

The Writings of
Thomas Jefferson

Jefferson at Forty-six

Photogravure reproduced from the Bust by Jean Antoine Houdon, in the
Rooms of the New York Historical Library

Jefferson paid Houdon, on July 3, 1789, one thousand francs for the original marble bust, which was destroyed at Monticello during Jefferson's lifetime, by the carelessness of a workman. Fortunately there are two signed plaster casts of this bust, owned respectively by the New York Historical Society and the American Philosophical Society of Philadelphia.

THE WRITINGS OF THOMAS JEFFERSON

Library Edition

CONTAINING HIS

AUTOBIOGRAPHY, NOTES ON VIRGINIA, PARLIAM-
ENTARY MANUAL, OFFICIAL PAPERS,
MESSAGES AND ADDRESSES, AND OTHER
WRITINGS, OFFICIAL AND PRIVATE,
NOW COLLECTED AND

PUBLISHED IN THEIR ENTIRETY FOR THE FIRST TIME

INCLUDING

ALL OF THE ORIGINAL MANUSCRIPTS, DEPOSITED IN THE DEPARTMENT
OF STATE AND PUBLISHED IN 1853 BY ORDER OF THE
JOINT COMMITTEE OF CONGRESS

THE UNIVERSITY OF VIRGINIA,
AND
THOMAS JEFFERSON, ITS FATHER.¹

The lives of institutions, like those of human beings, have their vicissitudes. This University in whose honor we are gathered together to-day, has not been an exception. It had a long struggle even for existence. Joy and triumph followed when, eighty years ago, its first corner-stone was laid with pomp and ceremony in the presence of a distinguished company which included three illustrious men who had filled the office of President of the United States. A long succeeding period of growth, prosperity and happiness was rudely interrupted by the desolating storm of war—war raging with fury around its own temples, and driving even its own peaceful children into the grim work of destruction and slaughter. But even war, which spares almost nothing, yet spared the walls with their precious contents. The heart of the soldier will still melt before the sad pleading of the Muse.

¹ An Address delivered by James C. Carter, LL. D., upon the occasion of the Dedication of the new Buildings of the University, June 14, 1898.

The University of Virginia, and

“Lift not thy spear against the Muses’ bower:
The great Emathian conqueror bid spare
The house of Pindarus, when temple and tow’r
Went to the ground; and the repeated air
Of sad Electra’s poet had the pow’r
To save the Athenian walls from ruin bare.”

The dawn of peace found the University weak and exhausted, but not disheartened. The people of Virginia who had learned to cherish it, its sons who looked back to it with fond affection, the warm-hearted and open-handed friends of learning in distant places came forward with liberal help. The Muses returned and re-peopled their haunts, and a new era of prosperity, stimulated by the new national life, began its course.

But another stroke of adversity awaited it,—this time, not from the hostile passions of man, but from the rage of the elements, less savage indeed, but not less unsparring. Its very walls were laid in ruins and their precious treasures wasted. But if any evidence were needed to show the extent to which the University had increased in power, in grandeur, in usefulness, and in the esteem of the people of Virginia and the friends everywhere of the higher education, it would be found in the undaunted spirit with which this disaster was faced. There was an immediate resolve that it should rise from its ashes in yet fairer proportions, more worthy of the spirit in which it was originally founded, better equipped for the great work to which it was originally dedicated, and a more glorious monument to the great name forever associated with it.

This great purpose has now been accomplished, and we are gathered together to-day to celebrate its completion. The scene before me and around is the best evidence of the interest of the occasion. The sons of the University from near and far have returned to the bosom of their Fair Mother to rejoice together over her happiness. Representatives of other seats of learning are here to offer their congratulations. The diplomatic representative of the great empire at the antipodes—an empire in which learning has for ages been held in honor—lends to the occasion the dignity of his presence. The venerable Commonwealth is here in the person of the Chief Magistrate and principal officers of state to manifest her own interest in an institution which her bounty has cherished and which has given back in return the support upon which alone a free Commonwealth can rest.

It is the custom on such occasions to make provision for deliberate utterance of the thoughts which they are calculated to excite, and the authorities of the University have thought it suitable to invite to this office, not—I have been made to feel—an entire stranger, but a friend from a distance, whose opportunities have not been such as to permit a close observation of the history and fortunes of the institution. Profoundly sensible of the honor thus conferred upon me, I cannot help feeling how inadequate I am to its due performance. I cannot speak of the University of Virginia with all the affection which

the graduate cherishes for his Alma Mater, nor with the full pride which the Virginian alone can feel; but to those who regard this institution as their own, who have control over its destinies, or have been reared within its walls, a view of it, as it appears to outside observers, may not be unwelcome, or wholly uninteresting. We are sometimes enabled to correct our own conceptions of ourselves, and qualify ourselves in some degree for the better performance of our own duties, by learning what is thought of us and what is expected of us by others.

Let me then occupy your thoughts for a brief hour with a sketch, very rude and imperfect, of the origin of the University and of its principal features as they appear to the world at large, to which I may add some allusion to its illustrious founder, and to the political philosophy the teaching of which he so ardently desired to promote.

Its origin offers a strong contrast with the beginnings of our principal seats of learning which preceded it. Harvard, Yale, Columbia and Princeton began as mere schools for humble colonies, with no prevision of the great destinies which awaited them. Their majestic proportions have been developed and shaped, during long periods of time, by many different hands and many varying influences. But the University of Virginia sprang into life, in full panoply, from the conception of a single man, like Minerva from the brain of Jove. The aim of its founder was not to supply merely local and immedi-

ate wants, but to make provision for the growth, maintenance and glory of the new civilization and the new empire with which his visions were filled. No sketch can even be outlined of the origin and character of this institution which does not take in as a principal element the figure of this illustrious man.

The leading feature in the mind and character of Thomas Jefferson was a firm and undoubting belief in the worth and dignity of human nature, and in the capacity of man for self government. This was at once the conclusion of his reason and the passion of his soul. Whence it came to him it is difficult to discover; it was not from the sense of subjection and oppression felt by an inferior class in society towards those above it, for he belonged to the class of well to do, if not wealthy, Virginia land-holders; not from the venerable college of William and Mary, in which he was bred, for his opinions were not the cherished sentiments of that institution; not from his early and familiar acquaintance, to which he has acknowledged his great indebtedness, with Dr. Small, the President of that College, George Wythe and Gov. Fauquier, for their tendencies were towards very conservative views; not even from the fiery eloquence of Patrick Henry, to which he had often listened with admiration,—that may have fanned the flame in his bosom—but indignation at the Stamp Act would scarcely have nerved him to his early effort in the House of Burgesses to facilitate the manumission of slaves. It seems to have been

inborn; but whether inborn or communicated, it ruled his life; it burst from him like the peal of an anthem when he came to pen the immortal Declaration; his long residence in Europe only confirmed it; the excesses of the French Revolution had no effect to abate it, and it breathes through every line of his public utterances from his seat as President of the United States; it was the foundation of his virtues and the source of his errors; and not only the source of these, but the cause of the false imputation to him of errors he never committed; his friendships and his enmities were alike due to it; he distrusted all who were not in full sympathy with it, and they distrusted him. Taught by bitter experience that the principles of true democracy are often as distasteful to the multitude as they are to the possessors of wealth and privilege, that the masses of men, fascinated by the splendors and force of concentrated power, may easily be persuaded, sometimes, to surrender in exchange for them the sense of individual freedom, even this did not dishearten him, and after filling, for eight years, the highest office in the gift of his countrymen with undeviating fidelity to the principles of popular government, he retired to the rest and repose of his beloved Monticello, carrying thither convictions of the worth and dignity of human nature, and ideals of government by the people, as distinct and fresh as those which animated him in the morning of his life.

Men have forever been prone to cast either a

doubt or a sneer upon the apparently beneficent deeds of those whose principles they reject and whose influence they fear. A large part, at least, of the acts of Mr. Jefferson's official life still remain, and will, perhaps, forever remain, the subjects of dispute; but he himself has happily singled out, to be engraven upon his tomb, three particular achievements with which he wished his name to be associated, by friend or stranger, in all future time. The latest generation of his countrymen will not question the justice of his claim, nor withhold any part of the full tribute of honor and glory which belongs to the "author of the Declaration of American Independence, of the Statute of Virginia for Religious Freedom, and to the Father of the University of Virginia."¹

Mr. Jefferson, at his retirement, was sixty-six years of age. His intellectual faculties were unimpaired, his bodily strength was well preserved, and he was still conscious of the possession of a large capacity for usefulness to his countrymen and to mankind. His ambition for public office, never very deeply cherished, had been fully satisfied, and he was inwardly resolved never again to seek it. He had cherished through life a passion for the acquisition of knowledge, and was one of the best educated men, if not the best educated man, of his country and time, and he could have filled the remainder of his days with a serene and tranquil enjoyment of the pleasures of literature and science; but such a life

¹ From the inscription on his tomb.

was not possible for him, nor was any life possible for him the strength of which was not devoted to the advancement of the liberty and happiness of men. He had in early manhood formed a scheme of public education, which, from time to time, had pressed itself on his attention throughout even the busiest years of his public life. It was part of his political philosophy. Lover of liberty as he was, firmly as he believed that popular government was the only form of public authority consistent with the highest happiness of men, he yet did not believe that any nation or community could permanently retain this blessing without the benefit of the lessons of truth, and the discipline of virtue to be derived only from the intellectual and moral education of the whole people.

His general scheme appears to have embraced three branches: (1) the division of the whole state into districts, or wards, and the establishment in each of a primary school in which the rudiments of knowledge should be taught to all; (2) the establishment of a sufficient number of higher academies or colleges, in which those exhibiting in the primary schools superior intellectual endowments might acquire, *gratis*, a further and higher education; and (3) a State University, in which each science should "be taught in the highest degree it has yet attained."¹

The length of time during which, and the intensity with which Mr. Jefferson had devoted himself to this great object, is well manifested by an extract from a

¹ See Jefferson's Autobiography; vol. 1, p. 47.

letter written by him in 1818, some ten years after his retirement from the presidency. "A system," says he, "of general instruction which shall reach every description of our citizens, from the highest to the poorest, *as it was the earliest, so will it be the latest, of all the public concerns in which I shall permit myself to take an interest.*"¹

The two branches of his scheme relating respectively to the primary schools and the higher academies encountered obstacles which it was impossible for him to surmount, and they are not those features which chiefly concern us to-day; but I cannot resist the temptation to read before this audience his statement of the objects of primary education contained in the celebrated report prepared by him for the Commission appointed by the Governor of Virginia under an act of the General Assembly and which met in 1818 at the unpretending tavern at Rockfish Gap in the Blue Ridge. There have been held since that day, in many parts of the United States, conventions and conferences of teachers, educators and friends and patrons of learning more numerous, attended, favored with more abundant information, and with other advantages for the consideration and discussion of educational questions; but none, certainly, more distinguished for the dignity and ability of its members. Besides senators and judges, there were among those who assembled on that occasion, James Monroe, then President of the United States,

¹ Correspondence of Jefferson and Cabell; p. 106.

and his two predecessors, James Madison and Thomas Jefferson. And, certainly, we may look in vain for any public statement before that time or since, of the objects of public education so concise, so comprehensive and so just as that contained in the report of this Commission written by Jefferson. He thus defined the objects of *primary* education:

“ 1. To give to every citizen the information he needs for the transaction of his own business.

“ 2. To enable him to calculate for himself, and to express and preserve his ideas, his contracts and accounts in writing.

“ 3. To improve, by reading, his morals and faculties.

“ 4. To understand his duties to his neighbors and country, and to discharge with competence the functions confided to him by either.

“ 5. To know his rights; to exercise with order and justice those he retains; to choose with discretion the fiduciary of those he delegates; and to notice their conduct with diligence, with candor and judgment.

“ 6. And, in general, to observe with intelligence and faithfulness all the social relations under which he shall be placed.”¹

This statement of the objects of primary education will never be improved. It ought to be written in letters of gold and hung in every primary school throughout the land and be known by heart to every teacher and child therein. It is, indeed, more than

¹ U. S. Bureau of Education, Circular No. 1, p. 33.

a statement of the elements of rudimentary education. It is an enumeration of the duties of every good citizen under a popular government.

The apparent impossibility, at the time he began his effort, of impressing upon the Commonwealth his sense of the necessity of a universal provision for primary education, moved Mr. Jefferson to turn his attention to the third branch of his scheme, that which embraced a State University. This, although not, in his democratic view, the part of his plan which promised results of the widest utility, was the one which offered to him the most congenial field of effort, and held out to his hopes a better promise of success.

His conception in its main elements had been in his mind from early manhood. He had never dismissed it from his thoughts. He cherished it during the gloomy years of the Revolution. He improved it during his long sojourn in France. He recurred to it again and again in the midst of the perplexities which distracted him during both his presidential terms, and he brought it gradually to a completion after his retirement. He sought every aid which he could derive from independent study, from unceasing correspondence with men of learning familiar with university education and from personal intercourse with those interested in his project whom he could attract to his own hospitable roof.

I have no time to recount the successive steps by which his plan proceeded towards its realization; its partial embodiment in the Albemarle Academy, its

fuller development in the Central College, under which name the corner-stone of the future University was laid, and its final establishment in fact and in name by the passage through the General Assembly, on the 25th of January, 1819, of the bill uniting the Central College and the University of Virginia.

It would be no disparagement of the glory to which Mr. Jefferson is entitled for this great achievement to say that he could never have accomplished the work without the aid of others. The assent of the Legislature was needed, and for this a favoring public sentiment was necessary; but it was here that Mr. Jefferson's task began. For forty years he had been laboring in every form in which public sentiment could be reached, through the press, and by correspondence and personal influence with leading public men, to create, and he finally created, a conviction of the importance and necessity of the work. But, however conspicuous the place which may be assigned to him, there was one coadjutor whose devoted labor and effective aid can never be forgotten. The right arm upon which he relied in later years, and without which it may well be doubted whether this audience would be gathered together to-day, was Joseph C. Cabell. The *alumni* and friends of the University of Virginia may be trusted to take care that that name shall not perish from the grateful memory of men.

The whole work, however, was as yet by no means accomplished. I have just said that the University

had become established in fact and in name; but the fact was only the legislative *fiat*, and the name as yet but a name. The conception of a University embraces noble buildings which contain its libraries, its collections, its halls of instruction, and which, in most instances prior to this time, had been the contributions of successive generations. Of these there were as yet none; and in nothing does this institution more clearly appear as the creation of Mr. Jefferson's mind than in its material structures and their situation.

In respect to the situation, the presence of a selfish interest may be recognized and excused. Among the motives which stimulated his zeal was undoubtedly a desire, of which we have more than one example among democratic statesmen, to spend the years of retirement in the congenial neighborhood of a great institution of learning and science; and it was the longing of his heart that the University should have her permanent seat, "her arms and her chariot," in the neighborhood of his own Monticello. To this end he employed every resource of argument, and when this failed, of art, to persuade the body of which he was himself a member, of the superior claims of this locality. They were obliged to admit that healthiness and centrality ought to be the predominating considerations; but, admitting this, they could hardly resist the argument afforded by Mr. Jefferson's "imposing array of octogenarians" then still living in this region; and, as to centrality, he was ready with a demonstration that on whatever

theory the lines might be run "they would be found to pass close to Charlottesville."¹

The form, the architecture, and the arrangement of the material structures seem to have been altogether his own; and here he did not allow the simplicity and frugality of his political philosophy to lead him astray. His vision was of a University which would appeal to the sentiments, and thus attract to itself the most famous teachers, with crowds of scholars. He knew the Muses could not be enticed to take up their abode in mean and squalid habitations. He wrote to his efficient helper, Cabell: "The great object of our aim from the beginning has been to make the establishment the most eminent in the United States in order to draw to it the youth of every State, but especially of the South and West. We have proposed, therefore, to call to it characters of the first order of science from Europe, as well as our own country, and not only by the salaries and the comforts of their situation, but by the distinguished scale of its structure and preparation, and the promise of future eminence which these would hold up, to induce them to commit their reputation to its future fortunes. Had we built a barn for a college and log huts for accommodations, should we ever have had the assurance to propose to an European professor of character to come to it?"² He sought, therefore, to reproduce on the American frontier a

¹ U. S. Bureau of Education, Circular No. 1, 1888, p. 37.

² Correspondence of Jefferson and Cabell; p. 260.

vision of the architecture and art of Greece and Rome. He seems to have been his own architect and almost his own builder. It would be strange, indeed, if the results had altogether escaped criticism, or if personal vanity had not, to some extent, usurped the place of knowledge; but it is no mean tribute to the merit of the original design that it has been, after the lapse of three-quarters of a century, reproduced and perpetuated in the principal restoration which we dedicate to-day.

On the 7th of March, 1825, the University was thrown open for the reception of students, and its actual career began. It must have been a day of unspeakable satisfaction to Mr. Jefferson. A long life filled with public service and public cares had been at last crowned by what he regarded as its most useful achievement, at the very moment when he had reached the boundary which limits human endeavor; but if he was capable of no further effort there was no further effort which he was called upon to make. It was the very point at which, as he had many times declared, he could with happiness pronounce his "*nunc dimittis*," and the moment was not long deferred. On the 4th day of July of the succeeding year, just half a century after the American Colonies had rung out to the world in his own immortal language their declaration of nationality, he closed his career on earth.

This is not the time, had I the ability, to make any attempt to assign the place to which this illustrious

man is entitled on the roll of philanthropists. Coming as he did upon the theatre of conspicuous life at a period when the fundamental principles of government were the subjects of universal discussion, subjects upon which freemen are at all times inclined to array themselves on one or the other of two opposing sides,—one dreading the effects of popular ignorance, the other fearing the selfishness of the enlightened,—one looking back to the supposed wisdom and virtue of the past, and the other looking forward with confidence to the possibilities and promise of the future,—plunging, as he did, into these conflicts with all the earnestness of long cherished and positive convictions, he could hardly fail to encounter hostilities which would stop at no methods by which his principles or his character could be discredited. By some irony of fate the great apostle of democracy was made to suffer in his own person all the injustice which democratic societies can perpetrate. The great defender of the liberty of speech and the press was rewarded by an outpouring from the press and the pulpit of calumny and detraction unparalleled before or since; and the foremost champion of popular principles, faithful to them in every act of his life, retired from the high office of President under a load of unpopularity.

But,

“Time! the corrector where our judgments err,

* * * * * * *
 * * * * * * *

Time, the avenger!”

has dispelled the clouds of detraction and the mists of prejudice and revealed in clearer light the true image of the statesman and the patriot. Looking at the denunciation poured out upon him by his contemporaries and the applause with which posterity has hailed his name, we are moved to think with the great English orator "that obloquy is a necessary ingredient in the composition of all true glory," and that "it was not only in the Roman customs, but it is in the nature and constitution of things that calumny and abuse are essential parts of a triumph."

He had, indeed, few of the qualities which mark the great military chieftain, the conqueror, or the dictator, but what figure in the gallery of American renown can point to such a catalogue of pacific achievement?—the abolition in his native State of the laws of primogeniture and entail—the Virginia Statute of religious freedom—the Declaration of Independence—the kind and peaceful removal of the Indian tribes to the west of the Mississippi—the near extinction of the national debt—the acquisition of Louisiana—the University of Virginia—where are the crimes or the vices which dim the lustre of these deeds? Those whose ideal of the duty and destiny of the Republic is that of a conquering nation ready at any moment for the grim business of war, eager to avenge an insult real or supposed, greedy of military and naval renown, inclined to erect its own will into law, and enforce it against all opposition, to strike first and reason afterwards—these will find

little to admire in the career of Mr. Jefferson. He knew too well the lessons of history. He knew what visions of empire had dazzled the ambition of Rome, while Rome was yet free,—

“Tu regere imperio populos, Romane, memento;
Hæ tibi erunt artes; pacisque imponere morem,
Parcere subjectis, et debellare superbos.”

And he knew also the terrible penalty to Rome and the world which an indulgence of those visions cost. He had lived in the midst of the interesting scenes which ushered in the emancipation of France, and had afterwards shuddered to see how ruthlessly the passion for extended empire and military glory would trample upon true liberty. He was a pacific ruler. War, except in self-defence, and as a last alternative, he held in detestation, as the enemy both of civilization and liberty. His patriotism expanded into philanthropy, and permitted no other ambitions respecting foreign nations than those of cultivating the peaceful relations of trade and commerce with the whole family of man.

Whatever abatement we may be required or disposed to make from his credit as a practical statesman, the sum of his achievements was hardly equalled by any of his contemporaries, save one alone, and the general features of his political philosophy still remain as the nominal creed at least of the great body of his countrymen.

But what, if any, was the particular conception of university education which he enshrined within these

walls? Is it still cherished here, and will it be a worthy guide in training the intellect and directing the aspirations of the future generations who are to flock hither? These are questions which more immediately concern us on this occasion.

I suppose most men who have given great attention to the subject of education have not thought it appropriate to inquire for what it was useful; they would deem it useful in itself, as being the development of the faculties of man, or, if required to assign an ulterior object to which it should be held subservient, they would point to nothing less general, or less absolute, than human happiness.

This, however, was not Mr. Jefferson's view. Lover as he was of the sciences, and of all learning for their own sake, happy as he had always been made while cultivating them, he yet would never have expended so many years of his life in founding this institution, if he had had no hopes other than those of establishing a university on the ordinary model, even though there were a promise of rivaling the fame of Oxford or Bologna. With him, university education was important as being a part of general education, and this was important because necessary to the development and preservation of that civil and political liberty which he deemed essential to the progress and happiness of man.

His idea of university education was, therefore, a part of his political philosophy. He believed that there was a system of government founded upon the

principles of human nature under which the largest liberty and happiness were attainable, but only upon the condition of a wide—a universal—diffusion of popular education, and that such education embraced the cultivation in the highest degree of those selected minds exhibiting the highest order of genius. It was by means of a systematic cultivation of the best natural geniuses in the land that he hoped to carry all the sciences to the highest degree of cultivation, and among them especially, the science of free government.

The animating principle of his political philosophy was a jealousy of all governmental power in whomsoever vested. Such power is, of necessity, to be exercised by some over others. It may be wrongfully usurped, or voluntarily entrusted, but, in either case, is liable to be abused; and, in Jefferson's view, the best guaranty against abuse consisted in preventing usurpation and withholding delegation. He knew, indeed, that government to a certain extent was necessary, and, therefore, that it was necessary to delegate and entrust power; but this he would do with stingy parsimony, measuring the amounts doled out by the rule of rigid necessity. This was the ground of his animosity towards any concentration of power in the hands of one, or a few; because concentrated power is a common form and fruit of usurped or delegated power. Nor did his democracy assume that socialistic form which would merge the liberty of the individual in the equality of the

masses. It was the natural, original freedom of man which he sought to preserve. He was the apostle of individualism. He lost no opportunity of inculcating his favorite principle, and a question as to whether primary schools should be supported and managed by counties, or each by the particular district in which it was situated, led him into a very concise and excellent statement of his whole theory: "No, my friend," said he, "the way to have good and safe government is not to trust it all to one; but to divide it among the many, distributing to every one exactly the functions he is competent to. Let the National government be entrusted with the defence of the nation, and its foreign and federal relations; the State government with the civil rights, laws, police and administration of what concerns the State generally; the counties with the local concerns of the counties and each ward direct the interests within itself. It is by dividing and subdividing these republics, from the great national one down through all its subordinations, until it ends in the administration of every man's farm and affairs by himself; by placing under every one what his own eye may superintend, that all will be done for the best. What has destroyed liberty and the rights of man in every government which has ever existed under the sun? The generalizing and concentrating all cares and powers into one body, no matter whether of the autocrats of Russia or France, or of the aristocrats of a Venetian Senate. And I do believe, that if

xxiv The University of Virginia, and

the Almighty has not decreed that man shall never be free (and it is blasphemy to believe it) the secret will be found in the making himself the depository of the powers respecting himself so far as he is competent to them, and delegating only what is beyond his competency by a synthetical process to higher and higher orders of functionaries, so as to trust fewer and fewer powers, in proportion as the trustees become more and more oligarchical.”¹

At the present day we are so familiar with these ideas that it is difficult to imagine that they were ever novel; but in Mr. Jefferson's time it was far otherwise. Not all of those who espoused the side of the colonies against Great Britain and joined in the struggle for independence were believers in popular government, and many even of those who supported the new constitution had but feeble faith in democratic principles. Many even preferred monarchical government, and many more what they called a strong government, that is, a government strong enough to maintain itself even against the popular will.

And it is difficult also to understand the partisan hostility and bitterness engendered by these conflicting views. Each side seemed to believe that the other was bent upon the destruction of everything valuable in society. Jefferson and Marshall, two great Virginians, incomparably the first political geniuses in the land, utterly distrusted each other.

¹ Correspondence of Jefferson and Cabell; p. 54.

Nor could men be much blamed for withholding assent from the political ideas of Jefferson. There was but little in the teachings of history to support them. They were based in large degree upon *a priori* conceptions. He was obliged to admit that all previous attempts at popular government had been failures; but this was, in his view, because of special disfavoring conditions; the long habit of submitting to despotic authority had enervated the people, or the true principle of popular government had been violated by delegating and concentrating too much power in the hands of a few. He saw in the conditions exhibited by the American colonies the first real opportunity for establishing liberty. For a century these colonies had been exempt from the dominion of feudalism, from sectarian domination, and from nearly every form of severe governmental oppression. Here was a virgin soil, an abundance of land, no degrading poverty, a brave and intelligent people which had just vindicated its title to independence after a long struggle with the mightiest of European powers. He could not help thinking that "unless the Almighty had decreed that man should never be free (and it would be blasphemy to believe this)" that the golden opportunity was now offered; that here the free spirit of mankind should "put its last fetters off;" that here should be established no bastard, degenerate freedom, no government affecting to be popular, but really resting upon monarchical or aristocratic contrivances:

but a freedom in which every man should be master of his own destiny, in which there should be no usurpation of power, and no delegation of power, unless its natural possessor was unfitted to exercise it, and consequently no concentration of power, beyond what rigid necessity required—no great standing armies—no powerful navies carrying the flag in triumph over every sea,—no interference with liberty of opinion or speech—no interference with liberty of action, so long as the public peace and order were not broken—this was Jefferson's vision of republican freedom.

It would be a gross injustice to impute to him hostility to government itself, or any indulgence of mere license. Government was in his view the first and most important of human necessities; but instead of regarding it, as some seemed to do, as being in itself the source of good, and therefore presumably beneficent wherever its power was felt, he looked upon it as beneficial only so far as it was necessary to prevent one man from encroaching upon the liberty and rights of another, and as carrying with it great possibilities of mischief and wrong, whenever its interference was pushed beyond its just limits.

Such was Mr. Jefferson's conception of liberty and government which he intended should be accepted by this University, and be therein defended and propagated. It was only through the universal adoption of this idea that it seemed to him possible

for the newly created nation to reach the glorious destiny which the future had in store for it; and hence the importance he attached to it, and the unquestioning assent which he demanded for it. By nature the most tolerant of men, upon this point he was dogmatic, even to bigotry. A thorough believer in the inherent power of truth to triumph ultimately over error, he was yet unwilling to subject his favorite dogma to the temporary hazards of a contest. In one of his communications just before the University was thrown open to students, he expressed to one of his fellows upon the Board of Visitors his anxieties in this direction. Said he: "In most public seminaries text-books are prescribed to each of the several schools as the *norma docendi* in that school; and this is generally done by authority of the trustees. I should not propose this generally in our University, because I believe none of us are so much at the heights of science in the several branches as to undertake this; and, therefore, that it will better be left to the professors, until occasion of interference shall be given. But there is one branch in which we are the best judges, in which heresies may be taught, of so interesting a character to our own State, and to the United States, as to make it a duty in us to lay down the principles which shall be taught. It is that of government. Mr. Gilmer being withdrawn, we know not who his successor may be. He may be a Richmond lawyer, or one of that school of *quondam* federalism, now consolidation. It is our duty to

xxviii The University of Virginia, and

guard against the dissemination of such principles among our youth, and the diffusion of that poison, by a previous prescription of the texts to be followed in their discourses.”¹

Of the fidelity heretofore of this University to the political theory thus entrusted to it, no doubt will be entertained. Its own convictions have concurred with the sentiments of grateful admiration for its father. Successive generations of the sons of the South have become deeply imbued with it by lessons received upon this spot and have greatly aided in making it the unchallenged popular faith throughout the largest part of the land.

Shall this fidelity be continued into the indefinite future? Shall Jefferson's theory of Liberty be forever cherished around his tomb? Has the experience of a century vindicated its pretensions as the only sure foundation of popular government, or stamped upon it the discredit of an illusive impracticability? These are not uninteresting questions and they deserve my few remaining words.

If an intelligent observer removed from any participation in our political strifes were to survey the history of our country for a century with the view of ascertaining how far events had justified the teachings of Mr. Jefferson and his followers, he would find difficulty in reaching at first, at least, a favorable verdict. He would impute, perhaps not unjustly, to that peaceful policy the national humiliations

¹ Correspondence of Jefferson and Cabell; p. 339.

which preceded and accompanied the War of 1812 with Great Britain. He would see one of the supposed conclusions of that political philosophy as originally drawn and carefully expressed by the great apostle himself in the celebrated Kentucky resolutions of 1798, and afterwards re-stated and vindicated by another illustrious son of the South, made the justification for a bold and deliberate attempt to nullify, throughout the territory of a State, a law of the United States. He would see this conclusion at a still later period made the ground for a widespread defiance of the entire national authority, and the main support of a civil strife which deluged the land with fraternal blood.

Further reflection, however, would probably dispel in part, if not altogether, the unfavorable impression. Mr. Jefferson's political system was, no doubt, based upon the assumption of peace. He held in abhorrence large standing armies and powerful navies, and a nation unprovided with these will sometimes find itself subjected to humiliation, as we were in the era of 1812, either by submitting to injury from a consciousness of unreadiness to make good a defiance, or by being suddenly overwhelmed by an inferior hostile force. But are nations unprepared for war the only ones likely to be subjected to humiliations? Was England never humiliated, or France, or Germany? And what can be a greater humiliation than that of an unjust aggression upon the rights of others and the peace of the world so

likely to be committed by those who think themselves armed with resistless power? And had we always been armed on the land and on the sea in proportion to our power, should we have gained and held the glory hitherto accorded to us by civilized mankind of being the promoters everywhere of international law, and the advocates of peace and justice among nations? And, even in respect to power itself, were we called upon to exhibit our strength in a just cause, could we under a more consolidated government, assemble the overwhelming forces which the emulation of rival States will now willingly place at the service of the nation?

For the theoretical doctrine which supported the claims of nullification and secession, Mr. Jefferson must, indeed, be held largely accountable; but this was never any essential part of his philosophy of free government, if indeed it be consistent with it. It concerned only the interpretation and effect of the particular constitutional instrument by which the colonies united themselves together.

I must employ a few words here to make this more plain. In the great political division which took place soon after the adoption of the constitution, men arrayed themselves on the one side or the other according as they favored the advanced doctrines of popular government, or, distrusting the capacity of the people, inclined towards the principles and methods of a constitutional monarchy. The impulse of the movement which culminated in the French

Revolution, reaching these shores, stirred the sympathies and passions of both parties, the one espousing the cause of Democratic France and the other of monarchical England. The Federal party, alarmed for the public welfare, and fearful lest the license of the French revolutionists should be repeated on this side of the water, sought to strengthen authority by those acts of repressive Federal power, since generally condemned, called the Alien and Sedition laws. The constitutional validity of these was attacked by Jefferson, and his argument was formulated in the celebrated Kentucky resolutions, in which he affirmed the right of each State, under the Constitution, to determine for itself the validity of any Federal enactment. The main question was not whether under a Federal government formed to secure the ends which ours had in view, it would be wise to delegate to the general government the exclusive right to determine the extent of its own powers, but whether in point of fact such a delegation was contained in our own constitution. Upon this point it would be true to say that Mr. Jefferson and his followers had their own way, until the appearance of the scene, at a later period, of those great protagonists in constitutional debate, Webster and Calhoun. In what condition the struggle between these renowned champions left the dispute I will not undertake to say,—

but I may hazard the opinion that if the question had been made, not in 1861, but in 1788, immediately after the adoption of the Constitution, whether the Union as formed by that instrument could lawfully treat the secession of a State as a rebellion and suppress it by force, few of those who had participated in framing that instrument would have answered in the affirmative.

Nor has that question been in any manner settled by the result of that civil strife which has effected such a profound revolution in the political and social world of America. I cannot admit the efficacy of force to settle any question of historic or scientific truth. Truth is eternal and immutable, and the warfare of those who seek to suppress it will forever be in vain. The question which the result of that strife did settle, as has been eloquently and powerfully shown by a distinguished statesman and jurist of the South—shown, too, in pronouncing a glowing eulogy upon his great teacher and master, Calhoun—was, not whether our Constitution actually created a consolidated nation—nations cannot be created by agreement—but whether the Federal Union, composed originally of colonies the people of which had been subjects of the same sovereign, and which had never occupied the attitude of independent States before the world, embracing, also, new States created out of territory which was the common property of all, could—after they had been knit together into a nation during the life of nearly a century by the

thousand processes which time and nature employ to cement and consolidate a people—by trade, by commerce, by railways, by social and business alliances, by common perils and sufferings in war, by the blessings, hopes and aspirations of peace,—could, after all this, at the will and pleasure of one of its parts, be instantly and peacefully resolved, not into its original elements, but into supposed constituent parts, most of which had had no participation in its original formation. That was a question which from its nature could be settled only by trial, and the trial has indeed forever settled that, and—strange thing in human history—neither side would wish the decision to be reversed. Nor should it be forgotten that, whatever the consequences, in the form of disunion or secession, the doctrine of Mr. Jefferson, as propounded in the Kentucky resolutions, might possibly involve, no such project was ever suggested, or in any manner countenanced, by him. Whatever discredit may be attached to any suggestions, in his day, of disunion or secession belongs altogether to his political opponents.

Are there any other respects in which it may be plausibly suggested that the political philosophy of Mr. Jefferson has been discredited by the teachings of experience? Does the General Government now need a larger delegation of power? Are there any functions hitherto performed by the States which should be relegated to the central authority? Do we need a large standing army? Must we confront

the gigantic naval armaments of the European nations with a corresponding array? Must we mingle in the ambitions of the great powers of the world? Must we extend the area of our territorial dominion? Must we look on and behold with unconcern the partitioning of Africa among the European powers, and the dismemberment of China? Must we assert before the world the might and majesty of seventy millions of the most energetic and productive people on the globe? Shall we form alliances with kindred peoples, or remain in calm and forbidding isolation among the nations? All these questions to which, if proposed in Mr. Jefferson's time, his teaching would have returned an answer in the negative, are likely to press themselves, if they are not already pressing themselves, upon the public attention.

Time, of course, does not permit me to indulge in any consideration of either of them; but I venture to express my conviction that unless the answer the American people make to them shall be consistent with those principles of which Mr. Jefferson has hitherto been regarded as the champion, there will be an end of true popular government among men. There is—there can be—but one true basis of liberty, and that lies in constantly cherishing the *dispersion* rather than the concentration of power. The individual loses something of his liberty the moment he clothes another with any power over himself. Nothing can justify the surrender except

the promise that by making it he better secures the liberty he retains. But with every new surrender of power there comes a peril. Power entrusted will sometimes be abused, and the temptation to abuse increases with the extent of the delegation. Liberty is safe when, and only when, for each delegation of power which is demanded a necessity is shown.

No; the fundamental political philosophy of Mr. Jefferson has not been discredited by time or experience. It never will be discredited while men retain a real love and a true comprehension of civil liberty. And never more than at the present time has there been a necessity for studying and teaching within the walls of universities the true principles of republican liberty and the practical art of applying them to human affairs. Recreant, indeed, would this University be to the fame of its founder, to the purposes for which it was established, and to its own obligations to present and to future times, if it failed to continue to maintain, not in the spirit of dogmatism, but of devotion to truth, those great principles upon which free popular government stands.

If anything were needed to impress upon patriotic minds the supreme importance of cultivating anew these principles and implanting in all hearts the determination to maintain them, it would be supplied by the extraordinary spectacle which our country exhibits at the present moment. We have voluntarily chosen to break the peace of the world

and engage in a war which already imposes a heavy burden upon the industry and resources of the nation, and which may become enlarged into gigantic proportions—a war undertaken not to repel aggression, but to check the disorders and relieve the oppressions to which a neighboring people have been subjected. It is, indeed, true that nations have their duties not only to themselves, but to the world; and these must be performed at whatever hazard. If we have not the virtue to perform them without sacrificing our own freedom, we have no right to be a republic. We believe, and have solemnly avowed, that we have taken this perilous step under the influence of those humane motives which civilization and humanity enjoin us to obey. For the sincerity of that avowal we must abide the judgment of civilized nations, and this will largely depend upon the consistency with that declaration which our future conduct shall exhibit. Even now the passion for national glory, growing by what it feeds upon, stimulated by the deeds of naval skill and daring on distant seas—deeds which reflect undying lustre on the American name and excite the admiration of the world—is indulging new visions of territorial aggrandizement.

But have a care, Americans! These national duties which call upon us to raise an avenging arm arise only in those rare alternatives when all else has proved to be ineffectual, and when we have good reason to know that such avenging arm will be

effectual. Have a care that among your ruling motives no place shall be allowed to the mere love of military and naval renown. The pathway marked out for the republic by its fathers was one of peaceful achievement. Its mission is peace. A free nation can rightfully have no other aspiration. But there are temptations which come with the possession of power. Men take pride in being the citizens of powerful nations, and enjoy the consciousness of strength. These temptations are to be resisted, for we may be sure that for any undue indulgence in them the price will be exacted with the certainty of fate; and this price is grinding taxation, the oppression of the poorer classes, the multiplication of the official corps, the intensifying of the struggle for the possession of governmental patronage and consequent spread of corruption, the increasing power of political bosses and chieftains, the decay of public and civic virtue, and the resulting danger of resorts to revolution. Let not our future confirm the sad lament of the misanthropic poet, that history has but one page which reads,

“First Freedom, and then Glory—when that fails,
Wealth, vice, corruption,—barbarism at last.”

Here, then, of all places, let the true principles of liberty and free government, as expounded by Jefferson, be forever studied and taught. Let the youth of the land who are to resort hither here learn the true objects of national ambition and the methods by

which they are to be reached. Let them study here the new problems arising from the prodigious growth of the nation and its rapid material consolidation. Let them be taught the true principles of legislation, and by what methods liberty is best reconciled with order and with law; and above all let them learn to prefer for their country that renown among the nations which comes from the constant display of the love of peace and justice.

And the ancient Commonwealth of Virginia,—to what nobler object can she extend her favor and support than the building up upon this historic spot of a great university which shall be at once the home of the Sciences and the Arts and the nursery of political freedom? Outshining all her sister colonies in the splendor of her contribution to the galaxy of great names which adorns our Revolutionary history, how can she better perpetuate that glory than by sending forth from her own soil a new line of patriot statesmen? No jealousies will attend her efforts to this great end, and her sister States would greet with delight her re-ascending star once more blazing in the zenith of its own proper firmament.

James C. Carter

NOTES ON VIRGINIA.

INTRODUCTORY NOTES.

"Notes on Virginia" was written by Jefferson in answer to inquiries propounded to him by the Marquis de Barbé-Marbois, then Secretary of the French Legation in Philadelphia. Jefferson had 200 copies privately printed in Paris in 1784 (dated 1782) for distribution among his friends in Europe and America. No more authentic account could be given as to the origin of the "Notes on Virginia" than the account Jefferson gives us himself in his Autobiography. This account is as follows:

"Before I had left America, that is to say, in the year of 1781, I had received a letter from M. de Marbois, of the French legation in Philadelphia, informing me that he had been instructed by his government to obtain such statistical accounts of the different States of our Union, as might be useful for their information; and addressing to me a number of queries relative to the State of Virginia. I had always made it a practice, whenever an opportunity occurred, of obtaining any information of our country which might be of use to me in any station, public or private, to commit it to writing. These memoranda, were on loose papers, bundled up without order, and difficult of recurrence, when I had occasion for a particular one. I thought this a good occasion to embody their substance, which I did in the order of M. Marbois's queries, so as to answer his wish, and to arrange them for my own use. Some friends, to whom they were occasionally communicated, wished for copies; but their volume rendering this too laborious by hand, I proposed to get a few printed for their gratification. I was asked such a price, however, as exceeded the importance of the object. On my arrival at Paris, I found it could be done for a fourth of what I had been asked here. I, therefore, corrected and enlarged them, and had two hundred copies printed, under the title of 'Notes on Virginia.' I gave a very few copies to some particular persons in Europe, and sent the rest to my friends in America. An European copy, by the death of the owner, got into the hands of a bookseller, who engaged its translation, and, when ready for the press, communicated his intentions and manuscript to me, suggesting that I should correct it without asking any other permission for the publication. I never had seen so wretched an attempt at translation. Interverted, abridged, mutilated, and often reversing the sense of the original, I found it a blotch of errors from

Introductory Notes

beginning to end. I corrected some of the most material, and, in that form, it was printed in French. A London bookseller, on seeing the translation, requested me to permit him to print the English original. I thought it best to do so, to let the world see that it was not really so bad as the French translation had made it appear. And this is the true history of that publication."

The English publisher referred to by Jefferson is John Stockdale, who published an edition of the "Notes on Virginia" in 1787. Jefferson's preface to this English edition was as follows:

"The following Notes were written in Virginia in the year 1781, and somewhat corrected and enlarged in the winter of 1782, in answer to queries proposed to the Author, by a Foreigner of Distinction, then residing among us. The subjects are all treated imperfectly; some scarcely touched on. To apologize for this by developing the circumstances of the time and place of their composition, would be to open wounds which have already bled enough. To these circumstances some of their imperfections may with truth be ascribed; the great mass to the want of information and want of talents in the writer. He had a few copies printed, which he gave among his friends; and a translation of them has been lately published in France, but with such alterations as the laws of the press in that country rendered necessary. They are now offered to the public in their original form and language."

This edition included three "appendices" that Jefferson added after the publication of the original edition, and it was the first edition to announce the name of the author. It was at once reprinted in America, and apparently without Jefferson's consent. A German translation was issued in 1789. Another American reprint of the English edition seems to have been made with Jefferson's consent in 1794. During the years of 1797 and 1798 Jefferson wrote an "Appendix" relative to the murder of Logan's family, which was added to the edition of 1800. All subsequent editions, except that of 1853, are reprints of the text of 1787, supplemented by the "Appendix" relating to Logan.

Jefferson left at his death a printed copy of his "Notes on Virginia" containing a revision of the text and many manuscript notes. This copy was transferred by Jefferson's literary executor, Thomas Jefferson Randolph, to J. W. Randolph & Co., who based their edition of 1853 on Jefferson's final revision.

In the preface of this edition the publishers, in contrast to Jefferson's low estimate of his work, declared that "the beauty of style, the accuracy of information, and the scientific research displayed in the 'Notes' have made them a permanent part of our national literature."

JEFFERSON'S WORKS.

NOTES ON VIRGINIA.

QUERY I.

An exact description of the limits and boundaries of the State of Virginia?

Virginia is bounded on the east by the Atlantic; on the north by a line of latitude crossing the eastern shore through Watkin's Point, being about $37^{\circ} 57'$ north latitude; from thence by a straight line to Cinquac, near the mouth of Potomac; thence by the Potomac, which is common to Virginia and Maryland, to the first fountain of its northern branch; thence by a meridian line, passing through that fountain till it intersects a line running east and west, in latitude $39^{\circ} 43' 42.4''$ which divides Maryland from Pennsylvania, and which was marked by Messrs. Mason and Dixon; thence by that line, and a continuation of it westwardly to the completion of five degrees of longitude from the eastern boundary of Pennsylvania, in the same latitude, and thence by a meridian line to the Ohio; on the

west by the Ohio and Mississippi, to latitude $36^{\circ} 30'$ north, and on the south by the line of latitude last mentioned. By admeasurements through nearly the whole of this last line, and supplying the unmeasured parts from good data, the Atlantic and Mississippi are found in this latitude to be seven hundred and fifty-eight miles distant, equal to $30^{\circ} 38'$ of longitude, reckoning fifty-five miles and three thousand one hundred and forty-four feet to the degree. This being our comprehension of longitude, that of our latitude, taken between this and Mason and Dixon's line, is $3^{\circ} 13' 42.4''$ equal to two hundred and twenty-three and one-third miles, supposing a degree of a great circle to be sixty-nine miles, eight hundred and sixty-four feet, as computed by Cassina. These boundaries include an area somewhat triangular of one hundred and twenty-one thousand five hundred and twenty-five square miles, whereof seventy-nine thousand six hundred and fifty lie westward of the Alleghany mountains, and fifty-seven thousand and thirty-four westward of the meridian of the mouth of the Great Kanhaway. This State is therefore one-third larger than the islands of Great Britain and Ireland, which are reckoned at eighty-eight thousand three hundred and fifty-seven square miles.

These limits result from, 1. The ancient charters from the crown of England. 2. The grant of Maryland to the Lord Baltimore, and the subsequent determinations of the British court as to the extent

of that grant. 3. The grant of Pennsylvania to William Penn, and a compact between the general assemblies of the commonwealths of Virginia and Pennsylvania as to the extent of that grant. 4. The grant of Carolina, and actual location of its northern boundary, by consent of both parties. 5. The treaty of Paris of 1763. 6. The confirmation of the charters of the neighboring States by the convention of *Virginia* at the time of constituting their commonwealth. 7. The cession made by *Virginia* to Congress of all the lands to which they had title on the north side of the Ohio.

QUERY II.

A notice of its rivers, rivulets, and how far they are navigable?

An inspection of a map of *Virginia*, will give a better idea of the geography of its rivers, than any description in writing. Their navigation may be imperfectly noted.

Roanoke, so far as it lies within the State, is nowhere navigable but for canoes, or light batteaux; and even for these in such detached parcels as to have prevented the inhabitants from availing themselves of it at all.

James River, and its waters, afford navigation as follows:

The whole of *Elizabeth River*, the lowest of those which run into *James River*, is a harbor, and would

contain upwards of three hundred ships. The channel is from one hundred and fifty to two hundred fathoms wide, and at common flood tide affords eighteen feet water to Norfolk. The *Stafford*, a sixty gun ship, went there, lightening herself to cross the bar at Sowel's Point. The *Fier Rodrigue*, pierced for sixty-four guns, and carrying fifty, went there without lightening. *Craney Island*, at the mouth of this river, commands its channel tolerably well.

Nansemond River is navigable to *Sleepy Hole* for vessels of two hundred and fifty tons; to *Suffolk* for those of one hundred tons; and to *Milner's* for those of twenty-five.

Pagan Creek affords eight or ten feet water to *Smithfield*, which admits vessels of twenty tons.

Chickahominy has at its mouth a bar, on which is only twelve feet water at common flood tide. Vessels passing that, may go eight miles up the river; those of ten feet draught may go four miles further, and those of six tons burden twenty miles further.

Appomattox may be navigated as far as *Broadways*, by any vessel which has crossed *Harrison's* bar in *James River*; it keeps eight or ten feet water a mile or two higher up to *Fisher's* bar, and four feet on that and upwards to *Petersburg*, where all navigation ceases.

James River itself affords a harbor for vessels of any size in *Hampton Road*, but not in safety through the whole winter; and there is navigable water for

them as far as Mulberry Island. A forty gun ship goes to Jamestown, and, lightening herself, may pass Harrison's bar; on which there is only fifteen feet water. Vessels of two hundred and fifty tons may go to Warwick; those of one hundred and twenty-five go to Rocket's, a mile below Richmond; from thence is about seven feet water to Richmond; and about the centre of the town, four feet and a half, where the navigation is interrupted by falls, which in a course of six miles, descend about eighty-eight feet perpendicular; above these it is resumed in canoes and batteaux, and is prosecuted safely and advantageously to within ten miles of the Blue Ridge; and even through the Blue Ridge a ton weight has been brought; and the expense would not be great, when compared with its object, to open a tolerable navigation up Jackson's river and Carpenter's creek, to within twenty-five miles of Howard's creek of Green Briar, both of which have then water enough to float vessels into the Great Kanaway. In some future state of population I think it possible that its navigation may also be made to interlock with that of the Potomac, and through that to communicate by a short portage with the Ohio. It is to be noted that this river is called in the maps *James River*, only to its confluence with the Rivanna; thence to the Blue Ridge it is called the Fluvanna; and thence to its source Jackson's river. But in common speech, it is called James River to its source.

The *Rivanna*, a branch of James River, is navigable for canoes and batteaux to its intersection with the South-West mountains, which is about twenty-two miles; and may easily be opened to navigation through these mountains to its fork above Charlottesville.

York River, at Yorktown, affords the best harbor in the State for vessels of the largest size. The river there narrows to the width of a mile, and is contained within very high banks, close under which vessels may ride. It holds four fathom water at high tide for twenty-five miles above York to the mouth of Poropotank, where the river is a mile and a half wide, and the channel only seventy-five fathom, and passing under a high bank. At the confluence of *Pamunkey* and *Mattapony*, it is reduced to three fathom depth, which continues up Pamunkey to Cumberland, where the width is one hundred yards, and up Mattapony to within two miles of Frazier's ferry, where it becomes two and a half fathom deep, and holds that about five miles. Pamunkey is then capable of navigation for loaded flats to Brockman's bridge, fifty miles above Hanover town, and Mattapony to Downer's bridge, seventy miles above its mouth.

Piankatank, the little rivers making out of *Mobjack Bay* and those of the eastern shore, receive only very small vessels, and these can but enter them.

Rappahannock affords four fathom water to Hobb's hole, and two fathom from thence to Fredericksburg.

Potomac is seven and a half miles wide at the mouth; four and a half at Nomony bay; three at Aquia; one and a half at Hallowing point; one and a quarter at Alexandria. Its soundings are seven fathom at the mouth; five at St. George's island; four and a half at Lower Matchodic; three at Swan's point, and thence up to Alexanderia; thence ten feet water to the falls, which are thirteen miles above Alexandria. These falls are fifteen miles in length, and of very great descent, and the navigation above them for batteaux and canoes is so much interrupted as to be little used. It is, however, used in a small degree up the Cohongoronta branch as far as fort Cumberland, which was at the mouth of Willis's creek and is capable, at no great expense, of being rendered very practicable. The Shenandoah branch interlocks with James river about the Blue Ridge, and may perhaps in future be opened.

The *Mississippi* will be one of the principal channels of future commerce for the country westward of the Alleghany. From the mouth of this river to where it receives the Ohio, is one thousand miles by water, but only five hundred by land, passing through the Chickasaw country. From the mouth of the Ohio to that of the Missouri, is two hundred and thirty miles by water, and one hundred and forty by land, from thence to the mouth of the Illinois river, is about twenty-five miles. The *Mississippi*, below the mouth of the Missouri, is always muddy, and abounding with sand bars, which

frequently change their places. However, it carries fifteen feet water to the mouth of the Ohio, to which place it is from one and a half to two miles wide, and thence to Kaskaskia from one mile to a mile and a quarter wide. Its current is so rapid, that it never can be stemmed by the force of the wind alone, acting on sails. Any vessel, however, navigated with oars, may come up at any time, and receive much aid from the wind. A batteau passes from the mouth of Ohio to the mouth of Mississippi in three weeks, and is from two to three months getting up again. During its floods, which are periodical as those of the Nile, the largest vessels may pass down it, if their steerage can be insured. These floods begin in April, and the river returns into its banks early in August. The inundation extends further on the western than eastern side, covering the lands in some places for fifty miles from its banks. Above the mouth of the Missouri it becomes much such a river as the Ohio, like it clear and gentle in its current, not quite so wide, the period of its floods nearly the same, but not rising to so great a height. The streets of the village at Cohoes are not more than ten feet above the ordinary level of the water, and yet were never overflowed. Its bed deepens every year. Cohoes, in the memory of many people now living, was insulated by every flood of the river. What was the eastern channel has now become a lake, nine miles in length and one in width, into which the river at this day never flows. This

river yields turtle of a peculiar kind, perch, trout, gar, pike, mullets, herrings, carp, spatula-fish of fifty pounds weight, cat-fish of one hundred pounds weight, buffalo fish, and sturgeon. Alligators or crocodiles have been seen as high up as the Acansas. It also abounds in herons, cranes, ducks, brant, geese, and swans. Its passage is commanded by a fort established by this State, five miles below the mouth of the Ohio, and ten miles above the Carolina boundary.

The Missouri, since the treaty of Paris, the Illinois and northern branches of the Ohio, since the cession to Congress, are no longer within our limits. Yet having been so heretofore, and still opening to us channels of extensive communication with the western and north-western country, they shall be noted in their order.

The *Missouri* is, in fact, the principal river, contributing more to the common stream than does the Mississippi, even after its junction with the Illinois. It is remarkably cold, muddy, and rapid. Its overflowings are considerable. They happen during the months of June and July. Their commencement being so much later than those of the Mississippi, would induce a belief that the sources of the Missouri are northward of those of the Mississippi, unless we suppose that the cold increases again with the ascent of the land from the Mississippi westwardly. That this ascent is great, is proved by the rapidity of the river. Six miles above the mouth,

it is brought within the compass of a quarter of a mile's width; yet the Spanish merchants at Pancore, or St. Louis, say they go two thousand miles up it. It heads far westward of the Rio Norte, or North River. There is, in the villages of Kaskaskia, Cohoes, and St. Vincennes, no inconsiderable quantity of plate, said to have been plundered during the last war by the Indians from the churches and private houses of Santa Fé, on the North river, and brought to the villages for sale. From the mouth of the Ohio to Sante Fé are forty days journey, or about one thousand miles. What is the shortest distance between the navigable waters of the Missouri, and those of the North river, or how far this is navigable above Sante Fé, I could never learn. From Santa Fé to its mouth in the Gulf of Mexico is about twelve hundred miles. The road from New Orleans to Mexico crosses this river at the post of Rio Norte, eight hundred miles below Santa Fé, and from this post to New Orleans is about twelve hundred miles; thus making two thousand miles between Santa Fé and New Orleans, passing down the North river, Red river, and Mississippi; whereas it is two thousand two hundred and thirty through the Missouri and Mississippi. From the same post of Rio Norte, passing near the mines of La Sierra and Laiguana, which are between the North river, and the river Salina to Sartilla, is three hundred and seventy-five miles, and from thence, passing the mines of Charcas, Zaccatecas, and Potosi, to the

city of Mexico, is three hundred and seventy-five miles; in all, one thousand five hundred and fifty miles from Santa Fé to the city of Mexico. From New Orleans to the city of Mexico is about one thousand nine hundred and fifty miles; the roads after setting out from the Red river, near Natchitoches, keeping generally parallel with the coast, and about two hundred miles from it, till it enters the city of Mexico.

The *Illinois* is a fine river, clear, gentle, and without rapids; insomuch that it is navigable for batteaux to its source. From thence is a portage of two miles only to the Chicago, which affords a batteau navigation of sixteen miles to its entrance into lake Michigan. The *Illinois*, about ten miles above its mouth, is three hundred yards wide.

The *Kaskaskia* is one hundred yards wide at its entrance into the Mississippi, and preserves that breadth to the Buffalo plains, seventy miles above. So far, also, it is navigable for loaded batteaux, and perhaps much further. It is not rapid.

The *Ohio* is the most beautiful river on earth. Its current gentle, waters clear, and bosom smooth and unbroken by rocks and rapids, a single instance only excepted.

It is one-quarter of a mile wide at Fort Pitt, five hundred yards at the mouth of the Great Kanhaway, one mile and twenty-five poles at Louisville, one-quarter of a mile on the rapids three or four miles below Louisville, half a mile where the low country

begins, which is twenty miles above Green river, a mile and a quarter at the receipt of the Tennessee, and a mile wide at the mouth.

Its length, as measured according to its meanders by Captain Hutchins, is as follows:—

From Fort Pitt

To Log's Town	18½	Little Miami	126¼
Big Beaver Creek	10¾	Licking Creek	8
Little Beaver Creek	13½	Great Miami	26¾
Yellow Creek	11¾	Big Bones	32½
Two Creeks	21¾	Kentucky	44¼
Long Reach	53¾	Rapids	77¼
End Long Reach	16½	Low Country	155¾
Muskingum	25½	Buffalo River	64½
Little Kanhaway	12¼	Wabash	97¼
Hockhocking	16	Big Cave	42¾
Great Kanhaway	82½	Shawanee River	52½
Guiandot	43¾	Cherokee River	13
Sandy Creek	14½	Massac	11
Sioto	48¼	Mississippi	46

1188

In common winter and spring tides it affords fifteen feet water to Louisville, ten feet to Le Tarte's rapids, forty miles above the mouth of the great Kanhaway, and a sufficiency at all times for light batteaux and canoes to Fort Pitt. The rapids are in latitude 38° 8'. The inundations of this river begin about the last of March, and subside in July. During these, a first-rate man-of-war may be carried from Louisville to New Orleans, if the sudden turns of the river and the strength of its current will admit a safe steerage. The rapids at Louisville descend about thirty feet in a length of a mile and a half.

The bed of the river there is a solid rock, and is divided by an island into two branches, the southern of which is about two hundred yards wide, and is dry four months in the year. The bed of the northern branch is worn into channels by the constant course of the water, and attrition of the pebble stones carried on with that, so as to be passable for batteaux through the greater part of the year. Yet it is thought that the southern arm may be the most easily opened for constant navigation. The rise of the waters in these rapids does not exceed ten or twelve feet. A part of this island is so high as to have been never overflowed, and to command the settlement at Louisville, which is opposite to it. The fort, however, is situated at the head of the falls. The ground on the south side rises very gradually.

The *Tennessee*, Cherokee, or Hogohege river, is six hundred yards wide at its mouth, a quarter of a mile at the mouth of Holston, and two hundred yards at Chotee, which is twenty miles above Holston, and three hundred miles above the mouth of the Tennessee. This river crosses the southern boundary of Virginia, fifty-eight miles from the Mississippi. Its current is moderate. It is navigable for loaded boats of any burden to the Muscle shoals, where the river passes through the Cumberland mountain. These shoals are six or eight miles long, passable downwards for loaded canoes, but not upwards, unless there be a swell in the river.

Above these the navigation for loaded canoes and batteaux continues to the Long island. This river has its inundations also. Above the Chickamogga towns is a whirlpool called the Sucking-pot, which takes in trunks of trees or boats, and throws them out again half a mile below. It is avoided by keeping very close to the bank, on the south side. There are but a few miles portage between a branch of this river and the navigable waters of the river Mobile, which runs into the Gulf of Mexico.

Cumberland, or Shawanee river, intersects the boundary between Virginia and North Carolina sixty-seven miles from the Mississippi, and again one hundred and ninety-eight miles from the same river, a little above the entrance of Obey's river into the Cumberland. Its Clear fork crosses the same boundary about three hundred miles from the Mississippi. Cumberland is a very gentle stream, navigable for loaded batteaux eight hundred miles, without interruption; then intervene some rapids of fifteen miles in length, after which it is again navigable seventy miles upwards, which brings you within ten miles of the Cumberland mountains. It is about one hundred and twenty yards wide through its whole course, from the head of its navigation to its mouth.

The *Wabash* is a very beautiful river, four hundred yards wide at the mouth, and three hundred at St. Vincennes, which is a post one hundred miles above the mouth, in a direct line. Within this

space there are two small rapids, which give very little obstruction to the navigation. It is four hundred yards wide at the mouth, and navigable thirty leagues upwards for canoes and small boats. From the mouth of Maple river to that of Eel river is about eighty miles in a direct line, the river continuing navigable, and from one to two hundred yards in width. The Eel river is one hundred and fifty yards wide, and affords at all times navigation for periaguas, to within eighteen miles of the Miami of the Lake. The Wabash, from the mouth of Eel river to Little river, a distance of fifty miles direct, is interrupted with frequent rapids and shoals, which obstruct the navigation, except in a swell. Little river affords navigation during a swell to within three miles of the Miami, which thence affords a similar navigation into Lake Erie, one hundred miles distant in a direct line. The Wabash overflows periodically in correspondence with the Ohio, and in some places two leagues from its banks.

Green River is navigable for loaded batteaux at all times fifty miles upwards; but it is then interrupted by impassable rapids, above which the navigation again commences and continues good thirty or forty miles to the mouth of Barren river.

Kentucky River is ninety yards wide at the mouth, and also at Boonsborough, eighty miles above. It affords a navigation for loaded batteaux one hundred and eighty miles in a direct line, in the winter tides.

The *Great Miami* of the Ohio, is two hundred yards wide at the mouth. At the Piccawee towns, seventy-five miles above, it is reduced to thirty yards; it is, nevertheless, navigable for loaded canoes fifty miles above these towns. The portage from its western branch into the Miami of Lake Erie, is five miles; that from its eastern branch into Sandusky river, is of nine miles.

Salt River is at all times navigable for loaded batteaux seventy or eighty miles. It is eighty yards wide at its mouth, and keeps that width to its fork, twenty-five miles above.

The *Little Miami* of the Ohio, is sixty or seventy yards wide at its mouth, sixty miles to its source, and affords no navigation.

The *Sioto* is two hundred and fifty yards wide at its mouth, which is in latitude $38^{\circ} 22'$, and at the Saltlick towns, two hundred miles above the mouth, it is yet one hundred yards wide. To these towns it is navigable for loaded batteaux, and its eastern branch affords navigation almost to its source.

Great Sandy River is about sixty yards wide, and navigable sixty miles for loaded batteaux.

Guiandot is about the width of the river last mentioned, but is more rapid. It may be navigated by canoes sixty miles.

The *Great Kanhaway* is a river of considerable note for the fertility of its lands, and still more, as leading towards the head waters of James river. Nevertheless, it is doubtful whether its great and

numerous rapids will admit a navigation, but at an expense to which it will require ages to render its inhabitants equal. The great obstacles begin at what are called the Great Falls, ninety miles above the mouth, below which are only five or six rapids, and these passable, with some difficulty, even at low water. From the falls to the mouth of Greenbriar is one hundred miles, and thence to the lead mines one hundred and twenty. It is two hundred and eighty yards wide at its mouth.

Hockhocking is eighty yards wide at its mouth, and yields navigation for loaded batteaux to the Press-place, sixty miles above its mouth.

The *Little Kanhaway* is one hundred and fifty yards wide at the mouth. It yields a navigation of ten miles only. Perhaps its northern branch, called Junius' creek, which interlocks with the western of Monongahela, may one day admit a shorter passage from the latter into the Ohio.

The *Muskingum* is two hundred and eighty yards wide at its mouth, and two hundred yards at the lower Indian towns, one hundred and fifty miles upwards. It is navigable for small batteaux to within one mile of a navigable part of Cuyahoga river, which runs into Lake Erie.

At Fort Pitt the river Ohio loses its name, branching into the Monongahela and Alleghany.

The *Monongahela* is four hundred yards wide at its mouth. From thence is twelve or fifteen miles to the mouth of Yohogany, where it is three hundred

yards wide. Thence to Redstone by water is fifty miles, by land thirty. Then to the mouth of Cheat river by water forty miles, by land twenty-eight, the width continuing at three hundred yards, and the navigation good for boats. Thence the width is about two hundred yards to the western fork, fifty miles higher, and the navigation frequently interrupted by rapids, which, however, with a swell of two or three feet, become very passable for boats. It then admits light boats, except in dry seasons, sixty-five miles further to the head of Tygart's valley, presenting only some small rapids and falls of one or two feet perpendicular, and lessening it its width to twenty yards. The *Western fork* is navigable in the winter ten or fifteen miles towards the northern of the Little Kanhaway, and will admit a good wagon road to it. The *Yohogany* is the principal branch of this river. It passes through the Laurel mountain, about thirty miles from its mouth; is so far from three hundred to one hundred and fifty yards wide, and the navigation much obstructed in dry weather by rapids and shoals. In its passage through the mountain it makes very great falls, admitting no navigation for ten miles to the Turkey Foot. Thence to the Great Crossing, about twenty miles, it is again navigable, except in dry seasons, and at this place is two hundred yards wide. The sources of this river are divided from those of the Potomac by the Alleghany mountain. From the falls, where it intersects the Laurel mountain, to

Fort Cumberland, the head of the navigation on the Potomac, is forty miles of very mountainous road. Wills' creek, at the mouth of which was Fort Cumberland, is thirty or forty yards wide, but affords no navigation as yet. *Cheat* river, another considerable branch of the Monongahela, is two hundred yards wide at its mouth, and one hundred yards at the *Dunkard's* settlement, fifty miles higher. It is navigable for boats, except in dry seasons. The boundary between Virginia and Pennsylvania crosses it about three or four miles above its mouth.

The *Alleghany* river, with a slight swell, affords navigation for light batteaux to Venango, at the mouth of French Creek, where it is two hundred yards wide, and is practised even to Le Bœuf, from whence there is a portage of fifteen miles to Presque Isle on the Lake Erie.

The country watered by the Mississippi and its eastern branches, constitutes five-eighths of the United States, two of which five-eighths are occupied by the Ohio and its waters; the residuary streams which run into the Gulf of Mexico, the Atlantic, and the St. Lawrence, water the remaining three-eighths.

Before we quit the subject of the western waters, we will take a view of their principal connections with the Atlantic. These are three; the Hudson river, the Potomac, and the Mississippi itself. Down the last will pass all heavy commodities. But the navigation through the Gulf of Mexico is so dangerous, and that up the Mississippi so difficult and tedious,

that it is thought probable that European merchandise will not return through that channel. It is most likely that flour, timber, and other heavy articles will be floated on rafts, which will themselves be an article for sale as well as their loading, the navigators returning by land, or in light batteaux. There will, therefore, be a competition between the Hudson and Potomac rivers for the residue of the commerce of all the country westward of Lake Erie, on the waters of the lakes, of the Ohio, and upper parts of the Mississippi. To go to New York, that part of the trade which comes from the lakes or their waters, must first be brought into Lake Erie. Between Lake Superior and its waters and Huron, are the rapids of St. Mary, which will permit boats to pass, but not larger vessels. Lakes Huron and Michigan afford communication with Lake Erie by vessels of eight feet draught. That part of the trade which comes from the waters of the Mississippi must pass from them through some portage into the waters of the lakes. The portage from the Illinois river into a water of Michigan is of one mile only. From the Wabash, Miami, Muskingum, or Alleghany, are portages into the waters of Lake Erie, of from one to fifteen miles. When the commodities are brought into, and have passed through Lake Erie, there is between that and Ontario an interruption by the falls of Niagara, where the portage is of eight miles; and between Ontario and the Hudson river are portages at the falls of Onondago, a little above

Oswego, of a quarter of a mile; from Wood creek to the Mohawks river two miles; at the little falls of the Mohawks river half a mile; and from Schenectady to Albany sixteen miles. Besides the increase of expense occasioned by frequent change of carriage, there is an increased risk of pillage produced by committing merchandise to a greater number of hands successively. The Potomac offers itself under the following circumstances: For the trade of the lakes and their waters westward of Lake Erie, when it shall have entered that lake, it must coast along its southern shore, on account of the number and excellence of its harbors; the northern, though shortest, having few harbors, and these unsafe. Having reached Cuyahoga, to proceed on to New York it will have eight hundred and twenty-five miles and five portages; whereas it is but four hundred and twenty-five miles to Alexandria, its emporium on the Potomac, if it turns into the Cuyahoga, and passes through that, Big Beaver, Ohio, Yohogany, (or Monongahela and Cheat,) and Potomac, and there are but two portages; the first of which, between Cuyahoga and Beaver, may be removed by uniting the sources of these waters, which are lakes in the neighborhood of each other, and in a champaign country; the other from the waters of Ohio to Potomac will be from fifteen to forty miles, according to the trouble which shall be taken to approach the two navigations. For the trade of the Ohio, or that which shall come into it from its own waters

or the Mississippi, it is nearer through the Potomac to Alexandria than to New York by five hundred and eighty miles, and it is interrupted by one portage only. There is another circumstance of difference, too. The lakes themselves never freeze, but the communications between them freeze, and the Hudson river is itself shut up by the ice three months in the year; whereas the channel to the Chesapeake leads directly into a warmer climate. The southern parts of it very rarely freeze at all, and whenever the northern do, it is so near the sources of the rivers, that the frequent floods to which they are there liable, break up the ice immediately, so that vessels may pass through the whole winter, subject only to accidental and short delays. Add to all this, that in case of war with our neighbors, the Anglo-Americans or the Indians, the route to New York becomes a frontier through almost its whole length, and all commerce through it ceases from that moment. But the channel to New York is already known to practice, whereas the upper waters of the Ohio and the Potomac, and the great falls of the latter, are yet to be cleared of their fixed obstructions. See Appendix (A.)

QUERY III.

A notice of the best Seaports of the State, and how big are the vessels they can receive?

Having no ports but our rivers and creeks, this *Query* has been answered under the preceding one.

QUERY IV.

A notice of its Mountains ?

