I received, also, one of Mr. Clarke's circulars, asking supplementary communications for a second edition. But these things are so much out of the reach of my inland situation, that I am the least able of all men to contribute anything to his desire. I will indulge myself, therefore, in two or three observations, of which you will make what use you may think they merit.

1. Bushnel's Turtle is mentioned slightly. Would the description of the machine be too much for the sale of the work? It may be found very minutely given in the American Philosophical transactions. It was excellently contrived, and might perhaps, by improvement, be brought into real use. I do not know the difference between this and Mr. Fulton's submarine boat. But an effectual machine of that kind is not beyond the laws of nature; and whatever is within these, is not to be despaired of. It would be to the United States the consummation of their safety.

2. The account of the loss of the Philadelphia, does not give a fair impression of the

transaction. The proofs may be seen among the records of the Navy Office. After this loss, Captain Bainbridge had a character to redeem. He has done it most honorably, and no one is more gratified by it than myself. But still the transaction ought to be correctly stated. 3. But why omit all mention of the scandalous campaigns of Commodore Morris? A two years' command of an effective squadron, with discretionary instructions, wasted in sailing from port to port of the Mediterranean, and a single half day before the port of the enemy against which he was sent. All this can be seen in the proceedings of the court on which he was dismissed; and it is due to the honorable truths with which the book abounds, to publish those which are not so. A fair and honest narrative of the bad, is a voucher for the truth of the good. In this way the old Congress set an example to the world, for which the world amply repaid them, by giving unlimited credit to whatever was stamped with the name of Charles Thompson. It is known that this was never put to an untruth but once, and that where Congress was misled by the credulity of their General (Sullivan). The first misfortune of the Revolutionary war, induced a motion to suppress or garble the account of it. It was rejected with indignation. The whole truth was given in all its details, and there never was another attempt in that body to disguise it. These observations are meant for the good of the work, and for

the honor of those whom it means to honor. Accept the assurance of my esteem and respect.

TO THE PRESIDENT OF THE UNITED STATES
(JAMES MADISON).

MONTICELLO, June 21, 1813.

DEAR SIR,—Your favor of the 6th has been received, and I will beg leave to add a few supplementary observations on the subject of my former letter. I am not a judge of the best forms which may be given to the gunboat; and indeed I suppose they should be of various forms, suited to the various circumstances to which they would be applied. Among these, no doubts, Commodore Barney's would find their place. While the largest and more expensive are fitted for moving from one seaport to another, coast-wise, to aid in a particular emergency, those of smaller draught and expense suit shallower waters; and of these shallow and cheap forms must be those for Lynhaven river. Commodore Preble, in his lifetime, undertook to build such in the best manner for two or three thousand dollars. Colonel Monroe, to whose knowledge of the face of the country I had referred, approves, in a letter to me, of such a plan of defence as was suggested, adding to it a fort on the middle grounds; but thinks the work too great to be executed during a war. Such a fort, certainly, could not be built during a war, in the face of an enemy

Its practicability at any time has been doubted, and although a good auxiliary, is not a necessary member of this scheme of defence. But the canal of retreat is really a small work, of a few months' execution; the laborers would be protected by the military guard on the spot, and many of these would assist in the execution, for fatigue, rations, and pay. The exact magnitude of the work I would not affirm, nor do I think we should trust for it to Tatham's survey; still less would I call in Latrobe, who would immediately contemplate a canal of Languedoc. I would sooner trust such a man as Thomas Monroe to take the level, measure the distances, and estimate the expense. And if the plan were all matured the ensuing winter, and laborers engaged at the proper season, it might be executed in time to mitigate the blockade of the next summer. On recurring to an actual survey of that part of the country, made in the beginning of the Revolutionary war, under the orders of the Governor and Council, by Mr. Andrews I think, a copy of which I took with great care, instead of the half a dozen miles I had conjectured in my former letter, the canal would seem to be of not half that length. I send you a copy of that part of the map, which may be useful to you on other occasions, and is more to be depended on for minutia, probably, than any other existing. I have marked on that the conjectured route of the canal, to wit, from the bridge on Lynhaven river to

King's landing, on the eastern branch. The exact draught of water into Lynhaven river you have in the Navy Office. I think it is over four feet.

When we consider the population and productions of the Chesapeake country, extending from the Génissee to the Saurà towns and Albemarle Sound, its safety and commerce seem entitled even to greater efforts, if greater could secure them. That a defence at the entrance of the bay can be made mainly effective, that it will cost less in money, harass the militia less, place the inhabitants on its interior waters freer from alarm and depredation, and render provisions and water more difficult to the enemy, is so possible as to render thorough inquiry certainly expedient. Some of the larger gunboats, or vessels better uniting swiftness with force, would also be necessary to scour the interior, and cut off any pickaroons which might venture up the bay or rivers. The loss on James river alone, this year, is estimated at two hundred thousand barrels of flour, now on hand, for which the half price is not to be expected. This then is a million of dollars levied on a single water of the Chesapeake, and to be levied every year during the war. If a concentration of its defence at the entrance of the Chesapeake should be found inadequate, then we must of necessity submit to the expenses of detailed defence, to the harassment of the militia, the burnings of towns and houses, depredations of farms, and the hard trial

of the spirit of the Middle States, the most zealous supporters of the war, and, therefore, the peculiar objects of the vindictive efforts of the enemy. Those north of the Hudson need nothing, because treated by the enemy as neutrals. All their war is concentrated on the Delaware and Chesapeake; and these, therefore, stand in principal need of the shield of the Union. The Delaware can be defended more easily. But I should not think one hundred gunboats (costing less than one frigate) an over-proportioned allotment to the Chesapeake country against the over-proportioned hostilities pointed at it.

I am too sensible of the partial and defective state of my information, to be over-confident, or pertinacious, in the opinion I have formed. A thorough examination of the ground will settle it. We may suggest, perhaps it is a duty to do it. But you alone are qualified for decision, by the whole view which you can command; and so confident am I in the intentions, as well as wisdom, of the government, that I shall always be satisfied that what is not done, either cannot, or ought not to be done. While I trust that no difficulties will dishearten us, I am anxious to lessen the trial as much as possible. Heaven preserve you under yours, and help you through all its perplexities and perversities.

TO JOHN W. EPPES.

MONTICELLO, June 24, 1813.

DEAR SIR,—This letter will be on politics only. For although I do not often permit myself to think on that subject, it sometimes obtrudes itself, and suggests ideas which I am tempted to pursue. Some of these relating to the business of finance, I will hazard to you, as being at the head of that committee, but intended for yourself individually, or such as you trust, but certainly not for a mixed committee.

It is a wise rule, and should be fundamental in a government disposed to cherish its credit, and at the same time to restrain the use of it within the limits of its faculties, “never to borrow a dollar without laying a tax in the same instant for paying the interest annually, and the principal within a given term; and to consider that tax as pledged to the creditors on the public faith.” On such a pledge as this, sacredly observed, a government may always command, on a *reasonable interest*, all the lendable money of their citizens, while the necessity of an equivalent tax is a salutary warning to them and their constituents against oppressions, bankruptcy, and its inevitable consequence, revolution. But the term of redemption must be moderate, and at any rate within the limits of their rightful powers. But what limits, it will be asked, does this prescribe to their powers? What is to

hinder them from creating a perpetual debt? The laws of nature, I answer. The earth belongs to the living, not to the dead. The will and the power of man expire with his life, by nature's law. Some societies give it an artificial continuance, for the encouragement of industry; some refuse it, as our aboriginal neighbors, whom we call barbarians. The generations of men may be considered as bodies or corporations. Each generation has the usufruct of the earth during the period of its continuance. When it ceases to exist, the usufruct passes on to the succeeding generation, free and unincumbered, and so on, successively, from one generation to another forever. We may consider each generation as a distinct nation, with a right, by the will of its majority, to bind themselves, but none to bind the succeeding generation, more than the inhabitants of another country. Or the case may be likened to the ordinary one of a tenant for life, who may hypothecate the land for his debts, during the continuance of his usufruct; but at his death, the reversioner (who is also for life only) receives it exonerated from all burthen. The period of a generation, or the term of its life, is determined by the laws of mortality, which, varying a little only in different climates, offer a general average, to be found by observation. I turn, for instance, to Buffon's tables, of twenty-three thousand nine hundred and ninety-four deaths, and the ages at which they happened, and I find that of the num-

bers of all ages living at one moment, half will be dead in twenty-four years and eight months. But (leaving out minors, who have not the power of self-government) of the adults (of twenty-one years of age) living at one moment, a majority of whom act for the society, one-half will be dead in eighteen years and eight months. At nineteen years then from the date of a contract, the majority of the contractors are dead, and their contract with them. Let this general theory be applied to a particular case. Suppose the annual births of the State of New York to be twenty-three thousand nine hundred and ninety-four, the whole number of its inhabitants, according to Buffon, will be six hundred and seventeen thousand seven hundred and three, of all ages. Of these there would constantly be two hundred and sixty-nine thousand two hundred and eighty-six minors, and three hundred and forty-eight thousand four hundred and seventeen adults, of which last, one hundred and seventy-four thousand two hundred and nine will be a majority. Suppose that majority, on the first day of the year 1794, had borrowed a sum of money equal to the fee-simple value of the State, and to have consumed it in eating, drinking and making merry in their day; or, if you please, in quarrelling and fighting with their unoffending neighbors. Within eighteen years and eight months, one-half of the adult citizens were dead. Till then, being the majority, they might rightfully levy the interest of their

debt annually on themselves and their fellow revelers, or fellow champions. But at that period, say at this moment, a new majority have come into place, in their own right, and not under the rights, the conditions, or laws of their predecessors. Are they bound to acknowledge the debt, to consider the preceding generation as having had a right to eat up the whole soil of their country, in the course of a life, to alienate it from them, (for it would be an alienation to the creditors,) and would they think themselves either legally or morally bound to give up their country and emigrate to another for subsistence? Every one will say no; that the soil is the gift of God to the living, as much as it had been to the deceased generation; and that the laws of nature impose no obligation on them to pay this debt. And although, like some other natural rights, this has not yet entered into any declaration of rights, it is no less a law, and ought to be acted on by honest governments. It is, at the same time, a salutary curb on the spirit of war and indebtedness, which, since the modern theory of the perpetuation of debt, has drenched the earth with blood, and crushed its inhabitants under burdens ever accumulating. Had this principle been declared in the British bill of rights, England would have been placed under the happy disability of waging eternal war, and of contracting her thousand millions of public debt. In seeking, then, for an ultimate term for the redemption of

our debts, let us rally to this principle, and provide for their payment within the term of nineteen years at the farthest. Our government has not, as yet, begun to act on the rule of loans and taxation going hand in hand. Had any loan taken place in my time, I should have strongly urged a redeeming tax. For the loan which has been made since the last session of Congress, we should now set the example of appropriating some particular tax, sufficient to pay the interest annually, and the principal within a fixed term, less than nineteen years. And I hope yourself and your committee will render the immortal service of introducing this practice. Not that it is expected that Congress should formally declare such a principle. They wisely enough avoid deciding on abstract questions. But they may be induced to keep themselves within its limits.

I am sorry to see our loans begin at so exorbitant an interest. And yet, even at that you will soon be at the bottom of the loan-bag. We are an agricultural nation. Such an one employs its sparings in the purchase or improvement of land or stocks. The lendable money among them is chiefly that of orphans and wards in the hands of executors and guardians, and that which the farmer lays by till he has enough for the purchase in view. In such a nation there is one and one only resource for loans, sufficient to carry them through the expense of a war; and that will always be sufficient, and in the power of an honest government, punctual in the

preservation of its faith. The fund I mean, is *the mass of circulating coin*. Every one knows, that although not literally, it is nearly true, that every paper dollar emitted banishes a silver one from the circulation. A nation, therefore, making its purchases and payments with bills fitted for circulation, thrusts an equal sum of coin out of circulation. This is equivalent to borrowing that sum, and yet the vendor receiving payment in a medium as effectual as coin for his purchases or payments, has no claim to interest. And so the nation may continue to issue its bills as far as its wants require, and the limits of the circulation will admit. Those limits are understood to extend with us at present, to two hundred millions of dollars, a greater sum than would be necessary for any war. But this, the only resource which the government could command with certainty, the States have unfortunately fooled away, nay corruptly alienated to swindlers and shavers, under the cover of private banks. Say, too, as an additional evil, that the disposal funds of individuals, to this great amount, have thus been withdrawn from improvement and useful enterprise, and employed in the useless, usurious and demoralizing practices of bank directors and their accomplices. In the war of 1755, our State availed itself of this fund by issuing a paper money, bottomed on a specific tax for its redemption, and, to insure its credit, bearing an interest of five per cent. Within a very short time, not a bill of this emission was to be found

in circulation. It was locked up in the chests of executors, guardians, widows, farmers, etc. We then issued bills bottomed on a redeeming tax, but bearing no interest. These were readily received, and never depreciated a single farthing. In the Revolutionary war, the old Congress and the States issued bills without interest, and without tax. They occupied the channels of circulation very freely, till those channels were overflowed by an excess beyond all the calls of circulation. But although we have so improvidently suffered the field of circulating medium to be filched from us by private individuals, yet I think we may recover it in part, and even in the whole, if the States will co-operate with us. If treasury bills are emitted on a tax appropriated for their redemption in fifteen years, and (to insure preference in the first moments of competition) bearing an interest of six per cent, there is no one who would not take them in preference to the bank paper now afloat, on a principle of patriotism as well as interest; and they would be withdrawn from circulation into private hoards to a considerable amount. Their credit once established, others might be emitted, bottomed also on a tax, but not bearing interest; and if ever their credit faltered, open public loans, on which these bills alone should be received as specie. These, operating as a sinking fund, would reduce the quantity in circulation, so as to maintain that in an equilibrium with specie. It is not easy to estimate the obstacles which, in the beginning,

we should encounter in ousting the banks from their possession of the circulation; but a steady and judicious alternation of emissions and loans, would reduce them in time. But while this is going on, another measure should be pressed, to recover ultimately our right to the circulation. The States should be applied to, to transfer the right of issuing circulating paper to Congress exclusively, *in perpetuum*, if possible, but during the war at least, with a saving of charter rights. I believe that every State west and south of Connecticut river, except Delaware, would immediately do it; and the others would follow in time. Congress would, of course, begin by obliging unchartered banks to wind up their affairs within a short time, and the others as their charters expired, forbidding the subsequent circulation of their paper. This they would supply with their own, bottomed, every emission, on an adequate tax, and bearing or not bearing interest, as the state of the public pulse should indicate. Even in the non-complying States, these bills would make their way, and supplant the unfunded paper of their banks, by their solidity, by the universality of their currency, and by their receivability for customs and taxes. It would be in their power, too, to curtail those banks to the amount of their actual specie, by gathering up their paper, and running it constantly on them. The national paper might thus take place even in the non-complying States. In this way, I am not without a hope, that this great, this sole resource for loans in an agri-

cultural country, might yet be recovered for the use of the nation during war; and, if obtained *in perpetuum*, it would always be sufficient to carry us through any war; provided, that in the interval between war and war, all the outstanding paper should be called in, coin be permitted to flow in again, and to hold the field of circulation until another war should require its yielding place again to the national medium.

But it will be asked, are we to have no banks? Are merchants and others to be deprived of the resource of short accommodations, found so convenient? I answer, let us have banks; but let them be such as are alone to be found in any country on earth, except Great Britain. There is not a bank of discount on the continent of Europe, (at least there was not one when I was there,) which offers anything but cash in exchange for discounted bills. No one has a natural right to the trade of a money lender, but he who has the money to lend. Let those then among us, who have a moneyed capital, and who prefer employing it in loans rather than otherwise, set up banks, and give cash or national bills for the notes they discount. Perhaps, to encourage them, a larger interest than is legal in the other cases might be allowed them, on the condition of their lending for short periods only. It is from Great Britain we copy the idea of giving paper in exchange for discounted bills; and while we have derived from that country some good principles of government and

legislation, we unfortunately run into the most servile imitation of all her practices, ruinous as they prove to her, and with the gulf yawning before us into which these very practices are precipitating her. The unlimited emission of bank paper has banished all her specie, and is now, by a depreciation acknowledged by her own statesmen, carrying her rapidly to bankruptcy, as it did France, as it did us, and will do us again, and every country permitting paper to be circulated, other than that by public authority, rigorously limited to the just measure for circulation. Private fortunes, in the present state of our circulation, are at the mercy of those self-created money lenders, and are prostrated by the floods of nominal money with which their avarice deluges us. He who lent his money to the public or to an individual, before the institution of the United States Bank, twenty years ago, when wheat was well sold at a dollar the bushel, and receives now his nominal sum when it sells at two dollars, is cheated of half his fortune; and by whom? By the banks, which, since that, have thrown into circulation ten dollars of their nominal money where was one at that time.

Reflect, if you please, on these ideas, and use them or not as they appear to merit. They comfort me in the belief, that they point out a resource ample enough, without overwhelming war taxes, for the expense of the war, and possibly still recoverable; and that they hold up to all future time a resource within ourselves, ever at the command of govern-

ment, and competent to any wars into which we may be forced. Nor is it a slight object to equalize taxes through peace and war.

* * * * *

Ever affectionately yours.

TO JOHN ADAMS.

MONTICELLO, June 27, 1813.

Ἰδαν ἐς πολυδενδρον ἀνηρ ὕλητομος ἐλθων
 Παπταίνει, παρεοντος ἀδην, ποθεν ἀρξεται ἐργῶ
 Τι πρᾶτον καταλέξω; ἐπει παρα μυρια εἶπην.

And I too, my dear Sir, like the wood-cutter of Ida, should doubt where to begin, were I to enter the forest of opinions, discussions, and contentions which have occurred in our day. I should say with Theocritus, *Τι πρᾶτον καταλέξω; ἐπει παρα μυρια εἶπην.* But I shall not do it. The *summum bonum* with me is now truly epicurian, ease of body and tranquillity of mind; and to these I wish to consign my remaining days. Men have differed in opinion, and been divided into parties by these opinions, from the first origin of societies, and in all governments where they have been permitted freely to think and to speak. The same political parties which now agitate the United States, have existed through all time. Whether the power of the people or that of the *ἀριστοι* should prevail, were questions which kept the States of Greece and Rome in eternal convulsions, as they now schismatize every people whose minds and

mouths are not shut up by the gag of a despot. And in fact, the terms of whig and tory belong to natural as well as to civil history. They denote the temper and constitution of mind of different individuals. To come to our own country, and to the times when you and I became first acquainted, we well remember the violent parties which agitated the old Congress, and their bitter contests. There you and I were together, and the Jays, and the Dickinsons, and other anti-independents, were arrayed against us. They cherished the monarchy of England, and we the rights of our countrymen. When our present government was in the mew, passing from Confederation to Union, how bitter was the schism between the Feds and Antis! Here you and I were together again. For although, for a moment, separated by the Atlantic from the scene of action, I favored the opinion that nine States should confirm the constitution, in order to secure it, and the others hold off until certain amendments, deemed favorable to freedom, should be made. I rallied in the first instant to the wiser proposition of Massachusetts, that all should confirm, and then all instruct their delegates to urge those amendments. The amendments were made, and all were reconciled to the government. But as soon as it was put into motion, the line of division was again drawn. We broke into two parties, each wishing to give the government a different direction; the one to strengthen the most popular branch, the other the more permanent branches, and to extend

their permanence. Here you and I separated for the first time, and as we had been longer than most others on the public theatre, and our names therefore were more familiar to our countrymen, the party which considered you as thinking with them, placed your name at their head; the other, for the same reason, selected mine. But neither decency nor inclination permitted us to become the advocates of ourselves, or to take part personally in the violent contests which followed. We suffered ourselves, as you so well expressed it, to be passive subjects of public discussion. And these discussions, whether relating to men, measures or opinions, were conducted by the parties with an animosity, a bitterness and an indecency which had never been exceeded. All the resources of reason and of wrath were exhausted by each party in support of its own, and to prostrate the adversary opinions; one was upbraided with receiving the anti-federalists, the other the old Tories and refugees, into their bosom. Of this acrimony, the public papers of the day exhibit ample testimony, in the debates of Congress, of State Legislatures, of stump-orators, in addresses, answers, and newspaper essays; and to these, without question, may be added the private correspondences of individuals; and the less guarded in these, because not meant for the public eye, not restrained by the respect due to that, but poured forth from the overflowings of the heart into the bosom of a friend, as a momentary easement of our feelings. In this way,

and in answers to addresses, you and I could indulge ourselves. We have probably done it, sometimes with warmth, often with prejudice, but always, as we believed, adhering to truth. I have not examined my letters of that day. I have no stomach to revive the memory of its feelings. But one of these letters, it seems, has got before the public, by accident and infidelity, by the death of one friend to whom it was written, and of his friend to whom it had been communicated, and by the malice and treachery of a third person, of whom I had never before heard, merely to make mischief, and in the same satanic spirit in which the same enemy had intercepted and published, in 1776, your letter animadverting on Dickinson's character. How it happened that I quoted you in my letter to Doctor Priestley, and for whom, and not for yourself, the strictures were meant, has been explained to you in my letter of the 15th, which had been committed to the post eight days before I received yours of the 10th, 11th, and 14th. That gave you the reference which these asked to the particular answer alluded to in the one to Priestley. The renewal of these old discussions, my friend, would be equally useless and irksome. To the volumes then written on these subjects, human ingenuity can add nothing new, and the rather, as lapse of time has obliterated many of the facts. And shall you and I, my dear Sir, at our age, like Priam of old, gird on the "*arma, diu desueta, tremantibus ævo humeris?*" Shall we, at our

age, become the Athletæ of party, and exhibit ourselves as gladiators in the arena of the newspapers? Nothing in the universe could induce me to it. My mind has been long fixed to bow to the judgment of the world, who will judge by my acts, and will never take counsel from me as to what that judgment shall be. If your objects and opinions have been misunderstood, if the measures and principles of others have been wrongfully imputed to you, as I believe they have been, that you should leave an explanation of them, would be an act of justice to yourself. I will add, that it has been hoped that you would leave such explanations as would place every saddle on its right horse, and replace on the shoulders of others the burdens they shifted on yours.

But all this, my friend, is offered, merely for your consideration and judgment, without presuming to anticipate what you alone are qualified to decide for yourself. I mean to express my own purpose only, and the reflections which have led to it. To me, then, it appears, that there have been differences of opinion and party differences, from the first establishment of governments to the present day, and on the same question which now divides our own country; that these will continue through all future time; that every one takes his side in favor of the many, or of the few, according to his constitution, and the circumstances in which he is placed; that opinions, which are equally honest on both sides, should not affect personal esteem or social intercourse; that as

we judge between the Claudii and the Gracchi, the Wentworths and the Hampdens of past ages, so of those among us whose names may happen to be remembered for awhile, the next generations will judge, favorably or unfavorably, according to the complexion of individual minds, and the side they shall themselves have taken; that nothing new can be added by you or me to what has been said by others, and will be said in every age in support of the conflicting opinions on government; and that wisdom and duty dictate an humble resignation to the verdict of our future peers. In doing this myself, I shall certainly not suffer moot questions to affect the sentiments of sincere friendship and respect, consecrated to you by so long a course of time, and of which I now repeat sincere assurances.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, June 28, 1813.*

DEAR SIR,—I know not what, unless it were the prophet of Tippecanoe, had turned my curiosity to inquiries after the metaphysical science of the Indians, their ecclesiastical establishments, and theological theories; but your letter, written with all the accuracy, perspicuity, and elegance of your youth and middle age, as it has given me great satisfaction, deserves my best thanks.

It has given me satisfaction, because, while it has furnished me with information *where* all the knowl-

edge is to be obtained that books afford, it has convinced me that I shall never know much more of the subject than I do now. As I have never aimed at making my collection of books upon this subject, I have none of those you abridged in so concise a manner. Lafitan, Adair, and De Bry, were known to me only by name.

The various ingenuity which has been displayed in inventions of hypothesis, to account for the original population of America, and the immensity of learning profusely expended to support them, have appeared to me for a longer time than I can precisely recollect, what the physicians call the *Literæ nihil Sanantes*. Whether serpents' teeth were sown here and sprang up men; whether men and women dropped from the clouds upon this Atlantic Island; whether the Almighty created them here, or whether they emigrated from Europe, are questions of no moment to the present or future happiness of man. Neither agriculture, commerce, manufactures, fisheries, science, literature, taste, religion, morals, nor any other good will be promoted, or any evil averted, by any discoveries that can be made in answer to these questions.

The opinions of the Indians and their usages, as they are represented in your obliging letter of the 11th of June, appear to me to resemble the Platonizing Philo, or the Philonizing Plato, more than the genuine system of Indianism.

