## *Introduction*

*World Encyclopedia of Police Forces and Correctional Systems* is the second edition of the work published in 1988 as *World Encyclopedia of Police Forces and Penal Systems*. The first edition covered 183 countries in one volume. The present one covers 198 countries in two volumes. In the intervening years between the first and the second editions the world has changed dramatically, and so have law enforcement and corrections. In the first edition, law enforcement was perceived as a local activity limited to nations and localities within nations. With the ever-present threat of terrorism, law enforcement has taken on a global dimension and the globalization of the science and the profession will only continue to grow in the future. When the first edition was published the Soviet Union had pulled down its iron curtain across half the world, permitting little information to leak into the free world. The collapse of Communism meant not only that there were now 21 more nations in the world, but that there was more access to the police systems of those countries that were once closed to the scrutiny of scholars. Since 1988 the information revolution and the resulting quantum jump in technology have changed the once staid and slow-moving profession of law enforcement into a dynamic one where every policeman has access to as much information in the field as his commanders at headquarters. Even in the smallest countries of the world, law enforcement people are seamlessly connected into a vast network that, through Interpol and other organizations, can reach into the farthest corners of the world. In fact not since the birth of the modern police in Robert Peel's Britain in the mid-1840s has there been a greater expansion in police powers and functions than in the last two decades.

These changes are reflected in the second edition and in the scope of the work. Because these global issues and trends needed to be addressed, the encyclopedia is now divided into two parts. The first part deals with critical global themes that affect all nations and that cannot be properly treated in national chapters. Terrorism has emerged as a discrete target of law enforcement activity. Although it can be dealt with only in a quasi-military fashion, most of the first responders are law enforcement officers and fire fighters. The conventional rubrics that governed law enforcement do not apply to terrorism, which is often described as a war. As the police gain new powers in this asymmetric war, questions are raised about the limits to such powers and the human rights that could be impacted as a result. It is not merely terrorism that confronts police forces and corrections throughout the world. The very same technological revolution that helps the police to be more innovative in foiling criminal activity also helps criminals to outsmart the police and devise new forms of crime. As technology has erased borders and shortened distances,

crime in all forms has become global. It is now possible for criminals to commit crimes in any country without necessarily being physically present there. Immigration crime and cybercrime are two examples of the new threats that law enforcement agencies face in the twenty-first century. This has called for an extraordinary degree of transnational cooperation among police agencies at every level. Borderless nations create borderless crimes and they in turn create borderless law enforcement strategies. The increasing use of drugs also contributes to the breakdown of law and order, especially among the youth. Even with technology on their side, few national police agencies have been able to resolve these new problems that beset them.

One indicator of how law enforcement has become one of the top priorities for every government is the fact that during the past 20 years, the ratio of police to the general population has risen in every country. Worldwide there is now one policeman for every 860 persons, compared to one policeman for every 1,300 persons in 1988. Worldwide there are now 7.2 million men and women in police uniforms. Unlike the military, policemen are highly visible and ubiquitous and their presence and profession affect society at every level.

Even though law enforcement and criminal justice studies are now major disciplines in their own right, police and corrections remain among the least studied institutions and ones on which the least information is available to scholars and researchers on a global basis. The reasons are twofold: The first is the instinctive and historical academic distrust of the more forbidding aspects of police and correctional studies, and the second is the uncommunicative nature of police and penal professionals who see little practical benefit in scholarly investigation. This is slowly changing. Movie and television dramas with police and court themes have helped to romanticize the investigative aspects of law enforcement. Secondly, there is now more accountability in law enforcement, especially in democratic countries. Nevertheless, the information currently available in police and corrections is of such poor quality outside of Europe and North America that many decades will pass before it reaches the level currently obtainable in other fields of public activity.

Information on police forces and penal systems is not only meager but also uneven and limited to certain areas of law enforcement to the exclusion of others. The situation is not helped by the fact that Interpol, the major international police organization, does not have a strong publishing or data collection program and has never taken an aggressive initiative in promoting police studies. It depends on the voluntary cooperation of members for input into the irregularly published *International Crime Statistics*. This publication provides only strict crime data and does not deal with law enforcement forces.

The individual country entries in the second edition are broader in scope and provide more information on areas that were not covered in the first edition. The most important of these new sections are the ones on human rights, including police corruption and prison conditions. Police activity is one that easily lends itself to brutality and corruption if left unchecked and if proper accountability procedures are not in place. This is particularly true of non-democratic nations where the police (as well as the military) are used by the powers that be to suppress legitimate dissent under the guise of enforcing the law.

Within each country entry the information is organized under four main headings: Law Enforcement; Human Rights; Crime; and Correctional System. Basic statistics are presented for both police and crime. While every effort has been made to present the information in a uniform and consistent manner, the schema had to be modified for some countries because of the paucity of information. Nevertheless, the encyclopedia represents one of the largest caches of information on law enforcement and correctional systems now available in print.

*George Thomas Kurian*

## *Acknowledgments*

The compilation of an international encyclopedia is the result of teamwork that extends across continents. Much help was received from countless scholars, librarians, and consultants in every country, and many national police agencies provided information. In the United States, the dean and members of the Criminal Justice Department at Sam Houston States University in Texas were closely associated with the project from the beginning. Particularly worthy of mention are Richard Ward, the director, who served as a member of the editorial board, and Adam Dulin, Joseph D. Serio, and Mitch P. Roth, all of whom have contributed to the encyclopedia and served as consultants. Their participation was an asset to the encyclopedia. I wish also to acknowledge the strong professional support and cooperation of the project team at Thomson Gale, led by Kristin Hart, Jan Klisz, and Dan Marowski.

I wish to add a personal note of gratitude to my wife, Annie Kurian, for her unfailing support and encouragement.

## *About the Contributors*

### *Hans-Jorg Albrecht*

Director of the Max Planck Institute for Foreign and International Criminal Law in Germany.

### *Jennifer Albright*

Doctoral student at the Department of Political Science, Programs in Criminal Justice, Washington State University.

### *Debra Allee*

Veteran of the Houston Police Department, presently assigned to the Houston Police Academy.

### *Arvydas V. Augas*

Captain and major of the Lithuanian Police which he joined in 1978 and a recently elected chairman of the Siauliai branch of the International Police Association. In 1998 he was appointed a Commissar of the criminal police in Siauliai, Lithuania.

### *Alan Beckley*

Immediate past president of the Society of Police Futurists International. He was a police officer in the United Kingdom for 30 years and is widely published on police training and management. He is the editor of *Police Futures*.

### *Lindsey Bowden*

Student currently pursuing a degree in criminal justice at Midwestern State University, Wichita Falls, Texas.

### *Rene Calderon*

Veteran of the Houston Police Department and a graduate student at Midwestern State University, Wichita Falls, Texas.

### *Hakan Can*

Doctoral student at the College of Criminal Justice at Sam Houston State University in Huntsville, Texas. He is the author of three books and nine articles on police systems. He joined the Turkish National Police in 1984 and was promoted to the rank of chief superintendent in 2001. He has worked with Interpol, the Turkish National Central Bureau, Central Anti-Smuggling Department, Drugs subdivision and Fiscal Crime subdivision, and with the police forces in Germany, Spain, Netherlands, Kosovo, Bosnia, Bulgaria, Romania, and Albania.

### *Josep Canabata*

Course instructor at the Cataluna Police Academy and an associate professor of law history with a specialty in comparative law at the Universidad Autonoma de Barcelona. He is a criminal lawyer and a member of the Investigation and the Socio-Juridical Studies Group. His research interests include African Colonial Law and criminal justice aspects of Muslim immigration. He has also served as visiting researcher at a number of universities abroad, including University of Berkeley, California, University of Munster, Germany, and University of Abdemalek es Saadi, Morocco.

### *Mark Clark*

Veteran of the Houston Police Department and the executive director of the Houston Police Officers' Union.

### *James A. Conser*

Professor, Criminal Justice Department, Youngstown State University, Youngstown, Ohio. He is coauthor with Gregory D. Russell of *Law Enforcement in the United States*.

**Clifford Cook**

Deputy police chief with the Fort Worth Police Department, currently assigned to the Operational Support Bureau.

**Daniel Donnelly**

Research fellow at the Scottish Centre for Police Studies, Bell College, Hamilton, Scotland. He retired from the Strathclyde Police Force as chief superintendent after 25 years of service.

**Adam Dulin**

International Terrorism editor for *Crime and Justice International* and a researcher in the Institute for the Study of Violent Groups at Sam Houston State University, Huntsville, Texas. In addition, he teaches criminal justice courses at the undergraduate level. His research interests include criminal justice systems around the globe.

**William Dyson**

Supervising Special Agent, FBI (retired).

**Erik Sean Estep**

Assistant professor in Milner Library at Illinois State University in Normal, Illinois.

**James Farsedakis**

Director of the Section on Criminology at Panteion University of Social and Political Sciences, Athens.

**Thomas Feltes**

Professor of Criminology, Criminal Policy and Police Science at the University of Bochum in Germany. From 1992 to 2002 he was director of the University of Applied Police Science in Villingen-Schwenningen, Germany. He has published 15 books and over 140 articles on juvenile law, sentencing, alternative sanctions, public prosecution, and policing. He is the editor of the *Police Newsletter*.

**Wendy C. Garfinkle-Brown**

Graduate student in criminal justice at Midwestern State University at Wichita Falls, Texas.

**Melchor C. de Guzman**

Assistant professor in the School of Public and Environmental Affairs at Indiana University, South Bend. He is a former committee secretary of the Philippine Senate Committee on National Defense and Security, where he was instrumental in drafting the legislation that reorganized the Philippine National Police.

**Robert D. Hanser**

Assistant professor of Criminal Justice at the University of Louisiana at Monroe. He teaches comparative criminal

justice systems, world conflict, terrorism, and organized crime.

**Clifford Jandal**

Former U.S. Marine and senior officer in the Houston Police Department assigned to DRT, a specialized problem-solving unit.

**Charles Johnson**

Doctoral student in the Department of Political Science, programs in Criminal Justice, Washington State University.

**Kaine A. Jones**

Graduate student the University of Louisiana at Monroe. He has pursued research on substance abuse, multicultural issues, and community corrections.

**Zdenek Karabec**

Director general of Prison Service in the Czech Republic. He is also research coordinator at the Institute of Criminology and Social Prevention and a member of the Penal Reform Commission of the Ministry of Justice, Prague.

**George Thomas Kurian**

Noted encyclopedist, with past titles including *Encyclopedia of the World's Nations* and *World Education Encyclopedia*. He is president of the International Encyclopedia Society.

**Ryan Lacina**

Student at Midwestern State University in Wichita Falls, Texas.

**Seung Mug Lee**

Doctoral student and lecturer in the School of Criminal Justice at Rutgers University, the State University in New Jersey. His research interests are comparative criminal justice systems, crime prevention, and private security.

**Ellen Lemley**

Assistant professor of Criminology at Arkansas State University. She has published in *Criminal Justice Policy Review* and *Justice System Journal*.

**Daniel Mabrey**

Doctoral student in criminal justice at Sam Houston State University in Huntsville, Texas. His current research interests include comparative criminal justice systems, predictive/threat assessment models of terrorism, decision-making models for counterterrorism, and justice administration. He has visited 21 countries—including Poland, Spain, and China—to study their criminal justice systems.

***Carolyn Martinez***

Director of the Institute for the Study of Violent Groups, College of Criminal Justice, San Houston State University, Huntsville, Texas.

***Michelle M. Martinez***

Graduate student in the Department of English, College of Humanities and Social Sciences, San Houston State University, Huntsville, Texas.

***Michael O. Maume***

Assistant professor of criminal justice at the University of North Carolina in Wilmington. His areas of research are lethal violence, communities and crime, and juvenile justice. He has published articles in *Criminology*, *Rural Sociology*, and *Homicide Studies*.

***Stephanie Mizrahi***

Doctoral student at Washington State University, specializing in the fields of criminal justice, public law, and public policy.

***Nathan R. Moran***

Assistant professor of Criminal Justice at Midwestern State University. He teaches courses on international crime comparative criminal justice systems, terrorism, and organized crime.

***Timothy Ocnasbek***

Patrol supervisor at the Beaumont Police Department.

***Willard M. Oliver***

Associate professor of criminal justice at Sam Houston State University in Huntsville, Texas. A former police officer, he is the author of several books including *Community-Oriented Policing* and co-author of *The Public Policy of Crime and Criminal Justice*.

***Russell Porter***

Associate dean of the College of Allied Health Sciences at Ferris State University.

***R. K. Raghavan***

Former director of the Central Bureau of Investigation in New Delhi and a former visiting fellow at the School of Criminal Justice at Rutgers University and the Harvard Law School. He is currently security adviser with Tata Consultancy Services in Bombay.

***Monica L. P. Robbers***

Associate professor of criminal justice and sociology at Marymount University in Arlington, Virginia. Her research has focused on correctional program evaluation, gun control policy, and attitudes toward the death penalty.

***John W. Roberts***

Chief of the Museum Management Program of the U. S. National Park Service and former chief of communications and archives for the U. S. Federal Bureau of Prisons. He is the author of numerous books and articles on the history of corrections.

***Roe Roberts***

MPA Graduate Program Coordinator and Associate Professor in the Department of Health and Public Administration at Midwestern State University, Wichita Falls, Texas.

***Helge Rostad***

Judge of the Supreme Court of Norway and president of the International Penal and Penitentiary Foundation.

***Frederick P. Roth***

Assistant professor of sociology at Marshall University, Huntington, West Virginia, teaching comparative criminology, social control, policing, and underdevelopment.

***Mitchel P. Roth***

Associate professor of criminal justice at Sam Houston State University, Huntsville, Texas. He is the author of numerous articles and seven books, including *Dictionary of Law Enforcement and Crime and Punishment: A History of the Criminal Justice System*. His research interests include comparative criminal justice system, international policing, and history of crime and punishment.

***Kathryn D. Rowell***

Police officer with the Fort Worth, Texas, Police Department.

***Gregory D. Russell***

Director and associate professor of criminology at Arkansas State University. He is the author of three books and has published in the *American Review of Public Administration*, *The Justice System Journal* and *Policing*.

***Miroslav Scheinost***

Director of the Institute of Criminology and Social Prevention in Prague. He has published several studies and monographs on organized crime, economic crime, and illegal migration.

***Ali Semerci***

Graduate student in the Criminal Justice Department at Sam Houston State University in Huntsville, Texas.

***Joseph D. Serio***

Doctoral student in criminal justice at Sam Houston State University in Huntsville, Texas. He lived in the former

Soviet Union for seven years and was the only American to work in the Organized Crime Control Department of the Ministry of Internal Affairs (MVD) of the USSR. He was a Moscow-based consultant to Kroll Associates from 1995 to 1996. From 1995 to 1997 he was director of Kroll's operations in the former Soviet states. He is currently editor-in-chief of the bimonthly magazine *Crime and Justice International* and coordinator of the U. S. Department of State's International Law Enforcement Academy in Roswell, New Mexico.

***Volodymyr Smelik***

Police captain in Ukraine and Ph.D. candidate at National University of Internal Affairs in Kharkiv, Ukraine.

***Mekisha Smith***

Graduate student at the University of Louisiana at Monroe. She has written and published on multicultural issues and multinational criminal justice.

***Gene Stephens***

Distinguished professor emeritus at the University of South Carolina where he teaches criminal justice and police futures research. He has also conducted seminars and executive training programs for over 200 organizations, such as the California Command College and Texas Law Enforcement Management Institute.

***Evangelos Stevgioulis***

Information Officer of Europol.

***Beverly Stiles***

Associate professor of the Department of Sociology in Midwestern State University, Wichita Falls, Texas.

***Gabriel Thrasher***

Graduate student in the Department of Public Administration at Midwestern State University, Wichita Falls, Texas.

***Jerry Toft***

Graduate student at Midwestern State University, Wichita Falls, Texas, and a veteran correctional officer with the Texas Department of Criminal Justice.

***Jeremy James van Blommestein***

Assistant professor of sociology at Midwestern State University in Wichita Falls, Texas.

***Peter Villiers***

Head of human rights at the Police Staff College in Bramshill, England. He is the author of numerous books on leadership, ethics, and human rights, including *Policing a Safe, Just and Tolerant Society*.

***Richard Ward***

Dean of the Criminal Justice Department at Sam Houston State University in Huntsville, Texas. Formerly, he spent 27 years at the University of Illinois in Chicago as vice chancellor and professor of International Criminal Justice. As scholar and researcher, he has lectured in over 50 countries. He was awarded the Friendship Medal, the highest honor bestowed on a non-citizen, by the People's Republic of China in 1994. He has published extensively on criminal justice systems.

***Samuel E. Watson***

Professor of Political Science and dean of the College of Liberal Arts at Midwestern State University in Wichita Falls, Texas. He teaches courses on politics and governments in Western and Eastern Europe and Central Asia.

***Jacek Wegrzyn***

Staff member of the Higher School of Police, Poland.

***Leslie Wills***

Veteran of the Houston Police Department and a graduate student at Midwestern State University in Wichita Falls, Texas. She is currently assigned to the Mounted Patrol Division.

***Michael Wills***

Veteran of the Houston Police Department, currently assigned to the Homicide Division's Family Violence Unit.

***Dwayne Wright***

Veteran of the Houston Police Department, assigned to the Houston Police Academy where he teaches courses on criminal behavior, detecting deception in interviewing, and physical and sexual abuse.

## *Chronology of International Policing*

**1851** On 9 April, police officials from Austria, Prussia, Sachsen, and Hannover gather to create an international police organization for political purposes. Within a year, they are joined by police from Bavaria, Wurttemberg, and Baden to form the Police Union of German States.

At least thirty-five foreign police officials, including several city police officers from the United States, attend the International Industrial Exhibition in London to investigate the activities of communists and liberals.

**1851–1866** Members of the Police Union hold twenty meetings and establish direct police communications and systems of information exchange until the outbreak of the Austro-Prussian War (June 15 to August 23 1866).

**1871** In October, a three-day National Police Convention is held in St. Louis, Missouri. Despite the fact that several European police were invited to attend the meeting, the convention remains an exclusively American affair.

**1898** From 24 November to 2 December, the International Conference of Rome for the Social Defence Against Anarchists is held. The Conference is attended by fifty-four delegates from twenty-one European states. Police officials hold separate meetings at the Conference and agree to cooperate on selected matters of policing techniques.

**1901** To broaden the scope of the National Police Chiefs' Union, the organization is renamed the International Association of Chiefs of Police.

At the Second Latin-American Scientific Congress in Montevideo, Uruguay, Juan Vucetich, Police Chief in La Plata, Argentina, proposes the establishment of an

interconnected system of Intercontinental Offices of Identification in Europe, South America, and North America.

**1902** On 15 July, the French government organizes an international conference in Paris to coordinate the suppression of prostitution and establish extradition procedures.

**1903** As a follow-up to the Rome Conference of 1898, a second anti-anarchist meeting is organized by the Russian government in St. Petersburg, where ten governments agree upon a Secret Protocol for the International War on Anarchism.

As a follow-up to the conference of 1902, a second anti-prostitution meeting is held in Paris, where twelve European governments sign an International Agreement for the Suppression of White Slave Traffic.

**1905** At a meeting in Hamburg, the International Union of Criminal Law (Internationale Kriminalistische Vereinigung) advocates the creation of interrelated central intelligence bureau across nations.

Following a proposal at the third Latin-American Scientific Congress in July in Rio de Janeiro, Brazil, an international police meeting is held in October in Buenos Aires, Argentina. The meeting leads to the signing of an International Police Convention by police from Buenos Aires, La Plata, Montevideo, Rio de Janeiro, and Santiago de Chile.

**1909** An international police meeting is held in Madrid, Spain.

The governments of thirteen states convene at the International Opium Commission in Shanghai.

**1910** In May, the International Convention for the Suppression of the White Slave Traffic is signed by the governments from thirteen nations at a meeting in Paris.

The creation of a Universal Police Union is proposed at the International American Scientific Congress in Buenos Aires.

**1911** The International Esperanto Society of Police Officials meets at an international meeting in Antwerp.

**1912** Following the International Police Convention of Buenos Aires in 1905, an international meeting of Latin-American police is held in São Paulo, Brazil.

Following the Shanghai meeting of 1909, a second Opium Conference in The Hague leads to the signing of a Convention for the Suppression of the Abuse of Opium and Other Drugs by the governments of fifty-seven countries.

**1913** At the initiative of Albert I of Monaco, the “Premier Congrès de Police Judiciaire Internationale” is held in the Monegasque principality. The congress is attended by 300 delegates from twenty-four countries.

**1917** The Bureau of Investigation in the U.S. Justice Department is granted police powers against espionage and sabotage and the control of enemy aliens.

Police institutions in Europe and the United States start engaging in transnational activities and limit multilateral arrangements to curb the communist threat following the revolution in Russia.

**1919** The Versailles Treaty places formal restrictions on the number, functions, and military character of Germany’s police.

On December 10, Captain M. C. van Houten of the Dutch criminal police sends out letters to police leaders of various countries to propose the establishment of an international police organization in the League of Nations.

**1920** As a follow-up to the Latin American police meeting of 1912, the “Conferencia Internacional Sudamericana da Policia” (International South-American Conference of Police) is held in Buenos Aires from February 20 to 27.

On December 10, 1920, German police officials convene a secret meeting titled “The International Struggle Against Bolshevism: An International Trouble” in Munich, Bavaria. Attended by twenty-four police officials from six European countries, methods of information exchange and mutual support against the communist threat are discussed.

On January 2 and 6, police raids across the United States lead to the arrest of some 10,000 people charged with violations of the Alien Act of 1918.

**1922** Under direction of Richard Enright, the Commissioner of the New York City Police Department, a meeting of police in New York leads to the creation of the International Police Conference.

**1923** From September 3 to 7, the International Police Congress is held in Vienna. Attended by over 100 police officials from various countries, the Congress establishes the International Criminal Police Commission (ICPC).

**1924–1938** The International Criminal Police Commission holds fourteen annual meetings in various capital cities across Europe.

**1924** In July, the Police-Technical Exhibition in Zoppot, Poland, attracts police representatives from Germany, Hungary, and Warsaw.

**1925** In June, the International Police-Technical Exhibition in Karlsruhe is attended by police from various European countries and the United States.

**1926** German authorities organize the Great Police Exhibition in Berlin to promote international understanding among the police.

**1931** In September, a joint meeting of the International Police Conference and the International Criminal Police Commission is held in Paris.

**1932** The Bureau of Investigation formally establishes an international exchange service of fingerprints.

**1934** In May, U.S. President Roosevelt secretly charges the Bureau of Investigation to investigate the American Nazi movement.

The International Criminal Police Commission accepts the proposal of the Italian Federal Police that the ICPC Presidency should reside permanently with the Viennese Police Directorate.

**1937** Nazi police officials organize an anti-communist police meeting in Berlin, attended by representatives from fifteen countries. In the following years, Nazi authorities organize several similar international police meetings.

**1938** In April, a few weeks after the German annexation of Austria, the Nazi-appointed Police President of Vienna, Otto Steinhausl, takes over as President of the International Criminal Police Commission.

At the ICPC meeting in June in Bucharest, Romania, the head of the Nazi criminal police successfully introduces the motion that the next ordinary meeting will be held in Berlin in 1939.

On June 10, President Roosevelt enacts a bill which authorizes the Attorney General to arrange U.S. membership in the International Criminal Police Commission, effectively securing FBI membership in the ICPC.

- 1939** On September 6, the FBI is formally assigned investigative duties related to espionage, sabotage, and subversive activities.
- 1940** In June, Reinhard Heydrich, the Chief of the Nazi office of the German Security Police, assumes the Presidency of the ICPC. In August, he decides to relocate ICPC headquarters from Vienna.
- 1941** On December 4, FBI Director J. Edgar Hoover decides to terminate all Bureau communications with the International Criminal Police Commission.
- 1943** In May, Ernst Kaltenbrunner succeeds Heydrich who had been assassinated a year earlier, as ICPC President.
- 1946** In June, the International Criminal Police Commission is re-founded at an international meeting in Brussels, Belgium.
- 1950** In July, Director Hoover decides that FBI membership in the ICPC will be terminated effective December 31 that year.

## *Overviews*

# General History of Policing

---

In our own century it was the revolutionary romantic, not the professional policeman, who glorified the omnipotence of Lenin's security chief Feliks Dzerzhinsky; the layman, not the specialist, who dreamt of government so meticulously engineered that its police could monitor the conversations of all passengers on every express train criss-crossing the continent at any hour. (Liang 1992)

In this brief historical examination of the history of policing since the eighteenth century it has been necessary to make a number of generalizations. This is particularly true when discussing the secret police forces that were central to many totalitarian regimes in the twentieth century. There is a tendency in police literature to associate countries with one or two manifestations of policing. John D. Brewer noted in his investigation of South African policing that the greatest focus is placed on the South African Police, thus ignoring "other functionally compatible forces, such as the old South African Mounted Riflemen, railway police, mines police, the location police employed by the Native Affairs Commission, and latterly, Black forces in the homelands and townships" (Brewer 1994). Similar conclusions can also be applied to a number of police systems surveyed in this short overview. The intentions of this essay are to portray the complexities and experiments that have forged modern policing and to present a jumping-off point for anyone wanting to explore individual police forces in more detail.

It is beyond the scope of this introductory essay to offer the complete history of policing throughout the world. Rather, this essay is an attempt to trace the origins and major developments in police institutions since

around 1700. Due to the expansion of the British Empire during this period, common law developments take up much of this examination, since British police institutions influenced the development of police institutions in countries as far-flung as South Africa, India, Australia, and Canada. Other important developments came out of continental Europe and Asia—these will be noted as well.

A perusal of police systems around the world demonstrates a remarkable diversity of police organizations. Some are religious in nature, or at least inspired by religion, such as Saudi Arabia's religious police, the *mutawwian*, and the Ottoman Empire's police system. Others are based on legal traditions or are heavily influenced by ideology and political theory, such as the former Soviet KGB and the secret police networks in Cuba, North Korea, and China. The common law legal system has exerted its influence on police systems around the world, bringing common law policing to Singapore, Kenya, Australia, New Zealand, and Canada, while also indirectly influencing developments in policing in postwar Japan and many other countries.

Any comparison between city police in Tokyo, Moscow, Los Angeles, and London results in probably more similarities than differences. Regardless of the nature of policing around the world in the twenty-first century, police organizations share more common traits than ever. With the advent of sophisticated crime and terrorist networks, police battle the enemies of social order on a number of fronts, in many cases sharing a common enemy while thousands of miles apart. Police organizations also share many of the same frustrations, whether in Africa, Asia, or the Americas; jurisdictional disputes and

turf squabbles continue to plague police organizations, large or small, coordinated or uncoordinated, centralized or decentralized.

Any meaningful examination into the origins and history of policing is shackled by the almost universal emphasis on 1829 and the establishment of the London Metropolitan Police. But, speaking for a number of scholars, police historian Philip Rawlings suggests that “the history of the police that is emerging” is much more complex than that, demonstrating that the history of policing “is one of diversity, both before and after 1829, and of slow evolutionary change” (Rawlings 2002). While Rawlings’s work focuses on Great Britain, his statement can also be applied to the wider world of police.

The term *police* can be traced back to the Greek *politeia*, which alluded to all the affairs that affected the survival and order of the state. By the 1700s, European states used *la police* (French) and *die Polizei* (German) to refer to the internal administration, safety, protection, and surveillance of a territory. While the English eschewed the word *police* because of its absolutist connotations, the term gained increasing currency in France during the Napoleonic era. The term *police* was probably imported into England from France at the beginning of the eighteenth century and initially referred to good government through the introduction of sanitation, street lighting, and the like.

Any definition of policing prior to the modern era is problematic, due in part to the broad range of duties expected of so-called police in previous centuries. Regardless of their tasks, police duties were typically performed through mutual obligation by community members. Even in preliterate societies, individuals were often expected to act in a police capacity, whether bringing to justice a malefactor who threatened a community, or exercising personal vengeance prior to judicial institutions.

The tithing system was an early example of community law enforcement in Anglo-Saxon England. From the era of King Alfred (849–899), the main responsibility for keeping the peace fell upon each community through a well-understood principle of social obligation. Each tithing was essentially a collection of ten families, with each member inextricably linked by a pledge to be answerable to the lawful behavior of the other members of the tithing group. A world away in ancient China, a system similar developed in which order and security was maintained through clansmen. One deeply ingrained notion that persisted in China was that everyone should participate in the creation of order. As early as the 1100s, one Chinese writer described mutual responsibility as “when one family has a robber and cannot seize him themselves, then the group of neighbors is to arrest him.” Similar developments heralded the evolution of law enforcement throughout the world

prior to the Industrial Revolution of the early nineteenth century.

Until the eighteenth century, military and paramilitary police forces were the rule rather than the exception. In 1285 England’s Statute of Winchester codified a variety of time-tested notions about early law enforcement. Many of these had been developing for decades but had not yet been formally introduced by statute. Among the most noteworthy in terms of policing was the system of watch and ward, which introduced the town watchman, a fixture in urban life until the birth of modern policing some six centuries later. According to the Statute of Winchester, most English towns were required to maintain a watch of up to sixteen men. Watchmen were to be stationed at the walled gates of town between the hours of sunset and sunrise and all strangers within their jurisdiction (city limits) were to be confined during the hours of darkness. An unpaid, unprofessional position, all ambulatory men were required to participate as volunteers.

## EUROPEAN TRADITIONS

The origins of policing in continental Europe can be traced back to the Middle Ages, but major developments took place in the eighteenth and nineteenth centuries that laid the foundations for modern state police systems. By the middle of the eighteenth century, Europe’s absolutist rulers, seeking a modern police force, looked to France, where Paris was considered the best policed city in Europe. European continental innovations stemming from Napoleonic France have had a dramatic impact on the development of centralized state policing throughout the world. Police historian Clive Emsley reported an exchange in which one lieutenant of the Paris police boasted that “when three persons gathered for a conversation, one of them was sure to be his agent.”

By the 1790s, police states in Europe that were characterized by secret and oppressive police strategies flourished in the Hapsburg police system, which was considered the most centralized in Europe. At the Congress of Vienna (1814–1815), Czar Alexander I (1777–1825) of Russia was so impressed by the Austrian police (both civil and military) that he arranged for members of the Russian embassy staff in Vienna to draw up recommendations for the formation of gendarme regiments in Russia based on the Austrian model. It was not long before Russian gendarmes (often referred to as *mounted police*) were operating alongside the army under the direction of police commanders in Moscow and Saint Petersburg.

In the eighteenth century, continental police functions transcended the traditional duties conducted by common law police. When police specialist Raymond Fosdick (1915) surveyed European police systems in the early 1900s, he noted that Prussia even had special forces

devoted to individual tasks, including Insurance Police, Mining Police, Water and Dike Police, Field and Forest Police, Cattle Disease Police, Hunting Police, Fisheries Police, Building Police, and so forth. All of these forces represented state functions and were responsible to state oversight, with nary a governmental activity unregulated by the police.

City police functions were no less comprehensive in Prussia. In Berlin, for example, the police president issued ordinances regulating the color of automobiles, the length of hatpins, and methods of purchasing fish and fowl. In both Germany and Austria, police had the power to frame rules and ordinances regulating the conduct of citizens, as well as limited powers to punish individuals.

The three classical European police states that preceded what would become the most famous police state in Russia were located in Prussia, France, and Austria. Their legal systems were mainly established to furnish order and stability. By the 1840s, most police states came under liberal attack and were gradually reformed into justice states or law states featuring a separation of powers—an independent judiciary and a commitment to rule of law.

#### FRENCH POLICING

As early as the 1890s, the French writer Anatole Leroy-Beaulieu (1842–1912) noted that “in no country has the police presence been more powerful than Russia under the Tsars” (Leroy-Beaulieu 1894). By the twentieth century, Russia was probably the most policed nation on earth. The word *police* was used for the first time in Russian legislation by Peter the Great (1672–1725) when he set up a police administration for Saint Petersburg in 1718. This force was not a separately organized force, nor was it similar to contemporary police systems in Europe. The greatest influence on the force stemmed from the Paris police model founded by Louis XIV (1638–1715) in the 1660s. By 1666, the police position of lieutenant-general of police for Paris had been established. The fourteen men who would hold this position between 1666 and 1789 were responsible for a variety of administrative and judicial tasks, including controlling prices, weights, and measures; inspecting markets; apprehending criminals; and conducting surveillance of suspected traitors.

French police origins can be traced back to the sixteenth century. Three hundred years later, mounted *gens d’armes* and archers consolidated to form the nucleus of what eventually became known as the *gendarmie* (which became slang for police officers on the Continent). Referring to the more recent nineteenth-century creation of British policing, police historian Philip Stead (1957) noted that what set apart French policing from the British model was its “long continuity.” A second important variation was the more administrative nature of French

policing that brought it more into the realm of civil life. But perhaps the most glaring difference between British policing and the French was that British policing was considered an expression of the community as opposed to being derived from the king. During the French Revolution (1789–1799), a national gendarmie was entrusted with maintaining internal and external security. During the Napoleonic Wars of the early 1800s, many countries within the French orbit adopted similar police units.

The gendarmie model of policing influenced France’s neighbors Italy and Spain—most notably in Italy’s Carabinieri and in Spain’s Guardia Civil. Clive Emsley explained that the reason England did not adopt this model was because England’s insular nature led to less involvement in conflicts with its neighbors during the sixteenth and seventeenth centuries.

In 1799 Napoléon I (1769–1821) appointed Joseph Fouché (1759–1820) as the minister of the general police of the Republic of France. His ministry was considered mostly political in nature and he was reportedly unconcerned with such ordinary police matters as vice and street lighting. From the start, Fouché demonstrated a remarkable acumen well suited to police work. Considered the “father of police intelligence operations,” during his tenure he reorganized the Paris police, initiating the prefecture system that exists to this day. Fouché is credited with establishing a centralized police force that was responsible to the national government. His administrative innovations included setting up police departments that were proportional to the populations of various urban units. Over time, he became a proponent of preventive policing, anticipating by three decades some of the principles of British statesman Robert Peel (1788–1850).

#### ENGLISH ANTECEDENTS

By the end of the eighteenth century, policing in London was for the most part still the domain of the parish constables, watchmen, and other amateurs. Most visitors to Europe would consider London more disorderly and less safe than Paris, or even Munich, which one historian described as “well policed” as early as the late 1780s. Despite the relative effectiveness of police in Paris and Munich, most English residents would favor the rampant disorder of London and other English environs rather than give up their cherished freedoms and make the transition to a more oppressive regime.

In the eighteenth century, English reformers visualized a police system that would be more preventive in nature. Much of the early groundwork for the London Metropolitan Police was laid by the Fielding brothers. Henry Fielding (1707–1754), best-known for his picaresque novel *Tom Jones* (1749), left the literary world

because of censorship restrictions and began work as a magistrate in 1748. During his six-year tenure at this post, he implemented several policies that led to increased safety on the streets of London. He introduced the Bow Street Runners (initially “Mr. Fielding’s People”), a specially formed group of six to eighty constables who ran to the aid of crime victims and pursued malefactors (in order to earn rewards for their capture). Fielding demonstrated remarkable foresight in police matters in his 1751 essay, *An Enquiry into the Causes of the Late Increase of Robbers*, which called for a professional, full-time police force. One of his first goals as police magistrate was to stem the corruption emanating from the Bow Street office. Fielding funded the publication of *The Covent-Garden Journal*, a precursor to the *Scotland Yard Police Gazette*, which was dedicated to educating the public about the rising crime problem. But he still faced reluctance on the part of the public to welcome a professional police force.

Following the death of Henry Fielding in 1754, his campaign for professional policing was taken up by his half-brother John Fielding (1721–1780). Blinded at age 19, John succeeded Henry as magistrate and head of the Bow Street Runners in 1754. His 1755 pamphlet, *Plan for Preventing Robberies within Twenty Miles of London*, explained his strategy for breaking up organized gangs of criminals, which had plagued the periphery of London for decades. Three years later, he oversaw the publication of a similar pamphlet, *An Account of the Origin and Effects of a Police Set on Foot by the Duke of Newcastle on a Plan Suggested by the Late Henry Fielding*. An astonishing detective despite his visual impairment, Fielding, sometimes referred to as the “Blind Beak,” reportedly could identify hundreds of criminals by voice alone. During his tenure with Bow Street, he made this office the official police headquarters with two officers always posted at the ready to pursue highwaymen. Despite the entreaties of the Fielding brothers, their vision for policing was ahead of its time by almost a half century.

In 1792 English justice of the peace Patrick Colquhoun (1745–1820) became interested in police reform through the work of the Fielding brothers and after detailed conversations with English philosopher Jeremy Bentham (1748–1832). Colquhoun’s investigations led him to write a *Treatise on the Police of the Metropolis*, published in 1797. Among the more important police concepts laid out in the book was the idea of crime prevention, a radical departure for the traditionally reactive police establishment of Europe. Colquhoun was perhaps one of the greatest influences on Sir Robert Peel, credited with creating the first modern police force in 1829. Colquhoun was also credited with the creation of the Thames River Police in 1789. In 1800 his *Treatise on the Commerce and Police of the River Thames* saw

publication. His writings led to improved police professionalism and the first systematic examination of crime costs and origins. An advocate of paid professional policing and of recruitment and management under a central authority free of political interference, he spurred police reform and introduced new solutions to maintaining public order in an era of urbanization and industrialization.

## THE LONDON METROPOLITAN MODEL

Although Robert Peel has received most of the credit for developing modern policing, some scholars subscribe to the belief that he deserves credit more for introducing the bill that inaugurated the London Metropolitan Police experiment and for his selection of Sir Charles Rowan (1783–1852) and Sir Richard Mayne (d. 1868), who actually organized and planned the new police force following Parliament’s passage of the Metropolitan Police Act of 1829. Regardless of who deserves the credit, the establishment of the London Metropolitan Police replaced the age-old system of the night watch with regularly paid, full-time officers. Under the direction of Rowan and Mayne, the force overcame the trepidation of the public about a strong police force by improving community relations and reinforcing its image as a civilian police force.

## ASIAN DEVELOPMENTS

While it is almost impossible to find a comprehensive translation for the term *police* in Chinese, there are at least two different translations. Public security organs, or *gong’an jiguan*, is the formal term for all police organizations from the high ministerial to the lowest local level, while *jingcha* refers to the substantive duties of vigilance and investigation. Chinese police traditions predate Robert Peel’s model by more than two thousand years, originating in the Shang era (1700–1100 B.C.E.), a millennium before China became a single state. During this preimperial period, clans formed the most important social structure, and, like the Anglo-Saxon tithing system, clansmen maintained order and security through self-policing. The Chinese system of mutual responsibility can be traced back to legalist reformer Shang Yang (d. 338 B.C.E.). His advice was taken to heart when the people of the rapidly expanding Qin kingdom (third century B.C.E.) were organized into groups of fives and tens mutually to control one another and share one another’s punishments. By mandating this system of mutual trust the seeds were sown for the mutual mistrust of neighbors and associates that became a hallmark of China’s twentieth-century police state.

In the thirteenth century, rising crime led to a demand for more social control. Much in the way that

modern peace officers claim that more police means less crime, the Chinese also believed this unproven axiom. But, from a medieval perspective, Chinese prescience is striking, particularly when increased emphasis was placed on employing a better quality of officer. China historian Brian McKnight noted the high esteem of the Italian traveler Marco Polo (1254–ca. 1324) for Chinese order when he visited there in the thirteenth century. Polo noted that Beijing “was so safe that the doors of houses and shops and stores full with expensive merchandise, remained unlocked day and night, and yet nothing was missed. One could freely travel throughout the empire by day and night and never be harassed” (McKnight 1992).

In the 1600s, a northeastern tribe known as the Manchu invaded China with the support of a formidable number of civil servants who had been disenfranchised during the previous Ming dynasty (1368–1644). The Manzu have been credited with reforming and strengthening the peasant civilian police system—and for the first time in Chinese history, the country had a nationwide police system complemented by a network of plain-clothes policemen who kept tabs on the lives of Chinese citizens. By the early eighteenth century, this system was used in a number of capacities, including such official tasks as census reporting, surveillance, and registration activities. Like czarist Russia, public places such as hotels, temples, and shrines were expected to keep tabs on guests. As the century wore on, rapid mobility and population growth pushed this system into obsolescence.

In 1901 a proclamation was issued ordering the establishment of police brigades in every province. At the same time, Chinese police reformers concluded that the creation of a modern police force based on Western and Japanese models could go a long way toward counterbalancing the power of elites and local gentry. In 1902 a 500-man police force was established southwest of Beijing and provided with its own training academy.

Japanese and Western policing would exert tremendous influence on the development of Chinese policing. The Japanese were so influential that the Chinese word for police—*jingcha*—originated from the Japanese *keisatsu*. The Japanese influence indirectly brought European traditions into China in the early 1900s as well.

In 1871, following the Meiji Restoration in Japan, Tokyo made the transition from a system of constables to a metropolitan police force. The following year, Toshiyoshi Kawaji was sent to Europe to study contemporary police systems. He returned in 1873 with a program of reorganization based on German and French police systems. What he learned strongly influenced the Tokyo Police Academy, and during its first six years more than one thousand sergeants and inspectors matriculated

through the program. The Japanese police system would serve as a model for the Chinese until the late 1920s, after which German police advisers would play an increasingly important role. But the first efforts at police modernization in China at the turn of twentieth century were quite different from advances that would be made under the Nationalist regime two decades later.

The 1930s saw the new Nationalist government set up its own police corps. President Jiang Jieshi (Chiang Kai-shek, 1887–1975) was reportedly an admirer of Prussian and Austrian policing. In fact, the Chinese word for public security, *gong'an*, is rooted in the German translation *öffentliche Sicherheit*. The Nationalist Penal Code described the duties and powers of the police. Harking back to medieval Chinese self-policing, police control under Jiang Jieshi was exercised at the neighborhood level through a network of small-scale precinct stations.

Influenced by centralized police activities in Japan and Europe, efforts were soon in place to standardize Chinese practices, increase the number of officers and police budgets, and introduce a uniform fingerprinting system. There is a bit of historical irony here, in that a system of fingerprint identification had been used in China centuries earlier as a way for illiterate individuals to sign contracts. So while the Chinese had been acquainted with the types of patterns in fingerprints for hundreds of years, they did not take the lead in developing a system of classification.

As Adolf Hitler (1889–1945) consolidated his power in Germany in the 1930s, Jiang cultivated contacts with German advisers and in 1933 sent a delegation to Berlin to study German military organization. At the same time, Jiang allowed Prussian police experts who had fallen out of Hitler's favor to teach at military and police academies in China. Over the next five years, a number of Nationalist police officers were sent to Berlin and Vienna to study German policing. However, most of these students were barred from courses outside basic instruction on crime detection and precinct duty. Chafing at these restrictions, Jiang intervened to allow three of his subordinates to train with Heinrich Himmler's (1900–1945) security squads (Schutzstaffel, or SS) and the secret police in 1936. As recently as the 1970s, some of these former trainees, then living in Taiwan, looked back wistfully to this period, exalting German “efficiency and lawfulness.”

Despite the influence of Japanese and German advisers, the Chinese regarded the Americans as the authority when it came to professional organization and training. Apparently, there was mutual admiration being traded between the two cultures, since according to one of the biographers of Berkeley, California, police reformer August Vollmer (1876–1955), Vollmer was inspired in his quest for better-educated “college cops” by the writings of Confucius (ca. 551–479 B.C.E.). Accorded the sobriquet of “father of

police professionalism,” Vollmer placed great faith in the Confucian adage: “The successful administration of any government depends entirely on the selection of proper men.” In the early 1930s, one Vollmer protégé even served a stint as adviser to the Nanking Ministry of Interior.

Prior to the overthrow of Jiang’s Nationalist government in 1949, the police force, including officers in Taiwan (Formosa) and mainland China, numbered almost one million. Little is known as to how many Nationalist police made the transition to Communist rule. Many officers took a wait-and-see approach. By most accounts, the remnants of the Nationalist Public Safety Bureau were successful in making the leap. There is enough evidence to suggest that the Communist police made impressive strides in clearing the streets of peddlers, restoring traffic control, suppressing robbery and prostitution, and ending opium addiction. In the end, it would take the transfer of power to the Communists to achieve most of the goals promised by the Nationalists. It can only be assumed that similar developments took place in other countries that made the transition to Communist rule in the twentieth century. Secret policing became the hallmark of policing in totalitarian and autocratic countries during the twentieth century.

#### THE DECENTRALIZED MODEL: AMERICAN POLICING

With close to twenty thousand different police forces, the United States exemplifies decentralization in policing, in stark contrast to the centralized model that dominates most of the world’s forces. British, French, Spanish, and Dutch colonies left their imprints on the American criminal justice system, but none was more influential in determining the course of policing as the British.

Like its precursors in Europe, early American law enforcement was the bailiwick of unskilled amateurs. There was little innovation in the early colonies, with most preferring what they were familiar with: some incarnation of the English constable and the county sheriff. Between 1608 and the end of the American Revolution, most American sheriffs and constables were appointed by colonial governors and performed the same tasks as their English counterparts.

Law enforcement figured little in the discussions of the Founding Fathers. The only mention of law enforcement in the U.S. Constitution is the power of the president during times of national emergencies. Historian David R. Johnson suggested that “there was no debate . . . as to whether the new nation should have a national police force, because such an idea did not occur to them” (Johnson 1981). This had important ramifications for future developments in American policing, which became increasingly decentralized over the next two

centuries. As the nation struggled with the forces of urbanization and industrialization during the early nineteenth century, communities created civil police forces, making the transition from amateur unpaid watchmen to more formal arrangements. In the first years of the new century, Boston became the first city to require by statute a permanent night watch.

In 1844 New York City’s traditional night watch was legislated out of existence and replaced with a new system comprised of separate day and night police forces, making New York the first city to merge its day and night forces into a uniformed police department along the lines of the Peel model. Between 1870 and 1900, most large American cities established professional police forces.

During the first half of the nineteenth century, federal policing was mainly the domain of the U.S. Marshal’s Service. In 1865 this organization was joined by the U.S. Secret Service at the federal level to fight a growing counterfeiting problem. Throughout most of the nineteenth century, there was little support for state policing. Americans favored decentralization of policing in an era that placed considerable value on a republican ideology that espoused local control of policing—hence, the development of municipal, county, and state law enforcement entities.

At the turn of the twentieth century, urban governments increasingly came to grips with the partisan manipulation of police agencies. An effort to replace partisan police boards with professional police chiefs was an important step toward police professionalism during the first decades of the twentieth century. Police chiefs such as Berkeley’s August Vollmer and Cleveland, Ohio’s Fred Kohler (1869–1933) rose to prominence after introducing a number of progressive reforms. Vollmer is considered the originator of the modern American police organization. Among his achievements was establishing a departmental code of ethics, introducing requirements that police officers attend college, and instituting the use of lie detectors and motorcycle and automobile patrols.

State policing gained increased support due to the ineffectiveness of county law enforcement and the rise in labor conflicts between 1910 and 1915. Between 1915 and 1923, twenty-seven states created some type of state police force. Although some created highway patrols in response to the growing popularity of the automobile by citizens and criminals, others adhered to the Pennsylvania paramilitary model of policing. The onset of the Great Depression stimulated the state police movement, leading to the creation of fifteen state police units between 1929 and 1941. Of these, twelve followed the highway patrol model. A new pattern also developed in which earlier state police forces were reorganized into larger forces. Managing to stay above the political fray and

maintaining good relations with the public was important; according to police historian David R. Johnson, “until the 1940s, at least, the state police were America’s elite lawmen” (Johnson 1981).

Perhaps the greatest development in policing in the 1920s and 1930s was the growing involvement of the federal government in law enforcement, as witnessed by the expansion of the Federal Bureau of Investigation, the Internal Revenue Service, the Customs Service, and the precursor agencies of the Bureau of Alcohol, Tobacco, and Firearms.

The 1940s and 1950s saw police departments across the nation continue the trend toward professionalization. Police reformers such as William H. Parker (1902–1966) in Los Angeles and Orlando W. Wilson (1900–1972) in Chicago personified the model of professional, impartial law enforcement. By 2001 most major police departments had adopted the “community-based” policing philosophy, demonstrating a dramatic shift from traditional reactive policing to a more proactive approach. No police strategy was more influential than the “broken windows” thesis espoused by the criminal justice and public policy experts James Q. Wilson and George L. Kelling. But, despite a movement from reactive to proactive policing, there is little evidence that the new policy was responsible for the drop in crime in the 1990s. In addition, civil libertarians and police critics cite the emergence of paramilitary SWAT teams in police departments across the nation as an alarming departure from the community policing model.

### MOUNTED POLICE TRADITION

One of the oldest police traditions still in use is the horse-mounted police patrol. Despite the introduction of police automobiles and motorcycles, mounted police still thrive. But, unlike earlier years when they were required to patrol hundreds of miles of sparsely populated terrain, they have found new life in urban areas of the greatest population density. While it is unknown when the first horse was used in a police action, most historians trace the utilization of mounted forces in law enforcement to the *Articles of War* of King Charles I (1600–1649) of England, published in 1629, which ordered that the provost be allowed a horse, “for he must be riding from one garrison to another correcting many, lest the soldiers scathe the country and frighten the people” (Carfield 1995). Although Australia and Texas established mounted patrol units in the 1820s, credit should probably be given to London’s 1805 Horse Patrol as the earliest formal mounted police force.

Beginning in 1758, the London Bow Street police established the Mounted Branch of the Metropolitan Police in Great Britain with the introduction of “two Pursuit [*sic*] horses and proper Pursuers.” Over the next

few years, John Fielding implemented his *Plan for Preventing Robberies* within Twenty Miles of London, which included a regular force of mounted men charged with crime prevention and criminal apprehension along the turnpikes leading into London proper.

By 1805 the Bow Street Horse Patrol consisted of fifty-two men and animals charged with patrolling main roads up to twenty miles outside London. Like most twentieth-century incarnations of the mounted police, officers came from the military, typically the cavalry (until 1939). They were housed in cottages near the patrol routes. Each man was equipped with a saber, pistol, handcuffs, and a truncheon, and with their scarlet waistcoats, white leather coats, and steel-spurred Wellingtons, they were a sight to behold and were not surprisingly referred to with the monikers “Redbreasts” and “Robin Red Breasts.” But the Bow Street Horse Patrol diverged from its modern counterparts in one important area: It was not initially involved in dealing with crowds and riots, but was employed mainly in patrolling roads.

By the 1820s, the Bow Street Horse Patrol proved such a success that its numbers were increased and in 1836 it was incorporated into Robert Peel’s new disciplined unarmed police force. Before the end of the decade, the Horse Patrol had become an integral cog of the Metropolitan Police.

As rioting and civil disorder increased during the nineteenth century, the mounted police played a crucial role in crowd control. The mounted branch was frequently involved in policing the militant suffragette movement beginning in 1903. By the next decade their duties included controlling other horsemen, holding down strike-breaking violence, patrolling common lands, and escorting members of the monarchy.

In addition to the London mounted police, numerous other communities in England used this type of unit as well. For instance, Newcastle upon Tyne began using horse police in 1836 and, despite the preponderance of cars, still employs a mounted branch of six. They are used primarily for patrolling the parks and woodlands that surround the city. Liverpool employs twenty-seven horses, while Edinburgh still maintains six. While the tendency has been for the mounted forces to decline in numbers since the introduction of motor vehicles, the city of Bristol has actually increased the size of its mounted unit.

The British brought their methods of policing to the far-flung edges of the British Empire as it expanded to the various corners of the world. Australia’s New South Wales Mounted Police Division claims to be the oldest continuous mounted police unit in the world. In 1825 the governor of the colony created the unit to suppress the growing bushranging threat and to apprehend runaway convicts in the rural districts. Like most mounted forces, it followed a military model, as well as Robert

Peel's London model. Most of the subsequent Australian colonies adopted the mounted patrol model because it was so well adapted to the terrain. Frontier conditions clearly influenced the development of law enforcement in the land down under. Conflict with the indigenous population required the creation of specialized and highly mobile police. The most specialized response to the "Aboriginal problem" in Australia was the formation of the Native Police Forces, which were staffed by native troopers and European officers, a common arrangement in the British Empire. This innovation was initially proposed by penal reformer Alexander Maconochie (1787–1860) in 1837 and combined the advantages of European firepower and horses with aboriginal bush and tracking skills.

Less known were the formidable Native American mounted forces in America's Indian Territory. Each of the Five Civilized Tribes (Cherokee, Chickasaw, Choctaw, Creek, and Seminole) referred to its "Lighthorse" units in their tribal law books. Lighthorsemen were authorized to not only enforce court decisions, but also to use their own discretion in upholding the law. The most prominent of the Lighthorse units included the Cherokee Lighthorse, Choctaw Lighthorse, Creek Lighthorse, and Seminole Lighthorse.

As early as 1808, the Cherokee nation passed a resolution creating a mounted regulator force to suppress horse stealing, robbery, and other criminal activities. A precursor to the Lighthorse units of the Indian Territory, the Cherokee Lighthorse was first authorized in November 1844. Composed of a captain, lieutenant, and twenty-four mounted officers, the force was charged with pursuing lawbreakers. However, it had little impact until after the American Civil War (1861–1865) because, in the years leading up to the conflict, law enforcement was typically handled by federal sheriffs and their deputies. The other tribes of the Indian Territory would eventually use the Cherokee Lighthorse as a model for creating their own units. The Indian mounted forces were often at odds with U.S. law enforcement agencies because of jurisdictional conflicts during the nineteenth century.

Like most colonial forces of the British Empire, in the rural areas of the British African colonies the Cape Mounted Police, Cape Mounted Riflemen, Natal Mounted Police, and the Zululand Mounted Police were inspired by the early Royal Irish Constabulary model, based on military discipline and command structure. Divorced from the local population and staffed by British officers, these rural-based forces were paramilitary in nature, allowing them to be easily transformed into military units in time of war, something that occurred often during nineteenth-century colonial expansion. The policeman-soldier tradition can be readily discerned in both the British and Afrikaner models of policing.

Formed in 1822, the Cape Mounted Police were the earliest example of the mounted police tradition in South Africa. At their zenith, they numbered eight hundred, two-thirds of whom were Hottentots; they were equipped with smooth-bore double-barreled shotguns, easily loaded on horseback. In 1857 they were disbanded and reconstituted as the frontier Armed and Mounted Police before returning to their original name in 1878.

Following the British victory in the Anglo-Boer War (1899–1902), Major General Robert Baden-Powell (1857–1941) recruited ten thousand men to police South Africa in order to guard against the same social tensions and disintegration that accompanied the Union victory in the American Civil War. Initially, their main task was to gain the confidence of their former adversaries. Police were encouraged to learn the Boer language, Afrikaans. The South African Constabulary was organized into three divisions, and after the succession of hostilities in South Africa was the largest mounted police force in the world with 10,500 members.

Jordan implemented a very different rendition of the mounted police force. Its creation can be traced to the Arab army that emerged victorious from the dominance of the Turks during World War I (1914–1918). Initial attempts were unsuccessful in creating a force that policed the lawless Bedouin people as well as the provincial towns. By the 1930s, several British officers arrived to help bring law and order to the Transjordan region. Chief among them was Lieutenant General Sir John Glubb (1897–1986), who would organize the original Desert Patrol. Unlike other mounted forces that rely on the horse, this one used camels, patrolling the borders for smugglers, opium dealers, and terrorists attempting to gain illegal passage into Jordan. The Camel Corps were scattered in outposts at intervals through the desert. Each patrol was composed of four men and camels. They were typically equipped with crossed bandoliers, a Colt revolver, a rifle, and a curved dagger. In addition to the Camel Corps, there were also gendarmie posts in the countryside that relied on horses. During range patrols they took census of livestock and handled public security.

In the wide expanses of frontier Texas, the ranging tradition of policing in the United States developed in the form of the Texas Rangers. New Mexico and Arizona took similar steps in the early 1900s. In the tradition of the rangers and other frontier mounted police, Mexican president Benito Juárez (1806–1872) founded the Mexican Rural Police Force, or Rurales, in 1861. The Americas were also the home of the world's best-known mounted police—the North-West Mounted Police, founded in 1873 by the Canadian government to police vast areas of western Canada. Renamed the Royal Canadian Mounted Police in 1920, this force consisted of more

than sixteen thousand peace officers and functioned as the municipal police in about two hundred towns and cities by the beginning of the twenty-first century. Although the Arizona Rangers and the New Mexico Mounted were short-lived units, the Texas Rangers moved into the modern era with less autonomy as part of the reorganized Texas Department of Public Safety in 1935.

## CONCLUSIONS

The colonial empires of Europe played an influential role in shaping police practices around the world. Beginning in the sixteenth and seventeenth centuries, nations as diverse as Great Britain, France, the Netherlands, and Spain expanded their spheres of influence beyond continental Europe, and in the process introduced a number of police practices to the far corners of the globe. It would be natural then that yesterday's colonies made the transition to today's nations with police forces that reflect the historical process in each country. Likewise, many powerful nations influenced their neighboring countries as well—witness the carabinieri in Italy, Spain, and France, or the state mounted police forces in Texas, Arizona, and New Mexico in the early twentieth century.

Some of the earliest efforts at international police cooperation emanated from Europe. Largely the brainchild of Vienna, Austria, police chief Johann Schober (1874–1932), the International Criminal Police Organization, or Interpol, was envisioned as a panacea for the international crime problem in the aftermath of World War I. Schober believed that if the world's police forces cooperated with each other, they would be more effective in deterring crime within their respective borders and apprehending offenders as the crimes occurred. In 1923 Schober sponsored a world conference of law enforcement officers in Vienna. Initially headquartered in Vienna, the ascendance of Nazi Germany in the 1930s led to an early disbandment of Interpol. But following World War II (1939–1945), Interpol was resurrected and in the following years relocated its central offices to Paris and Lyons, France. Demonstrating the transnational complexion of modern police cooperation, between 1984 and 1989 John Simpson, an American and chief of the U.S. Secret Service, presided as Interpol president.

In many respects, Interpol's efforts at international police cooperation were a harbinger to the Schengen Agreement of the 1980s in which Belgium, France, Germany, Luxembourg, and the Netherlands agreed to ensure cooperation in the ever-widening war against transnational crime and terrorism. Among the most important issues addressed by this agreement were the jurisdictional matters related to policing, particularly the sharing of information and how far police could pursue criminals across borders.

Technological advances are poised to take police weaponry into the twenty-first century. Law enforcement has recently emerged as one of the fastest-growing markets for high-tech gadgetry, particularly in the realm of less-than-lethal weapons and tools. The equipment on the drawing board for the twenty-first century includes the snare net, the smart gun, strobe goggles, rear-seat air bags to control arrestees, millimeter wave cameras to detect concealed weapons, and backscatter x-ray scanners for detecting drug shipments. However, what the September 11, 2001, terrorist attacks in the United States have taught law enforcement is that no matter what weapons are developed, policing is still the purview of police officers and police systems. No matter what technological innovations materialize in the twenty-first century, policing remains adamantly reliant on many of the time-tested traditions of the past. Witness the return of mounted police patrols. Almost forced out of existence by the automobile, since the 1980s mounted units have become a familiar presence in many cities around the world and are considered advantageous for riot control and community relations, as well as for their high visibility. Also demonstrating the cyclical nature of law enforcement innovation is the reinvigorated emphasis on community-oriented policing, which has taken officers from behind the wheel of an automobile and placed them once more on foot in the communities they serve.

# Colonial Policing

---

In at least seventy-six countries of the world, the earliest police forces were established by colonial powers. This was done not for altruistic purposes, but for reasons associated with maintaining imperial authority in occupied countries. The principal European colonial powers were Britain and France in the first tier, and also the Netherlands, Spain, Portugal, Belgium, Germany, and Italy in the second tier. Together, these powers ruled more than one hundred countries that are now independent states. Most of them were in Africa. In fact, not a single country in Africa escaped imperial domination. Most countries in Asia, with the exception of China, Nepal, and Thailand, also experienced colonial rule some time during their history. In Latin America, all countries were under the control of Spain and Portugal until the early decades of the nineteenth century, and some, such as Guyana and Suriname and all Caribbean countries, remained colonies well into the middle of the twentieth century.

Colonialism had a major formative influence on the history of policing. The colonial powers did not merely establish the first law enforcement forces in colonized countries, they also provided the constitutional and legal mechanisms that undergird them. For example, most Francophone countries still have such law enforcement bodies as the *gendarmerie* and *sûreté* built into their organizational structure, whereas Anglophone countries are modeled on the London Metropolitan Police, the mother of all police forces in the Anglo-Saxon world. Effective law enforcement is one of the great legacies of colonialism in the modern world.

Colonialism is essentially a form of military occupation in which the ruling powers use the army to maintain

law and order, repress any liberation movement, and generally suppress localized armed opposition. The function of the army is to inspire fear. Policing and law enforcement are afterthoughts that come into play only after an entire country has been pacified and brought under the authority of the sovereign colonial power. At this stage, the rulers become more benign and assume what the French call *mission civilisatrice*, or the “civilizing mission,” part of which involves “winning the hearts and minds of the natives.” Law and order are essential to achieving such a civilizing mission. Law enforcement is not merely critical to the suppression of criminal elements but also to restoring a sense of normalcy to the general population. A society in which anarchy prevails works against the long-term interests of the colonial power.

There is the further need to establish a court system that is perceived as impartial and unbiased and an administrative structure that is respected, even if the natives have no access to it. Colonial powers introduce a patron-client relationship vis-à-vis the ruled whereby the benign administration is able to provide basic services that will make up for the lack of autonomy and self-government. Many ethnic groups came to believe that they were better off under colonial powers than they could ever possibly be under the rule of fellow ethnic groups. The system worked well in all colonies well into the middle of the twentieth century.

In most colonies, the colonial powers never used the military to conduct law enforcement operations. This was a crucial distinction that has lasted until this day. But, in almost every case, the original police force was paramilitary in nature. They adopted military nomenclature and

techniques, but these were civilianized in an effort to hide the fact that the regime was nevertheless a military occupation. The colonial powers also succeeded in attracting the better-educated persons to join their administrative and police cadres, some of whom were sent to the home country to learn the language and customs of the rulers. Most police officers in the colonial police forces of Francophone Africa were sent to Paris, where they became part of the French establishment and in a sense, emissaries of the French administration. Italian colonies sent their police officers to Rome, and the British trained the police officers of their far-flung empire either in England or in one of the patrial countries, such as Australia or Canada. Thus, law enforcement was one of the sectors designed to reinforce the subservience of the colonies to the interests of the colonial power.

Crime rates varied among the colonies, but it has been observed that crime was not a more serious problem in premodern African, Asian, or Latin American societies than it was in medieval Europe. These were submissive societies used to centuries of authoritarian rule where violent crime was the exception rather than the rule. The colonial police forces in their initial stages found immediate acceptance in these societies. In many African countries, the ratio of policemen to the population was of the order of 1:1,500, and more often than not, the policemen were not even armed. The colonial powers were uneasy about arming these policemen because of the fear that they might turn their arms against the rulers and, second, because of the cost involved.

Power and authority are the dual attributes of the police. The first was symbolized by the small billy club or stick that most policemen carried, and the second by the uniforms and the badges. The lines of command were remarkably simple and uncomplicated. The headquarters was under the command of an official variously designated as a director general or commissioner who was directly responsible to the resident head of government. Below the headquarters there was a territorial organization that followed the administrative division of the country. Most large towns had a small station manned by one or two policemen who used the police station as a home as well. All patrols were on foot. The police force was also used as a listening post to feel the pulse of the people and to alert the rulers as to possible subversive actions or agitators. In the absence of any mechanism for accountability, most policemen enjoyed a great degree of personal discretion. Often they could harass people they disliked for personal or ethnic reasons. The term *human rights* had not even been coined.

One of the more peculiar features of the colonial police was the lack of a functional separation of the various police duties. In early days, firefighting and law

enforcement were combined and so were criminal investigation and regular police work. Most police stations also served as first-aid stations where medical help was offered. The police ran prisons and delivered the mail. In some colonies, such as Malta, police also registered births and deaths and rounded up truants and vagrants.

Police administrative organization followed several models. The four main models were: (1) extension of the home forces; (2) creation of an autonomous indigenous police department; (3) establishment of a formal ministry that combines justice and prisons; and (4) the use of traditional law enforcement posses or tribal units.

The first model, that of an extension of the home force, was peculiar to the French overseas territories. In every case, the *gendarmerie* and the *sûreté* dual-agency system was introduced by the French and the system has survived independence. The *gendarmerie* was essentially a rural police force that kept law and order in the villages, while the *sûreté* took care of crime in the towns and cities and also conducted criminal investigations. The French make a distinction between colonies and French departments that are constitutionally considered a part of France.

The British, having more colonies than the French, were more flexible in customizing and contextualizing law enforcement activities to the nature of the society they encountered. In some cases, they created a new police department, but without any ministerial status. These departments had direct access to the governor. In Palestine, for example, the inspector-general sat on the High Commissioner's Advisory Council and took his direct orders. In other cases, the British elevated law enforcement as a ministry (as in Malta) with cabinet status. In most cases, the ministry's jurisdiction also covered prisons, firefighting, and probation.

The relation of law enforcement to the regular administration also varies considerably. Here the German (or more strictly, the Prussian) model was emulated in many other countries. Under this arrangement, the superior police officers limited themselves to discipline, inspection, and training. Operational responsibilities fell on the district officers, who often lacked the critical judgment and professional experience of their superiors. This system was discredited when Germany lost its empire after World War I (1914–1918), but it survived in some of Germany's African colonies.

The last organizational mode was the tribal police under the direct control of the colonial authorities. This system was confined to British West Africa. Rudimentary police systems existed in all countries in the world even before the modern era, Africa being no exception. Here, the tribal agents, with or without official status or badges, performed rudimentary police functions, such as

apprehending criminals and placing them in detention. No criminal records were kept and justice was summary. It was in this manner that policing began in Nigeria, Sierra Leone, and Gambia. In Gambia, the tribal police were known as badge messengers, and it was the custom to regard the head of the force, known as the “silver badge messenger,” as the successor to the ruling chief.

Because policemen were selected by the colonial authorities on the basis of certain criteria, such as literacy, and because the rest of the population was mostly illiterate, there came to be a distinction between the two groups on the basis of their educational attainment. In fact, the term *literate constable* came to be the official appellation for policemen in some regions. Within the police force, the distinction persisted. In the Gold Coast (now Ghana), the general police were called *literates* and the escort police *illiterates*.

Another internal distinction was between the armed police and the unarmed police. The paramilitary origins of police forces were reflected not merely in the rank formations and nomenclature, but also in the types of weapons used. The colonial powers were fearful of an armed constabulary that could turn against its masters under certain circumstances; nevertheless, they realized that some units of the police needed to be armed to meet emergencies and public disorder. Certain forces had special armed units, such as the Police Mobile Columns or Police Support Units, that consisted of specially selected and trained men whose loyalty had been tested. These units were quartered together and received special privileges. The model for this paramilitary force was the Royal Irish Constabulary, later the Royal Ulster Constabulary, which kept peace in the restive island for centuries.

In some cases, the colonial police forces were transformed into a military force and vice versa. During World War I, units of the North Nigeria Police were converted into the West Africa Frontier Force, a British Army corps. During World War II (1939–1945), the Palestine Police was converted into a military fighting force that saw action in Syria and elsewhere.

All colonial forces were manned exclusively by white officers until independence. In many African countries, superior police officers were drawn from the home country even after independence. Nevertheless, serious efforts were made to train subordinate police officers and to devise standards and techniques suited to the local conditions. The earliest police schools and colleges in the colonies were founded in the early decades of the twentieth century and were staffed by expatriates. These schools and colleges provided only basic instruction, but in some cases they offered refresher courses for those

already in service. The required physical and educational standards varied from country to country, but they were generally lower for the natives than they were for expatriates.

Apart from professional pursuits, the colonial rulers fostered social activities, which offered opportunities for gaining a knowledge of local cultures. The British introduced the sports of soccer (football), rugby, and cricket in all the countries over which they ruled. Social intercourse was limited between the rulers and the ruled, and the social divisions in the home country persisted in the colonies. For example, in Kenya, no one below the grade of inspector was allowed into police clubs. It was customary for British police officers in West Africa to take out local girls to dance, whereas this practice was frowned upon in East Africa. In Malta, police officers could join a union and so could officers in Francophone Africa, but membership in any organization was banned by Italian authorities in Somalia.

In all colonies, Western languages supplanted the native languages quite early. Language, like religion, constitutes the soul of a society, and by controlling language colonial masters could control the societal evolution of the people who spoke it. Nevertheless, in certain countries with developed languages, the colonial rulers were forced to make adjustments and concessions. In Palestine, a knowledge of Arabic was required of all policemen and so was the knowledge of Swahili in East Africa. In Francophone Africa, the situation developed differently. The natives acquired a knowledge of French easily. In fact, the French spoken in Francophone countries like Senegal is considered superior to that spoken in France. But in North Africa, a knowledge of Arabic was encouraged more for the purpose of gaining access to local sources of information.

Local customs played an important role in shaping police rules and traditions. For example, in India, which had a highly developed culture even before the British gained control of the country, caste protocols were built into police procedures. Most of the police officers came from the higher castes and thus commanded ritualized respect from the lower masses. Confessions in India could be tendered only to an officer higher than an inspector, for fear that lower grades would be less trustworthy.

All remaining colonies gained their independence from the Western colonial rulers between the end of World War II and the end of the twentieth century. At the time of independence, only a few countries, such as Burma (now Myanmar) completely broke with their past and restored the precolonial social and administrative system. Most other countries, including India, the crown jewel of the British Empire, retained the administrative and judicial systems of the colonial era. Included in this

*Colonial Policing*

legacy are the law enforcement agencies and traditions. Reinforcing this trend is the globalization of crime as well as crime prevention. Superior police officers from all over the world are now trained in the United States or Britain or France, where the original law enforcement models are

being redefined and applied to the needs of the twenty-first century.

# Community Policing

---

A review of law enforcement strategies throughout the Western world reveals the majority of police forces and departments embracing community policing. Whether they are encouraged by government pressure, public pressure, or police policy is immaterial, as community policing has become an integral part of contemporary policing. Community policing has become more than a philosophy and concept, it is now an organizational strategy that promotes a partnership between people and their police. It is based on the premise that both the police and the community work together to identify and prioritize those problems that concern the community—for example, crime, drugs, fear of crime, neighborhood decay, and social and physical disorder—with the objective of improving the overall quality of life in the area.

Since the mid-1970s, more discussion and debate have centered on the topic of community policing than on any other aspect of police work. The topic has engulfed police literature, has spiraled across the Internet, and has been the main focus for a number of criminal justice departments in universities, colleges, and research establishments in the Western world. Community policing has also been the subject of major research funding, ultimately being hailed as the “archetypical model” of modern policing. It purportedly has won over police management and working police officers, as well as police commentators, academics, politicians, and the general public. But what is community policing? When did it start? Does it work? Does it have a future? This essay attempts to answer these questions, with a specific focus on policing in the United Kingdom and United States, with some relevant information about the wider world.

## WHEN DID COMMUNITY POLICING START?

The advent of industrialization and the introduction of interventionist liberal policies in the nineteenth century led to a broad definition of policing. For example, the “policing” of education, factories, and commerce, and the increase in social welfare-oriented policies, coupled with the expansion of the civil service and local authority bureaucracies, all added to the policing of the community for the benefit of the community. The new police evolved as part of this social policy, inextricably linked to both social control and executive enforcement.

With striking similarity to the development of policing in the United States, the police organization in the United Kingdom changed its approach to general policing in the 1950s and 1960s, with the assistance of technology, specialization, and mobility. This end of the so-called golden era of policing led to police isolation from their communities through the regular use of police cars, increased utilization of radio communication, and growing telephone ownership within the community, which negated the traditional personal contact with the local police. This dichotomy was further exacerbated by the need for more instant response to calls for service from an ever-demanding community. Over time, policing took on a demand-led stance that distanced the service from the community, causing a shift from “preventive” to “reactive” policing. Community policing slowly emerged as the savior of the foot-patrol officer, the sole community interface with the increasingly isolated police service.

Close scrutiny has revealed that contemporary community policing does not have a single identifiable

historical source, but grew and developed out of a need to fill a vacuum between policing and communities in modern twentieth-century society that resulted from the alienation of the police from the community. The intellectual leap from the social role of the police to that of a facilitator in community improvement is not so difficult, and, indeed, highly visible within the United Kingdom and the United States from the 1960s onward.

This said, however, the idea of community policing found its roots in the United Kingdom and United States as far back as the 1950s, with its source lying in two main areas: first, as part of an increasing call for citizens to become involved in community problem solving, and second, to satisfy a growing awareness of the need to tackle juvenile crime and delinquency within the community. A comparative-literature search into community policing in both Britain and North America dating back to the 1950s continually highlights similar concepts and philosophies surrounding community policing in both countries. For example, in 1957 in the town of Greenock in Scotland, the then chief constable, David Gray, started what was to become known as the Weir Street–Ladybank Project. Being particularly concerned about juvenile crime in the area, Gray suggested that concentrated attention be given to it by local authority services—the churches, teachers, police, and others—to produce a better environment for the children to play and grow in. He posted three constables to the area with a remit to support the residents and the statutory agencies in the wide range of structural, environmental, and sociological improvements that were being implemented. Gray believed that improving the neighborhood environment through a multiagency approach, with the police playing a central role, would increase the overall quality of life in the area and eventually reduce crime.

Officers were further instructed to become familiar with the area and develop useful and constructive relationships with local people. The police took the role of initiator and facilitator; a residents' association was formed and clubs were set up. Refuse collection was improved, and the landscape planted with trees. The key to David Gray's philosophy was that the maintenance of order and the prevention of crime could not be dealt with in isolation or by one agency, but rather had to be addressed within the wider spectrum of social issues that affected a community and its people, and more especially, by the wide range of skills, responsibilities, and resources vested in what has now become known as the *multiagency approach*. Gray was undoubtedly ahead of his time—his appointment of a group of dedicated police officers with specific instructions to liaise with the public is an obvious prototype of community policing, and installs him as one of the founders of community policing and a commendable legacy to Scottish policing.

A further example of innovative community action and problem solving can be found in the United States during the 1950s, as depicted in a study of community members engaged in a health survey in a Midwestern county. There, the importance of “insiders” having ownership of community problem solving is stressed: they “must be local residents. It is very difficult, if not impossible, for non-residents to become an initiating set for local community action” (Sower 1957, p. 67); that is, engaging the community in problem solving by focusing in particular on interventionist policies and the role of the community worker, whose job it is to highlight social problems within a community while encouraging citizens to do something about them. It is clear, by tracking the evolution of community policing and community problem solving in the United Kingdom and the United States, that there exists strong parallels in the development of community policing in both cultures, emerging out of social conflict, coupled with a fierce community-led drive for additional influence and control in the running of their own communities.

#### WHAT IS COMMUNITY POLICING?

A better understanding of community policing has been hampered at times by the difficulty of defining and articulating the concept of “community” itself. For most people, community relates to a small local area, while others see it in national or international terms—for example, the Jewish or Catholic community, and there are those who even perceive an “Internet community.” To fully understand community policing, one has to agree on what *community* means and how it dovetails into policing, or for that matter, how policing merges into community. For example, one could start from a base position and suggest that, if an ideal model of community existed, there would be little, if any, need for formal policing. In other words, the concept of community policing is ultimately tautological; if “community genuinely existed then policing in a formal sense would be otiose” (Reiner 1995, p. 164). A broader view suggests that any form of policing is community policing as long as it has community support and encouragement, as definitions of *community* and *policing* vary from place to place.

Similar to *community policing*, the term *community* can mean different things to different people—there is no universally accepted definition, but there are various interpretations. The term commonly refers to the relationships and experiences people have with each other in their homes, schools, workplaces, neighborhoods, sports clubs, bars, cities, and towns, where individuals identify with places and form an attachment and a sense of belonging to a particular area, fulfilling social and other

needs. This facilitates the development of a collective identity and encourages residents to feel secure in a neighborhood, stimulating a strong sense of community well-being. Community policing has, over time, become an essential part of this networking and is seen as a way of giving local communities more of a say in the running of local police services.

In general terms, the prime duty of the police is the protection of life and property, the maintenance of order, and the prevention of crime. It is well accepted that these goals cannot be achieved by the police alone, but require the assistance of the community, through community members accepting communal standards and values in partnership with the police and other public agencies. It follows that the police require the consent of the community in order to carry out their duties effectively. In addition, the police must understand the community's problems if they wish to be in a position to influence the community in the ways that prevent crime and maintain order. The idea that the police officer, through a regular presence on the beat, is working on behalf of the community, ever-sensitive to its needs and concerns, is, in essence, community policing.

One of the best attempts at a definition of community policing is the "Ten Principles of Community Policing" devised by Robert Trojanowicz and Bonnie Bucqueroux, summarized here:

1. Community policing is both a philosophy and an organizational strategy that allows the police and community residents to work closely together in new ways to solve the problems of crime, fear of crime, physical and social disorder, and neighborhood decay.
2. Community policing's organizational strategy first demands that everyone in the department, including both civilian and sworn personnel, must investigate ways to translate the philosophy into practice.
3. The implementation of community policing requires that police departments create and develop a new breed of line officer, the community policing officer (CPO), who acts as the direct link between the police and the people in the community.
4. The CPO's broad role demands continuous, sustained contact with the law-abiding people in the community, so that together they can explore creative, new solutions to local concerns involving crime, disorder, and decay, with private citizens serving as unpaid volunteers.
5. Community policing implies a new contract between the police and the citizens they serve, one that offers the hope of overcoming apathy, at the same time restraining any impulse to vigilantism.

6. Community policing adds a vital proactive element to the traditional reactive role of the police, resulting in full-spectrum police service.
7. Community policing stresses exploring new ways to protect and enhance the lives of those who are most vulnerable—juveniles, the elderly, minorities, the poor, the disabled, and the homeless.
8. Community policing promotes the judicious use of technology, but it also rests on the belief that nothing surpasses what dedicated human beings, talking and working together, can achieve.
9. Community policing must be a fully integrated approach that involves everyone in the department, with the CPOs as specialists in bridging the gap between the police and the people they serve.
10. Community policing provides decentralized, personalized police service to the community. It recognizes that the police cannot impose order on the community from outside, but that people must be encouraged to think of the police as a resource they can use in helping to solve contemporary community concerns.

(Trojanowicz and Bucqueroux 1990, pp. xiii–xv).

Although these ten principles articulate a clear definition of this contemporary policing reform, there are other variants. One is described as *community-oriented policing*, which entails efforts to bring about a closer liaison between police and community, with the end result being a close police-community relationship that facilitates the maintenance of a safer environment. Examples of this can include decentralizing the police service to the local area through subpolice offices; identifying regular foot-patrol officers; and the introduction of structured networks, such as neighborhood watch and crime-prevention programs, with the involvement of community members.

A second variant is *problem-oriented policing*. The main protagonist of this approach, Hermann Goldstein (1990), regularly accused the police of failing to address the underlying problems that surface as calls for assistance from members of the public, a situation that Goldstein argues can be remedied by problem-oriented policing. Problem-oriented policing requires the police to reorient themselves toward the solution to problems that come to their attention, instead of constantly returning to the same recurring complaints. Police officers should, in short, become oriented toward solving problems, rather than suppressing the apparent symptoms of problems. Efforts should be made to develop a joint system between police and the citizenry that focuses on community concerns and problems within a more rational scientific framework.

The community-oriented model tends to depict the citizen doing police work, with the associated problems of legitimization and authority, whereas the problem-oriented model does not have the legitimacy problem because the police are normally in the lead role in partnership with the community.

#### DOES COMMUNITY POLICING WORK?

Most modern police departments have a capacity to respond quickly to calls for service; however, community policing is different. It is not incident- and technology-driven, and officers operate on a decentralized basis. Community policing emphasizes officers being in regular contact with citizens, and it allocates police on the basis of neighborhoods. It involves structural and organizational reform, ensuring change in decision making and communication in police departments. Success also necessitates police cultural reform and a strategic “redefinition of policing” (Skogan 1995, p. 86).

Studies of earlier models of community-style policing in the United States, such as police-community relations units, team policing, unit beat policing, and foot patrol, revealed the confusion and ambiguity inherent in the term *community policing* (Manning 1984, p. 206). Such views have been reiterated since 1984 in other studies that reemphasize the dilemma facing police and community alike in coming to terms with the concept and meaning of community policing. For example, around this time a British study of community policing in five contrasting English forces found that an early problem existed with the variation in terminology (Brown and Iles 1985). Titles such as *home beat*, *neighborhood beat*, *suburban beat*, *rural beat*, *detailed beat*, and *structured patrol* had all been used, reflecting the range of local environments and local concerns. In general, however, each type of officer operated on a similar basis—he or she was assigned long term to a specific beat (usually at least a year) with the task of getting to know the beat and the people in it and becoming involved in the community. All were expected to perform conventional police duties.

In the United States, improved community-police relations came about in the 1970s with the introduction of “team policing,” and with it a more decentralized and personalized form of police and community liaison. It was hoped that the newfound relationship between the police and community members would engender communication, trust, and cooperation, and cultivate a sense of responsibility among citizens for crime prevention and other antisocial problems. Although team policing was the source of what was to become today’s model of community policing, it did flounder and fail, mainly due to management not being involved in a supportive

role. Police management could not shake off its traditional command-and-control function, which generated complaints that the police organization and bureaucracy were at fault; “team policing was a competing strategy with different assumptions about every element of police business. It was no wonder that it expired under such circumstances” (Kelling and Moore 1988, p. 23).

So the 1950s and 1960s witnessed the birth of community relations, quickly followed in the 1970s by the concepts of team policing and unit beat policing, which were the forerunners of the community policing approach that eventually found its foothold in the 1980s in both Britain and America. Although some of these initiatives during the 1950 to 1970 period failed to survive or had limited success, the notion of community and police in partnership remained viable. It offered some promise of success and progress at a time when policing was becoming more complex and was striving for novel ways to combat crime in its modern form.

The crisis of the 1960s and 1970s in the United Kingdom and the United States, with rioting and social unrest, generated a feeling within communities that police accountability was inadequate. This, in turn, led the ordinary member of the public to believe that he or she had little or no influence in the direction of police resources. Criticism of police professionalism appeared on political agendas, with associated questioning of police recruitment, training, and management policies. Critics recommended improved police management, training, use of technology, better recruitment, and more community involvement in police planning and implementation. At this time, the lack of liaison and poor communication links with the community caused conflict and alienation between the police and the public, and this problem, coupled with a growing public awareness of civil rights and liberties, resulted in a rise in complaints against the police. There are many examples of failures in the police systems of the 1970s and 1980s. The Scarman Report that looked into the April 1981 Brixton riots graphically describes one such failure that resulted in a conflict between police and young people living in the Brixton district of south London. Consequently, the 1970s and 1980s witnessed the emergence of a model of proactive policing or community policing that involved a higher level of police acceptance of local community values and a willingness to be influenced by the community.

Community policing persuades the police to think of themselves as more than a reactive agency for calls from the public; such an approach to policing promotes a more proactive, problem-solving role in tackling community problems. However, in adopting a closer interface with the community, the police are faced with the

dilemma of how involved they should become in resolving community problems. Where should they draw the line? For example, police are becoming more involved in policy discussions on such issues as drugs, prostitution, homelessness, antisocial behavior, sectarianism, race relations, and asylum seekers, which are usually associated with fear of crime in rundown inner-city areas. There is a danger that policing becomes too embroiled in party politics.

The difficulty is that, when police do not include “communities” in their decision making and ignore the community’s needs and responses, a breakdown in law, public order, and confidence in the police can result. Community policing offers services to the public that do not normally fall within the ambit of law enforcement and are not related to specific criminal activity, leading the community to need the police and vice versa. One example is the “war on drugs,” which the developed world generally accepts it is not winning and will not win solely through law enforcement. Community police officers are regularly involved in delivering the antidrug message in schools and to volunteer groups. A similar stance is taken with other crime-prevention initiatives, which will succeed only within a model of partnership and liaison. The dynamics of the police and community liaison clearly show community policing playing a vital part in local social-policy strategies.

However, as an important factor in community policing, the resurgence of the idea of community fills a vacuum left when the concept of society seems to be disbelieved and replaced by market-driven forces and individualism. To build on the success of this community spirit and communitarianism, one has to appreciate that community policing reflects similar “market trends” in the wider public and private management environment, such as quality management and continuous improvement, and orientation toward clients and customers. In addition, the basic tenets of community policing are found in the modern approach to service delivery—for example, client satisfaction, shared decision making, the extension of empowerment at the front line, local democracy, decentralization, partnership, openness, and accountability.

Since decentralized local decision making is the essence of community policing, with all officers involved in its implementation, no one should be excluded, particularly supervisors and management. A small team of highly motivated community police officers cannot by themselves make the necessary cultural and organizational changes required. This was reflected in Nigel Fielding’s 1994 examination of the organizational and occupational problems of community policing in the United Kingdom (pp. 305–322). For example, although

community policing may be in vogue, officers who took on the assignment felt their most daunting problems did not originate from the public but from within their own organization. The difficulty for community policing may lie less in establishing that it is an appropriate response to important demands on police services, and more in securing an organizational environment in which it can endure. The difficulty with community policing as gleaned from literature is that its “successes” are not compatible with the more traditional operational criteria—arrest rather than conciliation, clear-up rates rather than the absence of disturbance and crime. A different set of values and techniques has developed as a gauge of the success of community police officers, in particular their choice in the use of discretion rather than the impositional style of regular patrol officers.

A regular drain on community-policing resources has been brought about as a direct result of the growing professionalization of the modern police officer, which has led to increased specialization and the bureaucracy associated with it. This, in turn, has created a profusion of police departments and specialist posts, which have led either to the status quo in the number of foot patrol or community police officers, or, as usually is the case, to an actual reduction in their numbers, since the main source of recruitment for specialist posts in policing is from the pool of foot patrol and community police. Any additional new recruits are soon subsumed into mainstream policing, where they help feed the police organization’s constant appetite for specialization or duty in targeted initiatives.

Community police officers can obviously be successful when they are allowed to get on with their proper role in the community. The dilemma is that community police officers, particularly those working in large cities, are not consistently engaged in community-policing duties, but regularly abstracted to undergo other tasks. The research and literature show conclusively that, without a specific strategic policy and implementation plan with the requisite level of resources, community policing will continue to struggle and exist in rhetoric only. In contrast, the purest form of community policing can be found in small rural towns where the officers are not subject to constant abstractions from their everyday duties in their community.

The situation is not all negative, as the majority of community police officers and their colleagues work hard for their communities when they are allowed to do so by the system. They prevent crime and detect offenders on a regular basis, regularly placating the concerns of community members and significantly enhancing community safety. In addition, a high level of satisfaction with community policing has been sustained over the

years, as evidenced by regular independent opinion surveys. A considerable amount of goodwill on the part of officers makes the community police system work against all odds.

#### DOES COMMUNITY POLICING HAVE A FUTURE?

Although not discussed at length in this essay, models of community policing exist worldwide and are at various stages of evolution. In France and Germany, hybrids of the British and American styles of community policing have subsisted since the 1980s. For instance, in Germany, community policing is a recent development that suffers from the perennial internal organizational problems of resistance to change. The model is also hampered by the country's rigid legal structure, which constrains police officers' use of the discretion that is crucial to the implementation of community policing. In France, on the other hand, community policing suffers from not being part of the French policing tradition, which differs from the British model of the unarmed community beat officer. Historically, French police gave allegiance to the protection of the state and the suppression of public disorder, in contrast to the guard, watch, and patrol version of their contemporaries in the United Kingdom and the United States.

It is, therefore, difficult to "parachute" the traditional model of community policing into countries such as France and Germany that have no historical foundation of community and police partnership to support it. The "golden age" of policing and the stereotypical beat officer never existed in most countries. However, communities are making themselves heard through the medium of their politicians, and they are demanding change in their country's policing systems; in particular, they are calling for a voice in how they are policed. And it is not solely in Europe where change is on the horizon; many other countries throughout the world have experimented with versions of community policing that are tailored to suit their own historical, political, and legal circumstances. Some are proving successful, others less so. There is no ideal type that can be transplanted with a guarantee of success.

In the United Kingdom, the solitary icon of the patrol officer carrying the responsibility for the safety of the community on his or her shoulders is under threat, and, in particular, in danger of slowly disappearing from the British thoroughfares, even though a significant proportion of police managers, supported by the police associations, still maintain that the patrol officer is the bastion of policing. It is apparent that police workloads and the ever-increasing demands made of the service, coupled with the present systems of resource management, have had an adverse effect on foot patrol and

community policing, and at times have an opposite or counteracting outcome on police strategy and policy. Rhetoric and ambivalence still surround the subject of community policing and the wider issues of foot patrol. There will always be arguments put forward for extra funding for policing and patrol officers in particular, but funding is only part of the solution. It is worth drawing attention to the remarkable fall in crime and the increase in detection rates achieved in New York City during the 1990s. During this period the city experienced a rise in police recruitment of around 25 percent. It is highly unlikely that an injection of funds of that magnitude will be witnessed in the United Kingdom. In reality the demand for policing and general community security is such that it is unrealistic to believe public funding will ever reach the requisite level.

The warning for the police service is, if there is no sustainable increase in the number of patrol officers, then other methods will be introduced to fill the gap. The following options and alternatives to traditional methods of police patrol and community policing are being piloted in many areas of the United Kingdom.

As part of the British government's ongoing reform of the police, it is examining new models based on differing levels of patrol: For example, the civilian community-support officer or neighborhood warden who patrols with limited powers, funded from the public purse; private security patrols similar to those utilized on private estates in the United States; and the extension of the powers of existing auxiliary patrols, such as traffic wardens, giving them the authority to report minor crimes. This is against a backdrop of a significant increase in private security provision in Britain, with a move toward private civilian foot patrol in areas where the community, the local authority, and elected members are dissatisfied with the levels of police patrol cover and have taken the matter into their own hands and employed their own private foot-patrol wardens. Such provisions are attractive to the community because these resources are not subject to the vagaries of abstractions, as are their police colleagues, who engage in, for example, court duty, public-order detail, football duty, paperwork, training courses, or sick leave. In "best-value" terms, you get what you pay for; you pay the money and the patrol officers or wardens will be there on patrol. The police service cannot guarantee this. These initiatives are exceptionally attractive to a growing number of communities and could be viewed as an extension of a wider definition of community policing. One term commonly used is the *extended police family*.

Alternatives to the funding of police patrols are being piloted throughout the United Kingdom with the support of their respective police forces. For example, a

number of privately financed police officers are on patrol at local business premises on crime-prevention and staff-protection duties. A group of retailers is paying for officers to patrol city centers, and a National Health Service Management Trust is funding the salaries of police officers to patrol their hospitals. Not to be undone, the Home Office, the department of the British government that is responsible for domestic security, has proposed the setting up of a new National Cheque and Credit Card Squad funded by the finance industry. Police forces themselves have also employed civilian “parish constables” to patrol in the more rural areas. Such schemes have been met with severe criticism from the lower ranks in the British police, who are totally opposed to the private funding of police officers, believing it would lead to an influx of privatization of policing in the United Kingdom.

Although police may be in a position to bolster the informal control mechanisms in a community, it should not be forgotten that they are still the enforcers of the law within society, and the flexibility of police and community relations should allow police to act as community mentors and mediators while still being an active arm of authority, with a duty to ensure order maintenance within a community. Communities expect the police to enforce the law and protect them from crime regardless of gender, age, or ethnicity. This is the reality of community policing. But such expectations of service from the police must be held in tandem with the community and other public agencies playing a more active role in policing. So a closer investigation is required with a view to identifying what prevents communities and public departments from being more participative in their own community safety and how other social organizations can assist more.