For the particular geography of our mountains I must refer to Fry and Jefferson's map of Virginia; and to Evans' analysis of this map of America, for a more philosophical view of them than is to be found in any other work. It is worthy of notice, that our mountains are not solitary and scattered confusedly over the face of the country; but that they commence at about one hundred and fifty miles from the sea-coast, are disposed in ridges, one behind another, running nearly parallel with the sea-coast, though rather approaching it as they advance north-eastwardly. To the south-west, as the tract of country between the sea-coast and the Mississippi becomes narrower, the mountains converge into a single ridge, which, as it approaches the Gulf of Mexico, subsides into plain country, and gives rise to some of the waters of that gulf, and particularly to a river called the Apalachicola, probably from the Apalachies, an Indian nation formerly residing on it. Hence the mountains giving rise to that river, and seen from its various parts, were called the Apalachian mountains, being in fact the end or termination only of the great ridges passing through the continent. European geographers, however, extended the name northwardly as far as the mountains extended; some giving it, after their separation into different ridges, to the Blue Ridge, others

to the North Mountain, others to the Alleghany, others to the Laurel Ridge, as may be seen by their different maps. But the fact I believe is, that none of these ridges were ever known by that name to the inhabitants, either native or emigrant, but as they saw them so called in European maps. In the same direction, generally, are the veins of limestone, coal, and other minerals hitherto discovered; and so range the falls of our great rivers. But the courses of the great rivers are at right angles with these. James and Potomac penetrate through all the ridges of mountains eastward of the Alleghany; that is, broken by no water course. It is in fact the spine of the country between the Atlantic on one side, and the Mississippi and St. Lawrence on the other. The passage of the Potomac through the Blue Ridge is, perhaps, one of the most stupendous scenes in nature. You stand on a very high point of land. On your right comes up the Shenandoah, having ranged along the foot of the mountain an hundred miles to seek a vent. On your left approaches the Potomac, in quest of a passage also. In the moment of their junction, they rush together against the mountain, rend it asunder, and pass off to the sea. The first glance of this scene hurries our senses into the opinion, that this earth has been created in time, that the mountains were formed first, that the rivers began to flow afterwards, that in this place, particularly, they have been dammed up by the Blue Ridge of mountains, and have formed

an ocean which filled the whole valley; that continuing to rise they have at length broken over at this spot, and have torn the mountain down from its summit to its base. The piles of rock on each hand, but particularly on the Shenandoah, the evident marks of their disrapture and avulsion from their beds by the most powerful agents of nature, corroborate the impression. But the distant finishing which nature has given to the picture, is of a very different character. It is a true contrast to the foreground. It is as placid and delightful as that is wild and tremendous. For the mountain being cloven asunder, she presents to your eye, through the cleft, a small catch of smooth blue horizon, at an infinite distance in the plain country, inviting you, as it were, from the riot and tumult roaring around, to pass through the breach and participate of the calm below. Here the eye ultimately composes itself; and that way, too, the road happens actually to lead. You cross the Potomac above the junction, pass along its side through the base of the mountain for three miles, its terrible precipices hanging in fragments over you, and within about twenty miles reach Fredericktown, and the fine country round that. This scene is worth a voyage across the Atlantic. Yet here, as in the neighborhood of the Natural Bridge, are people who have passed their lives within half a dozen miles, and have never been to survey these monuments of a war between rivers and mountains, which must have shaken the earth itself to its centre. See Appendix (B.)

The height of our mountains has not yet been estimated with any degree of exactness. The Alleghany being the great ridge which divides the waters of the Atlantic from those of the Mississippi, its summit is doubtless more elevated above the ocean than that of any other mountain. But its relative height, compared with the base on which it stands, is not so great as that of some others, the country rising behind the successive ridges like the steps of stairs. The mountains of the Blue Ridge, and of these the Peaks of Otter, are thought to be of a greater height, measured from their base, than any others in our country, and perhaps in North America. From data, which may found a tolerable conjecture, we suppose the highest peak to be about four thousand feet perpendicular, which is not a fifth part of the height of the mountains of South America, nor one-third of the height which would be necessary in our latitude to preserve ice in the open air unmelted through the year. The ridge of mountains next beyond the Blue Ridge, called by us the North mountain, is of the greatest extent; for which reason they were named by the Indians the endless mountains.

A substance supposed to be Pumice, found floating on the Mississippi, has induced a conjecture that there is a volcano on some of its waters; and as these are mostly known to their sources, except the Missouri, our expectations of verifying the conjecture would of course be led to the mountains which divide the waters of the Mexican Gulf from those of the

South Sea; but no volcano having ever yet been known at such a distance from the sea, we must rather suppose that this floating substance has been erroneously deemed Pumice.

QUERY V.

Its Cascades and Caverns ?

The only remarkable cascade in this country is that of the Falling Spring in Augusta. It is a water of James' river where it is called Jackson's river, rising in the warm spring mountains, about twenty miles southwest of the warm spring, and flowing into that valley. About three-quarters of a mile from its source it falls over a rock two hundred feet into the valley below. The sheet of water is broken in its breadth by the rock, in two or three places, but not at all in its height. Between the sheet and the rock, at the bottom, you may walk across dry. This cataract will bear no comparison with that of Niagara as to the quantity of water composing it; the sheet being only twelve or fifteen feet wide above and somewhat more spread below; but it is half as high again, the latter being only one hundred and fifty-six feet, according to the mensuration made by order of M. Vaudreuil, Governor of Canada, and one hundred and thirty according to a more recent account.

In the lime-stone country there are many caverns of very considerable extent. The most noted is called Madison's Cave, and is on the north side of

Jefferson's Works

the Blue Ridge, near the intersection of the Rockingham and Augusta line with the south fork of the

An eye-draught of Madison's Cave of 67 feet to the inch. The arrows show where it descends or ascends.

southern river of Shenandoah. It

is in a hill of about two hundred feet perpendicular height, the ascent of which, on one side, is so steep that you may pitch a biscuit from its summit into the river which washes its base. The entrance of the cave is, in this side, about two-thirds of the way up. It extends into the earth about three hundred feet, branching into subordinate caverns, sometimes

ascending a little, but more generally descending, and at length terminates, in two different places, at basons of water of unknown extent, and which I should judge to be nearly on a level with the water

of the river; however, I do not think they are formed by reflux water from that, because they are never turbid; because they do not rise and fall in correspondence with that in times of flood or of drought; and because the water is always cool. It is probably one of the many reservoirs with which the interior parts of the earth are supposed to abound, and yield supplies to the fountains of water, distinguished from others only by being accessible. The vault of this cave is of solid lime-stone, from twenty to forty or fifty feet high; through which water is continually percolating. This, trickling down the sides of the cave, has incrustated them over in the form of elegant drapery; and dripping from the top of the vault generates on that and on the base below, stalactites of a conical form, some of which have met and formed massive columns.

Another of these caves is near the North mountain, in the county of Frederic, on the lands of Mr. Zane. The entrance into this is on the top of an extensive ridge. You descend thirty or forty feet, as into a well, from whence the cave extends, nearly horizontally, four hundred feet into the earth, preserving a breadth of from twenty to fifty feet, and a height of from five to twelve feet. After entering this cave a few feet, the mercury, which in the open air was 50° , rose to 57° of Fahrenheit's thermometer, answering to 11° of Reaumur's, and it continued at that to the remotest parts of the cave. The uniform temperature of the cellars of the observa-

tory of Paris, which are ninety feet deep, and of all subterraneous cavities of any depth, where no chemical agencies may be supposed to produce a factitious heat, has been found to be 10° of Reaumur, equal to $54\frac{1}{2}^{\circ}$ of Fahrenheit. The temperature of the cave above mentioned so nearly corresponds with this, that the difference may be ascribed to a difference of instruments.

At the Panther gap, in the ridge which divides the waters of the Crow and the Calf pasture, is what is called the *Blowing Cave*. It is in the side of a hill, is of about one hundred feet diameter, and emits constantly a current of air of such force as to keep the weeds prostrate to the distance of twenty yards before it. This current is strongest in dry, frosty weather, and in long spells of rain weakest. Regular inspirations and expirations of air, by caverns and fissures, have been probably enough accounted for by supposing them combined with intermitting fountains; as they must of course inhale air while their reservoirs are emptying themselves, and again emit it while they are filling. But a constant issue of air, only varying in its force as the weather is drier or damper, will require a new hypothesis. There is another blowing cave in the Cumberland mountain, about a mile from where it crosses the Carolina line. All we know of this is, that it is not constant, and that a fountain of water issues from it.

The *Natural Bridge*, the most sublime of nature's works, though not comprehended under the present

The Natural Bridge of Virginia

head, must not be pretermitted. It is on the ascent of a hill, which seems to have been cloven through its length by some great convulsion. The fissure, just at the bridge, is, by some admeasurements, two hundred and seventy feet deep, by others only two hundred and five. It is about forty-five feet wide at the bottom and ninety feet at the top; this of course determines the length of the bridge, and its height from the water. Its breadth in the middle is about sixty feet, but more at the ends, and the thickness of the mass, at the summit of the arch, about forty feet. A part of this thickness is constituted by a coat of earth, which gives growth to many large trees. The residue, with the hill on both sides, is one solid rock of lime-stone. The arch approaches the semi-elliptical form; but the larger axis of the ellipsis, which would be the cord of the arch, is many times longer than the transverse. Though the sides of this bridge are provided in some parts with a parapet of fixed rocks, yet few men have resolution to walk to them, and look over into the abyss. You involuntarily fall on your hands and feet, creep to the parapet, and peep over it. Looking down from this height about a minute, gave me a violent head-ache. If the view from the top be painful and intolerable, that from below is delightful in an equal extreme. It is impossible for the emotions arising from the sublime to be felt beyond what they are here; so beautiful an arch, so elevated, so light, and springing as it were up to heaven! The

rapture of the spectator is really indescribable! The fissure continuing narrow, deep, and straight, for a considerable distance above and below the bridge, opens a short but very pleasing view of the North mountain on one side and the Blue Ridge on the other, at the distance each of them of about five miles. This bridge is in the county of Rockbridge, to which it has given name, and affords a public and commodious passage over a valley which cannot be crossed elsewhere for a considerable distance. The stream passing under it is called Cedar creek. It is a water of James' river, and sufficient in the driest seasons to turn a grist-mill, though its fountain is not more than two miles above.¹

¹ Don Ulloa mentions a break, similar to this, in the province of Angaraez, in South America. It is from sixteen to twenty-two feet wide, one hundred and eleven feet deep, and of 1.3 miles continuance, English measure. Its breadth at top is not sensibly greater than at bottom. But the following fact is remarkable, and will furnish some light for conjecturing the probable origin of our natural bridge. "Esta caja, ó cauce está cortada en péna viva con tanta precision, que las desigualdades del un lado entrantes, corresponden á las del otro lado salientes, como si aquella altura se hubiese abierto expresamente, con sus bueltas y tortuosidades, para darle transito á los aguas por entre los dos morallones que la forman; siendo tal su igualdad, que si llegasen á juntarse se endentarian uno con otro sin dextar hueco." Not. Amer. ii. § 10. Don Ulloa inclines to the opinion that this channel has been effected by the wearing of the water which runs through it, rather than that the mountain should have been broken open by any convulsion of nature. But if it had been worn by the running of water, would not the rocks which form the sides, have been worn plain? or if, meeting in some parts with veins of harder stone, the water had left prominences on the one side, would not the same cause have sometimes, or perhaps generally, occasioned prominences on the other side also? Yet Don Ulloa tells us, that on the other side there are always corresponding cavities, and that these tally with the prominences so per-

QUERY VI.

A notice of the mines and other subterraneous riches; its trees, plants, fruits, etc.

I knew a single instance of gold found in this State. It was interspersed in small specks through a lump of ore of about four pounds weight, which yielded seventeen pennyweights of gold, of extraordinary ductility. This ore was found on the north side of Rappahanoc, about four miles below the falls. I never heard of any other indication of gold in its neighborhood.

On the Great Kanhaway, opposite to the mouth of Cripple creek, and about twenty-five miles from our southern boundary, in the county of Montgomery, are mines of lead. The metal is mixed, sometimes with earth, and sometimes with rock, which requires the force of gunpowder to open it; and is accompanied with a portion of silver too small to be worth separation under any process hitherto attempted there. The proportion yielded is from fifty to eighty pounds of pure metal from one hun-

fectly, that, were the two sides to come together they would fit in all their indentures, without leaving any void. I think that this does not resemble the effect of running water, but looks rather as if the two sides had parted asunder. The sides of the break, over which is the natural bridge of Virginia, consisting of a veiny rock which yields to time, the correspondence between the salient and re-entering inequalities, if it existed at all, has now disappeared. This break has the advantage of the one described by Don Ulloa in its finest circumstance; no portion in that instance having held together, during the separation of the other parts, so as to form a bridge over the abyss.

dred pounds of washed ore. The most common is that of sixty to one hundred pounds. The veins are sometimes most flattering, at others they disappear suddenly and totally. They enter the side of the hill and proceed horizontally. Two of them are wrought at present by the public, the best of which is one hundred yards under the hill. These would employ about fifty laborers to advantage. We have not, however, more than thirty generally, and these cultivate their own corn. They have produced sixty tons of lead in the year; but the general quantity is from twenty to twenty-five tons. The present furnace is a mile from the ore bank and on the opposite side of the river. The ore is first waggoned to the river, a quarter of a mile, then laden on board of canoes and carried across the river, which is there about two hundred yards wide, and then again taken into wagons and carried to the furnace. This mode was originally adopted that they might avail themselves of a good situation on a creek for a pounding mill; but it would be easy to have the furnace and pounding mill on the same side of the river, which would yield water, without any dam, by a canal of about half a mile in length. From the furnace the lead is transported one hundred and thirty miles along a good road, leading through the peaks of Otter to Lynch's ferry, or Winston's on James' river, from whence it is carried by water about the same distance to Westham. This land carriage may be greatly shortened, by delivering the

lead on James' river, above the Blue Ridge, from whence a ton weight has been brought on two canoes. The Great Kanhaway has considerable falls in the neighborhood of the mines. About seven miles below are three falls, of three or four feet perpendicular each; and three miles above is a rapid of three miles continuance, which has been compared in its descent to the great falls of James' river. Yet it is the opinion, that they may be laid open for useful navigation, so as to reduce very much the portage between the Kanhaway and James' river.

A valuable lead mine is said to have been lately discovered in Cumberland, below the mouth of Red river. The greatest, however, known in the western country, are on the Mississippi, extending from the mouth of Rock river one hundred and fifty miles upwards. These are not wrought, the lead used in that country being from the banks on the Spanish side of the Mississippi, opposite to Kaskaskia.

A mine of copper was once opened in the county of Amherst, on the north side of James' river, and another in the opposite country, on the south side. However, either from bad management or the poverty of the veins, they were discontinued. We are told of a rich mine of native copper on the Ouabache, below the upper Wiaw.

The mines of iron worked at present are Callaway's, Ross's, and Ballendine's, on the south side of James' river; Old's on the north side, in Albemarle; Miller's in Augusta, and Zane's in Frederic.

These two last are in the valley between the Blue Ridge and North mountain. Callaway's, Ross's, Miller's, and Zane's make about one hundred and fifty tons of bar iron each, in the year. Ross's makes also about sixteen hundred tons of pig iron annually; Ballendine's one thousand; Callaway's, Miller's, and Zane's, about six hundred each. Besides these, a forge of Mr. Hunter's, at Fredericksburg, makes about three hundred tons a year of bar iron, from pigs imported from Maryland; and Taylor's forge on Neapsco of Potomac, works in the same way, but to what extent I am not informed. The indications of iron in other places are numerous, and dispersed through all the middle country. The toughness of the cast iron of Ross's and Zane's furnaces is very remarkable. Pots and other utensils, cast thinner than usual, of this iron, may be safely thrown into, or out of the wagons in which they are transported. Salt-pans made of the same, and no longer wanted for that purpose, cannot be broken up, in order to be melted again, unless previously drilled in many parts.

In the western country, we are told of iron mines between the Muskingum and Ohio; of others on Kentucky, between the Cumberland and Barren rivers, between Cumberland and Tennessee, on Reedy creek, near the Long Island, and on Chesnut creek, a branch of the Great Kanhaway, near where it crosses the Carolina line. What are called the iron banks, on the Mississippi, are believed, by a

good judge, to have no iron in them. In general, from what is hitherto known of that country, it seems to want iron.

Considerable quantities of black lead are taken occasionally for use from Winterham in the county of Amelia. I am not able, however, to give a particular state of the mine. There is no work established at it; those who want, going and procuring it for themselves.

The country on James' river, from fifteen to twenty miles above Richmond, and for several miles northward and southward, is replete with mineral coal of a very excellent quality. Being in the hands of many proprietors, pits have been opened, and, before the interruption of our commerce, were worked to an extent equal to the demand.

In the western country coal is known to be in so many places, as to have induced an opinion, that the whole tract between the Laurel mountain, Mississippi, and Ohio, yields coal. It is also known in many places on the north side of the Ohio. The coal at Pittsburg is of very superior quality. A bed of it at that place has been a-fire since the year 1765. Another coal-hill on the Pike-run of Monongahela has been a-fire ten years; yet it has burnt away about twenty yards only.

I have known one instance of an emerald found in this country. Amethysts have been frequent, and crystals common; yet not in such numbers any of them as to be worth seeking.

There is very good marble, and in very great abundance, on James' river, at the mouth of Rockfish. The samples I have seen, were some of them of a white as pure as one might expect to find on the surface of the earth; but most of them were variegated with red, blue, and purple. None of it has been ever worked. It forms a very large precipice, which hangs over a navigable part of the river. It is said there is marble at Kentucky.

But one vein of limestone is known below the Blue Ridge. Its first appearance, in our country, is in Prince William, two miles below the Pignut ridge of mountains; thence it passes on nearly parallel with that, and crosses the Rivanna about five miles below it, where it is called the South-west ridge. It then crosses Hard-ware, above the mouth of Hudson's creek, James' river at the mouth of Rockfish, at the marble quarry before spoken of, probably runs up that river to where it appears again at Ross's iron-works, and so passes off south-westwardly by Flat Creek of Otter river. It is never more than one hundred yards wide. From the Blue Ridge westwardly, the whole country seems to be founded on a rock of limestone, besides infinite quantities on the surface, both loose and fixed. This is cut into beds, which range, as the mountains and sea-coast do, from south-west to north-east, the lamina of each bed declining from the horizon towards a parallelism with the axis of the earth. Being struck with this observation, I made, with

a quadrant, a great number of trials on the angles of their declination, and found them to vary from 22° to 60° ; but averaging all my trials, the result was within one-third of a degree of the elevation of the pole or latitude of the place, and much the greatest part of them taken separately were little different from that; by which it appears, that these lamina are, in the main, parallel with the axis of the earth. In some instances, indeed, I found them perpendicular, and even reclining the other way; but these were extremely rare, and always attended with signs of convulsion, or other circumstances of singularity, which admitted a possibility of removal from their original position. These trials were made between Madison's cave and the Potomac. We hear of limestone on the Mississippi and Ohio, and in all the mountainous country between the eastern and western waters, not on the mountains themselves, but occupying the valleys between them.

Near the eastern foot of the North mountain are immense bodies of *Schist*, containing impressions of shells in a variety of forms. I have received petrified shells of very different kinds from the first sources of Kentucky, which bear no resemblance to any I have ever seen on the tide-waters. It is said that shells are found in the Andes, in South America, fifteen thousand feet above the level of the ocean. This is considered by many, both of the learned and unlearned, as a proof of an universal

deluge. To the many considerations opposing this opinion, the following may be added: The atmosphere, and all its contents, whether of water, air, or other matter, gravitate to the earth; that is to say, they have weight. Experience tells us, that the weight of all these together never exceeds that of a column of mercury of thirty-one inches height, which is equal to one of rain water of thirty-five feet high. If the whole contents of the atmosphere, then, were water, instead of what they are, it would cover the globe but thirty-five feet deep; but as these waters, as they fell, would run into the seas, the superficial measure of which is to that of the dry parts of the globe, as two to one, the seas would be raised only fifty-two and a half feet above their present level, and of course would overflow the lands to that height only. In Virginia this would be a very small proportion even of the champaign country, the banks of our tide waters being frequently, if not generally, of a greater height. Deluges beyond this extent, then, as for instance, to the North mountain or to Kentucky, seem out of the laws of nature. But within it they may have taken place to a greater or less degree, in proportion to the combination of natural causes which may be supposed to have produced them. History renders probably some instances of a partial deluge in the country lying round the Mediterranean sea. It has been often¹ supposed, and it is not unlikely, that that sea was once a lake.

¹ *Buffon Epoques*, 96.

While such, let us admit an extraordinary collection of the waters of the atmosphere from the other parts of the globe to have been discharged over that and the countries whose waters run into it. Or without supposing it a lake, admit such an extraordinary collection of the waters of the atmosphere, and an influx from the Atlantic ocean, forced by long-continued western winds. The lake, or that sea, may thus have been so raised as to overflow the low lands adjacent to it, as those of Egypt and Armenia, which, according to a tradition of the Egyptians and Hebrews, were overflowed about two thousand three hundred years before the Christian era; those of Attica, said to have been overflowed in the time of Ogyges, about five hundred years later; and those of Thessaly, in the time of Deucalion, still three hundred years posterior. But such deluges as these will not account for the shells found in the higher lands. A second opinion has been entertained, which is, that in times anterior to the records either of history or tradition, the bed of the ocean, the principal residence of the shelled tribe, has, by some great convulsion of nature, been heaved to the heights at which we now find shells and other marine animals. The favorers of this opinion do well to suppose the great events on which it rests to have taken place beyond all the eras of history; for within these, certainly, none such are to be found; and we may venture to say farther, that no fact has taken place, either in our own days, or in the thousands of years

recorded in history, which proves the existence of any natural agents, within or without the bowels of the earth, of force sufficient to heave, to the height of fifteen thousand feet, such masses as the Andes. The difference between the power necessary to produce such an effect, and that which shuffled together the different parts of Calabria in our days, is so immense, that from the existence of the latter, we are not authorized to infer that of the former.

M. de Voltaire has suggested a third solution of this difficulty. (Quest. Encycl. Coquilles.) He cites an instance in Touraine, where, in the space of eighty years, a particular spot of earth had been twice metamorphosed into soft stone, which had become hard when employed in building. In this stone shells of various kinds were produced, discoverable at first only with a microscope, but afterwards growing with the stone. From this fact, I suppose, he would have us infer, that, besides the usual process for generating shells by the elaboration of earth and water in animal vessels, nature may have provided an equivalent operation, by passing the same materials through the pores of calcareous earths and stones; as we see calcareous drop-stones generating every day, by the percolation of water through lime-stone, and new marble forming in the quarries from which the old has been taken out. And it might be asked, whether is it more difficult for nature to shoot the calcareous juice into the form of a shell, than other juices into the forms

of crystals, plants, animals, according to the construction of the vessels through which they pass? There is a wonder somewhere. Is it greatest on this branch of the dilemma; on that which supposes the existence of a power, of which we have no evidence in any other case; or on the first, which requires us to believe the creation of a body of water and its subsequent annihilation? The establishment of the instance, cited by M. de Voltaire, of the growth, of shells unattached to animal bodies, would have been that of his theory. But he has not established it. He has not even left it on ground so respectable as to have rendered it an object of inquiry to the *literati* of his own country. Abandoning this fact, therefore, the three hypotheses are equally unsatisfactory; and we must be contented to acknowledge, that this great phenomenon is as yet unsolved. Ignorance is preferable to error; and he is less remote from the truth who believes nothing, than he who believes what is wrong.

There is great abundance (more especially when you approach the mountains) of stone, white, blue, brown, &c., fit for the chisel, good mill-stone, such also as stands the fire, and slate stone. We are told of flint, fit for gun-flints, on the Meherrin in Brunswick, on the Mississippi between the mouth of the Ohio and Kaskaskia, and on others of the western waters. Isinglass or mica is in several places; load-stone also; and an Asbestos of a ligneous texture, is sometimes to be met with.

Marle abounds generally. A clay, of which, like the Sturbridge in England, bricks are made, which resist long the violent action of fire, has been found on Tuckahoe creek of James' river, and no doubt will be found in other places. Chalk is said to be in Botetourt and Bedford. In the latter county is some earth believed to be gypseous. Ochres are found in various parts.

In the lime-stone country are many caves, the earthy floors of which are impregnated with nitre. On Rich creek, a branch of the Great Kanaway, about sixty miles below the lead mines, is a very large one, about twenty yards wide, and entering a hill a quarter or half a mile. The vault is of rock, from nine to fifteen or twenty feet above the floor. A Mr. Lynch, who gives me this account, undertook to extract the nitre. Besides a coat of the salt which had formed on the vault and floor, he found the earth highly impregnated to the depth of seven feet in some places, and generally of three, every bushel yielding on an average three pounds of nitre. Mr. Lynch having made about ten hundred pounds of the salt from it, consigned it to some others, who have since made ten thousand pounds. They have done this by pursuing the cave into the hill, never trying a second time the earth they have once exhausted, to see how far or soon it receives another impregnation. At least fifty of these caves are worked on the Greenbriar. There are many of them known on Cumberland river.

The country westward of the Alleghany abounds with springs of common salt. The most remarkable we have heard of are at Bullet's-lick, the Big-bones, the Blue-licks, and on the north fork of Holston. The area of Bullet's-lick is of many acres. Digging the earth to the depth of three feet the water begins to boil up, and the deeper you go and the drier the weather, the stronger is the brine. A thousand gallons of water yield from a bushel to a bushel and a half of salt, which is about eighty pounds of water to one pound of salt. So that sea-water is more than three times as strong as that of these springs. A salt spring has been lately discovered at the Turkey foot on Yohogany, by which river it is overflowed, except at very low water. Its merit is not yet known. Dunning's lick is also as yet untried, but it is supposed to be the best on this side the Ohio. The salt springs on the margin of the Onondago lake are said to give a saline taste to the waters of the lake.

There are several medicinal springs, some of which are indubitably efficacious, while others seem to owe their reputation as much to fancy and change of air and regimen, as to their real virtues. None of them having undergone a chemical analysis in skilful hands, nor been so far the subject of observations as to have produced a reduction into classes of the disorders which they relieve; it is in my power to give little more than an enumeration of them.

The most efficacious of these are two springs in

Augusta near the first sources of James' river, where it is called Jackson's river. They rise near the foot of the ridge of mountains generally called the Warm spring mountains, but in the maps Jackson's mountains. The one distinguished by the name of the Warm spring, and the other of the Hot spring. The Warm spring issues with a very bold stream, sufficient to work a grist mill and to keep the waters of its basin, which is thirty feet in diameter, at the vital warmth, viz. 96° of Fahrenheit's thermometer. The matter with which these waters is allied is very volatile; its smell indicates it to be sulphureous, as also does the circumstance of its turning silver black. They relieve rheumatisms. Other complaints also of very different natures have been removed or lessened by them. It rains here four or five days in every week.

The *Hot spring* is about six miles from the Warm, is much smaller, and has been so hot as to have boiled an egg. Some believe its degree of heat to be lessened. It raises the mercury in Fahrenheit's thermometer to 112 degrees, which is fever heat. It sometimes relieves where the Warm fails. A fountain of common water, issuing within a few inches of its margin, gives it a singular appearance. Comparing the temperature of these with that of the Hot springs of Kamschatka, of which Krachininnikow gives an account, the difference is very great, the latter raising the mercury to 200° which is within 12° of boiling water. These springs are very much

resorted to in spite of a total want of accommodation for the sick. Their waters are strongest in the hottest months, which occasions their being visited in July and August principally.

The Sweet springs are in the county of Botetourt, at the eastern foot of the Alleghany, about forty-two miles from the Warm springs. They are still less known. Having been found to relieve cases in which the others had been ineffectually tried, it is probable their composition is different. They are different also in their temperature, being as cold as common water; which is not mentioned, however, as a proof of a distinct impregnation. This is among the first sources of James' river.

On Potomac river, in Berkley county, above the North mountain, are medicinal springs, much more frequented than those of Augusta. Their powers, however, are less, the waters weakly mineralized, and scarcely warm. They are more visited, because situated in a fertile, plentiful, and populous country, better provided with accommodations, always safe from the Indians, and nearest to the more populous States.

In Louisa county, on the head waters of the South Ann branch of York river, are springs of some medicinal virtue. They are not much used however. There is a weak chalybeate at Richmond; and many others in various parts of the country, which are of too little worth, or too little note, to be enumerated after those before mentioned.

We are told of a sulphur spring on Howard's creek of Greenbriar, and another at Boonsborough on Kentucky.

In the low grounds of the Great Kanhaway, seven miles above the mouth of Elk river, and sixty-seven above that of the Kanhaway itself, is a hole in the earth of the capacity of thirty or forty gallons, from which issues constantly a bituminous vapor, in so strong a current as to give to the sand about its orifice the motion which it has in a boiling spring. On presenting a lighted candle or torch within eighteen inches of the hole it flames up in a column of eighteen inches in diameter, and four or five feet height, which sometimes burns out within twenty minutes, and at other times has been known to continue three days, and then has been still left burning. The flame is unsteady, of the density of that of burning spirits, and smells like burning pit coal. Water sometimes collects in the basin, which is remarkably cold, and is kept in ebullition by the vapor issuing through it. If the vapor be fired in that state, the water soon becomes so warm that the hand cannot bear it, and evaporates wholly in a short time. This, with the circumjacent lands, is the property of His Excellency General Washington and of General Lewis.

There is a similar one on Sandy river, the flame of which is a column of about twelve inches diameter, and three feet high. General Clarke, who informs me of it, kindled the vapor, staid about an hour, and left it burning.

The mention of uncommon springs leads me to that of Syphon fountains. There is one of these near the intersection of the Lord Fairfax's boundary with the North mountain, not far from Brock's gap, on the stream of which is a grist mill, which grinds two bushel of grain at every flood of the spring; another near Cow-pasture river, a mile and a half below its confluence with the Bull-pasture river, and sixteen or seventeen miles from Hot springs, which intermits once in every twelve hours; one also near the mouth of the north Holston.

After these may be mentioned the *Natural Well*, on the lands of a Mr. Lewis in Frederick county. It is somewhat larger than a common well; the water rises in it as near the surface of the earth as in the neighboring artificial wells, and is of a depth as yet unknown. It is said there is a current in it tending sensibly downwards. If this be true, it probably feeds some fountain, of which it is the natural reservoir, distinguished from others, like that of Madison's cave, by being accessible. It is used with a bucket and windlass as an ordinary well.

A complete catalogue of the trees, plants, fruits, &c., is probably not desired. I will sketch out those which would principally attract notice, as being first, Medicinal; second, Esculent; third, Ornamental; or four, useful for fabrication; adding the Linnæan to the popular names, as the latter might not convey precise information to a foreigner. I shall confine myself, too, to native plants.

1. Senna. *Cassia ligustrina*.
 Arsmart. *Polygonum Sagittatum*.
 Clivers, or goose-grass. *Galium spurium*.
 Lobelia of several species.
 Palma Christi. *Ricinus*.
 (3.) Jamestown weed. *Datura Stramonium*.
 Mallow. *Malva rotundifolia*.
 Syrian mallow. *Hibiscus moschentos*.
 Hibiscus Virginicus.
 Indian mallow. *Sida rhombifolia*.
 Sida abutilon.
 Virginia marshmallow. *Napæa hermaphrodita*.
 Napæa dioica.
 Indian physic. *Spiria trifoliata*.
 Euphorbia Ipecacuanhæ.
 Pleurisy root. *Asclepias decumbens*.
 Virginia snake-root. *Aristolochia serpentaria*.
 Black snake-root. *Actæ racemosa*.
 Seneca rattlesnake-root. *Polygala Senega*
 Valerian. *Valeriana locusta radiata*.
 Gentiana, Saponaria, Villosa & Centaurium.
 Ginseng. *Panax quinquefolium*.
 Angelica. *Angelica sylvestris*.
 Cassava. *Jatropha urens*.
2. Tuckahoe. *Lycoperdon tuber*.
 Jerusalem artichoke. *Helianthus tuberosus*.
 Long potatoes. *Convolvulus batatas*.
 Granadillas. Maycocks, Maracocks, *Passiflora incarnata*.
 Panic. *Panicum* of many species.
 Indian millet. *Holcus laxus*.
 Holcus striosus.
 Wild oat. *Zizania aquatica*.
 Wild pea. *Dolichos* of Clayton.
 Lupine. *Lupinus perennis*.
 Wild hop. *Humulus lupulus*.
 Wild cherry. *Prunus Virginiana*.
 Cherokee plum. *Prunus sylvestris fructu majori*. Clayton.
 Wild plum. *Prunus sylvestris fructu minori*. Clayton.
 Wild crab apple. *Pyrus coronaria*.
 Red mulberry. *Morus rubra*.
 Persimmon. *Diospiros Virginiana*.
 Sugar maple. *Acer saccharinum*.

Scaly bark hiccory. *Juglans alba cortice squamoso*. Clayton.
Common hiccory. *Juglans alba, fructu minore rancido*. Clayton.

Paccan, or Illinois nut. Not described by Linnæus, Millar, or Clayton. Were I to venture to describe this, speaking of the fruit from memory, and of the leaf from plants of two years' growth, I should specify it as *Juglans alba, foliolis lanceolatis, acuminatis, serratis, tomentosiss, fructu minore, ovato, compresso, vix insculpto, dulci, putamine tenerrimo*. It grows on the Illinois, Wabash, Ohio, and Mississippi. It is spoken of by Don Ulloa under the name of Pacanos, in his *Noticias Americanas, Entret. 6*.

Black walnut. *Juglans nigra*.

White walnut. *Juglans alba*.

Chesnut. *Fagus castanea*.

Chinquapin. *Fagus pumila*.

Hazlenut. *Corylus avellana*.

Grapes. *Vitis*. Various kinds; though only three described by Clayton.

Scarlet strawberries. *Fragaria Virginiana* of Millar.

Whortleberries. *Vaccinium uliginosum*.

Wild gooseberries. *Ribes grossularia*.

Cranberries. *Vaccinium oxycoccos*.

Black raspberries. *Rubus occidentalis*.

Blackberries. *Rubus fruticosus*.

Dewberries. *Rubus cæsius*.

Cloudberry. *Rubus Chamæmorus*.

3. Plane tree. *Platanus occidentalis*.

Poplar. *Liriodendron tulipifera*.

Populus heterophylla.

Black poplar. *Populus nigra*.

Aspen. *Populus tremula*.

Linden, or lime. *Telia Americana*.

Red-flowering maple. *Acer rubrum*.

Horse-chesnut, or buck's-eye. *Æsculus pavia*.

Catalpa. *Bignonia catalpa*.

Umbrella. *Magnolia tripetala*.

Swamp laurel. *Magnolia glauca*.

Cucumber-tree. *Magnolia acuminata*.

Portugal bay. *Laurus indica*.

Red bay. *Laurus borbonia*.

Dwarf-rose bay. *Rhododendron maximum*.

- Laurel of the western country. *Qu. species?*
 Wild pimento. *Laurus benzoin*.
 Sassafras. *Laurus sassafras*.
 Locust. *Robinia pseudo-acacia*.
 Honey-locust. *Gleditsia*. *1. β.*
 Dogwood. *Cornus florida*.
 Fringe, or snow-drop tree. *Chionanthus Virginica*.
 Barberry. *Barberis vulgaris*.
 Redbud, or Judas-tree. *Cercis Canadensis*.
 Holly. *Ilex aquifolium*.
 Cockspur hawthorn. *Cratægus coccinea*.
 Spindle-tree. *Euonymus Europæus*.
 Evergreen spindle-tree. *Euonymus Americanus*.
 Itea *Virginica*.
 Elder. *Sambucus nigra*.
 Papaw. *Annona triloba*.
 Candleberry myrtle. *Myrica cerifera*.
 Dwarf laurel. *Kalmia angustifolia* } called ivy with us
 Kalmia latifolia }
 Ivy. *Hedera quinquefolia*.
 Trumpet honeysuckle. *Lonicera sempervirens*.
 Upright honeysuckle. *Azalea nudiflora*.
 Yellow jasmine. *Bignonia sempervirens*.
Calycanthus floridus.
 American aloe. *Agave Virginica*.
 Sumach. *Rhus*. *Qu. species?*
 Poke. *Phytolacca decandra*.
 Long moss. *Tillandsia Usneoides*.
 4. Reed. *Aruudo phragmitis*.
 Virginia hemp. *Acnida cannabina*.
 Flax. *Linum Virginianum*,
 Black, or pitch-pine. *Pinus tæda*.
 White pine. *Pinus strobus*.
 Yellow pine. *Pinus Virginica*.
 Spruce pine. *Pinus foliis singularibus*. Clayton,
 Hemlock spruce Fir. *Pinus Canadensis*.
 Arbor vitæ. *Thuja occidentalis*.
 Juniper. *Juniperus Virginica* (called cedar with us).
 Cypress. *Cupressus disticha*.
 White cedar. *Cupressus Thyoides*.
 Black oak. *Quercus nigra*.
 White oak. *Quercus alba*.

- Red oak. *Quercus rubra*.
 Willow oak. *Quercus phellos*.
 Chesnut oak. *Quercus prinus*.
 Black jack oak. *Quercus aquatica*. Clayton.
 Ground oak. *Quercus pumila*. Clayton.
 Live oak. *Quercus Virginiana*. Millar.
 Black birch, *Betula nigra*.
 White birch. *Betula alba*.
 Beach. *Fagus sylvatica*.
 Ash. *Fraxinus Americana*.
 Fraxinus Novæ Angliæ. Millar.
 Elm. *Ulmus Americana*.
 Willow. *Salix*. Qu. species?
 Sweet gum. *Liquidambar styraciflua*.

The following were found in Virginia when first visited by the English; but it is not said whether of spontaneous growth, or by cultivation only. Most probably they were natives of more southern climates, and handed along the continent from one nation to another of the savages.

- Tobacco. *Nicotiana*.
 Maize. *Zea mays*.
 Round potatoes. *Solanum tuberosum*.
 Pumpkins. *Cucurbita pepo*.
 Cymplings. *Cucurbita verrucosa*.
 Squashes. *Cucurbita melopepo*.

There is an infinitude of other plants and flowers, for an enumeration and scientific description of which I must refer to the *Flora Virginica* of our great botanist, Dr. Clayton, published by Gronovius at Leyden, in 1762. This accurate observer was a native and resident of this State, passed a long life in exploring and describing its plants, and is supposed to have enlarged the botanical catalogue as much as almost any man who has lived.

Besides these plants, which are native, our *farms* produce wheat, rye, barley, oats, buck-wheat, broom corn, and Indian corn. The climate suits rice well enough, wherever the lands do. Tobacco, hemp, flax, and cotton, are staple commodities. Indigo yields two cuttings. The silk-worm is a native, and the mulberry, proper for its food, grows kindly.

We cultivate, also, potatoes, both the long and the round, turnips, carrots, parsnips, pumpkins, and ground nuts (*Arachis*). Our grasses are lucerne, st. foin, burnet, timothy, ray, and orchard grass; red, white, and yellow clover; greensward, blue grass, and crab grass.

The *gardens* yield musk-melons, water-melons, tomatoes, okra, pomegranates, figs, and the esculent plants of Europe.

The *orchards* produce apples, pears, cherries, quinces, peaches, nectarines, apricots, almonds, and plums.

Our quadrupeds have been mostly described by Linnæus and Mons. de Buffon. Of these the mammoth, or big buffalo, as called by the Indians, must certainly have been the largest. Their tradition is, that he was carnivorous, and still exists in the northern parts of America. A delegation of warriors from the Delaware tribe having visited the Governor of Virginia, during the revolution, on matters of business, after these had been discussed and settled in council, the Governor asked them some questions relative to their country, and among others, what

they knew or had heard of the animal whose bones were found at the Saltlicks on the Ohio. Their chief speaker immediately put himself into an attitude of oratory, and with a pomp suited to what he conceived the elevation of his subject, informed him that it was a tradition handed down from their fathers, "That in ancient times a herd of these tremendous animals came to the Big-bone licks, and began an universal destruction of the bear, deer, elks, buffaloes, and other animals which had been created for the use of the Indians; that the Great Man above, looking down and seeing this, was so enraged that he seized his lightning, descended on the earth, seated himself on a neighboring mountain, on a rock of which his seat and the print of his feet are still to be seen, and hurled his bolts among them till the whole were slaughtered, except the big bull, who presenting his forehead to the shafts, shook them off as they fell; but missing one at length, it wounded him in the side; whereon, springing round, he bounded over the Ohio, over the Wabash, the Illinois, and finally over the great lakes, where he is living at this day." It is well known, that on the Ohio, and in many parts of America further north, tusks, grinders, and skeletons of unparalleled magnitude, are found in great numbers, some lying on the surface of the earth, and some a little below it. A Mr. Stanley, taken prisoner near the mouth of the Tennessee, relates, that after being transferred through several tribes, from one to another, he was at length carried over the moun-

tains west of the Missouri to a river which runs westwardly; that these bones abounded there, and that the natives described to him the animal to which they belonged as still existing in the northern parts of their country; from which description he judged it to be an elephant. Bones of the same kind have been lately found, some feet below the surface of the earth, in salines opened on the North Holston, a branch of the Tennessee, about the latitude of $36\frac{1}{2}^{\circ}$ north. From the accounts published in Europe, I suppose it to be decided that these are of the same kind with those found in Siberia. Instances are mentioned of like animal remains found in the more southern climates of both hemispheres; but they are either so loosely mentioned as to leave a doubt of the fact, so inaccurately described as not to authorize the classing them with the great northern bones, or so rare as to found a suspicion that they have been carried thither as curiosities from the northern regions. So that, on the whole, there seem to be no certain vestiges of the existence of this animal farther south than the salines just mentioned. It is remarkable that the tusks and skeletons have been ascribed by the naturalists of Europe to the elephant, while the grinders have been given to the hippopotamus, or river horse. Yet it is acknowledged, that the tusks and skeletons are much larger than those of the elephant, and the grinders many times greater than those of the hippopotamus, and essentially different in form. Wherever these grinders are

found, there also we find the tusks and skeleton; but no skeleton of the hippopotamus nor grinders of the elephant. It will not be said that the hippopotamus and elephant came always to the same spot, the former to deposit his grinders, and the latter his tusks and skeleton. For what became of the parts not deposited there? We must agree then, that these remains belong to each other, that they are of one and the same animal, that this was not a hippopotamus, because the hippopotamus had no tusks, nor such a frame, and because the grinders differ in their size as well as in the number and form of their points. That this was not an elephant, I think ascertained by proofs equally decisive. I will not avail myself of the authority of the celebrated¹ anatomist, who, from an examination of the form and structure of the tusks, has declared they were essentially different from those of the elephant; because another² anatomist, equally celebrated, has declared, on a like examination, that they are precisely the same. Between two such authorities I will suppose this circumstance equivocal. But, 1. The skeleton of the mammoth (for so the incognitum has been called) bespeaks an animal of five or six times the cubic volume of the elephant, as Mons. de Buffon has admitted. 2. The grinders are five times as large, are square, and the grinding surface studded with four or five rows of blunt points; whereas those

¹ Hunter.

² D'Aubenton.

of the elephant are broad and thin, and their grinding surface flat. 3. I have never heard an instance, and suppose there has been none, of the grinder of an elephant being found in America. 4. From the known temperature and constitution of the elephant, he could never have existed in those regions where the remains of the mammoth have been found. The elephant is a native only of the torrid zone and its vicinities; if, with the assistance of warm apartments and warm clothing, he has been preserved in the temperate climates of Europe, it has only been for a small portion of what would have been his natural period, and no instance of his multiplication in them has ever been known. But no bones of the mammoth, as I have before observed, have been ever found further south than the salines of Holston, and they have been found as far north as the Arctic circle. Those, therefore, who are of opinion that the elephant and mammoth are the same, must believe, 1. That the elephant known to us can exist and multiply in the frozen zone; or, 2. That an eternal fire may once have warmed those regions, and since abandoned them, of which, however, the globe exhibits no unequivocal indications; or, 3. That the obliquity of the ecliptic, when these elephants lived, was so great as to include within the tropics all those regions in which the bones are found; the tropics being, as is before observed, the natural limits of habitation for the elephant. But if it be admitted that this obliquity has really decreased,

and we adopt the highest rate of decrease yet pretended, that is, of one minute in a century, to transfer the northern tropic to the Arctic circle, would carry the existence of these supposed elephants two hundred and fifty thousand years back; a period far beyond our conception of the duration of animal bones less exposed to the open air than these are in many instances. Besides, though these regions would then be supposed within the tropics, yet their winters would have been too severe for the sensibility of the elephant. They would have had, too, but one day and one night in the year, a circumstance to which we have no reason to suppose the nature of the elephant fitted. However, it has been demonstrated, that, if a variation of obliquity in the ecliptic takes place at all, it is vibratory, and never exceeds the limits of nine degrees, which is not sufficient to bring these bones within the tropics. One of these hypotheses, or some other equally voluntary and inadmissible to cautious philosophy, must be adopted to support the opinion that these are the bones of the elephant. For my own part, I find it easier to believe that an animal may have existed, resembling the elephant in his tusks, and general anatomy, while his nature was in other respects extremely different. From the 30th degree of south latitude to the 30th degree of north, are nearly the limits which nature has fixed for the existence and multiplication of the elephant known to us. Proceeding thence northwardly to $36\frac{1}{2}$ degrees, we

enter those assigned to the mammoth. The farther we advance north, the more their vestiges multiply as far as the earth has been explored in that direction; and it is as probable as otherwise, that this progression continues to the pole itself, if land extends so far. The centre of the frozen zone, then, may be the acmé of their vigor, as that of the torrid is of the elephant. Thus nature seems to have drawn a belt of separation between these two tremendous animals, whose breadth, indeed, is not precisely known, though at present we may suppose it about $6\frac{1}{2}$ degrees of latitude; to have assigned to the elephant the region south of these confines, and those north to the mammoth, founding the constitution of the one in her extreme of heat, and that of the other in the extreme of cold. When the Creator has therefore separated their nature as far as the extent of the scale of animal life allowed to this planet would permit, it seems perverse to declare it the same, from a partial resemblance of their tusks and bones. But to whatever animal we ascribe these remains, it is certain such a one has existed in America, and that it has been the largest of all terrestrial beings. It should have sufficed to have rescued the earth it inhabited, and the atmosphere it breathed, from the imputation of impotence in the conception and nourishment of animal life on a large scale; to have stifled, in its birth, the opinion of a writer, the most learned, too, of all others in the science of animal history, that in the new world, "La nature vivante est beaucoup

moins agissante, beaucoup moins forte;"¹ that nature is less active, less energetic on one side of the globe than she is on the other. As if both sides were not warmed by the same genial sun; as if a soil of the same chemical composition was less capable of elaboration into animal nutriment; as if the fruits and grains from that soil and sun yielded a less rich chyle, gave less extension to the solids and fluids of the body, or produced sooner in the cartilages, membranes, and fibres, that rigidity which restrains all further extension, and terminates animal growth. The truth is, that a pigmy and a Patagonian, a mouse and a mammoth, derive their dimensions from the same nutritive juices. The difference of increment depends on circumstances unsearchable to beings with our capacities. Every race of animals seems to have received from their Maker certain laws of extension at the time of their formation. Their elaborate organs were formed to produce this, while proper obstacles were opposed to its further progress. Below these limits they cannot fall, nor rise above them. What intermediate station they shall take may depend on soil, on climate, on food, on a careful choice of breeders. But all the manna of heaven would never raise the mouse to the bulk of the mammoth.

The opinion advanced by the Count de Buffon,² is 1. That the animals common both to the old and

¹ Buffon, xviii. 112 edit. Paris, 1764.

² Buffon, xviii. 100, 156.

new world are smaller in the latter. 2. That those peculiar to the new are on a smaller scale. 3. That those which have been domesticated in both have degenerated in America; and 4. That on the whole it exhibits fewer species. And the reason he thinks is, that the heats of America are less; that more waters are spread over its surface by nature, and fewer of these drained off by the hand of man. In other words, that *heat* is friendly, and *moisture* adverse to the production and development of large quadrupeds. I will not meet this hypothesis on its first doubtful ground, whether the climate of America be comparatively more humid? Because we are not furnished with observations sufficient to decide this question. And though, till it be decided, we are as free to deny as others are to affirm the fact, yet for a moment let it be supposed. The hypothesis, after this supposition, proceeds to another; that *moisture* is unfriendly to animal growth. The truth of this is inscrutable to us by reasonings *a priori*. Nature has hidden from us her *modus agendi*. Our only appeal on such questions is to experience; and I think that experience is against the supposition. It is by the assistance of *heat* and *moisture* that vegetables are elaborated from the elements of earth, air, water, and fire. We accordingly see the more humid climates produce the greater quantity of vegetables. Vegetables are mediately or immediately the food of every animal; and in proportion to the quantity of food, we

see animals not only multiplied in their numbers, but improved in their bulk, as far as the laws of their nature will admit. Of this opinion is the Count de Buffon himself in another part of his work; "en general il paroît que les pays un peu *froids* conviennent mieux à nos boeufs que les pays chauds, et qu'ils sont d'autant plus gross et plus grands que le climat est plus *humide* et plus abondans en paturages. Les boeufs de Danemarck, de la Podolie, de l'Ulkraine et de la Tartarie qui habitent les Calmouques sont les plus grands de tous." Here then a race of animals, and one of the largest too, has been increased in its dimensions by *cold* and *moisture*; in direct opposition to the hypothesis, which supposes that these two circumstances diminish animal bulk, and that it is their contraries *heat* and *dryness* which enlarge it. But when we appeal to experience we are not to rest satisfied with a single fact. Let us, therefore, try our question on more general ground. Let us take two portions of the earth, Europe and America for instance, sufficiently extensive to give operation to general causes; let us consider the circumstances peculiar to each, and observe their effect on animal nature. America, running through the torrid as well as temperate zone, has more *heat* collectively taken, than Europe. But Europe, according to our hypothesis, is the *dryest*. They are equally adapted then to animal productions; each being endowed with one of those causes which befriends animal growth, and with one

which opposes it. If it be thought unequal to compare Europe with America, which is so much larger, I answer, not more so than to compare America with the whole world. Besides, the purpose of the comparison is to try an hypothesis, which makes the size of animals depend on the *heat* and *moisture* of climate. If, therefore, we take a region so extensive as to comprehend a sensible distinction of climate, and so extensive, too, as that local accidents, or the intercourse of animals on its borders, may not materially affect the size of those in its interior parts, we shall comply with those conditions which the hypothesis may reasonably demand. The objection would be the weaker in the present case, because any intercourse of animals which may take place on the confines of Europe and Asia, is to the advantage of the former, Asia producing certainly larger animals than Europe. Let us then take a comparative view of the quadrupeds of Europe and America, presenting them to the eye in three different tables, in one of which shall be enumerated those found in both countries; in a second, those found in one only; in a third, those which have been domesticated in both. To facilitate the comparison, let those of each table be arranged in gradation according to their sizes, from the greatest to the smallest, so far as their sizes can be conjectured. The weights of the large animals shall be expressed in the English avoirdupois and its decimals; those of the smaller, in the same ounce and its decimals. Those which

are marked thus *, are actual weights of particular subjects, deemed among the largest of their species. Those marked thus †, are furnished by judicious persons, well acquainted with the species, and saying, from conjecture only, what the largest individual they had seen would probably have weighed. The other weights are taken from Messrs. Buffon and D'Aubenton, and are of such subjects as came casually to their hands for dissection. This circumstance must be remembered where their weights and mine stand opposed; the latter being stated not to produce a conclusion in favor of the American species, but to justify a suspension of opinion until we are better informed, and a suspicion, in the meantime, that there is no uniform difference in favor of either; which is all I pretend.

A comparative view of the Quadrupeds of Europe and of America.

I have not inserted in the first table the Phoca,¹ nor leather-winged bat, because the one living half the year in the water, and the other being a winged animal, the individuals of each species may visit both continents.

¹ It is said that this animal is seldom seen above thirty miles from shore, or beyond the 56th degree of latitude. The interjacent islands between Asia and America admit his passing from one continent to the other without exceeding these bounds. And in fact, travellers tell us that these islands are places of principal resort for them, and especially in the season of bringing forth their young.

Of the animals in the first table, Monsieur de Buffon himself informs us, [XXVII, 130, XXX. 213.] that the beaver, the otter, and shrew mouse, though of the same species, are larger in America than in Europe. This should therefore have corrected the generality of his expressions, XVIII. 145, and elsewhere, that the animals common to the two countries, are considerably less in America than in Europe, "et cela sans aucune exception." He tells us too, [Quadrup. VIII. 334, edit. Paris, 1777,] that on examining a bear from America, he remarked no difference, "dans la forme de cet ours d'Amerique comparé a celui d'Europe," but adds from Bartram's journal, that an American bear weighed four hundred pounds, English, equal to three hundred and sixty-seven pounds French; whereas we find the European bear examined by Mons. D'Aubenton, [XVII. 82,] weighed but one hundred and forty-one pounds French. That the palmated elk is larger in America than in Europe, we are informed by Kalm,¹ a naturalist, who visited the former by public appointment, for the express purpose of examining the subjects of natural history. In this fact Pennant concurs with him. [Barrington's Miscellanies.] The same Kalm tells us² that the black moose, or renne of America, is as high as a tall horse; and Catesby,³ that it is about the bigness of a middle-

¹ I. 233, Lon. 1772.

² Ib. 233.

³ I. xxvii.

sized ox. The same account of their size has been given me by many who have seen them. But Monsieur D'Aubenton says¹ that the renne of Europe is about the size of a red deer. The weasel is larger in America than in Europe, as may be seen by comparing its dimensions as reported by Monsieur D'Aubenton² and Kalm. The latter tells us,³ that the lynx, badger, red fox, and flying squirrel, are the *same* in America as in Europe; by which expression I understand, they are the same in all material circumstances, in size as well as others; for if they were smaller, they would differ from the European. Our gray fox is, by Catesby's account,⁴ little different in size and shape from the European fox. I presume he means the red fox of Europe, as does Kalm, where he says,⁵ that in size "they do not quite come up to our foxes." For proceeding next to the red fox of America, he says, "they are entirely the same with the European sort;" which shows he had in view one European sort only, which was the red. So that the result of their testimony is, that the American gray fox is somewhat less than the European red; which is equally true of the gray fox of Europe, as may be seen by comparing the measures of the Count de Buffon and Monsieur D'Aubenton.⁶ The

white bear of America is as large as that of Europe. The bones of the mammoth which has been found in America, are as large as those found in the old world. It may be asked, why I insert the mammoth, as if it still existed? I ask in return, why I should omit it, as if it did not exist? Such is the economy of nature, that no instance can be produced, of her having permitted any one race of her animals to become extinct; of her having formed any link in her great work so weak as to be broken. To add to this, the traditionary testimony of the Indians, that this animal still exists in the northern and western parts of America, would be adding the light of a taper to that of the meridian sun. Those parts still remain in their aboriginal state, unexplored and undisturbed by us, or by others for us. He may as well exist there now, as he did formerly where we find his bones. If he be a carnivorous animal, as some anatomists have conjectured, and the Indians affirm, his early retirement may be accounted for from the general destruction of the wild game by the Indians, which commences in the first instant of their connection with us, for the purpose of purchasing match-coats, hatchets, and fire-locks, with their skins. There remain then the buffalo, red deer, fallow deer, wolf, roe, glutton, wild cat, monax, bison, hedgehog, marten, and water-rat, of the comparative sizes of which we have not sufficient testimony. It does not appear that Messieurs de Buffon and D'Aubenton have measured, weighed, or seen

those of America. It is said of some of them, by some travellers, that they are smaller than the European. But who were these travellers? Have they not been men of a very different description from those who have laid open to us the other three quarters of the world? Was natural history the object of their travels? Did they measure or weigh the animals they speak of? or did they not judge of them by sight, or perhaps even from report only? Were they acquainted with the animals of their own country, with which they undertake to compare them? Have they not been so ignorant as often to mistake the species? A true answer to these questions would probably lighten their authority, so as to render it insufficient for the foundation of an hypothesis. How unripe we yet are, for an accurate comparison of the animals of the two countries, will appear from the work of Monsieur de Buffon. The ideas we should have formed of the sizes of some animals, from the formation he had received at his first publications concerning them, are very different from what his subsequent communications give us. And indeed his candor in this can never be too much praised. One sentence of his book must do him immortal honor. "J'aime autant une personne qui me relève d'une erreur, qu'une autre qui m'apprend une verité, parce qu'en effet une erreur corrigée est une verité."¹ He seems to have thought the cabiai he first examined wanted little

¹ Quad. IX. 158.

of its full growth. "Il n'etoit pas encore tout-à-fait adulte."¹ Yet he weighed but forty-six and a half pounds, and he found afterwards,² that these animals, when full grown, weigh one hundred pounds. He had supposed, from the examination of a jaguar,³ said to be two years old, which weighed but sixteen pounds twelve ounces, that when he should have acquired his full growth, he would not be larger than a middle-sized dog. But a subsequent account⁴ raises his weight to two hundred pounds. Further information will, doubtless, produce further corrections. The wonder is, not that there is yet something in this great work to correct, but that there is so little. The result of this view then is, that of twenty-six quadrupeds common to both countries, seven are said to be larger in America, seven of equal size, and twelve not sufficiently examined. So that the first table impeaches the first member of the assertion, that of the animals common to both countries, the American are smallest, "et cela sans aucune exception." It shows it is not just, in all the latitude in which its author has advanced it, and probably not to such a degree as to found a distinction between the two countries.

Proceeding to the second table, which arranges the animals found in one of the two countries only, Monsieur de Buffon observes, that the tapir, the

¹ XXV. 184.

² Quad. IX. 132.

³ XIX. 2.

⁴ Quad. IX. 41.

elephant of America, is but of the size of a small cow. To preserve our comparison, I will add, that the wild boar, the elephant of Europe, is little more than half that size. I have made an elk with round or cylindrical horns an animal of America, and peculiar to it; because I have seen many of them myself, and more of their horns; and because I can say, from the best information, that, in Virginia, this kind of elk has abounded much, and still exists in smaller numbers; and I could never learn that the palmated kind had been seen here at all. I suppose this confined to the more northern latitudes.¹ I have made

¹ The descriptions of Theodat, Denys and La Honton, cited by Monsieur de Buffon, under the article Elan, authorize the supposition, that the flat-horned elk is found in the northern parts of America. It has not however extended to our latitudes. On the other hand, I could never learn that the round-horned elk has been seen further north than the Hudson's river. This agrees with the former elk in its general character, being, like that, when compared with a deer, very much larger, its ears longer, broader, and thicker in proportion, its hair much longer, neck and tail shorter, having a dewlap before the breast (*caruncula gutturalis* Linnæi) a white spot often, if not always, of a foot diameter, on the hinder part of the buttocks round the tail; its gait a trot, and attended with a rattling of the hoofs; but distinguished from that decisively by its horns, which are not palmated, but round and pointed. This is the animal described by Catesby as the *Cervus major Americanus*, the stag of America, le Cerf de l'Amérique. But it differs from the *Cervus* as totally as does the palmated elk from the dama. And in fact it seems to stand in the same relation to the palmated elk, as the red deer does to the fallow. It has abounded in Virginia, has been seen, within my knowledge, on the eastern side of the Blue Ridge since the year 1765, is now common beyond those mountains, has been often brought to us and tamed, and its horns are in the hands of many. I should designate it as the "*Alces Americanus cornibus teretibus*." It were to be wished, that naturalists, who are acquainted with the renne and elk of Europe, and who

our hare or rabbit peculiar, believing it to be different from both the European animals of those denominations, and calling it therefore by its Algonquin name, Whabus, to keep it distinct from these. Kalm is of the same opinion.¹ I have enumerated the squirrels according to our own knowledge, derived from daily sight of them, because I am not able to reconcile with that the European appellations and descriptions. I have heard of other species, but they have never come within my own notice. These, I think, are the only instances in which I have departed from the authority of Monsieur de Buffon in the construction of this table. I take him for my ground work, because I think him the

may hereafter visit the northern parts of America, would examine well the animals called there by the names of gray and black moose, caribou, original and elk. Monsieur de Buffon has done what could be done from the materials in his hands, toward clearing up the confusion introduced by the loose application of these names among the animals they are meant to designate. He reduces the whole to the renne and flat-horned elk. From all the information I have been able to collect, I strongly suspect they will be found to cover three, if not four distinct species of animals. I have seen skins of a moose, and of the caribou: they differ more from each other, and from that of the round-horned elk, than I ever saw two skins differ which belonged to different individuals of any wild species. These differences are in the color, length, and coarseness of the hair, and in the size, texture, and marks of the skin. Perhaps it will be found that there is, 1, the moose, black and gray, the former being said to be the male, and the latter the female; 2, the caribou or renne; 3, the flat-horned elk, or original; 4, the round-horned elk. Should this last, though possessing so nearly the characters of the elk, be found to be the same with the Cerf d'Ardennes or Brandhitz of Germany, still there will remain the three species first enumerated.

¹ Kalm II. 340, I. 82.

best informed of any naturalist who has ever written. The result is, that there are eighteen quadrupeds peculiar to Europe; more than four times as many, to wit, seventy-four, peculiar to America; that the first¹ of these seventy-four weighs more than the whole column of Europeans; and consequently this second table disproves the second member of the assertion, that the animals peculiar to the new world are on a smaller scale, so far as that assertion relied on European animals for support; and it is in full opposition to the theory which makes the animal volume to depend on the circumstances of *heat* and *moisture*.

The third table comprehends those quadrupeds only which are domestic in both countries. That some of these, in some parts of America, have become less than their original stock, is doubtless true; and the reason is very obvious. In a thinly-peopled country, the spontaneous productions of the forests, and waste fields, are sufficient to support indifferently the domestic animals of the farmer, with a

¹ The Tapir is the largest of the animals peculiar to America. I collect his weight thus: Monsieur de Buffon says, XXIII. 274, that he is of the size of a Zebu, or a small cow. He gives us the measures of a Zebu, *ib.* 4, as taken by himself, viz. five feet seven inches from the muzzle to the root of the tail, and five feet one inch circumference behind the fore-legs. A bull, measuring in the same way six feet nine inches and five feet two inches, weighed six hundred pounds, VIII. 153. The Zebu then, and of course the Tapir, would weigh about five hundred pounds. But one individual of every species of European peculiar would probably weigh less than four hundred pounds. These are French measures and weights.

very little aid from him, in the severest and scarcest season. He therefore finds it more convenient to receive them from the hand of nature in that indifferent state, than to keep up their size by a care and nourishment which would cost him much labor. If, on this low fare, these animals dwindle, it is no more than they do in those parts of Europe where the poverty of the soil, or the poverty of the owner, reduces them to the same scanty subsistence. It is the uniform effect of one and the same cause, whether acting on this or that side of the globe. It would be erring, therefore, against this rule of philosophy, which teaches us to ascribe like effects to like causes, should we impute this diminution of size in America to any imbecility or want of uniformity in the operations of nature. It may be affirmed with truth, that, in those countries, and with those individuals in America, where necessity or curiosity has produced equal attention, as in Europe, to the nourishment of animals, the horses, cattle, sheep, and hogs, of the one continent are as large as those of the other. There are particular instances, well attested, where individuals of this country have imported good breeders from England, and have improved their size by care in the course of some years. To make a fair comparison between the two countries, it will not answer to bring together animals of what might be deemed the middle or ordinary size of their species; because an error in judging of that middle or ordinary size, would vary the result of

the comparison. Thus Mons. D'Aubenton¹ considers a horse of 4 feet 5 inches high and 400 lb. weight French, equal to 4 feet 8.6 inches and 436 lb. English, as a middle-sized horse. Such a one is deemed a small horse in America. The extremes must therefore be resorted to. The same anatomist² dissected a horse of 5 feet 9 inches height, French measure, equal to 6 feet 1.7 English. This is near 6 inches higher than any horse I have seen; and could it be supposed that I had seen the largest horses in America, the conclusion would be, that ours have diminished, or that we have bred from a smaller stock. In Connecticut and Rhode Island, where the climate is favorable to the production of grass, bullocks have been slaughtered which weighed 2,500, 2,200, and 2,100 lbs. nett; and those of 1,800 lbs. have been frequent. I have seen a hog³ weigh 1,050 lbs. after the blood, bowels, and hair had been taken from him. Before he was killed, an attempt was made to weigh him with a pair of steel yards, graduated to 1,200 lbs., but he weighed more. Yet this hog was probably not within fifty generations of the European stock. I am well informed of another which weighed 1,100 lbs. gross. Asses have been still more neglected than any other domestic animal in America. They are neither fed nor housed in the most rigorous season of the year. Yet

¹ VII. 432.

² VII. 474.

³ In Williamsburg, April, 1769.

they are larger than those measured by Mons. D'Aubenton,¹ of 3 feet 7¼ inches, 3 feet 4 inches, and 3 feet 2½ inches, the latter weighing only 215.8 lbs. These sizes, I suppose, have been produced by the same negligence in Europe, which has produced a like diminution here. Where care has been taken of them on that side of the water, they have been raised to a size bordering on that of the horse; not by the *heat* and *dryness* of the climate, but by good food and shelter. Goats have been also much neglected in America. Yet they are very prolific here, bearing twice or three times a year, and from one to five kids at a birth. Mons. de Buffon has been sensible of a difference in this circumstance in favor of America.² But what are their greatest weights, I cannot say. A large sheep here weighs 100 lbs. I observe Mons. D'Aubenton calls a ram of 62 lbs. one of the middle size.³ But to say what are the extremes of growth in these and the other domestic animals of America, would require information of which no one individual is possessed. The weights actually known and stated in the third table preceding will suffice to show, that we may conclude on probable grounds, that, with equal food and care, the climate of America will preserve the races of domestic animals as large as the European stock from which they are derived; and, consequently, that the third

² XVIII. 96.

³ IX. 41.

member of Mons. de Buffon's assertion that the domestic animals are subject to degeneration from the climate of America, is as probably wrong as the first and second were certainly so.

That the last part of it is erroneous, which affirms that the species of American quadrupeds are comparatively few, is evident from the tables taken together. By these it appears that there are an hundred species aboriginal in America. Mons. de Buffon supposes about double that number existing on the whole earth.¹ Of these Europe, Asia, and Africa, furnish suppose one hundred and twenty-six; that is, the twenty-six common to Europe and America, and about one hundred which are not in America at all. The American species, then, are to those of the rest of the earth, as one hundred to one hundred and twenty-six, or four to five. But the residue of the earth being double the extent of America, the exact proportion would have been but as four to eight.

Hitherto I have considered this hypothesis as applied to brute animals only, and not in its extension to the man of America, whether aboriginal or transplanted. It is the opinion of Mons. de Buffon that the former furnishes no exception to it.²

"Quoique le sauvage du nouveau monde soit à peu près de même stature que l'homme de notre monde, cela ne suffit pas pour qu'il puisse faire une exception au fait général du rapetissement de la nature vivante dans tout ce continent; le sauvage est foible et petit par les organes de

¹ XXX. 219.

² XVIII. 146.

la génération; il n'a ni poil, ni barbe, and nulle ardeur pour sa femelle. Quoique plus léger que l'Européen, parce qu'il a plus d'habitude à courir, il est cependant beaucoup moins fort de corps; il est aussi bien moins sensible, et cependant plus craintif et plus lâche; il n'a nulle vivacité, nulle activité dans l'ame; celle du corps est moins un exercice, un mouvement volontaire qu'une nécessité d'action causée par le besoin; ôtez lui la faim et la soif, vous détruisez en même tems le principe actif de tous ses mouvemens; il demeurera stupidement en repos sur ses jambes ou couché pendant des jours entiers. Il ne faut pas aller chercher plus loin à cause de la vie dispersée des sauvages et de leur éloignement pour la société; la plus précieuse étincelle du feu de la nature leur a été refusée; ils manquent d'ardeur pour leur femelle, et par consequent d'amour pour leur semblables; ne connoissant pas l'attachement le plus vif, le plus tendre de tous, leurs autres sentimens de ce genre, sont froids et languissans; ils aiment foiblement leurs pères et leurs enfans; la société la plus intime de toutes, celle de la même famille, n'a donc chez eux que de foibles liens; la société d'une famille à l'autre n'en a point de tout; dès lors nulle réunion, nulle république, nulle état social. La physique de l'amour fait chez eux le moral des mœurs; leur cœur est glacé, leur société et leur empire dur. Ils ne regardent leurs femmes que comme des servantes de peine ou des bêtes de somme qu'ils chargent, sans ménagement, du fardeau de leur chasse, et qu'ils forcent, sans pitié, sans reconnaissance, à des ouvrages qui souvent sont au dessus de leurs forces; ils n'ont que peu d'enfans; ils en ont peu de soin; tout se ressent de leur premier défaut; ils sont indifférens parce qu'ils sont peu puissans, et cette indifférence pour le sexe est la tache originelle qui flétrit la nature, qui l'empêche de s'épanouir, et qui détruisant les germes de la vie, coupe en même temps la racine de société. L'homme ne fait donc point d'exception ici. La nature en lui refusant les puissances de l'amour l'a plus maltraité et plus rapetissé qu'aucun des animaux."

An afflicting picture, indeed, which for the honor of human nature, I am glad to believe has no original. Of the Indian of South America I know nothing; for I would not honor with the appellation of knowledge, what I derive from the fables published of them. These I believe to be just as true as the fables of Æsop. This belief is founded on what I have seen

of man, white, red, and black, and what has been written of him by authors, enlightened themselves, and writing among an enlightened people. The Indian of North America being more within our reach, I can speak of him somewhat from my own knowledge, but more from the information of others better acquainted with him, and on whose truth and judgment I can rely. From these sources I am able to say, in contradiction to this representation, that he is neither more defective in ardor, nor more impotent with his female, than the white reduced to the same diet and exercise; that he is brave, when an enterprise depends on bravery; education with him making the point of honor consist in the destruction of an enemy by stratagem, and in the preservation of his own person free from injury; or, perhaps, this is nature, while it is education which teaches us to¹ honor force more than finesse; that he will defend himself against a host of enemies, always choosing to be killed, rather than to surrender,² though it be to the whites, who he knows will

Se non, dove la via meno è ficura.—ARIOSTO, 14, 117.