The philosophy both of Philo and Plato are at least as absurd. It is indeed less intelligible.

Plato borrowed his doctrines from Oriental and Egyptian philosophers, for he had travelled both in India and Egypt.

The Oriental philosophy, imitated and adopted, in part, if not the whole, by Plato and Philo, was

1. One God the good
2. The ideas, the thoughts, the reason, the intellect, the logos, the ratio of God.
3. Matter, the universe, the production of the logos, or contemplations of God. This matter was the source of evil.

Perhaps the three powers of Plato, Philo, the Egyptians, and Indians, cannot be distinctly made out, from your account of the Indians, but—

1. The great spirit, the good, who is worshipped by the kings, sachems, and all the great men, in their solemn festivals, as the Author, the Parent of good.
2. The Devil, or the source of evil. They are not metaphysicians enough as yet to suppose it, or at least to call it matter, like the wiscaims of Antiquity, and like Frederick the Great, who has written a very silly essay on the origin of evil, in which he ascribes it all to matter, as if this was an original discovery of his own.

The watchmaker has in his head an idea of the system of a watch before he makes it. The mechanic of the universe had a complete idea of the universe before he made it; and this idea, this logos, was almighty, or at least powerful enough to produce the world, but it must be made of matter which was

eternal; for creation out of nothing was impossible. And matter was unmanageable. It would not, and could not be fashioned into any system, without a large mixture of evil in it; for matter was essentially evil.

The Indians are not metaphysicians enough to have discovered this *idea*, this logos, this intermediate power between good and evil, God and matter. But of the two powers, the good and the evil, they seem to have a full conviction; and what son or daughter of Adam and Eve has not?

This logos of Plato seems to resemble, if it was not the prototype of, the *Ratio and its Progress* of Manilius, the astrologer; of the *Progress of the Mind* of Condorcet, and the *Age of Reason* of Tom Payne.

I could make a system too. The seven hundred thousand soldiers of Zingis, when the whole, or any part of them went to battle, they sent up a howl, which resembled nothing that human imagination has conceived, unless it be the supposition that all the devils in hell were let loose at once to set up an infernal scream, which terrified their enemies, and never failed to obtain them victory. The Indian yell resembles this; and, therefore, America was peopled from Asia.

Another system. The armies of Zingis, sometimes two or three or four hundred thousand of them, surrounded a province in a circle, and marched towards the centre, driving all the wild beasts before them, lions, tigers, wolves, bears, and every living

thing, terrifying them with their howls and yells, their drums, trumpets, etc., till they terrified and tamed enough of them to victual the whole army. Therefore, the Scotch Highlanders, who practice the same thing in miniature, are emigrants from Asia. Therefore, the American Indians, who, for anything I know, practice the same custom, are emigrants from Asia or Scotland.

I am weary of contemplating nations from the lowest and most beastly degradations of human life, to the highest refinement of civilization. I am weary of Philosophers, Theologians, Politicians, and Historians. They are an immense mass of absurdities, vices, and lies. Montesquieu had sense enough to say in jest, that all our knowledge might be comprehended in twelve pages in duodecimo, and I believe him in earnest. I could express my faith in shorter terms. He who loves the workman and his work, and does what he can to preserve and improve it, shall be accepted of him.

I have also felt an interest in the Indians, and a commiseration for them from my childhood. Aaron Pomham, the priest, and Moses Pomham, the king of the Punkapang and Neponset tribes, were frequent visitors at my father's house, at least seventy years ago. I have a distinct remembrance of their forms and figures. They were very aged, and the tallest and stoutest Indians I have ever seen. The titles of king and priest, and the names of Moses and Aaron, were given them no doubt by our Massachu-

setts divines and statesmen. There was a numerous family in this town, whose wigwam was within a mile of this house. This family were frequently at my father's house, and I, in my boyish rambles, used to call at their wigwam, where I never failed to be treated with whortleberries, blackberries, strawberries or apples, plums, peaches, etc., for they had planted a variety of fruit trees about them. But the girls went out to service, and the boys to sea, till not a soul is left. We scarcely see an Indian in a year. I remember the time when Indian murder, scalpings, depredations and conflagrations, were as frequent on the Eastern and Northern frontier of Massachusetts, as they are now in Indiana, and spread as much terror. But since the conquest of Canada, all has ceased; and I believe with you that another conquest of Canada will quiet the Indians forever, and be as great a blessing to them as to us.

The instance of Aaron Pomham made me suspect that there was an order of priesthood among them. But, according to your account, the worship of the good spirit was performed by the kings, sachems, and warriors, as among the ancient Germans, whose highest rank of nobility were priests. The worship of the evil spirit, *Αθανάτιος μὲν πρῶτα θεοῦ νομῆ ὡς διαπεύται τιμῆ.*

We have war now in earnest. I lament the contumacious spirit that appears about me. But I lament the cause that has given too much apology for it; the total neglect and absolute refusal of all

maritime protection and defence. Money, mariners, and soldiers, would be at the public service, if only a few frigates had been ordered to be built. Without this, our Union will be a brittle china vase, a house of ice, or a palace of glass.

I am, Sir, with an affectionate respect, yours.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, June 28, 1813.*

DEAR SIR,—It is very true that the denunciations of the priesthood are fulminated against every advocate for a complete freedom of religion. Comminations, I believe, would be plenteously pronounced by even the most liberal of them, against Atheism, Deism, against every man who disbelieved or doubted the resurrection of Jesus, or the miracles of the New Testament. Priestley himself would denounce the man who should deny the Apocalypse, or the Prophecies of Daniel. Priestley and Lindsay both have denounced as idolaters and blasphemers all the Trinitarians, and even the Arians.

Poor weak man, when will thy perfection arrive? Thy perfectability I shall not deny; for a greater character than Priestley or Godwin has said, "Be ye perfect," etc. For my part I can not deal damnation round the land on all I judge the foes of God and man. But I did not intend to say a word on this subject in this letter. As much of it as you please hereafter, but let me return to politics.

With some difficulty I have hunted up, or down, the "address of the young men of the city of Philadelphia, the district of Southwark, and the Northern Liberties," and the answer.

The addresses say, "Actuated by the SAME PRINCIPLES on which our forefathers achieved their independence, the recent attempts of a foreign power to derogate from the dignity and rights of our country, awaken our liveliest sensibility, and our strongest indignation." Huzza my brave boys! Could Thomas Jefferson or John Adams hear those words with insensibility, and without emotion? These boys afterwards add, "We regard our liberty and independence as the richest portion given us by our ancestors." And who were those ancestors? Among them were Thomas Jefferson and John Adams. And I very coolly believe that no two men among those ancestors did more towards it than those two. Could either hear this like statues? If, one hundred years hence, your letters and mine should see the light, I hope the reader will hunt up this address, and read it all; and remember that we were then engaged, or on the point of engaging, in a war with France. I shall not repeat the answer till we come to the paragraph upon which you criticised to Dr. Priestley, though every word of it is true, and I now rejoice to see it recorded, and though I had wholly forgotten it.

The paragraph is, "Science and morals are the great pillars on which this country has been raised to its present population, opulence and prosperity,

and these alone can advance, support, and preserve it. Without wishing to damp the ardor of curiosity, or influence the freedom of inquiry, I will hazard a prediction that, after the most industrious and impartial researches, the longest liver of you all will find no principles, institutions, or systems of education more fit, IN GENERAL, to be transmitted to your posterity than those you have received from your ancestors."

Now, compare the paragraph in the answer with the paragraph in the address, as both are quoted above, and see if we can find the extent and the limits of the meaning of both.

Who composed that army of fine young fellows that was then before my eyes? There were among them Roman Catholics, English Episcopalians, Scotch and American Presbyterians, Methodists, Moravians, Anabaptists, German Lutherans, German Calvinists, Universalists, Arians, Priestleyans, Socinians, Independents, Congregationalists, Horse Protestants and House Protestants, Deists and Atheists; and "*Protestans qui ne croyent rien.*" Very few however of several of these species. Nevertheless, all educated in the GENERAL PRINCIPLES of Christianity; and the general principles of English and American liberty.

Could my answer be understood by any candid reader or hearer, to recommend to all the others the general principles, institutions, or systems of education of the Roman Catholics? Or those of the Quakers? Or those of the Presbyterians? Or those

of the Menonists? Or those of the Methodists? Or those of the Moravians? Or those of the Universalists? Or those of the Philosophers? No.

The GENERAL PRINCIPLES on which the fathers achieved independence, were the only principles in which that beautiful assembly of young gentlemen could unite, and these principles only could be intended by them in their address, or by me in my answer.

And what were these GENERAL PRINCIPLES? I answer, the general principles of Christianity, in which all those sects were united; and the GENERAL PRINCIPLES of English and American liberty, in which all these young men united, and which had united all parties in America, in majorities sufficient to assert and maintain her independence.

Now I will avow that I then believed, and now believe, that those general principles of Christianity are as eternal and immutable as the existence and attributes of God; and that those principles of liberty are as unalterable as human nature, and our terrestrial mundane system. I could therefore safely say, consistently with all my then and present information, that I believed they would never make discoveries in contradiction to these GENERAL PRINCIPLES. In favor of these GENERAL PRINCIPLES in philosophy, religion and government, I would fill sheets of quotations from Frederick of Prussia, from Hume, Gibbon, Bolingbroke, Rousseau and Voltaire, as well as Newton and Locke; not to mention

thousands of divines and philosophers of inferior fame.

I might have flattered myself that my sentiments were sufficiently known to have protected me against suspicions of narrow thoughts, contracted sentiments, bigoted, enthusiastic, or superstitious principles, civil, political, philosophical, or ecclesiastical. The first sentence of the preface to my defence of the constitution, volume 1st, printed in 1787, is in these words: "The arts and sciences, in general, during the three or four last centuries, have had a regular course of *progressive* improvement. The inventions in mechanic arts, the discoveries in natural philosophy, navigation, and commerce, and the advancement of civilization and humanity, have occasioned changes in the condition of the world and the human character, which would have astonished the most refined nations of antiquity," etc. I will quote no farther; but request you to read again that whole page, and then say whether the writer of it could be suspected of recommending to youth "to look backward instead of forward" for instruction and improvement.

This letter is already too long. In my next I shall consider the Terrorism of the day. Meantime I am, as ever, your friend.

TO DR. JOHN L. E. W. SHECUT.

MONTICELLO, June 29, 1813.

SIR,—I am very sensible of the honor done me by the Antiquarian Society of Charleston, in the Rule for the organization of their Society, which you have been so good as to communicate, and I pray you to do me the favor of presenting to them my thanks. Age, and my inland and retired situation, make it scarcely probable that I shall be able to render them any services. But, should any occasion occur wherein I can be useful to them, I shall receive their commands with pleasure, and execute them with fidelity. While the promotion of the arts and sciences is interesting to every nation, and at all times, it becomes peculiarly so to ours, at this time, when the total demoralization of the governments of Europe, has rendered it safest, by cherishing internal resources, to lessen the occasions of intercourse with them. The works of our aboriginal inhabitants have been so perishable, that much of them must have disappeared already. The antiquarian researches, therefore, of the Society, cannot be too soon, or too assiduously directed, to the collecting and preserving what still remain.

Permit me to place here my particular thankfulness for the kind sentiments of personal regard which you have been pleased to express.

I have been in the constant hope of seeing the second volume of your excellent botanical work.

Its alphabetical form and popular style, its attention to the properties and uses of plants, as well as to their descriptions, are well calculated to encourage and instruct our citizens in botanical inquiries.

I avail myself of this occasion, of enclosing you a little of the fruit of a *Capsicum* I have just received from the province of Texas, where it is indigenous and perennial, and is used as freely as salt by the inhabitants. It is new to me. It differs from your *Capsicum Minimum*, in being perennial and probably hardier; perhaps, too, in its size, which would claim the term of *Minutissimum*. This stimulant being found salutary in a visceral complaint known on the seacoast, the introduction of a hardier variety may be of value. Accept the assurance of my great respect and consideration.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, June 30, 1813.

DEAR SIR,— * * * * *

But to return, *for the present*, to "The sensations excited in free, yet firm minds by the Terrorism of the day." You say none can conceive them who did not witness them; and they were felt by one party only.

Upon this subject I despair of making myself understood by posterity, by the present age, and even by you. To collect and arrange the documents illustrative of it, would require as many lives as those

of a cat. You never felt the terrorism of Shay's Rebellion in Massachusetts. I believe you never felt the terrorism of Gallatin's insurrection in Pennsylvania. You certainly never realized the terrorism of Tries's most outrageous riot and rescue, as I call it. Treason rebellion—as the world, and great judges, and two juries pronounce it.

You certainly never felt the terrorism excited by Genet in 1793, when ten thousand people in the streets of Philadelphia, day after day, threatened to drag Washington out of his house, and effect a revolution in the government, or compel it to declare war in favor of the French Revolution, and against England. The coolest and the firmest minds, even among the Quakers in Philadelphia, have given their opinions to me, that nothing but the yellow fever, which removed Dr. Hutchinson and Jonathan Dickenson Sargent from this world, could have saved the United States from a total revolution of government. I have no doubt you were fast asleep in philosophical tranquillity when ten thousand people, and perhaps many more, were parading the streets of Philadelphia, on the evening of my *Fast Day*. When even Governor Mifflin himself, thought it his duty to order a patrol of horse and foot, to preserve the peace; when Market Street was as full as men could stand by one another; and even before my door; when some of my domestics, in frenzy, determined to sacrifice their lives in my defence; when all were ready to make a desperate sally among the multi-

tude, and others were with difficulty and danger dragged back by the others; when I myself judged it prudent and necessary to order chests of arms from the War Office, to be brought through by lanes and back doors; determined to defend my house at the expense of my life, and the lives of the few, very few, domestics and friends within it. What think you of terrorism, Mr. Jefferson? Shall I investigate the causes, the motives, the incentives to these terrorisms? Shall I remind you of Philip Freneau, of Lloyd, of Ned Church? Of Peter Markoe, of Andrew Brown, of Duane? Of Callender, of Tom Paine, of Greenleaf, of Cheatham, of Tennison at New York, of Benjamin Austin at Boston?

But above all, shall I request you to collect circular letters from members of Congress in the Middle and Southern States to their constituents? I would give all I am worth for a complete collection of all those circular letters. Please to recollect Edward Livingston's motions and speeches, and those of his associates, in the case of Jonathan Robbins. The real terrors of both parties have always been, and now are, the fear that they shall lose the elections, and consequently the loaves and fishes; and that their antagonists will obtain them. Both parties have excited artificial terrors, and if I were summoned as a witness to say, upon oath, which party had excited, Machiavellially, the most terror, and which had really felt the most, I could not give a more sincere answer than in the vulgar style, put

them in a bag and shake them, and then see which comes out first.

Where is the terrorism now, my friend? There is now more real terrorism in New England than there ever was in Virginia. The terror of a civil war, *à La Vendée*, a division of the States, etc., etc., etc. How shall we conjure down this damnable rivalry between Virginia and Massachusetts? Virginia had recourse to Pennsylvania and New York. Massachusetts has now recourse to New York. They have almost got New Jersey and Maryland, and they are aiming at Pennsylvania. And all this in the midst of a war with England, when all Europe is in flames.

I will give you a hint or two more on the subject of terrorism. When John Randolph in the House, and Stephens Thompson Mason in the Senate, were treating me with the utmost contempt; when Ned Livingston was threatening me with impeachment for the murder of Jonathan Robbins, *the native of Danvers in Connecticut*; when I had certain information, that the daily language in an Insurance Office in Boston was, even from the mouth of Charles Jarvis, "We must go to Philadelphia and drag that John Adams from his chair;" I thank God that terror never yet seized on my mind. But I have had more excitements to it, from 1761 to this day, than any other man. Name the other if you can. I have been disgraced and degraded, and I have a right to complain. But as I always expected it, I have always submitted to it; perhaps often with too much

tameness. The amount of all the speeches of John Randolph in the House, for two or three years is, that himself and myself are the only two honest and consistent men in the United States. Himself eternally in opposition to government, and myself as constantly in favor of it. He is now in correspondence with his friend Quincy. What will come of it, let Virginia and Massachusetts judge. In my next you may find something upon correspondences; Whig and Tory; Federal and Democratic; Virginian and Novanglain; English and French; Jacobinic and Despotic, etc.

Meantime I am as ever, your friend.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, July, 1813.

DEAR SIR,—Correspondences! The letters of Bernard and Hutchinson, and Oliver and Paxton, etc., were detected and exposed before the Revolution. There are, I doubt not, thousands of letters now in being, (but still concealed from their party,) to their friends, which will, one day, see the light. I have wondered for more than thirty years, that so few have appeared; and have constantly expected that a Tory History of the rise and progress of the Revolution would appear; and wished it. I would give more for it than for Marshall, Gordon, Ramsay, and all the rest. Private letters of all parties will be found analogous to the newspapers, pamphlets, and

historians of the times. Gordon's and Marshall's histories were written to make money; and fashioned and finished to sell high in the London market. I should expect to find more truth in a history written by Hutchinson, Oliver, or Sewel; and I doubt not, such histories will one day appear. Marshall's is a Mausolæum, 100 feet square at the base, and 200 feet high. It will be as durable as the monuments of the Washington benevolent societies. Your character in history may easily be foreseen. Your administration will be quoted by philosophers as a model of profound wisdom; by politicians, as weak, superficial, and shortsighted. Mine, like Pope's woman, will have no character at all. The impious idolatry to Washington destroyed all character. His legacy of ministers was not the worst part of the tragedy; though by his own express confession to me, and by Pickering's confession to the world, in his letters to Sullivan, two of them, at least, were fastened upon him by necessity, because he could get no other. The truth is, Hamilton's influence over him was so well known, that no man fit for the office of State or War would accept either. He was driven to the necessity of appointing such as would accept; and this necessity was, in my opinion, the real cause of his retirement from office; for you may depend upon it, that retirement was not voluntary.

My friend, you and I have passed our lives in serious times. I know not whether we have ever seen any moments more serious than the present.

The Northern States are now retaliating upon the Southern States their conduct from 1797 to 1800. It is a mortification to me to see what servile mimics they are. Their newspapers, pamphlets, hand-bills, and their legislative proceedings, are copied from the examples set them, especially by Virginia and Kentucky. I know not which party has the most unblushing front, the most lying tongue, or the most impudent and insolent, not to say the most seditious and rebellious pen.

If you desire explanation on any of the points in this letter, you shall have them. This correspondence, I hope, will be concealed as long as Hutchinson's and Oliver's; but I should have no personal objection to the publication of it in the National Intelligencer. I am, and shall be for life, your friend.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, July 9, 1813.

Lord! Lord! What can I do with so much Greek? When I was of your age, young man, *i. e.*, seven, or eight, or nine years ago, I felt a kind of pang of affection for one of the flames of my youth, and again paid my addresses to Isocrates, and Dionysius of Hallicarnassus, etc., etc. I collected all my Lexicons and Grammars, and sat down to *περι συνθησεως ονοματων*, etc. In this way I amused myself for some time; but I found, that if I looked a word to-day, in less than a week I had to look it again.

It was to little better purpose than writing letters on a pail of water.

Whenever I sit down to write to you, I am precisely in the situation of the wood-cutter on Mount Ida. I cannot see wood for trees. So many subjects crowd upon me, that I know not with which to begin. But I will begin, at random, with Belsham; who is, as I have no doubt, a man of merit. He had no malice against you, nor any thought of doing mischief; nor has he done any, though he has been imprudent. The truth is, the dissenters of all denominations in England, and especially the Unitarians, are cowed, as we used to say at college. They are ridiculed, insulted, persecuted. They can scarcely hold their heads above water. They catch at straws and shadows to avoid drowning. Priestley sent your letter to Lindsay, and Belsham printed it from the same motive, *i. e.*, to derive some countenance from the name of Jefferson. Nor has it done harm here. Priestley says to Lindsay, "You see he is almost one of us, and he hopes will soon be altogether such as we are." Even in our New England, I have heard a high federal divine say, your letters had increased his respect for you.

"The same political parties which now agitate the United States, have existed through all time;" precisely. And this is precisely the complaint in the preface to the first volume of my defence. While all other sciences have advanced, that of government is at a stand; little better understood; little better

practised now, than three or four thousand years ago. What is the reason? I say, parties and factions will not suffer, or permit improvements to be made. As soon as one man hints at an improvement, his rival opposes it. No sooner has one party discovered or invented an amelioration of the condition of man, or the order of society, than the opposite party belies it, misconstrues, misrepresents it, ridicules it, insults it, and persecutes it. Records are destroyed. Histories are annihilated, or interpolated, or prohibited: sometimes by popes, sometimes by emperors, sometimes by aristocratical, and sometimes by democratical assemblies, and sometimes by mobs.

Aristotle wrote the history of eighteen hundred republics which existed before his time. Cicero wrote two volumes of discourses on government, which, perhaps, were worth all the rest of his works. The works of Livy and Tacitus, etc., that are lost, would be more interesting than all that remain. Fifty gospels have been destroyed, and where are St. Luke's world of books that have been written? If you ask my opinion who has committed all the havoc, I will answer you candidly,—Ecclesiastical and Imperial despotism has done it, to conceal their frauds.

Why are the histories of all nations, more ancient than the Christian era, lost? Who destroyed the Alexandrian library? I believe that Christian priests, Jewish rabbis, Grecian sages, and emperors, had as great a hand in it as Turks and Mahometans.

Democrats, Rebels and Jacobins, when they possessed a momentary power, have shown a disposition both to destroy and forge records as vandalical as priests and despots. Such has been and such is the world we live in.

I recollect, near some thirty years ago, to have said carelessly to you that I wished I could find time and means to write something upon aristocracy. You seized upon the idea, and encouraged me to do it with all that friendly warmth that is natural and habitual to you. I soon began, and have been writing upon that subject ever since. I have been so unfortunate as never to be able to make myself understood.

Your "ἀπίστοι" are the most difficult animals to manage of anything in the whole theory and practice of government. They will not suffer themselves to be governed. They not only exert all their own subtlety, industry and courage, but they employ the commonalty to knock to pieces every plan and model that the most honest architects in legislation can invent to keep them within bounds. Both patri-cians and plebeians are as furious as the workmen in England, to demolish labor-saving machinery.

But who are these "ἀπίστοι"? Who shall judge? Who shall select these choice spirits from the rest of the congregation? Themselves? We must first find out and determine who themselves are. Shall the congregation choose? Ask Xenophon; perhaps hereafter I may quote you Greek. Too much in a hurry

at present, English must suffice. Xenophon says that the ecclesia always choose the worst men they can find, because none others will do their dirty work. This wicked motive is worse than birth or wealth. Here I want to quote Greek again. But the day before I received your letter of June 27th, I gave the book to George Washington Adams, going to the academy at Hingham. The title is *Ἠθικὴ ποιησις*, a collection of moral sentences from all the most ancient Greek poets. In one of the oldest of them, I read in Greek, that I cannot repeat, a couplet, the sense of which was: "Nobility in men is worth as much as it is in horses, asses, or rams; but the meanest blooded puppy in the world, if he gets a little money, is as good a man as the best of them." Yet birth and wealth together have prevailed over virtue and talents in all ages. The many will acknowledge no other "*ἀπιστοί.*"

Your experience of this truth will not much differ from that of your best friend.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, July 13, 1813.

DEAR SIR,—Let me allude to one circumstance more in one of your letters to me, before I touch upon the subject of religion in your letters to Priestley.

The first time that you and I differed in opinion on any material question, was after your arrival from Europe, and that point was the French Revolution.

You were well persuaded in your own mind, that the nation would succeed in establishing a free republican government. I was as well persuaded in mine, that a project of such a government over five and twenty millions of people, when four and twenty millions and five hundred thousand of them could neither read nor write, was as unnatural, irrational and impracticable as it would be over the elephants, lions, tigers, panthers, wolves and bears in the royal menagerie at Versailles. Napoleon has lately invented a word which perfectly expresses my opinion, at that time and ever since. He calls the project Ideology; and John Randolph, though he was, fourteen years ago, as wild an enthusiast for equality and fraternity as any of them, appears to be now a regenerated proselyte to Napoleon's opinion and mine, that it was all madness.

The Greeks, in their allegorical style, said that the two ladies, *Αριστοκρατία* and *δημοκρατία*, always in a quarrel, disturbed every neighborhood with their brawls. It is a fine observation of yours, that "Whig and Tory belong to natural history." Inequalities of mind and body are so established by God Almighty, in His constitution of human nature, that no art or policy can ever plane them down to a level. I have never read reasoning more absurd, sophistry more gross, in proof of the Athanasian creed, or Transubstantiation, than the subtle labors of Helvetius and Rousseau, to demonstrate the natural equality of mankind. *Fus cuique*, the golden rule, do as you

would be done by, is all the equality that can be supported or defended by reason, or reconciled to common sense.