For the police to play their part in the overall strategy they have to adopt new approaches to “progressive” partnership policing, which involves changing the whole ethos and philosophy of policing. However, according to police associations, radical change or reform need not be at the expense of police tradition, customs, routines, habits, and practices. Therein lies the dilemma for, as we have seen, community policing is much more than a small cadre of dedicated officers ensuring a regular interface with the community. For community policing to move forward and take its rightful place in the “new communities” where community safety is king and not the sole responsibility of the police, it has to be allowed to blossom without restraints and restrictions. The contention is that this can only happen if there is a change in police tradition, customs, routines, habits, and practices.

More and more officers from multifarious disciplines are working and specializing in areas that hitherto would

have been the sole domain of the community police officer—for example, juvenile crime, domestic violence, sex offenders, prostitution, the elderly, the mentally ill, business crime, drug education, schools, crime prevention, community involvement, and child protection. As discussed earlier, the resourcing of these specialist units normally comes from the pool of officers working on community policing and street patrol, thus having a negative impact on their numbers. But these specialist posts are as much a part of the broader definition of “community policing” and “community safety” as the community police officer and the traditional beat officer with their hands-on interface with the community. A city division in a large British police force may have the same number of police officers involved on a daily basis in carrying out the specialist work identified above as they do in their community police work. In addition, police management and supervisors are constantly liaising with various sections of the community engaged in community-policing issues.

On a brighter note, innovations have been launched in both the United Kingdom and the United States that give some indication as to the future of community policing. First, many of the forces in the United Kingdom now award community police officers with additional allowances in recognition of the extra responsibility of their role. In some instances, community police officers are being encouraged to sign community contracts for up to three years, wherein they promise to manage teams of community-support officers or neighborhood wardens and to police local communities. As a reward, the officers are promised fast-track promotions, termed “career awards”; built into the contracts are local community expectations and standard levels of police service.

Another innovation in the United States relates to the concepts of community prosecution, community justice, community problem solving, and restorative justice. These themes involve active partnerships between the police, criminal justice agencies, and the community, with the set objective of tackling community problems in a more innovative, rigorous, and proactive manner than in the past—by, for example, focusing the combined forces of the criminal justice system toward preventing crime before it happens, through community policing, community groups, and volunteers. There are similarities with the new schemes of community problem solving and the traditional models referred to in this essay. The main distinction appears to be the will and momentum to make the new models work, and this impetus comes from the politicians, public agencies, and the communities themselves, working in close partnership as they have never done before.

These innovative approaches to tackling community problems in partnership are at the embryonic stages and, although promising, require further evaluation in the short to medium term. Intriguingly, it does show that community policing does have a future, but not in its traditional mode, which has existed for several decades and has been articulated in this essay. The future of community policing lies in a more comprehensively defined role in vigorous partnership with the community, elected members, the public, and voluntary and private bodies. However, any future implementation of community policing will be doomed if there is insufficient resourcing and unsustainable political and organizational support.

### CONCLUSION

The main problems preventing the efficient and effective implementation of community policing for over half a century include: insufficient change in police culture; a need for a redefinition of and clarity in community policing; a solution to abstractions; problems with tenure; difficulties in recruitment and training; the need for more lucid goals and objectives; organizational and occupational problems; and the lack of an efficient system for monitoring and evaluating the effectiveness of community policing. Add to this a modern policing system in “overload,” trying to achieve too many things and accepting too much work with insufficient resources.

It is becoming apparent that community policing is an emerging “new policing” that requires police officers and police management with a differing mindset from that of their predecessors. And it is also less than helpful to place community policing in a category and give it a label; in fact, the labeling and segregation of “community policing” have not only created one of the major barriers to our understanding of its concept, but have also hampered a wider appreciation of its problems and the search for solutions. The term *community policing* covers a broad range of tasks, and the definition and descriptor have become so broad as to be near meaningless. In reality, it is modern-day policing, firmly based on the relationship

between the police and the public. However, it is not entirely clear where the police responsibility lies and where the responsibilities of the community and government agencies take over. Achieving a balance between law enforcement and proactive community duties is one of the challenges facing policing in the future.

# Crime Rates

---

For more than a century, police have maintained statistics on various forms of crime, as well as on arrest rates and imprisonment rates. Such information has become important as a criminological tool, as well as a political one. Fluctuations in crime rates have important political consequences for elected officials, and in their ability to protect the life and property of constituents in the most cost-effective manner.

Because crime and imprisonment are public events, it is sometimes assumed that crime data are accurate and reflect the actual state of affairs. However, an undetermined percentage of all crimes go unreported, either because the victim did not report the crime or because the police ignored the report. Furthermore, because the police have a vested interest in keeping crime (or at least crime-rate data) low, they may juggle numbers to make it appear that they are more successful than they actually are. Once a crime is reported and gets into the data pipeline, it becomes difficult to hide or manipulate.

The accuracy of police-related data varies with the nature and size of the society. Small towns generally are able to maintain clean data with few distortions, and the occasional crimes are solved without much fanfare. The accuracy also varies with the nature of the crime. Auto thefts are solved much more quickly than some other crimes because technology is on the side of the police. Juvenile crimes are solved at a faster rate because juveniles do not have the professional savvy that hardened criminals have in eluding the police. The crime rates also depend on the expertise of the criminal investigation department. Those with skilled detectives have a better arrest rate than those with less trained cadres.

A different problem—common to all statistical formulations—arises when crime and arrest rates and police density rates are presented as a percentage of the population, especially as percentages of ethnic segments of the population. For example, urban populations are changing every day in terms of their ethnic mix. It is thus difficult to express a crime rate in terms of a minority population because the overall universe may be larger or smaller than reported in the decennial census. If crime data are not presented as rates per unit of population, they become meaningless because of differences in size among towns and localities, as well as police departments.

Crime statistics, like economic statistics, run in cycles. Historical data may therefore not be entirely reliable because the conditions under which crime rose or fell may have little to do with the efficiency of the police system. The cycles generally follow the organizational style of the directing political entity. James Q. Wilson spoke of three styles of government: the watchman, the legalistic, and the service. The watchman style focuses on maintaining the status quo, while the legalistic style is more proactive and formal. The service style is oriented toward serving needs. Most police departments go through these phases with resulting changes in crime rates.

Changes over time also include changing mores and definitions in law. Some laws that entered the statute books in the nineteenth century still stand even though nobody cares to enforce them. Some crimes have been so radically redefined that they do not refer to the same activity. In all countries, laws have been humanized and socialized to the extent that crime rates become incomparable over time. Courts also have entered into the

picture by making certain police strategies illegal or unconstitutional and thus making it more difficult for the police to apprehend or entrap criminals. Certain forms of crime have been decriminalized. Abortion and infanticide are crimes in some countries but not in others. Laws against sodomy, although still on many statute books, are routinely ignored. At the same time, some of the legal requirements for reporting crime have become so severe that police officers spend more time filling out forms and attending court sessions than they do in actual crime prevention.

Nevertheless, it has been established that even with all the limitations of data noted above, crime rates have dropped significantly in the modern era and are still dropping from their historically high levels in the Middle Ages. Over the short haul, they may appear to be rising, but modern life is much safer than the life of most human beings in earlier eras. For example, homicide rates in fifteenth-century England were forty-four per 100,000 persons compared to 0.4 per 100,000 in the 1990s. According to contemporary accounts, every person in England in the thirteenth century knew someone who had been killed even if he or she did not personally witness a murder. In rural areas, crimes were as common as in cities, and the criminals routinely escaped punishment because they had the protection of the powerful. The state of affairs in other countries was not materially different.

Colonial America was a violent society by all accounts, despite the fact that Puritans in New England observed strict ethical codes in their public behavior. The homicide rate in Boston in the early eighteenth century was a high thirty-seven per 100,000 persons, and the property crime rate was 123 per 100,000. The figures for lesser crimes are difficult to evaluate because they were settled privately or by informal bodies. Only a few were reported, and of those reported few were resolved. Because people had no trust in the fairness of the judiciary, court records do not reflect accurately the incidence of minor crime.

Nevertheless, available crime data indicate a sharp drop in crime all over the Western world between 1850 and 1950. In France, for example, serious crime fell by 90 percent during this period. In England and Wales, crime fell by 79 percent between 1842 and 1891, and in London by 63 percent between 1820 and 1870. Larceny indictments also declined in London from about 220 per 100,000 in the 1830s to about seventy per 100,000 twenty years later. In Sweden, burglary fell from about seventy-five per 100,000 in 1840 to about twenty-two per 100,000 in 1990. The same pattern became evident in many nations. Violent crime rates declined in established cities as they developed, but new communities and

rural areas suffered rising violent crime rates as they industrialized. Brief breaks in these patterns were experienced as, for example, when new crime waves sent crime rates up in large cities in the 1970s and 1980s. Periods of economic downturn usually resulted in higher levels of property crimes, whereas prosperity resulted in lower levels. The reverse was true of juvenile crimes. They were high during prosperous times and low during depressions.

Crime cycles are also related to the changing role of legal institutions in empowering law enforcement personnel with powers that they originally never had, and in taking these powers away when they were exercised without due regard to the rights of citizens. In a democratic society, the police are members of a political institution sensitive to the often contradictory concerns of the citizens. On the one hand, they want zero tolerance of crimes and, on the other hand, they want enforcement to be neat and tidy. But crime is always messy and, because of an intrusive media, ever present in the public mind. Statistics is therefore a necessary tool in determining when the controls should be tightened or relaxed.

The decline in crime rates was brought about not only by social change and legislation, but also by the growing efficiency of police departments. The beginning of the decline coincides in many countries (but not all) with the formation of the major police forces in modern times: London in 1829, followed by Philadelphia in 1833, Boston in 1838, New York in 1844, and Baltimore in 1857. Every time a new form of technology was introduced, the crime rates dipped correspondingly. For example, when patrols shifted from foot to motor in the early decades of the twentieth century, there was a sharp drop in rates that is not explainable by any other reason.

The biggest spike in crime rates in one hundred years took place after World War II. In England and Wales, murder and assault cases increased from thirteen per 100,000 persons in 1950 to 144.3 per 100,000 in 1975. During the same period, larceny rose from 847 per 100,000 to 3,659 per 100,000. Between 1960 and 1975, assaults and murders in Finland more than doubled from 127.9 to 282 per 100,000, and thefts more than tripled from 886 to 2,850 per 100,000. Between 1950 and 1971, the rate of violent crime in Stockholm more than tripled.

Between 1960 and 1997, violent crimes in the United States shot up from 160.9 to 610.8 per 100,000. The increase affected a number of segments of society that hitherto had kept a low profile in crime. Between 1960 and 1997, the rate of arrests for violent crimes increased by 500 percent among youths under eighteen in urban areas and by 251 percent in rural areas. Property crimes showed

similar increases. From 1960 to 1977, the arrest rate for property crimes rose by 401 percent for females and 278 percent for youths under eighteen. The period also witnessed the rise of antisocial criminal gangs in Europe and the Western Hemisphere: the Teddy Boys and Rockers in London, the Provos in Amsterdam, and the Raggare in Stockholm. Their members were young adults from eighteen to twenty-five in Europe, but below eighteen in the United States. Much of this was attributed to a transient youth culture, but although the political dissent stemming from the youth culture declined fast, the delinquency aspects have had a longer life.

Historically, several forces are at work in the rise and fall of crime rates. As society matures, so does civic culture and the legal and political institutions that form its hedges. Confidence in the judiciary and the police is slow to build, but once established it tends to inhibit antisocial behavior. However, capitalist societies breed an underclass that is severed from the rest of society and that

justifies violence and theft as forms of retaliation against injustices. New types of crime arise as societies become more complex. Thus, members of the middle class generally are rarely involved in traditional older forms of violent crime, but they are increasingly associated with economic white-collar crimes that were unknown before the twentieth century. All societies also have to contend with the drug problem as an engine of crime and violence. Efforts to intensify anticrime measures meet with resistance from advocates of civil liberties and human rights. The resurgence in crime in the post-World War II world is thus due to factors that are entirely different from those that propelled crime in the nineteenth century and earlier. There are social, political, and demographic influences always pushing up crime, just as better technology and police efficiency are pushing it down.

*George Thomas Kurian*

# Evolution of the Criminal Investigation Department

---

Most scholars suggest that the first criminal investigation division was established in France. The development of the *Sûreté* can be traced to the innovations of François Eugène Vidocq (1775–1857) in the early nineteenth century. Vidocq left home for a life of adventure at an early age. However, his perambulations would bring him into the orbit of an unsavory milieu and earn him several stints in prison. An escape artist, Vidocq came to prominence after breaking out of prison three times. While incarcerated in 1809 he offered to work for the police as a spy and informant, a dangerous proposition. Vidocq was released shortly after and placed in command of a group of ex-convicts which became the nucleus of the *Sûreté*, known today as the *Police Judiciaire*. His thief-catching force soon expanded from four to twenty-four as Paris witnessed a concomitant drop in property crime.

Considered the world's first private detective, Vidocq employed numerous police detection techniques—considered standard procedures today—including disguises, decoys, informants, autopsies, blood tests, ballistics, criminal files, and handwriting analysis. He directed the *Sûreté* from 1811 until he resigned in 1827. Except for a brief return to the bureau in 1832, Vidocq worked as a private detective the remainder of his career. A friend of both the celebrated and the damned, he returned to sleuthing as a counterespionage agent for Louis-Napoléon. Vidocq's exploits have reportedly provided the inspiration for several fictional sleuths, including Edgar Allan Poe's Auguste C. Dupin, Émile Gaboriau's Monsieur Lecoq, and Honoré de Balzac's Jacques Collin.

The late nineteenth century witnessed the transformation of the *Sûreté* into a highly professional detective police force as it was institutionalized into a separate unit. It won international renown for its meticulous information gathering and is generally considered the inspiration for the International Criminal Police Organization, better known as Interpol, and the Scotland Yard Criminal Investigation Department, or CID. In 1966 the *Sûreté* was merged with the police of Paris to form the National Police.

The incorporation of a plainclothes branch in England faced its first setback when the overzealous spying of a plainclothes policeman at a Chartist meeting led to charges of spying by the London public, a serious breach of trust. Although it became a fairly common practice to borrow uniformed officers for detective work, it was not until 1842 that a formal investigative branch was created. The foundations for the British CID were put in place in 1842, when the Detective Branch, or “the Detective,” was formed. This branch was considered the progenitor of what became CID four decades later. Initially, the branch included two inspectors and six sergeants from the London Metropolitan Police.

The largest and best-known branch of Scotland Yard, the CID was established in 1878 as a special branch that would lead the police force in its transition into a new era of scientific crime fighting. This unit developed extensive criminal files, a forensic laboratory, and a fraud squad, and used fingerprinting and photography. Later it introduced a detective school. London's CID grew out of one of Scotland Yard's most embarrassing moments. The

precursor to the CID was called the Detective Branch, and in 1877 three out of its four inspectors were convicted of corruption in a trial held at the Old Bailey criminal court. As the government department responsible for internal affairs in England and Wales, the Home Office directed an investigation that resulted in the groundwork for a new detective branch called the Criminal Investigation Department.

Sir Howard Vincent (1849–1908) initially directed the new department and in 1884 established the Special Irish Branch of the CID to combat Irish terrorists, the world's first antiterrorist squad. The creation of the Special Branch, the first specialist section of the CID, was precipitated by the bombing campaign launched by the American-based Fijian movement. Beginning in the late 1860s Fijians inaugurated a bombing campaign in England in order to win home rule for Ireland. In 1883 Fijians bombed several public buildings, resulting in the creation of the Special Irish Branch, later changed to Special Branch. The first members of this unit were primarily of Irish descent. Within two years the Fijians were suppressed. Today, the Special Branch remains a unique secret service and political police organization that bridges the divide between British Intelligence and Scotland Yard.

Vincent was reportedly influenced by continental European police methods. As its first director, Vincent set to reorganizing Scotland Yard by reassigning 250 detectives to CID and promoting Adolphus Frederick Williamson (1831–1889) to the new rank of chief superintendent. In the new arrangement, Williamson would be charged with supervising 3 chief inspectors, 20 inspectors, and 159 sergeants arrayed over sixty London divisions.

During its first decade there was often tension between the detectives of CID and the regular uniformed police, because the detectives were paid more and enjoyed a better pension plan. The public also opposed the clandestine nature of the plainclothes officers squad. All of these conflicts continue to resonate today. The CID began with 250 men before more than tripling in size in its first six years. By the 1960s membership exceeded 1,700 officers. The CID enjoyed its greatest popularity from the 1920s to the 1960s. This was in part due to the favorable reporting of the press and the lack of any well-publicized unsolved cases such as the earlier Jack the Ripper killings.

The early success of Great Britain's CID led to its adoption by a number of police departments in the British colonies. When eighteen-year-old William James Clarke (active from 1880s through 1910s) arrived in South Africa he joined the Natal Mounted Police and served with distinction in the Zulu War of the late nineteenth century. A student of police history, Clarke recommended merging the South African Police forces into

a single organization, in much the same way as Sir Charles Rowan (1783–1852) had helped create the London Metropolitan Police in 1829. Clarke also lobbied for the creation of a criminal investigation department. His suggestion provided the foundation for what would become Act Number 1 of 1894, better known as the Police Act. In 1902 he visited Scotland Yard and is credited with gaining enough expertise to introduce fingerprinting to South African policing. He would serve eleven years with CID, before accepting the position of assistant commissioner and the chief commissioner of police. By the early 1900s India organized an all-India Criminal Investigation Department, replete with fingerprint bureau.

The United States lagged behind other Western nations when it came to placing criminal investigation in the hands of the government. Until the creation of the Federal Bureau of Investigation (FBI) in the early twentieth century, criminal investigation was the purview of a handful of private detective agencies, including the Thiel Agency, Burns International Agency, and the Pinkerton National Detective Agency. The Pinkerton National Detective Agency was considered the premier detective organization prior to the FBI. The Pinkerton agency was founded as the North West Police Agency in 1855 by Allan J. Pinkerton (1819–1884). Pinkerton investigators were referred to as “operatives” rather than “detectives,” and were expected to follow a meticulous list of rules and regulations.

The Pinkerton agency initially handled investigations in areas with limited law enforcement expertise. It saw its greatest expansion in the years following the American Civil War (1861–1865), when it rose to prominence as the National Detective Agency. Much of their efforts in this era went toward pursuing railroad bandits such as the Reno, Younger, and Dalton gangs. However, as the agency became increasingly embroiled in labor strife on the side of management, agents gained a reputation for subterfuge as agent provocateurs during the Molly Maguire case between 1867 and 1877.

Since there were no federally designated crime fighting bureaus in the United States prior to the 1900s, it was usually up to the U.S. Treasury Department and the Department of Justice to investigate federal crimes. The elevation of Theodore Roosevelt to the presidency in 1901 following the assassination of President William McKinley placed federal policing in the sights of federal officials. A firm supporter of centralized law enforcement, as well as a former New York City police commissioner, Roosevelt selected the Treasury Department's Secret Service as the preferred agency for launching federal criminal investigations. When Congress prohibited Treasury detectives from being employed by other

government departments, according to FBI historian Athan Theoharis, Roosevelt ordered Attorney-General Joseph Bonaparte to “create an investigative service within the Department of Justice subject to no other department or bureau and which will report to no one except the Attorney General.” In July 1908 the Bureau of Investigation was created.

Prior to being renamed the Federal Bureau of Investigation, or FBI, in 1935, the agency concentrated on espionage, white slavery, sabotage, and draft violations during the World War I years. Under the leadership of J. Edgar Hoover, beginning in 1924, the bureau was transformed into a modern organization. Hoover inculcated the importance of establishing rigid codes of conduct and adhering to educational requirements, and thereby bringing professionalism into the agency.

With the advent of the FBI much of the criminal work once handled by the Pinkertons passed to the FBI and other official police forces. Pinkerton’s still handles criminal investigation on behalf of business and industry and for more than seventy five years has been the official detective agency of the Jewelers’ Security Alliance. Its criminal investigative department at its New York headquarters at one time had the nation’s most extensive file on jewel thieves and fences.

In 1924 the U.S. Congress allowed the relocation of fingerprint records at Leavenworth Federal Prison and the criminal records maintained by the International Association of Chiefs of Police (IACP) to FBI headquarters in Washington, D.C. This collection of more than 810,000 records became the nucleus of the FBI Identification Division. In 1932 the FBI laboratory was established to aid federal and local investigations through the scientific analysis of blood, hair, firearms, handwriting, and other types of evidence. By the 1990s the FBI laboratory was conducting over a million examinations per year for close to 15,000 investigations.

#### THE DEVELOPMENT OF FORENSIC SCIENCE IN CRIMINAL INVESTIGATION

The development of fingerprinting and DNA profiling revolutionized the world of criminal investigation. However, they were far from the first scientific methods used in criminal investigations. As the “father of toxicology,” Matthieu Orfila made tremendous strides in the classification of poisons in the first decades of the nineteenth century. Henry Goddard recognized the possibilities of making comparisons between bullet striations and the rifling of gun barrels as early as 1835. In 1804 J. W. Ritter discovered that ultraviolet rays could be utilized to detect erased writing and blemishes. In 1810 German authorities became the first to use science to expose a forged document. In 1836 James Marsh

developed a procedure for detecting small amounts of arsenic in human tissue. That same year Alfred Swaine Taylor published his work in scientific toxicology, *Elements of Medical Jurisprudence*.

The evolution of CID units around the world has paralleled concomitant development in criminalistics and forensic science. In this parallel development no name is more prominent than Alphonse Bertillon (1835–1914). Bertillon’s father was a physician and probably kindled his son’s early interest in anthropology and statistics. In 1878 Bertillon was hired as a records clerk in the Paris Prefecture of Police. This led to a lifelong interest in identifications systems that would earn him the moniker, “father of scientific detection.” During his first seven years in this position Bertillon developed a methodology to identify recidivists that became known as Bertillonage. It was based on human body measurements before the popularization of fingerprinting later in the century. In 1888 Bertillon was recognized for his contributions when he was appointed as chief of the service of judicial record-keeping. He would eventually add photographic methods to other identification techniques and become an expert in using photography to identify forged documents.

Bertillon’s innovations in identification systems soon came to the attention of—and were adopted by—a number of police forces around the world, including New York, London, and Chicago. In the 1880s Thomas Byrnes, a New York City detective, became one of the first police officials to use the Bertillon system. An advocate of modern identification systems, Byrnes zealously created a collection of tintype daguerreotypes of every criminal collared. Each mugshot in what became the best-selling *Professional Criminals of America* (1886) was accompanied by detailed descriptions of the modus operandi of each criminal.

Bertillon’s reputation was tarnished after he mistakenly identified a forged signature as that of French Army captain Alfred Dreyfus, leading to his imprisonment on Devil’s Island. In 1904 Bertillonage took an even bigger hit, when American officials at Leavenworth Prison came across two inmates, both named Will West, who exhibited the same measurements. With the increased popularity of fingerprinting, Bertillonage fell by the wayside as a method of identification.

Fingerprinting has a long history in China and Japan and as early as the 1820s an anatomy professor named Johann Purkinje noted that every person’s fingerprints were unique. However, until a classification system was created, fingerprinting was virtually useless for identification. By the late 1850s fingerprints were being used by British magistrate William Herschel to prevent the wrong individuals from fraudulently collecting money on the dole. In 1880 Henry Faulds (1843–1930), a Scottish physician working in Tokyo, helped acquit a suspected

thief by comparing his fingerprints to those left at the scene. His research led him to publish a letter in the scientific journal *Nature*. The letter advocated using fingerprints for the scientific identification of criminals.

The work of Faulds and Herschel came to the attention of Francis Galton (1822–1911), one of England's most prominent scientists. Galton would substantiate the permanence and individuality of fingerprints. After meeting with Galton, a British official from India, Edward Henry (1850–1931), devoted himself to creating a manageable system for classifying and filing fingerprints. Henry initially solved the problem by classifying the types of patterns and number of ridges in an individual's prints. As early as 1891 Argentina was using a workable fingerprint classification system. The police in Lower Bengal, India, found early success using this system and in 1901 Scotland Yard adopted it as well. All of the previously mentioned researchers contributed to the development of this important investigative tool, and more than a century later it is difficult to assign primacy to any one individual.

In between the development of fingerprint and DNA technology a number of advances have been witnessed in other areas of forensic science. Hans Gross published his seminal work on scientific investigation, *Criminalistics*, in 1893. Karl Landsteiner established the first system of blood grouping eight years later. In the 1920s advances were made in lie detection as well as microscopy technology, which allowed two objects to be examined simultaneously. In the 1940s Hugh C. McDonald developed a prototype for the Identikit and voice spectography methods were developed by Bell Telephone Laboratories.

While the development and adoption of fingerprinting as a crime investigation method was surely one of the most important advances in crime detection, no technique has had a more striking impact on forensic science than DNA profiling. In 1984 Dr. Alec Jeffries accomplished the breakthrough that allowed DNA to be used as a practical tool for identifying individuals from the smallest body trace. DNA profiling has revolutionized the entire concept of "positive identification."

Forensic science technology has become increasingly reliable since the 1980s. While the best-known identification techniques include DNA and fingerprint analysis, new methods now exist that allow investigators to use retinal scanning, voice printing, and chromatography (the analysis of certain chemicals contained in an individual's saliva). The use of computers has greatly enhanced the ability of investigators to sort and process mountains of evidence that would be inaccessible without computer databases. Brain "fingerprinting" is one of the latest tools being tested by law enforcement. One of the recent advances in computer-based technology allows investigators to identify or acquit subjects on the basis of

measuring brain-wave response to crime-related pictures or words presented on a computer screen. In one of the first tests of this technology, the FBI and then the U.S. Navy found a 100 percent accuracy rate in its employment.

Scandals at various high-profile American police labs have brought the value of various forensic science techniques into question, demonstrating that these methods are reliant on the expertise of the investigators and the trust of the public. What worries police and prosecutors most is that challenges to fingerprinting (*Daubert v. Merrell Dow*, 1993) could also undermine ballistics and handwriting tests and other evidence.

# Cybercrime: Problems and Prospects

---

A formidable challenge to policing in the twenty-first century is the growing menace of cybercrime. While it may not match traditional crime in volume, cybercrime outclasses the former in terms of its ingenuity, the ease with which it is committed, the quantum of economic loss it causes to society, and its mind-boggling international ramifications. However, as in the case of conventional crime, cybercrime is facilitated basically by what Peter Grabowsky calls the conjunction of three factors: “motivation, opportunity, and the absence of capable guardianship” (Grabowsky 2000). Naturally, because of its global reach and its glamour and complexity, cybercrime has received considerable attention from criminal justice academics and practitioners. In this process, it has spawned abundant literature that throws light on a wide spectrum of issues, including how to investigate such crime and bring to justice offenders who exploit cyberspace for their personal profit.

## BACKGROUND

Although computers came into existence as early as the 1940s, the fact that they could be used for unethical ends became clear only in the 1960s (Goodman and Brenner 2002). Around this time, many instances of manipulation, sabotage, espionage, and illegal use of computers were reported. Since the number of available computers was modest at the time, and they were found mainly on educational campuses and in research institutions, access to computers was extremely limited and the opportunity to put them to nonacademic and dishonest use was confined to researchers and students. Detection of unauthorized and unlawful use of systems

was therefore easy. By the end of the twentieth century, however, computer systems had transcended geographic frontiers and had moved from being mere official tools to household gadgets. While there is no credible estimate of their numbers, it is believed that there are millions of them being used globally, both in offices and homes. The advent in the early 1990s of the World Wide Web, part of the Internet, has also ushered in an entirely new dimension, rendering abuse of cyberspace even easier.

Most instances of cybercrime reported by a country originate from across its border. According to a United Nations estimate from 2000, losses suffered by businesses and governments from cybercrime during the preceding four years reached \$600 million. A Computer Security Institute (CSI) annual survey for 2002 conducted in the United States revealed that 90 percent of respondents (primarily large corporations and government agencies) had suffered security breaches, and 80 percent sustained financial losses due to such breaches. The losses were mainly from theft of proprietary information and financial fraud. As many as 40 percent of the respondents complained of system penetration from the outside, and the same percentage experienced denial-of-service (DOS) attacks. As many as 85 percent found their systems affected by viruses. The CSI’s 2004 survey revealed a drop in reports of the unauthorized use of computer systems, but DOS attacks continued to be a cause of concern because losses—\$26 million during 2003—to business came mainly from this form of computer abuse. Total losses to business from the twelve top kinds of security breaches reached \$141.4 million.

**DEFINITION**

Cybercrime has been defined in a variety of ways. There are some who look upon it as nothing but traditional crime committed through a modern medium, cyberspace. The crimes of theft, fraud, and forgery, which have been known for ages, are cited in support. This definition is only partially correct because it does not take into account the many novel forms of crime arising from the new economic activity peculiar to the twentieth and twenty-first centuries. Money laundering is one such activity that has acquired notoriety since the last decades of the twentieth century, especially in the context of terrorism, which has been fueled by easy transfers of money from one country to another. Such transfers occurred in the conspiracy that led to the al Qaeda attacks against the World Trade Center in New York and the Pentagon in Arlington, Virginia, on September 11, 2001.

Yet another simple way of describing cybercrime is that it is a crime flowing either from an unlawful attack against computer systems or one committed with the assistance of such systems. This is of course an expansive definition that brings into its fold a huge number of day-to-day occurrences, one that unfortunately contributes to the dilution of attention that cybercrime otherwise deserves at the hands of modern law enforcement agencies. There is, therefore, a practical suggestion that only crimes that are not possible to commit without the medium of computers should be classified as cybercrime (Jewkes 2003). This solves the problem of volume and helps to lend focus to the study and analysis of cybercrime. This definition does not, however, take into account the problem that what is considered criminal in one country may not be so in another, a feature of cybercrime that poses great difficulties to modern police investigators.

**THE NATURE OF CYBERCRIME**

Broadly speaking, there are eleven varieties of computer-related crime (Grabowsky 2000). These are: (1) theft of services; (2) communications in furtherance of criminal conspiracies; (3) information piracy and forgery; (4) the dissemination of offensive materials; (5) cyberstalking; (6) extortion; (7) electronic money laundering; (8) electronic vandalism and terrorism; (9) telemarketing fraud; (10) illegal interception; and (11) electronic funds-transfer fraud.

**Hacking.** Hacking, the most widely known cybercrime, makes inroads into a protected computer system. One of the simplest definitions of *hacking* is found in section 66 of India's Information Technology Act 2000. It reads: "Whoever with the intent to cause or knowing that he is likely to cause wrongful loss or damage to the public or any person destroys or deletes or alters any information

residing in a computer resource or diminishes its value or utility or affects it injuriously by any means commits hacking."

The objectives of a hacker are twofold: one, to prove to the world that a system owned by a large corporation or government department, such as a country's defense services, is vulnerable to external attack; and, two, to steal valuable information contained in that system that is normally available to only authorized individuals. Both are unethical intrusions prohibited by law in many countries. Interestingly, such hacking, which is not always done for profit or from a political motive, is often perpetrated by young computer engineers for the sheer thrill of the adventure that a successful penetration into a system provides them.

There is another form of attack that is sponsored by an organization itself in order to check how vulnerable its own systems are. This authorized intrusion is often called *ethical hacking*. Many at-risk organizations are known to employ a team of individuals with the required technical knowledge to resort to such hacking at frequent intervals so as to identify any holes in security and take follow-up action to plug them. As a result of recommendations from the multinational Organisation for Economic Co-operation and Development and the Council of Europe Convention on Cybercrime (2001), many countries have made the unauthorized access to data or information liable for punishment. This is in response to the lax laws in some countries, which do not take a serious view of such transgressions.

**Introduction of Viruses.** Users of computers all over the world are often plagued by "viruses" that result in a crash of their systems. A virus is malicious software written by misguided programmers for the purpose of interfering with computer traffic and thereby creating chaos. A virus is loaded onto a computer without the knowledge of the owner of the system. The simplest viruses merely duplicate themselves continuously. A more dangerous virus gets transmitted across networks in spite of whatever security measures are available. Many large software manufacturers wage a continual war against viruses, and they issue what are known as "patches" to take care of various forms of viruses.

One of the best-known instances of a virus affecting millions of computer users all over the globe is the "I Love You" bug that was unleashed in 2000 and caused a sensation. This novel virus was introduced through an innocent-looking electronic mail (e-mail) carrying the subject line "I Love You." It was described as the fastest-moving virus then known to the computer world. A twenty-seven-year-old man in Manila, Philippines, was later arrested for unleashing the virus. A more recent instance of this kind was reported from Germany in

May 2004 when a teenage hacker, Sven Jaschan, created a worm called Sasser, which passed through unprotected computers using Microsoft Windows XP and Windows 2000 operating systems. The Sasser worm resulted in a crash of computers in many parts of the world. Several airlines and banks across Europe had to curtail their operations for a time (Boyes 2004). The assessment is that the twenty-first century will see many more viruses. An indication of this is a report from Australia that there was a 21 percent increase in new viruses detected in that country in 2004 (Crawford 2004).

**Cyberstalking.** Cyberstalking is another common cyber-crime in which an offender pursues another individual, usually a woman or child, through e-mail by hurling a threat or making an inappropriate request. In this type of activity, the originator of the message may hide his or her identity by using a false e-mail ID. An associated crime is the morphing of faces of innocent unconnected men and women on the torso of models who appear in advertisements. In a case reported from New Delhi, India, in August 2004, for example, a married woman running a fitness center complained to the police that her face was fraudulently transposed onto the torso of a lingerie model and posted on a U.S.-based Web site (Sinha 2004).

In a well-known case that occurred in 1998 in California, a fifty-year-old former security guard harassed a twenty-eight-year-old woman out of a romantic infatuation. When the woman did not respond to his advances, the man started impersonating her in various Internet chat rooms. He went further by posting her personal information on bulletin boards, stating that she fantasized about being raped. As a result, visitors began appearing at her home wanting a relationship with her. Gravely affected by this development, the woman complained to the police, who ultimately tracked down the man and put an end to this sordid episode (Duggal 2002).

There are grounds to believe that cyberstalking is on the increase all over the world. While some countries have taken cognizance of this and have provided for it in their "cyberlaw," others have not. A principal criticism against India's Information Technology Act 2000 is that it does not directly make cyberstalking an offense. Still, Indian law enforcement agencies can use the comprehensive and excellently drafted Indian Penal Code to prosecute offenses having a cyber connection that cannot be brought under the Information Technology Act.

**Frauds.** With the phenomenal growth of electronic banking and the use of "plastic money" (i.e., credit and debit cards), the attention of cybercriminals has turned to innovative methods to defraud innocent members of the public. In addition, Web sites of banks are hacked into and monies moved from one account to another,

resulting in losses to banks and customers. One of the first such cases in which a leading bank was defrauded occurred in 1994 to 1995 when a Russian criminal group led by Vladimir Levin illegally transferred \$10.4 million from Citibank into various accounts all over the world. Levin was arrested in London in 1995, and was later extradited to the United States. Most of the money was recovered.

Another fraud method is to duplicate the Web sites of reputed institutions in order to win over the confidence of genuine customers, thereafter inducing them to part with confidential information, such as account numbers and passwords. The perpetrators can then gain access to the victim's online banking accounts. Known as *phishing* or *spoofing*, the modus operandi in such cases is to send an e-mail message to customers that appears to have emanated from a trusted or genuine bank or other financial institution. Such e-mail requests the private security information that would normally help the customer operate an account in a secure environment. Many customers fall prey to this type of fraud and part with data that is later used for dishonest transfers of money or other valuable security. Customers of a leading British bank became victims of this kind of deceit in early 2004; this crime was successfully investigated by Great Britain's National Hi-Tech Crime Unit, established in 2001.

Law enforcement agencies around the world, in particular the Federal Bureau of Investigation's (FBI) Internet Fraud Complaint Center, report a steady rise in instances of unsolicited e-mails that trick Internet users into visiting fraudulent Web sites offering customer services. According to cybercrime experts, this kind of criminal activity helps explain the rise in identity theft, credit card fraud, and other types of Internet fraud.

**Denial of Service.** Business rivalries are sometimes settled through cyberspace by competing firms. The tactics employed in denial-of-service attacks are to flood the Web site of a rival company with a staggering number of hits at an appointed time so that genuine customers wanting access to the Web site are denied access. A denial-of-service attack results in a measurable loss to the victim company. Such an attack can be initiated from a particular computer or from several computers. Denial of service is also known as *distributed denial of service* (DDOS) when attacks are launched simultaneously from a large number of computers—this form of cyberattack came to prominence in 2000 when the Web sites of such major companies as Amazon, Yahoo!, eBay, and CNN were targeted, rendering them inaccessible for several hours.

In August 2004, the FBI arrested a Massachusetts businessman who allegedly paid members of the computer underground to unleash a DDOS attack on three

of his competitors. The estimated loss to victims' businesses was \$2 million. While this misuse of cyberspace may not always amount to an illegal activity in many jurisdictions, it can be rightly looked upon as a cybercrime because of its intention to cause wrongful loss to an individual or business.

**Pornography.** Perhaps the most objectionable use of cyberspace is the circulation of illegal pornographic materials to a large number of customers across the globe. A trend that originated in Europe has now spread to other continents to hurt the sensibilities of law-abiding and knowledge-seeking users of the Internet. There are a large number of known sites that supply illegal pornography, and there could be more that have not come to the notice of law enforcement. This activity assumes its most depraved form in the circulation of pornographic images of children, for which there is unfortunately a large clientele in many countries, many of whom occupy respectable positions in society (Raghavan 2004).

Neil Barrett (2004) describes a case of a young researcher at a university in England getting ensnared, possibly unwittingly, in this form of crime. While most evidence pointed to his interviews and interactions with children and others being for the purpose of research, he was nonetheless in actual possession of illegal pornographic materials, leading ultimately to a court decision holding him guilty of breaking the law.

In another case that attracted widespread attention, a doctor in Chennai (formerly Madras), India, was arrested following the complaint of a youth that the doctor was forcing him to have sex with women for the purpose of producing pornographic videocassettes and pictures. The doctor was arrested by the Chennai police, who found that he had lured girls and women to perform in his videos, which were then carried by two Web sites. The doctor was the first adult citizen of India to be arrested for producing online pornography (Duggal 2002).

**Cyberterrorism.** Cybercrime assumes a forbidding form when it is committed by a terrorist in order to set off panic and chaos within an otherwise orderly and peaceful community. The FBI defines *cyberterrorism* as a "premeditated, politically motivated attack against information, computer systems, computer programs, and data which result in violence against noncombatant targets by sub-national groups or clandestine agents" (Dick 2002). Cyberterrorists interfere with a computer system that controls critical infrastructure, such as power and water distribution, management of waste, and the working of emergency services, including the 911 emergency telephone system, fire departments, and hospital intensive-care units. An attack on the computer systems that guide air traffic controllers is another way that cyberterrorists

could endanger human lives. Fear of cyberterrorism is such that the widespread power blackouts that occurred in parts of the eastern United States and Canada in August 2003 were originally suspected to be terrorist acts, although subsequent investigations did not confirm this.

Flooding that occurred in Maroochy Shire in Queensland, Australia, in early 2000 was an act of mischief caused by an attack on the computer system that controlled local sewage disposal. A Brisbane hacker was found to be responsible for the incident, in which raw sewage was pumped into the local water supply. When committed by a terrorist on a large scale, such an act puts citizens' lives at great risk. This is why computer systems that run and maintain critical infrastructure need to be protected, not merely by restricting physical access, but by shielding them against penetration from another computer system. Sophisticated hardware and software is now available for achieving maximum security. The United States and several other countries have taken measures to protect the systems that provide basic services to the nation.

In another case, there was a terrorist attack in December 2000 on the Red Fort, a historic structure in New Delhi, India. Investigation into the incident revealed that the terrorists had used steganography (the method by which messages are communicated stealthily after being hidden in images). In this case, it was found that communications between the terrorists were embedded in pornographic material (Duggal 2002).

**Cybercrime Law.** Until the mid-1980s, few nations thought it necessary to pass legislation to specifically deal with cybercrime. This was so because the number of cybercrime incidents was low, and normal criminal law, with some loose interpretation, could be employed for the purpose. However, with new forms of cybercrime developing, existing law became inadequate. In addition, the commission of such crimes from across the borders in foreign countries, but with international impact, brought in complex problems of jurisdiction. To meet the twin challenges of complexity and jurisdiction, many nations began to draft fresh cybercrime legislation. The United States was one of the first to draft a law, the Computer Fraud and Abuse Act of 1984, which was subsequently amended. One amendment followed the al Qaeda attack on September 11, 2001, and the passage of the Patriot Act in October 2001. Great Britain's principal legislation to tackle cybercrime is the Computer Misuse Act of 1990. Critics say that, being a law drafted before 9/11, it needs a drastic revision. India, a highly computer-savvy nation, passed an Information Technology Act in 2000. Although it is basically a law to regulate electronic commerce, it includes a section on cybercrimes and the penalties for them.

A survey conducted in 1999 revealed the evolution of a body of “consensus crimes” agreed upon by a majority of countries, and these have been incorporated into their computer-crime statutes. These cybercrimes include unauthorized access, illicit tampering with files or data, computer or network sabotage, and theft or damage of computer hardware or software (Putnam and Elliott 2001). In the Asia-Pacific region, one sees considerable variation among lawmakers in approaches to cybercrime. For instance, in Taiwan, merely accessing a computer system without authorization would not amount to an offense, unless there was evidence of a further crime, such as modification or destruction of data. In Japan, such unauthorized access to a computer for viewing secret information is itself an offense. Singapore’s strict Computer Misuse Act prohibits a wide variety of acts, including unauthorized access, disclosure of secrets, and computer fraud (Putnam and Elliott 2001).

The most contentious issue in the area of cyberlaw is jurisdiction. Jurisdiction is a problem because of the enormous reach of cyberspace, which transcends geographic and political boundaries. Also relevant is the spectacular globalization of trade and cultural exchanges, which bring people of different countries together more than ever before. Many countries have claimed international jurisdiction for their cyberlaws, without spelling out in detail how they will be able to invoke such jurisdiction. For instance, India’s Information Technology Act of 2000 states: “It [the act] shall extend to the whole of India and, save as otherwise provided in this Act, it applies also to any offense or contravention thereunder committed outside India by any person.” India’s law may be impractical, for any effort by an Indian court to rope in a foreign national for alleged crimes committed in a foreign country could prove problematic.

Two cases illustrate the problem. In *Zippo Manufacturing Co. v. Zippo Dot Com, Inc.* (1997), the U.S. courts applied the standard of a “sliding scale” of interactivity. The court said that:

[W]here a defendant clearly does business over the Internet . . . [and] enters into contracts with residents of a foreign jurisdiction that involve the knowing and repeated transmission of computer files over the Internet, personal jurisdiction is proper. . . . At the opposite end are situations where a defendant has simply posted information on an Internet web site that is accessible to users in foreign jurisdictions. A passive web site that does little more than make information available . . . is not grounds for the exercise of personal jurisdiction. (Duggal 2002)

In another case that attracted worldwide attention in 2000, a French court directed that Yahoo!’s auction Web

sites could not offer for sale in France Nazi or Third Reich memorabilia that were banned under French law. After its initial stand that this order was not enforceable on an American company such as Yahoo!, the latter agreed to remove the memorabilia links from its auction sites. Yahoo! then pursued the matter in a U.S. court, where it questioned the jurisdiction of a French court in issuing the order and also in imposing a fine on Yahoo! for any delay in complying with the order. The U.S. district court agreed with Yahoo! on the basis that the French judge’s directions violated the First Amendment to the U.S. Constitution and were not applicable to American law or American citizens (Duggal 2002). This decision was overruled in August 2004 by a higher court on the grounds that the lower court’s ruling was premature and that the court should have waited until the French parties concerned had approached the U.S. court for enforcement of the French judgment. The *Zippo* and Yahoo! cases establish that courts in any country cannot, as a matter of course, invoke their jurisdiction on foreign entities.

Perhaps the greatest contribution toward international cooperation and the expansion of the legal framework to tackle cybercrime was made by the convention on cybercrime held on November 6, 2001, at Budapest, Hungary, by the Council of Europe. As a result, the forty-five-member Council of Europe, along with some special invitees, including the United States, signed a broad treaty—the product of several years of debate and negotiations—that had three major features. First, it listed crimes that each country must have on its statutes. In particular, hacking and the production, sale, and distribution of hacking tools were required to be declared offenses. Child pornography was also required to be made an offense. The treaty further required signatories to expand criminal liability for intellectual property violations, illegal interceptions, forgery, and fraud. Possibly in pursuance of this treaty stipulation, the FBI seized computers, software, and equipment in New York, Texas, and Wisconsin in 2004 as part of a probe into the illegal sharing of copyrighted movies, music, and games over an Internet “peer-to-peer” network. This was the first time action was taken by a federal agency to pursue Internet violators of copyright laws. The incident indicated American law enforcement’s determination to impede Internet piracy of intellectual property (Anderson 2004).

**Cybercrime Investigation.** Investigating cybercrime is a problem-ridden exercise. While certain fundamental requirements, such as adherence to prescribed legal procedures, perseverance, and interrogation and interview of witnesses, are akin to those involved in handling traditional crime, there are several other requirements that call

for greater dexterity and finesse. Foremost among the problems is the collection, preservation, and analysis of evidence, and the presentation of electronic evidence before a court. Any carelessness in these activities could damage a criminal case.

In the early days of computers, computer printouts were the sole form of credible computer-generated evidence that could be presented before a judge. This is no longer the case. The incredible sophistication of computer criminals has demanded and brought about a qualitative change in the approach of the investigator. In particular, the investigator must be knowledgeable about how a computer works, and must have insight into how a system can be manipulated to leave little trace of the method or identity of the person behind a crime. In specific terms, what is now required of the investigator in the hours following the registration of a cybercrime case is the seizure according to law of the computer in question. It involves the taking into custody of the hard disk of the system, as well as any available diskettes and printouts. Obtaining a copy of all files in the hard disk is essential.

It is often the case that a cybercriminal tries to destroy evidence on a system before the police move in. It will therefore be necessary to involve a computer expert at the initial stages of investigation in order to find out whether any files have been deliberately eliminated before the investigator took charge of the system. If this has occurred, it is usually possible to recover such files and thereafter examine them for relevant evidence. Whenever a crime is suspected to have been committed from a system in a public cybercafé, the owner of the café may be questioned and his or her records examined to identify the offender. It may be necessary also to seek the assistance of the Internet service provider (ISP) concerned. The law in many countries makes it mandatory for the ISP to fully cooperate with the police investigator in providing documents and other evidence.

Since contamination of evidence is a real danger, quick isolation and desegregation of the evidence and its capture, if necessary, through photographing of computer screens, is recommended. What is further called for is the establishment of a chain of custody, so as to nullify any defense stand that the evidence has been tampered with since its collection (Isner 2003).

Sensitive to the fact that investigating cybercrime cannot be a routine police activity and that it requires special skills, police authorities around the globe have set up special squads with officers specifically trained for the purpose. The FBI has a special unit at its national headquarters. It has also set up regional cyberforensic laboratories. The United Kingdom has a National High-Tech Crime Unit in London that has successfully concluded

many high-profile investigations. The Central Bureau of Investigation in New Delhi and the National Police Academy in Hyderabad have taken the lead in India in training police forces all over the country. Some city police forces have also set up special cells for handling cybercrime. The police in India's largest city, Mumbai, are one such force; the Mumbai police have set up their own cyberforensic laboratory.

In sum, cybercrime investigation needs greater sophistication than ordinary crime. The early steps of an investigator can make or mar a foolproof case to be presented in court. As Neil Barrett suggests: "Good application of forensic disciplines to arcane complicated computer data can help to convict those who are truly guilty. Inadequate or careless application can render the data unusable, and under those circumstances defendants cannot be safely convicted" (Barrett 2004).

#### THE FUTURE

Cybercrime has come to stay as a prominent feature of deviant behavior in the modern setting. With the rapidly enlarging use of computers to facilitate all human activity in a wide range of spheres, one can reasonably predict a rise in the crime graph. This is especially true in the context of globalization of trade and the shrinking of distances between sovereign nations through air space and cyberspace. Law enforcement agencies will have to prepare themselves for the worst scenario where terrorism is easily perpetrated across nations through computer systems, without the terrorist having to be physically present in target countries. Any meaningful exercise to thwart such maneuvers can emerge only through multilateral treaties that make stiff laws obligatory and mutual cooperation in criminal investigation mandatory. Anything short of this ideal rapport between nations can only strengthen the hands of determined cybercriminals.

# Europol

---

Organized crime has developed in Europe and around the world at an alarming speed. The opening of the borders throughout Europe, the vast increase in trade and social mobility, and the development of international transportation and communication systems have played a major part in the internationalization of crime. Criminal networks aiming at expanding the scope and geographical range of their activities are active worldwide, and they use modern technology and develop new methods and techniques to facilitate their international contacts.

Criminals take full advantage of one of the main principles of the European Union (EU): the free movement of persons, goods, services, and capital. Along with them, criminals also move and operate across the Continent. Although restrictions and border controls still exist for law enforcement agencies, EU law enforcement agents have to work under a number of different legal systems, using several official languages. They often face major difficulties in understanding the practical and legal differences among different EU countries.

A criminal group can operate in one or several countries, usually choosing the country where fiscal laws may be more favorable or even nonexistent, or the law enforcement system remains “flexible.” Serious criminal offenses are not punishable everywhere in the same strict way, due to legal discrepancies from region to region. Mutual assistance in international investigations and criminal inquiries is often slow and bureaucratic, and full of legal, political, and administrative red tape. It is also known in the international law enforcement community that a response to a simple query or request for information might take days or weeks. This delay may be destructive when urgent operations, such as intercepting

a drug shipment, searching a building, or detaining an individual, are necessary. Suspects are given time to destroy evidence, move the proceeds of crime to a safe place, or even escape arrest.

The difficulties described above constituted the basis on which the EU member states justified their establishment of a European police office. Europol is a common European law enforcement organization whose aim is to act in a support capacity by providing a wide range of services to member states’ law enforcement authorities to fight organized crime in a concerted and efficient way.

## AN OVERVIEW OF THE INTERNATIONAL ORGANIZED CRIME SITUATION

The findings of the annual EU Organized Crime Report, elaborated by Europol on the basis of member states’ contributions, have shown that in the early years of the twenty-first century there exist some four thousand criminal groups consisting of around forty thousand members throughout Europe. Organized crime groups in the European Union are involved in all types of crime, especially drug trafficking, trafficking in human beings, commodity smuggling, fraud, and other forms of financial and property crime. In addition, they increasingly seem to mix low-risk and high-risk activities—for instance, drug trafficking alongside cigarette smuggling. Among the organized crime groups that pose a significant threat to the European Union, about half of them are indigenous groups or dominated by nationals from the member states.

The traditional monolithic and strongly hierarchical structures of criminal organizations, as well as the increasing

emergence of more flexible networks that can easily adapt and respond to new requirements and challenges, have become more and more apparent. Specialization in certain fields of the criminal market, new approaches in which organizations serve as criminal-service providers, and an increased mixing of legal and illegal activities are yet other noteworthy trends. Organized crime groups not only use legal companies for money laundering or other activities to hide their criminal dealings, they often invest their illicit proceeds in the legitimate economy, thus disturbing established market practices.

Organized crime has become more international both in its composition and geographical spread. Many organized crime groups operate within vast Europe-wide networks, with links to countries outside the European Union. This is a matter of great concern. Ethnic or cultural similarities, though still important, are no longer the predominant or only binding factors within particular criminal organizations. Nonindigenous groups that deserve the attention of law enforcement at the level of the European Union are ethnic Albanian, Chinese, Colombian, Nigerian, North African, Russian, Turkish, and Ukrainian organized crime groups. Ethnic Albanian organized crime groups, for example, rely on support from fellow nationals within the large Albanian diasporas in some EU member states. They establish themselves according to an initially insular strategy, possibly as criminal-service providers to other organized crime groups. East European organized crime groups, mainly from the Russian Federation and Ukraine, seem to find it relatively easy to integrate into their host member states. They represent a significant threat, especially in the fields of financial crime and money laundering, where they can rely on a high level of criminal expertise.

#### THE ESTABLISHMENT OF EUROPOL

Based on Article K.1.9. of the Maastricht Treaty (1992), which led to the formation of the European Union, the Europol Drugs Unit (EDU) was set up by a ministerial agreement in 1993 as a forerunner to Europol. The EDU started its activities on January 3, 1994, focusing on drug trafficking and related money-laundering cases. In the meantime, discussions on drafting the Europol Convention had begun; it was signed on July 26, 1995, and ratified by all member states by June 1998. The Europol Convention came into force on October 1, 1998, providing Europol with the legal basis to continue carrying out its tasks. Following the adoption of a number of other legal acts related to the Convention, Europol finally took up its full activities on July 1, 1999.

The mandate of Europol has been progressively extended since 1994. By a joint action of the EU Council of Justice and Home Affairs on March 20, 1995, new

crime areas were added to Europol's sphere of authority; these include trafficking in nuclear and radioactive substances, crimes involving clandestine immigration networks, and illicit vehicle trafficking together with associated money-laundering activities. On December 16, 1996, an additional extension of mandate added trafficking in human beings, and on July 1, 1999, the date that Europol took up its full activities, its mandate was again extended to include counterterrorism and forgery of money and other means of payment. In January 2002, the European Union extended Europol's realm of authority to include all serious forms of organized crime mentioned in a list annexed to the text of the Europol Convention.

#### EUROPOL'S MAIN ACTIVITIES IN COMBATING ORGANIZED CRIME

Europol is not a European version of America's Federal Bureau of Investigation. The Europol Convention does not provide Europol with executive powers, and it cannot launch investigations on its own. Europol personnel cannot arrest criminals, conduct searches, or seize assets, activities that are normally conducted by the national law enforcement authorities of individual member countries. The issues of policing and judicial cooperation of concern to the European Union are addressed in the Maastricht Treaty, which states that the European Union must respect the national sovereignty of member states. Thus, all cooperative activities are carried out on an inter-governmental basis. Nevertheless, Europol offers valuable assistance to national law enforcement authorities.

#### INFORMATION EXCHANGE AND SUPPORT TO INTERNATIONAL INVESTIGATIONS

Law enforcement authorities need relevant and comprehensive information on suspected criminals, enterprises, methods, and so on with a minimum of delay. Europol can supply timely and expertly prepared data from such different services as police departments, the gendarmerie, customs, and to a certain extent, the security authorities of the EU member states, non-EU states, international organizations, and other sources.

Since Europol was established, all member states have sent their own liaison officers to the Europol headquarters in the Hague, Netherlands. The liaison officers represent their country's law enforcement authorities, and they carry out their duties following the laws and judicial system of their home country. Europol liaison officers have access to more than forty national police forces and customs information systems, as well as to many of the administrative files and business registers of member states, thus making Europol a unique clearing-house for information relating to organized crime in

Europe. This network enables research and analysis on offenders and groups of offenders, as well as addresses, phone numbers, and so on. Europol's services are available around the clock; the staff is conversant in all the official languages of the European Union and can communicate internally and externally using secure electronic technology.

Each year, Europol is involved with approximately three thousand cases within the European Union, mainly crimes involving drugs, illegal immigration, trafficking in human beings, child pornography, terrorism, financial crime, and currency counterfeiting. In addition, Europol has signed cooperation agreements with a number of non-EU states, which have sent liaison officers to Europol headquarters.

#### OPERATIONAL AND STRATEGIC CRIME ANALYSIS

Intelligence analysis is one of the most important and sophisticated activities performed by law enforcement authorities. Few EU states, however, have adequate resources to provide such analytical services beyond the national level. In its effort to fill this gap at the Europe-wide level, Europol has invested a great deal in setting up a state-of-the-art analysis system that can be used by experienced personnel from both the law enforcement and private sector. Europol's analysts have built a strong reputation through the assistance they have provided to member states in conducting complex investigations. Europol's skilled staff and advanced technology enable the organization to process large amounts of data, to uncover links, and suggest lines of inquiry that are of considerable value to investigators and prosecutors.

Operational analysis aims at giving clear directions to operational law enforcement services in carrying out their investigations by identifying criminal groups, individual criminals, contact points, and methods of communication. Europol's analysts are able to develop knowledge and to cooperate closely with the relevant services in the member states in order to target and dismantle criminal organizations. Europol analysts have run many such analytical projects that have led to various operational results, such as the identification of targets, arrests, and other law enforcement activities.

At the strategic level, Europol gathers relevant information from various law enforcement authorities and other open sources on a Europe-wide basis, and provides assessments of the main threats and trends of organized crime. Such assessments include the annual European Union Organized Crime Report. These risk and threat assessments constitute valuable advice to European governments, legislators, and police chiefs, and help them obtain a global overview of serious crime. Europol assessments

also help officials decide on changes in legislation, policy, procedures, and priorities that are needed to combat international organized crime.

#### JOINT INVESTIGATION TEAMS AND INITIATION OF INVESTIGATIONS

Although Europol has no executive powers, there is a firm political and law enforcement tendency to strengthen the operational impact of Europol in fighting organized crime. The initiation and coordination of investigations by Europol and the establishment of joint investigative teams between member states in cooperation with Europol are the major issues being discussed by the EU Council of Justice and Home Affairs. Such developments would constitute significant steps forward in strengthening Europol's position and capacity as a supporting intelligence agency and giving it more powers to act as a centralized coordinating agency at the heart of the law enforcement community in the European Union. Europol is indeed capable of identifying opportunities for joint investigations, of being the main instrument in the creation of joint teams, and of playing a critical role in supporting such investigations. International joint teams can be set up and based at Europol, where technical and support facilities can be guaranteed in a secure environment. Such teams may also operate in member states' territories under the legal and political responsibility of their national authorities.

#### EXPERTISE, KNOWLEDGE, AND TRAINING

The experts of Europol's Serious Crime Department actively contribute to all crime areas. They help identify operational law enforcement needs and projects, coordinate and support specific law enforcement activities and criminal investigations, offer expertise in support of member states' law enforcement efforts, and contribute to international and political decisions. For instance, Europol offers training on investigating and searching for illegal synthetic-drug laboratories and on the production methods being used to make illicit drugs. Europol also maintains the European Vehicle Identification Database, along with a manual on how to investigate motor vehicle crimes.

In the area of crime analysis, Europol is constantly trying to enhance the awareness of intelligence analysis within law enforcement at a European level. This training focuses on explicating integration techniques aimed at managing massive amounts of data by using software available within Europol's Analysis Unit. In addition, the establishment and operation of special Europol task forces are key in promoting cooperation in such critical law enforcement areas as counterterrorism.

## CONCLUSION

The increase of organized criminality in Europe and worldwide affects not only the law enforcement community, but the whole of society. The social, political, economic, and law enforcement dimensions of the problem constitute perhaps the most difficult challenge that the international law enforcement community will face in the twenty-first century.

Europol was created by Europe's political leaders to confront the growing threat of organized crime and terrorism, a threat that has completely transformed traditional approaches to crime prevention and suppression. The terrorist attacks of September 11, 2001, in the United States have instigated a new wave of law enforcement efforts and boosted a new team spirit in international police cooperation. As a result, the EU member states have developed a common definition for terrorism and have adopted a European arrest warrant. Europol plays a major role in assisting the antiterrorism efforts of member states.

The international community must continually seek to implement a multiagency, interdisciplinary approach

to law enforcement, one that enables the fostering of both a national and an international team spirit. In this context, the strength of Europol is based on the fact that it provides law enforcement support by a unique combination of analysts, liaison officers, and experts, all working in the same environment and using the same tools to support international investigations. Europol continues its emergence as a European center for criminal analysis, expertise, and training. In some crime areas, Europol maintains a leading role, especially in such efforts as gathering relevant intelligence for the protection of the euro currency against criminal activity.

The establishment of Europol is considered a milestone in the effort to strengthen law enforcement cooperation in a Europe without borders. However, future developments in the overall framework of the European Union will certainly have an impact on Europol's role and mission.

# Future of Public Safety

---

The style of policing and public safety in the future will differ around the world, depending on the needs in each locale, but two basic models will compete for prominence—the war model, dependent on the reactive capture of suspects and the punishment of offenders; and the peace model, dedicated to the proactive discovery of crime-breeding conditions and the taking of action to ameliorate them before crime and disorder occur.

In third world nations, as was true during the developmental period of most countries, the military will continue to double as the country's police force. As such, the police often will be required to place a priority on rooting out enemies of the current regime—ahead of protecting the civilian population and enforcing civil law. When the police are established as a separate command from the military, they will often remain an arm of the administration in power until and unless the public demands and acquires command and control of lawmaking, law enforcement, and peacekeeping.

The goal of this entry is to describe the future of policing and public safety as they can or should be in the world's developed countries. In societies where discipline and obligation to the letter of the law are held in high esteem, it is likely that the war (or military) model of policing will continue for the foreseeable future, whereas in countries where individual liberties are valued above absolute order and obedience, movement toward a peace (or participatory) model of policing will escalate in the years ahead.

Within each of the two major models, a variety of approaches will evolve, based primarily on the popular culture of the country and its subunits (e.g., states,

regions, and communities). There will likely always be constables in former British Empire nations and gendarmes in former French colonial areas, but the meanings of these terms may be significantly different from one region to another. An English constable, for example, is normally a rural police officer, while an American constable is usually a citizen volunteer.

Before discussing the deployment of the two models, this essay will describe two topics germane to both: evolving crime-fighting technology and twenty-first-century crime.

## EVOLVING CRIME-FIGHTING TECHNOLOGY

For police departments following the war model, a continuously spiraling cycle of technology and counter-technology can be expected. For agencies following the peace model, coping with technology-aided crimes will require community-based, ethical discussions about what countertactics are appropriate.

Some of the innovations in surveillance that can be expected in the first decades of the twenty-first century include “smart” technology and various types of implants and control devices. Body scanners are already available and handheld models will become commonplace, not unlike the devices in the 1990 science-fiction movie *Total Recall* that can see through skin down to bone, revealing everything from concealed weapons, to drugs in condoms in the intestines, to the size of body parts. Already in use in some airports, these see-all devices can be expected to become standard in police stations, courthouses, and jails and prisons. The smaller versions (about the size of a camcorder) will become part of the normal supplies

issued to public safety and corrections officers in developed countries. When police are able to scan unsuspecting citizens on the street, the “in plain view” doctrine (i.e., any evidence “in plain view” of an officer on the street can legally be used as probable cause for arrest and later may be used at trial) will take on new meaning.

Using the same scanner technology, plus new super-sensitive auditory capabilities, bionic “eyes” and “ears” that can hear and see through walls will soon be available. Equipped with these new “body parts,” safety and corrections officers will be able to more easily spot criminal activity, rules violations, and mischief in the making.

Ubiquitous cameras and computer chips will provide surveillance even when individual officers are not in the area. In some cities, hundreds of cameras already operate twenty-four hours per day, providing street monitor stations with the same type of surveillance and control formerly found only in casinos and top-secret installations. Ubiquitous computer chips are on the market that allow an individual to keep a minute-by-minute record of his or her life with the goal of becoming more efficient and effective in both professional and personal matters. Such a record can also become evidence for authorities if probable cause is found to suspect criminal activity (or on demand when probable cause is not necessary).

Increasingly, video surveillance cameras will be paired with facial-recognition technology so that a person caught on camera can be immediately identified and a “rap sheet” of information will be automatically generated. A facial-recognition system that uses biometrics has been tested in airports and at the Super Bowl game, and by police departments in several nations. The technology has had mixed reviews (it has produced a considerable number of “false positives”), but development and testing continues.

Biometrics, including digitalized fingerprints, handprints, voiceprints, and DNA prints, are also being perfected for use along with keystroke locks to safeguard access to increasing numbers of workplaces and to Internet sites. As cash and checks are replaced by cybermoney, and as e-mail supplants postal services to convey official documents, the identification of the parties involved in a transaction must be secured, a technology that may signal the end of “anonymous” surfing of the Web. Biometric ID systems on computers can provide a continuous record of the activities of each individual computer user—providing authorities with evidence of possible criminal (or antiregime) activities.

Universal DNA databanks will eventually tie all of such data together, as a DNA bar code is placed on an individual’s record at birth, and all data on that individual are collected and stored in a single account, to be accessed as provided by law (where such laws exist).

Electronic monitoring devices tied to a global positioning system (GPS) are already being used by some probation and parole agencies to track suspects and parolees. The use of such devices will likely soon expand not only to more community corrections agencies, but also to police surveillance of ex-offenders. For those under court-ordered monitoring, convulsive electroshock capabilities may be added to make the system “self-policing”: When offenders leave a designated area, they will receive painful shocks until they return. On the positive side, persons formerly held in captivity may be allowed more freedom to go to work, school, and therapy while being tracked.

The growing sophistication of computer technology has led to “smart” applications, such as “smart houses” that have a computer brain that controls functions ranging from climate control to security. Smart houses already provide owners with biometric ID systems to allow or deny entrance to visitors and automatically call the owner or a security service or police in case of unauthorized intrusions. Increasingly, these systems will be capable of constant audiovisual surveillance inside and outside the residence, providing audiovisual data for homeowners and authorities to determine if a person caught in or near a home is welcome or not and later providing evidence for investigation or prosecution if a crime has been committed. Persons identified on the scene as intruders might even be subject to knockout gas or some other deterrent built into the system.

Smart automotive vehicles already come equipped with GPS mapping systems to assist drivers with directions. New models provide many computerized safety features, including the power to take control of the car in dangerous situations. Smart vehicles also provide tracking features that allow authorities to use GPS to find the vehicle if the owner is in trouble (e.g., carjacked) or if the car is stolen. Already being tested are smart highways, where computer chips in the roadway communicate with smart cars and control the flow of traffic, allowing vehicles to be spaced just inches apart while traveling at a uniform high speed. When the system is perfected, all cars will have monitors, and all cars can then be located and tracked, eliminating most car thefts and reducing opportunities for smuggling drugs and other illegal goods.

Smart materials involve placing computer chips in building products (e.g., bricks, masonry blocks, sheetrock, and paneling), which can then set off warning signals if they are damaged or worn and in need of repair. One application would be alarms set off by doors or windows forced open by burglars or home invaders.

Smart clothing is increasingly being used by the military and police, as chips woven into fabric allow

authorities to track wearers and even locate the area of the body where an injury has occurred. As nearly all public safety personnel begin to adopt these smart uniforms, not only will they be safer, but their location will be known at all times, allowing for better coordination (an application that will not be welcomed by all).

Information-age advancements are beginning to be combined with biotechnology-age innovations, a process that is likely to escalate. Computer components and software will increasingly be made of organic materials, facilitating a growing market for body implants—for medical as well as educational and recreational purposes. With the blooming of nanotechnology, biochips will provide a host of benefits for individuals—from chips designed specifically to search and destroy a particular disease to health monitoring chips that constantly surf the bloodstream looking for and correcting abnormalities. In addition, knowledge chips will contain all relevant information on a variety of topics, and brain-enhancement chips will allow increased storage, manipulation, and rapid retrieval of data (such as continuously updated records of all known offenders in a jurisdiction and beyond). Hooked into neural systems, these nanochips will become part of the thinking process of the individual.

Translator chips will allow users to speak and understand all of the world's major languages, eliminating misunderstandings of a speaker's intent due to not understanding his or her language or dialect. Translator chips will also allow immediate interrogation of victims, witnesses, and suspects at a crime or disaster scene.

Scientists have also found that memory recall can be forced by simulating specific areas of the brain where memories are encoded, and that a memory can be transferred after copying it. Thus a suspect could be required to undergo brain stimulation to recall the events of a specific crime scene, and then the memory could be copied and used in court later if needed (e.g., transferred to a visual presenter and shown to judge or jury). More than likely, such capabilities would lead to more confessions and plea bargains. Interrogation also might be aided by brain-wave readers, which will be significant improvements over the polygraph for spotting lies.

Neuroscience will play an increasing role in penal systems. Researchers have found that brain chemistry appears to be at the root of most human behavior, and "chemical cocktails" can be formulated to allow therapists to manipulate and even control individual behavior. While this may bode well for public safety, it calls into question the very foundations of Western legal systems, which are based on a belief in individual responsibility for actions based on free will.

Subliminal conditioning chips that remind one to "obey the law," "do the right thing," or "respect authority"

will be used to keep criminals and "potential" offenders cool, calm, and collected. Nano-implants will surf the body in search of abnormalities (such as a deficit in serotonin, a neurotransmitter associated with a calming effect on the individual) that might agitate the individual and lead to violence. "Sober-up" implants for drug addicts have already been tested and will soon be in use; using "blocker" technology, they keep the drug user from feeling the impact of a hallucinogenic drug, thus providing prevention and treatment capability. To save on the costs of incarcerating violent criminals, states may employ suspended animation in which the offender's bodily fluids are removed and the individual is stored until time for release.

Genetic engineering also promises new ways of impacting behavior through adding, deleting, and altering genes, and even searching for the elusive "perfect" combination to clone—happy, well-adjusted human beings with no criminal tendencies.

While all of these (and many more) technological innovations might provide the capacity for greater public safety, they obviously pose serious ethical questions, as well as threatening the very essence of humanity. It might be possible to create a virtually crime-free world, but the cost might be a loss to the quality of human life.

## TWENTY-FIRST-CENTURY CRIME

Emerging technologies, along with changing demographics, will shift the focus of those concerned with crime prevention and enforcement as the twenty-first century unfolds. Whereas "street" crime was the major focus in the twentieth century in developed countries, and violence, disorder, and threats to the current regime were the focus in less developed nations, the new millennium will bring a perplexing combination of the old and new that will challenge even the most creative of public safety leaders.

In areas where power still resides with those who seize it by force or threat of force, violence and mayhem can be expected to remain the major focus. Even here, however, some new types of crimes will require increased attention.

One new crime that is already occurring—water theft—is the result of a basic commodity of life being in short supply. Water theft can be as simple as stealing a bucket or barrel of uncontaminated drinking water or hijacking truckloads and shiploads of water, to as sophisticated as diverting major water sources like streams and rivers. As the water supply dwindles further (already one in three citizens of the world does not have access to safe water), water wars may develop. Governments will increasingly join farmers, ranchers, and thirsty residents as the practice of draining a river in one state or nation leaves those downstream angry and dry. Water pirates

will find a lucrative market as the crises deepens, and water pollution will become a more serious crime.

Other types of environmental crimes will get added attention—from air pollution; to soil erosion, caused by, for example, poor building practices; to the destruction of animal habitats. Many public safety agencies will follow the lead of such cities as Los Angeles, which has special units for environmental policing and prosecution.

Probably the most prolific generator of new crime is the Internet. In some ways the World Wide Web has made the streets safer, as “ordinary” crime has decreased in high-tech nations such as the United States. It is much easier and more profitable to steal remotely from a computer than in person with a gun. It is also less likely that perpetrators will be caught, and if captured that they will be convicted, and if found guilty that the penalty will be substantial. As electronic money rapidly replaces cash, checks, and even plastic cards, crimes such as armed robbery will make little sense.

Meanwhile identity theft has quietly become the most widespread and costly crime in many developed nations. Internet fraud is close behind as a plethora of Web sites seek nothing more than to entice surfers to stop and be fleeced. Rapists and child molesters are, for the most part, giving up searching dark corners and bars for victims and have taken to haunting online romance chat groups and children’s game sites for their prey. Cyberstalking will also be a growing problem in domestic disputes, as spurned mates, lovers, and would-be lovers vindictively use the Internet to ruin the reputation and credit of others via anonymous e-mails and hacking. In one case, a South Carolina man was charged with posing as his former girlfriend and placing her name, phone number, and alleged desire to meet sexual partners on an adult Web site, then sending e-mails to her friends and coworkers in her new hometown of Seattle, informing them about the postings.

As implanted computers become more common, frightening new crimes, such as biochip hacking and mind stalking, can be expected. In the former, hackers, for sport or maliciousness, will intrude into biochips hooked into the individual’s neural networks, sending messages such as “guess who” or “you can’t hide from me.” In the latter, intruders (i.e., computer crackers) will threaten mayhem on the brain of the individual—from scrambling data in the biochip, to wiping the brain clean of all memory, to extorting payment to cease and desist their threats and devastation.

As many complex systems are networked via the Internet, criminals will increasingly use terrorist tactics to gain power and wealth, by such means as shutting down an electrical grid for a portion of a nation and threatening to close the rest unless they are paid a fee or,

if their motivations are political, other demands are met. Banking, health care, and the supply of oil, gas, and other vital commodities and services are also highly networked and thus vulnerable.

Biotechnology will also provide opportunities for criminal activity, such as organ legging—trafficking in stolen body parts with a worldwide market thanks to the Internet. It is illegal in some countries, including the United States, to sell body parts; even acquiring the rights to parts for sale after death can be a criminal act—thus establishing a nascent body-parts black market for much-sought organs. As cloning technology proceeds up the food chain, eventually reaching primates, including humans, there will be a new source for body parts for transplant, creating with it a new type of crime and a new black market. Making clones of oneself for the body parts will likely carry penalties for assault and even murder of the clone, although some researchers are developing headless clones of frogs (on the way to humans) in the belief that without a brain the functioning organism will not really be human, and thus can be used for transplant parts.

Genetic engineering will lead to the creation of hybrid plants and animals (chimeras), including “humanoids”—organisms with a mixture of human and nonhuman genes. In Great Britain, for example, pigs have been given human liver genes, which have been passed on from one generation to the next, meaning the pig not only furnishes ham and bacon but a humanlike liver for transplant; such pigs are worth up to \$50,000, compared to around \$100 without the human gene. Again, in some countries, such as the United States, creating genetic combinations of animals and humans is illegal, setting the stage for a black market. There are always citizens in capitalist nations willing to defy laws for profit, especially when selling a product that saves lives. By midcentury, winged humanoids may fly and live in formerly uninhabited areas, while gilled humanoids live in the water. If bird-woman eats fish-woman’s children, is it a case of nature providing lunch or a case of murder; should such a crime be pursued by the Society for the Prevention of Cruelty to Animals or the criminal court?

While providing many lifesaving products—crops that grow in arid regions, drugs that cure formerly deadly diseases, microorganisms that clean up oil spills—geneticists might also unintentionally create bacteria that spread a new plague or organisms that destroy all life in their path. Biotech criminals will either steal or replicate such products to sell or to terrorize populations for political reasons or profit via extortion.

As the world shrinks and the “global village” becomes more dominant, international crime will escalate rapidly. Cyberpornography, for example, already has

a worldwide market via the Internet; images can be downloaded or shipped anywhere around the globe from any location. As business becomes increasingly internationalized, tax evasion, market and consumer fraud, and unfair employment practices can be expected to escalate. The problem of international crime can also be seen in the activities of radical groups, such as al Qaeda, that use terrorism as a main tactic. Such organizations may be supported by governments, but they are not based in any specific nation; they are like a mythical serpent with many heads that grow new ones as existing ones are cut off. Single cells can operate independently anywhere on earth. The only way to attack such crimes will be with multijurisdictional task forces or international public safety agencies supported by international courts.

### WAR-MODEL PUBLIC SAFETY

War-model policing has been termed “traditional” in many areas of the world where the military doubles as the public safety (or often public “control”) force, or a separate police agency is designed along the lines of a military organization with a hierarchal rank structure. There are several approaches to this model, the two major ones being militaristic policing in a dictatorship or controlled state, and militaristic policing in a free state.

Military policing is descriptive of the controlled-states approach, where all military personnel engage in policing duties, or select units of the military are assigned policing duties. Even when the police are officially separated from the military, they operate with the same hierarchal rank structure and methods. As long as power is held by force by individuals or regimes, this type of war-model “police state” will persist.

Laws in such societies first protect the interests of those in power; thus any challenges to the policies or procedures of the state or regime are treated as severe offenses. Often this type “criminal” becomes a political prisoner. The laws in such states usually allow the authorities considerable leeway in taking suspects into custody and in the length and type of interrogation that is imposed. Street violence and such crimes as theft that threaten public order are usually treated as serious and are dealt with sternly (e.g., with corporal punishment or imprisonment), while violence and theft by members of the regime are often ignored and go unpunished.

Constant surveillance, along with at times elaborate spy networks, will continue to supplement patrolling in tracking crime and criminals, often creating a high level of fear among the citizenry, since even a false report (e.g., for vindictive or profit motives) can result in serious penalties. High technology, such as scanners and facial-recognition files, will be used where resources are available,

but not as universally or effectively as in developed free states.

In war-torn countries, public safety officials will continue to find themselves targets of competing interests vying for power. In such situations, survival will take precedence over law enforcement and peacekeeping for many officers, and military training and tactics will be essential, along with a larger cadre of personnel than is needed in more peaceful areas.

The most frightening scenario from the public standpoint will remain the region or nation where no working government and thus no public safety exist. In such a power vacuum, there are, in effect, no laws and no authorities to protect the populace, who are left at the mercy of criminal elements. In some such places, such as Rwanda in the 1990s, this has led to genocide and other crimes against humanity.

The paramilitary model will continue in many free states where the power supposedly lies with the people; public safety officials in such countries (at least theoretically) work for the people—they “protect and serve” the public, as many agencies promise. These nations are usually democracies with capitalist or socialist economic systems, although capitalists are more likely to use the war model.

In these countries, law is the basis for police activity. Individuals are believed to have free will; thus they “choose” to obey or disobey the law and can be held criminally responsible for violations. Although choice is emphasized, there is a basic belief in most of these jurisdictions that human nature leads individuals to seek advantage over others (e.g., “original sin”), and thus the law must restrict such opportunities and penalties must be punitive (e.g., “the wages of sin”) and have a deterrent effect.

The role of public safety authorities is to capture lawbreakers and process them under the letter of the law. Courts seek to provide an “unbiased” venue for determining the facts of the case and applying the appropriate penalty if the accused is convicted. Since the offender “willingly” violated the law (and was not found to be criminally insane or have any other acceptable defense), the penalty prescribed by law is deemed appropriate. In some nations, especially in Western Europe, penalties are most often fines or relatively short periods of incarceration (usually under five years), while in other countries, such as the United States, the penalties are often longer periods of imprisonment or even death in some murder cases. Where penalties are most severe, plea bargaining (reducing the punishment in exchange for a guilty plea) is commonly practiced.

Where the war model is used in democracies, the police are often viewed by minority and powerless groups

as agents of the government rather than of the citizenry. Laws, according to this theory, are made by the economic and politically powerful to protect their rights (especially to property) against all claims, while keeping the less powerful groups docile and dependent on the (usually capitalistic) system. This situation is unlikely to change in the near future.

It is in these systems that the technology reviewed earlier is most likely to be deployed to the fullest, particularly in any period of perceived threat by the leaders or the public, whether the threat comes from an outside enemy (such as terrorism by foreign radical groups), from domestic turmoil (such as street protests turned violent), or just high crime rates or a perception of a breakdown in civility. Even where legal restraints to infringements on individual liberties are in place, in such times the definitions often are stretched to choose security over freedom, particularly where war-model systems are in place.

**A Scenario of a Future War-Model System in Action.** Consider the following scenario of a possible future war-model public safety system in action: Media reports of terrorism and turmoil around the world, plus recent incidents of disorder and an increase in crime, have resulted in a consensus to “crack down” on lawbreakers and deter further problems. Thus, public safety officials begin the campaign with public backing, seeing it as an opportunity to put into action a plan for high-tech law enforcement and crime prevention.

In this scenario of the future, birth-to-death monitoring of the population is possible with the latest scanners, which not only see through clothing and skin to reveal hidden weapons or contraband, but also through ceilings and walls to reveal what is happening in formerly private places. Aided by GPS satellites, every individual and structure can be monitored twenty-four hours a day. Records on all known felons and many misdemeanants, “suspects,” and “persons to watch” have been placed in facial-recognition files, so a full dossier appears on each as they are scanned; new files are being added and efforts are being made to start files on every individual at birth. The labor intensiveness of such surveillance is alleviated by applying new technologies that provide scanners with the ability to recognize criminal and “suspicious” behavior and to alert authorities while digitally storing the information for review. Similarly, anyone who enters cyberspace is recognized immediately via universal biometric ID, and all Internet activity is monitored; suspicious activity is digitally bookmarked with an alarm set, and all activity is stored perpetually for possible future use. Language translation capacity is built into all monitors and is implanted in nanobiochips in the brains of all authorities (and most citizens). In some jurisdictions, recently rediscovered powers of telepathy are used to read

the thoughts of suspicious individuals on the streets; a new law makes it a criminal offense “to even think about committing a crime.”

ID chips are included on all vehicles, and major highways are automated with chips that network with the vehicles and take control of traffic; thus all drivers are known and can be found at any time (e.g., such as for failure to appear in court or for questioning as a suspect in illegal possession or trafficking of contraband). Smart technology protects vehicles by immediately stopping and locking stolen vehicles while sending a signal to authorities.

Street officers have knowledge biochips that include all reports of criminal or suspicious activity in their jurisdiction, plus the capacity to immediately network with other systems when necessary. All officers carry handheld scanners and many have bionic eyes and ears for added surveillance. Weapons are multipurpose, using ultrasound to deliver blasts ranging from loud and annoying to break up disorderly crowds, to high-pitched to immediately render suspects unconscious, to literally “mind-blowing” to kill when deemed necessary.

Brain-wave readers immediately inform interrogators when a suspect is lying during questioning, and memory stimulation provides involuntary recall of the events during a specific period. The recalled memories can then be transferred to digital storage for later use in court (although guilty pleas are more common now that evidence is overwhelming).

Once convicted, a host of new approaches to punishment and treatment have joined incarceration (which has also changed). For minor offenders, sober-up implants are used for drug and alcohol addicts, while subliminal implants send constant messages (“obey the law,” “respect authority,” “do your civic duty,” “calm down”) to gang members and other subcultural offenders.

For an offender with emotional and possible mental problems believed to be caused by chemical disorders, thousands to millions of nanosized biochips transverse the bloodstream in search of problems that, when found, are quickly remedied with a “chemical cocktail” designed specifically for the control of that individual.

For more serious offenders, electronically monitored probation is imposed and the offender’s every move and thought is recorded, as is done for all parolees. For those deemed potentially dangerous, electrodes are attached to the implanted monitors to shock them if they stray from officially approved locations; the shock is discontinued when they return.

For those needing even greater incapacitation, prisons in space allow inmates to earn money for their future return to society while providing valuable minerals through the mining of asteroids, while undersea prisons

provide the same benefits through the farming of seaweed to feed millions. For long sentences, suspended animation is used to save imprisonment costs.

Experiments in genetic engineering have been underway to develop a more permanent answer to criminality for persons considered to be “bad seeds” (i.e., plagued by genetic abnormalities). Genes of convicted offenders have been altered—“bad” ones deleted and “good” ones inserted. One project promises to create an individual who is genetically incapable of violating the law, and there is talk of developing and cloning such “designer people.”

Versions of this scenario, titled “Perils of High-Tech Public Safety,” have been presented to hundreds of public safety officers, as well as students and citizens. Although most agreed with some parts of the approach, all were repulsed by the total package. Three major reasons emerged:

**Loss of Privacy.** There would be no privacy in this “safe” high-tech world. Every word, deed, and even thought would be recorded and potentially used against the citizen. Whereas some feel privacy is an overrated “right” and its demise would indeed make the public easier to protect, few are willing to give it up to the extent envisioned in this scenario, and few feel it is necessary to do so to provide an adequate degree of security.

**Gestapo Tactics.** The Gestapo, Nazi Germany’s secret police force during the 1930s and 1940s, would have been elated to have had access to this type of technology. They could keep every citizen and captive under the total control of the regime, and the government would be able to achieve (in its eyes at least) its plan to create a “master race.” Other despotic governments would also find this technology useful, but it is despicable to citizens of a “free” society.

**Dehumanization.** Are individuals being treated as human beings in this scenario, or simply as chunks of protoplasm to be controlled completely in order to provide “safety” for all? In the free world, citizens cherish the right to be “different,” to live as they desire as long as they do not seriously harm others. Such a lifestyle would be impossible in this high-tech war-model environment.

There is no technological solution to the crime problem. First, crime is politically defined and therefore constantly changing: crime is what we say it is. Second, for every technology that offers hope of increased safety, counter technologies will pose new perils. Third, technology works for human societies only when it is closely monitored and under civilian policymaking and control. The key to a safe future is not to abolish or ignore technology that has the potential for harm, but to balance each technology with ethical considerations and ethical use.

**Objections to the War-Model Approach.** Several major problems are associated with using the war model to provide public safety in a free society. First, militaristic organizations assume that there is an enemy that must be contained or defeated, an assumption that is inappropriate for securing public safety for civilians at the community level. Second, the “reactive” war-model approach has been a failure based on efficiency measures—usually “clearance of reported crimes by arrests.” In the United States, for example, ever since statistics have been kept on eight major crimes (the crime index), the annual clearance rate has hovered around 20 percent, meaning only one in five of the indexed crimes has resulted in an arrest (while no more than one in three is even reported to police according to crime surveys).

A third problem with using the war model in a free society is that citizens live in fear of crime, and public safety agencies often consider that fear to be healthy (rather than debilitating), partly because it keeps money and human resources flowing to them. In addition, prison populations continue climbing as public recognition of the failure of the system to protect them leads to draconian sentencing of the few criminals that are caught and convicted. Finally, citizens adopt a “mean world” philosophy that divides the populace into good guys and bad guys, usually based on media-driven stereotypes.

Therefore, the other alternative for public safety—the peace model—offers attention to this concern for the protection of personal freedoms while providing safety to the community.

#### PEACE-MODEL PUBLIC SAFETY

The concept of peace-model public safety begins with a belief that peace does not come as a result of war, but rather it must be earned in a process of good faith on the part of all members of the community (whether a neighborhood or a nation). Rejected is the war-model mantra that a finite group of “bad guys” prey on society and terrorize the “good guys,” and that removal of the bad guys will provide a safe community for everyone else.

Affirmed is a belief in the duality of human nature—that each individual has a capacity to harm others but also a capacity for altruistic behavior; that whether the person chooses criminal or lawful activity depends primarily on the environment and popular culture created in the society. The basis for such a belief in criminology can be traced to the works of French sociologist Émile Durkheim (1858–1917), who postulated that all the laws, rules, and mores of a particular society amounted to the “collective conscience” of that community. No one, however, followed all these regulations, and thus no one embodied the collective conscience, because “everyone is somewhat deviant.” Thus, the answer to the

question “Who is the criminal?” is everyone to some degree. Later this concept became the criminological principle, “the dualistic fallacy”—the mistaken belief that criminals and noncriminals are different.

To “peacemaking” and “peacekeeping” criminologists, the roots of crime lie in economic, political, and social injustice allowed by government and members of a society. Popular culturists see that crime and ideas of how to control it result from the “social reality” created by all forms of media (e.g., television, movies, radio, newspapers, fictional writing, poetry), which result, in turn, in policies and procedure that transform social reality into “functional reality” (public perceptions—right or wrong—being more important than demonstrable evidence). Thus poverty, powerlessness, and class structure lead to crime, and acceptance of such injustice is a product of a popular culture in which “criminals” are portrayed as subhuman or a threat to the general population. In the United States, for example, media is said to be involved in a perpetual morality play, with each crime story being framed as good guy(s) versus bad guy(s) and an assumption that some individual is responsible for the event and must “pay” a severe penalty. Ambiguously, however, “bad guys” are often portrayed sympathetically, and violence by authorities is seen as necessary to solve the crime problem.

The peace model requires making peace in the community in order to achieve public safety. Peace, in turn, requires that all citizens receive economic, political, and social justice in everyday interaction. No one can be truly safe until all are safe, because no one can truly be free to pursue his or her own desires until all are free to do so.

Public safety officers in the peace model are members of the public with no special rights, but with an obligation to “protect and serve” the public. In creating the first Western public police force in London in 1829, Sir Robert Peel (1788–1850) held: “The police are the public and the public are the police.” He added that the duty of the police is to “prevent crime” and the power of police “is dependent on public approval and . . . [the] ability to secure and maintain public respect.” Thus, tax-paid police began as “peace officers.”

The peace model requires public safety to be under citizen control, with officers being agents of the community, working in partnership to establish and maintain public order and peace. Corrections too are community-based. The most complete peace model would include community-based public safety paired with restorative justice.

**Community-Based Public Safety.** Peace in the neighborhood can be kept only if public safety is community-based and community-oriented. A number of types of community policing evolved during the 1990s and early twenty-first century, including community-oriented

policing (COP), problem-oriented policing (POP), and neighborhood-driven policing (NDP). All emphasize police-citizen partnerships, neighborhood needs analyses, and action plans to solve problems associated with crime and disorder. In their 1988 definition of community policing, Robert Trojanowicz and David Carter emphasized that “philosophy” was the key, with tactics differing, tailored to the needs of the individual neighborhood.

Emphasis has been placed on community building (one cannot police or bring peace to a community unless one can identify it, something that often comes only after officers hold organizational sessions and build cohesion in an area); trust (a commodity that comes only after numerous successful interactions among police and community members); and cooperation (where police and citizens enter a partnership, often with other public and private agencies and groups, to achieve a mission of crime reduction and prevention). Whereas in COP and POP the police remained in control of the agenda, often viewing citizens’ desires as “input” only, under NDP, a citizen board in each neighborhood is in charge, with police advising and carrying out action plans.

In many ways, community policing and public safety are “back to the future” as they require power sharing and the earning of respect and authority (as Peel postulated) rather than compliance (as in war models), and they focus on prevention of crime rather than reaction (via investigation and arrest) after it has occurred.

Another important element of successful community public safety is creativity—searching the world for programs that show promise and adapting them or developing other new approaches to problem solving and community safety. For instance, the Japanese *koban* (police box) has been studied and adopted in some Western nations as a way to serve the community better while acquiring better intelligence on problems. Officers in the *kobans* (often located in the center of a busy street in Japan) are responsible for knowing the whereabouts of all people in their (usually) four-block area; relations between the police and the public is such that citizens drop by the *koban* to inform officers of their plans and any needs (such as looking in on their elderly relatives) while they are gone. The *koban* was adapted for use in Columbia, South Carolina, as a center for residents (with an emphasis on children) to visit daily in low-income housing projects, lowering crime in the areas substantially.

Other Western nations have modified the Chinese “neighborhood committees” for use in providing public safety; members of the committees come from the community and assist police in maintaining order, preventing crime, investigating crime, and communicating with residents about the need to respect laws and public safety officers, as well as their responsibility to provide

information to authorities about crime-breeding situations. Another adaptation comes from Germany, where most offenses draw “fines” rather than prison sentences, partly in the belief that direct monetary payments are a better deterrent than time served after a lengthy court process. Also in Germany, sentences of more than six months incarceration are rare, and are imposed only in “special circumstances” (such as for a clearly dangerous offender).

Technology will be used ethically and creatively in peace-system public safety in the future. With the citizens in control, the levels of technology used will depend on a consensus within each community. For example, an increase in burglaries might lead to increased use in the community of cameras and possibly facial-recognition devices, but no use by authorities of surveillance within the home itself. Cyberstalking of residents might lead to a search of all Internet activity by suspects and (with permission) of likely victims, but not of all citizens in the jurisdiction.

To provide maximum protection, less invasive technology (e.g., caller ID, GPS electronic monitoring of “potentially dangerous” parolees, instantaneous record checks of suspects, facial recognition on street surveillance cameras) will be used extensively. Even here, community concerns about invasions of privacy will be considered and addressed, to the point of discontinuing use of a technology based on a neighborhood consensus. Safety and personal freedom must be balanced in a free society.