² In so judicious an author as Don Ulloa, and one to whom we are indebted for the most precise information we have of South America, I did not expect to find such assertions as the following: "Los Indios vencidos son los mas cobardes y pusilanimos que se pueden ver: Se hacen nocentes, le humillan hasta el desprecio, disculpan su considerado arrojo, y con las suplicas y los ruegos dan seguras pruebas de su pusilanimidad, ó lo que resieren las historias de la Conquista, sobre sus grandes acciones, es en un sentido figurado, ó el caracter de estas gentes no es ahora segun era entonces; pero lo que no tiene duda es, que las Naciones de la parte Septentrional subsisten en la misma

treat him well; that in other situations, also, he meets death with more deliberation, and endures tortures with a firmness unknown almost to religious enthusiasm with us; that he is affectionate to his children, careful of them, and indulgent in the extreme; that his affections comprehend his other connections, weakening, as with us, from circle to circle, as they recede from the centre; that his friendships are strong and faithful to the uttermost¹ extremity;

libertad que siempre han tenido, sin haber sido sojuzgados por algun Principe extrano, y que viven segun su régimen y costumbres de toda la vida, sin que haya habido motivo para que muden de caracter; y en estos se vé lo mismo, que sucede en los Peru, y de toda la América meridional, reducidos, y que nunca lo han estado." Noticias Americanas, Entretenimiento xviii. § I. Don Ulloa here admits, that the authors who have described the Indians of South America, before they were enslaved, had represented them as a brave people, and therefore seems to have suspected that the cowardice which he had observed in those of the present race might be the effect of subjugation. But, supposing the Indians of North America to be cowards also, he concludes the ancestors of those of South America to have been so too, and, therefore, that those authors have given fictions for truth. He was probably not acquainted himself with the Indians of North America, and had formed his opinion from hearsay. Great numbers of French, of English, and of Americans, are perfectly acquainted with these people. Had he had an opportunity of inquiring of any of these, they would have told him, that there never was an instance known of an Indian begging his life when in the power of his enemies; on the contrary, that he courts death by every possible insult and provocation. His reasoning, then, would have been reversed thus: "Since the present Indian of North America is brave, and authors tell us that the ancestors of those of South America were brave also, it must follow that the cowardice of their descendants is the effect of subjugation and ill treatment." For he observes, *ib.* § 27, that "los obrages los aniquillan por la inhumanidad con que se les trata."

¹ A remarkable instance of this appeared in the case of the late Colonel Byrd, who was sent to the Cherokee nation to transact some

that his sensibility is keen, even the warriors weeping most bitterly on the loss of their children, though in general they endeavor to appear superior to human events; that his vivacity and activity of mind is equal to ours in the same situation; hence his eagerness for hunting, and for games of chance. The women are submitted to unjust drudgery. This I believe is the case with every barbarous people. With such, force is law. The stronger sex imposes on the weaker. It is civilization alone which replaces women in the enjoyment of their natural equality. That first teaches us to subdue the selfish passions, and to respect those rights in others which we value in ourselves. Were we in equal barbarism, our females would be equal drudges. The man with them is less strong than with us, but their women stronger than ours; and both for the same obvious reason; because our man and their woman is habituated to labor, and formed by it. With both races

business with them. It happened that some of our disorderly people had just killed one or two of that nation. It was therefore proposed in the council of the Cherokees that Colonel Byrd should be put to death, in revenge for the loss of their countrymen. Among them was a chief named Silòuee, who, on some former occasion, had contracted an acquaintance and friendship with Colonel Byrd. He came to him every night in his tent, and told him not to be afraid, they should not kill him. After many days' deliberation, however, the determination was, contrary to Silòuee's expectation, that Byrd should be put to death, and some warriors were despatched as executioners. Silòuee attended them, and when they entered the tent, he threw himself between them and Byrd, and said to the warriors, "This man is my friend; before you get at him, you must kill me." On which they returned, and the council respected the principle so much as to recede from their determination.

the sex which is indulged with ease is the least athletic. An Indian man is small in the hand and wrist, for the same reason for which a sailor is large and strong in the arms and shoulders, and a porter in the legs and thighs. They raise fewer children than we do. The causes of this are to be found, not in a difference of nature, but of circumstance. The women very frequently attending the men in their parties of war and of hunting, child-bearing becomes extremely inconvenient to them. It is said, therefore, that they have learned the practice of procuring abortion by the use of some vegetable; and that it even extends to prevent conception for a considerable time after. During these parties they are exposed to numerous hazards, to excessive exertions, to the greatest extremities of hunger. Even at their homes the nation depends for food, through a certain part of every year, on the gleanings of the forest; that is, they experience a famine once in every year. With all animals, if the female be badly fed, or not fed at all, her young perish; and if both male and female be reduced to like want, generation becomes less active, less productive. To the obstacles, then, of want and hazard, which nature has opposed to the multiplication of wild animals, for the purpose of restraining their numbers within certain bounds, those of labor and of voluntary abortion are added with the Indian. No wonder, then, if they multiply less than we do. Where food is regularly supplied, a single farm will show more

of cattle, than a whole country of forests can of buffaloes. The same Indian women, when married to white traders, who feed them and their children plentifully and regularly, who exempt them from excessive drudgery, who keep them stationary and unexposed to accident, produce and raise as many children as the white women. Instances are known, under these circumstances, of their rearing a dozen children. An inhuman practice once prevailed in this country, of making slaves of the Indians. It is a fact well known with us, that the Indian women so enslaved produced and raised as numerous families as either the whites or blacks among whom they lived. It has been said that Indians have less hair than the whites, except on the head. But this is a fact of which fair proof can scarcely be had. With them it is disgraceful to be hairy on the body. They say it likens them to hogs. They therefore pluck the hair as fast as it appears. But the traders who marry their women, and prevail on them to discontinue this practice, say, that nature is the same with them as with the whites. Nor, if the fact be true, is the consequence necessary which has been drawn from it. Negroes have notoriously less hair than the whites; yet they are more ardent. But if cold and moisture be the agents of nature for diminishing the races of animals, how comes she all at once to suspend their operation as to the physical man of the new world, whom the Count acknowledges to be "à peu près de même stature que l'homme de notre

monde," and to let loose their influence on his moral faculties? How has this "combination of the elements and other physical causes, so contrary to the enlargement of animal nature in this new world, these obstacles to the development and formation of great germs,"¹ been arrested and suspended, so as to permit the human body to acquire its just dimensions, and by what inconceivable process has their action been directed on his mind alone? To judge of the truth of this, to form a just estimate of their genius and mental powers, more facts are wanting, and great allowance to be made for those circumstances of their situation which call for a display of particular talents only. This done, we shall probably find that they are formed in mind as well as in body, on the same module with the "Homo sapiens Europæus." The principles of their society forbidding all compulsion, they are to be led to duty and to enterprise by personal influence and persuasion. Hence eloquence in council, bravery and address in war, become the foundations of all consequence with them. To these acquirements all their faculties are directed. Of their bravery and address in war we have multiplied proofs, because we have been the subjects on which they were exercised. Of their eminence in oratory we have fewer examples, because it is displayed chiefly in their own councils. Some, however, we have, of very superior lustre. I

¹ XVIII. 146.

² Linn. Syst. Definition of a Man.

may challenge the whole orations of Demosthenes and Cicero, and of any more eminent orator, if Europe has furnished more eminent, to produce a single passage, superior to the speech of Logan, a Mingo chief, to Lord Dunmore, then governor of this State. And as a testimony of their talents in this line, I beg leave to introduce it, first stating the incidents necessary for understanding it.

In the spring of the year 1774, a robbery was committed by some Indians on certain land-adventurers on the river Ohio. The whites in that quarter, according to their custom, undertook to punish this outrage in a summary way. Captain Michael Cresap, and a certain Daniel Greathouse, leading on these parties, surprised, at different times, traveling and hunting parties of the Indians, having their women and children with them, and murdered many. Among these were unfortunately the family of Logan, a chief celebrated in peace and war, and long distinguished as the friend of the whites. This unworthy return provoked his vengeance. He accordingly signalized himself in the war which ensued. In the autumn of the same year a decisive battle was fought at the mouth of the Great Kanhaway, between the collected forces of the Shawanese, Mingoës and Delawares, and a detachment of the Virginia militia. The Indians were defeated and sued for peace. Logan, however, disdained to be seen among the suppliants. But lest the sincerity of a treaty should be disturbed, from which so distinguished a chief

absented himself, he sent, by a messenger, the following speech, to be delivered to Lord Dunmore:

“I appeal to any white man to say, if ever he entered Logan’s cabin hungry, and he gave him not meat; if ever he came cold and naked, and he clothed him not. During the course of the last long and bloody war Logan remained idle in his cabin, an advocate for peace. Such was my love for the whites, that my countrymen pointed as they passed, and said, ‘Logan is the friend of white men.’ I had even thought to have lived with you, but for the injuries of one man. Colonel Cresap, the last spring, in cold blood, and unprovoked, murdered all the relations of Logan, not even sparing my women and children. There runs not a drop of my blood in the veins of any living creature. This called on me for revenge. I have sought it: I have killed many: I have fully glutted my vengeance: for my country I rejoice at the beams of peace. But do not harbor a thought that mine is the joy of fear. Logan never felt fear. He will not turn on his heel to save his life. Who is there to mourn for Logan?—Not one.”¹

¹ PHILADELPHIA, December 31, 1797.

DEAR SIR,—Mr. Tazewell has communicated to me the inquiries you have been so kind as to make, relative to a passage in the “Notes on Virginia,” which has lately excited some newspaper publications. I feel, with great sensibility, the interest you take in this business, and with pleasure, go into explanations with one whose objects I know to be truth and justice alone. Had Mr. Martin thought proper to suggest to me, that doubts might be entertained of the transaction respecting Logan, as stated in the “Notes on Virginia,” and to inquire on what grounds that statement was founded, I should have felt

Before we condemn the Indians of this continent as wanting genius, we must consider that letters

myself obliged by the inquiry; have informed him candidly of the grounds, and cordially have co-operated in every means of investigating the fact, and correcting whatsoever in it should be found to have been erroneous. But he chose to step at once into the newspapers, and in his publications there and the letters he wrote to me, adopted a style which forbade the respect of an answer. Sensible, however, that no act of his could absolve me from the justice due to others, as soon as I found that the story of Logan could be doubted, I determined to inquire into it as accurately as the testimony remaining, after a lapse of twenty odd years, would permit, and that the result should be made known, either in the first new edition which should be printed of the "Notes on Virginia," or by publishing an appendix. I thought that so far as that work had contributed to impeach the memory of Cresap, by handing on an erroneous charge it was proper it should be made the vehicle of retribution. Not that I was at all the author of the injury; I had only concurred, with thousands and thousands of others, in believing a transaction on authority which merited respect. For the story of Logan is only repeated in the "Notes on Virginia," precisely as it had been current for more than a dozen years before they were published. When Lord Dunmore returned from the expedition against the Indians, in 1774, he and his officers brought the speech of Logan, and related the circumstances of it. These were so affecting, and the speech itself so fine a morsel of eloquence, that it became the theme of every conversation, in Williamsburg particularly, and generally, indeed, wheresoever any of the officers resided or resorted. I learned it in Williamsburg, I believe at Lord Dunmore's; and I find in my pocket-book of that year (1774) an entry of the narrative, as taken from the mouth of some person, whose name, however, is not noted, nor recollected, precisely in the words stated in the "Notes on Virginia." The speech was published in the Virginia Gazette of that time, (I have it myself in the volume of gazettes of that year,) and though it was the translation made by the common interpreter, and in a style by no means elegant, yet it was so admired, that it flew through all the public papers of the continent, and through the magazines and other periodical publications of Great Britain; and those who were boys at that day will now attest, that the speech of Logan used to be given them as a school exercise for repetition. It was not till about thirteen or fourteen

have not yet been introduced among them. Were we to compare them in their present state with the

years after the newspaper publications, that the "Notes on Virginia" were published in America. Combating, in these, the contumelious theory of certain European writers, whose celebrity gave currency and weight to their opinions, that our country from the combined effects of soil and climate, degenerated animal nature, in the general, and particularly the moral faculties of man, I considered the speech of Logan as an apt proof of the contrary, and used it as such; and I copied, verbatim, the narrative I had taken down in 1774, and the speech as it had been given us in a better translation by Lord Dunmore. I knew nothing of the Cresaps, and could not possibly have a motive to do them an injury with design. I repeated what thousands had done before, on as good authority as we have for most of the facts we learn through life, and such as, to this moment, I have seen no reason to doubt. That any body questioned it, was never suspected by me, till I saw the letter of Mr. Martin in the Baltimore paper. I endeavored then to recollect who among my contemporaries, of the same circle of society, and consequently of the same recollections, might still be alive; three and twenty years of death and dispersion had left very few. I remembered, however, that General Gibson was still living, and knew that he had been the translator of the speech. I wrote to him immediately. He, in answer, declares to me, that he was the very person sent by Lord Dunmore to the Indian town; that, after he had delivered his message there, Logan took him out to a neighboring wood; sat down with him, and rehearsing, with tears, the catastrophe of his family, gave him that speech for Lord Dunmore; that he carried it to Lord Dunmore; translated it for him; has turned to it in the Encyclopedia, as taken from the "Notes on Virginia," and finds that it was his translation I had used, with only two or three verbal variations of no importance. These, I suppose, had arisen in the course of successive copies. I cite General Gibson's letter by memory, not having it with me; but I am sure I cite it substantially right. It establishes unquestionably, that the speech of Logan is genuine; and that being established, it is Logan himself who is author of all the important facts. "Colonel Cresap," says he, "in cold blood and unprovoked, murdered all the relations of Logan, not sparing even my women and children; there runs not a drop of my blood in the veins of any living creature." The person and the fact, in all its material circumstances, are here given by Logan himself. General Gibson,

Europeans, north of the Alps, when the Roman arms and arts first crossed those mountains, the comparison would be unequal, because, at that time, those parts of Europe were swarming with numbers;

indeed, says, that the title was mistaken; that Cresap was a Captain, and not a Colonel. This was Logan's mistake. He also observes, that it was on another water of the Ohio, and not on the Kanhaway, that his family was killed. This is an error which has crept into the traditionary account; but surely of little moment in the moral view of the subject. The material question is, was Logan's family murdered, and by whom? That it was murdered has not, I believe, been denied; that it was by one of the Cresaps, Logan affirms. This is a question which concerns the memories of Logan and Cresap; to the issue of which I am as indifferent as if I had never heard the name of either. I have begun and shall continue to inquire into the evidence additional to Logan's, on which the fact was founded. Little, indeed, can now be heard of, and that little dispersed and distant. If it shall appear on inquiry, that Logan has been wrong in charging Cresap with the murder of his family, I will do justice to the memory of Cresap, as far as I have contributed to the injury, by believing and repeating what others had believed and repeated before me. If, on the other hand, I find that Logan was right in his charge, I will vindicate, as far as my suffrage may go, the truth of a Chief, whose talents and misfortunes have attached to him the respect and commiseration of the world.

I have gone, my dear Sir, into this lengthy detail to satisfy a mind, in the candor and rectitude of which I have the highest confidence. So far as you may incline to use the communication for rectifying the judgments of those who are willing to see things truly as they are, you are free to use it. But I pray that no confidence which you may repose in any one, may induce you to let it go out of your hands, so as to get into a newspaper: against a contest in that field I am entirely decided. I feel extraordinary gratification, indeed, in addressing this letter to you, with whom shades of difference in political sentiment have not prevented the interchange of good opinion, nor cut off the friendly offices of society and good correspondence. This political tolerance is the more valued by me, who consider social harmony as the first of human felicities, and the happiest moments, those which are given to the effusions of the heart. Accept them sincerely, I pray you, from one who has the honor to be, with sentiments of high respect and attachment, dear Sir, your most obedient, and most humble servant.

because numbers produce emulation, and multiply the chances of improvement, and one improvement begets another. Yet I may safely ask, how many good poets, how many able mathematicians, how many great inventors in arts or sciences, had Europe, north of the Alps, then produced? And it was sixteen centuries after this before a Newton could be formed. I do not mean to deny that there are varieties in the race of man, distinguished by their powers both of body and mind. I believe there are, as I see to be the case in the races of other animals. I only mean to suggest a doubt, whether the bulk and faculties of animals depend on the side of the Atlantic on which their food happens to grow, or which furnishes the elements of which they are compounded? Whether nature has enlisted herself as a Cis or Trans-Atlantic partisan? I am induced to suspect there has been more eloquence than sound reasoning displayed in support of this theory; that it is one of those cases where the judgment has been seduced by a glowing pen; and whilst I render every tribute of honor and esteem to the celebrated zoologist, who has added, and is still adding, so many precious things to the treasures of science, I must doubt whether in this instance he has not cherished error also, by lending her for a moment his vivid imagination and bewitching language. (4)

So far the Count de Buffon has carried this new theory of the tendency of nature to belittle her productions on this side the Atlantic. Its application

to the race of whites transplanted from Europe, remained for the Abbé Raynal. "On doit être étonné (he says) que l'Amérique n'ait pas encore produit un bon poète, un habile mathématicien, un homme de génie dans un seul art, ou seule science." Hist. Philos. p. 92, ed. Maestricht, 1774. "America has not yet produced one good poet." When we shall have existed as a people as long as the Greeks did before they produced a Homer, the Romans a Virgil, the French a Racine and Voltaire, the English a Shakespeare and Milton, should this reproach be still true, we will inquire from what unfriendly causes it has proceeded, that the other countries of Europe and quarters of the earth shall not have inscribed any name in the roll of poets.¹ But neither has America produced "one able mathematician, one man of genius in a single art or a single science." In war we have produced a Washington, whose memory will be adored while liberty shall have votaries, whose name shall triumph over time, and will in future ages assume its just station among the most celebrated worthies of the world, when that wretched philosophy shall be forgotten which would have arranged him among the degeneracies of nature. In physics we have produced a Franklin, than whom

¹ Has the world as yet produced more than two poets, acknowledged to be such by all nations? An Englishman only reads Milton with delight, an Italian, Tasso, a Frenchman the *Henriade*; a Portuguese, Camoens; but Homer and Virgil have been the rapture of every age and nation; they are read with enthusiasm in their originals by those who can read the originals, and in translations by those who cannot.

no one of the present age has made more important discoveries, nor has enriched philosophy with more, or more ingenious solutions of the phenomena of nature. We have supposed Mr. Rittenhouse second to no astronomer living; that in genius he must be the first, because he is self taught. As an artist he has exhibited as great a proof of mechanical genius as the world has ever produced. He has not indeed made a world; but he has by imitation approached nearer its Maker than any man who has lived from the creation to this day.¹ As in philosophy and war, so in government, in oratory, in painting, in the plastic art, we might show that America, though but a child of yesterday, has already given hopeful proofs of genius, as well as of the nobler kinds, which arouse the best feelings of man, which call him into action, which substantiate his freedom, and conduct him to happiness, as of the subordinate, which serve to amuse him only. We therefore suppose, that this reproach is as unjust as it is unkind: and that, of the geniuses which adorn the present age, America contributes its full share. For comparing it with those countries where genius is most cultivated, where are the most excellent models for art, and scaffoldings for the attainment of science, as France and England for instance, we calculate thus:

¹ There are various ways of keeping truth out of sight. Mr. Rittenhouse's model of the planetary system has the plagiarious application of an Orrery; and the quadrant invented by Godfrey, an American also, and with the aid of which the European nations traverse the globe, is called Hadley's quadrant.

The United States contains three millions of inhabitants; France twenty millions; and the British islands ten. We produce a Washington, a Franklin, a Rittenhouse. France then should have half a dozen in each of these lines, and Great Britain half that number, equally eminent. It may be true that France has; we are but just becoming acquainted with her, and our acquaintance so far gives us high ideas of the genius of her inhabitants. It would be injuring too many of them to name particularly a Voltaire, a Buffon, the constellation of Encyclopedists, the Abbé Raynal himself, etc., etc. We, therefore, have reason to believe she can produce her full quota of genius. The present war having so long cut off all communication with Great Britain, we are not able to make a fair estimate of the state of science in that country. The spirit in which she wages war, is the only sample before our eyes, and that does not seem the legitimate offspring either of science or of civilization. The sun of her glory is fast descending to the horizon. Her philosophy has crossed the channel, her freedom the Atlantic, and herself seems passing to that awful dissolution whose issue is not given human foresight to scan.¹

¹ In a later edition of the Abbé Raynal's work, he has withdrawn his censure from that part of the new world inhabited by the Federo-Americans; but has left it still on the other parts. North America has always been more accessible to strangers than South. If he was mistaken then as to the former, he may be so as to the latter. The glimmerings which reach us from South America enable us to see that its

Having given a sketch of our minerals, vegetables, and quadrupeds, and being led by a proud theory to make a comparison of the latter with those of Europe, and to extend it to the man of America, both aboriginal and emigrant, I will proceed to the remaining articles comprehended under the present query.

Between ninety and a hundred of our birds have been described by Catesby. His drawings are better as to form and attitude than coloring, which is generally too high. They are the following (see pages 98, 99 and 100):

Besides these, we have,

The Royston crow. *Corvus cor-*
nix.
 Crane. *Ardea Canadensis.*
 House swallow. *Hirundo*
rustica.

The Ground swallow. *Hirundo*
riparia.
 Greatest gray eagle.
 Smaller turkey buzzard, with
 a feathered head.

inhabitants are held under the accumulated pressure of slavery, superstition and ignorance. Whenever they shall be able to rise under this weight, and to show themselves to the rest of the world, they will probably show they are like the rest of the world. We have not yet sufficient evidence that there are more lakes and fogs in South America than in other parts of the earth. As little do we know what would be their operation on the mind of man. That country has been visited by Spaniards and Portuguese chiefly, and almost exclusively. These, going from a country of the old world remarkably dry in its soil and climate, fancied there were more lakes and fogs in South America than in Europe. An inhabitant of Ireland, Sweden, or Finland would have formed the contrary opinion. Had South America then been discovered and settled by a people from a fenny country, it would probably have been represented as much drier than the old world. A patient pursuit of facts, and cautious combination and comparison of them, is the drudgery to which man is subjected by his Maker, if he wishes to attain sure knowledge.

BIRDS OF VIRGINIA.

Linnæan Designation.	Catesby's Designation.	Popular Names.	Buffon oiseaux.
Lanius tyrannus	Muscicapa coronâ rubrâ 1.55	Tyrant. Field martin	8.398
Vultur aura	Buteo specie Gallo-pavonis 1.6	Turkey buzzard	1.246
Falco leucocephalus	Aquila capite albo 1.1	Bald eagle	1.138
Falco sparverius	Accipiter minor 1.5	Little hawk. Sparrow hawk
Falco columbarius	Accipiter palumbarius 1.3	Pigeon hawk	1.338
Falco furcatus	Accipiter caudâ furcatâ 1.4	Forked tail hawk	1.286.312
	Accipiter piscatorius 1.2	Fishing hawk	1.199
Strix asio	Noctua aurita minor 1.7	Little owl	1.141
Psittacus Caroliniensis	Psittacus Caroliniensis 1.11	Parrot of Carolina. Parroquet	11.383
Corvus cristatus	Pica glandaria, cærulea, cristata 1.15	Blue jay	5.164
Oriolus Baltimore	Icterus ex aureo nigroque varius 1.48	Baltimore bird	5.318
Oriolus spurius	Icterus minor 1.49	Bastard Baltimore	5.321
Gracula quiscula	Monedula purpurea 1.12	Purple jackdaw. Crow blackbird	5.134
Cuculus Americanus	Cuculus Caroliniensis 1.9	Carolina cuckow	12.62
Picus principalis	Picus maximus rostro albo 1.16	White bill woodpecker	13.69
Picus pileatus	Picus niger maximus, capite rubro 1.17	Larger red-crested woodpecker	13.72
Picus erythrocephalus	Picus capite toto rubro 1.20	Red-headed woodpecker	13.83
Picus ouratus	Picus major alis aureis 1.18	Gold-winged woodpecker. Yucker	13.59
Picus Carolinus	Picus ventre rubro 1.19	Red-bellied woodpecker	13.105
Picus pubescens	Picus varius minimus 1.21	Smallest spotted woodpecker	13.113
Picus villosus	Picus medius quasi-villosus 1.19	Hairy woodpecker. Spec. woodpecker	13.111
Picus varius	Picus varius minor ventre luteo 1.21	Yellow-bellied woodpecker	13.115
Sitta Europæa	{ Sitta capite nigro 1.22	Nuthatch	10.213
	{ Sitta capite fusco 1.22	Small Nuthatch	10.214
Alcedo alcyon	Ispida 1.69	Kingfisher	13.310
Certhia pinus	Parus Americanus lutescens 1.61	Pine-Creeper	9.433
Trochilus colubris	Mellivora avis Caroliniensis 1.65	Humming bird	11.16
Anas Canadensis	Anser Canadensis 1.92	Wild goose	17.122
Anas bucephala	Anas minor purpureo capite 1.95	Buffel's-head duck	17.356
Anas rustica	Anas minor ex albo and fusco vario 1.98	Little brown duck	17.413
Anas discors. b	Querquedula Americana variegata 1.10	White face teal	17.403
Anas discors. b	Querquedula Americana fusca 1.99	Blue wing teal	17.405

<i>Anas sponsa</i>	<i>Anas Americanus cristatus elegans</i> ..	1.97	Summer duck	17.351
<i>Mergus cucullatus</i>	<i>Anas Americanus lato rostro</i>	1.96	Blue wing shoveler	17.275
<i>Columbus podiceps</i>	<i>Anas cristatus</i>	1.94	Round crested duck	15.437
<i>Ardea Herodias</i>	<i>Prodicipes minor rostro vario</i>	1.91	Pied bill dopchick	15.383
<i>Ardea virescens</i>	<i>Ardea cristata maxima Americana</i> ..	3.10	Largest crested heron	14.113
<i>Ardea virescens</i>	<i>Ardea stellaris cristata Americana</i> ..	1.79	Crested bittern	14.134
<i>Ardea æquinoctialis</i>	<i>Ardea cærulea</i>	1.76	Blue heron. Crane	14.131
<i>Tantalus loculator</i>	<i>Ardea stellaris minima</i>	1.80	Small bittern	14.142
<i>Tantalus alber</i>	<i>Ardea alba minor Caroliniensis</i>	1.77	Little white heron	14.136
<i>Tantalus fuscus</i>	<i>Ardea stellaris Americana</i>	1.78	Brown bittern. Indian hen	14.175

Hirundo purpurea	Hirundo purpurea	Purple martin. House martin	12.445
Caprimulgus Europæus. a . . .	Caprimulgus	Goatsucker. Great bat	12.243
Caprimulgus Europæus. b . . .	Caprimulgus minor Americanus	Whip-poor-will	12.246

The Greatest owl, or night hawk.

Wet hawk, which feeds flying.

Raven.

Water Pelican of the Mississippi, whose pouch holds a peck.

Swan.

Loon.

Cormorant.

Duck and mallard.

Widgeon.

Sheldrach, or Canvas back.

Black head.

Ballcoot.

The Sprigtail.

Didapper, or dopchick.

Spoon-billed duck.

Water-witch.

Water-pheasant.

Mow-bird.

Blue Peter.

Water Wagtail.

Yellow-legged Snipe.

Squatting Snipe.

Small Plover.

Whistling Plover.

Woodcock.

Red bird, with black head, wings and tail.

And doubtless many others which have not yet been described and classed.

To this catalogue of our indigenous animals, I will add a short account of an anomaly of nature, taking place sometimes in the race of negroes brought from Africa, who, though black themselves, have, in rare instances, white children, called Albinos. I have known four of these myself, and have faithful accounts of three others. The circumstances in which all the individuals agree are these. They are of a pallid cadaverous white, untinged with red, without any colored spots or seams; their hair of the same kind of white, short, coarse, and curled as is that of the negro; all of them well formed, strong, healthy, perfect in their senses, except that of sight, and born of parents who had no mixture of white blood. Three of these Albinos were sisters, having two other full sisters, who were black. The youngest

Jefferson's Works

of the three was killed by lightning, at 12 years of age. The eldest died at about 27 years of age, in child-bed, with her second child. The middle one is now alive, in health, and has issue, as the eldest had, by a black man, which issue was black. They are uncommonly shrewd, quick in their apprehensions and in reply. Their eyes are in a perpetual tremulous vibration, very weak, and much affected by the sun; but they see much better in the night than we do. They are of the property of Colonel Skipwith, of Cumberland. The fourth is a negro woman, whose parents came from Guinea, and had three other children, who were of their own color. She is freckled, her eye-sight so weak that she is obliged to wear a bonnet in the summer; but it is better in the night than day. She had an Albino child by a black man. It died at the age of a few weeks. These were the property of Colonel Carter, of Albemarle. A sixth instance is a woman the property of Mr. Butler, near Petersburg. She is stout and robust, has issue a daughter, jet black, by a black man. I am not informed as to her eye-sight. The seventh instance is of a male belonging to a Mr. Lee of Cumberland. His eyes are tremulous and weak. He is tall of stature, and now advanced in years. He is the only male of the Albinos which have come within my information. Whatever be the cause of the disease in the skin, or in its coloring matter, which produces this change, it seems more incident to the female than male sex.

To these I may add the mention of a negro man within my own knowledge, born black, and of black parents; on whose chin, when a boy, a white spot appeared. This continued to increase till he became a man, by which time it had extended over his chin, lips, one cheek, the under jaw, and neck on that side. It is of the Albino white, without any mixture of red, and has for several years been stationary. He is robust and healthy, and the change of color was not accompanied with any sensible disease, either general or topical.

Of our fish and insects there has been nothing like a full description or collection. More of them are described in Catesby than in any other work. Many also are to be found in Sir Hans Sloane's Jamaica, as being common to that and this country. The honey-bee is not a native of our continent. Marcgrave, indeed, mentions a species of honey-bee in Brazil. But this has no sting, and is therefore different from the one we have, which resembles perfectly that of Europe. The Indians concur with us in the tradition that it was brought from Europe; but when, and by whom, we know not. The bees have generally extended themselves into the country, a little in advance of the white settlers. The Indians, therefore, call them the white man's fly, and consider their approach as indicating the approach of the settlements of the whites. A question here occurs, How far northwardly have these insects been found? That they are unknown in Lapland, I infer

from Scheffer's information, that the Laplanders eat the pine bark, prepared in a certain way, instead of those things sweetened with sugar. "Hoc comedunt pro rebus saccharo conditis." Scheff. Lapp. c. 18. Certainly if they had honey, it would be a better substitute for sugar than any preparation of the pine bark. Kalm tells us¹ the honey-bee cannot live through the winter in Canada. They furnish then an additional fact first observed by the Count de Buffon, and which has thrown such a blaze of light on the field of natural history, that no animals are found in both continents, but those which are able to bear the cold of those regions where they probably join.

QUERY VII.

*A notice of all that can increase the progress of
Human Knowledge?*

Under the latitude of this query, I will presume it not improper nor unacceptable to furnish some data for estimating the climate of Virginia. Journals of observations on the quantity of rain, and degree of heat, being lengthy, confused, and too minute to produce general and distinct ideas, I have taken five years' observations, to wit, from 1772 to 1777, made in Williamsburg and its neighborhood, have reduced them to an average for every month in the year, and stated those averages in the following table, adding

¹I. 126.

an analytical view of the winds during the same period.

The rains of every month, (as of January, for instance,) through the whole period of years, were added separately, and an average drawn from them. The coolest and warmest point of the same day in each year of the period, were added separately, and an average of the greatest cold and greatest heat of that day was formed. From the averages of every day in the month, a general average was formed. The point from which the wind blew, was observed two or three times in every day. These observations, in the month of January, for instance, through the whole period, amounted to three hundred and thirty-seven. At seventy-three of these, the wind was from the north; forty-seven from the north-east, etc. So that it will be easy to see in what pro-

portion each wind usually prevails in each month; or, taking the whole year, the total of observations through the whole period having been three thousand six hundred and ninety-eight, it will be observed that six hundred and eleven of them were from the north, five hundred and fifty-eight from the north-east, etc.

Though by this table it appears we have on an average forty-seven inches of rain annually, which is considerably more than usually falls in Europe, yet from the information I have collected, I suppose we have a much greater proportion of sunshine here than there. Perhaps it will be found, there are twice as many cloudy days in the middle parts of Europe, as in the United States of America. I mention the middle parts of Europe, because my information does not extend to its northern or southern parts.

In an extensive country, it will of course be expected that the climate is not the same in all its parts. It is remarkable, that proceeding on the same parallel of latitude westwardly, the climate becomes colder in like manner as when you proceed northwardly. This continues to be the case till you attain the summit of the Alleghany, which is the highest land between the ocean and the Mississippi. From thence, descending in the same latitude to the Mississippi, the change reverses; and, if we may believe travellers, it becomes warmer there than it is in the same latitude on the sea-side. Their testimony is

strengthened by the vegetables and animals which subsist and multiply there naturally, and do not on the sea-coast. Thus Catalpas grow spontaneously on the Mississippi, as far as the latitude of 37° , and reeds as far as 38° . Parroquets even winter on the Scioto, in the 39th degree of latitude. In the summer of 1779, when the thermometer was at 90° at Monticello, and 96° at Williamsburg, it was 110° at Kaskaskia. Perhaps the mountain, which overhangs this village on the north side, may, by its reflection, have contributed somewhat to produce this heat. The difference of temperature of the air at the sea-coast, or on the Chesapeake bay, and at the Alleghany, has not been ascertained; but contemporary observations, made at Williamsburg, or in its neighborhood, and at Monticello, which is on the most eastern ridge of the mountains, called the South-West, where they are intersected by the Rivanna, have furnished a ratio by which that difference may in some degree be conjectured. These observations make the difference between Williamsburg and the nearest mountains, at the position before mentioned, to be on an average $6\frac{1}{3}^{\circ}$ of Fahrenheit's thermometer. Some allowance, however, is to be made for the difference of latitude between these two places, the latter being $38^{\circ} 8' 17''$, which is $52' 22''$ north of the former. By contemporary observations of between five and six weeks, the averaged and almost unvaried difference of the height of mercury in the barometer, at those two

places, was .784 of an inch, the atmosphere at Monticello being so much the lightest, that is to say, about one-thirty-seventh of its whole weight. It should be observed, however, that the hill of Monticello is of five hundred feet perpendicular height above the river which washes its base. This position being nearly central between our northern and southern boundaries, and between the bay and Alleghany, may be considered as furnishing the best average of the temperature of our climate. Williamsburg is much too near the south-eastern corner to give a fair idea of our general temperature.

But a more remarkable difference is in the winds which prevail in the different parts of the country. The following table exhibits a comparative view of the winds prevailing at Williamsburg, and at Monticello. It is formed by reducing nine months' observations at Monticello to four principal points, to wit, the north-east, south-east, south-west, and north-west; these points being perpendicular to, or parallel with our coast, mountains, and rivers; and by reducing in like manner, an equal number of observations, to wit, four hundred and twenty-one from the preceding table of winds at Williamsburg, taking them proportionably from every point:

	N. E.	S. E.	S. W.	N. W.	Total.
Williamsburg,	127	61	132	101	421
Monticello,	32	91	126	172	421

By this it may be seen that the south-west wind prevails equally at both places; that the north-east

is, next to this, the principal wind towards the sea-coast, and the north-west is the predominant wind at the mountains. The difference between these two winds to sensation, and in fact, is very great. The north-east is loaded with vapor, insomuch, that the salt-makers have found that their crystals would not shoot while that blows; it brings a distressing chill, and is heavy and oppressive to the spirits. The north-west is dry, cooling, elastic, and animating. The eastern and south-eastern breezes come on generally in the afternoon. They have advanced into the country very sensibly within the memory of people now living. They formerly did not penetrate far above Williamsburg. They are now frequent at Richmond, and every now and then reach the mountains. They deposit most of their moisture, however, before they get that far. As the lands become more cleared, it is probable they will extend still further westward.

Going out into the open air, in the temperate, and warm months of the year, we often meet with bodies of warm air, which passing by us in two or three seconds, do not afford time to the most sensible thermometer to seize their temperature. Judging from my feelings only, I think they approach the ordinary heat of the human body. Some of them, perhaps, go a little beyond it. They are of about twenty to thirty feet diameter horizontally. Of their height we have no experience, but probably they are globular volumes wafted or rolled along with the wind.

But whence taken, where found, or how generated? They are not to be ascribed to volcanoes, because we have none. They do not happen in the winter when the farmers kindle large fires in clearing up their grounds. They are not confined to the spring season, when we have fires which traverse whole counties, consuming the leaves which have fallen from the trees. And they are too frequent and general to be ascribed to accidental fires. I am persuaded their cause must be sought for in the atmosphere itself, to aid us in which I know but of these constant circumstances: a dry air; a temperature as warm, at least, as that of the spring or autumn; and a moderate current of wind. They are most frequent about sun-set; rare in the middle parts of the day; and I do not recollect having ever met with them in the morning.

The variation in the weight of our atmosphere, as indicated by the barometer, is not equal to two inches of mercury. During twelve months' observation at Williamsburg, the extremes 29 and 30.86 inches, the difference being 1.86 of an inch; and in nine months, during which the height of the mercury was noted at Monticello, the extremes were 28.48 and 29.69 inches, the variation being 1.21 of an inch. A gentleman, who has observed his barometer many years, assures me it has never varied two inches. Contemporary observations made at Monticello and Williamsburg, proved the variations in the weight of air to be simultaneous and corresponding in these two places.

Our changes from heat to cold, and cold to heat, are very sudden and great. The mercury in Fahrenheit's thermometer has been known to descend from 92° to 47° in thirteen hours.

It was taken for granted, that the preceding table of average heat will not give a false idea on this subject, as it proposes to state only the ordinary heat and cold of each month, and not those which are extraordinary. At Williamsburg, in August, 1766, the mercury in Fahrenheit's thermometer was at 98° , corresponding with $29\frac{1}{3}$ of Reaumur. At the same place in January 1780, it was 6° , corresponding with $11\frac{1}{2}$ below zero of Reaumur. I believe¹ these may be considered to be nearly the extremes of heat and cold in that part of the country. The latter may most certainly, as that time York river, at Yorktown, was frozen over, so that people walked across it; a circumstance which proves it to have been colder than the winter of 1740-1741, usually called the cold winter, when York river did not freeze over at that place. In the same season of 1780, Chesapeake bay was solid, from its head to the mouth of Potomac. At Annapolis, where it is $5\frac{1}{4}$ miles over between the nearest points of land, the ice was from five to seven inches thick quite across, so that loaded carriages went over on it. Those, our extremes of heat and cold, of 6° and 98° , were indeed

¹ At Paris, in 1753, the mercury in Reaumur's thermometer was at $30\frac{1}{2}$ above zero, and in 1776, it was at 16 below zero. The extremities of heat and cold therefore at Paris, are greater than at Williamsburg, which is in the hottest part of Virginia.

very distressing to us, and were thought to put the extent of the human constitution to considerable trial. Yet a Siberian would have considered them as scarcely a sensible variation. At Jenniseitz in that country, in latitude $58^{\circ} 27'$, we are told that the cold in 1735 sunk the mercury by Fahrenheit's scale to 126° below nothing; and the inhabitants of the same country use stove rooms two or three times a week, in which they stay two hours at a time, the atmosphere of which raises the mercury to 135° above nothing. Late experiments show that the human body will exist in rooms heated to 140° of Reaumur, equal to 347° of Fahrenheit's, and 135° above boiling water. The hottest point of the twenty-four hours is about four o'clock, P. M., and the dawn of day the coldest.

The access of frost in autumn, and its recess the spring, do not seem to depend merely on the degree of cold; much less on the air's being at the freezing point. White frosts are frequent when the thermometer is at 47° , have killed young plants of Indian corn at 48° , and have been known at 54° . Black frost, and even ice, have been produced at $38\frac{1}{2}^{\circ}$, which is $6\frac{1}{2}$ degrees above the freezing point. That other circumstances must be combined with this cold to produce frost, is evident from this also, on the higher parts of mountains, where it is absolutely colder than in the plains on which they stand, frosts do not appear so early by a considerable space of time in autumn, and go off sooner in the spring, than in

the plains. I have known frosts so severe as to kill the hickory trees round about Monticello, and yet not injure the tender fruit blossoms then in bloom on the top and higher parts of the mountain; and in the course of forty years, during which it had been settled, there have been but two instances of a general loss of fruit on it; while in the circumjacent country, the fruit has escaped but twice in the last seven years. The plants of tobacco, which grow from the roots of those which have been cut off in the summer, are frequently green here at Christmas. This privilege against the frost is undoubtedly combined with the want of dew on the mountains. That the dew is very rare on their higher parts, I may say with certainty, from twelve years' observations, having scarcely ever, during that time, seen an unequivocal proof of its existence on them at all during summer. Severe frosts in the depth of winter prove that the region of dews extends higher in that season than the tops of the mountains; but certainly, in the summer season, the vapors, by the time they attain that height, are so attenuated as not to subside and form a dew when the sun retires.

The weevil has not yet ascended the high mountains.

A more satisfactory estimate of our climate to some, may perhaps be formed, by noting the plants which grow here, subject, however, to be killed by our severest colds. These are the fig, pomegranate, artichoke, and European walnut. In mild winters,

lettuce and endive require no shelter; but, generally, they need a slight covering. I do not know that the want of long moss, reed, myrtle, swamp laurel, holly, and cypress, in the upper country proceeds from a greater degree of cold, nor that they were ever killed with any degree of cold, nor that they were ever killed with any degree of cold in the lower country. The aloe lived in Williamsburg, in the open air, through the severe winter of 1779, 1780.

A change in our climate, however, is taking place very sensibly. Both heats and colds are become much more moderate within the memory even of the middle-aged. Snows are less frequent and less deep. They do not often lie, below the mountains, more than one, two, or three days, and very rarely a week. They are remembered to have been formerly frequent, deep, and of long continuance. The elderly inform me, the earth used to be covered with snow about three months in every year. The rivers, which then seldom failed to freeze over in the course of the winter, scarcely ever do so now. This change has produced an unfortunate fluctuation between heat and cold, in the spring of the year, which is very fatal to fruits. From the year 1741 to 1769, an interval of twenty-eight years, there was no instance of fruit killed by the frost in the neighborhood of Monticello. An intense cold, produced by constant snows, kept the buds locked up till the sun could obtain, in the spring of the year, so fixed an ascendancy as to dissolve those snows, and protect

the buds, during their development, from every danger of returning cold. The accumulated snows of the winter remaining to be dissolved all together in the spring, produced those overflowings of our rivers, so frequent then, and so rare now.

Having had occasion to mention the particular situation of Monticello for other purposes, I will just take notice that its elevation affords an opportunity of seeing a phenomenon which is rare at land, though frequent at sea. The seamen call it *looming*. Philosophy is as yet in the rear of the seamen, for so far from having accounted for it, she has not given it a name. Its principal effect is to make distant objects appear larger, in opposition to the general law of vision, by which they are diminished. I knew an instance, at Yorktown, from whence the water prospect eastwardly is without termination, wherein a canoe with three men, at a great distance was taken for a ship with its three masts. I am little acquainted with the phenomenon as it shows itself at sea; but at Monticello it is familiar. There is a solitary mountain about forty miles off in the South, whose natural shape, as presented to view there, is a regular cone; but by the effect of *looming*, it sometimes subsides almost totally in the horizon; sometimes it rises more acute and more elevated; sometimes it is hemispherical; and sometimes its sides are perpendicular, its top flat, and as broad as its base. In short, it assumes at times the most whimsical shapes, and all these perhaps successively

in the same morning. The blue ridge of mountains comes into view, in the north-east, at about one hundred miles distance, and approaching in a direct line, passes by within twenty miles, and goes off to the south-west. This phenomenon begins to show itself on these mountains, at about fifty miles distance, and continues beyond that as far as they are seen. I remark no particular state, either in the weight, moisture, or heat of the atmosphere, necessary to produce this. The only constant circumstances are its appearance in the morning only, and on objects at least forty or fifty miles distant. In this latter circumstance, if not in both, it differs from the looming on the water. Refraction will not account for the metamorphosis. That only changes the proportions of length and breadth, base and altitude, preserving the general outlines. Thus it may make a circle appear elliptical, raise or depress a cone, but by none of its laws, as yet developed, will it make a circle appear a square, or a cone a sphere.

QUERY VIII.

The number of its inhabitants?

The following table shows the number of persons imported for the establishment of our colony in its infant state, and the census of inhabitants at different periods, extracted from our historians and public records, as particularly as I have had opportunities

Years.	Settlers Imported.	Census of Inhabitants.	Census of Tythes.
1607	100
..	40
..	120
1608	120
..	70
1609	490
..	16
..	60
1610	150
..	200
1611	3 shiploads.
..	300
1612	80
1617	400
1618	200
..	40
..	600
1619	1,216
1621	1,300
1622	3,800
..	2,500
1628	3,000
1632	2,000
1644	4,822
1645	5,600
1652	7,000
1654	7,200
1700	22,000
1748	82,100
1759	105,000
1772	153,000
1782	567,614

and leisure to examine them. Successive lines in the same year show successive periods of time in that year. I have stated the census in two different columns, the whole inhabitants having been sometimes numbered, and sometimes the *tythes* only. This term, with us, includes the free males above sixteen years of age, and slaves above that age of both sexes. A further examination of our records would render this history of our population much more satisfactory and perfect, by furnishing a greater number of intermediate terms. These, however,

which are here stated will enable us to calculate, with a considerable degree of precision, the rate at which we have increased. During the infancy of the colony, while numbers were small, wars, importations, and other accidental circumstances render the progression fluctuating and irregular. By the year 1654, however, it becomes tolerably uniform, importations having in a great measure ceased from the dissolution of the company, and the inhabitants become too numerous to be sensibly affected by Indian wars. Beginning at that period, therefore, we find that from thence to the year 1772, our tythes had increased from 7,209 to 153,000. The whole term being of one hundred and eighteen years, yields a duplication once in every twenty-seven and a quarter years. The intermediate enumerations taken in 1700, 1748, and 1759, furnish proofs of the uniformity of this progression. Should this rate of increase continue, we shall have between six and seven millions of inhabitants within ninety-five years. If we suppose our country to be bounded, at some future day, by the meridian of the mouth of the Great Kanhaway, (within which it has been before conjectured, are 64,461 square miles) there will then be one hundred inhabitants for every square mile, which is nearly the state of population in the British Islands.

Here I will beg leave to propose a doubt. The present desire of America is to produce rapid population by as great importations of foreigners as pos-

sible. But is this founded in good policy? The advantage proposed is the multiplication of numbers. Now let us suppose (for example only) that, in this state, we could double our numbers in one year by the importation of foreigners; and this is a greater accession than the most sanguine advocate for emigration has a right to expect. Then I say, beginning with a double stock, we shall attain any given degree of population only twenty-seven years, and three months sooner than if we proceed on our single stock. If we propose four millions and a half as a competent population for this State, we should be fifty-four and a half years attaining it, could we at once double our numbers; and eighty-one and three quarter years, if we rely on natural propagation, as may be seen by the following tablet:

	Proceeding on our present stock.	Proceeding on a double stock.
1781	567,614	1,135,228
1808 $\frac{1}{4}$	1,135,228	2,270,456
1835 $\frac{1}{2}$	2,270,456	4,540,912
1862 $\frac{3}{4}$	4,540,912	

In the first column are stated periods of twenty-seven and a quarter years; in the second are our numbers at each period, as they will be if we proceed on our actual stock; and in the third are what they would be, at the same periods, were we to set out from the double of our present stock. I have taken the term of four million and a half of inhabitants for example's sake only. Yet I am persuaded it is a greater number than the country spoken of, consid-

ering how much inarable land it contains, can clothe and feed without a material change in the quality of their diet. But are there no inconveniences to be thrown into the scale against the advantage expected from a multiplication of numbers by the importation of foreigners? It is for the happiness of those united in society to harmonize as much as possible in matters which they must of necessity transact together. Civil government being the sole object of forming societies, its administration must be conducted by common consent. Every species of government has its specific principles. Ours perhaps are more peculiar than those of any other in the universe. It is a composition of the freest principles of the English constitution, with others derived from natural right and natural reason. To these nothing can be more opposed than the maxims of absolute monarchies. Yet from such we are to expect the greatest number of emigrants. They will bring with them the principles of the governments they leave, imbibed in their early youth; or, if able to throw them off, it will be in exchange for an unbounded licentiousness, passing, as is usual, from one extreme to another. It would be a miracle were they to stop precisely at the point of temperate liberty. These principles, with their language, they will transmit to their children. In proportion to their numbers, they will share with us the legislation. They will infuse into it their spirit, warp and bias its directions, and render it a heterogeneous, incoherent, distracted

mass. I may appeal to experience, during the present contest, for a verification of these conjectures. But, if they be not certain in event, are they not possible, are they not probable? Is it not safer to wait with patience twenty-seven years and three months longer, for the attainment of any degree of population desired or expected? May not our government be more homogeneous, more peaceable, more durable? Suppose twenty millions of republican Americans thrown all of a sudden into France, what would be the condition of that kingdom? If it would be more turbulent, less happy, less strong, we may believe that the addition of half a million of foreigners to our present numbers would produce a similar effect here. If they come of themselves they are entitled to all the rights of citizenship; but doubt the expediency of inviting them by extraordinary encouragements. I mean not that these doubts should be extended to the importation of useful artificers. The policy of that measure depends on very different considerations. Spare no expense in obtaining them. They will after a while go to the plough and the hoe; but, in the mean time, they will teach us something we do not know. It is not so in agriculture. The indifferent state of that among us does not proceed from a want of knowledge merely; it is from our having such quantities of land to waste as we please. In Europe the object is to make the most of their land, labor being abundant; here it is to make the most of our labor, land being abundant.

It will be proper to explain how the numbers for the year 1782 have been obtained; as it was not from a perfect census of the inhabitants. It will at the same time develop the proportion between the free inhabitants and slaves. The following return of taxable articles for that year was given in:

53,289 free males above twenty-one years of age.

211,698 slaves of all ages and sexes.

23,766 not distinguished in the returns, but said to be tytheable slaves.

195,439 horses.

609,734 cattle.

5,126 wheels of riding-carriages.

191 taverns.

There were no returns from the eight counties of Lincoln, Jefferson, Fayette, Monongalia, Yohogania, Ohio, Northampton, and York. To find the number of slaves which should have been returned instead of the 23,766 tytheables, we must mention that some observations on a former census had given reason to believe that the numbers above and below sixteen years of age were equal. The double of this number, therefore, to wit, 47,532 must be added to 211,698, which will give us 259,230 slaves of all ages and sexes. To find the number of free inhabitants we must repeat the observation that those above and below sixteen are nearly equal. But as the number 53,289 omits the males below sixteen and twenty-one we must supply them from conjecture. On a former experiment it had appeared

that about one-third of our militia, that is, of the males between sixteen and fifty, were unmarried. Knowing how early marriage takes place here, we shall not be far wrong in supposing that the unmarried part of our militia are those between sixteen and twenty-one. If there be young men who do not marry till after twenty-one, there are many who marry before that age. But as men above fifty were not included in the militia, we will suppose the unmarried, or those between sixteen and twenty-one, to be one-fourth of the whole number above sixteen, then we have the following calculation:

53,289 free males above twenty-one years of age.

17,763 free males between sixteen and twenty-one.

17,052 free males under sixteen.

142,104 free males of all ages.

284,208 free inhabitants of all ages.

259,230 slaves of all ages.

543,438 inhabitants, exclusive of the eight counties from which were no returns. In these eight counties in the years 1779 and 1780, were 3,161 militia. Say then,

3,161 free males above the age of sixteen.

3,161 free males under sixteen.

6,322 free females.

12,644 free inhabitants in these eight counties. To find the number of slaves, say, as 284,208 to 259,-

230, so is 12,644 to 11,532. Adding the third of these numbers to the first, and the fourth to the second, we have,

296,852 free inhabitants.

270,762 slaves.

567,614 inhabitants of every age, sex and condition. But 296,852, the number of free inhabitants, are to 270,762, the number of slaves, nearly as 11 to 10. Under the mild treatment our slaves experience, and their wholesome, though coarse food, this blot in our country increases as fast, or faster than the whites. During the regal government we had at one time obtained a law which imposed such a duty on the importation of slaves as amounted nearly to a prohibition, when one inconsiderate assembly, placed under a peculiarity of circumstance, repealed the law. This repeal met a joyful sanction from the then reigning sovereign, and no devices, no expedients, which could ever be attempted by subsequent assemblies, and they seldom met without attempting them, could succeed in getting the royal assent to a renewal of the duty. In the very first session held under the republican government, the assembly passed a law for the perpetual prohibition of the importation of slaves. This will in some measure stop the increase of this great political and moral evil, while the minds of our citizens may be ripening for a complete emancipation of human nature.

Facsimile Inscriptions

**Photo-engraving of Inscriptions that were written by Jefferson on the Fly
leaves of Two Presentation Copies of the French Edition
of his "Notes on Virginia"**

Th. Jefferson having had a few copies of these Notes printed to offer to some of his friends & to some other estimable characters beyond that line, begs Mr Barclay's acceptance of a copy. unwilling to expose them to the public eye, he asks the favor of Mr. Barclay to put them into the hands of no person on whose care & fidelity he cannot rely to guard them against publication.

Th. Jefferson begs Doct^r. Price's acceptance of a copy of these Notes. the circumstances under which they were written with the talents of the writer will account for their errors & defects. the original was sent to Grouse de Marbois in Decemb. 1781. being asked for a copy by a friend who wished to possess some of the details they contain he revised them in the subsequent winter. the vices however of their original composition were such as forbade material amendment he now has a few copies printed with a design of offering them to some of his friends, and to some other estimable characters beyond that line. a copy is presented to Doct^r. Price as a testimony of the respect which the writer bears him. unwilling to expose them to the public eye, he asks the favor of Doct^r. Price to put them into the hands of no person on whose care & fidelity he cannot rely to guard them against publication

QUERY IX.

The number and condition of the Militia and Regular Troops, and their Pay?

The following is a state of the militia, taken from returns of 1780 and 1781, except in those counties marked with an asterisk, the returns from which are somewhat older.

Brunswick	559		Whole Militia of the State...	49,971		

Every able-bodied freeman, between the ages of sixteen and fifty, is enrolled in the militia. Those of every county are formed into companies, and these again into one or more battalions, according to the numbers in the county. They are commanded by colonels, and other subordinate officers, as in the regular service. In every county is a county-lieutenant, who commands the whole militia of his county, but ranks only as a colonel in the field. We have no general officers always existing. These are appointed occasionally, when an invasion or insurrection happens, and their commission determines with the occasion. The Governor is head of the military, as well as civil power. The law requires every militia-man to provide himself with the arms usual in the regular service. But this injunction was always indifferently complied with, and the arms they had, have been so frequently called for to arm the regulars, that in the lower parts of the country they are entirely disarmed. In the middle country a fourth or fifth part of them may have such firelocks as they had provided to destroy the noxious animals which infest their farms; and on the western side of the Blue Ridge they are generally armed with rifles. The pay of our militia, as well as of our regulars, is that of the continental regulars. The condition of our regulars, of whom we have none but continentals, and part of a battalion of state troops, is so constantly on the change, that a state of it at this day would not

be its state a month hence. It is much the same with the condition of the other continental troops, which is well enough known.

QUERY X.

The Marine?

Before the present invasion of this State by the British, under the command of General Phillips, we had three vessels of sixteen guns, one of fourteen, five small gallies, and two or three armed boats. They were generally so badly manned as seldom to be in a condition for service. Since the perfect possession of our rivers assumed by the enemy, I believe we are left with a single armed boat only.

QUERY XI.

A description of the Indians established in that State?

When the first effectual settlement of our colony was made, which was in 1607, the country from the seacoast to the mountains, and from the Potomac to the most southern waters of James' river, was occupied by upwards of forty different tribes of Indians. Of these the *Powhatans*, the *Mannahoacs*, and *Monacans*, were the most powerful. Those between the seacoast and falls of the rivers, were in amity with one another, and attached to the

Powhatans as their link of union. Those between the falls of the rivers and the mountains, were divided into two confederacies; the tribes inhabiting the head waters of Potomac and Rappahannock, being attached to the *Mannahoacs*; and those on the upper parts of James' river to the *Monacans*. But the *Monacans* and their friends were in amity with the *Mannahoacs* and their friends, and waged joint and perpetual war against the *Powhatans*. We are told that the *Powhatans*, *Mannahoacs*, and *Monacans*, spoke languages so radically different, that interpreters were necessary when they transacted business. Hence we may conjecture, that this was not the case between all the tribes, and, probably, that each spoke the language of the nation to which it was attached; which we know to have been the case in many particular instances. Very possibly there may have been anciently three different stocks, each of which multiplying in a long course of time, had separated into so many little societies. This practice results from the circumstance of their having never submitted themselves to any laws, any coercive power, any shadow of government. Their only controls are their manners, and that moral sense of right and wrong, which, like the sense of tasting and feeling in every man, makes a part of his nature. An offence against these is punished by contempt, by exclusion from society, or, where the case is serious, as that of murder, by the individuals whom it concerns. Im-

perfect as this species of coercion may seem, crimes are very rare among them; insomuch that were it made a question, whether no law, as among the savage Americans, or too much law, as among the civilized Europeans, submits man to the greatest evil, one who has seen both conditions of existence would pronounce it to be the last; and that the sheep are happier of themselves, than under care of the wolves. It will be said, the great societies cannot exist without government. The savages, therefore, break them into small ones.

The territories of the *Powhatan* confederacy, south of the Potomac, comprehended about eight thousand square miles, thirty tribes, and two thousand four hundred warriors. Captain Smith tells us, that within sixty miles of Jamestown were five thousand people, of whom one thousand five hundred were warriors. From this we find the proportion of their warriors to their whole inhabitants, was as three to ten. The *Powhatan* confederacy, then, would consist of about eight thousand inhabitants, which was one for every square mile; being about the twentieth part of our present population in the same territory, and the hundredth of that of the British islands.

Besides these were the *Nottoways*, living on Nottoway river, the *Meherrins* and *Tuteloës* on Meherrin river, who were connected with the Indians of Carolina, probably with the *Chowanocs*.

The preceding table contains a state of these several tribes, according to their confederacies and geographical situation, with their numbers when we first became acquainted with them, where these numbers are known. The numbers of some of them are again stated as they were in the year 1669, when an attempt was made by assembly to enumerate them. Probably the enumeration is imperfect, and in some measure conjectural, and that a further search into the records would furnish many more particulars. What would be the melancholy sequel of their history, may, however, be argued from the census of 1669; by which we discover that the tribes therein enumerated were, in the space of sixty-two years, reduced to about one-third of their former numbers. Spirituous liquors, the small-pox, war, and an abridgement of territory to a people who lived principally on the spontaneous productions of nature, had committed terrible havoc among them, which generation, under the obstacles opposed to it among them, was not likely to make good. That the lands of this country were taken from them by conquest, is not so general a truth as is supposed. I find in our historians and records, repeated proofs of purchase, which cover a considerable part of the lower country; and many more would doubtless be found on further search. The upper country, we know, has been acquired—altogether acquired by purchases made in the most unexceptionable form.

Westward of all these tribes, beyond the mountains, and extending to the great lakes, were the *Maffawomees*, a most powerful confederacy, who harassed unremittingly the *Powhatans* and *Manna-hoacs*. These were probably the ancestors of tribes known at present by the name of the *Six Nations*.

Very little can now be discovered of the subsequent history of these tribes severally. The *Chickahominies* removed about the year 1661, to Mattapony river. Their chief, with one from each of the Pamunkies and Mattaponies, attended the treaty of Albany in 1685. This seems to have been the last chapter in their history. They retained, however, their separate name so late as 1705, and were at length blended with the Pamunkies and Mattaponies, and exist at present only under their names. There remain of the *Mattaponies* three or four men only, and have more negro than Indian blood in them. They have lost their language, have reduced themselves, by voluntary sales, to about fifty acres of land, which lie on the river of their own name, and have from time to time, been joining the Pamunkies, from whom they are distant but ten miles. The *Pamunkies* are reduced to about ten or twelve men, tolerably pure from mixture with other colors. The older ones among them preserve their language in a small degree, which are the last vestiges on earth, as far as we know, of the Powhatan language. They have about three hundred acres of very fertile land, on Pamunkey river, so

encompassed by water that a gate shuts in the whole. Of the *Nottoways*, not a male is left. A few women constitute the remains of that tribe. They are seated on Nottoway river, in Southampton country, on very fertile lands. At a very early period, certain lands were marked out and appropriated to these tribes, and were kept from encroachment by the authority of the laws. They have usually had trustees appointed, whose duty was to watch over their interests, and guard them from insult and injury.

The *Monacans* and their friends, better known latterly by the name of *Tuscaroras*, were probably connected with the Massawomecs, or Five Nations. For though we are told¹ their languages were so different that the intervention of interpreters was necessary between them, yet do we also learn² that the Erigas, a nation formerly inhabiting on the Ohio, were of the same original stock with the Five Nations, and that they partook also of the Tuscarora language. Their dialects might, by long separation, have become so unlike as to be unintelligible to one another. We know that in 1712, the Five Nations received the Tuscaroras into their confederacy, and made them the Sixth Nation. They received the Meherrins and Tuteloes also into their protection; and it is most probable, that the remains of many other of the tribes, of whom we find no particular account, retired westwardly in

¹ Smith.

² Evans.

like manner, and were incorporated with one or the other of the western tribes. See Appendix (5).

I know of no such thing existing as an Indian monument; for I would not honor with that name arrow points, stone hatchets, stone pipes, and half shapen images. Of labor on the large scale, I think there is no remain as respectable as would be a common ditch for the draining of lands; unless indeed it would be the barrows, of which many are to be found all over this country. These are of different sizes, some of them constructed of earth, and some of loose stones. That they were repositories of the dead, has been obvious to all; but on what particular occasion constructed, was a matter of doubt. Some have thought they covered the bones of those who have fallen in battles fought on the spot of interment. Some ascribed them to the custom, said to prevail among the Indians, of collecting, at certain periods, the bones of all their dead, wheresoever deposited at the time of death. Others again supposed them the general sepulchres for towns, conjectured to have been on or near these grounds; and this opinion was supported by the quality of the lands in which they are found, (those constructed of earth being generally in the softest and most fertile meadow-grounds on river sides,) and by a tradition, said to be handed down from the aboriginal Indians, that, when they settled in a town, the first person who died was placed erect, and earth put about him, so as to cover and

support him; that when another died, a narrow passage was dug to the first, the second reclined against him, and the cover of earth replaced, and so on. There being one of these in my neighborhood, I wished to satisfy myself whether any, and which of these opinions were just. For this purpose I determined to open and examine it thoroughly. It was situated on the low grounds of the Rivanna, about two miles above its principal fork, and opposite to some hills, on which had been an Indian town. It was of a spheroidal form, of about forty feet diameter at the base, and had been of about twelve feet altitude, though now reduced by the plough to seven and a half, having been under cultivation about a dozen years. Before this it was covered with trees of twelve inches diameter, and round the base was an excavation of five feet depth and width, from whence the earth had been taken of which the hillock was formed. I first dug superficially in several parts of it, and came to collections of human bones, at different depths, from six inches to three feet below the surface. These were lying in the utmost confusion, some vertical, some oblique, some horizontal, and directed to every point of the compass, entangled and held together in clusters by the earth. Bones of the most distant parts were found together, as, for instance, the small bones of the foot in the hollow of a skull; many skulls would sometimes be in contact, lying on the face, on the side, on the back, top or bottom,

so as, on the whole, to give the idea of bones emptied promiscuously from a bag or a basket, and covered over with earth, without any attention to their order. The bones of which the greatest numbers remained, were skulls, jaw-bones, teeth, the bones of the arms, thighs, legs, feet and hands. A few ribs remained, some vertebræ of the neck and spine, without their processes, and one instance only of the bone¹ which serves as a base to the vertebral column. The skulls were so tender, that they generally fell to pieces on being touched. The other bones were stronger. There were some teeth which were judged to be smaller than those of an adult; a skull, which on a slight view, appeared to be that of an infant, but it fell to pieces on being taken out, so as to prevent satisfactory examination; a rib, and a fragment of the under-jaw of a person about half grown; another rib of an infant; and a part of the jaw of a child, which had not cut its teeth. This last furnishing the most decisive proof of the burial of children here, I was particular in my attention to it. It was part of the right half of the under-jaw. The processes, by which it was attenuated to the temporal bones, were entire, and the bone itself firm to where it had been broken off, which, as nearly as I could judge, was about the place of the eye-tooth. Its upper edge, wherein would have been the sockets of the teeth, was perfectly smooth. Measuring it with that of an adult, by placing their

¹ The os sacrum.

hinder processes together, its broken end extended to the penultimate grinder of the adult. This bone was white, all the others of a sand color. The bones of infants being soft, they probably decay sooner, which might be the cause so few were found here. I proceeded then to make a perpendicular cut through the body of the barrow, that I might examine its internal structure. This passed about three feet from its centre, was opened to the former surface of the earth, and was wide enough for a man to walk through and examine its sides. At the bottom, that is, on the level of the circumjacent plain, I found bones; above these a few stones, brought from a cliff a quarter of a mile off, and from the river one-eighth of a mile off; then a large interval of earth, then a stratum of bones, and so on. At one end of the section were four strata of bones plainly distinguishable; at the other, three; the strata in one part not ranging with those in another. The bones nearest the surface were least decayed. No holes were discovered in any of them, as if made with bullets, arrows, or other weapons. I conjectured that in this barrow might have been a thousand skeletons. Every one will readily seize the circumstances above related, which militate against the opinion, that it covered the bones only of persons fallen in battle; and against the tradition also, which would make it the common sepulchre of a town, in which the bodies were placed upright, and touching each other. Appearances certainly indi-

cate that it has derived both origin and growth from the accustomed collection of bones, and deposition of them together; that the first collection had been deposited on the common surface of the earth, a few stones put over it, and then a covering of earth, that the second had been laid on this, had covered more or less of it in proportion to the number of bones, and was then also covered with earth; and so on. The following are the particular circumstances which give it this aspect. 1. The number of bones. 2. Their confused position. 3. Their being in different strata. 4. The strata in one part having no correspondence with those in another. 5. The different states of decay in these strata, which seem to indicate a difference in the time of inhumation. 6. The existence of infant bones among them.

But on whatever occasion they may have been made, they are of considerable notoriety among the Indians; for a party passing, about thirty years ago, through the part of the country where this barrow is, went through the woods directly to it, without any instructions or inquiry, and having staid about it for some time, with expressions which were construed to be those of sorrow, they returned to the high road, which they had left about half a dozen miles to pay this visit, and pursued their journey. There is another barrow much resembling this, in the low grounds of the south branch of Shenandoah, where it is crossed by the road leading

from the Rockfish gap to Staunton. Both of these have, within these dozen years, been cleared of their trees and put under cultivation, are much reduced in their height, and spread in width, by the plough, and will probably disappear in time. There is another on a hill in the Blue Ridge of mountains, a few miles north of Wood's gap, which is made up of small stones thrown together. This has been opened and found to contain human bones, as the others do. There are also many others in other parts of the country.

Great question has arisen from whence came those aboriginals of America? Discoveries, long ago made, were sufficient to show that the passage from Europe to America was always practicable, even to the imperfect navigation of ancient times. In going from Norway to Iceland, from Iceland to Greenland, from Greenland to Labrador, the first traject is the widest; and this having been practised from the earliest times of which we have any account of that part of the earth, it is not difficult to suppose that the subsequent trajects may have been sometimes passed. Again, the late discoveries of Captain Cook, coasting from Kamschatka to California, have proved that if the two continents of Asia and America be separated at all, it is only by a narrow strait. So that from this side also, inhabitants may have passed into America; and the resemblance between the Indians of America and the eastern inhabitants of Asia, would induce us to conjecture, that the

former are the descendants of the latter, or the latter of the former; excepting indeed the Esquimaux, who, from the same circumstance of resemblance, and from identity of language, must be derived from the Greenlanders, and these probably from some of the northern parts of the old continent. A knowledge of their several languages would be the most certain evidence of their derivation which could be produced. In fact, it is the best proof of the affinity of nations which ever can be referred to. How many ages have elapsed since the English, the Dutch, the Germans, the Swiss, the Norwegians, Danes and Swedes have separated from their common stock? Yet how many more must elapse before the proofs of their common origin, which exist in their several languages, will disappear? It is to be lamented then, very much to be lamented, that we have suffered so many of the Indian tribes already to extinguish, without our having previously collected and deposited in the records of literature, the general rudiments at least of the languages they spoke. Were vocabularies formed of all the languages spoken in North and South America, preserving their appellations of the most common objects in nature, of those which must be present to every nation barbarous or civilized, with the inflections of their nouns and verbs, their principles of regimen and concord, and these deposited in all the public libraries, it would furnish opportunities to those skilled in the languages of the old world to

compare them with these, now, or at any future time, and hence to construct the best evidence of the derivation of this part of the human race.

But imperfect as is our knowledge of the tongues spoken in America, it suffices to discover the following remarkable fact: Arranging them under the radical ones to which they may be palpably traced, and doing the same by those of the red men of Asia, there will be found probably twenty in America, for one in Asia, of those radical languages, so called because if they were ever the same they have lost all resemblance to one another. A separation into dialects may be the work of a few ages only, but for two dialects to recede from one another till they have lost all vestiges of their common origin, must require an immense course of time; perhaps not less than many people give to the age of the earth. A greater number of those radical changes of language having taken place among the red men of America, proves them of greater antiquity than those of Asia.

I will now proceed to state the nations and numbers of the Aborigines which still exist in a respectable and independent form. And as their undefined boundaries would render it difficult to specify those only which may be within any certain limits, and it may not be unacceptable to present a more general view of them, I will reduce within the form of a catalogue all those within, and circumjacent to, the United States, whose names and numbers have come to my

notice. These are taken from four different lists, the first of which was given in the year 1759 to General Stanwix by George Croghan, deputy agent for Indian affairs under Sir William Johnson; the second was drawn up by a French trader of considerable note, resident among the Indians many years, and annexed to Colonel Bouquet's printed account of his expedition in 1764. The third was made out by Captain Hutchins, who visited most of the tribes, by order, for the purpose of learning their numbers, in 1768; and the fourth by John Dodge, an Indian trader, in 1779, except the numbers marked*—which are from other information.