It is very true, as you justly observe, I can say nothing new on this or any other subject of government. But when Lafayette harangued you and me and John Quincy Adams, through a whole evening in your hotel in the Cul de Sac, at Paris, and developed the plans then in operation to reform France, though I was as silent as you were, I then thought I could say something new to him.

In plain truth, I was astonished at the grossness of his ignorance of government and history, as I had been for years before, at that of Turgot, Rochefoucauld, Condorcet and Franklin. This gross Ideology of them all, first suggested to me the thought and the inclination which I afterwards hinted to you in London, of writing something upon aristocracy. I was restrained for years, by many fearful considerations. Who, and what was I? A man of no name or consideration in Europe. The manual exercise of writing was painful and distressing to me, almost like a blow on the elbow or knee. My style was habitually negligent, unstudied, unpolished; I should make enemies of all the French patriots, the Dutch patriots, the English republicans, dissenters, reformers, call them what you will; and what came nearer home to my bosom than all the rest, I knew I should give offence to many if not all of my best friends in America, and very probably destroy all

the little popularity I ever had, in a country where popularity had more omnipotence than the British Parliament assumed. Where should I get the necessary books? What printer or bookseller would undertake to print such hazardous writings?

But when the French assembly of notables met, and I saw that Turgot's "government in one centre, and that centre the nation," a sentence as mysterious or as contradictory as the Athanasian creed, was about to take place, and when I saw that Shay's rebellion was about breaking out in Massachusetts, and when I saw that even my obscure name was often quoted in France as an advocate for simple democracy, which I saw that the sympathies in America had caught the French flame, I was determined to wash my own hands as clean as I could of all this foulness. I had then strong forebodings that I was sacrificing all the honors and emoluments of this life, and so it has happened, but not in so great a degree as I apprehended.

In truth, my defence of the constitutions and "discourses on Davila," laid the foundation for that immense unpopularity which fell, like the tower of Siloam, upon me. Your steady defence of democratical principles, and your invariable favorable opinion of the French revolution, laid the foundation of your unbounded popularity.

Sic transit gloria mundi! Now I will forfeit my life, if you can find one sentence in my defence of the constitutions, or the discourses on Davila, which, by

a fair construction, can favor the introduction of hereditary monarchy or aristocracy into America.

They were all written to support and strengthen the constitutions of the United States.

The wood-cutter on Ida, though he was puzzled to find a tree to chop at first, I presume knew how to leave off when he was weary. But I never know when to cease when I begin to write to you.

TO DR. SAMUEL BROWN.

MONTICELLO, July 14, 1813.

DEAR SIR,—Your favors of May 25th and June 13th have been duly received, as also the first supply of Capsicum, and the second of the same article with other seeds. I shall set great store by the Capsicum, if it is hardy enough for our climate, the species we have heretofore tried being too tender. The Galvance too, will be particularly attended to, as it appears very different from what we cultivate by that name. I have so many grandchildren and others who might be endangered by the poison plant, that I think the risk overbalances the curiosity of trying it. The most elegant thing of that kind known is a preparation of the Jamestown weed, Datura-Stramonium, invented by the French in the time of Robespierre. Every man of firmness carried it constantly in his pocket to anticipate the guillotine. It brings on the sleep of death as quietly as fatigue does the ordinary sleep, without the least

struggle or motion. Condorcet, who had recourse to it, was found lifeless on his bed a few minutes after his landlady had left him there, and even the slipper which she had observed half suspended on his foot, was not shaken off. It seems far preferable to the Venesection of the Romans, the Hemlock of the Greeks, and the Opium of the Turks. I have never been able to learn what the preparation is, other than a strong concentration of its lethiferous principle. Could such a medicament be restrained to self-administration, it ought not to be kept secret. There are ills in life as desperate as intolerable, to which it would be the rational relief, *e. g.*, the inveterate cancer. As a relief from tyranny indeed, for which the Romans recurred to it in the times of the emperors, it has been a wonder to me that they did not consider a poignard in the breast of the tyrant as a better remedy.

I am sorry to learn that a banditti from our country are taking part in the domestic contests of the country adjoining you; and the more so as from the known laxity of execution in our laws, they cannot be punished, although the law has provided punishment. It will give a wrongful hue to a rightful act of taking possession of Mobile, and will be imputed to the national authority as Meranda's enterprise was, because not punished by it. I fear, too, that the Spaniards are too heavily oppressed by ignorance and superstition for self-government, and whether a change from foreign to domestic despotism will be to their advantage remains to be seen.

We have been unfortunate in our first military essays by land. Our men are good, but our generals unqualified. Every failure we have incurred has been the fault of the general, the men evincing courage in every instance. At sea we have rescued our character; but the chief fruit of our victories there is to prove to those who have fleets, that the English are not invincible at sea, as Alexander has proved that Bonaparte is not invincible by land. How much to be lamented that the world cannot unite and destroy these two land and sea monsters! The one drenching the earth with human gore, the other ravaging the ocean with lawless piracies and plunder. Bonaparte will die, and the nations of Europe will recover their independence with, I hope, better governments. But the English government never dies, because their king is no part of it, he is a mere formality, and the real government is the aristocracy of the country, for their House of Commons is of that class. Their aim is to claim the dominion of the ocean by conquest, and to make every vessel navigating it pay a tribute to the support of the fleet necessary to maintain that dominion, to which their own resources are inadequate. I see no means of terminating their maritime dominion and tyranny but in their own bankruptcy, which I hope is approaching. But I turn from these painful contemplations to the more pleasing one of my constant friendship and respect for you.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, July 15, 1813.

Never mind it, my dear Sir, if I write four letters to your one, your one is worth more than my four.

It is true that I can say, and have said, nothing new on the subject of government. Yet I did say in my defence and in my discourses on Davila, though in an uncouth style, what was new to Locke, to Harrington, to Milton, to Hume, to Montesquieu, to Rousseau, to Turgot, to Condorcet, to Rochefoucauld, to Price, to Franklin, and to yourself; and at that time to almost all Europe and America. I can prove all this by indisputable authorities and documents.

Writings on government had been not only neglected, but discountenanced and discouraged throughout all Europe, from the restoration of Charles the Second in England, till the French revolution commenced.

The English commonwealth, the fate of Charles the First, and the military despotism of Cromwell, had sickened mankind with disquisitions on government to such a degree, that there was scarcely a man in Europe who had looked into the subject.

David Hume had made himself so fashionable with the aid of the court and clergy, Atheist, as they called him, and by his elegant lies against the republicans and gaudy daubings of the courtiers, that he had nearly laughed into contempt Rapin,

Sydney, and even Locke. It was ridiculous and even criminal in almost all Europe to speak of constitutions, or writers upon the principles or the fabrics of them.

In this state of things my poor, unprotected, unpatronized books appeared; and met with a fate not quite so cruel as I had anticipated. They were at last, however, overborne by misrepresentations, and will perish in obscurity, though they have been translated into German as well as French. The three emperors of Europe, the Prince Regents, and all the ruling powers, would no more countenance or tolerate such writings, than the Pope, the emperor of Haiti, Ben Austin, or Tom Paine.

The nations of Europe appeared to me, when I was among them, from the beginning of 1778, to 1785, *i. e.* to the commencement of the troubles in France, to be advancing by slow but sure steps towards an amelioration of the condition of man in religion and government, in liberty, equality, fraternity, knowledge, civilization and humanity.

The French Revolution I dreaded, because I was sure it would not only arrest the progress of improvement, but give it a retrograde course, for at least a century, if not many centuries. The French patriots appeared to me like young scholars from a college, or sailors flushed with recent pay or prize money, mounted on wild horses, lashing and spurring till they would kill the horses, and break their own necks.

Let me now ask you very seriously, my friend, where are now, in 1813, the perfection and the perfectability of human nature? Where is now the progress of the human mind? Where is the amelioration of society? Where the augmentations of human comforts? Where the diminutions of human pains and miseries? I know not whether the last day of Dr. Young can exhibit to a mind unstaidd by philosophy and religion [for I hold there can be no philosophy without religion], more terrors than the present state of the world. When, where, and how is the present chaos to be arranged into order? There is not, there cannot be, a greater abuse of words than to call the writings of Callender, Paine, Austin and Lowell, or, the speeches of Ned Livingston and John Randolph, public discussions. The ravings and rantings of Bedlam merit the character as well; and yet Joel Barlow was about to record Tom Paine as the great author of the American Revolution! If he was, I desire that my name may be blotted out forever from its records.

You and I ought not to die before we have explained ourselves to each other.

I shall come to the subject of religion by-and-bye. Your friend.

I have been looking for some time for a space in my good husband's letters to add the regards of an old friend, which are still cherished and preserved through all the changes and vicissitudes which have

taken place since we first became acquainted, and will, I trust, remain as long as

A. ADAMS.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, July 16, 1813. *

DEAR SIR,—Your letters to Priestley have increased my grief, if that were possible, for the loss of Rush. Had he lived, I would have stimulated him to insist on your promise to him, to write him on the subject of religion. Your plan I admire.

In your letter to Priestley of March 21st, 1801, dated at Washington, you call "The Christian Philosophy, the most sublime and benevolent, but the most perverted system that ever shone upon man." That it is the most sublime and benevolent, I agree. But whether it has been more perverted than that of Moses, of Confucius, of Zoroaster, of Sanchoniatan, of Numa, of Mahomet, of the Druids, of the Hindoos, etc., etc., I cannot as yet determine, because I am not sufficiently acquainted with these systems, or the history of their effects, to form a decisive opinion of the result of the comparison.

In your letter dated Washington, April 9, 1803, you say, "In consequence of some conversations with Dr. Rush, in the years 1798-99, I had promised some day to write to him a letter, giving him my view of the Christian system. I have reflected often on it since, and even sketched the outline in my own

mind. I should first take a general view of the moral doctrines of the most remarkable of the ancient philosophers, of whose ethics we have sufficient information to make an estimate; say of Pythagoras, Epicurus, Epictetus, Socrates, Cicero, Seneca, Antonius. I should do justice to the branches of morality they have treated well, but point out the importance of those in which they are deficient. I should then take a view of the Deism and Ethics of the Jews, and show in what a degraded state they were, and the necessity they presented of a reformation. I should proceed to a view of the life, character, and doctrines of Jesus; who, sensible of the incorrectness of their ideas of the Deity, and of morality, endeavored to bring them to the principles of a pure Deism, and juster notions of the attributes of God—to reform their moral doctrines to the standard of reason, justice, and philanthropy, and to inculcate the belief of a future state. This view would purposely omit the question of his Divinity, and even of his inspiration. To do him justice, it would be necessary to remark the disadvantages his doctrines have to encounter, not having been committed to writing by himself, but by the most unlettered of men, by memory, long after they had heard them from him, when much was forgotten, much misunderstood, and presented in very paradoxical shapes; yet such are the fragments remaining, as to show a master workman, and that his system of morality was the most benevolent and sublime,

probably, that has been ever taught, and more perfect than those of any of the ancient philosophers. His character and doctrines have received still greater injury from those who pretend to be his special disciples, and who have disfigured and sophisticated his actions and precepts from views of personal interest, so as to induce the unthinking part of mankind to throw off the whole system in disgust, and to pass sentence, as an impostor, on the most innocent, the most benevolent, the most eloquent and sublime character that has ever been exhibited to man. This is the outline!"

"Sancte Socrate! ora pro nobis!"—Erasmus.

Priestley in his letter to Lindsay, enclosing a copy of your letter to him, says, "He is generally considered an unbeliever; if so, however, he cannot be far from us, and I hope in the way to be not only almost, but altogether what we are. He now attends public worship very regularly, and his moral conduct was never impeached."

Now, I see not but you are as good a Christian as Priestley and Lindsay. Piety and morality were the end and object of the Christian system, according to them, and according to you. They believed in the resurrection of Jesus, in his miracles, and in his inspiration; but what inspiration? Not all that is recorded in the New Testament, nor the Old. They have not yet told us how much they believe, or how much they doubt or disbelieve. They have not told us how much allegory, how much parable, they find,

nor how they explain them all, in the Old Testament or the New.

John Quincy Adams has written for years to his two sons, boys of ten and twelve, a series of letters, in which he pursues a plan more extensive than yours; but agreeing in most of the essential points. I wish these letters could be preserved in the bosoms of his boys, but women and priests will get them; and I expect, if he makes a peace, he will be obliged to retire like a Jay, to study prophecies to the end of his life. I have more to say on this subject of religion.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, July 18, 1813.

DEAR SIR,—I have more to say on religion. For more than sixty years I have been attentive to this great subject. Controversies between Calvinists and Arminians, Trinitarians and Unitarians, Deists and Christians, Atheists and both, have attracted my attention, whenever the singular life I have led would admit, to all these questions. The history of this little village of Quincy, if it were worth recording, would explain to you how this happened. I think I can now say I have read away bigotry, if not enthusiasm. What does Priestley mean by an unbeliever, when he applies it to you? How much did he “unbelieve” himself? Gibbon had him right, when he determined his creed “scanty.” We are to

understand, no doubt, that he believed the resurrection of Jesus; some of his miracles; his inspiration, but in what degree? He did not believe in the inspiration of the writings that contain his history, yet he believed in the Apocalyptic beast, and he believed as much as he pleased in the writings of Daniel and John. This great, excellent, and extraordinary man, whom I sincerely loved, esteemed, and respected, was really a phenomenon; a comet in the system, like Voltaire, Bolingbroke, and Hume. Had Bolingbroke or Voltaire taken him in hand, what would they have made of him and his creed.

I do not believe you have read much of Priestley's "corruptions of Christianity," his history of early opinions of Jesus Christ, his predestination, his no-soul system, or his controversy with Horsley.

I have been a diligent student for many years in books whose titles you have never seen. In Priestley's and Lindsay's writings; in Farmer, in Cappe, in Tucker's or Edwards' searches; Light of Nature pursued; in Edwards and Hopkins, and lately in Ezra Styles Ely; his reverend and learned panegyrists, and his elegant and spirited opponents. I am not wholly uninformed of the controversies in Germany, and the learned researches of universities and professors, in which the sanctity of the Bible and the inspiration of its authors are taken for granted, or waived, or admitted, or not denied. I have also read Condorcet's Progress of the Human Mind.

Now, what is all this to you? No more, than if I should tell you that I read Dr. Clark, and Dr. Waterland, and Emlyn, and Leland's view or review of the Deistical writers more than fifty years ago; which is a literal truth. I blame you not for reading Euclid and Newton, Thucydides and Theocritus; for I believe you will find as much entertainment and instruction in them, as I have found in my theological and ecclesiastical instructors; or even as I have found in a profound investigation of the life, writings, and doctrines of Erasmus, whose disciples were Milton, Harrington, Selden, St. John, the Chief Justice, father of Bolingbroke, and others, the choicest spirits of their age; or in Le Harpe's history of the philosophy of the eighteenth century, or in Van der Kemp's vast map of the causes of the revolutionary spirit in the same and preceding centuries. These things are to me, at present, the marbles and nine-pins of old age; I will not say the beads and prayer-books.

I agree with you, as far as you go, most cordially, and I think solidly. How much farther I go, how much more I believe than you, I may explain in a future letter. Thus much I will say at present, I have found so many difficulties, that I am not astonished at your stopping where you are; and so far from sentencing you to perdition, I hope soon to meet you in another country.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, July 22, 1813.

DEAR SIR,—Dr. Priestley, in a letter to Mr. Lindsay, Northumberland, November 4, 1803, says:

“As you were pleased with my comparison of Socrates and Jesus, I have begun to carry the same comparison to all the heathen moralists, and I have all the books that I want for the purpose except Simplicius and Arrian on Epictetus, and them I hope to get from a library in Philadelphia; lest, however, I should fail there, I wish you or Mr. Belsham would procure and send them from London. While I am capable of anything I cannot be idle, and I do not know that I can do anything better. This, too, is an undertaking that Mr. Jefferson recommends to me.”

In another letter, dated Northumberland, January 16th, 1804, Dr. Priestley says to Mr. Lindsay:

“I have now finished and transcribed for the press, my comparison of the Grecian philosophers with those of revelation, and with more ease and more to my own satisfaction than I expected. They who liked my pamphlet entitled, ‘Socrates and Jesus compared,’ will not, I flatter myself, dislike this work. It has the same object and completes the scheme. It has increased my own sense of the unspeakable value of revelation, and must, I think, that of every person who will give due attention to the subject.”

I have now given you all that relates to yourself in Priestley's letters.

This was possibly, and not improbably, the last letter this great, this learned, indefatigable, most excellent and extraordinary man ever wrote, for on the 4th of February, 1804, he was released from his labors and sufferings. Peace, rest, joy and glory to his soul! For I believe he had one, and one of the greatest.

I regret, oh how I lament that he did not live to publish this work! It must exist in manuscript. Cooper must know something of it. Can you learn from him where it is, and get it printed?

I hope you will still perform your promise to Doctor Rush.

If Priestley had lived, I should certainly have corresponded with him. His friend Cooper, who, unfortunately for him and me and you, had as fatal an influence over him as Hamilton had over Washington, and whose rash hot head led Priestley into all his misfortunes and most his errors in conduct, could not have prevented explanations between Priestley and me.

I should propose to him a thousand, a million questions. And no man was more capable or better disposed to answer them candidly than Dr. Priestley.

Scarcely anything that has happened to me in my curious life, has made a deeper impression upon me than that such a learned, ingenious, scientific and

talented madcap as Cooper, could have influence enough to make Priestley my enemy.

I will not yet communicate to you more than a specimen of the questions I would have asked Priestley.

One is: Learned and scientific, Sir!—You have written largely about matter and spirit, and have concluded there is no human soul. Will you please to inform me what matter is? and what spirit is? Unless we know the meaning of words, we cannot reason in or about words.

I shall never send you all my questions that I would put to Priestley, because they are innumerable; but I may hereafter send you two or three.

I am, in perfect charity, your old friend.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, August 9, 1813.

I believe I told you in my last that I had given you all in Lindsay's memorial that interested you, but I was mistaken. In Priestley's letter to Lindsay, December 19th, 1803, I find this paragraph:

"With the work I am now composing, I go on much faster and better than I expected, so that in two or three months, if my health continues as it now is, I hope to have it ready for the press, though I shall hardly proceed to print it till we have dispatched the notes.

"It is upon the same plan with that of Socrates

and Jesus compared, considering all the more distinguished of the Grecian sects of philosophy, till the establishment of Christianity in the Roman empire. If you liked that pamphlet, I flatter myself you will like this.

“I hope it is calculated to show, in a peculiarly striking light, the great advantage of revelation, and that it will make an impression on candid unbelievers if they will read.

“But I find few that will trouble themselves to read anything on the subject, which, considering the great magnitude and interesting nature of the subject, is a proof of a very improper state of mind, unworthy of a rational being.”

I send you this extract for several reasons. First, because you set him upon this work. Secondly, because I wish you to endeavor to bring it to light and get it printed. Thirdly, because I wish it may stimulate you to pursue your own plan which you promised to Dr. Rush.

I have not seen any work which expressly compares the morality of the Old Testament with that of the New, in all their branches, nor either with that of the ancient philosophers. Comparisons with the Chinese, the East Indians, the Africans, the West Indians, etc., would be more difficult; with more ancient nations impossible. The documents are destroyed.

TO ISAAC MCPHERSON.

MONTICELLO, August 13, 1813.

SIR,—Your letter of August 3d asking information on the subject of Mr. Oliver Evans' exclusive right to the use of what he calls his Elevators, Conveyers, and Hopper-boys, has been duly received. My wish to see new inventions encouraged, and old ones brought again into useful notice, has made me regret the circumstances which have followed the expiration of his first patent. I did not expect the retrospection which has been given to the reviving law. For although the second proviso seemed not so clear as it ought to have been, yet it appeared susceptible of a just construction; and the retrospective one being contrary to natural right, it was understood to be a rule of law that where the words of a statute admit of two constructions, the one just and the other unjust, the former is to be given them. The first proviso takes care of those who had lawfully used Evans' improvements under the first patent; the second was meant for those who had lawfully erected and used them after that patent expired, declaring they "should not be liable to damages therefor." These words may indeed be restrained to uses already past, but as there is parity of reason for those to come, there should be parity of law. Every man should be protected in his lawful acts, and be certain that no *ex post facto* law shall punish or endamage him for them. But he is endamaged, if forbidden to use a machine lawfully erected, at con-

siderable expense, unless he will pay a new and unexpected price for it. The proviso says that he who erected and used lawfully should not be liable to pay damages. But if the proviso had been omitted, would not the law, construed by natural equity, have said the same thing? In truth both provisos are useless. And shall useless provisos, inserted *pro majori cautela* only, authorize inferences against justice? The sentiment that *ex post facto* laws are against natural right, is so strong in the United States, that few, if any, of the State constitutions have failed to proscribe them. The federal constitution indeed interdicts them in criminal cases only; but they are equally unjust in civil as in criminal cases, and the omission of a caution which would have been right, does not justify the doing what is wrong. Nor ought it to be presumed that the legislature meant to use a phrase in an unjustifiable sense, if by rules of construction it can be ever strained to what is just. The law books abound with similar instances of the care the judges take of the public integrity. Laws, moreover, abridging the natural right of the citizen, should be restrained by rigorous constructions within their narrowest limits.

Your letter, however, points to a much broader question, whether what have received from Mr. Evans the new and proper name of Elevators, are of his invention. Because, if they are not, his patent gives him no right to obstruct others in the use of what they possessed before. I assume it is a Lemma,

that it is the invention of the machine itself, which is to give a patent right, and not the application of it to any particular purpose, of which it is susceptible. If one person invents a knife convenient for pointing our pens, another cannot have a patent right for the same knife to point our pencils. A compass was invented for navigating the sea; another could not have a patent right for using it to survey land. A machine for threshing *wheat* has been invented in Scotland; a second person cannot get a patent right for the same machine to thresh *oats*, a third *rye*, a fourth *peas*, a fifth *clover*, etc. A string of buckets is invented and used for raising water, ore, etc.; can a second have a patent right to the same machine for raising wheat, a third oats, a fourth rye, a fifth peas, etc.? The question then whether such a string of buckets was invented first by Oliver Evans, is a mere question of fact in mathematical history. Now, turning to such books only as I happen to possess, I find abundant proof that this simple machinery has been in use from time immemorial. Doctor Shaw, who visited Egypt and the Barbary coast in the years 1727-8-9, in the margin of his map of Egypt, gives us the figure of what he calls a Persian wheel, which is a string of round cups or buckets hanging on a pulley, over which they revolved, bringing up water from a well and delivering it into a trough above. He found this used at Cairo, in a well 264 feet deep, which the inhabitants believe to have been the work of the patriarch Joseph. Shaw's travels,

341, Oxford edition of 1738 in folio, and the Universal History, I. 416, speaking of the manner of watering the higher lands in Egypt, says, "formerly they made use of Archimedes' screw, thence named the Egyptian pump, but they now generally use wheels (wallowers) which carry a rope or chain of earthen pots holding about seven or eight quarts apiece, and draw the water from the canals. There are besides a vast number of wells in Egypt, from which the water is drawn in the same manner to water the gardens and fruit trees; so that it is no exaggeration to say, that there are in Egypt above 200,000 oxen daily employed in this labor." Shaw's name of Persian wheel has been since given more particularly to a wheel with buckets, either fixed or suspended on pins, at its periphery. Mortimer's husbandry, I. 18, Duhamel III. II., Ferguson's Mechanic's plate, XIII; but his figure, and the verbal description of the Universal History, prove that the string of buckets is meant under that name. His figure differs from Evans' construction in the circumstances of the buckets being round, and strung through their bottom on a chain. But it is the principle, to wit, a string of buckets, which constitutes the invention, not the form of the buckets, round, square, or hexagon; nor the manner of attaching them, nor the material of the connecting band, whether chain, rope, or leather. Vitruvius, L. x. c. 9, describes this machinery as a windlass, on which is a chain descending to the water, with vessels of

copper attached to it; the windlass being turned, the chain moving on it will raise the vessel, which in passing over the windlass will empty the water they have brought up into a reservoir. And Perrault, in his edition of Vitruvius, Paris, 1684, folio plates 61, 62, gives us three forms of these water elevators, in one of which the buckets are square, as Mr. Evans' are. Bossuet, *Histoire des Mathematiques*, i. 86, says, "the drum wheel, the wheel with buckets and the *Chapelets*, are hydraulic machines which come to us from the ancients. But we are ignorant of the time when they began to be put into use." The *Chapelets* are the revolving bands of the buckets which Shaw calls the Persian wheel, the moderns a chain-pump, and Mr. Evans elevators. The next of my books in which I find these elevators is Wolf's *Cours de Mathematiques*, i. 370, and plate 1, Paris, 1747, 8vo; here are two forms. In one of them the buckets are square, attached to two chains, passing over a cylinder or wallower at top, and under another at bottom, by which they are made to revolve. It is a nearly exact representation of Evans' Elevators. But a more exact one is to be seen in Desagulier's *Experimental Philosophy*, ii. plate 34; in the *Encyclopedie de Diderot et D'Alembert*, 8vo edition of Lausanne, first volume of plates in the four subscribed *Hydraulique*. Norie, is one where round eastern pots are tied by their collars between two endless ropes suspended on a revolving lantern or wallower. This is said to have been used for

raising ore out of a mine. In a book which I do not possess, *L'Architecture Hydraulique de Belidor*, the second volume of which is said [De la Lande's continuation of Montuclas' *Histoire de Mathematiques*, iii. 711] to contain a detail of all the pumps, ancient and modern, hydraulic machines, fountains, wells, etc., I have no doubt this Persian wheel, chain pump, chapelets, elevators, by whichever name you choose to call it, will be found in various forms. The last book I have to quote for it is Prony's *Architecture Hydraulique* i., Avertissement vii., and § 648, 649, 650. In the latter of which passages he observes that the first idea which occurs for raising water is to lift it in a bucket by hand. When the water lies too deep to be reached by hand, the bucket is suspended by a chain and let down over a pulley or windlass. If it be desired to raise a continued stream of water, the simplest means which offers itself to the mind is to attach to an endless chain or cord a number of pots or buckets, so disposed that, the chain being suspended on a lanthorn or wallower above, and plunged in water below, the buckets may descend and ascend alternately, filling themselves at bottom and emptying at a certain height above, so as to give a constant stream. Some years before the date of Mr. Evans' patent, a Mr. Martin of Caroline county in this State, constructed a drill-plough, in which he used the band of buckets for elevating the grain from the box into the funnel, which let them down into the furrow. He had bands with different sets

of buckets adapted to the size of peas, of turnip seed, etc. I have used this machine for sowing Benni seed also, and propose to have a band of buckets for drilling Indian corn, and another for wheat. Is it possible that in doing this I shall infringe Mr. Evans' patent? That I can be debarred of any use to which I might have applied my drill, when I bought it, by a patent issued after I bought it?