The structure of public safety agencies will be similar to “team policing,” where a few officers will be assigned exclusively to a single neighborhood and it is their responsibility to serve and protect the citizens there, most likely at the direction of a citizen-controlled committee. Because the officers can only succeed if they can identify or create community, conduct needs assessments, seek creative answers to problems, assist in development of a plan of action, and carry out that plan under citizen direction, every officer will need to be a leader; it will be necessary to achieve the mission. Two critical skills of these street leaders will be coordination and cooperation. Many tasks will take coordination with multiple agencies (e.g., fire, emergency services, transportation, health, town council, county commission) in both the planning and action stages, the latter being where cooperation (avoiding turf conflict) will be critical.

Specialized public-safety support groups (e.g., automated traffic control, forensics, cybercrime, environmental and biotech units) will be centralized in the full jurisdictions (or even serve multiple jurisdictions), but will be available to serve needs in each neighborhood.

An alternative structure, tried in numerous jurisdictions in the late twentieth century, places police, fire, and

emergency services together in a single agency—a public safety department. In the most successful of these hybrid organizations, employees are cross-trained so they can handle any or all problems at the scene of an emergency. Although this approach seems logical, the competitive, exclusionary “culture” of policing and firefighting will have to change considerably for acceptance by “sworn personnel” in most jurisdictions. This same problem also will continue to make multijurisdictional agencies difficult to assemble and operate, but given the increasing difficulty of finding funding for public programs, these efficient and effective approaches will be increasingly attempted. One new approach will be to have cross-trained specialists within a community-based agency where public safety officers continue to serve the community’s need for safety from crime and the specialists will handle all calls for emergency services.

Successful community-based public safety will be judged by the absence of crime and disorder (the same measure used by Peel in his first-of-its-kind London public department). Unfortunately, some crime will still occur, and in a peace model, this is where restorative justice takes over.

**Balanced and Restorative Justice.** A major difference in peace models versus war models is the way crime and disorder are handled within the community. Suspected serial or mass murderers, rapists, or child molesters, as well as proven incorrigible predatory offenders (e.g., lifetime burglars and con artists) will remain the province of the criminal court, but for the other approximately 90 percent of cases, a more humanized venue will be provided.

Like community public safety, justice that is in many ways balanced and restorative harkens “back to the future”—to tribal justice, where the full community met to determine the facts of the case and develop a consensus on a fair and healing remedy. Tribes were often small and isolated; thus it was accepted that those involved in a dispute or harmful incident would remain part of the community, and peace would only be kept if the process was seen as just and the decision as equitable to all parties.

The vast majority of disputes that have in the past resulted in criminal charges have actually resulted from laws that favored one group (usually the more powerful) against the other, and at best the decision of the court satisfied only one party or often failed to satisfy anyone (“I didn’t have a chance in the first place”; “He didn’t get half the penalty he deserved”). Since all parties to the dispute normally live in the same community and return to it, such a system often creates enemies and aggravates problems rather than solves them. Restorative justice is designed to provide a “win-win” system for resolving

disputes at the community level, replacing the penal system, except for the predatory types of crime mentioned earlier.

The base of the balanced-and-restorative justice model is accountability, which is absolutely necessary for providing justice to all participants. If someone is found to have wronged someone else, that person must accept accountability for his or her actions. Such accountability almost always includes restitution to the person(s) harmed and service to the community harmed. Once restitution is determined, the next step is to ensure “community protection” by taking appropriate action to stop further incidents that might threaten others. Finally, while an offender is paying back for harm done, an evaluation of his or her problems is followed by “competency development” in recognition that he or she will likely remain a resident of the community and may need assistance in becoming a law-abiding, productive member.

The methods and process of restorative justice begin with mediation and arbitration. Rather than designate one party as the accused and another as the victim at the beginning, the disputants (whether in a civil or criminal matter) and all other interested parties (including the arresting officer, witnesses, neighbors, etc.) meet with a mediator or arbitrator for a session at which all have a say about what happened. It may be decided that there is no blame to be assessed or that both parties share in the blame, but where one party clearly harmed another and should be held responsible, the process then turns to what should be done. Again all are involved in this process, including the accused. In mediation, the search is for agreement on a fair settlement that the accused and accuser will then sign and carry out (a monitored process). An arbitrator, on the other hand, goes through the same process and then, if no agreement can be reached, hands down a binding decision based on an equitable settlement. Failure to carry out the agreement can result in criminal charges in the adversary system.

Most settlements include restitution—payback by the offender for the harm done, usually in money, but sometimes in service to the victim. Restitution may also include community service because the offense is seen as harmful to the peace and security of the neighborhood as well as the direct victim. Reformation—repentance and reform—is sought as offender and victim converse throughout the proceedings and the offender is encouraged to apologize or make his or her feelings about the offense known to the victim. Reclamation of the offender is also sought, as existing programs or new ones established by the community are used for drug treatment, therapy, remedial education, job training, employment assistance, and so on. Once the process nears an end, reintegration of the individual back into the community

as an accepted member (with no employment or social discrimination) is attempted and eventually a full reconciliation (forgive and forget) is sought (often after offender and victim meet to seek their own reconciliation).

Again, restorative justice is designed for the vast majority of criminal and civil disputes—the ones where disputants know one another or where the incident is relatively minor or the offender has not committed previous offenses. It is not designed for serious “predatory” offenders (about 10 to 15 percent of felony offenders) who are kept in the adversarial system because they may require incapacitation for community protection—incarceration, electronic monitoring, or (in the future) biochemical control.

A pioneer in tying community policing and restorative justice together into a seamless system was Caroline G. Nicholl, who authored two publications for the U.S. Department of Justice Office of Community Oriented Policing Services (COPS): *Community Policing, Community Justice, and Restorative Justice* (1999) and *Toolbox for Implementing Restorative Justice and Advancing Community Policing* (2000). Nicholl, at one time the highest-ranking female police official in England, came to the United States on a research fellowship and stayed to work with the community-policing unit of the District of Columbia Police Department and with COPS.

## INTERNATIONAL POLICING AND PUBLIC SAFETY

As communications and transportation technology make the world a smaller place where international business and cooperative ventures are growing rapidly, many public safety problems will have no borders. The Internet, for example, exists worldwide with little management or control; increasingly, corporations operate worldwide with no allegiance to any country. In this “power vacuum,” some groups will have to step forward to protect the public interest, including public safety everywhere.

More international “task forces” will be created to deal with specific problems, such as Internet crime. While ad hoc approaches might be successful for specific targets, international crime will grow rapidly in the increasingly “global” environment. The United Nations police forces can be expected to be called on more frequently, but standing forces will have to be created to combat worldwide threats via the Internet and beyond: the destruction of the environment (e.g., air and water pollution, forest depletion); biohazards (e.g., the creation and distribution of deadly new viruses, bioterrorism); radical extremists (e.g., global terror cells, kidnappings for ransom); the development and sale of weapons of

mass destruction, and so on. In addition, courts with international jurisdiction will have to be created to handle the cases brought by these new public safety agencies.

The most successful efforts will adopt some war-model practices (e.g., surveillance, investigation, arrests), but should also rely heavily on peace-model approaches (e.g., diplomacy and peacemaking). Above all, economic, political, and social justice must be sought worldwide, for in this increasingly interdependent world, inequities rapidly become clear to the oppressed and stand in the way of any real hope of public safety everywhere. A large “peace corps,” supported by the “have” nations to offer a hand (without a condescending attitude) to the “have not” nations will do more for public safety than any warlike effort to force compliance with international law.

# Interpol

---

Interpol is the world's largest police organization, established for mutual assistance in the detection and deterrence of international crime. Its aim is to facilitate cooperation among the police forces of member countries, despite differences of language, culture, and criminal justice systems.

## LEGAL STATUS

Interpol is founded on a constitution that was not submitted for diplomatic signature or ratification by governments. Nevertheless, immediately after its formation, countries began applying for membership, appointing delegates, allocating funds for dues, and complying with the organization's rules and regulations. The League of Nations gave Interpol official recognition by entrusting it with the administration of the 1929 Convention on the Suppression of Counterfeiting Currency. Over the years, many international organizations have become affiliated with Interpol, and the United Nations Economic and Social Council granted it official status as an intergovernmental agency in 1971.

Because member governments have not delegated to it any specific powers or authority, Interpol must function within the limits of the laws of each member country, as well as within the provisions of its own constitution. This explains why Interpol itself has no powers of arrest or search and seizure, nor the authority to conduct criminal investigations. These powers are exercised by the police of member states.

## AIMS

The organization's aims are summarized in Article 2 of its constitution: (1) "To ensure and promote the widest

possible mutual assistance between all criminal police authorities within the limits of the laws existing in the different countries and in the spirit of the *Universal Declaration of Human Rights*;" and (2) "To establish and develop all institutions likely to contribute effectively to the prevention and suppression of ordinary law crimes." Article 3 of the Interpol constitution states: "It is strictly forbidden for the organization to undertake any intervention or activities of a political, military, religious or racial character." Therefore, in its function of facilitating cooperation among member states, Interpol deals exclusively with "ordinary" law crimes. The term *ordinary law* is used rather than *common law* because common law has a specific legal significance in certain judicial systems.

## BASIC PRINCIPLES

The organization conducts its activities on the basis of several fundamental principles:

1. Respect for national sovereignty.
2. Involvement with "ordinary" law crimes only (within the limits of Article 3).
3. Universality (cooperation among member states regardless of geographic or linguistic impediments).
4. Equality (all member states are provided with the same services and have the same rights, irrespective of their financial contributions to the organization).
5. Cooperation with other agencies involved in combating criminal offenses.

6. Flexibility of working methods (ensuring regularity and continuity while keeping formalities to a minimum and taking into account the wide variety of structures and situations in different countries).

Respecting these principles means that international police cooperation depends on coordinated action on the part of member states' police forces, which supply or request information or services through Interpol.

### INTERPOL'S ORIGINS

One of the most striking features of crime in the twenty-first century is its international nature. Criminals have become increasingly mobile as restrictions on international travel have gradually been lifted and means of communication and transport have improved. At the same time, economic and social activities have expanded and increased in complexity at both national and international levels. This phenomenon has provided offenders with significantly extended opportunities for their illicit activities.

While these factors make it easier for criminals to offend, they hinder the police, whose actions are subject to various legitimate constraints (such as territorial limitations on jurisdiction, respect for the law, and limited resources). Consequently, society has become more vulnerable to criminal activities, even though it may enjoy a higher standard of living.

Although "international crime" has never been clearly defined in legal terms, the offenses covered by this phrase are recognizable in practice, either because they are the subject of international conventions (such as the 1929 Convention on the Suppression of Counterfeiting Currency, the 1949 Convention for the Suppression of Traffic in Persons and Exploitation of Prostitution of Others, the 1961 Single Convention on Narcotic Drugs, and the 1971 Convention on Psychotropic Substances), or because of other international aspects of a purely circumstantial nature. Such aspects may include the fact that an offense was prepared and carried out in more than one country, or the revelation that a single offender has committed a number of crimes in different countries, has absconded to another country, or transferred the proceeds of his or her offense to another country. In addition, offenders, victims, or witnesses may not be resident in the country where the offense was committed.

When international offenses such as those described above are committed, the police and judicial authorities in the countries concerned need to exchange information rapidly to obtain evidence and to identify, locate, and arrest offenders with a view to extradition. The need for international cooperation in these circumstances first made itself felt at the beginning of the twentieth century

and gradually became more pressing. This led to the establishment of Interpol as an instrument of international police cooperation.

In 1914 the first International Criminal Police Congress was held in Monaco. Legal experts and police officers from fourteen countries met to discuss the possibility of establishing an international criminal records office and of harmonizing extradition procedures. The outbreak of World War I in 1914 prevented further progress until 1923, when the second International Criminal Police Congress met in Vienna to continue the work begun in Monaco. The congress set up the International Criminal Police Commission (ICPC), with its official headquarters in Vienna and its own statutes. The ICPC was essentially European in character, and it operated until the outbreak of World War II in 1939.

The third "new start" for international police cooperation took place in 1946, when a conference was held in Brussels, Belgium, with the intention of re-creating an effective organization for international police cooperation in the aftermath of World War II.

With the growth in membership from 50 countries in 1955, to 100 in 1967, and 184 in 2005, Interpol's worldwide mission has become more apparent. Article 4 of the Interpol constitution states: "Any country may delegate as a member to the organization any official police body whose functions come within the framework of activities of the organization." It is therefore the country that belongs to the organization, not the individual police agency. If a country wishes to join Interpol, an appropriate governmental department, usually the ministry responsible for the police or in some cases the ministry for foreign affairs, submits an application for membership to the General Secretariat, which must then be approved by Interpol's General Assembly.

### BRIEF HISTORY OF THE ORGANIZATION

In 1914, at the invitation of Prince Albert I of Monaco (1848–1922), lawyers and police officials from twenty-three nations and territories met in Monaco at the first International Criminal Police Congress. They discussed improvements in arrest procedures, perfection of identification techniques, establishment of central international criminal records, and unification of extradition proceedings. The meeting was so successful that the delegates agreed to meet in Bucharest, Romania, in 1916, but World War I erupted, so the meeting never took place. In 1919 Colonel M. C. van Houten of the Royal Netherlands Police unsuccessfully tried to convene a conference on police cooperation.

In 1923 Johann Schober, president of the Vienna Police, convened the second International Criminal Police Congress in Vienna. The meeting was attended

by representatives from nineteen countries. The delegates agreed to establish the International Criminal Police Commission (ICPC), draw up a constitution of ten articles, and continue to work toward the goals of the 1914 Monaco congress. Vienna was selected as the site for the organization's headquarters because Austria offered to house and finance it. At that time, the Austrian police were considered to be leaders in the field of maintaining records on international criminals. Schober became president of the Executive Committee, and Oskar Dressler, a lawyer and the chief of the Austrian Federal Police, was appointed secretary to the International Police Congress. Dues were set at one Swiss franc for every ten thousand inhabitants of each member country. It was also established that a General Assembly would convene once a year.

In 1925 at the third General Assembly, held in Berlin, it was suggested that each country establish a central point of contact within their police structure. Two years later Interpol adopted a resolution to formally establish national central bureaus (NCB) in each member country. NCBs facilitate a member country's cooperation with the Interpol General Secretariat and with the NCBs of other countries.

In the beginning of the 1930s, the ICPC General Assembly, held in Antwerp, Belgium, began organizational independence by deciding to elect ICPC Executive Committee members by majority vote rather than the automatic appointment of Austrian police officials. Specialized departments were also established at headquarters, and included the Central Government; the International Bureau, concerned with currency counterfeiting; the International Criminal Records Office; and the Passport Forgery Bureau.

Schober died in 1932, and the post of secretary-general was created by a change in the statutes. The first to serve as secretary-general was Dressler, who retained the post until 1946. In 1935 the ICPC international radio network was inaugurated. The last General Assembly before World War II was held in Bucharest in 1938. The Nazi regime deposed ICPC president, Michael Skubl, and replaced him as chief of the Austrian police with Otto Steinhäusl, who thus automatically became president of the ICPC under the statutes of the organization at the time. In response, the countries of the free world stopped participating, and the ICPC effectively ceased to exist as an international organization. By 1942 the ICPC had fallen completely under German control and was moved to Berlin.

In 1946, after World War II had ended, a group of officials interested in continuing the idea of international police cooperation met in London to reestablish the organization. Florent Louwage, Belgium's inspector general for

state security and a former ICPC Executive Committee member, met with Harry Soderman of the Swedish Criminal Institute; Werner Muller, chief of the Swiss Federal Police; Louis Ducloux, director of the French Judicial Police; and Ronald Howe, assistant commissioner at London's Scotland Yard. Their efforts resulted in the fifteenth General Assembly session in Brussels where seventeen nations were represented out of the nineteen that had renewed their ICPC membership.

France was chosen as the most suitable host country for the organization because it provided a central location, superior communication facilities, and was happy to accept financial and other obligations as host nation. At that time in Europe, France was also a pivotal location for international criminals.

In reorganizing, the ICPC established a democratic process for electing its president and members of its Executive Committee. At that time, the Executive Committee consisted of five members elected for five years: a president, a secretary-general, and three general rapporteurs (vice presidents). Louis Ducloux (France), as host-country representative, was named secretary-general. Florent Louwage (Belgium) was elected president, with Ronald Howe (United Kingdom), Werner Muller (Switzerland), and Harry Soderman (Sweden) as general rapporteurs.

The General Secretariat was allocated offices belonging to the French Ministry of Interior near the Champs Elysées in the eighth arrondissement of Paris. The coinage "Interpol," a contraction of "International Police," was chosen for the organization's telegraphic address in 1946.

In 1949 the United Nations granted the ICPC consultative status as a nongovernmental organization. International radio communications regulations were adopted and appended to the organization's General Regulations. The United Nations Commission on Narcotic Drugs encouraged the use of ICPC channels for the exchange of information on illicit drug traffic in 1955. Then, in 1956 at the twenty-fifth General Assembly session in Vienna, a new constitution was adopted and the name of the organization was changed to ICPO-Interpol, or simply Interpol. The status and function of NCBs were officially recognized in Articles 32 and 33 of the new constitution. The organization became autonomous by collecting dues from member countries and relying on investments as its main means of support. In 1959 the Council of Europe recognized Interpol as having constitutive status equivalent to a United Nations specialized agency, thus allowing cooperation and information exchange.

In 1960 the General Assembly met for first time outside Europe, in Washington, D.C. In 1961 the Counterfeit Currency Group, formerly headquartered in

the Hague, Netherlands, was moved to Interpol's General Secretariat in Paris. In 1963 the first regional conference was held in Monrovia, Liberia. The General Assembly outlined new operating policies for the NCBs in 1965, and the following year Interpol moved to new offices near the Bois de Boulogne on the outskirts of Paris.

In 1971 the United Nations Economic and Social Council granted Interpol the status of intergovernmental organization, clarifying its legal status as an international organization. This change permitted the two-way exchange of information, documents, consultants, and technical expertise, as well as the presence of Interpol observers at United Nations General Assembly sessions, and the right to submit proposals for the United Nations' agenda.

The first Interpol president from the United States, John R. Simpson, was elected in 1984, and the following year the organization appointed its first non-French secretary-general since its 1946 reorganization, Raymond E. Kendall from the United Kingdom. Interpol subsequently decided to construct a new building for the General Secretariat in Lyon, France, a move that coincided with a complete reorganization of the internal structures of the secretariat.

In 1990 Interpol initiated its X.400 communication system, which enabled NCBs to exchange electronic messages directly with one another and with the General Secretariat. The introduction in 1992 of an automatic search facility allowed remote searches of the Interpol database. A new Interpol database, the Interpol Criminal Information System (ICIS), came into operation in 1998.

In 2000 Ronald Noble, Interpol's first U.S. secretary-general, took office. Noble was reelected to serve a second term in 2005. Interpol's I-24/7 Web-based communication system was developed in 2002. The new system, which replaced the obsolete X.400 system, improved NCB access to Interpol's multiple databases.

#### INTERPOL'S DECISION-MAKING BODIES

The General Assembly is the organization's supreme governing body and it meets once a year. It is composed of delegates from each member state appointed by the appropriate governmental authority in their countries. The General Assembly makes all the major policy decisions affecting the organization, as well as decisions on working methods, finances, and budget; modes of cooperation; and the program of activities. It also elects representatives to the Executive Committee and approves applications for membership.

The Executive Committee usually meets three times a year. It ensures that General Assembly decisions are implemented, prepares the agenda for General Assembly sessions, approves the program of activities and the draft

budget before they are submitted to the General Assembly, and supervises the secretary-general's administration and work. The Executive Committee has thirteen members (a president elected for a four-year term of office, three vice-presidents, and nine delegates elected for three-year terms of office), and the seats are shared equitably among different regions of the world.

The secretary-general is the organization's chief official and the head of the General Secretariat. The secretary-general is responsible for managing the daily work of international police cooperation and for the implementation of the General Assembly and Executive Committee decisions. The secretary-general is nominated by the Executive Committee and confirmed by the General Assembly for a five-year term with the possibility of reselection.

**Structure and Budget.** The General Secretariat is the permanent administrative and technical institution through which Interpol operates. It implements the decisions made by the General Assembly and the Executive Committee, supervises and coordinates the fight against international crime, centralizes information on crime and criminals, and maintains contact with national and international authorities. The General Secretariat staff is divided into two categories: police officers or international civil servants, seconded or detached by member states, and staff employed directly by the organization.

In each of the organization's member states the National Central Bureau (NCB) is the focal point of cooperation. Each member state has a single Interpol "contact" whatever the type of criminal case involved, thus reducing linguistic difficulties. Furthermore, each NCB can initiate, at the request of any other NCB, large-scale operations that may involve other police or government departments. The NCBs collect documents and information relating to international law enforcement from sources in their own countries, and they share this material with other NCBs and the General Secretariat. Any NCB may restrict the circulation of information it provides, even down to a country-by-country basis. The communications systems developed by the General Secretariat have this facility as an integral feature. They also ensure that police inquiries and operations requested through Interpol channels are carried out in their own countries and that the results are communicated to the requesting party. In addition, they transmit to NCBs in other countries requests for international cooperation made by their own judicial authorities or other governmental departments.

International cooperation also enables law enforcement personnel from one member state to travel to another to investigate international offenses. The NCBs

are responsible for organizing these missions or for authorizing them with the consent of the appropriate judicial authorities.

The heads of NCBs attend Interpol General Assembly sessions as members of their countries' delegations and subsequently ensure that the General Assembly's resolutions are implemented. NCBs may communicate directly among themselves. However, they are expected to send copies of their correspondence to the General Secretariat so the latter can perform its task of centralizing information and coordinating cooperation.

Groups of member states of a same region work in partnership with Interpol to provide sub-regional bureaus (SRBs). Managed by the General Secretariat, SRBs are partly financed by the member countries of the region concerned.

Interpol's activities are primarily financed by the annual budget contributions of the member states. The operating budget for 2005 was just under 35 million euros. An external audit is conducted by an independent body appointed by the General Assembly.

#### OPERATIONAL POLICE SUPPORT AND GLOBAL COMMUNICATIONS NETWORK

Interpol provides a set of tools for international police cooperation: a global network, an international notice system, various databases, forensic services, and criminal analysis. Interpol's worldwide police communications network is unique, and the fundamental tool that underpins international police cooperation. Known as I-24/7, it uses a high-security virtual private network over the Internet for heavily encrypted data. The system facilitates access to Interpol's many databases of criminal information and allows police to transmit key data, including photographs and fingerprints, helping the law enforcement community to work together more effectively and much more quickly.

**Interpol Notices.** Interpol notices give the identity particulars, a physical description, and, sometimes, photographs and fingerprints of an individual suspect. Notices are used to assist the law enforcement community around the world by exchanging critical crime-related information.

Depending on their objective, five types of color-coded notices are issued: (1) red notices—to make arrests with a view to extradition, contain full details of the national arrest warrant and the offense committed; (2) blue notices—to collect additional information about offenders and help trace them, and to locate witnesses to crimes; (3) green notices—to warn about offenders who operate in more than one country; (4) yellow notices—to locate missing persons (such as minors, people suffering from

amnesia, etc.); and (5) black notices—to seek the identity of unidentified bodies by giving their descriptions and fingerprints where possible. Usually notices are issued at the request of NCBs, but the General Secretariat may also issue green notices on its own initiative.

**Databases.** Interpol maintains a series of interrelated databases to assist members in making full use of the information available. For example, special topic areas are devoted to drugs seizures, travel and identity documents, DNA, counterfeit payment cards, stolen motor vehicles, wanted and missing persons, other notice subjects, and stolen works of art. The majority of member countries have an automatic search facility, and other law enforcement services, such as customs and immigration, may also have access to Interpol databases that can help them in their crime prevention and detection work.

#### Forensic Services.

**DNA.** Interpol provides support to enhance member states' DNA-profiling capacity, encouraging DNA-profile comparison across borders. Specifically, Interpol provides: a DNA database available to all member states with an international DNA-profile matching capacity; a DNA Monitoring Expert Group; and an International DNA Users' Conference to focus on best-practice models and contemporary applications. Interpol also provides regional support in the form of national assistance packages, training, and workshops for member states connected by local forensic and investigational issues affecting DNA applications.

**Fingerprints.** Interpol's Automated Fingerprint Identification System (AFIS) offers member countries the opportunity to send and receive high-quality electronic fingerprints in compliance with Interpol standards to and from the General Secretariat. The AFIS branch also uses working groups to promote fingerprint training and identification standards, and organizes a biennial international fingerprint symposium. In addition to AFIS, Interpol has implemented ANSI-NIST, an internationally recognized standard for interoperability between AFIS systems, regardless of supplier. Any system can be automatically tested for compliance.

**Disaster Victim Identification.** Interpol recommends best practices in disaster handling procedures, in the areas of identification and international cooperation. It also emphasizes the importance of planning in advance for such events so that all the necessary elements of response are already in place if a disaster occurs.

**Criminal Analysis.** Interpol analysts work on strategic and operational projects, as well as offering training and consultancy to law enforcement bodies. Many of these projects are related to aspects of organized crime

or terrorism. Regular threat assessments are produced on a global and regional basis, as well as for specific crime areas. Occasionally, Interpol also provides analytical assistance to other international bodies.

#### MEETINGS AND CONFERENCES

Representatives of member states meet to discuss cooperation matters specific to a particular continent or region, or to discuss certain types of crime, at regional conferences. Interpol also organizes symposia, where police officers and experts share experiences and technical information.

#### INTERPOL'S SPECIALIZED ACTIVITIES

Interpol concentrates on three major groups of international crimes:

1. Crimes against people and property: terrorism, crimes against children, trafficking in human beings, illegal immigration, fugitives, maritime piracy, weapons of mass destruction, stolen vehicles, and stolen works of art.
2. Economic, financial, and high-tech crime: banking fraud, money laundering, counterfeit banknotes and payment cards, cybercrime, advance-fee fraud, corruption, and environmental crime.
3. Criminal organizations and drugs: organized crime and drug trafficking.

In addition to assistance with crime investigations, the organization provides crime-intelligence analyses at

global, regional, and crime-specific levels. The organization also supplies international crime statistics online.

**Interpol and the International Community.** Interpol has many contacts with a wide range of authorities and international institutions where cooperation is likely to be of mutual assistance. Its long-standing relationship with the United Nations was formally recognized in 1971 by the adoption of a special arrangement on cooperation between the United Nations Economic and Social Council and Interpol. Interpol signed a cooperation agreement with the Council of Europe in 1959. Since then it has worked with the council on crime issues and on the preparation of European conventions, many of which contain provisions stating that the signatories may use Interpol channels to forward judicial documents.

Interpol also cooperates with a number of other international bodies, and it participates in the activities of various nongovernmental organizations. Interpol maintains formal cooperation agreements with many of these bodies and organizations. Interpol's objectives in these relationships are to strengthen efforts, avoid duplication, exchange information, and share expertise.

# Police Leadership

---

Policing may be carried out for and on behalf of the state, in order to protect its identity and stability; or by the community, in order to serve its own local interests; or by any variation between those two extremes. It is therefore possible to contrast two very different types of police organization, embodying two very different forms of leadership. The first type of organization is the police force: A police force is an organization whose primary function is to serve the state. It may be a gendarmerie. It is likely to have some form of military leadership, perhaps of regular army officers on secondment. The second type of police organization is the police service: A police service sets out to serve the local community, often in partnership with other organizations, and its leadership is more likely to be a matter of negotiation and compromise than the supposed autocracy of military leadership.

The two types of police organization do not exist in pure form. All police forces provide a service and all police services use force. However, police organizations in general have tended toward an autocratic style of leadership that has hampered their ability to adapt to changing circumstances and is at variance with their espoused aims.

## THE EVOLUTION OF POLICE LEADERSHIP

Policing itself is an activity as old as social life. All groups have some form of social control. How policing is organized has changed over time. The British statesman Sir Robert Peel (1788–1850) created London's Metropolitan Police in 1829 as a quasi-military organization. He gave it uniforms, ranks, and the requirement to obey the lawful commands of senior officers—although its workforce was not placed under military discipline. At the same

time, he was determined to ensure that the new police would be both acceptable to the public and distinguishable from soldiery acting to restore order by force. Peel saw the attainment of public acceptance as a challenge to character as much as organization, and laid down standards of behavior for his new “peelers” which are still applicable today.

Peel was determined that the new organization should develop its own form of leadership—except at the very top, where he appointed gentlemen as joint commissioners. However, Peel was emphatic that his new organization should not be generally officered by gentlemen and should have no officer or commissioned class. The ranks for the new organization were created as superintendent, inspector, sergeant, and constable, and only the word *sergeant* had a military connotation. Promotion was to be in force. Initial selections were of such people as former noncommissioned officers in the army: They were men with experience of authority, who knew their place in society and could be expected to not challenge prevailing mores.

The new police were intended to prevent or deter crime rather than investigate it once it had occurred, and they patrolled a fixed beat system under strict supervision. They had little legal knowledge, and there was no intention to create a police profession. The new police were expected to develop a working relationship with the public and not to act as bullies, cultivators of informants, or spies. To that end, they wore a conspicuous but not military uniform, and were famously, in truth as in legend, armed only with a truncheon—to be supplemented by firearms or cutlasses only when necessary. Supervision was strict and discipline harsh, mediated only by the inescapable fact that much police work must be carried out alone.

The model of the new police service as an entirely male, almost entirely working-class organization with a single point of entry and no officer class was to last for a very long time. Indeed, in many aspects it is still the prevailing model today. Although the police service now includes women as well as men, it is no longer entirely working class, and includes a large percentage of university graduates in its ranks—as well as some very highly educated senior officers. However, entry is still only at the rank of constable, and there is no officer class or police equivalent of the army's general staff.

The British Home Office, the department of the British government that is responsible for domestic security, acting in a pragmatic way to improve the quality of police leadership, made three changes to Peel's model that are of significance in the continuing evolution of police leadership.

**The Creation of the Police Staff College.** The national police college for England and Wales was set up in 1948 with the intention of developing the present and future leadership of the police service. Despite its extremely cautious beginnings, the creation of the Police Staff College (the name was changed in 1979) was an immensely significant event for the British police service and its leadership. For the first time, the senior officers of some 150 separate and entirely independent forces were to meet together in one place, exchange experiences and ideas, and begin to develop a common ethos. What the Police Staff College taught, for example by way of leadership theory, was not of the first importance. What was important was that it existed.

**The Importance of the Senior Command Course.** As the college developed, so did its senior command course: a lengthy, residential, and assessed course in which senior officers gathered to explore all aspects of policing. It has been a Home Office requirement since 1993 that all members of ACPO (the Association of Chief Police Officers of England, Wales, and Northern Ireland) must have attended this course. The current generation of senior police officers in the United Kingdom are the product of the Police Staff College and its various programs.

**The Need to Serve in More than One Force.** Home Office regulations further stipulate that no police officer may rise in service from constable to chief constable in one force, without having served in another—a further attempt toward giving the police service as a whole a more professional leadership.

#### THE SITUATION TODAY

The Police Staff College model of leadership education and development is no longer in fashion. Previously

accepted axioms of police leadership are under review and the cult of “modernization” is being applied to police leadership, as in other areas of governmental reform. There is an underlying dissatisfaction with the police service and its leadership that, some believe, may be an endemic feature of modern life.

Policing is and will remain an expensive public service; difficult to measure in terms of performance; unable to resolve in any complete sense issues such as crime, international terrorism, and antisocial behavior; and liable to periodic and indeed cyclical scandals and crises. External pressures may have some effect, but the real pressure for reform must come from within.

That reforming zeal needs to be based upon three factors: (1) a proper understanding of the nature of policing and the enduring values upon which policing by consent is based, if the relatively fragile and recently established traditions of public-service policing are to survive and flourish; (2) a clear understanding of the general principles of successful leadership; and (3) an authentic model of successful policing. This essay shall deal with these requirements in reverse order.

**Public-Safety Policing.** As mentioned above, the evolution of the police service is continuing. Robert Panzarella (2004) argues that there is an emerging model of public-safety policing with three outstanding characteristics: (1) Emphasis on the safety of people through risk reduction, including crime prevention; (2) Increased reliance on technology for routine policing; and (3) Increased cooperative relationships between police, other agencies, and the public.

In Britain, according to Panzarella, the national government is promoting core components of a public-safety model of policing. In the United States, some of those components are being promoted through the models of problem-solving policing and community policing and some through national initiatives under the banner of “homeland security.” The new model may be more evident, more refined, and better articulated in Britain, but developments in American policing are aimed in the same direction.

The style of leadership best suited to the emerging model, somewhat paradoxically, may be a military one. This, however, is a new doctrine of military leadership emphasizing flexibility, discretion, and a commitment to core values.

#### GENERAL PRINCIPLES OF EFFECTIVE LEADERSHIP

There is a substantial knowledge base on the principles of effective leadership as they apply within any organization. Generally speaking, the most effective style of leadership

is when the leader is able to provide structure and show consideration (Argyle 1969). Additional studies of leadership have emphasized how the character of leadership changes. Thus, for example, at the most senior levels in a management hierarchy, a visionary perspective is needed, along with the skills to make the vision a reality.

The personality and values of the leader are of immense influence on the organization as a whole; and there is a cluster of generally agreed and clearly identifiable characteristics of superior leaders and managers. “Visionary,” “charismatic,” and “transformational” aspects of effective leadership need to be identified, explored, and understood in terms of their strengths and weaknesses for application in the modern organization. “Transformational leadership” has taken center stage in much contemporary theorizing about effective leadership, and needs to be further explored.

**Transformational Leadership.** James MacGregor Burns’s research (1978) serves as a useful point of departure for the study of transformational leadership. He “discovered” how important it was for the leader to convey a sense of vision and mission that would enhance the followers’ sense of the possible. Transformational leaders also motivated their followers to achieve organizational goals rather than pursue self-interest. They altered the psychology of the followers; the needs for security and safety were overtaken by a search for self-esteem and autonomy. Transformational leaders help their followers go beyond what they thought was possible. They excite feelings that bind their followers to the organization and its mission.

Building on the earlier work of Burns, as well as more recent developments in leadership theory, Gary Yukl (2002) contrasts and clarifies the difference between “transactional,” “charismatic,” and “transformational” leadership. Yukl thinks that the transformational leader is more likely to empower followers. He notes that they delegate significant authority to individuals, create self-managed teams, and develop the self-confidence and skills of their followers.

The research findings make it possible to provide some basic guidelines for the practice of transformational leadership. Thus, the leader should:

1. Articulate a clear and appealing vision.
2. Explain how the vision can be attained.
3. Act confidently and optimistically.
4. Express confidence in his or her followers.
5. Use dramatic, symbolic actions to emphasize key values.
6. Lead by example.
7. Empower people to achieve the vision.

**Effective Police Leadership as a Distinct Form of Practice.** *The Constitutional Context.* Police work takes place in a constitutional context. Its leadership requires an understanding of the underlying features of a liberal democracy and the need to apply them in policing.

*The Legal Context.* Police work also takes place in a changing legal context. Politico-legal developments continuously impact upon and have implications for police leadership and management practice.

## HUMAN RIGHTS LEGISLATION

As a significant example for the first two points, this essay will consider the impact of human rights legislation upon police practice and leadership. Under Great Britain’s Human Rights Act (2000), the police service is a public authority and is thereby obliged to respect and uphold human rights. This is both a constitutional and legal obligation and has considerable implications for police leadership in terms of knowledge, skills, and attitudes. It has altered police behavior and given the police a new language, or at least a terminology, by which to justify their actions, so that one of the results of the Human Rights Act has been to make police leaders better capable of demonstrating rationality in their professional decision making.

To protect human rights is, as the Police Service of Northern Ireland has declared, the *raison d’être* of policing, and it is cited as a fundamental task of the police in the European Code of Police Ethics (Council of Europe, 2001). It is entirely consistent with the tradition of policing by consent of which the police services of Great Britain are rightly proud, and it does not prevent but rather promotes effective law enforcement. It reinforces the police inclination to promote human rights in its role of protecting the weakest and most vulnerable members of society—who are, of course, disproportionately the victims of crime, oppression, malice, and neglect by both private individuals and state agencies that fail to treat them with respect. It also provides a valid and accountable mechanism for the invasion of qualified human rights, such as the protection of privacy, when such invasion can be justified.

Those who plan murder and oppression cannot claim the protection of privacy in order to plot such activities or the necessary secrecy in order to review their success or failure after the event. Indeed, the police are obliged to invade certain rights on occasion, and in dereliction of their duty if they do not do so. Moreover, the language and case law of human rights give them the possibility to decide on an analytical basis how far they can exercise their powers before, for example, legitimate deception may become illegitimate entrapment.

Overall, human rights principles and legislation are making a significant impact upon the police service and its leadership.

### THE PUBLIC SECTOR

The police are part of the public sector, and police leadership must be based upon a proper understanding of the idea of the “public good.” While it is helpful to think of those who use public services as customers, consumerism is, by itself, no guarantee of the public interest. The tasks of the public domain include the balancing of interests and the search for collective values. Public-sector management necessarily involves: managing diversity and conflict; building and testing for consensus; and using scarce resources to best effect in achieving the valued ends shared by the collectivity. In short, public-sector leadership is especially concerned with realizing the common good. In consequence, public-sector leaders are obliged to forge partnerships with collectives, communities, organizations, and agencies.

**Police Work as a Unique Occupation.** Police work is in some ways different from other work. It is possible that no single feature of police work is unique. However, the combination of unusual factors, linked to the absolute need for integrity under pressure, presents a particular challenge to police leadership. Moreover, the principles and methods that may be successfully applied in other contexts may not be transferable to policing, or may lead to unintended consequences.

**Organizational Factors.** At the organizational level, police work is characterized by:

1. The wide menu of responsibilities—from “enforcement of the criminal law,” through “maintaining public order,” to “reassuring the community.”
2. The uncertainty about the fundamental role of the police.
3. The exacting demands of the criminal justice system. There appears to be a “mismatch of emphasis” when police and other functionaries within the criminal justice system are compared. For police, the priorities are with people, especially victims of crime.
4. The degree of public scrutiny of police work, unmatched in any other occupation.
5. The large degree of discretion employed by the individual police officer.

Either police leaders have to find a way to resolve the apparently contradictory and ambiguous character of the police purpose or they have to create a followership that thrives on these contradictions.

**Day-to-Day Practices.** On a day-to-day basis, police work is characterized by:

1. The need for instant decisions.
2. The reliance upon individual skills, judgment, and initiative.
3. The emotional demands of policing.
4. The physical dangers of policing.
5. The influence of the police officer’s image.

As stated in 1993 by the ACPO’s Quality of Service Committee:

In most occupations, front-line staff have only routine, relatively unemotional contacts with other people. In contrast, police officers frequently operate in an emotionally charged environment. This can be caused by dealing with a crisis (for example a road traffic accident, a sudden death, being the victim of a crime, etc.) or, alternatively, enforcing the criminal law or responding to other “conflict” situations which are themselves stressful for every one present... To add to this, the police have close relationships with only a quarter of the population, the most deprived. It can be difficult for officers to maintain professional detachment—still less to have any measure of sympathy... The emotional stress of policing cannot be underestimated.

Significantly, the ACPO goes on to underline how, in the absence of the kinds of support system that are found in, for example, marriage guidance teams, the “canteen culture” of the police “is given room to thrive.” In that culture, police leaders are perceived as “not understanding” the circumstances and realities of “front-line” policing.

### THE PSYCHOLOGICAL AND ETHICAL CONTEXT

Police work takes place in a psychological and ethical context. Its leadership requires a psychological understanding of the sustained impact of police work upon the mentality and personality of the officers concerned, both individually and collectively. Police leaders have to understand that police officers are liable to moral depletion and need sophisticated methods to prevent its occurrence. Police incline toward pragmatism, suspiciousness, in-group loyalty and solidarity, conservatism, and an “action” orientation. These features of the police emerge from experiences and interactions within the police culture(s).

The noted police observer William Ker Muir recognized how the exercise of coercive power is likely to have profound effects upon an individual human personality and found that police officers were susceptible to moral

depletion and unprofessional conduct if their character were not marked by certain virtues. Muir argues that:

To become a true professional, a police officer needs to develop and cultivate two virtues—one moral, the other intellectual. The moral virtue is “passion.” Passion is the strong conviction that the achievement of certain “goods” or ends is so important that it allows the individual police officer to reconcile him or herself to using morally dangerous, coercive, or violent means to achieve them. The second virtue, “perspective,” serves to counterbalance passion. Perspective is akin to having a sense of the “big picture” concerning humanity. It enables the police officer to respect the suffering, sorrows, pain, and sensitivities of others. Perspective teaches people not to have a cynical outlook on humankind but to recognize “tragedy” in the human condition.

Passion and perspective work together to discourage the destructive effects of having to exercise coercive power. Thus, a good police officer understands the psychological dynamics that result from the obligation to use coercive force—and how to withstand its potentially corrupting or damaging effects. (Muir 1977)

Muir’s analysis implies that an “occupation-specific” knowledge of the psychology of policing is an essential requirement for police leadership practice. Without it, there can be no guarantee that police leaders can provide the conditions within which the virtues of “passion” and “perspective” can be cultivated. In consequence, the police mentality will continue to reflect and sustain the dysfunctional aspects of police occupational culture unless and until this is addressed as a major leadership issue.

#### **POLICE LEADERSHIP: ENDURING PRINCIPLES**

The distinguished former chief constable John Alderson (1998) states that the police function should be based on the notion and principle of trusteeship, and the principles that he recommends are bound to notions of justice, fairness, tolerance, and a deep sense of community.

Robert Adlam and Peter Villiers (2003) identify and describe six effective and enduring principles of police leadership, as follows:

1. *Service*: Whatever their level in the police organization, effective leaders are committed to providing the best possible service to the people policed.
2. *Unselfishness*: Leaders demonstrate a genuine concern for and interest in both staff and colleagues. Fundamental and significant to the process of effectively leading people is the need to be visible

and to put the interests of the staff, the organization, and the public before the personal interests of the leader.

3. *Strategic awareness*: Effective police leaders ground their practices upon a range of personal powers and qualities that make a real difference to their followers. This includes a range of intellectual virtues that, in combination with professional knowledge and experience, generate credibility and confidence. Effective police leaders are sensitive to the wider social, cultural, political, and business environment within which the police service operates. They are able to communicate with a diverse public and with all levels of the service itself.
4. *Support*: Effective police leaders support, value, and encourage their staff, who find themselves enjoying a working milieu in which they can flourish. Central to the process of “getting the best” from staff is the ability to provide a clear vision and sense of direction.
5. *Professional excellence*: Good police leaders are exemplary practitioners who set and maintain high personal and professional standards in the workplace. Put differently, they are rigorous professionals striving for excellence, who demonstrate both intellectual and moral virtues. Effective police leaders are trustworthy, open, honest, fair, and compassionate. They are willing to confront poor performance as well as dysfunctional and inappropriate behavior. Effective police leaders have a vibrant “can do” approach to the challenges facing their part of the police organization. They are recognizable as individuals, and impress because of their integrity, genuineness, and warmth.
6. *Endurance with integrity*: Good police leadership requires the qualities of stoicism and endurance under pressure.

The fourfold challenge of leadership is physical, intellectual, moral, and spiritual, and requires a life-long learning process. Adlam and Villiers described the good person as leading life according to these virtues:

- Benevolence and justice.
- A disposition to think clearly.
- Conscientiousness and integrity.
- Moral courage and respect for the moral law.
- The ability to realize vividly, in imagination and feeling, the inner lives of others.

Such a list of virtues is demanding, to say the least; and to live one’s life consistently at such a level may

prove impossible. To aspire to do so, however, is not an ignoble ambition. Leadership can be a dangerous and painful task. It is always likely to be a lonely one. In order to be able to function effectively, police leaders need to acquire and cultivate resources at every level, to keep a sense of proportion, and to exercise a sense of humor.

# Policewomen

---

Historically, policing, like the military, is a male occupation. For the most part, it remains so. If women have been admitted to police forces in almost all countries, it is because of societal changes rather than a change of heart among professional leaders. In most Western countries, women were initially admitted to the force only in a token fashion. Even where they were integrated into the police force, they were restricted to certain levels of employment and categories of work. Even in advanced countries, the percentage of women in the upper echelons of the police force remains low. In a number of developing countries, there are no women at all outside of clerical or dispatcher positions. Gender discrimination in policing is particularly prevalent in Africa, especially when placing women in positions of authority over men.

Nevertheless, there continues to be incremental progress throughout the world in the employment of women in police forces. The catalyst for change was the women's movement that occurred in Western countries. In addition, many social reformers argued that women could provide a humanizing influence on police forces, and that the inclusion of women would change for the better not only the professional aspects of the force but also its culture.

The admission of women into policing was also the result of labor shortages in Western countries beginning in the early twentieth century. Hiring women to do clerical work freed male officers to patrol the beat and chase criminals. The growth in the number of women criminals also necessitated the presence of women officers who could be trusted to frisk them or undertake other sensitive tasks. In fact, in many European countries, the first policewomen were employed in what were known as

morals squads, that is, units devoted to fighting prostitution and enforcing decency laws applying to clothing. The first policewomen in New Zealand were employed as matrons to deal with lost children. Women were recruited in larger numbers during World War I (1914–1918) because men were away at the front and there was a need to fill vacancies at home. There was initial opposition from policemen to the employment of women, and after the war ended the recruitment of women slowed.

Some of these experiments in hiring women police extended to the colonial countries during and after World War II (1939–1945). The first policewoman was hired in India around 1947, after independence. In Japan, women were introduced into the police force after 1946, but they were employed in the traffic and juvenile sections only. Japanese policewomen were also prohibited from working after midnight or from engaging in street fighting. In 1949 ten women formed the Singapore Women's Special Constabulary to deal with homeless women and destitute children. In 1949 a woman was admitted to the Hong Kong police force as a clerk and an interpreter. In 1946 nineteen women were added to the Hungarian police force.

Even when women were admitted to the police force, they had to endure ribaldry and hostility from men. On the other hand, many women achieved early success. Some even achieved celebrity status. Alice Stebbins Wells, who joined the Los Angeles Police Department in 1910, became the first sworn woman police officer in the United States. In 1915 Kate Cocks became the first constable in the South Australia Women Police Branch and the first policewoman in the British

Empire. By the late twentieth century, a number of women had achieved leadership positions: Christine Silverberg became Calgary, Alberta's first female chief of police in 1995; Pauline Clare became Great Britain's first woman chief constable in 1995; and Koraiza Abdulla was appointed Malaysia's first woman police commander in 1996.

The admission of women to police forces and their rise to positions of responsibility were hastened by the actions of some male colleagues. Among the men who opened doors to women police were Roger Langeron of Paris, the Marqués de Fronda of Spain, and Peter Fraser of New Zealand. In 1944 the British Home Office issued a directive calling for greater participation of women in the police force. During the 1970s the German minister of the interior authorized an employment program for women in the police.

Until recently, certain types of police work were designated as "reserved" for women. These included dealing with "soft" criminals, such as runaways and shoplifters. Women were also used as decoys for luring male clients of prostitutes or drug dealers and as agents provocateurs. Undercover work was the most difficult and posed the greatest risks. In Japan, policewomen also served as tourist police because their good looks were thought to give them an advantage over males.

Women police officers are thought by some authorities to be unable to play on a level field with men in the use of firearms. Some male police officers believe that women lack appropriate tactical skills to fire when necessary, and as a result some male patrol officers are reluctant to accept a woman as backup. Research in the United States shows that women do often score lower than men in firearms tests, although training has narrowed the gap. In addition, it is feared that some male officers may suffer injuries when they try to protect female patrol partners in dangerous situations.

Breakthroughs in the employment of women police officers have generally occurred after the passage of equal-opportunity legislation. Such legislation exists in all Western countries and in some developing countries. The Civil Rights Act of 1964 in the United States, the Sex Discrimination Act of 1975 in Great Britain, and similar legislation elsewhere enabled women to use litigation to open doors to employment in police departments. These laws also enabled women to circumvent earlier restrictions. In many countries, women are still

excluded from jobs that are considered dangerous and morally or physically risky. Some countries had exclusionary laws against married women serving on the police force. In many countries, civil laws also mandate equal pay for equal work. Another area of discrimination that is correctable through litigation is selection criteria and physical tests that favor men. Most departments have height requirements and other tests that are heavily weighted in favor of males.

One fallout from the admission of women to police forces is sexual harassment, a problem not unique to police departments. Sexual harassment affects morale as policewomen become the objects of pranks, jokes, innuendo, and propositions against which it is difficult to create any legal barriers. Sexual harassment of a legally definable nature is present in almost all police departments. The harassment increases among patrol personnel, and decreases among nonsworn personnel and ministerial employees. Unfortunately, it is difficult to prove allegations of sexual harassment and even more difficult to get a conviction.

Policing is an intensely physical profession where such physical attributes as strength and presence define the job. This places many women at a disadvantage when competing on a level playing field without gender-based hiring quotas. Even decades after women were admitted in large numbers to police forces, concerns about male physical superiority and female unfitness persist. To compensate, policewomen may adopt two defense mechanisms: one is to "defeminize" and the other is to deprofessionalize. In the former case, policewomen adopt a pseudomascularity and become "one of the boys." In the latter case, they accept a subordinate role as the price of career advancement. Woman police may also be challenged by operational practices that require them to confront violent criminals with little respect for authority.

It is not known whether the number of policewomen may change substantially in the future, given the nature of police culture and police work. It is also not clear whether the presence of women will have any impact on the style of policing. Nevertheless, antidiscrimination legislation has done much in pushing upward the participatory levels of women in police forces.

# Role and Place of the Police in Security Sector Reform

---

Security sector reform takes a holistic and integrated view of the dynamics and needs for human, civic, and state security within the contexts of societal change. According to the British Department for International Development, security sector reform “describes the process for developing professional and effective security structures that will allow citizens to live their lives in safety” (DFID 2002). Security sector reform is based on an analysis of the capacities and contributions of all governmental and private security-providing agencies within a society—conventionally labeled the *security sector architecture*. The goal of security sector reform is creating a security sector architecture that can sustain the effective protection and promotion of security (in all its dimensions) balanced against dominant normative values, including democratic politics, good governance, and accountability to civic society (Edmonds 2002). Successful security sector reform should lead to more effective, legitimate, accountable, and sustainable security systems and a sense of safety among all citizens. The normative goal at the core of security sector reform is human security, broadly defined. The practical question is how to protect citizens and communities against insecurity or threats to their security from all sources. Considering police reforms within the context of security sector reform, rather than focusing on the police alone, can cast the difficulties and opportunities for reforms in a different light.

Security sector reform arose from three practical and theoretical concerns: (1) oversight and control of the security apparatus (mainly the military) as a prerequisite

for political democracy; (2) the impact of human and state insecurity on the capacity and prospects for economic and political development; and (3) concerns with notions of good governance in political systems and the concomitant notions of transparency, accountability, and integrity.

A core concern of civil-military studies has been democratic control of the armed forces and related agencies, as well as how to prevent the power of the gun from subverting the integrity and stability of political institutions. Unless the military, and other coercive agencies of the state, can be kept in their barracks and garrisons, prospects for democracy and economic development are dim.

Foreign aid and economic development agencies (e.g., the World Bank, foreign aid offices in donor countries, nongovernmental organizations interested in economic and political development) have realized that foreign aid, even if effectively utilized in the recipient countries, will not sustain economic development unless the aid is distributed equitably and unless threshold conditions of domestic security have been met (e.g., reducing the likelihood of military coups or the incidence of crime and disorder). If people believe they are not safe or they fear that what they have struggled to acquire through aid and hard work will be stolen by corrupt officials, then economic aid accomplishes little. Security and development go hand in hand.

A large security sector is a drain on the limited resources of transitional and developing countries. It is far better to invest those resources in programs that

improve the lives of the people. Reforms seek to establish a greater degree of democratic control over the security sector and to accomplish a redistribution of resources to other sectors. Security sector reform leads to good governance.

Good governance means minimal levels of integrity (or noncorruption) in government agencies, transparency of governmental decision making and outcomes, responsiveness to public demands, accountability to civic institutions (or a clear hierarchy of civilian control over the state's coercive agencies), and adherence by security forces to domestic and international norms and the rules of law that safeguard human rights (Ball 1998). Misgovernance, in contrast, leads to social conflict and violence, allows crime to flourish, creates insecurity, sustains corruption, wastes scarce resources, leads to violations of human rights, and protects authoritarian and dictatorial regimes.

### THE SECURITY SECTOR

The security sector is a flexible concept. At a minimum, the security sector includes the state-controlled agencies of coercion that are charged with the protection of civic society and the state—the armed forces, police, border-control systems, intelligence agencies, and co-opted informal control mechanisms. The security sector also encompasses agencies whose work is essential to sustaining the effectiveness and accountability of the agencies of control (the courts, legal systems, oversight mechanisms, and budget agencies). A more inclusive conception of the security sector would include correctional systems, economic support for control agencies, and civic society participation in social control. Some analysts also include natural threats to human security (e.g., floods and earthquakes) and the agencies and policies designed to minimize or prevent such threats.

The question of what should be included in the security sector has some analytical interest but is not of great relevance to the practice of reform. Rather, emphasis is placed on the process by which policies can be created and sustained by domestic and international actors, and on the policies that will lead to democratic reform of the armed forces, police, intelligence, border security, and other conventional elements of the security sector.

Of central importance is the theoretical and practical notion that minimal levels of security are a prerequisite but not a guarantee of good governance, the rule of law, or democratic accountability. The coercive agencies of the state have the power to subvert development, stability, and democracy, but they are, at the same time, a necessary foundation for achieving stability and development and for establishing democracy.

### THE POLICE IN SECURITY SECTOR REFORM AND SECURITY SECTOR ARCHITECTURE

The police and reforms to policing systems in countries that have failed, are in disarray, are in transition to more democratic forms of political and economic life, or are on the road to development are essential elements in devising, establishing, and controlling an effective and democratic security architecture. Security sector reform points to the systemic connections of the police to wider security concerns and other security-providing mechanisms. Such reform is seen as a process rather than an outcome. It stresses the inherently political nature of policing systems, especially when they are supported by democratic control and good governance. Security sector reform also highlights the politics of reform in general as it argues for the importance of legitimating new means of coercion and the autonomous capacity of the police to affect their own futures. Such reform underscores the importance of rights as a counterbalance to demands for security in a democratic society, and expands the standards for judging the quality of policing beyond conventional measures of crime and order.

A focus on the governance of the security sector (however the sector is defined) automatically shifts empirical and theoretical attention to the means and processes by which security is sought. Such a focus also raises the issue of good governance. The police are part of the security sector, and reforms of other agencies in the security sector will necessarily affect the police. Reforms of policing systems will be caught up in the wider discourse of the securitization of societies and the globalization of risks and threats to domestic order (Loader 2002). The jobs, roles, authorities, and domains of policing will expand to reflect broader conceptions of security and insecurity, as will the repositioning of policing to other security agencies.

Reform is a process for which each outcome is only a way station to further reform. Policing, as with security sector architecture as a whole, has to be adaptive and responsive to changing domestic and transnational threat conditions, to reconceptualizations of goals and standards for democratic policing, and to fluctuations in the political contexts and civic society-state relations within which policing is delivered.

Policing and the reform of policing are inherently political processes. The linking of policing to broader security threats and other security-providing agencies stresses an aspect of policing that is frequently downplayed in the search by police to gain the status of a professional occupation. The democratic requirements for accountability, transparency, and the goal of good governance lead to this unavoidable enmeshment of the police in the security sector architecture and the concomitant need to involve

civic society, the police, and the state in a negotiated understanding of the limits of police authority when balanced against the rule of law and the protection of human rights. Democratic policing is balanced policing.

The behavior of the police will help determine levels of insecurity experienced by civic society but will have delegitimizing consequences as well. Police reforms are not self-sustaining but require civic legitimization both to be effective and to be accorded a normative status. Yet the legitimacy of governments, the identity and social status of groups, and the people's sense that they can depend on promises made, rewards earned, and the likelihood of a stable future will be influenced by what the police do. Policing is about more than crime control, order maintenance, and the protection of the state. The manner and substance of the policing experienced by the community will legitimate or delegitimize social order, sustain changes or undermine them, and enable reform not just in the security sector but in other important sectors of social and political life as well.

The reform of policing systems is a fundamental requirement for human security, the stability of democratic governance, and the attainment of justice. Placing the police within the ambit of security sector architecture and security sector reform reemphasizes that policing is about more than enforcing laws, providing services, or maintaining public order. Context matters and reforms require political skills, as well as organizational and functional knowledge. Policing is part of the governance of security, and good policing is part of good governance and the promotion of democratic forms of societal life.

# Typology of Police

---

Across the modern world, variants of the word *police* are employed to describe institutions charged with the enforcement of laws, the maintenance of public order, and the prevention and detection of crime. These tasks can be very different; moreover, the institutions that are labeled with variants of the word *police* are not the only ones involved in these tasks. Landowners pay gamekeepers and factory owners employ watch guards to carry out policing duties on their property; traffic wardens enforce street regulations; forensic scientists are involved in the detection of crimes; and drug enforcement agents, immigration officials, and state functionaries all carry out law enforcement duties that could be defined as “policing.” The complexity of these tasks have led some academic theorists to situate the defining characteristic of the police institution as being the police officer’s ability to use force to enforce the law in his or her everyday dealings with citizens. But, in turn, this has to be qualified with an emphasis on the fact that in neither liberal democratic nor authoritarian societies do police officers spend their days swinging batons or firing guns. This article will describe some of the different types of policing and the ways in which they evolved, primarily in a broad European and North American context.

Although modern bureaucratic police institutions are largely the creation of the nineteenth century, the word *police* itself has roots in the ancient world. In classical Greece, the term *politeia* referred to all things relating to the survival and well-being of the city-state (the *polis*). In ancient Rome, *politia* meant simply “the state,” an entity that, unlike any other, had the right to prescribe limits on both public and private behavior.

In the early modern period, *police* was used generally to describe the good management of a defined territory,

particularly a city or a town. This could involve the cleanliness of streets, the management of markets, and the regulation of various forms of trading, as well as more precise issues such as the maintenance of public order and the apprehension of criminal offenders.

During the sixteenth and seventeenth centuries, princes in the German lands began to develop the concept of *Gute Policey*. To this end they published, sometimes in cooperation with their advisory estates, “police ordinances” designed to ensure the preservation of the established social order and of morality, but also to encourage economic growth. It was, however, easy to publish ordinances, but enforcing them required agents on the ground, and these were not always provided. Individual cities and towns usually funded their own systems of watchmen and agents who picked up vagabonds, prostitutes, and beggars. These workers enforced various urban regulations.

The emergence of the state during the seventeenth and eighteenth centuries, and the impact of the French Revolution and Napoléon Bonaparte (1769–1821), fostered major developments in policing institutions, and while there were significant differences between each state, there were also sufficient similarities to enable a typology of police to be suggested with reference to situation, command, and management structures. Broadly, three types of police institution can be delineated as emerging during the late eighteenth and nineteenth centuries: state military, state civilian, and municipal. The descendants of each of these types still exist in the contemporary world.

State military police, which may also be characterized under the generic term *gendarmeries*, originated in France under the old regime. While the Gendarmerie

Nationale of contemporary France likes to situate its beginnings in the medieval period, a more realistic origin is in the companies of men established to police the royal army at the beginning of the sixteenth century. These companies were under the command of the military marshals of France, hence their name, *maréchaussées*. During the seventeenth century, they began to acquire more and more responsibilities for the policing of civilians. They were deployed in groups of up to half a dozen men, garrisoned in small barracks in towns and villages on the main roads. They made regular patrols of the roads and supervised fairs and village fetes, and their officers had their own courts and the judicial authority to deal rapidly with petty offenders.

In 1778 the different companies were amalgamated into a single institution called the *Maréchaussée*, but the corps itself maintained its military links and drew the majority of its recruits from army veterans. The *Maréchaussée* was a small body—fewer than four thousand men at its maximum, for a population of close to thirty million. On the eve of the French Revolution, it appeared to have been relatively popular. In the early, liberal stage of the Revolution, the judicial authority of the *Maréchaussée* officers was removed and the institution itself was significantly enlarged and renamed the *Gendarmerie*, reviving the name of an old elite cavalry formation; literally, “men-at-arms.”

Napoléon regarded the *Gendarmerie* as “the most efficient way to maintain the tranquility of a country [since] it provides a surveillance half civil, half military spread across the whole territory.” *Gendarmes* marched with his armies as the agents of the military provosts; they were also created across his empire and urged on both his satellite states and his allies. The half-military, half-civil system showed the imperial flag, and brought and administered the new legal code—the Code Napoléon. This system proved to be an effective opponent of the bandits that had plagued many parts of old regime Europe.

Following Napoléon’s defeat, the *gendarmerie* system was maintained in Dutch, Italian, and German states where restored or continuing princes found it an admirable institution for demonstrating to the rural population that they were now citizens of nation-states. The *gendarmes*—known as *Marechaussee* in the Netherlands, as *Carabinieri* in northern Italy, and as *Landjagers* in parts of Germany—enforced a new reciprocal arrangement on behalf of the state. They were generally deployed in small barracks like the old French *Maréchaussée* and its successor. They ensured the annual collection of taxes and the delivery of annual quotas of military conscripts; but they also brought the state’s new promise of protection from criminal offenders and wild animals, and assistance in time of natural disaster.

Variants of the system were subsequently created by the British as their police institution to maintain the peace in rural Ireland, and by the Austrian, Belgian, Danish, Greek, Russian, and Spanish governments. The administrative structure was largely similar in each of these cases. The members of most of these institutions—the Royal Irish Constabulary was the main exception—were considered to be soldiers. Their duties involved maintaining the internal peace of the kingdom and the pursuit of internal malefactors, but they generally looked to the minister of war as their ultimate authority.

The state-civilian and the municipal police institutions emerged from the common root of the old urban systems. Paris was not strictly the capital city under King Louis XIV (1638–1715), given that the center of the court and the king’s government was in the much smaller neighboring town of Versailles. Louis XIV and his ministers, however, began to take a keen interest in the policing of Paris, the largest city in the kingdom, toward the end of the seventeenth century. A lieutenant general of police was created for the city in 1667. He had supervision of all the old tasks generally incorporated into the concept of police, and by the middle of the eighteenth century he commanded a force of some three thousand men. Half of these men were patrolmen, while the other half had responsibilities ranging from supervising wet-nurses to firefighting, and from market supervision to crime detection. This was the first serious example of the state-civilian police type that is a police institution directly responsible to central government.

Several eighteenth-century sovereigns sought to create similar institutions for the largest city of their territories—notably Frederick the Great (1712–1786) in Prussia and Maria Theresa (1717–1780) in Austria. The type was revived and given sole authority in Paris by Napoléon when, in 1800, he reorganized the city’s police and created the post of prefect of police. But, curiously, given the long English hostility to centralized government control of policing agencies, it was the Metropolitan Police created for London in 1829 that became the most widely influential model for the state-civilian type. The Metropolitan Police were financed from money raised on local London communities, but these communities had no say in how the money was spent or how the new “police constables” were deployed. The police authority was the home secretary; he appointed the commissioners of the police, and the commissioners answered to him and through him to Parliament. Throughout the nineteenth and twentieth centuries, there were periodic protests from local government in London for at least a degree of local government control. In both the 1880s and the 1980s, when these demands were at their most shrill, dire warnings were made in defense of the status quo on the grounds of what

might happen if the police of the capital were ever subject to radical and socialist local control.

The state-civilian forces generally emerged in capital cities such as Paris and Berlin. In the mid-nineteenth century, many European governments cherry-picked elements of the London system to develop their own capital city police forces. But in neither Paris nor Berlin, nor in other European capitals, did the authorities take the British line of requiring their patrol officers to carry out their duties, as a rule, with no other armament than a wooden baton. Moreover, there often remained a military link insofar as recruits were commonly drawn from army veterans. Nevertheless, there was a distinct difference between these police officers and the soldier-policemen of the gendarmeries. In Italy, as the Savoyard monarchy unified the peninsula and shifted its capital southward, eventually to Rome, the centralized civilian police also shifted. Once again, it was decided that the men of the *Guardia di Pubblica Sicurezza* should carry firearms, but they were recognized as being distinct from the military men of the *Carabinieri*.

France and Prussia both had reputations for centralized government structures. Some elements of the policing systems that developed in the two countries during the nineteenth century fit with these structures, but many did not. Across Europe for most of the nineteenth century, much of the policing of towns and cities remained in the hands of the municipalities. From 1791 towns with a population of five thousand or more in France had a *commissaire* of police appointed by the Ministry of the Interior. In Prussia, in theory, no police power was ever devolved from the crown to local government. But, in general, in both countries the policing of provincial towns was based primarily on what an individual municipality was prepared to pay for and to organize. In France, particularly after 1882 when mayors began to be locally elected rather than appointed by central government, the *commissaire* occasionally clashed with the municipality in which he served; a hostile municipality had the ability to reduce a *commissaire's* pay. In Prussia, toward the end of the century, municipalities in some of the fast-growing industrial districts requested the deployment of royal police—that is, state-civilian officers like those in Berlin—principally on the grounds that these men were funded out of national taxation rather than a local levy. And while the state-civilian *Pubblica Sicurezza* moved down the Italian peninsula, it was often required to function alongside local urban police—the *Vigili Urbani*.

In none of these centralized states, however, was there anything resembling Her Majesty's Inspectors of Constabulary established in Britain in 1857 to assess annually the efficiency of each provincial police institution. But whatever the level of state involvement—such

as the centrally appointed *commissaire* or the annual inspections by royal appointees—the provincial forces remained essentially under the direction of local government. Outside of Europe this type of police structure was to be found extensively across the United States, where, building on the traditions of the decentralized parish and municipal administrations of Georgian England, policing remained under municipal control and was involved increasingly with local political debate and elections.

The United States maintained this municipal structure through the twentieth century; and the state police institutions—often referred to as state troopers—like the county forces of nineteenth-century Britain, also took their authority from the state as opposed to the federal government. Elsewhere, however, the twentieth century saw a considerable degree of centralization. Police institutions in Britain came under increasing pressure to amalgamate with each other, especially after World War II. By the end of the twentieth century, there were only forty-three separate police forces in England and Wales, as opposed to more than two hundred on the eve of World War I. The insistence on local accountability was maintained, but essentially the police forces became institutions responsible to the British government's Home Office.

Police centralization came in France with the Vichy regime and in Germany with the Nazis, but in West Germany the centralized state-civilian form was undone in 1945 and policing was devolved to the individual states of the federal republic. In Italy the varieties of state-military, state-civilian, and municipal police survived through the fascist period, and were further complicated by the continuation of a semimilitarized financial police, the *Guardia di Finanza*, with responsibility for enforcing fiscal legislation as well as guarding frontiers.

At the close of the twentieth century, most states of Europe deployed the state-civilian type of police. In some (Ireland and Denmark, for example), this was the only system in existence. Belgium amalgamated its state-civilian police with its gendarmerie at the new millennium to form a single, state-civilian force. Elsewhere, in France, Italy, Portugal, and Spain, for example, state-military, state-civilian, and municipal police institutions continue to exist side by side.

In addition to a typology that is based on structure and administration, there is another that is based on policing tasks. Detectives and patrolmen are the most obvious distinct types. Again, these are types of policing that go back to the prepolice period. In England, for example, parish constables and magistrates could undertake to detect offenders, though there were relatively few who did so. The celebrated Bow Street Runners established by the Fielding brothers in the mid-eighteenth century were detective officers whose expertise was called

upon from all over England. In Paris, three and later four *commissaries* working under the lieutenant-general had overall responsibility for the detection of offenders in the city. Alongside these early detectives were the various night watches and patrols. In addition to the watches established by parishes in eighteenth-century London, for example, toward the end of the eighteenth century a series of squads based in the Bow Street Police Office were mounting evening patrols along the main metropolitan thoroughfares.

The emergence of bureaucratic police organizations in the early nineteenth century began a process of formalizing these different kinds of police work and apportioning them to distinct and separate types of officer. The nineteenth-century patrolman followed essentially an unskilled working-class trade. There was little skill required in walking a designated route at a steady pace for hours on end and ensuring that there was no disorder; at night such patrols had the additional chore of checking that doors and windows were properly secured. Similarly, there was little skill required if the men were deployed to supervise strikes and demonstrations, and to break them up by force if so ordered. Nevertheless the patrolman's was a trade that required respectability. On continental Europe, former noncommissioned officers from the army were thought to suit the role admirably. In the United States, the position of a police patrolman in a big city gave a new immigrant a degree of respectability and authority among his peers. Hence the position was popular among, for example, Irish immigrants in cities on the eastern seaboard, and the power of appointment to the position was a means of cementing political authority within such communities.

In the Anglo-Saxon world, the police detective tended to be recruited from among patrolmen. But the trade of detective was considered to be more cerebral than that of patrolman. On continental Europe, men could be appointed directly to a plainclothes detective role, and in nineteenth-century France, the police detective was perceived to have had an unfortunate beginning with François-Eugène Vidocq (1775–1857).

Vidocq was a former convict, and, when he was first appointed to establish a detective department for the prefecture in 1811, he recruited other ex-convicts as his subordinates. While he did not appear to have been corrupt or dishonest as a detective, some of his agents were. Moreover his memoirs, published at the end of the 1820s, created a scandal. Parisians were shocked that setting a thief to catch a thief had become a reality. A stigma hung over the detective department of the prefecture for much of the early part of the nineteenth century, and critics continued to play upon the dubious nature of the department's origins long afterward. The soldier-policemen of

the Gendarmerie, for example, countered criticism of their supposedly narrow military perspective with criticism of the secretive and suspicious missions of plainclothes detectives, and branded all of the civilian police with this image. In England, the detective in civilian clothes was also regarded by many with suspicion for much of the Victorian period. The civilian clothes suggested something underhanded and gave the detective the disreputable image of the spy.

The prefecture had recruited Vidocq and his men in the belief that their origins and former lifestyle made them best able to identify other criminal offenders. The idea that the detective developed an expert knowledge of criminals and could identify who committed an offence from the methods employed became a popular perception relatively early on and is present in the novels of Honoré de Balzac (1799–1850), Charles Dickens (1812–1870), and others. But the concept of the police detective shifted gradually over the nineteenth and early twentieth centuries from the perception of an individual relying upon shrewdness and cunning to a technical bureaucrat reliant on well-honed procedures, forensic practice, and the use of modern science.

The point was made at the beginning of this essay that policing tasks are not necessarily delegated to individuals who are members of an institution specifically labeled *police*. This is as true of those involved in the investigation and detection of crimes as it is of those involved in the prevention of crimes. A significant number of major crimes have been, and continue to be, investigated by groups headed by men and women with judicial rather than any form of police training and whose career path is situated within the magistracy. Senior magistrates of this sort, backed by squads of police, launched major enquiries into political corruption, notably in France and Italy, during the last quarter of the twentieth century. Such people have also been charged with investigating organized crime. Giovanni Falcone (1939–1992), who did so much to expose the Mafia on both sides of the Atlantic and who was assassinated by a bomb attack in Sicily in May 1992, was a prime example of such an investigative magistrate. His role, and his creation of the Direzione Investigativa Antimafia, which united Carabinieri, police, and other agencies in the war against the Mafia, emphasizes the often fuzzy distinction between police officer and judicial officer in many aspects of detective work.

There was always a degree of specialization within the two task-types of policing: watchman/protection and detective/investigation. During the nineteenth century, however, this was most apparent among the detective police. On continental Europe, much of the work of those who are best considered as detective police was concerned with political surveillance. There were also

squads who were charged solely with the surveillance and supervision of prostitutes—*la police des mœurs* in France, *die Sittenpolizei* in Germany, *polizia dei costumi* in Italy, and so forth. It was the development of the automobile that prompted the first significant specialization among uniformed patrolmen and led to the creation of traffic units, as well as, ultimately, to major shifts in styles of patrolling.

A final, important development in policing during the twentieth century, which had significance for the evolution of police types, was the employment of women officers. Uniformed women officers began to be recruited into state-civilian and municipal police institutions in the early twentieth century. Their responsibilities, however, rarely spread beyond the supervision of women and children, areas that were commonly disparaged by male officers as “not real police work.” Only gradually were women officers given a greater range of opportunities. These opportunities increased most notably in the aftermath of World War II and particularly during the

campaigns of the women’s movement during the 1960s and 1970s. Only in the last quarter of the twentieth century did women begin to be accepted into the state-military police institutions, which was roughly the same time that gender equality of tasks and opportunities in police institutions, as in other bodies, began to be formalized in law.

The easy everyday usage of the word *police* invariably masks the complexities of police institutions and police tasks. The typology set out above is not definitive and, given the occasional overlaps between types, links, and other bodies, the types described have to be considered in a broad Weberian “ideal” sense. Nevertheless, such a typology should alert the reader to the varieties of institutions and structures and the range of duties and roles undertaken by police officers both in the past and in the contemporary world.

*George Thomas Kurian*

# History of Prisons

---

Prisons, as places of confinement for lawbreakers, debtors, enemy combatants, political dissidents, religious heretics, and others, came into existence thousands of years before the common era. The modern concept of prisons, however, as places where offenders would be confined for specified periods of time as punishment for criminal offenses, did not emerge fully until the eighteenth century. Before then, states and societies seldom used imprisonment as a punishment. Rather, prisons functioned merely as detention areas to house offenders until the state could mete out the actual sentences—usually some form of capital or corporal punishment.

A landmark in humanitarian reform when it first appeared in the late 1700s, the concept of imprisonment as punishment continued to evolve during the nineteenth and twentieth centuries. Prisons and prison systems throughout the world experimented with different programs, purposes, methodologies, and models. Far from the somewhat monolithic image of prisons in the popular imagination, prison facilities have ranged from halfway houses and minimum-security work camps to fortresslike maximum-security penitentiaries. Prison programs have varied from an emphasis on prisoner reform and the establishment of “normalized” environments, to a reliance on harsh discipline and long sentences. Prison administrators have struggled continually as the principal advocates for making prisons more effective, more responsible, and more humane—often in the face of hostile public reaction. Finally, prison systems have changed as legal structures, social standards, and public attitudes have changed. Like any other institution, prisons have reflected the cultures, societies, governments, and eras to which they have belonged.

## EARLIEST PRISONS

There was widespread use of prisons in the ancient world. During the Middle Kingdom era in Egypt (ca. 2000 B.C.E.), the pharaohs imprisoned non-Egyptian criminals at hard labor in granaries and other available areas. From about 3000 B.C.E. to 400 B.C.E., the Babylonian Empire maintained prisons for petty offenders and debtors, and for noncitizens who broke the law. Babylonian citizens who committed crimes, however, were more likely to suffer banishment, mutilation, or execution. And many accounts of ancient prisons appear in the Christian Bible, both in the Old Testament (which cites imprisonment imposed by the Egyptians, Philistines, Israelites, and Assyrians) and the New Testament (which describes how the Romans confined early Christians in chambers beneath the floor of the Coliseum, before throwing them to the beasts).

There were also prisons in ancient Greece. As early as the fifth century B.C.E., Athens maintained a system of prisons—although criminals faced incarceration less frequently than fines, exile, stoning, crucifixion, and “precipitation” (being thrown from a high cliff). After witnessing his mentor, Socrates (ca. 470–399 B.C.E.), drink poisonous hemlock to satisfy a death sentence imposed against him for teaching philosophies that diverted his students from worshiping the traditional Athenian deities, Plato (ca. 427–347 B.C.E.) described in his *Laws* what he considered to be an ideal system of prisons. Minor offenders would serve short sentences in a public building near the marketplace; serious but redeemable offenders serving longer sentences would be sent to a nearby reform center; and the most incorrigible would be locked away in a secure prison far from the city.

Plato's blueprint was never adopted by the ancient Greeks, but it anticipated with remarkable accuracy the corrections-oriented prison systems of many centuries later, with their graduated levels of security.

Exile and a variety of capital punishments were the primary sanctions in Rome. In the fifth century B.C.E., however, Rome introduced imprisonment for debtors, and permitted the heads of families to discipline slaves or other members of their households by confining them in domestic prison cells. In the third century B.C.E. Rome built an underground prison, called the Tullianum, in an old rock quarry, and in the first century B.C.E. Rome established a series of dungeons known as the Mamertine beneath the streets of the city. Rome built subterranean dungeons throughout the empire, often for captured enemy soldiers awaiting execution.

In 428 C.E., toward the end of the Roman Empire, Emperor Theodosius II (401–450) issued the Theodosian Code. A wide-reaching codification of Roman imperial legislation and decrees, it featured one of the first attempts to establish a systematic legal basis for prison operations. The code outlined minimum standards for the humane treatment of prisoners awaiting trial and provided for a rudimentary form of prisoner classification by requiring offenders who had committed the most heinous crimes to be incarcerated under harsher conditions than less serious offenders. It also sought to eliminate staff corruption and ensure proper treatment of inmates by requiring judges to inspect prisons regularly, and by holding prison wardens, or "registrars," responsible for escapes or mistreatment of prisoners.

With the collapse of the Roman Empire and the onset of the Middle Ages in Europe, the Roman Catholic Church expanded the jurisdiction of its legal system, and provided for monastic or ecclesiastical prisons to confine both clergy and laypeople who violated canon law. During the papacy of Saint Siricius (ca. 334–399), prison cells (*ergastulum*) were established in monasteries, abbeys, and convents to confine miscreant priests, monks, and nuns at hard labor. By the twelfth and thirteenth centuries, the church was using ecclesiastical prisons to punish clergy and nonclergy alike for behavior deemed sinful. And during the Inquisition of the fourteenth and fifteenth centuries, the church imprisoned thousands of religious heretics.

Conditions in ecclesiastical prisons of the Middle Ages could be harsh, with restricted diets, beatings, and other forms of physical abuse. In the 1300s, the monks of Toulouse, France, protested prison conditions, and, even hundreds of years later, stories about cruelty in the ecclesiastical prisons were a staple of the lurid anti-Catholic screeds of the eighteenth and nineteenth centuries. Nevertheless, the ecclesiastical prisons represented an important advance. The purpose of the ecclesiastical

prisons was not to serve simply as places of confinement for offenders awaiting capital or corporal punishment. Rather, they were intended as places of correction, where offenders could redeem themselves through prayer and penance.

By about 1100, nation-states and kingdoms were coalescing in Europe—giving rise to civil government, public law, and secular prisons. In 1166 Henry II (1133–1189) of England ordered county sheriffs throughout his domain to build jails (or *gaols*) to hold defendants awaiting trial. Sheriffs in northern Europe, including Scandinavia and Iceland, confined inmates in their own homes until they could be tried or until sentences could be imposed.

Many of the secular prisons during the Middle Ages were located in castles and fortresses. During the last half of the eleventh century in England, William I (ca. 1028–1087) started a royal tradition of imprisoning political enemies in the Tower of London. French monarchs began sending prisoners to the Chalet, a fortress on the right bank of the Seine, around 1200, and by the 1370s were housing offenders in the dungeons and towers of the Bastille. In the second half of the 1400s, Louis XI (1423–1483) used the fortress at Loches, near Tours, as a prison. City-states in Germany also incarcerated offenders in dungeons, chambers, and holes in castles, fortifications, and ruins.

By the end of the Middle Ages, the most prevalent forms of punishment continued to be forfeiture of property, torture, mutilation, and execution. Most offenders were confined in the secular prisons only until they could be tried and their sentences carried out. Gradually, however, incarceration became the punishment for a growing body of minor crimes—mainly misdemeanors, morals offenses, and vagrancy. Blasphemy and theft, for example, were imprisonable offenses in thirteenth-century France. And by the early 1500s, English common law specified no fewer than 180 offenses that were punishable by incarceration.

Until at least the eighteenth century, jailers who operated prisons received little or no funding from their governments. Instead, they collected fees from the inmates to pay for food and other necessities. Nobles and others who could pay higher fees were able to obtain better accommodations, and often were incarcerated in comparative comfort and privacy. Most inmates, however, were crowded into large rooms, without regard to sex, age, severity of offense, or mental stability, and were often subjected to the most squalid conditions. Corruption was widespread, as jailers frequently demanded exorbitant fees for the meager rations they dispensed, and discipline was enforced with beatings and other harsh measures.

There were a few notable early attempts to classify and segregate inmates, particularly by sex. Le Stinche prison, built in the 1290s in Florence, Italy, housed male inmates separately from female inmates, and also segregated inmates by age group, degree of sanity, and severity of offense. The Maison de Force in Ghent, Belgium, and the Amsterdam House of Correction both separated men from women and felons from misdemeanants. Rome's Hospice of San Michele included special facilities and programs for juvenile offenders, and in 1645 Holland established the Spinuis in Amsterdam—a textile mill that served as a refuge and place of work for wayward and destitute women, and as a prison for women convicted of minor offenses.

The end of the Middle Ages (ca. 1500) was marked by the breakup of feudalism, which sent unnumbered landless peasants streaming across the European countryside and into the cities in search of livelihoods—either honest or dishonest. This inherently unstable population, perpetually at risk of descending into vagrancy or criminality, alarmed rural landowners and urban citizens alike, and governments attempted various means to bring the problem under control. One strategy was imprisonment.

After measures to restrict the movement of workers and brutal punishments, such as branding and mutilation, proved ineffective, the English Parliament ordered each county to open a workhouse for the incarceration of vagrants and petty criminals. Called bridewells—after the first such workhouse, established in London's old Bridewell Palace in 1557—the workhouses confined their inmates under strict discipline, and required them to perform labor in manufacturing, milling, baking, or other endeavors. As harsh as the bridewells may have been, they were a humane alternative to the corporal punishments that the destitute could otherwise have suffered.

The end of the Middle Ages was also marked by the rise of mercantilism and the era of exploration as many European powers sent out expeditions to the Western and Southern Hemispheres in search of colonies. Colonization, in turn, gave rise to a new type of criminal sentence: transportation of convicts to European penal colonies in Africa, Australia, and the Americas, primarily during the 1600s, 1700s, and 1800s. Spain established penal colonies in the Canary Islands and North Africa; Russia exiled convicts to Siberia; and France used New Caledonia, a Pacific island west of Australia, as a penal colony, as well as French Guiana in South America—which included Devil's Island, the notorious prison camp that France operated until after World War II.

England transported convicts to its North American colonies in the seventeenth and eighteenth centuries, where they were auctioned to settlers as indentured

servants. After American independence, England transported convicts to its colony in Australia.

Norfolk Island was a prison colony within the prison colony of Australia, reserved for some of England's most desperate criminals, and for exiled criminals who reoffended after reaching Australia. For most of its history, Norfolk Island had a reputation for great brutality, but Captain Alexander Maconochie (1787–1860) introduced numerous reforms during his administration as superintendent from 1839 to 1843. Maconochie's emphasis on rehabilitation, compassionate treatment of inmates, and release of inmates based on good behavior and sound attitudes rather than time served ultimately were rejected by his superiors in London, but Maconochie and his ideas had enormous influence on reform-minded prison administrators of later generations.

Another confinement option, used mainly in England, was to imprison convicts on derelict warships and merchant vessels called hulks. England resorted to this form of incarceration in the mid-1700s because its criminal population was expanding so rapidly that bridewells, gaols, and transportation to the colonies could not contain it. Anchored in bays and rivers throughout England, the hulks were filthy, crowded, unventilated, and disease-ridden. The food was inadequate and the discipline harsh. No longer seaworthy, so much water seeped into the hulks that inmate drownings sometimes occurred. At any given time, as many as 5,500 convicts were imprisoned on hulks in England, many of whom were marched onto land by day to perform hard labor. England generally abandoned its use of hulks by the mid-nineteenth century, but it continued to operate at least one, anchored off Gibraltar, as late as 1875.

#### IMPRISONMENT AS PUNISHMENT: THE PENITENTIARY ERA

Imprisoning felons under humane conditions as their punishment for serious crimes was a reform that emerged from the Age of Enlightenment in eighteenth-century Europe. It also reflected a growing revulsion against the floggings; the severing of lips, ears, and limbs; the hangings and decapitations; and the postmortem desecrations that until then were the favored sanctions against felons and against the horrendous conditions that prevailed in bridewells, gaols, hulks, and other places where misdemeanants, debtors, and pretrial detainees were incarcerated.

European philosophers, reformers, and leaders, such as Voltaire (1694–1778), Montesquieu (1689–1755), and Denis Diderot (1713–1784) in France; Italy's Cesare Beccaria (1738–1794); Frederick II (1712–1786) of Prussia; and England's Jeremy Bentham (1748–1832) and John Howard (1726–1790), denounced the cruelty and barbarity of existing criminal sanctions. They

championed replacement of capital and corporal punishments with fixed terms at humane, rehabilitation-oriented prisons as part of systematic, impartial, and reasoned criminal justice systems aligned with the spirit of rationalism that characterized the Enlightenment. Bentham, Howard, and Beccaria in particular proposed specific designs, procedures, and standards focused on creating prisons that were equitable, well-managed, safe, and sanitary, and that sought to achieve reform of individual inmates through religious instruction and meaningful work. “The purpose of punishment is not to torment a sensible being, nor to undo a crime already committed,” wrote Beccaria in 1764, but rather to “prevent the criminal from doing further injury to society and to prevent others from committing the like offense.”

England and France both enacted laws in the late 1700s to establish prisons that would be clean, competently managed, free of corruption, subject to regular inspections, and supported by government appropriations instead of fees paid by the inmates. Rudimentary classification would also ensure that male inmates would be housed separately from female inmates, adults from minors, felons from misdemeanants, and the sane from the insane. The concept of temporary incarceration in humane prisons as the primary form of punishment, however, did not take hold right away in Europe. Rather, the first major, practical tests of the prison concept came in America.

In 1682 members of a religious dissident group, the Quakers, began to settle in England’s North American colony of Pennsylvania. Many Quakers, including the colony’s first governor William Penn (1644–1718), had been imprisoned for their religious beliefs when they were in England, and they had been appalled by the brutal conditions they saw and experienced. Moreover, as pacifists, the Quakers opposed capital and corporal punishments on moral grounds.

In setting up its new government, Pennsylvania adopted a set of criminal laws called Penn’s Code or the Great Code, which provided for only one capital offense, murder, as opposed to the more than two hundred capital offenses then on the books in England. The fundamental criminal sanction under Penn’s Code was incarceration, and each county in Pennsylvania was required to establish a government-financed (not fee-based) house of correction. The houses of correction in Pennsylvania in the late 1600s and early 1700s represented the first glimmerings of “penitentiaries”—that is, facilities for penitents, or convicts doing penance for their crimes. They also marked the beginning of the Quakers’ long tradition of prison reform and criminal-justice activism.

England, however, did not share the Quakers’ enthusiasm for the new sanction. After Penn’s death in 1718,

England forced the colony to repeal Penn’s Code and to adopt the so-called sanguinary laws, which reinstated the death penalty for many crimes and also provided for corporal punishment.

The other English colonies in North America adhered more readily than Pennsylvania to the criminal sanctions that were part of the English legal forms they had inherited. Murder, manslaughter, rape, and kidnapping were punishable by death, as were certain morals offenses. In seventeenth-century Massachusetts, for example, idolatry, witchcraft, blasphemy, and adultery were capital crimes. Branding and whipping were among the forms of corporal punishment used in the North American colonies. Lesser crimes frequently were punishable by public humiliation, such as exposing convicts to stares and ridicule by locking them in stocks and pillories located in public gathering places.

As in Europe, there were jails in North America to house petty offenders, defendants awaiting trial, or felons awaiting sentences of death or physical abuse. Also as in Europe, those facilities tended to be crude, unsanitary, and dangerous, and inmates of all kinds were crowded in together. One of the worst was located in an abandoned copper mine in Connecticut, where convicts were kept chained in underground cages.

After the United States gained its independence in 1781, however, and began creating new governments and judicial systems, many jurisdictions also began experimenting with new sanctions. Pennsylvania, in particular, moved quickly to abandon the sanguinary laws and enact a criminal code similar to that promulgated a century earlier under Governor Penn.

Although incarceration had been reinstated as the primary form of criminal punishment in Pennsylvania, conditions at the state’s main prison, the Walnut Street Jail in Philadelphia, were troubling. Inmates worked outside the prison walls in degrading positions on chain gangs; rations were so meager that inmates on chain gangs had to beg passersby for food; and within the prison walls, supervision was insufficient, sanitation deplorable, and inmate classification almost nonexistent.

To campaign for better prison conditions, and to provide assistance to individual inmates in distress, several of Philadelphia’s most eminent citizens, including Benjamin Franklin (1706–1790), Benjamin Rush (1745–1813), and leading members of the Quaker community, formed what would become one of the world’s longest-lived and most influential prison reform organizations, the Pennsylvania Prison Society. Through laws it passed in 1789 and 1790, the Pennsylvania state legislature adopted the reforms urged by the society, thereby transforming the Walnut Street Jail into what may have been the first modern penitentiary.

The prototype for the modern penitentiary was actually a three-story wing that was added to the Walnut Street Jail. The new wing housed convicted felons exclusively, with the most dangerous confined to individual cells. The facility was explicitly “correctional” in purpose. Through its work programs (such as shoemaking, weaving, and marble cutting and polishing), and through the remorse and penitential reflection that were supposed to occur during incarceration, the intention was for the felons to reform themselves, so that they could return to society as law-abiding citizens.

The Walnut Street Jail became a model for prisons throughout the United States, including state prisons in Trenton, New Jersey (1798); Richmond, Virginia (1800); Charlestown, Massachusetts (1805); and Baltimore, Maryland (1811). In New York City, the Newgate Prison (1797) was perhaps the most important to emulate the Walnut Street Jail, and it went on to introduce several innovations of its own. Warden Thomas Eddy (1758–1827), like so many of the Pennsylvania prison reformers a Quaker, established a hospital at Newgate and hired a full-time physician, established clearly defined qualifications and job assignments for staff, prohibited corporal punishment as a disciplinary measure, provided inmates with more wholesome and varied meals, and instituted a work program within Newgate’s walls that covered most of the prison’s costs.

Walnut Street Jail and Newgate Prison, however, were only temporary solutions, and they were quickly outgrown. But they paved the way for the massive, full-scale penitentiaries that appeared in the nineteenth century.

By the 1820s and 1830s, two distinct penitentiary models had emerged in the United States: the separate system (also known as the Pennsylvania system) and the congregate system (or Auburn system). Each model had its own programs, philosophies, and architectural styles.

The separate system was pioneered at Eastern State Penitentiary in Philadelphia, which the state of Pennsylvania built in 1829 to replace the aging Walnut Street Jail. The congregate system was pioneered at the state penitentiary in Auburn, New York, built between 1816 and 1825 to replace the overcrowded Newgate Prison.

The separate system was based on the principle of solitary confinement. In developing the system, Eastern State Penitentiary implemented proposals espoused by the Pennsylvania Prison Society. Apart from contact with prison staff, representatives of the Pennsylvania Prison Society, and clergy, inmates served their entire sentences confined to their cells in virtual solitude. They took meals in their cells, completed work assignments in their cells, and even exercised in small, private yards adjacent to their cells. On rare occasions when they were

permitted out of their cells, they had to wear hoods to maintain their anonymity and prevent them from communicating with other inmates.

The purpose of solitary confinement was threefold. First, it made it easier and safer to control the inmates. Second, it prevented inmates from consorting with each other, which prison administrators feared would reinforce patterns of criminal behavior. Third, and most importantly, it presumably would give inmates the time and solitude they needed to pray, study the Bible, contemplate their misdeeds and do penance for them, and redeem themselves.

An unintended consequence was that years of enforced solitude could have devastating psychological effects on individual prisoners. When famed English novelist Charles Dickens (1812–1870) visited Eastern State Penitentiary in 1842, he praised the facility for its cleanliness and orderliness, but deplored the separate system and its “tampering with the mysteries of the brain” as “cruel and wrong.”