Chactaws	2,000	4,500	6,000		{ Western parts of Georgia.
Upper Creeks			3,000		{ Western parts of Georgia.
Lower Creeks		1,180			
Natchez		150			
Alibamous		600			{ Alabama river, in the western parts of Georgia.

The following tribes are also mentioned:

Crogan's Catal.	{	Lezar	400	{	From the mouth of Ohio to the mouth of Wabash.
		Webings	200		On the Mississippi below the Shakes.
		Ousasoyes... }	4,000	{	On White Creek, a branch of the Mississippi.
		Grand Tuc. }			
		Linways	1,000	On the Mississippi.	
Bouquet's.	{	Les Puans	700	Near Puans Bay.	
		Folle Avoine	350	Near Puans Bay.	
		Ouanakina	300	{	Conjectured to be tribes of the Creeks.
		Chiakanessou.....	350		
		Machecous	800		
		Souikilas	200		
Dodge's.	{	Minneamis	2,000	{	North-west of Lake Michigan, to the heads of Mississippi, and up to Lake Superior.
		Piankishas ... }	800		{
		Mascoutins... }			
Vermillions ... }					

But apprehending these might be different appellations for some of the tribes already enumerated, I have not inserted them in the table, but state them separately as worthy of further inquiry. The variations observable in numbering the same tribe may sometimes be ascribed to imperfect information, and sometimes to a greater or less comprehension of settlements under the same name. See Appendix (7).

QUERY XII.

A notice of the counties, cities, townships, and villages?

The counties have been enumerated under Query IX. They are seventy-four in number, of very

unequal size and population. Of these thirty-five are on the tide waters, or in that parallel; twenty-three are in the midlands, between the tide waters and Blue Ridge of mountains; eight between the Blue Ridge and Alleghany; and eight westward of the Alleghany.

The State, by another division, is formed into parishes, many of which are commensurate with the counties; but sometimes a county comprehends more than one parish, and sometimes a parish more than one county. This division had relation to the religion of the State, a portion of the Anglican church, with a fixed salary, having been heretofore established in each parish. The care of the poor was another object of the parochial division.

We have no townships. Our country being much intersected with navigable waters, and trade brought generally to our doors, instead of our being obliged to go in quest of it, has probably been one of the causes why we have no towns of any consequence. Williamsburg, which, till the year 1780, was the seat of our government, never contained above 1,800 inhabitants; and Norfolk, the most populous town we ever had, contained but 6,000. Our towns, but more properly our villages and hamlets, are as follows:

On *James' River* and its waters, Norfolk, Portsmouth, Hampton, Suffolk, Smithfield, Williamsburg, Petersburg, Richmond, the seat of our government, Manchester, Charlottesville, New London.

On *York River* and its waters, York, Newcastle, Hanover.

On *Rappahannock*, Urbanna, Port-Royal, Fredericksburg, Falmouth.

On *Potomac* and its waters, Dumfries, Colchester, Alexandria, Winchester, Staunton.

On *Ohio*, Louisville.

There are other places at which, like some of the foregoing, the *laws* have said there shall be towns; but *nature* has said there shall not, and they remain unworthy of enumeration. *Norfolk* will probably be the emporium for all the trade of the Chesapeake bay and its waters; and a canal of eight or ten miles will bring to it all that of Albemarle sound and its waters. Secondary to this place, are the towns at the head of the tide waters, to wit, Petersburg on Appomattox; Richmond on James' river; Newcastle on York river; Alexandria on Potomac, and Baltimore on Patapsco. From these the distribution will be to subordinate situations in the country. Accidental circumstances, however, may control the indications of nature, and in no instance do they do it more frequently than in the rise and fall of towns.

QUERY XIII.

The constitution of the State and its several charters?

Queen Elizabeth by her letters patent, bearing date March 25, 1584, licensed Sir Walter Raleigh to

search for remote heathen lands, not inhabited by Christian people, and granted to him in fee simple, all the soil within two hundred leagues of the places where his people should, within six years, make their dwellings or abidings; reserving only to herself and her successors, their allegiance and one-fifth part of all the gold and silver ore they should obtain. Sir Walter immediately sent out two ships, which visited Wococoon island in North Carolina, and the next year despatched seven with one hundred and seven men, who settled in Roanoke island, about latitude $35^{\circ} 30'$. Here Okisko, king of the Weopomeibes, in a full council of his people is said to have acknowledged himself the homager of the Queen of England, and, after her, of Sir Walter Raleigh. A supply of fifty men were sent in 1586, and one hundred and fifty in 1587. With these last Sir Walter sent a governor, appointed him twelve assistants, gave them a charter of incorporation, and instructed them to settle on Chesapeake bay. They landed, however, at Hatorask. In 1588, when a fleet was ready to sail with a new supply of colonists and necessaries, they were detained by the Queen to assist against the Spanish armada. Sir Walter having now expended £40,000 in these enterprises, obstructed occasionally by the crown without a shilling of aid from it, was under a necessity of engaging others to adventure their money. He, therefore, by deed bearing date the 7th of March, 1589, by the name of Sir Walter Raleigh, Chief Governor

of Assamàcòmoc, (probably Acomàc,) alias Wingadacoia, alias Virginia, granted to Thomas Smith and others, in consideration of their adventuring certain sums of money, liberty to trade to this new country free from all customs and taxes for seven years, excepting the fifth part of the gold and silver ore to be obtained; and stipulated with them and the other assistants, then in Virginia, that he would confirm the deed of incorporation which he had given in 1587, with all the prerogatives, jurisdictions, royalties and privileges granted to him by the Queen. Sir Walter, at different times, sent five other adventurers hither, the last of which was in 1602; for in 1603 he was attainted and put into close imprisonment, which put an end to his cares over his infant colony. What was the particular fate of the colonists he had before sent and seated, has never been known; whether they were murdered, or incorporated with the savages.

Some gentlemen and merchants, supposing that by the attainder of Sir Walter Raleigh the grant to him was forfeited, not inquiring over carefully whether the sentence of an English court could affect lands not within the jurisdiction of that court, petitioned king James for a new grant of Virginia to them. He accordingly executed a grant to Sir Thomas Gates and others, bearing date the 9th of March, 1607, under which, in the same year, a settlement was effected at Jamestown, and ever after maintained. Of this grant, however, no particular

notice need be taken, as it was superseded by letters patent of the same king, of May 23, 1609, to the Earl of Salisbury and others, incorporating them by the name of "The Treasurer and company of Adventurers and Planters of the City of London for the first colony in Virginia," granting to them and their successors all the lands in Virginia from Point Comfort along the sea-coast, to the northward two hundred miles, and from the same point along the sea-coast to the southward two hundred miles, and all the space from this precinct on the sea-coast up into the land, west and north-west, from sea to sea, and the islands within one hundred miles of it, with all the communities, jurisdictions, royalties, privileges, franchises, and pre-eminencies, within the same, and thereto and thereabouts, by sea and land, appertaining in as ample manner as had before been granted to any adventurer; to be held of the king and his successors, in common soccage, yielding one-fifth part of the gold and silver ore to be therein found, for all manner of services; establishing a counsel in England for the direction of the enterprise, the members of which were to be chosen and displaced by the voice of the majority of the company and adventurers, and were to have the nomination and revocation of governors, officers, and ministers, which by them should be thought needful for the colony, the power of establishing laws and forms of government and magistracy, obligatory not only within the colony, but also on the

seas in going and coming to and from it; authorizing them to carry thither any persons who should consent to go, freeing them forever from all taxes and impositions on any goods or merchandise on importations into the colony, or exportation out of it, except the five per cent. due for custom on all goods imported into the British dominions, according to the ancient trade of merchants; which five per cent. only being paid they might, within thirteen months, re-export the same goods into foreign parts, without any custom, tax, or other duty, to the king or any of his officers, or deputies; with powers of waging war against those who should annoy them; giving to the inhabitants of the colony all the rights of natural subjects, as if born and abiding in England; and declaring that these letters should be construed, in all doubtful parts, in such manner as should be most for the benefit of the grantees.

Afterwards on the 12th of March, 1612, by other letters patent, the king added to his former grants, all islands in any part of the ocean between the 30th and 41st degrees of latitude, and within three hundred leagues of any of the parts before granted to the treasurer and company, not being possessed or inhabited by any other Christian prince or state, nor within the limits of the northern colony.

In pursuance of the authorities given to the company by these charters, and more especially of that part in the charter of 1609, which authorized them to establish a form of government, they on the 24th

of July, 1621, by charter under their common seal, declared that from thenceforward there should be two supreme councils in Virginia, the one to be called the council of state, to be placed and displaced by the treasurer, council in England, and company from time to time, whose office was to be that of assisting and advising the governor; the other to be called the general assembly, to be convened by the governor once yearly or oftener, which was to consist of the council of state, and two burgesses out of every town, hundred, or plantation, to be respectively chosen by the inhabitants. In this all matters were to be decided by the greater part of the votes present; reserving to the governor a negative voice; and they were to have power to treat, consult, and conclude all emergent occasions concerning the public weal, and to make laws for the behoof and government of the colony, imitating and following the laws and policy of England as nearly as might be; providing that these laws should have no force till ratified in a general court of the company in England, and returned under their common seal; and declaring that, after the government of the colony should be well framed and settled, no orders of the council in England should bind the colony unless ratified in the said general assembly. The king and company quarrelled, and by a mixture of law and force, the latter were ousted of all their rights without retribution, after having expended one hundred thousand pounds in establishing the colony, without the smallest aid

from government. King James suspended their powers by proclamation of July 15, 1624, and Charles I. took the government into his own hands. Both sides had their partisans in the colony, but, in truth, the people of the colony in general thought themselves little concerned in the dispute. There being three parties interested in these several charters, what passed between the first and second, it was thought could not affect the third. If the king seized on the powers of the company, they only passed into other hands, without increase or diminution, while the rights of the people remained as they were. But they did not remain so long. The northern parts of their country were granted away to the lords Baltimore and Fairfax; the first of these obtaining also the rights of separate jurisdiction and government. And in 1650 the parliament, considering itself as standing in the place of their deposed king, and as having succeeded to all his powers, without as well as within the realm, began to assume a right over the colonies, passing an act for inhibiting their trade with foreign nations. This succession to the exercise of kingly authority gave the first color for parliamentary interference with the colonies, and produced that fatal precedent which they continued to follow, after they had retired, in other respects, within their proper functions. When this colony, therefore, which still maintained its opposition to Cromwell and the parliament, was induced in 1651 to lay down their arms, they previously secured

their most essential rights by a solemn convention, which, having never seen in print, I will here insert literally from the records.

“ARTICLES agreed on and concluded at James Cittie in Virginia for the surrendering and settling of that plantation under the obedience and government of the commonwealth of England by the commissioners of the Council of State by authoritie of the parliamt of England, and by the Grand assembly of the Governour, Council, and Burgesses of that countrey.

“First it is agreed and consted that the plantation of Virginia, and all the inhabitants thereof, shall be and remain in due obedience and subjection to the Commonwealth of England, according to the laws there established, and that this submission and subscription bee acknowledged a voluntary act not forced nor constrained by a conquest upon the countrey, and that they shall have and enjoy such freedoms and priviledges as belong to the free borne people of England, and that the former government by the Commissions and Instructions be void and null.

“2ly. That the Grand assembly as formerly shall convene and transact the affairs of Virginia, wherein nothing is to be acted or done contrairie to the government of the Commonwealth of England and the lawes there established.

“3ly. That there shall be a full and totall remission and indempnitie of all acts, words, or writeings done or spoken against the parliament of England in relation to the same.

“4ly. That Virginia shall have and enjoy the antient bounds and lymitts granted by the charters of the former kings, and that we shall seek a new charter from the parliament to that purpose against any that have intrencht upon the rights thereof.

“5ly. That all the pattents of land granted under the colony seal by any of the precedent governours shall be and remaine in their full force and strength.

“6ly. That the priviledge of haveing fffitie acres of land for every person transported in that collonie shall continue as formerly granted.

“7ly. That the people of Virginia have free trade as the people of England do enjoy to all places and with all nations according to the lawes of that commonwealth, and that Virginia shall enjoy all priviledges equall with any English plantations in America.

“8ly. That Virginia shall be free from all taxes, customs and impositions whatsoever, and none to be imposed on them without consent

of the Grand assembly; and soe that neither forts nor castle bee erected or garrisons maintained without their consent.

"9ly. That noe charge shall be required from this country in respect of this present fleet.

"10ly. That for the future settlement of the cuntry in their due obedience, the engagement shall be tendered to all the inhabitants according to act of parliament made to that purpose, that all persons who shall refuse to subscribe the said engagement, shall have a yeare's time if they please to remove themselves and their estates out of Virginia, and in the meantime during the said yeare to have equall justice as formerly.

"11ly. That the use of the booke of common prayer shall be permitted for one yeare ensuinge with reference to the consent of the major part of the parishes, provided that those which relate to kingshipp or that government be not used publicly, and the continuance of ministers in their places, they not misdemeaning themselves, and the payment of their accustomed dues and agreements made with them respectively shall be left as they now stand dureing this ensuing yeare.

"12ly. That no man's cattell shall be questioned as the companies, unless such as have been entrusted with them or have disposed of them without order.

"13ly. That all ammunition, powder and armes, other than for private use, shall be delivered up, securitie being given to make satisfaction for it.

"14ly. That all goods allreadie brought hither by the Dutch or others which are now on shoar shall be free from surprizall.

"15ly. That the quitrents granted unto us by the late kinge for seaven yeares bee confirmed.

"16ly. That the commissioners for the parliament subscribing these articles engage themselves and the honour of parliament for the full performance thereof; and that the present governour, and the councill, and the burgesses do likewise subscribe and engage the whole collony on their parts.

RICHARD BENNETT.—Seale.

WILLIAM CLAIBORNE.—Seale.

EDMOND CURTIS.—Seale.

"These articles were signed and sealed by the Commissioners of the Council of state for the Commonwealth of England the twelveth day of March 1651."

Then follow the articles stipulated by the governor and council, which relate merely to their own persons and property, and then the ensuing instrument:

"An act of indemnitie made att the surrender of the countrey.

"Whereas, by the authoritie of the parliament wee the commissioners appointed by the councill of state authorized thereto, having brought a fleet and force before James cittie in Virginia to reduce that collonie under the obedience of the commonwealth of England, and finding force raised by the Governour and countrey to make opposition against the said fleet, whereby assured danger appearinge of the ruine and destruction of the plantation, for prevention whereof the burgeses of all the severall plantations being called to advise and assist therein, upon long and serious debate, and in sad contemplation of the great miseries and certain destruction which were soe neerely hovering over the whole countrey; Wee the said Commissioners have thought fitt and condescending and granted to signe and confirme under our hands, seales and by our oath, Articles bearinge date with these presents, and do further declare that by the authoritie of the parliament and commonwealth of England derived unto us their commissioners, that according to the artieles in generall wee have granted an act of indemnitie and oblivion to all the inhabitants of this collonie from all words, actions, or writings that have been spoken acted or writt against the parliament or commonwealth of England or any other person from the beginning of the world to this daye. And this we have done that all the inhabitants of the collonie may live quietly and securely under the commonwealth of England. And we do promise that the parliament and commonwealth of England shall confirm and make good all those transactions of ours. Witness our hands and seales this 12th of March 1651.

RICHARD BENNETT.—Seale.

WILLIAM CLAIBORNE.—Seale.

EDMOND CURTIS.—Seale."

The colony supposed, that, by this solemn convention, entered into with arms in their hands, they had secured the ancient limits¹ of their country, its free trade,² its exemption from taxation³ but by

¹ Art. 4.

² Art. 7.

³ Art. 8.

their own assembly, and exclusion of military force¹ from among them. Yet in every of these points was this convention violated by subsequent kings and parliaments, and other infractions of their constitution, equally dangerous committed. Their general assembly, which was composed of the council of state and burgesses, sitting together and deciding by plurality of voices, was split into two houses, by which the council obtained a separate negative on their laws. Appeals from their supreme court, which had been fixed by law in their general assembly, were arbitrarily revoked to England, to be there heard before the king and council. Instead of four hundred miles on the seacoast, they were reduced, in the space of thirty years, to about one hundred miles. Their trade with foreigners was totally suppressed, and when carried to Great Britain, was there loaded with imposts. It is unnecessary, however, to glean up the several instances of injury, as scattered through American and British history, and the more especially as, by passing on to the accession of the present king, we shall find specimens of them all, aggravated, multiplied and crowded within a small compass of time, so as to evince a fixed design of considering our rights natural, conventional and chartered as mere nullities. The following is an epitome of the first sixteen years of his reign: The colonies were taxed internally and externally; their essential interests sacrificed to

¹ Art. 8.

individuals in Great Britain; their legislatures suspended; charters annulled; trials by juries taken away; their persons subjected to transportation across the Atlantic, and to trial before foreign judicatories; their supplications for redress thought beneath answer; themselves published as cowards in the councils of their mother country and courts of Europe; armed troops sent among them to enforce submission to these violences; and actual hostilities commenced against them. No alternative was presented but resistance, or unconditional submission. Between these could be no hesitation. They closed in the appeal to arms. They declared themselves independent states. They confederated together into one great republic; thus securing to every State the benefit of an union of their whole force. In each State separately a new form of government was established. Of ours particularly the following are the outlines: The executive powers are lodged in the hands of a governor, chosen annually, and incapable of acting more then three years in seven. He is assisted by a council of eight members. The judiciary powers are divided among several courts, as will be hereafter explained. Legislation is exercised by two houses of assembly, the one called the house of Delegates, composed of two members from each county, chosen annually by the citizens, possessing an estate for life in one hundred acres of uninhabited land, or twenty-five acres with a house on it, or in a house or lot in some town: the other

called the Senate, consisting of twenty-four members, chosen quadrennially by the same electors, who for this purpose are distributed into twenty-four districts. The concurrence of both houses is necessary to the passage of a law. They have the appointment of the governor and council, the judges of the superior courts, auditors, attorney-general, treasurer, register of the land office, and delegates to Congress. As the dismemberment of the State had never had its confirmation, but, on the contrary, had always been the subject of protestation and complaint, that it might never be in our own power to raise scruples on that subject, or to disturb the harmony of our new confederacy, the grants to Maryland, Pennsylvania, and the two Carolinas, were ratified.

This constitution was formed when we were new and unexperienced in the science of government. It was the first, too, which was formed in the whole United States. No wonder then that time and trial have discovered very capital defects in it.

1. The majority of the men in the State, who pay and fight for its support, are unrepresented in the legislature, the roll of freeholders entitled to vote not including generally the half of those on the roll of the militia, or of the tax-gatherers.

2. Among those who share the representation, the shares are very unequal. Thus the county of Warwick, with only one hundred fighting men, has an equal representation with the county of Loudon,

which has one thousand seven hundred and forty-six. So that every man in Warwick has as much influence in the government as seventeen men in Loudon. But lest it should be thought that an equal interspersion of small among large counties, through the whole State, may prevent any danger of injury to particular parts of it, we will divide it into districts, and show the proportions of land, of fighting men, and of representation in each:

	Square Miles.	Fighting Men.	Delegates.	Senators.
Between the sea-coast and falls of the rivers	¹ 11,205	19,012	7 ¹	12
Between the falls of the rivers and Blue Ridge of mountains	18,759	18,828	46	8
Between the Blue Ridge and the Alleghany	11,911	7,673	16	2
Between the Alleghany and Ohio	² 79,650	4,458	16	2
Total	121,525	49,971	149	24

An inspection of this table will supply the place of commentaries on it. It will appear at once that nineteen thousand men, living below the falls of the rivers, possess half the senate, and want four members only of possessing a majority of the house of delegates; a want more than supplied by the vicinity of their situation to the seat of government, and of course the greater degree of convenience and punctuality with which their members may and will

¹ Of these 542 are on the eastern shore.

² Of these, 22,616 are eastward of the meridian of the north of the Great Kanhaway.

attend in the legislature. These nineteen thousand, therefore, living in one part of the country, give law to upwards of thirty thousand living in another, and appoint all their chief officers, executive and judiciary. From the difference of their situation and circumstances, their interests will often be very different.

3. The senate is, by its constitution, too homogeneous with the house of delegates. Being chosen by the same electors, at the same time, and out of the same subjects, the choice falls of course on men of the same description. The purpose of establishing different houses of legislation is to introduce the influence of different interests or different principles. Thus in Great Britain it is said their constitution relies on the house of commons for honesty, and the lords for wisdom; which would be a rational reliance, if honesty were to be bought with money, and if wisdom were hereditary. In some of the American States, the delegates and senators are so chosen, as that the first represent the persons, and the second the property of the State. But with us, wealth and wisdom have equal chance for admission into both houses. We do not, therefore, derive from the separation of our legislature into two houses, those benefits which a proper complication of principles are capable of producing, and those which alone can compensate the evils which may be produced by their dissensions.

4. All the powers of government, legislative,

executive, and judiciary, result to the legislative body. The concentrating these in the same hands is precisely the definition of despotic government. It will be no alleviation that these powers will be exercised by a plurality of hands, and not by a single one. One hundred and seventy-three despots would surely be as oppressive as one. Let those who doubt it turn their eyes on the republic of Venice. As little will it avail us that they are chosen by ourselves. An *elective despotism* was not the government we fought for, but one which should not only be founded on free principles, but in which the powers of government should be so divided and balanced among several bodies of magistracy, as that no one could transcend their legal limits, without being effectually checked and restrained by the others. For this reason that convention which passed the ordinance of government, laid its foundation on this basis, that the legislative, executive, and judiciary departments should be separate and distinct, so that no person should exercise the powers of more than one of them at the same time. But no barrier was provided between these several powers. The judiciary and executive members were left dependent on the legislative, for their subsistence in office, and some of them for their continuance in it. If, therefore, the legislature assumes executive and judiciary powers, no opposition is likely to be made; nor, if made, can it be effectual; because in that case they may put their proceedings into the form of an act

of assembly, which will render them obligatory on the other branches. They have, accordingly, in many instances, decided rights which should have been left to judiciary controversy; and the direction of the executive, during the whole time of their session, is becoming habitual and familiar. And this is done with no ill intention. The views of the present members are perfectly upright. When they are led out of their regular province, it is by art in others, and inadvertence in themselves. And this will probably be the case for some time to come. But it will not be a very long time. Mankind soon learn to make interested uses of every right and power which they possess, or may assume. The public money and public liberty, intended to have been deposited with three branches of magistracy, but found inadvertently to be in the hands of one only, will soon be discovered to be sources of wealth and dominion to those who hold them; distinguished, too, by this tempting circumstance, that they are the instrument, as well as the object of acquisition. With money we will get men, said Cæsar, and with men we will get money. Nor should our assembly be deluded by the integrity of their own purposes, and conclude that these unlimited powers will never be abused, because themselves are not disposed to abuse them. They should look forward to a time, and that not a distant one, when a corruption in this, as in the country from which we derive our origin, will have seized the heads of government,

and be spread by them through the body of the people; when they will purchase the voices of the people, and make them pay the price. Human nature is the same on every side of the Atlantic, and will be alike influenced by the same causes. The time to guard against corruption and tyranny, is before they shall have gotten hold of us. It is better to keep the wolf out of the fold, than to trust to drawing his teeth and claws after he shall have entered. To render these considerations the more cogent, we must observe in addition:

5. That the ordinary legislature may alter the constitution itself. On the discontinuance of assemblies, it became necessary to substitute in their place some other body, competent to the ordinary business of government, and to the calling forth the powers of the State for the maintenance of our opposition to Great Britain. Conventions were therefore introduced, consisting of two delegates from each county, meeting together and forming one house, on the plan of the former house of burgesses, to whose places they succeeded. These were at first chosen anew for every particular session. But in March 1775, they recommended to the people to choose a convention, which should continue in office a year. This was done, accordingly, in April 1775, and in the July following that convention passed an ordinance for the election of delegates in the month of April annually. It is well known, that in July 1775, a separation from Great Britain

and establishment of republican government, had never yet entered into any person's mind. A convention, therefore, chosen under that ordinance, cannot be said to have been chosen for the purposes which certainly did not exist in the minds of those who passed it. Under this ordinance, at the annual election in April 1776, a convention for the year was chosen. Independence, and the establishment of a new form of government, were not even yet the objects of the people at large. One extract from the pamphlet called Common Sense had appeared in the Virginia papers in February, and copies of the pamphlet itself had got in a few hands. But the idea had not been opened to the mass of the people in April, much less can it be said that they had made up their minds in its favor.

So that the electors of April 1776, no more than the legislators of July 1775, not thinking of independence and a permanent republic, could not mean to vest in these delegates powers of establishing them, or any authorities other than those of the ordinary legislature. So far as a temporary organization of government was necessary to render our opposition energetic, so far their organization was valid. But they received in their creation no powers but what were given to every legislature before and since. They could not, therefore, pass an act transcendent to the powers of other legislatures. If the present assembly pass an act, and declare it shall be irrevocable by subsequent assemblies, the decla-

ration is merely void, and the act repealable, as other acts are. So far, and no farther authorized, they organized the government by the ordinance entitled a constitution or form of government. It pretends to no higher authority than the other ordinances of the same session; it does not say that it shall be perpetual; that it shall be unalterable by other legislatures; that it shall be transcendent above the powers of those who they knew would have equal power with themselves. Not only the silence of the instrument is a proof they thought it would be alterable, but their own practice also; for this very convention, meeting as a house of delegates in general assembly with the Senate in the autumn of that year, passed acts of assembly in contradiction to their ordinance of government; and every assembly from that time to this has done the same. I am safe, therefore, in the position that the constitution itself is alterable by the ordinary legislature. Though this opinion seems founded on the first elements of common sense, yet is the contrary maintained by some persons. 1. Because, say they, the conventions were vested with every power necessary to make effectual opposition to Great Britain. But to complete this argument, they must go on, and say further, that effectual opposition could not be made to Great Britain without establishing a form of government perpetual and unalterable by the legislature; which is not true. An opposition which at some time or other was to come to an end, could

not need a perpetual institution to carry it on; and a government amendable as its defects should be discovered, was as likely to make effectual resistance, as one that should be unalterably wrong. Besides, the assemblies were as much vested with all powers requisite for resistance as the conventions were. If, therefore, these powers included that of modelling the form of government in the one case, they did so in the other. The assemblies then as well as the conventions may model the government; that is, they may alter the ordinance of government.

2. They urge, that if the convention had meant that this instrument should be alterable, as their other ordinances were, they would have called it an ordinance; but they have called it a *constitution*, which, *ex vi termini*, means "an act above the power of the ordinary legislature." I answer that *constitutio*, *constitutium*, *statutum*, *lex*, are convertible terms. "*Constitutio* dicitur jus quod a principe conditur." "*Constitutium*, quod ab imperatoribus rescriptum statutumve est." "*Statutum*, idem quod lex." Calvini Lexicon juridicum. *Constitution* and *statute* were originally terms of the¹ civil law, and from thence introduced by ecclesiastics into the English law. Thus in the statute 25 Hen. VIII. c. 19, § 1, "*Constitutions* and *ordinances*" are used as synonymous. The term *constitution* has many other significations in physics and politics; but in jurispru-

¹ To bid, to set, was the ancient legislative word of the English. Ll. Hlotharri and Eadrici. Ll. Inæ. Ll. Eadwerdi. Ll. Aathelstani.

dence, whenever it is applied to any act of the legislature, it invariably means a statute, law, or ordinance which is the present case. No inference then of a different meaning can be drawn from the adoption of this title; on the contrary, we might conclude that, by their affixing to it a term synonymous with ordinance or statute. But of what consequence is their meaning, where their power is denied? If they meant to do more than they had power to do, did this give them power? It is not the name, but the authority that renders an act obligatory. Lord Coke says, "an article of the statute, 11 R. II. c. 5, that no person should attempt to revoke any ordinance then made, is repealed, for that such restraints is against the jurisdiction and power of the parliament." 4. Inst. 42. And again, "though divers parliaments have attempted to restrain subsequent parliaments, yet could they never effect it; for the latter parliament hath ever power to abrogate, suspend, qualify, explain, or make void the former in the whole or in any part thereof, notwithstanding any words of restraint, prohibition, or penalty, in the former; for it is a maxim in the laws of the parliament, *quod leges posteriores priores contrarias abrogant.*" 4. Inst. 43. To get rid of the magic supposed to be in the word *constitution*, let us translate it into its definition as given by those who think it above the power of the law; and let us suppose the convention, instead of saying, "We the ordinary legislature, establish a *constitution*,"

had said, "We the ordinary legislature, establish an act *above the power of the ordinary legislature.*"

Does not this expose the absurdity of the attempt?

3. But, say they, the people have acquiesced, and this has given it an authority superior to the laws. It is true that the people did not rebel against it; and was that a time for the people to rise in rebellion? Should a prudent acquiescence, at a critical time, be construed into a confirmation of every illegal thing done during that period? Besides, why should they rebel? At an annual election they had chosen delegates for the year, to exercise the ordinary powers of legislation, and to manage the great contest in which they were engaged. These delegates thought the contest would be best managed by an organized government. They therefore, among others, passed an ordinance of government. They did not presume to call it perpetual and unalterable. They well knew they had no power to make it so; that our choice of them had been for no such purpose, and at a time when we could have no such purpose in contemplation. Had an unalterable form of government been meditated, perhaps we should have chosen a different set of people. There was no cause then for the people to rise in rebellion. But to what dangerous lengths will this argument lead? Did the acquiescence of the colonies under the various acts of power exercised by Great Britain in our infant State, confirm these acts, and so far invest them with the authority of the people as to render

them unalterable, and our present resistance wrong? On every unauthoritative exercise of power by the legislature must the people rise in rebellion, or their silence be construed into a surrender of that power to them? If so, how many rebellions should we have had already? One certainly for every session of assembly. The other States in the union have been of opinion that to render a form of government unalterable by ordinary acts of assembly, the people must delegate persons with special powers. They have accordingly chosen special conventions to form and fix their governments. The individuals then who maintain the contrary opinion in this country, should have the modesty to suppose it possible that they may be wrong, and the rest of America right. But if there be only a possibility of their being wrong, if only a plausible doubt remains of the validity of the ordinance of government, is it not better to remove that doubt by placing it on a bottom which none will dispute? If they be right we shall only have the unnecessary trouble of meeting once in convention. If they be wrong, they expose us to the hazard of having no fundamental rights at all. True it is, this is no time for deliberating on forms of government. While an enemy is within our bowels, the first object is to expel him. But when this shall be done, when peace shall be established, and leisure given us for intrenching within good forms, the rights for which we have bled, let no man be found indolent enough

to decline a little more trouble for placing them beyond the reach of question. If anything more be requisite to produce a conviction of the expediency of calling a convention at a proper season to fix our form of government, let it be the reflection:

6. That the assembly exercises a power of determining the quorum of their own body which may legislate for us. After the establishment of the new form they adhered to the *Lex majoris partis*, founded in common law¹ as well as common right. It is the natural law² of every assembly of men, whose numbers are not fixed by any other law. They continued for some time to require the presence of a majority of their whole number, to pass an act. But the British parliament fixes its own quorum; our former assemblies fixed their own quorum; and one precedent in favor of power is stronger than an hundred against it. The house of delegates, therefore, have lately³ voted that, during the present dangerous invasion, forty members shall be a house to proceed to business. They have been moved to this by the fear of not being able to collect a house. But this danger could not authorize them to call that a house which was none; and if they may fix it at one number, they may at another, till it loses its fundamental character of being a representative body. As this vote expires with the present inva-

¹ Bro. abr. Corporations, 31, 34. Hakewell, 93.

² Puff. Off. hom. l. 2, c. 6, § 12.

³ June 4, 1781.

sion, it is probable the former rule will be permitted to revive; because at present no ill is meant. The power, however, of fixing their own quorum has been avowed, and a precedent set. From forty it may be reduced to four, and from four to one; from a house to a committee, from a committee to a chairman or speaker, and thus an oligarchy or monarchy be substituted under forms supposed to be regular. "Omnia mala exempla ex bonis orta sunt; sed ubi imperium ad ignaros aut minus bonos pervenit, novum illud exemplum ab dignis et idoneis adindignos et non idoneos fertur." When, therefore, it is considered, that there is no legal obstacle to the assumption by the assembly of all the powers legislative, executive, and judiciary, and that these may come to the hands of the smallest rag of delegation, surely the people will say, and their representatives, while yet they have honest representatives, will advise them to say, that they will not acknowledge as laws any acts not considered and assented to by the major part of their delegates.

In enumerating the defects of the Constitution, it would be wrong to count among them what is only the error of particular persons. In December 1776, our circumstances being much distressed, it was proposed in the house of delegates to create a *dictator*, invested with every power legislative, executive, and judiciary, civil and military, of life and of death, over our persons and over our properties; and in June 1781, again under calamity, the same

proposition was repeated, and wanted a few votes only of being passed. One who entered into this contest from a pure love of liberty, and a sense of injured rights, who determined to make every sacrifice, and to meet every danger, for the re-establishment of those rights on a firm basis, who did not mean to expend his blood and substance for the wretched purpose of changing this matter for that, but to place the powers of governing him in a plurality of hands of his own choice, so that the corrupt will of no one man might in future oppress him, must stand confounded and dismayed when he is told, that a considerable portion of that plurality had mediated the surrender of them into a single hand, and, in lieu of a limited monarchy, to deliver him over to a despotic one! How must we find his efforts and sacrifices abused and baffled, if he may still, by a single vote, be laid prostrate at the feet of one man! In God's name, from whence have they derived this power? Is it from our ancient laws? None such can be produced. Is it from any principle in our new Constitution expressed or implied? Every lineament expressed or implied, is in full opposition to it. Its fundamental principle is, that the State shall be governed as a commonwealth. It provides a republican organization, proscribes under the name of *prerogative* the exercise of all powers undefined by the laws; places on this basis the whole system of our laws; and by consolidating them together, chooses that they should be left to stand or

fall together, never providing for any circumstances, nor admitting that such could arise, wherein either should be suspended; no, not for a moment. Our ancient laws expressly declare, that those who are but delegates themselves shall not delegate to others powers which require judgment and integrity in their exercise. Or was this proposition moved on a supposed right in the movers, of abandoning their posts in a moment of distress? The same laws forbid the abandonment of that post, even on ordinary occasions; and much more a transfer of their powers into other hands and other forms, without consulting the people. They never admit the idea that these, like sheep or cattle, may be given from hand to hand without an appeal to their own will. Was it from the necessity of the case? Necessities which dissolve a government, do not convey its authority to an oligarchy or a monarchy. They throw back, into the hands of the people, the powers they had delegated, and leave them as individuals to shift for themselves. A leader may offer, but not impose himself, nor be imposed on them. Much less can their necks be submitted to his sword, their breath to be held at his will or caprice. The necessity which should operate these tremendous effects should at least be palpable and irresistible. Yet in both instances, where it was feared, or pretended with us, it was belied by the event. It was belied, too, by the preceding experience of our sister States, several of whom had grappled through greater difficulties

without abandoning their forms of government. When the proposition was first made, Massachusetts had found even the government of committees sufficient to carry them through an invasion. But we at the time of that proposition, were under no invasion. When the second was made, there had been added to this example those of Rhode Island, New York, New Jersey, and Pennsylvania, in all of which the republican form had been found equal to the task of carrying them through the severest trials. In this State alone did there exist so little virtue, that fear was to be fixed in the hearts of the people, and to become the motive of their exertions, and principle of their government? The very thought alone was treason against the people; was treason against mankind in general; as riveting forever the chains which bow down their necks, by giving to their oppressors a proof, which they would have trumpeted through the universe, of the imbecility of republican government, in times of pressing danger, to shield them from harm. Those who assume the right of giving away the reins of government in any case, must be sure that the herd, whom they hand on to the rods and hatchet of the dictator, will lay their necks on the block when the shall nod to them. But if our assemblies supposed such a recognition in the people, I hope they mistook their character. I am of opinion, that the government, instead of being braced and invigorated for greater exertions under their difficulties, would have been thrown back upon

the bungling machinery of county committees for administration, till a convention could have been called, and its wheels again set into regular motion. What a cruel moment was this for creating such an embarrassment, for putting to the proof the attachment of our countrymen to republican government! Those who meant well, of the advocates of this measure, (and most of them meant well, for I know them personally, had been their fellow-laborer in the common cause, and had often proved the purity of their principles,) had been seduced in their judgment by the example of an ancient republic, whose constitution and circumstances were fundamentally different. They had sought this precedent in the history of Rome, where alone it was to be found, and where at length, too, it had proved fatal. They had taken it from a republic rent by the most bitter factions and tumults, where the government was of a heavy-handed unfeeling aristocracy, over a people ferocious, and rendered desperate by poverty and wretchedness; tumults which could not be allayed under the most trying circumstances, but by the omnipotent hand of a single despot. Their constitution, therefore, allowed a temporary tyrant to be erected, under the name of a dictator; and that temporary tyrant, after a few examples, became perpetual. They misapplied this precedent to a people mild in their dispositions, patient under their trial, united for the public liberty, and affectionate to their leaders. But if from the constitution of the Roman government there

resulted to their senate a power of submitting all their rights to the will of one man, does it follow that the assembly of Virginia have the same authority? What clause in our constitution has substituted that of Rome, by way of residuary provision, for all cases not otherwise provided for? Or if they may step *ad libitum* into any other form of government for precedents to rule us by, for what oppression may not a precedent be found in this world of the *ballum omnium in omnia*? Searching for the foundations of this proposition, I can find none which may pretend a color of right or reason, but the defect before developed, that there being no barrier between the legislative, executive, and judiciary departments, the legislature may seize the whole; that having seized it, and possessing a right to fix their own quorum, they may reduce that quorum to one, whom they may call a chairman, speaker, dictator, or by any other name they please. Our situation is indeed perilous, and I hope my countrymen will be sensible of it, and will apply, at a proper season, the proper remedy; which is a convention to fix the constitution, to amend its defects, to bind up the several branches of government by certain laws, which, when they transgress, their acts shall become nullities; to render unnecessary an appeal to the people, or in other words a rebellion, on every infraction of their rights, on the peril that their acquiescence shall be construed into an intention to surrender those rights.

QUERY XIV.

The administration of justice and the description of the laws?

The State is divided into counties. In every county are appointed magistrates, called justices of the peace, usually from eight to thirty or forty in number, in proportion to the size of the county, of the most discreet and honest inhabitants. They are nominated by their fellows, but commissioned by the governor, and act without reward. These magistrates have jurisdiction both criminal and civil. If the question before them be a question of law only, they decide on it themselves; but if it be of fact, or of fact and law combined, it must be referred to a jury. In the latter case, of a combination of law and fact, it is usual for the jurors to decide the fact, and to refer the law arising on it to the decision of the judges. But this division of the subject lies with their discretion only. And if the question relate to any point of public liberty, or if it be one of those in which the judges may be suspected of bias, the jury undertake to decide both law and fact. If they be mistaken, a decision against right, which is casual only, is less dangerous to the State, and less afflicting to the loser, than one which makes part of a regular and uniform system. In truth, it is better to toss up cross and pile in a cause, than to refer it to a judge whose mind is warped by any motive whatever, in that particular case. But

the common sense of twelve honest men gives still a better chance of just decision, than the hazard of cross and pile. These judges execute their process by the sheriff or coroner of the county, or by constables of their own appointment. If any free person commit an offence against the commonwealth, if it be below the degree of felony, he is bound by a justice to appear before their court, to answer it on an indictment or information. If it amount to felony, he is committed to jail; a court of these justices is called; if they on examination think him guilty, they send him to the jail of the general court, before which court he is to be tried first by a grand jury of twenty-four, of whom thirteen must concur in opinion; if they find him guilty, he is then tried by a jury of twelve men of the county where the offence was committed, and by their verdict, which must be unanimous, he is acquitted or condemned without appeal. If the criminal be a slave, the trial by the county court is final. In every case, however, except that of high treason, there resides in the governor a power of pardon. In high treason the pardon can only flow from the general assembly. In civil matters these justices have jurisdiction in all cases of whatever value, not appertaining to the department of the admiralty. This jurisdiction is twofold. If the matter in dispute be of less value than four dollars and one-sixth, a single member may try it at any time and place within his county, and may award execution on the goods of the party cast. If

it be of that or greater value, it is determinable before the county court, which consists of four at the least of those justices and assembles at the courthouse of the county on a certain day in every month. From their determination, if the matter be of the value of ten pounds sterling, or concern the title or bounds of lands, an appeal lies to one of the superior courts.

There are three or four superior courts, to wit, the high court of chancery, the general court, and the court of admiralty. The first and second of these receive appeals from the county courts, and also have original jurisdiction, where the subject of controversy is of the value of ten pounds sterling, or where it concerns the title bounds or lands. The jurisdiction of the admiralty is original altogether. The high court of chancery is composed of three judges, the general court of five, and the court of admiralty of three. The two first hold their sessions at Richmond at stated times, the chancery twice in the year, and the general court twice for business, civil and criminal, and twice more for criminal only. The court of admiralty sits at Williamsburg whenever a controversy arises.

There is one supreme court, called the court of appeals, composed of the judges of the three superior courts, assembling twice a year at stated times at Richmond. This court receives appeals in all civil cases from each of the superior courts, and determines them finally. But it has no original jurisdiction.

If a controversy arise between two foreigners of a nation in alliance with the United States, it is decided by the Consul for their State, or, if both parties choose it, by the ordinary courts of justice. If one of the parties only be such a foreigner, it is triable before the courts of justice of the country. But if it shall have been instituted in a county court, the foreigner may remove it into the general court, or court of chancery, who are to determine it at their first sessions, as they must also do if it be originally commenced before them. In cases of life and death, such foreigners have a right to be tried by a jury, the one-half foreigners, the other natives.

All public accounts are settled with a board of auditors, consisting of three members appointed by the general assembly, any two of whom may act. But an individual, dissatisfied with the determination of that board, may carry his case into the proper superior court.

A description of the laws.

The general assembly was constituted, as has been already shown, by letters-patent of March the 9th, 1607, in the fourth year of the reign of James the first. The laws of England seem to have been adopted by consent of the settlers, which might easily enough be done whilst they were few and living all together. Of such adoption, however, we have no other proof than their practice till the year 1661, when they were expressly adopted by an act of the assembly, except so far as "a difference of con-

dition" rendered them inapplicable. Under this adoption, the rule, in our courts of judicature was, that the common law of England, and the general statutes previous to the fourth of James, were in force here; but that no subsequent statutes were, *unless we were named in them*, said the judges and other partisans of the crown, but *named or not named*, said those who reflected freely. It will be unnecessary to attempt a description of the laws of England, as that may be found in English publications. To those which were established here, by the adoption of the legislature, have been since added a number of acts of assembly passed during the monarchy, and ordinances of convention and acts of assembly enacted since the establishment of the republic. The following variations from the British model are perhaps worthy of being specified:

Debtors unable to pay their debts, and making faithful delivery of their whole effects, are released from confinement, and their persons forever discharged from restraint for such previous debts; but any property they may afterwards acquire will be subject to their creditors.

The poor unable to support themselves, are maintained by an assessment on the tytheable persons in their parish. This assessment is levied and administered by twelve persons in each parish, called vestrymen, originally chosen by the housekeepers of the parish, but afterwards filling vacancies in their own body by their own choice. These are usually

the most discreet farmers, so distributed through their parish, that every part of it may be under the immediate eye of some one of them. They are well acquainted with the details and economy of private life, and they find sufficient inducements to execute their charge well, in their philanthropy, in the approbation of their neighbors, and the distinction which that gives them. The poor who have neither property, friends, nor strength to labor, are boarded in the houses of good farmers, to whom a stipulated sum is annually paid. To those who are able to help themselves a little, or have friends from whom they derive some succors, inadequate however to their full maintenance, supplementary aids are given which enable them to live comfortably in their own houses, or in the houses of their friends. Vagabonds without visible property or vocation, are placed in work houses, where they are well clothed, fed, lodged, and made to labor. Nearly the same method of providing for the poor prevails through all our States; and from Savannah to Portsmouth you will seldom meet a beggar. In the large towns, indeed, they sometimes present themselves. These are usually foreigners, who have never obtained a settlement in any parish. I never yet saw a native American begging in the streets or highways. A subsistence is easily gained here; and if, by misfortunes, they are thrown on the charities of the world, those provided by their own country are so comfortable and so certain, that they never think of

relinquishing them to become strolling beggars. Their situation too, when sick, in the family of a good farmer, where every member is emulous to do them kind offices, where they are visited by all the neighbors, who bring them the little rarities which their sickly appetites may crave, and who take by rotation the nightly watch over them, when their condition requires it, is without comparison better than in a general hospital, where the sick, the dying and the dead are crammed together in the same rooms, and often in the same beds. The disadvantages, inseparable from general hospitals, are such as can never be counterpoised by all the regularities of medicine and regimen. Nature and kind nursing save a much greater proportion in our plain way, at a smaller expense, and with less abuse. One branch only of hospital institution is wanting with us; that is, a general establishment for those laboring under difficult cases of chirurgery. The aids of this art are not equivocal. But an able chirurgeon cannot be had in every parish. Such a receptacle should therefore be provided for those patients; but no others should be admitted.

Marriages must be solemnized either on special license, granted by the first magistrate of the county, on proof of the consent of the parent or guardian of either party under age, or after solemn publication, on three several Sundays, at some place of religious worship, in the parishes where the parties reside. The act of solemnization may be by the

minister of any society of Christians, who shall have been previously licensed for this purpose by the court of the county. Quakers and Menonists, however, are exempted from all these conditions, and marriage among them is to be solemnized by the society itself.

A foreigner of any nation, not in open war with us, becomes naturalized by removing to the State to reside, and taking an oath of fidelity; and thereupon acquires every right of a native citizen; and citizens may divest themselves of that character, by declaring, by solemn deed, or in open court, that they mean to expatriate themselves, and no longer to be citizens of this State.

Conveyances of land must be registered in the court of the county wherein they lie, or in the general court, or they are void, as to creditors, and subsequent purchasers.

Slaves pass by descent and dower as lands do. Where the descent is from a parent, the heir is bound to pay an equal share of their value in money to each of their brothers and sisters.

Slaves, as well as lands, were entailable during the monarchy; but, by an act of the first republican assembly, all donees in tail, present and future, were vested with the absolute dominion of the entailed subject.

Bills of exchange, being protested, carry ten per cent. interest from their date.

No person is allowed, in any other case, to take

more than five per cent. per annum simple interest for the loan of moneys.

Gaming debts are made void, and moneys actually paid to discharge such debts (if they exceed forty shillings) may be recovered by the payer within three months, or by any other person afterwards.

Tobacco, flour, beef, pork, tar, pitch, and turpentine must be inspected by persons publicly appointed, before they can be exported.

The erecting iron-works and mills is encouraged by many privileges; with necessary cautions however to prevent their dams from obstructing the navigation of the water-courses. The general assembly have on several occasions shown a great desire to encourage the opening the great falls of James and Potomac rivers. As yet, however, neither of these have been effected.

The laws have also descended to the preservation and improvement of the races of useful animals, such as horses, cattle, deer; to the extirpation of those which are noxious, as wolves, squirrels, crows, blackbirds; and to the guarding our citizens against infectious disorders, by obliging suspected vessels coming into the State, to perform quarantine, and by regulating the conduct of persons having such disorders within the State.

The mode of acquiring lands, in the earliest times of our settlement, was by petition to the general assembly. If the lands prayed for were already cleared of the Indian title, and the assembly thought

the prayer reasonable, they passed the property by their vote to the petitioner. But if they had not yet been ceded by the Indians, it was necessary that the petitioner should previously purchase their right. This purchase the assembly verified, by inquiries of the Indian proprietors; and being satisfied of its reality and fairness, proceeded further to examine the reasonableness of the petition, and its consistence with policy; and according to the result, either granted or rejected the petition. The company also sometimes, though very rarely, granted lands, independently of the general assembly. As the colony increased, and individual applications for land multiplied, it was found to give too much occupation to the general assembly to inquire into and execute the grant in every special case. They therefore thought it better to establish general rules, according to which all grants should be made, and to leave to the governor the execution of them, under these rules. This they did by what have been usually called the land laws, amending them from time to time, as their defects were developed. According to these laws, when an individual wished a portion of unappropriated land, he was to locate and survey it by a public officer, appointed for that purpose; its breadth was to bear a certain proportion to its length: the grant was to be executed by the governor; and the lands were to be improved in a certain manner, within a given time. From these regulations there resulted to the State a sole

and exclusive power of taking conveyances of the Indian right of soil; since, according to them an Indian conveyance alone could give no right to an individual, which the laws would acknowledge. The State, or the crown, thereafter, made general purchases of the Indians from time to time, and the governor parcelled them out by special grants, conformable to the rules before described, which it was not in his power, or in that of the crown, to dispense with. Grants, unaccompanied by their proper legal circumstances, were set aside regularly by *fieri facias*, or by bill in chancery. Since the establishment of our new Government, this order of things is but little changed. An individual, wishing to appropriate to himself lands still unappropriated by any other, pays to the public treasurer a sum of money proportioned to the quantity he wants. He carries the treasurer's receipt to the auditors of public accounts, who thereupon debit the treasurer with the sum, and order the register of the land-office to give the party a warrant for his land. With this warrant from the register, he goes to the surveyor of the county where the land lies on which he has cast his eye. The surveyor lays it off for him, gives him its exact description, in the form of a certificate, which certificate he returns to the land-office, where a grant is made out, and is signed by the governor. This vests in him a perfect dominion in his lands, transmissible to whom he pleases by deed or will, or by descent to his heirs, if he die intestate.

Many of the laws which were in force during the monarchy being relative merely to that form of government, or inculcating principles inconsistent with republicanism, the first assembly which met after the establishment of the commonwealth appointed a committee to revise the whole code, to reduce it into proper form and volume, and report it to the assembly. This work has been executed by three gentlemen, and reported; but probably will not be taken up till a restoration of peace shall leave to the legislature leisure to go through such a work.

The plan of the revival was this. The common law of England, by which is meant, that part of the English law which was anterior to the date of the oldest statutes extant, is made the basis of the work. It was thought dangerous to attempt to reduce it to a text; it was therefore left to be collected from the usual monuments of it. Necessary alterations in that, and so much of the whole body of the British statutes, and of acts of assembly, as were thought proper to be retained, were digested into one hundred and twenty-six new acts, in which simplicity of style was aimed at, as far as was safe. The following are the most remarkable alterations proposed:

To change the rules of descent, so as that the lands of any person dying intestate shall be divisible equally among all his children, or other representatives, in equal degree.

To make slaves distributable among the next of kin, as other movables.

To have all public expenses, whether of the general treasury, or of a parish or county, (as for the maintenance of the poor, building bridges, court-houses, &c.,) supplied by assessment on the citizens, in proportion to their property.

To hire undertakers for keeping the public roads in repair, and indemnify individuals through whose lands new roads shall be opened.

To define with precision the rules whereby aliens should become citizens, and citizens make themselves aliens.

To establish religious freedom on the broadest bottom.

To emancipate all slaves born after the passing the act. The bill reported by the revisers does not itself contain this proposition; but an amendment containing it was prepared, to be offered to the legislature whenever the bill should be taken up, and farther directing, that they should continue with their parents to a certain age, then to be brought up, at the public expense, to tillage, arts, or sciences, according to their geniuses, till the females should be eighteen, and the males twenty-one years of age, when they should be colonized to such place as the circumstances of the time should render most proper, sending them out with arms, implements of household and of the handicraft arts, seeds, pairs of the useful domestic animals, &c., to declare them a free and independent people, and extend to them our alliance and protection, till they have acquired

strength; and to send vessels at the same time to other parts of the world for an equal number of white inhabitants; to induce them to migrate hither proper encouragements were to be proposed. It will probably be asked, Why not retain and incorporate the blacks into the State, and thus save the expense of supplying by importation of white settlers, the vacancies they will leave? Deep-rooted prejudices entertained by the whites; ten thousand recollections, by the blacks, of the injuries they have sustained; new provocations; the real distinctions which nature has made; and many other circumstances, will divide us into parties, and produce convulsions, which will probably never end but in the extermination of the one or the other race. To these objections, which are political, may be added others, which are physical and moral. The first difference which strikes us is that of color. Whether the black of the negro resides in the reticular membrane between the skin and scarf-skin, or in the scarf-skin itself; whether it proceeds from the color of the blood, the color of the bile, or from that of some other secretion, the difference is fixed in nature, and is as real as if its seat and cause were better known to us. And is this difference of no importance? Is it not the foundation of a greater or less share of beauty in the two races? Are not the fine mixtures of red and white, the expressions of every passion by greater or less suffusions of color in the one, preferable to that eternal monotony, which reigns in the

countenances, that immovable veil of black which covers the emotions of the other race? Add to these, flowing hair, a more elegant symmetry of form, their own judgment in favor of the whites, declared by their preference of them, as uniformly as is the preference of the Oran-ûtan for the black woman over those of his own species. The circumstance of superior beauty, is thought worthy attention in the propagation of our horses, dogs, and other domestic animals; why not in that of man? Besides those of color, figure, and hair, there are other physical distinctions proving a difference of race. They have less hair on the face and body. They secrete less by the kidneys, and more by the glands of the skin, which gives them a very strong and disagreeable odor. This greater degree of transpiration, renders them more tolerant of heat, and less so of cold than the whites. Perhaps, too, a difference of structure in the pulmonary apparatus, which a late ingenious experimentalist¹ has discovered to be the principal regulator of animal heat, may have disabled them from extricating, in the act of inspiration, so much of that fluid from the outer air, or obliged them in expiration, to part with more of it. They seem to require less sleep. A black after hard labor through the day, will be induced by the slightest amusements to sit up till midnight, or later, though knowing he must be out with the first dawn of the morning. They are at least as brave, and more adventuresome.

¹ Crawford.

But this may perhaps proceed from a want of forethought, which prevents their seeing a danger till it be present. When present, they do not go through it with more coolness or steadiness than the whites. They are more ardent after their female; but love seems with them to be more an eager desire, than a tender delicate mixture of sentiment and sensation. Their griefs are transient. Those numberless afflictions, which render it doubtful whether heaven has given life to us in mercy or in wrath, are less felt, and sooner forgotten with them. In general, their existence appears to participate more of sensation than reflection. To this must be ascribed their disposition to sleep when abstracted from their diversions, and unemployed in labor. An animal whose body is at rest, and who does not reflect must be disposed to sleep of course. Comparing them by their faculties of memory, reason, and imagination, it appears to me that in memory they are equal to the whites; in reason much inferior, as I think one could scarcely be found capable of tracing and comprehending the investigations of Euclid; and that in imagination they are dull, tasteless, and anomalous. It would be unfair to follow them to Africa for this investigation. We will consider them here, on the same stage with the whites, and where the facts are not apocryphal on which a judgment is to be formed. It will be right to make great allowances for the difference of condition, of education, of conversation, of the sphere in which they move

Many millions of them have been brought to, and born in America. Most of them, indeed, have been confined to tillage, to their own homes, and their own society; yet many have been so situated, that they might have availed themselves of the conversation of their masters; many have been brought up to the handicraft arts, and from that circumstance have always been associated with the whites. Some have been liberally educated, and all have lived in countries where the arts and sciences are cultivated to a considerable degree, and all have had before their eyes samples of the best works from abroad. The Indians, with no advantages of this kind, will often carve figures on their pipes not destitute of design and merit. They will crayon out an animal, a plant, or a country, so as to prove the existence of a germ in their minds which only wants cultivation. They astonish you with strokes of the most sublime oratory; such as prove their reason and sentiment strong, their imagination glowing and elevated. But never yet could I find that a black had uttered a thought above the level of plain narration; never saw even an elementary trait of painting or sculpture. In music they are more generally gifted than the whites with accurate ears for tune and time, and they have been found capable of imagining a small catch.¹ Whether they will be

¹ The instrument proper to them is the Banjar, which they brought hither from Africa, and which is the original of the guitar, its chords being precisely the four lower chords of the guitar.

equal to the composition of a more extensive run of melody, or of complicated harmony, is yet to be proved. Misery is often the parent of the most affecting touches in poetry. Among the blacks is misery enough, God knows, but no poetry. Love is the peculiar œstrum of the poet. Their love is ardent, but it kindles the senses only, not the imagination. Religion, indeed, has produced a Phyllis Whately; but it could not produce a poet. The compositions published under her name are below the dignity of criticism. The heroes of the Dunciad are to her, as Hercules to the author of that poem. Ignatius Sancho has approached nearer to merit in composition; yet his letters do more honor to the heart than the head. They breathe the purest effusions of friendship and general philanthropy, and show how great a degree of the latter may be compounded with strong religious zeal. He is often happy in the turn of his compliments, and his style is easy and familiar, except when he affects a Shandean fabrication of words. But his imagination is wild and extravagant, escapes incessantly from every restraint of reason and taste, and, in the course of its vagaries, leaves a tract of thought as incoherent and eccentric, as is the course of a meteor through the sky. His subjects should often have led him to a process of sober reasoning; yet we find him always substituting sentiment for demonstration. Upon the whole, though we admit him to the first place among those of his own color who have

presented themselves to the public judgment, yet when we compare him with the writers of the race among whom he lived and particularly with the epistolary class in which he has taken his own stand, we are compelled to enrol him at the bottom of the column. This criticism supposes the letters published under his name to be genuine, and to have received amendment from no other hand; points which would not be of easy investigation. The improvement of the blacks in body and mind, in the first instance of their mixture with the whites, has been observed by every one, and proves that their inferiority is not the effect merely of their condition of life. We know that among the Romans, about the Augustan age especially, the condition of their slaves was much more deplorable than that of the blacks on the continent of America. The two sexes were confined in separate apartments, because to raise a child cost the master more than to buy one. Cato, for a very restricted indulgence to his slaves in this particular,¹ took from them a certain price. But in this country the slaves multiply as fast as the free inhabitants. Their situation and manners place the commerce between the two sexes almost without restraint. The same Cato, on a principle of economy, always sold his sick and superannuated slaves. He gives it as a standing precept to a master visiting his farm, to sell his old oxen, old wagons,

¹ Tous doulous etaxen örismenou nomesmatos homilein tais therapainsin.—Plutarch. Cato.

old tools, old and diseased servants, and everything else become useless. "Vendat boves vetulos, plaustrum vetus, feramenta vetera, servum senem, servum morbosum, et si quid aliud supersit vendat." Cato de re rustica, c. 2. The American slaves cannot enumerate this among the injuries and insults they receive. It was the common practice to expose in the island Æsculapius, in the Tyber, diseased slaves whose cure was like to become tedious.¹ The emperor Claudius, by an edict, gave freedom to such of them as should recover, and first declared that if any person chose to kill rather than to expose them, it should not be deemed homicide. The exposing them is a crime of which no instance has existed with us; and were it to be followed by death, it would be punished capitally. We are told of a certain Vedius Pollio, who, in the presence of Augustus, would have given a slave as food to his fish, for having broken a glass. With the Romans, the regular method of taking the evidence of their slaves was under torture. Here it has been thought better never to resort to their evidence. When a master was murdered, all his slaves, in the same house, or within hearing, were condemned to death. Here punishment falls on the guilty only, and as precise proof is required against him as against a freeman. Yet notwithstanding these and other discouraging circumstances among the Romans, their slaves were often their rarest artists. They excelled too in

¹ Suet. Claud. 25.

science, insomuch as to be usually employed as tutors to their master's children. Epictetus, Terence, and Phædrus, were slaves. But they were of the race of whites. It is not their condition then, but nature, which has produced the distinction. Whether further observation will or will not verify the conjecture, that nature has been less bountiful to them in the endowments of the head, I believe that in those of the heart she will be found to have done them justice. That disposition to theft with which they have been branded, must be ascribed to their situation, and not to any depravity of the moral sense. The man in whose favor no laws of property exist, probably feels himself less bound to respect those made in favor of others. When arguing for ourselves, we lay it down as a fundamental, that laws, to be just, must give a reciprocation of right; that, without this, they are mere arbitrary rules of conduct, founded in force, and not in conscience; and it is a problem which I give to the master to solve, whether the religious precepts against the violation of property were not framed for him as well as his slave? And whether the slave may not as justifiably take a little from one who has taken all from him, as he may slay one who would slay him? That a change in the relations in which a man is placed should change his ideas of moral right or wrong, is neither new, nor peculiar to the color of the blacks. Homer tells us it was so two thousand six hundred years ago.

'Emisu, ger t' aretes apoainutai euruopa Zeus
Haneros, eut' an min kata doulion ema elesin.

Odd. 17, 323.

Jove fix'd it certain, that whatever day
Makes man a slave, takes half his worth away.

But the slaves of which Homer speaks were whites. Notwithstanding these considerations which must weaken their respect for the laws of property, we find among them numerous instances of the most rigid integrity, and as many as among their better instructed masters, of benevolence, gratitude, and unshaken fidelity. The opinion that they are inferior in the faculties of reason and imagination, must be hazarded with great diffidence. To justify a general conclusion, requires many observations, even where the subject may be submitted to the anatomical knife, to optical glasses, to analysis by fire or by solvents. How much more then where it is a faculty, not a substance, we are examining; where it eludes the research of all the senses; where the conditions of its existence are various and variously combined; where the effects of those which are present or absent bid defiance to calculation; let me add too, as a circumstance of great tenderness, where our conclusion would degrade a whole race of men from the rank in the scale of beings which their Creator may perhaps have given them. To our reproach it must be said, that though for a century and a half we have had under our eyes the races of black and of red men, they have

never yet been viewed by us as subjects of natural history. I advance it, therefore, as a suspicion only, that the blacks, whether originally a distinct race, or made distinct by time and circumstances, are inferior to the whites in the endowments both of body and mind. It is not against experience to suppose that different species of the same genus, or varieties of the same species, may possess different qualifications. Will not a lover of natural history then, one who views the gradations in all the races of animals with the eye of philosophy, excuse an effort to keep those in the department of man as distinct as nature has formed them? This unfortunate difference of color, and perhaps of faculty, is a powerful obstacle to the emancipation of these people. Many of their advocates, while they wish to vindicate the liberty of human nature, are anxious also to preserve its dignity and beauty. Some of these, embarrassed by the question, "What further is to be done with them?" join themselves in opposition with those who are actuated by sordid avarice only. Among the Romans emancipation required but one effort. The slave, when made free, might mix with, without staining the blood of his master. But with us a second is necessary, unknown to history. When freed, he is to be removed beyond the reach of mixture.

The revised code further proposes to proportion crimes and punishments. This is attempted on the following scale:

- I. Crimes whose punishment extends to LIFE.
1. High treason. Death by hanging.
Forfeiture of lands and goods to the commonwealth.
 2. Petty treason. Death by hanging. Dissection.
Forfeiture of half the lands and goods to the representatives of the party slain.
 3. Murder.
 1. By poison. Death by poison.
Forfeiture of one-half, as before.
 2. In duel. Death by hanging. Gibbeting, if the challenger.
Forfeiture of one-half as before, unless it be the party challenged, then the forfeiture is to the commonwealth.
 3. In any other way. Death by hanging.
Forfeiture of one-half as before.
 4. Manslaughter. The second offence is murder.
- II. Crimes whose punishment goes to LIMB.
1. Rape } Dismemberment.
 2. Sodomy } Dismemberment.
 3. Maiming } Retaliation, and the forfeiture of half of the lands and goods to the sufferer.
 4. Disfiguring } the sufferer.
- III. Crimes punishable by LABOR.
1. Manslaughter, 1st offence. Labor VII. years for the public. Forfeiture of half, as in murder.
 2. Counterfeiting money. Labor VI. years " Forfeiture of lands and goods to the commonwealth.
 3. Arson. } Labor V. years " { Reparation three-fold.
 4. Asportation of vessels. } Labor V. years " {
 5. Robbery. } Labor IV. years " { Reparation double.
 6. Burglary. } Labor IV. years " {
 7. House-breaking. } Labor III. years " { Reparation.
 8. Horse-stealing. } Labor III. years " {
 9. Grand larceny. Labor II. years " { Reparation. Pillory.
 10. Petty larceny. Labor I. year " { Reparation. Pillory.
 11. Pretensions to witchcraft, &c } Ducking. Stripes.
 12. Excusable homicide. } To be pitied, not punished.
 13. Suicide. } To be pitied, not punished.
 14. Apostasy. Heresy. } To be pitied, not punished.

Pardon and privilege of clergy are proposed to be abolished; but if the verdict be against the defendant, the court in their discretion may allow a new trial. No attainder to cause a corruption of blood, or forfeiture of dower. Slaves guilty of offences punishable in others by labor, to be transported to Africa, or elsewhere, as the circumstances of the time admit, there to be continued in slavery. A rigorous regimen proposed for those condemned to labor.

Another object of the revisal is to diffuse knowledge more generally through the mass of the people. This bill proposes to lay off every county into small districts of five or six miles square, called hundreds, and in each of them to establish a school for teaching, reading, writing, and arithmetic. The tutor to be supported by the hundred, and every person in it entitled to send their children three years gratis, and as much longer as they please, paying for it. These schools to be under a visitor who is annually to choose the boy of best genius in the school, of those whose parents are too poor to give them further education, and to send him forward to one of the grammar schools, of which twenty are proposed to be erected in different parts of the country, for teaching Greek, Latin, Geography, and the higher branches of numerical arithmetic. Of the boys thus sent in one year, trial is to be made at the grammar schools one or two years, and the best genius of the whole selected, and continued six years, and the residue dismissed. By this means twenty of the best geniuses will be raked from the rubbish annually, and be instructed, at the public expense, so far as the grammar schools go. At the end of six years' instruction, one half are to be discontinued (from among whom the grammar schools will probably be supplied with future masters); and the other half, who are to be chosen for the superiority of their parts and disposition, are to be sent and continued three years in the study of such sciences as they shall

choose, at William and Mary college, the plan of which is proposed to be enlarged, as will be hereafter explained, and extended to all the useful sciences. The ultimate result of the whole scheme of education would be the teaching all the children of the State reading, writing, and common arithmetic; turning out ten annually, of superior genius, well taught in Greek, Latin, Geography, and the higher branches of arithmetic; turning out ten others annually, of still superior parts, who, to those branches of learning, shall have added such of the sciences as their genius shall have led them to; the furnishing to the wealthier part of the people convenient schools at which their children may be educated at their own expense. The general objects of this law are to provide an education adapted to the years, to the capacity, and the condition of every one, and directed to their freedom and happiness. Specific details were not proper for the law. These must be the business of the visitors entrusted with its execution. The first stage of this education being the schools of the hundreds, wherein the great mass of the people will receive their instruction, the principal foundations of future order will be laid here. Instead, therefore, of putting the Bible and Testament into the hands of the children at an age when their judgments are not sufficiently matured for religious inquiries, their memories may here be stored with the most useful facts from Grecian, Roman, European and American history. The first elements

of morality too may be instilled into their minds; such as, when further developed as their judgments advance in strength, may teach them how to work out their own greatest happiness, by showing them that it does not depend on the condition of life in which chance has placed them, but is always the result of a good conscience, good health, occupation, and freedom in all just pursuits. Those whom either the wealth of their parents or the adoption of the State shall destine to higher degrees of learning, will go on to the grammar schools, which constitute the next stage, there to be instructed in the languages. The learning Greek and Latin, I am told, is going into disuse in Europe. I know not what their manners and occupations may call for; but it would be very ill-judged in us to follow their example in this instance. There is a certain period of life, say from eight to fifteen or sixteen years of age, when the mind like the body is not yet firm enough for laborious and close operations. If applied to such, it falls an early victim to premature exertion; exhibiting, indeed, at first, in these young and tender subjects, the flattering appearance of their being men while they are yet children, but ending in reducing them to be children when they should be men. The memory is then most susceptible and tenacious of impressions; and the learning of languages being chiefly a work of memory, it seems precisely fitted to the powers of this period, which is long enough, too, for acquiring the most useful lan-

guages, ancient and modern. I do not pretend that language is science. It is only an instrument for the attainment of science. But that time is not lost which is employed in providing tools for future operation; more especially as in this case the books put into the hands of the youth for this purpose may be such as will at the same time impress their minds with useful facts and good principles. If this period be suffered to pass in idleness, the mind becomes lethargic and impotent, as would the body it inhabits if unexercised during the same time. The sympathy between body and mind during their rise, progress and decline, is too strict and obvious to endanger our being missed while we reason from the one to the other. As soon as they are of sufficient age, it is supposed they will be sent on from the grammar schools to the university, which constitutes our third and last stage, there to study those sciences which may be adapted to their views. By that part of our plan which prescribes the selection of the youths of genius from among the classes of the poor, we hope to avail the State of those talents which nature has sown as liberally among the poor as the rich, but which perish without use, if not sought for and cultivated. But of the views of this law none is more important, none more legitimate, than that of rendering the people the safe, as they are the ultimate, guardians of their own liberty. For this purpose the reading in the first stage, where *they* will receive their whole education, is proposed, as has

been said, to be chiefly historical. History, by apprizing them of the past, will enable them to judge of the future; it will avail them of the experience of other times and other nations; it will qualify them as judges of the actions and designs of men; it will enable them to know ambition under every disguise it may assume; and knowing it, to defeat its views. In every government on earth is some trace of human weakness, some germ of corruption and degeneracy, which cunning will discover, and wickedness insensibly open, cultivate and improve. Every government degenerates when trusted to the rulers of the people alone. The people themselves therefore are its only safe depositories. And to render even them safe, their minds must be improved to a certain degree. This indeed is not all that is necessary, though it be essentially necessary. An amendment of our constitution must here come in aid of the public education. The influence over government must be shared among all the people. If every individual which composes their mass participates of the ultimate authority, the government will be safe; because the corrupting the whole mass will exceed any private resources of wealth; and public ones cannot be provided but by levies on the people. In this case every man would have to pay his own price. The government of Great Britain has been corrupted, because but one man in ten has a right to vote for members of parliament. The sellers of the government, therefore, get nine-tenths

of their price clear. It has been thought that corruption is restrained by confining the right of suffrage to a few of the wealthier of the people; but it would be more effectually restrained by an extension of that right to such members as would bid defiance to the means of corruption.