These verbal descriptions, applying so exactly to Mr. Evans' elevators, and the drawings exhibited to the eye, flash conviction both on reason and the senses that there is nothing new in these elevators but their being strung together on a strap of leather. If this strap of leather be an invention, entitling the inventor to a patent right, it can only extend to the strap, and the use of the string of buckets must remain free to be connected by chains, ropes, a strap of hempen girthing, or any other substance except leather. But, indeed, Mr. Martin had before used the strap of leather.

The screw of Archimedes is as ancient, at least, as the age of that mathematician, who died more than 2,000 years ago. Diodorus Siculus speaks of it, L. i., p. 21, and L. v., p. 217, of Stevens' edition of 1559, folio; and Vitruvius, xii. The cutting of its spiral worm into sections for conveying flour or grain, seems to have been an invention of Mr. Evans, and to be a fair subject of a patent right. But it cannot take away from others the use of Archimedes' screw with its perpetual spiral, for any purposes of which it is susceptible.

The hopper-boy is an useful machine, and so far as I know, original.

It has been pretended by some, (and in England especially,) that inventors have a natural and exclusive right to their inventions, and not merely for their own lives, but inheritable to their heirs. But while it is a moot question whether the origin of any kind of property is derived from nature at all, it would be singular to admit a natural and even an hereditary right to inventors. It is agreed by those who have seriously considered the subject, that no individual has, of natural right, a separate property in an acre of land, for instance. By an universal law, indeed, whatever, whether fixed or movable, belongs to all men equally and in common, is the property for the moment of him who occupies it, but when he relinquishes the occupation, the property goes with it. Stable ownership is the gift of social law, and is given late in the progress of society. It would be curious then, if an idea, the fugitive fermentation of an individual brain, could, of natural right, be claimed in exclusive and stable property. If nature has made any one thing less susceptible than all others of exclusive property, it is the action of the thinking power called an idea, which an individual may exclusively possess as long as he keeps it to himself; but the moment it is divulged, it forces itself into the possession of every one, and the receiver cannot dispossess himself of it. Its peculiar character, too, is that no one possesses the less,

because every other possesses the whole of it. He who receives an idea from me, receives instruction himself without lessening mine; as he who lights his taper at mine, receives light without darkening me. That ideas should freely spread from one to another over the globe, for the moral and mutual instruction of man, and improvement of his condition, seems to have been peculiarly and benevolently designed by nature, when she made them, like fire, expansible over all space, without lessening their density in any point, and like the air in which we breathe, move, and have our physical being, incapable of confinement or exclusive appropriation. Inventions then cannot, in nature, be a subject of property. Society may give an exclusive right to the profits arising from them, as an encouragement to men to pursue ideas which may produce utility, but this may or may not be done, according to the will and convenience of the society, without claim or complaint from anybody. Accordingly, it is a fact, as far as I am informed, that England was, until we copied her, the only country on earth which ever, by a general law, gave a legal right to the exclusive use of an idea. In some other countries it is sometimes done, in a great case, and by a special and personal act, but, generally speaking, other nations have thought that these monopolies produce more embarrassment than advantage to society; and it may be observed that the nations which refuse monopolies of invention, are as fruitful as England in new and useful devices.

Considering the exclusive right to invention as given not of natural right, but for the benefit of society, I know well the difficulty of drawing a line between the things which are worth to the public the embarrassment of an exclusive patent, and those which are not. As a member of the patent board for several years, while the law authorized a board to grant or refuse patents, I saw with what slow progress a system of general rules could be matured. Some, however, were established by that board. One of these was, that a machine of which we were possessed, might be applied by every man to any use of which it is susceptible, and that this right ought not to be taken from him and given to a monopolist, because the first perhaps had occasion so to apply it. Thus a screw for crushing plaster might be employed for crushing corn-cobs. And a chain-pump for raising water might be used for raising wheat: this being merely a change of application. Another rule was that a change of material should not give title to a patent. As the making a ploughshare of cast rather than of wrought iron; a comb of iron instead of horn or of ivory, or the connecting buckets by a band of leather rather than of hemp or iron. A third was that a mere change of form should give no right to a patent, as a high-quartered shoe instead of a low one; a round hat instead of a three-square; or a square bucket instead of a round one. But for this rule, all the changes of fashion in dress would have been under the tax of patentees. These were

among the rules which the uniform decisions of the board had already established, and under each of them Mr. Evans' patent would have been refused. First, because it was a mere change of application of the chain-pump, from raising water to raise wheat. Secondly, because the using a leathern instead of a hempen band, was a mere change of material; and thirdly, square buckets instead of round, are only a change of form, and the ancient forms, too, appear to have been indifferently square or round. But there were still abundance of cases which could not be brought under rule, until they should have presented themselves under all their aspects; and these investigations occupying more time of the members of the board than they could spare from higher duties, the whole was turned over to the judiciary, to be matured into a system, under which every one might know when his actions were safe and lawful. Instead of refusing a patent in the first instance, as the board was authorized to do, the patent now issues of course, subject to be declared void on such principles as should be established by the courts of law. This business, however, is but little analogous to their course of reading, since we might in vain turn over all the lubberly volumes of the law to find a single ray which would lighten the path of the mechanic or the mathematician. It is more within the information of a board of academical professors, and a previous refusal of patent would better guard our citizens against harassment by lawsuits. But Eng-

land had given it to her judges, and the usual predominancy of her examples carried it to ours.

It happened that I had myself a mill built in the interval between Mr. Evans' first and second patents. I was living in Washington, and left the construction to the millwright. I did not even know he had erected elevators, conveyers and hopper-boys, until I learnt it by an application from Mr. Evans' agent for the patent price. Although I had no idea he had a right to it by law, (for no judicial decision had then been given,) yet I did not hesitate to remit to Mr. Evans the old and moderate patent price, which was what he then asked, from a wish to encourage even the useful revival of ancient inventions. But I then expressed my opinion of the law in a letter, either to Mr. Evans or to his agent.

I have thus, Sir, at your request, given you the facts and ideas which occur to me on this subject. I have done it without reserve, although I have not the pleasure of knowing you personally. In thus frankly committing myself to you, I trust you will feel it as a point of honor and candor, to make no use of my letter which might bring disquietude on myself. And particularly, I should be unwilling to be brought into any difference with Mr. Evans, whom, however, I believe too reasonable to take offence at an honest difference of opinion. I esteem him much, and sincerely wish him wealth and honor. I deem him a valuable citizen, of uncommon ingenuity and usefulness. And had I not esteemed still

more the establishment of sound principles, I should now have been silent. If any of the matter I have offered can promote that object, I have no objection to its being so used; if it offers nothing new, it will of course not be used at all. I have gone with some minuteness into the mathematical history of the elevator, because it belongs to a branch of science in which, as I have before observed, it is not incumbent on lawyers to be learned; and it is possible, therefore, that some of the proofs I have quoted may have escaped on their former arguments. On the law of the subject I should not have touched, because more familiar to those who have already discussed it; but I wished to state my view of it merely in justification of myself, my name and approbation being subscribed to the act. With these explanations, accept the assurance of my respect.

TO JOHN WALDO.

MONTICELLO, August 16, 1813.

SIR,—Your favor of March 27th came during my absence on a journey of some length. It covered your "Rudiments of English Grammar," for which I pray you to accept my thanks. This acknowledgment of it has been delayed, until I could have time to give the work such a perusal as the avocations to which I am subject would permit. In the rare and short intervals which these have

allotted me, I have gone over with pleasure a considerable part, although not yet the whole of it. But I am entirely unqualified to give that critical opinion of it which you do me the favor to ask. Mine has been a life of business, of that kind which appeals to a man's conscience, as well as his industry, not to let it suffer, and the few moments allowed me from labor have been devoted to more attractive studies, that of grammar having never been a favorite with me. The scanty foundation, laid in at school, has carried me through a life of much hasty writing, more indebted for style to reading and memory, than to rules of grammar. I have been pleased to see that in all cases you appeal to usage, as the arbiter of language; and justly consider that as giving law to grammar, and not grammar to usage. I concur entirely with you in opposition to Purists, who would destroy all strength and beauty of style, by subjecting it to a rigorous compliance with their rules. Fill up all the ellipses and syllepses of Tacitus, Sallust, Livy, etc., and the elegance and force of their sententious brevity are extinguished.

“Auferre, trucidare, rapere, falsis nominibus, imperium appellant.” “Deorum injurias, diis curæ.” “Allieni appetens, sui profusus; ardens in cupiditatibus; satis loquentiæ, sapientiæ parum.” “Annibal peto pacem.” “Per diem Sol non *uret* te, neque Luna per noctem.” Wire-draw these expressions by filling up the whole syntax and sense, and they

become dull paraphrases on rich sentiments. We may say then truly with Quintilian, "Aliud est Grammaticé, aliud Latiné loqui." I am no friend, therefore, to what is called *Purism*, but a zealous one to the *Neology* which has introduced these two words without the authority of any dictionary. I consider the one as destroying the verve and beauty of language, while the other improves both, and adds to its copiousness. I have been not a little disappointed, and made suspicious of my own judgment, on seeing the Edinburgh Reviewers, the ablest critics of the age, set their faces against the introduction of new words into the English language; they are particularly apprehensive that the writers of the United States will adulterate it. Certainly so great growing a population, spread over such an extent of country, with such a variety of climates, of productions, of arts, must enlarge their language, to make it answer its purpose of expressing all ideas, the new as well as the old. The new circumstances under which we are placed, call for new words, new phrases, and for the transfer of old words to new objects. An American dialect will therefore be formed; so will a West-Indian and Asiatic, as a Scotch and an Irish are already formed. But whether will these adulterate, or enrich the English language? Has the beautiful poetry of Burns, or his Scottish dialect, disfigured it? Did the Athenians consider the Doric, the Ionian, the Æolic, and other dialects, as disfiguring or as beauti-

fying their language? Did they fastidiously disavow Herodotus, Pindar, Theocritus, Sappho, Alcæus, or Grecian writers? On the contrary, they were sensible that the variety of dialects, still infinitely varied by poetical license, constituted the riches of their language, and made the Grecian Homer the first of poets, as he must ever remain, until a language equally ductile and copious shall again be spoken.

Every language has a set of terminations, which make a part of its peculiar idiom. Every root among the Greeks was permitted to vary its termination, so as to express its radical idea in the form of any one of the parts of speech; to wit, as a noun, an adjective, a verb, participle, or adverb; and each of these parts of speech again, by still varying the termination, could vary the shade of idea existing in the mind.

* * * * *

It was not, then, the number of Grecian roots (for some other languages may have as many) which made it the most copious of the ancient languages; but the infinite diversification which each of these admitted. Let the same license be allowed in English, the roots of which, native and adopted, are perhaps more numerous and its idiomatic terminations more various than of the Greek, and see what the language would become. Its idiomatic terminations are:—

Subst. Gener-ation—ator; degener-acy; gener-osity—ousness—alship—alissimo; king-dom—ling;

joy-ance; enjoy-er—ment; herb-age—alist; sanctu-ary—imony—itude; royal-ism; lamb-kin; child-hood; bishop-ric; proced-ure; horseman-ship; worthi-ness.

Adj. Gener-ant—ative—ic—ical—able—ous—al; joy-ful—less—some; herb-y; accous—escent—ulent; child-ish; wheat-en.

Verb. Gener-ate—alize.

Part. Gener-ating—ated.

Adv. Gener-al—ly.

I do not pretend that this is a complete list of all the terminations of the two languages. It is as much so as a hasty recollection suggests, and the omissions are as likely to be to the disadvantage of the one as the other. If it be a full, or equally fair enumeration, the English are the double of the Greek terminations.

But there is still another source of copiousness more abundant than that of termination. It is the composition of the root, and of every member of its family, 1, with prepositions, and 2, with other words. The prepositions used in the composition of Greek words are:—

* * * * *

Now multiply each termination of a family into every preposition, and how prolific does it make each root! But the English language, beside its own prepositions, about twenty in number, which it compounds with English roots, uses those of the Greek for adopted Greek roots, and of the Latin

for Latin roots. The English prepositions, with examples of their use, are *a*, as in *a-long*, *a-board*, *a-thirst*, *a-clock*; *be*, as in *be-lie*; *mis*, as in *mis-hap*; these being inseparable. The separable, with examples, are *above-cited*, *after-thought*, *gain-say*, *before-hand*, *fore-thought*, *behind-hand*, *by-law*, *for-give*, *fro-ward*, *in-born*, *on-set*, *over-go*, *out-go*, *thorough-go*, *under-take*, *up-lift*, *with-stand*. Now let us see what copiousness this would produce, were it allowed to compound every root and its family with every preposition, where both sense and sound would be in its favor. Try it on an English root, the verb "to place," Anglo-Saxon *plæce*,¹ for instance, and the Greek and Latin roots, of kindred meaning, adopted in English, to wit, *θεσις* and *locatio*, with their prepositions.

mis-place	amphi-thesis	a-location	inter-location
after-place	ana-thesis	ab-location	intro-location
gain-place	anti-thesis	abs-location	juxta-location
fore-place	apo-thesis	al-location	ob-location
hind-place	dia-thesis	anti-location	per-location
by-place	ek-thesis	circum-location	post-location
for-place	en-thesis	cis-location	pre-location
fro-place	epi-thesis	col-location	preter-location
in-place	cata-thesis	contra-location	pro-location
on-place	para-thesis	de-location	retro-location
over-place	peri-thesis	di-location	re-location
out-place	pro-thesis	dis-location	se-location
thorough-place	pros-thesis	e-location	sub-location
under-place	syn-thesis	ex-location	super-location
up-place	hyper-thesis	extra-location	trans-location
with-place	hypo-thesis	il-location	ultra-location

¹ Johnson derives "place" from the French "place," an open square in a town. But its northern parentage is visible in its syno-nime *plats*, Teutonic, and *plattse*, Belgic, both of which signify locus, and the Anglo-Saxon *plæce*, *platea*, *vicus*.

Some of these compounds would be new; but all present distinct meanings, and the synonymisms of the three languages offer a choice of sounds to express the same meaning; add to this, that in some instances, usage has authorized the compounding an English root with a Latin preposition, as in de-place, dis-place, re-place. This example may suffice to show what the language would become, in strength, beauty, variety, and every circumstance which gives perfection to language, were it permitted freely to draw from all its legitimate sources.

The second source of composition is of one family of roots with another. The Greek avails itself of this most abundantly, and beautifully. The English once did it freely, while in its Anglo-Saxon form, *e. g.*, **бoc-цнѣрѣ**, book-craft, learning, **пѣчлѣп-фулл**, right-belief-ful, orthodox. But it has lost by desuetude much of this branch of composition, which it is desirable however to resume.

If we wish to be assured from experiment of the effect of a judicious spirit of Neology, look at the French language. Even before the revolution, it was deemed much more copious than the English; at a time, too, when they had an Academy which endeavored to arrest the progress of their language, by fixing it to a Dictionary, out of which no word was ever to be sought, used, or tolerated. The institution of parliamentary assemblies in 1789, for which their language had no apposite terms or

phrases, as having never before needed them, first obliged them to adopt the Parliamentary vocabulary of England; and other new circumstances called for corresponding new words; until by the number of these adopted, and by the analogies for adoption which they have legitimated, I think we may say with truth that a Dictionnaire Neologique of these would be half as large as the dictionary of the Academy; and that at this time it is the language in which every shade of idea, distinctly perceived by the mind, may be more exactly expressed, than in any language at this day spoken by man. Yet I have no hesitation in saying that the English language is founded on a broader base, native and adopted, and capable, with the like freedom of employing its materials, of becoming superior to that in copiousness and euphony. Not indeed by holding fast to Johnson's Dictionary; not by raising a hue and cry against every word he has not licensed; but by encouraging and welcoming new compositions of its elements. Learn from Lye and Benson what the language would now have been if restrained to their vocabularies. Its enlargement must be the consequence, to a certain degree, of its transplantation from the latitude of London into every climate of the globe; and the greater the degree the more precious will it become as the organ of the development of the human mind.

These are my visions on the improvement of the English language by a free use of its faculties.

To realize them would require a course of time. The example of good writers, the approbation of men of letters, the judgment of sound critics, and of none more than of the Edinburgh Reviewers, would give it a beginning, and once begun, its progress might be as rapid as it has been in France, where we see what a period of only twenty years has effected. Under the auspices of British science and example it might commence with hope. But the dread of innovation there, and especially of any example set by France, has, I fear, palsied the spirit of improvement. Here, where all is new, no innovation is feared which offers good. But we have no distinct class of literati in our country. Every man is engaged in some industrious pursuit, and science is but a secondary occupation, always subordinate to the main business of his life. Few therefore of those who are qualified, have leisure to write. In time it will be otherwise. In the meanwhile, necessity obliges us to neologize. And should the language of England continue stationary, we shall probably enlarge our employment of it, until its new character may separate it in name as well as in power, from the mother-tongue.

Although the copiousness of a language may not in strictness make a part of its grammar, yet it cannot be deemed foreign to a general course of lectures on its structure and character; and the subject having been presented to my mind by the occasion of your letter, I have indulged myself in

its speculation, and hazarded to you what has occurred, with the assurance of my great respect.

TO JOHN WILSON.

MONTICELLO, August 17, 1813.

SIR,—Your letter of the 3d has been duly received. That of Mr. Eppes had before come to hand, covering your MS. on the reformation of the orthography of the plural of nouns ending in *y*, and *ey*, and on orthoepy. A change has been long desired in English orthography, such as might render it an easy and true index of the pronunciation of words. The want of conformity between the combinations of letters, and the sounds they should represent, increases to foreigners the difficulty of acquiring the language, occasions great loss of time to children in learning to read, and renders correct spelling rare but in those who read much. In England a variety of plans and propositions have been made for the reformation of their orthography. Passing over these, two of our countrymen, Dr. Franklin and Dr. Thornton, have also engaged in the enterprise; the former proposing an addition of two or three new characters only, the latter a reformation of the whole alphabet nearly. But these attempts in England, as well as here, have been without effect. About the middle of the last century an attempt was made to banish the letter *d* from the words bridge, judge, hedge, knowledge, etc., others of that

termination, and to write them as we write age, cage, sacrilege, privilege; but with little success. The attempt was also made, which you mention in your second part, to drop the letter *u* in words of Latin derivation ending in *our*, and to write honor, candor, rigor, etc., instead of honour, candour, rigour. But the *u* having been picked up in the passage of these words from the Latin, through the French, to us, is still preserved by those who consider it as a memorial of our title to the words. Other partial attempts have been made by individual writers, but with as little success. Pluralizing nouns in *y*, and *ey*, by adding *s* only, as you propose, would certainly simplify the spelling, and be analogous to the general idiom of the language. It would be a step gained in the progress of general reformation, if it could prevail. But my opinion being requested I must give it candidly, that judging of the future by the past, I expect no better fortune to this than similar preceding propositions have experienced. It is very difficult to persuade the great body of mankind to give up what they have once learned, and are now masters of, for something to be learnt anew. Time alone insensibly wears down old habits, and produces small changes at long intervals, and to this process we must all accommodate ourselves, and be content to follow those who will not follow us. Our Anglo-Saxon ancestors had twenty ways of spelling the word "many." Ten centuries have dropped all of them and substituted that which we

now use. I now return your MS. without being able, with the gentlemen whose letters are cited, to encourage hope as to its effect. I am bound, however, to acknowledge that this is a subject to which I have not paid much attention; and that my doubts therefore should weigh nothing against their more favorable expectations. That these may be fulfilled, and mine prove unfounded, I sincerely wish, because I am a friend to the reformation generally of whatever can be made better, and because it could not fail of gratifying you to be instrumental in this work. Accept the assurance of my respect.

TO JOHN ADAMS.

MONTICELLO, August 22, 1813.

DEAR SIR,—Since my letter of June the 27th, I am in your debt for many; all of which I have read with infinite delight. They open a wide field for reflection, and offer subjects enough to occupy the mind and the pen indefinitely. I must follow the good example you have set, and when I have not time to take up every subject, take up a single one. Your approbation of my outline to Dr. Priestley is a great gratification to me; and I very much suspect that if thinking men would have the courage to think for themselves, and to speak what they think, it would be found they do not differ in religious opinions as much as is supposed. I remember to

have heard Dr. Priestley say, that if all England would candidly examine themselves, and confess, they would find that Unitarianism was really the religion of all; and I observe a bill is now depending in parliament for the relief of Anti-Trinitarians. It is too late in the day for men of sincerity to pretend they believe in the Platonic mysticisms that three are one, and one is three; and yet that the one is not three, and the three are not one; to divide mankind by a single letter into *'ομοσουλαις* and *'ομοισουλαις*. But this constitutes the craft, the power and the profit of the priests. Sweep away their gossamer fabrics of factitious religion, and they would catch no more flies. We should all then, like the Quakers, live without an order of priests, moralize for ourselves, follow the oracle of conscience, and say nothing about what no man can understand, nor therefore believe; for I suppose belief to be the assent of the mind to an intelligible proposition.

It is with great pleasure I can inform you, that Priestley finished the comparative view of the doctrines of the philosophers of antiquity, and of Jesus, before his death; and that it was printed soon after. And, with still greater pleasure, that I can have a copy of his work forwarded from Philadelphia, by a correspondent there, and presented for your acceptance, by the same mail which carries you this, or very soon after. The branch of the work which the title announces, is executed with learn-

ing and candor, as was everything Priestley wrote, but perhaps a little hastily; for he felt himself pressed by the hand of death. The Abbé Batteux had, in fact, laid the foundation of this part in his *Causes Premieres*, with which he has given us the originals of Ocellus and Timæus, who first committed the doctrines of Pythagoras to writing, and Enfield, to whom the Doctor refers, had done it more copiously. But he has omitted the important branch, which, in your letter of August the 9th, you say you have never seen executed, a comparison of the morality of the Old Testament with that of the New. And yet, no two things were ever more unlike. I ought not to have asked him to give it. He dared not. He would have been eaten alive by his intolerant brethren, the Cannibal priests. And yet, this was really the most interesting branch of the work.