Influential prison architect John Haviland (1792–1852) designed Eastern State to facilitate the practice of solitary confinement. Long cell houses radiated out from a central rotunda, each featuring central hallways flanked by rows of “outside” cells, so-called because each cell had an exterior wall facing the outdoors, and cells were separated by masonry walls rather than bars. Ground-level cells opened out onto small exercise yards, surrounded by high stone walls. Cells were large enough to accommodate the machinery, tools, and materials inmates needed to make shoes, weave and dye cloth, cane chairs, roll cigars, and manufacture other products that were sold to defray prison costs. And, even in 1829, indoor plumbing minimized the need for inmates to leave their cells.

The congregate system modeled at Auburn Penitentiary, however, restricted inmates to their cells only at night. By day, they worked and ate in large common areas. Long, parallel cell houses featured “inside” cells. Unlike the outside cells at Eastern State, Auburn-style cells did not have exterior walls. Instead, each cell house formed a shell for two rows of cells, placed back to back and stacked three or four tiers high, with corridors or ranges completely surrounding them. The cell blocks, in a sense, were buildings within buildings, to ensure greater security. Another characteristic of Auburn-style architecture was that it tended to be massive, with fortresslike walls and imposing towers. The monumental Gothic towers were intended to enhance security and reinforce the punitive aspect of confinement. For more than a century, the Auburn style was the most frequently copied prison layout.

Because they permitted inmates to congregate, prisons following the Auburn model imposed harsh measures to ensure control. Inmates wore striped uniforms to

guarantee ready identification, and they had to walk in lockstep when in groups. Inmates also generally were prohibited from speaking to other inmates, and they faced severe physical punishments for committing infractions.

The congregate system had clear economic advantages over the separate system. Requiring less space for individual cells, such prisons were less expensive to build. And congregating inmates on a single shop floor allowed congregate-style penitentiaries to take advantage of factory production methods, enabling them to produce a greater variety of consumer goods more cheaply and to realize higher returns. Penitentiaries based on the separate system, however, were tied to old-fashioned, preindustrial handicraft production, which generally was too inefficient to generate a sufficient income to support prison operations.

By turning inmate labor into a viable economic asset, the congregate system opened the door for what evolved into one of the most disturbing prison abuses of the nineteenth century: the convict contract/lease system. Private companies, particularly in the northern United States, paid fees to congregate system prisons to have inmates manufacture goods for them in the prisons' factories. In a variant of that system, which appeared mainly in the southern and western United States, private business interests actually leased the convicts from the prison, and put them to work at privately owned factories, mines, logging camps, and plantations.

The relative merits of the solitary system and the congregate system were the subject of impassioned debate during the nineteenth century, and prisons based on both models were erected throughout the United States. Due largely to its economic advantages, the congregate system eventually became the standard; between the 1820s and the 1870s, more than thirty state penitentiaries in the United States were built and operated following the Auburn model, and others converted from the solitary system to the congregate system. Some prisons, most notably, the U.S. Penitentiary in Leavenworth, Kansas (ca. 1900), incorporated architectural elements of both systems, while operating more under the congregate philosophy.

There was a third type of penitentiary system, which, though highly imaginative, never attained the acceptance of either the solitary system or the congregate system. The panopticon system was proposed by English philosopher and scholar Jeremy Bentham in 1791, at the birth of the penitentiary era. Its unusual design featured multiple tiers of open-front, barred cells built in a large circle, resembling a wheel. The cells faced inward toward a hub that served not only as a guard station from which staff could observe all inmates in all cells simultaneously, but that also provided a convenient place for providing

religious and other forms of instruction to the entire cell house at once.

The underlying philosophy was that the constant supervision from the hub would not only facilitate better security, but would also make inmates more aware of their own behavior and more likely to improve their habits. Only a few penitentiaries in the United States were built according to the panopticon model, and one of them (in Pittsburgh, Pennsylvania) was deemed such a failure that the state demolished it after only a few years. The most successful example of a panopticon prison in the United States was Stateville Penitentiary in Illinois, built in 1919.

Similar debates over penitentiary designs and philosophies were also occurring in Europe. A modified version of Auburn-style architecture was developed in France; later called the telephone pole design, it featured parallel cell houses linked by a central corridor. The Pennsylvania style, however, proved much more influential. Worldwide, approximately three hundred prisons were built in the nineteenth and early twentieth centuries modeled on the radial design and separate-system approach of Eastern State Penitentiary. Pentonville Prison (1840–1842) in London was one of the first European facilities to be built and operated according to the Eastern State model, but it was soon followed by other Pennsylvania-style prisons throughout Europe, including Mazas Prison in France (1843–1850), Louvain Prison in Belgium (1856–1860), San Vittoire Prison in Italy (1867–1879), Moabit Prison in Germany (1868–1879), and Kresty Prison in Russia (1884–1890). Spain, Portugal, Holland, Switzerland, and Austria also opened Pennsylvania-style prisons. In addition, British colonies, such as South Africa, Australia, and Canada, favored the radial design.

It was during and shortly after the penitentiary era that colonialism and westernization led to prison development in Asia, Africa, and South America. In ancient India, as in pre-eighteenth-century Europe, offenders were imprisoned only until they could be tried and convicted, but they were normally sentenced to suffer corporal punishment. In the 1830s, however, the British colonial administration in India began introducing English prison models into India. Precolonial African societies, meanwhile, typically relied on noncustodial, community-based sanctions. As Great Britain, France, Portugal, and Belgium colonized Africa in the nineteenth century, they imposed their own criminal justice systems, including penitentiaries, which the postcolonial governments tended to retain.

South American governments sent representatives to inspect prisons in the United States as early as the 1830s, and the very few large-scale prisons built on that continent before 1870 were based on the Pennsylvania

model. Several more radial-design prisons were built in Latin America during the late 1800s and early 1900s, in Brazil, Argentina, Peru, Colombia, Ecuador, and Mexico.

Prison reform was one aspect of the westernization that took hold in Asia in the late nineteenth and early twentieth centuries, and the Pennsylvania style received wide acceptance. Between 1906 and 1918, China completely revamped its prison system with nearly forty institutions that combined the Pennsylvania system's radial architecture with certain operational elements of congregate-system facilities. As British colonies in the early 1900s, of course, Hong Kong and Burma also established Pennsylvania-style prisons.

Between 700 C.E. and 900 C.E., the principal criminal sanctions in Japan were whipping, caning, banishment, and death, although imprisonment at forced labor was sometimes meted out as punishment for minor crimes. Thereafter, imprisonment was abandoned under samurai feudalism, until the country began to adopt Western legal forms in the 1870s. In 1879 Miyagi Prison became the first of at least thirty-six Pennsylvania-style prisons erected in Japan.

Comprising only a minuscule portion of the inmate population, female inmates largely were ignored during the penitentiary era. The only time or place in world history where women made up more than about 10 percent of the inmate population was in mid-nineteenth-century Great Britain, where nearly 40 percent of the prisoners were women. More typical was the United States, where in 1845 there may have been fewer than two hundred female prisoners in the entire country.

Women usually were relegated to the attics, corners, or basements of prisons built for male offenders, where their primary activities included cleaning and mending for male inmates, and where they could be vulnerable to abuse by the male officers who supervised them. Not infrequently during the late eighteenth and early nineteenth centuries, women who were sent to prison were accompanied by their children. Auburn Penitentiary's facilities for women were typical: a single room in the administration building was all that could be spared in the sprawling prison.

There were significant exceptions, where prison administrators made determined efforts to provide suitable conditions for female inmates. Both Walnut Street Jail and Newgate Prison maintained separate cell blocks for women in the 1790s, as did the Maryland State Penitentiary in Baltimore in the 1820s. Eastern State Penitentiary hired a matron to supervise female inmates who was praised by prison and asylum reformer Dorothea Dix (1802–1887) for maintaining “neatness” and “good behavior” among her charges, and for providing books,

lessons, and constructive work assignments. Moreover, there were strong advocates for women in prison. Probably the most notable was the Quaker reformer Elizabeth Gurney Fry (1780–1845), who campaigned throughout Great Britain for better prison conditions for women (and their children), and established guidelines for the management of women's prisons.

In 1828 Sing Sing Prison in Ossining, New York, opened a separate building for female prisoners, with female staff members, space for religious and educational activities, a nursery, and high walls to provide ample protection from male inmates. Under the direction of Head Matron Eliza W. B. Farnham (1815–1864) in the 1840s, Sing Sing's women's facility, called Mount Pleasant, became a prototype for female reformatories of the twentieth century, emphasizing rehabilitation programs, relying on inducements to good behavior rather than punishment for misconduct, and attempting to create an atmosphere resembling an idealized middle-class home.

#### PRISONS AS CORRECTIONAL FACILITIES: THE REFORMATORY MOVEMENT

The promise of the penitentiary was that it would incarcerate offenders as punishment for their crimes, and that it would help offenders redeem themselves. In actual practice during the nineteenth century, penitentiaries lived up to their goal of punishment, but failed to achieve much in the area of redemption. By the 1830s, prison reformers and social critics in Europe were calling for prisons to offer more and better correctional treatments and to provide incentives that would encourage inmates to reform themselves. In the words of Frederick Hill, an English prison reformer, each prison should be a “moral hospital” where prisoners would be “cured of their bad habits.” Out of these criticisms and reform proposals, a new type of prison emerged by the late 1800s: the reformatory.

There were two short-lived precursors of the reformatory in the 1830s and 1840s: Norfolk Island penal colony in Australia, under Alexander Maconochie, and the Valencia Prison in Spain, under Colonel Manuel Montesinos. Even more influential were the sweeping initiatives of the Irish prison system, devised and implemented in the mid-nineteenth century by Irish prison director Joshua Jebb (1793–1863) and his successor, Walter Crofton (1815–1897). Jebb and Crofton introduced an ambitious regimen of religious, educational, and work programs; established a graduated classification system with greater privileges at higher levels; rewarded inmates demonstrating good behavior with advancement through the system; and allowed inmates to earn credits toward early release by showing progress in their

rehabilitation programs. The Irish prison system won international acclaim, but other European systems were slow to emulate it. Prison administrators in the United States, however, eagerly adopted many of the Irish reforms.

Inspired by the Irish system and the rehabilitation philosophies emanating from Europe, an aggressive prison reform movement was coalescing in the United States during the 1860s. It culminated in 1870 with the formation of the National Prison Congress (later called the American Correctional Association). At its inaugural meeting, delegates heard an address by Crofton, and went on to adopt a Declaration of Principles that endorsed the Irish system and the reformatory concept; supported inmate classification and separate facilities for men, women, and juveniles; called for abolition of convict leasing; proposed a variety of work and education programs; and declared that “reformation, not vindictive suffering,” was the purpose of incarceration.

In 1876 Warden Zebulon Brockway (1827–1920) attempted to put the Declaration of Principles into practice at a prison for younger, nonrepeat male offenders in Elmira, New York. Brockway’s prison became the first reformatory, and gave its name to an Elmira system that displaced the Pennsylvania and Auburn systems as the central focus of American prison philosophy.

Brockway’s Elmira system rejected the Auburn system’s stern disciplinary and inmate control practices, such as corporal punishment, striped uniforms, the lock-step, the silent system, and other measures aimed at degrading or humiliating prisoners. To maintain order, the Elmira Reformatory instituted an inmate classification scheme, ranging from a low grade affording minimum privileges to a high grade offering a variety of privileges and incentives; inmates could be moved up and down the classification scale, depending on their behavior and their responsiveness to the rehabilitation program. Indeterminate sentences, providing only a range of years to be served rather than single specific term, enabled Elmira Reformatory to release inmates early—again, depending on their conduct and their efforts to reform themselves.

The central feature of Elmira Reformatory was a multifaceted program of educational, vocational, and recreational opportunities. There were academic courses on general subjects, as well as on religion, ethics, and industrial arts, taught by instructors from nearby schools and colleges. A trade school offered courses in tailoring, plumbing, telegraphy, and printing. There was an inmate band, an inmate newspapers, daily calisthenics, organized athletics, and military drill practice.

Although Brockway attained legendary status in the history of American corrections, in many ways he failed

to live up to the ideals he espoused. While formally prohibiting corporal punishment at Elmira, in reality he permitted brutal physical punishments to be inflicted upon misbehaving inmates. There were other problems at Elmira. The traditional Auburn-style architecture was not conducive to Elmira’s rehabilitative programming; stronger inmates were allowed to terrorize younger ones; medical treatment was substandard; there was evidence of mismanagement at the facility; funding from the state was insufficient; and, despite the theoretical emphasis on rehabilitating tractable, first-time offenders in an environment where they would have no contact with career criminals, the courts committed many repeat offenders to Elmira.

Nevertheless, the Elmira system had a far-reaching impact on American prison development. Between 1876 and 1913, seventeen states built reformatories for adult males based largely on the Elmira model. The early reformatories relied on traditional, but unsuitable, Auburn-style physical layouts. By the 1920s, however, newer reformatories had moved away from massive, fortresslike Auburn designs toward more open and normalized campuslike settings.

Several states opened reformatories for women in the last quarter of the nineteenth century, most notably Indiana, Massachusetts, and New York, although, in general, living conditions for female inmates at that time remained far worse than those for men. The women’s rights movement played an important role in focusing greater attention on prisons for women. Quaker feminists Sarah Smith and Rhoda Coffin were particularly influential in lobbying the state of Indiana to open a women’s reformatory. Then, early in the twentieth century, Katherine Bement Davis (1860–1935) became the founding superintendent of Bedford Hills Women’s Reformatory in New York; by combining the Elmira model with innovative features for female convicts, Davis established a model facility for women’s prisons that would be adopted widely.

At the end of the nineteenth century, most prisons and jails in the United States were crude, overcrowded, and punishment-oriented. Discipline was harsh, the staff was poorly trained, and inmates either languished in idleness or were exploited for their labor. But the reformatory movement of the last quarter of the century, despite its flaws, raised standards, moved away from Auburn cell block designs, rejected excessive regimentation and physical discipline, introduced incentives to promote good behavior, and emphasized an array of restorative programs. The reformatory movement had a powerful impact on all types of prisons in the United States, and anticipated the program-oriented correctional facilities of the twentieth century.

As the reformatory era was unfolding in the United States, much of Europe was moving in a different direction. Rather than experimenting with new prison models, European countries increasingly were relying on suspended sentences, probation, parole, and other noncustodial sanctions. Apart from Italy, Russia, and Spain, which continued to emphasize imprisonment, European countries became so concerned over the harshness and expense of imprisonment that they began to regard it as a last resort for habitual criminals. With noncustodial sanctions in place, inmate populations in western Europe declined significantly after 1865, in contrast with the burgeoning inmate populations on the opposite side of the Atlantic Ocean. Between 1887 and 1956, for example, the inmate population in France was reduced by 50 percent.

#### “SCIENTIFIC PENOLOGY,” INDIVIDUALIZED TREATMENT, AND THE MEDICAL MODEL

During the first decades of the twentieth century, the social sciences, including psychology, sociology, and criminology, became fully established as academic disciplines. At the same time, the field of corrections was becoming more professional, and federal and state governments in the United States were creating large, bureaucratic structures to administer prison operations. The emergence of the social sciences gave rise to new theories of corrections. Greater professionalism and bureaucratization, meanwhile, provided the expertise and the apparatus to implement those theories.

A host of dedicated men and women devoted their careers to prison reform and administration during the penitentiary and reformatory eras, but they operated as individuals or as part of small groups. More typically, though, prison administration in nineteenth-century America remained highly political and nonprofessional, with leadership positions distributed as political plums, and staff positions filled with little regard for training or ability. Moreover, apart from the advice of well-meaning but usually weak boards of directors, oversight of prison operations was lax, and individual prisons were virtually autonomous.

By the 1910s, 1920s, and 1930s, however, the federal government and many state governments in the United States established departments of corrections to centralize prison operations, develop consistent and systematic policies, impose higher standards, and exercise strong supervisory controls. They began staffing prisons through civil service procedures rather than partisan appointment, and created staff training programs. And the top management at the new departments, such as Sanford Bates and James Bennett at the Federal Bureau of Prisons, Richard McGee of California, Austin

MacCormack of New York City, and F. Lovell Bixby of New Jersey, tapped into the insights of the social sciences to develop the concept of individualized treatment, which became the dominant theme in corrections for almost fifty years.

The goal of individualized treatment was to develop treatment plans for each offender based on scientific observations and precepts, and to carry them out in a prison environment that was therapeutic as well as geared toward meeting the specific security challenges posed by each offender. In the 1910s and 1920s, universities and clinical psychologists established research centers and laboratories connected with courts and prisons to collect and analyze data on offenders, and developed undergraduate and graduate courses that further promoted the study of criminal behavior and sanctions.

The social science-based rehabilitative ideal that became entrenched in American academic and corrections circles by the second quarter of the twentieth century gradually attained popular and political acceptance, reaching its apogee in the 1960s. By then, the fully elaborated and most sophisticated versions of individualized treatment had become nicknamed the medical model. The term was a metaphor suggesting that criminal behavior was like a disease, and further that the courts or prisons should apply social science methods to diagnose each inmate's condition and determine what caused the disease (inadequate education, poor social development, mental instability, substance addiction, etc.) and that the prison should then serve figuratively as a hospital responsible for curing the disease through the prescription of whatever nostrums best suited the inmate's needs (such as education, counseling, addiction therapy, or psychiatric treatment).

Individualized treatment entailed broad changes in prison design and programs. Classification by sex, age, criminal background, security risk, and other factors became the centerpiece of prison operations. By the mid-twentieth century, it was vastly more elaborate and important than it had been in the reformatory era, when it reflected little more than the individual inmate's institutional adjustment and resulted simply in permitting greater or fewer privileges. Staff compiled case histories on each inmate, and classification boards or assignment committees attempted to develop a mix of programs and place the inmate in the specific type of prison that would meet that inmate's specific needs or problems. Highly sophisticated classification modalities evolved by the 1960s, such as the Quay typology and the Megaree-Bohn model, based on the Minnesota Multiphasic Personality Inventory.

The emphasis on classification revolutionized prison design, as prison environments had to match the various

classification categories. Separate facilities were maintained for women and youthful offenders, of course, but a variety of different types of institutions was also developed for the adult males who made up the vast majority of inmates.

Rather than committing all male inmates to a traditional penitentiary, a range of institution types representing graduated levels of security enabled prison officials to focus resources by confining only the most dangerous inmates in expensive, high-security penitentiaries, while assigning less escape-prone or disruptive inmates to less expensive, medium-security correctional institutions, and the easiest-to-manage inmates to the least expensive option, minimum-security camps. Jails or detention centers were built to house short-term or pretrial inmates. Prison hospitals, psychiatric centers, and detoxification facilities (initially called “narcotics farms”) were available for special needs offenders. Some prison systems even established prisons that served exclusively as reception or diagnostic centers, where newly committed inmates could be classified and receive orientation. And during the last half of the twentieth century, many prison systems began utilizing halfway houses or prerelease centers, which were unwallled facilities in the community where inmates nearing their release dates could receive supervision and guidance while easing their way back into society.

Prison layouts took on an entirely new look. While Auburn-style inside cells remained the norm for maximum-security penitentiaries, lower-security facilities sometimes featured Pennsylvania-style outside cells (though without the policy of solitary confinement), honor rooms, and even open dormitories. There were expanded common areas for classrooms, workshops, and various activities related to rehabilitation programs. In the late 1960s and early 1970s, several prison systems adopted the unit-management approach, whereby prisons were subdivided into semi-autonomous housing and program units so that staff could monitor and interact with individual inmates more effectively. To facilitate unit management, old-fashioned cell houses were replaced with cottages or housing units within decentralized compounds, and the units themselves were designed to be easier to supervise yet not as demoralizing or oppressive.

Diversified housing served numerous purposes. It reduced costs, facilitated program delivery, and enhanced the control and supervision of inmates. Graduated security levels may have been the most critical benefit. The ability to move disruptive inmates to higher-security prisons offered a highly effective sanction against misconduct—in effect, maintaining prisons within prison systems. It also offered an incentive to encourage good behavior, as clear conduct could earn an inmate transfer

to less regimented and more desirable lower-security facilities. Finally, by moving the most violent and intractable inmates to the most secure prisons, prison systems were able to improve safety for staff and inmates alike, and maintain more normalized and less restrictive environments in the lower-security prisons that were more conducive to the operation of rehabilitative programs.

In many respects, the Federal Bureau of Prisons provided the model for correctional systems that followed the individualized-treatment concept. Spearheaded by Assistant U.S. Attorney General Mabel Walker Willebrandt (1889–1963) in 1929 to house offenders convicted of violating federal laws (as opposed to state laws), the bureau built a state-of-the-art system of prisons at all security levels, offering wide arrays of programs and featuring innovative designs.

At the security apex was the U.S. Penitentiary at Alcatraz, California—the most secure prison of its time, unquestionably the most famous prison in United States history, home to many of America’s most notorious and incorrigible criminals, and the prototype for what would later become known as supermaximum prisons. At the minimum-security end of the scale were unwallled road camps and forestry camps for minor, nonviolent offenders. In between were medium- and low-security reformatory-like facilities, such as the Federal Correctional Institution at Seagoville, Texas, which resembled a college campus and instituted one of the country’s first work-release programs. The women’s reformatory in Alderson, West Virginia, was emulated by state prison systems throughout the United States; its establishment, after considerable agitation by women’s groups, remedied decades of deplorable conditions for female federal offenders. The Bureau of Prisons also pioneered the use of halfway houses in the early 1960s, and unit management in the late 1960s and early 1970s. The bureau was not necessarily the first system to adopt some of those programs and designs, but it did so on such a well-funded, national scale that it had the greatest impact on other systems.

The Bureau of Prisons, along with several state prison systems, took important strides in the first half of the twentieth century toward solving the critical problem of inmate labor. For much of the penitentiary era, prisons funded a large portion of their operations through the public sale of products manufactured by inmates. This practice was highly controversial because it put prisons in direct competition with private sector enterprises, and prison labor in direct competition with law-abiding wage earners. Consequently, the federal government and several state governments enacted laws in the late nineteenth and early twentieth centuries that placed severe restrictions on the sale of goods from prison factories. Moreover, the convict leasing/contract labor

system that developed by the mid- and late nineteenth century subjected inmates to such extraordinary abuse that it precipitated a national outcry. Yet, at the same time, inmate labor was essential to smooth prison operations. The idleness that could plague prisons that did not employ inmates in constructive activities led to increased tension and misconduct—often with devastating results.

The solution was the state-use system of inmate labor. First tried by state prisons in New Jersey, New York, and Pennsylvania at the end of the nineteenth century, the state-use system provided for inmate-produced goods to be sold exclusively to government agencies—thereby maintaining a revenue-producing activity that could help manage inmates by keeping them constructively occupied, while avoiding competition against the private sector in the open market.

The most fully elaborated model of the state-use system was Federal Prison Industries, Inc., established by the U.S. Congress in 1934 as an adjunct to the Federal Bureau of Prisons. A government-owned, not-for-profit corporation, Federal Prison Industries employed inmates to produce goods for sale to federal agencies. Not only were the company's products not sold to the public, the product line was so diversified—everything from office furniture to military uniforms—that it did not even have an unfair impact on the federal sales of any one industry. Revenues were plowed back into inmate education and vocational training programs. And portions of the wages paid to the inmates helped support the inmates' families or pay fines or restitution related to their court cases. The program, in short, kept inmates busy, provided on-the-job training, paid for further inmate education opportunities, avoided damaging private sector interests, and inspired similar efforts in state prison systems.

The new theories, models, and prototypes, however, were not always followed—or necessarily effective even if they were followed. The various departments of corrections in the United States instituted policies regarding conditions in their prisons, the American Correctional Association issued national standards for prisons to meet, and by the late 1970s a national prison accreditation program was in place—yet overcrowded, unsanitary, and dangerous living conditions continued to prevail in many facilities. Many prison systems screened carefully to ensure that new hires were qualified, and then put them through intensive training courses—yet underqualified and poorly trained staff continued to be the norm in other prison systems; further, some prison systems resisted hiring many minority staff members until well into the 1970s, thereby helping to perpetuate a demographic and cultural gulf between correctional officers and the inmates they supervised. Vocational, educational,

and recreational programs were a vital component in twentieth-century American prisons, yet there was not always enough work to keep inmates employed, or enough money to fund other types of activities. Perhaps most important, departments of corrections instituted policies recognizing inmate rights, providing avenues for inmates to seek remedies for grievances, and prohibiting staff mistreatment of inmates, yet the policies were not always enforced adequately, and inmate abuse continued in some prison systems.

Partly because of these failures, American prisons were hit by several riots in the mid- and late twentieth century. Serious disturbances at more than a dozen prisons in Michigan, New Jersey, California, Massachusetts, and elsewhere flared up in the early 1950s, largely the result of post-World War II prison overcrowding and inmate idleness produced by declining government orders for prison-made products. There were more riots in the 1960s and 1970s in California, North Carolina, Michigan, and Pennsylvania. One of the bloodiest uprisings occurred in 1980, when inmates at the New Mexico State Penitentiary killed and mutilated dozens of fellow inmates, tortured several officers, and practically demolished the prison. The most horrific of the riots took place in 1971 at Attica State Prison in New York, where poor food and inadequate health care exacerbated years of escalating tension between the predominately rural, white officers and urban, minority inmates.

Prison systems responded with internally developed reforms intended to improve conditions, address grievances, and alleviate tensions. And, for the first time, the courts began intervening in prison operations.

Until the 1960s, courts in the United States had seldom exercised much authority over the prisons to which they committed offenders, generally following an 1871 Supreme Court opinion that prisoners were “slaves of the state” who enjoyed no constitutional rights. The American civil rights movement, however, gave rise to inmate advocacy groups, such as the American Civil Liberties Union's National Prison Project, that challenged substandard prison conditions and unduly restrictive prison operations on constitutional grounds. The riots gave further impetus to litigation. After the Supreme Court ruled in 1974 that there was “no iron curtain drawn between the Constitution and the prisons of this country,” prison systems were hit with tens of thousands of individual and class-action lawsuits.

Some of the lawsuits were frivolous. Others, particularly those filed against the Federal Bureau of Prisons, which had been able to prevent the sorts of objectionable practices and conditions that prevailed in some state prison systems, either were settled in the prison system's favor or resulted simply in minor adjustments to prison

operations. But many lawsuits revealed conditions and practices that were so unsatisfactory and even unconstitutional that the courts issued orders that mandated changes, appointed special masters to monitor conditions, and issued contempt citations for unsatisfactory compliance. By the 1980s, courts had imposed orders against prisons in more than forty states. One of the most notorious cases involved the Texas State Department of Corrections, which was found by a federal court to maintain such abusive conditions that it ordered the department to be completely restructured.

To the extent that European countries utilized the prison option during this period, they subscribed to a rehabilitation ideology similar to individualized treatment and the medical model. European prison systems relied heavily on criminology, psychology, and the other social sciences in developing programs that stressed inmate education, medical treatment, and social services. Europe emphasized staff training and inmate rights through a series of international penitentiary congresses in the early twentieth century, United Nations initiatives after World War II, and the so-called social defense movement of the 1950s and 1960s, which held that society could be protected most successfully by treating offenders rather than punishing them.

Except for the fascist countries before World War II, and the socialist countries thereafter, however, Europe continued the trend away from imprisonment that began at the end of the nineteenth century. Incarceration rates in Western European countries plummeted, due to increasing reliance on probation, fines, conditional sentences, and parole. In the Netherlands, for example, incarceration rates fell from sixty-six per 100,000 persons in 1950 to twenty-five per 100,000 in 1965. And what prisons existed were increasingly less prisonlike. Sentences were shorter, furloughs and work release were common, and inmate management was much more lenient than in American prisons.

#### THE BALANCED MODEL AND DEVELOPMENTS IN THE LATE TWENTIETH CENTURY

Prison officials and social scientists in the 1970s and 1980s began questioning the rehabilitation-oriented medical model that in the 1960s was the dominant theme of American corrections. The programs themselves did not come under attack. They were considered as valuable as ever, if only as a means to manage the inmate population. But two underlying theories of the medical model, that rehabilitation was the paramount purpose of incarceration and that it could be compelled through mandatory programs, fell from favor. The so-called balanced model attempted to place noncoercive rehabilitation in a more realistic framework as one of several coequal goals.

Two developments helped to undermine the medical model. First, researcher Robert Martinson published studies in 1974 and 1975 that suggested that rehabilitation programs in New York State prisons had failed to reduce recidivism, and set off a national debate over his assertion that “nothing works.” Second, prominent legal scholar Norval Morris was one of several critics who maintained that the medical model was naive in assuming that it was possible to diagnose and cure criminal behavior as a physician would cure a disease, and that the coercive nature of medical model programs encouraged inmates to dissemble or connive in order to give the appearance of reforming so they could win early release. Morris was a strong proponent of rehabilitation programs, but believed that to be effective they had to be voluntary. In fact, as many prison administrators conceded, prison was one of the least promising places to offer rehabilitation services; individuals ended up in prison only after all other institutions of society had proven ineffective at dissuading them from crime, and the only way programs could be effective was if offenders sincerely wanted to take advantage of them.

Federal Bureau of Prisons director Norman A. Carlson agreed with Morris, saying that his point of view “was the same thing that many of us had thought for a number of years: that we in corrections could not coerce or force change. We could facilitate change, however, and we had that obligation as part of our responsibilities.”

In 1975 the Bureau of Prisons formally abandoned the medical model. Apart from work assignments, considered indispensable to inmate management, rehabilitation programs would no longer be mandatory. Carlson emphasized, however, that the bureau was “not abandoning [its] efforts to assist inmates,” but in fact would “develop more and better programs” that would “interest inmates in helping themselves.” Throughout the last decades of the twentieth century, in fact, the Bureau of Prisons did just that, with new types of educational programs, upgraded mental health programs, and a landmark drug treatment program developed in concert with the National Institute on Drug Addiction.

In abandoning the medical model, the Bureau of Prisons stressed that rehabilitation was only one of several prison functions. The balanced model held that prisons had the equally important responsibilities of punishing offenders through humane incarceration, incapacitating offenders (i.e., preventing them from engaging in criminal activities during their imprisonment), and deterring others from committing crimes.

In 1976 the Bureau of Prisons opened what would be the model for the post-medical-model prison: the Federal Correctional Institution in Butner, North Carolina. Butner offered some of the most advanced programs available in

any prison, but, except for work assignments, inmate participation was voluntary. The open compound within a secure perimeter permitted free movement and a normalized environment for inmates, which Morris and others believed would be the most conducive atmosphere for successful programs. The Butner model attracted international attention.

Other developments in the closing decades of the twentieth century included establishment of supermaximum prisons to confine the 1 to 2 percent of the inmate population that was so violent that they would have been a threat to staff and other inmates even in high-security penitentiaries. At the other end of the spectrum was home confinement, under which pretrial detainees or nonviolent convicts were confined to their own homes; electronic ankle bracelets or other means were employed to ensure compliance. And through “privatization,” private companies built their own prisons and charged governments to house inmates in them—despite the dubious legal ethics of the arrangement, the even more dubious claims of economic efficiencies, and the fact that the inmates who were most expensive to confine (the violent, the ill, the psychotic) could not be sent to private facilities.

Although Western Europe continued to pursue non-prison options in the 1980s and 1990s, American prison models proved highly influential in the former dictatorships of Eastern Europe and in Latin America. The U.S. government provided governments in those countries with technical expertise on prison operations through the National Institute of Corrections. A subsidiary of the Federal Bureau of Prisons, the institute advised

foreign governments on prison design and operations, staff training curricula, protection of inmate rights, and program development.

As the century drew to a close, there was strong public sentiment in the United States for “get-tough” policies aimed at making imprisonment as onerous and humiliating as possible. Longer sentences, mandatory sentences, reduction or even elimination of parole, removal of hot meals from prison menus, the housing of inmates in tents, and reintroduction of such nineteenth-century relics as striped uniforms and chain gangs were adopted in many jurisdictions. Some of the more theatrical “hard-time” tactics contradicted safe correctional methods, however, and could only be instituted in county jails that housed short-term, nonviolent offenders.

During the more than five thousand years of prison history, the role of incarceration has encompassed non-punitive detention, punishment, and rehabilitation. The nature of incarceration has varied from indiscriminate crowding of all types of offenders into cages, to highly regimented custody of inmates in barred cells, to normalized environments emphasizing treatment programs. And the approach to incarceration of any given society has drawn on political ideologies, legal trends, cultural traditions, popular sensibilities, and academic theories; in short, as British statesman Winston Churchill (1874–1965) observed, it has always reflected the state of civilization.

*John W. Roberts*

# Cross-National Correctional Health Care

---

Several health-care structural frameworks exist, including: (1) a government-oversight model in which government interaction with the facility is assessed; (2) a rational-contingency model based on customer needs; and (3) a resource-dependency model in which resources are consumed according to availability.

Ezekiel Emanuel (1991) describes four “schemes” in which health care is provided within a government-oversight framework. As a continuum, this framework starts with the high-technology, ability-to-pay model of health care that is most identified with the United States. In such a system, not all individuals have health insurance, but they do have access to medical technology if they visit an emergency room. For those who are incarcerated, this type of health-care framework is analogous to all types of health care being provided either onsite or in an emergency room.

With a growing population of aging detainees, there is a significant need to deal with the chronic medical conditions that such detainees face. Emanuel describes the National Health Care System in Britain, in which all detainees have access to health care, but at the lowest possible cost. This system permits detainees access to such medical technology as x-rays or ultrasound, but not high-cost CAT or MRI scans.

In the rational-contingency model, a structure is created based on the differing needs of a variety of customers. For example, as the degree of customer homogeneity increases, there is less need for programs that address a diversity of health-care situations. In a heterogeneous customer environment, in contrast, there is a need for wide variations of programs. For correctional

facilities that house different types and genders of offenders, the need for more complex health-care programs is greater than in facilities that house only male or female detainees or only those who have committed minor infractions.

With the resource-dependency model, it does not matter what type of government oversight exists or what type of needs are represented by those who are incarcerated, since this type of health-care system depends primarily on the availability of funding allocated for the care of detainees. The resource-dependency model “emphasizes the importance of the organization’s abilities to secure needed resources from its environment in order to survive” (Shortell and Kaluzny 1997, p. 23). Although it is considered important to provide health care to detainees, it may be impossible when there are limited funds available for health care in correctional facilities. More importantly, the resource-dependency model emphasizes that the systems that succeed are those that plan and interact the most effectively with their sources of funding (Ouchi 1981; Pfeffer and Salancik 1978).

## NORTH AND SOUTH AMERICA

In the United States, a significant source of information on correctional health care is the National Commission on Correctional Health Care (NCCHC). The NCCHC accredits correctional health-care facilities, including clinics and stand-alone acute-care facilities. According to the NCCHC and other sources, the most pressing issues in correctional health care in the United States are HIV/AIDS, hepatitis, and tuberculosis.

In terms of structure, the U.S. correctional system employs the full range of health-care frameworks—government-oversight, government-managed, and various private arrangements, especially for those incarcerated for long periods. There are also many sources of funding in the United States for correctional health care; all levels of government (local, state, and national), as well as private funds, provide resources for correctional facilities. Compared to other countries, the U.S. prison system has the greatest variety of structures and resource sources. There are, however, many similarities in the ways U.S. institutions are attempting to meet the needs of incarcerated HIV/AIDS, hepatitis, and tuberculosis patients. The high rate of such chronic diseases among prisoners has a major impact on health-care costs in correctional facilities.

Like the United States, Canada employs a variety of models of government oversight and resource procurement for prison health care. However, there are only a small number of privately run facilities in Canada, and those exist only at the provincial level. Also like the United States, Canada has a problem with the type of outcomes relating to those who are incarcerated. A high percentage of the Canadian prison population is infected with HIV/AIDS and hepatitis C, and those rates are expected to increase.

In South America, Chile and Peru showed a growing trend toward privatizing the oversight of correctional health care. Information on Brazilian correctional health care is more readily available than for Chile and Peru. Brazilian correctional health-care systems are predominately government-run, although there is an increasing move toward privatization. As in many other countries, the prevalence in Brazil of incarcerated individuals with HIV is high (Tourinto and Dourado 2002). The number of prisoners in Brazil with hepatitis C was also high, and the infection rate has been found to increase due to incarceration (Brandao and Costa Fuchs 2002).

#### EUROPE AND THE MIDDLE EAST

The following countries in Europe and the Middle East were assessed: Israel, Switzerland, Romania, France, Italy, Spain, and Germany.

The Israeli Prison Service houses more than ten thousand inmates; about 20 percent are incarcerated for offenses against the state. According to Physicians for Human Rights, an American-based humanitarian organization, the prisons in Israel present hygiene and sanitation problems. Each of Israel's prisons has a clinic and medical staff, and inmates who cannot be treated at the institution are moved to the Israeli Prison Service Medical Center, which offers advanced medical care. After recording numerous complaints about the

conditions of medical care among prisoners in Israel, Physicians for Human Rights investigated, and found that many of the inmate complaints were legitimate. Some areas of concern included inappropriate medical treatment, protracted delays in treatment and surgery, intervention in treatment by nonmedical personnel, poor sanitary conditions, neglect of prisoners in need of nursing care or mental rehabilitation, and avoidable fatalities.

According to the European Institute for Crime Prevention and Control, prisons in Romania reported a significant tuberculosis problem in 2004. In 2003 nine Romanian prisoners died from tuberculosis. The Romanian Centre for Health Services and Strategy of the Open Society Institute funds HIV treatment in prison hospitals. This organization also funds tuberculosis clinics.

Switzerland, a country of nearly 7.5 million people, had a prison population of roughly six thousand in 2005, according to the International Centre for Prison Studies (ICPS). As such, Switzerland has one of the lowest incarceration rates in the world with 157 prison facilities that are both publicly and privately operated. Within these prisons, medical services are available for the mentally disabled and for those addicted to alcohol or drugs. Human rights groups have few complaints about health care in Switzerland's prison system.

The penitentiary system in Spain provides onsite health care, as well as specialized care through public hospitals and private organizations. The goal is to provide health care at a minimum cost to society. The Spanish prison system administers two psychiatric hospitals. However, the prison system suffers from many of the same problems facing the country's health-care system as a whole—in particular, long waiting lists for specialists and for nonurgent operations. Other problems include overcrowding; in 2005 the Spanish prison system was at 114.2 percent of capacity according to the ICPS, and questions persist as to who has oversight of the correctional health-care system.

Primary, secondary, and tertiary care are provided free to all French inmates. Legislation passed in August 2000 created interregional security-protected hospital units to provide care for prisoners at public hospitals. That care was sorely needed as the prison population grew and occupancy reached 110 percent capacity by 2005, according to ICPS. In 1998, 6.8 percent of France's prisoners were fifty to sixty years old and 2.6 percent were over sixty. The average prison time served in 1997 was just over eight years (Ministère de la Justice 1998).

Along with France's aging prison population and its potential need for both chronic and acute care, an analysis of 15,200 inmate records dating from 1989 to 1995 painted a dismal picture of their social and psychiatric

situation. The analysts found that 57 percent of inmates had been unemployed; 60 percent had no professional qualifications; 31 percent had a psychiatric history; 16 percent had made suicide attempts in the past; and drug abuse more than doubled from 24 percent in 1989 to 53 percent in 1995 (Ministère de la Justice 1998; Duhamel et al. 1999).

Health care in French correctional facilities is organized pursuant to legislation passed on January 8, 1994. The delivery of secondary levels of care is entrusted to hospitals within the framework of agreements signed between correctional facilities and public hospitals. Primary care may be handled by private medical teams or by public hospitals using ambulatory health-care units.

In 2005 Italy's prisons were overcrowded at 134.2 percent capacity according to the ICPS. During the 1990s, however, the correctional health-care staff was able to deal adequately with the inmates' psychiatric problems (Marasco et al. 1998). In Italy, primary, secondary, and tertiary health care is provided to all prisoners free of charge. A high percentage of Italian prisoners suffer from drug-related health problems, including HIV. Among European prisoners, HIV prevalence rates were highest in Spain and Italy. Fortunately for the Italian prisoners who are HIV positive, Italian law stipulates that all HIV-positive prisoners should receive the same treatment provided by the country's health service for all Italian citizens.

Germany's prisons face the aging of its incarcerated population, among other critical issues. For example, in 2003 a significant number of German prisoners were over the age of fifty, and approximately two thousand of them were serving life sentences. Another problem facing German authorities is that almost 30 percent of the prisoners in 2005 were from other countries, according to the ICPS.

## AFRICA

Few African countries provide reliable information to researchers investigating their prison health-care system. The most information is available from South Africa, Nigeria, and Botswana.

The HIV/AIDS problem is especially pronounced for South African prisoners. According to research by K. Goyer and J. Gow, "The issue of HIV/AIDS in prison has largely been under-researched and underanalysed in South Africa" (2001, p. 195). The South African prison environment is not conducive to good health and therefore also contributes to a pronounced high risk for the contraction of HIV. These conditions include gang violence, sexual violence that results in tearing and bleeding, and the use of needles or other instruments for injecting intravenous drugs and tattooing. The presence of

tuberculosis is also a major problem in South African prisons (Goyer and Gow 2001; Goyer 2002).

The South African prison environment is further challenged by conditions of poor nutrition, inadequate medical care, and overcrowding. The illness of an HIV-positive South African who is imprisoned will advance more quickly than someone who has access to a supportive environment, better nutrition, and good health care.

Many advocate for the availability of free condoms in South African prisons. South Africa began distributing condoms to prisoners in the 1990s, but not before prisoners had undergone HIV/AIDS education. "Constraints on the implementation of effective HIV prevention strategies include: bureaucratic inefficiency, lack of resources, and a reluctance by prison authorities to address the issue of HIV in prison" (Goyer and Gow 2001, p. 307). South Africa's Department of Correctional Services implemented a program in 1996 to establish clinics for sexually transmitted diseases (STDs) in all prison hospitals, to be run by nursing staff. These clinics were to provide "testing, treatment, counseling, and information regarding STDs" (Goyer and Gow 2001, p. 197). In November of 2003, the South African government approved a national HIV/AIDS plan to provide free antiretroviral drugs, although it was not clear if this policy would apply to prisoners (Baleta 2003).

A study examining the number and causes of death at one prison in South Africa reveals disturbing results related to HIV/AIDS and prison exposure. From 1995 through mid-1997, prisoners in South Africa who were HIV positive were segregated from the other prisoners. This resulted in a slight decrease in prison deaths. When the segregation policy was discontinued, a marked increase occurred in the number of prisoner deaths. The death rate rose from approximately ten per year to over sixty per year. Details of the deaths were not recorded until 1999, but at that point it became clear that the majority of the deaths were HIV/AIDS-related. Health staff revealed that two-thirds of the prisoners had received HIV testing and that 80 percent were HIV positive (Goyer and Gow 2001).

Nigeria's challenge is similar to that found in African prisons in general—the HIV/AIDS epidemic. The problem of how to manage such an epidemic is linked to many other health-care problems, one of the most important being a lack of professional medical personnel (Narasimhan et al. 2004). In Nigeria, the HIV/AIDS epidemic hit a country that already had a fragile health-care system, and adding to the problem is the government's longtime denial that HIV was a threat. As a result, there has been only minimal financial support from Nigeria's Ministry of Health to implement prevention programs.

A study of 252 inmates in the Kiri-kiri prisons of Nigeria examined knowledge about HIV/AIDS and about preventive practices and risks. The researchers discovered a considerable amount of ignorance regarding the transmission of HIV, with corresponding high-risk behavior. The prisons lacked educational and risk-reduction programs, nor did they make condoms available to prisoners (Odujinrin and Adebajo 2001). Another study of the prevalence of psychiatric morbidity among prisoners in Nigeria found a “fairly high level of psychiatric disorders” (Agbahowe et al. 1998). Most of the inmates developed these psychiatric illnesses while in prison. The rates are much higher than in developed countries.

A physician who had been imprisoned in Nigeria reported that in nine out of ten cases there was no physician who could prescribe medication or treatment to prisoners. The former Nigerian prisoner also stated that in the rare occurrence that a physician was present, he or she only had time to jot down prescriptions that the prisoners lacked the money to purchase. The physician further reported that the health of prisoners in Nigeria is abysmal because the minimum rules that should be in place for access to medical treatment are ignored (Oyo 1998).

Botswana is a relatively rich African country, but, like Nigeria, Botswana is hindered in administering adequate health care by a lack of medical personnel, much of the dearth being linked to the HIV/AIDS epidemic (Narasimhan et al. 2004). Another common health problem in Botswana’s prisons is tuberculosis.

## AUSTRALIA

The structure of the prison system in Australia varies from province to province. The Department of Justice and Corrections manages and oversees both publicly and privately run prisons. Regardless of whether the prison is publicly or privately run, all prisoners in Australia receive primary, secondary, and tertiary health care free of charge. All prisons, whether public or private, are responsible for insuring that primary-care provisions are available within the prison itself. However, when hospitalization is necessary, whether it be secondary or tertiary care, prisoners may be referred to specific hospitals that provide care for prisoners.

## CROSS-NATIONAL CORRECTIONAL HEALTH-CARE FRAMEWORK

Cross-national correctional health care takes a number of shapes and forms, and unique problems exist in every country. The trends in health care among prison populations tend to parallel that of the citizenry as a whole (e.g., HIV/AIDS, hepatitis, and tuberculosis). Problems appear to be correlated with access to resources and

governmental peculiarities found in different countries. For example, the United States has the greatest range of resources and government oversight, due to the range of federal, state, and local governments and the country’s status as the most free of the world’s free-market economies.

To summarize the cross-national correctional health-care trends:

- There is a significant problem with HIV/AIDS, and the prevalence is increasing.
- Hepatitis and tuberculosis are also major problems that will increase if overcrowding is not reduced in correctional facilities around the world.
- Funding for correctional health care and the variety of resources available are limited in most countries, with little, if any, private funding available in many countries.

# History of International Collaboration in Corrections

---

The German penologist Karl Krohne (1836–1913) spoke in favor of international collaboration in the field of criminology more than a century ago. At the time, many countries had experienced a substantial increase in crime, a phenomenon that was connected with an increase in industrialization and urbanization.

During the mid-nineteenth century, many countries were considering a reform of their penal system, partly due to an increase in the prison population and partly due to a desire for more humane and rational treatment of prisoners. Plans for new prisons were launched in many countries—new buildings would also make room for new methods of treatment. In an endeavor to improve European prison systems, many countries sent observers to the United States. The common interest in a new prison system gave rise to a need for an exchange of views and experience.

## EARLY INTERNATIONAL CONGRESSES

The first international congress on prison problems was held in Frankfurt, Germany, in 1846. It was attended by seventy-five people representing the United States and twelve European countries. The congress brought together lawyers, physicians, prison chaplains, wardens, and heads of correctional administrations. The discussions were concentrated on the merits of solitary or separate confinement as a treatment for inmates (Eriksson 1976).

The following year another international congress was held in Brussels, Belgium. The focus at this congress was the treatment of young offenders, and as a result a

system of correctional education was stressed. According to Krohne (1889), this congress attracted attention not only from corrections professionals, but also from several governments, which expressed an interest in exchanging ideas on the treatment of offenders.

In the early 1870s the time seemed right for concerted action at the international level, and the great engineer in the work of international collaboration was the American prison reformer Enoch Wines (1806–1879). In 1871 he was appointed the task of organizing an international congress, influenced by Vladimir Sollohub, governor of the penal institutions in Moscow. Wines intended to give the international congresses a wider scope by addressing the prevention of crime as well as the treatment of offenders. He believed that crime prevention should be founded on intergovernmental cooperation. The outcome of Wines's efforts was a world congress held in London in 1872 with four hundred delegates, one-fourth of whom represented governments. The agenda of this congress was practical, with general and more subtle matters pushed into the background.

The 1878 congress in Stockholm, Sweden, was given a firmer structure. The agenda was divided into three sections: legislative matters within the penal field, prison matters, and crime prevention. One of the main purposes was to gather worldwide information on prisons. Altogether, fifty reports were sent in from European countries, American states, several countries in Africa and Asia, and even Australia and New Zealand (Eriksson 1967).

The Swedish penologist Torsten Eriksson made this observation of the congress in Stockholm: "Beginning with this congress, the governmental delegates dominated the discussions and ran the resolution machinery. The rest of the delegates were kept in the background, whether they represented international associations or themselves. They were not allowed a voice until after the official delegates had expressed themselves" (Eriksson 1967). Nevertheless, the International Penitentiary Commission was founded at this meeting.

International collaboration was substantially broadened in 1889 with the foundation of the Union Internationale de Droit Pénale, a movement founded by three prominent penologists: the German Franz von Liszt (1851–1919), the Dutch Gerard Anton van Hamel (1842–1917), and the Belgian Adolphe Prins (1845–1919). These three distinguished scholars of penal law shared "the same values and concerns with respect to an emerging historical crisis at that time." They were deeply concerned about the increasingly repressive tendencies in penal law and decided to create a "forum which would permit scholars, academicians, and practitioners of criminal justice to gather, exchange views, and express their concerns, and ultimately to have a positive and constructive effect on the development of criminal justice policy" (Bassiouni 1984).

Not surprisingly, the agenda for their first meeting included suspended sentences, alternatives to short-term imprisonment (including the use of fines as a penal sanction), problems related to recidivists, and measures against young offenders. The program of this new organization aroused worldwide attention and led to the foundation of several Scandinavian associations for criminologists.

In 1924 the International Association of Penal Law (IAPL) was founded, continuing in some respects the work of the Union Internationale de Droit Pénale. The first international congress of the new association took place in 1926 in Brussels. While at first dominated by European delegates, it later expanded to include delegates from outside Europe.

In the late 1930s the International Society of Criminology (ISC) was founded. This organization furthered the development of scientific research on crime. The society held its first international congress in Rome in 1937.

#### THE INTERNATIONAL PENITENTIARY COMMISSION

Activities on the international level were for a long while dominated by the International Penitentiary Commission (IPC), which was formally organized at the 1878 international congress in Stockholm. This organization consisted of delegates nominated by nations that joined the

commission. The number of member nations increased after 1900, and at the outbreak of World War I in 1914 about twenty countries had nominated delegates.

The commission met once a year with one or two delegates from each member country to discuss penal problems. The headquarters was in Bern, Switzerland, with a permanent secretary-general. It was here that the regular periodical, *Select Papers on Penal and Penitentiary Matters*, was published.

Following its organization at the Stockholm congress, the IPC arranged six congresses until the outbreak of World War I. All but the last one, held in 1910 in Washington, D.C., were held in European capitals. World War I brought an interruption of international collaboration in the penal field, but due to the efforts of an active secretary-general, Professor Jan Simon van der Aa (1865–1944), the IPC was able to act as an efficient link.

In 1925 the IPC held its ninth international congress in London. In addition to the official delegates, university professors, lawyers, prison administrators, government officials, and well-known scholars were invited to participate. This congress is remembered for rejecting the concept of punishment as a deterrent. A differentiation of offenders was also strongly advocated, especially with respect to young offenders. Special attention was also paid to recidivists, mentally ill offenders, alcoholics, vagrants, and sex offenders.

In 1929 the commission changed its name to the International Penal and Penitentiary Commission (IPPC) in order to cover more penal and criminological issues. At the tenth congress in Prague in 1930, lengthy discussions took place dealing with young offenders. Special attention was given to the establishment of juvenile courts. The eleventh congress, held in Berlin in 1935, was colored by criticisms of the penal philosophies set up by the new regime in Germany.

The IPPC held its twelfth international congress in the Hague, Netherlands, in 1950 with about three hundred delegates from thirty countries—more than seventy were official delegates. This congress was the last to be organized by the IPPC. The time had now come for the new giant on the international scene, the United Nations, to take the lead in this field.

#### THE ROLE OF THE UNITED NATIONS AND THE IPPC

Deliberations between the United Nations and the IPPC, IAPL, and ISC had gone on for some time. Having agreed that the United Nations should take over the tasks hitherto performed by the IPPC, the organization held its last meeting in July 1951. Under the terms of the agreement, groups of experts would meet in different

regions of the world at least once every two years, and the first consultation group would be composed of the former members of the IPPC. The United Nations declared its willingness to organize a quinquennial congress in the manner established by the IPPC and to publish regular bulletins.

In 1955 the United Nations (UN) held its first World Congress on the Prevention of Crime and the Treatment of Offenders. The main topic of this first congress was the formulation of standard minimum rules for the treatment of prisoners. These rules originally were elaborated by the IPPC, which presented them to the League of Nations in 1934. The league recommended that member and nonmember nations implement the minimum standards to the fullest extent. At the request of the United Nations, the IPPC prepared a new draft of the standard minimum rules that had been approved by the commission on July 6, 1951. This set of rules was adopted at the first world congress.

At its dissolution, the IPPC had a large amount of money at its disposal, as each subscribing government contributed 120 Swiss francs annually for each million of its population. It was found to be impossible for the United Nations to receive funds earmarked for specific purposes under its statutes, and because the IPPC's own constitution required that its funds be expended only for purposes for which it was founded, the IPPC decided to create a foundation that would continue to expend the income from the fund for appropriate work in crime prevention and the treatment of offenders. The organization of the International Penal and Penitentiary Foundation (IPPF) was completed at the final session of the IPPC in July 1951. The foundation is registered in Switzerland and is a nongovernmental, nonprofit organization governed by the provisions of the Swiss civil code.

The foundation continues the scientific work of the IPPC in the prevention of crime and treatment of offenders. It sponsors conferences and publications, and has been given consultative status to the Economic and Social Council of the United Nations. The twenty countries represented at the IPPC at the dissolution of the commission are member countries of the foundation. Each country may have at most three members.

During the five-year period between UN congresses, the foundation arranges at least two international meetings—one for members only, the other as a colloquium open for other participants. For many years the foundation also arranged conferences for heads of prison administrations, partly as a tradition of the commission, which had a large representation of prison administrators. The arrangement of these special conferences was later taken over by the Council of Europe.

## THE BIG FOUR ASSOCIATIONS

In 1949 the IAPL, the IPPC (later the IPPF), and the ISC were supplemented by a new organization, the International Society of Social Defense. This group was particularly interested in developing a criminal justice policy divorced from the punishment ideology, emphasizing treatment and preventive measures. This new society proclaimed a twofold objective: provide protection for society against criminals, and safeguard members of society from falling into crime.

These four associations are often called the *four major associations*, or in more popular terminology, the Big Four. There has always been extensive collaboration between them. Since 1963 they have met every five years at Bellagio, Italy, for a joint colloquy, where one of the main topics of the forthcoming UN congress is discussed. During these colloquies each association gives its contribution to the topic under discussion, and the proceedings of these colloquies are published and distributed at the UN congress.

On the occasion of the tenth anniversary of the International Institute for Higher Studies in Criminal Sciences at Siracusa, Italy, in 1982, the Big Four established the International Committee for Coordination (ICC), consisting of the four presidents and the secretaries-general. Since its establishment, this committee has met several times, and its creation has greatly furthered collaboration between the four major associations. Collaboration among the Big Four has been especially strong and efficient in preparation for the periodic UN congresses on crime, including the Eleventh United Nations Congress on Crime Prevention and Criminal Justice, held in Bangkok, Thailand, in April 2005. Seminars have also been held for elaborating UN standards, and through the ICC and the institute in Siracusa a model agreement has been set up for the transfer of inmates.

For many years the four major associations have worked closely with the Council of Europe by sending observers to its most important meetings, and by giving suggestions and advice. The council is usually represented in conferences and congresses that are organized separately or jointly by the associations. According to the council's report on *Activities in the Field of Crime Problems* (1977), "The Council of Europe has always found a source of inspiration and encouragement in its working relations with the four associations and is grateful for the support which they have given to its activities."

# Aviation Terrorism

---

Aviation is an ineluctably international industry. Airports connect the world, and thousands of flights leave the United States and other countries each day bound for international destinations. Indeed, the degree to which the world is a global community is dependent on aviation. The global aviation industry moves some two billion people each year with a fleet of nearly 18,000 aircraft. Studies of global aviation's worldwide growth potential, even allowing for business downturns, project that the number of passengers will double by 2015.

The hijacking of an airplane has been described as the most dramatic and visible form of terrorism. High-profile hijackings allow terrorists to garner worldwide attention, as well as the opportunity to inflict a large number of casualties. However, the threat of aviation terrorism encompasses more than just hijackings. Over the last decades of the twentieth century, aviation-related terrorism evolved, and terrorists became much more deadly. In 2001 the United States experienced the horrors of aviation terrorism firsthand.

At about 8:00 A.M. on September 11, 2001, American Airlines Flight 11 took off from Boston's Logan International Airport bound for Los Angeles with eighty-one passengers and a crew of eleven. Shortly after Flight 11 left Boston, United Airlines Flight 175 also departed Boston for Los Angeles carrying fifty-six passengers and nine crewmembers. Neither of these flights would reach Los Angeles. At 8:46 A.M., American Airlines Flight 11 crashed into the north tower of the World Trade Center in lower Manhattan. Less than twenty minutes later, United Airlines Flight 175 hit the World Trade Center's south tower. The two attacks resulted in the deaths of about 2,750 people.

About a half hour after the second plane hit the World Trade Center, a third hijacked plane, American Airlines Flight 77 from Dulles International Airport in Virginia, crashed into the west side of the Pentagon building near Washington, D.C., killing everyone on board the plane and 125 people on the ground. A fourth hijacked plane, United Airlines Flight 93, heading to San Francisco from Newark International Airport in New Jersey, crashed at about 10:00 A.M. in a field near Shanksville, Pennsylvania, killing all on board. All four planes had been hijacked in a premeditated terrorist attack that caught the United States by surprise. Nearly 3,000 people lost their lives in the series of four coordinated attacks of aviation terrorism on 9/11.

Immediately after the 9/11 attacks, government officials from the U.S. Federal Aviation Administration (FAA) went on the defensive, expressing the impossibility of predicting the incidents that occurred that day. Despite the shock that many government officials, along with most American citizens, felt after the attacks, the idea of using planes as missiles was neither outlandish nor novel. As recently as 1994, an Air France flight destined for Marseille was halted when French authorities received intelligence indicating that someone intended to fly the plane into the Eiffel Tower in Paris. In 1993 a small airplane was stolen and crashed into the west side of the White House. Two decades earlier, in 1970, Israel downed a Libyan airliner after receiving information that the plane was going to be used as a missile for a suicide mission.

Only months before the attacks of September 11, 2001, the FAA had conducted an experiment at domestic airports designed to increase aviation security and reduce

the rate of lost and misrouted baggage. The experiment, known as Positive Passenger-Bag Match (PPBM), was based on the premise that bags checked in by passengers before takeoff could be identified if the passenger did not board the flight. It was hoped that this experiment would prevent acts of aviation terrorism where terrorists checked a bomb disguised as luggage, and simply did not board the flight. Prior to the 9/11 attacks, it was generally assumed that aviation terrorists were not suicidal. The 9/11 attacks invalidated this idea, and further illustrated that aviation terrorism is a deadly and ever-changing threat.

### TERRORISM COMES OF AGE

The aviation industry has long been a target for terrorists. In fact, the modern age of terrorism, characterized by the growth of Islamic fundamentalism, was precipitated by an act of terrorism committed against civil aviation: the July 1968 hijacking of an Israeli El Al commercial aircraft by members of the Popular Front for the Liberation of Palestine.

A number of significant acts of aviation terrorism, as well as disrupted plots, have been featured in news headlines since then. One example of a planned attack that was never carried out was the Bojinka plot. The mastermind was Ramzi Youssef, a skilled bomb maker who concocted the deadly mixture of urea-nitrate that was used in the World Trade Center bombing of February 1993. The name of the plot was derived from the Serbo-Croatian word for “big noise” and was adopted from Youssef’s experience with Muslims in Bosnia. The Bojinka plot was conceived in the early 1990s; the plan was to blow up several U.S. airliners flying over Southeast Asia, causing mass casualties. Youssef appears to have been cognizant that the aviation industry offered an appealing target to terrorists—a large number of people confined in a small space where even a limited amount of explosives could cause maximum casualties.

Although the Bojinka plot was foiled, it illustrates two important characteristics of aviation terrorism. First, Youssef chose a less-developed country, the Philippines, as his base of operations. Second, Youssef surmised that it was possible to indirectly hit the United States with a large-scale terrorist attack without stepping foot on American soil; the aviation industry offered terrorists the opportunity to conduct a coordinated attack against the United States from a remote location.

Another major aviation terrorism incident was the bombing of Pan Am Flight 103 over Lockerbie, Scotland, in December 1988. This act of aviation terrorism claimed the lives of 270 individuals. Eleven of the people killed were inhabitants of the village where the plane crashed after a powerful explosion. Libyan nationals were eventually tried and convicted for the Lockerbie bombing. Such a

bombing is the type of low-probability event that can cause large numbers of casualties. In fact, the Lockerbie bombing alone claimed 93 percent of the total American casualties from terrorist incidents worldwide in 1988.

As the above examples demonstrate, aviation-related terrorism is a problem that affects the entire world. It is not just airline passengers that face the threat of aviation terrorism, but people going about their normal lives on the ground or conducting business at a site like the World Trade Center. Additionally, the economic implications of terrorism against the airline industry are immense and have cost airlines and governments billions of dollars. The problem is compounded by the possibility of an airline going bankrupt after a terrorist attack, resulting in the loss of jobs and the destabilization of a country’s economy. Furthermore, acts of aviation terrorism may reach far beyond the main target of the attack. In most cases, the airliner itself is not the actual target, but rather a medium through which a larger constituency can be affected, whether it is the United States, Israel, India, or countless other possible targets.

### HIJACKING HISTORY

The first hijacking of an aircraft occurred in 1930 when a group of Peruvian revolutionaries seized control of an aircraft in order to flee the country. It would not be until 1947 that hijacking became more frequent. In July 1947, three Romanians hijacked a DC-3 aircraft in flight and ordered the pilot to land in Turkey. Between 1947 and 1950, a wave of fourteen hijackings occurred in Eastern Europe as citizens attempted to flee their countries.

In the late 1950s, coinciding with Fidel Castro’s Cuban revolution, a second wave of hijackings occurred that had a greater impact on the United States. In 1961 the first hijacked U.S. airplane was diverted to Cuba. Another sixty-six aircraft were hijacked by the end of 1968.

Although the majority of early hijackings were not strictly terrorist incidents, these events set the stage for the coming decades of aviation terrorism. In July 1968, three terrorists belonging to the Popular Front for the Liberation of Palestine (PFLP) hijacked an Israeli El Al aircraft en route from Rome to Tel Aviv. This incident ushered in the age of modern international terrorism. The PFLP hijacking differed from the dozens of previous hijackings in that the nationality of the aircraft held symbolic importance to the Palestinian terrorists. Additionally, the terrorists were not hijacking the aircraft to gain political asylum in a new country. They were seeking the release from prison of fellow Palestinian terrorists.

Though bombings of airplanes may prove to be more newsworthy, hijackings of aircraft by terrorist groups continue. One, more recent, example of aviation terrorism was the December 1999 hijacking of an Air

India flight. Members of a Pakistan-based terrorist group known as the Harkat-ul-Mujahideen (HUM) are believed to have been involved in the incident. Additionally, the act mirrored earlier hijackings in that the group managed to secure the release from prison of Maulana Masood Azhar, a former leader of the HUM.

## **BOMBINGS**

As with hijacking, the first recorded case of a bombing onboard an aircraft was not strictly an act of terrorism. The incident occurred on May 7, 1949, when what is believed to have been a time bomb detonated onboard a Philippines Airlines flight. Two criminals hired by a woman to kill her husband, who was on the flight, reportedly placed the bomb on the aircraft. Another flight was bombed the same year, this time in Québec, Canada. On September 9, a Québec Airways flight crashed after a bomb placed in the forward luggage compartment detonated. There were no survivors in either of these incidents. Between the first bombing of an aircraft and 1990, ninety-five reported cases of aircraft bombings occurred, and thousands of people died.

In Tokyo, Japan, on June 23, 1985, two baggage handlers were performing their normal tasks at Narita Airport when a suitcase ready to be loaded onto an aircraft exploded. Both of the baggage handlers were killed. On the other side of the world at almost the same time, an Air India flight en route from Canada to London exploded over the North Atlantic Ocean, killing 329 people. Canada, long thought to be safe from international terrorist attacks, soon learned that it was not immune to the worldwide phenomenon of aviation terrorism. In a move that at the time was unusual for acts of terrorism causing mass casualties, a Sikh group calling itself the Dashmesh Regiment claimed responsibility for the incident. In 2000, three Sikhs were arrested by Canadian authorities in connection to the incident.

On December 21, 1988, Pan Am Flight 103 left London's Heathrow Airport behind schedule. After the aircraft reached an altitude of 31,000 feet, it suddenly exploded over Lockerbie, Scotland, killing all passengers, crew, and eleven people living in Lockerbie. Although the PFLP was originally blamed for the incident, two Libyans, Abd al-Basit al-Megrahi and Lamem Fimah, were later arrested as the perpetrators. A lengthy investigation revealed that the two Libyans used the powerful Czech-made explosive Semtex to down the aircraft. Additionally, the Semtex was detonated using a sophisticated double detonator that consisted of a barometric switch that turned on a timer.

As with other forms of terrorism, the perpetrators of aviation terrorism have demonstrated the ability to improve their methods. This is illustrated by the

Lockerbie bombing, where the detonation device used was more advanced than earlier detonation methods. Earlier bombs placed on aircraft had employed a less-sophisticated barometric detonator that ignited the explosives after the plane reached a certain altitude. Such a device was used by the PFLP in 1970 to down a flight en route from Switzerland to Tel Aviv. Aviation terrorism incidents involving bombings have led some scholars to propose that terrorist attacks are becoming more deadly, though not necessarily more frequent. The notion that a terrorist attack is certain but with no certainty of when it will occur is an important aspect of aviation terrorism.

## **ARMED ASSAULTS**

The use of such weapons as AK-47 rifles or a surface-to-air missiles against aircraft in flight or on the ground is another way that individuals or groups commit aviation terrorism. Missile attacks against aircraft became an acute problem in the 1980s, in part because of increased security measures at airports to combat hijackings and bombings onboard aircraft. Missiles, such as SAM-7s (surface-to-air), also referred to as MANPADS (man-portable air defense systems), are widely available and in the possession of a number of terrorist groups, including al Qaeda, Hezbollah, and the National Liberation Army (ELN) in Colombia. Additionally, since the missiles are only 5 to 6 feet in length, they can be disguised, as alleged al Qaeda operatives proved in Mombasa, Kenya, during a failed attack in 2002. Some estimates place the number of available missiles worldwide at 350,000. With such a large number of missiles available, as well as the presence of these weapons in terrorist arsenals, some terrorism experts find it amazing that more missile attacks against aircraft have not occurred.

## **OBSERVATIONS SINCE THE EARLY 1990s**

Since the early 1990s, a pattern of increases and decreases can be observed in aviation terrorism. In addition, terrorism and nonterrorism-related hijackings can occur at any time during the year. The frequency of incidents categorized by day and month show that there is no particular day or month when incidents are more likely to occur.

The most common type of aviation-terrorism act committed since the early 1990s was a hijacking by a single perpetrator on a domestic flight. The perpetrator was most likely to demand that the aircraft be diverted to another location. Although the majority of incidents were resolved with the perpetrator being arrested, more than 58 percent of incidents caused the aircraft to reach a destination that was not scheduled. When a perpetrator made a threat, it was most often to blow up the plane. However,

in a majority of incidents where the perpetrator threatened to blow up the plane, there was no bomb onboard.

Along with such broad categories as ideology, training, and motivation, there are three essential ways in which terrorist incidents differ from nonterrorist acts perpetrated against aircraft: region, duration, and number of perpetrators. Terrorist incidents have a longer duration, involve more perpetrators, and are likely to occur in any region of the world.

The average duration for incidents of aviation terrorism that have occurred since the early 1990s is approximately sixteen hours. In contrast, the average incident duration for nonterrorist hijackings is only four hours. Accordingly, the first essential way that acts of aviation terrorism can be distinguished from other incidents committed against aircraft is by how long the incident lasts.

On average, aviation terrorism incidents involve multiple perpetrators, usually two or three individuals, whereas nonterrorist acts involve a single perpetrator. Thus, the number of perpetrators is the second characteristic that distinguishes acts of terrorism committed against aircraft from nonterrorist incidents.

Observed as a whole, terrorist and nonterrorist acts committed against aircraft are more likely to occur in Europe, the Middle East and North Africa, and Central and East Asia. However, when excluding nonterrorist hijackings, the observation can be made that acts of aviation terrorism can occur anywhere. Acts of aviation terrorism recorded since 1993 occurred in every region, without great differences. This observation runs contrary to the notion that acts of aviation terrorism might occur more often in the Middle East. Indeed, the highest number of incidents occurred in Asia. The world region with the most incidents was Central and East Asia. Europe had the second highest number of incidents. The Middle East and North Africa followed closely behind Europe.

## SUMMARY

Experts recognize that aviation is still high on the terrorists list of potential targets, both for its newsworthiness, as well as the ability to inflict mass casualties. Additionally, international terrorist groups such as al Qaeda that have professed the goal of killing Americans through mass-casualty terrorist acts have the resources to continue mounting a campaign of terror.

The threat that aviation terrorism poses to aircraft comes in a variety of forms that can change in an instant to become more deadly. The thousands of casualties caused by acts of aviation terrorism attest to the need to examine this problem more deeply. The various highly publicized acts of aviation terrorism, the international nature of the threat, the continuity of the threat represented by the continued vulnerability of the airline industry, as well as the presence of terrorists all too willing to conduct acts of terrorism designed to inflict mass casualties, make the subject of aviation terrorism important to researchers. To ensure that more lives are not lost, it is important to gain a better understanding of the problem on a global level.

# Emerging Trends in Terrorism

---

Terrorism probably presents a greater threat at the beginning of the twenty-first century than at any time in the history of the world. The attacks that occurred in the United States on September 11, 2001, and the bombings in Madrid in 2003 and London in 2005 made that all too clear. Advances in technology that occurred during the latter part of the twentieth century, and that will undoubtedly continue throughout the twenty-first century, have enhanced the ability of terrorists to strike accurately—and with extraordinary violence. Even worse, people who would previously have never resorted to the use of extreme violence are now capable of venting their dissatisfaction through the use of terrorism. Most special-interest or single-issue extremists fall within this category.

It is likely that throughout the ages at least some political malcontents have considered the idea of perpetrating an act of mass destruction as a vehicle to pressure the government and the population to adopt their demands. Fortunately for humankind, the capability to easily conduct such an action simply did not exist until the later twentieth century. During most of history, a military unit would have been required to kill thousands of people within minutes or to cause millions of dollars in damage in a single action. That all changed during the twentieth century.

In a May 17, 2000, commencement address to the U.S. Coast Guard Academy at New London, Connecticut, President Bill Clinton mentioned this issue. He advised, “the central reality of our time is that the advent of globalization and the revolution in information technology have magnified both the creative and the destructive potential of every individual, tribe, and nation on our planet.” He continued by noting that the miniaturization

of weapons will enable small groups or “free agents” to pose serious threats that were once possible only when initiated by hostile nations (Babington 2000).

So-called conventional weapons—weapons that do not incorporate chemical, biological, or nuclear payloads—have considerably improved and can now be used to cause catastrophic damage. Readily available explosives were used by relatively small numbers of people to bomb the World Trade Center in New York in 1993 and the Alfred P. Murrah Federal Building in Oklahoma City in 1995. In both these attacks, the death toll could have been much greater. If the World Trade Center tower actually had toppled in the 1993 attack, as was apparently the intent of the perpetrators, tens of thousands of people could have died. Similarly, if the Murrah Building had erupted into a flaming inferno—as certainly could have happened in an explosion of that magnitude—many of those who did survive the blast would have perished. Furthermore, modern technology has made it possible for violence-prone activists to deploy otherwise mundane objects as lethal weapons capable of horrific destruction. The use of commercial airliners as weapons on September 11, 2001, illustrated this danger.

Prior to September 11, one of the most costly terrorist attacks ever to occur on U.S. soil (financially) took place on October 18, 1998, when the Earth Liberation Front (ELF) used a flammable liquid to burn down buildings at a ski resort in Vail, Colorado. Despite the fact that no exotic weapons were employed in this attack, the damage exceeded \$12 million.

Nuclear weapons that were unheard of prior to the middle of the twentieth century are now found in many

countries around the globe. While it is unlikely that terrorists will have such weapons in their arsenals any time in the near future, the possibility does exist. Some terrorists who are assisted by nations identified as “sponsors” of international terrorism could conceivably obtain nuclear weapons or radiological materials through their supporters. In 2006 six nations—Cuba, Iran, Libya, North Korea, Sudan, and Syria—were designated as sponsors of international terrorism by the U.S. Department of State.

The likelihood that terrorists could effectively employ nuclear weapons in an attack is not high as of 2006. However, considering the devastating effects radioactive materials can have both on human health and the possible extensive fiscal costs for environmental decontamination and cleanup, authorities should pay particular attention to the threat of radiological and nuclear terrorism.

The Aum Shinrikyo (Supreme Truth) organization perpetrated an attack on March 20, 1995, of the kind that many law enforcement officials feared—deadly sarin gas was dispersed into the subway system in Tokyo, Japan. Twelve people died and thousands were sickened. The message was unmistakable: terrorists could employ chemical weapons with lethal results. Although deadly to handle, sarin gas can be produced with relative ease, and there are many terrorists living in the United States capable of obtaining and using this extremely deadly chemical.

Biological weapons also represent a real danger to society. Anthrax-laced mailings to members of the U.S. Congress and the news media occurred shortly after the September 11 attacks, resulting in five deaths. What relation, if any, these incidents had with the four airplane attacks remained unknown as of early 2006, and the exact perpetrators were yet to be identified. However, there have been scores of threats by dissidents to use anthrax against their targets. Abortion clinics have been frequent recipients of such warnings. In January 2000 police arrested Micky A. Sauer of Kenosha, Wisconsin, on charges that he mailed envelopes allegedly containing anthrax to over a dozen abortion clinics and other locations in southeastern Wisconsin. None of the envelopes contained actual anthrax.

Over the span of human history, millions of people have succumbed to naturally occurring biological agents, such as smallpox, bubonic plague, AIDS, and most recently, H5N1 avian influenza. These agents—or even more exotic ones—spread by a terrorist group might prove to actually be more deadly than when they have occurred naturally, since terrorists could specifically direct them to reach the maximum number of targeted people.

Obviously, anyone who attempts to use chemical and biological agents as weapons is placed in great jeopardy. The slightest mistake could result in the terrorist’s

demise. Nonetheless, the ability that these types of weapons provide to terrorists to hold a body of people “hostage” to their demands will likely be enough incentive to induce some terrorists to take the risks associated with chemical and biological agents.

The possibility of assassinations may be greater than ever before. Throughout most of history, the assassination of a prominent political leader was often regarded as a suicide mission. The weaponry was so rudimentary that, in order to ensure success, the assassin had to be close enough to see the victim with a naked eye. This difficulty usually resulted in the assassin being killed or captured—ultimately sacrificing his or her own life for the cause. Advances in technology, however, have dramatically altered the sacrificial nature of assassination, allowing for more clandestine accessibility and accuracy.

It is certainly not beyond the capability of some modern terrorist groups to assassinate several government leaders during a single attack. Terrorists have access to a wide array of firearms, such as rockets, that can be fired from great distances against a specific human target. Indeed, many hunters own weapons that are capable of striking a target that is out of the range of unaided vision. Explosives technology has also improved markedly. Of even greater significance are the rapid advances in detonating systems that permit remote and delayed initiations of bombs and rockets.

During the 1960s and 1970s current and emerging terrorist threats could be defined by the activities of specific groups and by advancements in communications and weaponry. Terrorism is much more complex in the twenty-first century. In order to fully explore the current threat situation, one must study not only the active groups, but also the political causes, the specific issues, and the violent tactics being employed. In some instances, the same issues are being targeted by differing groups. Similarly, divergent groups are using identical tactics to achieve their objectives.

Dedication to their cause is a trait that can be assigned to all terrorists. They are willing to place the promulgation of their political philosophy above almost anything else. The September 11 attacks illustrate that, for some, the dedication goes beyond the value of life itself. The very idea that nineteen extremists (or at least four of that number) were willing to commit suicide simultaneously, after a period of seemingly lengthy preparation, is difficult to digest. Yet, it happened. Politically motivated suicide attacks occurred with some frequency during the late twentieth century, especially in the Middle East and Sri Lanka, but they were never of this magnitude.

Because of this willingness to sacrifice one’s life, using a group member as an actual weapon offers a

terrorist group a unique ability to attack a target. For the first time in world history, it is now possible for a small group of dissidents to perpetrate catastrophic attacks, resulting in a degree of death and damage that previously required the involvement of an army.

#### THE THREAT FROM POLITICAL-CAUSE INTERNATIONAL TERRORISM

The attacks of September 11, 2001, brought the issue of international terrorism to the forefront in the United States and marked the beginning of the Global War on Terrorism (GWOT). The GWOT, a U.S. and international coalition aimed at fighting international terrorism, was formed immediately after September 11, 2001, when the United States and its allies agreed to fight terrorism worldwide. Some actions undertaken under the banner of the GWOT include the military campaigns in Afghanistan and Iraq, the seizing of financial assets and disruption of terrorist fund-raising programs, and the search, detainment, and arrest of known terrorists worldwide.

The terrorist attacks that had occurred in the United States during the previous quarter-century were largely domestic in nature and most often perpetrated by U.S. citizens. September 11 reinforced the message sent by the Islamic extremists who bombed the World Trade Center in 1993—they possess a hatred of U.S. foreign policy, and are both willing and able to attack the U.S. homeland and U.S. allies overseas.

Violent Islamic extremist terrorist groups appear to constitute the greatest international terrorist threat to the United States during the first decade of the twenty-first century. Intelligence analysis demonstrates that forces loyal to Osama bin Laden or in some way loosely affiliated with al Qaeda are continually planning additional attacks against the United States and its allies, both domestically but also on presences abroad, as occurred when two suicide terrorists bombed the USS *Cole* in Yemen on October 12, 2000, resulting in thirty-nine sailors being injured and the deaths of another seventeen sailors. Further international terror attacks against the United States, its allies, and GWOT partners have occurred in Bali, Indonesia; Madrid, Spain; and most recently, in London, England.

**The Bali Bombings.** On October 12, 2002, in the town of Kuta on the Indonesian island of Bali, members of the al Qaeda affiliated terrorist group Jemaah Islamiya set off three bombs in popular tourist locations. The first bomb was set off in a busy tourist bar, resulting in the evacuation of all the victims into the street, exposing the crowd to the full blast of the second bomb, which was planted in a van parked next to a neighboring club. Immediately after the second bombing a smaller bombing occurred about 300 yards from the U.S. Consular office in Bali.

The three bombings resulted in the deaths of 202 people and more than three hundred people were injured. A second terror attack in Indonesia aimed at Westerners occurred on October 1, 2005, at two popular tourist locations in Bali. The blasts struck the seaside area of Jimbaran Bay and the bar and shopping hub of Kuta, resulting in the deaths of twenty-three individuals, including the three suicide bombers, and injuring over a hundred more. Like the 2002 terror attacks in Bali, Indonesia, authorities believe members of Jemaah Islamiya carried out the attacks.

**Madrid, Spain.** On the morning of March 11, 2003, Spain became victim to a devastating terror attack when terrorists exploded ten bombs on four different trains during the morning rush-hour commute in Madrid. The attack, which left 190 people dead and over 1,500 injured, was the deadliest assault by a terrorist organization against civilians in Europe since the Lockerbie bombing in 1988, which killed 270 people, and the worst militant terror attack in modern Spanish history. Although authorities were quick to suspect the Basque armed militant group ETA as responsible for the attack, investigations led the authorities to members of an Islamic terror cell operating in Spain. Further investigation revealed that some members of the cell had met, assisted, or even trained with some of the terrorists that carried out the September 11, 2001, terror attacks.

**London Terror Attacks.** A terror attack in Europe aimed at the United States and its allies in the GWOT occurred in London, England, on the morning of July 7, 2005, when Islamic extremists attacked London commuters, detonating bombs in three crowded underground trains and one aboard a double-decker bus. Over fifty five people died in the bombing, including the three suicide terrorists, and over seven hundred others were injured. The bombings were attributed to Islamist terrorists operating in the United Kingdom. A second terrorist attack in London occurred on July 21, 2005, when four more incidents took place. Homemade bombs were placed in three subway trains and one on a bus in London, however, the explosive devices never completely detonated and no injuries or deaths were attributed to the incident. Through a thorough investigation, authorities determined that members of an Islamic extremist terror organization operating outside of London were responsible for the attempted bombings.

It is also important to note that not all terrorist activity is occurring outside of the United States. In January 1997 letter bombs were sent to the Leavenworth Federal Penitentiary in Kansas and to the offices of *Al-Hayat* newspaper in Washington, D.C. None of the dozen bombs detonated. The devices all

bore postmarks from Alexandria, Egypt. Although the motive behind the devices was never made clear, it is apparent that they were intended to be terrorist in nature. Given their place of origin, it would seem that the perpetrators were Middle Eastern extremists. The letters received media publicity and caused concern and increased security at both target locations. It is likely that an incident of this nature may be repeated in the future, because it is easily accomplished and almost impossible to solve. In September 2002, six American-born men of Yemeni descent were arrested in Lackawanna, New York, on charges of providing material support to al Qaeda. The arrest and subsequent convictions of the men highlight that domestic Islamic extremist groups are operating on U.S. soil and pose a continued threat to national security.

#### **ANIMAL RIGHTS AND ENVIRONMENTAL ISSUES**

Animal rights and environmental terrorist activity (often called eco-crime) will likely represent a common and widespread form of terrorism in the United States during the early part of the twenty-first century. It will also present law enforcement with a major terrorist challenge. The law enforcement community has had little success in combating animal rights extremism and ecoterrorism since the mid-1980s; most eco-crimes have not been solved. In those instances in which the perpetrators have been identified, the resultant punishments were minimal when compared with the damage the perpetrators caused.

Animal rights and environmental terrorists can strike anywhere and at any time. Whether in the heart of a major city or in a remote territory, there are numerous targets to attack throughout the United States. These targets include restaurants, grocery stores, laboratories, entertainment facilities, farms, government buildings, corporate entities, ranches, and logging operations—just to name a few. Fortunately, both animal rights and eco-extremists have directed their violence against property, instead of people; however, there have been some direct attacks against individuals by animal rights activists in England. It remains to be seen if this trend will continue, and if it will spread to the United States.

Animal rights and eco-extremists are unique because their philosophical causes have broad popular appeal—even among governmental officials and law enforcement officers. The fact is that most citizens abhor cruelty toward animals. Most people are also concerned about pollution and other environmental issues. What cannot be accepted are the violent, illegal methods that extremist groups employ to convey their messages. By contrast, many other terrorist causes do

not have broad popular appeal, and their causes are often not fully understood by the population or law enforcement community.

The exact number of animal rights-related attacks that have occurred in the United States will likely never be known. The U.S. Department of Justice, as well as overt supporters of such groups as the Animal Liberation Front (ALF) and the Animal Rights Militia, provide lists on the Internet that suggest that close to one thousand such attacks have taken place since 1980 in the United States. In addition, many hundreds of attacks have occurred in Canada, Great Britain, and elsewhere. Of course, many of the incidents cited as “actions” amount to no more than extended protests—as opposed to obvious terrorism in which extreme fear is generated by the violent nature of the incident. Nonetheless, there have been at least eighty incidents since 1984 that were of sufficient magnitude to qualify as true terrorist attacks. Most of these incidents caused damage in excess of \$100,000, and the combined damage from these eighty incidents exceeds \$40 million. Obviously, if the loss of business and the time required to make repairs were factored into these figures, the damage could approach \$100 million.

#### **ANTIABORTION**

Although attacks against abortion providers in the United States did not immediately commence following the 1973 *Roe v. Wade* Supreme Court decision that legalized abortions in all states, they have occurred with some regularity since the 1980s. Several abortion doctors have been assassinated, and a number of clinics have been firebombed or heavily vandalized. Two people were named to the Federal Bureau of Investigation’s (FBI) Ten Most Wanted Fugitives list for perpetrating fatal attacks on abortion clinics during the latter part of the 1990s. Eric Rudolph, a longtime fugitive, was arrested in 2003 for the 1998 killing of police officer Robert Sanderson, who was guarding a Birmingham, Alabama, abortion clinic when Rudolph bombed it, and for the Centennial Olympic Park Bombing in Atlanta on July 27, 1996. After pleading guilty to this and several other bombings, Rudolph was sentenced to consecutive life terms in prison. James Kopp, who was sought for the 1998 shooting death of Dr. Barnett A. Slepian, was arrested in France in 2001. Kopp was convicted of second-degree murder in 2003 and sentenced to twenty-five years to life in prison. On June 11, 2001, the Westgate Family Clinic in Tacoma, Washington, was firebombed in the middle of the day when it was occupied by medical staff and patients. On January 28, 2001, an effort was made to burn a Kalamazoo, Michigan, Planned Parenthood clinic that was closed at the time. In

addition, at the beginning of January 2001, someone fired at least twenty-five shots into a closed abortion clinic in Overland Park, Kansas.

While abortion terrorists do not represent a direct threat to overthrow the U.S. government and are unlikely to even consider perpetrating attacks similar to the World Trade Center incidents or the bombing of the Murrah Federal Building, they nonetheless must be afforded investigation by law enforcement agencies. Such extremists will likely remain a problem for many years.

#### THE PUERTO RICAN INDEPENDENCE MOVEMENT

The issue of independence has not varied much in Puerto Rico since the mid-twentieth century. Referendums held in 1993 and 1998 reaffirmed that the vast majority of residents of Puerto Rico want to continue their commonwealth status or become a state of the United States. A small but vocal minority of the island's residents, however, continues to seek independence. Some of them believe that violence is necessary to achieve their goal. Bombings and other terrorist attacks have occurred in Puerto Rico for decades. On March 31, 1998, the clandestine Macheteros group claimed credit for firebombing the Superaqueduct Project in Arecibo. On June 9, 1998, the same group claimed credit for bombing the Banco Popular in Río Piedras.

Supporters of the Puerto Rican independence movement were also active in protests against the U.S. military's use of the Puerto Rican island of Vieques for training exercises. A round of demonstrations at Vieques began on April 19, 1999, when an off-target bombing mission killed a Puerto Rican security guard. Puerto Rican activists physically occupied Vieques until they were forcibly removed in 2000. The U.S. government subsequently agreed to discontinue the use of the island as a training site.

FALN—Armed Forces of National Liberation, a Puerto Rican pro-independence group known by its Spanish initials—claimed responsibility or was blamed for 130 bombings and arson incidents, mostly in New York and Chicago, in the 1970s and early 1980s. It is believed that the lengthy sentences given to FALN members during the 1980s produced a chilling effect on those who would like to commit attacks on the U.S. mainland. It remains unclear, however, how President Bill Clinton's September 1999 commutation of the sentences of most of the incarcerated FALN members will affect the overall Puerto Rican independence movement.

#### RIGHT-WING EXTREMISM

Although right-wing extremism in the United States is found in a variety of forms, and even though there is no

overall umbrella for this ideology, right-wing terrorism nonetheless represents a threat that deserves law enforcement attention. This was clearly illustrated by the April 19, 1995, attack by two right-wing extremists on the Murrah Federal Building in Oklahoma City that killed 168 people and injured more than 500.

Right-wing extremism in the United States encompasses a number of philosophies and beliefs. Some groups address a variety of issues, while others dwell largely on a single concern. Most of the issues that drove the right wing during the last two decades of the twentieth century continue into the twenty-first century.

**Hatred of Nonwhites and Support of the "White Race."** Some right-wing extremists advocate violence toward nonwhites. Others want separation from nonwhites while some want immigration restricted in order to maintain the "purity" of the "white race" in the United States, while others would prefer moving nonwhites out of the country.

*The Ku Klux Klan.* Many right-wing activists dwell on the concept of preservation of the "white race." This is certainly not a new issue. The Ku Klux Klan (KKK), founded in 1866 in Pulaski, Tennessee, was based on hatred of former slaves. Although the revived KKK, which became active again around 1915, addressed a variety of issues and prejudices, hatred of blacks remained a part of its philosophy. The modern version of the KKK is small and badly splintered; however, it still harbors an antiblack philosophy. Although the KKK may be able to trace its lineage over 150 years, it is not a dominant force in right-wing politics in 2006.

**Religious Justification for Hate.** Some right-wing extremists, including adherents to the Christian Identity movement, Aryan Nations, the Phineas Priesthood, and the Order, base their racial views on religion.

*Christian Identity.* The "Christian Identity" religious doctrine teaches that the white Aryan race is God's chosen race and nonwhite people are less than human and are not the chosen people descended from the biblical Adam. It also teaches that people who claim to be Jews are in actuality from the seed of Satan (Bushart et al. 1998). Various people associated with the Christian Identity movement have been involved in violence. Christian Identity adherent Buford O'Neal Furrow Jr. was charged with firing on children during an August 11, 1999, shooting spree at the North Valley Jewish Community Center in Los Angeles. Furrow was also charged with murdering Filipino-American mail-carrier Joseph Iletto in Chatsworth, California. Furrow pleaded guilty to these attacks on January 24, 2001. Eric Rudolph was also influenced by Christian Identity teachings, as were members of the Aryan Republican Army who

committed numerous bank robberies to raise funds for right-wing causes during the early 1990s.

*Aryan Nations.* The Aryan Nations group is based on Christian Identity beliefs. Former Aryan Nations leader Richard Butler was also the pastor of the Identity-oriented Church of Jesus Christ Christian that long had its sanctuary located on the now-defunct Aryan Nations compound in Idaho. In 2006 the Aryan Nations headquarters was located in a rural area in Pennsylvania and August B. Kries III was the national director of the Aryan Nations and James P. Wickstrom was the world chaplain.

*Covenant, Sword, and the Arm of the Lord.* The Covenant, Sword, and the Arm of the Lord compound, which straddled the Arkansas-Missouri border in the 1970s and early 1980s, closely followed the Christian Identity religion. One of the right-wing martyrs of the 1980s, Richard Wayne Snell, was a Christian Identity member. Snell was executed on April 19, 1995, the same day the Murrah Federal Building was bombed. He was convicted of murdering a black Arkansas state trooper, Lewis Bryant, and a pawnshop owner, Wayne Stumpp, whom Snell mistakenly believed was Jewish.

*The Order.* Many members of the clandestine terrorist group known as the Order were followers of the Christian Identity religion. In the early 1980s, members of the Order committed armed robberies and participated in hate crimes, including the assassination of Jewish radio talk-show host Alan Berg.

*Posse Comitatus.* James Wickstrom, a long-time right-wing activist and leading proponent of the Posse Comitatus movement, is a Christian Identity minister and world chaplain of the Aryan Nations. Wickstrom was jailed for impersonating a municipal judge in 1984 and for possession of counterfeit currency in 1990. Other leading Posse Comitatus members, including the movement's founder, William Potter Gale, were also Christian Identity adherents.

*The World Church of the Creator/Creativity Movement.* People have often questioned if the Creativity Movement, formerly known as the World Church of the Creator (WCOTC), is actually a religion, since members do not worship a deity. However, the group publicly calls itself a religion, and some of its leaders employ "reverend" as a title. This group stresses the importance of the white race to the detriment of nonwhites and, like the Christian Identity religion, advocates disdain toward Jewish people. There have been a variety of violent acts committed by people associated with this group. Shortly before founder Benjamin Klassen committed suicide in August 1993, a minister of the church, George Loeb, was arrested for murdering a black

Gulf War veteran, Harold Mansfield Jr., in Florida. In 1998 four armed members robbed a video store in south Florida, supposedly to raise funds for the group.