Lastly, it is proposed, by a bill in this revisal, to begin a public library and gallery, by laying out a certain sum annually in books, paintings, and statues.

QUERY XV.

The Colleges and Public Establishments, the Roads, Buildings, &c.

The college of William and Mary is the only public seminary of learning in this State. It was founded in the time of king William and queen Mary, who granted to it twenty thousand acres of land, and a penny a pound duty on certain tobaccos exported from Virginia and Maryland, which had been levied by the statute of 25 Car. II. The assembly also gave it, by temporary laws, a duty on liquors imported, and skins and furs exported. From these resources it received upwards of three thousand pounds *communibus annis*. The buildings are of brick, sufficient for an indifferent accommodation of perhaps an hundred students. By its charter it was to be under the government of twenty visitors, who were to be its legislators, and to have a president and six professors, who were incorporated. It

was allowed a representative in the general assembly. Under this charter, a professorship of the Greek and Latin languages, a professorship of mathematics, one of moral philosophy, and two of divinity, were established. To these were annexed, for a sixth professorship, a considerable donation by Mr. Boyle, of England, for the instruction of the Indians, and their conversion to Christianity. This was called the professorship of Brafferton, from an estate of that name in England, purchased with the monies given. The admission of the learners of Latin and Greek filled the college with children. This rendering it disagreeable and degrading to young gentlemen already prepared for entering on the sciences, they were discouraged from resorting to it, and thus the schools for mathematics and moral philosophy, which might have been of some service, became of very little. The revenues, too, were exhausted in accommodating those who came only to acquire the rudiments of science. After the present revolution, the visitors, having no power to change those circumstances in the constitution of the college which were fixed by the charter, and being therefore confined in the number of the professorships, undertook to change the objects of the professorships. They excluded the two schools for divinity, and that for the Greek and Latin languages, and substituted others; so that at present they stand thus:

A Professorship for Law and Police;

Anatomy and Medicine;

A Natural Philosophy and Mathematics;
Moral Philosophy, the Law of Nature and
Nations, the Fine Arts;
Modern Languages;
For the Brafferton.

And it is proposed, so soon as the legislature shall have leisure to take up this subject, to desire authority from them to increase the number of professorships, as well for the purpose of subdividing those already instituted, as of adding others for other branches of science. To the professorships usually established in the universities of Europe, it would seem proper to add one for the ancient languages and literature of the north, on account of their connection with our own language, laws, customs, and history. The purposes of the Brafferton institution would be better answered by maintaining a perpetual mission among the Indian tribes, the object of which, besides instructing them in the principles of Christianity, as the founder requires, should be to collect their traditions, laws, customs, languages, and other circumstances which might lead to a discovery of their relation with one another, or descent from other nations. When these objects are accomplished with one tribe, the missionary might pass on to another.

The roads are under the government of the county courts, subject to be controlled by the general court. They order new roads to be opened wherever they think them necessary. The inhabitants of the

county are by them laid off into precincts, to each of which they allot a convenient portion of the public roads to be kept in repair. Such bridges as may be built without the assistance of artificers, they are to build. If the stream be such as to require a bridge of regular workmanship, the court employs workmen to build it, at the expense of the whole county. If it be too great for the county, application is made to the general assembly, who authorize individuals to build it, and to take a fixed toll from all passengers, or give sanction to such other proposition as to them appears reasonable.

Ferries are admitted only at such places as are particularly pointed out by law, and the rates of ferriage are fixed.

Taverns are licensed by the courts, who fix their rates from time to time.

The private buildings are very rarely constructed of stone or brick, much the greatest portion being of scantling and boards, plastered with lime. It is impossible to devise things more ugly, uncomfortable, and happily more perishable. There are two or three plans, on one of which, according to its size, most of the houses in the State are built. The poorest people build huts of logs, laid horizontally in pens, stopping the interstices with mud. These are warmer in winter, and cooler in summer, than the more expensive construction of scantling and plank. The wealthy are attentive to the raising of vegetables, but very little so to fruits. The poorer

people attend to neither, living principally on milk and animal diet. This is the more inexcusable, as the climate requires indispensably a free use of vegetable food, for health as well as comfort, and is very friendly to the raising of fruits. The only public buildings worthy of mention are the capitol, the palace, the college, and the hospital for lunatics, all of them in Williamsburg, heretofore the seat of our government. The capitol is a light and airy structure, with a portico in front of two orders, the lower of which, being Doric, is tolerably just in its proportions and ornaments, save only that the inter-colonations are too large. The upper is Ionic, much too small for that on which it is mounted, its ornaments not proper to the order, nor proportioned within themselves. It is crowned with a pediment, which is too high for its span. Yet, on the whole, it is the most pleasing piece of architecture we have. The palace is not handsome without, but it is spacious and commodious within, is prettily situated, and with the grounds annexed to it, is capable of being made an elegant seat. The college and hospital are rude, misshapen piles, which, but that they have roofs, would be taken for brick-kilns. There are no other public buildings but churches and court-houses, in which no attempts are made at elegance. Indeed, it would not be easy to execute such an attempt, as a workman could scarcely be found capable of drawing an order. The genius of architecture seems to have shed its maledictions over this land.

Buildings are often erected, by individuals, of considerable expense. To give these symmetry and taste, would not increase their cost. It would only change the arrangement of the materials, the form and combination of the members. This would often cost less than the burthen of barbarous ornaments with which these buildings are sometimes charged. But the first principles of the art are unknown, and there exists scarcely a model among us sufficiently chaste to give an idea of them. Architecture being one of the fine arts, and as such within the department of a professor of the college, according to the new arrangement, perhaps a spark may fall on some young subjects of natural taste, kindle up their genius, and produce a reformation in this elegant and useful art. But all we shall do in this way will produce no permanent improvement to our country, while the unhappy prejudice prevails that houses of brick or stone are less wholesome than those of wood. A dew is often observed on the walls of the former in rainy weather, and the most obvious solution is, that the rain has penetrated through these walls. The following facts, however, are sufficient to prove the error of this solution: 1. This dew upon the walls appears when there is no rain, if the state of the atmosphere be moist. 2. It appears upon the partition as well as the exterior walls. 3. So, also, on pavements of brick or stone. 4. It is more copious in proportion as the walls are thicker; the reverse of which ought to be the case, if this hypothesis were

just. If cold water be poured into a vessel of stone, or glass, a dew forms instantly on the outside; but if it be poured into a vessel of wood, there is no such appearance. It is not supposed, in the first case, that the water has exuded through the glass, but that it is precipitated from the circumambient air; as the humid particles of vapor, passing from the boiler of an alembic through its refrigerant, are precipitated from the air, in which they are suspended, on the internal surface of the refrigerant. Walls of brick and stone act as the refrigerant in this instance. They are sufficiently cold to condense and precipitate the moisture suspended in the air of the room, when it is heavily charged therewith. But walls of wood are not so. The question then is, whether the air in which this moisture is left floating, or that which is deprived of it, be most wholesome? In both cases the remedy is easy. A little fire kindled in the room, whenever the air is damp, prevents the precipitation on the walls; and this practice, found healthy in the warmest as well as coldest seasons, is as necessary in a wooden as in a stone or brick house. I do not mean to say that the rain never penetrates through walls of brick. On the contrary, I have seen instances of it. But with us it is only through the northern and eastern walls of the house, after a north-easterly storm, this being the only one which continues long enough to force through the walls. This, however, happens too rarely to give a just character of unwholesomeness to such houses. In a house, the

walls of which are of well-burnt brick and good mortar, I have seen the rain penetrate through but twice in a dozen or fifteen years. The inhabitants of Europe, who dwell chiefly in houses of stone or brick, are surely as healthy as those of Virginia. These houses have the advantage, too, of being warmer in winter and cooler in summer than those of wood; of being cheaper in their first construction, where lime is convenient, and infinitely more durable. The latter consideration renders it of great importance to eradicate this prejudice from the minds of our countrymen. A country whose buildings are of wood, can never increase in its improvements to any considerable degree. Their duration is highly estimated at fifty years. Every half century then our country becomes a *tabula rasa*, whereon we have to set out anew, as in the first moment of seating it. Whereas when buildings are of durable materials, every new edifice is an actual and permanent acquisition to the State, adding to its value as well as to its ornament.

QUERY XVI.

The measures taken with regard to the estates and possessions of the Rebels, commonly called Tories ?

A tory has been properly defined to be a traitor in thought but not in deed. The only description, by which the laws have endeavored to come at them, was that of non-jurors, or persons refusing to take

the oath of fidelity to the State. Persons of this description were at one time subjected to double taxation, at another to treble, and lastly were allowed retribution, and placed on a level with good citizens. It may be mentioned as a proof, both of the lenity of our government, and unanimity of its inhabitants, that though this war has now raged near seven years, not a single execution for treason has taken place.

Under this query I will state the measures which have been adopted as to British property, the owners of which stand on a much fairer footing than the tories. By our laws, the same as the English as in this respect, no alien can hold lands, nor alien enemy maintain an action for money, or other movable thing. Lands acquired or held by aliens become forfeited to the State; and, on an action by an alien enemy to recover money, or other movable property, the defendant may plead that he is an alien enemy. This extinguishes his right in the hands of the debtor or holder of his movable property. By our separation from Great Britain, British subjects became aliens, and being at war, they were alien enemies. Their lands were of course forfeited, and their debts irrecoverable. The assembly, however, passed laws at various times, for saving their property. They first sequestered their lands, slaves, and other property on their farms in the hands of commissioners, who were mostly the confidential friends or agents of the owners, and

directed their clear profits to be paid into the treasury; and they gave leave to all persons owing debts to British subjects to pay them also into the treasury. The monies so to be brought in were declared to remain the property of the British subject, and if used by the State, were to be repaid, unless an improper conduct in Great Britain should render a detention of it reasonable. Depreciation had at that time, though unacknowledged and unperceived by the whigs, begun in some small degree. Great sums of money were paid in by debtors. At a later period, the assembly, adhering to the political principles which forbid an alien to hold lands in the State, ordered all British property to be sold; and, become sensible of the real progress of depreciation, and of the losses which would thence occur, if not guarded against, they ordered that the proceeds of the sales should be converted into their then worth in tobacco, subject to the future direction of the legislature. This act has left the question of retribution more problematical. In May, 1780, another act took away the permission to pay into the public treasury debts due to British subjects.

QUERY XVII.

The different religions received into that State?

The first settlers in this country were emigrants from England, of the English Church, just at a point of time when it was flushed with complete victory

over the religious of all other persuasions. Possessed, as they became, of the powers of making, administering, and executing the laws, they showed equal intolerance in this country with their Presbyterian brethren, who had emigrated to the northern government. The poor Quakers were flying from persecution in England. They cast their eyes on these new countries as asylums of civil and religious freedom; but they found them free only for the reigning sect. Several acts of the Virginia assembly of 1659, 1662, and 1693, had made it penal in parents to refuse to have their children baptized; had prohibited the unlawful assembling of Quakers; had made it penal for any master of a vessel to bring a Quaker into the State; had ordered those already here, and such as should come thereafter, to be imprisoned till they should abjure the country; provided a milder punishment for their first and second return, but death for their third; had inhibited all persons from suffering their meetings in or near their houses, entertaining them individually, or disposing of books which supported their tenets. If no execution took place here, as did in New England, it was not owing to the moderation of the church, or spirit of the legislature, as may be inferred from the law itself; but to historical circumstances which have not been handed down to us. The Anglicans retained full possession of the country about a century. Other opinions began then to creep in, and the great care of the government to support their

own church, having begotten an equal degree of indolence in its clergy, two-thirds of the people had become dissenters at the commencement of the present revolution. The laws, indeed, were still oppressive on them, but the spirit of the one party had subsided into moderation, and of the other had risen to a degree of determination which commanded respect.

The present state of our laws on the subject of religion is this. The convention of May 1776, in their declaration of rights, declared it to be a truth, and a natural right, that the exercise of religion should be free; but when they proceeded to form on that declaration the ordinance of government, instead of taking up every principle declared in the bill of rights, and guarding it by legislative sanction, they passed over that which asserted our religious rights, leaving them as they found them. The same convention, however, when they met as a member of the general assembly in October, 1776, repealed all *acts of Parliament* which had rendered criminal the maintaining any opinions in matters of religion, the forbearing to repair to church, and the exercising any mode of worship; and suspended the laws giving salaries to the clergy, which suspension was made perpetual in October, 1779. Statutory oppressions in religion being thus wiped away, we remain at present under those only imposed by the common law, or by our own acts of assembly. At the common law, *heresy* was a capital offence, punishable

by burning. Its definition was left to the ecclesiastical judges, before whom the conviction was, till the statute of the 1 El. c. 1 circumscribed it, by declaring, that nothing should be deemed heresy, but what had been so determined by authority of the canonical scriptures, or by one of the four first general councils, or by other council, having for the grounds of their declaration the express and plain words of the scriptures. Heresy, thus circumscribed, being an offence against the common law, our act of assembly of October 1777, c. 17, gives cognizance of it to the general court, by declaring that the jurisdiction of that court shall be general in all matters at the common law. The execution is by the writ *De hæretico comburendo*. By our own act of assembly of 1705, c. 30, if a person brought up in the Christian religion denies the being of a God, or the Trinity, or asserts there are more gods than one, or denies the Christian religion to be true, or the scriptures to be of divine authority, he is punishable on the first offence by incapacity to hold any office or employment ecclesiastical, civil, or military; on the second by disability to sue, to take any gift or legacy, to be guardian, executor, or administrator, and by three years' imprisonment without bail. A father's right to the custody of his own children being founded in law on his right of guardianship, this being taken away, they may of course be severed from him, and put by the authority of a court into more orthodox hands. This is a summary view of that religious

slavery under which a people have been willing to remain, who have lavished their lives and fortunes for the establishment of their civil freedom. The error¹ seems not sufficiently eradicated, that the operations of the mind, as well as the acts of the body, are subject to the coercion of the laws. But our rulers can have no authority over such natural rights, only as we have submitted to them. The rights of conscience we never submitted, we could not submit. We are answerable for them to our God. The legitimate powers of government extend to such acts only as are injurious to others. But it does me no injury for my neighbor to say there are twenty gods, or no God. It neither picks my pocket nor breaks my leg. If it be said, his testimony in a court of justice cannot be relied on, reject it then, and be the stigma on him. Constraint may make him worse by making him a hypocrite, but it will never make him a truer man. It may fix him obstinately in his errors, but will not cure them. Reason and free inquiry are the only effectual agents against error. Give a loose to them, they will support the true religion by bringing every false one to their tribunal, to the test of their investigation. They are the natural enemies of error, and of error only. Had not the Roman government permitted free inquiry, Christianity could never have been introduced. Had not free inquiry been indulged at the era of the Reformation, the corruptions of

¹ Furneaux *passim*.

Christianity could not have been purged away. If it be restrained now, the present corruptions will be protected, and new ones encouraged. Was the government to prescribe to us our medicine and diet, our bodies would be in such keeping as our souls are now. Thus in France the emetic was once forbidden as a medicine, and the potato as an article of food. Government is just as infallible, too, when it fixes systems in physics. Galileo was sent to the Inquisition for affirming that the earth was a sphere; the government had declared it to be as flat as a trencher, and Galileo was obliged to abjure his error. This error, however, at length prevailed, the earth became a globe, and Descartes declared it was whirled round its axis by a vortex. The government in which he lived was wise enough to see that this was no question of civil jurisdiction, or we should all have been involved by authority in vortices. In fact, the vortices have been exploded, and the Newtonian principle of gravitation is now more firmly established, on the basis of reason, than it would be were the government to step in, and to make it an article of necessary faith. Reason and experiment have been indulged, and error has fled before them. It is error alone which needs the support of government. Truth can stand by itself. Subject opinion to coercion: whom will you make your inquisitors? Fallible men; men governed by bad passions, by private as well as public reasons. And why subject it to

coercion? To produce uniformity. But is uniformity of opinion desirable? No more than of face and stature. Introduce the bed of Procrustes then, and as there is danger that the large men may beat the small, make us all of a size, by lopping the former and stretching the latter. Difference of opinion is advantageous in religion. The several sects perform the office of a *censor morum* over such other. Is uniformity attainable? Millions of innocent men, women, and children, since the introduction of Christianity, have been burnt, tortured, fined, imprisoned; yet we have not advanced one inch towards uniformity. What has been the effect of coercion? To make one half the world fools, and the other half hypocrites. To support roguery and error all over the earth. Let us reflect that it is inhabited by a thousand millions of people. That these profess probably a thousand different systems of religion. That ours is but one of that thousand. That if there be but one right, and ours that one, we should wish to see the nine hundred and ninety-nine wandering sects gathered into the fold of truth. But against such a majority we cannot effect this by force. Reason and persuasion are the only practicable instruments. To make way for these, free inquiry must be indulged; and how can we wish others to indulge it while we refuse it ourselves. But every State, says an inquisitor, has established some religion. No two, say I, have established the same. Is this a proof of the infallibility of establishments?

Our sister States of Pennsylvania and New York, however, have long subsisted without any establishment at all. The experiment was new and doubtful when they made it. It has answered beyond conception. They flourish infinitely. Religion is well supported; of various kinds, indeed, but all good enough; all sufficient to preserve peace and order; or if a sect arises, whose tenets would subvert morals, good sense has fair play, and reasons and laughs it out of doors, without suffering the State to be troubled with it. They do not hang more malefactors than we do. They are not more disturbed with religious dissensions. On the contrary, their harmony is unparalleled, and can be ascribed to nothing but their unbounded tolerance, because there is no other circumstance in which they differ from every nation on earth. They have made the happy discovery, that the way to silence religious disputes, is to take no notice of them. Let us too give this experiment fair play, and get rid, while we may, of those tyrannical laws. It is true, we are as yet secured against them by the spirit of the times. I doubt whether the people of this country would suffer an execution for heresy, or a three years' imprisonment for not comprehending the mysteries of the Trinity. But is the spirit of the people an infallible, a permanent reliance? Is it government? Is this the kind of protection we receive in return for the rights we give up? Besides, the spirit of the times may alter, will alter. Our

rulers will become corrupt, our people careless. A single zealot may commence persecutor, and better men be his victims. It can never be too often repeated, that the time for fixing every essential right on a legal basis is while our rulers are honest, and ourselves united. From the conclusion of this war we shall be going down hill. It will not then be necessary to resort every moment to the people for support. They will be forgotten, therefore, and their rights disregarded. They will forget themselves, but in the sole faculty of making money, and will never think of uniting to effect a due respect for their rights. The shackles, therefore, which shall not be knocked off at the conclusion of this war, will remain on us long, will be made heavier and heavier, till our rights shall revive or expire in a convulsion.

QUERY XVIII.

The particular customs and manners that may happen to be received in that State?

It is difficult to determine on the standard by which the manners of a nation may be tried, whether *catholic* or *particular*. It is more difficult for a native to bring to that standard the manners of his own nation, familiarized to him by habit. There must doubtless be an unhappy influence on the manners of our people produced by the existence of slavery among us. The whole commerce be-

tween master and slave is a perpetual exercise of the most boisterous passions, the most unremitting despotism on the one part, and degrading submissions on the other. Our children see this, and learn to imitate it; for man is an imitative animal. This quality is the germ of all education in him. From his cradle to his grave he is learning to do what he sees others do. If a parent could find no motive either in his philanthropy or his self-love, for restraining the intemperance of passion towards his slave, it should always be a sufficient one that his child is present. But generally it is not sufficient. The parent storms, the child looks on, catches the lineaments of wrath, puts on the same airs in the circle of smaller slaves, gives a loose to the worst of passions, and thus nursed, educated, and daily exercised in tyranny, cannot but be stamped by it with odious peculiarities. The man must be a prodigy who can retain his manners and morals undepraved by such circumstances. And with what execration should the statesman be loaded, who, permitting one half the citizens thus to trample on the rights of the other, transforms those into despots, and these into enemies, destroys the morals of the one part, and the *amor patriæ* of the other. For if a slave can have a country in this world, it must be any other in preference to that in which he is born to live and labor for another; in which he must lock up the faculties of his nature, contribute as far as depends on his individual en-

deavors to the evanishment of the human race, or entail his own miserable condition on the endless generations proceeding from him. With the morals of the people, their industry also is destroyed. For in a warm climate, no man will labor for himself who can make another labor for him. This is so true, that of the proprietors of slaves a very small proportion indeed are ever seen to labor. And can the liberties of a nation be thought secure when we have removed their only firm basis, a conviction in the minds of the people that these liberties are of the gift of God? That they are not to be violated but with His wrath? Indeed I tremble for my country when I reflect that God is just; that his justice cannot sleep forever; that considering numbers, nature and natural means only, a revolution of the wheel of fortune, an exchange of situation is among possible events; that it may become probable by supernatural interference! The Almighty has no attribute which can take side with us in such a contest. But it is impossible to be temperate and to pursue this subject through the various considerations of policy, of morals, of history natural and civil. We must be contented to hope they will force their way into every one's mind. I think a change already perceptible, since the origin of the present revolution. The spirit of the master is abating, that of the slave rising from the dust, his condition mollifying, the way I hope preparing, under the auspices of heaven, for a total emancipa-

tion, and that this is disposed, in the order of events, to be with the consent of the masters, rather than by their extirpation.

QUERY XIX.

The present state of manufactures, commerce, interior and exterior trade?

We never had an interior trade of any importance. Our exterior commerce has suffered very much from the beginning of the present contest. During this time we have manufactured within our families the most necessary articles of clothing. Those of cotton will bear some comparison with the same kinds of manufacture in Europe; but those of wool, flax and hemp are very coarse, unsightly, and unpleasant; and such is our attachment to agriculture, and such our preference for foreign manufactures, that be it wise or unwise, our people will certainly return as soon as they can, to the raising raw materials, and exchanging them for finer manufactures than they are able to execute themselves.

The political economists of Europe have established it as a principle, that every State should endeavor to manufacture for itself; and this principle, like many others, we transfer to America, without calculating the difference of circumstance which should often produce a difference of result. In Europe the lands are either cultivated, or locked

up against the cultivator. Manufacture must therefore be resorted to of necessity not of choice, to support the surplus of their people. But we have an immensity of land courting the industry of the husbandman. Is it best then that all our citizens should be employed in its improvement, or that one half should be called off from that to exercise manufactures and handicraft arts for the other? Those who labor in the earth are the chosen people of God, if ever He had a chosen people, whose breasts He has made His peculiar deposit for substantial and genuine virtue. It is the focus in which he keeps alive that sacred fire, which otherwise might escape from the face of the earth. Corruption of morals in the mass of cultivators is a phenomenon of which no age nor nation has furnished an example. It is the mark set on those, who, not looking up to heaven, to their own soil and industry, as does the husbandman, for their subsistence, depend for it on casualties and caprice of customers. Dependence begets subservience and venality, suffocates the germ of virtue, and prepares fit tools for the designs of ambition. This, the natural progress and consequence of the arts, has sometimes perhaps been retarded by accidental circumstances; but, generally speaking, the proportion which the aggregate of the other classes of citizens bears in any State to that of its husbandmen, is the proportion of its unsound to its healthy parts, and is a good enough barometer whereby to measure its degree of

corruption. While we have land to labor then, let us never wish to see our citizens occupied at a work-bench, or twirling a distaff. Carpenters, masons, smiths, are wanting in husbandry; but, for the general operations of manufacture, let our workshops remain in Europe. It is better to carry provisions and materials to workmen there, than bring them to the provisions and materials, and with them their manners and principles. The loss by the transportation of commodities across the Atlantic will be made up in happiness and permanence of government. The mobs of great cities add just so much to the support of pure government, as sores do to the strength of the human body. It is the manners and spirit of a people which preserve a republic in vigor. A degeneracy in these is a canker which soon eats to the heart of its laws and constitution.

QUERY XX.

A notice of the commercial productions particular to the State, and of those objects which the inhabitants are obliged to get from Europe and from other parts of the world. ?

Before the present war we exported, *communibus annis*, according to the best information I can get, nearly as follows:

ARTICLES.	Quantity.	Price in Dollars.	Amount in Dollars.
Tobacco	55,000 hhds. of 1,000 lbs.	at 30d. per hhd.	\$1,650,000
Wheat	800,000 bushels.	at 5-6d. per bush.	666,666 $\frac{2}{3}$
Indian corn	600,000 "	at $\frac{1}{3}$ d. per bush.	200,000
Shipping			100,000
Masts, planks, scant- ling, shingles, staves }			66,666 $\frac{2}{3}$
Tar, pitch, turpentine .	30,000 barrels.	at 1 $\frac{1}{3}$ d. per bbl.	40,000
Peltry, viz., skins of deer, beavers, otters, muskrat, raccoons, foxes }	180 hhds. of 600 lbs.	at 5-12d. per lb.	42,000
Pork	4,000 barrels.	at 10d. per bbl.	40,000
Flax-seed, hemp, cotton			8,000
Pit coal, pig iron			6,666 $\frac{2}{3}$
Peas	5,000 bushels.	at $\frac{2}{3}$ d. per bush.	3,333 $\frac{1}{3}$
Beef	1,000 barrels.	at 3 $\frac{1}{3}$ d. per bbl.	3,333 $\frac{1}{3}$
Sturgeon, white shad, herring			3,333 $\frac{1}{3}$
Brandy from peaches and apples, and whis- key			1,666 $\frac{2}{3}$
Horses			1,666 $\frac{2}{3}$
			\$2,833,333 $\frac{1}{3}$

In the year 1758 we exported seventy thousand hogsheads of tobacco, which was the greatest quantity ever produced in this country in one year. But its culture was fast declining at the commencement of this war and that of wheat taken its place; and it must continue to decline on the return of peace. I suspect that the change in the temperature of our climate has become sensible to that plant, which to be good, requires an extraordinary degree of heat. But it requires still more indispensably an uncommon fertility of soil; and the price which it commands at market will not enable the planter to produce this by manure. Was the supply still to

¹ This sum is equal to £850,000; Virginia money, 607,142 guineas.

depend on Virginia and Maryland alone as its culture becomes more difficult, the price would rise so as to enable the planter to surmount those difficulties and to live. But the western country on the Mississippi, and the midlands of Georgia, having fresh and fertile lands in abundance, and a hotter sun, will be able to undersell these two States, and will oblige them to abandon the raising of tobacco altogether. And a happy obligation for them it will be. It is a culture productive of infinite wretchedness. Those employed in it are in a continual state of exertion beyond the power of nature to support. Little food of any kind is raised by them; so that the men and animals on these farms are badly fed, and the earth is rapidly impoverished. The cultivation of wheat is the reverse in every circumstance. Besides clothing the earth with herbage, and preserving its fertility, it feeds the laborers plentifully, requires from them only a moderate toil, except in the season of harvest, raises great numbers of animals for food and service, and diffuses plenty and happiness among the whole. We find it easier to make an hundred bushels of wheat than a thousand weight of tobacco, and they are worth more when made. The weevil indeed is a formidable obstacle to the cultivation of this grain with us. But principles are already known which must lead to a remedy. Thus a certain degree of heat, to wit, that of the common air in summer, is necessary to hatch the eggs. If subterranean granaries, or others, there-

fore, can be contrived below that temperature, the evil will be cured by cold. A degree of heat beyond that which hatches the egg we know will kill it. But in aiming at this we easily run into that which produced putrefaction. To produce putrefaction, however, three agents are requisite, heat, moisture, and the external air. If the absence of any one of these be secured, the other two may safely be admitted. Heat is the one we want. Moisture then, or external air, must be excluded. The former has been done by exposing the grain in kilns to the action of fire, which produces heat, and extracts moisture at the same time; the latter, by putting the grain into hogsheads, covering it with a coating of lime, and heading it up. In this situation its bulk produced a heat sufficient to kill the eggs; the moisture is suffered to remain indeed, but the external air is excluded. A nicer operation yet has been attempted; that is, to produce an intermediate temperature of heat between that which kills the egg, and that which produces putrefaction. The threshing the grain as soon as it is cut, and laying it in its chaff in large heaps, has been found very nearly to hit this temperature, though not perfectly, nor always. The heap generates heat sufficient to kill most of the eggs, whilst the chaff commonly restrains it from rising into putrefaction. But all these methods abridge too much the quantity which the farmer can manage, and enable other countries to undersell him, which are not infested with this insect. There

is still a desideratum then to give with us decisive triumph to this branch of agriculture over that of tobacco. The culture of wheat by enlarging our pasture, will render the Arabian horse an article of very considerable profit. Experience has shown that ours is the particular climate of America where he may be raised without degeneracy. Southwardly the heat of the sun occasions a deficiency of pasture, and northwardly the winters are too cold for the short and fine hair, the particular sensibility and constitution of that race. Animals transplanted into unfriendly climates, either change their nature and acquire new senses against the new difficulties in which they are placed, or they multiply poorly and become extinct. A good foundation is laid for their propagation here by our possessing already great numbers of horses of that blood, and by a decided taste and preference for them established among the people. Their patience of heat without injury, their superior wind, fit them better in this and the more southern climates even for the drudgeries of the plough and wagon. Northwardly they will become an object only to persons of taste and fortune, for the saddle and light carriages. To those, and for these uses, their fleetness and beauty will recommend them. Besides these there will be other valuable substitutes when the cultivation of tobacco shall be discontinued such as cotton in the eastern parts of the State, and hemp and flax in the western.

It is not easy to say what are the articles either of necessity, comfort, or luxury, which we cannot raise, and which we therefore shall be under a necessity of importing from abroad, as everything hardier than the olive, and as hardy as the fig, may be raised here in the open air. Sugar, coffee and tea, indeed, are not between these limits; and habit having placed them among the necessaries of life with the wealthy part of our citizens, as long as these habits remain we must go for them to those countries which are able to furnish them.

QUERY XXI.

The weights, measures and the currency of the hard money? Some details relating to exchange with Europe?

Our weights and measures are the same which are fixed by acts of parliament in England. How it has happened that in this as well as the other American States the nominal value of coin was made to differ from what it was in the country we had left, and to differ among ourselves too, I am not able to say with certainty. I find that in 1631 our house of burgesses desired of the privy council in England, a coin debased to twenty-five per cent.; that in 1645 they forbid dealing by barter for tobacco, and established the Spanish piece of eight at six shillings, as the standard of their currency; that in 1655 they changed it to five shillings sterling. In 1680 they

sent an address to the king, in consequence of which, by proclamation in 1683, he fixed the value of French crowns, rix dollars, and pieces of eight, at six shillings, and the coin of New England at one shilling. That in 1710, 1714, 1727, and 1762, other regulations were made, which will be better presented to the eye stated in the form of a table as follows:

	1710.	1714.	1727.	1762.
Guineas		26s.		
British gold coin not milled, gold coin of Spain and France, chequins, Arabian gold, moidores of Portugal.....		5s. dwt.		
Coined gold of the empire.....		5s. dwt.	4s. 3d. dwt.
English milled silver money, in proportion to the crown, at		5s. 10d.	6s. 3d.	
Pieces of eight of Mexico, Seville & Pillar, ducatoons of Flanders, French écus, or silver Louis, crusados of Portugal	3½d. dwt.	4d. dwt.	
Peru pieces, cross dollars, and old rix dollars of the empire	3½d. dwt.	3½d. dwt.	
Old British silver coin not milled		3½d. dwt.		

The first symptom of the depreciation of our present paper money, was that of silver dollars selling at six shillings, which had before been worth but five shillings and ninepence. The assembly thereupon raised them by law to six shillings. As the dollar is now likely to become the money-unit of America, as it passes at this rate in some of our sister States, and as it facilitates their computation in pounds and shillings, &c., converso, this seems to be more

convenient than its former denomination. But as this particular coin now stands higher than any other in the proportion of one hundred and thirty-three and a half to one hundred and twenty-five, or sixteen to fifteen, it will be necessary to raise the others in proportion.

QUERY XXII.

The public Income and Expenses?

The nominal amount of these varying constantly and rapidly, with the constant and rapid depreciation of our paper money, it becomes impracticable to say what they are. We find ourselves cheated in every essay by the depreciation intervening between the declaration of the tax and its actual receipt. It will therefore be more satisfactory to consider what our income may be when we shall find means of collecting what our people may spare. I should estimate the whole taxable property of this State at an hundred millions of dollars, or thirty millions of pounds, our money. One per cent. on this, compared with anything we ever yet paid, would be deemed a very heavy tax. Yet I think that those who manage well, and use reasonable economy, could pay one and a half per cent., and maintain their household comfortably in the meantime, without aliening any part of their principal, and that the people would submit to this willingly for the

purpose of supporting their present contest. We may say, then, that we could raise, from one million to one million and a half of dollars annually, that is from three hundred to four hundred and fifty thousand pounds, Virginia money.

Of our expenses it is equally difficult to give an exact state, and for the same reason. They are mostly stated in paper money, which varying continually, the legislature endeavors at every session, by new corrections, to adapt the nominal sums to the value it is wished they would bear. I will state them, therefore, in real coin, at the point at which they endeavor to keep them:

	Dollars.
The annual expenses of the general assembly are about . . .	20,000
The governor	3,333 $\frac{1}{3}$
The council of state	10,666 $\frac{2}{3}$
Their clerks	1,166 $\frac{2}{3}$
Eleven judges	11,000
The clerk of the chancery	666 $\frac{2}{3}$
The attorney general	1,000
Three auditors and a solicitor	5,333 $\frac{1}{3}$
Their clerks	2,000
The treasurer	2,000
His clerks	2,000
The keeper of the public jail	1,000
The public printer	1,666 $\frac{2}{3}$
Clerks of the inferior courts	43,333 $\frac{1}{3}$
Public levy; this is chiefly for the expenses of criminal . . . justice	40,000
County levy, for bridges, court-houses, prisons, &c.	40,000
Members of Congress	7,000
Quota of the federal civil list, supposed one-sixth of about \$78,000	13,000
Expenses of collecting, six per cent. on the above	12,310

	Dollars.
The clergy receive only voluntary contributions; suppose them on an average one-eighth of a dollar a tythe on 200,000 tythes.....	25,000
Contingencies, to make round numbers not far from truth.....	7,523 $\frac{1}{3}$
	<hr/> \$250,000

or 53,571 guineas. This estimate is exclusive of the military expense. That varies with the force actually employed, and in time of peace will probably be little or nothing. It is exclusive also of the public debts, which are growing while I am writing, and cannot therefore be now fixed. So it is of the maintenance of the poor, which being merely a matter of charity cannot be deemed expended in the administration of government. And if we strike out the \$25,000 for the services of the clergy, which neither makes part of that administration, more than what is paid to physicians, or lawyers, and being voluntary, is either much or nothing as every one pleases, it leaves \$225,000, equal to 48,208 guineas, the real cost of the apparatus of government with us. This divided among the actual inhabitants of our country, comes to about two-fifths of a dollar, twenty-one pence sterling, or forty-two sols, the price which each pays annually for the protection of the residue of his property, and the other advantages of a free government. The public revenues of Great Britain divided in like manner on its inhabitants would be sixteen times greater. Deducting even the double of the expenses of government, as before estimated,

from the million and a half of dollars which we before supposed might be annually paid without distress, we may conclude that this State can contribute one million of dollars annually towards supporting the federal army, paying the federal debt, building a federal navy, or opening roads, clearing rivers, forming safe ports, and other useful works.

To this estimate of our abilities, let me add a word as to the application of them. If, when cleared of the present contest, and of the debts with which that will charge us, we come to measure force hereafter with any European power. Such events are devoutly to be deprecated. Young as we are, and with such a country before us to fill with people and with happiness, we should point in that direction the whole generative force of nature, wasting none of it in efforts of mutual destruction. It should be our endeavor to cultivate the peace and friendship of every nation, even of that which has injured us most, when we shall have carried our point against her. Our interest will be to throw open the doors of commerce, and to knock off all its shackles, giving perfect freedom to all persons for the vent of whatever they may choose to bring into our ports, and asking the same in theirs. Never was so much false arithmetic employed on any subject, as that which has been employed to persuade nations that it is their interest to go to war. Were the money which it has cost to gain, at the close of a long war,

a little town, or a little territory, the right to cut wood here, or to catch fish there, expended in improving what they already possess, in making roads, opening rivers, building ports, improving the arts, and finding employment for their idle poor, it would render them much stronger, much wealthier and happier. This I hope will be our wisdom. And, perhaps, to remove as much as possible the occasions of making war, it might be better for us to abandon the ocean altogether, that being the element whereon we shall be principally exposed to jostle with other nations; to leave to others to bring what we shall want, and to carry what we can spare. This would make us invulnerable to Europe, by offering none of our property to their prize, and would turn all our citizens to the cultivation of the earth; and, I repeat it again, cultivators of the earth are the most virtuous and independent citizens. It might be time enough to seek employment for them at sea, when the land no longer offers it. But the actual habits of our countrymen attach them to commerce. They will exercise it for themselves. Wars then must sometimes be our lot; and all the wise can do, will be to avoid that half of them which would be produced by our own follies and our own acts of injustice; and to make for the other half the best preparations we can. Of what nature should these be? A land army would be useless for offence, and not the best nor safest instrument of defence. For either of these purposes, the sea is

the field on which we should meet an European enemy. On that element it is necessary we should possess some power. To aim at such a navy as the greater nations of Europe possess, would be a foolish and wicked waste of the energies of our countrymen. It would be to pull on our own heads that load of military expense which makes the European laborer go supperless to bed, and moistens his bread with the sweat of his brows. It will be enough if we enable ourselves to prevent insults from those nations of Europe which are weak on the sea, because circumstances exist, which render even the stronger ones weak as to us. Providence has placed their richest and most defenceless possessions at our door; has obliged their most precious commerce to pass, as it were, in review before us. To protect this, or to assail, a small part only of their naval force will ever be risked across the Atlantic. The dangers to which the elements expose them here are too well known, and the greater dangers to which they would be exposed at home were any general calamity to involve their whole fleet. They can attack us by detachment only; and it will suffice to make ourselves equal to what they may detach. Even a smaller force than they may detach will be rendered equal or superior by the quickness with which any check may be repaired with us, while losses with them will be irreparable till too late. A small naval force then is sufficient for us, and a small one is necessary. What this should be, I will not

undertake to say. I will only say, it should by no means be so great as we are able to make it. Suppose the million of dollars, or three hundred thousand pounds, which Virginia could annually spare without distress, to be applied to the creating a navy. A single year's contribution would build, equip, man, and send to sea a force which should carry three hundred guns. The rest of the confederacy, exerting themselves in the same proportion, would equip in the same time fifteen hundred guns more. So that one year's contributions would set up a navy of eighteen hundred guns. The British ships of the line average seventy-six guns; their frigates thirty-eight. Eighteen hundred guns then would form a fleet of thirty ships, eighteen of which might be of the line, and twelve frigates. Allowing eight men, the British average, for every gun, their annual expense, including subsistence, clothing, pay, and ordinary repairs, would be about \$1,280 for every gun, or \$2,304,000 for the whole. I state this only as one year's possible exertion, without deciding whether more or less than a year's exertion should be thus applied.

The value of our lands and slaves, taken conjunctly, doubles in about twenty years. This arises from the multiplication of our slaves, from the extension of culture, and increased demand for lands. The amount of what may be raised will of course rise in the same proportion.

QUERY XXIII.

The histories of the State, the memorials published in its name in the time of its being a colony, and the pamphlets relating to its interior or exterior affairs present or ancient?

Captain Smith, who next to Sir Walter Raleigh may be considered as the founder of our colony, has written its history, from the first adventures to it, till the year 1624. He was a member of the council, and afterwards president of the colony; and to his efforts principally may be ascribed its support against the opposition of the natives. He was honest, sensible, and well informed; but his style is barbarous and uncouth. His history, however, is almost the only source from which we derive any knowledge of the infancy of our State.

The reverend William Stith, a native of Virginia, and president of its college, has also written the history of the same period, in a large octavo volume of small print. He was a man of classical learning, and very exact, but of no taste in style. He is inelegant, therefore, and his details often too minute to be tolerable, even to a native of the country, whose history he writes.

Beverley, a native also, has run into the other extreme, he has comprised our history from the first propositions of Sir Walter Raleigh to the year 1700, in the hundredth part of the space which Stith employs for the fourth part of the period.

James Monroe

(1758-1831)

From an Original **Painting**

James Mouror

Sir Walter Keith has taken it up at its earliest period, and continued it to the year 1725. He is agreeable enough in style, and passes over events of little importance. Of course he is short and would be preferred by a foreigner.

During the regal government, some contest arose on the exaction of an illegal fee by Governor Dinwiddie, and doubtless there were others on other occasions not at present recollected. It is supposed that these are not sufficiently interesting to a foreigner to merit a detail.

The petition of the council and burgesses of Virginia to the king, their memorials to the lords, and remonstrance to the commons in the year 1764, began the present contest; and these having proved ineffectual to prevent the passage of the stamp-act, the resolutions of the house of burgesses of 1765 were passed declaring the independence of the people of Virginia of the parliament of Great Britain, in matters of taxation. From that time till the Declaration of Independence by Congress in 1776, their journals are filled with assertions of the public rights.

The pamphlets published in this State on the controverted question, were:

1766, An Inquiry into the rights of the British Colonies, by Richard Bland.

1769, The Monitor's Letters, by Dr. Arthur Lee.

1774, A summary View of the rights of British America.¹

¹ By the author of these "Notes."

1774, Considerations, &c., by Robert Carter Nicholas.

Since the Declaration of Independence this State has had no controversy with any other, except with that of Pennsylvania, on their common boundary. Some papers on this subject passed between the executive and legislative bodies of the two States, the result of which was a happy accommodation of their rights.

To this account of our historians, memorials, and pamphlets, it may not be unuseful to add a chronological catalogue of American state-papers, as far as I have been able to collect their titles. It is far from being either complete or correct. Where the title alone, and not the paper itself, has come under my observation, I cannot answer for the exactness of the date. Sometimes I have not been able to find any date at all, and sometimes have not been satisfied that such a paper exists. An extensive collection of papers of this description has been for some time in a course of preparation by a gentleman¹ fully equal to the task, and from whom, therefore, we may hope ere long to receive it. In the meantime accept this as the result of my labors, and as closing the tedious detail which you have so undesignedly drawn upon yourself.

- A commission by the proprietors of East New Jersey to Robert Barclay to be governor. Sm. N. J. 166. 1683, July 17.
- An order of council for issuing a quo warranto against the charter of the colony of the Massachusetts bay in New England, with his majesty's declaration that in case the said corporation of Massachusetts bay shall before prosecution had upon the same quo warranto make a full submission and entire resignation to his royal pleasure, he will then regulate their chareter in such a manner as shall be for his service and the good of that colony. Title in American library. 139, 6. 1683, July 26. 35 Car. 2.
- A commission to Lord Howard of Effingham to be lieutenant and governor general of Virginia. M. S. 1683, Sept 28. 35 Car. 2.
- The humble address of the chief governor, council and representatives of the island of Nevis, in the West Indies, presented to his majesty by Colonel Netheway and Captain Jefferson, at Windsor, May 3, 1684. Title in Amer. libr. 142. 3. cites Lond. Gaz. No. 1927. 1684, May 3.
- A treaty with the Indians at Albany. 1684, Aug. 2.
- A treaty of neutrality for America between France and England. 7 Corps Dipl. part 2, p. 44. 2. Mem. Am. 40. 1686, Nov. 16.
- By the king, a proclamation for the more effectual reducing and suppressing of pirates and privateers in America, as well on the sea as on the land in great numbers, committing frequent robberies and piracies, which hath occasioned a great prejudice and obstruction to trade and commerce, and given a great scandal and disturbance to our government in those parts. Title Amer. libr. 127. 2. cites Lond. Gaz. No. 2315. 1687, Jan. 10.
- Constitution of the council of proprietors of West Jersey. Smith's N. Jersey. 199. 1687, Feb. 12.
- A confirmation of the grant of the Northern neck of Virginia to Lord Culpeper. 1687, ou. Sept. 27. 4 Jac. 2.
- Governor Coxe's declaration to the council of proprietors of West Jersey. Sm. N. J. 190. 1687, Sept. 5.
- Provisional treaty of Whitehall concerning America between France and England. 2 Mem. de l'Am. 89. 1687, Dec. 16.
- Governor Coxe's narrative relating to the division line, directed to the council of proprietors of West Jersey. Sm. App. No. 4. 1687.
- The representation of the council of proprietors of West Jersey to Governor Burnet. Smith. App. No. 5. 1687.

- The remonstrance and petition of the inhabitants of East New Jersey to the king. Sm. App. No. 8.
- The memorial of the proprietors of East New Jersey to the Lords of trade. Sm. App. No. 9.
- 1778, Sept. 5. Agreement of the line of partition between East and West New Jersey. Smith's N. J. 196.
1691. Conveyance of the government of West Jersey and territories, by Dr. Coxe, to the West Jersey society.
- 1691, Oct. 7. A charter granted by King William and Queen Mary to the inhabitants of the province of Massachusetts bay, in New England. 2 Mem. de l'Am. 593.
- 1696, Nov. 7. The frame of government of the province of Pennsylvania and the territories thereunto belonging, passed by Gov. Markham. Nov. 7, 1696.
- 1697, Sept. 20. The treaty of peace between France and England, made at Ryswick. 7 Corps Dipl. part 2. p. 399. 2 Mem. Am. 89.
- 1699, July 5. The opinion and answer of the Lords of trade to the memorial of the proprietors of East N. Jersey. Sm. App. No. 10.
- 1700, Jan. 15. The memorial of the proprietors of East New Jersey to the Lords of trade. Sm. App. No. 11.
- The petition of the proprietors of East and West New Jersey to the Lords justices of England. Sm. App. No. 12.
- 1700, W. 3. A confirmation of the boundary between the colonies of New York and Connecticut, by the crown.
- 1701, Aug. 12. The memorial of the proprietors of East and West New Jersey to the king. Sm. App. No. 14.
- 1701, Oct. 2. Representations of the Lords of trade to the Lords justices. Sm. App. No. 18.
1701. A treaty with the Indians.
- 1701-2, Jan. 6. Report of Lords of trade to king William, of draughts of a commission and instructions for a governor of N. Jersey. Sm. N. J. 262.
- 1702, Apr. 15. Surrender from the proprietors of E. and W. N. Jersey, of their pretended right of government to her majesty Queen Anne. Sm. N. J. 211.
- 1702, Apr. 17. The Queen's acceptance of the surrender of government of East and West Jersey. Sm. N. J. 219.
- 1702, Nov. 16. Instructions to lord Cornbury. Sm. N. J. 230.

- A commission from Queen Anne to Lord Cornbury, to be 1702, Dec. 5.
captain general and governor in chief of New Jersey.

Present Monument over Jefferson's Tomb

This Monument was put up at Monticello in place of the one taken away to the campus of the University of the State of Missouri, at Columbia, in 1882

APPENDIX

The preceding sheets have been submitted to my friend Mr. Charles Thompson, Secretary of Congress; he has furnished me with the following observations, which have too much merit not to be communicated:

(A.) p. 22. Besides the three channels of communication mentioned between the western waters and the Atlantic, there are two others to which the Pennsylvanians are turning their attention; one from Presque Isle, on Lake Erie, to Le Boeuf, down the Alleghany to Kiskiminitas, then up the Kiskiminitas, and from thence, by a small portage, to Juniata, which falls into the Susquehanna; the other from Lake Ontario to the East Branch of the Delaware, and down that to Philadelphia. Both these are said to be very practicable; and, considering the enterprising temper of the Pennsylvanians, and particularly of the merchants of Philadelphia, whose object is centred in promoting the commerce and trade of one city, it is not improbable but one or both of these communications will be open and improved.

(B.) p. 25. The reflections I was led into on viewing this passage of the Potomac through the Blue Ridge were, that this country must have suffered some violent convulsion, and that the face of it must have been changed from what it probably was

some centuries ago; that the broken and ragged faces of the mountain on each side the river; the tremendous rocks, which are left with one end fixed in the precipice, and the other jutting out, and seemingly ready to fall for want of support, the bed of the river for several miles below obstructed, and filled with the loose stones carried from this mound; in short, everything on which you cast your eye evidently demonstrates a disrapture and breach in the mountain, and that, before this happened, what is now a fruitful vale, was formerly a great lake or collection of water, which possibly might have here formed a mighty cascade, or had its vent to the ocean by the Susquehanna, where the Blue Ridge seems to terminate. Besides this, there are other parts of this country which bear evident traces of a like convulsion. From the best accounts I have been able to obtain, the place where the Delaware now flows through the Kittatinney mountain, which is a continuation of what is called the North Ridge, or mountain, was not its original course, but that it passed through what is now called "the Wind-gap," a place several miles to the westward, and about a hundred feet higher than the present bed of the river. This Wind-gap is about a mile broad, and the stones in it such as seem to have been washed for ages by water running over them. Should this have been the case, there must have been a large lake behind that mountain, and by some uncommon swell in the waters, or by some convulsion of nature, the river

must have opened its way through a different part of the mountain, and meeting there with less obstruction, carried away with it the opposing mounds of earth, and deluged the country below with the immense collection of waters to which this new passage gave vent. There are still remaining, and daily discovered, innumerable instances of such a deluge on both sides of the river, after it passed the hills above the falls of Trenton, and reached the Champaign. On the New Jersey side, which is flatter than the Pennsylvania side, all the country below Crosswick hills seems to have been overflowed to the distance of from ten to fifteen miles back from the river, and to have acquired a new soil by the earth and clay brought down and mixed with the native sand. The spot on which Philadelphia stands evidently appears to be made ground. The different strata through which they pass in digging to water, the acorns, leaves, and sometimes branches, which are found above twenty feet below the surface, all seem to demonstrate this. I am informed that at Yorktown in Virginia, in the bank of York river, there are different strata of shells and earth, one above another, which seem to point out that the country there has undergone several changes; that the sea has, for a succession of ages, occupied the place where dry land now appears; and that the ground has been suddenly raised at various periods. What a change would it make in the country below, should the mountains at Niagara, by any accident, be cleft

asunder, and a passage suddenly opened to drain off the waters of Erie and the upper lakes! While ruminating on these subjects, I have often been hurried away by fancy, and led to imagine, that what is now the bay of Mexico, was once a champaign country; and that from the point or cape of Florida, there was a continued range of mountains through Cuba, Hispaniola, Porto Rico, Martinique, Guadeloupe, Barbadoes, and Trinidad, till it reached the coast of America, and formed the shores which bounded the ocean, and guarded the country behind; that by some convulsion or shock of nature, the sea had broken through these mounds, and deluged that vast plain, till it reached the foot of the Andes; that being there heaped up by the trade winds, always blowing from one quarter, it had found its way back, as it continues to do, through the Gulf between Florida and Cuba, carrying with it the loam and sand it may have scooped from the country it had occupied, part of which it may have deposited on the shores of North America, and with part formed the banks of Newfoundland. But these are only the visions of fancy.

(3.) p. 51. There is a plant, or weed, called the Jamestown weed,¹ of a very singular quality. The late Dr. Bond informed me, that he had under his care a patient, a young girl, who had put the seeds of this plant into her eye, which dilated the pupil to such a degree, that she could see in the dark, but

¹ *Datura pericarpis erectis ovatis.* Linn.

in the light was almost blind. The effect that the leaves had when eaten by a ship's crew that arrived at Jamestown, are well known.¹

(4.) p. 93. Monsieur Buffon has indeed given an afflicting picture of human nature in his description of the man of America. But sure I am there never was a picture more unlike the original. He grants indeed that his stature is the same as that of the man of Europe. He might have admitted, that the Iroquois were larger, and the Lenopi, or Delawares, taller than people in Europe generally are. But he says their organs of generation are smaller and weaker than those of Europeans. Is this a fact? I believe not; at least it is an observation I never heard before.—“They have no beard.” Had he known the pains and trouble it costs the men to pluck out by the roots the hair that grows on their faces, he would have seen that nature had not been deficient in that respect. Every nation has its customs. I have seen an Indian beau, with a looking-glass in his hand, examining his face for hours together, and plucking out by the roots every hair he could discover, with a kind of tweezer made of a piece of fine brass wire, that had been twisted round a stick, and which he used with great dexterity.—“They have no ardor for their females.” It is true they do not indulge those excesses, nor discover that fondness which is customary in Europe; but this is

¹ An instance of temporary imbecility produced by them is mentioned, Beverl. H. of Virg. b. 2, c. 4.

not owing to a defect in nature but to manners. Their soul is wholly bent upon war. This is what procures them glory among the men, and makes them the admiration of the women. To this they are educated from their earliest youth. When they pursue game with ardor, when they bear the fatigues of the chase, when they sustain and suffer patiently hunger and cold; it is not so much for the sake of the game they pursue, as to convince their parents and the council of the nation that they are fit to be enrolled in the number of the warriors. The songs of the women, the dance of the warriors, the sage counsel of the chiefs, the tales of the old, the triumphal entry of the warriors returning with success from battle, and the respect paid to those who distinguish themselves in war, and in subduing their enemies; in short, everything they see or hear tends to inspire them with an ardent desire for military fame. If a young man were to discover a fondness for women before he has been to war, he would become the contempt of the men, and the scorn and ridicule of the women. Or were he to indulge himself with a captive taken in war, and much more were he to offer violence in order to gratify his lust, he would incur indelible disgrace. The seeming frigidity of the men, therefore, is the effect of manners, and not a defect of nature. Besides, a celebrated warrior is oftener courted by the females, than he has occasion to court; and this is a point of honor which the men aim at.

Instances similar to that of Ruth and Boaz¹ are not uncommon among them. For though the women are modest and diffident, and so bashful that they seldom lift up their eyes, and scarce ever look a man full in the face, yet, being brought up in great subjection, custom and manners reconcile them to modes of acting, which, judged of by Europeans, would be deemed inconsistent with the rules of female decorum and propriety. I once saw a young widow, whose husband, a warrior, had died about eight days before, hastening to finish her grief, and who, by tearing her hair, beating her breast, and drinking spirits, made the tears flow in great abundance, in order that she might grieve much in a short space of time, and be married that evening to another young warrior. The manner in which this was viewed by the men and women of the tribe, who stood round, silent and solemn spectators of the scene, and the indifference with which they answered my question respecting it, convinced me that it was no unusual custom. I have known men advanced in years, whose wives were old and past child-bearing, take young wives, and have children, though the practice of polygamy is not common. Does this savor of frigidity, or want of ardor for the female? Neither do they seem to be deficient in natural affection. I have seen both fathers and mothers in the deepest

¹ When Boaz had eaten and drank, and his heart was merry, he went to lie down at the end of the heap of corn; and Ruth came softly, and uncovered his feet, and laid her down. Ruth, iii. 7.

affliction, when their children have been dangerously ill; though I believe the affection is stronger in the descending than the ascending scale, and though custom forbids a father to grieve immoderately for a son slain in battle. "That they are timorous and cowardly," is a character with which there is little reason to charge them, when we recollect the manner in which the Iroquois met Monsieur ———, who marched into their country; in which the old men, who scorned to fly, or to survive the capture of their town, braved death, like the old Romans in the time of the Gauls, and in which they soon after revenged themselves by sacking and destroying Montreal. But above all, the unshaken fortitude with which they bear the most excruciating tortures and death when taken prisoners, ought to exempt them from that character. Much less are they to be characterized as a people of no vivacity, and who are excited to action or motion only by the calls of hunger and thirst. Their dances in which they so much delight, and which to an European would be the most severe exercise, fully contradict this, not to mention their fatiguing marches, and the toil they voluntarily and cheerfully undergo in their military expeditions. It is true, that when at home, they do not employ themselves in labor or the culture of the soil; but this again is the effect of customs and manners, which have assigned that to the province of the women. But it is said, they are averse to society and a social life. Can anything be more

inapplicable than this to a people who always live in towns or clans? Or can they be said to have no "republic," who conduct all their affairs in national councils, who pride themselves in their national character, who consider an insult or injury done to an individual by a stranger as done to the whole, and resent it accordingly? In short, this picture is not applicable to any nation of Indians I have ever known or heard of in North America.

(5.) p. 134. As far as I have been able to learn, the country from the sea coast to the Alleghany, and from the most southern waters of James river up to Patuxen river, now in the State of Maryland, was occupied by three different nations of Indians, each of which spoke a different language, and were under separate and distinct governments. What the original or real names of those nations were, I have not been able to learn with certainty; but by us they are distinguished by the names of Powhatans, Manahoacs, and Monacans, now commonly called Tuscaroras. The Powhatans, who occupied the country from the sea shore up to the falls of the rivers, were a powerful nation, and seem to have consisted of seven tribes, five on the western and two on the eastern shore. Each of these tribes was subdivided into towns, families, or clans, who lived together. All the nations of Indians in North America lived in the hunter state, and depended for subsistence on hunting, fishing, and the spontaneous fruits of the earth, and a kind of grain which was planted and

gathered by the women, and is now known by the name of Indian corn. Long potatoes, pumpkins of various kinds, and squashes, were also found in use among them. They had no flocks, herds, or tamed animals of any kind. Their government is a kind of patriarchal confederacy. Every town or family has a chief, who is distinguished by a particular title, and whom we commonly call "Sachem." The several towns or families that compose a tribe, have a chief who presides over it, and the several tribes composing a nation have a chief who presides over the whole nation. These chiefs are generally men advanced in years, and distinguished by their prudence and abilities in council. The matters which merely regard a town or family are settled by the chief and principal men of the town; those which regard a tribe, such as the appointment of head warriors or captains, and settling differences between different towns and families, are regulated at a meeting or council of the chiefs from the several towns; and those which regard the whole nation, such as the making war, concluding peace, or forming alliances with the neighboring nations, are deliberated on and determined in a national council composed of the chiefs of the tribe, attended by the head warriors and a number of the chiefs from the towns, who are his counsellors. In every town there is a council house, where the chief and old men of the town assemble, when occasion requires, and consult what is proper to be done. Every tribe has a fixed place for the

chiefs of the towns to meet and consult on the business of the tribe; and in every nation there is what they call the central council house, or central council fire, where the chiefs of the several tribes, with the principal warriors, convene to consult and determine on their national affairs. When any matter is proposed in the national council, it is common for the chiefs of the several tribes to consult thereon apart with their counsellors, and when they have agreed, to deliver the opinion of the tribe at the national council; and, as their government seems to rest wholly on persuasion, they endeavor, by mutual concessions, to obtain unanimity. Such is the government that still subsists among the Indian nations bordering upon the United States. Some historians seem to think that the dignity of office of Sachem was hereditary. But that opinion does not appear to be well founded. The sachem or chief of the tribe seems to be by election. And sometimes persons who are strangers, and adopted into the tribe, are promoted to this dignity, on account of their abilities. Thus on the arrival of Captain Smith, the first founder of the colony of Virginia, Opechanchough, who was Sachem or chief of the Chickahomines, one of the tribes of the Powhatans, is said to have been of another tribe, and even of another nation, so that no certain account could be obtained of his origin or descent. The chiefs of the nation seem to have been by a rotation among the tribes. Thus when Captain Smith, in the year 1609, questioned

Powhatan (who was the chief of the nation, and whose proper name is said to have been Wahunsonacock) respecting the succession, the old chief informed him, "that he was very old, and had seen the death of all his people thrice;¹ that not one of these generations were then living except himself; that he must soon die, and the succession descend in order to his brothers Opichapan, Opechancanough, and Catataugh, and then to his two sisters, and their two daughters." But these were appellations designating the tribes in the confederacy. For the persons named are not his real brothers, but the chiefs of different tribes. Accordingly in 1618, when Powhatan died, he was succeeded by Opichapan, and after his decease, Opechancanough became chief of the nation. I need only mention another instance to show that the chiefs of the tribes claimed this kindred with the head of the nation. In 1622, when Raleigh Crashaw was with Japazaw, the Sachem or chief of the Potomacs, Opechancanough, who had great power and influence, being the second man in the nation, and next in succession to Opicha-

¹ This is one generation more than the poet ascribes to the life of Nestor:

Tō d' ede duo men geneai meropō anthrōpōn
 Ephthiath oi oi prosthen ama traphen ed' egneonto
 En Pulō egathee, meta de tritatoisin anassen.

II. Hom. II. 250.

Two generations now had passed away,
 Wise by his rules, and happy by his sway;
 Two ages o'er his native realm he reign'd,
 And now th' example of the third remained.

POPE.

pan, and who was a bitter but secret enemy to the English, and wanted to engage his nation in a war with them, sent two baskets of beads to the Potomac chief, and desired him to kill the Englishman that was with him. Japazaw replied, that the English were his friends, and Opichapan his *brother*, and that therefore there should be no blood shed between them by his means. It is also to be observed, that when the English first came over, in all their conferences with any of the chiefs, they constantly heard him make mention of his brother, with whom he must consult, or to whom he referred them, meaning thereby either the chief of the nation or the tribes in confederacy. The Manahoacks are said to have been a confederacy of four tribes, and in alliance with the Monacans, in the war which they were carrying on against the Powhatans.

To the northward of these there was another powerful nation which occupied the country from the head of the Chesapeake bay up to the Kittatinney mountain, and as far eastward as Connecticut river, comprehending that part of New York which lies between the Highlands and the ocean, all the State of New Jersey, that part of Pennsylvania which is watered, below the range of the Kittatinney mountains, by the rivers or streams falling into the Delaware, and the county of Newcastle in the State of Delaware, as far as Duck creek. It is to be observed, that the nations of Indians distinguished their countries one from another by natural boundaries, such

as ranges of mountains or streams of water. But as the heads of rivers frequently interlock, or approach near to each other, as those who live upon a stream claim the country watered by it, they often encroached on each other, and this is a constant source of war between the different nations. The nation occupying the tract of country last described, called themselves Lenopi: The French writers call them Loups; and among the English they are now commonly called Delawares. This nation or confederacy consisted of five tribes, who all spoke one language. 1. The Chihohocki, who dwelt on the west side of the river now called Delaware, a name which it took from Lord De la War, who put into it on his passage from Virginia in the year —, but which by the Indians was called Chihohocki. 2. The Wanami, who inhabit the country called New Jersey, from the Rariton to the sea. 3. The Munsey, who dwelt on the upper streams of the Delaware, from the Kittatinney mountains down to the Lehigh or western branch of the Delaware. 4. The Wabinga, who are sometimes called River Indians, sometimes Mohickanders, and who had their dwelling between the west branch of Delaware and Hudson's river, from the Kittatinney Ridge down to the Rariton; and 5. The Mahicon, or Manhattan, who occupied Staten Island, York Island (which from its being the principal seat of their residence was formerly called Manhattan), Long Island, and that part of New York and Connecticut which lies between

Hudson and Connecticut rivers, from the highland, which is a continuation of the Kittatinney Ridge down to the Sound. This nation had a close alliance with the Shawanese, who lived on the Susquehanna and to the westward of that river, as far as the Alleghany mountains, and carried on a long war with another powerful nation or confederacy of Indians, which lived to the north of them between the Kittatinney mountains or highlands, and the Lake Ontario, and who call themselves Mingoës, and are called by the French writers Iroquois, by the English the Five Nations, and by the Indians to the southward, with whom they were at war, Massawomacs. This war was carrying on in its greatest fury, when Captain Smith first arrived in Virginia. The Mingo warriors had penetrated down the Susquehannah to the mouth of it. In one of his excursions up the bay, at the mouth of Susquehannah, in 1608, Captain Smith met with six or seven of their canoes full of warriors, who were coming to attack their enemies in the rear. In an excursion which he had made a few weeks before, up the Rappahannock, and in which he had a skirmish with a party of the Manahoacs, and taken a brother of one of their chiefs prisoner, he first heard of this nation. For when he asked the prisoner why his nation attacked the English? the prisoner said, because his nation had heard that the English came from under the world to take their world from them. Being asked, how many worlds he knew? he said, he knew but one, which was

under the sky that covered him, and which consisted of Powhatans, the Manakins, and the Massawomacs. Being questioned concerning the latter, he said, they dwelt on a great water to the North, that they had many boats, and so many men, that they waged war with all the rest of the world. The Mingo confederacy then consisted of five tribes; three who are the elder, to wit, the Senecas, who live to the West, the Mohawks to the East, and the Onondagas between them; and two who are called the younger tribes, namely, the Cayugas and Oneidas. All these tribes speak one language, and were then united in a close confederacy, and occupied the tract of country from the east end of Lake Erie to Lake Champlain, and from the Kittatinney and Highlands to the Lake Ontario and the river Cadaraqui, or St. Lawrence. They had some time before that, carried on a war with a nation, who lived beyond the lakes, and were called Adirondacks. In this war they were worsted; but having made a peace with them, through the intercession of the French who were then settling Canada, they turned their arms against the Lenopi; and as this war was long and doubtful, they, in the course of it, not only exerted their whole force, but put in practice every measure which prudence or policy could devise to bring it to a successful issue. For this purpose they bent their course down the Susquehannah, and warring with the Indians in their way, and having penetrated as far as the mouth of it, they, by the terror of their

arms, engaged a nation, now known by the name of Nanticocks, Conoys, and Tuteloes, and who lived between Chesapeake and Delaware bays, and bordering on the tribe of Chihohocki, to enter into an alliance with them. They also formed an alliance with the Monicans, and stimulated them to a war with the Lenopi and their confederates. At the same time the Mohawks carried on a furious war down the Hudson against the Mohiccons and River Indians, and compelled them to purchase a temporary and precarious peace, by acknowledging them to be their superiors, and paying an annual tribute. The Lenopi being surrounded with enemies, and hard pressed, and having lost many of their warriors, were at last compelled to sue for peace, which was granted to them on the condition that they should put themselves under the protection of the Mingoës, confine themselves to raising corn, hunting for the subsistence of their families, and no longer have the power of making war. This is what the Indians call making them women. And in this condition the Lenopi were when William Penn first arrived and began the settlement of Pennsylvania in 1682.

(6.) p. 135. From the figurative language of the Indians, as well as from the practice of those we are still acquainted with, it is evident that it was and still continues to be, a constant custom among the Indians to gather up the bones of the dead, and deposit them in a particular place. Thus, when they make peace with any nation with whom they have

been at war, after burying the hatchet, they take up the belt of wampum, and say, "We now gather up all the bones of those who have been slain, and bury them," &c. See all the treaties of peace. Besides, it is customary when any of them die at a distance from home, to bury them, and afterwards to come and take up the bones and carry them home. At a treaty which was held at Lancaster with the Six Nations, one of them died, and was buried in the woods a little distance from the town. Some time after a party came and took up the body, separated the flesh from the bones by boiling and scraping them clean, and carried them to be deposited in the sepulchres of their ancestors. The operation was so offensive and disagreeable, that nobody could come near them while they were performing it.

(7.) p. 146. The Osweatchies, Connosedàgoes and Cohunnegoes, or, as they are commonly called, Caghnewàgos, are of the Mingo or Six Nation Indians, who, by the influence of the French missionaries, have been separated from their nation, and induced to settle there.

I do not know of what nation the Augquàgahs are, but suspect they are a family of the Senecas.

The Nanticocks and Conōies were formerly of a nation that lived at the head of Chesapeake bay, and who, of late years, have been adopted into the Mingo or Iroquois confederacy, and make a seventh nation. The Monacans or Tuscaroras, who were taken into the confederacy in 1712, making the sixth.

The Saponies are families of the Wanamies, who removed from New Jersey, and with the Mohiccons, Munsies, and Delawares, belonging to the Lenopi nation. The Mingos are a war colony from the Six Nations; so are the Cohunnewagos.

Of the rest of the Northern tribes I never have been able to learn anything certain. But all accounts seem to agree in this, that there is a very powerful nation, distinguished by a variety of names taken from the several towns or families, but commonly called Tawas or Ottawas, who speak one language, and live round and on the waters that fall into the western lakes, and extend from the waters of the Ohio quite to the waters falling into Hudson's bay.

No. II.

In the summer of the year 1783, it was expected that the assembly of Virginia would call a Convention for the establishment of a Constitution. The following draught of a fundamental Constitution for the Commonwealth of Virginia was then prepared, with a design of being proposed in such Convention had it taken place.

To the citizens of the commonwealth of Virginia, and all others whom it may concern, the delegates for the said commonwealth in Convention assembled, send greeting:

It is known to you and to the world, that the government of Great Britain, with which the American States were not long since connected, assumed over them an authority unwarrantable and oppressive; that they endeavored to enforce this authority by

arms, and that the States of New Hampshire, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia, considering resistance, with all its train of horrors, as a lesser evil than abject submission, closed in the appeal to arms. It hath pleased the Sovereign Disposer of all human events to give to this appeal an issue favorable to the rights of the States; to enable them to reject forever all dependence on a government which had shown itself so capable of abusing the trusts reposed in it; and to obtain from that government a solemn and explicit acknowledgment that they are free, sovereign, and independent States. During the progress of that war, through which we had to labor for the establishment of our rights, the legislature of the commonwealth of Virginia found it necessary to make a temporary organization of government for preventing anarchy, and pointing our efforts to the two important objects of war against our invaders, and peace and happiness among ourselves. But this, like all other acts of legislation, being subject to change by subsequent legislatures, possessing equal powers with themselves; it has been thought expedient, that it should receive those amendments which time and trial have suggested, and be rendered permanent by a power superior to that of the ordinary legislature. The general assembly therefore of this State recommend it to the good people thereof, to choose delegates to meet in

general convention, with powers to form a constitution of government for them, and to declare those fundamentals to which all our laws present and future shall be subordinate; and, in compliance with this recommendation, they have thought proper to make choice of us, and to vest us with powers for this purpose.