Very soon after my letter to Doctor Priestley, the subject being still in my mind, I had leisure during an abstraction from business for a day or two, while on the road, to think a little more on it, and to sketch more fully than I had done to him, a syllabus of the matter which I thought should enter into the work. I wrote it to Doctor Rush, and there ended all my labor on the subject; himself and Doctor Priestley being the only two depositories of my secret. The fate of my letter to Priestley, after his death, was a warning to me on that of Doctor Rush; and at my request, his family were

so kind as to quiet me by returning my original letter and syllabus. By this, you will be sensible how much interest I take in keeping myself clear of religious disputes before the public, and especially of seeing my syllabus disembowelled by the Aruspices of the modern Paganism. Yet I enclose it *to you* with entire confidence, free to be perused by yourself and Mrs. Adams, but by no one else, and to be returned to me.

You are right in supposing, in one of yours, that I had not read much of Priestley's Predestination, his no-soul system, or his controversy with Horsley. But I have read his Corruptions of Christianity, and Early Opinions of Jesus, over and over again; and I rest on them, and on Middleton's writings, especially his letters from Rome, and to Waterland, as the basis of my own faith. These writings have never been answered, nor can be answered by quoting historical proofs, as they have done. For these facts, therefore, I cling to their learning, so much superior to my own.

I now fly off in a tangent to another subject. Marshall, in the first volume of his history, chapter 3, p. 180, ascribes the petition to the King, of 1774, (1 Journ. Cong. 67) to the pen of Richard Henry Lee. I think myself certain it was not written by him, as well from what I recollect to have heard, as from the internal evidence of style. His was loose, vague, frothy, rhetorical. He was a poorer writer than his brother Arthur; and Arthur's stand-

ing may be seen in his Monitor's letters, to insure the sale of which, they took the precaution of tacking to them a new edition of the Farmer's letters, like Mezentius, who "*mortua jungebat corpora vivis.*" You were of the committee, and can tell me who wrote this petition, and who wrote the address to the inhabitants of the colonies, *ib.* 45. Of the papers of July, 1775, I recollect well that Mr. Dickinson drew the petition to the King, *ib.* 149; I think Robert R. Livingston drew the address to the inhabitants of Great Britain, *ib.* 152. Am I right in this? And who drew the address to the people of Ireland, *ib.* 180? On these questions I ask of your memory to help mine. Ever and affectionately yours.

TO JOHN W. EPPES.

POPLAR FOREST, September 11, 1813.

DEAR SIR,—I turn with great reluctance from the functions of a private citizen to matters of State. The swaggering on deck, as a passenger, is so much more pleasant than clambering the ropes as a seaman, and my confidence in the skill and activity of those employed to work the vessel is so entire, that I notice nothing *en passant*, but how smoothly she moves. Yet I avail myself of the leisure which a visit to this place procures me, to revolve again in my mind the subject of my former letter, and in compliance with the request of yours of —, to add

some further thoughts on it. Though intended as only supplementary to that, I may fall into repetitions, not having that with me, nor paper or book of any sort to supply the default of a memory on the wane.

The objects of finance in the United States have hitherto been very simple; merely to provide for the support of the government on its peace establishment, and to pay the debt contracted in the Revolutionary war, a war which will be sanctioned by the approbation of posterity through all future ages. The means provided for these objects were ample, and resting on a consumption which little affected the poor, may be said to have been sensibly felt by none. The fondest wish of my heart ever was that the surplus portion of these taxes, destined for the payment of that debt, should, when that object was accomplished, be continued by annual or biennial re-enactments, and applied, in time of peace, to the improvement of our country by canals, roads and useful institutions, literary or others; and in time of war to the maintenance of the war. And I believe that keeping the civil list within proper bounds, the surplus would have been sufficient for any war, administered with integrity and judgment. For authority to apply the surplus to objects of improvement, an amendment of the Constitution would have been necessary. I have said that the taxes ~~should~~ be continued by annual or biennial re-enactments, because a ~~constant~~ hold,

by the nation, of the strings of the public purse, is a salutary restraint from which an honest government ought not to wish, nor a corrupt one to be permitted to be free. No tax should ever be yielded for a longer term than that of the Congress wanting it, except when pledged for the reimbursement of a loan. On this system, the standing income being once liberated from the Revolutionary debt, no future loan nor future tax would ever become necessary, and wars would no otherwise affect our pecuniary interests than by suspending the improvements belonging to a state of peace. This happy consummation would have been achieved by another eight years' administration, conducted by Mr. Madison, and executed in its financial department by Mr. Gallatin, could peace have been so long preserved. So enviable a state in prospect for our country, induced me to temporize, and to bear with national wrongs which under no other prospect ought ever to have been unresented or unresisted. My hope was, that by giving time for reflection, and retraction of injury, a sound calculation of their own interests would induce the aggressing nations to redeem their own character by a return to the practice of right. But our lot happens to have been cast in an age when two nations to whom circumstances have given a temporary superiority over others, the one by land, the other by sea, throwing off all restraints of morality, all pride of national character, forgetting the mutability of

fortune and the inevitable doom which the laws of nature pronounce against departure from justice, individual or national, have dared to treat her reclamations with derision, and to set up force instead of reason as the umpire of nations. Degrading themselves thus from the character of lawful societies into lawless bands of robbers and pirates, they are abusing their brief ascendancy by desolating the world with blood and rapine. Against such a banditti, war had become less ruinous than peace, for then peace was a war on one side only. On the final and formal declarations of England, therefore, that she never would repeal her orders of council as to us, until those of France should be repealed as to other nations as well as us, and that no practicable arrangement against her impressment of our seamen could be proposed or devised, war was justly declared, and ought to have been declared. This change of condition has clouded our prospects of liberation from debt, and of being able to carry on a war without new loans or taxes. But although deferred, these prospects are not desperate. We should keep forever in view the state of 1817, towards which we were advancing, and consider it as that which we must attain. Let the old funds continue appropriated to the civil list and Revolutionary debt, and the reversion of the surplus to improvement during peace, and let us take up this war as a separate business, for which, substantive and distinct provision is to be made.

That we are bound to defray its expenses within our own time, and unauthorized to burden posterity with them, I suppose to have been proved in my former letter. I will place the question nevertheless in one additional point of view. The former regarded their independent right over the earth; this over their own persons. There have existed nations, and civilized and learned nations, who have thought that a father had a right to sell his child as a slave, in perpetuity; that he could alienate his body and industry conjointly, and *a fortiori* his industry separately; and consume its fruits himself. A nation asserting this fratricide right might well suppose they could burden with public as well as private debt their "*nati natorum, et qui nascentur at illis.*" But we, this age, and in this country especially, are advanced beyond those notions of natural law. We acknowledge that our children are born free; that that freedom is the gift of nature, and not of him who begot them; that though under our care during infancy, and therefore of necessity under a duly tempered authority, that care is confided to us to be exercised for the preservation and good of the child only; and his labors during youth are given as a retribution for the charges of infancy. As he was never the property of his father, so when adult he is *sui juris*, entitled himself to the use of his own limbs and the fruits of his own exertions: so far we are advanced, without mind enough, it seems to take the whole step. We believe, or we

act as if we believed, that although an individual father cannot alienate the labor of his son, the aggregate body of fathers may alienate the labor of all their sons, of their posterity, in the aggregate, and oblige them to pay for all the enterprises, just or unjust, profitable or ruinous, into which our vices, our passions, or our personal interests may lead us. But I trust that this proposition needs only to be looked at by an American to be seen in its true point of view, and that we shall all consider ourselves unauthorized to saddle posterity with our debts, and morally bound to pay them ourselves; and consequently within what may be deemed the period of a generation, or the life of the majority. In my former letter I supposed this to be a little¹ over twenty years. We must raise then ourselves the money for this war, either by taxes within the year, or by loans; and if by loans, we must repay them ourselves, proscribing forever the English practice of perpetual funding; the ruinous consequences of which, putting right out of the question, should be a sufficient warning to a considerate nation to avoid the example.

The raising money by Tontine, more practised on the continent of Europe than in England, is liable to the same objection, of encroachment on the independent rights of posterity; because the annuities not expiring gradually, with the lives on which they rest, but all on the death of the last survivor

¹ A lapse of memory, not having the letter to recur to.

only, they will of course over-pass the term of a generation, and the more probably as the subjects on whose lives the annuities depend, are generally chosen of the ages, constitutions and occupations most favorable to long life.

Annuities for single lives are also beyond our powers, because the single life may pass the term of a generation. This last practice is objectionable too, as encouraging celibacy, and the disinherison of heirs.

Of the modes which are within the limits of right, that of raising within the year its whole expenses by taxation, might be beyond the abilities of our citizens to bear. It is, moreover, generally desirable that the public contributions should be as uniform as practicable from year to year, that our habits of industry and of expense may become adapted to them; and that they may be duly digested and incorporated with our annual economy.

There remains then for us but the method of limited anticipation, the laying taxes for a term of years within that of our right, which may be sold for a present sum equal to the expenses of the year; in other words, to obtain a loan equal to the expenses of the year, laying a tax adequate to its interest, and to such a surplus as will reimburse, by growing instalments, the whole principal within the term. This is, in fact, what has been called raising money on the sale of annuities for years. In this way a new loan, and of course a new tax,

is requisite every year during the continuance of the war; and should that be so long as to produce an accumulation of tax beyond our ability, in time of war the resource would be an enactment of the taxes requisite to ensure good terms, by securing the lender, with a suspension of the payment of instalments of principal and perhaps of interest also, until the restoration of peace. This method of anticipating our taxes, or of borrowing on annuities for years, insures repayment to the lender, guards the rights of posterity, prevents a perpetual alienation of the public contributions, and consequent destitution of every resource even for the ordinary support of government. The public expenses of England during the present reign, have amounted to the fee simple value of the whole island. If its whole soil could be sold, farm by farm, for its present market price, it would not defray the cost of governing it during the reign of the present king, as managed by him. Ought not then the right of each successive generation to be guaranteed against the dissipations and corruptions of those preceding, by a fundamental provision in our Constitution? And, if that has not been made, does it exist the less; there being between generation and generation, as between nation and nation, no other law than that of nature? And is it the less dishonest to do what is wrong, because not expressly prohibited by written law? Let us hope our moral principles are not yet in that stage

of degeneracy, and that in instituting the system of finance to be hereafter pursued, we shall adopt the only safe, the only lawful and honest one, of borrowing on such short terms of reimbursement of interest and principal as will fall within the accomplishment of our own lives.

The question will be asked and ought to be looked at, what is to be the resource if loans cannot be obtained? There is but one, "*Carthago delenda est.*" Bank paper must be suppressed, and the circulating medium must be restored to the nation to whom it belongs. It is the only fund on which they can rely for loans; it is the only resource which can never fail them, and it is an abundant one for every necessary purpose. Treasury bills, bottomed on taxes, bearing or not bearing interest, as may be found necessary, thrown into circulation will take the place of so much gold and silver, which last, when crowded, will find an efflux into other countries, and thus keep the quantum of medium at its salutary level. Let banks continue if they please, but let them discount for cash alone or for treasury notes. They discount for cash alone in every other country on earth except Great Britain, and her too often unfortunate copyist, the United States. If taken in time they may be rectified by degrees, and without injustice, but if let alone till the alternative forces itself on us, of submitting to the enemy for want of funds, or the suppression of bank paper, either by law or by

convulsion, we cannot foresee how it will end. The remaining questions are mathematical only. How are the taxes and the time of their continuance to be proportioned to the sum borrowed, and the stipulated interest?

The rate of interest will depend on the state of the money market, and the duration of the tax on the will of the legislature. Let us suppose that (to keep the taxes as low as possible) they adopt the term of twenty years for reimbursement, which we call their maximum; and let the interest they last gave of $7\frac{1}{2}$ per cent. be that which they must expect to give. The problem then will stand in this form. Given the sum borrowed (which call s), a million of dollars for example; the rate of interest, $.075$ or $\frac{75}{1000}$ (call it $r-i$), and the duration of the annuity or tax, twenty years, ($=t$), what will be (a) the annuity or tax, which will reimburse principal and interest within the given term? This problem, laborious and barely practicable to common arithmetic, is readily enough solved, Algebraically and with the aid of Logarithms. The theorem applied

to the case is $a = \frac{tr - i \times i}{i - \frac{i}{rt}}$ the solution of which gives $a = \$98,684.2$, nearly \$100,000, or one-tenth of the sum borrowed.

It may be satisfactory to see stated in figures the yearly progression of reimbursement of the million of dollars, and their interest at $7\frac{1}{2}$ per cent. effected by the regular payment of — dollars annually. It will be as follows:

Borrowed, \$1,000,000.

Balance after	1st payment,	\$975,000
"	2d	948,125
"	3d	919,234
"	4th	888,177
"	5th	854,790
"	6th	818,900
"	7th	780,318
"	8th	738,841
"	9th	694,254
"	10th	646,324
"	11th	594,800
"	12th	539,410
"	13th	479,866
"	14th	415,850
"	15th	347,039
"	16th	273,068
"	17th	193,548
"	18th	108,064
"	19th	16,169

If we are curious to know the effect of the same annual sum on loans at lower rates of interest, the following process will give it:

From the Logarithm of a , subtract the Logarithm $r-i$, and from the number of the remaining Logarithm subtract s , then subtract the Logarithm of this last remainder from the difference between the Logarithm a and Logarithm $r-i$ as found before, divide the remainder by Logarithm r , the quotient

will be *t*. It will be found that — dollars will reimburse a million,

	Years.	Dollars.
At $7\frac{1}{2}$ per cent. interest in	19.17, costing in the whole	1,917,000
7 " "	17.82, " "	1,782,000
$6\frac{1}{2}$ " "	16.67, " "	1,667,000
6 " "	15.72, " "	1,572,000
$5\frac{1}{2}$ " "	14.91, " "	1,491,000
5 " "	14. 2, " "	1,420,000
0 " "	10. " "	1,000,000

By comparing the first and the last of these articles, we see that if the United States were in possession of the circulating medium, as they ought to be, they could redeem what they could borrow from that, dollar for dollar, and in ten annual instalments; whereas, the usurpation of that fund by bank paper, obliging them to borrow elsewhere at $7\frac{1}{2}$ per cent., two dollars are required to reimburse one. So that it is literally true that the toleration of banks of paper discount, costs the United States one-half their war taxes; or, in other words, doubles the expenses of every war. Now think, but for a moment, what a change of condition that would be, which should save half our war expenses, require but half the taxes, and enthral us in debt but half the time.

Two loans having been authorized, of sixteen and seven and a half millions, they will require for their due reimbursement two millions three hundred and fifty thousand dollars of the three millions expected from the taxes lately imposed. When the produce shall be known of the several items of these taxes,

such of them as will make up this sum should be selected, appropriated, and pledged for the reimbursement of these loans. The balance of six hundred and fifty thousand dollars, will be a provision for six and a half millions of the loan of the next year; and in all future loans, I would consider it as a rule never to be departed from, to lay a tax of one-tenth, and pledge it for the reimbursement.

In the preceding calculations no account is taken of the increasing population of the United States, which we know to be in a compound ratio of more than 3 per cent. per annum; nor of the increase of wealth, proved to be in a higher ratio by the increasing productiveness of the imports on consumption. We shall be safe therefore in considering every tax as growing at the rate of 3 per cent. compound ratio annually. I say *every tax*, for as to those on consumption the fact is known; and the same growth will be found in the value of real estate, if valued annually; or, which would be better, 3 per cent. might be assumed by the law as the average increase, and an addition of one thirty-third of the tax paid the preceding year, be annually called for. Supposing then a tax laid which would bring in \$100,000 at the time it is laid, and that it increases annually at the rate of 3 per cent. compound, its important effect may be seen in the following statement:

The 1st year	103,090,	and reduces the million to	\$972,000
2d "	106,090,	" " "	938,810
3d "	109,273,	" " "	899,947
4th "	112,556,	" " "	854,896

Jefferson's Works

The 5th year	115,920,	and reduces the million to	\$803,053
6th "	119,410,	" " "	743,915
7th "	122,990,	" " "	676,719
8th "	126,680,	" " "	600,793

915,913

It yields the 9th year	\$130,470,	and reduces it to	\$515,382
10th "	134,390,	" "	419,646
11th "	138,420,	" "	312,699
12th "	142,580,	" "	193,517
13th "	146,850,	" "	61,181
14th "	151,260,	over pays,	85,491

1,759,883

This estimate supposes a million borrowed at $7\frac{1}{2}$ per cent.; but, if obtained from the circulation without interest, it would be reimbursed within eight years and eight months, instead of fourteen years, or of twenty years, on our first estimate.

But this view being in prospect only, should not affect the quantum of tax which the former circulation pronounces necessary. Our creditors have a right to certainty, and to consider these political speculations as make-weights only to that, and at our risk, not theirs. To us belongs only the comfort of hoping an earlier liberation than that calculation holds out, and the right of providing expressly that the tax hypothecated shall cease so soon as the debt it secures shall be actually reimbursed; and I will add that to us belongs also the regret that improvident legislators should have exposed us to a twenty years' thralldom of debts and taxes, for the necessary defence of our country, where the same contributions

would have liberated us in eight or nine years; or have reduced us perhaps to an abandonment of our rights, by their abandonment of the only resource which could have ensured their maintenance.

I omit many considerations of detail because they will occur to yourself, and my letter is too long already. I can refer you to no book as treating of this subject fully and suitably to our circumstances. Smith gives the history of the public debt of England, and some views adapted to that; and Dr. Price, in his book on annuities, has given a valuable chapter on the effects of a sinking fund. But our business being to make every loan tax a sinking fund for itself, no general one will be wanting; and if my confidence is well founded that our original import, when freed from the revolutionary debt, will suffice to embellish and improve our country in peace, and defend her in war, the present may be the only occasion of perplexing ourselves with sinking funds.

Should the injunctions under which I laid you, as to my former letter, restrain any useful purpose to which you could apply it, I remove them; preferring public benefit to all personal considerations. My original disapprobation of banks circulating paper is not unknown, nor have I since observed any effects either on the morals or fortunes of our citizens, which are any counterbalance for the public evils produced; and a thorough conviction that, if this war continues, that circulation must be suppressed, or the government shaken to its foundation by the

weight of taxes, and impracticability to raise funds on them, renders duty to that paramount to the love of ease and quiet.

When I was here in May last, I left it without knowing that Francis was at school in this neighborhood. As soon as I returned, on the present occasion, I sent for him, but his tutor informed me that he was gone on a visit to you. I shall hope permission for him always to see me on my visits to this place, which are three or four times a year.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, September 14, 1813. •

DEAR SIR,—I owe you a thousand thanks for your favor of August 22d and its enclosures, and for Dr. Priestley's doctrines of Heathen Philosophy compared with those of Revelation. Your letter to Dr. Rush and the syllabus, I return enclosed with this according to your injunctions, though with great reluctance. May I beg a copy of both?

They will do you no harm; me and others much good.

I hope you will pursue your plan, for I am confident you will produce a work much more valuable than Priestley's, though that is curious, and considering the expiring powers with which it was written, admirable.

The bill in Parliament for the relief of Anti-Trinitarians, is a great event, and will form an epoch in

ecclesiastical history. The motion was made by my friend Smith, of Clapham, a friend of the Belshams.

I should be very happy to hear that the bill is passed.

The human understanding is a revelation from its Maker which can never be disputed or doubted. There can be no scepticism, Pyrrhonism, or incredulity, or infidelity, here. No prophecies, no miracles are necessary to prove the celestial communication.

This revelation has made it certain that two and one make three, and that one is not three nor can three be one. We can never be so certain of any prophecy, or the fulfilment of any prophecy, or of any miracle, or the design of any miracle, as we are from the revelation of nature, *i. e.*, Nature's God, that two and two are equal to four. Miracles or prophecies might frighten us out of our wits; might scare us to death; might induce us to lie, to say that we believe that two and two make five. But we should not believe it. We should know the contrary.

Had you and I been forty days with Moses on Mount Sinai, and been admitted to behold the divine Shekinah, and there told that one was three and three one, we might not have had courage to deny it, but we could not have believed it.

The thunders, and lightnings, and earthquakes, and the transcendent splendors and glories might

have overwhelmed us with terror and amazement, but we could not have believed the doctrine. We should be more likely to say in our hearts whatever we might say with our lips,—This is chance. There is no God, no truth. This is all delusion, fiction, and a lie, or it is all chance. But what is chance? It is motion, it is action, it is event, it is phenomenon without cause.

Chance is no cause at all, it is nothing. And nothing has produced all this pomp and splendor. And nothing may produce our eternal damnation in the flames of hell-fire and brimstone, for what we know, as well as this tremendous exhibition of terror and falsehood.

God has infinite wisdom, goodness and power. He created the universe. His duration is eternal, *a parte ante* and *a parte post*.

His presence is as extensive as space. What is space? An infinite spherical vacuum. He created this speck of dirt and the human species for his glory, and with the deliberate design of making nine-tenths of our species miserable forever, for his glory.

This is the doctrine of Christian Theologians in general, ten to one.

Now, my friend, can prophecies or miracles convince you or me, that infinite benevolence, wisdom and power, created and preserves for a time, innumerable millions, to make them miserable forever for his own glory?

Wretch! What is his glory? Is he ambitious? Does he want promotion? Is he vain-tickled with adulation? Exulting and triumphing in his power and the sweetness of his vengeance?

Pardon me, my Maker, for these awful questions. My answer to them is always ready. I believe no such things. My adoration of the Author of the Universe is too profound and too sincere.

The love of God and his creation, delight, joy, triumph, exultation in my own existence, though but an atom, a molecule organique in the universe, are my religion. Howl, snarl, bite, ye Calvinistic, ye Athanasian divines, if you will. Ye will say I am no Christian. I say ye are no Christians, and there the account is balanced.

Yet I believe all the honest men among you are Christians, in my sense of the word.

When I was at college, I was a metaphysician, at least I thought myself such. And such men as Locke, Hemmenway and West, thought me so too; for we were forever disputing though in great good humor.

When I was sworn as an attorney, in 1758, in Boston, though I lived in Braintree, I was in a low state of health—thought in great danger of a consumption; living on milk, vegetable pudding and water. Not an atom of meat, or a drop of spirit. My next neighbor, my cousin, my friend Dr. Savil, was my physician. He was anxious about me, and did not like to take the sole responsibility of my

recovery. He invited me to a ride. I mounted my horse and rode with him to Hingham, on a visit to Dr. Ezekiel Hersey, a physician of great fame, who felt my pulse, looked in my eyes, heard Savil describe my regimen and course of medicine, and then pronounced his oracle: "Persevere, and as sure as there is a God in Heaven you will recover."

He was an everlasting talker, and ran out into history, philosophy, metaphysics, etc., and frequently put questions to me as if he wanted to sound me, and see if there was anything in me besides hectic fever. I was young, and then very bashful, however saucy I may have sometimes been since. I gave him very modest and very diffident answers. But when I got upon metaphysics, I seemed to feel a little bolder, and ventured into something like argument with him. I drove him up, as I thought, into a corner, from which he could not escape. "Sir, it will follow from what you have now advanced, that the universe, as distinct from God, is both infinite and eternal." "Very true," said Dr. Hersey, "your inference is just, the consequence is inevitable, and I believe the universe to be both eternal and infinite."

Here I was brought up! I was defeated. I was not prepared for this answer. This was fifty-five years ago.

When I was in England, from 1785 to 1788, I may say I was intimate with Dr. Price. I had much conversation with him at his own house, at my

house, and at the houses and tables of my friends. In some of our most unreserved conversations when we have been alone, he has repeatedly said to me: "I am inclined to believe that the universe is eternal and infinite. It seems to me that an eternal and infinite effect must necessarily flow from an eternal and infinite cause; and an infinite wisdom, goodness and power, that could have been induced to produce a universe in time, must have produced it from eternity. It seems to me the effect must flow from the cause."

Now, my friend Jefferson, suppose an eternal, self-existent being, existing from eternity, possessed of infinite wisdom, goodness and power, in absolute, total solitude, six thousand years ago, conceiving the benevolent project of creating a universe! I have no more to say at present.

It has been long, very long, a settled opinion in my mind, that there is now, never will be, and never was but one being who can understand the universe.

And that it is not only vain, but wicked, for insects to pretend to comprehend it.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, September 15, 1813.

DEAR SIR,—My last sheet would not admit an observation that was material to my design.

Dr. Price was inclined to think that infinite wisdom and goodness could not permit infinite power to be

inactive from eternity, but that an infinite and eternal universe must have necessarily flowed from these attributes.

Plato's system was "*αγαθος*" was eternal, self-existent, etc. His ideas, his word, his reason, his wisdom, his goodness, or in one word his "Logos" was omnipotent, and produced the universe from all eternity. Now! as far as you and I can understand Hersey, Price and Plato, are they not of one theory? Of one mind? What is the difference? I own an eternal solitude of a self-existent being, infinitely wise, powerful and good, is to me altogether incomprehensible and incredible. I could as soon believe the Athanasian creed.