Over the holiday weekend of July 4, 1999, a WCOTC follower, Benjamin Nathaniel Smith, went on a shooting spree in Illinois and Indiana that resulted in the killing of Ricky Byrdsong, a former basketball coach at Northwestern University (who was African American) in a Chicago suburb, and the murder of Korean graduate student Won-Joon Yoon in Bloomington, Indiana. Just an hour before killing Byrdsong on July 2, Smith also shot several Jewish men, including a fifteen-year-old boy, who were leaving synagogues in Chicago. On the following day, he shot an African American minister in Decatur, Illinois. Smith was active in the WCOTC organization prior to the shooting escapade and was named "Creator of the Year" in 1998 by Matthew Hale, the leader of the church. Smith committed suicide on July 4, when confronted by local law enforcement officers in Marion County, Illinois. Creativity Movement leader Hale was convicted in 2004 for solicitation of murder and obstruction of justice; he was sentenced to forty years in prison.

*The Phineas Priesthood.* There are small cells of right-wing extremists who refer to themselves as the Phineas Priesthood. They literally translate certain parts of the Bible as a justification for taking violent actions they believe promulgate the teachings of God. They seek to emulate Phineas (also Phineus, Phinehas, and Phinees—depending on the Bible used) who is chronicled in Numbers 25 in the Old Testament. According to scripture, Phineas took up the sword and slew Zimri and his foreign concubine for violating God's laws; this was at a time when his fellow Hebrews were generally ignoring the situation. For being a man of action, it is said that God rewarded Phineas. People calling themselves Phineas priests think they are justified in taking action in support of what they believe are God's commands against such matters as racial mixing, homosexuality, and abortion. One group of Phineas priests operated in the states of Idaho, Oregon, and Washington during 1996. Members Robert Berry, Charles Barbee, and Verne Jay Merrill were involved in bank robberies and the bombings of a Planned Parenthood building and a newspaper office. Another proponent of the Phineas Priesthood was Paul Hill, who was convicted of murdering Dr. John Bayard Britton outside a Pensacola, Florida, abortion clinic on July 29, 1994. Hill had previously written in support of the Phineas concept (Anti-Defamation League 1999).

*Odinism.* The Norse religion of Odinism (or Wotanism) is favored by certain right-wing extremists. A large number of skinheads and other white extremists proudly adorn their bodies with tattoos related to Odinism. Many extremists turned to this religion as a

rebellion against Christianity. They believe that their distant “Aryan” forefathers followed this religion before Christianity spread into northern Europe and was forced on the people. Odinists claim that Christianity’s golden rule, “love thy neighbor,” and its “turn the other cheek” philosophy have made white people weak, allowing Jews to dominate them and nonwhites to intimidate them. By contrast, the gods Odin (Wotan, Wodin), Thor, Hel, Heimdahl, Frig, Balduin, and others represent strength and pride in the “white race.”

Although the clandestine right-wing terrorist group known as the Order was largely composed of Christian Identity followers, certain important members were Odinists. There is also good information to suggest that leader Robert Mathews, who died in a standoff with law enforcement authorities, was an Odinist, although his wife and girlfriend dispute this.

**The Militia Movement.** A good number of right-wing extremists fear that the United Nations, or some other international entity, will take over the sovereignty of individual national groups and eventually formulate a “one-world” government that will destroy the American way of life. Some right-wing radicals fear the U.S. government and believe that it is continually increasing its efforts to limit the rights of citizens and strongly oppose the U.S. Patriot Act, which was originally signed into law in 2001. Opponents of the Patriot Act—which expands the authority of U.S. law enforcement, including the Central Intelligence Agency and Federal Bureau of Investigation, for the stated purpose of fighting terrorist acts in the United States—argue that it is unconstitutional and takes away from personal freedoms, including freedom of speech and privacy. The Patriot Act was renewed by President George W. Bush on March 9, 2006. Some of these right-wing extremists, especially proponents of *Posse Comitatus*, would be happy if all forms of government (federal, state, and formalized local) were eliminated.

A few right-wing extremists believe either that the government needs help in protecting the rights of the people, or that people need something to protect them from the government. These people become involved in militias (more properly referred to by members as “unorganized militias”), which they view as citizens’ armies. William Potter Gale championed the militia concept in the 1980s; however, he died before the idea gained full momentum. Activists involved in militias believe that their units are lawful, and that the U.S. Constitution authorizes them.

In the early 1990s, militias were forming across the country. The fatal confrontations with federal agents at Ruby Ridge, Idaho, in 1992, and Waco, Texas, in 1993, as well as the passage of restrictive firearms legislation,

including the 1993 Brady Bill, served to highlight the purported need for militias to protect the common person. It was not, however, until the 1995 bombing of the Murrah Federal Building in Oklahoma City, and the well-publicized investigation thereafter, that the concept of the citizen militia became universally known in the United States. Although neither Timothy McVeigh nor Terry Nichols, the perpetrators of the bombing, were active members of a militia, many in the media tended to link them and their violent attack to the militia movement. This led to national television and print stories on militias. It also caused local media outlets to identify and publicize militias operating in their areas. The publicity proved to be a double-edged sword for the militia concept, resulting in people joining existing militias and promoting the creation of new units. However, the publicity also forced law enforcement agencies to investigate militias. This led to various group members being arrested for crimes ranging from firearms violations to major criminal conspiracies, such as the plot to attack Fort Hood, Texas, on July 4, 1997. Consequently, the later 1990s was not a period of growth for the militia movement.

Private militias continue to exist and could present a threat, in that members are armed and fearful of many things they believe will beset the country. These militias are not as open as many were in the 1990s, making them more difficult for law enforcement to monitor and infiltrate.

**Sovereign Citizens.** Some right-wing extremists accept the concept that at one time all residents of the United States were sovereign citizens, not under the control of a central government. They are convinced that supporters of a strong central government have, over time, changed the very nature of the United States, forcing citizenship and its restrictions onto the residents of the land. These activists seek to reverse the situation by declaring themselves “sovereign citizens,” not under the control of the government. As such, they reject various permits, registrations, and other obligations that they believe place them under the control of the government. Some refuse to use driver’s licenses, license plates, Social Security cards, or any other documents that are issued by the government. They will not obey zoning laws and they will not pay taxes.

Some “sovereign citizens” have established “common-law courts” to listen to grievances, settle disputes, and relieve them from obeying certain governmental regulations. Clearly, these tactics pose a threat to law enforcement. Not only may sovereign citizens become violent when confronted, they commonly harass investigators by filing liens against their property, suing them, and having common-law courts issue arrest warrants. They may also

submit forms to the Internal Revenue Service (IRS) that claim an officer was paid money or transacted large sums of money at a bank. This often results in the IRS initiating an investigation of the unsuspecting officers. These harassment tactics have also been used against judges, local officials, and others.

Sovereign-citizen advocates are likely to reside in rural areas. Continuing hard times in the farming community, especially with respect to the loss of family farms, are often catalysts for people becoming involved in common-law courts and other sovereign-citizen concepts.

**Tax Protest.** Tax protest is a popular right-wing activity, and some extremist groups concentrate on this issue. Unlike many tax protesters of the 1960s and 1970s who opposed the war in Vietnam and refused to pay taxes as a challenge to that engagement, most right-wing extremists are not concerned about how tax money is spent. Instead, they claim that the federal government has no legal right to levy an income tax. They argue that the Sixteenth Amendment to the U.S. Constitution was never lawfully ratified.

Tax protesters have been known to behave violently. On February 13, 1983, for example, Gordon Wendell Kahl killed a U.S. marshal and a deputy U.S. marshal in Medina, North Dakota, when they attempted to arrest him. Kahl, who died later that year during a standoff with law enforcement officers in Arkansas, is still regarded as a hero and martyr by many right-wing tax protesters. Kahl, who was a decorated World War II veteran, had earlier served a federal prison term for failure to pay income taxes (Corcoran 2005).

**One-World Government, Globalization, and the New World Order.** Opposition to globalization, “one-world government,” and the “new world order” gained adherents in the United States during the latter part of the twentieth century. Many feel that the citizens of the United States would end up as only a small minority if a world government consisting of the planet’s six billion residents were to rule the world.

Opponents to the concept of a single world government come from a variety of groups. Many right-wing extremists and survivalists live in constant fear that the U.S. government is going to be taken over by (or given to) the United Nations. Some, such as adherents to the *Posse Comitatus* philosophy, who do not even want the U.S. government to have control over them, abhor the notion of world-government rule. A more recent philosophy, known as the ‘Third Position,’ claims it is neither right- nor left-wing in ideology and promotes nationalism based on ethnic similarities. This growing movement opposes people of one background ruling people of another background, as well as the notion of

a single world government. The Third Position is not a violent philosophy per se, and has not been linked to any terrorist attacks. The Third Position draws from various elements, including the animal rights and environmental movements because it vehemently opposes cruelty to animals and supports protection of the environment.

Opponents of one-world government are especially concerned about economics. They believe that countries should be self-sufficient and not financially dependent on other nations. They also oppose what they believe are powerful countries like the United States taking financial advantage of less-developed governments. As a result, law enforcement agencies have been forced to address security during world economic meetings. Violent demonstrations, such as the one that took place in Seattle, Washington, during the World Trade Organization conference in 1999, were subsequently staged in other cities. Indeed, around seven hundred protesters were arrested in Washington, D.C., in April 2000 as they demonstrated against the International Monetary Fund meetings held in that city. The Seattle riots caused \$2.5 million in property damage and the loss of upwards of \$17 million in sales. The chief of police in Seattle, Norm Stamper, was forced to resign as a result of the violence. An estimated forty thousand people were involved in Seattle’s protests, and almost six hundred activists were arrested.

What was apparent in both the Seattle and Washington, D.C., protests was that the demonstrators were well organized and schooled in methods of impeding the travel of conference participants to meetings. They were also prepared to obstruct the law enforcement officers assigned to maintain order. An entity that calls itself the Ruckus Society, and claims to be nonviolent, openly admits that it trains activists to participate in demonstrations such as those staged in Washington, D.C.

Violent protests are likely to accompany any world financial conference taking place in the United States or involving the United States. Important gatherings like the Democratic National Convention in Boston and the Republican National Convention in New York City in 2004 were targets of antiglobalization and world economy protesters. Protesters routinely demonstrate during the annual economic summit held by the G8 countries. The possibility that terrorism, including bombings and arsons, will take place as an outgrowth of these protests must be considered.

**Zionist Occupied Government (ZOG).** Some right-wing extremists believe that people of Jewish origin have taken control of the U.S. government. They refer to the Jewish-run government as ZOG, or sometimes JOG for “Jewish occupied government.” Some of these groups, including the Creativity Movement (formerly WCOTC), have released lists of government officials whom they believe

are Jewish. The lists they publish tend to indicate that each succeeding presidential administration employs more Jewish people, many of whom occupy influential positions in government. The sources upon which these lists were compiled are usually not given, and their accuracy is questionable. Some right-wing groups also claim that Jewish people control the media in the United States. The National Alliance publishes lengthy documents outlining the perceived Jewish domination of electronic and print media in the country.

The right-wing extremists who adhere to a belief in a Jewish conspiracy tend to blame the nation's problems on those of Jewish descent. Farmers losing their land and small-town business owners facing bankruptcy are ripe candidates for recruitment by groups who claim that rural economic woes are caused by a Jewish conspiracy. Some believe that moves toward a one-world government and a new world order are part of the conspiracy.

**Land Use.** Land-use issues developed rapidly during the latter portion of the twentieth century, and such concerns are expected to become even more significant in the future. Land-use issues involve several factors that are not necessarily compatible.

Environmentalists and animal rights activists want the government to take action to protect the environment and its inhabitants. They would prefer laws that limit the use of undeveloped land and restrict such industries as mining and lumbering, along with motorized vehicles, dams, and hunting. Absent such laws, activists may take matters in their own hands and perpetrate violent attacks. A shocking example involved the 1998 arson attack at Vail, Colorado, which was intended to stop expansion of a ski resort where an endangered animal, the lynx, was native. An estimated \$12 million in damage resulted from this attack.

Another example was the January 23, 2000, attack involving a house under construction in Bloomington, Indiana, in an area that ELF believed should be left in a natural state. Damage from this arson incident was \$200,000. Several months later, on April 30, 2000, ELF claimed credit for an attack on road construction equipment near the town of Ellettsville, Indiana. On July 21, 2001, ELF claimed credit for attacking fifteen vehicles at a power plant construction site in Oldham County, Kentucky. On April 15, 2001, ELF torched three cement trucks in Portland, Oregon, to protest mining operations by the company that owned those vehicle. ELF is also suspected of causing of \$30,000 worth of damage to equipment at the West Old Town Landfill in Maine on September 15, 2005.

In contrast, some ranchers and farmers want to be able to use the land as they see fit. In the case of ranchers, many want continued free access to public lands for

grazing and the movement of livestock. They also want to minimize governmental involvement in private property. Some have objected to action by the federal government that placed additional undeveloped lands, including national parks and national forests, under federal protection. Right-wing groups can be expected to appeal to a fraction of those concerned with such land-use issues—especially if standoffs develop as the government attempts to seize property.

Zoning problems also fall within the category of land-use issues. Some people violently resist efforts by local governments to restrict the manner in which land-owners can use their property, particularly with respect to building or subdividing.

**Immigration.** Immigration is another issue that draws people to extremist groups. Many right-wing groups believe that the recent waves of immigrants to the United States are endangering the country as a whole and the white race in particular. Attacks on immigrants by right-wing extremists occurred during the latter part of the twentieth century, and there is every reason to believe these attacks will continue in the twenty-first century.

**The Right to Bear Arms.** The issue of gun ownership and the Second Amendment to the U.S. Constitution are favorite rallying cries for the extreme right wing, as well as for many other Americans. For many extremists, the issue involves far more than the mere right to own firearms; for them it is a question of survival. They believe the “new world order” or the “Jewish conspiracy” will ultimately take over the government if they, as loyal Americans, do not have the ability to protect the country and themselves. They are opposed to the idea of limitations being imposed on gun ownership. Although many dispute the point, some extremists believe that the Constitution specifically gives Americans the right to own firearms, and that any effort to abrogate that right represents only the beginning of an effort to limit other liberties contained in the Constitution.

#### THE THREAT BY TACTIC

As the twenty-first century gets underway, various extremist movements in the United States are stressing the concept of “leaderless resistance” as a vehicle to advance their causes. Right-wing, animal rights, environmental, religious, and antiabortion extremists have all employed this tactic and will likely continue to do so.

**Leaderless Resistance and the “Lone Wolf.”** Leaderless resistance involves a small contingent of individuals perpetrating violent, cause-related attacks without the knowledge of anyone else involved in the movement. The concept is not new. Well-known white supremacist

and Aryan Nations supporter Louis Beam promoted this approach as a means of avoiding the mistakes that led to the downfall in the mid-1980s of the right-wing extremist group the Order. Beam purports that the Order became too large and that more people than necessary knew of its clandestine actions. He proposed that so-called phantom cell networks or autonomous leadership units be established that would operate independently of one another in perpetrating violent attacks. Beam envisioned that eventually these units would join together to create a chain reaction that would lead to a nationwide white-supremacist revolution (Hoffman 1998).

The “lone-wolf” concept is a form of leaderless resistance in which a single person perpetrates violent, cause-related action without the direct knowledge of anyone else in the movement. Buford Furrow’s 1999 rampage at a Jewish community center in Los Angeles fits this definition, in that he made it clear that his actions were intended to be “a wake-up call to America to kill Jews.” Eric Rudolph, who apparently acted alone in a series of bombing attacks in the mid-1990s, is another example of a lone wolf.

William Pierce’s 1989 novel *Hunter*, written under the name Andrew MacDonald, depicts the actions of Oscar Yeager against nonwhites and Jews. This narrative of leaderless resistance and lone-wolf tactics has been read by thousands of people with right-wing sympathies. Pierce also authored the *The Turner Diaries* (1978), which is regarded as a “bible” by many right-wing terrorists in the United States. The popularity of leaderless resistance can be traced to the Vietnam War era in the United States. The *Minimanual of the Urban Guerrilla* (1969), written by Brazilian revolutionary Carlos Marighella, describes the need for guerrilla forces within a movement that could perpetrate terrorist attacks and escape because no one within the movement knew of their activities. Leftist extremists in the United States during the 1960s and 1970s treasured Marighella’s pamphlet as a kind of “bible” for operations. Fortunately for law enforcement, many of the radical left-wing groups of the era, including the Weather Underground Organization, were structured in such a manner that their leadership dictated or approved the violent actions of their members. This was an indication that the cherished concept of leaderless resistance was not widely employed during that time.

ALF openly encourages people to conduct cause-related attacks under its banner. ELF also urges people to conduct actions on their own. ELF claims that its cells “control their own destinies” and there is no centralized organization to give them direction.

In the area of antiabortion violence, investigative agencies have been unsuccessful in efforts to link the various violent attacks on abortion providers with an

organizational hierarchy. It appears that many of the actual or attempted assassinations and attacks on abortion providers have amounted to leaderless resistance in that few, if any, within the antiabortion movement had prior knowledge that the attacks were to occur.

Clearly, leaderless resistance and lone-wolf tactics, if actually employed (as opposed to the lip service sometimes given to the concept during the Vietnam War era), present a significant challenge. Law enforcement has been able to successfully combat terrorism by developing intelligence through overt support groups and the penetration of clandestine groups. In this manner, they have been able to develop information about planned actions. When members of a group follow the principle of leaderless resistance, however, law enforcement is unlikely to learn of impending attacks. Even after an attack, it will be difficult to identify the perpetrators because even the organization’s leaders may be unsure of the specific perpetrator’s identities.

This is not to suggest that investigators should abandon efforts to penetrate overt and covert groups with informants, undercover operatives, and electronics. Such methods may well lead to the discovery of the actual perpetrators of a terrorist attack. This was the case in Missouri when undercover state police investigators encountered a group of extremists who were convinced that the “new world order” was soon to take over the U.S. government. On their own, without direct orders from anyone of prominence in the overall movement, this small contingent, including undercover officers, plotted a series of violent actions that were to include a July 4, 1997, attack on Fort Hood in Texas. The small group planned to kill thousands of people. Through the intelligence gathered by the undercover officers, authorities were able to apprehend the conspirators just hours before the attack was to take place.

Another example of leaderless resistance uncovered through outstanding law enforcement efforts involved a group called the New Order, which was founded in southwestern Illinois near Saint Louis in 1997. Members of this group were preparing to carry out assassinations, bombings, and other attacks when they were arrested in early 1998 (Farrow 1998).

**The Internet.** Virtually all terrorist groups have come to realize that the Internet is a vehicle through which they can convey their political messages to the world and communicate with each other. Furthermore, extremists have employed the Internet to raise funds and sell cause-related merchandise.

The Internet has enabled relatively small, and sometimes obscure, extremist groups to appear as though they pose a significant challenge to the government. This was seen in some of the elaborate militia Web sites that

appeared during the 1990s. An unknowing person could easily believe that a particular militia was composed of hundreds of members and operated from an expansive compound. In actuality, that militia might consist of only a handful of members and function from a farmhouse bedroom in an unincorporated area. Virtually all right-wing extremists, as well as animal rights and ecoterrorist groups, either have their own Web sites or are supported by Web sites operated by “front groups” and boosters. Groups such as Aryan Nations, Posse Comitatus, National Alliance, White Aryan Resistance, various KKK groups, Creativity Movement, and ALF and ELF fall into this category.

**Music.** Certain right-wing extremists have discovered the value of employing popular music in their recruiting efforts. Young people in the United States have traditionally enjoyed music, and dancing has long been a means for socializing. During the late twentieth century, skinheads evolved a distinct type of music that gives them a common bond. Right-wing leaders realize that messages of philosophy and hate can be transmitted through music. Extremist religious messages can also be conveyed through music.

Recruitment through music is not necessarily restricted to right-wing extremism. The Straight Edge movement also utilizes music to publicize its beliefs. The very name of this movement emanates from the title of the 1981 song “Straight Edge” performed by Ian Mackaye’s punk-rock group Minor Threat. Straight Edgers oppose alcohol, tobacco, meat, and drugs, since they are also staunch defenders of animal rights. Many have been involved in violent animal rights attacks, including arsons and bombings, especially in the state of Utah.

The company known as Resistance Records is an example of the importance that right-wing extremists place on music. The company, founded in 1993 by Canadian skinhead George Burdi, experienced a myriad of problems when Burdi was sentenced to a one-year jail term on an assault charge. The company subsequently passed through several hands before being purchased by William Pierce in 1999. Pierce moved the company’s operations to his National Alliance compound in Hillsboro, West Virginia, and became involved with Resistance Records in order to recruit young people to his cause of white supremacy. Pierce, who died in 2002, was quoted as saying, “I don’t care for the music myself. But if it helps move people in the right direction, I’m for it” (Segal 2000).

Resistance Records advertises itself as the “pro-white alternative.” Its advertising promotes CDs by such performers as Angry Aryans, Attack, Before God, Blue Eyed Devils, Bound for Glory, and Prussian Blue. Pierce also promoted his cause through a magazine titled *Resistance*

and through racist neo-Nazi pins that were advertised when people purchased CDs from Resistance Records. Another record company that markets to such extremists include Free Your Mind Productions. There are also numerous independent sites and radio stations operating that cater to “white alternative” music. Law enforcement should expect that right-wing groups will continue to capitalize on political music that appeals to young white people who adhere to these beliefs. Extremist groups will continue their efforts to recruit members through music sales and concerts they stage.

**Shortwave Radio.** Right-wing extremists in the United States and in foreign countries have used citizens-band radios for several decades to convey their political philosophies. Militias also employ shortwave radio for communications and transmission of their philosophies. Possibly the most prominent shortwave broadcaster was William Pierce, who spoke over shortwave radio each Saturday. Pierce also broadcast on several AM-FM stations in various parts of the United States.

One can expect that right-wing extremists, and possibly others, will continue to employ shortwave radio to transmit their thoughts. It is possible that they will also attempt to capitalize on any low-power television stations that are awarded licenses to operate.

**Unconventional Terrorist Weapons of the New Millennium.** The September 11, 2001, attacks were not carried out by weapons that were created or designed to cause mass destruction. Instead, commercial passenger airplanes were employed to create the same result. It does not take a great deal of imagination to identify other facets of modern culture that could be used in such a manner. A truck driven into a national landmark at high speed, a train diverted onto the wrong track, or a ship being sunk at a strategic location all could fall within this category.

**Computers.** By the time the twentieth century closed, it was apparent that computers had crept into most aspects of the lives of every resident of industrialized nations. Virtually all the utilities people utilize—including power, water, heat, and cooling—are controlled in some way by a computer. Walking is probably the only form of transportation not heavily reliant on computers. Even the family car is run by a maze of computers. Sizable retail outlets rely on computers to stock their shelves and dispense their products. Mom-and-pop grocery stores may still use cash registers; however, the merchandise they receive has been directed to them through computers. Of course, the profusion of home computers and their access to the Internet has had a profound impact on how people live. By the end of the first decade of the twenty-first

century, it will be difficult to find a residence in the United States that does not have a home computer.

Although computers were little more than a dream in the minds of some scientists in the middle of the twentieth century, fifty years later they were an integral part of life. In many ways, computers have enhanced the way people live; however, if used improperly, a computer can also destroy lives in ways never before imaginable. The May 2000 "I Love You" virus that infected computers worldwide demonstrated the extent of damage that can be inflicted by one, or possibly, a handful of people.

It is easy to imagine the various ways a diabolical mind could transform a relatively sterile collection of transistors into a weapon of mass destruction. If something is directed or managed by a computer, it can likely be misdirected or mismanaged by that computer. If something is directed or managed by one computer, it is also probable that another computer can be programmed to make it take an undesired action. Even if a certain process or utility is not under the control of a computer, it is possible that someone could place it under a computer's control.

A dam, for example, could be "commanded" to release enough water to suddenly inundate an entire town. A jumbo jet could be electronically misdirected to crash into the center of a city. Excessive electricity could be sent through power lines at such a rate as to burn out circuits and start fires. Gas lines could also be overloaded, which would result in explosions. Computers could be induced to add toxins to foods being produced at a cannery. Medicine could be transformed into poison by a computer controlling production in a laboratory. Records of corporations, banking institutions, or governmental agencies could be wiped out or altered.

*Unconventional Weapons.* Advances in unconventional weaponry, including nuclear, biological, and chemical devices, render just about any part of the United States vulnerable to terrorist attack. In March 1995 the Aum Shinrikyo cult demonstrated in the Tokyo subway that a chemical agent, sarin gas, could be used as a terrorist weapon. In 1991 law enforcement officers in Minnesota apprehended a small band of right-wing extremists (calling themselves the Patriot Council) as they conspired to employ a biological agent, ricin, to kill a deputy U.S. marshal and a sheriff. The subjects had produced enough ricin to kill more than one hundred people. On February 28, 1995, conspirators Douglas Allen Baker and Leroy Charles Wheeler were convicted, and on October 25, 1995, Richard John Oelrich and Dennis Brett Henderson were convicted. These four men became the first people in the United States to be found guilty under the Biological Weapons Anti-Terrorism Act of 1989. In late September and October 2001, an unknown individual or group sent

anthrax-laced letters through the mail to both political and media targets, causing nationwide panic and resulting in five deaths, and in February 2004, officials in Washington, D.C., announced that ricin, a toxin made from castor oil beans, was found in an office mailroom of U.S. Senate Majority Leader Bill Frist.

The military in the United States and in other countries continually develop "space age" weaponry. Laser, heat, cold, magnetic, electric, and sound weapons are among the few that are, or will soon be, viable for use. The ability of terrorists, especially those who are foreign-based or sponsored, to procure military weapons has been demonstrated many times in the past. Indeed, there is a sizable black market for military weapons that terrorists could use.

#### TERRORIST TARGETS OF THE TWENTY-FIRST CENTURY

Terrorists will strike targets they believe will help them accomplish their objectives. Modern terrorists may spend considerable time selecting targets that clearly represent something important to their cause. Throughout most of history, however, terrorists have been restricted in what they could attack. The lack of transportation limited targets to those that could be easily reached. Limited communication sources restricted the publicity that terrorists could expect to receive from an attack. If they hoped to get widespread attention, a prominent target had to be selected. Poor communications also made it difficult for terrorists to recruit for their cause. Throughout most of history, terrorists' choices of targets were contingent on the availability of weapons.

The twenty-first-century terrorist has a larger variety of available weapons than any terrorist in history. Targets can be chosen depending upon what best suits the terrorist's political cause. Distance is no longer a factor; in fact, sonic terrorists have found that it is better to attack something far from their home base. Today's communications make it possible for terrorists to attack anywhere and still create mass publicity. No longer are attacks restricted to large cities or high-profile sites, as illustrated by the distant and sometimes obscure targets of animal rights and environmental terrorists in the United States, Canada, and Europe. Recent developments have made it possible for terrorists to kill large numbers of people in a single attack. Such a situation occurred on September 11, 2001, and is expected to happen again as the twenty-first century progresses.

There are enough conventional explosives, and enough information on the Internet and in books concerning their construction and usage, to make it possible for a terrorist cell to bomb a major structure. Buildings today are larger than ever and, unlike their counterparts

of fifty or more years ago, they have massive windows, basement parking garages, elaborate internal air and heating systems, and much thinner walls—especially at lower levels. Many are located in congested areas. If a large structure is heavily damaged from a modern explosive device, it could fall on other buildings, and thereby add to the number of deaths and injuries.

Governmental and law enforcement structures will continue to be targets for terrorist attacks because they often directly represent the source of the terrorists' irritation. For many terrorists, big business and financial firms are also ideal targets. Such buildings as the World Trade Center are symbols of strength of a nation, even though they are not officially government structures, and are likely to be targets for terrorist attacks. In addition, considering that many people are fearful that a single government will soon take control of the entire world, anything that suggests a nexus to globalization might become a terrorist target. Law enforcement must become extremely security-conscious with respect to any world economic or trade meetings. At best, dissidents will picket such sessions. At worst, these meetings may be targets for terrorist attacks.

Although terrorists, especially animal rights and ecoterrorists, are known to focus their attacks on a wide variety of targets that will further their cause, law enforcement officers must consider researchers and producers of genetically modified foods as logical targets for these terrorists. Attacks on laboratories and farmers' fields have already taken place. Ecoterrorists destroyed a field of genetically modified strawberries on January 20, 2000, in Watsonville, California. On February 9, 2000, ELF claimed credit for destroying genetically altered oats at the University of Minnesota campus in Saint Paul. However, these incidents were dwarfed by the dual ELF attacks of May 21, 2001. The University of Washington's Merrill Hall was gutted in a fire that caused an estimated \$2.5 million to \$3 million in damage. On the same date, ELF claimed credit for a \$500,000 attack on the Jefferson Poplar Farm in Clatskanie, Oregon. Both actions were in opposition to genetic tree research.

It is also likely that ecoterrorists will attack companies that they believe are enabling expansion into tracts of land that they think should be left in a natural state. On January 23, 2000, ELF members caused \$200,000 worth of damage to a \$700,000 home being constructed near Bloomington, Indiana, because they believed the Lake Monroe Watershed was being disturbed. On June 11 to 12, 2001, an individual or group using the initials CSP claimed credit for torching four luxury homes in the Pima Canyon Estates community in Tucson, Arizona, causing some \$2 million in damage. The motive appears to have involved an effort to prevent housing expansion into the desert. Although these types of crimes are often

not immediately associated with terrorists, law enforcement officers must be ever alert to the fact that terrorism may be a factor in any criminal attack that involves farms, laboratories, or projects on previously undeveloped land. In January 2006 the U.S. Department of Justice announced indictments of eleven environmental and animal rights activists for attacks carried out between 1996 and 2001 in five western states. The charges included arson, conspiracy, and destruction of an energy facility. Those indicted were allegedly acting on behalf of ELF and ALF.

#### **THE LAW ENFORCEMENT RESPONSE TO MODERN TERRORISM**

The first Joint Terrorism Task Forces (JTTF) were created in Chicago and New York in 1981. Unlike many law enforcement cooperative initiatives in which various agencies pool the results of their investigative efforts or concentrate on a single case, JTTFs address the overall problem of terrorism in a given geographic area. Investigators who make up the JTTF come from those law enforcement bodies in the area that would conduct terrorism investigations. Most actual investigative procedures are conducted jointly, and all investigative results are shared.

JTTFs presently exist throughout the United States, and the JTTF concept has now become a basic foundation block in the U.S. law enforcement community's approach to terrorism. The process for creating such task forces has become refined. In his address before the Coast Guard Academy on May 18, 2000, Bill Clinton pledged that a portion of some \$300 million in proposed new spending would go to boost the JTTFs. Following the September 11, 2001, attacks, the U.S. attorney general instructed each U.S. attorney to become involved in the creation of terrorism task forces to ensure that all the agencies involved in terrorism investigations are functioning cooperatively.

#### **Enhancements in the Use of Investigative Techniques.**

The same advances in modern technology that caused the increase in the threat posed by terrorists have also enabled the law enforcement community to better meet the challenge. Although the basic investigative techniques may not have changed much over the history of law enforcement, the methods for employing them have markedly improved. Even the "mother" of all investigative techniques, the interview, is different today than it was a hundred years ago. Increased knowledge about psychology and sociology has better equipped investigators to understand how humans think and respond. Advances in technology now allow officers to film subjects prior to, during, and following an interview. The polygraph will continue to become more sophisticated, and other

mechanical methods for determining the truthfulness of a person's statements will be introduced.

Computers and word-processing technology are common in the law enforcement community. Investigators even have the ability to prepare reports using computers in squad cars. Some officers use handheld recorders to transcribe an interview in progress or to make notes immediately following an interview. In the near future, voice-activated computers may permit an investigator to produce a neat, professional document by merely speaking into a microphone. In fact, it may soon become possible for an entire interview to be recorded and converted to written form by an investigator pushing several buttons on a recorder-processor-printer.

The use of electronic tracing devices has already made it possible to monitor, to a certain extent, a subject's activities without an investigator even leaving the police station. Video cameras mounted in surveillance vehicles will likely become commonplace during the early part of the twenty-first century. Rear-mounted cameras feeding to dash-mounted screens will make it possible for a surveillance officer to view the activities of a subject while driving in front of that individual. It is also likely that surveillance vehicles will be routinely equipped with monitors that will depict ever-changing maps of the surveillance area, so alternate and parallel routes can be taken to better avoid detection.

Air support has greatly enhanced the effectiveness of surveillance during the latter part of the twentieth century. Advances in aviation technology will improve and increase the ability of aircraft to assist surveillance officers. Surveillance radio communications have also greatly improved, particularly with respect to encryption. Further advances can be expected, especially in the use of "hands-off" transmitters. Surveillance logs will likely become audio, rather than handwritten, and surveillance reports will be printed directly from audio logs, without the need for someone to type them.

Electronic monitoring devices with concealed microphones and systems designed to intercept telephone, fax, and computer communications will improve rapidly during the twenty-first century. Some devices are so small they can be discovered only through a strip search of the person suspected of wearing one. Advances will make the devices even less conspicuous, yet more effective in range. Law enforcement will see the development of a truly useful parabolic microphone in the not-too-distant future. This will prove to be extremely effective against terrorists who now are often able to evade law enforcement monitoring by holding open-air conversations away from any location where a microphone could be placed.

The courts will undoubtedly be forced to deal with the issue of actually "bugging" a subject. As technology

continues to advance, law enforcement can expect to be presented with a monitoring device so small it can be placed on a person in such a manner that the subject would be unaware of its presence. If statutes permit and the courts concur with the legality of such a device, it would mean that law enforcement could monitor everything a subject says or hears during the entire period of coverage.

Camera technology has made extraordinary strides and will have an increasing impact on the ability of law enforcement to monitor the activities of subjects. When the Omnibus Crime Control and Safe Streets Act of 1968 was passed in the United States, its Title III provisions considered only oral interceptions. The idea of being able to install an entirely concealed camera within a targeted structure was largely speculation. By the 1980s, however, advancing technology made that a reality. This was clearly demonstrated in 1983 when investigators on the Chicago Terrorist Task Force observed members of the Puerto Rican FALN organization constructing bombs in a Chicago apartment. The camera lens was so small that the security-conscious terrorists were unaware of its presence—despite their efforts to detect monitoring devices. Since that successful case, technology has advanced with extraordinary rapidness. Closed-circuit television will become a routine part of surveillance of the twenty-first century. Many law enforcement officers are already using digital cameras successfully, and this technology will also advance rapidly in the early twenty-first century.

Cameras are now mounted in many areas for security purposes. It is becoming a common law-enforcement practice in some parts of the country for one of the initial investigators at a crime scene to be assigned to identify and review all logical private and public security cameras in the area for clues. In the future, expect more crimes to be solved utilizing this technique.

Obviously, advances in such techniques as surveillance and electronic camera monitoring will permit more effective undercover operations. It will become considerably easier for support officers to protect undercover operatives, and for the operatives' actions to be documented, thereby reducing the potential for the defense to use an entrapment argument. The technology can also enhance the use of informants.

It is almost impossible to compare what can be done with physical evidence today with what could be accomplished a century ago. During most of the history of law enforcement, crime scene investigations consisted largely of picking up clearly observable articles left near the site of the crime or in a location associated with a suspect. In many bombing sites of the 1960s and 1970s, evidence recovery was minimal at best. It was often assumed that

nothing of value could have survived the blast, and frequently only what could be quickly retrieved from the scene was recovered. After that, the area was rapidly cleared so that the observable impact of the attack could be minimized.

**Advancements in Organizing the Results of Investigations.** One of the most important changes in the field of criminal investigation has been the enhanced capability to coordinate and correlate information. The computer age has made it possible to easily accomplish what was at one time impractical. Within minutes, thousands of telephone numbers connected to a case can be arranged in a meaningful order. The results of numerous surveillances can be analyzed and crunched on a chart that reflects a subject's pattern of activity, associates, and contacts. Some computers will even predict, based upon previous surveillances, what the subject will do in the future. Reports generated by undercover officers and informants can be similarly analyzed. Indeed, it is now possible to correlate the products of several different investigators in a single report, graph, or chart. Things investigators would have never considered doing, even as recently as the 1980s, are now accomplished with regularity.

A major weakness in employing computers to organize investigations has been the time required to enter data into the system. Various developments occurred during the 1990s and early 2000s to speed the process, and even more advances can be expected to help resolve previous shortcomings. No area of criminal investigation will be more positively affected by these advancements than terrorism. These cases are often complex because they deal with highly trained and security-conscious subjects. To be successful, investigators must rely on a variety of investigative techniques that will generate huge volumes of documentation that need to be organized into meaningful evidence.

**Recognizing Terrorism as a Unique Investigation.** Terrorist investigations are unique. The specific crime may not be unusual, but the perpetrators are different in many ways from the criminals usually encountered by law enforcement. This factor was not universally recognized in the 1960s and 1970s in the United States. In fact, even the word *terrorism* was not employed to describe many of the politically inspired violent attacks of that era. The perpetrators of such incidents were often referred to as "revolutionaries," "insurrectionists," "agitators," "commies," "pinkos," or "hippies." Without even a common term to link these people, it was difficult for law enforcement to view terrorism as a unique criminal science. This had changed by the mid-1980s.

By the beginning of the twenty-first century, virtually the entire law enforcement community had come to

regard terrorism as a specialized form of crime. This acceptance will allow better training to continue. It will also allow both social and physical scientists to focus on the phenomenon, which will in turn assist investigators.

## CONCLUSION

Although terrorism has continued throughout history, modern terrorism has changed drastically since the 1980s. Advances in technology have made it possible for a single person or a small group to commit catastrophic acts of violence. Previously, such extreme actions were not feasible. The present terrorist threat comes from several directions. In view of the events of September 11, 2001, everyone in the United States and in the industrialized Western world must be alert for international terrorist attacks either in their homelands or to their foreign interests.

Islamic fundamentalist terrorism represents the foremost concern to the United States. Although left-wing violence largely vanished in the United States by the last decade of the twentieth century, there is evidence from anarchist protesters and some eco-activists and animal rights activists that this form of activism is reemerging and also represents a threat. Right-wing extremism is present and based on several causes, including white pride, fear of a world government, opposition to a strong central government, firearms issues, land-use questions, and immigration. Religious-based terrorism is present in the United States, both in certain right-wing extremist movements and in the area of international terrorism. Religious extremism is also manifested in the antiabortion movement. Many modern terrorist groups have moved away from a strong, controlling central organization in favor of the lone-wolf or leaderless-resistance approach.

Terrorists will undoubtedly explore the use of more unconventional weapons during the twenty-first century, including nuclear, chemical, biological, and computer devices. However, improvements made in widely available conventional weapons will induce terrorists to continue to employ them as well. The use of the atypical, yet quite conventional, passenger aircraft as a terrorist weapon on September 11, 2001, illustrated to the world that, with a little imagination and planning, commonplace objects can be transformed into weapons.

The U.S. law enforcement community has been remarkably effective in addressing domestic terrorism since the 1980s. With the exception of animal rights and ecoterrorist attacks, most instances of extreme violence have been quickly solved. The law enforcement community should be able to come together in a coordinated effort against animal rights groups and ecoterrorists during the early part of the twenty-first century. Several major convictions resulting in lengthy prison

terms will likely have a chilling effect on these movements. Law enforcement has greatly improved and become more sophisticated, and fortunately has been able to quickly adopt modern technology in its battle with terrorists. Furthermore, the use of such technology in the field of terrorism will probably grow, due to increases in federal funding in response to the September 11 attacks.

Above all, the spirit of cooperation that exists within the law enforcement community in the United States—due in no small part to the existence of Joint Terrorism Task Forces—will continue to allow investigators the opportunity to successfully address the threat posed by terrorists. The extent of cooperation between U.S. investigative agencies and those of other nations that developed after the September 11 attacks, which involved perpetrators with ties to a number of countries outside the United States, will undoubtedly result in a trust that will endure for many years.

# Global Trends in Juvenile Crime and Justice

---

The involvement of children and adolescents in serious crime is a global concern. The extent of such involvement varies from nation to nation, but the majority of nations have determined methods for dealing with young offenders in the context of a juvenile justice system. This essay will describe both juvenile crime and juvenile justice from a global perspective.

Although nations vary both in principle and practice, the majority define *juveniles* as persons under the age of eighteen. Justice is an elusive concept to understand and a difficult one to define, and it is often beneficial to use a broad definition of justice when adopting a global emphasis on children; however, the use of the term at present will be confined to its use in descriptions of various nations' juvenile justice systems. Although *juvenile justice* and *juvenile court* are terms often used interchangeably, the meaning of juvenile justice used here includes juvenile courts, as well as those agencies that have substantial contact with juvenile offenders: law enforcement agencies, juvenile probation agencies, and juvenile correctional and detention facilities. Scholars also debate what constitutes "crime," as well as its objective and subjective characteristics. For purposes of comparison, this essay will use those definitions of crime employed by international sources of data on crime, which tend to rely on objective and legal definitions (i.e., crime as a violation of penal codes). The term *delinquency*, a commonplace in the criminological literature, is used interchangeably with *juvenile crime*.

The problem of crime is one that plagues just about every nation in the world. Although crime has become transnational, within each nation there are crimes against persons and property that have required the people of

that nation to determine how to deal with criminal offenders. One class of offenders is made up of delinquents, who in most countries are under the age of eighteen, and are responsible for a share of crime disproportionate to their representation in the total population. For example, in the United States, juveniles (defined as ten to seventeen years of age) represent about one-eighth of the total population. According to Federal Bureau of Investigation's reports, however, juveniles were implicated in roughly 17 percent of arrests in 2004, as well as 16.5 percent of arrests for serious violent crimes and about 28 percent for property crimes.

## TRENDS IN JUVENILE CRIME

Comparisons between countries on rates of juvenile crime are made difficult by the quality of international data sources available on crime. Each data source has its strengths and weaknesses. The following discussion of juvenile crime trends highlights three major sources of data: official data collected by government agencies and compiled by international agencies, self-report survey data collected across several countries, and historical data. The first two sources are quantitative in nature; the last may be both quantitative and qualitative.

**Official Data.** The majority of cross-national criminological studies of juvenile crime have relied on data compiled from national reports of law enforcement, judicial, and correctional statistics. One of the most well known of these official data sources is the United Nations Surveys on Crime Trends and the Operations of Criminal Justice Systems, or UNCJS. Begun in 1977, the UNCJS solicits tabulations from individual nations—through the use of a

**Table 1. Juvenile Suspects in Selected Nations, 2000**

Nation	Juvenile Suspects	Rate (per 100,000 population)	Ratio of Male to Female Juvenile Suspects	Ratio of Adult to Juvenile Suspects	Age of Full Adult Responsibility
Germany*	687,516	844.22	3.2	2.6	18
New Zealand	31,324	817.69	3.4	4.8	18

SOURCE: Seventh United Nations Survey of Crime Trends and Operation of Criminal Justice Systems (UNCJS), Question 4

\* Data are for 1999.

\*\* Special Administrative Region of China

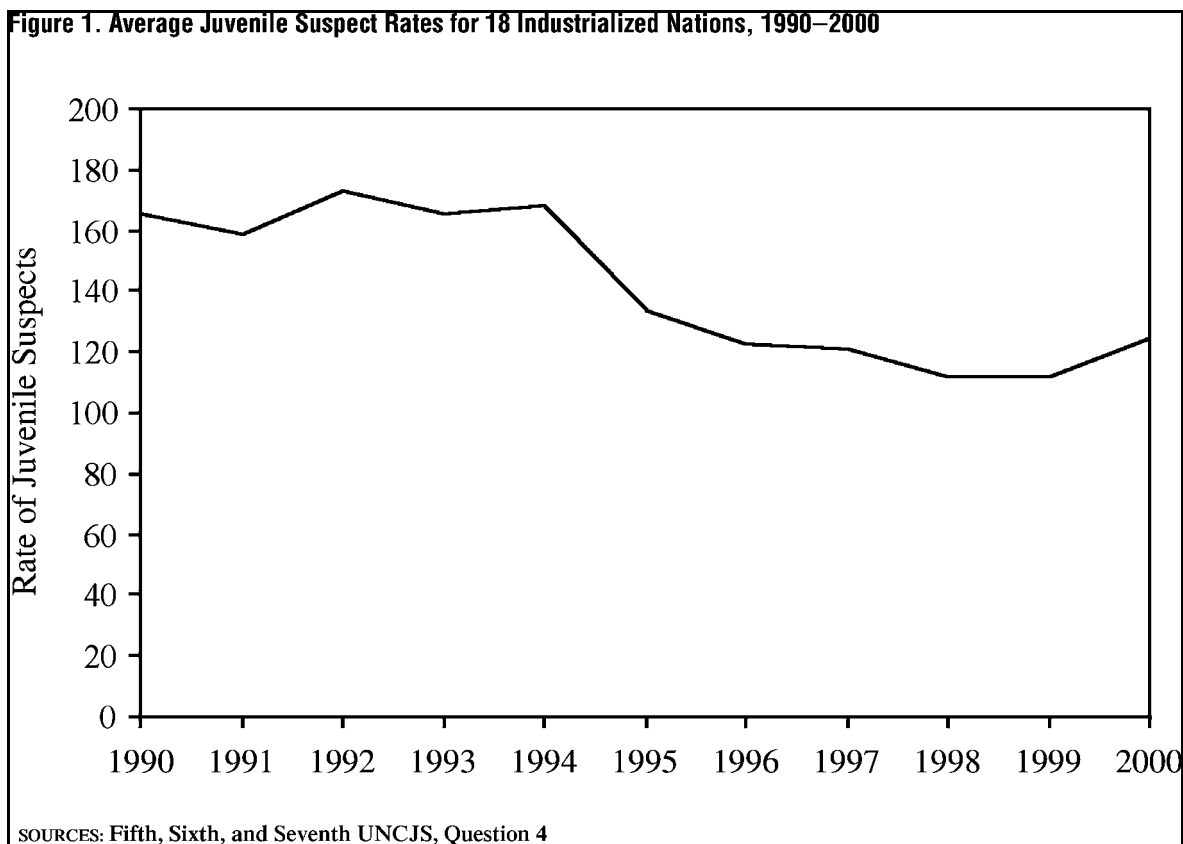

self-administered questionnaire—on such items as crimes known to the police, suspects taken into police custody, prosecutions, prison admission rates, and the resources devoted to the criminal justice system. The UNCJS is the only global source of official data that allows for analyses of trends in juvenile crime. Seven waves of surveys, each containing several years worth of statistics, are available to researchers.

UNCJS data include the age and gender of juveniles who had some formal contact with law enforcement agencies in each country. Formal contact could include a custodial arrest, being placed under suspicion, or being cautioned by police officers. For simplicity's sake, the UNCJS uses the term *suspect* in its reports. Table 1 provides information on juvenile suspects in those nations with complete data in either 1999 or 2000. These totals

represent all juvenile offenses. The UNCJS does not ask nations to provide data on suspects by type of offense. The data, for example, give a manslaughter suspect the same weight as a youth arrested for stealing a candy bar. Besides the total number of juvenile suspects identified by police agencies, the UNCJS data include the rate of juvenile suspects per 100,000 population, ratios of male to female juvenile and adult to juvenile suspects, and the minimum age in each nation at which full responsibility for criminal offenses applies. Four industrialized nations—Germany, New Zealand, Finland, and the United States—reported the highest juvenile suspect rates in the 2000 survey. Yemen, which has a population of close to twenty million, reported the lowest rate: about one juvenile suspect per 100,000 people.

In examining gender differences in the numbers of juvenile suspects, it is interesting that several of the

nations with the highest male-to-female differential are former Soviet states. This is despite the fact that the juvenile gender ratio in the total population in most of these countries is at or near 1:1. Many of the lowest gender ratios are observed in Western democracies, although this is by no means a perfect association.

When the numbers of juvenile suspects are compared with adult statistics, many of the democratic nations with low juvenile gender ratios also have relatively low ratios of adult to juvenile suspects (e.g., Germany, the United States, Canada, Hong Kong, and Japan). The largest adult-juvenile differential, 218:1 in India, is an even more staggering figure if one considers that people under the age of eighteen make up about one-third of India's immense national population.

The information provided in Figure 1 is an attempt to put delinquent involvement into temporal perspective. Using data from the fifth through seventh UNCJS surveys, the figure provides data on the juvenile suspect rate from 1990 to 2000, averaged across eighteen industrialized nations. The dramatic reduction in the number of nations between Table 1 and Figure 1 is almost entirely due to the lack of complete data across these eleven years. Due to the

very small number of developing nations with complete data, these nations are excluded from the analysis. The eighteen retained nations are all European, with the exception of Japan.

The trend line is indicative of independent crime reports from around the world, suggesting a high rate of juvenile crime in the early 1990s, with rates dropping substantially as the decade moves further along. There is considerable variation among the eighteen nations' rates, particularly in the early 1990s. Finland tops the distribution with a rate of 1,430 juvenile suspects per 100,000 in 1990, but it also experienced the most dramatic decline over the decade (note the rate of 787.44 in Table 1). At the other end of the distribution, Japan reported an average juvenile suspect rate of thirty-five per 100,000 over the eleven-year period.

This leads to a discussion of the limitations of the UNCJS. Some of these limitations are unique to the UNCJS, while others are common to data sources that rely on police reports of crime (for a more complete discussion of these issues, see Graeme Newman [1999]). First is the issue of incomplete data. As autonomous political entities, nations have a choice whether or not

to reveal their crime trends and criminal justice resources to the global community. In his extensive report on international crime, Newman suggests that industrialized nations are overrepresented in the UNCJS data because many developing countries face obstacles (political or otherwise) with recording and reporting their own crime statistics. This makes comparisons between countries more easily stated than achieved. Nations have a tendency in the UNCJS to report data incompletely—some leave blank spaces across several years—making analyses within countries difficult as well.

Second, and specific to the UNCJS, the population data upon which the suspect rates in Table 1 are based are not disaggregated by age. Thus, rate-based comparisons between countries are problematic, given that age distributions across countries are known to vary widely.

Third, police reports of crimes and suspected offenders rely on accurate reporting and recording of crimes. The decision to report crimes to police is particularly important because it “activates” the criminal (or juvenile) justice process. Results from the United Nations International Crime Victim Survey reveal that the majority of criminal victimizations are not reported to the police. In general, crimes against persons, such as auto theft and burglary, tend to be more reliably reported than other crimes of theft or violence against women (Newman 1999).

**Self-Report Data.** Given these limitations, it is doubtful that the UNCJS is providing a complete picture of juvenile crime in these nations. The second major source of data on international juvenile crime—an alternative source to the UNCJS—is produced from self-report surveys. Criminologists consider such surveys to have distinct advantages over official data based on police statistics. Given the worldwide tendency to underreport crime, measuring delinquency based on reports gathered directly from juvenile offenders is one means to crack the “dark figure” of crimes unknown to authorities. Victimization surveys have this advantage as well, but cannot provide data on juvenile suspects. It is therefore left to the self-report survey.

By far the most useful data source in this regard is the International Self-Reported Delinquency Study (ISRD). The ISRD is based on a common survey instrument used across eleven countries. The study’s sponsors modeled the survey after reliable instruments already in existence—particularly the National Youth Survey used in the United States. They designed the survey to measure the existence and frequency of thirty-three types of delinquent offenses and problem behaviors (e.g., status offenses), items tapping concepts relating to dominant theories of delinquent behavior (e.g., social bonding theory), self-reports of reactions to offenses by formal and informal authorities, situational characteristics of

self-reported delinquent acts, and background information on the juvenile respondents to the survey. Although the self-report method is a common one to measure juvenile delinquency, the ISRD represents the first effort to make comparisons across more than a few nations (Junger-Tas et al. 2003).

The eleven nations that took part in the study are all industrialized nations in Europe and North America. A total of 10,858 surveys were administered between 1991 and 1992. Although methods of sampling juvenile populations differed in each country, most of the surveys were completed using face-to-face interviews.

The analysis of Josine Junger-Tas, Ineke Haen Marshall, and Denis Ribeaud (2003) of the combined survey responses provides interesting contrasts to the UNCJS statistics. Based on common socioeconomic characteristics between countries, Junger-Tas, Marshall, and Ribeaud placed the eleven nations into three comparison groups: (1) northwest Europe, including Belgium, Finland, Germany, the Netherlands, and Switzerland; (2) Anglo-Saxon countries, including England and Wales, the United States, and Northern Ireland; and (3) southern Europe, which included the remaining countries of Portugal, Spain, and Italy.

To summarize their findings briefly, they established clearly in their analysis that there appeared to be more similarities than differences across the three comparison groups. In every country the majority of delinquent behavior was committed by youths fourteen to eighteen years old. But some of the differences between nation groups are intriguing. First, the peak age for offending was fifteen in the Anglo-Saxon group, one year less than in the other two groups. Second, they found the rate of property offending to be higher in the Anglo-Saxon and northwest European nations, and the highest rates of violent delinquency in the United States. Third, males self-reported greater involvement than female juveniles in serious delinquent behaviors (e.g., burglaries, assaults, drug trafficking). However, Junger-Tas and colleagues found that such variables as familial bonding, which tends to be a negative correlate of delinquency, work similarly in predicting male and female delinquency. Finally, most delinquent offenses self-reported in the ISRD were reported by their perpetrators to have gone undiscovered by both police and parents. For two-thirds of the behaviors measured, less than 10 percent reported that the police discovered the act. Those offenses with higher rates of police discovery tended to be more serious in nature. “This supports the generally accepted belief that police statistics are useful indicators of more serious delinquent behavior” (Junger-Tas et al. 2003, p. 128).

Like official data on juvenile crime, the ISRD has its limitations. Differing definitions of juvenile delinquency

found their way into the study due to dissimilar interpretations by researchers of worded survey items in the national survey. More importantly, cross-national differences in sampling methods led to significant reductions in the number of cases available for analysis. Perhaps most importantly, the high cost of a data-collection effort like the ISRD may prohibit future attempts to extend the study into a longitudinal one (i.e., with several time points of data collection), particularly if researchers want to include nations outside of Europe and North America.

**Historical Studies.** A third approach to studying juvenile crime trends is a historical one. Both the UNCJS and ISRD lack the ability to analyze juvenile delinquency over a lengthy period. Criminal justice historians have published an array of books and articles that allow researchers to take the long view of history, if only for one or a few countries at a time. One example is Sarah Fishman's *The Battle for Children* (2002), an examination of juvenile delinquency and juvenile justice in twentieth-century France. Emphasizing World War II as an anchoring time period, Fishman uses two types of historical data: writings on French delinquency and justice published during the relevant time period, and archival materials, including policy documents and juvenile court records. Although Fishman did not produce a time series of French juvenile delinquency trends, her interpretations of the historical data have their own merits. Fishman's analyses provide an interesting description of the nature of public concern with juvenile delinquents and how this concern led to changes in juvenile justice policy. France and many other European countries experienced increases in juvenile delinquency during World War II. In France, concern with this problem led directly to the establishment of a law in 1945 that more clearly outlined rules for juvenile procedure and the rights of juvenile suspects.

Mimi Ajzenstadt used historical documents on juvenile delinquency in Israel published in the 1950s and 1960s to study the "ways in which forms of public discourse on male juvenile delinquency and the socio-legal response to this behavior contributed to the process by which social categories [middle-class European-immigrant juveniles and working-class juveniles of Arab, Turkish, and North African descent] were historically constituted and ranked" (Ajzenstadt 2002, p. 586). Ajzenstadt found that members of the latter group were relegated by Israeli society to an "other" position outside the cultural mainstream, which led to harsher treatment of them by the juvenile justice system in comparison to members of the former group. The exclusionary treatment of Arabs in general may also have had an impact on the academic discourse, as some scholars "took the position that the causes of Arab juvenile delinquency differed

from that of Jewish offenders" (p. 595). An important lesson from studies like Ajzenstadt's is that perceptions of juvenile crime trends may resonate more with policy-makers and the public than actual data, and may be more influential in shaping juvenile justice policy.

## JUVENILE JUSTICE

It is not possible to provide here a comprehensive overview of the world's juvenile justice systems and all international issues of juvenile justice. Accordingly, the essay is selective in its approach. The following material provides a brief overview of global juvenile justice; gives the reader a sampling of some of the diverse approaches to juvenile justice by examining England and Wales, France, and China; and concludes with a discussion of two key international issues in juvenile justice: capital punishment and the restorative justice movement.

The origin of formal juvenile justice systems is found in the industrial revolutions that occurred in Europe and North America in the nineteenth century. Prior to that century, children older than seven in many parts of the world were considered to be almost miniature adults. The class of individuals we now label adolescents served as an important source of labor for their families. But with the gradual shift from an agrarian economy to an industrial one in much of the Western world, new patterns of work and family life emerged. Progressive reformers pushed to make formal schooling a broader priority for societies' young inhabitants. At the same time, juvenile involvement in crime seemed to be on the rise, particularly in the growing cities of industrializing nations. Many of the same progressive reformers who were interested in "saving" young people from the cruelties of a poor, urban existence through education also pushed for reforms in the ways that juveniles were treated by the courts and correctional institutions.

The efforts of progressives in the United States played a major role in the creation of the world's first juvenile court in Illinois in 1899. Emulations of this court appeared shortly thereafter in other parts of the United States and in other countries. Although individual nations differed in their approaches (and still do), the newly created juvenile courts all shared the ideas that children and adolescents should not be held as accountable as adult offenders, and that the objective of the juvenile justice system is to help the child, to treat and rehabilitate rather than punish.

On the world stage, the United Nations (UN) has embraced these ideas in a set of treaties and covenants passed over the course of the late twentieth century. In 1985 the UN General Assembly adopted the Standard Minimum Rules for the Administration of Juvenile Justice, also known as the Beijing Rules. These rules are

an example of “soft,” or nonbinding, international law, meaning that nations are not obligated to abide by the rules, and a nation’s nonadherence to the rules carries no sanction. These rules provide nations with a blueprint for designing a juvenile justice system that adheres to “hard,” or binding, international law regarding children’s rights. The Beijing Rules also lay out procedural safeguards recommended for all juveniles suspected of delinquent or more minor offenses.

Like juvenile crime, comparisons across juvenile justice systems can be complicated. Some observers have found it easier to talk about “models” of juvenile justice into which nations can be classified. For example, Nicholas Bala and his coeditors (2002) compare nations that employ a “welfare” model emphasizing the care and protection of juveniles with nations asserting a “justice” model in which due-process rights and other trappings of the adult system are applied to the prosecution and adjudication of juveniles. These models also are useful for historical analyses of individual systems.

**Juvenile Justice in Selected Nations.** Because juvenile justice systems are based on varying philosophies on how youth should be treated, and even those nations working from a similar philosophy will differ in the actual operation of their systems, it is helpful to provide more specific information. What follows are brief profiles of juvenile justice in three nations: England and Wales, France, and China. These nations were chosen because they each represent separate legal traditions in the world. England and Wales (treated here as one nation) has a common legal tradition (and is, in fact, the “mother” of common law systems). France’s legal system is civil, or code-based, and modern China is one of the few remaining exemplars of the socialist legal tradition. Although these countries represent neither “model” juvenile justice systems nor models of juvenile justice, they provide interesting contrasts in the treatment of youthful offenders.

**England and Wales.** The modern history of juvenile justice in England and Wales is highlighted by a number of key pieces of legislation, beginning with the passage of the Children Act of 1908, which created the first juvenile court in the nation. In the half-century preceding this act, judges had the option of diverting juvenile delinquents from the formality of the adult court, or sending them to institutions where treatment was akin to that received by incarcerated adults. The Children Act mandated the classification of juvenile suspects as those between the ages of seven and fifteen years old for all offenses except murder. It gave court magistrates the ability to dispose quickly of minor infractions, and provided juveniles with many of the procedural rights enjoyed by adults at that time. The juvenile incarceration rate dropped dramatically in only a few years’ time.

In more recent times, the Youth Courts, which have replaced the juvenile courts, extend jurisdiction to sixteen- and seventeen-year-olds. A law passed in 1991 divided juveniles into two groups: ten- to thirteen-year-olds are deemed “children,” and those fourteen to seventeen are “young persons.” The magistrates who preside over these courts are volunteer judges. But the majority of juvenile suspects in England and Wales never see these courts. The police have a great deal of discretionary power when it comes to juvenile offenders, and may opt to “caution,” or divert, juveniles into home- and community-based forms of intervention (e.g., community service, restitution, or treatment programs). In 1998 police cautioned about two-thirds of all juvenile suspects (Graham 2002). Custody in a secured setting is restricted to young persons.

England and Wales also make use of “parenting orders.” Youth Courts have the option of sending a juvenile offender’s parents to counseling sessions designed to help them be better parents. The parenting order is reserved for select types of violations, including truancy, that are facilitated by the parents. Preliminary observations suggest that these orders have been well received by parents, particularly those who might not have the ability to pay costly fines (Graham 2002).

**France.** France’s modern juvenile court came into existence under the Fourth Republic in 1945, the same year the Ministry of Justice took over the duties of correctional administration from the Ministry of the Interior. The juvenile justice system in France more closely resembles the welfare model of juvenile justice than does that of England and Wales, emphasizing treatment over punishment.

In 1906 France raised the age of full adult responsibility to eighteen, with criminal provisions retained for sixteen- and seventeen-year-olds, depending on judicial discretion. Six years later the French Parliament set a lower age boundary of thirteen on formal proceedings against juveniles. This classification is still followed today. Juvenile suspects aged sixteen and seventeen face hearings in special courts of assize for juveniles (courts of assize are the major trial courts in France). The majority of delinquency cases are heard in juvenile courts presided over by a judge and two lay assessors (regular citizens). Following the inquisitorial system in all French courts, the juvenile judge actively questions the suspect, and determines with the juvenile the most appropriate disposition. Courts follow the guideline of *excuse de minorité* with juvenile offenders aged thirteen to seventeen, meaning they receive half the punishment that an adult would for a similar offense. Most adjudicated delinquents are not incarcerated, but some are sent to *foyers*, which are small, unsecured facilities where juveniles may receive treatment or educational training.

As in England and Wales, the French police have the ability to divert juvenile offenders from the juvenile courts. One development is the formation of “juvenile squads,” which are staffed by police officers trained to deal with juvenile problems and to counsel juveniles regarding their misbehavior (Terrill 2003). Whatever disposition juveniles receive, the French system emphasizes *protection judiciaire de la jeunesse* (judicial protection of youth). Although several highly publicized cases of violence in the 1990s led to calls by some for juvenile justice reform, Sarah Fishman notes that “the evidence suggests that in France today, strong mechanisms—intellectual, political and institutional—resist abandoning the therapeutic approach for a repressive one, in spite of pressures in that direction” (Fishman 2002, p. 220).

**China.** Between 1949 and 1979, the Chinese government erased formerly existing legal codes under the Chinese dynasties and fully embraced a socialist legal tradition. The ruling Communists put a new set of rules and regulations in place to control criminal and antisocial behavior. The government under party chairman Mao Zedong (1893–1976) stressed a lack of education and knowledge of the party as major causes of crime. Punishments for criminal offenders emphasized reform through labor and education. Since 1979, China has returned to legal codes as part of a gradual move toward increased trade and diplomacy with other nations. With regard to juvenile delinquency, Article 14 of China’s Criminal Law holds that:

Offenders above 16 years of age are punishable by law, whereas offenders age 14 to 16 are liable only when they have committed serious crimes such as homicide, robbery, mayhem, arson, and repeated theft. Chinese authorities typically refer to crimes committed by youth younger than age 25 as “youth delinquency,” whereas crimes committed by minors between the ages of 14 and 18 are described as “juvenile delinquency.” (Wong 2001, p. 492)

Unlike the two nations described above, China has a brief history when it comes to dealing with juvenile crime. Delinquency rates became significant only in the last decades of the twentieth century, and they remain a fraction of what is reported in Western industrialized nations. As Dennis Wong states, “many observers rightly describe China’s social control orientation as a mixture of informal control and formal control” (2001, p. 297). On the informal side is the neighborhood committee that exists at the local level to deal with juvenile offenders, and the *bangjiao*, which is a panel made up of community members (e.g., the juvenile’s parents, a member of the neighborhood committee, and a public security officer) who intervene to help prevent juveniles who have

committed minor offenses from getting involved in more serious behavior (Terrill 2003). Juveniles dealt with formally are treated the same as adults, whose cases are heard by the People’s Courts, but juvenile delinquents between the ages of fourteen and seventeen are supposed to receive lighter punishment due to their age. Adjudicated delinquents may participate in educational programs and hard labor if sent to one of China’s many juvenile reformatories.

In the future, it will be interesting to see if China implements more of the UN rules of juvenile justice administration adopted in its own backyard (the Beijing Rules described above). Wong argues that this will be a challenge for several reasons, including the fact that the judiciary and the *bangjiao* remain closely tied to Communist Party politics.

#### **Global Issues in Juvenile Justice: Capital Punishment and Restorative Justice.**

Either on a de jure or a de facto basis, capital punishment has been abolished in about half of the countries in the world and in most industrialized nations. Yet even in those nations that have retained the right to impose the death penalty, only a few extend that right to individuals who committed their capital crimes as juveniles. Still fewer impose the penalty on such individuals. According to Amnesty International, since 1990 only eight countries are known to have carried out executions of juvenile offenders: China, the Democratic Republic of the Congo, Iran, Nigeria, Pakistan, Saudi Arabia, the United States, and Yemen. The United States leads the world with nineteen such executions since 1990 (these offenders had committed their crimes when they were sixteen or seventeen years of age, but had reached their twenties or thirties when they were executed). International law prohibits the application of the death penalty to those who committed their crimes prior to age eighteen. In 2005 the U.S. Supreme Court ruled in *Roper v. Simmons* that it was unconstitutional to execute an offender who was less than eighteen years old at the time of the crime.

A recent trend in juvenile justice in many industrialized nations has been the increased use of restorative justice programs. Restorative justice is a model of justice that emphasizes personal trust and mutual dependence between parties involved in acts of wrongdoing, over the adversarial or inquisitorial approach embodied in the major legal traditions, which tend to emphasize the dominance of the state in resolving matters of crime and delinquency. Some argue that restorative justice has its roots in older, indigenous legal traditions, which may explain why restorative justice programs have proliferated in countries with large indigenous populations or long-standing traditions of tribal law (e.g., Australia, New

Zealand, Canada, the United States, and some African countries).

Put into practice in juvenile justice, restorative justice programs typically involve some setting whereby the juvenile offender has the opportunity, often with family members present, to face the victim(s) of the offense and take part in a process that involves arriving at a settlement agreed upon by all parties. These conferences may take place in an intimate setting involving the immediate parties, or before panels of interested citizens (e.g., probation and police officers, judges, and community members). The juvenile offender may receive punishment similar to those handed out in traditional settings (e.g., probation), but he or she will usually be required to provide some restitution directly to the victim.

The restorative justice approach is seen by some juvenile justice practitioners as a necessary reform for systems that in many countries have shifted to an adult-like, “get-tough” approach to juvenile crime. Some countries in Latin America have used restorative justice as a tool to overhaul juvenile justice systems that are not in line with minimum UN standards. Nevertheless, there is an unwarranted tendency to regard restorative justice as a panacea for juvenile justice reform. Critics warn that restorative justice programs are difficult to establish in socioeconomically ravaged communities, where a lack of community integration can present problems for programs that rely on community participation. Still others label the restorative justice approach as too “softhearted” on young criminals.

## CONCLUSION

Future trends in juvenile crime and justice are, like many social indicators, uncertain. Demographers point to worldwide birth-rate statistics that foreshadow decreasing juvenile populations in many nations, coupled with an increase in the size of minority-group birth cohorts. Nicholas Bala et al. suggest that “the combination of the changing age and racial composition in [some countries] means that juvenile justice issues are likely to be more important and more divisive in coming years” (2002, p. 257). In addition, any changes in how societies view childhood and adolescence may possibly lead to broad reforms, or, in some nations, the abolition of separate mechanisms for dealing with juvenile delinquents.

# Transnational Organized Crime

---

Transnational crime must be linked to basic changes in modern societies, changes that affect labor markets, the economy, and mechanisms of social integration. Transnational crime is therefore also linked to migration and immigration and those processes that have led to multicultural or multiethnic societies in both Europe and North America. These changes concern not only the emergence of transnational enterprises and a global economy, but also the emergence of transnational ethnic communities that bridge borders and possibly also cultures. Transnational crimes, that is, crimes affecting more than one country or nation at a time, as well as crimes characterized by their cross-border nature, are not new. Transnational crimes have always been part of the crime phenomenon. What has changed is the quantity and quality as well as the structures of transnational crime, which today are determined by the market economy, organizations and networks, rational choice, and migration.

With cyberspace, a completely new environment emerged in which crime is bred in forms that have come to be called cybercrime, but which could easily be conceptualized as a another form of transnational crime. Cyberterrorism, cyberstalking, and cybervandalism, as well as numerous varieties of property crime, such as money laundering, that make use of the Internet, create a sort of globalized threat that fuels insecurity. Cybercrime further fuels demands to establish security and safety through expanding social control, in particular, electronically based systems of control.

International and national criminal-law reforms and police strategies are geared toward better control of transnational crimes. Along with cybercrimes, the transnational crimes that attract policy attention include trafficking and

smuggling of illegal immigrants, a variety of economic crimes, environmental crime and cross-border pollution, drug trafficking, trafficking in women and children, money laundering, international corruption, and transnational terrorism, which emerged in the 1970s.

Transnational crime is characterized by either a criminal who perceives opportunities to commit crimes beyond national borders or by the cross-border transfer of illegal commodities. The motivation to cross borders and to engage in transnational crime are twofold. First, transnational criminals sometimes are enabled by the exploitation of the established national legal and administrative frameworks, which differ from country to country. Second, certain cross-border crimes, such as drug trafficking, simply cannot be accomplished without crossing national borders because supply and demand are located in different countries and regions.

The term *transnational crime* refers to networks of criminals or organized crime groups. Moreover, and from a methodological perspective, transnational crime is not accessible through the conventional instruments of criminological research, such as surveys, interviews, or participant observation, which are routinely deployed to study such conventional subjects as youth crime. The United Nations is investigating methods for incorporating the variables of transnational crime into its surveys on international crime trends.

However, the phenomenon of transnational organized crime is part of a trend toward the integration and convergence of social, cultural, and economic systems. It is, in particular, subcultural systems that display symptoms of globalization and integration, with transnational

terrorism being an exception because it aims at disintegration. The process of integration is based on well-known general trends, such as the mobility and globalization of economy.

#### THE CONCEPT OF TRANSNATIONAL ORGANIZED CRIME

Transnational crime can be classified into four groups based on the forms the crime takes, the control and investigation problems it poses, and the means by which societies can or should respond to it. These categories are:

1. Crimes related to the market economy.
2. Organized crime.
3. Crimes related to immigration and migration.
4. Crimes involving ethnic minorities and the social and ethnic segmentation of modern societies.

#### CRIMINAL MARKETS

Transnational crime is related to the market economy. All transnational crime is a response to an economy that is regulated by demand and supply. Along with markets for illicit commodities, there are markets for licit goods that stem from such acquisitive crimes as subsidy and tax fraud. There are also markets for illegal risks (e.g., illegal waste disposal or various types of investment fraud) and markets for illicit services, such as gambling, prostitution, money laundering, illegal immigration, software piracy, and the transfer of restricted or controlled technology.

Modern societies in Europe and North America have produced an enormous demand for an undocumented labor force that exists outside of the regulated labor market. This demand for undocumented labor continues to attract illegal immigrants. Illegal immigration has created a major market for transnational crime groups. It is estimated that approximately three-quarters of illegal immigrants had the support of organized groups in traveling to Europe and in crossing European borders. Some experts estimate that the number of immigrants illegally smuggled and trafficked stands at about four million per year.

Brokerage of illegal immigrants into labor markets concentrates on the construction industry, domestic service, sweatshops, and agriculture, as well as various types of shadow economies. Conventional organized crime groups, in particular the Chinese triads, are heavily involved in trafficking immigrants. In Germany, estimates put the number of illegal immigrants in the construction business at approximately 500,000. Several million illegal Mexicans live and work in the United States (most of them in parts of the South, where agriculture plays a major role). International adoption practices also point to an illegal market for children. The

emergence of shadow economies leads to the accumulation of capital, which, in turn, demands the reallocation of such illicit capital into legal markets.

The law enforcement response to shadow economies and black markets has been multifold. However, the most important responses are: (1) disruption of local retail markets through zero-tolerance and proactive policing; and (2) disruption of the global economy of illicit goods and services through strategies that pursue the proceeds of crime.

Anti-money laundering and confiscation measures rank high on the policy agendas of European countries. Demands to prevent organized criminals from profiting from various types of illegal activities, especially drug trafficking, have led to legislation facilitating the seizure and the freezing and forfeiture of crime proceeds. Along with the Council of Europe's Convention on Money Laundering, the guidelines issued by the European Commission oblige member states to enact laws forbidding money laundering and to establish systems of control that enhance the potential for identifying, freezing, and confiscating criminals' money. Moreover, the 1988 United Nations Convention against Illicit Traffic in Narcotic Drugs and Psychotropic Substances emphasizes the need to crack down on illegal profits. Article K of the 1992 Treaty on European Union makes the problems of international crime, drug trafficking, and money laundering major aspects of European Union (EU) police and justice cooperation. The 2000 United Nations Convention against Transnational Organized Crime also gives special attention to money laundering and forfeiture policies.

Anti-money laundering measures and confiscation techniques represent the most powerful weapons available in the fight against drug trafficking and other types of organized crime. It is even argued that the traditional punishments for crime, such as imprisonment and fines, are ineffective against transnational organized crime, the better alternative being to follow the money trail. Since the 1990s, most European countries have amended their basic criminal codes and procedural laws to facilitate the seizure and forfeiture of ill-gotten gains.

Both confiscation and anti-money laundering policies have instigated significant changes in criminal law. National policies covering transnational crime have developed into international policies. Policies designed to combat organized crime are backed up by commitments to uniform legislation and joint efforts in law enforcement, as expressed in international treaties and supranational directives.

Analysis of confiscation policies and anti-money laundering measures must focus on the process and potential problems of implementation of these policies. It can be assumed that similar problems to those

encountered during the implementation of other branches of modern criminal law (e.g., environmental criminal law) will surface, although the type of actors and activities involved will differ. This assumption is based on the central role of information and information exchange for enforcing criminal laws. Crime profits and money laundering are part of systems (e.g., black markets, financial institutions, banks, and commerce) that are not easily penetrated by law enforcement. Obtaining access to these systems is crucial for the implementation of the law enforcement.

In cases of traditional street crime, for example, initiation of criminal investigations depends on victims reporting the crime. Moreover, successful investigation is primarily dependent on the victim's ability to give a clear account of what has happened, and, more importantly, some information on the suspect, which can then be used to track down the offender. The victim's role in social control has been compared to that of a gatekeeper of the criminal justice system. However, money laundering and crimes such as drug trafficking that generate huge profits cannot be easily traced to a particular victim or victims. It follows that someone else has to take care of collecting and passing on intelligence. The functions normally fulfilled by the victim in the investigation of ordinary crimes have to be assumed either by the private sector, which is engaged in financial transactions, or by administrative authorities who have routine access to the needed information. The success or failure of confiscation and anti-money laundering policies are essentially dependent on whether relevant information can be provided for law enforcement purposes.

Two options are available for criminal justice agencies attempting to cope with the deficit of information caused by the lack of a reporting victim. The first option consists of criminal justice agencies becoming proactive and acquiring for themselves the knowledge and access necessary to produce meaningful information. Their goal is to initiate criminal investigations, prepare solid charges, and finally reach a verdict. This option has been used extensively against drug-related crime, where proactive policing has become a major mechanism for controlling drug markets.

The second option consists of criminal justice agencies creating "artificial victims" or of private law enforcement staff making use of the intelligence on money laundering available in other systems that would not usually be involved in law enforcement. This option is in use against environmental crimes where particular administrative agencies are responsible for implementing administrative environmental law. The creation of artificial victims supposes that persons or institutions can be made interested in reporting suspicious cases or suspects, just as individual victims of crime do. Persons or

institutions, such as cultural or financial institutions, that are relevant to the money laundering process must be persuaded that they are victimized by the crime. Financial institutions, in particular, desire to maintain an image of honesty, trust, confidentiality, and respect for customers' privacy, and banks and their employees can to some degree be assigned the functions of police deputies, which amounts to a form of private policing.

## ORGANIZED CRIME

The concept of organized crime is based on two theoretical approaches. One approach views organized crime as linked with the traditional subcultures of the modern metropolis. These subcultures are also dependent on shadow economies that serve as the economic basis for what once was called the professional criminal (in particular, the professional thief) and that provide an environment for a network of criminals on the basis of deviant norms and values. In fact, much contemporary literature on these subcultures of organized crime describe an underworld, which sometimes is conceived as a competitor to conventional society. However, in many societies there exists a multitude of arrangements between these underworlds and the conventional society. These arrangements are functional insofar as the underworld and the shadow economies operating within it provide some commodity or service that is in demand in the conventional society. The demand for drugs, prostitution, or gambling emerges outside of shadow economies and keeps these economies alive. The arrangements vary and include various types of corrupt relationships.

The second theoretical approach to understanding organized crime considers crime as a rational and well-organized enterprise. According to this view, the enterprise-related characteristics of organized crime prevail, and the subculture-based characteristics are declining. Organized crime thus displays the forms and the structures of conventional economic behavior. The once-clear differences between criminal and noncriminal activity have faded, and organized crime has become indistinguishable from other types of economic behavior. For example, in money laundering, nothing in the appearance of the offender or in the act itself can serve as a clear identification of the act as criminal or deviant. The offender and the criminal act do not exhibit the traditional signs of crime or deviance. The difference between organized and conventional crime, therefore, has led to the emergence of new investigation problems in identifying the changes in rational and organized criminal enterprises. Such changes consist of getting closer to conventional society and abolishing subculture-related and therefore visible differences. Organized crime creates problems for law enforcement because such crimes use the forms and procedures of

conventional society, making identification of criminal acts and suspects difficult. New types of criminal legislation, such as money-laundering statutes, take perfectly legitimate behavior (e.g., the handling of assets or money) and mark it with an illegality that is invoked only by the criminal origins of the assets.

## IMMIGRATION

Immigration and migration represent the third “pillar” in understanding transnational crimes. Immigration has always been associated with issues of safety and crime. Immigration in Europe since the early 1960s has been associated with a number of social problems; therefore, immigration has also become a central topic in the debates on safety in EU countries. As was demonstrated through the implementation of the Schengen treaties, which regulate immigration between EU countries, immigration has become a significant part of the EU’s policies with respect to crime and crime control. Control of immigration is even equated with control of crime and the creation of stable social conditions. The particular relevance of the relationship between safety and immigration results from the process of globalization in the economy, the shrinking of the first labor market, mass unemployment, and the rapid expansion of shadow economies, the consequences of which become visible in EU citizens’ sense of insecurity, segregation, and the emergence of inner-city ghettos. It also results in the loss of social solidarity and signs of bias, hate, and violence. In this environment, the concern is that immigrants (and other ethnic minorities) may: (1) contribute to instability and violence either actively as offenders or passively as violence-provoking victims; and (2) exploit host countries and host societies either through the marketing of illicit goods and services or by living on social security and property crime.

This view is reinforced through other signs of disintegration and conflict displayed by immigrant groups. It is, in particular, their statistically high share of unemployment and low achievement in training and education that make immigrants (in particular, those from non-EU countries) a social group living at the margins of society. In some EU countries, unemployment rates among non-EU immigrants are at least twice that of the majority group.

During the 1950s and 1960s, immigration took place almost exclusively on the basis of labor immigration (finding its expression in active recruitment of labor immigrants in most Western European countries), as well as on the basis of postcolonial relationships. Immigration in the early years of the twenty-first century is, predominantly, an involuntary movement triggered by military conflicts, civil wars, and rapid processes of economic and cultural transformation in less-developed countries. The process of

constructing immigration as a social, economic, political, and criminal problem has gained momentum with the sociopolitical and economic changes that occurred in Eastern Europe in the 1990s, and the opening of the former tightly controlled borders between Western and Central European countries.

At the beginning of the new millennium, estimates put the number of non-EU nationals in EU countries at approximately ten million, representing some 3 percent of the resident population of the EU. Interviews with migrants and nonmigrants from five countries (Turkey, Egypt, Ghana, Senegal, and Morocco) indicate that the main motive for migration is economic (however, there are also clear gender patterns, with women being motivated primarily by family reasons). The migration destination is determined by the presence of family and friendship networks. This explains why there are, despite the same motives for emigration and varying conditions of immigration, clear preferences that remain the same for legal and illegal immigrants—with Turkish people choosing mainly Germany; Moroccans choosing Spain or France; and Egyptians, Senegalese, and Ghanaians choosing non-EU destinations. Information relevant for migration is provided primarily by family and friends living in the country of destination, with information covering economic and labor conditions considered most important, and the statutory conditions of immigration seen as least important. Interviews carried out in the sending countries, as well as in Spain and Italy, reveal that there is a significant proportion of immigrants reporting experiences with undocumented entry or overstaying a legal period in receiving countries. The main motive for nonmigration is, not surprisingly, family bonds. A certain bar is also set by economic resources because migration demands the availability of economic means.

The links between immigration and crime can be summarized as follows:

- Some immigrant groups exhibit much higher proportions of crime participation or crime involvement than does the majority group.
- Some immigrant groups display the same degree of crime involvement or even less participation in crime than does the majority group.
- First-generation immigrants of the 1950s and 1960s were less involved in criminal activities than were second- or third-generation immigrants and those arriving in the 1980s and 1990s.
- Most immigrant groups have in common their socially and economically disadvantageous and precarious position, which puts them at risk of becoming involved in shadow economies, drug markets, and acquisitive crime.

- Cultural differences between groups that are socially situated in similar positions can result in different crime patterns—different in terms of both the structure and the magnitude of crime involvement.
- Cultural differences between immigrant groups include the capacity for community building and the preservation of cultural and ethnic homogeneity.
- Cultural differences are important in explaining varying degrees of social and economic opportunities, be they legal or illegal, in different ethnic or immigrant communities and social groups.
- Immigrants are at as much at risk of becoming victims of crime as they are of posing risks in terms of deviance and crime. In this, they are not different from the majority group.

### MULTIETHNIC SOCIETIES

Ethnic minorities and the ethnic segmentation of modern societies contribute to the distinct features of transnational crime. With changes in immigration patterns and in the economic and social structures of modern societies, immigrants move into a precarious position of marginality and exclusion. Such marginality contributes to ethnic segmentation, as well as a group loyalty that supports shadow economies and creates new law enforcement problems.

Successful immigrants to Europe and North America during the nineteenth and twentieth centuries managed to work hard and integrate (economically and culturally) into mainstream society. Several waves of Polish immigrants settled at the end of the nineteenth and the beginning of the twentieth centuries in western Germany, mostly in coal mining areas; they melted rapidly into mainstream society and became invisible as a distinct group within half a century. The traditional conception of immigration and cultural conflict that was developed to explain social problems related to immigration in North America does not fit the European situation, where immigration creates new networks of migration and a pluralism of “transnational communities.”

The disappearance of low-skilled jobs and the transformation of industrial societies into service-and-information societies dependent on highly skilled workers have contributed to a drastic change in labor markets and in the traditional mechanisms of social integration, which were always based on labor and employment. Shadow economies and black markets, particularly in metropolitan areas, now offer precarious employment opportunities for new immigrants.

Political changes in Europe, then, have had an impact on the legal status of immigrants. In the 1960s and 1970s, most immigrants entered European countries legally as labor immigrants or on the basis of family

reunification. In the first decade of the twenty-first century, the legal status of new arrivals to Europe is more tenuous. Immigrants may be asylum seekers or refugees, or they may be merely tolerated, subject to strict administrative controls, and threatened by criminalization as a consequence of noncompliance.

With the transformation of labor markets, immigrants in general came to be unemployed and dependent on social security. Crime policies related to immigration must address the assumed precursors of crime and deviance, including family problems, unemployment, and lack of education and professional training. Immigrants tend to concentrate in inner-city ghettos. Migration and immigration in Europe is mostly directed toward metropolitan areas and areas that are increasingly plagued by numerous social problems, including the emergence of ghettos.

There are important changes in the types of immigrants entering Europe and North America. Labor immigrants of the 1950s and 1960s came predominantly from rural areas, while immigrants arriving after 1980 were mainly from urban areas where resources for migration are more readily available than in the disadvantaged areas of developing countries. Migration and immigration during the second half of the twentieth century led to the fast-developing phenomenon of ethnic and migration networks, as well as the establishment of transnational communities that provided ample opportunities to move. These developments represented an alternative to the EU plan for the free movement of goods and people.

### NEW CHALLENGES FOR POLICE AND POLICING

New challenges for the policing of transnational crime have several sources. Some challenges are related to changes in police work itself—in particular, the emergence of zero-tolerance-style policing and related strategies that focus on the disruption of local expressions of transnational crime (i.e., local shadow economies and black markets). These strategies have given rise to the question of how crime can be controlled without increasing the police abuse of power and illegitimate violence, a question that can be boiled down to how to organize the relationship between police and ethnic minorities. Research on zero-tolerance policing has revealed that such strategies are associated with a parallel increase among police in the abuse of power, illegal behavior, and sometimes illegitimate violence, a development that has led to the question of how irregular conduct can be reduced without sacrificing strict policing advantages. The problem is well known to all agencies that pursue several objectives at the same time. Policing encompasses the goal of reducing crime but also must respect the value of human life and human dignity while guaranteeing the

basis of a civil society. Police must also enforce the law impartially. They aim to strike a balance between crime control and due process.

An important aspect of the attempt to make police departments take a balanced approach to crime control and in particular a fair and impartial approach to ethnic minorities has been the representation of minorities themselves in police forces. However, European police forces have only recently adopted policies of active recruitment of ethnic minorities. Research on the recruitment of minorities into police forces in England and Wales shows that despite an active commitment toward an ethnicization of the police, the proportion of minorities is still low. The details demonstrate that there is obviously an inverse relationship between the size of the ethnic general population and the proportion of ethnic police.

The second challenge follows from the attempt to balance efficiency in crime control with the need to protect privacy and human rights. Demands for increasingly sophisticated electronic forms of communication, as well as compensation for growing mobility, globalized threats, and weakening border controls, reflect the decline in informal control of crime. In the face of transnational crime, control remains limited. There is a growing tension resulting from conflicting perspectives between the right of privacy and law enforcement objectives.

The third challenge concerns cooperation between police forces, an increasing demand for intelligence about policing, and international variation in police organizations, police laws, criminal procedural laws, and policing models. Such intelligence is needed to understand the problems that arise in police cooperation and to develop remedies in international treaties on transnational crime control.

#### INTERNATIONAL COOPERATION AND INTERNATIONAL POLICING

On the international level, the political will to focus on transnational organized crime in Europe and to work on instruments to combat these types of crimes was first expressed in the 1988 Vienna Convention. The Vienna Convention focused on three areas perceived to be of paramount importance for the control of transnational drug trafficking, including harmonization of criminal law related to drug trafficking and harmonization of money laundering legislation. The streamlining of international judicial cooperation was also sought. Of marginal importance were attempts to make investigative techniques uniform from country to country. The 2000 Vienna Convention was followed by the United Nations Convention against Transnational Organized Crime, with an additional protocol dealing with trafficking in human beings.

The United Nations Convention against Transnational Organized Crime, adopted in 2000, defined transnational and organized crime beyond drug trafficking and attempted to establish a framework within which all types of transnational crimes could be dealt with effectively. According to Article 2 of Annex 1 of the convention:

“Organized criminal group” shall mean a structured group of three or more persons, existing for a period of time and acting in concert with the aim of committing one or more serious crimes or offences established in accordance with this Convention, in order to obtain, directly or indirectly, a financial or other material benefit.

The definition remains vague about the various phenomena that constitute transnational crime. The convention also covers offenses regarded as core transnational crimes, such as money laundering, corruption, trafficking in humans, and all “serious offenses” committed by organized crime groups. A *serious offense* is defined as a criminal offense carrying a threat of punishment of at least four years imprisonment. Membership in a criminal enterprise or organized criminal group as defined in the convention was made an important tenet, and signatories to the convention were urged to introduce legislation making such membership a criminal offense. The convention also suggested introducing various types of communication control and covert operations, as well as witness-protection programs and corporate liability.

With this convention, a trend was reinforced in Europe in which cross-border cooperation is dominated by police, provoking criticism of “policization” of the criminal procedure and the marginalization of the judiciary in international law enforcement. In fact, the system of liaison officers, which has been strengthened considerably since the 1980s, has created a dynamic in police cooperation that has no parallel in judicial cooperation. A process is underway that aims at harmonizing special investigative techniques and sanctioning strategies, while expanding their application beyond drug trafficking to other serious types of crimes. The focus is on efficiency in crime control and law enforcement; policing and law enforcement have become international, while the judiciary and judicial procedures remain national.

# Afghanistan

---

**Official country name:** Republic of Afghanistan

**Capital:** Kabul

**Geographic description:** Completely landlocked country covering an estimated area of 260,000 sq. mi.

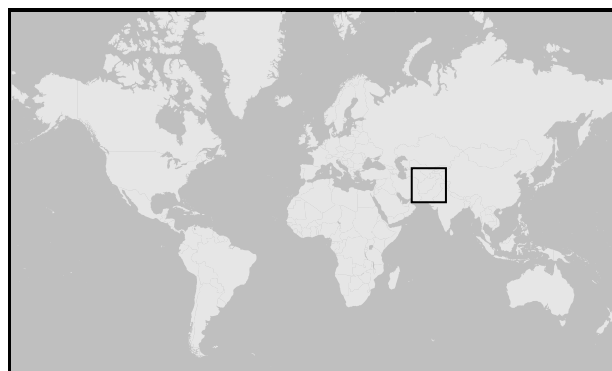

**Population:** 27,750,000 (est. 2005)

## LAW ENFORCEMENT

**History.** For centuries until the accession of Abdur Rahman Shah in 1880, public order on a countrywide basis was nonexistent. Each tribe defined proper behavior for its members, trying and punishing offenders for violations of tribal codes. Intertribal relations, more often than not, are governed by armed force. Tribal chiefs and village leaders regarded themselves as independent rulers over their respective areas. Brigands and robbers preyed with impunity on travelers and passing caravans.

Abdur Rahman (ca. 1844–1901) was a strong and forceful ruler who established the first institutions of a civil society. He set up a police force in the modern sense, including a network of informers and agents. In Kabul, the force was so large that one out of every four able-bodied adults was engaged in police work. He organized Muslim courts and tribunals to deal with crimes against the state, property and person, and personally presided over the trials in all serious cases. His punishments were harsh and capricious. Common punishments included amputation of hands or foot and blinding. There was an official “blinder” attached to the royal court. The death penalty was common and included such forms of execution as death by starving and stoning and being blown from a cannon.

Abdur Rahman’s efforts to modernize the state were continued under his successor, Habibullah Khan. A modernization program, initiated by Nadir Shah (r. 1929–1933) and developed by his son King Mohammad Zahir Shah, included provisions for rebuilding the police. The police force took over internal security responsibilities from the army. Later, control of the police was transferred from the Army to the Ministry of the Interior. The *Gendarmerie* was established in 1942 and it took over law and order responsibilities in rural areas. The police were limited to the major cities, such as Kabul, Herat, Kandahar and Mazar-i-Sharif.

In 1957 the Afghan government signed an agreement with the United States designed to improve the operational effectiveness of the civil police through technical assistance and training. Under this agreement English-language training was instituted at the National Police Academy in Kabul. For the first time, the Afghan police received fire-fighting apparatus, scientific crime-detection

devices, laboratory materials, photographic supplies, bicycles, and jeeps. This program laid the groundwork of a modern civil police department. After the program was terminated in 1959, it was replaced by a similar program under the auspices of the Federal Republic of Germany.