We, therefore, the delegates, chosen by the said good people of this State for the purpose aforesaid, and now assembled in general convention, do in execution of the authority with which we are invested, establish the following constitution and fundamentals of government for the said State of Virginia:

The said State shall forever hereafter be governed as a commonwealth.

The powers of government shall be divided into three distinct departments, each of them to be confided to a separate body of magistracy; to wit, those which are legislative to one, those which are judiciary to another, and those which are executive to another. No person, or collection of persons, being of one of these departments, shall exercise any power properly belonging to either of the others, except in the instances hereinafter expressly permitted.

The legislature shall consist of two branches, the one to be called the House of Delegates, the other the Senate, and both together the General Assembly. The concurrence of both of these, expressed on three several readings, shall be necessary to the passage of a law.

Delegates for the general assembly shall be chosen on the last Monday of November in every year. But if an election cannot be concluded on that day, it may be adjourned from day to day till it can be concluded.

The number of delegates which each county may send shall be in proportion to the number of its qualified electors; and the whole number of delegates for the State shall be so proportioned to the whole number of qualified electors in it, that they shall never exceed three hundred, nor be fewer than one hundred. Whenever such excess or deficiency shall take place, the House of Delegates so deficient or excessive shall, notwithstanding this, continue in being during its legal term; but they shall, during that term, readjust the proportion, so as to bring their number within the limits before mentioned at the ensuing election. If any county be reduced in its qualified electors below the number authorized to send one delegate, let it be annexed to some adjoining county.

For the election of senators, let the several counties be allotted by the senate, from time to time, into such and so many districts as they shall find best; and let each county at the time of electing its delegates, choose senatorial electors, qualified as themselves are, and four in number for each delegate their county is entitled to send, who shall convene, and conduct themselves, in such manner as the legislature shall direct, with the senatorial electors from the other counties of their district, and then choose, by

ballot, one senator for every six delegates which their district is entitled to choose. Let the senatorial districts be divided into two classes, and let the members elected for one of them be dissolved at the first ensuing general election of delegates, the other at the next, and so on alternately forever.

All free male citizens, of full age, and sane mind, who for one year before shall have been resident in the county, or shall through the whole of that time have possessed therein real property of the value of _____; or shall for the same time have been enrolled in the militia, and no others, shall have a right to vote for delegates for the said county, and for senatorial electors for the district. They shall give their votes personally, and *viva voce*.

The general assembly shall meet at the place to which the last adjournment was, on the forty-second day after the day of election of delegates, and thenceforward at any other time or place on their own adjournment, till their office expires, which shall be on the day preceding that appointed for the meeting of the next general assembly. But if they shall at any time adjourn for more than one year, it shall be as if they had adjourned for one year precisely. Neither house, without the concurrence of the other, shall adjourn for more than one week, nor to any other place than the one at which they are sitting. The governor shall also have power, with the advice of the council of State, to call them at any other time to the same place, or to a different one, if that

shall have become, since the last adjournment, dangerous from an enemy, or from infection.

A majority of either house shall be a quorum, and shall be requisite for doing business; but any smaller proportion which from time to time shall be thought expedient by the respective houses, shall be sufficient to call for, and to punish, their non-attending members, and to adjourn themselves for any time not exceeding one week.

The members, during their attendance on the general assembly, and for so long a time before and after as shall be necessary for travelling to and from the same, shall be privileged from all personal restraint and assault, and shall have no other privilege whatsoever. They shall receive during the same time, daily wages in gold or silver, equal to the value of two bushels of wheat. This value shall be deemed one dollar by the bushel till the year 1790, in which, and in every tenth year thereafter, the general court, at their first sessions in the year, shall cause a special jury, of the most respectable merchants and farmers, to be summoned, to declare what shall have been the averaged value of wheat during the last ten years; which averaged value shall be the measure of wages for the ten subsequent years.

Of this general assembly, the treasurer, attorney general, register, ministers of the gospel, officers of the regular armies of this State, or of the United States, persons receiving salaries or emoluments from any power foreign to our confederacy, those who are

not resident in the county for which they are chosen delegates, or districts for which they are chosen senators, those who are not qualified as electors, persons who shall have committed treason, felony, or such other crime as would subject them to infamous punishment, or who shall have been convicted by due course of law of bribery or corruption, in endeavoring to procure an election to the said assembly, shall be incapable of being members. All others, not herein elsewhere excluded, who may elect, shall be capable of being elected thereto.

Any member of the said assembly accepting any office of profit under this State, or the United States, or any of them, shall thereby vacate his seat, but shall be capable of being re-elected.

Vacancies occasioned by such disqualifications, by death, or otherwise, shall be supplied by the electors, on a writ from the speaker of the respective house.

The general assembly shall not have power to infringe this constitution; to abridge the civil rights of any person on account of his religious belief; to restrain him from professing and supporting that belief, or to compel him to contributions, other than those he shall have personally stipulated for the support of that or any other; to ordain death for any crime but treason or murder, or military offences; to pardon, or give a power of pardoning persons duly convicted of treason or felony, but instead thereof they may substitute one or two new trials, and no

more; to pass laws for punishing actions done before the existence of such laws; to pass any bill of attainder of treason or felony; to prescribe torture in any case whatever; nor to permit the introduction of any more slaves to reside in this State, or the continuance of slavery beyond the generation which shall be living on the thirty-first day of December, one thousand eight hundred; all persons born after that day being hereby declared free.

The general assembly shall have power to sever from this State all or any parts of its territory westward of the Ohio, or of the meridian of the mouth of the Great Kanhaway, and to cede to Congress one hundred square miles of territory in any other part of this State, exempted from the jurisdiction and government of this State so long as Congress shall hold their sessions therein, or in any territory adjacent thereto, which may be tendered to them by any other State.

They shall have power to appoint the speakers of their respective houses, treasurer, auditors, attorney general, register, all general officers of the military, their own clerks and sergeants, and no other officers, except where, in other parts of this constitution, such appointment is expressly given them.

The executive powers shall be exercised by a *Governor*, who shall be chosen by joint ballot of both houses of assembly, and when chosen shall remain in office five years, and be ineligible a second time. During his term he shall hold no other office or emol-

ument under this State, or any other State or power whatsoever. By executive powers, we mean no reference to those powers exercised under our former government by the crown as of its prerogative, nor that these shall be the standard of what may or may not be deemed the rightful powers of the governor. We give him those powers only, which are necessary to execute the laws (and administer the government), and which are not in their nature either legislative or judiciary. The application of this idea must be left to reason. We do however expressly deny him the prerogative powers of erecting courts, offices, boroughs, corporations, fairs, markets, ports, beacons, light-houses, and sea-marks; of laying embargoes, of establishing precedence, of retaining within the State, or recalling to it any citizen thereof, and of making denizens, except so far as he may be authorized from time to time by the legislature to exercise any of those powers. The power of declaring war and concluding peace, of contracting alliances, of issuing letters of marque and reprisal, of raising and introducing armed forces, of building armed vessels, forts, or strongholds, of coining money or regulating its value, of regulating weights and measures, we leave to be exercised under the authority of the confederation; but in all cases respecting them which are out of the said confederation, they shall be exercised by the governor, under the regulation of such laws as the legislature may think it expedient to pass.

The whole military of the State, whether regular,

or of militia, shall be subject to his directions; but he shall leave the execution of those directions to the general officers appointed by the legislature.

His salary shall be fixed by the legislature at the session of the assembly in which he shall be appointed, and before such appointment be made; or if it be not then fixed, it shall be the same which his next predecessor in office was entitled to. In either case he may demand it quarterly out of any money which shall be in the public treasury; and it shall not be in the power of the legislature to give him less or more, either during his continuance in office, or after he shall have gone out of it. The lands, houses, and other things appropriated to the use of the governor, shall remain to his use during his continuance in office.

A *Council of State* shall be chosen by joint ballot of both houses of assembly, who shall hold their offices seven years, and be ineligible a second time, and who, while they shall be of the said council, shall hold no other office or emolument under this State, or any other State or power whatsoever. Their duty shall be to attend and advise the governor when called on by him, and their advice in any case shall be a sanction to him. They shall also have power, and it shall be their duty, to meet at their own will, and to give their advice, though not required by the governor, in cases where they shall think the public good calls for it. Their advice and proceedings shall be entered in books to be kept for

that purpose, and shall be signed as approved or disapproved by the members present. These books shall be laid before either house of assembly when called for by them. The said council shall consist of eight members for the present; but their numbers may be increased or reduced by the legislature, whenever they shall think it necessary; provided such reduction be made only as the appointments become vacant by death, resignation, disqualification, or regular deprivation. A majority of their actual number, and not fewer, shall be a quorum. They shall be allowed for the present — each by the year, payable quarterly out of any money which shall be in the public treasury. Their salary, however, may be increased or abated from time to time, at the discretion of the legislature; provided such increase or abatement shall not, by any ways or means, be made to affect either then, or at any future time, any one of those then actually in office. At the end of each quarter their salary shall be divided into equal portions by the number of days on which, during that quarter, a council has been held, or required by the governor, or by their own adjournment, and one of those portions shall be withheld from each member for every of the said days which, without cause allowed good by the board, he failed to attend, or departed before adjournment without their leave. If no board should have been held during that quarter, there shall be no deduction.

They shall annually choose a *President*, who shall preside in council in the absence of the governor, and who, in case of his office becoming vacant by death or otherwise, shall have authority to exercise all his functions, till a new appointment be made, as he shall also in any interval during which the governor shall declare himself unable to attend to the duties of his office.

The *Judiciary* powers shall be exercised by county courts and such other inferior courts as the legislature shall think proper to continue or to erect, by three superior courts, to wit, a Court of Admiralty, a general Court of Common Law, and a High Court of Chancery; and by one Supreme Court, to be called the Court of Appeals.

The judges of the high court of chancery, general court, and court of admiralty, shall be four in number each, to be appointed by joint ballot of both houses of assembly, and to hold their offices during good behavior. While they continue judges, they shall hold no other office or emolument, under this State, or any other State or power whatsoever, except that they may be delegated to Congress, receiving no additional allowance.

These judges, assembled together, shall constitute the Court of Appeals, whose business shall be to receive and determine appeals from the three superior courts, but to receive no original causes, except in the cases expressly permitted herein.

A majority of the members of either of these courts,

and not fewer, shall be a quorum. But in the Court of Appeals nine members shall be necessary to do business. Any smaller numbers however may be authorized by the legislature to adjourn their respective courts.

They shall be allowed for the present ——— each by the year, payable quarterly out of any money which shall be in the public treasury. Their salaries, however, may be increased or abated, from time to time, at the discretion of the legislature, provided such increase or abatement shall not by any ways or means, be made to affect, either then, or at any future time, any one of those then actually in office. At the end of each quarter their salary shall be divided into equal portions by the number of days on which, during that quarter, their respective courts sat, or should have sat, and one of these portions shall be withheld from each member for every of the said days which, without cause allowed good by his court, he failed to attend, or departed before adjournment without their leave. If no court should have been held during the quarter, there shall be no deduction.

There shall, moreover, be a *Court of Impeachments*, to consist of three members of the Council of State, one of each of the superior courts of Chancery, Common Law, and Admiralty, two members of the house of delegates and one of the Senate, to be chosen by the body respectively of which they are. Before this court any member of the three branches

of government, that is to say, the governor, any member of the council, of the two houses of legislature, or of the superior courts, may be impeached by the governor, the council, or either of the said houses or courts, and by no other, for such misbehavior in office as would be sufficient to remove him therefrom; and the only sentence they shall have authority to pass shall be that of deprivation and future incapacity of office. Seven members shall be requisite to make a court, and two-thirds of those present must concur in the sentence. The offences cognizable by this court shall be cognizable by no other, and they shall be triers of the fact as well as judges of the law.

The justices or judges of the inferior courts already erected, or hereafter to be erected, shall be appointed by the governor, on advice of the council of State, and shall hold their offices during good behavior, or the existence of their courts. For breach of the good behavior, they shall be tried according to the laws of the land, before the Court of Appeals, who shall be judges of the fact as well as of the law. The only sentence they shall have authority to pass shall be that of deprivation and future incapacity of office, and two-thirds of the members present must concur in this sentence.

All courts shall appoint their own clerks, who shall hold their offices during good behavior, or the existence of their court; they shall also appoint all other attending officers to continue during their

pleasure. Clerks appointed by the supreme or superior courts shall be removable by their respective courts. Those to be appointed by other courts shall have been previously examined, and certified to be duly qualified, by some two members of the general court, and shall be removable for breach of the good behavior by the Court of Appeals only, who shall be judges of the fact as well as of the law. Two-thirds of the members present must concur in the sentence.

The justices or judges of the inferior courts may be members of the legislature.

The judgment of no inferior court shall be final, in any civil case, of greater value than fifty bushels of wheat, as last rated in the general court for setting the allowance to the members of the general assembly, nor in any case of treason, felony, or other crime which should subject the party to infamous punishment.

In all causes depending before any court, other than those of impeachments, of appeals, and military courts, facts put in issue shall be tried by jury, and in all courts whatever witnesses shall give testimony *viva voce* in open court, wherever their attendance can be procured; and all parties shall be allowed counsel and compulsory process for their witnesses.

Fines, amercements, and terms of imprisonment left indefinite by the law, other than for contempts, shall be fixed by the jury, triers of the offence.

The governor, two councillors of State, and a

judge from each of the superior Courts of Chancery, Common Law, and Admiralty, shall be a council to revise all bills which shall have passed both houses of assembly, in which council the governor, when present, shall preside. Every bill, before it becomes a law, shall be represented to this council, who shall have a right to advise its rejection, returning the bill, with their advice and reasons in writing, to the house in which it originated, who shall proceed to reconsider the said bill. But if after such reconsideration, two-thirds of the house shall be of opinion that the bill should pass finally, they shall pass and send it, with the advice and written reasons of the said Council of Revision, to the other house, wherein if two-thirds also shall be of opinion it should pass finally, it shall thereupon become law; otherwise it shall not.

If any bill, presented to the said council, be not, within one week (exclusive of the day of presenting it) returned by them, with their advice of rejection and reasons, to the house wherein it originated, or to the clerk of the said house, in case of its adjournment over the expiration of the week, it shall be law from the expiration of the week, and shall then be demandable by the clerk of the House of Delegates, to be filed of record in his office.

The bills which they approve shall become law from the time of such approbation, and shall then be returned to, or demandable by, the clerk of the House of Delegates, to be filed of record in his office.

A bill rejected on advice of the Council of Revision may again be proposed, during the same session of assembly, with such alterations as will render it conformable to their advice.

The members of the said Council of Revision shall be appointed from time to time by the board or court of which they respectively are. Two of the executive and two of the judiciary members shall be requisite to do business; and to prevent the evils of non-attendance, the board and courts may at any time name all, or so many as they will, of their members, in the particular order in which they would choose the duty of attendance to devolve from preceding to subsequent members, the preceding failing to attend. They shall have additionally for their services in this council the same allowance as members of assembly have.

The confederation is made a part of this constitution, subject to such future alterations as shall be agreed to by the legislature of this State, and by all the other confederating States.

The delegates to Congress shall be five in number; any three of whom, and no fewer, may be a representation. They shall be appointed by joint ballot of both houses of assembly for any term not exceeding one year, subject to be recalled, within the term, by joint vote of both the said houses. They may at the same time be members of the legislative or judiciary departments, but not of the executive.

The benefits of the writ of Habeas Corpus shall be

extended, by the legislature, to every person within this State, and without fee, and shall be so facilitated that no person may be detained in prison more than ten days after he shall have demanded and been refused such writ by the judge appointed by law, or if none be appointed, then by any judge of a superior court, nor more than ten days after such writ shall have been served on the person detaining him, and no order given, on due examination, for his remandment or discharge.

The military shall be subordinate to the civil power.

Printing presses shall be subject to no other restraint than liableness to legal prosecution for false facts printed and published.

Any two of the three branches of government concurring in opinion, each by the voice of two-thirds of their whole existing number, that a convention is necessary for altering this constitution, or correcting breaches of it, they shall be authorized to issue writs to every county for the election of so many delegates as they are authorized to send to the general assembly, which elections shall be held, and writs returned, as the laws shall have provided in the case of elections of delegates of assembly, *mutatis mutandis*, and the said delegates shall meet at the usual place of holding assemblies, three months after date of such writs, and shall be acknowledged to have equal powers with this present convention. The said writs shall be signed by all the members approving the same.

To introduce this government, the following special and temporary provision is made.

This convention being authorized only to amend those laws which constituted the form of government, no general dissolution of the whole system of laws can be supposed to have taken place; but all laws in force at the meeting of this convention, and not inconsistent with this constitution, remain in full force, subject to alterations by the ordinary legislature.

The present general assembly shall continue till the forty-second day after the last Monday of November in this present year. On the said last Monday of November in this present year, the several counties shall by their electors qualified as provided by this constitution, elect delegates, which for the present shall be, in number, one for every _____ militia of the said county, according to the latest returns in possession of the governor, and shall also choose senatorial electors in proportion thereto, which senatorial electors shall meet on the fourteenth day after the day of their election, at the court house of that county of their present district which would stand first in an alphabetical arrangement of their counties, and shall choose senators in the proportion fixed by this constitution. The elections and returns shall be conducted, in all circumstances not hereby particularly prescribed, by the same persons and under the same forms as prescribed by the present laws in elections of senators

and delegates of assembly. The said senators and delegates shall constitute the first general assembly of the new government, and shall specially apply themselves to the procuring an exact return from every county of the number of its qualified electors, and to the settlement of the number of delegates to be elected for the ensuing general assembly.

The present governor shall continue in office to the end of the term for which he was elected.

All other officers of every kind shall continue in office as they would have done had their appointment been under this constitution, and new ones, where new are hereby called for, shall be appointed by the authority to which such appointment is referred. One of the present judges of the general court, he consenting thereto, shall by joint ballot of both houses of assembly, at their first meeting, be transferred to the High Court of Chancery.

No. III.

An Act for establishing Religious Freedom, passed in the Assembly of Virginia in the beginning of the year 1786.

Well aware that Almighty God hath created the mind free; that all attempts to influence it by temporal punishments or burdens, or by civil incapacitations, tend only to beget habits of hypocrisy and meanness, and are a departure from the plan of the Holy Author of our religion, who being Lord both of body and mind, yet chose not to propagate it by

coercions on either, as was in his Almighty power to do; that the impious presumption of legislators and rulers, civil as well as ecclesiastical, who, being themselves but fallible and uninspired men have assumed dominion over the faith of others, setting up their own opinions and modes of thinking as the only true and infallible, and as such endeavoring to impose them on others, hath established and maintained false religions over the greatest part of the world, and through all time; that to compel a man to furnish contributions of money for the propagation of opinions which he disbelieves, is sinful and tyrannical; that even the forcing him to support this or that teacher of his own religious persuasion, is depriving him of the comfortable liberty of giving his contributions to the particular pastor whose morals he would make his pattern, and whose powers he feels most persuasive to righteousness, and is withdrawing from the ministry those temporal rewards, which proceeding from an approbation of their personal conduct, are an additional incitement to earnest and unremitting labors for the instruction of mankind; that our civil rights have no dependence on our religious opinions, more than our opinions in physics or geometry; that, therefore, the proscribing any citizen as unworthy the public confidence by laying upon him an incapacity of being called to the offices of trust and emolument, unless he profess or renounce this or that religious opinion, is depriving him injuriously of those privileges and advantages

to which in common with his fellow citizens he has a natural right; that it tends also to corrupt the principles of that very religion it is meant to encourage, by bribing, with a monopoly of worldly honors and emoluments, those who will externally profess and conform to it; that though indeed these are criminal who do not withstand such temptation, yet neither are those innocent who lay the bait in their way; that to suffer the civil magistrate to intrude his powers into the field of opinion and to restrain the profession or propagation of principles, on the supposition of their ill tendency, is a dangerous fallacy, which at once destroys all religious liberty, because he being of course judge of that tendency, will make his opinions the rule of judgment, and approve or condemn the sentiments of others only as they shall square with or differ from his own; that it is time enough for the rightful purposes of civil government, for its offices to interfere when principles break out into overt acts against peace and good order; and finally, that truth is great and will prevail if left to herself, that she is the proper and sufficient antagonist to error, and has nothing to fear from the conflict, unless by human interposition disarmed of her natural weapons, free argument and debate, errors ceasing to be dangerous when it is permitted freely to contradict them.

Be it therefore enacted by the General Assembly, That no man shall be compelled to frequent or support any religious worship, place or ministry whatsoever,

nor shall be enforced, restrained, molested, or burthened in his body or goods, nor shall otherwise suffer on account of his religious opinions or belief; but that all men shall be free to profess, and by argument to maintain, their opinions in matters of religion, and that the same shall in nowise diminish, enlarge, or affect their civil capacities.

And though we well know this Assembly, elected by the people for the ordinary purposes of legislation only, have no power to restrain the acts of succeeding assemblies, constituted with the powers equal to our own, and that therefore to declare this act irrevocable, would be of no effect in law, yet we are free to declare, and do declare, that the rights hereby asserted are of the natural rights of mankind, and that if any act shall be hereafter passed to repeal the present or to narrow its operation, such act will be an infringement of natural right.

AN APPENDIX RELATIVE TO THE MURDER OF
LOGAN'S FAMILY.¹

The "Notes on Virginia" were written, in Virginia, in the years 1781 and 1782, in answer to certain queries proposed to me by Monsieur de Marbois, then secretary of the French legation in the United States; and a manuscript copy was delivered to him. A few copies, with some additions, were afterwards, in 1784, printed in Paris, and given to particular friends. In speaking of the animals of America, the theory of M. de Buffon, the Abbé Raynal, and others presented itself to consideration. They have supposed there is something in the soil, climate, and other circumstances of America, which occasions animal nature to degenerate, not excepting even the man, native or adoptive, physical or moral. This theory, so unfounded and degrading to one-third of the globe, was called to the bar of fact and reason. Among other proofs adduced in contradiction of this hypothesis, the speech of Logan, an Indian chief, delivered to Lord Dunmore in 1774, was produced, as a specimen of the talents of the aborigines of this country, and particularly of their eloquence; and it was believed that Europe had never produced anything superior to this morsel of eloquence. In order to make it intelligible to the reader, the transaction, on which it was founded, was stated, as it

¹ In connection with this appendix see letter to Governor Henry, printed as Note in p. 89.

had been generally related in America at the time, and as I had heard it myself, in the circle of Lord Dunmore, and the officers who accompanied him; and the speech itself was given as it had, ten years before the printing of that book, circulated in the newspapers through all the then colonies, through the magazines of Great Britain, and periodical publications of Europe. For three and twenty years it passed uncontradicted; nor was it ever suspected that it even admitted contradiction. In 1797, however, for the first time, not only the whole transaction respecting Logan was affirmed in the public papers to be false, but the speech itself suggested to be a forgery, and even a forgery of mine, to aid me in proving that the man of America was equal in body and in mind, to the man of Europe. But wherefore the forgery; whether Logan's or mine, it would still have been American. I should indeed consult my own fame if the suggestion, that this speech is mine, were suffered to be believed. He would have just right to be proud who could with truth claim that composition. But it is none of mine; and I yield it to whom it is due.

On seeing then that this transaction was brought into question, I thought it my duty to make particular inquiry into its foundation. It was the more my duty, as it was alleged that, by ascribing to an individual therein named, a participation in the murder of Logan's family, I had done an injury to his char-

acter, which it had not deserved. I had no knowledge personally of that individual. I had no reason to aim an injury at him. I only repeated what I had heard from others, and what thousands had heard and believed as well as myself; and which no one indeed, till then, had been known to question. Twenty-three years had now elapsed, since the transaction took place. Many of those acquainted with it were dead, and the living dispersed to very distant parts of the earth. Few of them were even known to me. To those however of whom I knew, I made application by letter; and some others, moved by a regard for truth and justice, were kind enough to come forward, of themselves, with their testimony. These fragments of evidence, the small remains of a mighty mass which time has consumed, are here presented to the public, in the form of letters, certificates, or affidavits, as they came to me. I have rejected none of these forms, nor required other solemnities from those whose motives and characters were pledges of their truth. Historical transactions are deemed to be well vouched by the simple declarations of those who have borne a part in them; and especially of persons having no interest to falsify or disfigure them. The world will now see whether they, or I, have injured Cresap, by believing Logan's charge against him; and they will decide between Logan and Cresap, whether Cresap was innocent, and Logan a calumniator?

In order that the reader may have a clear concep-

tion of the transactions, to which the different parts of the following declarations refer, he must take notice that they establish four different murders. 1. Of two Indians, a little above Wheeling. 2. Of others at Grave Creek, among whom were some of Logan's relations. 3. The massacre at Baker's bottom, on the Ohio, opposite the mouth of Yellow Creek, where were other relations of Logan. 4. Of those killed at the same place, coming in canoes to the relief of their friends. I place the numbers 1, 2, 3, 4, against certain paragraphs of the evidence, to indicate the particular murder to which the paragraph relates, and present also a small sketch or map of the principal scenes of these butcheries, for their more ready comprehension.

Extract of a letter from the Honorable Judge Innes, of Frankfort in Kentucky, to Thomas Jefferson, dated Kentucky, near Frankfort, March 2d, 1779.

I recollect to have seen Logan's speech in 1775, in one of the public prints. That Logan conceived Cresap to be the author of the murder at Yellow Creek, it is in my power to give, perhaps, a more particular information, than any other person you can apply to.

In 1774 I lived in Fincastle county, now divided into Washington, Montgomery and part of Wythe. Being intimate in Col. Preston's family, I happened in July to be at his house, when an express was sent to him as County Lieut. requesting a guard of the militia to be ordered out for the protection of the inhabitants residing low down on the north fork of Holston river. The express brought with him a War Club, and a note which was left tied to it at the house of one Robertson, whose family were cut off by the Indians, and gave rise for the application to Col. Preston, of which the following is a copy, then taken by me in my memorandum book.

“Captain Cresap,—What did you kill my people on Yellow Creek for? The white people killed my kin at Conestoga, a great while ago; and I thought nothing of that. But you killed my kin again, on Yellow Creek, and took my Cousin Prisoner. Then I thought I must kill too; and I have been three times to war since; but the Indians are not angry; only myself.

“July 21st, 1774.

CAPTAIN JOHN LOGAN.”

With great respect, I am, Dear Sir, your most obedient servant,
HARRY INNES

ALLEGHANY COUNTY, ss. }
STATE OF PENNSYLVANIA. }

Before me, the subscriber, a justice of the peace in and for said county, personally appeared John Gibson, Esquire, an associate Judge of same county, who being duly sworn, deposeth and saith that he traded with the Shawanese and other tribes of Indians then settled on the Siota in the year 1773, and in the beginning of the year 1774, and that in the month of April of the same year, he left the same Indian towns, and came to this place, in order to procure some goods and provisions, that he remained here only a few days, and then set out in company with a certain Alexander Blaine and M. Elliot by water to return to the towns on the Siota, and that one evening as they were drifting in their canoes near the Long Reach on the Ohio, they were hailed by a number of white men on the South West shore, who requested them to put ashore, as they had disagreeable news to inform them of; that we then landed on shore; and found amongst the party, a Major Angus M'Donald from West Chester, a Doctor Woods from same place, and a party as they said of one hundred and fifty men. We then asked the news. They informed us that some of the party who had been taken up, and improving lands near the Big Kanhawa river, had seen another party of white men, who informed them that they and some others had fell in with a party of Shawanese, who had been hunting on the South West side of the Ohio, that they had killed the whole of the Indian party, and that the others had gone across the country to Cheat river with the horses and plunder, the consequence of which they apprehended would be an Indian war, and that they were flying away. On making inquiry of them when this murder should have happened, we found that it must have been some considerable time before we left the Indian towns, and that there was not

the smallest foundation for the report, as there was not a single man of the Shawanese, but what returned from hunting long before this should have happened.

We then informed them that if they would agree to remain at the place we then were, one of us would go to Hock Hocking river with some of their party, where we should find some of our people making canoes, and that if we did not find them there, we might conclude that everything was not right. Doctor Wood and another person then proposed going with me; the rest of the party seemed to agree, but said they would send and consult Captain Cresap, who was about two miles from that place. They sent off for him, and during the greatest part of the night they behaved in the most disorderly manner, threatening to kill us, and saying the damned traders were worse than the Indians and ought to be killed. In the morning Captain Michael Cresap came to the camp. I then gave him the information as above related. They then met in council, and after an hour or more Captain Cresap returned to me, and informed that he could not prevail on them to adopt the proposal I had made to them, that as he had a great regard for Captain R. Callender, a brother-in-law of mine, with whom I was connected in trade, he advised me by no means to think of proceeding any further, as he was convinced the present party would fall on and kill every Indian they met on the river, that for his part he should not continue with them, but go right across the country to Red-Stone to avoid the consequences. That we then proceeded to Hocking and went up the same to the canoe place where we found our people at work, and after some days we proceeded to the towns on Siota by land. On our arrival there, we heard of the different murders committed by the party on their way up the Ohio.

This Deponent further saith that in the year 1774, he accompanied Lord Dunmore on the expedition against the Shawanese and other Indians on the Siota, that on their arrival within fifteen miles of the towns, they were met by a flag, and a white man of the name of Elliot, who informed Lord Dunmore that the Chiefs of the Shawanese had sent to request his Lordship to halt his army and send in some person, who understood their language; that this Deponent, at the request of Lord Dunmore and the whole of the officers with him, went in; that on his arrival at the towns, Logan, the Indian, came to where the deponent was sitting with the Corn-Stalk, and the other chiefs of the Shawanese, and asked him to walk out with him; that they went into a copse of wood, where they sat down, when Logan, after shedding abundance of tears, delivered to him the speech, nearly as related by Mr. Jefferson in his Notes on the State of Virginia; that he the deponent told him

that it was not Col. Cresap who had murdered his relations, and that although his son Captain Michael Cresap was with the party who killed a Shawanese chief and other Indians, yet he was not present when his relations were killed at Baker's, near the mouth of Yellow Creek on the Ohio; that this Deponent on his return to camp delivered the speech to Lord Dunmore; and that the murders perpetrated as above were considered as ultimately the cause of the war of 1774, commonly called Cresap's war.

JOHN GIBSON.

Sworn and subscribed the 4th April, 1800, at Pittsburg, before me,

JER. BARKER.

Extract of a letter from Col. Ebenezer Zane, to the honorable John Brown, one of the Senators in Congress from Kentucky; dated Wheeling, Feb. 4th, 1800.

I was myself, with many others, in the practice of making improvements on lands upon the Ohio, for the purpose of acquiring rights to the same. Being on the Ohio at the mouth of Sandy Creek, in company with many others, news circulated that the Indians had robbed some of the Land jobbers. This news induced the people generally to ascend the Ohio. I was among the number. On our arrival at the Wheeling, being informed that there were two Indians with some traders near and above Wheeling, a proposition was made by the then Captain Michael Cresap to waylay and kill the Indians upon the river. This measure I opposed with much violence, alleging that the killing of those Indians might involve the country in a war. But the opposite party prevailed, and proceeded up the Ohio with Captain Cresap at their head.

In a short time the party returned, and also the traders, in a canoe; but there were no Indians in the company. I inquired what had become of the Indians, and was informed by the traders and Cresap's party that they had fallen overboard. I examined the canoe, and saw much fresh blood and some bullet holes in the canoe. This fully convinced me that the party had killed the two Indians, and thrown them into the river.

On the afternoon of the day this action happened, a report prevailed that there was a camp, or party of Indians on the Ohio below and near the Wheeling. In consequence of this information, Captain Cresap with his party, joined by a number of recruits, proceeded immediately down the Ohio for the purpose, as was then generally under-

stood, of destroying the Indians above mentioned. On the succeeding day, Captain Cresap and his party returned to Wheeling, and it was generally reported by the party that they had killed a number of Indians. Of the truth of this report I had no doubt, as one of Cresap's party was badly wounded, and the party had a fresh scalp, and a quantity of property, which they called Indian plunder. At the time of the last-mentioned transaction, it was generally reported that the party of Indians down the Ohio were Logan and his family; but I have reason to believe that this report was unfounded.

Within a few days after the transaction above mentioned, a party of Indians were killed at Yellow Creek. But I must do the memory 3 of Captain Cresap the justice to say that I do not believe that he was present at the killing of the Indians at Yellow Creek. But there is not the least doubt in my mind, that the massacre at Yellow Creek was brought on by the two transactions first stated.

All the transactions, which I have related happened in the latter end of April 1774; and there can scarcely be a doubt that they were the cause of the war which immediately followed, commonly called Dunmore's War.

I am with much esteem, yours, &c.,
EBENEZER ZANE.

The certificate of William Huston of Washington county, in the State of Pennsylvania, communicated by David Riddick, Esquire, Prothonotary of Washington county, Pennsylvania; who in the letter enclosing it says "Mr. William Huston is a man of established reputation in point of integrity."

I William Huston of Washington county, in the State of Pennsylvania, do hereby certify to whom it may concern, that in the year 1774, I resided at Catfishes camp, on the main path from Wheeling to Redstone; that Michael Cresap, who resided on or near the Potomac river, on his way up from the river Ohio, at the head of a party of armed men, lay some time at my cabin.

I had previously heard the report of Mr. Cresap having killed 2 some Indians, said to be the relations of "Logan" an Indian Chief. In a variety of conversations with several of Cresap's party, they boasted of the deed; and that in the presence of their chief. They acknowledged they had fired first on the Indians. They had with them one man on a litter, who was in the skirmish.

I do further certify that, from what I learned from the party themselves, I then formed the opinion, and have not had any reason to change the opinion since, that the killing, on the part of the whites, was what I deem the grossest murder. I further certify that some of
 3 the party, who afterwards killed some women and other Indians at Baker's bottom, also lay at my cabin, on their march to the interior part of the country; they had with them a little girl, whose life had been spared by the interference of some more humane than the rest. If necessary I will make affidavit to the above to be true. Certified at Washington, this 18th day of April, Anno Domini, 1798.

WILLIAM HUSTON.

The certificate of Jacob Newland, of Shelby County, Kentucky, communicated by the Honorable Judge Innes, of Kentucky.

In the year 1774, I lived on the waters of Short Creek, a branch of the Ohio, twelve miles above Wheeling. Some time in June or in July of that year, Capt. Michael Cresap raised a party of men, and came out under Col. M'Daniel, of Hampshire County, Virginia, who commanded a detachment against the Wappotommaka towns on the Muskinghum. I met with Capt. Cresap, at Redstone fort, and entered his company. Being very well acquainted with him, we conversed freely; and he,
 2 among other conversations, informed me several times of falling in with some Indians on the Ohio some distance below the mouth of Yellow Creek, and killed two or three of them; and that this murder
 3 was before that of the Indians by Great-house and others, at Yellow Creek. I do not recollect the reason which Capt. Cresap assigned for committing the act. but never understood that the Indians gave any offence. Certified under my hand this 15th day of November, 1799, being an inhabitant of Shelby county, and State of Kentucky.

JACOB NEWLAND.

The Certificate of John Anderson, a merchant in Fredericksburg, Virginia; communicated by Mann Page, Esquire, of Mansfield, near Fredericksburg, who in the letter accompanying it, says, "Mr. John Anderson has for many years past been settled in Fredericksburg, in the mercantile line. I have known him in prosperous and adverse situations. He has always shown the greatest degree of Equanimity, his honesty and veracity are unimpeachable. These things can be attested by all the respectable part of the town and neighborhood of Fredericksburg."

Mr. John Anderson, a merchant in Fredericksburg, says, that in the year 1774, being a trader in the Indian country, he was at Pittsburg, to which place he had a cargo brought up the river in a boat navigated by a Delaware Indian and a white man. That on their return down the river, with a cargo belonging to Messrs. Butler, Michael Cresap fired on the boat, and killed the Indian, after which two men of the name of Gatewood, and others of the name of Tumblestone,¹ who lived on the opposite side of the river from the Indians, with whom they were on the most friendly terms, invited a party of them to come over and drink with him; and that, when the Indians were drunk, they murdered them to the number of six, among whom was Logan's mother. That five other Indians uneasy at the absence of their friends, came over the river to inquire after them; when they were fired upon, and two were killed, and the others wounded. This was the origin of the war.

I certify the above to be true to the best of my recollection.

Attest DAVID BLAIR, 30th June, 1798. JOHN ANDERSON.

The Deposition of James Chambers, communicated by David Riddick, Esquire, Prothonotary of Washington county, Pennsylvania, who, in the letter enclosing it, shows that he entertains the most perfect confidence in the truth of Mr. Chambers.

WASHINGTON COUNTY, ss.

Personally came before me Samuel Shannon, Esquire, one of the Commonwealth Justices for the County of Washington in the State of Pennsylvania, James Chambers, who, being sworn according to law, deposeth and saith that in the spring of the year 1774, he resided on the frontier near Baker's bottom on the Ohio; that he had an intimate companion, with whom he sometimes lived, named Edward King; that a report reached them that Michael Cresap had killed some Indians near Grave Creek, friends to an Indian, known by the name of "Logan;" that other of his friends, following down the river, having received intelligence, and fearing to proceed, lest Cresap might fall in with them, encamped near the mouth of Yellow Creek, opposite Baker's bottom; that Daniel Great-house had determined to kill them; had made the secret known to the deponent's companion, King; that the deponent was earnestly solicited to be of the party, and, as an inducement, was told that they would get a great deal of plunder; and

¹ The proper pronounciation of Tomlinson, which was the real name.

further, that the Indians would be made drunk by Baker, and that little danger would follow the expedition. The deponent refused having any hand in killing unoffending people. His companion, King, went with Great-house, with divers others, some of whom had been collected at a considerable distance under an idea that Joshua Baker's family was in danger from the Indians, as war had been commenced between Cresap and them already; that Edward King, as well as others of the party, did not conceal from the deponent the most minute circumstances of this affair; they informed him that Great-house, concealing his people, went over to the Indian encampments and counted their number, and found that they were too large a party to attack with his strength; that he then requested Joshua Baker, when any of them came to his house, (which they had been in the habit of,) to give them what rum they could drink, and to let him know when they were in a proper train, and that he would then fall on them; that accordingly they found several men and women at Baker's house; that one of these women had cautioned Great-house, when over in the Indian camp, that he had better return home, as the Indian men were drinking, and that having heard of Cresap's attack on their relations down the river, they were angry, and, in a friendly manner, told him to go home. Great-house, with his party, fell on them, and killed
4 all except a little girl, which the deponent saw with the party after the slaughter; that the Indians in the camp hearing the firing, manned two canoes, supposing their friends at Baker's to be attacked, as was supposed; the party under Great-house prevented their landing by a well-directed fire, which did execution in the canoes; that Edward King showed the deponent one of the scalps. The deponent further saith, that the settlements near the river broke up, and he the deponent immediately repaired to Catfish's camp, and lived some time with Mr. William Huston; that not long after his arrival, Cresap, with his party, returning from the Ohio, came to Mr. Huston's and tarried
2 some time; that in various conversations with the party, and in particular with a Mr. Smith, who had one arm only, he was told that the Indians were acknowledged and known to be Logan's friends which they had killed, and that he heard the party say, that Logan would probably avenge their deaths.

They acknowledged that the Indians passed Cresap's encampment on the bank of the river in a peaceable manner, and encamped below him; that they went down and fired on the Indians and killed several; that the survivors flew to their arms and fired on Cresap, and
2 wounded one man, whom the deponent saw carried on a litter by
3 the party; that the Indians killed by Cresap were not only Logan's

relations, but of the women killed at Baker's one was said and generally believed to be Logan's sister. The deponent further saith, that on the relation of the attack by Cresap on the unoffending Indians, he exclaimed in their hearing, that it was an atrocious murder; on which Mr. Smith threatened the deponent with the tomahawk; so that he was obliged to be cautious, fearing an injury, as the party appeared to have lost, in a great degree, sentiments of humanity as well as the effects of civilization. Sworn and subscribed at Washington, the 20th day of April, Anno Domini 1798.

Before SAMUEL SHANNON.

JAMES CHAMBERS.

WASHINGTON COUNTY, ss.

I, David Reddick, prothonotary of the court of common pleas, SEAL. for the county of Washington in the State of Pennsylvania, do certify that Samuel Shannon, Esq., before whom the within affidavit was made, was, at the time thereof, and still is, a justice of the peace in and for the county of Washington aforesaid; and that full credit is due to all his judicial acts as such as well in courts of justice as thereout.

In testimony whereof I have hereunto set my hand and affixed the seal of my office at Washington, the 26th day of April, Anno Dom. 1798.

DAVID REDDICK.

The certificate of Charles Polke, of Shelby County, in Kentucky, communicated by the Hon. Judge Innes, of Kentucky, who in the letter enclosing it, together with Newland's certificate, and his own declaration of the information given him by Baker, says, "I am well acquainted with John Newland, he is a man of integrity. Charles Polke and Joshua Baker both support respectable characters."

About the latter end of April or beginning of May, 1774, I lived on the waters of Cross creek, about sixteen miles from Joshua Baker, who lived on the Ohio, opposite the mouth of Yellow Creek. A number of persons collected at my house, and proceeded to the said Baker's and murdered several Indians, among whom was a woman said to be the sister of the Indian chief, Logan. The principal leader of the party was Daniel Great-house. To the best of my recollection the

cause which gave rise to the murder was a general idea that the Indians were meditating an attack on the frontiers. Capt. Michael Cresap was not of the party; but I recollect that some time before the perpetration of the above fact it was currently reported that Capt. Cresap had murdered some Indians on the Ohio, one or two, some distance below Wheeling.

Certified by me, an inhabitant of Shelby county and State of Kentucky, this 15th day of November, 1799. CHARLES POLKE.

The Declaration of the Hon. Judge Innes, of Frankfort, in Kentucky.

On the 14th of November, 1799, I accidentally met upon the road Joshua Baker, the person referred to in the certificate signed by Polke, who informed me that the murder of the Indians in 1774, opposite the mouth of Yellow Creek, was perpetrated at his house by thirty-two men, led on by Daniel Great-house; that twelve were killed and six or eight wounded; among the slain was a sister and other relations of the Indian chief, Logan. Baker says, Captain Michael Cresap was not of the party; that some days preceding the murder at his house two Indians left him and were on their way home; that they fell in with Capt. Cresap and a party of land improvers on the Ohio, and were murdered, if not by Cresap himself, with his approbation; he being the leader of the party, and that he had this information from Cresap.

HARRY INNES.

The Declaration of William Robinson.

William Robinson, of Clarksburg, in the county of Harrison, and State of Virginia, subscriber to these presents, declares that he was, in the year 1774, a resident on the west fork of Monongahela river, in the county then called West Augusta, and being in his field on the 12th of July, with two other men, they were surprised by a party of eight Indians, who shot down one of the others and made himself and the remaining one prisoners; this subscriber's wife and four children having been previously conveyed by him for safety to a fort about twenty-four miles off; that the principal Indian of the party which took them was Captain Logan; that Logan spoke English well, and very soon manifested a friendly disposition to this subscriber, and told him to be of good heart, that he would not be killed, but must go with him to his

town, where he would probably be adopted in some of their families; but above all things, that he must not attempt to run away; that in the course of the journey to the Indian town he generally endeavored to keep close to Logan, who had a great deal of conversation with him, always encouraging him to be cheerful and without fear; for that he would not be killed, but should become one of them; and constantly impressing on him not to attempt to run away; that in these conversations he always charged Capt. Michael Cresap with the murder of his family; that on his arrival in the town, which was on the 18th of July, he was tied to a stake and a great debate arose whether he should not be burnt; Logan insisted on having him adopted, while others contended to burn him; that at length Logan prevailed, tied a belt of wampum round him as the mark of adoption, loosed him from the post and carried him to the cabin of an old squaw, where Logan pointed out a person who he said was this subscriber's cousin; and he afterwards understood that the old woman was his aunt, and two others his brothers, and that he now stood in the place of a warrior of the family who had been killed at Yellow Creek; that about three days after this Logan brought him a piece of paper, and told him he must write a letter for him, which he meant to carry and leave in some house where he should kill somebody; that he made ink with gun powder, and the subscriber proceeded to write the letter by his direction, addressing Captain Michael Cresap in it, and that the purport of it was, to ask "why he had killed his people? That some time before they had killed his people at some place, (the name of which the subscriber forgets,) which he had forgiven; but since that he had killed his people again at Yellow Creek, and taken his cousin, a little girl, prisoner; that therefore he must war against the whites; but that he would exchange the subscriber for his cousin." And signed it with Logan's name, which letter Logan took and set out again to war; and the contents of this letter, as recited by the subscriber, calling to mind that stated by Judge Innes to have been left, tied to a war club, in a house where a family was murdered, and that being read to the subscriber, he recognizes it, and declares he verily believes it to have been the identical letter which he wrote, and supposes he was mistaken in stating as he has done before from memory, that the offer of exchange was proposed in the letter; that it is probable that it was only promised him by Logan, but not put in the letter; while he was with the old woman, she repeatedly endeavored to make him sensible that she had been of the party at Yellow Creek, and, by signs, showed him how they decoyed her friends over the river to drink, and when they were reeling and tumbling about, tomahawked them all, and that whenever she entered on

this subject she was thrown into the most violent agitations, and that he afterwards understood that, amongst the Indians killed at Yellow Creek, was a sister of Logan, very big with child, whom they ripped open, and stuck on a pole; that he continued with the Indians till the month of November, when he was released in consequence of the peace made by them with Lord Dunmore; that, while he remained with them, the Indians in general were very kind to him; and especially those who were his adopted relations; but above all, the old woman and family in which he lived, who served him with everything in their power, and never asked, or even suffered him to do any labor, seeming in truth to consider and respect him as the friend they had lost. All which several matters and things, so far as they are stated to be of his own knowledge, this subscriber solemnly declares to be true, and so far as they are stated on information from others, he believes them to be true. Given and declared under his hand at Philadelphia, this 28th day of February, 1800.

WILLIAM ROBINSON.

The deposition of Colonel William M'Kee, of Lincoln County, Kentucky, communicated by the Hon. John Brown, one of the Senators in Congress from Kentucky.

Colonel William M'Kee of Lincoln county, declareth, that in autumn, 1774, he commanded as a captain in the Bottetourt Regiment under Colonel Andrew Lewis, afterwards General Lewis; and fought in the battle at the mouth of Kanhaway, on the 10th of October in that year. That after the battle, Colonel Lewis marched the militia across the Ohio, and proceeded towards the Shawnee towns on Sciota; but before they reached the towns, Lord Dunmore, who was Commander-in-Chief of the army, and had, with a large part thereof, been up the Ohio about Hockhockin, when the battle was fought, overtook the militia, and informed them of his having since the battle concluded a treaty with the Indians; upon which the whole army returned.

And the said William declareth that, on the evening of that day on which the junction of the troops took place, he was in company with Lord Dunmore and several of his officers, and also conversed with several who had been with Lord Dunmore at the treaty; said William, on that evening, heard repeated conversations concerning an extraordinary speech at the treaty, or sent there by a chieftain of the Indians named Logan, and heard several attempts at a rehearsal of it. The speech as rehearsed excited the particular attention of said William, and the most striking members of it were impressed on his memory.

And he declares that when Thomas Jefferson's "Notes on Virginia" were published, and he came to peruse the same, he was struck with the speech of Logan as there set forth, as being substantially the same, and accordant with the speech he heard rehearsed in the camp as aforesaid.

Signed, WILLIAM M'KEE.

DANVILLE, December 18th, 1799.

We certify that Colonel William M'Kee this day signed the original certificate, of which the foregoing is a true copy, in our presence.

JAMES SPEED, Junior.

J. H. DEWEES.

The Certificate of the Honorable Stevens Thompson Mason, one of the Senators in Congress from the State of Virginia.

"Logan's Speech, delivered at the Treaty, after the battle in which Colonel Lewis was killed in 1774."

[Here follows a copy of the speech agreeing verbatim with that printed in Dixon and Hunter's Virginia Gazette of February 4, 1775, under the Williamsburg head. At the foot is this certificate.]

"The foregoing is a copy taken by me, when a boy, at school, in the year 1775, or at farthest in 1776, and lately found in an old pocket-book, containing papers and manuscripts of that period.

"January 20th, 1798.

STEVENS THOMPSON MASON."

A copy of Logan's speech, given by the late General Mercer, who fell in the battle of Trenton, January 1776, to Lewis Willis, Esquire, of Fredericksburg, in Virginia, upwards of twenty years ago, (from the date of February 1798,) communicated through Mann Page, Esquire.

"The speech of Logan, a Shawanese chief, to Lord Dunmore."

[Here follows a copy of the speech, agreeing verbatim with that in the Notes on Virginia.]

A copy of Logan's speech from the Notes on Virginia having been sent to Captain Andrew Rodgers, of Kentucky, he subjoined the following certificate:

In the year 1774 I was out with the Virginia Volunteers, and was in the battle at the mouth of Canhawee, and afterwards proceeded over

the Ohio to the Indian towns. I did not hear Logan make the above speech; but from the unanimous accounts of those in camp, I have reason to think that said speech was delivered to Dunmore. I remember to have heard the very things contained in the above speech, related by some of our people in camp at that time.

ANDREW RODGERS.

The declaration of Mr. John Heckewelder, for several years a missionary from the society of Moravians, among the western Indians.

In the spring of the year 1774, at a time when the interior part of the Indian country all seemed peace and tranquil, the villagers on the Muskingum were suddenly alarmed by two runners (Indians), who reported "that the Big Knife (Virginians) had attacked the Mingo settlement, on the Ohio, and butchered even the women with their children in their arms, and that Logan's family were among the slain." A day or two after this several Mingoes made their appearance; among whom were one or two wounded, who had in this manner effected their escape. Exasperated to a high degree, after relating the particulars of this transaction, (which for humanity's sake I forbear to mention,) after resting some time on the treachery of the Big Knives, of their barbarity to those who are their friends, they gave a figurative description of the perpetrators; named Cresap as having been at the head of this murderous act. They made mention of nine being killed, and two wounded; and were prone to take revenge on any person of a white color; for which reason the missionaries had to shut themselves up during their stay. From this time terror daily increased. The exasperated friends and relations of these murdered women and children, with the nations to whom they belonged, passed and repassed through the villages of the quiet Delaware towns, in search of white people, making use of the most abusive language to these (the Delawares), since they would not join in taking revenge. Traders had either to hide themselves, or try to get out of the country the best way they could. And even at this time, they yet found such true friends among the Indians, who, at the risk of their own lives, conducted them, with the best part of their property, to Pittsburg; although, (shameful to relate!) these benefactors were, on their return from this mission, waylaid, and fired upon by whites, while crossing Big Beaver in a canoe, and had one man, a Shawanese, named Silverheels, (a man of note in his nation,) wounded in the body. This exasperated the Shaw-

anese so much, that they, or at least a great part of them, immediately took an active part in the cause; and the Mingoës, (nearest connected with the former.) became unbounded in their rage. A Mr. Jones, son to a respectable family of this neighborhood (Bethlehem), who was then on his passage up Muskingum, with two other men, was fortunately espied by a friendly Indian woman, at the falls of Muskingum; who through motives of humanity alone, informed Jones of the nature of the times, and that he was running right in the hands of the enraged; and put him on the way, where he might perhaps escape the vengeance of the strolling parties. One of Jones's men, fatigued by travelling in the woods, declared he would rather die than remain longer in this situation; and hitting accidentally on a path, he determined to follow the same. A few hundred yards decided his fate. He was met by a party of about fifteen Mingoës, (and as it happened, almost within sight of White Eyes town,) murdered, and cut to pieces; and his limbs and flesh stuck up on the bushes. White Eyes, on hearing the scalp halloo, ran immediately out with his men, to see what the matter was; and finding the mangled body in this condition, gathered the whole and buried it. But next day when some of the above party found on their return the body interred, they instantly tore up the ground, and endeavored to destroy or scatter about, the parts at a greater distance. White Eyes, with the Delawares, watching their motions, gathered and interred the same a second time. The war party finding this out, ran furiously into the Delaware village, exclaiming against the conduct of these people, setting forth the cruelty of Cresap towards women and children, and declaring at the same time, that they would, in consequence of this cruelty, serve every white man they should meet with in the same manner. Times grew worse and worse, war parties went out and took scalps and prisoners, and the latter, in hopes it might be of service in saving their lives, exclaimed against the barbarous act which gave rise to these troubles and against the perpetrators. The name of Great-house was mentioned as having been accomplice to Cresap. So detestable became the latter name among the Indians, that I have frequently heard them apply it to the worst of things; also in quieting or stilling their children, I have heard them say, hush! Cresap will fetch you; whereas otherwise, they name the Owl. The warriors having afterwards bent their course more toward the Ohio, and down the same, peace seemed with us already on the return; and this became the case soon after the decided battle fought on the Kan-haway. Traders, returning now into the Indian country again, related the story of the above-mentioned massacre, *after the same manner, and with the same words*, we have heard it related hitherto. So the report

remained, and was believed by all who resided in the Indian country. So it was represented numbers of times, in the peaceable Delaware towns, by the enemy. So the Christian Indians were continually told they would one day be served. With this impression, a petty chief hurried all the way from Wabash in 1779, to take his relations (who were living with the peaceable Delawares near Coshachking) out of the reach of the Big Knives, in whose friendship he never more would place any confidence. And when this man found that his numerous relations would not break friendship with the Americans, nor be removed, he took two of his relations (women) off by force, saying, "The whole crop should not be destroyed; I will have seed out of it for a new crop;" alluding to, and repeatedly reminding those of the family of Logan, who he said had been real friends to the whites, and yet were cruelly murdered by them.

In Detroit, where I arrived the same Spring, the report respecting the murder of the Indians on the Ohio (amongst whom was Logan's family) was the same as related above; and on my return to the United States in the fall of 1786, and from that time, whenever and wherever in my presence, this subject was the topic of conversation, I found the report still the same; viz. that a person, bearing the name of Cresap, was the author, or perpetrator of this deed.

Logan was the second son of Shikellemus, a celebrated chief of the Cayuga nation. This chief, on account of his attachment to the English government, was of great service to the country, having the confidence of all the Six Nations, as well as that of the English, he was very useful in settling disputes, &c., &c. He was highly esteemed by Conrad Weisser, Esq., (an officer for government in the Indian department), with whom he acted conjunctly, and was faithful unto his death. His residence was at Shamokin, where he took great delight in acts of hospitality to such of the white people whose business led them that way.¹ His name and fame were so high on record, that Count Zinzendorf, when in this country in 1742, became desirous of seeing him, and actually visited him at his house in Shamokin.² About the year 1772, Logan was introduced to me by an Indian friend, as son to the late reputable chief Shikellemus, and as a friend to the white people. In the course of conversation I thought him a man of superior talents

¹ The preceding account of Shikellemus, (Logan's father,) is copied from manuscripts of the Rev. C. Pyrloeus, written between the years 1741 and 1748.

² See G. H. Hoskiel's history of the Mission of the United Brethren, &c. Part II. Chap. 11, Page 31.

than Indians generally were. The subject turning on vice and immorality, he confessed his too great share of this, especially his fondness for liquor. He exclaimed against the white people for imposing liquors upon the Indians; he otherwise admired their ingenuity; spoke of gentlemen, but observed the Indians unfortunately had but few of these as their neighbors, &c. He spoke of his friendship to the white people, wished always to be a neighbor to them, intended to settle on the Ohio, below Big Beaver; was (to the best of my recollection) then encamped at the mouth of this river, (Beaver,) urged me to pay him a visit, &c. Note. I was then living at the Moravian town on this river, in the neighborhood of Cuskuskee. In April, 1773, while on my passage down the Ohio for Muskingum, I called at Logan's settlement; where I received every civility I could expect from such of the family as were at home.

Indian reports concerning Logan, after the death of his family, ran to this; that he exerted himself during the Shawanese war, (then so called,) to take all the revenge he could, declaring he had lost all confidence in the white people. At the time of negotiation, he declared his reluctance in laying down the hatchet, not having (in his opinion) yet taken ample satisfaction; yet, for the sake of the nation, he would do it. His expressions, from time to time, denoted a deep melancholy. Life (said he) had become a torment to him: he knew no more what pleasure was: he thought it had been better if he had never existed, &c., &c. Report further states, that he became in some measure delirious, declared he would kill himself, went to Detroit, drank very freely, and did not seem to care what he did, and what became of himself. In this condition he left Detroit, and on his way between that place and Miami was murdered. In October, 1781, (while as prisoner on my way to Detroit,) I was shown the spot where this should have happened. Having had an opportunity since last June of seeing the Rev. David Zeisberger, senior, missionary to the Delaware nation of Indians, who had resided among the same on Muskingum, at the time when the murder was committed on the family of Logan, I put the following questions to him: first, who he had understood it was that had committed the murder on Logan's family? and secondly, whether he had any knowledge of a speech sent to Lord Dunmore by Logan, in consequence of this affair, &c. To which Mr. Zeisberger's answer was: That he had, from that time when this murder was committed to the present day, firmly believed the common report (which he had never heard contradicted) viz., that one Cresap was the author of the massacre; or that it was committed by his orders; and that he had known Logan as a boy, had frequently seen him from that time,

and doubted not in the least, that Logan had sent such a speech to Lord Dunmore on this occasion, as he understood from me had been published; that expressions of that kind from Indians were familiar to him; that Logan in particular was a man of quick comprehension, good judgment and talents. Mr. Zeisberger has been a missionary upwards of fifty years; his age is about eighty; speaks both the language of the Onondagoes and the Delawares; resides at present on the Muskingum, with his Indian congregation; and is beloved and respected by all who are acquainted with him.

JOHN HECKEWELDER.

From this testimony the following historical statement results:

In April or May, 1774, a number of people being engaged in looking out for settlements on the Ohio, information was spread among them, that the Indians had robbed some of the land-jobbers, as those adventurers were called. Alarmed for their safety, they collected together at Wheeling Creek. ¹Hearing there that there were two Indians and some traders a little above Wheeling, Captain Michael Cresap, one of the party, proposed to waylay and kill them. The proposition, though opposed, was adopted. A party went up the river, with Cresap at their head, and killed the two Indians.

²The same afternoon it was reported that there was a party of Indians on the Ohio, a little below Wheeling. Cresap and his party immediately proceeded down the river, and encamped on the bank. The Indians passed him peaceably, and encamped at the mouth of Grave Creek, a little below. Cresap and his party attacked them, and killed several. The Indians returned the fire, and wounded one of Cresap's party. Among the slain of the Indians were some of Logan's family. Colonel Zane indeed expresses a doubt of it; but it is affirmed by Huston and Chambers. Smith, one of the murderers, said they were known and acknowledged to be Logan's friends, and the party themselves generally said so; boasted of it in presence of Cresap; pretended no provocation; and expressed their expectations that Logan would probably avenge their deaths.

Pursuing these examples. ³Daniel Great-house, and one Tomlinson,

¹ First murder of the two Indians by Cresap.

² Second murder on Grave Creek.

³ Massacre at Baker's Bottom, opposite Yellow Creek, by Great-house.

who lived on the opposite side of the river from the Indians, and were in habits of friendship with them, collected, at the house of Polke, on Cross Creek, about 16 miles from Baker's Bottom, a party of 32 men. Their object was to attack a hunting encampment of Indians, consisting of men, women, and children, at the mouth of Yellow Creek, some distance above Wheeling. They proceeded, and when arrived near Baker's Bottom, they concealed themselves, and Great-house crossed the river to the Indian camp. Being among them as a friend, he counted them, and found them too strong for an open attack with his force. While here, he was cautioned by one of the women not to stay, for that the Indian men were drinking, and having heard of Cresap's murder of *their relations* at Grave Creek, were angry, and she pressed him in a friendly manner, to go home; whereupon, after inviting them to come over and drink, he returned to Baker's, which was a tavern, and desired that when any of them should come to his house he would give them as much rum as they would drink. When his plot was ripe, and a sufficient number of them were collected at Baker's, and intoxicated, he and his party fell on them and massacred the whole, except a little girl, whom they preserved as a prisoner. Among these was the very woman who had saved his life, by pressing him to retire from the drunken wrath of her friends, when he was spying their camp at Yellow Creek. Either she herself, or some other of the murdered women, was the sister of Logan, very big with child, and inhumanly and indecently butchered; and there were others of his relations who fell here.

The party on the other side of the river,¹ alarmed for their friends at Baker's, on hearing the report of the guns, manned two canoes and sent them over. They were received, as they approached the shore, by a well-directed fire from Great-house's party, which killed some, wounded others, and obliged the rest to put back. Baker tells us there were twelve killed, and six or eight wounded.

This commenced the war, of which Logan's war-club and note left in the house of a murdered family, was the notification. In the course of it, during the ensuing summer, a great number of innocent men, women, and children, fell victims to the tomahawk and scalping knife of the Indians, till it was arrested in the autumn following by the battle at Point Pleasant, and the pacification with Lord Dunmore, at which the speech of Logan was delivered.

Of the genuineness of that speech nothing need be said. It was known to the camp where it was delivered; it was given out by Lord Dunmore and his officers; it ran through the public papers of these

¹ Fourth murder, by Great-house.

States; was rehearsed as an exercise at schools; published in the papers and periodical works of Europe; and all this, a dozen years before it was copied into the Notes on Virginia. In fine, General Gibson concludes the question for ever, by declaring that he received it from Logan's hand, delivered it to Lord Dunmore, translated it for him, and that the copy in the Notes on Virginia is a faithful copy.

The popular account of these transactions, as stated in the Notes on Virginia, appears, on collecting exact information, imperfect and erroneous in its details. It was the belief of the day; but how far its errors were to the prejudice of Cresap, the reader will now judge. That he, and those under him, murdered two Indians above Wheeling; that they murdered a large number at Grave Creek, among whom were a part of the family and relations of Logan, cannot be questioned; and as little that this led to the massacre of the rest of the family at Yellow Creek. Logan imputed the whole to Cresap, in his war-note and peace-speech: the Indians generally imputed it to Cresap: Lord Dunmore and his officers imputed it to Cresap: the country, with one accord, imputed it to him: and whether he were innocent, let the universal verdict now declare.

The declaration of John Sappington, received after the publication of the preceding Appendix.

I, JOHN SAPPINGTON, declare myself to be intimately acquainted with all the circumstances respecting the destruction of Logan's family, and do give in the following narrative, a true statement of that affair:

"Logan's family (if it was his family) was not killed by Cresap, nor with his knowledge, nor by his consent, but by the Great-houses and their associates. They were killed 30 miles above Wheeling, near the mouth of Yellow Creek. Logan's camp was on one side of the river Ohio, and the house, where the murder was committed, opposite to it on the other side. They had encamped there only four or five days, and during that time had lived peaceably and neighbourly with the whites on the opposite side, until the very day the affair happened. A little before the period alluded to, letters had been received by the inhabitants from a man of great influence in that country, and who was then, I believe, at Capteener, informing them that war was at hand, and desiring them to be on their guard. In consequence of those letters and other rumors of the same import, almost all the inhabitants fled for safety into the settlements. It was at the house of one Baker the murder was committed. Baker was a man who sold rum, and the Indians had made frequent visits at his house, induced, probably, by their fondness for that liquor. He had been particularly desired by Cresap to remove and take away his rum, and he was actually preparing to move at the time of the murder. The evening before, a squaw came over to Baker's house, and by her crying seemed to be in great distress. The cause of her uneasiness being asked, she refused to tell; but getting Baker's wife alone, she told her that the Indians were going to kill her and all her family the next day, that she loved her, did not wish her to be killed, and therefore told her what was intended, that she might save herself. In consequence of this information, Baker got a number of men, to the amount of twenty-one, to come to his house, and they were all there before morning. A council was held, and it was determined that the men should lie concealed in the back apartment; that if the Indians did come, and behaved themselves peaceably, they should not be molested; but if not, the men were to show themselves, and act accordingly. Early in the morning, seven Indians, four men and three squaws, came over. Logan's brother was one of them. They immediately got rum, and all, except Logan's brother, became very much intoxicated. At this time all the men were coti-

cealed, except the man of the house, Baker, and two others who staid out with him. Those Indians came unarmed. After some time Logan's brother took down a coat and hat, belonging to Baker's brother-in-law, who lived with him, and put them on, and setting his arms a-kimbo, began to strut about, till at length coming up to one of the men, he attempted to strike him, saying, "White man, son of a bitch." The white man, whom he treated thus, kept out of his way for some time; but growing irritated, he jumped to his gun, and shot the Indian as he was making to the door with the coat and hat on him. The men who lay concealed then rushed out, and killed the whole of them, excepting one child, which I believe is alive yet. But before this happened, one with two, the other with five Indians, all naked, painted, and armed completely for war, were discovered to start from the shore on which Logan's camp was. Had it not been for this circumstance, the white men would not have acted as they did; but this confirmed what the squaw had told before. The white men, having killed, as aforesaid, the Indians in the house, ranged themselves along the bank of the river, to receive the canoes. The canoe with the two Indians came near, being the foremost. Our men fired upon them and killed them both. The other canoe then went back. After this, two other canoes started, the one containing eleven, the other seven, Indians, painted and armed as the first. They attempted to land below our men, but were fired upon; had one killed, and retreated, at the same time firing back. To the best of my recollection there were three of the Great-houses engaged in this business. This is a true representation of the affair from beginning to end. I was intimately acquainted with Cresap, and know he had no hand in that transaction. He told me himself afterwards, at Redstone Old Fort, that the day before Logan's people were killed, he, with a small party, had an engagement with a party of Indians on Capteener, about forty-four miles lower down. Logan's people were killed at the mouth of Yellow Creek, on the 24th of May, 1774; and the 23d, the day before, Cresap was engaged as already stated. I know, likewise, that he was generally blamed for it, and believed by all who were not acquainted with the circumstances to have been the perpetrator of it. I know that he despised and hated the Great-houses ever afterwards on account of it. I was intimately acquainted with General Gibson, and served under him during the late war, and I have a discharge from him now lying in the land-office at Richmond, to which I refer any person for my character, who might be disposed to scruple my veracity. I was likewise at the treaty held by Lord Dunmore with the Indians, at Chelicothe. As for the speech said to have been delivered by Logan

on that occasion, it might have been, or might not, for anything I know, as I never heard of it till long afterwards. I do not believe that Logan had any relations killed, except his brother. Neither of the squaws who were killed was his wife. Two of them were old women, and the third, with her child, which was saved, I have the best reason in the world to believe was the wife and child of General Gibson. I know he educated the child, and took care of it, as if it had been his own. Whether Logan had a wife or not, I can't say; but it is probable that as he was a chief, he considered them all as his people. All this I am ready to be qualified to at any time.

Attest, SAMUEL M'KEE, Junr.

JOHN SAPPINGTON.

MADISON COUNTY, Feb. 13th, 1800.

I do certify further, that the above-named John Sappington told me, at the same time and place at which he gave me the above narrative, that he himself was the man who shot the brother of Logan in the house, as above related, and that he likewise killed one of the Indians in one of the canoes, which came over from the opposite shore.

He likewise told me, that Cresap never said an angry word to him about the matter, although he was frequently in company with Cresap, and indeed had been, and continued to be, in habits of intimacy with that gentleman, and was always befriended by him on every occasion. He further told me, that after they had perpetrated the murder, and were flying into the settlement, he met with Cresap (if I recollect right, at Redstone Old Fort); and gave him a scalp, a very large fine one, as he expressed it, and adorned with silver. This scalp, I think he told me, was the scalp of Logan's brother; though as to this I am not absolutely certain.

The Bank of Wisdom publish all works of human interest, we scorn no ideas of serious thought. Ideas and beliefs some may think “dangerous” and would want to hide, we seek to reproduce and distribute for the consideration and intellectual development of every human mind. When peace and understanding is established throughout the world it might be said that humanity has achieved an acceptable degree of civilization, but until that longed for time we must never cease to search for greater truth and a higher morality for humanity.

The wealth of thought hidden in obscure books of past ages makes festinating reading, and as much of this original thought was suppressed by the sheer power of the established systems of the time, these ideas may well be those needed for the future progress. One thing is certain, the belief systems we have are not the ones we need.

INTRODUCTION.

THE Constitution of the United States, establishing a Legislature for the Union under certain forms, authorizes each branch of it "to determine the rules of its own proceedings." The Senate have accordingly formed some rules for its own government: but those going only to few cases, they have referred to the decision of their President, without debate and without appeal, all questions of order arising either under their own rules, or where they have provided none. This places under the discretion of the President a very extensive field of decision, and one which, irregularly exercised, would have a powerful effect on the proceedings and determinations of the House. The President must feel, weightily and seriously, this confidence in his discretion: and the necessity of recurring, for its government, to some known system of rules, that he may neither leave himself free to indulge caprice or passion, nor open to the imputation of them. But to what system of rules is he to recur, as supplementary to those of the Senate? To this there can be but one answer: to the systems of regulations adopted by the government of some one of the parliamentary bodies within these States, or of that which has served as a prototype to most of them. This last is the model which we have studied; while we are little acquainted with the modifications of it in our several States. It is deposited, too, in publications possessed by many, and open to all. Its rules are probably as wisely constructed for governing the debates of a considerative body, and obtaining its true sense, as any which can become known to us; and the acquiescence of the Senate hitherto under the references to them, has given them the sanction of their approbation.

Considering, therefore, the law of proceedings in the Senate as composed of the precepts of the Constitution, the regulations of the Senate, and where these are silent, of the rules of Parliament, I have here endeavored to collect and digest so much of these as is called for in ordinary practice, collating the parliamentary with the senatorial rules, both where they agree and where they vary. I have done this, as well to have them at hand for my own government, as to deposit with the Senate the standard by which I judge and am willing to be judged. I could not doubt the necessity of quoting the sources of my informa-

tion; among which Mr. Hatsel's most valuable book is pre-eminant; but as he has only treated some general heads, I have been obliged to recur to other authorities, in support of a number of common rules of practice to which his plan did not descend. Sometimes each authority cited supports the whole passage. Sometimes it rests on all taken together. Sometimes the authority goes only to a part of the text, the residue being inferred from known rules and principles. For some of the most familiar forms, no written authority is or can be quoted; no writer having supposed it necessary to repeat what all were presumed to know. The statement of these must rest on their notoriety.