You will ask me what conclusion I draw from all this? I answer, I drop into myself, and acknowledge myself to be a fool. No mind but one can see through the immeasurable system. It would be presumption and impiety in me to dogmatize on such subjects. My duties in my little infinitesimal circle I can understand and feel. The duties of a son, a brother, a father, a neighbor, a citizen, I can see and feel, but I trust the Ruler with His skies.

*Si quid novisti rectius, istis
Candidus imperti, si non, his utere, mecum.*

This world is a mixture of the sublime and the beautiful, the base and the contemptible, the whimsical and ridiculous, (according to our narrow sense and trifling feelings). It is an enigma and

a riddle. You need not be surprised, then, if I should descend from these heights to the most egregious trifle. But first let me say, I asked you in a former letter how far advanced we were in the science of aristocracy since Theognis' stallions, jacks and rams? Have not Chancellor Livingston and Major General Humphreys introduced an hereditary aristocracy of Merino sheep? How shall we get rid of this aristocracy? It is entailed upon us forever. And an aristocracy of land jobbers and stock jobbers is equally and irremediably entailed upon us, to endless generations.

Now for the odd, the whimsical, the frivolous. I had scarcely sealed my last letter to you upon Theognis' doctrine of well-born stallions, jacks and rams, when they brought me from the post office a packet, without post mark, without letter, without name, date or place. Nicely sealed was a printed copy of eighty or ninety pages, and in large full octavo, entitled: Section first—Aristocracy. I gravely composed my risible muscles and read it through. It is from beginning to end an attack upon me by name for the doctrines of aristocracy in my three volumes of Defence, etc. The conclusion of the whole is that an aristocracy of bank paper is as bad as the nobility of France or England. I most assuredly will not controvert this point with this man. Who he is I cannot conjecture. The honorable John Taylor of Virginia, of all men living or dead, first occurred to me.

Is it Oberon? Is it Queen Mab, that reigns and sports with us little beings? I thought my books as well as myself were forgotten. But behold! I am to become a great man in my expiring moments. Theognis and Plato, and Hersey and Price, and Jefferson and I, must go down to posterity together; and I know not, upon the whole, where to wish for better company. I wish to add Van der Kemp, who has been here to see me, after an interruption of twenty-four years. I could and ought to add many others, but the catalogue would be too long. I am, as ever.

P. S. Why is Plato associated with Theognis, etc.? Because no man ever expressed so much terror of the power of birth. His genius could invent no remedy or precaution against it, but a community of wives; a confusion of families; a total extinction of all relations of father, son and brother. Did the French Revolutionists contrive much better against the influence of birth?

TO WILLIAM CANBY.

MONTICELLO, September 18, 1813.*

SIR,—I have duly received your favor of August 27th, am sensible of the kind intentions from which it flows, and truly thankful for them. The more so as they could only be the result of a favorable estimate of my public course. During a long life,

as much devoted to study as a faithful transaction of the trusts committed to me would permit, no subject has occupied more of my consideration than our relations with all the beings around us, our duties to them, and our future prospects. After reading and hearing everything which probably can be suggested respecting them, I have formed the best judgment I could as to the course they prescribe, and in the due observance of that course, I have no recollections which give me uneasiness. An eloquent preacher of your religious society, Richard Motte, in a discourse of much emotion and pathos, is said to have exclaimed aloud to his congregation, that he did not believe there was a Quaker, Presbyterian, Methodist or Baptist in heaven, having paused to give his hearers time to stare and to wonder. He added, that in heaven, God knew no distinctions, but considered all good men as his children, and as brethren of the same family. I believe, with the Quaker preacher, that he who steadily observes those moral precepts in which all religions concur, will never be questioned at the gates of heaven, as to the dogmas in which they all differ. That on entering there, all these are left behind us, and the Aristides and Catos, the Penns and Tillotsons, Presbyterians and Baptists, will find themselves united in all principles which are in concert with the reason of the supreme mind. Of all the systems of morality, ancient or modern, which have come under my observation, none appear

to me so pure as that of Jesus. He who follows this steadily need not, I think, be uneasy, although he cannot comprehend the subtleties and mysteries erected on his doctrines by those who, calling themselves his special followers and favorites, would make him come into the world to lay snares for all understandings but theirs. These metaphysical heads, usurping the judgment seat of God, denounce as his enemies all who cannot perceive the Geometrical logic of Euclid in the demonstrations of St. Athanasius, that three are one, and one is three; and yet that the one is not three nor the three one. In all essential points you and I are of the same religion; and I am too old to go into inquiries and changes as to the unessential. Repeating therefore, my thankfulness for the kind concern you have been so good as to express, I salute you with friendship and brotherly esteem.

TO GENERAL WILLIAM DUANE.

MONTICELLO, September 18, 1813.

DEAR SIR,—Repeated inquiries on the part of Senator Tracy what has become of his book, (the MS. I last sent you,) oblige me to ask of you what I shall say to him. I congratulate you on the brilliant affair of the Enterprise and Boxer. No heart is more rejoiced than mine at these mortifications of English pride, and lessons to Europe that the English are not invincible at sea. And if

these successes do not lead us too far into the navy mania, all will be well. But when are to cease the severe lessons we receive by land, demonstrating our want of competent officers? The numbers of our countrymen betrayed into the hands of the enemy by the treachery, cowardice or incompetence of our high officers, reduce us to the humiliating necessity of acquiescing in the brutal conduct observed towards them. When, during the last war, I put Governor Hamilton and Major Hay into a dungeon and in irons for having themselves personally done the same to the American prisoners who had fallen into their hands, and was threatened with retaliation by Philips, then returned to New York, I declared to him I would load ten of their Saratoga prisoners (then under my care and within half a dozen miles of my house) with double irons for every American they should misuse under pretence of retaliation, and it put an end to the practice. But the ten for one are now with them. Our present hopes of being able to do something by land seem to rest on Chauncey. Strange reverse of expectations that our land force should be under the wing of our little navy. Accept the assurance of my esteem and respect.

TO ISAAC MCPHERSON.

MONTICELLO, September 18, 1813.

SIR,—I thank you for the communication of Mr. Jonathan Ellicot's letter in yours of August 28th,

and the information it conveys. With respect to mine of August 13th, I do not know that it contains anything but what any man of mathematical reading may learn from the same sources; however, if it can be used for the promotion of right, I consent to such an use of it. Your inquiry as to the date of Martin's invention of the drill-plough, with a leathern band and metal buckets, I cannot precisely answer; but I received one from him in 1794, and have used it ever since for sowing various seeds, chiefly peas, turnips, and benni. I have always had in mind to use it for wheat; but sowing only a row at a time, I had proposed to him some years ago to change the construction so that it should sow four rows at a time, twelve inches apart, and I have been waiting for this to be done either by him or myself; and have not, therefore, commenced that use of it. I procured mine at first through Colonel John Taylor of Caroline, who had been long in the use of it, and my impression was that it was not then a novel thing. Mr. Martin is still living, I believe. If not, Colonel Taylor, his neighbor, probably knows its date. If the bringing together under the same roof various useful things before known, which you mention as one of the grounds of Mr. Evans' claim, entitles him to an exclusive use of all these, either separately or combined, every utensil of life might be taken from us by a patent. I might build a stable, bring into it a cutting-knife to chop straw, a hand-mill to grind the grain, a

curry comb and brush to clean the horses, and by a patent exclude every one from ever more using these things without paying me. The elevator, the conveyer, the hopper-boy, are distinct things, unconnected but by juxtaposition. If no patent can be claimed for any one of these separately, it cannot be for all of them,—several nothings put together cannot make a something;—this would be going very wide of the object of the patent laws. I salute you with esteem and respect.

TO JAMES MARTIN.

MONTICELLO, September 20, 1813.

SIR,—Your letter of August 20th, enabled me to turn to mine of February 23d, 1798, and your former one of February 22d, 1801, and to recall to my memory the oration at Jamaica, which was the subject of them. I see with pleasure a continuance of the same sound principles in the address to Mr. Quincy. Your quotation from the former paper alludes, as I presume, to the term of office to our Senate; a term, like that of the judges, too long for my approbation. I am for responsibilities at short periods, seeing neither reason nor safety in making public functionaries independent of the nation for life, or even for long terms of years. On this principle I prefer the Presidential term of four years, to that of seven years, which I myself had at first suggested, annexing to it, however, ineligibility

forever after; and I wish it were now annexed to the second quadrennial election of President.

The conduct of Massachusetts, which is the subject of your address to Mr. Quincy, is serious, as embarrassing the operations of the war, and jeopardizing its issue; and still more so, as an example of contumacy against the Constitution. One method of proving their purpose, would be to call a convention of their State, and to require them to declare themselves members of the Union, and obedient to its determinations, or not members, and let them go. Put this question solemnly to their people, and their answer cannot be doubtful. One-half of them are republicans, and would cling to the Union from principle. Of the other half, the dispassionate part would consider, 1st. That they do not raise bread sufficient for their own subsistence, and must look to Europe for the deficiency, if excluded from our ports, which vital interests would force us to do. 2d. That they are navigating people without a stick of timber for the hull of a ship, nor a pound of anything to export in it, which would be admitted at any market. 3d. That they are also a manufacturing people, and left by the exclusive system of Europe without a market but ours. 4th. That as the rivals of England in manufactures, in commerce, in navigation, and fisheries, they would meet her competition in every point. 5th. That England would feel no scruples in making the abandonment

and ruin of such a rival the price of a treaty with the producing States; whose interest too it would be to nourish a navigation beyond the Atlantic, rather than a hostile one at our own door. And 6th. That in case of war with the Union, which occurrences between coterminous nations frequently produce, it would be a contest of one against fifteen. The remaining portion of the federal moiety of the State would, I believe, brave all these obstacles, because they are monarchists in principle, bearing deadly hatred to their republican fellow-citizens, impatient under the ascendancy of republican principles, devoted in their attachment to England, and preferring to be placed under her despotism, if they cannot hold the helm of government here. I see, in their separation, no evil but the example, and I believe that the effect of that would be corrected by an early and humiliating return to the Union, after losing much of the population of their country, insufficient in its own resources to feed her numerous inhabitants, and inferior in all its allurements to the more inviting soils, climates, and governments of the other States. Whether a dispassionate discussion before the public, of the advantages and disadvantages of separation to both parties, would be the best medicine for this dialytic fever, or to consider it as sacrilege ever to touch the question, may be doubted. I am, myself, generally disposed to indulge, and to follow reason; and believe that in no case would it be safer than

in the present. Their refractory course, however, will not be unpunished by the indignation of their co-States, their loss of influence with them, the censures of history, and the stain on the character of their State. With my thanks for the paper enclosed, accept the assurance of my esteem and respect.

TO DR. GEORGE LOGAN.

MONTICELLO, October 3, 1813.

DEAR SIR,—I have duly received your favor of September 18th, and I perceive in it the same spirit of peace which I know you have ever breathed, and to preserve which you have made many personal sacrifices. That your efforts did much towards preventing declared war with France, I am satisfied. Of those with England, I am not equally informed. I have ever cherished the same spirit with all nations, from a consciousness that peace, prosperity, liberty, and morals, have an intimate connection. During the eight years of my administration, there was not a year that England did not give us such cause as would have provoked a war from any European government. But I always hoped that time and friendly remonstrances would bring her to a sounder view of her own interests, and convince her that these would be promoted by a return to justice and friendship towards us. Continued impressments of our seamen by her naval commanders, whose

interest it was to mistake them for theirs, her innovations on the law of nations to cover real piracies, could illy be borne; and perhaps would not have been borne, had not contraventions of the same law by France, fewer in number but equally illegal, rendered it difficult to single the object of war. England, at length, singled herself, and took up the gauntlet, when the unlawful decrees of France being revoked as to us, she, by the proclamation of her Prince Regent, protested to the world that she would never revoke hers until those of France should be removed as to all nations. Her minister too, about the same time, in an official conversation with our Chargé, rejected our substitute for her practice of impressment; proposed no other; and declared explicitly that no admissible one for this abuse could be proposed. Negotiation being thus cut short, no alternative remained but war, or the abandonment of the persons and property of our citizens on the ocean. The last one, I presume, no American would have preferred. War was therefore declared, and justly declared; but accompanied with immediate offers of peace on simply doing us justice. These offers were made through Russel, through Admiral Warren, through the government of Canada, and the mediation proposed by her best friend Alexander, and the greatest enemy of Bonaparte, was accepted without hesitation. An entire confidence in the abilities and integrity of those now administering the govern-

ment, has kept me from the inclination, as well as the occasion, of intermeddling in the public affairs, even as a private citizen may justifiably do. Yet if you can suggest any conditions which we ought to accept, and which have not been repeatedly offered and rejected, I would not hesitate to become the channel of their communication to the administration. The revocation of the orders of council, and discontinuance of impressment, appear to me indispensable. And I think a thousand ships taken unjustifiably in time of peace, and thousands of our citizens impressed, warrant expectations of indemnification; such a western frontier, perhaps, given to Canada, as may put it out of their power hereafter to employ the tomahawk and scalping-knife of the Indians on our women and children; or, what would be nearly equivalent, the exclusive right to the lakes. The modification, however, of this indemnification must be effected by the events of the war. No man on earth has stronger detestation than myself of the unprincipled tyrant who is deluging the continent of Europe with blood. No man was more gratified by his disasters of the last campaign; nor wished, more sincerely, success to the efforts of the virtuous Alexander. But the desire of seeing England forced to just terms of peace with us, makes me equally solicitous for her entire exclusion from intercourse with the rest of the world, until by this peaceable engine of constraint, she can be made to renounce her views of

dominion over the ocean, of permitting no other nation to navigate it but with her license, and on tribute to her; and her aggressions on the persons of our citizens, who may choose to exercise their right of passing over that element. Should the continental armistice issue in closing Europe against her, she may become willing to accede to just terms with us; which I should certainly be disposed to meet, whatever consequences it might produce on our intercourse with the continental nations. My principle is to do whatever is right, and leave consequences to Him who has the disposal of them. I repeat, therefore, that if you can suggest what may lead to a just peace, I will willingly communicate it to the proper functionaries. In the meantime, its object will be best promoted by a vigorous and unanimous prosecution of the war.

I am happy in this occasion of renewing the interchange of sentiments between us, which has formerly been a source of much satisfaction to me; and with the homage of my affectionate attachment and respect to Mrs. Logan, I pray you to accept the assurance of my continued friendship and esteem for yourself.

TO JOHN ADAMS.

MONTICELLO October, 13 1813.

DEAR SIR,—Since mine of August the 22d, I have received your favors of August the 16th, September

the 2d, 14th, 15th, and —, and Mrs. Adams' of September the 20th. I now send you, according to your request, a copy of the syllabus. To fill up this skeleton with arteries, with veins, with nerves, muscles and flesh, is really beyond my time and information. Whoever could undertake it would find great aid in Enfield's judicious abridgment of Brucker's History of Philosophy, in which he has reduced five or six quarto volumes, of one thousand pages each of Latin closely printed, to two moderate octavos of English open type.

To compare the morals of the Old, with those of the New Testament, would require an attentive study of the former, a search through all its books for its precepts, and through all its history for its practices, and the principles they prove. As commentaries, too, on these, the philosophy of the Hebrews must be inquired into, their Mishna, their Gemara, Cabbala, Jezirah, Sohar, Cosri, and their Talmud, must be examined and understood, in order to do them full justice. Brucker, it would seem, has gone deeply into these repositories of their ethics, and Enfield, his epitomizer, concludes in these words: "Ethics were so little understood among the Jews, that in their whole compilation called the Talmud, there is only one treatise on moral subjects. Their books of morals chiefly consisted in a minute enumeration of duties. From the law of Moses were deduced six hundred and thirteen precepts, which were divided into two classes, affirmative and nega-

tive, two hundred and forty-eight in the former, and three hundred and sixty-five in the latter. It may serve to give the reader some idea of the low state of moral philosophy among the Jews in the middle age, to add that of the two hundred and forty-eight affirmative precepts, only three were considered as obligatory upon women, and that in order to obtain salvation; it was judged sufficient to fulfil any one single law in the hour of death; the observance of the rest being deemed necessary, only to increase the felicity of the future life. What a wretched depravity of sentiment and manners must have prevailed, before such corrupt maxims could have obtained credit! It is impossible to collect from these writings a consistent series of moral doctrine." Enfield, B. 4, chapter 3. It was the reformation of this "wretched depravity" of morals which Jesus undertook. In extracting the pure principles which he taught, we should have to strip off the artificial vestments in which they have been muffled by priests, who have travestied them into various forms, as instruments of riches and power to themselves. We must dismiss the Platonists and Plotinists, the Stagyrates, and Gamalielites the Eclectics, the Gnostics and Scholastics, their essences and emanations, their Logos and Demiurgos, Æons and Dæmons, male and female, with a long train of etc., etc., etc., or, shall I say at once, of nonsense. We must reduce our volume to the simple evangelists, select, even from them, the very words only of Jesus,

paring off the amphibologisms into which they have been led, by forgetting often, or not understanding, what had fallen from him, by giving their own misconceptions as his dicta, and expressing unintelligibly for others what they had not understood themselves. There will be found remaining the most sublime and benevolent code of morals which has ever been offered to man. I have performed this operation for my own use, by cutting verse by verse out of the printed book, and arranging the matter which is evidently his, and which is as easily distinguishable as diamonds in a dunghill. The result is an octavo of forty-six pages, of pure and unsophisticated doctrines, such as were professed and acted on by the *unlettered* Apostles, the Apostolic Fathers, and the Christians of the first century. Their Platonizing successors, indeed, in after times, in order to legitimate the corruptions which they had incorporated into the doctrines of Jesus, found it necessary to disavow the primitive Christians, who had taken their principles from the mouth of Jesus himself, of his Apostles, and the Fathers cotemporary with them. They excommunicated their followers as heretics, branding them with the opprobrious name of Ebionites or Beggars.

For a comparison of the Grecian philosophy with that of Jesus, materials might be largely drawn from the same source. Enfield gives a history and detailed account of the opinions and principles of the different sects. These relate to the Gods, their

natures, grades, places and powers; the demi-Gods and Dæmons, and their agency with man; the universe, its structure, extent and duration; the origin of things from the elements of fire, water, air and earth; the human soul, its essence and derivation; the *summum bonum* and *finis bonorum*; with a thousand idle dreams and fancies on these and other subjects, the knowledge of which is withheld from man; leaving but a short chapter for his moral duties, and the principal section of that given to what he owes himself, to precepts for rendering him impassible, and unassailable by the evils of life, and for preserving his mind in a state of constant serenity.

Such a canvass is too broad for the age of seventy, and especially of one whose chief occupations have been in the practical business of life. We must leave, therefore, to others, younger and more learned than we are, to prepare this euthanasia for Platonic Christianity, and its restoration to the primitive simplicity of its founder. I think you give a just outline of the theism of the three religions, when you say that the principle of the Hebrew was the fear, of the Gentile the honor, and of the Christian the love of God.

An expression in your letter of September the 14th, that "the human understanding is a revelation from its maker," gives the best solution that I believe can be given of the question, "what did Socrates mean by his Dæmon?" He was too wise to believe,

and too honest to pretend, that he had real and familiar converse with a superior and invisible being. He probably considered the suggestions of his conscience, or reason, as revelations or inspirations from the Supreme mind, bestowed, on important occasions, by a special superintending Providence.

I acknowledge all the merit of the hymn of Cleantes to Jupiter, which you ascribe to it. It is as highly sublime as a chaste and correct imagination can permit itself to go. Yet in the contemplation of a being so superlative, the hyperbolic flights of the Psalmist may often be followed with approbation, even with rapture; and I have no hesitation in giving him the palm over all the hymnists of every language and of every time. Turn to the 148th psalm, in Brady and Tate's version. Have such conceptions been ever before expressed? Their version of the 15th psalm is more to be esteemed for its pithiness than its poetry. Even Sternhold, the leaden Sternhold, kindles, in a single instance, with the sublimity of his original, and expresses the majesty of God descending on the earth, in terms not unworthy of the subject:

“ The Lord descended from above,
And bowed the heav'ns most high;
And underneath his feet he cast
The darkness of the sky.
On Cherubim and Seraphim
Full royally he rode;
And on the wings of mighty winds
Came flying all abroad.”—Psalm xviii, 9, 10.

The Latin versions of this passage by Buchanan and by Johnston, are but mediocres. But the Greek of Duport is worthy of quotation,

Ουρανον αγκλινας κατεβη· υπο πόσσι δέοισιν
 Δχλύς αμφι μελαινα χυθη και νυξ ερεβεννη.
 Ψιμβα ποτατο χεροσβω οχενμενος, ωσπερ εφ' ιππω·
 Ίππατοδε πτερυγεσσι πολυπλαγκτου ανεμοιο.

The best collection of these psalms is that of the Octagonian dissenters of Liverpool, in their printed form of prayer; but they are not always the best versions. Indeed, bad is the best of the English versions; not a ray of poetical genius having ever been employed on them. And how much depends on this, may be seen by comparing Brady and Tate's 15th psalm with Blacklock's *Justum et tenacem propositi virum* of Horace, quoted in Hume's history, Car. 2, ch. 65. A translation of David in this style, or in that of Pompei's Cleanthes, might give us some idea of the merit of the original. The character, too, of the poetry of these hymns is singular to us; written in monostichs, each divided into strophe and anti-strophe, the sentiment of the first member responded with amplification or antithesis in the second.

On the subject of the postscript of yours of August the 16th and of Mrs. Adams' letter, I am silent. I know the depth of the affliction it has caused, and can sympathize with it the more sensibly, inasmuch as there is no degree of affliction, produced by the loss of those dear to us, which experience has not taught me to estimate. I have ever found time and

silence the only medicine, and these but assuage, they never can suppress, the deep drawn sigh which recollection forever brings up, until recollection and life are extinguished together. Ever affectionately yours.

· TO JOHN ADAMS.

MONTICELLO, October 28, 1813.

DEAR SIR,—According to the reservation between us, of taking up one of the subjects of our correspondence at a time, I turn to your letters of August the 16th and September the 2d.

The passage you quote from Theognis, I think has an ethical rather than a political object. The whole piece is a moral *exhortation*, *παραινεσις*, and this passage particularly seems to be a reproof to man, who, while with his domestic animals he is curious to improve the race, by employing always the finest male, pays no attention to the improvement of his own race, but intermarries with the vicious, the ugly, or the old, for considerations of wealth or ambition. It is in conformity with the principle adopted afterwards by the Pythagoreans, and expressed by Ocellus in another form; *περι δε τῆς ἑκ τῶν ἀλλήλων ἀνθρωπῶν γενεσεως* etc.,—*οὐχ ἡδονῆς ἐνεκα ἢ μίξις*· which, as literally as intelligibility will admit, may be thus translated: “concerning the interprocreation of men, how, and of whom it shall be, in a perfect manner, and according to the laws of modesty and sanc-

tity, conjointly, this is what I think right. First to lay it down that we do not commix for the sake of pleasure, but of the procreation of children. For the powers, the organs and desires for coition have not been given by God to man for the sake of pleasure, but for the procreation of the race. For as it were incongruous, for a mortal born to partake of divine life, the immortality of the race being taken away, God fulfilled the purpose by making the generations uninterrupted and continuous. This, therefore, we are especially to lay down as a principle, that coition is not for the sake of pleasure." But nature, not trusting to this moral and abstract motive, seems to have provided more securely for the perpetuation of the species, by making it the effect of the *oestrum* implanted in the constitution of both sexes. And not only has the commerce of love been indulged on this unhallowed impulse, but made subservient also to wealth and ambition by marriage, without regard to the beauty, the healthiness, the understanding, or virtue of the subject from which we are to breed. The selecting the best male for a harem of well-chosen females also, which Theognis seems to recommend from the example of our sheep and asses, would doubtless improve the human, as it does the brute animal, and produce a race of veritable *αριστοι*. For experience proves, that the moral and physical qualities of man, whether good or evil, are transmissible in a certain degree from father to son. But I suspect that the equal

rights of men will rise up against this privileged Solomon and his harem, and oblige us to continue acquiescence under the "Αμανρωσις γενεος αστων" which Theognis complains of, and to content ourselves with the accidental aristoi produced by the fortuitous concourse of breeders. For I agree with you that there is a natural aristocracy among men. The grounds of this are virtue and talents. Formerly, bodily powers gave place among the aristoi. But since the invention of gunpowder has armed the weak as well as the strong with missile death, bodily strength, like beauty, good humor, politeness and other accomplishments, has become but an auxiliary ground of distinction. There is also an artificial aristocracy, founded on wealth and birth, without either virtue or talents; for with these it would belong to the first class. The natural aristocracy I consider as the most precious gift of nature, for the instruction, the trusts, and government of society. And indeed, it would have been inconsistent in creation to have formed man for the social state, and not to have provided virtue and wisdom enough to manage the concerns of the society. May we not even say, that that form of government is the best, which provides the most effectually for a pure selection of these natural aristoi into the offices of government? The artificial aristocracy is a mischievous ingredient in government, and provision should be made to prevent its ascendancy. On the question, what is the best provision, you and I differ;

but we differ as rational friends, using the free exercise of our own reason, and mutually indulging its errors. You think it best to put the pseudo-aristoi into a separate chamber of legislation, where they may be hindered from doing mischief by their co-ordinate branches, and where, also, they may be a protection to wealth against the agrarian and plundering enterprises of the majority of the people. I think that to give them power in order to prevent them from doing mischief, is arming them for it, and increasing instead of remedying the evil. For if the co-ordinate branches can arrest their action, so may they that of the co-ordinates. Mischief may be done negatively as well as positively. Of this, a cabal in the Senate of the United States has furnished many proofs. Nor do I believe them necessary to protect the wealthy; because enough of these will find their way into every branch of the legislation, to protect themselves. From fifteen to twenty legislatures of our own, in action for thirty years past, have proved that no fears of an equalization of property are to be apprehended from them. I think the best remedy is exactly that provided by all our constitutions, to leave to the citizens the free election and separation of the aristoi from the pseudo-aristoi, of the wheat from the chaff. In general they will elect the really good and wise. In some instances, wealth may corrupt, and birth blind them; but not in sufficient degree to endanger the society.