Much of the structure of the police and legal system was destroyed in the civil war that followed the overthrow of King Zahir Shah and the establishment of a democratic republic. The state of political instability lasted for nearly 22 years until collapse of the Taliban in 2001 and the establishment of an Afghan International Administration (AIA) under the auspices of an international coalition led by the United States. The AIA abolished the Taliban's religious police, the principal law enforcement agency that functioned under the Ministry for the Promotion of Virtue and Suppression of Vice. The Religious Police committed numerous serious violations of human rights in areas under Taliban control. The interim government of Afghanistan under Hamid Karzai has reestablished a functioning, but still rudimentary, police system in the country. Security in Kabul is maintained by an International Security Assistance Force. Outside Kabul, the warlords maintain their own private armies, which dispense a primitive form of law and order.

**Structure and Organization.** Police functions are performed by the National Police and the Afghan Gendarmerie, both agencies controlled by the Ministry of Interior's Police and *Gendarmerie* department. In general, the police work in large urban areas and the *Gendarmerie* in rural areas. The Traffic Police function independently under the Provincial Administration Department of the Ministry of the Interior. This structure has remained intact under the post-Taliban interim administration with a few modifications.

The National Police fall into two categories: municipal and provincial. The Municipal Police maintain public order in towns and cities and also operate prisons and jails, arrest criminals, investigate criminal cases, serve summonses, guard government buildings, and escort government vehicles. The Provincial Police also serve the provincial governments and maintain law and order in towns without a formal municipal government. All civil forces wear the same uniform, patterned after that of the army, but with certain distinguishing police patches. Normally the police are posted in pairs and carry side arms. On night patrol or emergency missions provincial police usually carry a rifle as an additional weapon.

Each of the larger cities, except Kabul, has a civil police under a chief of police, an official on the staff of the mayor. They function as a city police force and are paid from the municipal funds. The Kabul Police enjoys

a special status because of its metropolitan character and is under the general supervision of the State Department of Police.

The Afghan *Gendarmerie* is the rural and frontier police force and operates in those areas not covered by the National Police. Its tasks include garrisoning of the less-important garrison posts, patrolling sensitive stretches of the border, manning important road checkpoints, and settling or suppressing disturbances in rural areas. The gendarmes are usually mounted, but some safety patrols along the main roads employ small trucks or jeeps. In addition to these patrols, manned posts are established at various intervals in the difficult mountain pass regions. Other duties assigned to the *Gendarmerie* include escorting government convoys, guarding vital installations, providing emergency aid, checking on military exemptions and deferments, collecting conscripts for the Army, and apprehending deserters and conscript evaders.

**Education and Training.** In the prewar police force most of the recruits came from the dominant Pushtun tribe. The National Police Academy established under U.S. and later German auspices ceased to function during the civil war, and was reconstituted under American auspices after the fall of the Taliban. Police training is provided at the Kabul Police Academy that opened in 2002. For the first time, police recruits at the Academy include women. There are two courses at the Academy: the Stanman course for subordinate officers and the Saran course for higher level officers.

#### **Police Statistics.**

- Total Number of Police Officers: 51,500
- Population per Police Officer: 540

#### **HUMAN RIGHTS**

After the fall of the Taliban, the human rights situation remained extremely fluid. In areas where the Coalition forces are present, standard human rights practices are enforced, but large parts of the country are subject to the warlords who maintain their fiefdoms in defiance of the Kabul government.

#### **CORRECTIONAL SYSTEM**

Almost all cities and towns have jails, and the larger administrative and population centers have prisons. In the villages where *Gendarmerie* posts are located, a lockup room is maintained for the detention of prisoners pending their final trial. Provincial and central government officials make periodic inspections of jails and sentences.

In the post-Taliban era, the government has emphasized the rehabilitation of prisoners through expanded

*An Afghan police officer oversees the burning of seized drugs in Kabul, Afghanistan, June 26, 2005. A United Nations program, launched in 2005, targeted the illegal drug trade in Afghanistan, the world's largest producer of opium and heroin. Through teams of investigators, lawyers, and judges, the program started prosecuting major narcotics cases as part of international efforts to rebuild the country. AP IMAGES.*

training programs and reform schools for juvenile delinquents. In certain provinces, private associations conduct rehabilitation classes for women prisoners. Prison labor is used to produce wares, especially clothing for the military. Inmates are taught trades and handicrafts and they are permitted to retain part of the money earned from the sale of their products. Stone masonry, pottery making, and rug and carpet weaving are among the most common trades and crafts taught.

Just as in the judicial system, corruption is rampant in the corrections system. Bribes to police and corrections officers procure the release of prisoners without the knowledge of higher officials. Record keeping is primitive and no statistics are collected.

**Prison Conditions.** Prison conditions are poor and prisoners lived in overcrowded, unsanitary conditions

in collective cells. The prisoners received no food from prison authorities; prisoners' relatives were allowed to visit them once or twice a week and bring them food. Prisoners with no relatives had to petition the local council or to rely on other inmates. Prisoners are subject to torture and beatings with rubber- and plastic-bound cables. Sometimes they are forced to do hard and dangerous work, such as digging trenches in mined areas.

**Prison Statistics.** In 2005 there were 6,000 prisoners in 34 jails and hundreds more in an unknown number of provincial prisons that are under the jurisdiction of the warlords. The U.S.-led coalition forces maintain a number of detention centers.

*George Thomas Kurian*

# Albania

---

**Official country name:** Republic of Albania

**Capital:** Tirana

**Geographic description:** Southwestern Balkans bordering the Adriatic Sea and the Ionian Sea

**Population:** 3,166,000 (est. 2005)

## LAW ENFORCEMENT

**History.** In a government that is about twelve years old and operating under a constitution that is five years old, the law enforcement is constantly evolving. Due to these quick changes and the fact that Albania is the most isolated country in eastern Europe and only began to open up a little in the 1990s, getting a grasp on the current law enforcement system is not an easy task.

Under Communist rule, one police force, the People's Police, had extremely broad jurisdiction that shouldered the bulk of the burden of law enforcement duties. Today, the law enforcement system is believed to be more specialized. From the outside perspective, since 1997, the Albanian society has been showing steady improvement likely attributed to Albanian law enforcement. But, with the emergence of the Albanian Mafia into the world as a very legitimate and quickly expanding organized crime outfit, Albanian law enforcement's job is not getting any easier.

In 1997 the Albanian National Police was formed and next year the new Ministry of Public Order for Police and Human Rights was in place along with a new law on state police in 1999.

## Structure and Organization.

**Local Police.** The General Police of the People's Police performed the duties of regulating traffic and performing local criminal investigations. Their powers often overlapped with the Security Police, but as a rule, the General Police had local jurisdiction.

**Special Police.** The People's Police had five branches to their police force:

1. Police for Economic Objectives act as guard police for state buildings, factories, construction projects, and similar government enterprises.
2. Communications Police protect Albania's lines of communication, which included bridges, railroads, telephone, and telegraph network.
3. Fire Police act as the fire department.
4. Detention Police serve as prison and labor camp guards.

5. General Police serve as the local police force, performing traffic regulation and criminal investigations.

After 1989, information on the operation, staffing, and training of the People's Police is generally not known outside the borders of Albania.

**Auxiliary Police.** The Auxiliary Police assisted the People's Police under Communist rule. In 1948 a law was passed requiring all able-bodied men to put in two months service with the police and this is the avenue often chosen to fulfill this obligation. They worked with the People's Police in their particular localities. They were to be the link between the community and the police forces.

**Border Police.** Frontier Guards of Albania was one of the most prestigious forces in the old government because of its closed borders. They work much like the border patrol or immigration departments in the United States, but are organized along military lines. This 7,000 troop agency would neither let people in nor would they allow for people to leave the borders. Although the society is slowly beginning to open up, their job is not becoming any easier. Albania has historically had terrible relations with its formerly Yugoslavian neighbors, namely Serbia and Montenegro and the Kosovo region. They also have a great deal of responsibility in controlling the smuggling and other ventures of the Albanian Mafia. Due to this important task, the frontier guards had probably the best training and strictest prescreening process for admission. The Frontier Guards were moved to the Ministry of People's Defense under the new government.

**National Information Service.** The National Information Service replaced the hated Directorate of State Security (Sigurimi) in 1991. The National Information Service objective is to enforce the constitution and laws of Albania and the civil rights of its citizens. Its predecessor, Sigurimi, was a corrupt agency that ended up only serving the purpose of enforcing Communist ideals. It is because of this that political activities are banned in the organization.

**Judicial Police.** Judicial Police are the police officers of the state police force directed and controlled by the prosecutors. The prosecutor directs the judicial police based on orders handed down from judges concerning the procedural duties (Republic of Albania Assembly Law 2000).

**Organized Crime Police.** Albania's organized crime investigation team was created in 1998 to help address the nation's biggest threat. They work with law enforcement agencies throughout Europe, but especially with the Italians due to the intense relationship between the Italian and Albanian Mafias (Galeotti 1998).

**Riot Police.** Riot Police are often a norm in a new unstable society. In 1997 the Riot Police had their hands full when failed pyramid schemes lost an enormous amount of money for the investors. The Riot Police were called into battle to control 35,000 protesters in the capital city of Tirana.

**Traffic Police.** The People's Police's General Police have the traffic jurisdiction within the municipalities.

**Uniforms.** Auxiliary Police, required to serve with the People's Police under the Communist government, wore the uniforms of the People's Police. They were distinguishable by a red band worn around their arm. Judicial Police may be exempt from wearing uniforms with the approval of their director, but as with most police officers in Albania, they must have a numbered badge kept with them if it is not on their uniform.

**Community Relations.** The former Communist government of Albania had recognized the need for better community relations with law enforcement. This task was put largely in the hands of the Auxiliary Police. They were charged with the duty of giving the population a familiarity with and a better understanding of police activities and problems.

Community relations took a turn for the worse at the end of the twentieth century. About half of the country's population admitted to paying bribes and two-thirds of public officials acknowledged bribery as commonplace in the system. In 1998 the World Bank named Albania as the most corrupt nation in Europe. Although the problem of corruption still is a huge problem, it is being addressed. Under pressure from lending agencies and donor countries, the Albanian government has established an Anti-Corruption Monitoring Board to get a handle on the problem. Since the board was established, corruption in Albania has steadily declined in most areas.

**Education and Training.** Albania's crime problem spans far outside the nation's borders. Albanian organized crime has affected the entire globe, and, thus, it is in the world's best interest to contribute to Albania's ability to counter it. European countries and the United States have aided in everything from weapons to manpower. The United States has taken the lead in aid with the training of Albanian law enforcement, namely the Albanian National Police (ANP).

The United States, through the International Criminal Investigative Training Assistance Program (ICITAP), is providing the ANP leadership with strategic planning management training to help them more closely resemble law enforcement agencies in democratic societies.

**Albanian police control crowds as aid workers hand out food in the main square of Kukes, Albania, April 9, 1999.** The crowds consisted of ethnic Albanians who fled from Kosovo during a war that pitted Serbians against Albanians. An estimated 320,000 ethnic Albanians who fled Kosovo are living in Albania. AP IMAGES.

The ICITAP are giving civil disorder management training to the Rapid Reaction Unit that is responsible for the Albanian-Kosovo border. Their efforts continued through assigning advisers to key police executives and created the Inspectors General's Office to counter corruption. The ICITAP has assisted the ANP with training and technical assistance in election security as well as in their battle against all organized crime, including preventing human trafficking and investigating alien (U.S. Department of Justice 2003).

#### Police Statistics.

- Police Staff for Every 100,000 People: 300–399 (1995)

(Source: *European Source Book*)

**Police Officers Killed in the Line of Duty.** In a country where the two biggest problems are corruption of government officials and crime, it might be expected that a

police officer may have a risky profession. In 1999, 142 police officers were among the 657 people murdered in the country of Albania.

#### HUMAN RIGHTS

Historically, an issue continually brought to the attention of the world has been Albanians' disregard for human rights. Environmental dangers, serious mistreatment of prisoners, and labor camp workers have all been alleged. However, the country appears improving on these fronts.

A good measure of the improvement of the nation can be attributed to the freedom of the press. The amount of freedom the press has is often a mirror of how free a country is.

The expansive domestic issue paralyzing the nation is that of the Albanian Mafia and other organized crime. Albania has become an increasingly active transshipment point for the trafficking of illicit drugs from Asia to

Western Europe. Along with this activity also comes associated crimes like money laundering and other illegal activities.

### CRIME

Crime in Albania continues to trouble the developing nation. They do not have a severe problem with conventional crimes. However, Albanian organized crime has caused the entire globe stress and heartache.

**Organized Crime.** Although in the big picture they have not been around for very long, the Albanian Mafia exploded onto the organized crime scene. The Albanian Mafia controls 70 percent of the heroin market in Switzerland, Germany, Austria, and the Scandinavian countries, and 40 percent of the heroin market throughout Europe. This organization also participated in smuggling cocaine, oil, contraband cigarettes, refugees, body parts, and guns (Roslin 2000).

It has recently come to light that the Albanian Mafia has been a large player in human smuggling for the slave and sex trade world. Albanians' criminal networks included the smuggling of migrants as well. Although the country appears to have opened up to some degree, there is still a big market for assistance in leaving the nation. In the first eight months of 2001, 54% of migrant smugglers arrested in Greece were Albanians (Antonopoulos 2003). In fact, a report by the International Crisis Group estimates that half of the gross national product is accounted for through criminal activity (Wood 2003).

**Crime Statistics.** Crime was listed as the second-largest problem in the country behind corruption, and the trend only seems to be getting worst. Albania is in the upper third of the world in sexual assaults. The U.S. Department of State warns of instances of armed robberies, assaults, and bombings outside of Tirana, as well as putting special emphasis on carjackings. Pick-pocketing and other misdemeanors are not uncommon in the nation (U.S. Department of State 2002).

### CORRECTIONAL SYSTEM

As a whole, Albanian corrections is no stranger to scrutiny. They are often under fire for human rights violations. However, the reforms after 1997 are steadily improving the corrections system. During the Communist reign over the country, the corrections facilities were overrun

with political prisoners who did not fall in line with the Communist regime. At the time, 32,000 prisoners were jammed in 29 prisons or labor camps. It was evident that reforms to the system were desperately needed.

**Prison Conditions.** Although Albania is still far from meeting standards in the realm of corrections, it seems to be making strides in a positive direction. Reforms in the area of human rights and the death penalty have the system on the rise in the eyes of Europe and the rest of the Western world.

**Prison Statistics.** Some 3,075 prisoners are housed in seven institutions. 44.9% are pretrial detainees or remand prisoners. 4.4% of the total population are female and 1.2% are juveniles (under 18 years of age). 90 per every 100,000 are institutionalized in Albania. Based upon the capacity of the institutions (2,241), the facilities are 136.2% full (International Centre for Prison Studies 2004).

# Algeria

---

**Official country name:** People's Democratic Republic of Algeria

**Capital:** Algiers

**Geographic description:** Located on the North African littoral, between Morocco and Tunisia, with a total area of 919,595 square miles, of which more than four-fifths is desert

**Population:** 32,531,853 (est. 2005)

## LAW ENFORCEMENT

**History.** Modern Algerian police dates only from French occupation and is modeled on the police force of metropolitan France. For many years much of the equipment of all police units was supplied by the French who also provided instructors and technical advisers.

**Structure and Organization.** Primary responsibility for the maintenance of law and order is exercised jointly by two separate organizations: the *Gendarmerie Nationale* and the *Sûreté Nationale*.

The *Gendarmerie* is a component of ANP, the National Liberation Army, and is the main rural police force. Operationally, it has been described as a combination of rural security force and national guard always on active duty. Because of its size, training, equipment inventory, and tactical deployment capability, it is regarded as a competent and versatile paramilitary force. The chief responsibilities of the *gendarmerie* are to maintain law and order in rural areas, to conduct security surveillance of local inhabitants, and to symbolize the authority of the

government in remote regions where tensions and conflicts have occurred periodically. The *Gendarmerie* is organized into battalions, with companies and battalions stationed separately in villages along the coast, in such remote mountainous regions as the Kabylie and the Aures and in the plateau villages between the coast and the desert. A highly mobile force, the *Gendarmerie* uses both motor and animal transport and a modern communications system interconnects its various units with each other, with the army, and with the Ministry of the Interior. *Gendarmerie* equipment includes light infantry weapons and armored cars mounted with machine guns or light cannons.

For administrative purposes, the *Gendarmerie* units are allocated to the five military divisions, with headquarters at al-Boulaida, Oahran, Bechar, Ouargla, and Quacentina.

The *Sûreté Nationale* is the primary policing authority in the principal cities and other urban centers. It is charged

with the maintenance of law and order, the protection of life and property, the investigation of crimes and the apprehension of offenders. In addition, it performed other routine police functions, including traffic control. Under the administrative control of the Ministry of Interior, the *Sûreté* is commanded by a director general. It is organized generally along the lines of the French *Sûreté* with operational and investigative branches and supporting services. The Judiciary Police branch is responsible for criminal investigations, working in close cooperation with the office of the public prosecutor in the Ministry of Justice. Police elements assigned to the capitals of the *wilayaat* are under the nominal control of the provincial governors. Elements of the *Sûreté* also play a role in countering threats to the government from political subversives. In earlier periods, this function was carried out by the National Company of Security, but this designation was dropped during the 1970s. The primary responsibility for counterterrorism lies with the military security service of the Ministry of Defense.

The *Sûreté* also controls illegal immigration and contraband trafficking working through customs inspectors at all legal points of entry. Police assigned to the seaports operate under the control of the National Port Office, which is responsible for security in the maritime zones.

Only the police and uniformed members of the military may possess pistols, revolvers, and automatic weapons. Police also maintain control of concealed weapons, such as daggers and knives. The Penal Code prohibits the sale and possession of all firearms by private individuals.

**Education and Training.** Both the *Gendarmerie* and the *Sûreté Nationale* have their own training schools. The *gendarmerie*'s main training center is at Sidi Bel Abbas, the former headquarters of the French Foreign Legion. Officers are trained at Sidi Mohammed and El Harrach.

#### Police Statistics.

- Total Police Personnel: 75,000
- Population per Police Officer: 840

#### HUMAN RIGHTS

The constitution bans torture and other cruel, inhuman or degrading treatment by the police, but the police at times resort to torture when interrogating persons suspected of being involved with or having sympathies for armed insurgency groups. Security forces also have been

charged with committing extrajudicial killings and with the arrest and detention of suspected members of armed groups. The police have been reported to use excessive force to put down demonstrations and riots. Police and communal guards sometimes detain persons at checkpoints.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 178. Of which:

- Murder: 0.7
- Assault: 67.6
- Burglary: 13.7
- Automobile Theft: 1.7

#### CORRECTIONAL SYSTEM

The country's corrections system includes large prisons in Algiers, Medea, Berrouaghia, Oran, Tlemcen, and Constantine. There is at least one cell in each *wilaya*. Supervision and operation of the penal system are coordinated by the Ministry of Justice.

Persons convicted of civil crimes are sent to provincial civil prisons, while those found guilty of more serious crimes against the state or crimes that carry the death penalty are sent to one of the three penitentiaries.

**Prison Conditions.** Conditions in the penitentiaries are much worse than in civil prisons. Prisoners are often crowded together and sanitary and medical arrangements are poor. Each prison has a contract with a local doctor who visits the prison to treat ill prisoners while seriously ill prisoners are sent to the local hospital. Prisoners are generally fed a bland and starchy diet augmented by provisions and meals from their families. Families are allowed to visit civil prisons once a week.

#### Prison Statistics.

- Total Prison Population: 38,868
- Prison Population Rate: 121 per 100,000
- Pretrial Detainees: 36.1%
- Female Prisoners: 1.8%
- Juveniles: 2.1%
- Number of Prisons: 127
- Official Capacity of the Prison System: 34,173

*George Thomas Kurian*

# Andorra

---

**Official country name:** Principality of Andorra

**Capital:** Andorra la Vella

**Geographic description:** Landlocked principality in the Pyrenees between France and Spain

**Population:** 70,549 (est. 2005)

## LAW ENFORCEMENT

**History.** The Andorran Police was established in 1931. The police force is assisted in alternate years by the French *Gendarmerie* or the Barcelona Police.

**Structure and Organization.** The police force is headed by the French and Spanish *Viguiers* (representative) and divided into a motorcycle Traffic Branch, a Criminal Investigation Team and a Mountain Rescue Team.

**Uniforms and Weapons.** The uniform for all ranks is a beige tunic and trousers with a matching cap in summer and a green uniform in winter. A Smith and Wesson .357 Magnum 4-inch revolver is carried by uniformed personnel and a Smith and Wesson .38 Special 2-inch revolver by plainclothes and off-duty personnel.

**Education and Training.** Most police officers receive their training in Spain or France.

### Police Statistics.

- Total Police Personnel: 302
- Population per Police Officer: 220

## HUMAN RIGHTS

The government generally respects the human rights of its citizens and the law and judiciary provide effective means of dealing with individual instances of abuse.

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 2,616. Of which:

- Murder: 0
- Assault: 16.7
- Burglary: 515.2
- Automobile Theft: 110.6

## CORRECTIONAL SYSTEM

The prison system is administered by the Ministry of Interior Justice based at the *Centre Penitenciar*. The administrative head of the system is the director general. There are

two prisons with a total capacity of 85 and an actual prison population of 55. Of the inmates, 74.5% are pretrial detainees, 7.3% female prisoners, and 83.6% foreigners.

**Prison Conditions.** Prison conditions generally meet international standards and are considered humane. Men and women are held separately, as are adults from minors.

**Prison Statistics.**

- Prison Population: 55
- Prison Population Rate: 90 per 100,000

- Pretrial Detainees: 77%
- Female Prisoners: 7.3%
- Foreign Prisoners: 83.6%
- Number of Prisons: 2
- Official Capacity of the Prison System: 85
- Occupancy Level: 71.8%

**Population:** 11,190,786 (est. 2005)

## LAW ENFORCEMENT

**History.** The national Angolan police force, the Angolan National Police, evolved from the Portuguese colonial police. In 1978 the MPLA created the People's Police Corps as an arm of the Marxist Party. Most of its core members were also members of the MPLA and were drawn from the armed forces. The force was headquartered in Luanda under the Ministry of Defense, but there were provincial and local commands. It was supported by a paramilitary force of 10,000 that resembled a national guard. A police school known as the Kapolo Martyrs Practical Police School, staffed by Cubans, was also founded.

**Structure and Organization.** The Angolan National Police (ANP) is headed by a commander who reports to the Ministry of Defense in Luanda. Grades in the force are comparable to those in the military. Lower-ranking personnel are referred to as sergeants and agents. ANP is organized by function and has sections or divisions devoted to criminal activities, traffic, railroads, ports and harbors, and mining. There are police commands in the provincial capitals and police squadrons below the provincial level. MPLA party cells are established even in the smallest police groups and a

political commissariat exists at the main police headquarters.

In addition to ANP, there are other police organizations of which little is known. One is the Directorate of Information and Security, which is directly involved in national security operations. The other is the State Secretariat for Internal Order, which is a supervisory and advisory board concerned with the prevention of a broad range of crimes.

In 1983 President José Eduardo dos Santos created the People's Vigilance Brigades (BPV) as a mass public order and law enforcement force. Some BPV units are armed but most performed public security and welfare duties including crime prevention, detection, surveillance, and intelligence gathering. The brigades are organized at the provincial level and operated in small units of up to 100 members.

**Recruitment, Education, and Training.** Since 1978 recruitment to the police force has been on a voluntary

basis. ANP runs the principal training academy, the Kapolo Martyrs Practical Police School, in Luanda. Only 28% of policemen receive any training at all and only 2% advanced training.

#### **Police Statistics.**

- Total Strength of the Police Force: 764,285 (including civilian militia)
- Population per Police Officer: 14

#### **HUMAN RIGHTS**

During the civil war that lasted from independence until 2002, the country had a dismal human rights record. Members of the security forces routinely committed extrajudicial killings and were responsible for disappearances, torture, rape, and beatings.

#### **CORRECTIONAL SYSTEM**

At the end of the civil war, MPLA took over the colonial prison system, which had been heavily damaged during the conflict. The new government set about rebuilding the system and trained personnel at the National School for Penal Technology, which opened in 1976.

The operation of the penal system is the responsibility of the Ministries of State Security and Interior. The system consists of maximum- and minimum-security prisons along with the so-called production camps where prisoners are sent to be rehabilitated through regular work and reeducation programs. The principal prisons are in Luanda, where a maximum-security prison opened in 1981, and in several provincial capitals. The main detention centers for political prisoners are the Estrada de Catete Prison in the capital and the Bentiaba Detention Camp in Namibe province. The detention

center at Tari in Cuanza Sul province is identified as one of the main rural detention centers. Tari was a former sisal plantation turned into a labor farm where prisoners live in barracks or in their own huts while doing forced labor. Warehouses in Bengo, Malange, and Luanda Norte are used as prison facilities. Other prisons are located at Viana, Chitato, Dundo, and Huambo.

**Prison Conditions.** Prison conditions are harsh. Cells are overcrowded and lack basic sanitary facilities. Prisons do not get much financial support from the government, and therefore prisoners are not provided adequate food or health care. Rural prisons do not have toilets, beds, mattresses, water, or medicine. Juveniles are incarcerated along with adults and suffer abuse by guards and inmates. Female prisoners are held separately yet are often victims of sexual abuse. Prison guards, who are chronically unpaid, support themselves by stealing from prisoners and extorting money from family members.

#### **Prison Statistics.**

- Prison Population: 6,008
- Prison Population Rate: 44 per 100,000
- Pretrial Detainees: 58.9%
- Female Prisoners: 3.3%
- Juveniles: 5%
- Number of Establishments: 22
- Official Capacity of the Prison System: 6,000
- Occupancy Level: 82.9%

# Anguilla

---

**Official country name:** Anguilla

**Capital:** The Valley

**Geographic description:** Island in the Caribbean Sea

**Population:** 13,254 (est. 2005)

## LAW ENFORCEMENT

**History.** The Anguillan Police was established in 1972 following the departure of a detachment of the London Metropolitan Force that had been stationed on the island since 1969. In the absence of an army, the police also serve as a paramilitary service.

**Structure and Organization.** The police force is headed by a chief of police who reports to the Minister of Home Affairs. The island is divided into five police districts. There is a small traffic police and a Criminal Investigation Department attached to the headquarters.

The line of command runs from the Chief of Police to inspector, sergeant, corporal, and constable.

**Uniforms and Weapons.** Officers and inspectors wear khaki trousers with either a khaki bush shirt as a working dress or a khaki tunic over a white shirt as a service dress. Both are worn with a blue cap and a black Sam Browne belt. A ceremonial dress consisting of white tunic and blue trousers or overalls worn with a sword and either a blue cap for officers and a white helmet for inspectors is worn on appropriate occasions. Other ranks wear blue trousers with a gray shirt and a blue cap.

**Education and Training.** There are no formal police training facilities on the island.

## HUMAN RIGHTS

As an overseas dependency, Anguilla guarantees its inhabitants all the rights enjoyed by subjects of the queen in the United Kingdom. There are no reported instances of abuse of power by the police.

## CORRECTIONAL SYSTEM

There is one prison on the island run by the Department of Prisons. It has a capacity of 48 and currently holds 54 inmates.

**Prison Conditions.** The sole prison is a minimum-security facility. Prison conditions meet international standards. There are no separate women's or juvenile facilities.

# Antigua and Barbuda

---

**Official country name:** Antigua and Barbuda

**Capital:** Saint John's

**Geographic description:** Caribbean islands between the Caribbean Sea and the North Atlantic Ocean

**Population:** 68,722 (est. 2005)

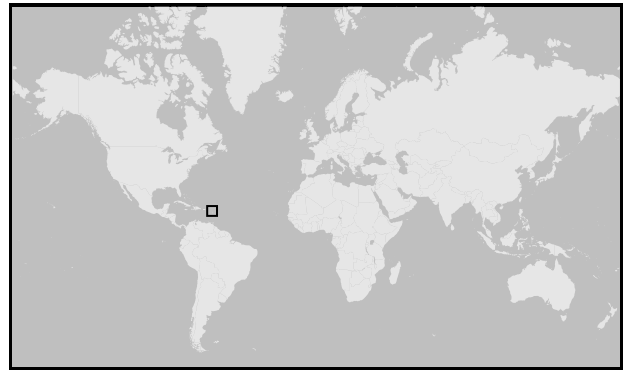

## LAW ENFORCEMENT

**History.** The Antigua and Barbuda Police Force dates from 1886 when Antigua was the headquarters of the Leeward Islands. In 1965 the force was granted the prefix Royal. On independence in 1981 the Leeward Islands Police Force was disbanded and the Antigua and Barbuda Police became a separate organization.

**Structure and Organization.** Part of the Judicial and Legal Services Commission, the Royal Antigua and Barbuda Police is headed by a commissioner with divisional headquarters at Saint John's and subdivisional headquarters at All Saints, Barbuda, Bolans, Parham, and Saint John's. There are specialized branches or departments dealing with crime, traffic, prosecutions, state security, riots, crowd control, immigration and telecommunications. The police are also responsible for the fire service.

The principal grades in the police service are: commissioner, deputy commissioner, assistant superintendent, inspector, service sergeant, sergeant, corporal, and constable.

**Uniforms and Weapons.** The working dress for the junior ranks is a gray short-sleeved shirt, navy-blue serge trousers with a white stripe on the seams, and a peaked cap. Women

wear skirts of the same color. Senior ranks from inspector up wear a khaki bush tunic with matching shorts (trousers for commissioner and deputies) and a blue peaked cap. For ceremonial occasions all ranks wear a white tunic and blue trousers with a white stripe (buff stripe for officers). Lower ranks wear white spiked helmets while the senior ranks wear caps. Members of the force are not generally armed.

**Education and Training.** There are no formal police training facilities on the islands. Officers are generally sent abroad for training.

## Police Statistics.

- Total Police Personnel: 636
- Population per Police Officer: 120

## HUMAN RIGHTS

The government generally respects the human rights of its citizens. The police are organized, trained, and supervised

## *Antigua and Barbuda*

according to British law enforcement practices, which exclude excessive use of force. The constitution provides for an independent judiciary that serves as a buffer against misuse of power by the government.

### **CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 4,977. Of which:

- Murder: 4.7
- Assault: 475
- Burglary: 1,984.4
- Automobile Theft: 35.9

### **CORRECTIONAL SYSTEM**

The prison system is administered by the Ministry of Justice and Legal Affairs through the Superintendent of Prisons. There are two prisons on the islands with an official capacity of 100 and a prison population of 184. The major prison was built in the eighteenth century and was considerably damaged after a disastrous fire in 1999.

There is a separate prison for women, but none for juveniles, who are housed with adults.

**Prison Conditions.** Prison conditions are poor and unsanitary. Serious charges of sexual misconduct and abuse of female prisoners led to the appointment of a task force in 2002.

### **Prison Statistics.**

- Prison Population: 184
- Prison Population Rate: 269
- Pretrial Detainees: 28.3%
- Female Prisoners: 7.6%
- Juveniles 6%
- Number of Prisons: 2
- Official Capacity of the Prison System: 100
- Occupancy Level: 184%

*George Thomas Kurian*

# Argentina

---

**Official country name:** Argentine Republic

**Capital:** Buenos Aires

**Geographic description:** Southeastern part of South America, covering much of the tapering end of the continent.

**Population:** 39,537,943 (est. 2005)

## LAW ENFORCEMENT

**History.** The initial development of police forces in Latin America followed a Spanish model noted for its repressiveness and orientation toward order maintenance and defense of the Crown. Often, the role of police was viewed as complementary to that of the army. The number of law enforcement personnel in the colonies was small. The task of order maintenance was assigned to marshals (*alguaciles*), rural police, and night watchmen (*serenos*). The first police departments were established in Chile (1760), New Granada (1791), Brazil (1808), Argentina (1813), and Uruguay (1829).

Argentina, the second largest country in South America, underwent a colonization process beginning in 1615 with the landing of Juan Díaz de Solís. For the next two hundred years European powers fought for control over the rich resources that Argentina had to offer. Spain eventually became the country's colonial master, ruling its people as part of the Viceroyalty of Peru until 1776 when the Viceroyalty of Río de la Plata was instituted. A quarter of a century later Europeans were occupying most parts of the country and establishing their own institutions including Roman Catholicism and European forms

of government. Second-generation Argentines, brimming with nationalism and a hunger for freedom from Spain's colonial grip, along with native South Americans, eventually drove Spanish forces back to the Iberian Peninsula. In 1853 Argentina established its first constitutional presidency.

Since independence, Argentina has experienced a number of high and low periods. The country's economic boom period occurred during the early part of the twentieth century when Buenos Aires was nicknamed the "Paris of South America." Argentina has also had its share of dictatorships and authoritarian regimes including the dictatorship of Juan Perón, a legacy the country feels to this day. Today, 97% of Argentina's population is composed of European descendants. The official language is Spanish and the capital, situated in Río de la Plata, is Buenos Aires.

Similar to the United States, Argentina has a decentralized police system. The various police agencies in

Argentina include a federal police force and a police force in all of the country's 23 provinces. The primary function of police in Argentina is to ensure national security and protect the lives and property of citizens. In addition, police keep the judiciary branch informed of offenders who need to stand trial. Police officers (*oficiales*) also have important roles within the Argentine penal system. During sentencing, officers may serve as secretaries of instruction (*secretarios de instruccion de la Investigacion Penal Preparatoria*).

After the city of Buenos Aires became federalized in 1880, its police force became more professionalized and a previously ill-defined mission became more focused. Though a stable foundation based on an organic code had not been established, the police mission was defined as the protection of law and order and the security of the state in the *Reglamento General* issued in 1885.

More stable foundations for the Argentine police were established in 1906 after Colonel Ramón Falcón was appointed as the Chief of Police for Buenos Aires. Falcón established the police along hierarchical lines in a restructuring process that would be performed again at the end of the 1900s. The main component of the police under Falcón was the Security Division (uniformed police). An Investigative Division was also instituted that operated in plainclothes. In addition to these two main divisions, Administrative and Judicial Divisions were also created.

During the early part of the twentieth century the Buenos Aires Police was rapidly growing and becoming more attuned to the Argentine experience with crime and delinquency. The police personnel increased from 4,170 in 1907 to 5,372 in 1911. By 1914, mobile patrols and crime labs, as well as new training practices, were created. By 1999 the Buenos Aires provincial police had more than 48,000 officers and was the country's largest armed force. Despite these numbers, Argentina needs more police officers. In 1998 the Buenos Aires provincial police was restructured in a process perceived as traumatic and dangerous to the lawyers and academics who pioneered the change and to the new officers brought in to ensure the new police force was effective. Changes included breaking the police force into 18 different departments and the sacking of 300 commanders. Additionally, the detectives' brigade was dissolved and detectives were placed in a separate department under the command of Argentine prosecutors. Perhaps most importantly, civilian oversight was placed in the new policing structure. Amendments to the legal code inserted civilians in positions of investigation and oversight to combat corruption.

The Federal Police in Argentina (Policía Federal Argentina) has a rich history dating back to 1580 when Juan de Garay founded City of the Trinity and the Port

of Santa Maria of Buenos Aires (la Ciudad de la Trinidad and Puerto de Santa María de Buenos Aires). During this time, people were selected to exercise police and judicial functions. In the beginning there was not a police station, rather, designated authorities enforced the folkways and mores out of their own homes.

On December 31, 1821, the position of Chief of Police (Jefe de Policía) was created. The first Police Chief of the Argentine Federal Police was Don Joaquín de Achaval. February 22 of the following year, the Federal Police had its first headquarters, a palace that formerly served as the residence of Bishop Diocesano dating back to 1761.

To become a police officer in Argentina, potential recruits must undergo physical and mental examinations as well as psychological tests. Then, recruits may either be selected for the Officers Academy (designed for high-ranking officers) or an academy for street-level police officers who will later become traffic police, investigators and so on. Gaining entrance into an academy is difficult because of the entrance requirements as well as the lack of vacant positions. Street-level officers attend academy training for six months and high-level *oficiales* attend academy training for two years.

Once police officers have completed training they can go to a police station, which may be anywhere in the country if the new officer is a member of the federal police. An officer on duty wears a uniform that is mostly blue and similar to the uniforms worn by the New York Police Department. However, the attire also depends on the season of the year as well as the duties the office is performing (a detective, for example, may not wear a uniform).

Street cops normally carry a pistol on duty that is provided by the department, normally a 9mm. However, officers can use their own weapons provided that it is in compliance with department regulations. Special police forces use more advanced weapons. The mounted police that work in the capital carry swords. In addition to 9mm pistols, virtually every officer carries a baton that may come in different varieties.

To stay in contact with police dispatch and other officers on duty, police in Argentina rely on mobile communications. Communications equipment includes proprietary telephones, radios in all vehicles, and handles supplied to every police officer on foot. It is a modern system based on the system used by French police. Additionally, police vehicles use tracking devices in case they are stolen. Currently there is no retirement age for police officers. However, with 25 years of service, an officer can apply for retirement. When an officer has served more than 30 years, a forced retirement may be applicable.

The Argentine Federal Police as well as the provincial police forces began experimenting with the development of special police forces in 1978. Since the late

1970s, a number of special police forces have been formed in Argentina with varying missions including counterterrorism, riot control, and investigation of special offenses. A number of well-established special operations groups were consulted in the formation of special police forces in Argentina including the GSG-9 in Germany, the FBI SWAT in the United States, and the SAS in England. Following are some of the forces that have been created.

The Brigada Operativa Halcon Especial was formed in 1986 to combat terrorism. This special police force is under the command of the Buenos Aires Police and consists of 75 members organized into 5 teams. Each team has eight people capable of assault, two snipers, a demolitions expert, a negotiator, a communications specialist, an intelligence specialist, and a medic. The unit uses various foreign-made weaponry including the Glock 17 and the HK G3 GS/1.

This unit of the Santa Fe Provincial Police was formally recognized on May 4, 1990. The unit has been widely modeled by other police forces in South America and has received training and direction from some of the world's most experienced counterterrorism and crisis response groups from Israel, the United States, and the Basque province in Spain. Besides being ready at any time for crisis situations that require police officers with a high level of training, this special police unit performs intelligence operations to combat organized crime in Argentina.

#### **Structure and Organization.**

**Police Reform.** Reform of the Buenos Aires Police began on December 19, 1997, with a decree by then Governor Eduardo Duhalde. The reformation began with a 90-day intervention period to reorganize the police and dissolve the command and management structure. The reorganization was based on an assessment that the police structure was inadequate in many areas including crime investigation, lack of a coherent crime prevention system, and criminal prosecution as well as a lack of mechanisms for political oversight of the police.

Changes made to the organizational structure of the police included forced retirement for more than 300 police superintendents and high-level officers. Additionally, regional units were dissolved and in their place were created 18 police divisions for the different judicial districts in the province. To improve the criminal investigative function of the police, 18 investigative units were also created.

**Education and Training.** The Escuela Federal de Policía Coronel Ramón L. Falcón (Colonel Ramon Lorenzo Falcon Federal Police School) is Argentina's leading institution for the formation of personnel in the country's police leadership. The school was created on November 17, 1906.

Cadets at the school receive education in various subject areas such as introduction to law and legal concepts, intermediate and advanced law, human rights, constitutional law, civil law, criminal investigation, criminology, history, and intelligence. To aid the cadets' learning process, the school also has a large library and cadets are allowed access to the country's national library if needed. In order to be accepted to the school, potential cadets must be native Argentines, no more than 30 years old, pass an entrance exam, and have a clean criminal record.

On August 2, 1974, the University for the Argentine Federal Police (IUPFA: Instituto Universitario de la Policía Federal Argentina) was created. The institute was originally founded under the name Academia Superior de Estudios Policiales (Superior Academy of Police Studies). In the beginning, the academy was subdivided into a series of institutes and centers including the Superior Police Institute, the Center of Higher Police Education, the Institute for Science and Applied Technology and the Institute of Criminalistics.

On December 26, 1977, the Academy was nationally recognized by decree, granting the Academy national recognition and the right to offer graduates a degree in criminalistics, as well as expert certification in ballistics as well as other areas. In 1982 the Academy was granted the right to offer degrees in security and social action. With the passage of resolution 1432/92 by the Ministry of Education, the Academy was renamed the Instituto Universitario de la Policía Federal Argentina.

**Provincial Police Forces.** As already noted, Argentina has a decentralized police system. Although the Federal police receive the majority of attention, each province in Argentina has a police force with a unique history. Below is a description of some of the many provincial police departments in Argentina.

In 2003 the Chaco province police celebrated its fiftieth anniversary. The Chaco province police is divided into a number of regional units to provide a wide coverage of the jurisdiction. In all, there are seven regional units that provide coverage to a number of different areas. In addition to policing urban areas, there are rural and environmental police in Chaco that police areas outside of the city as well as investigating environmental crimes.

The police force in Chaco province has a number of different departments designed to handle problems specific to the region. The following are some of the major departments for the province:

- Department of Dangerous Drugs (Dirección de Drogas Peligrosas)
- Department of Police Planning (Dirección de Planeamiento Policial)

*A police motorcade patrols Mar del Plata, Argentina, before the opening of the Fourth Summit of Americas, November 1, 2005. The summit brought leaders from countries in North, South, and Central America to the popular resort town 230 miles south of Buenos Aires to discuss social and political issues. Around 10,000 security forces were deployed amid concerns of massive protests against U.S. President George W. Bush. AP IMAGES.*

- Department of Administration (Dirección de Administración)
- Audit Department (Dirección de Asesoría Letrada)
- Department of Public and International Relations (Dirección de Relaciones Públicas e Internacionales)
- Department of Communications and Information (Dirección de Comunicaciones e Informática)
- Department of Internal Affairs (Dirección de Asuntos Internos)

On June 15 of each year, the police of Chaco province celebrate a day that commemorates the police in the province. The “Día de la Policía del Chaco” is celebrated on this date to remember the creation of the police school Comisario Inspector Miguel Roberto Mora. The creation of this new school marked the beginning of a professional police force for the province.

The police in Santa Fe province have a large jurisdiction. For this reason, there are 19 regional units where

police stations are located and police officers are deployed. Additionally, the police for this province have a number of different departments including the following:

- Personnel Department (Departamento Personal)
- Information Department (Departamento Informaciones)
- Department of Police Operations (Departamento Operaciones Policiales)
- Logistics and Planning Department (Departamento Logística)
- Legal Department (Departamento Judicial)
- Department of Public Relations (Departamento Relaciones Policiales)

#### CRIME

There appears to be a general consensus that crime prevention strategies in Latin America that stress deterrence are ineffective and incompetence and corruption on the

part of the government, including the police, makes the problem of crime much worse in the region. Four characteristics of Latin American crime have been offered by scholars in order to explain why Latin American crime is different from other regions. First is the endemic patterns of poverty and inequality. A second characteristic is the cultural pattern of male chauvinism. Third is the presence of corrupt law enforcement, which ebbs and flows in intensity depending on the country being examined. The last characteristic is the drug trade, which has become an omnipresent problem in Latin America.

In the early 1990s, crime was not considered a serious issue to the populace. Surveys conducted between 1994 and 1997 ranked crime fifth to eighth on the list of people's concerns. In late 1997, attitudes changed, with crime becoming one of the three main problems cited by respondents.

In a 1998 survey conducted in the province of Buenos Aires, the most common fear among citizens living in the capital was being the victim of a physical attack (52.5%) whereas provincial citizens outside the capital cited robbery and theft as their greatest fear (45.2%).

In the late 1990s, Argentina experienced a significant increase in crime. Although the rates of homicide in Argentina pale in comparison to other countries such as the United States and Brazil, Argentina does have slightly higher rates than other neighboring countries such as Paraguay, Uruguay, and Chile. In 1997 Argentina had a total crime rate of 229 crimes per 10,000 people. This is more than a 12% increase over 1996. Homicide rates have also increased in Argentina over previous years. Argentina had an average of 10 homicides per 100,000 people in 1997, a 9.86% increase over the previous year even though one province was not included in the statistics that had been counted in 1996.

Police statistics in Argentina for the 1980s and 1990s show an increase in the number of crimes and a crime rate that is consistent with trends in industrial and developing countries. From 1980 to 1995 both the crime rate as well as the number of crimes reported increased. Despite a possible increase in citizen willingness to report crimes, a "dark figure" in the Argentine crime rate is apparent. In 1996 a victimization survey was carried out in the capital and greater Buenos Aires area by the National Office of Crime Policy that points to the number of crimes committed versus the number of crimes reported to police. In 1996, 51.8% of respondents in Greater Buenos Aires said they had been the victim of a crime. The largest number of crimes, according to the survey, were thefts of objects from vehicles.

Despite increased rates of crime in the population, the country's conviction rates have decreased since the beginning of the 1990s. In 1992, over 3.5% of total

recorded crimes resulted in a conviction. The percentage continued to decrease with a low of 2.3% in 1997. At least part of this decrease may be explained by the worsening economic situation in Argentina and the resulting scarce jobs and lower wages. Ironically, as in other parts of Latin America, higher crime rates, or at least the perception of such a phenomenon, serve as a deterrent to potential investors.

Certain social and economic factors may help to explain the increase of crime in the country. Between 1986 and 1996, the rate of unemployment in Greater Buenos Aires doubled. Between 1991 and 1996, 48% of youths between 14 and 19 years of age living in low-income households dropped out of school. The worsening economic conditions as well as the school drop-out rate are considered key factors in understanding and explaining crime in Argentina.

**Police Officers Killed in the Line of Duty.** Between the years 1996 and 2001, there was an increase in the number of police officers killed (as well as civilians) in the Buenos Aires Metropolitan Area in armed confrontations where the Argentine Federal Police were present. In 1996, 22 police officers were killed under these circumstances based on information obtained from open-sources. In 1997 the number of officers killed decreased to 18. However, since 1998 the number of police officers killed has steadily increased. In 2001, 51 officers were reportedly killed in the Buenos Aires Metropolitan Area during armed confrontations in which members of the federal police took part.

**Crime Mapping and Analysis in Buenos Aires.** The Buenos Aires Police have been actively involved in crime mapping since 1999. The Crime Mapping Unit in the capital includes IT professionals, social scientists, and GIS Analysts. The Unit follows Interpol and other international guidelines regarding the recommended profile for a member of a Crime Mapping Unit, and all members of the Unit are sworn police officers. To aid in the crime mapping endeavor, the Buenos Aires Provincial Police works with a large crimes database as well as base maps that aid in spatial and statistical analysis.

The Crime Mapping Unit is able to perform a number of functions regarding the analysis of crimes. For example, the unit may select a crime type to be analyzed and then geocode the incidents for that particular crime to gain a better understanding of where the crime occurs and any possible hot spots or problem areas. Afterward, the unit can determine which populations are at risk and make recommendations of officer deployment strategies.

**Organized Crime and Terrorist Groups in Argentina.** Organized crime in Argentina is regional rather than

international in scope, thriving on the socioeconomic and political conditions prevalent in the country. The only form of organized crime in Argentina that is linked to international cartels is said to be drug trafficking, although the traffickers also traffic in women and children and stolen cars, and engage in embezzlement, fraud, and other financial crimes. The Tri Border Area (TBA) is of particular concern to the Argentine government in this regard because it serves as a gateway for organized crime to migrate south into the rest of the country.

Islamic fundamentalists in the TBA are reportedly linked to a growing Argentine mafia that provided assistance in the 1992 bombing of the Israeli Embassy in Buenos Aires and the 1994 bombing of a Jewish community center (AMIA) in Argentina. As the economic crisis in Argentina continued at the beginning of this century, a criminal group known as Local Connection, comprised of corrupt politicians and former members of the military regime, reportedly prospered. As a result of the group's unique relationship between common criminals and public figures, the Local Connection has operated with impunity. It reportedly controls much of what are now major industries in Argentina, including arms and drug trafficking, kidnappings, and the country's flourishing industry of dismantling stolen cars for scrap and spare parts. The Local Connection is organized like the Italian Mafia in small units, or families, linked to a boss, generally a corrupt police official or someone who served in the military regime. Its members are linked to the fundamentalist Islamic movements that are active in the TBA. The Local Connection bosses use code names when contacting the fundamentalists in Foz de Iguacu and Ciudad del Este.

In late 2001, a change of strategy in arms trafficking reportedly took place amid the political and economic crisis that overtook Argentina. Until then, the Local Connection was involved only in big arms deals, such as providing military equipment to groups fighting civil wars, but in late 2001, it began to sell contraband. Since then, Argentina reportedly has been taking the place of Paraguay in smuggling weapons into Brazil, including even arms used exclusively by the Argentine armed forces.

#### HUMAN RIGHTS

Although Argentina's military dictatorship ended in 1983, it is still fresh on many people's minds. In March 1995, a former Argentine Navy officer accused his government of complicity in the killings of rebel prisoners between 1976 and 1983. The Navy officer who made the claims stated that the military regime killed and tortured leftist rebels with little regard for human rights. More than 4,000 people were killed and 10,000 simply disappeared in the government's wars against leftist guerrillas in Argentina.

In February 1998 the Buenos Aires municipal legislature approved the *Codigo de Convivencia Urbana*. This code set standards for the protection of rights and property. One of the key standards set by the new code was the elimination of the Federal Police authority to detain people not strictly in their jurisdiction. Although the darkest period in the region's recent history ended with the end of military rule, human rights violations continue to dominate much of the debate over the state of the justice system.

#### CORRECTIONAL SYSTEM

Argentina has a vast corrections system spread throughout the country. The federal prison system and the Buenos Aires provincial prison system are the country's largest. To ensure that the country's prisons are up to standard, the system relies on the Federal Penitentiary Service (SPFA; *Servicio Penitenciario Federal Argentino*). The SPFA is comprised of a National Directorate that is responsible to the Ministry of Justice for administering the various institutes, services and prisons throughout the country.

On the hierarchy chain, the National Sub-Directors of Argentina's federal prisons are followed by a series of General Directors who are in charge of different areas such as the prison population, the prison regimen, and general administration. Besides maximum security prisons for the country's hardened criminals, Argentina has a number of specialized prisons. One such example is the Men's Central Psychiatric Service in Buenos Aires. Argentina also has prisons designed specifically for women and young adults.

To ensure professionalism among Argentina's correctional employees the country has a penal academy. At the Superior Academy of Penitentiary Studies correctional personnel study a variety of subjects including ethics, human relations, public administration, and political science. Since the 1990s, Argentina has taken many steps to modernize the corrections system and to focus on the rehabilitation aspect of the penal system. In July 1996, a law went into effect, the *ley de ejecucion de la pena privativa de la libertad*. The law established a system of monitoring by the judicial system of prison conditions and the treatment of prisoners.

#### Prison Statistics.

- Total Prison Population: 56,313
- Prison Population Rate per 100,000: 148
- Pretrial Detainees: 58.9%
- Female Prisoners: 5.3%
- Juvenile Prisoners: 0.2%

- Number of Prisons: 166
- Official Capacity of the Prison System: 27,524

# Armenia

---

**Official country name:** Republic of Armenia (Hayastani Hanrapetut'yun)

**Capital:** Yerevan

**Geographic description:** Slightly smaller than Maryland, Armenia is located in Southwestern Asia and borders Georgia, Azerbaijan, Iran, and Turkey. It also contains the Azerbaijan-Naxcivan exclave and other disputed territories.

**Population:** 2,982,904 (est. 2005)

## LAW ENFORCEMENT

**History.** Armenia was the first nation to formally adopt Christianity (early 4th century). Despite periods of autonomy, over the centuries, Armenia came under the sway of various empires including the Roman, Byzantine, Arab, Persian, and Ottoman. It was incorporated into Russia in 1828 and the USSR in 1920.

Armenian leaders remain preoccupied by the long conflict with Muslim Azerbaijan over Nagorno-Karabakh, a primarily Armenian-populated region, assigned to Soviet Azerbaijan in the 1920s by Moscow. Armenia and Azerbaijan began fighting over the area in 1988; the struggle escalated after both countries attained independence from the Soviet Union in 1991. By May 1994, when a cease-fire was declared, Armenian forces held not only Nagorno-Karabakh, but also a significant portion of Azerbaijan proper. The economies of both sides have been hurt by their inability to make substantial progress toward a peaceful resolution.

The Armenian police was created in 1918, with the establishment of the first Republic of Armenia. Its history can be roughly divided into the periods of the First Republic (1918–1920), Soviet Armenia (1920–1991), and the Third Republic (1991 to present).

One order of business for the government of newly independent Armenia in 1918 was the establishment of the Ministry of Interior, of which the police was an integral part. In addition to enforcing law and order, the Interior Ministry was initially also responsible for communications and telegraph, railroads, and the public school system. The Armenian Parliament passed the Law on the Police on April 21, 1920, specifying its structure, jurisdiction, and responsibilities. The first Republic of Armenia ceased to exist on November 29, 1920.

Upon establishment of the Soviet regime in Armenia, the Ministry of Interior was replaced by the People's Commissariat for Internal Affairs (NKVD), which included the so-called Special Commission (better known by its

Russian abbreviation “Cheka”) that was charged with rooting out “the class enemies” of the revolution. It was subordinated to the central Soviet police authorities. Between 1920 and 1940, the police agency was reorganized and renamed several times, serving as the instrument of Stalinist oppression and mass executions. Ten out of thirteen heads of the Armenian police who served between 1920 and 1940 were executed by the same agency.

By the 1950s, the police and special services were finally separated into two agencies: the Ministry of Internal Affairs (MVD) and the Committee for State Security (KGB). The police was an integral part of the MVD. In the 1960s and 1970s, Interior Troops were added to the Ministry structure; the Road Traffic Directorate and the School of Police were also created.

As the Soviet Union began to disintegrate in the late 1980s, the MVD became more of an Armenian national structure and, in fact, the police units were called upon to protect the Armenians living in the border regions from attacks by Azeri forces and the Soviet Army in 1990 and 1991. Hundreds of police officers joined self-defense units and were killed in action while their colleagues dealt with the rapidly rising threat of organized crime across the country.

On June 21, 1992, the Interior Troops were established by a decree of the president of Armenia as an auxiliary unit of the Ministry of Interior. New units, including Organized Crime Enforcement, Drug Enforcement, and Economic Crime departments were established within the police. The School of Police was reorganized into the Police Academy. Armenia joined Interpol in 1992, and began to cooperate closely with its counterparts in foreign countries.

In 1996 the Ministry of Interior merged with the Ministry of National Security, but these two agencies were separated in 1999.

The Law on the Police was passed by the Armenian National Assembly on April 16, 2001, and April 16 is now celebrated as Police Day. In accordance with Armenia’s obligations under its accession to the Council of Europe, the Law on Police Service was passed on June 30, 2002, providing for the Ministry of Interior to be reorganized into the Police of the Republic of Armenia on January 1, 2003.

**Structure and Organization.** The Police of the Republic of Armenia (PRA) is territorially divided into Central Headquarters and 11 police departments (one each for the City of Yerevan and 10 provinces) that are further subdivided into 52 police precincts.

The PRA also includes the Interior Troops, training and education centers, as well as other auxiliary organizations.

The PRA Central Headquarters is at the top of the police command structure and is comprised of the Offices of the Chief, Deputy Chiefs, and specialized branches (Directorates and Divisions).

Among the operations branches are the Organized Crime Enforcement Directorate, Criminal Investigations Directorate, and the Drug Enforcement Directorate. Other important branches are the Operations Staff, Investigations Directorate, Public Safety Directorate, Personnel (Human Resources) Directorate, Information Department, Public Relations and Press Directorate, Financial-Economic Directorate, Administrative Directorate, Road Inspection Directorate, Transportation Directorate, Passports and Visa Directorate, State Protection Directorate, National Central Bureau of Interpol, Criminal Forensics Directorate, Legal Directorate, and Health Directorate.

The activities of the police are directed by the Chief of Police, who is appointed by the President at the nomination of the Prime Minister. The Chief has one First Deputy and several Deputies who are appointed by the President at the nomination of the Chief. The Commander of the Interior Troops is appointed by the President, and serves as *ex officio* Deputy Chief of the Police. Each Deputy Chief is assigned a sphere of responsibility by the Chief of Police. The Chief is assisted by a group of Advisers to the Chief.

As is the case in most police agencies of the former Soviet Union, the Armenian police has undergone dramatic and frequent restructuring since independence from the USSR. The current structure goes by the name of Police Service as opposed to the more commonly used Ministry of Interior or Ministry of Internal Affairs in other states. The Interior Ministry was abolished in 2002 by Armenian president Robert Kocharian. The Police Service was placed under the direct control of Kocharian in keeping with another trend that has emerged in most former Soviet states, a very strong executive branch.

**Police at Work.** After the collapse of the Soviet Union, Armenia was a weak state with powerful regional and family clans running much of the local administration and economy. Criminal gangs operated with impunity, corruption was rampant, and assassinations of political figures occurred on occasion. The stresses of war and material privation, uncertainty about the future, and widespread suspicion about the legitimacy of the ruling elites remain to this day.

Dominating the police working environment are the interrelated issues of low salaries and corruption. The average monthly income in Armenia is less than \$100 and for many professions it can be as low as \$10. This holds true for the police service as well; the average salary is approximately \$50. Traffic police earn about \$35 a

month, which was increased from \$25 in 2002. Unable to survive on such a low wage, police frequently resort to demanding bribes for services that should be performed as part of their official duties.

Annually, about 30% of the police force receives some form of reprimand. Nineteen percent of traffic police received varying punishments for abuse of position. In 2002, 22 inspectors were discharged, 29 were demoted, and 136 received disciplinary punishment for violations. Low levels of morale, professionalism, and loyalty as well as a frequent failure to respond to the needs of citizens are hallmarks of the system. Police promotions are frequently a cash transaction as in other state agencies, guaranteeing that the cycle of corruption will remain unbroken.

The concentration of the police and other organs of internal security in the hands of the President with little or no checks and balances by the legislature, judiciary, or public organizations has led to a deeply politicized police force frequently accused of human rights violations.

Lack of budgetary means for maintenance of equipment, vehicles, and basic supplies such as gas for police cars, together with rampant corruption, has produced a police force that is unable to address effectively the most pressing law enforcement challenges such as organized crime and narcotics trafficking.

**Police Positions.** The hierarchy of titles in the PRA is as follows: Chief of Police, Commander of Interior Troops, Deputy Chief of Police, Chief of Directorate and Chief of Provincial (City of Yerevan) Police Department, Deputy Chief of Directorate, Chief of Police Precinct, Deputy Chief of Precinct, Chief of Division, Deputy Chief of Division, Senior Investigator on Special Cases, Senior Operations Agent on Special Cases, Senior Inspector at large, Senior Inspector, Senior Investigator, Senior Operations Agent, Inspector, Investigator, Operations Agent, Junior Inspector, Senior Policeman, Junior Policeman.

**Police Ranks.** In descending order, the hierarchy of ranks in the PRA is as follows:

*Supreme Officer Personnel:*

- Colonel General
- Lieutenant General
- Major General

*Senior Officer Personnel:*

- Colonel
- Lieutenant Colonel
- Major

*Middle/Secondary Officer Personnel:*

- Captain
- Senior Lieutenant
- Lieutenant
- Junior Lieutenant

*Junior Officer Personnel:*

- Senior Corporal
- Corporal
- Senior Sergeant
- Sergeant
- Junior Sergeant

*Soldier's Rank:*

- Police Soldier

Employees and servicemen working or serving in the police may not be members of any political organization in the course of their work or service with the police.

**Awards and Medals.** Police personnel can be awarded the following decorations: *Medals:* "For Heroism," "For Strengthening Law and Order," "Continuous Police Service" of 1st, 2nd, and 3rd order, and "For Strengthening Cooperation." *Honorary Title:* "Dedicated Police Service." *Badges:* "Dedicated Police Service," "Excellent Police Service," "Excellent Interior Troops Service" of the 1st and 2nd order. The Certificate of Achievement is awarded by the Chief of Police.

At the recommendation of the Chief of Police, the President of the Republic can award the following national orders to the individual police officers: "Order of the Homeland," "Order of Valor," and "Medal of Military Service."

**Police-Community Relations.** Local residents often do not bother to call police in order to report minor crimes due to their ineffectiveness and the fact that low-level police are so poorly paid that they often solicit bribes to perform their duties. In addition, police have a reputation of blaming the victims for the crimes perpetrated against them. These attitudes toward police are deeply ingrained and represent some of the debilitating legacies of Soviet rule and the economic and political chaos of the post-Soviet era.

Police-community tension is exacerbated by numerous allegations of human rights violations by the police against members of the political opposition, editors of newspapers and magazines, television broadcasters, and others. Police have used truncheons, electric shock, and firearms against antipresidential demonstrators.

Steps are being taken by the government of Armenia to narrow the gap between the police and community. For example, in late 2003, the Police Assistance Program in Armenia was launched by the Organization for Security and Cooperation in Europe (OSCE) to provide assistance to the PRA in three main areas: (1) organizing a community policing pilot program (in a police district in Yerevan), (2) improving the Armenian Police Training Centre for police recruits and advanced training, and (3) improving the emergency response capacity of the Yerevan police force. The program is to create a constructive partnership between the police and the population. Specifically, the community policing project is to lead to the creation of a police-public consultative committee with civil action groups that will jointly address definition of priorities for focusing police resources.

The OSCE office in Yerevan launched a program on military and security activities in 2002, in line with the decision of the 2001 OSCE Ministerial Council Meeting to enhance the OSCE's role in police-related activities in conflict prevention, crisis management, and postconflict rehabilitation. This includes provision of advice and assistance on the restructuring of police services, monitoring and training of existing police services, training on human rights and fundamental freedoms, capacity-building in all forms of policing, including support for integrated or multiethnic police services.

The Armenian public as well as police officials are in need of education and training regarding the functioning of a criminal justice system in a free society. To that end, much work is being conducted by various non-governmental organizations. One group is preparing a series of television films based on actual court cases in order to build awareness of the basics of the litigation process. Another group is developing and promoting professional and ethical standards among journalists writing on legal topics through development of a code of professional conduct. The group also publishes a magazine dedicated to various aspects of media interaction with policing and the criminal justice system.

Even with the efforts of numerous non-governmental organizations, changes in attitudes toward law enforcement and the rule of law will take years if not decades, to affect the deep-seated legacy of the Soviet experience.

**Uniforms and Weapons.** The uniforms of the police officers and the rules for wearing uniforms are set in the decree of the Cabinet dated October 31, 2002, and by the decree of the Chief of Police dated April 15, 2003.

To ensure his or her personal safety, a police officer shall be entitled to use a helmet, a shield, an armored or bullet-resistant vest, a gas mask (respirator), and other means of individual defense.

Police personnel are armed primarily with Soviet-made firearms and ammunition, including Makarov and TT handguns, and AKS, AKM, and AK-74 automatic rifles. TT handguns are rather-old vintage weapons and are being used with less frequency.

According to Article 32 of the Law on the Police, police employees may use firearms in six general circumstances: (1) while defending citizens from attacks; (2) while repulsing an attack made upon a police officer when his/her life is endangered, as well as while preventing an attempt to seize his/her weapon; (3) while releasing hostages; (4) while arresting persons caught in the commission of a serious crime and making an attempt to escape, as well as displaying armed resistance; (5) while repulsing group or armed attacks made upon apartments of citizens, areas occupied by state organizations, as well as upon an escort detail; (6) while seizing, or preventing the escape of, persons under arrest or persons escaping from a place of incarceration.

There are a number of other instances in which officers are entitled to use firearms. They include: (1) while stopping a vehicle by damaging it if the driver represents a danger to citizens and does not obey police commands to stop the vehicle; (2) while rendering harmless animals threatening citizens; (3) while warning about the intention to employ arms, while awaiting assistance from other police.

Police are not permitted to use firearms against individuals who clearly pose less of a threat to officers or could not reasonably flee the custody of an officer, such as pregnant women and minors (with the exception of cases of armed or group attacks) as well as during a large gathering of people when other persons may suffer from the use of firearms. In all cases of using a firearm, a police officer shall submit a report to his/her superior immediately afterward.

## HUMAN RIGHTS

Human rights organizations express deep concern that police agencies are acting essentially as enforcers for a strong executive, ignoring commitments the state has made to the guarantee of key individual rights. In April 1991, for example, Armenia signed the International Covenant of Civil and Political Rights which includes the right to counsel; the presumption of innocence of the accused; the right to privacy; prohibition of arbitrary arrest; freedom of the press, religion, political expression and assembly, and movement; minority rights; and prohibition of discrimination. Similar laws were signed since then.

With the growing power of the executive has come increased government tolerance of, if not reliance on, harassment, arbitrary arrest, and torture in violation of

the International Covenant. According to human rights groups, members of opposition groups and their relatives have been subject to physical and psychological abuse by members of the police force. Periods of pretrial investigations are said to be used by police to threaten, beat, and sometimes torture arrestees in an effort to extract confessions.

## CRIME

Armenia has a low rate of violent crime, but since the collapse of the Soviet Union, it has experienced a steady increase in a wide variety of crimes including organized crime and drug trafficking. While prostitution is not illegal, the trafficking of people from Armenia to other countries for the purpose of prostitution has increased dramatically. In addition, property crime and economic crime, particularly fraud and embezzlement, have increased dramatically since the 1990s.

While prostitution is not illegal, operating brothels is prohibited. According to anecdotal evidence, most prostitutes stopped by police simply were sent to a hospital or physician for a medical checkup. An investigation in 2000 reported that the police had registered more than 1,500 prostitutes; the study showed that some prostitutes in Yerevan operated by telephone, but that the vast majority of prostitutes were streetwalkers, with their "class" and desirability defined by the area of the city in which they operated.

Crime statistics should always be handled with great care; in the case of Armenia and other former Soviet states, they are relatively meaningless. Locked in an ideological battle with the West, Soviet reality urged the creation of fictitious figures across virtually all sectors of the economy and society in order to portray a positive image to the outside world. The depiction of crime was one of the most important sectors for manipulation as the USSR attempted to demonstrate the superiority of Communism and its promise of the disappearance of crime. According to police officials, the practice of producing fraudulent statistics (*pripiska*) continues long after the demise of the Soviet Union. Latent crime has always been assumed to be rather high.

**Narcotics.** Armenian Anti-Drug Department experts have accumulated a significant database on drug transit sources, routes, and the people engaged in trafficking. The principal transit countries through which drugs pass before they arrive in Armenia include Iran (opiates, heroin), Georgia (opiates, cannabis, hashish), and the Russian Federation (opiates, heroin).

Armenia's borders with Turkey and Azerbaijan remain closed owing to the Nagorno-Karabakh conflict; however, according to Anti-Drug Department informa-

tion, opiates and heroin are smuggled to Armenia from Turkey via Georgia. When these borders open, drug transit could increase significantly. Official police statistics state that currently 53 percent of drug transit enters Armenian territory by truck and 45 percent by air. Sixty percent of the drugs consumed locally are imported, particularly heroin and opiates. Hemp and opium poppy grow wild in northern Armenia and in mountainous regions, but Armenia is not a major drug-producing country.

In 2002, the Armenian legislature passed a bill aimed at strengthening the police mandate to combat drug sales and trafficking. Together with Georgia and Azerbaijan, Armenia is engaged in the ongoing United Nations-sponsored Southern Caucasus Anti-Drug Program (SCAD), which was launched in 2001. Armenia is a party to the 1988 UN Drug Convention.

Scarce financial and human resources, however, limit police ability to combat drug trafficking and drug abuse. Drug abuse does not constitute a serious problem in Armenia, and the local market for narcotics, according to the Anti-Drug Department, is not large. However, while official estimates put the number of drug addicts at less than 2,000, already in 1995, the true number was believed to be approximately 10,000; two years later, that unofficial figure had doubled.

The average age of drug abusers is believed to have fallen from 35 to 25, with an increasing number of 15-17 year olds among abusers. This may be explained, in part, by the increased use of narcotics in cafes and nightclubs. The principal drugs of abuse are opium, cannabis, and ephedrine. Heroin and cocaine first appeared in the Armenian drug market in 1996 and, since then, there has been a small upward trend in heroin sales, while cocaine abuse has remained flat. In late November 2003, the Armenian government began work to create an Interdepartmental Commission on the Prevention of the Illegal Trade of Drugs.

**Organized Crime.** In 1992 and 1993, immediately following the collapse of the Soviet Union, a police campaign temporarily limited the activity of a few large gangs, but gang leaders, whose identities were commonly known in Armenian society, used influence in parliament to stymie the efforts of the Ministry of Interior. Some deputies in Parliament were implicated directly in white-collar crime and some had been convicted of crimes prior to their election.

In recent years, the incidence of gang shootouts on the streets of Yerevan, Giumri (Armenia's second largest city), and in other cities has increased. Until this time, Armenia generally had not experienced the same level of high-profile gang wars as was seen in Moscow, Saint Petersburg, and other cities. It is understood,

**Table 1. Armenia, Reported Crime, 1998–2002**

	1998	1999	2000	2001	2002
Total Reported Crime	10,761	10,056	12,048	11,483	12,074
Premeditated Homicide and Attempt	145	156	127	120	107
Premeditated Serious Bodily Injury	207	178	196	193	203
Rape and Attempted Rape	22	23	28	24	30
Robbery	125	104	92	122	82
Larceny	126	126	162	117	135
Theft	2,921	3,056	3,663	3,466	3,476

SOURCE: Statistical Yearbook of Armenia, 2003.

<http://www.armstat.am/StatData/2003/10%20Law.pdf>

though, that the power and influence of organized crime figures in the country is great.

In 1999 armed gunmen burst into the Parliament killing eight leading politicians including the prime minister. This attack clearly contributed to the perception of lawlessness in the country.

**Trafficking in People.** The new Criminal Code, adopted in April 2003 and put into effect that August, criminalizes trafficking in persons. Trafficking of women and children from and through the country is a problem. Trafficking in persons committed for “mercenary purposes” is punishable with a fine in the amount of 300 to 500 minimum salaries, correctional labor for up to 1 year, arrest for up to 2 months, or imprisonment for up to 4 years. The maximum sentence if the crime was committed under aggravated circumstances is 8 years imprisonment. The police has worked with law enforcement officials in both Georgia and the United Arab Emirates on trafficking investigations.

A 2001 study by the International Organization for Migration found that Armenia was an origin country for trafficking women and adolescents, primarily for sexual exploitation, to the United Arab Emirates, Turkey, Russia, Greece, Germany, and other European countries. There have been undocumented anecdotal reports of persons trafficked into the country for sexual exploitation from Russia and Ukraine and anecdotal reports of trafficking within the country. Officials contend that many women who claimed to have been trafficked were actually prostitutes who had departed the country voluntarily, perhaps without a clear understanding of the abuses they would encounter.

Government and other reports indicate that traffickers primarily targeted young women and girls from socially vulnerable groups. Police officials believed that some of the victims were already engaged in prostitution. There were anecdotal cases of older children from orphanages and poor families sold to wealthy men in Dubai, but there was no documentation other than victim testimony to nongovernmental organizations. An orphanage run by a religious group reported that older girls had been urged by relatives to “earn their share” for the family by engaging in prostitution. Most potential victims were approached by persons whom they personally knew, such as neighbors or distant relatives, or by travel agencies. In some case, recruiters told victims that they would be working in such jobs as babysitters, waitresses, or cleaning ladies. According to international organizations and some nongovernmental organizations, only a few of the victims knew before departure the exploitation to which they would be subject.

**Crime Statistics.** Crime statistics for 1998 to 2002 are listed in Table 1.

#### CORRECTIONAL SYSTEM

In 2001 the prison system was transferred from the jurisdiction of the Ministry of Interior to the Ministry of Justice. There are 14 prison institutions in Armenia.

According to the Criminal Procedure Code, the maximum term of detention without bringing charges is 72 hours. In practice, police sometimes arrest people suspected of a specific criminal act, register it as “minor hooliganism,” and keep them in detention for 15 days during which time they carry out an investigation to see

if there is evidence to fill in the detention protocol. Despite such misconduct, no officers are known to have been held accountable for arbitrary detentions. In most cases, suspects are held in custody pending trial. Bail could be used in cases of minor or average offenses. Bail could be given only upon payment of a large sum of money, starting from 200 times the minimum monthly salary.

According to the Criminal Procedure Code, the maximum term of pretrial detention is two months, which could be prolonged by two months, but not longer than for a total duration of a year. There is a right to state-appointed and paid lawyers, but defendants frequently reject their services due to the poor performance in defending them: In some cases, such defense lawyers have even pressured their clients into pleading guilty on the basis of an arrangement with the prosecution or judge.

In June 2001 Parliament adopted a Presidential decree regarding an amnesty to mark the 1,700th anniversary of Armenia's adoption of Christianity as the state religion. Under the Armenian Constitution, the President has the right to grant amnesty with the agreement of the parliament. The amnesty affected over 2,100 people, with 1,250 scheduled for release. It did not extend to individuals who had been convicted of murder or other serious crimes.

**Prison Conditions.** As with most of the other states of the former Soviet Union, Armenia is experiencing outbreaks of tuberculosis in its prison system. The disease spreads quickly in the overcrowded and unhygienic cells and is carried to the population outside. In 2002 a new prison hospital for prisoners infected with tuberculosis was opened. Its capacity was 220 patients but, by the end of 2002, only 88 convicts with acute tuberculosis were cared for. The overall number of the diseased in prisons or colonies was about 300, most of whom underwent outpatient treatment.

Until recently, the prison population per 100,000 persons was around 200, making it high by Western European standards, but lower than most parts of the former Soviet Union and well below that of the United States. It currently is reported at approximately 135 per 100,000.

Due to a lack of resources, prison food is grossly inadequate to meet the nutritional needs of inmates. The main diet consists of boiled cabbage soup or other thin, meatless soups. Exercise facilities and medical clinics are under-equipped. In a struggling economic system, inmates have relatively little opportunity to work while incarcerated. Realities of the prison system reflect the realities in the society at large.

The prison budgets allow for the daily expenses of approximately \$2 per day per prisoner (including food, electricity, and so on). Toilets in investigation detention facilities are situated in the cells, while in the colonies they are outside the barracks. There is no central heating in prisons, but inmates are allowed to bring electric heaters to their cells. Floors in some cells are asphalt.

From a human rights standpoint the treatment of pretrial prisoners is problematic. Inmates are frequently denied visits from family members and defense attorneys, particularly if the detainee's case has political overtones. Political detainees are frequently beaten while in pre-trial facilities. Pretrial detainees generally receive lower food rations than convicted prisoners. Although many inmates have televisions in their cells, electric service in Armenia in general is frequently interrupted. There are few other activities with which to pass the time.

**Capital Punishment.** A moratorium on capital punishment was imposed in 1991. However, the death penalty was preserved in the Criminal Code for certain crimes. To comply with the commitments undertaken before the Council of Europe, Armenia should have ratified Protocol 6 of the European Convention on Human Rights and abolish the death penalty within one year of its accession to the Council. However, the country failed to do both. Armenia claimed that a new Criminal Code without the death penalty would be adopted by the end of 2002, which did not happen. At the end of 2002, 42 men were on death row, four of them having been sentenced in 2002. Capital punishment was finally outlawed in late 2003. Even then, a sentence of capital punishment may still be handed down for certain serious crimes committed before August 1, 2003, namely "terrorist" acts and premeditated murder.

**Prison Statistics.** Prisons fall under the direction of the Ministry of Justice.

- Total Prison Population (including pretrial detainees/remand prisoners): 4,343
- Prison population rate (per 100,000 of national population): 135 (based on an estimated national population of 3.21 million at beginning of 2003)
- Pretrial detainees/remand prisoners (percentage of prison population): 22.3%
- Female prisoners (percentage of prison population): 2.4%
- Juveniles/minors/young prisoners—under 18 (percentage of prison population): 1.3%
- Foreign prisoners (percentage of prison population): 0.2%
- Number of establishments/institutions: 14

- Official capacity of prison system: 7,020
- Occupancy level (based on official capacity): 61.9%

Recent prison population trend (year, prison population total, prison population rate per 100,000 of national population):

1994	5,354	(143)
1997	7,648	(202)
2001	7,428	(195)

# Australia

---

**Official country name:** Commonwealth of Australia

**Capital:** Canberra

**Geographic description:** Sixth-largest country in the world, encompassing the entire continent of Australia as well as islands, such as Tasmania; located in Oceania in the Southern Hemisphere

**Population:** 20,090,437 (est. 2005)

## LAW ENFORCEMENT

**History.** Police in Australia have their origins in the three major British settlement initiatives in New Holland: Sydney (New South Wales), 1788; Swan River (Western Australia), 1829; and Adelaide (South Australia), 1836. In all cases, the formation of police organizations was preceded by the appointment of individual constables who were mostly subordinate to magistrates and whose duties could be described only marginally as police work in the modern sense of the term. Such appointments bore close similarity to the eighteenth- and early nineteenth-century practices in England.

First settlement, in 1788, occurred at Sydney Cove, where the great majority of settlers were English or Irish convicts. Thefts of precious food, several serious assaults and a generally low level of public behavior in the infant colony prompted the governor, Arthur Phillip, to appoint a night watch of 10 or 12 (historical records contain conflicting numbers) convict constables in 1789. Their main duty was to guard the rations of the colony stored in a central warehouse. These men, who received lodging, rations and clothing only, were made

subordinate to the judge advocate and other military officers until the end of military rule in 1796. Although these first convict constables were referred to as “police” by the judge advocate at the time of their appointment in 1789, it is probable that they operated initially as night watch only.

As time went by and areas surrounding Sydney were explored and settled, more constables, many of them freemen, were appointed in the outlying regions. In the larger towns, full-time constables operated 24 hours a day. After the end of the military government in New South Wales, the Sydney town constables were placed under the first magistrate, who was also known as the superintendent of police. He was first and foremost a justice of the peace. For the next 20 years there were no further changes in police functions and organization because the town grew slowly. In 1811 there was a significant reorganization of the Sydney Police, although the various grades of constables remained subordinate to the first magistrate. The new governor, Lachlan Macquarie, established a full-scale police force under a superintendent

of police and published regulations dividing the town into five districts, each with its own warehouse. A district constable was appointed, with six constables assisting him in each district, with a chief constable in overall command, subordinate to the superintendent of police. A Criminal Investigation Branch was developed in 1827. In 1833 an act of Parliament gave the governor the power to appoint two or more justices of the peace who would serve as police magistrates. In 1834 Colonel H. C. Wilson introduced the first beat system and was also responsible for the introduction of a uniform, a plain blue jacket with a badge and number. In the rural areas of New South Wales, constables were appointed by the local justices, and they remained accountable to the particular bench by which they were appointed.

Convict constables on the New South Wales model were appointed at Norfolk Island penal settlement in 1791 and at Port Dalrymple, Van Diemen's Land (now Tasmania) in 1804.

As the colony's population increased in the second and third decades of the nineteenth century, various security and administrative needs resulted in the creation of a number of discrete "police" bodies, for example, mounted patrol, water police, border police, native police, and gold police. Some of these were later disbanded, some combined with others, and some absorbed by other colonies. A similar situation occurred in Australia Felix, now known as the state of Victoria.

Following a wild New Year's rioting in Sydney in 1850, efforts were made to consolidate all police bodies in the area now known as New South Wales. These efforts were not entirely successful, and it was not until the 1861 communal rioting in Lambing Flat goldfields that the government was able to fully achieve its aim. In 1862 the present police department of New South Wales was created.

Victoria separated from New South Wales in 1851, achieving colonial status in the process. The Victorian colonial government inherited a fragmented collection of police bodies very similar to those of New South Wales. The new government consolidated its police services in 1853.

Queensland did not separate from New South Wales until 1859. At that time, New South Wales police, in particular the Native Police, had a general responsibility for policing the area despite the presence of local town and water police constables. An inspector general of police was appointed in 1860, but fragmentation of responsibility continued until 1864. Even then the native police retained a separate identity until disbanded in 1900.

In Tasmania, separate police bodies existed prior to 1857, when police services were reorganized. In 1804 the first chief constable was appointed, with three subordinate

constables. In 1828 the state was divided into nine districts, each with a police magistrate, who was responsible to a chief police magistrate. Legislation passed in 1856 empowered municipalities to raise their own police forces. Twenty-one such forces were established over a period of years. In addition, a body known as the Colonial Police (later the Territorial Police) was created. The Territorial Police covered those areas not subject to municipal government. In 1899 the various police bodies were consolidated under a police commissioner, thus creating the present police department of Tasmania.

Following the commencement of the first civil settlement in Western Australia, in the Swan River Colony in 1829, a number of constables were appointed by the governor. They were freemen who plied their normal trade, acting in the office of constable only when necessary. By 1832, however, conflict between aborigines and settlers was so fierce that many settlers left the colony. Local constables continued to be appointed in both towns and rural areas, and they remained subordinate to the justices of the peace. Police numbers started to increase in 1849, in anticipation of the arrival of transported British convicts. In 1853 all police were placed under the authority of a superintendent. In 1861, following a thorough reorganization, the police department of Western Australia was created.

The colony of South Australia was first settled in 1836, and a number of freeman constables were appointed soon after landing. These men, who were subordinate to the justices of the peace, continued to work at their normal calling, exercising their police authority only when called upon to do so. Unfortunately, the new colony quickly attracted a large number of undesirables, many of whom were escaped convicts from areas to the east and from Van Diemen's Land. In 1838 a police force of 20 members was established, with colony-wide jurisdiction. The force had a chief officer who was answerable to a four-person commission, but in 1840 a member of the police commission was appointed as commissioner of police and the board was abolished. Thus, the police department of South Australia is the oldest surviving police force in Australia.

Between 1860 and 1910 the Northern Territory was governed by South Australia. From 1865 to 1869 a small body of constables was employed at Escape Cliffs, the scene of the territory's first major settlement attempt. These men, who performed many other tasks, such as caring for stock and exploring, were subordinate to the government resident. Escape Cliffs was abandoned in 1869 and its personnel dispersed. A detachment of South Australian Police arrived at Palmerston (now Darwin), the successor location to Escape Cliffs, in January 1870. South Australian Police personnel undertook the territory's policing needs for the next 40 years.

Eventually, however, the South Australian government felt it could no longer bear the administrative costs involved, and the federal government assumed responsibility in January 1911 for the huge but sparsely populated region. A new police body, the Northern Territory Mounted Police, was formed. In 1926 the Northern Territory Police Force (the “Mounted” had by then been dropped from the title) was split into two, but in 1931 it was reconstituted.

Australian Police Forces by Year of Origin:

- South Australia Police Force, 1838
- Victoria Police Force, 1853
- Western Australia Police Force, 1861
- New South Wales Police Force, 1862
- Queensland Police Force, 1864
- Tasmania Police Force, 1899
- Northern Territory Police Force, 1911
- Australian Capital Territory Police Force (later absorbed by Australian Federal Police), 1927

The Federal (later changed to Australian) Capital Territory Police Force was formed in 1927 as a result of a decision to hold federal parliament sittings in Canberra. The Australian Capital Territory (ACT) Police Force remained a separate organization until 1979, when it was absorbed by the Commonwealth Police Force, which is largely concerned with security. The resulting hybrid was called the Australian Federal Police, although the ACT police component provides the body’s only traditional police function.

The Commonwealth Police Force was formed in 1960 by combining the Commonwealth Investigation Service and the Commonwealth Peace Officer Guard. It is the chief agency for enforcing laws passed by Parliament, and it coordinates the work of other investigation and law enforcement agencies.

**Structure and Organization.**

*The Australian Federal Police.* The Australian Federal Police is divided into a plainclothes and a uniform branch. It is headed by a commissioner aided by two deputy commissioners. It has officers in the capitals of each state. Members of the Plainclothes Branch investigate offenses against Commonwealth laws. Within the branch are a number of specialized sections: The Central Crime Intelligence Bureau, the Central Intelligence Bureau, the Document Examination Bureau, the Currency Squad, the Companies Squad of ACT, and the Neutron Activation Analysis Section. The Uniformed Branch protects royalty and public officials, guards public property, checks exit and entry at ports and airports, conducts surveillance

against terrorists, drug dealers, and organized crime, deports unwanted aliens, and interdicts counterfeit currency operations. The Australian Federal Police runs the Australian Police College and trains police dogs. The Central Crime Intelligence Bureau is the central narcotics intelligence agency for the Commonwealth.

*Queensland Police Force.* The Queensland Police Force is headed by a commissioner who directly controls the Crime Intelligence Unit, Emergencies and Inspections Chief Superintendent, the Planning and Research Branch, the Special Branch and the Public Relations Branch. Three assistant commissioners—the Assistant Commissioner for Crime, the Assistant Commissioner for Traffic and the Assistant Commissioner for Administration—report to the commissioner. There are four regions, each headed by a regional superintendent who directly reports to the commissioner. The Brisbane Division has five districts and four subdivisions. The other regions are divided into districts but have no subdivisions. Some districts are divided into subdistricts. The final division is the police station.

Queensland police work a forty-hour week or eight hours a day. Larger stations work on a 24-hour basis with three eight-hour shifts per day. Overtime is paid for work beyond these schedules and penalty rates are paid for work on weekends. In addition, police officers receive special allowances for detective work and other types of special assignments. Additional allowances are provided for nighttime duty. Vacation varies according to location and length of service, with a minimum of 35 days per year. Sick leave is granted up to 60 days per year on full pay and 30 days per year on half pay. After ten years of service, policemen receive a long service leave of 13 weeks on full pay, and leave accrues as length of service increases. Each member of the police force contributes to a pension plan that takes effect at age 60. Examinations for promotion are held annually. Promotions are from probationer or cadet to constable first class, senior constable first class, sergeant first class, sergeant second class, and senior sergeant.

*Victoria Police Force.* The Victoria Police Force is headed by a commissioner aided by a deputy commissioner and five assistant commissioners. The first assistant commissioner is in charge of personnel, recruitment, education and training and the Police College at Airlie. The second assistant commissioner handles services, buildings, purchases, computers and equipment. The third handles operations, including Search and Rescue Squads, Motor Boat Squad, Licensing, Gaming and Vice Division, Mounted Police Branch, Dock Police Branch and the Women Police. He or she also coordinates the metropolitan and rural police districts. The fourth assistant commissioner is in charge of crime, the Forensic Science Laboratory, stolen motor vehicles, missing persons, fingerprint bureau,

criminal records division and the detective training school. The fifth assistant commissioner handles traffic, driving schools and road tests, automobile registration, mobile patrols, traffic accident investigations and traffic fines.

The Victoria Police Force has three fields of service: General Duties, Criminal Investigation and Mobile Traffic Patrol. Their uniform consists of a navy blue jacket and trousers or skirt, with a white-topped cap. Summer headgear may consist of a helmet. Cadets wear a similar uniform, but with a light and dark blue band around the cap with the words, "Police Cadet." Foot patrols carry a .32 or .38 caliber pistol.

Victoria police officers work a 40-hour week. They receive a 7-week annual vacation that increases to 19 weeks after 15 years of service with an additional 6 weeks for every 5 years of service thereafter. They also receive 15 days of sick leave with full pay with an additional 12 days of sick leave on completion of each year of service. Members of the force receive a housing allowance and a uniform allowance and participate in liberal pension plans.

The state is divided into 21 police districts, of which 17 are geographical and the other 4 are Criminal Investigation, Traffic Control, Information Bureau, and Training and Recruiting. Each district is headed by a superintendent who reports to the director of administration. Attached to the office of the commissioner is the Public Relations Division, an Inspectorate and Future Plans Office, and a Complaints and Discipline Department.

**Tasmania Police Force.** The Tasmania Police Force is headed by a commissioner who reports to the minister. Below the commissioner are the deputy commissioner and the chief superintendent. There are two types of police districts—one geographical and the other statewide. Geographical districts are under the control of a superintendent. Below the superintendent are inspectors who are in charge of divisions, and below them are sergeants, noncommissioned officers and constables and junior constables. Statewide or "deemed" districts are functional areas such as recruitment and training, criminal investigation and traffic control, and are each headed by a superintendent.

Most police functions are carried out by uniformed personnel. The exception is the Criminal Investigation Operations (CIO), the members of which are mostly plainclothes. CIO has an Information Bureau which consists of a Records Section, a Scientific Section and a Communications Section.

Police salaries and allowances are set by the Public Service Board. Police officers are eligible to join pension plans. Promotions are granted upon successful completion of tests and on the basis of internal ratings and

assessments. The Police Promotions Appeal Board hears appeals regarding denials of promotions.

**Western Australia Police Force.** The police force of Western Australia is headed by a commissioner who is aided by a deputy commissioner, assistant commissioner, and chief superintendent. There are 10 police districts in the state, each supervised by a superintendent or a senior inspector. The police department has three branches: Criminal Investigation, Traffic, and Liquor, Gambling and Firearms. The Criminal Investigation Branch has suburban and county branches. It operates a fingerprint and scientific bureau and a photographic section. It has a radio network covering the state. The Traffic Branch operates the Police Driver Training Wing and road patrols. It also is responsible for motor vehicle registrations and driver's licenses.

Members of the Western Australia Police Force work 40 hours a week. They receive 6 weeks of annual leave, increasing to 13 weeks after 10 years of service and by an additional 13 weeks for every 7 years of service thereafter. Sick leave is 168 days a year.

**South Australia Police Force.** The South Australia Police Force is headed by a chief secretary to whom the commissioner of police reports directly. The force is divided into seven regions and a number of branches. Regions are commanded by a superintendent. Region A has headquarters at Adelaide and is organized into five geographical divisions. Region B is headquartered at Thebarton and includes the Traffic Division. Region C has headquarters at Adelaide and includes the Criminal Investigation Branch and the Women Police. Both Region D, which includes five geographical divisions, and Region E, which includes six geographical divisions, are headquartered in Adelaide. Region F includes the Central Records Division, Prosecution Division, Communications Division and the Data Processing Section. Region G at Adelaide is the metropolitan region with one division that polices the city. The other units of the force includes Planning and Research, Juvenile Aid, Personnel and Emergency, Legal, In-service, and the Police Academy.

The Public Services handles correspondence, accounting, payroll, plant and equipment, property and buildings, purchases, personnel records and civil defense. The Legal and In-Services Branch provides legal research and advisory and in-service training courses and services. It publishes the police news bulletin. Management services, commanded by a superintendent, is responsible for collecting and collating information on police activities. The Planning and Research Branch organizes, directs and controls statewide surveys which are used to make recommendations and decisions. Management Services are also responsible for recruitment, examinations and placements. There is an Emergency Operations Group

attached to Management Services whose members have special skills in underwater recovery, sea rescue, and land search.

Region B consists of the Traffic and Transport Division, which operates highway patrols in country areas and foot-traffic police in urban areas. It includes an accident investigation squad and a motorcycle squad. Also part of Region B is the Transport Division, which maintains and repairs all police motor vehicles.

Region C is the home of the Criminal Investigation Branch (CIB). It has a number of specialized squads, such as the Homicide Squad, Break-in Squad, Motor Squad (which deals with automobile thefts), Fraud Squad, Consorting Squad and Anti-Larikin Squad (which investigates organized crime and gangs), Stock Squad (which handles sheep and cattle stealing), and General Squad. A subdivision of CIB is the Forensic Science Laboratory. The Women Police are also part of Region C.

Region F is the Communications Network which provides a 24/7 radio communications system. Region G has the largest number of police officers, and its members are on the beat in three eight-hour shifts. It has a number of divisions, such as the vice squad, drug squad, and the public parks squad.

South Australia Police Force personnel receive special allowances in addition to regular salary and paid sick leave and vacations. After three years of service, a constable is eligible to sit for an examination to first class constable. Promotion to senior constable comes automatically after a further four years of service. Promotion to higher ranks is based on successful completion of training programs.

*Northern Territory Police Force.* The police force of the Northern Territory is headed by a commissioner who is assisted by a superintendent and three chief inspectors. There are only 31 police stations throughout the territory, which is divided into five districts. Districts A and B are administrative districts. District A has two subdivisions, one concerned with firearms and licensing and the other with planning and research. The other three are operational units. C has two divisions (of which one is the CIB) and D has three geographical divisions. E covers a wide area, with Alice Springs as its principal urban center.