I am aware, that authorities can often be produced in opposition to the rules which I lay down as parliamentary. An attention to dates will generally remove their weight. The proceedings of Parliament in ancient times, and for a long while, were crude, multiform, and embarrassing. They have been, however, constantly advancing towards uniformity and accuracy; and have now obtained a degree of aptitude to their object, beyond which little is to be desired or expected.

Yet I am far from the presumption of believing, that I may not have mistaken the parliamentary practice in some cases; and especially in those minor forms, which, being practised daily, are supposed known to everybody, and therefore have not been committed to writing. Our resources in this quarter of the globe, for obtaining information on that part of the subject, are not perfect. But I have begun a sketch, which those who come after me will successively correct and fill up, till a code of rules shall be formed for the use of the Senate, the effects of which may be accuracy in business, economy of time, order, uniformity, and impartiality.

NOTE.

The rules and practices peculiar to the Senate are printed in small type. Those of Parliament are in large.

A MANUAL OF PARLIAMENTARY PRACTICE.¹

IMPORTANCE OF RULES.

SECTION I.

THE IMPORTANCE OF ADHERING TO RULES.

MR. ONSLOW, the ablest among the Speakers of the House of Commons, used to say, "It was a maxim he had often heard when he was a young man, from old and experienced members, that nothing tended more to throw power into the hands of administration and those who acted with the majority of

[JUDGE WYTHE.]

¹ PHILADELPHIA, February 28, 1800.

MY DEAR SIR:—I know how precious your time is, and how exclusively you devote it to the duties of your office, yet I venture to ask a few hours or minutes of it on motives of public service, as well as private friendship. I will explain the occasion of the application. You recollect enough of the old Congress to remember that their mode of managing the business of the House was not only unparliamentary, but that the forms were so awkward and inconvenient that it was impossible sometimes to get at the true sense of the majority. The House of Representatives of the United States are now pretty much in the same situation. In the Senate it is in our power to get into a better way; our ground is this: The Senate have established a few rules for their government, and have subjected the decisions on these and on *all other points of order* without debate, and without appeal, to the judgment of their President, he, for his own sake, as well as theirs, must prefer recurring to some system of rules ready formed; and there can be no question that the Parliamentary rules are the best known

the House of Commons, than a neglect of, or departure from, the rules of proceeding; that these forms,

to us for managing the debates, and obtaining the sense of a deliberative body. I have therefore made them my rule of decision, rejecting those of the old Congress altogether, and it gives entire satisfaction to the Senate; insomuch that we shall not only have a good system there, but probably, by the example of its effects, produce a conformity in the other branch. But in the course of this business I find perplexities, having for twenty years been out of deliberative bodies, and become rusty as to many points of proceeding; and so little has the Parliamentary branch of the law been attended to, that I not only find no person here, but not even a book to aid me. I had, at an early period of life, read a good deal on the subject, and common-placed what I read. This common-place has been my pillar; but there are many questions of practice on which that is silent, some of them are so minute indeed, and belong too much to every-day's practice, that they have never been thought worthy of being written down, yet from desuetude they have slipped my memory. You will see by the enclosed paper what they are. I know with what pain you write: therefore I have left a margin in which you can write a simple negative or affirmative opposite every position, or perhaps, with as little trouble, correct the text by striking out or interlining. This is what I have earnestly to solicit from you, and I would not have given you the trouble if I had had any other resource. But you are, in fact, the only spark of Parliamentary science now remaining to us. I am the more anxious, because I have been forming a manual of Parliamentary law which I mean to deposit with the Senate as the standard by which I judge, and am willing to be judged. Though I should be opposed to its being printed, yet it may be done perhaps without my consent; and in that case I should be sorry indeed should it go out with errors that a Tyro should not have committed. And yet it is precisely those to which I am most exposed. I am less afraid as to important matters, because for them I have printed authorities; but it is those small matters of daily practice, which twenty years ago were familiar to me, but have in that time escaped my memory. I hope under these circumstances you will pardon the trouble I propose to you in the enclosed paper. I am not pressed in time, so that your leisure will be sufficient for me. Accept the salutations of grateful and sincere friendship and attachment, and many prayers for your health and happiness from, Dear Sir, Yours affectionately.

as instituted by our ancestors, operated as a check, and control, on the actions of the majority; and that they were, in many instances, a shelter and protection to the minority, against the attempts of power.”

So far the maxim is certainly true, and is founded in good sense, that as it is always in the power of the majority, by their numbers, to stop any improper measures proposed on the part of their opponents, the only weapons by which the minority can defend themselves against similar attempts from those in power, are the forms and rules of proceeding, which have been adopted as they were found necessary from time to time, and are become the law of the house; by a strict adherence to which, the weaker party can only be protected from those irregularities and abuses which these forms were intended to check, and which the wantonness of power is but too often apt to suggest to large and successful majorities.—2 *Hats*. 171, 172.

And whether these forms be in all cases the most rational or not, is really not of so great importance. It is much more material that there should be a rule to go by, than what that rule is; that there may be a uniformity of proceeding in business, not subject to the caprice of the Speaker, or captiousness of the members. It is very material that order, decency, and regularity be preserved in a dignified public body.—2 *Hats*. 149. And in 1698 the Lords say the reasonableness of what is desired is never considered by us, for we are bound to consider nothing but what

is usual. Matters of form are essential to government, and 'tis of consequence to be in the right. All the reason for forms is custom, and the law of forms is practice; the reason is quite out of doors. Some particular customs may not be grounded on reason, and no good account can be given of them; and yet many nations are zealous for them; and Englishmen are as zealous as any others to pursue their old forms and methods.—4 *Hats*. 258.

SECTION II.

LEGISLATURE.

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.—*Constitution of the United States*, Article I., Section 1.

The Senators and Representatives shall receive a compensation for their services, to be ascertained by law, and paid out of the treasury of the United States.—*Const. U. S.*, Art. I. Sec. 6.

For the powers of Congress, see the following Articles and Sections of the Constitution of the United States:—Art. I., Sec. 4, 7, 8, 9.—Art. II., Sec. 1, 2.—Art. III., Sec. 3.—Art. IV., Sec. 1, 3, 5.—And all the Amendments.

SECTION III.

PRIVILEGE.

The privileges of the members of Parliament, from small and obscure beginnings, have been advancing for centuries, with a firm and never-yielding pace. Claims seem to have been brought forward from time to time, and repeated till some example of their admission enabled them to build law on that

example. We can only, therefore, state the point of progression at which they now are. It is now acknowledged, 1st. That they are at all times exempted from question elsewhere, for anything said in their own house: that during the time of privilege, 2d. Neither a member himself, his wife,¹ or his servants, [*familiares sui*] for any matter of their own, may be² arrested on mesne process, in any civil suit: 3d. Nor be detained under execution, though levied before the time of privilege: 4th. Nor impleaded, cited or subpoenaed, in any court: 5th. Nor summoned as a witness or juror: 6th. Nor may their lands or goods be distrained: 7th. Nor their persons assaulted, or characters traduced. And the period of time, covered by privilege, before and after the session, with the practice of short prorogations under the connivance of the Crown; amounts in fact to a perpetual protection against the course of justice. In one instance, indeed, it has been relaxed by 10 G. 3, c. 50, which permits judiciary proceedings to go on against them. That these privileges must be continually progressive, seems to result from their rejecting all definition of them; the doctrine being, that "their dignity and independence are preserved by keeping their privileges indefinite;" and that "the maxims upon which they proceed, together with the method of proceeding, rest entirely in their own breast, and are not defined and ascertained by any particular stated laws."—1 *Blackstone*, 163, 164.

¹ Order of the House of Commons, 1663, July 16.

² *Elsynge*, 217; 1 *Hats*. 21; 1 *Grey's Deb.* 133.

It was probably from this view of the encroaching character of privilege, that the framers of our Constitution, in their care to provide that the laws shall bind equally on all, and especially that those who make them shall not be exempt themselves from their operation, have only privileged "Senators and Representatives" themselves from the single act of arrest in all cases except treason, felony, and breach of the peace, during their attendance at the session of their respective Houses, and in going to and returning from the same, and from being questioned in any other place for any speech or debate in either House.—*Const. U. S.*, Art. I. Sec. 6. Under the general authority "to make all laws necessary and proper for carrying into execution the powers given them," *Const. U. S.*, Art. II., Sec. 8, they may provide by law the details which may be necessary for giving full effect to the enjoyment of this privilege. No such law being as yet made, it seems to stand at present on the following ground:—1. The act of arrest is void, *ab initio*, 2 *Stra.* 989.—2. The member arrested may be discharged on motion, 1 *Bl.* 166. 2. *Stra.* 990; or by Habeas Corpus under the Federal or State authority, as the case may be; or by a writ of privilege out of the Chancery, 2 *Stra.* 989, in those States which have adopted that part of the laws of England.—Orders of the House of Com. 1550, Feb. 20.—3. The arrest being unlawful, is a trespass for which the officer and others concerned are liable to action or indictment in the ordinary courts of justice, as in other cases of unauthorized arrest.—4. The court before which the process is returnable, is bound to act as in other cases of unauthorized proceeding, and liable also, as in other similar cases, to have their proceedings stayed or corrected by the Superior Courts.

The time necessary for going to and returning from Congress not being defined, it will of course be judged of in every particular case by those who will have to decide the case.

While privilege was understood in England to extend, as it does here, only to exemption from arrest *eundo, morando, et redeundo*, the House of Commons themselves decided that "a convenient time was to be understood."—1580—1 *Hats.* 99, 100. Nor is the law so strict in point of time as to require the party to set out immediately on his return, but allows him time to settle his private affairs, and to prepare for

his journey; and does not even scan his road very nicely, nor forfeit his protection for a little deviation from that which is most direct; some necessity perhaps constraining him to it.—2 *Stra.* 986, 987.

This privilege from arrest, privileges of course against all process, the disobedience is punishable by an attachment of the person; as a subpœna ad respondendum, or testificandum, or a summons on a jury; and with reason, because a member has superior duties to perform in another place.

When a Representative is withdrawn from his seat by summons, the 47,700 people whom he represents lose their voice in debate and vote, as they do in his voluntary absence: when a Senator is withdrawn by summons, his State loses half its voice in debate and vote, as it does in his voluntary absence. The enormous disparity of evil admits no comparison.

So far there will probably be no difference of opinion as to the privileges of the two Houses of Congress; but in the following cases it is otherwise. In Dec. 1795, the House of Representatives committed two persons of the names of Randall and Whitney, for attempting to corrupt the integrity of certain members, which they considered as a contempt and breach of the privileges of the House; and the facts being proved, Whitney was detained in confinement a fortnight, and Randall three weeks, and was reprimanded by the Speaker. In March, 1796, the House of Representatives voted a challenge given to a member of their House, to be a breach of the privileges of the House; the satisfactory apologies and acknowledgments being made, no further proceedings were had. The Editor of the *Aurora* having in his paper of Feb. 19, 1800, inserted some paragraphs defamatory to the Senate, and failed in his appearance, he was ordered to be committed. In debating the legality of this order, it was insisted in support of it, that every man, by the law of nature, and every body of men, possesses the right of self-defence; that all public functionaries are essentially invested with the powers of self-preservation; that they have an inherent right to do all acts necessary to keep themselves in a condition to discharge the trusts confided to them; that whenever authorities are given, the means of carrying

them into execution are given by necessary implication; that thus we see the British Parliament exercise the right of punishing contempts; all the State Legislatures exercise the same power; and every Court does the same; that if we have it not, we sit at the mercy of every intruder who may enter our doors or gallery, and by noise and tumult render proceeding in business impracticable; that if our tranquillity is to be perpetually disturbed by newspaper defamation, it will not be possible to exercise our functions with the requisite coolness and deliberation; and that we must therefore have a power to punish these disturbers of our peace and proceedings. To this it was answered, that the Parliament and Courts of England have cognizance of contempts by the express provisions of their law; that the State Legislatures have equal authority, because their powers are plenary; they represent their constituents completely, and possess all their powers, except such as their Constitutions have expressly denied them; that the Courts of the several States have the same powers by the laws of their States, and those of the Federal Government by the same State laws, adopted in each State by a law of Congress; that none of these bodies, therefore, derive those powers from natural or necessary right, but from express law; that Congress have no such natural or necessary power, nor any powers but such as are given them by the Constitution; that that has given them directly exemption from personal arrest, exemption from question elsewhere for what is said in the House, and power over their own members and proceedings; for these, no further law is necessary, the Constitution being the law; that, moreover, by that article of the Constitution which authorizes them "to make all laws necessary and proper for carrying into execution the powers vested by the Constitution in them," they may provide by law for an undisturbed exercise of their functions, *e. g.* for the punishment of contempts, of affrays or tumults in their presence, &c.; but, till the law be made, it does not exist; and does not exist, from their own neglect; that in the meantime, however, they are not unprotected, the ordinary magistrates and courts of law being open and competent to punish all unjustifiable disturbances or defamations, and even their own sergeant, who may appoint deputies ad libitum to aid him, 3 *Grey*, 59, 147, 255, is equal to the smallest disturbances; that, in requiring a previous law, the Constitution had regard to the inviolability of the citizen as well as of the member; as, should one House, in the regular form of a bill, aim at too broad privileges, it may be checked by the other, and both by the President; and also as, the law being promulgated, the citizen will know how to avoid offence. But if one branch may assume its own privileges without control; if it may do it on the

spur of the occasion, conceal the law in its own breast, and after the fact committed make its sentence both the law and the judgment on that fact; if the offence is to be kept undefined, and to be declared only *ex re nata*, and according to the passions of the moment, and there be no limitation either in the manner or measure of the punishment the condition of the citizen will be perilous indeed. Which of these doctrines is to prevail, time will decide. Where there is no fixed law, the judgment on any particular case is the law of that single case only, and dies with it. When a new and even a similar case arises, the judgment which is to make, and at the same time apply, the law, is open to question and consideration, as are all new laws. Perhaps Congress, in the meantime, in their care for the safety of the citizens, as well as that for their own protection, may declare by law what is necessary and proper to enable them to carry into execution the powers vested in them, and thereby hang up a rule for the inspection of all, which may direct the conduct of the citizen, and at the same time test the judgments they shall themselves pronounce in their own case.

Privilege from arrest takes place by force of the election; and before a return be made, a member elected may be named of a committee, and is to every intent a member, except that he cannot vote until he is sworn.—*Memor.* 107, 108.—*D'Ewes*, 642. *col.* 2. 653. *col.* 1.—*Pet. Miscel. Parl.* 119; *Lex. Parl. c.* 23; 2 *Hats.* 22. 62.

Every man must, at his peril, take notice who are members of either House returned of record.—*Lex. Parl.* 23, 4—*Inst.* 24.

On complaint of a breach of privilege, the party may either be summoned, or sent for in custody of the serjeant.—1 *Grey*, 88, 95.

The privilege of a member is the privilege of the House. If the member waive it without leave, it is a ground for punishing him, but cannot in effect waive the privilege of the House.—*Grey*, 140. 222.

For any speech or debate in either House, they shall not be questioned in any other place.—*Const. U. S.*, Art. I. Sec. 6. *S. P. protest of Commons to James I.* 1621. 2 *Rapin*. No. 54. p. 211, 212. But this is restrained to things done in the House in a Parliamentary course, 1 *Rush*, 663.—For he is not to have privilege contra morem parliamentarium, to exceed the bounds and limits of his place and duty.—*Com.* p.

If an offence be committed by a member in the House, of which the House has cognizance, it is an infringement of their right for any person or court to take notice of it, till the House has punished the offender, or referred him to a due course.—*Lex. Parl.* 63.

Privilege is in the power of the House, and is a restraint to the proceeding of inferior courts; but not of the House itself.—2 *Nelson*, 450; 2 *Grey*, 399. For whatever is spoken in the House, is subject to the censure of the House; and offences of this kind have been severely punished, by calling the person to the bar to make submission, committing him to the Tower, expelling the House, &c.—*Scob.* 72; *Lex. Parl.* c. 22.

It is a breach of order, for the Speaker to refuse to put a question which is in order.—*Hats.* 175, 176; 5 *Grey*, 133.

And even in cases of treason, felony, and breach of the peace, to which privilege does not extend as to substance; yet, in Parliament, a member is privi-

leged as to the mode of proceeding. The case is first to be laid before the House, that it may judge of the fact, and of the grounds of the accusation, and how far forth the manner of the trial may concern their privilege. Otherwise it would be in the power of other branches of the government, and even of every private man, under pretences of treason, &c., to take any man from his service in the House; and so as many, one after another, as would make the House what he pleaseth.—*Decision of the Commons on the King's declaring Sir John Hotham a traitor*—4 *Rushw.* 586. So when a member stood indicted of felony, it was adjudged that he ought to remain of the House till conviction. For it may be any man's case, who is guiltless, to be accused and indicted of felony, or the like crime.—23 *El.* 1580.—*D'Ewes*, 283, col. 1.—*Lex. Parl.* 133.

When it is found necessary for the public service to put a member under arrest, or when, on any public inquiry, matter comes out which may lead to affect the person of a member, it is the practice immediately to acquaint the House, that they may know the reasons for such a proceeding, and take such steps as they think proper.—2 *Hats.* 259. Of which, see many examples.—2 *Hats.* 256, 257, 258. But the communication is subsequent to the arrest.—1 *Blackst.* 167.

It is highly expedient, says Hatsell, for the due preservation of the privileges of the separate branches of the Legislature, that neither should encroach on

the other, or interfere in any matter depending before them, so as to preclude, or even influence, that freedom of debate, which is essential to a free council. They are, therefore, not to take notice of any bills or other matters depending, or of votes that have been given, or of speeches that have been held, by the members of either of the other branches of the Legislature, until the same have been communicated to them in the usual Parliamentary manner.—2 *Hats.* 252; 4 *Inst.* 15; *Seld. Jud.* 63. Thus the King's taking notice of the bill for suppressing soldiers depending before the House, his proposing a provisional clause for a bill before it was presented to him by the two Houses, his expressing displeasure against some persons for matters moved in Parliament during the debate and preparation of a bill, were breaches of privilege.—2 *Nalson*, 743. And in 1783, December 17, it was declared a breach of fundamental privileges, &c., to report any opinion or pretended opinion of the King, on any bill or proceeding depending in either House of Parliament, with a view to influence the votes of the members.—2 *Hats.* 251, 6.

SECTION IV.

ELECTIONS.

The times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the place of choosing Senators.—*Const. U. S.* Art. I. Sec. 4.

Each House shall be the judge of the elections, returns, and qualifications of its own members.—*Const. U. S. Art. I. Sec. 5.*

SECTION V.

QUALIFICATIONS.

The Senate of the United States shall be composed of two Senators from each State, chosen by the Legislature thereof, for six years; and each Senator shall have one vote.

Immediately after they shall be assembled, in consequence of the first election, they shall be divided as equally as may be into three classes. The seats of the Senators of the first class shall be vacated at the end of the second year; of the second class, at the expiration of the fourth year; and of the third class, at the expiration of the sixth year; so that one-third may be chosen every second year; and if vacancies happen, by resignation or otherwise, during the recess of the Legislature of any State, the Executive thereof may make temporary appointments, until the next meeting of the Legislature, which shall then fill such vacancies.

No person shall be a Senator, who shall not have attained to the age of thirty years, and been nine years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State for which he shall be chosen.—*Const. U. S., Art. I. Sec. 3.*

The House of Representatives shall be composed of members chosen every second year by the people of the several States; and the electors in each State

shall have the qualifications requisite for electors of the most numerous branch of the State Legislature.

No person shall be a Representative who shall not have attained to the age of twenty-five years, and been seven years a citizen of the United States, and who shall not, when elected, be an inhabitant of that State in which he shall be chosen.

Representatives and direct taxes shall be apportioned among the several States which may be included within this Union, according to their respective numbers, which shall be determined by adding to the whole number of free persons, including those bound to service for a term of years, and excluding Indians not taxed, three-fifths of all other persons. The actual enumeration shall be made within three years after the first meeting of Congress of the United States, and within every subsequent term of ten years, in such manner as they shall by law direct. The number of Representatives shall not exceed one for every thirty thousand; but each State shall have at least one Representative.—*Const. U. S. Art. I. Sec. 2.*

The provisional apportionments of Representatives made in the Constitution in 1787, and afterwards by Congress, were as follows:—

	1787	1793	1801	1813
New Hampshire,	3	4	5	6
Massachusetts,	8	14	17	20
Rhode Island,	1	2	2	2
Connecticut,	5	7	7	7
Vermont,	2	6	6
New York,	6	10	17	27
New Jersey,	4	5	6	6

	1787	1793	1801	1813
Pennsylvania,	8	13	18	23
Delaware,	1	1	1	2
Maryland,	6	8	9	9
Virginia,	10	19	22	23
Kentucky,	2	3	10
Tennessee,	1	6
North Carolina,	5	10	12	13
South Carolina,	5	6	8	9
Georgia,	3	2	4	6
Ohio,	6

When vacancies happen in the representation from any State, the executive authority thereof shall issue writs of election to fill such vacancies.—*Const. U. S. Art. I. Sec. 2.*

No Senator or Representative shall, during the time for which he was elected, be appointed to any civil office under the authority of the United States, which shall have been created, or the emoluments whereof shall have been increased during such time; and no person holding any office under the United States shall be a member of either house during his continuance in office.—*Const. U. S. Art. I. Sec. 6.*

SECTION VI.

QUORUM.

A majority of each House shall constitute a quorum to do business; but a smaller number may adjourn from day to day, and may be authorized to compel the attendance of absent members, in such manner, and under such penalties, as each house may provide.—*Const. U. S. Art. I. Sec. 5.*

In general, the chair is not to be taken till a quorum for business is present; unless, after due waiting, such a quorum be despaired of, when the chair may be taken, and the House adjourned. And whenever, during business, it is observed that a quorum is not present, any member may call for the House to be counted; and being found deficient, business is suspended.—2 *Hats.* 125, 126.

The President having taken the chair, and a quorum being present, the journal of the preceding day shall be read to the end, that any mistake may be corrected that shall have been made in the entries.—*Rules of the Senate*, 1.

SECTION VII.

CALL OF THE HOUSE.

On a call of the House, each person rises up as he is called, and answereth; the absentees are then only noted, but no excuse to be made till the House be fully called over. Then the absentees are called a second time, and if still absent, excuses are to be heard.—*Ord H. of C.* 92.

They rise that their persons may be recognized; the voice, in such a crowd, being an inefficient verification of their presence. But in so small a body as the Senate of the United States, the trouble of rising cannot be necessary.

Orders for calls on different days may subsist at the same time.—2 *Hats.* 72.

SECTION VIII.

ABSENCE.

No member shall absent himself from the service of the Senate without leave of the Senate first obtained. And in case a less number than a quorum of the Senate shall convene, they are hereby authorized to send the serjeant-at-arms, or any other person or persons by them authorized, for any or all absent members, as the majority of such members present shall agree, at the expense of such absent members respectively, unless such excuse for non-attendance shall be made, as the Senate, when a quorum is convened, shall judge sufficient, and in that case the expense shall be paid out of the contingent fund. And this rule shall apply as well to the first convention of the Senate, at the

legal time of meeting, as to each day of the session, after the hour is arrived to which the Senate stood adjourned.—*Rule 19.*

SECTION IX.

SPEAKER.

The Vice-President of the United States shall be President of the Senate, but shall have no vote unless they be equally divided.—*Const. U. S. Art. I. Sec. 3.*

The Senate shall choose their other officers, and also a President pro tempore in the absence of the Vice-President, or when he shall exercise the office of President of the United States.—*Const. U. S. Art. I. Sec. 3.*

The House of Representatives shall choose their Speaker and other officers.—*Const. U. S. Art. I. Sec. 3.*

When but one person is proposed, and no objection made, it has not been usual in Parliament to put any question to the House; but without a question, the members proposing him, conduct him to the chair. But if there be objection, or another proposed, a question is put by the clerk.—2 *Hats.* 168. As are also questions of adjournment.—6 *Grey*, 406. Where the House debated and exchanged messages and answers with the King for a week, without a Speaker, till they were prorogued. They have done it *de die in diem* for 14 days.—1 *Chand.* 331, 335.

In the Senate, a President pro tempore, in the absence of the Vice-President, is proposed and chosen by ballot. His office is understood to be determined on the Vice-President's appearing and taking the chair, or at the meeting of the Senate after the first recess.—*Vide Rule 23.*

Where the Speaker has been ill, other Speakers pro tempore have been appointed. Instances of this

are, 1 *H.* 4, Sir John Cheney, and for Sir William Sturton, and in 15 *H.* 6, Sir John Tyrrell, in 1656, Jan. 27; 1658, Mar. 9; 1659, Jan. 13.

Sir Job Charlton ill, Seymour chosen, 1673, Feb. 18.

Seymour being ill, Sir Robert Sawyer chosen, 1678, April 15.

Sawyer being ill, Seymour chosen.

} Not merely
pro tempore.
— 1 *Chand.*
169, 276, 7.

Thorpe in execution, a new Speaker chosen—31 *H.* VI.—3 *Grey*, 11; and March 14, 1694, Sir John Trevor chosen. There have been no later instances.—2 *Hats.* 161.—4 *Inst.*—8 *Lex. Parl.* 263.

A Speaker may be removed at the will of the House, and a Speaker pro tempore appointed.—2 *Grey*, 186; 5 *Grey*, 134.

SECTION X.

ADDRESS.

The President shall, from time to time, give to the Congress information of the state of the Union, and recommend to their consideration such measures as he shall judge necessary and expedient.—*Const.* U. S. Art. II. Sec. 3.

A joint address from both Houses of Parliament is read by the Speaker of the House of Lords. It may be attended by both Houses in a body, or by a committee from each House, or by the two Speakers only. An address of the House of Commons only may be presented by the whole House, or by the Speaker,—9 *Grey*, 473; 1 *Chandler*, 298, 301; or by such particular members as are of the Privy Council.—2 *Hats.* 278.

SECTION XI.

COMMITTEES.

Standing committees, as of privileges and elections, &c., are usually appointed at the first meeting, to continue through the session. The person first named is generally permitted to act as chairman. But this is a matter of courtesy; every committee having a right to elect their own chairman, who presides over them, puts questions, and reports their proceedings to the House.—4 *Inst.* 11, 12; *Scob.* 7; 1 *Grey*, 112.

At these committees the members are to speak standing, and not sitting, though there is reason to conjecture it was formerly otherwise.—*D'Ewes*, 630, col. 1; 4 *Parl. Hist.* 440; 2 *Hats.* 77.

Their proceedings are not to be published, as they are of no force till confirmed by the House.—*Rushw. part 3, vol. 2*, 74; 3 *Grey*, 401; *Scob.* 39. Nor can they receive a petition but through the House.—9 *Grey*, 412.

When a committee is charged with an inquiry, if a member prove to be involved, they cannot proceed against him, but must make a special report to the House; whereupon the member is heard in his place, or at the bar, or a special authority is given to the committee to inquire concerning him.—9 *Grey*, 523.

So soon as the House sits, and a committee is notified of it, the chairman is in duty bound to rise

instantly, and the members to attend the service of the House.—2 *Nals.* 19.

It appears, that on joint committee of the Lords and Commons, each committee acted integrally in the following instances:—7 *Grey*, 261, 278, 286, 338; 1 *Chandler*, 357, 462. In the following instances it does not appear whether they did or not:—6 *Grey*, 129; 7 *Grey*, 213, 229, 321.

SECTION XII.

COMMITTEE OF THE WHOLE.

The speech, messages, and other matters of great concernment, are usually referred to a committee of the whole House—6 *Grey*, 311, where general principles are digested in the form of resolutions, which are debated and amended till they get into a shape which meets the approbation of a majority. These being reported and confirmed by the House, are then referred to one or more select committees, according as the subject divides itself into one or more bills.—*Scob.* 36, 44. Propositions for any charge on the people are especially to be first made in a committee of the whole.—3 *Hats.* 127. The sense of the whole is better taken in committee, because in all committees every one speaks as often as he pleases.—*Scob.* 49. They generally acquiesce in the chairman named by the Speaker; but, as well as all other committees, have a right to elect one, some member, by consent, putting the question.—*Scob.* 36; 3 *Grey*,

301. The form of going from the House into committee, is for the Speaker, on motion, to put the question that the House do now resolve itself into a committee of the whole, to take under consideration such a matter, naming it. If determined in the affirmative, he leaves the chair, and takes a seat elsewhere, as any other member; and the person appointed chairman seats himself at the clerk's table.—*Scob.* 36. Their quorum is the same as that of the House; and if a defect happens, the chairman, on a motion and question, rises, the Speaker resumes the chair, and the chairman can make no other report than to inform the House of the cause of their dissolution. If a message is announced during a committee, the Speaker takes the chair, and receives it, because the committee cannot.—2 *Hats*, 125, 126.

In a committee of the whole, the tellers, on a division, differing as to numbers, great heats and confusion arose, and dangers of a decision by the sword. The Speaker took the chair, the mace was forcibly laid on the table; whereupon, the members retiring to their places, the Speaker told the House "he had taken the chair without an order, to bring the House into order." Some excepted against it; but it was generally approved as the only expedient to suppress the disorder. And every member was required, standing up in his place, to engage that he would proceed no further, in consequence of what had happened in the grand committee, which was done.—3 *Grey*, 139.

A committee of the whole being broken up in disorder, and the chair resumed by the Speaker without an order, the House was adjourned. The next day the committee was considered as thereby dissolved, and the subject again before the House; and it was decided in the House, without returning into committee.—3 *Grey*, 130.

No previous question can be put in a committee; nor can this committee adjourn as others may; but if their business is unfinished, they rise on a question, the House is resumed, and the chairman reports that the committee of the whole have, according to order, had under their consideration such a matter, and have made progress therein; but not having time to go through the same, have directed him to ask leave to sit again. Whereupon, a question is put on their having leave, and on the time when the House will again resolve itself into a committee.—*Scob.* 38. But if they have gone through the matter referred to them, a member moves that the committee may rise, and the chairman report their proceedings to the House; which being resolved, the chairman rises, the Speaker resumes the chair, the chairman informs him that the committee have gone through the business referred to them, and that he is ready to make report when the House shall think proper to receive it. If the House have time to receive it, there is usually a cry of "Now, Now," whereupon he makes the report; but if it be late, the cry is, "To-morrow, To-morrow," or, "On Monday," etc.,

or a motion is made to that effect, and a question put, that it be received to-morrow, etc.—*Scob.* 38.

In other things the rules of proceedings are to be the same as in the House.—*Scob.* 39.

SECTION XIII.

EXAMINATION OF WITNESSES.

Common fame is a good ground for the House to proceed by inquiry, and even to accusation.—*Resolution of the House of Commons*, 1 *Car.* 1, 1625; *Rush. Lex. Parl.* 115; 1 *Grey*, 16. 22. 92; 8 *Grey*, 21. 23. 27. 45.

Witnesses are not to be produced but where the House has previously instituted an inquiry, 2 *Hats.* 102, nor then are orders for their attendance given blank.—3 *Grey*, 51. The process is a summons from the House.—4 *Hats.* 255. 258.

When any person is examined before a committee, or at the bar of the House, any member wishing to ask the person a question, must address it to the Speaker or chairman, who repeats the question to the person, or says to him, "You hear the question, answer it." But if the propriety of the question be objected to, the Speaker directs the witness, counsel, and parties to withdraw; for no question can be moved, or put, or debated, while they are there.—2 *Hats.* 108. Sometimes the questions are previously settled in writing before the witness enters.—2 *Hats.* 106, 107; 8 *Grey*, 64. The questions asked must be

entered in the journals.—3 *Grey*, 81. But the testimony given in answer before the House is never written down; but before a committee it must be for the information of the House, who are not present to hear it.—7 *Grey*, 52, 334.

If either House have occasion for the presence of a person in custody of the other, they ask the other their leave that he may be brought up to them in custody.—3 *Hats*. 52.

A member, in his place, gives information to the House of what he knows of any matter under hearing at the bar.—*Four. H. of C.*, Jan. 22, 1744, 5.

Either House may request, but not command, the attendance of a member of the other. They are to make the request by message to the other House, and to express clearly the purpose of attendance, that no improper subject of examination may be tendered to him. The House then gives leave to the member to attend, if he choose it; waiting first to know from the member himself whether he chooses to attend, till which they do not take the message into consideration. But when the Peers are sitting as a court of Criminal Judicature, they may order attendance; unless where it be a case of impeachment by the Commons. There it is to be a request.—3 *Hats*. 17; 9 *Grey*, 306. 406; 10 *Grey*, 133.

Counsel are to be heard only on private, not on public bills; and on such points of law only as the House shall direct.—19 *Grey*, 61.

SECTION XIV.

ARRANGEMENT OF BUSINESS.

The Speaker is not precisely bound to any rules as to what bills or other matter shall be first taken up, but is left to his own discretion, unless the House on a question decide to take up a particular subject.—*Hakew.* 136.

A settled order of business is, however, necessary for the government of the presiding person, and to restrain individual members from calling up favorite measures, or matters under their special patronage, out of their just turn. It is useful also for directing the discretion of the House, when they are moved to take up a particular matter, to the prejudice of others having a priority of right to their attention in the general order of business.

In Senate, the bills and other papers which are in possession of the House, and in a state to be acted upon, are arranged every morning, and brought on in the following order:

1. Bills ready for a second reading are read, that they may be referred to committees, and so be put under way. But if, on their being read, no motion is made for commitment, they are then laid on the table in the general file, to be taken up in their just turn.
2. After twelve o'clock, bills ready for it are put on their passage.
3. Reports in possession of the House which offer grounds for a bill, are to be taken up, that the bill may be ordered in.
4. Bills or other matters before the House, and unfinished on the preceding day, whether taken up in turn, or on special order, are entitled to be resumed and passed on through their present stage.
5. These matters being despatched, for preparing and expediting business, the general file of bills and other papers is then taken up, and each article of it is brought on according to its seniority, reckoned by the date of its first introduction to the House. Reports on bills belong to the dates of their bills.

In this way we do not waste our time in debating what shall be taken up: we do one thing at a time, follow up a subject while it is fresh, and till it is done with; clear the House of business, gradation as it is brought on, and prevent, to a certain degree, its immense accumulation towards the close of the session.

Arrangement, however, can only take hold of matters in possession of the House. New matter may be moved at any time, when no question is before the House. Such are original motions, and reports on bills. Such are, bills from the other House, which are received at all times, and receive their first reading as soon as the question then before the House is disposed of; and bills brought in on leave, which are read first whenever presented. So, messages from the other House respecting amendments to bills, are taken up as soon as the House is clear of a question, unless they require to be printed for better consideration. Orders of the day may be called for, even when another question is before the House.

SECTION XV.

ORDER.

Each House may determine the rules of its proceedings; punish its members for disorderly behavior, and, with the concurrence of two-thirds, expel a member.—*Const.* I. 5.

In Parliament, "instances make order," *per Speaker Onslow, 2 Hats.* 144; but what is done only by one Parliament, cannot be called custom of Parliament: *by Prynne, 1 Grey, 52.*

SECTION XVI.

ORDER RESPECTING PAPERS.

The Clerk is to let no journals, records, accounts, or papers, be taken from the table, or out of his custody.—*2 Hats.* 193, 194.

Mr. Prynne having, at a committee of the whole,

amended a mistake in a bill, without order or knowledge of the committee, was reprimanded.—1 *Chand.* 77.

A bill being missing, the House resolved, that a protestation should be made and subscribed by the members, “before Almighty God and this honorable House, that neither myself nor any other, to my knowledge, have taken away, or do at this present conceal a bill entitled,” &c.—5 *Grey*, 202.

After a bill is engrossed, it is put into the Speaker’s hands, and he is not to let any one have it to look into.—*Town. col.* 209.

SECTION XVII.

ORDER IN DEBATE.

When the Speaker is seated in his chair, every member is to sit in his place.—*Scob.* 6; *Grey*, 403.

When any member means to speak, he is to stand up in his place, uncovered, and to address himself, not to the House, or any particular member, but to the Speaker, who calls him by his name, that the House may take notice who it is that speaks.—*Scob.* 6; *D’Ewes*, 487, *col.* 1; 2 *Hats.* 77; 4 *Grey*, 66; 8 *Grey*, 108. But members who are indisposed may be indulged to speak sitting.—3 *Hats.* 75, 77; 1 *Grey*, 195.

In Senate, every member, when he speaks, shall address the chair, standing in his place; and when he has finished, shall sit down.—*Rule* 3.

When a member stands up to speak, no question is to be put; but he is to be heard, unless the House overrule him.—4 *Grey*, 390; 5 *Grey*, 6, 143.

If two or more rise to speak nearly together, the Speaker determines who was first up, and calls him by name; whereupon he proceeds, unless he voluntarily sits down, and gives way to the other. But sometimes the House does not acquiesce in the Speaker's decision; in which case, the question is put, "which member was first up?"—2 *Hats*. 76; *Scob.* 7; *D'Ewes*, 434, col. 1, 2.

In the Senate of the United States, the President's decision is without appeal. Their rule is in these words:—*When two members rise at the same time, the President shall name the person to speak; but in all cases, the member who shall first rise and address the chair, shall speak first.*—*Rule* 5.

No man can speak more than once to the same bill, on the same day; or even on another day, if the debate be adjourned. But if it be read more than once, in the same day, he may speak once at every reading.—*Co.* 12, 116; *Hakew.* 148; *Scob.* 58; 2 *Hats*. 75. Even a change of opinion does not give a right to be heard a second time.—*Smyth. Comw. L.* 2. c. 3; *Arcan. Parl.* 17.

The corresponding rule of the Senate is in these words:—No member shall speak more than twice in any one debate on the same day, without leave of the Senate.—*Rule* 4.

But he may be permitted to speak again to clear a matter of fact.—3 *Grey*, 357, 416. Or merely to explain himself, 3 *Hats*. 73, in some material part of

his speech, *ib.* 75; or to the manner or words of the question, keeping himself to that only, and not travelling into the merits of it, *Memorials in Hakew.* 29; or to the orders of the House, if they be transgressed, keeping within that line, and falling into the matter itself.—*Mem. Hakew.* 30, 31.

But if the Speaker rises to speak, the member standing up ought to sit down, that he may be first heard. *Town. col.* 205; *Hale, Parl.* 133; *Mem. in Hakew.* 30, 31. Nevertheless, though the Speaker may of right speak to matters of order, and be first heard, he is restrained from speaking on any other subject, except where the House have occasion for facts within his knowledge: then he may, with their leave, state the matter of fact.—3 *Grey*, 38.

No one is to speak impertinently or beside the question, superfluously or tediously.—*Scob.* 31, 33; 2 *Hats.* 166, 168; *Hale, Parl.* 133.

No person is to use indecent language against the proceedings of the House, no prior determination of which is to be reflected on by any member unless he means to conclude with a motion to rescind it.—2 *Hats.* 169, 170; *Rushw.* p. 3. v. 1. fol. 42. But while a proposition is under consideration, is still in fieri, though it has even been reported by a committee, reflections on it are no reflections on the House.—9 *Grey*, 308.

No person in speaking, is to mention a member then present by his name; but to describe him by his seat in the House, or who spoke last or on the

other side of the question, &c. *Mem. in Hakew.*—3 *Smyth's Comw. L. 2. c. 3*; nor to digress from the matter to fall upon the person.—*Scob. 31*; *Hale, Parl. 133*; 2 *Hats. 166*, by speaking, reviling, nipping, or unmannerly words against a particular member. *Smyth's Comw. L. 2. c. 3*. The consequence of a measure may be reprobated in strong terms; but to arraign the motives of those who propose or advocate it, is a personality, and against order. *Qui digreditur a materia ad personam*, Mr. Speaker ought to suppress.—*Ord. Com. 1604, Apr. 19*.

When a member shall be called to order he shall sit down, until the President shall have determined whether he is in order or not.—*Rule 16*.

No member shall speak to another, or otherwise interrupt the business of the Senate, or read any printed paper while the Journals or public papers are reading, or when any member is speaking in any debate.—*Rule 2*.

No one is to disturb another in his speech, by hissing, coughing, spitting.—6 *Grey, 332*; *Scob. 8*; *D'Ewes, 332, col. 1*; nor stand up to interrupt him,—*Town. col. 205*; *Mem. in Hakew. 31*; nor to pass between the Speaker and the speaking member; nor to go across the House,—*Scob. 6*; or to walk up and down it; or to take books or papers from the table, or write there.—2 *Hats. 171*.

Nevertheless, if a member finds it is not the inclination of the House to hear him, and that, by conversation or any other noise, they endeavor to drown his voice, it is the most prudent way to sub-

mit to the pleasure of the House, and sit down; for it scarcely ever happens that they are guilty of this piece of ill manners without sufficient reason, or inattentive to a member who says anything worth their hearing.—2 *Hats.* 77, 78.

If repeated calls do not produce order, the Speaker may call by his name any member obstinately persisting in irregularity; whereupon the House may require the member to withdraw. He is then to be heard in exculpation and to withdraw. Then the Speaker states the offence committed, and the House considers the degree of punishment they will inflict.—2 *Hats.* 169, 7, 8, 172.

For instances of assaults and affrays in the House of Commons, and the proceedings thereon, see 1 *Pet. Misc.* 82; 3 *Grey*, 128; 4 *Grey*, 328; 5 *Grey*, 38; 26 *Grey*, 204; 10 *Grey*, 8. Whenever warm words or an assault have passed between the members, the House, for the protection of their members, requires them to declare in their place not to prosecute any quarrel,—3 *Grey*, 128, 293; 5 *Grey*, 289; or orders them to attend the Speaker, who is to accommodate their differences, and to report to the House,—3 *Grey*, 419; and they are put under restraint, if they refuse, or until they do.—9 *Grey*, 234, 312.

Disorderly words are not to be noticed till the member has finished his speech.—5 *Grey*, 356; 6 *Grey*, 60. Then the person objecting to them, and desiring them to be taken down by the clerk at the table, must repeat them. The Speaker then may

direct the clerk to take them down in his minutes. But if he thinks them not disorderly, he delays the direction. If the call becomes pretty general, he orders the clerk to take them down, as stated by the objecting member. They are then part of his minutes, and when read to the offending member, he may deny they were his words, and the House must then decide by a question, whether they are his words or not. Then the member may justify them, or explain the sense in which he used them, or apologize. If the House is satisfied, no further proceeding is necessary. But if two members still insist to take the sense of the House, the member must withdraw before that question is stated, and then the sense of the House is to be taken.—2 *Hats*. 199; 4 *Grey*, 170; 6 *Grey*, 59. When any member has spoken, or other business intervened, after offensive words spoken, they cannot be taken notice of for censure. And this is for the common security of all, and to prevent mistakes, which must happen, if words are not taken down immediately. Formerly, they might be taken down at any time the same day.—2 *Hats*. 196; *Mem. in Hakew.* 71; 3 *Grey*, 48; 9 *Grey*, 514.

Disorderly words spoken in a committee, must be written down as in the House; but the committee can only report them to the House for animadversion.—6 *Grey*, 46.

The rule of the Senate says,—If a member be called to order for words spoken, the exceptionable words shall be immediately taken down in writing, that the President may be better enabled to judge.—*Rule 17.*

In Parliament, to speak irreverently or seditiously against the King, is against order.—*Smyth's Comw. L. 2, c. 3; 2 Hats. 170.*

It is a breach of order in debate to notice what has been said on the same subject in the other House, or the particular votes or majorities on it there; because the opinion of each House should be left to its own independency, not to be influenced by the proceedings of the other; and the quoting them might beget reflections leading to a misunderstanding between the two Houses.—8 *Grey, 22.*

Neither House can exercise any authority over a member or officer of the other, but should complain to the House of which he is, and leave the punishment to them. Where the complaint is of words disrespectfully spoken by a member of another House, it is difficult to obtain punishment, because of the rules supposed necessary to be observed (as to the immediate noting down of words) for the security of members. Therefore it is the duty of the House, and more particularly of the Speaker, to interfere immediately, and not to permit expressions to go unnoticed, which may give a ground of complaint to the other House, and introduce proceedings and mutual accusations between the two Houses, which can hardly be terminated without difficulty and disorder.—3 *Hats. 51.*

No member may be present when a bill, or any business concerning himself, is debating; nor is any member to speak to the merits of it till he with-

draws.—2 *Hats*. 219. The rule is, that if a charge against a member arise out of a report of a committee, or examination of witnesses in the House, as the member knows from that to what points he is to direct his exculpation, he may be heard to those points before any question is moved or stated against them. He is then to be heard, and withdraw before any question is moved. But if the question itself is the charge, as for breach of order, or matter arising in debate, then the matter must be stated, that is, the question must be moved, himself heard, and then to withdraw.—2 *Hats*. 121, 122.

Where the private interests of a member are concerned in a bill or question, he is to withdraw. And where such an interest has appeared, his voice has been disallowed, even after a division. In a case so contrary not only to the laws of decency, but to the fundamental principles of the social compact, which denies to any man to be a judge in his own cause, it is for the honor of the House that this rule of immemorial observance should be strictly adhered to.—2 *Hats*. 119, 121; 6 *Grey*, 368.

No member is to come into the House with his head covered, nor to remove from one place to the other with his hat on, nor is to put on his hat in coming in, or removing, until he be sit down in his place.—*Scob*. 6.

A question of order may be adjourned to give time to look into precedents.—2 *Hats*. 118.

In the Senate of the United States, every question of order is to be decided by the President, without debate; but if there be a doubt in his mind, he may call for the sense of the Senate.—*Rule 16.*

In Parliament, all decisions of the Speaker may be controlled by the House.—3 *Grey*, 319.

SECTION XVIII.

ORDERS OF THE HOUSE.

Of right, the door of the House ought not to be shut, but to be kept by porters, or sergeants-at-arms, assigned for that purpose.—*Mod. ten. Parl.* 23.

By the rule of the Senate, on motion made and seconded to shut the doors of the Senate, on the discussion of any business which may in the opinion of a member, require secrecy, the President shall direct the gallery to be cleared; and during the discussion of such motion the door shall remain shut.—*Rule 28.*

No motion shall be deemed in order, to admit any person or persons whatever within the doors of the Senate-chamber, to present any petition, memorial, or address, or to hear any such read.—*Rule 29.*

The only case where a member has a right to insist on anything, is where he calls for the execution of a subsisting order of the House. Here, there having been already a resolution, any member has a right to insist that the Speaker, or any other whose duty it is, shall carry it into execution; and no debate or delay can be had on it. Thus any member has a right to have the House or gallery cleared of strangers, an order existing for that purpose; or to have the House told when there is not a quorum present.—2 *Hats.* 87, 129. How far an order of the House is binding, see *Hakew.* 392.

But where an order is made that any particular matter be taken up on a particular day, there a question is to be put when it is called for, Whether the House will now proceed to that matter? Where orders of the day are on important or interesting matter, they ought not to be proceeded on till an hour at which the House is usually full—(*which in Senate is at noon*).

Orders of the day may be discharged at any time, and a new one made for a different day.—3 *Grey*, 48, 313.

When a session is drawing to a close, and the important bills are all brought in, the House, in order to prevent interruption by further unimportant bills, sometimes come to a resolution, that no new bill be brought in, except it be sent from the other House.—3 *Grey*, 156.

All orders of the House determine with the session; and one taken under such an order may, after the session is ended, be discharged on a Habeas Corpus.—*Raym.* 120; *Jacob's L. D. by Ruffhead; Parliament*, 1 *Lev.* 165, *Prichard's case*.

Where the Constitution authorizes each House to determine the rule of its proceedings, it must mean in those cases, legislative, executive, or judiciary, submitted to them by the Constitution, or in something relating to these, and necessary towards their execution. But orders and resolutions are sometimes entered in their journals, having no relation to these, such as acceptances of invitations to attend orations, to take part in processions, &c. These must be understood to be merely conventional among those who are willing to participate in the ceremony, and are therefore, perhaps, improperly placed among the records of the House.

SECTION XIX.

PETITIONS.

A petition prays something. A remonstrance has no prayer.—1 *Grey*, 58.

Petitions must be subscribed by the petitioners, *Scob.* 87; *L. Parl. c.* 22; 9 *Grey*, 362, unless they are attending, 1 *Grey*, 401, or unable to sign, and averred by a member.—3 *Grey*, 418. But a petition not subscribed, but which the member presenting it affirmed to be all in the handwriting of the petitioner, and his name written in the beginning, was, on the question, (March 14, 1800,) received by the Senate. The averment of a member, or somebody without doors, that they know the handwriting of the petitioners, is necessary, if it be questioned.—6 *Grey*, 36. It must be presented by a member, not by the petitioners, and must be opened by him, holding it in his hand.—10 *Grey*, 57.

Before any petition or memorial, addressed to the Senate, shall be received and read at the table, whether the same shall be introduced by the President or a member, a brief statement of the contents of the petition or memorial shall verbally be made by the introducer.—*Rule 21.*

Regularly a motion for receiving it must be made and seconded, and a question put, Whether it shall be received? But a cry from the House of "Received," or even its silence, dispenses with the formality of this question: it is then to be read at the table, and disposed of.

SECTION XX.

MOTIONS.

When a motion has been made, it is not to be put to the question, or debated, until it is seconded.—*Scob. 21.*

The Senate say, No motion shall be debated until the same shall be seconded.—*Rule 6.*

It is then, and not till then, in possession of the House. It is to be put into writing, if the House or Speaker require it, and must be read to the House by the Speaker, as often as any member desires it for his information.—*2 Hats. 82.*

The rule of the Senate is, When a motion shall be made and seconded, it shall be reduced to writing, if desired by the President or any member, delivered in at the table, and read by the President before the same shall be debated.—*Rule 7.*

It might be asked, whether a motion for adjournment, or for the orders of the day, can be made by one member while another is speaking? It cannot. When two members offer to speak, he who rose first is to be heard, and it is a breach of order in another to interrupt him, unless by calling him to order if he departs from it. And the question of order being decided, he is still to be heard through. A call for adjournment, or for the order of the day, or for the question, by gentlemen from their seats, is not a motion. No motion can be made without arising and addressing the chair. Such calls are themselves

breaches of order, which, though the member who has risen may respect as an expression of impatience of the House against farther debate, yet, if he chooses, he has a right to go on.

SECTION XXI.

RESOLUTIONS.

When the House commands, it is by an "order." But facts, principles, their own opinions and purposes, are expressed in the form of resolutions.

A resolution for an allowance of money to the clerks being moved, it was objected to as not in order, and so ruled by the chair. But on appeal to the Senate, (i. e., a call for their sense by the President, on account of doubt in his mind, according to Rule 16), the decision was overruled.—*Journ. Sen.*, June 1, 1796. I presume the doubt was, whether an allowance of money could be made otherwise than by bill.

SECTION XXII.

BILLS.

Every bill shall receive three readings previous to its being passed; and the President shall give notice at each, whether it be the first, second, or third; which readings shall be on three different days, unless the Senate unanimously direct otherwise, or unless by a joint vote of both Houses, or the expiration of their term, the session is to be closed within three days.—*Rule 13.*

SECTION XXIII.

BILLS, LEAVE TO BRING IN.

One day's notice, at least, shall be given of an intended motion for leave to bring in a bill.—*Rule 12.*

When a member desires to bring a bill on any subject, he states to the House, in general terms, the causes for doing it, and concludes by moving for leave to bring in a bill, entitled, etc. Leave being given, on the question, a committee is appointed to prepare and bring in the bill. The mover and seconder are always appointed on this committee, and one or more in addition.—*Hakew.* 132; *Scob.* 40.

It is to be presented fairly written, without any erasure or interlineation; or the Speaker may refuse it.—*Scob.* 31; 1 *Grey*, 82, 84.

SECTION XXIV.

BILLS, FIRST READING.

When a bill is first presented, the clerk reads it at the table, and hands it to the Speaker, who, rising, states to the House the title of the bill; that this is the first time of reading it; and the question will be, Whether it shall be read a second time? Then, sitting down, to give an opening for objections; if none be made, he rises again, and puts the question, Whether it shall be read a second time?—*Hakew.* 137, 141. A bill cannot be amended at the first reading,—6 *Grey*, 286; nor is it usual for it to be opposed then, but it may be done and rejected.—*D'Ewes*, 335, col. 1; 3 *Hats.* 198.

SECTION XXV.

BILLS, SECOND READING.

The second reading must regularly be on another day.—*Hakew.* 143. It is done by the clerk at the table, who then hands it to the Speaker. The Speaker, rising, states to the House the title of the bill, that this is the second time of reading it, and that the question will be, Whether it shall be committed, or engrossed and read a third time? But if the bill came from the other House, as it always comes engrossed, he states that the question will be, Whether it shall be read a third time? And before he has so reported the state of the bill, no one is to speak to it.—*Hakew.* 143, 146.

In the Senate of the United States, the President reports the title of the bill, that this is the second time of reading it, that it is now to be considered as in a committee of the whole, and the question will be, Whether it shall be read a third time? or, that it may be referred to a special committee.

SECTION XXVI.

BILLS, COMMITMENT.

If, on motion and question, it be decided that the bill shall be committed, it may then be moved to be referred to a committee of the whole House, or to a special committee. If the latter, the Speaker proceeds to name the committee. Any member also may name a single person, and the clerk is to write him down as of the committee. But the House

have a controlling power over the names and number, if a question be moved against any one; and may in any case put in and put out whom they please.

Those who take exceptions to some particulars in the bill, are to be of the committee. But none who speak directly against the body of the bill. For he that would totally destroy, would not amend it.—*Hakew.* 146; *Town. col.* 208; *D'Ewes*, 634, *col.* 2; *Scob.* 47; or, as is said, 5 *Grey*, 145, the child is not to be put to a nurse that cares not for it.—6 *Grey*, 373. It is therefore a constant rule, “that no man is to be employed in any matter who has declared himself against it.” And when any member who is against the bill, hears himself named of its committee, he ought to ask to be excused. Thus, March 6, 1606, Mr. Hadley was, on the question being put, excused from being of a committee, declaring himself to be against the matter itself.—*Scob.* 48.

No bill shall be committed or amended until it shall have been twice read, after which it may be referred to a committee.—*Rule* 14.

All committees shall be appointed by ballot, and a plurality of voices shall make a choice.—*Rule* 15.

The clerk may deliver the bill to any member of the committee.—*Town. col.* 138. But it is usual to deliver it to him who is first named.

In some cases, the House has ordered the committee to withdraw immediately into the committee-chamber, and act on and bring back the bill, sitting the House.—*Scob.* 48.

A committee meets when and where they please, if the House has not ordered time and place for them.—6 *Grey*, 370. But they can only act when together, and not by separate consultation and consent; nothing being the report of the committee, but what has been agreed to in committee, actually assembled.

A majority of the committee constitutes a quorum for business.—*Elsynge's method of passing bills*, 11.

Any member of the House may be present at any select committee, but cannot vote, and must give place to all of the committee, and must sit below them.—*Elsynge*, 12; *Scob.* 49.

But in 1626, April 24th, the House of Commons resolved that though any members may be present at the examination of witnesses, they may not be at the debate, disposition, or penning of the business by the select committee.—4 *Hats.* 124.

The committee have full power over the bill, or other paper committed to them, except that they cannot change the title or subject.—8 *Grey*, 228.

The paper before a committee, whether select or of the whole, may be a bill, resolutions, draught of an address, &c., and it may either originate with them, or be referred to them. In every case, the whole paper is read first by the clerk, and then by the chairman, by paragraphs, *Scob.* 49, pausing at the end of each paragraph, and putting questions, for amending, if proposed. In the case of resolutions on distinct subjects, originating with themselves, a

question is put on each separately, as amended, or unamended, and no final question on the whole.—3 *Hats.* 276. But if they relate to the same subject, a question is put on the whole. If it be a bill, draught of an address, or other paper originating with them, they proceed by paragraphs, putting questions for amending, either by inserting or striking out, if proposed; but no question on agreeing to the paragraphs separately. This is reserved to the close, when a question is put on the whole for agreeing to it as amended or unamended. But if it be a paper referred to them, they proceed to put questions of amendment, if proposed, but no final question on the whole; because all parts of the paper having been adopted by the House, stand, of course, unless altered, or struck out by a vote. Even if they are opposed to the whole paper, and think it cannot be made good by amendments, they cannot reject it, but must report it back to the House without amendments, and there make their opposition.

The natural order in considering and amending any paper is, to begin at the beginning, and proceed through it by paragraphs; and this order is so strictly adhered to in Parliament, that, when a latter part has been amended, you cannot recur back and make any alteration in a former part.—2 *Hats.* 90. In numerous assemblies, this restraint is, doubtless, important.

But in the Senate of the United States, though in the main we consider and amend the paragraphs in their natural order, yet recurrences are indulged; and they seem, on the whole, in that small body, to produce advantages overweighing their inconveniences.

To this natural order of beginning at the beginning, there is a single exception found in Parliamentary usage. When a bill is taken up in committee, or on its second reading, they postpone the preamble, till the other parts of the bill are gone through. The reason is, that on consideration of the body of the bill, such alterations may therein be made, as may also occasion the alteration of the preamble.—*Scob.* 50; 7 *Grey*, 431.

On this head, the following case occurred in the Senate, March 6, 1800. A resolution which had no preamble, having been already amended by the House, so that a few words only of the original remained in it, a motion was made to prefix a preamble, which, having an aspect very different from the resolution, the mover intimated that he should afterwards propose a correspondent amendment in the body of the resolution. It was objected that a preamble could not be taken up till the body of the resolution is done with. But the preamble was received; because we are in fact through the body of the resolution, we have amended that as far as amendments have been offered, and indeed till little of the original is left. It is the proper time, therefore, to consider a preamble; and whether the one offered be consistent with the resolution, is for

the House to determine. The mover, indeed, has intimated that he shall offer a subsequent proposition for the body of the resolution; but the House is not in possession of it; it remains in his breast, and may be withheld. The rules of the House can only operate on what is before them. The practice of the Senate, too, allows recurrences backwards and forwards for the purpose of amendments, not permitting amendments in a subsequent, to preclude those in a prior part, or *a converso*.

When the committee is through the whole, a member moves that the committee may rise, and the chairman report the paper to the House, with or without amendments, as the case may be.—2 *Hats.* 289, 292; *Scob.* 53; 2 *Hats.* 290; 8 *Scob.* 50.

When a vote is once passed in a committee, it cannot be altered but by the House, their votes being binding on themselves.—1607, June 4.

The committee may not erase, interline, or blot the bill itself; but must, in a paper by itself, set down the amendments, stating the words that are to be inserted or omitted, *Scob.* 50; and where, by reference to the page, line, and word of the bill.—*Scob.* 50.

SECTION XXVII.

REPORT OF COMMITTEE.

The chairman of the committee, standing in his place, informs the House that the committee, to

whom was referred such a bill, have, according to order, had the same under consideration, and have directed him to report the same without any amendment, or with sundry amendments, (as the case may be,) which he is ready to do when the House pleases to receive it. And he, or any other, may move that it be now received. But the cry of "now, now," from the House, generally dispenses with the formality of a motion and question. He then reads the amendments, with the coherence in the bill, and opens the alterations, and the reasons of the committee for such amendment, until he has gone through the whole. He then delivers it at the clerk's table, where the amendments reported are read by the clerk, without the coherence; whereupon the papers lie upon the table, till the House, at his convenience, shall take up the report.—*Scob.* 52; *Hakew.* 148.

The report being made, the committee is dissolved, and can act no more without a new power.—*Scob.* 51. But it may be revived by a vote, and the same matter recommitted to them.—4 *Grey*, 361.

SECTION XXVIII.

BILL, RECOMMITMENT.

After a bill has been committed and reported, it ought not, in an ordinary course, to be recommitted. But in cases of importance, and for special reasons, it is sometimes recommitted, and usually to the

same committee.—*Hakew.* 151. If a report be committed before agreed to in the House, what has passed in the committee is of no validity; the whole question is again before the committee, and a new resolution must be again moved, as if nothing had passed.—3 *Hats.* 131, note.

In Senate, January, 1800, the salvage bill was recommitted three times after the commitment.

A particular clause of a bill may be committed without the whole bill,—3 *Hats.* 131; or so much of a paper to one, and so much to another committee.

SECTION XXIX.

BILL, REPORT TAKEN UP.

When the report of a paper, originating with a committee, is taken up by the House, they proceed exactly as in committee. Here, as in committee, when the paragraphs have, on distinct questions, been agreed to *seriatim*,—5 *Grey*, 365; 6 *Grey*, 368; 8 *Grey*, 47, 104, 360; 1 *Torbuck's deb.* 124; 3 *Hats.* 348,—no question need be put on the whole report.—5 *Grey*, 381.

On taking up a bill reported with amendments, the amendments only are read by the clerk. The Speaker then reads the first, and puts it to the question, and so on till the whole are adopted or rejected, before any other amendment be admitted, except it be an amendment to an amendment.—*Elsynge's Mem.* 23. When through the amendments

of the committee, the Speaker pauses, and gives time for amendments to be proposed in the House to the body of the bill; as he does also if it has been reported without amendments; putting no question but on amendments proposed; and when through the whole, he puts the question, Whether the bill shall be read the third time?

SECTION XXX.

QUASI-COMMITTEE.

If, on the motion and question, the bill be not committed, or if no proposition for commitment be made, then the proceedings in the Senate of United States and in Parliament are totally different. The former shall be first stated.

The 20th rule of the Senate says, "All bills, on a second reading, shall first be considered by the Senate in the same manner as if the Senate were in a committee of the whole, before they shall be taken up and proceeded on by the Senate agreeably to the standing rules, unless otherwise ordered;" that is to say, unless ordered to be referred to a special committee.

The proceeding of the Senate, as in committee of the whole, or in quasi-committee, are precisely as in a real committee of the whole, taking no questions but on amendments. When through the whole, they consider the quasi-committee as risen, the House resumed, without any motion, question, or resolution to that effect, and the President reports, that "the House, acting as in committee of the whole, have had under consideration the bill entitled, &c., and have made sundry amendments, which he will now report to the House." The bill is then before them, as it would have been if reported from a committee, and questions are regularly to be put again on every amendment: which being gone through, the President pauses to give time to the House to propose amendments to the body of the bill, and when through, puts the question, whether it shall be read a third time?

After progress in amending a bill in quasi-committee, a motion may be made to refer it to a special committee. If the motion prevails, it is equivalent in effect to the several votes that the committee rise, the House resume itself, discharge the committee of the whole, and refer the bill to a special committee. In that case, the amendments already made fall. But if the motion fails, the quasi-committee stands in *statu quo*.

How far does this 20th rule subject the House, when in quasi-committee, to the laws which regulate the proceedings of a committee of the whole? The particulars, in which these differ from proceedings in the House, are the following:—1. In a committee, every member may speak as often as he pleases.—2. The votes of a committee may be rejected or altered when reported to the House.—3. A committee, even of the whole, cannot refer any matter to another committee.—4. In a committee, no previous question can be taken: the only means to avoid an improper discussion, is to move that the committee rise; and if it be apprehended that the same discussion will be attempted on returning into committee, the House can discharge them, and proceed itself on the business, keeping down the improper discussion by the previous question.—5. A committee cannot punish a breach of order, in the House, or in the gallery,—9 *Grey*, 113; it can only rise and report it to the House, who may proceed to punish.

The 1st and 2d of these peculiarities attach to the quasi-committee of the Senate, as every day's practice proves; and seem to be the only ones to which the 20th rule meant to subject them: for it continues to be a House, and therefore, though it acts in some respects as a com-

mittee, in others it preserves its character as a House.—Thus, 3d, It is in the daily habit of referring its business to a special committee.—4th. It admits the previous question: if it did not, it would have no means of preventing an improper discussion; not being able, as the committee is, to avoid it by returning into the House: for the moment it would resume the same subject there, the 20th rule declares it again a quasi-committee.—5th. It would doubtless exercise its powers as a House on any breach of order.—6th. It takes a question by Yea and Nay, as the House does.—7th. It receives messages from the President and the other House.—8th. In the midst of a debate, it receives a motion to adjourn, and adjourns as a House, not as a committee.

SECTION XXXI.

BILL, SECOND READING IN THE HOUSE.

In Parliament, after the bill has been read a second time, if, on the motion and question, it be not committed, or if no proposition for commitment be made, the Speaker reads it by paragraphs, pausing between each, but putting no questions but on amendments proposed; and when through the whole, he puts the question, Whether it shall be read the third time? if it came from the other House. Or, if originating with themselves, Whether it shall be engrossed and read a third time? The Speaker reads sitting, but rises to put a question. The clerk stands while he reads.

But the Senate of the United States is so much in the habit of making many and material amendments at the third reading, that it has become the practice not to engross a bill till it has passed. An irregular and dangerous practice; because, in this way, the paper which passes the Senate is not that which goes to the other House; and that which goes to the other House as the act of the Senate, has never been seen in Senate. In reducing numerous, difficult, and illegible amend-

ments into the text, the secretary may, with the most innocent intentions, commit errors which can never again be corrected.

The bill being now as perfect as its friends can make it, this is the proper stage for those, fundamentally opposed, to make their first attack. All attempts at other periods are with disjointed efforts; because many who do not expect to be in favor of the bill, ultimately, are willing to let it go on to its perfect state, to take time to examine it themselves, and to hear what can be said for it; knowing that, after all, they have sufficient opportunities of giving it their veto. Its two last stages, therefore, are reserved for this, that is to say, on the question, Whether it shall be engrossed and read a third time? and, lastly, Whether it shall pass? The first of these is usually the most interesting contest; because then the whole subject is new and engaging, and the minds of the members having not yet been declared by any trying vote, the issue is the more doubtful. In this stage, therefore, is the main trial of strength between its friends and opponents; and it behooves every one to make up his mind decisively for this question, or he loses the main battle; and accident and management may, and often do, prevent a successful rallying on the next and last question, Whether it shall pass?

When the bill is engrossed, the title is to be endorsed on the back, and not within the bill.—*Hakew.*
250.

SECTION XXXII.

READING PAPERS.

Where papers are laid before the House, or referred to a committee, every member has a right to have them once read at the table, before he can be compelled to vote on them. But it is a great, though common error, to suppose that he has a right, *toties quoties*, to have acts, journals, accounts, or papers, on the table, read independently of the will of the House. The delay and interruption which this might be made to produce, evince the impossibility of the existence of such a right. There is indeed so manifest a propriety of permitting every member to have as much information as possible on every question on which he is to vote, that when he desires the reading, if it be seen that it is really for information, and not for delay, the Speaker directs it to be read without putting a question, if no one objects. But if objected to, a question must be put.—2 *Hats.* 117, 118.

It is equally an error to suppose, that any member has a right, without a question put, to lay a book or paper on the table, and have it read, on suggesting that it contains matter infringing on the privileges of the House.—2 *Hats.* 117, 118.

For the same reason, a member has not a right to read a paper in his place, if it be objected to, without leave of the House. But this rigor is never exercised but where there is an intentional or gross abuse of the time and patience of the House.

A member has not a right even to read his own speech, committed to writing, without leave. This also is to prevent an abuse of time; and therefore is not refused, but where that is intended.—2 *Grey*, 227.

A report of a committee of the Senate on a bill from the House of Representatives being under consideration, on motion that the report of the committee of the House of Representatives on the same bill be read in the Senate, it passed in the negative.—Feb. 28, 1793.

Formerly, when papers were referred to a committee, they used to be first read; but of late, only the titles; unless a member insists they shall be read, and then nobody can oppose it.—2 *Hats*. 117.

SECTION XXXIII.

PRIVILEGED QUESTIONS.

While a question is before the Senate, no motion shall be received unless for an amendment, for the previous question, or for postponing the main question, or to commit it, or to adjourn.—*Rule* 8.

It is no possession of a bill, unless it be delivered to the clerk to be read, or the Speaker reads the title.—*Lex. Parl.* 274; *Elsynge, Mem.* 85; *Ord. House Commons*, 64.

It is a general rule, that the question first moved and seconded shall be first put.—*Scob.* 28, 22; 2 *Hats.* 81. But this rule gives way to what may be called privileged questions; and the privileged questions are of different grades among themselves.

A motion to adjourn, simply takes place of all others; for otherwise the House might be kept sitting against its will, and indefinitely. Yet this motion cannot be received after another question is actually put, and while the House is engaged in voting.

Orders of the day take place of all other questions, except for adjournment. That is to say, the question which is the subject of an order, is made a privileged one, *pro hac vice*. The order is a repeal of the general rule as to this special case. When any member moves, therefore, for the orders of the day to be read, no further debate is permitted on the question which was before the House; for if the debate might proceed, it might continue through the day, and defeat the order. This motion, to entitle it to precedence, must be for the orders generally, and not for any particular one; and if it be carried on the question, "Whether the House will now proceed to the orders of the day?" they must be read and proceeded on in the course in which they stand.—2 *Hats*. 83. For priority of order gives priority of right, which cannot be taken away but by another special order.

After these there are other privileged questions, which will require considerable explanation.

It is proper that every Parliamentary assembly should have certain forms of questions, so adapted as to enable them fitly to dispose of every proposition which can be made to them. Such are, 1. The previous question: 2. To postpone indefinitely:

3. To adjourn to a definite day: 4. To lie on the table: 5. To commit: 6. To amend. The proper occasion for each of these questions should be understood.

1. When a proposition is moved, which it is useless or inexpedient now to express or discuss, the previous question has been introduced for suppressing, for that time, the motion and its discussion.—
3 *Hats.* 188, 189.

2. But as the previous question gets rid of it only for that day, and the same proposition may recur the next day, if they wish to suppress it for the whole of that session, they postpone it indefinitely.—
3 *Hats.* 183. This quashes the proposition for that session, as an indefinite adjournment is a dissolution, or the continuance of a suit sine die is a discontinuance of it.