It is probable that our difference of opinion may,

in some measure, be produced by a difference of character in those among whom we live. From what I have seen of Massachusetts and Connecticut myself, and still more from what I have heard, and the character given of the former by yourself, (volume 1, page 111,) who know them so much better, there seems to be in those two States a traditionary reverence for certain families, which has rendered the offices of the government nearly hereditary in those families. I presume that from an early period of your history, members of those families happening to possess virtue and talents, have honestly exercised them for the good of the people, and by their services have endeared their names to them. In coupling Connecticut with you, I mean it politically only, not morally. For having made the Bible the common law of their land, they seem to have modeled their morality on the story of Jacob and Laban. But although this hereditary succession to office with you, may, in some degree, be founded in real family merit, yet in a much higher degree, it has proceeded from your strict alliance of Church and State. These families are canonized in the eyes of the people on common principles, "you tickle me, and I will tickle you." In Virginia we have nothing of this. Our clergy, before the revolution, having been secured against rivalship by fixed salaries, did not give themselves the trouble of acquiring influence over the people. Of wealth, there were great accumulations in particular families, handed down from generation

to generation, under the English law of entails. But the only object of ambition for the wealthy was a seat in the King's Council. All their court then was paid to the crown and its creatures; and they Philipized in all collisions between the King and the people. Hence they were unpopular; and that unpopularity continues attached to their names. A Randolph, a Carter, or a Burwell must have great personal superiority over a common competitor to be elected by the people even at this day. At the first session of our legislature after the Declaration of Independence, we passed a law abolishing entails. And this was followed by one abolishing the privilege of primogeniture, and dividing the lands of intestates equally among all their children, or other representatives. These laws, drawn by myself, laid the axe to the foot of pseudo-aristocracy. And had another which I prepared been adopted by the legislature, our work would have been complete. It was a bill for the more general diffusion of learning. This proposed to divide every county into wards of five or six miles square, like your townships; to establish in each ward a free school for reading, writing and common arithmetic; to provide for the annual selection of the best subjects from these schools, who might receive, at the public expense, a higher degree of education at a district school; and from these district schools to select a certain number of the most promising subjects, to be completed at an university, where all the useful sciences should be taught.

Worth and genius would thus have been sought out from every condition of life, and completely prepared by education for defeating the competition of wealth and birth for public trusts. My proposition had, for a further object, to impart to these wards those portions of self-government for which they are best qualified, by confiding to them the care of their poor, their roads, police, elections, the nomination of jurors, administration of justice in small cases, elementary exercises of militia; in short, to have made them little republics, with a warden at the head of each, for all those concerns which, being under their eye, they would better manage than the larger republics of the county or State. A general call of ward meetings by their wardens on the same day through the State, would at any time produce the genuine sense of the people on any required point, and would enable the State to act in mass, as your people have so often done, and with so much effect by their town meetings. The law for religious freedom, which made a part of this system, having put down the aristocracy of the clergy, and restored to the citizen the freedom of the mind, and those of entails and descents nurturing an equality of condition among them, this on education would have raised the mass of the people to the high ground of moral respectability necessary to their own safety, and to orderly government; and would have completed the great object of qualifying them to select the veritable aristoi, for the trusts of government,

to the exclusion of the pseudalists; and the same Theognis who has furnished the epigraphs of your two letters, assures us that “Ουδεμιν πω, Κυρν’, αγαθοι πολιν ωλεσαν ανδρες.” Although this law has not yet been acted on but in a small and inefficient degree, it is still considered as before the legislature, with other bills of the revised code, not yet taken up, and I have great hope that some patriotic spirit will, at a favorable moment, call it up, and make it the keystone of the arch of our government.

With respect to aristocracy, we should further consider, that before the establishment of the American States, nothing was known to history but the man of the old world, crowded within limits either small or overcharged, and steeped in the vices which that situation generates. A government adapted to such men would be one thing; but a very different one, that for the man of these States. Here every one may have land to labor for himself, if he chooses; or, preferring the exercise of any other industry, may exact for it such compensation as not only to afford a comfortable subsistence, but wherewith to provide for a cessation from labor in old age. Every one, by his property, or by his satisfactory situation, is interested in the support of law and order. And such men may safely and advantageously reserve to themselves a wholesome control over their public affairs, and a degree of freedom, which, in the hands of the *canaille* of the cities of Europe, would be instantly perverted to the demolition and destruction

of everything public and private. The history of the last twenty-five years of France, and of the last forty years in America, nay of its last two hundred years, proves the truth of both parts of this observation.

But even in Europe a change has sensibly taken place in the mind of man. Science had liberated the ideas of those who read and reflect, and the American example had kindled feelings of right in the people. An insurrection has consequently begun, of science, talents, and courage, against rank and birth, which have fallen into contempt. It has failed in its first effort, because the mobs of the cities, the instrument used for its accomplishment, debased by ignorance, poverty, and vice, could not be restrained to rational action. But the world will recover from the panic of this first catastrophe. Science is progressive, and talents and enterprise on the alert. Resort may be had to the people of the country, a more governable power from their principles and subordination; and rank, and birth, and tinsel-aristocracy will finally shrink into insignificance, even there. This, however, we have no right to meddle with. It suffices for us, if the moral and physical condition of our own citizens qualifies them to select the able and good for the direction of their government, with a recurrence of elections at such short periods as will enable them to displace an unfaithful servant, before the mischief he meditates may be irremediable.

I have thus stated my opinion on a point on which

we differ, not with a view to controversy, for we are both too old to change opinions which are the result of a long life of inquiry and reflection; but on the suggestions of a former letter of yours, that we ought not to die before we have explained ourselves to each other. We acted in perfect harmony, through a long and perilous contest for our liberty and independence. A constitution has been acquired, which, though neither of us thinks perfect, yet both consider as competent to render our fellow citizens the happiest and the securest on whom the sun has ever shone. If we do not think exactly alike as to its imperfections, it matters little to our country, which, after devoting to it long lives of disinterested labor, we have delivered over to our successors in life, who will be able to take care of it and of themselves.

Of the pamphlet on aristocracy which has been sent to you, or who may be its author, I have heard nothing but through your letter. If the person you suspect, it may be known from the quaint, mystical, and hyperbolic ideas, involved in affected, new-fangled and pedantic terms which stamp his writings. Whatever it be, I hope your quiet is not to be affected at this day by the rudeness or intemperance of scribblers; but that you may continue in tranquillity to live and to rejoice in the prosperity of our country, until it shall be your own wish to take your seat among the aristoi who have gone before you. Ever and affectionately yours.

TO JOHN W. EPPES.

MONTICELLO, November 6, 1813.

DEAR SIR,—I had not expected to have troubled you again on the subject of finance; but since the date of my last, I have received from Mr. Law a letter covering a memorial on that subject, which, from its tenor, I conjecture must have been before Congress at their two last sessions. This paper contains two propositions; the one for issuing treasury notes, bearing interest, and to be circulated as money; the other for the establishment of a national bank. The first was considered in my former letter; and the second shall be the subject of the present.

The scheme is for Congress to establish a national bank, suppose of thirty millions capital, of which they shall contribute ten millions in new six per cent. stock, the States ten millions, and individuals ten millions, one-half of the two last contributions to be of similar stock, for which the parties are to give cash to Congress; the whole, however, to be under the exclusive management of the individual subscribers, who are to name all the directors; neither Congress nor the States having any power of interference in its administration. Discounts are to be at five per cent., but the profits are expected to be seven per cent. Congress then will be paying six per cent. on twenty millions, and receiving seven per cent. on ten millions, being its third of the institution; so that on the ten millions cash which they

receive from the States and individuals, they will, in fact, have to pay but five per cent. interest. This is the bait. The charter is proposed to be for forty or fifty years, and if any future augmentations should take place, the individual proprietors are to have the privilege of being the sole subscribers for that. Congress are further allowed to issue to the amount of three millions of notes, bearing interest, which they are to receive back in payment for lands at a premium of five or ten per cent., or as subscriptions for canals, roads, and bridges, in which undertakings they are, of course, to be engaged. This is a summary of the case as I understand it; but it is very possible I may not understand it in all its parts, these schemes being always made unintelligible for the gulls who are to enter into them. The advantages and disadvantages shall be noted promiscuously as they occur; leaving out the speculation of canals, etc., which, being an episode only in the scheme, may be omitted, to disentangle it as much as we can.

1. Congress are to receive five millions from the States (if they will enter into this partnership, which few probably will), and five millions from the individual subscribers, in exchange for ten millions of six per cent. stock, one per cent. of which, however, they will make on their ten millions of stock remaining in bank, and so reduce it, in effect, to a loan of ten millions at five per cent. interest. This is good; but

2. They authorize this bank to throw into circulation ninety millions of dollars, (three times the capital,) which increases our circulating medium fifty per cent., depreciates proportionably the present value of a dollar, and raises the price of all future purchases in the same proportion.

3. This loan of ten millions at five per cent., is to be once for all, only. Neither the terms of the scheme, nor their own prudence could ever permit them to add to the circulation in the same, or any other way, for the supplies of the succeeding years of the war. These succeeding years then are to be left unprovided for, and the means of doing it in a great measure precluded.

4. The individual subscribers, on paying their own five millions of cash to Congress, become the depositories of ten millions of stock belonging to Congress, five millions belonging to the States, and five millions to themselves, say twenty millions, with which, as no one has a right ever to see their books, or to ask a question, they may choose their time for running away, after adding to their booty the proceeds of as much of their own notes as they shall be able to throw into circulation.

5. The subscribers may be one, two, or three, or more individuals, (many single individuals being able to pay in the five millions,) whereupon this bank oligarchy or monarchy enters the field with ninety millions of dollars, to direct and control the politics of the nation; and of the influence of these

institutions on our politics and into what scale it will be thrown, we have had abundant experience. Indeed, England herself may be the real, while her friend and trustee here shall be the nominal and sole subscriber.

6. This state of things is to be fastened on us, without the power of relief, for forty or fifty years. That is to say, the eight millions of people now existing, for the sake of receiving one dollar and twenty-five cents apiece, at five per cent. interest, are to subject the fifty millions of people who are to succeed them within that term, to the payment of forty-five millions of dollars, principal and interest, which will be payable in the course of the fifty years.

7. But the great and national advantage is to be the relief of the present *scarcity of money*, which is produced and proved by,

1. The additional industry created to supply a variety of articles for the troops, ammunition, etc.

2. By the cash sent to the frontiers, and the vacuum occasioned in the trading towns by that.

3. By the late loans.

4. By the necessity of recurring to shavers with *good* paper, which the existing banks are not able to take up; and

5. By the numerous applications of bank charters, showing that an increase of circulating medium is wanting.

Let us examine these causes and proofs of the want of an increase of medium, one by one.

1. The additional industry created to supply a variety of articles for troops, ammunition, etc. Now, I had always supposed that war produced a diminution of industry, by the number of hands it withdraws from industrious pursuits for employment in arms, etc., which are totally unproductive. And if it calls for new industry in the articles of ammunition and other military supplies, the hands are borrowed from other branches on which the demand is slackened by the war; so that it is but a shifting of these hands from one pursuit to another.

2. The cash sent to the frontiers occasions a vacuum in the trading towns, which requires a new supply. Let us examine what are the calls for money to the frontiers. Not for clothing, tents, ammunition, arms, which are all bought in the trading towns. Not for provisions; for although these are bought partly in the immediate country, bank bills are more acceptable there than even in the trading towns. The pay of the army calls for some cash, but not a great deal, as bank notes are as acceptable with the military men, perhaps more so; and what cash is sent must find its way back again in exchange for the wants of the upper from the lower country. For we are not to suppose that cash stays accumulating there forever.

3. This scarcity has been occasioned by the late loans. But does the government borrow money to keep it in their coffers? Is it not instantly restored to circulation by payment for its necessary

supplies? And are we to restore a vacuum of twenty millions of dollars by an emission of ninety millions?

4. The want of medium is proved by the recurrence of individuals with *good* paper to brokers at exorbitant interest; and

5. By the numerous applications to the State governments for additional banks; New York wanting eighteen millions, Pennsylvania ten millions, etc. But say more correctly, the speculators and spendthrifts of New York and Pennsylvania, but never consider them as being the States of New York and Pennsylvania. These two items shall be considered together.

It is a litigated question, whether the circulation of paper, rather than of specie, is a good or an evil. In the opinion of England and of English writers it is a good; in that of all other nations it is an evil; and excepting England and her copyist, the United States, there is not a nation existing, I believe, which tolerates a paper circulation. The experiment is going on, however, desperately in England, pretty boldly with us, and at the end of the chapter, we shall see which opinion experience approves: for I believe it to be one of those cases where mercantile clamor will bear down reason, until it is corrected by ruin. In the meantime, however, let us reason on this new call for a national bank.

After the solemn decision of Congress against the renewal of the charter of the bank of the United

States, and the grounds of that decision, (the want of constitutional power,) I had imagined that question at rest, and that no more applications would be made to them for the incorporation of banks. The opposition on that ground to its first establishment, the small majority by which it was overborne, and the means practised for obtaining it, cannot be already forgotten. The law having passed, however, by a majority, its opponents, true to the sacred principle of submission to a majority, suffered the law to flow through its term without obstruction. During this, the nation had time to consider the constitutional question, and when the renewal was proposed, they condemned it, not by their representatives in Congress only, but by express instructions from different organs of their will. Here then we might stop, and consider the memorial as answered. But, setting authority apart, we will examine whether the legislature ought to comply with it, even if they had the power.

Proceeding to reason on this subject, some principles must be premised as forming its basis. The adequate price of a thing depends on the capital and labor necessary to produce it. [In the term *capital*, I mean to include science, because capital as well as labor has been employed to acquire it. Two things requiring the same capital and labor, should be of the same price. If a gallon of wine requires for its production the same capital and labor

with a bushel of wheat, they should be expressed by the same price, derived from the application of a common measure to them. The comparative prices of things being thus to be estimated and expressed by a common measure, we may proceed to observe, that were a country so insulated as to have no commercial intercourse with any other, to confine the interchange of all its wants and supplies within itself, the amount of circulating medium, as a common measure for adjusting these exchanges, would be quite immaterial. If their circulation, for instance, were of a million of dollars, and the annual produce of their industry equivalent to ten millions of bushels of wheat, the price of a bushel of wheat might be one dollar. If, then, by a progressive coinage, their medium should be doubled, the price of a bushel of wheat might become progressively two dollars, and without inconvenience. Whatever be the proportion of the circulating medium to the value of the annual produce of industry, it may be considered as the representative of that industry. In the first case, a bushel of wheat will be represented by one dollar; in the second, by two dollars. This is well explained by Hume, and seems admitted by Adam Smith, B. 2, c. 2, 436, 441, 490. But where a nation is in a full course of interchange of wants and supplies with all others, the proportion of its medium to its produce is no longer indifferent. *Ib.* 441. To trade on equal terms, the common measure of values should be as nearly as possible on a par with

that of its corresponding nations, whose medium is in a sound state; that is to say, not in an accidental state of excess or deficiency. Now, one of the great advantages of specie as a medium is, that being of universal value, it will keep itself at a general level, flowing out from where it is too high into parts where it is lower. Whereas, if the medium be of local value only, as paper money, if too little, indeed, gold and silver will flow in to supply the deficiency; but if too much, it accumulates, banishes the gold and silver not locked up in vaults and hoards, and depreciates itself; that is to say, its proportion to the annual produce of industry being raised, more of it is required to represent any particular article of produce than in the other countries. This is agreed by Smith, (B. 2, c. 2, 437,) the principal advocate for a paper circulation; but advocating it on the sole condition that it be strictly regulated. He admits, nevertheless, that "the commerce and industry of a country cannot be so secure when suspended on the Dædalian wings of paper money, as on the solid ground of gold and silver; and that in time of war, the insecurity is greatly increased, and great confusion possible where the circulation is for the greater part in paper." B, 2, c. 2, 484. But in a country where loans are uncertain, and a specie circulation the only sure resource for them, the preference of that circulation assumes a far different degree of importance, as is explained in my former letters.

The only advantage which Smith proposes by substituting paper in the room of gold and silver money, B. 2, c. 2, 434, is "to replace an expensive instrument with one much less costly, and *sometimes* equally convenient;" that is to say, page 437, "to allow the gold and silver to be sent abroad and converted into foreign goods," and to substitute paper as being a cheaper measure. But this makes no addition to the stock or capital of the nation. The coin sent out was worth as much, while in the country, as the goods imported and taking its place. It is only, then, a change of form in a part of the national capital, from that of gold and silver to other goods. He admits, too, that while a part of the goods received in exchange for the coin exported may be materials, tools and provisions for the employment of an additional industry, a part, also, may be taken back in foreign wines, silks, etc., to be consumed by idle people who produce nothing; and so far the substitution promotes prodigality, increases expense and corruption, without increasing production. So far also, then, it lessens the capital of the nation. What may be the amount which the conversion of the part exchanged for productive goods may add to the former productive mass, it is not easy to ascertain, because, as he says, page 441, "it is impossible to determine what is the proportion which the circulating money of any country bears to the whole value of the annual produce. It has been computed

by different authors, from a fifth¹ to a thirtieth of that value." In the United States it must be less than in any other part of the commercial world; because the great mass of their inhabitants being in responsible circumstances, the great mass of their exchanges in the country is effected on credit, in their merchants' ledger, who supplies all their wants through the year, and at the end of it receives the produce of their farms, or other articles of their industry. It is a fact, that a farmer with a revenue of ten thousand dollars a year, may obtain all his supplies from his merchant, and liquidate them at the end of the year, by the sale of his produce to him, without the intervention of a single dollar of cash. This, then, is merely barter, and in this way of barter a great portion of the annual produce of the United States is exchanged without the intermediation of cash. We might safely, then, state our medium at the minimum of one-thirtieth. But what is one-thirtieth of the value of the annual produce of the industry of the United States? Or what is the whole value of the annual produce of the United States? An able writer and competent judge of the subject, in 1799, on as good grounds as probably could be taken, estimated it, on the then population of four and a half millions of inhabitants, to

¹The real cash or money necessary to carry on the circulation and barter of a State, is nearly one-third part of all the annual rents of the proprietors of the said State; that is, one-ninth of the whole produce of the land. Sir William Petty supposes one-tenth part of the value of the whole produce sufficient. Postlethwait, voce, Cash.

be thirty-seven and a half millions sterling, or one hundred and sixty-eight and three-fourths millions of dollars. See Cooper's Political Arithmetic, page 47. According to the same estimate for our present population, it will be three hundred millions of dollars, one-thirtieth of which, Smith's minimum, would be ten millions, and one-fifth, his maximum, would be sixty millions for the quantum of circulation. But suppose that instead of our needing the least circulating medium of any nation, from the circumstance before mentioned, we should place ourselves in the middle term of the calculation, to wit: at thirty-five millions. One-fifth of this, at the least, Smith thinks should be retained in specie, which would leave twenty-eight millions of specie to be exported in exchange for other commodities; and if fifteen millions of that should be returned in productive goods, and not in articles of prodigality, that would be the amount of capital which this operation would add to the existing mass. But to what mass? Not that of the three hundred millions, which is only its gross annual produce, but to that capital of which the three hundred millions are but the annual produce. But this being gross, we may infer from it the value of the capital by considering that the rent of lands is generally fixed at one-third of the gross produce, and is deemed its net profit, and twenty times that its fee simple value. The profits on landed capital may, with accuracy enough for our purpose, be

supposed on a par with those of other capital. This would give us then for the United States, a capital of two thousand millions, all in active employment, and exclusive of unimproved lands lying in a great degree dormant. Of this, fifteen millions would be the hundred and thirty-third part. And it is for this petty addition to the capital of the nation, this minimum of one dollar, added to one hundred and thirty-three and a third or three-fourths per cent., that we are to give up our gold and silver medium, its intrinsic solidity, its universal value, and its saving powers in time of war, and to substitute for it paper, with all its train of evils, moral, political and physical, which I will not pretend to enumerate.

There is another authority to which we may appeal for the proper quantity of circulating medium for the United States. The old Congress, when we were estimated at about two millions of people, on a long and able discussion, June 22d, 1775, decided the sufficient quantity to be two millions of dollars, which sum they emitted.¹ According to this, it should be eight millions, now that we are eight millions of people. This differs little from Smith's minimum of ten millions, and strengthens our respect for that estimate.

There is, indeed, a convenience in paper; its easy

¹ Within five months after this, they were compelled by the necessities of the war, to abandon the idea of emitting only an adequate circulation, and to make those necessities the sole measure of their emissions.

transmission from one place to another. But this may be mainly supplied by bills of exchange, so as to prevent any great displacement of actual coin. Two places trading together balance their dealings, for the most part, by their mutual supplies, and the debtor individuals of either may, instead of cash, remit the bills of those who are creditors in the same dealings; or may obtain them through some third place with which both have dealings. The cases would be rare where such bills could not be obtained, either directly or circuitously, and too unimportant to the nation to overweigh the train of evils flowing from paper circulation.

From eight to thirty-five millions then being our proper circulation, and two hundred millions the actual one, the memorial proposes to issue ninety millions more, because, it says, a great scarcity of money is proved by the numerous applications for banks; to wit, New York for eighteen millions, Pennsylvania ten millions, etc. The answer to this shall be quoted from Adam Smith, B. 2, c. 2, page 462; where speaking of the complaints of the trader against the Scotch bankers, who had already gone too far in their issues of paper, he says, "those traders and other undertakers having got so much assistance from banks, wished to get still more. The banks, they seem to have thought, could extend their credits to whatever sum might be wanted, without incurring any other expense besides that of a few reams of paper. They complained of the

contracted views and dastardly spirit of the directors of those banks, which did not, they said, extend their credits in proportion to the extension of the trade of the country; meaning, no doubt, by the extension of that trade, the extension of their own projects beyond what they could carry on, either *with their own capital*, or with what they had credit to borrow of private people in the usual way of bond or mortgage. The banks, they seem to have thought, were in honor bound to supply the deficiency, and to provide them with all the capital which they wanted to trade with." And again, page 470: "when bankers discovered that certain projectors were trading, not with any capital of their own, but with that which they advanced them, they endeavored to withdraw gradually, making every day greater and greater difficulties about discounting. These difficulties alarmed and enraged in the highest degree those projectors. Their own distress, of which this prudent and necessary reserve of the banks was no doubt the immediate occasion, they called the distress of the country; and this distress of the country, they said, was altogether owing to the ignorance, pusillanimity, and bad conduct of the banks, which did not give a sufficiently liberal aid to the spirited undertakings of those who exerted themselves in order to beautify, improve and enrich the country. It was the duty of the banks, they seemed to think, to lend for as long a time, and to as great an extent, as they might wish

to borrow." It is, probably, the *good paper* of these projectors which the memorial says, the bank being *unable* to discount, goes into the hands of brokers, who (knowing the risk of this *good paper*) discount it at a much higher rate than legal interest, to the great distress of the enterprising adventurers, who had rather try trade on borrowed capital, than go to the plough or other laborious calling. Smith again says, page 478, "that the industry of Scotland languished for want of money to employ it, was the opinion of the famous Mr. Law. By establishing a bank of a particular kind, which, he seems to have imagined might issue paper to the amount of the whole value of all the lands in the country, he proposed to remedy this want of money. It was afterwards adopted, with some variations, by the Duke of Orleans, at that time Regent of France. The idea of the possibility of multiplying paper to almost any extent, was the real foundation of what is called the Mississippi scheme, the most extravagant project both of banking and stock jobbing, that perhaps the world ever saw. The principles upon which it was founded are explained by Mr. Law himself, in a discourse concerning money and trade, which he published in Scotland when he first proposed his project. The splendid but visionary ideas which are set forth in that and some other works upon the same principles, still continue to make an impression upon many people, and have perhaps, in part, contributed to that excess of

banking which has of late been complained of both in Scotland and in other places." The Mississippi scheme, it is well known, ended in France in the bankruptcy of the public treasury, the crush of thousands and thousands of private fortunes, and scenes of desolation and distress equal to those of an invading army, burning and laying waste all before it.