The Northern Territory Police Force has a number of sections with territory-wide responsibilities: Licensing, Prosecution, Communications, Training, Planning and Research, General Duties, Criminal Investigation and Traffic. The CIB, comprising the Criminal Intelligence Section, Drug Squad, Stock Squad, Forensic Science Section and Information Bureau, is by far the largest branch in the Northern Territory. The Information Bureau maintains criminal records, the fingerprint collection and the police library, and the central warrant

and missing persons bureau. The General Duties Police conducts highway and foot patrols, escorts prisoners and executes court warrants.

Salaries of Northern Territory police officers are fixed by an arbitration board. In addition to their regular salary they receive a district allowance based on hardship, night-shift-duty allowance, special duty allowance and a clothing allowance. They work a 40-hour week in five shifts of eight hours each. Beyond this limit, they receive overtime pay. Police officers receive recreation leave of seven weeks. After 10 years of service, they are entitled to a long service leave of two months for every five years of service. They also receive 10 days of sick leave with full pay and 10 days with half pay. Unmarried personnel receive free furnished quarters, and married personnel receive a housing allowance.

There is automatic promotion to constable first class after eight years of service and senior constable after 15 years of service. Promotion beyond senior constable is by examination.

*New South Wales Police Force.* The police force of New South Wales is headed by a commissioner who is assisted by a deputy commissioner, a senior assistant commissioner, and a number of assistant commissioners. Under the deputy commissioner are the Metropolitan Superintendent in charge of four subdistricts and country area superintendents E and F. The four subdistricts are divided into 20 divisions. Police operational branches include:

- Police Driving School
- Traffic Branch
- Water Police (under a chief superintendent)
- Licensing Branch concerned with firearms, liquor, real estate, and wool licenses
- Rescue Squad
- Criminal Investigation Branch with eleven specialized squads dealing with vice, break-ins, pawnbroking, auto theft, fraud, drugs, and armed holdups.
- Scientific, Technical, and Other Services
- Prosecution
- Women Police
- Public Relations
- Mounted Police
- Band

The uniform of New South Wales police consists of a two-piece navy blue tunic and trouser or tunic and skirt outfit in the winter. In the summer, the uniform

changes to a pale blue short-sleeved shirt for men and a pale blue two-piece outfit for women. Caps are banded in a checked material.

Police officers work a 40-hour week in eight-hour shifts. They are paid a regular salary augmented with clothing and overtime allowances. Vacation leave is 6 weeks per year with an extended 2 months for every 10 years of service. Sick leave is granted at the rate of 60 days per year on full pay and 30 days on half pay. They are granted pension on retirement at age 60. After 5 years constables are automatically promoted to first class and, after an additional 4 years, to senior constable. Promotion above this rank is by selection.

**Police at Work.** Police stations are scattered all over the country and differ widely in size. In Western Australia, some stations cover an area as large as 7,200 square miles. The one-man police station is common in Queensland. The officer generally spends part of his or her day in the police station attending to administrative work and the rest of the day on patrol.

Within major cities there are what are commonly called suburban police stations. These stations are generally staffed by 10 or 12 officers who perform both administrative tasks and patrols. Large cities have two kinds of patrols: general patrol and special patrol. Some units have police stations, patrol bases, and detective offices in the same building, while others house them in separate locations.

In terms of operational emphasis, three categories predominate: traffic, criminal investigation, and general duties. The last is a catchall category that includes patrol, public order, and station duties. In very broad terms, just over a quarter of all personnel are directly engaged in traffic control and criminal investigation. Police departments include both civilian and sworn employees. Generally speaking, apart from research, training, and radio dispatching duties, civilians have been kept out of police work. Civilians perform clerical, cleaning, and maintenance duties. The relationship of the civilian bureaucracy to the chief police officer varies according to the state. In some states, the secretary or the director of administration is a powerful figure rivaling the chief police commissioner in status. In other states he or she tends to be subordinate. In all cases, however, the chief police officer is the operational head with direct access to the minister.

A major feature of the Australian police service is that it is exclusively territory- or state-based, which means that a single agency provides metropolitan as well as urban and rural police services. Members normally begin their service in a metropolitan area. After a couple of years many are assigned to a smaller town. There is no clear pattern, however.

In those states having a metropolitan mobile patrol, such as South Australia and Queensland, patrol personnel operate from patrol bases. General-duty police work from traditional police stations, while detectives and traffic personnel operate from special premises. The reduced interaction between detectives and other police results in a reduction in the transfer of local knowledge and information. Area crime collator services are designed to overcome such disadvantages, but inevitably some loss of information transfer occurs.

The typical Australian police officer is male; over five feet, nine inches tall; between 20 and 30 years of age; Anglo-Saxon; and generally in modest physical condition. Reflecting a historical trend going back to the eighteenth century, females are significantly underrepresented at all levels. For many years there was a rule that forced policewomen to resign once they got married. Women are not permitted to work night shifts and are assigned tasks that are deemed suitable. Similarly, most police officers are white. Little effort is made to recruit minority or migrant groups into the service. There are very few Aborigines, and most of them are police aides.

There is a great divergence in the age, education, and training of police officers reflected in their professional attitudes and skills.

New recruits are required to meet strict physical requirements prior to entry and during their training period. However, once sworn into the service, little effort is made to maintain their physical condition, and there is no incentive to keep in shape. There is no provision for a weekly exercise period for members; before long the physical condition of most decline and they develop the appearance of their counterparts outside the service.

All police officers operate on a 24/7 basis the year through. Police officers are required to commence and complete duty at staggered hours. Duty rosters are drawn up and promulgated, usually a week in advance. Generally, police officers must work an eight-hour day and a five-day week. There is a great variance between general police hours of work and administrative hours of work from 9:00 A.M. to 5:00 P.M. The majority of police officers work in shifts.

There is some variety among the leave and other entitlements in the various states. Officers doing shift work are entitled to an additional annual leave. All police officers are covered by superannuation or pension schemes, which assures them of certain income on retirement or a lump sum payment.

The practice of a departmental funeral is still observed in most forces for those police officers killed in the line of duty. Some police forces have a departmental flag. Compared to the United States, fewer police

*A protester is arrested outside the West Australian Maritime Museum in Fremantle, Australia, March 1, 2005. The man was part of an impromptu republican demonstration that coincided with Britain's Prince Charles visiting the museum. AP IMAGES.*

officers are killed in Australia as victims of violence. However, they suffer considerable occupational stress and are occasionally assaulted in the execution of their duties.

**Uniforms.** All police officers other than plainclothes officers in criminal investigation departments are issued uniforms. Departmental designs vary between tropical and subtropical and temperate zones, but shades of blue predominate. Each police force has a different winter and summer uniform to accommodate the changes in temperature. Since the 1960s, short-sleeved and open-necked shirts are worn in summer and tunics are worn in winter. Some departments in South Australia provide a patrol jacket. Commissioned officers wear slightly different uniforms that display rank differences. The basic uniform is the same, but badges of rank and cap braid indicate their status. All police carry batons, handcuffs, and a notebook. The handcuffs and baton are carried prominently.

Officers of all ranks may wear service medals on formal occasions. When working, only ribbons displayed on the left breast are worn. The government issues a number of police service medals. The Long Service and

Good Conduct Medal is issued after 22 years of service. The National Medal is issued after 15 years, and the Queen's Police Medal is the highest award, issued to only two or three members in a year, for outstanding achievement. Victoria has its own Police Medal for Gallantry. All police commissioners issue internal accolades, such as "favorable records" or "commendations," to officers who have distinguished themselves or performed their duty in an exemplary manner.

**Structure and Organization.** Each state and territory police commissioner, subject to ministerial approval, has the discretion to establish a rank structure and hierarchy best suited to the needs of the locality. Hence there are some differences in number of ranks and their nomenclature. There is, however, a clear distinction in all agencies between commissioned and noncommissioned ranks. Commissioned officers are appointed by the executive council of their respective governments. Noncommissioned officers and constable ranks are promoted by the commissioner of police.

An officer is generally promoted to each rank after obtaining the necessary promotional qualifications.

However, there are exceptions to this rule. In Queensland, a senior constable, once he or she has served 15 years, is automatically upgraded to the rank of sergeant 3/C. There are no promotional examinations for the various ranks of commissioned officers. These officers, once they have obtained commissioned rank, are upgraded through the various levels—inspector through superintendent—at the discretion of the commissioner of police and the minister or executive council. Compared to the armed services and many overseas police forces, the proportion of commissioned and noncommissioned officers to other ranks in Australia may seem low. This low percentage affects negatively the career prospects of police personnel.

There is no great difference in the amounts paid to officers of the same rank in the various states. Pay is determined by the length of service in a particular rank. All police officers are entitled to extra allowances and benefits such as overtime.

A police officer may be transferred to any part of the state or territory to which he or she belongs. The transfer may be for a number of reasons as determined by the commissioner under relevant regulations. It may be to bring an understaffed police station to a more efficient level of personnel strength. Sometimes it may be punitive, in which case it may become the subject of a labor dispute, leading to the intervention of the labor union.

In no instance are police officers permitted to find employment in any outside task or occupation. To moonlight, police officers have to seek the permission of their superiors. Police officers are not permitted to work in certain occupations, such as casinos.

**Recruitment, Education, and Training.** Recruitment testing and standards vary from state to state, albeit slightly. In general the standards for employment require that they:

- pass a medical examination
- pass a police entrance examination or have completed high school
- receive clearance after a background investigation
- appear at a personal interview
- appear before a selection board
- complete an 11-week initial training course

Candidates must be at least 18 to 19 years of age and be Australian or British subjects by birth or naturalization.

Some states employ a recruit entry test battery that includes four cognitive tests, as in South Australia, or Otis Higher Test, as in Western Australia, or the ACER Higher Test, as in Tasmania.

Each state police force has its own training academies which provide recruit and in-training courses. Those agencies with cadet programs also either use academy resources for cadet training or, as in the case of Victoria, operate a separate cadet academy. The Commonwealth Police force operates the Australian Police College at Manly, New South Wales, a senior police training school for its own recruits as well as those from other states and nations.

Recruit courses average 20 weeks but vary greatly among states as to content. Generally two such courses are run in the course of a year. The syllabus covers four core areas: police law, education, practical subjects, and outstation duty. Practical subjects cover first aid, drill, self-defense, physical training, fingerprinting, and ballistics. In-service courses cover detective training, bomb disposal, first aid, traffic, and diving. Cadet courses consist of a two-year residential session. Cadets spend approximately five months on field work. Executive training has received greater emphasis in Australia in recent years. A small but growing number of police officers take tertiary studies and hold university degrees in police studies and law.

#### Police Statistics.

- Total Police Personnel: 44,982
- Population per Police Officer: 438

#### HUMAN RIGHTS

The government generally respects human rights, and the law and the judiciary provide effective means of dealing with the isolated instances of abuse.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 7,003. Of which:

- Murder: 3.7
- Assault: 708.5
- Burglary: 2,926.2
- Automobile Theft: 624.8

#### CORRECTIONAL SYSTEM

The principles, organization, and procedures of criminal justice are British in origin. Criminal law was separately codified in Queensland, Western Australia, and Tasmania. As a result, legal terminology and definitions vary greatly among states. The death penalty was abolished in federal jurisdictions in 1973 and since then in other states.

## *Australia*

The corrections system is entirely the responsibility of the states, and no prisons are maintained by the federal government. Prisoners sentenced by a court in the ACT are held in New South Wales prisons. The most modern penitentiary in the country is in Tasmania. The states operate a total of 89 prisons, of which New South Wales has the most and Tasmania the fewest. The percentage of open prisons varies with Western Australia leading with about 24% of its inmates in such facilities.

A high percentage of inmates in Western Australia are Aboriginals, but Queensland sends Aboriginals to reserves rather than to prisons. Aboriginal adults represent only 2.2% of the population but 20% of the prison population and 22% of the deaths in custody.

**Prison Conditions.** Prison conditions meet or exceed international standards. In 2001 there were 87 deaths in custody or during arrest.

### **Prison Statistics.**

- Prison Population Total: 24,171
- Prison Population Rate per 100,000: 120
- Pretrial Detainees: 20.4%
- Female Prisoners: 6.9%
- Juveniles: 0.1%
- Number of Prisons: 124, of which 81 are government-run prisons, 7 privately operated ones, 8 custodial centers, 15 court cell centers, and 12 periodic detention centers
- Official Capacity of the Prison System: 20,503
- Occupancy Level: 105.9%

*George Thomas Kurian*

# Austria

---

**Official country name:** Republic of Austria (Republik Österreich)

**Capital:** Vienna (Wien)

**Geographic description:** Austria enjoys a historically strategic location at the crossroads of central Europe, where it shares a boundary with the Czech Republic and Germany to the north, Liechtenstein and Switzerland to the west, Slovakia and Hungary to the east, and Italy and Slovenia to the south. Total land area is 52,114.4 square miles (83,870 square kilometers).

**Population:** 8,184,691 (est. 2005)

## LAW ENFORCEMENT

**History.** The Austrian police service (Bundespolizei/Bundesgendarmerie) finds its origins in Citizen's Watch, which was formed in 1221 to protect the life and property of Viennese citizens. In 1531 this Citizen's Watch evolved into an official Day and Night watch, although still carried out by citizens. The earliest urban police force was Vienna's City Guard of 1569, consisting of 150 men. By the beginning of the Thirty Years' War (1618–48), the City Guard consisted of 1,000 men organized as a regiment, individual companies of which took part in military campaigns. The soldiers of the guard were subject to the authority of the Imperial War Council, and the city was required to pay for their services. In 1646 the city set up its own Public Order Watch; serious frictions between the two bodies resulted in their replacement by a new service under a commissioner of

police in 1776. Its personnel were still made up of soldiers, either volunteers or assigned, but they failed to meet the city's needs because of a lack of training and continuity of service. Police functions were organized in a similar form in other large cities of the empire. It was not until a series of reforms between 1850 and 1869 that military influence over the police force was finally ended with the introduction of an independent command structure, a permanent corps of police professionals, training of officers in police skills, and distinctive uniforms and symbols of rank. The Gendarmerie was created by Emperor Franz Josef I in 1850 after the disorder and looting that accompanied the uprising of 1848. Initially composed of eighteen regiments and part of the army, its operational command was transferred to the Ministry for Interior in 1860 and wholly severed from the armed forces in 1867. Nevertheless, training, uniforms, ranks, and even pay remained patterned after the army. A special Alpine branch was formed in 1906, mainly to protect the part of Tirol that bordered Italy. Alpine rescue operations and

border patrols have remained an important Gendarmerie function. After the breakup of the monarchy in 1918, the Gendarmerie was transformed into a “civilian security force,” but still retained paramilitary characteristics. Austria’s annexation to the German Reich in 1938 led to the Gendarmerie merging with the German Police, to be restored to its old status as a uniform-wearing armed security force within the civil service following World War II. By 1964 the Gendarmerie had fully reconstituted itself and became an effective rural police force. The gendarmes saw a professionalism in the corps as training and pay gradually increased. As Eastern Europe began to open up in the 1980s, the Gendarmerie found itself facing increasing amounts of criminality and it took different forms than in the past. By 1993 the Gendarmerie had to realign itself with Austria’s security needs and the needs of the burgeoning European community. Austria’s accession to the European union and the Schengen agreements expanded the Gendarmerie’s role border security—no longer was the Gendarmerie responsible only for securing the Austrian borders, but the European Union’s Eastern border as well.

**Structure and Organization.** The most important law enforcement and security agencies are organized under the General Directorate for Public Security of the federal Ministry for Interior. The directorate is divided into two principle units: the *Bundespolizei* or federal police and the *Bundsgendarmerie* or rural police.

In most major towns, security is in the hands of the Federal Police. Each department is headed by a Director of Police, with the exception of the Vienna Police Directorate where the highest ranking officer is referred to as Chief of Police. The Federal Police Directorates are divided into *Kommisariate*, which are, in turn, divided into *Wachzimmer*. Within the Federal Police, there is the constabulary and officers belonging to the criminal investigations division. Furthermore, there are special taskforces called mobile operational units. The constabulary has middle duty, higher duty, and senior duty officers, also referred to as W3, W2, and W1 officers respectively.

The rural constabulary (Gendarmerie) operates in rural areas. In each state the district police divisions, which are, in turn, divided into police stations, are headed by a commander. The rural constabulary has special task forces referred to as special mobile groups. The antiterror squad is one of the special task forces of the rural constabulary. One important distinction between the federal police and the rural constabulary, apart from different uniforms, is the difference in authority. Federal police officers are government officials/civil servants who may summon and bring in the accused and the witnesses. Rural constabulary officers do not have the same status. They are not government officials/civil servants, and may only

request, rather than demand, the accused and the witnesses to come in for questioning. The rural constabulary, the constabulary, and the criminal investigators are referred to as *Wachkörper*, that is to say they are armed, uniformed, or part of an organization run along military lines whose tasks are of a policing nature.

While there are local police in Austria, they largely perform minor security roles or provide support to the Federal Police or Gendarmerie.

The typical Austrian police officer, whether Federal Police or Gendarmerie, is young, male, and educated at or beyond the high-school level. Over half are under the age of 35, and women make up a growing segment of the workforce.

Policing in Austria is similar to that of other Western nations as police officers work in shifts four or five days per week, totaling a 40-hour work week.

**Uniforms.** The Federal police will adopt a new uniform in 2005 that is reminiscent of the K.U.K uniforms of the early twentieth century. The formal uniform will be a five-button navy-blue coat with two breast pockets. Rank insignia is displayed on the lapel of the coat, which buttons at the neck, as well as on the left breast pocket. On the left shoulder is formal dress cord that also corresponds to rank. There are neither identifying numbers of name tags. The Federal Police patch is on the left sleeve midway down the arm. The police cap is peaked in front with the Federal Police emblem above a cord that highlights a short black bill; the remainder of the hat is navy blue. The dress slacks are navy blue with two silver stripes running along the outermost section of each pant leg. Shoes are black, but patrol personnel generally wear ankle-length boots. The duty uniform differs from the formal uniform in several ways. The coat is replaced with an open-necked navy blue shirt with silver epaulets that display rank; the cord on the shoulder is removed from the shirt. Officers wear a black tie with the shirt and can wear either a beret or police hat, depending on preference and assignment. Slacks are replaced with multipocketed tactical pants, and female officers have the option to wear a skirt depending on their assignment. In winter, the uniform is complemented by a navy blue heavy coat with a fur-lined collar.

From 1990 to 1995, the old Gendarmerie uniform was gradually replaced by a newer and substantially more practical general-purpose uniform. The Gendarmerie was the first police unit of Europe to get a uniform incorporating waterproof materials (Gore-Tex). The general-purpose uniform also introduced all-purpose trousers, suitable for formal or duty attire. The Gendarmerie redesigned its uniforms again in 2000. The uniform incorporated a general-purpose fleece jacket and a formal

jacket. Each part is in the new 2-color style (bluish gray) implemented with red Passepoil on chest and back. At the back of each is a reflecting signature “Gendarmerie.” The equipment belt can be worn outside of all three articles—the shirt, jacket, and trousers—to ensure rapid access to service weapons and equipment. The general-purpose jacket is implemented with a wind and waterproof diaphragm. The duty jacket has zippered sleeves to maintain body heat. The duty boots are waterproof and breathable (Gore-Tex) within a leather Cordura combination. In place of the ankle-high boots, a half-boot (waterproof and breathable) made of leather was introduced.

**Police Equipment.** There are four principal types of police vehicles: motor vehicles, boats, helicopters, and airplanes. The Austrian motor pool includes police patrol cars, traffic patrol cars, motorcycles, nonofficial vehicles for undercover and plainclothes officers, and transportation cars. The Gendarmerie has a fleet of specially converted Mercedes and BMW patrol vehicles, limousines, motorcycles, Jeeps, and special assault vehicles. The Aviation division of the Gendarmerie deploys Bell-206 and 212 helicopters as well as light aircraft. In the mountainous regions, the Gendarmerie uses a wide variety of all-terrain vehicles and snowmobiles in its daily operations.

In late 2003, the Ministry of Interior overhauled its information systems infrastructure and implemented a ministry-wide data collection tool to increase communication and productivity while reducing paper files, physical storage, and administrative costs. The Information Technology Division of the Ministry of Interior manages over 14,000 desktops for the Federal Police and Federal Gendarmerie spread over 1,700 locations.

The Federal Police have specially trained officers called *Kriminalbeamten*, or Criminalists, that are responsible for processing major crime scenes like those of homicides or where organized criminality is suspected. There are three principal branches of the *Kriminaldirektionen* or Criminalistics Division within the Federal Police:

- *Kriminaldirektionen* 1 is concerned with processing crime scenes involving the most complicated crime scenes and large amounts of evidence, economic and financial crimes, and crimes involving organized crime
- *Kriminaldirektionen* 2 is the general criminalistics division and handles a wide range of crimes according to the specifics of the criminal activity
- *Kriminaldirektionen* 3 carries out the technical tasks of forensic science and usually involves the laboratories and technicians

**Police dogs help authorities search outside a home in Austria where the bodies of slain infants were found, June 3, 2005.** After discovering the remains of one infant in a freezer, three more bodies were found throughout the residence. A 32-year-old woman confessed to killing the four infants in despair after giving birth. AP IMAGES.

Police dogs are used extensively in Austria. There are many categories of dog service, each using a specific breed of canine. The principal categories are: cadaver search, narcotics search, agriculture search, explosives search, watch/guard dogs. There are four major breeds of canines used by the Austrian police authorities: German shepherd, Malinois, rottweiler, and Doberman pinscher.

**Traffic Police.** Traffic enforcement in Austria is carried out largely by the Gendarmerie because of its larger jurisdiction in the country. The gendarmes of the transport departments complete special training courses in the area of transportation law, beyond the basic training they acquire at the federal academy. Gendarmerie traffic police are principally responsible for responding to accidents on motorways, enforcing speeding laws using stationary and mobile radar equipment, providing security for the transportation of money and financial

instruments of the central bank of Austria, and regulating the contents of commercial vehicles in Austria.

The duties of the traffic division of the Federal Police are similar to those of the Gendarmerie, but with a higher emphasis on reducing drunken driving. For instance, there were over 130,000 breath alcohol tests administered by the Federal Police in 2000.

Traffic Control Instruments (as of 2002):

- Stationary Radar Devices: 96
- Mobile Radar Devices: 427
- Laser Speed Measuring Instruments: 84
- Video Recording Devices: 86
- Breath Alcohol Measuring Instruments: 1655

**Criminal Identification and Forensics.** In addition to the forensic labs of the Federal Police and the Gendarmerie, there are five laboratories used by the police for assistance in evidence and forensic science. They are:

- United Nations Office on Drugs and Crime—Laboratory and Scientific Section
- University of Graz—Institute for Forensic Medicine
- University of Wien—Blutgruppenserologie
- University of Vienna—Institute of Forensic Medicine
- Identilab Forensic Services—Vienna

**Special Police.** The principal Special Police unit for Austria is the elite counterterrorism unit known as *Gendarmerieeinsatzkommando* (GEK) Cobra. This unit is made up of approximately 200 police gendarmes and falls under the command and control of the Ministry of Interior and the Directorate for State Security. This unit participates in undercover counterterrorist and counterespionage operations, in conjunction with the Directorate for State Security, and also serves as sky marshals onboard high-risk Austrian Airlines flights. Other responsibilities include protecting the President and Prime Minister as well as foreign Presidents and heads of states visiting Austria. The unit was created in response to the 1972 Munich Olympics terrorist attacks where a Palestinian terror group called Black September murdered eleven Israeli Olympic team members.

The GEK was formally created in 1978 within the Austrian Federal Gendarmerie, although the organization receives its orders directly from the General Secretary of Security, and was given national jurisdiction and even international jurisdiction when Austrian interests in other countries were affected. The GEK headquarters and training facilities are in Wiener-Neustadt, just south of the Austrian capital. A command group of 13 senior officers provides the operational leadership for the

GEK, while the administrative duties and management comes from the Gendarmerie's Central Command.

The GEK is a highly sought-after position for gendarmes and the competition level is high. All candidates for GEK must be graduates of the Gendarmerie's Academy and on active duty at their Gendarmerie station. GEK has trials twice a year at its headquarters to select candidates for its training platoon. The trials include medical, psychological, and physical examinations, shooting tests, and personnel introduction. Those candidates selected to the training platoon undergo a rigorous six-month training program with a curriculum covering the following topics: physical training, tactical operations training, combat shooting, rappelling, hostage-rescue exercises, airborne unit training, high-speed driving, firing out of moving cars and helicopters, technical equipment training, surveillance exercises, parachuting, and psychology.

The GEK prefers the 5.56mm Steyr AUG assault rifle as its principal weapon in counterterrorist situations, in addition to the 8mm Steyr TMP and the German 9mm Heckler & Koch MP5 submachine gun. The 9mm Glock 17 semiautomatic handgun equipped with flashlight has become the sidearm of choice for the GEK. The 7.62 Steyr SSG-CISM sniper rifle is used by GEK snipers in hostage-taking situations and scenarios needing long-range firing. The Remington M870 and the semiautomatic Frnachi SPAS-15 shotguns are used for close-assault engagements like house-storming and can be configured to fire less lethal munitions. The GEK is one of the best equipped and highly trained counterterrorism forces in Europe and benefits greatly from its relationships with its counterparts in other countries, Germany's GSG9 in particular.

**Police-Community Relations.** In the major metropolitan areas, and especially in the capital, the Federal Police have a very visible presence. It is not uncommon to see police officers on patrol, either by car or walking, and the relationship between the police and the citizenry should not be characterized as hostile or confrontational. The spirit of community-policing has permeated the Austrian police agencies and community interaction is generally encouraged because it improves public confidence in the police.

Respect for the law and devotion to social tranquility are engrained in the Austrian character. Law enforcement agencies are efficient and are regarded with respect. Since the late 1980s, however, instances of mistreatment of arrested persons and improper activities of the organs of security have made necessary measures to restore the public's confidence in the police.

**Education and Training.** Federal Police and Gendarmerie are civil service positions in Austria and have the following general civil service requirements for admission employment with the police:

- Austrian nationality
- Control of the German language in speaking, reading, and writing
- Completion of military service for male applicants
- Full capacity to act
- Personal and technical suitability
- Age of at least 18 years

Beyond these civil service requirements, there are specific requirements each applicant must meet before gaining an offer of employment and admission to police training. These requirements include:

- Between ages of 18 and 30
- Minimum size: 168cm for male, 163cm for female
- Must fall between acceptable limits of body mass index
- Superior physical fitness
- Successful completion of entrance examination

The entrance examination generally lasts 4.5 hours and covers four substantive areas: dictation, grammar, an intelligence examination, and a personality questionnaire. Successful applicants then undergo a medical examination that includes urinalysis and blood testing, HIV testing, and pregnancy testing for women. Minimum physical fitness standards are assessed following the medical examination. Males must perform 10 push-ups and females must perform 7 push-ups and both must complete an obstacle course error free in a maximum time of 40 seconds.

Upon the successful completion of the entrance examination and the certification of health and fitness, the applicant will receive a tentative job offer and given the rank of “Aspirant” or cadet. Each cadet must successfully complete *die Grundausbildung* or basic training course. This course is divided into three sections, and it can take from 21 to 24 months to complete the training. The first course is 15 months and covers the theoretical knowledge a police officer will need to properly perform his job. Every officer must demonstrate mastery of all appropriate legal regulations, unarmed self-defense, weapons proficiency, interpersonal relations, and police tactics. Officer safety and basic administrative skills are also included in the basic theoretical curriculum. The second course lasts 6 months and serves as a practicum for the police cadet. Officers are repeatedly subjected to

real-time scenario training, controlled hypothetical situation training, and skills practicums during these 6 months, concluding with a practical examination graded by training staff. The third course is a 3-month assessment of the skills and knowledge of each police cadet. During this time, the cadet is also encouraged to study for the final service examination, which he/she must pass to become a police officer or gendarme. The basic course for the *Bundespolizei* is completed at the Federal Police Headquarters in Vienna, where cadets can live in residence while they complete their training.

Basic training is similar for both the *Bundespolizei* and the *Bundesgendarmerie*, the Gendarmerie offers several advanced training courses for gendarmes who are promoted to middle and senior management. After five years as a gendarme, individuals can take a *mittlere Führungsebene* or middle-leadership examination for promotion to the Inspector rank. Selected officers enter a nine-month training course that prepares them for their role as middle leadership supervisors. Six months are spent teaching theoretical material on leadership, management, administration, evaluation, and addressing problems that police supervisors encounter. The final three months instruct the gendarme in an area of specialization, such as counterterrorism, criminalistics, border security, or canine duties, so that he/she can effectively run these special units upon return to his/her post. Before promotion, each candidate for middle leadership must pass an oral and written examination. For those select gendarmes chosen to become senior management and administrators, there is the *Offizierskurs* (Officer’s Course). Candidates participate in this course over a two-year period, while they keep their command positions. There are five modules each officer must complete, three theoretical and two practical, culminating in an oral examination. Each officer receives executive-style training in areas of administration and management, including budget issues, personnel issues, strategic planning, and critical incident management.

#### Police Statistics.

- Federal Police: 15,150 women and men (total)
- Federal Police—Service: 10,000
- Federal Police—Criminal Service: 2,400
- Federal Police—General Administration: 2,750
- Federal Gendarmerie: 15,450 women and men (total)
- Federal Gendarmerie—Gendarmes and Civil Service: 14,700
- Federal Gendarmerie—Civilian Employees: 750
- Ratio of Police to Citizens: 1:267

**HUMAN RIGHTS**

The Austrian government generally respects the human rights of its citizens, with few exceptions. There are occasional reports of abuse by police, which involved infrequent beatings, but mainly involve verbal abuse, threats, and harassment. There were 1,251 complaints against federal police officials; of those, 1,160 were dropped. Sixteen cases were brought before the courts, and 2 officers were convicted of using unjustified force; 74 cases were pending at year's end. Types of abuse ranged from slander to kicking and hitting, which resulted mainly in bruising. Some of the violence appeared to be racially motivated. Austria has designated a committee in the Interior Ministry to ensure that the police and Gendarmerie respect human rights while carrying out their duties. Since its founding, the committee has issued 230 recommendations regarding the improvement of human rights in the country, including: Greater transparency for nongovernmental organizations regarding police documentation, police handling of inmates on hunger strikes, and proper police techniques in dealing with unruly suspects.

In 2003 foreign observers, including the European Court of Human Rights, criticized the use of libel procedures to protect politicians, which they argued hampered freedom of speech and the press. The small print media consisted of 16 daily newspapers, 6 of which received special subsidies from the government. After the merger of two major publishing groups, News and Mediaprint in 2001, one company controlled 60 percent of Austria's daily newspaper market and almost 100 percent of the magazine market. European Union (EU) authorities criticized the media monopoly. All newspapers were independent. There were 49 commercial and 12 noncommercial radio stations. By year's end, 75.3 percent of citizens listened to the Austrian Broadcasting Corporation, a public but independent radio station in which the government owns shares but has no control over content; 21.5 percent listened to private stations.

In July 2002 Parliament adopted an immigration reform proposal, effective January 1, which harmonized residence and employment provisions and required permanent legal residents to take German language and civics courses for the purpose of integration. Immigrants who entered the country after January 1, 1998, need to show a basic knowledge of the German language and an understanding of the country's culture when applying for an immigrant visa. Those immigrants who fail to complete the courses by various deadlines would face financial penalties and deportation or expulsion. Annual immigration quotas remained static at approximately 8,000 per year, although there have been shifts in the distribution among the categories. In 2002 the number

of illegal aliens intercepted at national borders was 48,436, a slight decrease from the previous year.

There was some governmental and societal discrimination against members of some nonrecognized religious groups, particularly those considered to be sects. There were neo-National Socialist, right-wing extremist, and xenophobic incidents during the year.

Trafficking in women for prostitution remained a problem, which the government took steps to combat. In 2002 the Interior Ministry, which is the primary government agency involved in antitrafficking efforts, reported that there were 70 complaints filed under Article 217, of which 27 resulted in convictions. There were 58 cases filed under Article 105, resulting in 15 convictions. Cases filed for alien smuggling under the Aliens Act were much higher, affirming that many traffickers were prosecuted under this section of law. In 2002 there were 1,988 cases filed, leading to 281 convictions.

**CRIME**

The Federal Ministry of the Interior produces annual statistics on crime based on the annual number of crimes reported to police. Since February 2000 the criminal offense figures have been collected electronically ("crime statistics online"), whereas previously, count sheets had been used. Crime in Austria is broken into two categories: felonies and misdemeanors. Felonies, considered to be the most serious crimes, carry the stiffest penalties and include murder, grievous bodily injury, robbery, burglary, fraud, and sexual crimes. Misdemeanors include public order crimes, obstruction of justice, damage to another's property, and minor thefts. Person-related crimes (homicides/attempted homicides, crimes against liberty as well as sexual crimes) have a traditionally high clearance rate, whereas anonymous crimes have a relatively low clearance rate.

**Crime Statistics.** According to the "Crime Report 2001—Statistics and Analysis," the law enforcement authorities in Austria recorded 522,710 criminal offenses liable to prosecution, of these were 418,967 misdemeanors and 103,743 crimes. The increases in the counterfeiting of money and the passing of counterfeit money were mainly due to the currency switchover, as criminals tried to bring their stocks of counterfeit old currencies on the market until the end of the dual currency phase.

The number of car thefts declined. In 2001 the law enforcement authorities recorded 5,623 car thefts in Austria, which was a decline by 612 cases (–10%), compared to the previous year (6,235). This figure also included the cars (1,407) that were stolen from Austrians abroad. With a clear-up rate of 7%, the chances of getting

back a car stolen abroad are slim. The cars most frequently stolen were manufactured by VW, Audi, Mercedes, BMW, Opel, Ford, and Skoda. In 2005, 302 stolen cars totaling €5,453,000 were seized at the Austrian borders. In the car theft statistics Austria continues to rank in the lower third among EU member states. Almost half of all stolen cars (44%) were found. In the future, data on car thefts shall be electronically recorded in a database.

In 2001 there were as many right-wing extremist acts as in 2000, while left-wing extremist acts declined sharply. In 2001, 335 right-wing extremist-motivated acts took place, which led to 528 police reports. Most reports were made for violation of the law banning Nazi activities (269) as well as for violation of the Criminal Code (133). Criminal offenses in the field of left-wing extremism declined drastically, compared to 2000, with only 52 offenses recorded.

In 2001, 48,659 persons (an increase of 6.4% from 2000) who had illegally entered or stayed in Austria were detained. This increase was mainly due to the migration wave from Afghanistan. Two thousand two hundred and ninety-four of the detained persons were traffickers. The illegal immigrants came from 138 countries, most of them from Afghanistan (7,665), Romania (7,449), Ukraine (5,390), Yugoslavia (3,517), and Iraq (2,443). In 2001, on each trip, a trafficker brought, on average, six to seven persons illegally to Austria. In 2000 this figure was still down to four persons. Since 1993 the number of persons entering Austria illegally has been increasing steadily. In 1993 the number of detentions had been one twentieth of that in 2001. More than 16,500 of the detained persons had come to Austria across internal borders (Schengen countries), in particular, from Italy. These people were mainly Romanian and Ukrainian citizens.

In 2001 the law enforcement authorities seized more cocaine, heroin, and ecstasy, and less cannabis. There were 21,862 cases pursuant to the Addictive Drugs Act reported in 2001. Twenty-one thousand three hundred and two cases referred to offenses in connection with addictive drugs, which is an increase of 20% compared to the previous year (18,125), and 560 cases related to offenses involving psychotropic substances. The increase was greatest in Salzburg (104.87%) and in Carinthia (61.58%). In the federal capital of Vienna, the rate increased by 18.71%. The amount of seized cocaine quadrupled compared to 2000; heroin increased by 25%, 2000 already being a "record year," and the increase in seized ecstasy was 58%. Federal police and Gendarmerie removed addictive drugs amounting to €15 million from the illegal drug market. Organized drug traffic in Austria is dominated mainly by foreign criminal groups. These groups use Austria because of its geographical position as a transit country to ship the drugs to other European countries.

## CORRECTIONAL SYSTEM

Corrections in Austria finds its origins in the Josefine Code of 1787, which declared that there was no crime without a law. This code was subsequently revised in 1803 and 1852 and has since remained the basis of the current Penal Code. The Austrian Penal Code was quite progressive in its construction, incorporating several prohibitions against torture, capital punishment, and even imprisonment in chains. The death penalty was abolished for the second time in 1919, only to be reinstated in 1934 and again abolished in 1950. 1932 saw the creation of workhouses, which are still in use today, dedicated to housing petty criminals over 18 years of age who are unable or unwilling to find employment. In 1954 a commission was appointed to reform the Penal Code in response to the abuse of criminal justice by regimes in the two world wars. One uniquely Austrian characteristic is the distinction in law among three classes of lawbreakers: those who can be reformed, those who commit impulse crimes, and those who are "incurable."

The Penal Code was revised again in 1967 to emphasize rehabilitation, education, and inmate labor, rather than retributive punishment. Inmates were allowed to earn wages and programs were created to assist inmates in their reintegration into society. The Ministry of Justice, through the Prison Administration, is responsible for the maintenance and regulation of all prisons, including county jails. Until the late 1980s, Austria averaged more than 100 inmates per 100,000 members of the population, giving it one of the highest prison rates in Europe. The pretrial detention rate was high, as was the proportion of unconditional sentences. Moreover, prison sentences were relatively long, with only sparse use being made of parole. To combat the high incarceration rate, changes in the sanctions system were introduced to encourage judges to make more use of suspended sentences, and stimulate the release on parole. On average, the prison rate has been steadily decreasing, with a daily average of 6,915 prisoners in the first half of 2001, compared to the 8,050 of 1986.

**Prison Conditions.** Prison conditions generally met international standards. Male and female prisoners were held separately, as were adults and juveniles. Pretrial detainees were held separately from convicted criminals. The government permits prison visits by independent human rights observers.

### Prison Statistics.

- Prison Population Total (October 2003): 8,114
- Prison Population Rate per 100,000 (November 2003): 100

*Austria*

- Pretrial Detainees/Remand Prisoners: 26.8%
- Female Prisoners: 5.7%
- Juveniles/Minors/Young Prisoners: 2.5%
- Foreign Prisoners: 33%
- Number of Institutions: 29
- Official Capacity of the Prison System (October 2003): 8,022
- Occupancy Level % (October 2003): 101.1

Recent prison population trend (year, prison population total, prison population rate as a percentage):

1992	6,913	(87%)
1995	6,180	(77%)
1998	6,962	(86%)
2001	6,915	(85%)

*Daniel Mabrey*

# Azerbaijan

---

**Official country name:** Republic of Azerbaijan  
(Azərbaycan Respublikası)

**Capital:** Baku (Bakı)

**Geographic description:** Shares borders with Georgia, Russia, Turkey, Iran (Azerbaijan proper, and Azerbaijan-Naxçıvan exclave), and Armenia (Azerbaijan proper, and Azerbaijan-Naxçıvan exclave). Azerbaijan is also adjacent to the Caspian Sea.

**Population:** 7,911,974 (est. 2005)

## LAW ENFORCEMENT

**History.** Oil wealth precipitated a prolonged power struggle in Baku following the Russian Revolution of 1917. The nationalists initially seized control and enlisted the support of the British, who allegedly authorized the execution, in 1918, of 26 leading local communists (the “Baku Commissars”), in an unsuccessful attempt to destroy the Bolshevik power base in the oil industry.

Eventually, a mainly Russian and Armenian group of Baku Bolsheviks declared a Marxist republic in Azerbaijan. Muslim nationalists separately declared the establishment of the Azerbaijan People’s Democratic Republic in May 1918 and formed the “Army of Islam,” with substantial help from the Ottoman Turkish army, to defeat the Bolsheviks in Baku. The Army of Islam marched into the capital in September 1918, meeting little resistance from the Bolshevik forces. After some violence against Armenians still residing in the city, the new Azeri government, dominated by the

Musavat Party, moved into its capital. Azerbaijan was occupied by Ottoman Turkish troops until the end of World War I in November 1918. British forces then replaced the defeated Turks and remained in Azerbaijan for most of that country’s brief period of independence.

Facing imminent threat from the Red Army, Azerbaijan attempted to negotiate a union with Persia, but this effort was moot when the Red Army invaded Azerbaijan in April 1920. Russian leader Vladimir Lenin justified the invasion because of the importance of the Baku region’s oil to the Bolsheviks, who were still embroiled in a civil war. The Red Army met little resistance from Azeri forces because the Azeris were heavily involved in suppressing separatism among the Armenians that formed a majority in the Nagorno-Karabakh area of south-central Azerbaijan. In September 1920, Azerbaijan signed a treaty with Russia unifying its military forces, economy, and foreign trade with those of Russia, although the fiction of Azeri political independence was maintained.

The Soviet invasion began a seventy-one-year period under total political and economic control of the state. The borders and formal status of Azerbaijan underwent a period of change and uncertainty in the 1920s and 1930s, and then they remained stable through the end of the Soviet period in 1991.

In late 1921, the Russian leadership dictated the creation of a Transcaucasian federated republic, composed of Armenia, Azerbaijan, and Georgia, which in 1922 became part of the newly proclaimed Soviet Union as the Transcaucasian Soviet Federated Socialist Republic (TSFSR). In this large, new republic, the three subunits ceded their nominal powers over foreign policy, finance, trade, transportation, and other areas to the unwieldy and artificial authority of the TSFSR. In 1936 the new "Stalin Constitution" abolished the TSFSR and the three constituent parts were proclaimed separate Soviet republics.

The first communist president of Azerbaijan was the activist and writer Nariman Narimanov. In the "honeymoon" period of the Soviet state, Narimanov became a popular leader, despite the fact that he was responsible for numerous killings and deportations. In the end, Narimanov was murdered by Stalin's agents in 1925.

The German Wehrmacht and Luftwaffe mounted great pressure on the Caucasus region in order to make more resources available to the oil-thirsty German war machine. During World War II, Germany managed to push the Soviets eastward. By the summer of 1941 they occupied Grozny in Chechnya, leaving only a thin corridor along the Caspian to link Azerbaijan with the rest of the USSR. The Germans, however, were pushed out of the region by the harsh Russian winter and Soviet bullets.

During Stalin's regime, Azerbaijan suffered, as did other Soviet republics, from forced collectivization and far-reaching purges. Yet, during the same period, Azerbaijan also achieved significant gains in industrialization and literacy levels that were impressive in comparison with those of other Muslim states of the Middle East at that time.

After Stalin, Moscow's intrusions were less sweeping, but nonetheless authoritarian. In 1959 Nikita Khrushchev, first secretary of the Communist Party of the Soviet Union (CPSU), moved to purge leaders of the Azeri Communist Party (ACP) because of corruption and nationalist tendencies. Leonid Brezhnev, Khrushchev's successor, also removed ACP leaders for nationalist leanings, naming Heydar Aliyev in 1969 as the new ACP leader.

Aliyev emerged as the most influential Azeri politician during the postwar years and was, successively, head of the Azeri KGB (1967), head of the republic itself (1969), and then a full member of the Soviet Politburo

(1982) and first deputy chairman of the USSR Council of Ministers. However, Mikhail Gorbachev removed him in 1987, ostensibly for health reasons, although Aliyev was later accused of corruption.

In the fall of 1989, the nationalist opposition Azeri Popular Front (APF) led a wave of protest strikes expressing growing political opposition to ACP rule. Under this pressure, the ACP authorities bowed to opposition calls to legalize the APF and proclaim Azeri sovereignty.

In January 1990 Soviet tanks were brought into Baku, ostensibly to prevent programs against the Armenians which were taking place in the city. The exercise, in the course of which more than 100 Azeris were killed, was actually aimed at restoring Communist power in the republic. In this it was successful, but in the long term, the episode proved decisive in turning the populace against Moscow, becoming known as Black January and a reference for Azeri independence. The Communist Party retained power in multiparty elections, but parliament faced opposition for the first time.

Azerbaijan declared itself independent from the USSR in August 1991, and became a member of the Commonwealth of Independent States. In 1992 Abulfaz Elchibey, leader of the Popular Front Party, was elected president, but he was ousted by the Parliament a year later, after a military mutiny. Aliyev, leader of the Azerbaijan Communist Party from 1969 to 1982, assumed power and was confirmed in office by an election.

Aliyev promoted exploitation of the country's oil resources through agreements with Russia and several Western oil companies for development of oil fields in the Caspian Sea. In the November 1995 elections, which were condemned by international observers as rigged, voters elected a new parliament that was dominated by Aliyev's party and approved constitutional changes that expanded his power.

Aliyev was reelected in 1998, and his New Azerbaijan Party retained power in the November 2000 parliamentary elections. In August 2003 the ailing president appointed his son, Ilham Aliyev, as the country's prime minister. The president withdrew from the October 2003 election in favor of his son, who was elected by a landslide; the balloting was criticized by independent observers as neither free nor fair. The elder Aliyev died two months after the election.

**Structure and Organization.** Under the Police Act of 1999, the Ministry of Internal Affairs and the Ministry of National Security are responsible for internal security and report directly to the President. The MIA oversees the local police forces in the capital, Baku, and in the regions; it also maintains internal troops trained in civil

**Local police detain a protestor in Baku, Azerbaijan, May 21, 2005.** Police forces dispersed crowds headed toward the planned location of an antigovernment rally that was prohibited by Azerbaijan authorities. Several demonstrators were beaten with batons and arrested. AP IMAGES.

defense. The Ministry of National Security has a separate security force.

Little information regarding its structure and organization is readily available. Basic figures, such as the number of employees, are uncertain. In 2003 the Minister reported in an interview that there were 23,600 personnel, though it is uncertain if this indicated only police officers or the entire Ministry staff. Some reports have the figures reaching as high as 60,000.

According to a presidential decree, as of September 1, 2003, the country's minimum wage of \$5.60 (27,500 manats) was raised to \$9.20 (45,000 manats) per month and would be raised again to \$12.25 (60,000 manats) on January 1, 2004. The minimum wage for calculating pensions was \$17.35 (85,000 manats) per month. Several presidential decrees in 2003 raised the minimum wage of most government employees, including employees of the Ministry of Internal Affairs, by 50 to 100%. In June 2004 President Ilham Aliyev reportedly signed a

decree raising police salaries again. Reportedly, the salaries of high-ranking police officers and civil employees of the police agencies would increase by 100%. The salaries of employees of special purpose and rapid-reaction units would increase by 200%.

The recommended monthly wage level to meet basic subsistence needs is estimated to be \$96 (470,400 manats) per person. Many workers rely on the safety net of the extended family or on remittances from relatives working in Russia. Combinations of these and other strategies are the only way for broad sectors of the urban population to reach a subsistence income level. Police salaries are said to range from \$150 to \$300 per month. In any event, corruption is widespread throughout the country and has been noted particularly in law enforcement agencies. Before his death, President Heydar Aliyev publicly castigated the traffic police for its persistent demands for bribes from the country's drivers. The other main source of visible corruption is payment of protection fees to

neighborhood police. Azerbaijan has a reputation for being one of the most corrupt countries in the world, in the company of Colombia and Nigeria.

In most cases, the government takes little action to punish police who break the law. The Minister of Internal Affairs reports that the Ministry took disciplinary action, including dismissals, against more than 200 police officers for the violation of human rights and civil liberties in 2003. Much of the reported human rights violations appear to be in the address of the Organized Crime Control Department, which reports directly to the Minister. Reported violations include torture and abuse of detained members of the opposition party. None of the officers involved were brought to trial.

According to the Law on the Police, each officer takes an oath at a swearing-in ceremony before the country flag, saying the following words: "I swear to follow, from the moment of starting my police service, the Constitution and other Laws of the Azerbaijan Republic, respect human rights and freedoms, strictly adhere to the rule of law, execute my responsibilities with honor and honesty, to be disciplined, protect public order and public safety bravely and sacrifice my life if needed."

## CRIME

**Narcotics.** Azerbaijan emerged as a narcotics transit route several years ago because of the disruption of the "Balkan Route" due to regional conflicts in several countries of the former Yugoslavia. Narcotics originating in Afghanistan enter Azerbaijan from Iran or cross the Caspian Sea from Central Asia and continue on to markets in Russia and Europe. Azerbaijan shares a border with Iran, and its border control forces are insufficiently trained and equipped to patrol it effectively. Iranian and other traffickers are exploiting this situation. Drug enforcement officials suspect that traffickers may attempt to use new direct flights between Kabul and Baku as an alternate route, but there is no evidence so far to support this theory. Azerbaijan cooperates with Black Sea and Caspian Sea littoral states in tracking and interdicting narcotics shipments, especially morphine base and heroin. Caspian Sea cooperation includes efforts to interdict narcotics transported across the Caspian Sea by ferry.

Consumption and cultivation of narcotics are comparatively low, but levels of use are increasing. Approximately 18,000 people are registered in hospitals for drug abuse or treatment in Azerbaijan; the actual level of drug abuse is believed to be many times higher. The government has begun education initiatives directed at curbing domestic drug consumption, particularly among students. During 2003 the main drugs seized were cannabis and opium.

In 2003 the Ministry of Internal Affairs continued "Operation Hash-Hash," a poppy and cannabis cultivation and storage eradication program, in several parts of the country. This operation seized and destroyed more than 200 tons of narcotic plants and 152 kilograms of other narcotic substances. During the first ten months of 2003, law enforcement authorities discovered and destroyed 291 tons of hemp and poppies that were under cultivation. Cannabis and poppy are cultivated illegally, mostly in southern Azerbaijan. As an example of daily activity, every day 70 kilograms of heroin, 19 kilograms of opium, 12 kilograms of hashish and 10 kilograms of marijuana arrive in the city of Sumgait and are transited to Russia and Georgia.

There were 1,828 drug-related arrests during the first ten months of 2003, mostly small-time traffickers and users. Of those arrested, 32 were foreign citizens. Police lack basic equipment and have little experience in modern counternarcotics methods. Border control capabilities on the border with Iran, and Azerbaijan's maritime border units, are inadequate to prevent narcotics smuggling. An Azerbaijani newspaper reported that in the city of Sumgait alone there are 144 drug traffickers operating and that drug trafficking in the city is controlled by four large groups. The newspaper also quoted British experts as saying that more than 80% of villas in the South Caucasus have been built using drug money. Reportedly, 106 villas worth \$642 million have been built in Baku alone with the proceeds from drug trafficking.

The Ministry of Internal Affairs has continued its antidrug program, which organizes local counternarcotics police officials in several areas of the country to work closely together across local jurisdictions. Two new Customs Committee training facilities, completed in 2003, provide training in border-interdiction techniques to Customs officers.

Azeri law enforcement and computer experts met with their counterparts from Georgia, Ukraine, Uzbekistan, Azerbaijan, and Moldova (the so-called GUUAM countries) in Baku for 90 days in the fall of 2003 to draft and implement an action plan for the GUUAM Virtual Law Enforcement Center. The virtual center is organized around an encrypted system of information exchange among the law enforcement agencies in member countries, with the goal of coordinating efforts against terrorism, narcotics trafficking, small arms, and trafficking in persons.

In 2003 the State Commission together with the United Nation's South Caucasus Anti-Drug Program, a five-year regional initiative, established a resource center and information network that provides access to a central database of information pertaining to narcotics control.

In 2003 the Export Control and Related Border Security (EXBS) program of assistance to the Azerbaijan Border Guards and Customs services expanded. EXBS training and assistance efforts, while aimed at non-proliferation of weapons of mass destruction, directly enhance Azerbaijan's ability to interdict all contraband, including narcotics. During 2003 EXBS sponsored numerous boarding officer and law enforcement courses for the Border Guard Maritime Brigade. These courses included extensive instruction on conducting at-sea law-enforcement boardings, and included training on defensive tactics, arrest procedures, hidden-compartment identification, smuggling detection, and use of force. EXBS also hosted numerous conferences and training sessions aimed at nonproliferation efforts in Azerbaijan, including a Department of Defense/FBI Counterproliferation training team, and a Department of Defense "Counterproliferation Awareness Training" course. In addition, in 2003 EXBS purchased or repaired Border Guard and Customs communications equipment, vehicles, vessels, and border-crossing x-rays.

Hampering these efforts, corruption permeates the public and private sectors, including law enforcement. Government officials have remarked on the gravity of the problem. Current legislation has proven inadequate to address police and judicial corruption as salaries remain low and many officials turn to corruption to supplement inadequate incomes to support themselves and their families.

Some 1,253 drug-related crimes were registered in the country in the first half of 2004, according to the state drug control commission.

During this period, the drugs seized amounted to over 118 kilograms: heroine 5.6 kilograms, opium 26.1 kilograms, hashish over 3 kilograms and marijuana 83.5 kilograms. In addition, 2,622 pills and 363 ampules of psychotropic substances were detected.

Moreover, police confiscated and destroyed 74.1 tons of illegally grown and wild narcotic plants.

From January to June 2004, 31 citizens of Iran, 10 citizens of Georgia, 2 citizens of Russia, 1 from Ukraine, and 1 from Israel were detained for committing drug-related crimes.

More than 200 kilograms of drugs and psychotropic substances were seized in Azerbaijan in 2003. A total of 2,069 drug-related crimes were registered. Criminal proceedings were instituted against more than 1,800 people, including 47 foreigners. Among them were 21 citizens of Iran and 17 Russians. Some 35 kilograms of drugs were confiscated from the foreigners. About 300 metric tons of drug-containing plants were found and destroyed in the country in 2003.

**Trafficking in Persons.** There are no laws that specifically prohibit trafficking in persons, although traffickers may be prosecuted under articles prohibiting forced prostitution, forced labor, and forgery of travel documents; trafficking in persons remains a problem. Corruption by officials facilitates the activity.

Under the Criminal Code, the act of forcing an individual into prostitution carries a 10- to 15-year jail term, which is a harsher sentence than in the previous code. The Criminal Code provides penalties for persons who enslave, rape, or coerce children into prostitution. The Criminal Code is not limited to citizens, but it has no extraterritorial effect.

In 2003 there were 17 cases of "coercion into prostitution" and three cases of "coercion of minors into prostitution or immoral activities" referred to the courts. The previous year, four persons whom international organizations considered to be traffickers were prosecuted under forgery laws in the Criminal Code.

According to the International Organization for Migration (IOM), the country was primarily a country of origin and a transit point for trafficked women, men, and children. In a 2002 report, the IOM documented approximately 32 cases of trafficking victims from the country. The organization reported that Azeri, Russian, and Georgian women were most often trafficked from, or through, Azerbaijan to the United Arab Emirates and Turkey to work in the sex industry. There were also reports of internal trafficking from the rural regions to the Azeri capital, Baku. Primarily Iranians, Iraqis, Afghans, and migrants from south Asia were smuggled via the country to Europe—particularly to Germany, Sweden, France, and the Netherlands—and possibly the United States, where they may have had their passports confiscated, been subjected to forced labor, and/or sought asylum. Traffickers generally target women; however, there are also cases in which men and children are victims of trafficking.

Traffickers' identified by the IOM were either foreigners or ethnic Azerbaijanis who acted in loose international networks, probably without central coordination. Victims were approached directly and indirectly through friends and relatives. Traffickers also used newspaper advertisements offering false work abroad.

According to the Society for the Defense of Women's Rights, draft-age men seeking to escape military service in 2000 were invited by local traffickers to work in the hotel industry in Turkey, but ended up in male brothels. Another report indicated that families of young women had been approached by individuals claiming that visiting Iranian businessmen had seen their daughters and wished to marry them. Following parental permission for such marriages, the women were transported to Iran to work as

**Table 1. Azerbaijan, Crime Statistics, 1998–2000**

	1998	1999	2000
Total Recorded Crimes	14,937	14,400	13,958
Intentional Homicides, Completed	280	242	226
Assaults	219	197	200

[http://www.unodc.org/unodc/crime\\_cicp\\_survey\\_seventh.html](http://www.unodc.org/unodc/crime_cicp_survey_seventh.html)

prostitutes. According to the IOM, families sometimes willingly married their daughters to wealthy men in Iran and turned a blind eye to their outcomes.

The Ministry of Internal Affairs, the Ministry of Labor and Social Protection, the Ministry of National Security, and the Border Guards are responsible for antitrafficking efforts. There are no government public antitrafficking campaigns. There is no mechanism to return trafficked women to Azerbaijan. According to the IOM, there are deportations of Azerbaijani and third-country nationals back to the country for trafficking or prostitution, particularly by Turkey and the United Arab Emirates, but the government has no program to assist trafficked victims who are returned to the country.

Several nongovernmental organizations and the State Committee for Women's Issues deal with the problems of trafficking in women and prostitution. The IOM provides training to domestic nongovernmental organizations to operate emergency hotlines and secure accommodations for trafficking victims and conducts awareness campaigns; in 2002 it completed a study of trafficking in the country.

**Crime Statistics.** Crime statistics for the years 1998 to 2000 are listed in Table 1.

## HUMAN RIGHTS

The President of Azerbaijan dominates the executive and legislative branches of government. Ilham Aliyev was elected President in October 2003 in an election marred by numerous serious irregularities. Parliamentary elections in the past several years featured similar irregularities, resulting in some domestic groups regarding the parliament as illegitimate. Opposition members made up only a small minority of the Milli Majlis' (Parliament) 125 deputies. The Constitution provides for an independent judiciary; however, the judiciary does not function

independently of the executive branch and is corrupt and inefficient.

The government's human rights record remains poor. The government continued to restrict citizens' ability to change their government peacefully. Law enforcement officers killed one person at a postelection demonstration on October 2003 that turned violent. Police tortured and beat persons in custody, including several opposition members, and used excessive force to extract confessions. In most cases, the government took no action to punish abusers, although the government reportedly took disciplinary action against more than 200 police officers. Prison conditions remain harsh and life threatening and some prisoners have died as a result of these conditions. Arbitrary arrest and detention and lengthy pretrial detention continue to be problems.

The government continued to restrict some freedom of speech and of the press, and police used excessive force and continued to harass journalists during 2003. The government restricted freedom of assembly and forcibly dispersed several demonstrations held without a permit, and law enforcement officers beat protestors at several demonstrations during the year. The government continued to restrict freedom of association by refusing to register some political parties and harassing domestic human rights activists and nongovernmental organizations. There were some restrictions and abuses of religious freedom, and lower-level and local government officials continued to harass some "nontraditional" religious groups. Violence against women, societal discrimination against women and certain ethnic minorities, and limitations of some worker rights remain problems.

Despite a cease-fire in effect since 1994, minor outbreaks of fighting with Armenia over the Nagorno-Karabakh enclave occurred during the year, resulting in the deaths of civilians and combatants. Armenian forces continued to occupy an estimated 16% of Azerbaijan's territory (including Nagorno-Karabakh); this fact continued to dominate national politics and undermine democratic and economic development. The government did not exercise any control over developments in the territories occupied by Armenian forces, and little verifiable information was available on the human rights situation there.

The International Committee of the Red Cross (ICRC) repeatedly urged the Azerbaijani and Armenian governments to provide information on the fate of those missing in action since the fighting over Nagorno-Karabakh began. Since the early 1990s, the ICRC has collected from concerned family members the names of approximately 2,300 missing Azerbaijani citizens allegedly held by Armenia. The government estimated the number to be closer to 4,922.

Security officers forcibly disrupted some demonstrations and in some cases harassed, beat, and detained some opposition party members, demonstrators, and journalists, causing injuries, and arrested several persons, whom they sometimes beat in detention. Following violent disturbances in Baku on October 16 after the presidential election, Ministry of Internal Affairs personnel reportedly detained and tortured several opposition leaders. Human Rights Watch (HRW) documented numerous cases in which members of the MIA's organized crime unit used electric shock, severe beatings, and threats of rape to torture detainees. According to HRW, police used severe beatings and torture to extract confessions, and to pressure detainees to sign false statements denouncing the opposition and implicating opposition leaders in the post-election violence. Law enforcement authorities conducted a wave of politically motivated detentions and arrests of more than 700 election officials, opposition members, and journalists across the country. Through the end of 2003, the government continued to hold many political prisoners and infringe on citizens' privacy rights.

Police used excessive force against journalists at several pre- and postelection events. On September 8 police harassed or struck journalists from seven news services in front of the Baku police station as they gathered to witness the arrival of the Deputy Chairman of the Popular Front Party, whom authorities had summoned for questioning after a televised altercation during an election debate. On September 21 police physically harassed and arrested a journalist from the Azerbaijan National Independence Party (AMIP) newspaper, and struck or detained four other journalists at a meeting of AMIP and Popular Front voters in the city of Lenkoran.

Journalists were also injured during the violent demonstrations in Baku after the election, in some cases as a result of police beating them. The Azerbaijan Journalists Confederation and RUH reported that police beat 54 journalists, detained or arrested 18, and broke the equipment of 6.

In November 2003 the nongovernmental National Press Council created a joint monitoring group together with representatives from the MIA to examine relations between the police and journalists during mass actions. The monitoring group was working on the development of an identification card and special clothes for journalists to distinguish them from demonstrators.

Violence against women, including domestic violence, continues to be a problem. In rural areas, women had no real recourse against assaults by their husbands or others; no laws exist regarding spousal abuse or spousal rape. The Criminal Code prohibits rape, which is punishable by up to 15 years in prison. According to the State Statistics Committee, there were 46 rapes and attempted rapes

reported during 2003. According to a nongovernmental organization, most rape victims knew their assailants, but did not report incidents due to the associated stigma.

There are no government-sponsored or funded programs for victims of domestic violence or rape. A women's crisis center in Baku, opened by the Institute for Peace and Democracy, provided free medical, psychological, or legal assistance to more than 2,500 women. During the year, the Institute also produced a six-segment television series regarding women's rights.

## CORRECTIONAL SYSTEM

**Prison Conditions.** Conditions in prisons, which the Ministry of Justice managed, remain harsh and sometimes life threatening.

Overcrowding and poor medical care combine to make the spread of infectious diseases a serious problem. Tuberculosis (TB) continues to be the primary cause of death in prisons. By the end of 2003, approximately 800 detainees were undergoing treatment for TB. Due to the absence of systematic screening in prisons, patients often start treatment when already seriously ill. There are widespread and credible reports that authorities withheld medical treatment from selected inmates, particularly political prisoners.

Prisoners have to rely on their families to provide food and medicine, and bribes generally are required for families to gain access to imprisoned relatives. Authorities severely limit lawyer and family visits and exercise in maximum security prisons. Some pretrial detainees were kept in "separation cells" often located in basements, in which food and sleep reportedly were denied to elicit confessions with no physical evidence of abuse. There were separate facilities for men and women, juveniles and adults, and pretrial detainees and convicts.

Deaths of inmates occurred, in part due to harsh conditions and in some cases due to mistreatment by law enforcement personnel.

The ICRC has had access to all prisons since June 2000; and in 2002 the government extended its agreement on access to all places and to all detainees, both sentenced and unsentenced. The ICRC has had access to prisoners of war and civilians held in relation to the conflict over Nagorno-Karabakh. Foreign observers regularly received permission to enter maximum security prisons to meet with alleged political prisoners. One domestic human rights organization reported that authorities restricted their access to police stations and detention centers, though not prisons.

Reports suggest that conditions of detention in the strict regime prison, where many political prisoners are detained, amounts to cruel, inhuman, and degrading treatment. Cells have no ventilation and the electric light

## Azerbaijan

is permanently switched on. Temperatures in the cells can exceed 100 degrees Fahrenheit.

During 2003 the government undertook a program to improve conditions in prisons; they remodeled some and built five new prisons.

**Prison Statistics (2003 est.).** Prisons fall under the direction of the Ministry of Justice.

- Total Prison Population (including pretrial detainees/remand prisoners): 16,345
- Prison Population Rate (per 100,000 of national population, based on an estimated national population of 8.24 million at September 2003): 198
- Pretrial Detainees/Remand Prisoners: 10.8%
- Female Prisoners: 1.7%
- Juveniles/Minors/Young Prisoners, Under 18: 0.5%
- Foreign Prisoners: 1.4%
- Number of Establishments/Institutions: 52
- Official Capacity of Prison system: 24,670

- Occupancy Level (based on official capacity): 66.3%

Recent prison population trend (year, prison population total, prison population rate per 100,000 of national population):

1997	24,851	(323)
2000	23,504	(291)
2002	18,321	(224)

# Bahamas

---

**Official country name:** The Commonwealth of the Bahamas

**Capital:** Nassau

**Geographic description:** Caribbean chain of islands in the North Atlantic Ocean

**Population:** 301,790 (est. 2005)

## LAW ENFORCEMENT

**History.** The history of the Royal Bahamas Police Force (RBPF) goes back to 1840 when 16 volunteers were appointed to patrol the town of Nassau. In the 1850s similar guards, known as privates, were appointed to the other islands. Toward the end of the nineteenth century a second force, the Bahamas Constabulary, was formed to undertake guard and firefighting duties. In 1909 the two forces were amalgamated into the Bahamas Police Force. After a visit by Queen Elizabeth II in 1966, the prefix was conferred on the force.

**Structure and Organization.** The headquarters of the RBPF is in Nassau on New Providence Island. The other islands are referred to as the Family Islands. The headquarters comprises eight sections: Administration, Criminal Investigation, Security and Intelligence, Fire Service, Training, Marine Operations, Communications, and the police band. Operationally, there are two districts: one on New Providence and the other on Grand Bahamas, each under an assistant commissioner. Each division includes, in addition to routine police sections, a prosecution branch, a CID, a traffic branch, and a radio and

communications section. Regional police districts are headed by district constables who supervise police stations.

There are two auxiliary forces to aid the regular police. Police reserve units consisting of unpaid volunteers are established on the two main islands. On most other islands there are local constables who receive some training and work under the supervision of an inspector. They are paid and wear a police uniform.

The principal grades of police service are, from top to bottom, commissioner, deputy commissioner, senior assistant commissioner, assistant commissioner, chief superintendent, superintendent, deputy superintendent, assistant superintendent, chief inspector, inspector, sergeant, corporal, and constable.

**Uniforms and Equipment.** Officers above inspector grade wear dark-blue uniforms in winter and for formal occasions. A khaki bush jacket and trousers are worn in summer. Sergeants, corporals, and constables wear

## *Bahamas*

trousers with a red stripe and a white tunic on formal and ceremonial occasions and a white bush jacket for normal duty in the summer. They wear blue trousers in winter and khaki in summer. Throughout the year a dark-blue tunic is worn at night. All ranks wear a blue cap with a red band, but in summer sergeants and below wear a white helmet during the day. Lower ranks wear similar tunics with red striped skirts or slacks. The headgear is a tricorn hat.

For normal duty all members of the force are unarmed. However, as a paramilitary force, the police are trained in the use of rifles and handguns.

**Education and Training.** Basic training is provided for commissioned and noncommissioned personnel in the police school at Nassau. In many cases officers are sent to the United Kingdom for advanced professional training.

### **Police Statistics.**

- Total Police Personnel: 2,200
- Population per Police Officer: 125

### **HUMAN RIGHTS**

The government generally respects human rights and penalizes police personnel guilty of human rights abuses. However, there are occasional incidents in which the police have beaten and otherwise abused suspects, generally to extract confessions. The police have also been known to arbitrarily arrest and detain persons. The Police Complaints and Corruption Branch is responsible for investigating allegations of police brutality. This unit determines if there is any evidence of abuse or misconduct to justify disciplinary action within the police system or criminal prosecution by the attorney general. In 2002 there were 398 complaints against the police. Of these, 88 resulted in disciplinary actions.

### **CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 4,870. Of which:

- Murder: 27.1
- Assault: 61.5
- Burglary: 1,560.2
- Automobile Theft: 415.7

### **CORRECTIONAL SYSTEM**

Prisons are administered by the Bahamas Prison Service under the Ministry of National Security. The Prison Service is headed by a Superintendent of Prisons.

**Prison Conditions.** Overcrowding is a major problem in the prison system. The occupancy rate is 129.2%. The men's maximum-security block holds more than half the total prison population. The remaining prisoners are housed in medium- and minimum-security units. The cells are poorly ventilated and lack running water. Most cells lack beds, and inmates generally sleep on concrete floors and are locked in their cells for 23 hours each day. About 7% of all inmates are infected with HIV/AIDS. The prison service offers some educational and literacy programs, including computer training, aid, religious instruction, and counseling services. Women are held separately from males, and their conditions are less harsh than those for men. Juvenile offenders have a separate section. Young children as well as children deemed incorrigible are housed at the Simpson Penn Center for Boys and Williamae Pratt Center for Girls.

**Prison Statistics.** The islands' only prison is Her Majesty's Prison at Fox Hill in Nassau, with an official capacity of 1,084 and an actual population of 1,335. The prison population rate is 425 per 100,000. Of the inmates, 22.7% are pretrial detainees and 1.8% are female. The prison population ratio is 410 per 100,000.

*George Thomas Kurian*

# Bahrain

---

**Official country name:** Kingdom of Bahrain

**Capital:** Manama

**Geographic description:** Middle Eastern archipelago in the Persian Gulf on the east coast of the Arabian Peninsula

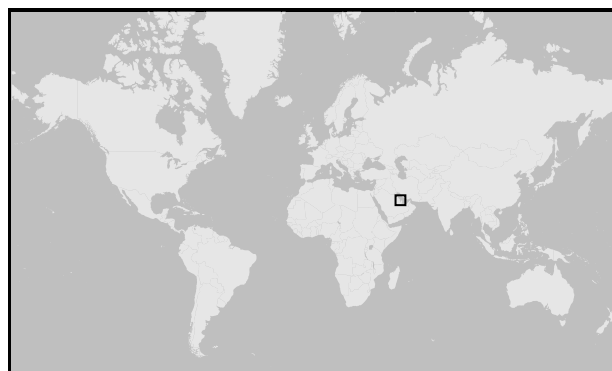

**Population:** 688,345 (est. 2005)

## LAW ENFORCEMENT

**History.** The Bahrain Police and Public Security Department was founded in 1926 and initially was staffed by British officers. In 1962, when Bahrain became a fully independent state, the force was indigenized.

**Structure and Organization.** The Police and Public Security Department is commanded by a director general and assisted by a deputy director general and a director of security and intelligence services. The Administrative Branch is the first of many headquarter divisions, which includes immigration, prosecutions, traffic, criminal investigations, women police, education and sport, mounted police, public security, Emergency Squad, and the Flying Wing. The Public Security Division also controls the Coast Guard and the Bahrain Fire Service. Territorially the sheikhdom is divided into five divisions: Manama; Bahrain Airport, Mina Sulman, Rural North and Rural South. Bahrain's Women Police Division was a major innovation in the Middle East when it was formed in the 1970s. The Criminal Investigation Division operates a criminal records archive and photography and fingerprints laboratories. The Emergency

Squad is the principal reserve for dealing with riots and major disasters. They have a high mobile capability.

**Uniforms.** In the summer khaki drill uniforms (tunics or shirts) are worn and in winter a dark blue tunic and trousers is the standard. A dark blue cap is worn throughout the year.

**Education and Training.** There is a Royal Police College in Bahrain and police training centers in Muharraq and Safra. The Initial Training Depot in Manama also has a reserve.

### Police Statistics.

- Total Police Personnel: 3,733
- Population per Police Officer: 180

## HUMAN RIGHTS

The government's human rights record is mixed. While it has made progress in some areas, it remains poor in others. All political prisoners were freed in 2001. There is no effort

## ***Bahrain***

to discipline or punish security personnel who commit serious human rights violations. There are two nongovernmental organizations in Bahrain dealing with human rights.

### **CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 1,390. Of which:

- Murder: 1.6
- Assault: 0.5
- Burglary: 30.1
- Automobile Theft: 207.6

### **CORRECTIONAL SYSTEM**

The corrections system is administered by the Ministry of Justice and Islamic Affairs through a Director of Prisons.

**Prison Conditions.** There are credible reports of torture and cruel, inhuman, and degrading treatment in the prisons. No prison officials are punished or reprimanded for abuse of prisoners. Physical conditions in prisons meet international standards. Women prisoners are housed separately from men and juveniles are housed separately from adults until age 15.

**Prison Statistics.** There are two prisons in the sheikhdom, with a total population of 911 in a system designed to hold only 648. The prison population rate is 155 per 100,000. Of the prisoners, 29.3% are pre-trial detainees.

*George Thomas Kurian*

# Bangladesh

**Official country name:** People's Republic of Bangladesh

**Capital:** Dhaka

**Geographic description:** Part of the Plain of Bengal at the end of the Indo-Gangetic Plain

**Population:** 144,319,628 (est. 2005)

## LAW ENFORCEMENT

**History.** The foundation of the Bangladesh police administration is the Police Act of 1861, which created a provincial police under the control of an inspector general in each of the territories ruled by the British in the Indian subcontinent. It was supplemented by the Criminal Procedure Act of 1898 and the Police Regulations of Bengal of 1943, both of which continued to remain in force after the departure of the British in 1947, and the creation of the republic of Bangladesh in 1972. But it was not until 1976 that a metropolitan police force was established in Dhaka, the capital. This was followed by the introduction of a metropolitan police force at Chittagong in 1978. A number of committees and commissions helped to broaden and streamline police functions, particularly during the 25 years that Bangladesh was part of Pakistan. These include the Shahabuddin Committee of 1953, the Hatch Barnwell Committee of 1956, the Committee on the Increase of Force in Dhaka and Narayanganj of 1957, the Constantine Commission of 1960–1961, and the Mitha Commission of 1969. The War of Independence took a heavy toll on the number and morale of the police force. As a result, the force was

expanded and reconstituted and its training facilities were modernized in the 1970s.

**Structure and Organization.** The Bangladesh Police is headed by an inspector general of police, who reports to the Ministry of Home Affairs. Below the headquarters level, the force is organized by districts and divisions. Police officers are categorized as gazetted or subordinate—roughly analogous to the commissioned and noncommissioned officers in the military. The subordinate grades are further classified into upper and lower categories.

The top four gazetted police grades, in descending order, are:

- inspector general
- deputy inspector general
- superintendent
- assistant superintendent

Upper subordinate grades:

- inspector
- subinspector
- assistant subinspector

Lower subordinate grades:

- head constable
- constable

The inspector general supervises staff departments concerned with criminal investigation, identification, communications, administration and supply. He is further responsible for supervision over police ranges, divisions coterminous with the political divisions, each under a deputy inspector general. Within the ranges, the districts form the fulcrum of police operations. The district chief is a superintendent; subordinate to him are one or more assistant superintendents and a number of inspectors and those in other ranks. The senior subdivisional police officer is an assistant superintendent. The *thana*, or station house, is supervised by one of the upper subordinate grades, called the station house officer, with about 10 head constables and constables at the station. The *thana* is also the seat of the lowest court and magistrate in the legal system. Assisting the regular police are part-time village constables called *ansars*, who report violations to the nearest police stations and apprehend offenders on police orders. The *ansars* are recruited locally and receive a pittance for their efforts. There are approximately 564 active police stations.

At all levels, the senior police officer responds to the chain of command within the police organization, but he is also under the general direction of the designated civil government officials. These multiple lines of command sometimes cause confusion, but the principle of civil control is fairly well established under the Police Act of 1861. Thus at the national level, the inspector general reports to the home secretary and ultimately to the Minister of Home Affairs. At the divisional or police range level, the deputy inspector general answers to the deputy commissioner. Although the latter has no right to intervene directly in the internal organization and discipline of the police, an important part of his duties is to inspect the police stations of his district at regular intervals. In cases where the deputy commissioner and the police chief disagree on issues relating to police functioning, the former's decision is final. However, he is dependent on police cooperation for the overall success of his administration. In cases of serious differences, both may refer the dispute to their bosses: the deputy commissioner to his commissioner and the police chief to his deputy inspector general.

Countrywide, the regular police are overworked. In the lower subordinate grades, which account for 90% of the force, the pay is poor, advancement slow, and educational levels and public accountability low. Corruption is rampant at all levels. There is political interference at all levels and professionalism is increasingly rare.

There are no municipal forces except at Dhaka and Chittagong where the metropolitan police forces are headed by commissioners. Both forces have effective anti-riot units. The Armed Police Reserve is primarily a riot control force. The Anti-Corruption Department, administered by a cabinet secretariat, is a special investigative unit. Internal security is the responsibility of the Department of National Security Intelligence.

**Education and Training.** The principal training center is at Sardah in Rajshahi District. It was established in 1903 for training nongazetted officers and was upgraded in 1912 into an academy. Constables are trained in four regional schools and detectives in a separate institution. The Jungle Warfare and Tactical Training School trains inspectors in border areas.

#### **Police Statistics.**

- Total Police Personnel: 52,053
- Population per Police Officer: 2,560
- Number of Police Stations: 564

#### **HUMAN RIGHTS**

The government's human rights record remains poor and is marred by serious abuses. The police commit extrajudicial killings and some persons have died in police custody under suspicious circumstances. Police routinely use torture, beatings, and other forms of abuse while interrogating suspects, and frequently beat demonstrators. According to one human rights organization, 44 persons died in 2000 as a result of lethal force by the police. The Public Safety Act of 2000 gives the police even greater opportunity to abuse their powers.

#### **CRIME**

**Crime Statistics.** Total offenses reported to the police per 100,000 population: 90. Of which:

- Murder: 2.8
- Assault: 4.3
- Burglary: 4.3
- Automobile Theft: 1.1

#### **CORRECTIONAL SYSTEM**

The penal system, under the office of an inspector general of prisons, is governed by the Penal Code of 1860,

*Police face a group of activists from the Awami League during a general strike in Dhaka, Bangladesh, May 18, 2005. The Awami League, an opposition political party, called for the strike in protest of a politician who was killed. The strike shut down schools and businesses, and also disrupted traffic across the capital city. AP IMAGES.*

the Prisons Act of 1894, and the Prisoners Act of 1900. Bangladesh has not been able to devote much time or effort on modernizing the prison system inherited from the British. At the division or police range level, the senior official is called the director of prisons, and at the district level he is the jail superintendent. Below the district level are the *thana* and village police backups. All installations are manned by the prison police.

**Prison Conditions.** Prison conditions are extremely poor and degrading. In 2000 more than 72 prisoners died in prison or police custody. Most prisons are overcrowded and lack adequate facilities. The Dhaka Central Jail houses 9,775 prisoners in a facility designed to hold only 3,000. In some cases, the cells are so crowded that prisoners sleep in shifts. The food is unhygienically prepared and drugs are abused widely. There are three classes of cells. Common criminals and persons of low status are held in C cells, which have dirt floors, no furnishings,

and poor quality food. The use of restraining devices in these cells is common. A new prison facility in Kashimpur, north of Dhaka, opened in 2001.

#### **Prison Statistics.**

- Total Prison Population: 74,170
- Prison Population Rate per 100,000: 50
- Pretrial Detainees: 60.3%
- Female Prisoners: 2.8%
- Juvenile Prisoners: 1.6%
- Number of Prisons: 66
- Official Capacity of the Prison System: 25,712
- Occupancy Level: 288.5%

# Barbados

---

**Official country name:** Barbados

**Capital:** Bridgetown

**Geographic description:** Caribbean island between the Caribbean Sea and the North Atlantic, northeast of Venezuela

**Population:** 279,254 (est. 2005)

## LAW ENFORCEMENT

**History.** The Barbados Police Force was established in 1835 and became the Royal Barbados Police Force in 1966.

**Structure and Organization.** The Royal Barbados Police Force (RBPf) is headed by a commissioner. The island is divided into three territorial divisions: Northern, Southern, and Mobile, and these divisions are further divided into 15 police districts. The Headquarters Division includes a Criminal Investigation Department, Traffic and Transport, Special Branch, Mounted Branch, Canine Section, Marine Section, Special Services Unit, Office of Professional Responsibility, Research and Planning Unit, Training Unit, and the Police Band. Junior ranks are housed in barracks and work on a double shift system. There is a mounted detachment for ceremonial and rural police duties. In 2002 the government created a special rapid response unit to respond quickly to emergencies. RBPf has both motorized (60%) and foot patrols. The majority of the foot patrols are assigned to Bridgetown. Community policing comprises ministations in housing estates and 93 neighborhood watch organizations.

The principal police ranks, in descending order, are Commissioner, Deputy Commissioner, Assistant Commissioner, Senior Superintendent, Superintendent, Assistant Superintendent, Inspector, Station Sergeant, Sergeant, Corporal and Constable.

**Uniforms and Weapons.** Officers wear a working uniform of khaki trousers; an open-neck, short-sleeved bush tunic with a belt; and a blue forage cap with a red band. On formal occasions, a short-sleeved tunic is worn with a white shirt and tie. Rank-and-file members wear a gray shirt or open-neck, short-sleeved tunic and blue serge trousers with a two-inch-wide stripe on the seam. A white helmet, black boots, and brown leather belt complete the uniform. On ceremonial occasions officers wear a white tropical helmet, and other ranks wear a white spiked helmet. Police patrols generally are unarmed except for sentries at important public buildings.

**Education and Training.** The Royal Barbados Police Force Regional Training Center at Grantley Adams International Airport in Seawell provides training not only for Barbadians but also for the police forces of the Cayman Islands, Grenada, Montserrat, Saint Lucia, Saint Vincent, Turks and Caicos, and the British Virgin Islands.

**Police Statistics.**

- Total Police Personnel: 1328
- Population per Police Officer: 280

**HUMAN RIGHTS**

The government generally respects the human rights of its citizens. The police have an Office of Professional Responsibility, headed by a superintendent, to deal with unprofessional conduct by policemen. In 2001 a Police Complaints Authority was created by Parliament for the same purpose. Police procedures provide sufficient safeguards for suspects against arbitrary acts by policemen.

**CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 3,813. Of which:

- Murder: 8.6
- Assault: 161.9

- Burglary: 1,080.8
- Automobile Theft: 105.5

**CORRECTIONAL SYSTEM**

The corrections system is administered by the Ministry of Home Affairs through the Superintendent of Prisons. Her Majesty's Prison at Glendairy, Station Hill, Saint Michael, built over 150 years ago, is the oldest prison facility on the island.

**Prison Conditions.** Overcrowding is a major problem, with an occupancy rate 184.7% of the official capacity. There are separate wings in the island's only prison for pretrial detainees, women, and juveniles. Beating of prisoners is common. In 2002 the government dismissed 14 prison officials for physical abuse of prisoners.

**Prison Statistics.** There are two prisons whose official capacity is 328, but the actual prison population is 992. The prison population rate is 317 per 100,000. Of all inmates, 22.6% are pretrial detainees, 4.7% are females, 1.3% juveniles, and 14.3% foreigners.

# Belarus

---

**Official country name:** Republic of Belarus (Respublika Byelarus)

**Capital:** Minsk

**Geographic description:** Slightly smaller than Kansas, Belarus covers a total area of 207,600 square kilometers. It borders Latvia, Lithuania, Poland, Russia, and Ukraine.

**Population:** 10,300,483 (est. 2005)

## LAW ENFORCEMENT

**History.** The outbreak of World War I in 1914 turned Byelorussia into a zone of strict martial law, military operations, and great destruction. Large German and Russian armies caused the departure of more than one million civilians from the country. The Russian government's inept war efforts and ineffective economic policies prompted high food prices, shortages of goods, and countless deaths. Discontent in the cities and the countryside led to strikes, riots, and the eventual downfall of the czarist government.

A month after the November 1917 Russian Revolution, more than 1,900 delegates to the Byelorussian Congress (Rada) met in Minsk to establish a democratic republican government in Byelorussia, but Bolshevik soldiers disbanded the assembly before it had finished its deliberations.

The Treaty of Brest-Litovsk in March 1918, ending World War I between the Russians and Germans, put most of Byelorussia under German control, but on March 25, 1918, the Central Executive Committee of

the Rada nullified the treaty and proclaimed the independence of the Byelorussian National Republic. Later that year, the German government, which had guaranteed the new state's independence, collapsed, and the new republic was unable to resist Byelorussian Bolsheviks supported by the Bolshevik government in Moscow. The Byelorussian Soviet Socialist Republic (Byelorussian SSR) was established on January 1, 1919.

Vladimir Lenin's New Economic Policy (NEP), established in 1921 as a temporary compromise with capitalism, stimulated economic recovery, and by the mid-1920s agricultural and industrial output in Byelorussia had reached 1913 levels. Historically, Byelorussia had been a country of landlords with large holdings, but after the Bolshevik Revolution, these landlords were replaced by middle-class landholders; farm collectives were practically nonexistent. When forced collectivization and confiscations began in 1928, there was strong resistance, for which the peasantry paid a high

social price: Peasants were allowed to starve in some areas and many were deported to Siberia. Because peasants slaughtered their livestock rather than turn it over to collective farms, agriculture suffered serious setbacks. However, the rapid industrialization that accompanied forced collectivization enabled the Moscow government to develop new heavy industry in Belarus quickly.

During NEP, the Soviet government relaxed its cultural restrictions, and Byelorussian language and culture flourished. But in the 1930s, when Joseph Stalin was fully in power, Moscow's attitude changed, and it became important to Moscow to bind both Byelorussia and its economy as closely to the Soviet Union as possible. This meant Russification of the people and culture. The Byelorussian language was reformed to bring it closer to the Russian language, and history books were rewritten to show that the Byelorussian people had strived to be united with Russia throughout their history. Political persecutions in the 1930s reached genocidal proportions, causing population losses as great as would occur during World War II—more than two million people.

Germany attacked Poland on September 1, 1939. Two and a half weeks later, Soviet troops moved into the western portions of Byelorussia and Ukraine. Ignorant of, or disbelieving the existence of, mass persecutions under Stalin, most Byelorussians welcomed the Red Army, only to learn quickly of the harsh reality of Communism. Arrests and deportations were common, and the so-called flourishing of national culture was strictly circumscribed by the ideological and political goals of the Communist Party of the Soviet Union. About 300,000 persons were deported from western Byelorussia to Soviet labor camps between September 1939 and June 1941, when Germany attacked the Soviet Union.

By June 1941, when German tanks swept through Byelorussia toward Moscow, many Byelorussians actually welcomed the Nazis, thinking that they would free the Byelorussian people from their Communist oppression. However, the Nazis' designs for the occupied territories became known soon enough: Germanizing and assimilating 25% of the Byelorussians and either ousting or destroying the remaining 75%.

Later in the war, when the eastern front began moving westward, many Byelorussians had to choose between two evils: life with the Soviets or departure into exile with the Nazis. Many Byelorussians decided to flee, and tens of thousands of them found themselves in Germany and Austria toward the end of World War II. Some of those who had been deported as forced laborers to Germany agreed to go back to Byelorussia, only to be deported again by the Communists to Siberia or other remote places in the Soviet Union. All those who fled voluntarily

to the West eventually settled in Germany, other European countries, or overseas.

The wartime devastation of Byelorussia—the loss of people, homes, animals, public buildings, educational and cultural resources, roads, communications, health care facilities, and the entire industrial base—was complete. To make up for the industrial loss, Stalin ordered the building of new factories and plants, more efficient than most of those elsewhere in the Soviet Union.

The Byelorussian language was unofficially banned from official use, educational and cultural institutions, and the mass media; Byelorussian national culture was suppressed by Moscow. This so-called cultural cleansing intensified greatly after 1959, when Nikita Khrushchev, the leader of the Communist Party of the Soviet Union at the time, declared in the Byelorussian capital, “The sooner we all start speaking Russian, the faster we shall build communism.”

All the Soviet events of the postwar period, from 1945 up until Mikhail Gorbachev, were reflected in Belarus. It came through the end of Stalinism, the Khrushchev “thaw,” the stagnation of the Leonid Brezhnev government, the cold war, and Gorbachev's perestroika.

The resistance of some students, writers, and intellectuals in Minsk during the 1960s and 1970s was met with harassment by the Committee for State Security and firing from jobs rather than arrests.

In April 1986 a new tragedy was visited upon Byelorussia—the disaster at the Chernobyl nuclear plant equal to the explosion of 150 Hiroshima atomic bombs. Though the station itself was situated in Ukraine, the winds blew in the direction of Byelorussia. As a result, 70% of all radioactive fallout is believed to have landed on Byelorussian land, turning one-fifth of it into a zone of radioactive contamination. This resulted in a dramatic increase in cancers, genetic mutations, and leukemia.

Following the August 1991 attempted overthrow of Gorbachev, the Supreme Soviet in Minsk declared the independence of Byelorussia on August 25, 1991, by giving its Declaration of State Sovereignty the status of a constitutional document and renaming the country the Republic of Belarus.

With independence, Belarus got a new start under less than favorable conditions. The economy was in disastrous shape, inflation was spinning out of control, unemployment increased dramatically, and the influence of organized crime was felt in every corner of the country. The election of Alexander Lukashenko as President only worsened the situation.

Lukashenko had been manager of a state farm in the 1980s before being elected to the Supreme Council in 1990. He came out on top in the presidential election of 1994, declaring an anti-inflation and anticorruption

agenda. Following his election, Lukashenko reintroduced Soviet price controls, moved the economy back into Russia's sphere of influence, and introduced an authoritarian constitution.

Soon after the 100-day mark of his presidency, Lukashenko launched an attack on the independent mass media in Belarus. Many popular TV shows and newspapers which did not always approve of the President's actions were discontinued; in others, editors were replaced by more loyal ones. The editor of the most popular newspaper was replaced and the opposition newspaper was forced out of the country.

Lukashenko succeeded in muzzling the media, limiting most public expressions of dissatisfaction among the population, and perpetuating a police state that moves rapidly to suppress any signs of protest. Human rights abuse by law enforcement agencies is commonplace. The Ministry of Internal Affairs, State Security, and other law enforcement agencies are little more than enforcers for the President, frequently disregarding laws on the books, flouting the constitution, and ignoring due process.

In 1996 Lukashenko disbanded Parliament, which had been seeking to impeach him, and also strengthened his control over the judiciary. The new Parliament that emerged was handpicked and subsequent elections in 2000 were widely condemned by observers as rigged. Meanwhile, many former allies and government ministers have either fled abroad or joined the opposition. High ranking officials, such as a former Deputy Prime Minister and a former Minister of Internal Affairs, have simply disappeared.

President Lukashenko has essentially ignored the legislature and has ruled by decree. Protests by legislators are largely ignored but sometimes brutally suppressed, as was the case with a group of democratic deputies who held a hunger strike in the parliament building in protest of a referendum on integration with Russia. Reportedly on Lukashenko's order, they were beaten by police and forcibly removed.

Immediately following the result of the referendum, the Belarusian flag which had been approved by the legislature and could only be removed by the legislature, was taken off the presidential palace and torn into pieces. The old red-green flag of Byelorussian Soviet Socialist Republic was hung instead, and eventually replaced the historic one everywhere by presidential decree.

**Structure and Organization.** The Ministry of Internal Affairs (MIA) and the Committee for State Security—both of which report directly to the President—share law enforcement and internal security responsibilities. The Presidential Guard—created initially to protect senior officials—acts primarily against the political enemies of

Lukashenko's government with little, if any, judicial or legislative oversight. Apart from the President, civilian authorities generally do not maintain effective control of the security forces. Members of the security forces are known to have committed numerous serious human rights abuses.

The chief of police is the First Deputy of the Interior Minister. The National Police Headquarters consists of the following directorates: Operation and Organization, Investigation, Crimes Against Persons, Investigation of Past Crimes, Narcotics, Economic Crimes, High Technology Crime, Information Analysis, and Information Technology. Also part of the headquarters are the Committee for Combating Corruption and Organized Crime, and the Antiterrorist Police. At the regional level there are regional police headquarters in all six provinces, Minsk, Homel, Vitebsk, Brest, Mohilev, and Grodno and in the capital city of Minsk. On the subregional level there are district headquarters that supervise local police stations.

In addition to the regular police force there are two other law enforcement services: the Internal Security Service, including the Border Guard and the General Security and Special Police.