3. When a motion is made which it will be proper to act on, but information is wanted, or something more pressing claims the present time, the question or debate is adjourned to such a day within the session as will answer the views of the House.—
2 *Hats.* 81. And those who have spoken before, may not speak again when the adjourned debate is resumed.—
2 *Hats.* 73. Sometimes, however, this has been abusively used, by adjourning it to a day beyond the session, to get rid of it altogether, as would be done by an indefinite postponement.

4. When the House has something else which claims its present attention, but would be willing

to reserve in their power to take up a proposition whenever it shall suit them, they order it to lie on their table. It may then be called for at any time.

5. If the proposition will want more amendment and digestion than the formalities of the House will conveniently admit, they refer it to a committee.

6. But if the proposition be well digested, and may need but few and simple amendments, and especially if these be of leading consequence, they then proceed to consider and amend it themselves.

The Senate, in their practice, vary from this regular gradation of forms. Their practice, comparatively with that of Parliament, stands thus:

For the Parliamentary,
Postmt. indefinite.
Adjournment,
Laying on the table.

The Senate uses,
—Postmt. to a day beyond the session.
—Postmt. to a day within the session.
{ Postponement indefinite.
{ Laying on the table.

In their 8th Rule, therefore, which declares, that while a question is before the Senate, no motion shall be received, unless it be for the previous question, or to postpone, commit or amend the main question, the term postponement must be understood according to their broad use of it, and not in its Parliamentary sense. Their rule then establishes as privileged questions, the previous question, postponement, commitment, and amendment.

But it may be asked, Have these questions any privilege among themselves? or are they so equal that the common principle of the "first moved, first

put," takes place among them? This will need explanation. Their competitions may be as follows:

- | | | |
|---------------------------|---|--|
| 1. Prev. Qu. and Postpone | } | In the 1st, 2d, and 3d classes, and the 1st member of the 4th class, the rule "first moved, first put," takes place. |
| Commit | | |
| Amend | | |
| 2. Postpone and Prev. Qu. | } | |
| Commit | | |
| | } | |
| Amend | | |
| 3. Commit and Prev. Qu. | } | |
| Postpone | | |
| Amend | | |
| 4. Amend and Prev. Qu. | } | |
| Postpone | | |
| Commit | | |

In the 1st class, where the previous question is first moved, the effect is peculiar; for it not only prevents the after motion to postpone or commit from being put to question before it, but also from being put after it. For if the previous question be decided affirmatively, to wit, that the main question shall *now* be put, it would of course be against the decision to postpone or commit. And if it be decided negatively, to wit, that the main question shall not now be put, this puts the House out of possession of the main question, and consequently there is nothing before them to postpone or commit. So that neither voting for nor against the previous question will enable the advocates for postponing or committing to get at their object. Whether it may be amended, shall be examined hereafter.

2d class.—If postponement be decided affirmatively, the proposition is removed from before the House, and consequently there is no ground for the

previous question, commitment, or amendment. But if decided negatively, that it shall not be postponed, the main question may then be suppressed by the previous question, or may be committed or amended.

The 3d class is subject to the same observations as the 2d.

The 4th class.—Amendment of the main question first moved, and afterwards the previous question, the question of amendment shall be first put.

Amendment and postponement competing, postponement is first put, as the equivalent proposition to adjourn the main question would be in Parliament. The reason is, that the question for amendment is not suppressed by postponing or adjourning the main question, but remains before the House whenever the main question is resumed; and it might be that the occasion for other urgent business might go by, and be lost by length of debate on the amendment, if the House had it not in their power to postpone the whole subject.

Amendment and commitment. The question for committing, though last moved, shall be first put; because in truth it facilitates and befriends the motion to amend. *Scobell* is express:—"On a motion to amend a bill, any one may, notwithstanding, move to commit it, and the question for commitment shall be first put."—*Scob.* 46.

We have hitherto considered the case of two or more of the privileged questions contending for privi-

lege between themselves, when both were moved on the original or main question; but now let us suppose one of them to be moved, not on the original primary question, but on the secondary one, *e. g.*

Suppose a motion to postpone, commit, or amend the main question, and that it be moved to suppress that motion by putting the previous question on it. This is not allowed, because it would embarrass questions too much to allow them to be piled on one another several stories high; and the same result may be had in a more simple way, by deciding against the postponement, commitment, or amendment.—
2 *Hats.* 81, 2, 3, 4.

Suppose a motion for the previous question, or commitment or amendment of the main question, and that it be then moved to postpone the motion for the previous question, or for commitment or amendment of the main question: 1. It would be absurd to postpone the previous question, commitment, or amendment, alone, and thus separate the appendage from its principal; yet it must be postponed separately from the original, if at all, because the 8th rule of the Senate says, that when a main question is before the House, no motion shall be received but to commit, amend, or pre-question the original question, which is the parliamentary doctrine; therefore, the motion to postpone the secondary motion for the previous question, or for committing or amending, cannot be received: 2. This is a piling of questions one on another, which, to

avoid embarrassment, is not allowed: 3. The same result may be had more simply, by voting against the previous question, commitment, or amendment.

Suppose a commitment moved, of a motion for the previous question, or to postpone, or amend.

The 1st, 2d, and 3d reasons before stated, all hold good against this.

Suppose an amendment moved to a motion for the previous question? Answer: The previous question cannot be amended. Parliamentary usage, as well as the 9th rule of the Senate, has fixed its form to be, "Shall the main question be now put?" *i. e.*, at this instant. And as the present instant is but one, it can admit of no modification. To change it to tomorrow, or any other moment, is without example and without utility. But suppose a motion to amend a motion for postponement, as to one day instead of another, or to a special instead of indefinite time. The useful character of amendment gives it a privilege of attaching itself to a secondary privileged motion. That is, we may amend a postponement of a main question. So we may amend a commitment of a main question, as by adding, for example, "with instruction to inquire," &c. In like manner, if an amendment be moved to an amendment, it is admitted. But it would not be admitted in another degree, to wit, to amend an amendment to an amendment of a main question. This would lead to too much embarrassment. The line must be drawn somewhere; and usage has drawn it after the

amendment to the amendment. The same result must be sought by deciding against the amendment to the amendment, and then moving it again as it was wished to be amended. In this form it becomes only an amendment to an amendment.

In filling a blank with a sum, the largest sum shall be first put to the question, by the 18th Rule of the Senate, contrary to the rule of Parliament, which privileges the smallest sum and longest time.—5 Grey, 179; 2 Hats. 8, 83; 3 Hats. 132, 133. And this is considered to be not in the form of an amendment to the question, but as alternative or successive originals. In all cases of time or number, we must consider whether the larger comprehends the lesser, as in a question to what day a postponement shall be, the number of a committee, amount of a fine, term of an imprisonment, term of irredeemability of a loan, or the *terminus in quem* in any other case. Then the question must begin *a maximo*. Or whether the lesser includes the greater, as in question on the limitation of the rate of interest, on what day the session shall be closed by adjournment, on what day the next shall commence, when an act shall commence, or the *terminus a quo* in any other case, where the question must begin *a minimo*. The object being not to begin at that extreme, which, and more, being within every man's wish, no one could negative it, and yet, if we should vote in the affirmative, every question for more would be precluded; but at that extreme which would unite few, and then to advance

or recede till you get to a number which will unite a bare majority.—3 *Grey*, 376, 384, 385. “The fair question in this case is not that to which and more all will agree, whether there shall be addition to the question.”—1 *Grey*, 365.

Another exception to the rule of priority is, when a motion has been made to strike out or agree to a paragraph. Motions to amend it are to be put to the question, before a vote is taken on striking out, or agreeing to the whole paragraph.

But there are several questions, which, being incidental to every one, will take place of every one, privileged or not; to wit, a question of order arising out of any other question, must be decided before that question.—2 *Hats*. 88.

A matter of privilege arising out of any question, or from a quarrel between two members, or any other cause, supersedes the consideration of the original question, and must first be disposed of.—2 *Hats*. 88.

Reading papers relative to the question before the House. This question must be put before the principal one.—2 *Hats*. 88.

Leave asked to withdraw a motion. The rule of Parliament being, that a motion made and seconded is in possession of the House, and cannot be withdrawn without leave, the very terms of the rule imply that leave may be given, and, consequently, may be asked and put to the question.

SECTION XXXIV.

THE PREVIOUS QUESTION.

When any question is before the House, any member may move a previous question, "Whether that question (called the main question) shall now be put?" If it pass in the affirmative, then the main question is to be put immediately, and no man may speak anything further to it, either to add or alter.—*Memor. in Hakew. 28; 4 Grey, 27.*

The previous question being moved and seconded, the question from the chair shall be, "Shall the main question be now put?" and if the nays prevail, the main question shall not then be put.—*Rule 9.*

This kind of question is understood by Mr. Hatsell to have been introduced in 1604.—2 *Hats. 80.* Sir Henry Vane introduced it.—2 *Grey, 113, 114; 3 Grey, 384.* When the question was put in this form, "Shall the main question be put?" a determination in the negative suppressed the main question during the session; but since the words "now put" are used, they exclude it for the present only. Formerly, indeed, only till the present debate was over; 4 *Grey, 43; but now for that day and no longer.—2 Grey, 113, 114.*

Before the question, "Whether the main question shall now be put?" any person might formerly have spoken to the main question, because otherwise he would be precluded from speaking to it at all.—*Mem. in Hakew. 28.*

The proper occasion for the previous question is, when a subject is brought forward of a delicate nature as to high personages, etc., or the discussion of which may call forth observations which might be of injurious consequences. Then the previous question is proposed, and, in the modern usage, the discussion of the main question is suspended, and the debate confined to the previous question. The use of it has been extended abusively to other cases; but in these, it is an embarrassing procedure: its uses would be as well answered by other more simple Parliamentary forms, and therefore it should not be favored, but restricted within as narrow limits as possible.

Whether a main question may be amended after the previous question on it has been moved and seconded? 2 *Hatsell*, 88, says, If the previous question had been moved and seconded, and also proposed from the chair, (by which he means, stated by the Speaker for debate,) it has been doubted whether an amendment can be admitted to the main question. He thinks it may, after the previous question moved and seconded; but not after it has been proposed from the chair.

In this case he thinks the friends to the amendment must vote that the main question be not now put, and then move their amended question, which being made new by the amendment, is no longer the same which has been just suppressed, and therefore may be proposed as a new one. But this proceeding certainly endangers the main question, by dividing

its friends, some of whom may choose it unamended, rather than lose it altogether; while others of them may vote, as Hatsell advises, that the main question be not now put, with a view to move it again in an amended form. The enemies of the main question by this manœuvre to the previous question, get the enemies to the amendment added to them on the first vote, and throw the friends of the main question under the embarrassment of rallying again as they can. To support his opinion, too, he makes the deciding circumstance, whether an amendment may or may not be made, to be, that the previous question has been proposed from the chair. But as the rule is, that the House is in possession of a question as soon as it is moved and seconded, it cannot be more than possessed of it by its being also proposed from the chair. It may be said, indeed, that the object of the previous question being to get rid of a question, which it is not expedient should be discussed, this object may be defeated by moving to amend, and, in the discussion of that motion, involving the subject of the main question. But so may the object of the previous question be defeated by moving the amended question, as Mr. Hatsell proposes, after the decision against putting the original question. He acknowledges, too, that the practice has been to admit previous amendment, and only cites a few late instances to the contrary. On the whole, I should think it best to decide it *ab inconvenienti*; to wit, Which is most inconvenient, to put

it in the power of one side of the House to defeat a proposition by hastily moving the previous question and thus forcing the main question to be put amended? or to put it in the power of the other side to force on, incidentally at least, a discussion which would be better avoided? Perhaps the last is the least inconvenience; inasmuch as the Speaker, by confining the discussion rigorously to the amendment only, may prevent their going into the main question; and inasmuch also, as so great a proportion of the cases, in which the previous question is called for, are fair and proper subjects of public discussion, and ought not to be obstructed by a formality introduced for questions of a peculiar character.

SECTION XXXV.

AMENDMENTS.

On an amendment being moved, a member who has spoken to the main question may speak again to the amendment.—*Scob.* 23.

If an amendment be proposed inconsistent with one already agreed to, it is a fit ground for its rejection by the House; but not within the competence of the Speaker to suppress, as if it were against order. For, were he permitted to draw questions of consistency within the vortex of order, he might usurp a negative on important modifications, and suppress instead of subserving the legislative will.

Amendments may be made so as totally to alter the nature of the proposition; and it is a way of getting rid of a proposition, by making it bear a sense different from what was intended by the movers, so that they vote against it themselves.—*2 Hats.* 79; 4, 82, 84. A new bill may be ingrafted, by way of amendment, on the words, "Be it enacted," &c.—*1 Grey,* 190, 192.

If it be proposed to amend by leaving out certain words, it may be moved as an amendment to this amendment, to leave out a part of the words of the amendment, which is equivalent to leaving them in the bill.—*2 Hats.* 80, 9. The Parliamentary question is always, Whether the words shall stand part of the bill?

When it is proposed to amend by inserting a paragraph, or part of one, the friends of the paragraph may make it as perfect as they can, by amendments, before the question is put for inserting it. If it be received, it cannot be amended afterwards, in the same stage, because the House has, on a vote, agreed to it in that form. In like manner, if it is proposed to amend by striking out a paragraph, the friends of the paragraph are first to make it as perfect as they can by amendments, before the question is put for striking it out. If, on the question, it be retained, it cannot be amended afterwards; because a vote against striking out is equivalent to a vote agreeing to it in that form.

When it is moved to amend, by striking out certain

words and inserting others, the manner of stating the question is, first to read the whole passage to be amended, as it stands at present; then the words proposed to be struck out; next those to be inserted; and lastly, the whole passage, as it will be when amended. And the question, if desired, is then to be divided, and put first on striking out. If carried, it is next on inserting the words proposed. If that be lost, it may be moved to insert others.—2 *Hats*. 80, 7.

A motion is made to amend by striking out certain words, and inserting others in their place, which is negatived. Then it is moved to strike out the same words, and to insert others of a tenor entirely different from those first proposed. It is negatived. Then it is moved to strike out the same words and insert nothing, which is agreed to. All this is admissible; because to strike out and insert A, is one proposition. To strike out and insert B, is a different proposition. And to strike out and insert nothing is still different. And the rejection of one proposition does not preclude the offering a different one. Nor would it change the case were the first motion divided by putting the question first on striking out, and that negatived. For as putting the whole motion to the question at once would not have precluded, the putting the half of it cannot do it.¹

¹ In a case of division of the question, and a decision against striking out, I advance, doubtingly, the opinion here expressed. I find no authority either way; and I know it may be viewed under a different

But if it had been carried affirmatively to strike out the words and to insert A, it could not afterwards be permitted to strike out A and insert B. The mover of B should have notified, while the insertion of A was under debate, that he would move to insert B. In which case, those who preferred it would join in rejecting A.

After A is inserted, however, it may be moved to strike out a portion of the original paragraph, comprehending A, provided the coherence to be struck out be so substantial as to make this effectively a different proposition. For then it is resolved into the common case of striking out a paragraph after amending it. Nor does anything forbid a new insertion, instead of A and its coherence.

In Senate, January 25, 1798, a motion to postpone, until the second Tuesday in February, some amendments proposed to the Constitution. The words, "until the second Tuesday in February," were struck out by way of amendment. Then it was moved to add, "until the first day of June." Objected, that it was not in order, as the question should first be put on the longest time; therefore, a shorter time decided against, a longer cannot be put to question. It was answered, that this rule takes place only in filling

aspect. It may be thought, that having decided separately not to strike out the passage, the same question for striking out cannot be put over again, though with a view to a different insertion. Still I think it more reasonable and convenient to consider the striking out and insertion as forming one proposition; but should readily yield to any evidence that the contrary is the practice in Parliament.

blanks for time. But when a specific time stands part of a motion, that may be struck out as well as any other part of the motion; and when struck out, a motion may be received to insert any other. In fact, it is not till they are struck out, and a blank for the time thereby produced, that the rule can begin to operate, by receiving all the propositions for different times, and putting the questions successively on the longest. Otherwise, it would be in the power of the mover, by inserting originally a short time, to preclude the possibility of a longer. For, till the short time is struck out, you cannot insert a longer; and if, after it is struck out, you cannot do it, then it cannot be done at all. Suppose the first motion has been to amend by striking out "the second Tuesday in February," and inserting, instead thereof, "the first of June." It would have been regular then to divide the question, by proposing first the question to strike out and then that to insert. Now, this is precisely the effect of the present proceeding; only, instead of one motion and two questions, there are two motions and two questions to effect it; the motion being divided as well as the question.

When the matter contained in two bills might be better put into one, the manner is to reject the one, and incorporate its matter into another bill by way of amendment. So, if the matter of one bill would be better distributed into two, any part may be struck out by way of amendment, and put into a new bill. If a section is to be transposed, a question must

be put on striking it out where it stands, and another for inserting it in the place desired.

A bill passed by the one House, with blanks. These may be filled up by the other, by way of amendments, returned to the first, as such, and passed.—3 *Hats.* 83.

The number prefixed to the section of a bill being merely a marginal indication, and no part of the text of the bill, the clerk regulates that; the House or committee is only to amend the text.

SECTION XXXVI.

DIVISION OF THE QUESTION.

If a question contain more parts than one, it may be divided into two or more questions.—*Mem. in Hakew.* 29. But not as the right of an individual member, but with the consent of the House. For who is to decide whether a question is complicated or not? where it is complicated? into how many propositions it may be divided? The fact is, that the only mode of separating a complicated question is by moving amendments to it; and these must be decided by the House on a question, unless the House orders it to be divided: as on the question, Dec. 2, 1640, making void the election of the Knights of Worcester, on a motion it was resolved to make two questions of it, to wit, one on each Knight.—2 *Hats.* 85, 86. So, wherever there are several names in a question, they may be divided, and put one by one.—

9 *Grey*, 444. So, 1729, April 17, on an objection that a question was complicated, it was separated by amendment.—2 *Hats*. 79. 5.

The soundness of these observations will be evident from the embarrassments produced by the 10th rule of the Senate, which says, "If the question in debate contain several points, any member may have the same divided.

1798, May 30, the alien bill in quasi-committee. To a section and proviso in the original, had been added two new provisos by way of amendment. On a motion to strike out the section as amended, the question was desired to be divided. To do this, it must be put first on striking out either the former proviso, or some distinct member of the section. But when nothing remains but the last member of the section, and the provisos, they cannot be divided so as to put the last member to question by itself; for the provisos might thus be left standing alone as exceptions to a rule when the rule is taken away: or the new provisos might be left to a second question, after having been decided on once before at the same reading; which is contrary to rule. But the question must be on striking out the last member of the section as amended. This sweeps away the exceptions with the rule, and relieves from inconsistency. A question to be divisible, must comprehend points so distinct and entire, that one of them being taken away, the other may stand entire. But a proviso or exception, with an enacting clause, does not contain an entire point or proposition.

May 31. The same bill being before the Senate. There was a proviso, that the bill should not extend, 1. To any foreign minister; nor, 2. To any person to whom the President should give a passport; nor, 3. To any alien merchant, conforming himself to such regulations as the President shall prescribe; and division of the question into its simplest elements was called for. It was divided into four parts, the fourth taking in the words "conforming himself," etc. It was objected, that the words "any alien merchant" could not be separated from their modifying words "conforming," etc., because these words, if left by themselves, contain no substantive idea, will make no sense. But admitting that the divisions of a paragraph into separate questions must be so made as that each part may stand by itself, yet the House having, on the question, retained the first two divisions, the words "any alien merchant" may be struck out, and their modifying words will then attach themselves to the preceding description of persons, and become a modification of that description.

When a question is divided, after the question on the first member, the second is open to debate and amendment: because it is a known rule, that a person may rise and speak at any time before the question has been completely decided by putting the negative, as well as the affirmative side. But the question is not completely put when the vote has been taken on the first member only. One half

of the question, both affirmative and negative, still remains to be put.—See *Executive Journ.*, June 25, 1795. The same decision by President Adams.

SECTION XXXVII.

CO-EXISTING QUESTIONS.

It may be asked whether the House can be in possession of two motions or propositions at the same time? So that, one of them being decided, the other goes to question without being moved anew? The answer must be special. When a question is interrupted by a vote of adjournment, it is thereby removed from before the House; and does not stand *ipso facto* before them at their next meeting, but must come forward in the usual way: so, when it is interrupted by the order of the day. Such other privileged questions also as dispose of the main question (*e. g.* the previous question, the postponement, or commitment) remove it from before the House. But it is only suspended by a motion to amend, to withdraw, to read papers, or by a question of order or privilege, and stands again before the House when these are decided. None but the class of privileged questions can be brought forward while there is another question before the House; the rule being, that when a motion has been made and seconded no other can be received except it be a privileged one.

SECTION XXXVIII.

EQUIVALENT QUESTIONS.

If, on a question for rejection, a bill be retained, it passes of course to its next reading.—*Hakew.* 141. *Scob.* 42, and a question for a second reading determined negatively, is a rejection without farther question.—4 *Grey*, 149. And see *Elsynge's Memor.* 42, in what case questions are to be taken for rejection.

Where questions are perfectly equivalent, so that the negative of the one amounts to the affirmative of the other, and leaves no other alternative, the decision of the one concludes necessarily the other.—4 *Grey*, 157. Thus the negative of striking out amounts to the affirmative of agreeing; and therefore to put a question on agreeing after that on striking out, would be to put the same question in effect twice over. Not so in questions of amendments between the two Houses. A motion to recede being negatived, does not amount to a positive vote to insist, because there is another alternative, to wit, to adhere.

A bill originating in one House, is passed by the other with an amendment. A motion in the originating House, to agree to the amendment, is negatived. Do these result from this vote of disagreement? or must the question on disagreement be expressly voted? The questions respecting amendments from another House are, 1st. To agree: 2d. Disagree: 3d. Recede: 4th. Insist: 5th. Adhere.

- 1st. To agree. { Either of these concludes the
2d. To disagree. { other necessarily, for the positive of either is exactly the equivalent of the negative of the other, and no other alternative remains. On either motion, amendments to the amendment may be proposed; *e. g.* if it be moved to disagree, those who are for the amendment have a right to propose amendments, and to make it as perfect as they can, before the question of disagreeing is put.
- 3d. To recede. { You may then either insist or
4th. To insist. { adhere. You may then either
5th. To adhere. { recede or adhere. You may then either recede or insist. Consequently, the negative of these is not equivalent to a positive vote the other way. It does not raise so necessary an implication as may authorize the secretary by inference to enter another vote; for two alternatives still remain, either of which may be adopted by the House.

SECTION XXXIX.

THE QUESTION.

The question is to be put first on the affirmative, and then on the negative side.

After the Speaker has put the affirmative part of the question, any member who has not spoken before the question, may rise and speak before the negative be put. Because it is no full question till the negative part be put.—*Scob.* 23; *Hats.* 73.

But in small matters, and which are of course, such as receiving petitions, reports, withdrawing motions, reading papers, etc., the Speaker most commonly supposes the consent of the House, where no objection is expressed, and does not give them the trouble of putting the question formally.—*Scob.* 22; 2 *Hats.* 87. 2. 87; 5 *Grey*, 129; 9 *Grey*, 301.

SECTION XL.

BILL, THIRD READING.

To prevent bills from being passed by surprise, the House, by a standing order, directs that they shall not be put on their passage before a fixed hour, naming one at which the House is commonly full.—*Hakew.* 153.

The usage of the Senate is, not to put bills on their passage till noon.

A bill reported and passed to the third reading, cannot on that day be read the third time and passed.

Because this would be to pass on two readings on the same day. At the third reading, the clerk reads the bill, and delivers it to the Speaker, who states the title, that it is the third time of reading the bill, and that the question will be, Whether it shall pass? Formerly, the Speaker, or those who prepared a bill, prepared also a breviate or summary statement of its contents, which the Speaker read when he declared the state of the bill at the several readings. Sometimes, however, he read the bill itself, especially on its passage.—*Hakew.* 136, 137, 153; *Coke*, 22, 115. Latterly, instead of this, he, at the third reading, states the whole contents of the bill, verbatim; only instead of reading the formal parts, “be it enacted,” etc., he states that “the preamble recites so and so; the first section enacts, that, etc.; the second section enacts,” etc.

But in the Senate of the United States, both of these formalities are dispensed with; the breviate presenting but an imperfect view of the bill, and being capable of being made to present a false one; and the full statement being a useless waste of time, immediately after a full reading by the clerk; and especially as every member has a printed copy in his hand.

A bill, on the third reading, is not to be committed for the matter or body thereof; but, to receive some particular clause or proviso, it hath been sometimes suffered, but as a thing very unusual.—*Hakew.* 156; thus, 27 *El.* 1584, a bill was committed on the third reading, having been formerly committed on the second; but it is declared not usual.—*D'Ewes*, 137, *col.* 2. 414. *col.* 2.

When an essential provision has been omitted, rather than erase the bill, and render it suspicious, they add a clause on a separate paper, engrossed and called a rider, which is read, and put to the question three times.—*Elsynge's Memorials*, 59; 6 *Grey*, 335; 1 *Blackst.* 183. For examples of riders, see 3 *Hats.* 121, 122, 124, 126. Every one is at liberty to bring in a rider without asking leave.—10 *Grey*, 52.

It is laid down as a general rule, that amendments proposed at the second reading shall be twice read, and those proposed at the third reading thrice read; as also all amendments from the other House.—*Town. col.* 19, 23, 24, 25, 26, 27, 28.

It is with great, and almost invincible reluctance, that amendments are admitted at this reading, which occasion erasures or interlineations. Sometimes the proviso has been cut off from a bill; sometimes erased.—9 *Grey*, 513.

This is the proper stage for filling up blanks; for if filled up before, and now altered by erasure, it would be peculiarly unsafe.

At this reading, the bill is debated afresh, and for the most part is more spoken to, at this time, than on any of the former readings.—*Hakew.* 153.

The debate on the question, Whether it should be read a third time? has discovered to its friends and opponents the arguments on which each side relies, and which of these appear to have influence with the House; they have had time to meet them with new arguments, and to put their old ones into new shapes.

The former vote has tried the strength of the first opinion, and furnished grounds to estimate the issue; and the question now offered for its passage, is the last occasion which is ever to be offered for carrying or rejecting it.

When the debate is ended, the Speaker, holding the bill in his hand, puts the question for its passage, by saying, "Gentlemen, all you who are of opinion that this bill shall pass, say ay;" and after the answer of ayes, "All those of the contrary opinion, say no."—*Hakew.* 154.

After the bill has passed, there can be no further alteration of it in any point.—*Hakew.* 159.

SECTION XLI.

DIVISION OF THE HOUSE.

The affirmative and negative of the question having been both put and answered, the Speaker declares whether the yeas or nays have it by the sound, if he be himself satisfied, and it stands as the judgment of the House. But if he be not himself satisfied which voice is the greater, or if, before any other member comes into the House, or before any new motion is made, (for it is too late after that,) any member shall rise and declare himself dissatisfied with the Speaker's decision, then the Speaker is to divide the House.—*Scob.* 24; 2 *Hats.* 140.

When the House of Commons is divided, the one party goes forth, and the other remains in the House.

This has made it important which go forth, and which remain; because the latter gain all the indolent, the indifferent, and inattentive. Their general rule, therefore, is, that those who give their vote for the preservation of the orders of the House shall stay in, and those who are for introducing any new matter, or alteration, or proceeding contrary to the established course, are to go out. But this rule is subject to many exceptions and modifications.—2 *Rush*. p. 3, fol. 92; *Scob*. 43, 52; *Co*. 12, 116; *D'Ewes*, 505, col. 1; *Mem. in Hakew*. 25, 29; as will appear by the following statement of who go forth.

Petition that it be received ¹ . . .	} Ayes.

Over the 30th January.	Noes.
For sitting on Sunday, or any other day, not being a sit- ting day	} Ayes.

The one party being gone forth, the Speaker names two tellers from the affirmative, and two from the negative side, who first count those sitting in the House, and report the number to the Speaker. Then they place themselves within the door, two on each side, and count those who went forth, as they come in, and report the number to the Speaker.—*Mem. in Hakew. 26.*

A mistake in the report of the tellers may be rectified after the report made.—2 *Hats. 145.* Note.

But, in both Houses of Congress, all those intricacies are avoided. The ayes first rise, and are counted, standing in their places, by the President or Speaker. Then they sit, and the noes rise, and are counted in like manner.

In Senate, if they be equally divided, the Vice-President announces his opinion, which decides.

The Constitution, however, has directed that "the yeas and nays of the members of either House, on any question, shall, at the desire of one-fifth of those present, be entered on the journal." And again, that in all cases of re-considering a bill disapproved by the President, and returned with his objections, "the votes of both Houses shall be determined by the yeas and nays, and the names of the persons voting for and against the bill, shall be entered on the journals of each House respectively."

By the 11th rule of the Senate, when the yeas and nays shall be called for by one-fifth of the members present, each member called upon shall, unless for special reasons he be excused by the Senate, declare openly, and without debate, his assent or dissent to the question. In taking the yeas and nays, and upon the call of the House, the names of the members shall be taken alphabetically.

When it is proposed to take a vote by yeas and nays, the President or Speaker states that "The question is whether, *e. g.*, the bill shall pass? That it is proposed that the yeas and nays shall be entered on the journal. Those, therefore, who desire it will rise." If he finds and declares that one-fifth have risen, he then states, that "those who are of opinion that the bill shall pass, are to answer in the affirmative, those of the contrary opinion, in the negative." The clerk then calls over the names alphabetically, notes the yea or nay of each, and gives the list to the President or Speaker, who declares the result. In Senate, if there be an equal division, the Secretary calls on the Vice-President, who notes his affirmative or negative, which becomes the decision of the House.

In the House of Commons, every member must give his vote the one way or the other.—*Scob.* 24. As it is not permitted to any one to withdraw who is in the House when the question is put, nor is any one to be told in the division who was not in when the question was put.—2 *Hats.* 140.

This last position is always true when the vote is by yeas and nays; where the negative as well as the affirmative of the question is stated by the President at the same time, and the vote of both sides begins and proceeds *pari passu*. It is true, also, when the question is put in the usual way, if the negative has also been put. But if it has not, the member entering, or any other member may speak, and even propose amendments, by which the debate may be opened again, and the question greatly deferred. And, as some who have answered ay, may have been changed by the new arguments, the affirmative must be put over again. If, then, the member entering may, by speaking a few words, occasion a repetition of the question, it would be useless to deny it on his simple call for it.

While the House is telling, no member may speak, or move out of his place; for, if any mistake be suspected, it must be told again.—*Mem. in Hakew.* 26; 2 *Hats.* 143.

If any difficulty arises in point of order, during the division, the Speaker is to decide peremptorily, subject to the future censure of the House, if irregular. He sometimes permits old experienced members to assist him with their advice, which they do sitting in their seats, covered to avoid the appearance of debate; but this can only be with the Speaker's leave, else the division might last several hours.— 2 *Hats.* 143.

The voice of the majority decides. For the *lex*

majoris partis is the law of all councils, elections, etc., where not otherwise expressly provided.—*Hakew.* 93. But if the House be equally divided, “*semper presumatur pro negante.*” that is, the former law is not to be changed but by a majority.—*Towns. col.* 134.

But, in the Senate of the United States, the Vice-President decides, when the House is divided.—*Const. U. S. Art. I. Sec. 2.*

When, from counting the House, on a division, it appears that there is not a quorum, the matter continues exactly in the state in which it was before the division, and must be resumed at that point on any future day.—2 *Hats.* 126.

1606, May 1, on a question whether a member having said Yea, may afterwards sit and change his opinion? a precedent was remembered by the Speaker, of Mr. Morris, attorney of the wards, in 39 *Eliz.*, who in like case changed his opinion.—*Mem. in Hakew.* 27.

SECTION XLII.

TITLE.

After the bill has passed, and not before, the title may be amended, and is to be fixed by a question; and the bill is then sent to the other House.

SECTION XLIII.

RE-CONSIDERATION.

When a question has been once made and carried in the affirmative or negative, it shall be in order for any member of the majority to move for the re-consideration thereof.—*Rule 22.*

1798, Jan. A bill on its second reading, being amended, and on the question, whether it shall be read a third time negatived, was restored by a decision to re-consider the question. Here the votes of negative and re-consideration, like positive and negative quantities in equation, destroy one another, and are as if they were expunged from the journals. Consequently the bill is open for amendment, just so far as it was the moment preceding the question for the third reading. That is to say, all parts of the bill are open for amendment, except those on which votes have been already taken in its present stage. So also may it be re-committed.

The rule permitting a re-consideration of a question affixing to it no limitation of time or circumstance, it may be asked whether there is no limitation? If, after the vote, the paper on which it has passed has been parted with, there can be no re-consideration: as if a vote has been for the passage of a bill, and the bill has been sent to the other House. But where the paper remains, as on a bill rejected, when, or under what circumstances, does it cease to be susceptible of re-consideration? This remains to be settled, unless a sense that the right of re-consideration is a right to waste the time of the House in repeated agitations of the same question, so that it shall never know when a question is done with, should induce them to reform this anomalous proceeding.

In Parliament, a question once carried, cannot be questioned again, at the same session; but must stand as the judgment of the House.—*Towns. col. 67; Memor. in Hakew. 33.* And a bill once rejected, another of the same substance cannot be brought in again the same session.—*Hakew. 158; 6 Grey, 392.* But this does not extend to prevent putting the same questions in different stages of a bill; because every stage of a bill submits the whole and every

part of it to the opinion of the House, as open for amendment, either by insertion or omission, though the same amendment has been accepted or rejected in a former stage. So in reports of committees, *e. g.* report of an address, the same question is before the House, and open for free discussion.—*Towns. col.* 26; 2 *Hats.* 98, 100, 101. So, orders of the House, or instructions to committees may be discharged. So a bill begun in one House, sent to the other, and there rejected, may be renewed again in that other, passed, and sent back.—*Ib.* 92; 3 *Hats.* 161. Or if, instead of being rejected, they read it once, and lay it aside, and put it off a month, they may offer in another to the same effect, with the same or a different title.—*Hakew.* 97, 98.

Divers expedients are used to correct the effects of this rule; as, by passing an explanatory act, if anything has been omitted or ill-expressed, 3 *Hats.* 278; or an act to enforce, and make more effectual an act, &c., or to rectify mistakes in an act, &c.; or a committee on one bill may be instructed to receive a clause to rectify the mistakes of another. Thus, June 24, 1685, a clause was inserted in a bill for rectifying a mistake committed by a clerk in engrossing a bill of reply.—2 *Hats.* 194. 6. Or the session may be closed for one, two, three, or more days, and a new one commenced. But then all matters depending must be finished, or they fall, and are to begin *de novo*.—2 *Hats.* 94, 98. Or a part of the subject

may be taken up by another bill, or taken up in a different way.—6 *Grey*, 316.

And in cases of the last magnitude, this rule has not been so strictly and verbally observed as to stop indispensable proceedings altogether.—2 *Hats*. 92. 98. Thus, when the address on the preliminaries of peace, in 1782, had been lost by a majority of one; on account of the importance of the question, and smallness of the majority, the same question in substance, though with words not in the first, and which might change the opinions of some members, was brought on again and carried: as the motives for it were thought to outweigh the objections of form.—2 *Hats*. 99, 100.

A second bill may be passed, to continue an act of the same session; or to enlarge the time limited for its execution.—2 *Hats*. 95, 98. This is not in contradiction to the first act.

SECTION XLIV.

BILLS SENT TO THE OTHER HOUSE.

All bills passed in the Senate, shall before they are sent to the House of Representatives, be examined by the committees respectively who brought in such bills, or to whom the same have been last committed in Senate.—*Rule 23*.

A bill from the other House is sometimes ordered to lie on the table.—2 *Hats*. 97.

When bills, passed in one House and sent to the other, are grounded on special facts requiring proof, it is usual, either by message, or at a conference, to

ask the grounds and evidence; and this evidence, whether arising out of papers, or from the examination of witnesses, is immediately communicated.—
3 *Hats.* 48.

SECTION XLV.

AMENDMENTS BETWEEN THE HOUSES.

When either House, *e. g.* the House of Commons, sends a bill to the other, the other may pass it with amendments. The regular progression in this case is, that the Commons disagree to the amendment; the Lords insist on it; the Commons insist on their disagreement; the Lords adhere to their amendment; the Commons adhere to their disagreement. The term of insisting may be repeated as often as they choose, to keep the question open. But the first adherence by either renders it necessary for the other side to recede or adhere also; when the matter is usually suffered to fall.—10 *Grey*, 148. Latterly, however, there are instances of their having gone to a second adherence. There must be an absolute conclusion of the subject somewhere, or otherwise transactions between the Houses would be endless.—
3 *Hats.* 268, 270. The term of insisting, we are told by Sir John Trevor, was then [1679] newly introduced into Parliamentary usage, by the Lords.—7 *Grey*, 94. It was certainly a happy innovation, as it multiplies the opportunities of trying modifications which may bring the House to a concurrence.

Either House, however, is free to pass over the term of insisting, and to adhere in the first instance.—10 *Grey*, 146. But it is not respectful to the other. In the ordinary Parliamentary course, there are two free conferences at least before adherence.—10 *Grey*, 147.

Either House may recede from its amendment, and agree to the bill; or recede from their disagreement to the amendment, and agree to the same absolutely, or with an amendment. For here the disagreement and receding destroy one another, and the subject stands as before the disagreement.—*Elsynge*, 23, 27; 9 *Grey*, 476.

But the House cannot recede from or insist on, its own amendment with an amendment, for the same reason that it cannot send to the other House an amendment to its own act after it has passed the act. They may modify an amendment from the other House by ingrafting an amendment on it, because they have never assented to it; but they cannot amend their own amendment, because they have, on the question, passed it in that form; 9 *Grey*, 353; 10 *Grey*, 240. In Senate, March 29, 1798. Nor where one House has adhered to their amendment, and the other agrees with an amendment, can the first House depart from the form which they have fixed by an adherence.

In the case of a money bill, the Lords' proposed amendments become, by delay, confessedly necessary. The Commons, however, refused them, as

infringing on their privilege as to money bills, but they offered themselves to add to the bill a proviso to the same effect, which had no coherence with the Lords' amendments, and urged, that it was an expedient warranted by precedent, and not unparliamentary in a case become impracticable, and irremediable in any other way.—3 *Hats*. 256, 266, 270, 271. But the Lords refused and the bill was lost, 1 *Chand*. 288. A like case, 1 *Chand*. 311. So the Commons resolve, that it is unparliamentary to strike out at a conference anything in a bill which hath been agreed and passed by both Houses, 6 *Grey*, 274; 1 *Chand*. 312.

A motion to amend an amendment from the other House, takes precedence of a motion to agree or disagree.

A bill originating in one House, is passed by the other with an amendment.

The originating House agrees to their amendment with an amendment. The other may agree to their amendment with an amendment; that being only in the second and not the third degree. For, as to the amending House, the first amendment with which they passed the bill is a part of its text; it is the only text they have agreed to. The amendment to that text by the originating House, therefore, is only in the first degree, and the amendment to that again by the amending House is only in the second, to wit, an amendment to an amendment, and so admissible. Just so when, on a bill from the originating

House, the other, at its second reading, makes an amendment; on the third reading, this amendment is become the text of the bill, and if an amendment to it be moved, an amendment to that amendment may also be moved, as being only in the second degree.

SECTION XLVI.

CONFERENCES.

It is on the occasion of amendments between the Houses that conferences are usually asked; but they may be asked in all cases of difference of opinion between the two Houses on matters depending between them. The request of a conference, however, must always be by the House which is possessed of the papers.—3 *Hats.* 71; 1 *Grey*, 435; 4 *Hats.* 3, 43.

Conferences may be either simple or free. At a conference simply, written reasons are prepared by the House asking it, and they are read and delivered without debate, to the managers of the other House at the conference; but are not then to be answered.—3 *Grey*, 144. The other House then, if satisfied, vote the reasons satisfactory, or say nothing; if not satisfied, they resolve them not satisfactory, and ask a conference on the subject of the last conference, where they read and deliver in like manner written answers to those reasons.—3 *Grey*, 183. They are meant chiefly to record the justification of each House to the nation at large, and to posterity, and in proof that the miscarriage of a necessary measure is not

imputable to them.—3 *Grey*, 255. At free conferences, the managers discuss *viva voce* and freely, and interchange propositions for such modifications as may be made in a Parliamentary way, and may bring the sense of the two Houses together. And each party reports in writing to their respective Houses the substance of what is said on both sides, and it is entered in their journals.—6 *Grey*, 220; 3 *Hats*. 280. (*Vide Joint Rules*, 1.) This report cannot be amended or altered as that of a committee may be.—*Journ. Senate*, May 24, 1796.

A conference may be asked, before the House asking it has come to a resolution of disagreement, insisting or adhering.—3 *Hats*. 269, 341. In which case the papers are not left with the other conferees, but are brought back to be the foundation of the vote to be given. And this is the most reasonable and respectful proceeding. For, as was urged by the Lords on a particular occasion, "it is held vain, and below the wisdom of Parliament, to reason or argue against fixed resolutions, and upon terms of impossibility to persuade."—3 *Hats*. 226. So the Commons say "an adherence is never delivered at a free conference, which implies debate."—10 *Grey*, 147. And on another occasion, the Lords made it an objection that the Commons had asked a free conference after they had made resolutions of adhering. It was then affirmed, however, on the part of the Commons, that nothing was more Parliamentary than to proceed with free conferences after adhering; 3 *Hats*.

269; and we do in fact see instances of conference or of free conference, asked after the resolution of disagreeing.—3 *Hats.* 251, 253, 260, 286, 291, 316, 349, of insisting, *ib.* 280, 296, 299, 319, 322, 355, of adhering, 269, 270, 283, 300; and even of a second or final adherence.—3 *Hats.* 270. And in all cases of conference asked after a vote of disagreement, &c., the conferees of the House asking it are to leave the papers with the conferees of the other; and in one case where they refused to receive them, they were left on the table in the conference chamber.—3 *Hats.* 271, 317, 323, 354; 10 *Grey*, 146. The Commons affirm, that it is usual to have two free conferences or more before either House proceeds to adhere, because, before that time, the Houses have not had the full opportunity of making replies to one another's arguments, and, to adhere so suddenly and unexpectedly, excludes all possibility of offering expedients.—4 *Hats.* 330.

After a free conference the usage is to proceed with free conferences, and not to return again to a conference.—3 *Hats.* 270; 9 *Grey*, 229.

After a conference denied, a free conference may be asked.—1 *Grey*, 45.

When a conference is asked, the subject of it must be expressed, or the conference not agreed to.—*Ord. H. Com.* 89; 1 *Grey*, 425; 7 *Grey*, 31. They are sometimes asked to inquire concerning an offence or default of a member of the other House, 6 *Grey*, 181; 1 *Chand.* 304; or the failure of the other House to

present to the King a bill passed by both Houses, 8 *Grey*, 302; or on information received, and relating to the safety of the nation, 10 *Grey*, 711, or when the methods of Parliament are thought by the one House to have been departed from by the other, a conference is asked to come to a right understanding thereon.—10 *Grey*. 148. So, when an unparliamentary message has been sent, instead of answering it, they ask a conference.—3 *Grey*, 155. Formerly, an address, or articles of impeachment, or a bill with amendments, or a vote of the House, or concurrence in a vote, or a message from the King, were sometimes communicated by way of conference.—7 *Grey*, 128, 300, 387; 7 *Grey*, 80; 8 *Grey*, 210, 255; 1 *Torbuck's Deb.* 278; 10 *Grey*, 293; 1 *Chandler*, 49, 287. But this is not modern practice.—8 *Grey*, 255.

A conference has been asked after the first reading of a bill. 1 *Grey*, 194. This is a singular instance. During the time of a conference, the House can do no business. As soon as the names of the managers are called over, and they are gone to the conference, the Speaker leaves the chair, without any question, and resumes it in the return of the managers. It is the same while the managers of an impeachment are at the House of Lords.—4 *Hats.* 47, 209, 288.

SECTION XLVII.

MESSAGES.

Messages between the Houses are to be sent only while both Houses are sitting.—3 *Hats*. 15. They are received during a debate, without adjourning the debate.—3 *Hats*. 22.

In Senate, the messengers are introduced in any state of business, except—1. While a question is putting. 2. While the yeas and nays are calling. 3. While the ballots are calling. The first case is short: the second and third are cases where any interruption might occasion errors difficult to be corrected.—So arranged, June 15th, 1798.

In the House of Representatives, as in Parliament, if the House be in a committee when a messenger attends, the Speaker takes the chair to receive the message, and then quits it to return into a committee, without any question or interruption.—4 *Grey*, 226.

Messengers are not saluted by the members, but by the Speaker, for the House.—2 *Grey*, 253, 274.

If messengers commit an error in delivering their messages, they may be admitted, or called in, to correct their message.—4 *Grey*, 41. Accordingly, March 13, 1800, the Senate having made two amendments to a bill from the House of Representatives, their secretary, by mistake, delivered one only; which being inadmissible by itself, that House disagreed, and notified the Senate of their disagreement. This produced a discovery of the mistake. The secretary was sent to the other House to correct his mistake, the correction was received, and the two amendments acted on *de novo*.

As soon as the messenger, who has brought bills

from the other House, has retired, the Speaker holds the bills in his hand, and acquaints the House, "That the other House have, by their messenger, sent certain bills," and then reads their titles, and delivers them to the clerk to be safely kept till they shall be called for to be read.—*Hakew.* 178.

It is not the usage for one House to inform the other by what numbers a bill has passed.—10 *Grey*, 150. Yet they have sometimes recommended a bill as of great importance to the consideration of the House to which it is sent.—3 *Hats.* 25. Nor when they have rejected a bill from the other House, do they give notice of it; but it passes *sub silentio* to prevent unbecoming altercation.—1 *Black.* 133.

But in Congress the rejection is notified by message to the House in which the bill originated.

A question is never asked by the one House of the other by way of message, but only at a conference; for this is an interrogatory, not a message.—3 *Grey*, 151, 181.

When a bill is sent by one House to the other, and is neglected, they may send a message to remind them of it.—3 *Hats.* 25; 5 *Grey*, 154. But if it be mere inattention, it is better to have it done informally, by communications between the Speakers, or members of the two Houses.

Where the subject of a message is of a nature that it can properly be communicated to both Houses of Parliament, it is expected that this communication

should be made to both on the same day. But where a message was accompanied with an original declaration, signed by the party, to which the message referred, its being sent to one House was not noticed by the other, because the declaration, being original, could not possibly be sent to both Houses at the same time.—2 *Hats.* 260, 261, 262.

The King having sent original letters to the Commons, afterwards desires they may be returned, that he may communicate them to the Lords.—1 *Chandler*, 303.

SECTION XLVIII.

ASSENT.

The House which has received a bill, and passed it, may present it for the King's assent, and ought to do it, though they have not by message notified to the other their passage of it. Yet the notifying by message is a form which ought to be observed between the two Houses, from motives of respect and good understanding.—3 *Hats.* 242. Were the bill to be withheld from being presented to the King, it would be an infringement of the rules of Parliament.—2 *Hats.* 242.

When a bill has passed both Houses of Congress, the House last acting on it notifies its passage to the other, and delivers the bill to the joint committee of enrolment, who see that it is truly enrolled in parchment. When the bill is enrolled, it is not to be written in paragraphs, but solidly and all of a piece, that the blanks within the paragraphs may not give room for forgery.—9 *Grey*, 143. It is then put in the hands of the clerk of the House of Representatives, to have it

signed by the Speaker. The clerk then brings it by way of message to the Senate, to be signed by their President. The secretary of the Senate returns it to the committee of enrolment, who present it to the President of the United States. If he approves, he signs and deposits it among the rolls in the office of the Secretary of State, and notifies by message the House in which it originated, that he has approved and signed it; of which that House informs the other by message. If the President disapproves, he is to return it, with his objections, to the House in which it shall have originated; who are to enter the objections at large on their journal, and proceed to reconsider it. If, after such reconsideration, two-thirds of the House shall agree to pass the bill, it shall be sent, together with the President's objections, to the other House, by which it shall likewise be reconsidered, and if approved by two-thirds of that House, it shall become a law. If any bill shall not be returned by the President within ten days (Sundays excepted) after it shall have been presented to him, the same shall be a law, in like manner as if he had signed it, unless the Congress, by their adjournment, prevent its return; in which case it shall not be a law.—*Const. U. S.*, Art. I. Sec. 7.

SECTION XLIX.

JOURNALS.

Every order, resolution, or vote, to which the concurrence of the Senate and the House of Representatives may be necessary, (except on a question of adjournment,) shall be presented to the President of the United States, and before the same shall take effect, shall be approved by him, or, being disapproved by him, shall be re-passed by two-thirds of the Senate and House of Representatives, according to the rules and limitations prescribed in the case of a bill.—*Const. U. S.*, Art. I. Sec. 7.

Each House shall keep a journal of its proceedings, and from time to time publish the same, excepting such parts as may, in their judgment, require secrecy.—*Const.*, I. 5, 3.

Every vote of Senate shall be entered on the journal, and a brief statement of the contents of each petition, memorial, or paper, presented to the Senate, be also inserted on the journal.—*Rule 24.*

The proceedings of the Senate, when not acting as in a committee of the House, shall be entered on the journals, as concisely as possible, care being taken to detail a true account of the proceedings.—*Rule 26.*

The titles of bills, and such part thereof only as shall be affected by proposed amendments, shall be inserted on the journals.—*Rule 27.*

If a question is interrupted by a vote to adjourn, or to proceed to the orders of the day, the original question is never printed in the journal, it never having been a vote, nor introductory to any vote; but when suppressed by the previous question, the first question must be stated, in order to introduce, and make intelligible, the second.—2 *Hats.* 83.

So also, when a question is postponed, adjourned, or laid on the table, the original question, though not yet a vote, must be expressed in the journals; because it makes part of the vote of postponement, adjourning, or laying on the table.

Where amendments are made to a question, those amendments are not printed in the journals, separated from the question; but only the question as finally agreed to by the House. The rule of entering in the journals only what the House has agreed to, is founded in great prudence and good sense; as there may be many questions proposed which it may be improper to publish to the world, in the form in which they are made.—2 *Hats.* 85.

In both Houses of Congress, all questions whereon the yeas and nays are desired by one-fifth of the members present, whether decided affirmatively or negatively, must be entered on the journals.—*Const.*, I. 5, 3.

The first order for printing the votes of the House of Commons, was October 30, 1685.—1 *Chandler*, 387.

Some judges have been of opinion, that the journals of the House of Commons are no records, but remembrances. But this is no law.—*Cob.* 110, 111;

Lex. Parl. 114, 115; *Four. H. C.* Mar. 17, 1592; *Hale, Parl.* 105. For the Lords, in their House, have power of judicature; the Commons, in their House, have power of judicature; and both Houses together have power of judicature; and the book of the clerk of the House of Commons is a record, as is affirmed by act of Parliament.—6 *H.* 8. c. 16; *Inst.* 23, 24; and every member of the House of Commons has a judicial place.—4 *Inst.* 15. As records, they are open to every person; and a printed vote of either House is sufficient ground for the other to notice it. Either may appoint a committee to inspect the journals of the other, and report what has been done by the other in any particular case.—2 *Hats.* 261; 3 *Hats.* 27, 30. Every member has a right to see the journals, and to take and publish votes from them. Being a record, every one may see and publish them.—6 *Grey*, 118, 119.

On information of a mis-entry or omission of an entry in the journal, a committee may be appointed to examine and rectify it, and report it to the House.—2 *Hats.* 194, 5.

SECTION L.

ADJOURNMENT.

The two Houses of Parliament have the sole, separate, and independent power of adjourning, each their respective Houses. The King has no

authority to adjourn them; he can only signify his desire, and it is in the wisdom and prudence of either House to comply with his requisition, or not, as they see fitting.—2 *Hats.* 332; 1 *Blackstone*, 186; 5 *Grey*, 122.

By the Constitution of the United States, a smaller number than a majority may adjourn from day to day.—I. 5. But neither House, during the session of Congress, shall, without the consent of the other, adjourn for more than three days, nor to any other place than that in which the two Houses shall be sitting.—I. 5. The President may on, extraordinary occasions, convene both Houses, or either of them, and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper.—*Const.* II. 3.

A motion to adjourn simply, cannot be amended as by adding, "To a particular day." But must be put simply, "That this House do now adjourn?" and if carried in the affirmative, it is adjourned to the next sitting day, unless it has come to a previous resolution, "That at its rising, it will adjourn to a particular day;" and then the House is adjourned to that day.—2 *Hats.* 82.

Where it is convenient that the business of the House be suspended for a short time, as for a conference presently to be held, &c., it adjourns during pleasure.—2 *Hats.* 305. Or for a quarter of an hour.—5 *Grey*, 331.

If a question be put for adjournment, it is no adjournment till the Speaker pronounces it.—5 *Grey*, 137. And from courtesy and respect, no member leaves his place till the Speaker has passed on.

SECTION LI.

A SESSION.

Parliament have three modes of separation, to wit, by adjournment, by prorogation, by dissolution by the King, or by the efflux of the term for which they were elected. Prorogation or dissolution constitutes there what is called a session; provided some act has passed. In this case, all matters depending before them are discontinued, and at their next meeting are to be taken up *de novo*, if taken up at all.—1 *Blackstone*, 186. Adjournment, which is by themselves, is no more than a continuance of the session from one day to another, or for a fortnight, a month, etc., *ad libitum*. All matters depending remain in *statu quo*, and when they meet again, be the term ever so distant, are resumed without any fresh commencement, at the point at which they were left.—1 *Lev.* 165; *Lex. Parl. c.* 2; 1 *Ro. Rep.* 29; 4 *Inst.* 7, 27, 28; *Hut.* 61; 1 *Mod.* 152; *Ruffh. Fac. L. Dict. Parliaments*; *Blackstone*, 186. Their whole session is considered in law but as one day, and has relation to the first day thereof.—*Bro. Abro. Parliament*, 86.

Committees may be appointed to sit during a recess by adjournment, but not by prorogation.—5 *Grey*, 374; 9 *Grey*, 350; 1 *Chandler*, 50. Neither House can continue any portion of itself in any Parliamentary function, beyond the end of the session, without the consent of the other two branches,

When done, it is by a bill constituting them commissioners for the particular purpose.

Congress separate in two ways only, to wit, by adjournment or dissolution by the efflux of their time. What then constitutes a session with them? A dissolution certainly closes one session, and the meeting of the new Congress begins another. The Constitution authorizes the President, "On extraordinary occasions, to convene both Houses, or either of them."—Art. I. Sec. 3. If convened by the President's proclamation, this must begin a new session, and of course determine the preceding one to have been a session. So, if it meets under the clause of the Constitution, which says, "The Congress shall assemble, at least once in every year, and such meeting shall be on the first Monday in December, unless they shall by law appoint a different day,"—I. 4,—this must begin a new session. For even if the last adjournment was to this day, the act of adjournment is merged in the higher authority of the Constitution, and the meeting will be under that, and not under their adjournment. So far we have fixed landmarks for determining sessions. In other cases, it is declared by the joint vote authorizing the President of the Senate and the Speaker to close the session on a fixed day, which is usually in the following form, "Resolved, by the Senate and House of Representatives, that the President of the Senate and the Speaker of the House of Representatives, be authorized to close the present session, by adjourning their respective Houses on the — day of —."

When it was said above, that all matters depending before Parliament were discontinued by the determination of the session, it was not meant for judiciary cases, depending before the House of Lords, such as impeachments, appeals, and writs of error. These stand continued of course to the next session.—*Raym.* 120, 381; *Ruffh. Jac. L. D. Parliament.*

Impeachments stand in like manner continued before the Senate of the United States.

SECTION LII.

TREATIES.

The President of the United States has power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur.—*Const. U. S.*, Art. II. Sec. 2.

Resolved, That all confidential communications, made by the President of the United States to the Senate, shall be, by the members thereof, kept inviolably secret; and that all treaties, which may hereafter be laid before the Senate, shall also be kept secret, until the Senate shall, by their resolution, take off the injunction of secrecy.—*Dec. 22d*, 1804.

Treaties are legislative acts. A treaty is a law of the land. It differs from other laws only as it must have the consent of a foreign nation, being but a contract with respect to that nation. In all countries, I believe, except England, treaties are made by the legislative power; and there, also, if they touch the laws of the land, they must be approved by Parliament. *Ware vs. Hilton*.—3 *Dallas's Rep.* 199. It is acknowledged, for instance, that the King of Great Britain cannot, by a treaty, make a citizen of an alien.—*Vattel*, b. 1, c. 19, sec. 214. An act of Parliament was necessary to validate the American treaty of 1783. And abundant examples of such acts can be cited. In the case of the treaty of Utrecht, in 1712, the commercial articles required the concurrence of Parliament. But a bill brought in for that purpose was rejected. France, the other contracting party, suffered these articles, in practice, to be not insisted on, and adhered to the rest of the

treaty.—4 *Russell's Hist. Mod. Europe*, 457; 2 *Smollet*, 242, 246.

By the Constitution of the United States, this department of legislation is confined to two branches only, of the ordinary Legislature; the President originating, and Senate having a negative. To what subject this power extends, has not been defined in detail by the Constitution; nor are we entirely agreed among ourselves. 1. It is admitted that it must concern the foreign nation, party to the contract, or it would be a mere nullity *res inter alias acta*. 2. By the general power to make treaties, the Constitution must have intended to comprehend only those objects which are usually regulated by treaty, and cannot be otherwise regulated. 3. It must have meant to except out of these the rights reserved to the States; for surely the President and Senate cannot do by treaty what the whole government is interdicted from doing in any way. 4. And also to except those subjects of legislation in which it gave a participation to the House of Representatives. This last exception is denied by some, on the ground that it would leave very little matter for the treaty power to work on. The less the better, say others. The Constitution thought it wise to restrain the Executive and Senate from entangling and embroiling our affairs with those of Europe. Besides, as the negotiations are carried on by the Executive alone, the subjecting to the ratification of the Representatives such articles as are within their participation, is no more inconvenient than to the Senate. But the ground of this exemption is denied as unfounded. For examine, *e. g.*, the treaty of commerce with France, and it will be found that out of thirty-one articles, there are not more than small portions of two or three of them which would not still remain as subjects of treaties, untouched by these exceptions.

Treaties being declared, equally with the laws of the United States, to be the supreme law of the land, it is understood that an act of the Legislature alone can declare them infringed and rescinded. This was accordingly the process adopted in the case of France, 1798.

It has been the usage of the Executive, when it communicates a treaty to the Senate for their ratification, to communicate also the correspondence of the negotiations. This having been omitted in the case of the Prussian treaty, was asked by a vote of the House of February 12, 1800, and was obtained. And in December, 1800, the Convention of that year, between the United States and France, with

the report of the negotiations by the Envoys, but not their instructions, being laid before the Senate, the instructions were asked for, and communicated by the President.

The mode of voting on questions of ratification is by nominal call.

Resolved, as a standing rule, That whenever a treaty shall be laid before the Senate for ratification, it shall be read a first time for information only; when no motion to reject, ratify, or modify the whole or any part, shall be received.

That its second reading shall be for consideration; and on a subsequent day, when it shall be taken up as in a committee of the whole, and every one shall be free to move a question on any particular article in this form: "Will the Senate advise and consent to the ratification of this article?" or to propose amendments thereto, either by inserting or leaving out words, in which last case the question shall be, "Shall the words stand part of the article?" And in every of the said cases, the concurrence of two-thirds of the Senators present shall be required to decide affirmatively. And when through the whole, the proceedings shall be stated to the House, and questions be again severally put thereon for confirmation, or new ones proposed, requiring in like manner a concurrence of two-thirds for whatever is retained or inserted.

That the votes so confirmed shall, by the House or a committee thereof, be reduced into the form of a ratification with or without modifications, as may have been decided, and shall be proposed on a subsequent day, when every one shall again be free to move amendments, either by inserting or leaving out words; in which last case the question shall be, "Shall the words stand part of the resolution?" And in both cases the concurrence of two-thirds shall be requisite to carry the affirmative; as well as on the final question to advise and consent to the ratification in the form agreed to.—*Rule of Jan. 6, 1801.*

Resolved, That when any question may have been decided by the Senate, in which two-thirds of the members present are necessary to carry the affirmative, any member who voted on that side which prevailed in the question may be at liberty to move for a reconsideration; and a motion for reconsideration shall be decided by a majority of votes.—*Rule of Feb. 3, 1801.*

SECTION LIII.

IMPEACHMENT.

These are the provisions of the Constitution of the United States on the subject of impeachments. The following is a sketch on some of the principles and practices of England on the same subject.

The House of Representatives shall have the sole power of impeachment.—*Const. U. S.*, Art. I. Sec. 3.

The Senate shall have the sole power to try all impeachments. When sitting for that purpose, they shall be on oath or affirmation. When the President of the United States is tried, the Chief Justice shall preside; and no person shall be convicted without the concurrence of two-thirds of the members present. Judgment, in cases of impeachment, shall not extend further than to removal from office, and disqualification to hold and enjoy any office of honor, trust, or profit, under the United States. But the party convicted shall nevertheless be liable and subject to indictment, trial, judgment, and punishment, according to law.—*Const. U. S.*, Art. I. Sec. 3.

The President, Vice-President, and all civil officers of the United States, shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.—*Const. U. S.*, Art. II. Sec. 4.

The trial of crimes, except in cases of impeachment, shall be by jury.—*Const. U. S.*, Art. III. Sec. 2.

Jurisdiction.—The Lords cannot impeach any to themselves, nor join in the accusation, because they are judges.—*Seld. Judic. in Parl.* 12, 63. Nor can they proceed against a commoner, but on complaint of the Commons.—*Ib.* 84. The Lords may not, by the law, try a commoner for capital offence, on the information of the King, or a private person; because the accused is entitled to a trial by his peers gener-

ally; but on accusation by the House of Commons, they may proceed against the delinquent, of whatsoever degree, and whatsoever be the nature of the offence; for there they do not assume to themselves trial at common law. The Commons are then instead of a jury, and the judgment is given on their demand, which is instead of a verdict. So the Lords do only judge but not try the delinquent.—*Ib.* 6, 7. But Wooddeson denies that a commoner can now be charged capitally before the Lords, even by the Commons; and cites Fitzharris's case, 1681, impeached of high treason, where the Lords remitted the prosecution to the inferior court.—8 *Grey's Deb.* 325, 6, 7; 2 *Wooddeson*, 601, 576; 3 *Seld.* 1610, 1619, 1641; 4 *Black.* 257; 3 *Seld.* 1604, 1618, 9. 1656.

Accusation.—The Commons, as the grand inquest of the nation, become suitors for penal justice.—2 *Woodd.* 597; 6 *Grey*, 356. The general course is to pass a resolution, containing a criminal charge against the supposed delinquent, and then to direct some member to impeach him by oral accusation, at the bar of the House of Lords, in the name of the Commons. The person signifies, that the articles will be exhibited, and desires that the delinquent may be sequestered from his seat, or be committed, or that the Peers will take order for his appearance.—*Sachev. Trial.* 325; 2 *Woodd.* 602, 605; *Lords' Jour.* 3 June, 1701; 1 *Wms.* 616; *Grey*, 324.

Process.—If the party do not appear, proclamations are to be issued giving him a day to appear.

On their return they are strictly examined. If any error be found in them, a new proclamation issues, giving a short day. If he appear not, his goods may be arrested, and they may proceed.—*Seld. Jud.* 98, 99.

Articles.—The accusation (article) of the Commons, is substituted in place of an indictment. Thus, by the usage of Parliament, an impeachment for writing or speaking the particular words, need not be specified.—*Sach. Tr.* 325; 2 *Woodd.* 602, 605; *Lords' Journ.* 3 June, 1701; 1 *Wms.* 616.

Appearance.—If he appears, and the case be capital, he answers in custody; though not if the accusation be general. He is not to be committed but on special accusations. If it be for a misdemeanor only, he answers a Lord in his place, a Commoner at the bar, and not in custody, unless, on the answer, the Lords find cause to commit him till he find sureties to attend, and lest he should fly.—*Seld. Jud.* 98, 99. A copy of the articles is given him, and a day fixed for his answer.—*T. Ray*; 1 *Rushw.* 268; *Fost.* 232. 1 *Clar. Hist. of the Reb.* 379. On a misdemeanor, his appearance may be in person, or he may answer in writing, or by attorney.—*Seld. Jud.* 100. The general rule on accusation for a misdemeanor is, that in such a state of liberty or restraint as the party is when the Commons complain of him, in such he is to answer.—*Seld. Jud.* 101. If previously committed by the Commons, he answers as a prisoner. But this may be called, in

some sort, *judicium parium suorum*.—*Seld. Jud.* In misdemeanors, the party has a right to counsel by the common law; but not in capital cases.—*Jud. Seld.* 102-5.

Answer.—The answer need not observe great strictness of form. He may plead guilty as to part, and defend as to the residue; or, saving all exceptions, deny the whole, or give a particular answer to each article separately.—1 *Rush.* 247; 2 *Rush.* 1374; 12 *Parl. Hist.* 442; 3 *Lords' Journ.* 13 Nov., 1643; 2 *Woodd.* 607. But he cannot plead a pardon in bar to the impeachment.—2 *Woodd.* 618; 2 *St. Tr.* 735.

Replication, rejoinder, &c.—There may be a replication, rejoinder, &c.—*Seld. Jud.* 114; 8 *Grey's Deb.* 233; *Sach. Tr.* 15; *Journ. House of Commons*, 6 March, 1640, 1.

Witnesses.—The practice is to swear the witnesses in open House, and then examine them there: or a committee may be named, who shall examine them in committee either on interrogatories agreed on in the House, or such as the committee, in their discretion, shall demand.—*Seld. Jud.* 120, 123.

Fury.—In the case of Alice Pierce, 1 *R.* 2. a jury was empannelled for her trial before a committee.—*Seld. Jud.* 123. But this was on a complaint, not an impeachment by the Commons.—*Seld. Jud.* 163. It must also have been for a misdemeanor only, as the Lords Spiritual sat in the case, which they do on misdemeanors, but not in capital cases.—*Seld. Jud.* 148. The judgment was a forfeiture of all her lands

and goods.—*Seld. Jud.* 188. This, Selden says, is the only jury he finds recorded in Parliament for misdemeanors; but he makes no doubt if the delinquent doth put himself on the trial of his country, a jury ought to be empannelled: and he adds, that it is not so on impeachment by the Commons; for they are in *oco proprio*, and here no jury ought to be empannelled.—*Ib.* 124. The Lord Berkeley, 6 *E.* 3, was arraigned for the murder of, *L.* 2, on an information on the part of the King, and not on impeachment of the Commons; for then they had been *patria sua*. He waived his peerage, and was tried by a jury of Gloucestershire and Warwickshire.—*Ib.* 125. In one, 1 *H.* 7, the Commons protest that they are not to be considered as parties to any judgment given, or hereafter to be given in Parliament.—*Ib.* 133. They have been generally, and more justly considered, as is before stated, as the grand jury. For the conceit of Selden is certainly not accurate, that they are the *patria sua* of the accused, and that the Lords do only judge, but not try. It is undeniable that they do try. For they examine witnesses as to the facts, and acquit or condemn according to their own belief of them. And Lord Hale says, “the Peers are judges of law as well as of fact.”—2 *Hale, P. C.* 275. Consequently of fact as well as of law.

Presence of Commons.—The Commons are to be present at the examination of witnesses.—*Seld. Jud.* 124. Indeed, they are to attend throughout, either

as a committee of the whole House; or otherwise, at discretion, appoint managers to conduct the proofs.—*Rushw. Tr. of Straff.* 37; *Com. Journ.* 4 Feb., 1709, 10; 2 *Wood.* 614. And judgment is not to be given till they demand it.—*Seld. Jud.* 124. But they are not to be present on impeachment when the Lords consider of the answer or proofs, and determine of their judgment. Their presence, however, is necessary at the answer and judgment in cases capital—*Ib.* 58, 159; as well as not capital, 162. The Lords debate the judgment among themselves. Then the vote is first taken on the question of guilty or not guilty; and if they convict, the question, or particular sentence, is out of that which seemeth to be most generally agreed on.—*Seld. Jud.* 167; 2 *Wood.* 612.

Judgment.—Judgments in Parliament, for death, have been strictly guided *per legem terræ*, which they cannot alter; and not at all according to their discretion. They can neither admit any part of the legal judgment, nor add to it. Their sentence must be *secundum, non ultra legem*.—*Seld. Jud.* 168, 169, 170, 171. This trial, though it varies in external ceremony, yet differs not in essentials from criminal prosecutions before inferior courts. The same rules of evidence, the same legal notions of crimes and punishments, prevail. For impeachments were not framed to alter the law, but to carry it into more effectual execution against too powerful delinquents. The judgment, therefore, is to be such as is war-

ranted by legal principles or precedents.—6 *Stra. Tr.* 14; 2 *Wood.* 611. The Chancellor gives judgments in misdemeanors; the Lord High Steward, formerly, in cases of life and death.—*Seld. Jud.* 180. But now the Steward is deemed not necessary.—*Fost.* 144; 1 *Woodd.* 613. In misdemeanors, the greatest corporal punishment hath been imprisonment.—*Seld. Jud.* 184. The King's assent is necessary in capital judgments, (but 2 *Woodd.* 614. contra.) but not in misdemeanors.—*Seld. Jud.* 136.

Continuance.—An impeachment is not discontinued by the dissolution of Parliament; but may be resumed by the new Parliament.—*T. Ray.* 383; 5 *Com. Four.* 23 Dec., 1790; *Lords' Four.* May 16, 1791; 2 *Wood.* 618.