At the time we were funding our national debt, we heard much about "a public debt being a public blessing;" that the stock representing it was a creation of active capital for the aliment of commerce, manufactures and agriculture. This paradox was well adapted to the minds of believers in dreams, and the gulls of that size entered *bona fide* into it. But the art and mystery of banks is a wonderful improvement on that. It is established on the principle that "*private* debts are a public blessing." That the evidences of those private debts, called bank notes, become active capital, and aliment the whole commerce, manufactures, and agriculture of the United States. Here are a set of people, for instance, who have bestowed on us the great blessing of running in our debt about two hundred millions of dollars, without our knowing who they are, where they are, or what property they have to pay this debt when called on; nay, who have made us so sensible of the blessings of letting them run in our debt, that we have exempted them by law from the repayment of these debts beyond a given proportion, (generally

estimated at one-third). And to fill up the measure of blessing, instead of paying, they receive an interest on what they owe from those to whom they owe; for all the notes, or evidences of what they owe, which we see in circulation, have been lent to somebody on an interest which is levied again on us through the medium of commerce. And they are so ready still to deal out their liberalities to us, that they are now willing to let themselves run in our debt ninety millions more, on our paying them the same premium of six or eight per cent. interest, and on the same legal exemption from the repayment of more than thirty millions of the debt, when it shall be called for. But let us look at this principle in its original form, and its copy will then be equally understood. "A public debt is a public blessing." That our debt was juggled from forty-three up to eighty millions, and funded at that amount, according to this opinion was a great public blessing, because the evidences of it could be vested in commerce, and thus converted into active capital, and then the more the debt was made to be, the more active capital was created. That is to say, the creditors could now employ in commerce the money due them from the public, and make from it an annual profit of five per cent., or four millions of dollars. But observe, that the public were at the same time paying on it an interest of exactly the same amount of four millions of dollars. Where then is the gain to either party, which makes it a public blessing?

There is no change in the state of things, but of persons only. A has a debt due to him from the public, of which he holds their certificate as evidence, and on which he is receiving an annual interest. He wishes, however, to have the money itself, and to go into business with it. B has an equal sum of money in business, but wishes now to retire, and live on the interest. He therefore gives it to A in exchange for A's certificates of public stock. Now, then, A has the money to employ in business, which B so employed before. B has the money on interest to live on, which A lived on before; and the public pays the interest to B which they paid to A before. Here is no new creation of capital, no additional money employed, nor even a change in the employment of a single dollar. The only change is of place between A and B in which we discover no creation of capital, nor public blessing. Suppose, again, the public to owe nothing. Then A not having lent his money to the public, would be in possession of it himself, and would go into business without the previous operation of selling stock. Here again, the same quantity of capital is employed as in the former case, though no public debt exists. In neither case is there any creation of active capital, nor other difference than that there is a public debt in the first case, and none in the last; and we may safely ask which of the two situations is most truly a public blessing? If, then, a *public* debt be no public blessing, we may pronounce,

a fortiori, that a private one cannot be so. If the debt which the banking companies owe be a blessing to anybody, it is to themselves alone, who are realizing a solid interest of eight or ten per cent. on it. As to the public, these companies have banished all our gold and silver medium, which, before their institution, we had without interest, which never could have perished in our hands, and would have been our salvation now in the hour of war; instead of which they have given us two hundred million of froth and bubble, on which we are to pay them heavy interest, until it shall vanish into air, as Morris' notes did. We are warranted, then, in affirming that this parody on the principle of "a public debt being a public blessing," and its mutation into the blessing of private instead of public debts, is as ridiculous as the original principle itself. In both cases, the truth is, that capital may be produced by industry, and accumulated by economy; but jugglers only will propose to create it by legerdemain tricks with paper.

I have called the actual circulation of bank paper in the United States, two hundred millions of dollars. I do not recollect where I have seen this estimate; but I retain the impression that I thought it just at the time. It may be tested, however, by a list of the banks now in the United States, and the amount of their capital. I have no means of recurring to such a list for the present day; but I turn to two lists in my possession for the years of 1803 and 1804.

In 1803, there were thirty-four banks,
 whose capital was \$28,902,000

In 1804, there were sixty-six, conse-
 quently thirty-two additional ones.
 Their capital is not stated, but at the
 average of the others, (excluding the
 highest, that of the United States,
 which was of ten millions,) they
 would be of six hundred thousand
 dollars each, and add 19,200,000

Making a total of \$48,102,000

or say of fifty millions in round numbers. Now, every one knows the immense multiplication of these institutions since 1804. If they have only doubled, their capital will be of one hundred millions and if trebled, as I think probable, it will be one hundred and fifty millions, on which they are at liberty to circulate treble the amount. I should sooner, therefore, believe two hundred millions to be far below than above the actual circulation. In England, by a late parliamentary document, (see Virginia Argus of October the 18th, 1813, and other public papers of about that date,) it appears that six years ago the Bank of England had twelve millions of pounds sterling in circulation, which had increased to forty-two millions in 1812, or to one hundred and eighty-nine millions of dollars. What proportion all the other banks may add to this, I do not know; if we were allowed to suppose they equal it,

this would give a circulation of three hundred and seventy-eight millions, or the double of ours on a double population. But that nation is essentially commercial, ours essentially agricultural, and needing, therefore, less circulating medium, because the produce of the husbandman comes but once a year, and is then partly consumed at home, partly exchanged by barter. The dollar, which was of four shillings and sixpence sterling, was, by the same document, stated to be then six shillings and nine pence, a depreciation of exactly fifty per cent. The average price of wheat on the continent of Europe, at the commencement of its present war with England, was about a French crown, of one hundred and ten cents, the bushel. With us it was one hundred cents, and consequently we could send it there in competition with their own. That ordinary price has now doubled with us, and more than doubled in England; and although a part of this augmentation may proceed from the war demand, yet from the extraordinary nominal rise in the prices of land and labor here, both of which have nearly doubled in that period, and are still rising with every new bank, it is evident that were a general peace to take place to-morrow, and time allowed for the re-establishment of commerce, justice, and order, we could not afford to raise wheat for much less than two dollars, while the continent of Europe, having no paper circulation, and that of its specie not being augmented, would raise it at their former price of one hundred

and ten cents. It follows, then, that with our redundancy of paper, we cannot, after peace, send a bushel of wheat to Europe, unless extraordinary circumstances double its price in particular places, and that then the exporting countries of Europe could undersell us.

It is said that our paper is as good as silver, because we may have silver for it at the bank where it issues. This is not true. One, two, or three persons might have it; but a general application would soon exhaust their vaults, and leave a ruinous proportion of their paper in its intrinsic worthless form. It is a fallacious pretence, for another reason. The inhabitants of the banking cities might obtain cash for their paper, as far as the cash of the vaults would hold out, but distance puts it out of the power of the country to do this. A farmer having a note of a Boston or Charleston bank, distant hundreds of miles, has no means of calling for the cash. And while these calls are impracticable for the country, the banks have no fear of their being made from the towns; because their inhabitants are mostly on their books, and there on sufferance only, and during good behavior.

In this state of things, we are called on to add ninety millions more to the circulation. Proceeding in this career, it is infallible, that we must end where the revolutionary paper ended. Two hundred millions was the whole amount of all the emissions of the old Congress, at which point their bills ceased

to circulate. We are now at that sum, but with treble the population, and of course a longer tether. Our depreciation is, as yet, but about two for one. Owing to the support its credit receives from the small reservoirs of specie in the vaults of the banks, it is impossible to say at what point their notes will stop. Nothing is necessary to effect it but a general alarm; and that may take place whenever the public shall begin to reflect on, and perceive the impossibility that the banks should repay this sum. At present, caution is inspired no farther than to keep prudent men from selling property on long payments. Let us suppose the panic to arise at three hundred millions, a point to which every session of the legislatures hasten us by long strides. Nobody dreams that they would have three hundred millions of specie to satisfy the holders of their notes. Were they even to top now, no one supposes they have two hundred millions in cash, or even the sixty-six and two-third millions, to which amount alone the law compels them to repay. One hundred and thirty-three and one-third millions of loss, then, is thrown on the public by law; and as to the sixty-six and two-thirds, which they are legally bound to pay, and ought to have in their vaults, every one knows there is no such amount of cash in the United States, and what would be the course with what they really have there? Their notes are refused. Cash is called for. The inhabitants of the banking towns will get what is in the vaults, until a few banks declare their

insolvency; when, the general crush becoming evident, the others will withdraw even the cash they have, declare their bankruptcy at once, and leave an empty house and empty coffers for the holders of their notes. In this scramble of creditors, the country gets nothing, the towns but little. What are they to do? Bring suits? A million of creditors bring a million of suits against John Nokes and Robert Styles, wheresoever to be found? All nonsense. The loss is total. And a sum is thus swindled from our citizens, of seven times the amount of the real debt, and four times that of the fictitious one of the United States, at the close of the war. All this they will justly charge on their legislatures; but this will be poor satisfaction for the two or three hundred millions they will have lost. It is time, then, for the public functionaries to look to this. Perhaps it may not be too late. Perhaps, by giving time to the banks, they may call in and pay off their paper by degrees. But no remedy is ever to be expected while it rests with the State legislatures. Personal motive can be excited through so many avenues to their will, that, in their hands, it will continue to go on from bad to worse, until the catastrophe overwhelms us. I still believe, however, that on proper representations of the subject, a great proportion of these legislatures would cede to Congress their power of establishing banks, saving the charter rights already granted. And this should be asked, not by way of amendment to the Constitution, be-

cause until three-fourths should consent, nothing could be done; but accepted from them one by one, singly, as their consent might be obtained. Any single State, even if no other should come into the measure, would find its interest in arresting foreign bank paper immediately, and its own by degrees. Specie would flow in on them as paper disappeared. Their own banks would call in and pay off their notes gradually, and their constituents would thus be saved from the general wreck. Should the greater part of the States concede, as is expected, their power over banks to Congress, besides insuring their own safety, the paper of the non-conceding States might be so checked and circumscribed, by prohibiting its receipt in any of the conceding States, and even in the non-conceding as to duties, taxes, judgments, or other demands of the United States, or of the citizens of other States, that it would soon die of itself, and the medium of gold and silver be universally restored. This is what ought to be done. But it will not be done. *Carthago non delibitur*. The overbearing clamor of merchants, speculators, and projectors, will drive us before them with our eyes open, until, as in France, under the Mississippi bubble, our citizens will be overtaken by the crush of this baseless fabric, without other satisfaction than that of execrations on the heads of those functionaries, who, from ignorance, pusillanimity or corruption, have betrayed the fruits of their industry into the hands of projectors and swindlers.

When I speak comparatively of the paper emission of the old Congress and the present banks, let it not be imagined that I cover them under the same mantle. The object of the former was a holy one; for if ever there was a holy war, it was that which saved our liberties and gave us independence. The object of the latter, is to enrich swindlers at the expense of the honest and industrious part of the nation.

The sum of what has been said is, that pretermitt-
ing the constitutional question on the authority of Congress, and considering this application on the grounds of reason alone, it would be best that our medium should be so proportioned to our produce, as to be on a par with that of the countries with which we trade, and whose medium is in a sound state; that specie is the most perfect medium, because it will preserve its own level; because, having intrinsic and universal value, it can never die in our hands, and it is the surest resource of reliance in time of war; that the trifling economy of paper, as a cheaper medium, or its convenience for transmission, weighs nothing in opposition to the advantages of the precious metals; that it is liable to be abused, has been, is, and forever will be abused, in every country in which it is permitted; that it is already at a term of abuse in these States, which has never been reached by any other nation, France excepted, whose dreadful catastrophe should be a warning against the instrument which produced it; that we are already at ten or twenty times the due quantity

of medium; insomuch, that no man knows what his property is now worth, because it is bloating while he is calculating; and still less what it will be worth when the medium shall be relieved from its present dropsical state; and that it is a palpable falsehood to say we can have specie for our paper whenever demanded. Instead, then, of yielding to the cries of scarcity of medium set up by speculators, projectors and commercial gamblers, no endeavors should be spared to begin the work of reducing it by such gradual means as may give time to private fortunes to preserve their poise, and settle down with the subsiding medium; and that, for this purpose, the States should be urged to concede to the General Government, with a saving of chartered rights, the exclusive power of establishing banks of discount for paper.

To the existence of banks of *discount* for *cash*, as on the continent of Europe, there can be no objection, because there can be no danger of abuse, and they are a convenience both to merchants and individuals. I think they should even be encouraged, by allowing them a larger than legal interest on short discounts, and tapering thence, in proportion as the term of discount is lengthened, down to legal interest on those of a year or more. Even banks of *deposit*, where cash should be lodged, and a paper acknowledgment taken out as its representative, entitled to a return of the cash on demand, would be convenient for remittances, travelling persons, etc. But, liable as

its cash would be to be pilfered and robbed, and its paper to be fraudulently re-issued, or issued without deposit, it would require skilful and strict regulation. This would differ from the bank of Amsterdam, in the circumstance that the cash could be redeemed on returning the note.

When I commenced this letter to you, my dear Sir, on Mr. Law's memorial, I expected a short one would have answered that. But as I advanced, the subject branched itself before me into so many collateral questions, that even the rapid views I have taken of each have swelled the volume of my letter beyond my expectations, and, I fear, beyond your patience. Yet on a revisal of it, I find no part which has not so much bearing on the subject as to be worth merely the time of perusal. I leave it then as it is; and will add only the assurances of my constant and affectionate esteem and respect.

TO JOHN JACOB ASTOR, ESQ.

MONTICELLO, November 9, 1813.

DEAR SIR,—Your favor of October 18th has been duly received, and I learn with great pleasure the progress you have made towards an establishment on Columbia river. I view it as the germ of a great, free and independent empire on that side of our continent, and that liberty and self-government spreading from that as well as this side, will ensure their complete establishment over the whole. It must be

still more gratifying to yourself to foresee that your name will be handed down with that of Columbus and Raleigh, as the father of the establishment and founder of such an empire. It would be an afflicting thing indeed, should the English be able to break up the settlement. Their bigotry to the bastard liberty of their own country, and habitual hostility to every degree of freedom in any other, will induce the attempt; they would not lose the sale of a bale of furs for the freedom of the whole world. But I hope your party will be able to maintain themselves. If they have assiduously cultivated the interests and affections of the natives, these will enable them to defend themselves against the English, and furnish them an asylum even if their fort be lost. I hope, and have no doubt our government will do for its success whatever they have power to do, and especially that at the negotiations for peace, they will provide, by convention with the English, for the safety and independence of that country, and an acknowledgment of our right of patronizing them in all cases of injury from foreign nations. But no patronage or protection from this quarter can secure the settlement if it does not cherish the affections of the natives and make it their interest to uphold it. While you are doing so much for future generations of men, I sincerely wish you may find a present account in the just profits you are entitled to expect from the enterprise. I will ask of the President permission to read Mr. Stuart's journal. With fervent

wishes for a happy issue to this great undertaking, which promises to form a remarkable epoch in the history of mankind, I tender you the assurance of my great esteem and respect.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, November 12, 1813.

DEAR SIR,—As I owe you more for your letters of October 12th and 28th than I shall be able to pay, I shall begin with the P. S. to the last.

I am very sorry to say that I cannot assist your memory in the inquiries of your letter of August 22d. I really know not who was the compositor of any one of the petitions or addresses you enumerate. Nay, further: I am certain I never did know. I was so shallow a politician that I was not aware of the importance of those compositions. They all appeared to me, in the circumstances of the country, like children's play at marbles or push-pin, or like misses in their teens, emulating each other in their pearls, their bracelets, their diamond pins and Brussels lace.

In the Congress of 1774, there was not one member, except Patrick Henry, who appeared to me sensible of the precipice, or rather the pinnacle on which we stood, and had candor and courage enough to acknowledge it. America is in total ignorance, or under infinite deception concerning that assembly. To draw the characters of them all would require a volume, and would now be considered as a carica-

tured print. One-third Tories, another Whigs, and the rest Mongrels.

There was a little aristocracy among us of talents and letters. Mr. Dickinson was *primus inter pares*, the bell-wether, the leader of the aristocratical flock.

Billy, *alias* Governor Livingston, and his son-in-law, Mr. Jay, were of the privileged order. The credit of most if not all those compositions, was often if not generally given to one or the other of these choice spirits. Mr. Dickinson, however, was not on any of the original committees. He came not into Congress till October 17th. He was not appointed till the 15th by his assembly.

Vol. 1, 30. Congress adjourned October 27th though our correct secretary has not recorded any final adjournment or dissolution. Mr. Dickinson was in Congress but ten days. The business was all prepared, arranged, and even in a manner finished before his arrival.

R. H. Lee was the chairman of the committee for preparing the loyal and dutiful address to his majesty, Johnson and Henry were acute spirits, and understood the controversy very well, though they had not the advantages of education like Lee and John Rutledge.

The subject had been near a month under discussion in Congress, and most of the materials thrown out there. It underwent another deliberation in committee, after which they made the customary compliment to their chairman, by requesting him to

prepare and report a draught, which was done, and after examination, correction, amelioration or pejoration, as usual reported to Congress. October 3d, 4th and 5th were taken up in debating and deliberating on matters proper to be contained in the address to his majesty, vol. 122. October 21st. The address to the king was, after debate, re-committed, and Mr. John Dickinson added to the committee. The first draught was made, and all the essential materials put together by Lee. It might be embellished and seasoned afterwards with some of Mr. Dickinson's piety, but I know not that it was. Neat and handsome as the composition is, having never had any confidence in the utility of it, I never have thought much about it since it was adopted. Indeed, I never bestowed much attention on any of those addresses which were all but repetitions of the same things, the same facts and arguments, dress and ornament rather than body, soul or substance. My thoughts and cares were nearly monopolized by the theory of our rights and wrongs, by measures for the defence of the country, and the means of governing ourselves. I was in a great error, no doubt, and am ashamed to confess it; for those things were necessary to give popularity to our cause both at home and abroad. And to show my stupidity in a stronger light, the reputation of any one of those compositions has been a more splendid distinction than any aristocratical star or garter in the escutcheon of every man who has enjoyed it. Very sorry that I cannot give you

more satisfactory information, and more so that I cannot at present give more attention to your two last excellent letters. I am, as usual, affectionately yours.

N. B. I am almost ready to believe that John Taylor, of Caroline, or of Hazlewood, Port Royal, Virginia, is the author of 630 pages of printed octavo upon my books that I have received. The style answers every characteristic that you have intimated. Within a week I have received and looked into his *Arator*. They must spring from the same brain, as *Minerva* issued from the head of *Jove*, or rather as *Venus* rose from the froth of the sea. There is, however, a great deal of good sense in *Arator*, and there is some in his *Aristocracy*.

JOHN ADAMS TO THOMAS JEFFERSON.

QUINCY, November 15, 1813.

DEAR SIR,—Accept my thanks for the comprehensive syllabus in your favor of October 12th.

The Psalms of David, in sublimity, beauty, pathos and originality, or, in one word, in poetry, are superior to all the odes, hymns and songs in our language. But I had rather read them in our prose translation, than in any version I have seen. His morality, however, often shocks me, like *Tristram Shandy's* execrations.

Blacklock's translation of Horace's "Justum," is admirable; superior to Addison's. Could David be translated as well, his superiority would be universally acknowledged. We cannot compare the sublime poetry. By Virgil's "Pollio," we may conjecture there was prophecy as well as sublimity. Why have those verses been annihilated? I suspect Platonic Christianity, Pharisaical Judaism or Machiavellian politics, in this case, as in all other cases, of the destruction of records and literary monuments,

The auri sacra fames, et dominandi sæva cupido.

Among all your researches in Hebrew history and controversy, have you ever met a book the design of which is to prove that the ten commandments, as we have them in our Catechisms and hung up in our churches, were not the ten commandments written by the finger of God upon tables delivered to Moses on Mount Sinai, and broken by him in a passion with Aaron for his golden calf, nor those afterwards engraved by him on tables of stone; but a very different set of commandments?

There is such a book, by J. W. Goethe; *Schriften*, Berlin, 1775-1779. I wish to see this book. You will perceive the question in Exodus, 20: 1, 17, 22, 28, chapter 24: 3, etc.; chapter 24: 12; chapter 25: 31; chapter 31: 18; chapter 31: 19; chapter 34: 1; chapter 34: 10, etc.

I will make a covenant with all this people. Observe that which I command this day:

1. Thou shalt not adore any other God. Therefore take heed not to enter into covenant with the inhabitants of the country; neither take for your sons their daughters in marriage. They would allure thee to the worship of false gods. Much less shall you in any place erect images.

2. The feast of unleavened bread shalt thou keep. Seven days shalt thou eat unleavened bread, at the time of the month Abib; to remember that about that time, I delivered thee from Egypt.

3. Every first born of the mother is mine; the male of thine herd, be it stock or flock. But you shall replace the first born of an ass with a sheep. The first born of your sons shall you *redeem*. No man shall appear before me with empty hands.

4. Six days shalt thou labor. The seventh day thou shalt rest from ploughing and gathering.

5. The feast of weeks shalt thou keep with the firstlings of the wheat harvest; and the feast of harvesting at the end of the year.

6. Thrice in every year all male persons shall appear before the Lord. Nobody shall invade your country, as long as you obey this command.

7. Thou shalt not sacrifice the blood of a sacrifice of mine, upon leavened bread.

8. The sacrifice of the Passover shall not remain till the next day.

9. The firstlings of the produce of your land, thou shalt bring to the house of the Lord.

10. Thou shalt not boil the kid, while it is yet sucking.

And the Lord spake to Moses: Write these words, as after these words I made with you and with Israel a covenant.

I know not whether Goethe translated or abridged from the Hebrew, or whether he used any translation, Greek, Latin, or German. But he differs in form and words somewhat from our version, Exodus 34: 10 to 28. The sense seems to be the same. The tables were the evidence of the covenant, by which the Almighty attached the people of Israel to himself. By these laws they were separated from all other nations, and were reminded of the principal epochs of their history.

When and where originated our ten commandments? The tables and the ark were lost. Authentic copies in few, if any hands; the ten Precepts could not be observed, and were little remembered.

If the book of Deuteronomy was compiled, during or after the Babylonian captivity, from traditions, the error or amendment might come in those.

But you must be weary, as I am at present of problems, conjectures, and paradoxes, concerning Hebrew, Grecian and Christian and all other antiquities; but while we believe that the *finis bonorum* will be happy, we may leave learned men to their disquisitions and criticisms.

I admire your employment in selecting the philosophy and divinity of Jesus, and separating it from all mixtures. If I had eyes and nerves I would go through both Testaments and mark all that I under-

stand. To examine the Mishna, Gemara, Cabbala, Jezirah, Sohar, Cosri and Talmud of the Hebrews would require the life of Methuselah, and after all his 969 years would be wasted to very little purpose. The dæmon of hierarchical despotism has been at work both with the Mishna and Gemara. In 1238 a French Jew made a discovery to the Pope (Gregory Ninth) of the heresies of the Talmud. The Pope sent thirty-five articles of error to the Archbishops of France, requiring them to seize the books of the Jews and burn all that contained any errors. He wrote in the same terms to the kings of France, England, Aragon, Castile, Leon, Navarre and Portugal. In consequence of this order, twenty cartloads of Hebrew books were burnt in France; and how many times twenty cartloads were destroyed in the other kingdoms? The Talmud of Babylon and that of Jerusalem were composed from 120 to 500 years after the destruction of Jerusalem.

If Lightfoot derived light from what escaped from Gregory's fury, in explaining many passages in the New Testament, by comparing the expressions of the Mishna with those of the Apostles and Evangelists, how many proofs of the corruptions of Christianity might we find in the passages burnt?