The minimum wage in 2003 was approximately \$22 (45,000 rubles) a month, which did not provide a decent standard of living for a worker and a family; however, average real wages improved during the year from approximately \$110 (200,000 rubles) to \$126 (264,000 rubles) a month. The country's continuing economic problems make it difficult for the average worker to earn a decent living, and major wage arrears continued to grow, especially in the agricultural sector. This is true of law enforcement as well. The average police salary is \$200 to \$300 per month. In addition, supplies such as gas, radios, vehicles, and uniforms are either in short supply or inadequate for the task of policing the country. Organized crime groups, which sprang up across the region toward the end of the Soviet era, are better equipped than police.

As in most of the other former Soviet states, corruption is rife throughout the country. Police salaries are insufficient to ensure evenhandedness in enforcing the law. Complicating this is the role of police as heavy-handed enforcers for Lukashenko. In December 1994 a report was read in the legislature charging a number of high-level administration officials with corruption, which led a number of these officials to offer their resignations. Lukashenko refused to accept the resignations and banned four independent newspapers from publishing the report. Such incidents are generally acknowledged to be minor examples of the reality of the situation.

In March 2002 Ministry of Internal Affairs's troops dispersed a march held to mark the eighth anniversary of the 1994 Constitution of Belarus. The march organizer, who was leader of one of the opposition political parties, was sentenced to ten days in prison.

Also in March, more than eighty people were arrested and given brief prison terms, fines, or official warnings after police broke up a Freedom Day rally. Another hundred people were arrested and about forty injured in clashes with police in April during an unauthorized protest against living conditions in Belarus. Protest organizers and participants were sentenced to up to fifteen days in jail; others were fined.

The disappearances and presumed killings of a television cameraman, the former Minister of Internal Affairs, the deputy chairman of the legislature, and an opposition supporter remain unresolved despite the 2002 conviction of four members of the Ministry of Internal Affairs' SWAT team. There were credible reports of involvement of senior government officials in the disappearances. Such reports were reinforced when Lukashenko acknowledged to the press that he had ordered the security services to kidnap a former Belarus ambassador and return him to the country. The cameraman had worked personally for Lukashenko until 1996, when he resigned from the government-run TV station without the agreement of the authorities and joined a Russian station. He was imprisoned for two months in 1997 after reporting gaps in Belarus security along the country's border with Lithuania.

**Surveillance.** The interception of telephone and other communications without a court order is prohibited; in practice, authorities continue to monitor residences, telephones, and computers. The Ministry of Internal Affairs, State Security, and certain border guard detachments may use wiretaps, but under the law they must obtain permission from a prosecutor before installing them. However, in some cases, the agencies do enter homes, conduct unauthorized searches, and read mail without warrants.

The prosecutor's office exercises no independence from the government, effectively rendering due process protections regarding wiretaps meaningless. The Administrative Offenses Code provides penalties for those who obstruct State Security officers in the performance of their duties. Any effort to prevent officers from entering the premises of a company, establishment, or organization is an administrative offense, as is any refusal by such entities to allow audits or to deny or restrict access to company information systems and databases. Contracts used by the Ministry of Communications for supplying telephone service prohibit subscribers from

using telephone communications for purposes that run counter to state interests and public order. The Ministry has the authority to terminate telephone service to those who breach this provision.

In most circumstances, night searches are prohibited; however, in February 2003 ten armed police officers conducted a night search of the apartment of an individual after he returned from a meeting to plan a series of demonstrations. The officers seized printed material concerning a presidential decree regulating small business. The individual claimed the authorities refused to give him a copy of the search warrant.

Nearly all opposition political figures report that authorities monitor their activities and conversations; the government has done nothing to refute these reports. Representatives of certain nongovernmental organizations also said that their conversations and correspondence were monitored routinely by the security services. The Procurator General declined to investigate charges of illegal wiretapping brought by members of the opposition.

The Presidential Guard or security service reportedly continues to conduct surveillance activities of the President's political opponents. There is no judicial or legislative oversight of the Presidential Guard's budget or activities, and the executive branch repeatedly thwarts attempts to exercise such oversight. Some officials are themselves monitored. Militia officers assigned to stand outside diplomatic missions are known to keep records of visits by political opposition leaders. In March 2003 a panel of judges threw out a complaint by the leader of an opposition party over his 2002 detention. Plainclothes officers who refused to identify themselves forcibly detained him near a foreign embassy. The officers drove him to the State Security headquarters and issued him a formal warning that he would be charged with treason if he did not cease his contacts with foreigners. Some opposition figures express reluctance to visit foreign embassies due to fear of reprisals.

Unidentified plainclothes officials working for the security services regularly apprehend and detain individuals engaged in antiregime demonstrations and in the distribution of opposition materials. Members of organizations involved in publishing opposition media are arrested and detained. Security officers on occasion preemptively arrest and detain organizers and individuals considered to be potential participants in demonstrations. Security officials held some detainees incommunicado following demonstrations. In addition to the hundreds of antiregime protesters, whom authorities held for several hours or days, authorities also held several prominent political detainees for prolonged periods in pretrial detention, some for more than a year.

*A youth opposition activist is arrested during an unsanctioned rally in Minsk, Belarus, July 21, 2005. Police detained 10 people from the youth movement, Zubr, as members of the group held up photographs of jailed opponents of President Alexander Lukashenko and protest banners in the capital city. AP IMAGES.*

## CRIME

A drastic decline in living standards and the general breakdown in law and order throughout the former Soviet Union have contributed greatly to a dramatic rise in crime in Belarus since 1991. In the first half of 1993, the murder rate increased by almost 50% and muggings by almost 60%. Belarus has become a transshipment point for illegal drugs intended for Western Europe; locally produced opium and cannabis supply local demands.

Although statistics are difficult to come by, women's groups report that domestic violence, including spousal abuse against women, is a significant problem. Spousal abuse is punishable under the Criminal and Administrative Codes; a minor beating is punishable by a fine or up to 15 days in jail while more serious offenses are punishable by up to 15 years in prison. Women's groups have indicated that police generally enforce the

laws against domestic violence and that the courts generally impose these sentences. The primary problem remains a general reluctance among women to report instances of domestic violence due to fear of reprisal and because of the attendant social stigma. Rape is a problem. A law against rape exists; however, most women do not report it due to shame or fear that the police will blame the victim.

Although the authorities and local human rights observers report that prostitution was not yet a significant problem inside the country, there is little doubt that as the economy has deteriorated, prostitution has increased. As during the Soviet era, prostitution rings operate in state-owned hotels.

Sexual harassment reportedly was widespread, but no specific laws deal with the problem other than laws against physical assault.

**Narcotics.** Its location between Russia and the West, its good rail and road transportation, and a customs union with Russia that eliminated internal borders between the two countries, give Belarus significant potential to become a major drug transit and production site. Drugs flow into and through Belarus from Central Asia, the Caucasus, Ukraine, and Russia to the Baltic States, Poland, and Germany. Cases of heroin trafficking from Afghanistan to Poland and Germany through Belarus have increased dramatically.

Adding to this already grim picture is an economy that has been largely unsuccessful in moving toward market capitalism, dislocating many workers and dramatically increasing levels of dissatisfaction.

The Belarusian government claims to lack the financial resources to combat drug trafficking. The claim is somewhat dubious, however, given the extremely large police force—120,000 for a population of 10.3 million.

Belarus also faces many of the organized crime problems that plague other countries of the former Soviet Union, albeit without the high profile evident in some neighboring countries (for example, fewer gangland-style slayings). The lack of Belarusian laws on organized crime could lead syndicates to use Belarus for not only drug production and trafficking, but also for other drug-related crimes such as money laundering.

The Criminal Code, enacted on January 1, 2001, does not provide any responsibility for drug use. Only drug trafficking, and the theft, manufacturing, processing, acquisition, storage, transportation, or sending, of drugs with or without the purpose of selling is prohibited. The same is true of sowing or cultivating narcotic-containing plants with the aim of selling. Although drug use is not a crime in itself, use is inevitably preceded either by storage or sale of drugs. It is worth noting that the law excuses from criminal liability those who voluntarily surrender drugs and actively contribute to disclosure or suppression of a drug crime, including trafficking, distributors, or property obtained illegally.

Changes were made to the Criminal Code in January 2003, which greatly increased the responsibility for illegal drug trafficking, committed with or without the goal of selling. The penalty was increased from three years imprisonment to five years.

It is claimed that groups engaged in narcotics trafficking are primarily Gypsies from the Central Asian and Caucasus regions. Given the vast amount of discrimination and targeted enforcement in Belarus and other former Soviet republics, this is likely an inaccurate depiction of the makeup of traffickers.

According to the official data of the Ministry of Internal Affairs, there are about 8,000 drug addicts in Belarus. The Ministry of Health puts the official figure at

around 5,000, with an estimated 700 to 800 added each year. The real figures are believed to be at least 10 to 15 times higher. According to official data, the average age of getting addicted to drugs is 14.5 years old. In the late 1990s, the government claimed that some 40% of drug addicts resided in the Gomel region of Belarus, which includes Svetlogorsk. Since the summer of 1997, Svetlogorsk has experienced an outbreak of HIV/AIDS in epidemic proportions.

The drugs of choice in Belarus are opium derivatives as well as cannabis and synthetic drugs. Heroin, cocaine, barbiturates, and other drugs are being used in increasing amounts.

Belarus has all the resources necessary for the production of synthetic narcotics. The laboratory and technical capabilities are in place while many industrial facilities suitable for basic chemical production are idle. Law enforcement is not trained in the detection of synthetic drug manufacturing facilities. There is no legislation in Belarus dealing with precursor chemicals; the chemical industry, all government-owned, is allowed to police itself. Control of precursor chemicals is not an issue that appears to be on the agenda of policy makers, or even law enforcement officials.

Many crimes are associated with narcotics trafficking in Belarus. Smuggling is the most significant. Others include theft of narcotic and addictive substances, organizing or maintaining drug dens for drug use, and forging medical documents with the aim of procuring drugs. There were 1,252 criminal cases related to illegal drugs in 1998 and 3,018 drug-related offenses during the same year. In 2001 there were no significant arrests or seizures of drugs, despite evidence of growing abuse and trafficking, but 2002 brought some large drug seizures.

Belarus also faces many organized crime problems that plague other countries of the former Soviet Union. The lack of Belarusian laws on organized crime have lead syndicates to use Belarus for not only drug production and trafficking, but also other drug-related crimes such as money laundering. The Minsk office of the United Nation (UN) High Commissioner for Refugees reports that many illegal immigrants in Belarus finance their trips to the West through narcotics smuggling.

The enforcement effort against narcotics in Belarus suffers from a lack of efficient coordination among the agencies charged with various aspects of narcotics control. The Ministry of Internal Affairs, State Security, Customs Committee, Border Guards, and Ministry of Health all play a role in enforcement measures, but despite an inter-agency commission to coordinate the fight against drug trafficking, problems persist.

Belarus is a member of Interpol and has a department dealing with cross-border crime. Belarus has also

joined regional efforts at law enforcement cooperation and has signed bilateral agreements on cooperation against organized crime and drug trafficking with many of its neighbors.

**Trafficking in Persons.** Belarus is both a country of origin and a country of transit for women and girls being trafficked to Central and Western Europe for purposes of prostitution and sexual exploitation. Trafficking remains a significant problem. As an example, Cyprus became a point of interest for the Ministry of Internal Affairs. It is believed that in a three-year period more than 500 Belarusian women were trafficked to Cyprus. Victims were forced to work as dancers and prostitutes in Cypriot clubs, bars, and restaurants. The authorities released limited statistics on the problem of trafficking. According to nongovernmental organizations in the country, several thousand Belarusian women are victims of trafficking. The open border with Russia makes the country a likely transit route for victims from Russia and points eastward. Belarus is believed to be a country of origin and transit for women being trafficked to Russia, Ukraine, Lithuania, Germany, Israel, Poland, the Czech Republic, Turkey, Cyprus, Bahrain, Syria, Greece, Hungary, and Serbia and Montenegro.

The Ministry of Internal Affairs believes that criminal organizations try to lure and recruit women into serving as prostitutes in Western Europe and the Middle East. Traffickers, who were associated with organized crime and drug trafficking, entice their victims through advertisements for lucrative jobs in newspapers, on the Internet, and in advertisements posted in the metro.

The authorities continue to address the problem of trafficking in persons. In 2001 the Ministry of Internal Affairs prepared a five-year, 33-point strategy to combat trafficking in persons that covered ways of improving legislation, international cooperation, combating trafficking, and rehabilitation of victims. The strategy includes various governmental agencies, such as the Ministries of Foreign Affairs, Labor, Education, and State Security. Belarus has ratified the UN Convention on Transnational Organized Crime and the UN Protocol to Prevent, Suppress, and Punish Trafficking in Persons, Especially Women and Children.

The Ministry of Internal Affairs and the Ministry of Social Welfare are involved in antitrafficking efforts. The Ministry of Labor and the Department of Migration continues to monitor the activities of businesses licensed by the Ministry to offer employment in foreign countries. In some instances, the Ministry has suspended or revoked licenses for failure to comply with the regulations governing overseas employment agencies. In 2002 the Ministry of Internal Affairs signed law

enforcement cooperation agreements with Poland, Lithuania, Estonia, and Moldova regarding organized crime; these agreements included cooperation on combating trafficking in persons. At year's end, the Ministry of Internal Affairs was reportedly working to broaden its cooperation with international and foreign government law enforcement agencies.

Provisions of the Criminal Code penalize trafficking in persons for the purpose of sexual or other kinds of exploitation. The Criminal Code also criminalizes the hiring of individuals in order to exploit them sexually or otherwise. The penalty for trafficking is between five and seven years in prison and severe forms of trafficking are punishable by up to 15 years in prison.

The Belarusian Criminal Code provides specific penalties for trafficking for the purposes of sexual or other kinds of exploitation, though many prosecutors pursue trafficking crimes under sexual assault, abduction, or recruitment for sexual exploitation statutes. In 2003 the government convicted 45 individuals for trafficking or trafficking-related abuses, with a majority of sentences ranging from two to five years. The Ministry of Internal Affairs reported 191 investigations of alleged trafficking, including the trafficking of women abroad for sexual exploitation, the recruitment of women for the purpose of sexual exploitation abroad, and the abduction and recruitment of minors for prostitution.

According to government statistics, law enforcement agencies broke up 10 trafficking rings run by international organized criminal groups during 2002. During the year, law enforcement agencies initiated several investigations related to trafficking in persons. In November, the Ministry of Internal Affairs reported that three cases were being investigated under the antitrafficking law. For the same period, the MIA identified several returned Belarusian victims of trafficking, including 24 minors under the age of 18. According to the MIA, courts opened 47 cases related to trafficking in persons. Of these cases, 24 perpetrators received prison sentences, 3 received hard labor, 2 were fined, 1 received community service, 11 had pending sentences, and 6 accused awaited trial.

In April 2003 the Ministry of Internal Affairs dismantled a criminal organization that had trafficked over 400 Belarusian women to Western Europe and the Middle East since 1997. In addition, it broke up 17 organized criminal groups connected to trafficking crimes. In an effort to improve police antitrafficking operations, in 2003 the government collaborated with an international organization to produce a countertrafficking operations handbook. Attention to trafficking at the borders has increased, but segments of the border remain largely uncontrolled. The Belarusian government

collaborates with foreign governments to pursue trafficking investigations. For example, it has assisted law enforcement agencies in Germany, England, Lithuania, Austria, and Poland.

The government is believed to work with nongovernmental organizations to provide limited assistance to victims of trafficking, although it does not directly fund such assistance programs. Nongovernmental organizations report a sharp increase in victim protection referrals from law enforcement officials, due in part to better awareness and to an increase in the number of trafficking investigations. The Criminal Code contains procedures for witness protection, but government officials contend that financial restraints limit the government's capacity to implement those procedures.

Women seldom report incidents of trafficking to police, probably because of the social stigma attached to trafficking crimes, a generally negative public opinion about law enforcement authorities, insufficient protection accorded victims and witnesses, and lack of reintegration services for victims. Most victims return to the country as deportees and do not receive special status as victims of trafficking in the countries to which they are trafficked. As a consequence, they are denied victims' access to return assistance and the likelihood that they would come forward once back in the country is reduced.

The government's recognition of the trafficking problem in Belarus and its efforts to address the issue has increased trafficking awareness among government agencies. The government did not conduct an independent antitrafficking information campaign during 2003, but state-controlled media outlets have increased news coverage of the issue.

In 2003 the UN Development Programme launched a two-year countertrafficking program that focused on improving legislation, law enforcement efforts, and the provision of assistance available to victims. The International Organization for Migration (IOM) conducted a national awareness campaign and provided awareness training to nongovernmental organizations in regional towns. The IOM made available resources to provide basic reintegration assistance to victims of trafficking. Crisis centers established by some nongovernmental organizations provided psychological assistance to victims of violence; however, such centers did not include specialists in dealing with victims of trafficking.

Nongovernmental organizations operated two trafficking information hotlines; one in the capital of Minsk and a second in Brest located near the Polish and Ukrainian borders. The hot line in Brest received 1,277 calls in its first year of operation; 66% of which were from women. Of the callers, 52% had questions regarding

**Table 1. Belarus, Crime Statistics, 1998–2000**

employment abroad, and 390 callers said they received proposals to work abroad from friends. The hot line in Minsk received an average of 100 calls per month.

**Crime Statistics.** Crime statistics should always be handled with great care; in the case of Belarus and other former Soviet states, they are relatively meaningless. Locked in an ideological battle with the West, Soviet reality urged the creation of fictitious figures across virtually all sectors of the economy and society in order to portray a positive image to the outside world. The depiction of crime was one of the most important sectors for manipulation as the USSR attempted to demonstrate the superiority of Communism and its promise of the disappearance of crime. According to police officials, the practice of producing fraudulent statistics (*pripiska*) continues long after the demise of the Soviet Union. Latent crime has always been assumed to be rather high.

Crime statistics for the years 1998 to 2000 are given in Table 1.

## HUMAN RIGHTS

In 2000 the Organization for Security and Cooperation in Europe (OSCE) implemented seven projects in the fields of democratization and human rights in Belarus, including providing assistance to the penitentiary system. This project envisaged four stages, namely (1) experts' assessment of the sanitary and health conditions in prisons, (2) holding of training seminars for prison managers about regarding prison management guidelines sanctioned by the European Union and the OSCE, (3) assistance to the prisons that are in the most difficult situation, and (4) a study tour for Belarusian prison managers to Poland for familiarization with prison management guidelines applied in that country.

Despite this effort to assist Belarus, the OSCE, like nongovernmental agencies throughout the country,

operates at the whim of the authoritarian government. In 2002 the government denied visa extensions to OSCE mission representatives in the country, which effectively forced the mission to close in October 2002. A successor mission officially opened in January 2003 based on an agreement signed between the government and OSCE in December 2002; however, the new OSCE office resumed activities only in March 2003. No projects in the Civil Society working group were implemented during 2003. According to the OSCE, its representative on media freedom and several aides applied for visas to enter the country for a series of meetings. However, the government delayed acting on the application until after the proposed travel date had passed.

The action taken against the OSCE was not an isolated incident. The government has moved vigorously against nongovernmental organizations involved in human rights-related activities. In August 2003 the Ministry of Justice issued a warning to the Belarusian Helsinki Committee, a prominent human rights nongovernmental organization, reportedly merely for the absence of quotation marks in its letterhead and seal. The Belarusian Helsinki Committee would be closed after one more warning.

In June 2003 a regional court closed a nongovernmental organization's resource center, claiming that the organization used foreign aid for illegal purposes. In July another regional court closed a nongovernmental organization's resource center, claiming that the organization abbreviated its name in internal documents and referred to itself as an organization rather than an association as stated in its registration documents. In September, a nongovernmental organization received its third warning for contributing to the bulletin of an unregistered organization; the Ministry of Justice could at any time initiate proceedings to close the organization.

Independent observers viewed the closing of the nongovernmental organizations and resource centers as politically motivated. A Supreme Court judge closed one organization for using an incorrect seal and for having an office in a residence. The organization focused on historical research and social and cultural projects. The government closed several other cultural and social organizations, including those supporting women's issues and others providing assistance to inmates.

In December 2003, in addition to punitive measures for nongovernmental organizations introduced in earlier years, Lukashenko signed into law a bill introducing punishments for activity on behalf of organizations that are not registered by the Ministry of Justice. Those guilty of such offenses are liable to fines of \$80 to \$400 (175,000 to 875,000 rubles); a repeated offense would entail fines of \$400 to \$800 (875,000 to 1.75 million

rubles) or up to 15 days in jail. The law also prohibits the media from disseminating information issued by non-registered organizations. Nongovernmental organizations were already prohibited from receiving support from foreign sources.

Break-ins and questionable tax audits are less widely used now than in the 2001 preelection period; however, they remain a problem. The Ministry of Justice launched five separate inspections of a single human rights organization between January and July 2003. Each inspection involved all of the organization's minutes, activities, and its general convention.

A Council of Europe representative sent to Belarus to investigate the disappearances of journalists and human rights advocates reported getting little cooperation from the government; meetings were canceled after officials managed to obtain a copy of his draft report, which they regarded as too critical. The report had still not been released by the end of 2003.

Human rights monitors repeatedly reported that investigators coerced confessions through beatings and psychological pressure. In November 2000, the U.N. Committee against Torture cited concern over the deterioration in the human rights situation and noted numerous continuing allegations of torture and inhumane treatment or punishment committed by state officials or with their acquiescence, reportedly against political opponents of the regime and peaceful demonstrators. Police and plainclothesmen frequently beat individuals while arresting them or holding them in detention.

Officers have also been known to handcuff violators and beat them. Some suspected of minor offenses have had all of their clothes removed and been placed in cold cells overnight. On occasion, in an effort to coerce suspects into signing an affidavit, the policemen handcuffed them, forced them to the ground, and shot a pistol above their heads. The police also threaten and sometimes make good on the threat to electroshock suspects and deny them food.

#### **CORRECTIONAL SYSTEM**

The government has amended only slightly its Soviet-era law on detention; security forces continue to arrest arbitrarily and detain citizens, most often in connection with demonstrations, some of which are not officially sanctioned. There continue to be politically motivated arrests, although most of those arrested are soon released.

The Criminal Procedure Code provides that police may detain a person suspected of a crime for 24 hours without a warrant, within which time the procurator is notified. The procurator then has 48 hours to review the legality of the detention. If the procurator deems the detention legal, a suspect can be held for a maximum

of 10 days without formal charge. However, usually once the decision is made to hold a suspect, a formal charge is made. Once a suspect is charged, a trial must be initiated within 2 months, although in some cases the Procurator general can extend pretrial detention to 18 months to allow for further investigation. Alternatively, a suspect who has been charged can be released on a written pledge not to flee, in which case there is no time limit on the pretrial investigation. The law allows detainees the right to apply to the court (rather than the procurator) to determine the legality of their detentions. However, in practice, suspects' appeals to have their detentions reviewed by the courts frequently are suppressed because detainees are at the mercy of investigators and detention officials are unwilling to forward the appeals.

By law, detainees may be allowed unlimited access to legal counsel, and, for those who cannot afford counsel, the court appoints a lawyer. However, investigators routinely fail to inform detainees of their rights and conduct preliminary interrogations without giving detainees an opportunity to consult counsel. The information gained is then used against the defendant in court. Even when appointed by the state, defense attorneys are subordinate to the executive branch of power.

**Prison Conditions.** Prison conditions remain poor and, as in the other former Soviet states, are marked by severe overcrowding, shortages of food and medicine, and the spread of diseases such as tuberculosis, syphilis, and HIV/AIDS. According to the Minister of Internal Affairs, the prison population exceeds the capacity of the prison by approximately 20%.

Official detailed information regarding overcrowding is difficult to come by. Accounts by officials of the OSCE note that in one cell in the detention facility visited, 16 female prisoners shared 10 beds, while in another, 14 prisoners between the ages of 14 and 17 shared 8 beds. One observer reports that the prisons in one particular region are designed to hold a total of 8,550 inmates but in reality house more than 14,000. A correctional facility for women, intended to house only 1,350 inmates, holds 2,800. The average amount of space provided for each inmate is 1.2 square yards. Food provided in prisons does not meet minimum medical requirements.

A government amnesty for lesser offenders was intended to decrease the total prison population by approximately 8,000 inmates, but it is unclear to what extent it was implemented. Those convicted of alleged "economic crimes," for example, reportedly were granted amnesty and released from prison only after payment of financial restitution.

Male and female prisoners are held separately. Juveniles are held separately from adults, and pretrial

detainees normally are held separately from convicted prisoners; however, due to prison overcrowding, they occasionally may be housed together.

Detainees in pretrial detention facilities also report poor conditions and denial of medical treatment, which contribute to their declining health while awaiting trial.

Reports indicate that prison guards regularly beat detainees and prisoners. A member of the disbanded parliament and vocal critic of Lukashenko who spent 4 years in prison claimed that torture was widespread. Several individuals held in administrative detention complained about conditions and claimed that authorities ignored their complaints.

Amnesty International has called on the authorities to abolish the practice of "punishment cells" in which particularly harsh conditions are imposed on prisoners, and the use of the "press camera," a prison cell where a special prisoner, *pressovshchik*, is placed among the other inmates to carry out instructions by the prison officials.

In December 2002 the Constitutional Court ruled that prisons must consider appeals against prison-imposed punishments; however, prisons refused to consider such appeals on the grounds that there were no laws outlining the procedures for handling such appeals.

**Prison Statistics (2001 est.).** Prisons fall under the direction of the Ministry of Internal Affairs.

- Total Prison Population (including pretrial detainees/remand prisoners): 55,156
- Prison Population Rate (per 100,000 of national population); (based on an estimated national population of 9.95 million at the end of 2001): 556
- Detainees/Remand Prisoners: 17.5%
- Female Prisoners: 6.1%
- Juveniles/Minors/Young Prisoners — Under 18: 3.1%
- Foreign Prisoners: 2.6%
- Number of Establishments/Institutions: 37
- Official Capacity of Prison System: 43,400
- Occupancy Level (based on official capacity): 135.9%

Recent prison population trend (year, prison population total, prison population rate per 100,000 of national population):

1992	33,641	(327)
1995	54,869	(535)
1998	63,157	(620)

**Population:** 10,364,388 (est. 2005)

## LAW ENFORCEMENT

**History.** Before police reforms and institution of the Federal Police, Belgian law enforcement was composed of three levels: the Gendarmerie, the Judicial Police, and Municipal/Rural Police forces. The Gendarmerie, literally translated as “guard of the kingdom,” was the federal component of Belgian law enforcement until the integrated police force was established. Initially, the gendarmerie was a branch of the Belgian military, but lost that status in 1992. By the end of 1999, over 16,000 personnel were assigned. The Gendarmerie included several specialized assignments, such as the Central Intelligence Bureau, Special Intervention Squadron, Railroad Police, Maritime Police (including maritime, fluvial, and harbor police), Airport Police, Court and Corrections Police, Transport Police, and a General Reserve. For the Railroad Police, the rank of the officer in charge determined the size of the jurisdiction around the railroad stations. The Transport Police were also assigned the railways, airport and maritime, and roads as well as control of trucks, buses, and personal cars including weight, needed papers, security, and driving times. The General Reserve was composed of two infantry and two mounted companies. The mounted companies

provided the Royal escort and also were available for riot control. Gendarmerie duties also included schools, anti-terrorism, antidrug enforcement, protection and security of the Belgian embassies in foreign countries, close protection for VIPs, transfer of prisoners. The force was commanded by the Lieutenant-General Commander of the Gendarmerie.

The Judicial Police were created in 1919 to compensate for the lack of other Belgian police available for criminal investigations. There was also a need to provide magistrates the disposal of its own police department. There were about 1,400 officers broken down into 23 brigades, under overall command of the Commissioner-General. Twenty-two of the brigades were assigned to the 27 judicial districts in the country, while the 23rd was assigned as a national brigade against “high criminality.” Each brigade was commanded by a Chief-Commissioner who reported to the Prosecutor of the King. They all worked in plainclothes. Assigned duties included a

national computer crime unit and judicial police laboratories.

The Municipal/Rural Police comprised a total of about 18,000 personnel. The large cities were headed by a Chief-Commissioner and the smaller cities by a Commissioner. Small communes were led by a Commissioner of Rural Police. There were 589 departments, all with emergency police and traffic brigades. The largest departments had judicial brigades and antiaggression brigades assigned.

A “Committee P” was also established as a permanent control committee for the police services, akin to many agencies’ internal affairs divisions. This unit was assigned to the Federal Parliament and was composed of police officers coming from various forces and departments around the country and also included a retinue of civilians.

The SGAP was also formed to provide general service and support for the police and to assist with coordination between various departments and agencies. This agency provided central judicial and police documentation, a central description bulletin (of searched persons, etc.) support to Interpol and Europol, as well as management of the Municipal Police departments’ electronic system.

**Structure and Organization.** Major reform was initiated April 15, 2000, involving all law enforcement in the country, combining agencies and streamlining overall structure. Law enforcement currently operates at two levels: federal and local. Soon after the reform, one report noted the Federal Police employed about 12,000 police officers and approximately 2,500 other workers. According to Chief Inspector Yvon Goffard of the Belgian Federal Police in March 2004, the establishment of the Federal Police and Local Police was finalized on January 4, 2001, and January 1, 2002, respectively, with a current total of 40,000 policemen. 11,000 are assigned to Special Services under the Federal Police and the remaining 29,000 comprise the Local Police community policing efforts divided into 196 police zones (territories). Belgian cities fall within various police zones.

Some special investigation departments are available to help the local police in their investigations, to include: the strategic analysts’ special unit, behavioral sciences’ special unit (profiling), a special unit for the hearing of children, and the polygraph special unit. Testing for drugs and human samples is conducted on both local levels and at national laboratories depending on the situation.

The hierarchy of Belgian Police is as follows:

- *General commissioner:* Commander of the Belgian Police

- *General director* (rank of police chief): 5 general directors are in charge of the 5 general directions of the staff headquarters of the Federal Police
- *General officer:* chief of police (in charge of a police zone)
- *Officer:* police captain
- *Noncommissioned officer:* Lieutenant
- *Police inspector*
- *Police assistant*

Special police services include:

- Canine support department
- Air support department
- Special Intervention Unit (DSU), special forces of the police
- Traffic police
- Railway Police
- Waterway police
- Protection services (protection of the King and VIPs) and international missions
- Scientific and technical police
- Disaster Victim Identification

Monthly salary ranges are:

- Officer: 1,450 euro (\$1,800)—2,320 euro (\$2,881)
- Chief inspector: 1,285 euro (\$1,597)—1,860 euro (\$2,310)
- Police inspector: 1,203 euro (\$1,494)—1,480 euro (\$1,838)
- Police assistant: 1,136 euro (\$1,410)—1,395 euro (\$1,732)

Standard retirement is at the age of 65, but some categories of personnel may retire, under some conditions, at the age of 58 or 60.

**Uniforms and Equipment.** The shirts are light blue and the pants dark blue. The Federal Police logo is a white flame on a blue background that will be used on the hats, collars, or shoulder badges.

The police arsenal includes the .38mm handgun, semiautomatic gun GP 9mm, machine-gun type Uzi, shotgun 12mm (riot-gun), stun-gas spray, teargas grenade for the maintenance of public order, and night sticks (short and long).

The Belgium Police were the first in Europe to pioneer face recognition technology nationwide. This is done by comparing images to photos in the national

***Mounted police guard a house owned by a French forest ranger who allegedly kidnapped and murdered eight young girls, April 13, 2005. database, which will include all mug shots taken digitally across the nation. Law enforcement has many Web sites available for use in French or Dutch, and current statistics and law enforcement related information is available online.

Belgian communications are state of the art, using a centralized network called ASTRID, for all the special services (police, ambulance, civilian rescue organizations, etc.). ASTRID is based on the TETRA (Terrestrial Trunked Radio) which has been a European standard for voice and data digital radio communications, and has since become recognized as a worldwide standard of reference, using the 380 to 400 MHz frequency range. Police are dispatched using computer-aided dispatching technology.

**Community Relations.** The Local Police is established as a community oriented police and are in charge of pre-

liminary inquiries. When the enquiry seems to be important, the Federal Police respond to assist them.

**Education and Training.** Education for Belgium's law enforcement community can be seen as broken into two distinct groups. One is education provided for the Belgium police and the other the Belgian Gendarmerie.

An associate level of police education is available for the Gendarmerie, but not for the police. This education can be obtained in educational institutions (i.e., colleges and academies) that are run by the police. The prerequisite is two years as a police officer, and then a mandatory obligation of one and a half times the length the education took is added to their service requirement. While some countries recognize the associate level of education as an associate degree in nonpolice fields, Belgium recognizes it only within the law enforcement community. Both males and females are eligible and after graduation, the employee receives additional on-the-job training. Upon graduation, however, the education guarantees the rank of "Opperwachtmeester" in the bureaucratic structure. Course curriculum for the associate level education includes 20 percent Law, 20 percent Police Administration and Management, 20 percent Criminalistics and Criminology, 20 percent Other Police Related Subjects, and the other 20 percent is dedicated to General Subjects.

Higher police education is also available only to the Gendarmerie. Unlike the associate level, no previous police experience is needed for this level of education. It is still available to men and women. The course curriculum is general based across the same range of subjects, but with 50 percent dedicated to General Subjects, 20 percent to Other Police Related Subjects and 10 percent to the other categories. This program forms a part of a Bachelor of Arts degree, but unlike the associate level education, there is no guarantee of rank when finished and no mandatory duty after graduation.

A third level of education is also available exclusively to the Gendarmerie, a bachelor's level police education available to both men and women. The schools are operated by the police and previous experience or application to the police is required for enrollment. After completion, another year and a half times the study time must be added to the employment requirement. This degree is recognized outside of police work and guarantees a certain rank in the police hierarchy. The program takes four years and again the course load includes general topics. Twenty percent is dedicated to Law, 10 percent to Police Administration and Management, 30 percent to Criminalistics and Criminology, 20 percent to Other Police Related Subjects and the final 20 percent to General Subjects. A master's and doctoral level police education is not available in Belgium.

The second type of schooling is defined as Police Training, which is similar to what would be commonly labeled as “in-service training” in the United States. These courses may last anywhere from one day to a year and training is a process of imparting or acquiring particular knowledge or skills necessary for police work, but are not applied to a degree, even though completion may lead to a certificate of some type. All basic training for Belgium Police is conducted in police training centers, and the course curriculum is the same regardless of the trainee’s level of formal education. Active police personnel assist in the training as part-time instructors, but full-time employees from police educational institutions are also utilized. The course of instruction includes the following subjects: law (traffic, penal, civil, penal procedure, criminal, criminal procedure), general legal and administrative knowledge, psychology, crime prevention, youth problems, drug related problems, informatics, criminalistics, crime scene investigation, patrolling, stopping vehicles, crime-related information gathering, witness interviewing, intervening in public disorders, and history of law enforcement. The following skills are also taught: criminal evidence handling, traffic regulation, self-defense, swimming, shooting, report writing, first aid, communication, using computers, public relations, crowd control, using batons, handcuffs, gathering information, using correct police procedure, documenting, using technical equipment, cooperation in group decision making, administrative skills, foreign languages, and physical training.

Management training is also available to police and gendarmerie who are of higher rank or acting in a supervisory capacity. Again, police instructors conduct this training exclusively within police training centers. The training is not always necessary for promotion, but some management positions include the training as a prerequisite. Managers and supervisors tend to receive about 60 training hours per year. The curriculum specifically includes topics such as coaching, leadership, negotiation, effective meeting conducting, listening and communication skills, delegation, and project and operation management. The topics fall under three categories. The first is Organizational Behavior (leadership, motivation, working with groups, team building, stress management, conflict management, decision making). Next is Human Resource Management, which includes recruiting and selection, career development, human resource development and training, and effective use of human resources. The third category is Supervision and Management of Police Operations.

Belgium has eight police training institutions that provide the basic, specialized and management training. Belgium does not offer a police high school education and statistics show no employment of person’s not

having graduated from high school. It is unclear from available data whether a high school education is a prerequisite of employment. Ninety-four percent of Belgium Police enter the organization after completing high school, 5 percent after completing an associate level education, and 1 percent after completing a higher professional education degree. The schooling lasts about ten months. Subsequent “specialized police training” is also available for areas such as motorcycle police, dog handlers, shooting instructors, self-defense instructors, as well as in the areas of traffic, horses, dogs, and criminal investigation where additional, specific and detailed knowledge is deemed necessary. This training is done exclusively at police training centers and is conducted in conjunction with on-the-job training and tends to last from one day to as long as four weeks, depending on the specialty.

**Police Statistics.** The Sixth United Nations Survey on Crime Trends and the Operation of Criminal Justice Systems released on March 15, 2000, reported the police budget at \$2,351.3 million in 1997, the most recent data available. The *European Sourcebook*, in the article “Police Statistics,” shows that Belgium law enforcement had a ratio of 300 to 399 officers per 100,000 of its population in 1995. As noted previously, there are currently 40,000 officers for a population of approximately 10.2 million. There are currently 3,900 Officers, 8,800 Chief Inspectors, and 27,000 Police Inspectors.

#### CRIME

Similar to other countries, crime rates are increasing, yet are still quite low. According to the *CIA World Factbook*, they are “a growing producer of synthetic drugs, a transit point for U.S.-bound ecstasy, a source of precursor chemicals for South American cocaine processors, transshipment point for cocaine, heroin, hashish, and marijuana entering Western Europe, money laundering related to trafficking of drugs, automobiles, alcohol, and tobacco.”

In January 2001 the Belgian federal government redefined the drug policy for the nation in effect “adopting a kind of tolerance policy towards cannabis. Possession of a small amount of cannabis for his/her personal use will no longer be prosecuted [even though it remains illegal]... [W]hen the drug consumption causes social nuisance (consuming drugs in the presence of minors, smoking near schools or in situations where it may disturb other people), the police will serve a summons. Other illegal drugs (cocaine, heroine, ecstasy, etc.) remain forbidden” (Belgian National Report on Drugs 2001, p. 17). The same report noted that about 12 percent of students aged 15 to 16 years experienced with cannabis at least once during the last month, and about 20 percent of students aged 17 to 18 in the same time period. After age

15, “cannabis derivatives are the products most used” (Belgian National Report on Drugs 2001, p. 9). One report notes the maximum drug trafficking penalty is currently set at 20 years (“Drug Intelligence Brief” 2002, p. 4).

**Organized Crime.** Ernesto Savona provides a glimpse of organized crime in his working paper titled “Organized Criminality in Europe. A Descriptive Analysis.” Belgium’s central location in Eastern Europe, international airports such as in Antwerp, and large ports have resulted in the development of “domestic bilateral organizations” influenced by Italian organized crime groups that participate in the drug trade. Colombian cartels, working with the Spanish Galician and Italian Mafia, distribute cocaine. Chinese triads, whose main activities include drug trafficking, alien smuggling, local extortion, illegal gambling, and prostitution rackets, have established stable communities in the country. Additionally, he relates that “Belgium is a consumer market for synthetic drugs and the trafficking is carried out through co-operation between networks of Belgian and Dutch citizens” (1997, p. 2). Savona adds that well-established criminal trading communities within the nation have arisen from extensive organized crime networks who thrive on fraud against the financial interests of the European Union as a whole. His analysis showed that local criminal groups specialized in the production and export of synthetic drugs in and outside the European Union, and white-collar criminals are primarily responsible for the fraud cases (1997, pp.5–6). With regard to enforcement, Savona notes that as the criminal organizations have become better established, the “hierarchical distance between the leaders . . . and the rank-and-file is increasing, thus causing the ‘trail of evidence’ linking the crime with the top leaders to become obscured, providing insulation from law enforcement” (1997, p. 6).

## HUMAN RIGHTS

Belgium has been a proactive member of the United Nations Convention against Torture and Other Cruel, Inhuman or Degrading Treatment of Punishment ratified by 132 countries, as well as the Geneva Convention ratified by almost all countries. Until recently, Belgium was one of a very few countries who would undertake investigations into charge of atrocities committed regardless of where the crime took place and even if none of its citizens were a victim and the suspect was not Belgian. However, in April 2003 amendments were adopted to limit the acceptance of cases where there is no connection with Belgium and bring the country more in line with the Roman Statute of the ICC and International law on immunity.

In the 30th Session of the Committee against Torture, held April 28 to May 16, 2003, a report states

that Belgium has expanded upon the definition of torture as previously agreed upon by the committee, indicating a true concern for human rights. The report further addressed the committee’s concern about a lack of available medical facilities and legal counsel to detainees during the 24-hours following apprehension. Complaints were also raised about repeated allegations of harsh treatment and the use of force against demonstrators and asylum seekers when they arrived or were deported. The committee submitted recommendations to enhance training for medical and penitentiary staff to limit violence and abuse by both the officials and the prisoners.

On a more specific level, the Federal Police set up an internal service for prevention and protection at work, concerning the issue of Occupational Safety and Health (OSH), in accordance with laws for all Belgian employees. The goal is to promote the most favorable social climate and working environment possible within the framework of statutory provisions. Concern for employees is shown in the liaison that the internal OSH service has with other departments providing necessary services to police such as stress relief, and the occupational medicine service. The program operates at a local level that leads to flexibility in handling specific topics as they develop and issues of limited duration. Another agency with strong local affiliation is the Belgian Information REITOX Network that cooperates with the National Focal Point and the regions or communities regarding drugs and drug addiction. They monitor treatment, health care and conduct drug research and epidemiological surveillance, among other drug prevention efforts. The U.S. Drug Enforcement Agency (DEA), in its “Drug Intelligence Brief,” notes, “all regions in Belgium are implementing drug hotlines and HIV and hepatitis prevention programs” (“Drug Intelligence Brief” 2002, p. 3).

Human rights have improved in the military sector as well. The Belgian government currently prohibits the participation of military persons under 18 years old from serving in combat.

## CORRECTIONAL SYSTEM

According to the DEA intelligence division, Belgium’s prison system has established “drug free” sections in the prisons “to segregate non-users in an attempt to prevent an increase in users in the penal system” (“Drug Intelligence Brief” 2002, p. 1).

### Prison Statistics.

- Total Prison Population: 9,245
- Prison Population Rate per 100,000: 88
- Pretrial Detainees: 39.1%

**Belgium**

- Female Prisoners: 4%
- Juvenile Prisoners: 1.1%
- Number of Prisons: 34
- Official Capacity of the Prison System: 8,092
- Occupancy Level: 113%

# Belize

---

**Official country name:** Belize

**Capital:** Belmopan

**Geographic description:** Middle Central American country bordering the Caribbean Sea, between Mexico and Guatemala

**Population:** 279,457 (est. 2005)

## LAW ENFORCEMENT

**History.** The first constabulary force in British Honduras (as Belize was known until 1973) was formed in 1885. It was populated by men imported from Barbados, as local men were opposed to enlistment, and retained a military character until it became the British Honduras Police Force in 1902. In 1957 the first commissioner was appointed. Following the country's independence in 1973, the agency became the Belize Police Force.

**Structure and Organization.** Directly subordinate to the Ministry of Home Affairs, the Belize Police Force is headed by a commissioner and is divided territorially into eastern (including Belmopan and Belize City), central, and western agencies. The police headquarters is in the former capital of Belize City, but the commissioner resides in Belmopan.

There are three operational branches at the headquarters: General Duties, Criminal Investigation, and Special. The Special Branch is the internal security organ.

In descending order, the principal ranks are:

- Commissioner
- Assistant Commissioner

- Senior Superintendent
- Superintendent
- Assistant Superintendent
- Inspector
- Assistant Inspector
- Sergeant
- Corporal
- Constable

**Uniforms and Weapons.** The main working dress for sergeants and lower ranks consists of a dark-blue peaked cap, khaki shirt, blue serge trousers with a green seam on both sides, and a brown leather belt. Ceremonial uniforms include a white tunic with a white buff belt. Members of the Special Branch wear plainclothes.

**Education and Training.** Education is provided at the police training college at Belmopan. British influences are prominent in training programs.

**Police Statistics.**

- Total Police Personnel: 865
- Population per Police Officer: 323
- Percentage of Women Police: 9%

**HUMAN RIGHTS**

The government generally respects human rights but less so in matters involving the police. There are reports of unlawful police killings, brutality, excessive use of force, arbitrary arrest, and detention. Allegations of abuse by officials are investigated by the police department's Internal Affairs Department (IAD). In 2003 there were 322 sanctions against police officers by the IAD. An Amnesty International study found that human rights violations by the police were sporadic but that the government was slow to take action against errant officers. There is also a Human Rights Commission that monitors police actions that violate human rights.

**CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: NA. Of which:

- Murder: 12.8
- Assault: 20
- Burglary: 600
- Automobile Theft: 4

**CORRECTIONAL SYSTEM**

Prisons are administered by the Superintendent of Prisons, who heads the Department of Corrections under the Ministry of National Security.

Pretrial detainees are housed separately, but first-time offenders are housed together with hardened criminals. There are reports of physical brutality by prison wardens. Troublesome inmates are beaten and then placed in isolation wards, which measure eight feet by

ten feet and are unlit and unventilated. Prisoners in isolation wards are served a diet of bread and water. Incidents of gang- and drug-related violence are common. There are frequent prison breaks and smuggling of weapons such as machetes and guns. A few inmates are allowed to work outside the prisons, often in construction. Otherwise, opportunities for work or skills training are limited.

Hattieville Prison, the only prison in the country, includes a separate facility for women, where conditions are significantly better and where each inmate has her own bed. The inmates in this facility also have access to vocational and limited educational programs.

In 2002 the government privatized the management of the Hattieville Prison. The Department of Prisons retained oversight, but management was taken over by the nonprofit Kolbe Foundation created by the Prison Advisory Board and the Rotary Club.

**Prison Conditions.** Overcrowding is a serious problem in Belize's prison. The occupancy level is 219.4% over capacity. More than 150 inmates share 30 cells, with only 30 beds and one bathroom. The roofs leak and the cells are flooded during rain. Uncovered buckets are used as toilets. Meals are delivered in small buckets on wheelbarrows. Prisoners have to pay for their own medicine and treatment. The prison medical budget is only 25 cents per inmate per month.

**Prison Statistics.** The only prison in the country is the Hattieville Prison.

- Total Prison Population: 1,097
- Prison Population Rate: 459
- Pretrial Detainees: 12.2%
- Female Prisoners: 6.4%
- Number of Prisons: 1
- Official Capacity of Prison System: 500
- Occupancy Level: 219.4%

*George Thomas Kurian*

# Benin

---

**Official country name:** Republic of Benin  
**Capital:** Porto-Novo; Cotonou (seat of government)  
**Geographic description:** In West Africa, between Nigeria and Togo  
**Population:** 7,460,025 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The National Police of Benin is composed of the Gendarmerie Nationale and the Sûreté nationale. The Gendarmerie is by law a regular branch of the armed forces and is concerned with the maintenance of law and order. Though under the jurisdiction of the minister of defense, it has separate hierarchy and is divided into six companies. The Sûreté nationale is involved in criminal and investigatory work.

### Police Statistics.

- Total Police Personnel: 2,166
- Population per Police Officer: 3,444

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 297. Of which:

- Murder: 5.1
- Assault: 102
- Burglary: 4.6
- Automobile Theft: 0.6

## CORRECTIONAL SYSTEM

Prisons are under the Ministry of Justice, Legislation, and Human Rights and are administered by a director.

**Prison Conditions.** Prison conditions are extremely harsh and are characterized by a lack of proper sanitation and medical facilities, overcrowding, malnutrition, and disease. Family members are expected to provide food for inmates to supplement food rations. Women are housed separately but juveniles and pretrial detainees are housed with convicted prisoners. The prison at Natitingou is the only prison that is not overcrowded.

**Prison Statistics.** There are eight prisons, with an official capacity of 1,950 and a prison population of 4,961. Per 100,000 population, the prison inmate rate is 81. About 64.5% of the inmates are pretrial detainees, 3.5% women, and 1% juveniles. In 2004 a new prison opened at Akpro-Misserete in Oueme Department.

*George Thomas Kurian*

# Bermuda

---

**Official country name:** Bermuda

**Capital:** Hamilton

**Geographic description:** Group of islands in the North Atlantic Ocean

**Population:** 65,365 (est. 2005)

## LAW ENFORCEMENT

**History.** The island was first settled in 1609, and the settlers tried a number of police systems borrowed from their home country of England. These included parish constables and a town watch. The first islandwide police force was instituted in 1879.

**Structure and Organization.** For operational purposes the headquarters in Hamilton consists of four divisions: Operations, Eastern, Western, and Central. Headquarters is responsible for administration, finance, provost marshal, general stores, Criminal Investigative Division (CID), prosecutions, recruitment, training, crime prevention, and public relations. The three territorial divisions are responsible for general duties, personnel, parish constables, and CID. The Central Division is also in charge of the Marine Section and the Women Police. The Operations Division is in charge of Traffic Section, Information Branch, Motorcycle Patrol, Driving School, Radio Section, and Beach Squad. The administrative divisions are led by chief inspectors and the territorial divisions by inspectors. There is a reserve constabulary of 300.

In descending order, the principal ranks are:

- Commissioner
- Deputy Commissioner
- Chief Superintendent
- Superintendent
- Chief Inspector
- Inspector
- Sergeant
- Constable

**Education and Training.** Training for all ranks is provided by the Police Training School in Hamilton.

**Uniforms and Weapons.** There are two basic uniforms, one for summer and another for winter. The summer uniform consists of a light-blue (white for officers) short-sleeved, open-neck shirt, a black webbed belt, navy-blue shorts, navy-blue long hose, and black shoes. The winter uniform is basically identical to that worn by British

policemen except that it is lightweight. Plain flat black caps are worn by all ranks, with the exception of beat personnel, who wear helmets. Police personnel are unarmed.

**Police Statistics.**

- Total Police Personnel: 382
- Population per Police Officer: 171

**HUMAN RIGHTS**

The government respects the constitutional commitments to protect human rights. The police department has internal controls to monitor police behavior and punish the use of excessive force.

**CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 8,871. Of which:

- Murder: 5.1
- Assault: 221.7
- Burglary: 1,949.2

**CORRECTIONAL SYSTEM**

**Prison Conditions.** The prison conditions meet international standards in terms of food, medicine, and ventilation.

**Prison Statistics.**

- Total Prison Population: 343
- Prison Population Rate per 100,000: 532
- Pretrial Detainees: 19.2%
- Female Prisoners: 10.5%
- Juveniles: 5.6%
- Number of Establishments: 3
- Official Capacity of the Prison System: 369
- Occupancy Level: 93%

*George Thomas Kurian*

# Bhutan

---

**Official country name:** Kingdom of Bhutan

**Capital:** Thimphu

**Geographic description:** A landlocked country in the high Himalayas between India and China

**Population:** 2,232,291 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The national police is the Royal Bhutan Police under a commissioner who is stationed in Thimphu. It is sometimes assisted by a national militia. There are police outposts in each block that report to the superintendent of police in each district. There is a special unit in charge of criminal investigation. Superior police officers are sent to India for training. Policemen are generally unarmed.

## CORRECTIONAL SYSTEM

The principal prison is in Thimphu, but there are smaller jails in every district. The Chemgang Prison is five miles

east of Thimphu. The total prison population is estimated to be 1,400, of which 35% are pretrial detainees.

**Prison Conditions.** Prison conditions are austere because of the small budget of the prison service. Prisoners receive small food rations and little or no medical services. The prison buildings tend to be ill maintained.

*George Thomas Kurian*

# Bolivia

---

**Official country name:** Republic of Bolivia

**Capital:** La Paz

**Geographic description:** A landlocked country, fifth in size in South America

**Population:** 8,857,870 (est. 2005)

## LAW ENFORCEMENT

**History.** Bolivia has one of the most centralized law enforcement agencies in Latin America. Its constitution defines law enforcement as one of the functions of the central government. Police organization and functions were first spelled out in an 1886 law, which remained unchanged until 1950 when it was substantially revised in the Organic Law of Police and Carabineros, also known as Law No. 311. Together with the law of 1886, it provides the legal basis for the present-day police system.

Until the Revolution of 1952, the Police Corps was subordinate to the regular armed forces and the most senior police posts were given to army officers. The situation changed radically in 1952 with the rise to power of the Movimiento Nacionalista Revolucionario (MNR; National Revolutionary Movement). The Corps sided with the MNR and was rewarded with greater autonomy. During this time, it also received technical assistance from the United States.

**Structure and Organization.** Under the constitution, the president of the republic is the commander in chief of the National Police Force of Bolivia (PNB), the National

Corps of Carabineros (rural police force), and other police units. In this capacity, he names the director general of the PNB and other key officials. During times of internal unrest, the president may take over the direct control of the police. In times of war the uniformed carabinero units may be transferred to the Ministry of National Defense and their operations integrated with those of the armed forces.

Administrative jurisdiction over the police is vested in the Ministry of the Interior. Operational control rests with the director general, who may hold the rank of a colonel if he is a career police officer. The director general is also the commandant of the National Police Academy, the head of the National Identification Service, and liaison with the Interpol. The Interpol connection is significant because Bolivia is one of the chief producers of coca leaves from which cocaine is made. The office of the director general consists of a command group and twelve numbered staff sections.

Under the Office of the Director General in La Paz, field elements are stationed in all areas of the country where they function outside the control of departmental, municipal, or provincial governments. Subordinate headquarters, known as brigades, are established in each of the nine departments. Each brigade is divided into two commands, one urban and the other provincial. The urban command, at the departmental capital, has charge of the police stations and local jails, and is divided into sections with assigned personnel to patrol and carry out criminal investigations.

Most corps personnel and units within a department, regardless of their size, composition, mission, or station, are considered part of the brigade in the area they serve and are members of a single departmental unit. An exception is the city of La Paz, where two separate regiments of the police are kept under the direct control of the director general and the president. Other exceptions are made in sections of the country where dependence on the regular departmental brigade forces is not deemed advisable or feasible. Two such areas—San Ignacio de Velasco in Santa Cruz department and Tupiza in Potosí—have independent carabinero detachments besides the departmental brigades.

Certain departmental brigade personnel of the rural command are on duty at a series of frontier posts scattered at twenty-seven critical points along the border and at river and lake ports of entry. They include customs police now integral to the corps, as well as uniformed carabineros engaged in combating smuggling and illegal border crossing.

Most of the police force is concentrated in the La Paz area where about 50% of its uniformed members and 60% of its civilian personnel are stationed. Elsewhere, the national distribution of the corps is in direct proportion to the density of the population or the strategic importance of the area. Within the corps itself approximately 80% are uniformed carabineros and about 20% are civilian police investigators, specialists of the identification service, and minor functionaries. Both elements are undermanned, particularly in the field of routine police activities. In La Paz there is a small forensic laboratory. Some use is made of police informers if funds are available, but crimes are solved mainly through periodic roundup of all known miscreants.

Besides the corps, two other official agencies are involved in the maintenance of public order. One is the Directorate General of Traffic and Travel, and the other is the Municipal Police. The Judicial Technical Police conducts investigations for common crimes that do not involve narcotics. The Special Counternarcotics Force, including the Mobile Rural Patrol Unit, is dedicated to antinarcotics enforcement.

**Education and Training.** Corps personnel are usually men between the ages of twenty-one and twenty-five who have already completed their tours of obligatory duty in the army. They usually come from the lower economic strata and are, in most cases, illiterate. Pay scales are low, opportunities for personal betterment and advancement are rare, and little prestige, if any, is attached to police work.

The quality of officers and higher civilian employees, drawn mainly from the small urban middle class, is relatively higher. Officers receive their commissions regularly following graduation from the National Police Academy, by transfer or after retirement from commissioned status in the armed forces, or by direct political appointment for demonstrated ability or by outright patronage. Civilians are nearly always political appointees. Cadets accepted for the National Police Academy are not subject to the age limitations for military service and matriculation automatically exempts them from their military obligations. Entrance requirements are minimal. Since 1956 cadets receive specialized training in criminal law personnel administration, police methods and techniques, and riot control tactics. Following graduation, cadets receive a bachelor of humanities certificate, a symbolic saber, and a commission as a second lieutenant in the carabineros.

Personnel of the corps are classified into three groups. The first is made up of uniformed personnel. The second includes technical and auxiliary personnel chaplains, physicians, social workers, and communication and transportation workers, who may be uniformed carabineros or civilians. The third group is exclusively civilian and consists of investigators and detectives.

Uniformed personnel have three classifications, with three grades in each class. In descending order, the classifications are field officers (*jefes*), company officers (*officials*), and privates (*tropes*). Uniformed personnel are promoted on the basis of annual examinations. Captains and sergeants must spend five years in a grade before becoming eligible for promotion. Civilian personnel have only a two-tier hierarchy composed of superiors (*funcionarios superiores*) and subordinates (*funcionarios subalternos*).

In-service training is provided by the National Police Academy while some officers are sent abroad for special training. The academy offers a four-year program for privates and agents covering riot control, police ethics, and unarmed combat; for civilian detectives, scientific crime detection, criminal law and procedure, and methods of interrogation and identification; and for officers, tactics and administrative functions. For noncommissioned grades, there are additional courses in public relations, preparation of reports, personnel management,

*Bolivian police forces take cover as stones are thrown by demonstrators at a protest in El Alto, Bolivia, March 3, 2005. The demonstrations were part a general strike called to shut down a French-owned utility company. Protestors claimed the company failed to provide water to thousands of poor residents in El Alto and La Paz. AP IMAGES.*

and leadership. Other types of training, such as self-improvement courses, are offered at off-duty classes in universities. A specialized course in counterinsurgency is offered at the police academy.

The Young Men's Basic Police School provides a one-year training course at the operational level for subalterns. The Higher Police School prepares officers for management duties and police operations.

#### Police Statistics.

- Total Strength of the Police Force: 17,000
- Population per Police Officer: 521
- Percentage of Women Police: 10%

#### HUMAN RIGHTS

The government generally respects human rights, but problems remain in certain areas because of legal and institutional deficiencies. There are a number of allegations of torture by the police and security forces. There are also credible reports of use of excessive force, petty

theft, extortion, and improper arrests. Investigations of alleged official abuses are slow. At times, the police arbitrarily arrest and detain persons, and during violent demonstrations, they are known to kill protesters.

#### CRIME

**Crime Statistics.** Offenses reported per 100,000 population: 660. Of which:

- Murder: 28.6
- Assault: 59.4
- Burglary: 0.9

#### CORRECTIONAL SYSTEM

The Penal Code recognized three types or orders of punishment that may be imposed on criminals, regardless of whether the offense was a misdemeanor or a felony: corporal punishment, such as imprisonment; noncorporal punishment, such as deprivation of civil rights; and pecuniary punishment, such as fines. Capital punishment was abolished in 1961 but was restored in 1973.

The national penitentiary is at La Paz and there is one in each of the nine departments. Most provinces have jails of their own. Other facilities include a correctional farm at Caranavi, a reformatory for women at La Paz, and three reformatories for juveniles, one at La Paz and two near Cochambamba. These institutions, with the exception of the reformatories, are under the Ministry of the Interior.

The Correctional Farm at Caranavi is the best run correctional institution in the country. Regulations there are strict, prisoners are secluded in their cells at night, communication with the outside world is closely regulated, and families are rarely permitted to visit inmates. But meals are better than in urban prisons and prisoners engage in common work in the fields. The Women's Reformatory at La Paz is run under contract by a Roman Catholic order of nuns.

**Prison Conditions.** Prison conditions are harsh. Prisons are generally overcrowded. With the exception of the maximum-security prison at Chonchocoro in El Alto, prison authorities have effective control of only the outer perimeter of prisons. Inside prison walls, prisoners have free rein. Violence among prisoners and between prison guards and prisoners is common. Corruption is a problem among low-ranking and poorly paid prison guards and wardens. Detention centers, which house the accused before the completion of their trials and sentencing, are also overcrowded.

According to the director general of the Penal System, there are 7,165 prisoners in facilities designed to hold 4,700 persons. The majority of all prisoners are held for narcotics crimes. The Pardon and Extraordinary Freedom Jubilee 2000 Law has begun to reduce overcrowding. The law pardons prisoners below the age of twenty-one and older than the age of sixty, reduces felony sentences by one-third for all persons sentenced before August 2000, and prisoners who are parents of minor

children and have completed at least 50% of their sentences. The law does not apply to prisoners convicted of murder, treason, terrorism, rape, kidnapping, and narcotics traffic.

A person's wealth can determine cell size, visiting privileges, day-pass eligibility, and place or length of confinement. Cell prices range from \$20 to \$5,000 and are paid to prior occupants or to prisoners who control cell blocks. In the poorest parts of San Pedro prison in La Paz, inmates occupy tiny cells that measure three by four by six feet, with no ventilation, lighting, or beds. Crowding in such low-rent cells obliges inmates to sleep sitting up. Children up to six years of age are permitted to live with their incarcerated parents, but children as old as twelve sometimes do. The standard prison diet is so poor that it causes anemia. The government budgets only 32 cents per prisoner per day for food. Prisoners who can afford to supplement their diet do so at their expense.

There is no adequate health care within the prisons, and only affluent prisoners get permission for outside medical treatment. Drugs and alcohol are readily available for those inmates who can pay.

**Prison Statistics.**

- Total Prison Population: 8,315
- Prison Population Rate per 100,000: 102
- Pretrial Detainees: 36%
- Female Prisoners: 16.7%
- Juveniles: 10.6%
- Number of Prisons: 89
- Official Capacity of Prison System: 4,959
- Occupancy Level: 162.5%

*George Thomas Kurian*

# Bosnia and Herzegovina

---

**Official country name:** Bosnia and Herzegovina

**Capital:** Sarajevo

**Geographic description:** Almost a landlocked country in southeastern Balkans; a narrow corridor extends to the Adriatic Sea

**Population:** 4,025,476 (est. 2005)

## LAW ENFORCEMENT

The situation in Bosnia-Herzegovina is unique. This small nation, or better put, this small federation, is the product of military and social intervention from numerous outside entities. Having once been a part of Yugoslavia, Bosnia-Herzegovina is now a war-torn nation being rebuilt into a democratic entity. In the process, its criminal justice system is being virtually created within the evolving governmental infrastructure. This civilian criminal justice system often works in conjunction with peace-keeping forces within the area. Due to the new establishment of this unstable nation and equally due to the inadequate nature of the Bosnian-Herzegovinian criminal justice system, much of this country's information is scarce or ill defined. Record keeping in this country is extremely new and lax. In mid-2005 numerous entities were involved in maintaining order and in creating both a government and criminal justice system. Thus, statistical facts and/or data were virtually nonexistent.

**History.** After four years of intensive conflict, the war in Bosnia and Herzegovina was finally brought to an end with what is commonly known as the Dayton Peace

Accords in December 1995 (note that this occurred in Dayton, Ohio, in the United States of America). The international community, having invested so much in the peace process in this country, became intimately involved in implementing the accords as part of an unprecedented effort at postconflict peace-building. The goal was to prevent further warfare and to build a national infrastructure that could ensure lasting peace. This required cooperation between three warring factions—the Bosnian-Muslim forces, the Bosnian-Croat Croatian Defense Council, and the Bosnian-Serb Army—that had wracked the country with nonstop warfare. This ultimately resulted in the establishment of the Bosnia and Herzegovina Federation and the Republic of Srpska, which together form the state of Bosnia and Herzegovina.

The United Nations (UN) implemented several programs of force restructuring to create a new professional police force. The UN created, as part of the UN Mission in Bosnia and Herzegovina (UNMIBH), the International

Police Task Force (IPTF) that, in turn, developed a three-point plan concentrating on: (1) restructuring a postcommunist and postparamilitary police force, (2) reforming the police through training, selection, certification, and decertification procedures, and (3) making a democratic police force by establishing a nonpolitical, impartial, and multiethnic police force that utilized principles of community policing.

**Structure and Organization.** As of 2005, the Bosnian police system, which is at best a loose term, was going through a transition period. Specifically, the NATO-led Implementation Force was being replaced with the European Union's own oversight personnel. In the midst of this external military policing from other countries, the Bosnian system was slowly developing as an organized civilian police force. Numerous agencies came together to provide assistance in the building of this civilian police force. Some of these were the U.S. Department of Justice's International Criminal Investigative Training Assistance Program (ICITAP), the European Union's Immigration Pact Team, the UN High Commissioner for Refugees, the Office of the High Representative's Antifraud Department, and many others.

There are basically two entities (the Federation of Bosnia and Herzegovina and the Republic of Srpska) that maintain their own police forces under the control of their respective interior ministers. Authority over the police is further decentralized in the federation, with each of the ten cantons also possessing a ministry of the interior. While the Republic of Srpska police are merely subdivided geographically into regional public security centers and local police stations, the chiefs of which remain directly accountable to the Republic of Srpska's interior minister.

The limited policing power of the federation is reflected by the short list of policing tasks that fall within its purview: coordinating interentity and intercantonal cooperation (especially in regard to terrorism and other serious and organized crimes), protecting VIPs, and guarding diplomatic premises. The ten cantonal interior ministries are responsible for all other aspects of law enforcement, with each municipality having a police administration. In contrast, the Republic of Srpska maintains responsibility for all crime prevention and enforcement within its borders.

Bosnia's police forces suffer from several institutional weaknesses that stem from the country's wartime division, thus endowing it with a disorganized collection of authorities. Bosnia has fourteen separate police forces, and cooperation between these police forces is poor. Weak collaboration among the police, prosecutors, and judges also undermines the overall effectiveness of the

criminal justice system, particularly when it comes to prosecuting the organizers of ethnic violence or making corrupt officials responsible for their acts. So long as policing structures remain flawed, providing for too much latitude at the local level and too little accountability to the center, international efforts to prevent corrupt political influences on the police will remain futile.

**Principle Agencies and Divisions.** Besides its regular police forces, the federation also has separate Court Police (under the authority of the Federation Supreme Court) and Finance Police (under the Ministry of Finance). The Federation Court Police are responsible for protecting trials, court buildings and witnesses, transporting prisoners, enforcing court-ordered evictions, and carrying out court-ordered arrests. The Republic of Srpska has neither court police nor finance police. These two police entities were absorbed into the tax authority in the autumn of 2001.

**Salaries.** Police salaries are both very low and, more often than not, long past due. The problem is somewhat varied by rank and region with some police officers' salary being just KM 455 per month, with a regional police chief earning KM 820. Moreover, many police have had no pay raise since 1999. Federation police do a bit better, with an average monthly wage of KM 530 in 2001. It should be noted that the real incomes of most police do exceed these figures but are due to "gray areas" of policing and to the product of private employment, which is much more lucrative in Bosnia-Herzegovina.

**Police-Community Relations.** In general, police-community relations within this nation are poor. In fact, public opinion polls show little public confidence in the police: only 48.1% think the police are now more professional than the prewar police, and only 42.7% think they treat all people equally (King et al. 2002). Furthermore, citizens have expressed dissatisfaction with the performance of the international peace mission in Bosnia-Herzegovina, which has yet to achieve the expected results with key points in the arrest of war criminals and other criminal justice and human rights-related issues. However, the role of the peace mission was perceived differently in the Federation of Bosnia and Herzegovina and the Republic of Srpska. Namely, while people in Bosnia-Herzegovina generally urged that the indicted war criminals be apprehended and punished, in the Republic of Srpska the majority of citizens still helped to keep them in hiding. This notes how the complex confluence of ethnicity, religion, and local politics can greatly shape police-community relations to a point where starkly different community expectations are held.

***Police secure an area near the Potocari Memorial Centre after explosives were found before the tenth anniversary of the massacre in Srebrenica, Bosnia, July 5, 2005. The explosives were found in two locations near the center. More than 50,000 visitors, including political diplomats and dignitaries from the region, were expected to attend an anniversary ceremony on July 11, 2005. The city was the site of a 1995 massacre where Serbian armed forces entered the town and killed between an estimated 7,000 and 8,000 Muslims. AP IMAGES.***

**Special Police.** The recently created State Investigation and Protection Agency (SIPA) takes responsibility for exchanging law enforcement information and providing protection for national institutions and representatives. SIPA is also meant to facilitate interentity and regional cooperation in the fight against organized crime, human trafficking, and international terrorism.

The Citizens Identity Protection System (CIPS), a state-level civil registry, facilitates SIPA's work. The CIPS has a state-level Network Operations Center, which maintains a registry of blacklisted lawbreakers compiled by Interpol.

The State Border Service (SBS), established by order of the High Representative in 2000, is responsible both for controlling Bosnia's 1,666-kilometer-long frontiers and for pursuing border-related crimes throughout Bosnia-Herzegovina. These police are not required to

seek the consent of cantonal authorities, but are encouraged to notify local agencies if they operate in their jurisdiction. The official establishment of the SBS in June 2000 ended a long-standing feud between Bosnia's two entities. Despite facing repeated upsets and problems with funding, logistics, and political resistance, the SBS controls approximately 1,660 kilometers of international border area and employs over 2,700 officers. In 2005 the SBS covered the entire Bosnia-Herzegovina border and three international airports in Sarajevo, Mostar, and Banja Luka.

While the NATO-led troops stationed in Bosnia do not uphold the laws of the country, they do perform significant security tasks that local police are not always able to carry out. As part of the post-September 11 "war on terrorism," U.S. troops have captured and ordered the apprehension or taken custody of suspected terrorists.

Because of this, NATO troops must now also be seen as a part of the law enforcement establishment in Bosnia.

**Education and Training.** Beginning in 2005 outside pressures from multinational forces and the European Union compelled the Bosnian police academies to coordinate both their curricula and selection procedures. The Association of European Police Colleges (AEPCC) is the authority that links the European Union's various police academies. The AEPCC has a program known as the "Working Group on Regional Civilian Police Training in Southeast Europe," which has plans to provide training to several police forces in the Balkans. This training is designed to provide professionalism to the civilian police force in Bosnia, but there have been noted difficulties. One of the most prominently cited problems has been in the recruitment and representation of minority Serbs within the police training academies.

The ICITAP has provided training to the IPTF itself and to local police forces. The European Commission has also been active in police reform as have numerous European Union countries. While police advisers and trainers have improved the technical aspects of policing, efforts to establish police forces that respect human rights have been less successful. One important lesson has been the realization that while technical capacity and police attitudes can be improved in a short period, the success of long-term reform is jeopardized if the responsible international organization lacks the authority to remove elements of political influence.

The UNMIBH initiated a program to check whether serving police officers have the proper educational qualifications and have not falsified documents to obtain employment. It is thought that up to 20% of the police officers in Bosnia have lied on their application forms, thereby committing documentary fraud (International Crisis Group 2002).

**Uniforms and Weapons.** Police officers of the Federation of Bosnia and Herzegovina most often use Austrian Glock side arms. The Republic of Srpska police continue to use their traditional Yugoslav model (Cervena Zastava CZ99). The high-powered armament of the Bosnia-Herzegovina police is due to the fact that these officers frequently possessed a "mix of weapons" that included the Hungarian Marakov and other eastern European varieties, requiring a broad range of expensive ammunition.

#### **Transportation, Technology, and Communications.**

**Surveillance and Intelligence Gathering.** Intelligence organizations have largely remained outside of international reform and restructuring efforts. In the federation, unrestrained intelligence services, located in the police stations of several municipalities, obstructed

early efforts to unify police forces. Fortunately, European Union authorities have been successful in removing intelligence services from police facilities in the federation and are making progress in the Republic of Srpska.

Several intelligence services have been active in the territory, believed to be under the control of various political parties. Besides the intelligence services of Croatia and Serbia that, no doubt, operate in Bosnia, Bosnia's own services include the intelligence and security service of the Republic of Srpska, the Bosnian-Muslim Agency for Investigation and Documentation, and the Bosnian-Croat National Security Service. It is estimated that each of these services has up to 700 operatives. International officials have expressed concern that political parties oversee the operation of intelligence services for their own purposes.

In March 2002 a Federation Law on Intelligence Service was adopted to establish a Federation Intelligence and Security Service to replace the current ones. The service included the following other bodies: an Inter-Resource Group, established by the federation government, and a Working Group for Monitoring and Controlling the work of the service, established by the federation parliament. Besides the service director and deputy, the federation government appointed an executive director (operator of services) and a chief inspector. The service will operate until the eventual establishment of a state intelligence service.

**Police Statistics.** There has been a reduction in police numbers from 45,000 after the war to approximately 23,000 today. This is considered a fairly acceptable police-to-population ratio by regional standards (King et al. 2002). As of 2005, there were approximately 11,500 officers in the federation, 6,800 in the Republic of Srpska, and 280 in Brcko (International Crisis Group 2002). An additional 2,700 officers are due to be employed by the SBS and approximately 500 by SIPA. Although most of these will be recruited from the ranks of ordinary policemen, the addition of new officers will not solve the mismatch between professional skills and numbers, on the one hand, and resources and sustainability, on the other (International Crisis Group 2002). In 2005 Bosnia's population was estimated at around 3.7 million. This means that there was approximately 1 police officer for every 171 citizens. The European standard is usually 1 police officer for every 330 residents (International Crisis Group 2002). In Kosovo, where the international community took over policing and started to build an indigenous police service from scratch in 1999, there were approximately 9,000 police officers (International Crisis Group 2002).

#### **HUMAN RIGHTS**

With respect to the policing system of Bosnia-Herzegovina, discriminatory actions, lack of minority protection, and abuse of authority are commonly

encountered problems. Corrupt police officers were involved in the trafficking of human beings, prostitution networks, and drug dealing. In addition, numerous local police officers lived illegally in apartments or houses belonging to refugees.

There is an overwhelming need for a comprehensive and truly independent criminal justice system that can effectively address the wartime violations committed in Bosnia-Herzegovina. Thousands of perpetrators still continue to escape punishment for war crimes, crimes against humanity, and genocide committed during the wartime period in Bosnia-Herzegovina. Nearly 250,000 people were killed during this conflict, many as a result of summary executions and arbitrary killings. According to Amnesty International (2003), the official number of persons still unaccounted for is around 16,000 (including thousands of unresolved “disappearances”). Rape and sexual abuse of women and girls have occurred on a massive scale. However, most of the vast number of case files, recorded and investigated by Bosnian police and prosecutors, have not been pursued by the criminal justice system in Bosnia-Herzegovina. Thus, many thousands of persons responsible for the worst possible crimes in Bosnia-Herzegovina still have not been brought to justice.

## CRIME

**Organized Crime.** Organized crime elements conducting human trafficking and smuggling have exploited Bosnia’s lax visa requirements and border controls to further their trade. For example, the UN reported that of the 1,298 Iranian passport holders entering Bosnia-Herzegovina on one- to two-week visas in the period June 1–28, 2000, only 116 “officially departed” the country. The other 1,182 are suspected of having left Bosnia-Herzegovina and entered western Europe illegally through the porous southeastern European borders. An estimated 50,000 illegal migrants transited Bosnia-Herzegovina territory in 2000, representing 10% of the estimated 500,000 that enter the European Union every year. International civilian police and aid workers have also reported an alarming number of incidences in illegal trafficking of women in Bosnia-Herzegovina. To assist the Bosnia-Herzegovina government, the international community embarked on several exercises to assist with capacity building and material support to fortify the country’s border services.

**Crime Statistics.** Those few statistics that are provided by Bosnia-Herzegovina generally come from the SBS. Since 2001 the SBS has had immediate impact in two core areas of border security. First, combating pervasive illegal migration: in 2001 the SBS achieved a 66% reduction in illegal migrants passing through Sarajevo airport alone—from 24,000 in 2000 to 8,000 in 2001. Second, by

closing illegal smuggling routes and redirecting commercial traffic to recognized border crossings, the SBS is largely attributed with increasing customs revenues in both entities by at least 20% (King et al. 2002).

While the issue of war crimes is a prime concern, Amnesty International (2003) notes that there are currently no exact numbers available for persons currently under investigation for war crimes in Bosnia-Herzegovina. But Federation of Bosnia and Herzegovina and Republic of Srpska public prosecutors estimate the number of suspects for these crimes to be around 3,000 and 6,000 in their respective jurisdictions.

## CORRECTIONAL SYSTEM

**Prison Conditions.** In 2003 an Amnesty International inspection found that the prison administrations and staff were familiar with international regulations on the treatment of prisoners and no serious cases of inhuman treatment of prisoners were registered. However, inmates have complained of poor physical conditions and bad food quality. Most prisons did not meet the minimum physical conditions for accommodation. The buildings are frequently in very poor condition and are overcrowded, particularly in the Federation of Bosnia and Herzegovina. Local monitors fear the spread of infectious diseases unless the conditions improve soon.

Overcrowding resulted in long-term prisoners being accommodated in the same wards as short-term inmates and juvenile delinquents, contrary to international standards. Discontent took the form of hunger strikes, riots, and self-mutilation. Cases of homosexual abuse by inmates have been reported in some prisons as well.

**Prison Statistics.** As of 2005 there were fourteen penal institutions in Bosnia-Herzegovina, eight in the Federation of Bosnia and Herzegovina, and six in the Republic of Srpska. In January 2002 the Human Rights Office of the UNMIBH conducted a total of forty-nine visits to prisons in Bosnia-Herzegovina. It was recorded that there were 2,251 inmates in the Bosnia-Herzegovina prison system. Specifically, 1,438 were in the federation system and another 813 were in the prisons of the Republic of Srpska (King et al. 2002).

- Total Prison Population: 1,509
- Prison Population Rate per 100,000: 58
- Pretrial Detainees: 16.9%
- Female Prisoners: 2.5%
- Juvenile Prisoners: 1%
- Number of Prisons: 8
- Official Capacity of the Prison System: 1,183
- Occupancy Level: 113.1%

# Botswana

---

**Official country name:** Republic of Botswana

**Capital:** Gaborone

**Geographic description:** A landlocked country in south-central Africa, formerly Bechuanaland

**Population:** 1,640,115 (est. 2005)

## LAW ENFORCEMENT

**History.** Formal policing in Botswana has its origins in the colonial experience. During the late nineteenth century British interest in the Tswana-controlled Kalahari region was intended to establish a buffer state to check Boer expansion and German imperial ambitions in central Africa. In 1885, when Great Britain declared its intention to administer the territory as the Bechuanaland Protectorate, one of the first measures enacted was the introduction of the Bechuanaland Border Police. Composed entirely of Europeans, its principal objective was to secure the frontier areas of the British colonial empire in southern Africa. In addition, it was also expected to perform internal administrative functions such as mediate tribal disputes, dispatch communiqués to and from the chiefs, and enforce native regulations consistent with the British policy of indirect rule. It became increasingly clear, however, that indigenous officers would conduct these latter tasks more efficiently and in 1895 a Protectorate Native Police Force was organized under European command. In 1902 the two forces were merged to create the Bechuanaland Protectorate Police.

After independence in 1966 the Protectorate Police continued in the form of the Botswana Police Force

(BPF) that, though now serving the newly formed state, retained the vertical command structure and centralized management of its colonial predecessor. The transfer of police authority to the new republic proceeded smoothly and within a few short years the BPF was composed almost entirely of African officers. A more important structural change occurred in 1977 when the BPF relinquished its military duties and transferred the Police Mobile Unit to the newly created Botswana Defense Force. Even before 1977, however, the police had already begun to shift to those responsibilities typically associated with the police function, such as the detection of crimes and the maintenance of order. In 1996, commensurate with its focus on community policing and the appointment of a new commissioner, the BPF reorganized itself as the Botswana Police Service (BPS). The Office of the President has had administrative oversight of police services in Botswana since independence.

**Structure and Organization.** Until 1996 police coverage in Botswana, a country roughly the size of France and

Belgium combined, was separated into 2 divisions that were subdivided into 13 districts, 6 in a Northern Division and 7 in a Southern Division. Subsequently, a third division (South-Central Division) was created to accommodate the urban growth radiating outward from Gaborone along a pluvial eastern corridor, where most of the population expansion has taken place in recent years. Three districts were drawn from the Southern Division including District #3 (Gaborone), District #13 (Gaborone West, a completely uninhabited area in 1966), and District #12 (Mochudi, a large village about 40 kilometers north of Gaborone) to form the South-Central Division. In addition, the new division also included the district surrounding Serowe (District #2), the traditional residence of the most prominent Tswana chiefs, a district formerly consigned to the Northern Division. Excluding District #2, the Northern Division remained intact. The four remaining districts in the Southern Division were augmented by the establishment of a fifth district (District #14) to serve the Kanye area. Consequently, present-day police operations consist of 3 divisions, 14 police districts, and 75 police stations. District headquarters are located in the largest villages or towns. The sparsely populated western part of the country is bisected by two of the three divisions constituting Districts #6 and #9 (Southern Division) and District #5 (Northern Division). Maun, a frontier town with a rough-and-tumble tradition, is the official headquarters of District #5 and the largest population center in the arid Kalahari region.

*Hierarchy and Ranks.* Three deputy commissioners, one each for Operations, Support Services, and the Security Intelligence Services, assist the commissioner of police. The eleven senior assistant commissioners are in charge of each of the major branches (e.g., Training, Criminal Investigations Department, Traffic, etc.) along with the three divisional commanders. The deputy directors and deputy commanders all hold the rank of assistant commissioner. From an office at District Headquarters, the districts are commanded by senior superintendents and are assisted in their administrative responsibilities by as many as three superintendents. Most police stations are also commanded by superintendents who, when off duty, are relieved by an assistant superintendent. When the size and magnitude of the attendant duties merit it, typically in the more isolated regions, the commanding officer of a police station may be an inspector. No commanding officer of a police station is lower in rank than an inspector. Inspectors and subinspectors are responsible for the routine day-to-day operations within the precinct forming the lowest stratum of the command structure. Sergeants and constables perform direct services to the public and conventional patrol activities.

*Police-Community Relations.* The cornerstone of the BPS-community relations program is a system of crime prevention committees that was established during the early 1980s in many of the traditional villages and later extended to urban neighborhoods. Composed of citizen volunteers organized at the division, district, and station levels, this effort at grassroots community participation is supported by the Crime Prevention Coordination Unit, which conducts seminars and workshops. As consultative bodies, these local crime prevention committees have been instrumental in promoting positive relations between the police and the public. As of 2002 there were 619 crime prevention committees throughout the nation.

*Local Police.* The government of Botswana acknowledges a dual legal system that grants legitimacy to customary law, customary courts, and a local police separate from the national police system. The origins of the local police are deeply rooted in traditional tribal society. The authority and pronouncements of the chief or the headmen, the chief's representatives in the wards and remote villages, were enforced by the chief's messengers who administered corporal punishment and guaranteed that the will of the communal assembly was respected. When European missionaries arrived, several traditional authorities, most prominently Khama III, the paramount chief of the Bamangwato, converted to Christianity. One of the consequences of this newly acquired faith was a prohibition against the brewing and consumption of traditional beer. So widespread was this practice that Khama III eventually appointed a regular tribal policeman to bring violators of the alcohol ban to justice. Based in Serowe, the traditional seat of Bamangwato authority, each successive chief incrementally augmented the size of the tribal police force. With the passage of time the duties of the tribal police came to include assisting in the collection of tax revenues, collecting court fines, and arresting people found to be in illegal possession of stray cattle. Throughout the colonial period, however, the tribal police officers were under funded, almost entirely illiterate, and not required to undergo any form of training. After independence, the tribal police continued to be poorly organized, ill equipped, and lacked any legal basis for its authority. In 1972, however, a special government commission appointed to investigate the conditions of service among tribal employees recommended that the tribal police receive proper training, that educational qualifications be raised, and that officers be given statutory arrest powers. Later that same year, the legislature acted on these recommendations and reconstituted the tribal police as the Botswana Local Police. By 2004 a contingent of local police officers was attached to all customary courts that handled more than 80% of all

*Britain's Princess Anne is escorted by Botswana police during a visit to a newly built training college in Otse, Botswana, July 9, 2003. Princess Anne was on a three-day official visit to the country to support the government's efforts to fight AIDS. Botswana has one of the highest rates of HIV infection in the world. AP IMAGES.*

court cases in Botswana. Both local police and BPS officers are located in the urban areas and major villages of Botswana, but only the local police are stationed in the smaller, remote hamlets. There is some jurisdictional overlap between the two police services, but typically the local police confine their enforcement activities to routine public order offenses (e.g., disorderly conduct, domestic disputes, etc.) and minor criminal offenses like petty larceny and common assaults.

#### **Special Police.**

*Special Support Group.* Since the transfer of the Police Mobile Unit to the Botswana Defense Force in 1977, the Special Support Group (SSG) has served as the paramilitary arm of the BPS. As its name implies, many SSG duties involve a supporting role to other police units including traffic surveillance, mobile patrols, manning road blocks, providing escort services for the president and other dignitaries, delivering emergency services, preventing cross-border stock theft, and being deployed to

control foot-and-mouth disease. Its most controversial role is its employment in the suppression of civil disturbances. The democratic process in Botswana, however, is characterized by a broad consensus and mobilized challenges to state authority have been rare. On only on a few occasions has the SSG been called on to restore public order. As of 1999, the SSG consisted of 727 officers administered by a commander (senior assistant commissioner), a deputy commander (assistant commissioner), and a supervisory corps of twenty-six individuals above the rank of inspector.

*Diamond and Narcotics Squad.* Because Botswana's economic development depends on its mineral sector, the state has a vested interest in the security of its mining operations and the integrity of its product. The Diamond and Narcotics Squad was established in the 1980s with a mandate to investigate all cases involving the theft of precious stones and to provide security for the transport of diamonds. In 1988 its responsibilities were expanded

to include cases of illegal drugs and those involving the illegal trade in ivory.

Mining operations in Botswana are state of the art with comprehensive checkpoints and sophisticated monitoring devices. Therefore, most of what the Diamond and Narcotics Squad has accomplished has been to apprehend the trafficking of illicit gems and prevent fraudulent stones and “conflict diamonds” from entering Botswana.

The consumption and distribution of illegal drugs is insignificant in Botswana. There is some local cultivation of marijuana (referred to locally as *dagga*), but the most pressing problem is vast uninhabited areas and porous borders that make Botswana attractive as a transit point to the lucrative South African market.

Botswana’s burgeoning tourist industry depends on the preservation of its natural fauna. A policy of unfenced wildlife reserves and the presence of the largest herd of elephants in Africa, however, make Botswana an obvious target for the clandestine ivory trade. In 2002 the Diamond and Narcotics Squad investigated 17 cases of unlicensed poaching and confiscated 632 elephant tusks.

*Traffic Division.* In 1966 the road network of an independent Botswana consisted of only 25 kilometers of paved surface. The transportation system was so rudimentary that in 1966 there were only 323 road accidents (involving 302 trucks) resulting in a mere 21 fatalities. One consequence of the substantial wealth generated by the mining industry was a series of ambitious road construction projects begun in the 1980s and a commensurate increase in the number of licensed vehicles especially in the Gaborone metropolitan area. Nevertheless, throughout the 1980s only ninety officers were assigned to traffic enforcement under the command of a superintendent. Although the number of traffic officers grew incrementally thereafter, it was not until 1994 that a Traffic Branch was created with its own headquarters and divisional offices. By that time an assistant commissioner had been appointed to head a formation of 361 officers. By the end of the decade the Traffic Branch, now directed by a senior assistant commissioner, had increased to nearly 600 officers, a clear acknowledgment of the need to regulate vehicular congestion on urban thoroughfares.

*Serious Crime Squad.* This police unit is responsible for investigating cases involving motor vehicle theft, fraud, murder, and robbery. Since rates of violent crime and fraud are relatively low, most of its operations involve cases of stolen automobiles. The proximity of the Gaborone metropolitan area to the South African border makes it relatively easy to both export and import stolen automobiles. Since the 1880s, as mineral revenues have generated higher living standards, Botswana has

become an important market for stolen vehicles from South Africa. Conversely, a government program of generous loan guarantees extended to all civil servants has expanded vehicle ownership in Botswana. Therefore, many automobiles purchased in Botswana have found their way to South Africa and to a lesser extent Zimbabwe and Zambia. The Serious Crime Squad, in cooperation with the South African police, has had some modest success in tracing and intercepting the trafficking in stolen vehicles.

**Education and Training.** An enhanced training curriculum has been facilitated by the recently constructed Botswana National Police College in Otse, which is located a few miles outside of Gaborone. The new facility has enabled an expansion of course offerings beyond those required for recruits including refresher courses for sergeants and inspectors, courses covering specialized police functions, and in-service training in management and administrative skills for supervising officers. The BPS also draws on the resources available at local educational institutions such as the University of Botswana, Botswana Institute of Administration and Commerce, and area technical schools for advanced training. In 2002 the BPS also sponsored the attendance of sixty-three officers in training courses abroad mostly in the United Kingdom and South Africa.

In July 2000 Botswana entered into a bilateral agreement with the United States to establish an International Law Enforcement Academy (ILEA) located on the grounds of the Police College near Gaborone. The state-of-the-art training facility was completed in 2002 with a mandate to serve as a training academy for police executives from the member countries of the Southern African Development Community. The central feature of the ILEA program is a six-week personal and professional development curriculum designed for midlevel police officers that concentrates on leadership, ethics, internal controls, the rule of law, and managing the investigative process. Special instruction for police and other criminal justice officials in drug enforcement, violent crime, white-collar offenses, firearms, and border security is also offered under ILEA auspices.

**Recruitment and Conditions of Service.** The steady growth of the BPS suggests that manpower requirements are being met through the normal recruitment process. Because there is a substantial and persistent unemployment problem in Botswana, jobs in law enforcement are coveted. Moreover, women are increasingly attracted to the police service. The relatively low compensation, however, especially at the entry-level positions, has meant that the BPS has been unable to effectively compete with

other occupations for the most educated sector of the population.

One of the most important prerequisites of the police service is the provision of housing for constables and sergeants. Police housing units are modest, but comfortable, most are equipped with all the requisite utilities, and they can accommodate a small family. These residential developments are usually located in close proximity to police stations except in some urbanized areas where congestion and land costs has forced the government to construct police housing on remote, more affordable sites. Nevertheless, there is an acute shortage of available housing (in 1997 there were 1,673 police houses) despite an ambitious construction program.

**Uniforms and Weapons.** The BPS uniform consists of a slate-blue, short-sleeved, belted waistcoat with matching pants and dark-blue cap (officers assigned to the Traffic Branch wear white caps with a blue brim and visor). The insignia of the Botswana Police appears above the brim of the cap. An officer's rank can be determined by the chevrons that appear on the epaulets. Female officers are attired in a plain slate-blue skirt hemmed just below the knees, a white short-sleeved blouse, and dark-blue ankle-length socks with standard issue black shoes. This is accompanied by a dark-blue, short-brimmed bowler hat ringed at the base with a blue-and-white checkerboard patterned band.

In keeping with the traditions of the British police, patrol officers are unarmed. The SSG is the only component of the force that is normally armed. Since 1996 fully armed members of the Botswana Defense Force have been attached to several urban police stations and have been patrolling various areas of Gaborone in the evening hours.

**Transportation, Technology, and Communications.** Most police stations are connected through a digital microwave telephone framework. To reach the more isolated areas of the country, several digital microwave spurs have been commissioned. To improve communications efficiency, switchboards are being phased out and replaced with a PABX system. Radio communication has been greatly improved by the installation of a trunk VHF radio system that has increased coverage and reduced blackout spots.

A newly created Information Technology Unit has been vested with the responsibility for improving the delivery of information services to the BPS. Its first initiative has been to computerize the current Crime Recording and Criminal Records systems, but the development of data management systems continues to be relatively primitive.

**Vehicles and Equipment.** The vehicular fleet of the BPS consists of about 1,600 automobiles and 150 motorcycles, most of which are disproportionately distributed to the more populated areas. In the rural areas, where roads are sometimes impassable, the BPS also maintains a stable of seventy-eight horses and twenty-six camels. Although Botswana is a landlocked nation, river transport in the form of motorboats and airboats is necessary during the rainy season, when the Okavanga region is flooded. Two airboats and sixteen motorboats are stationed in Maun, Seronga, and Shakawe for emergency and recovery operations.

**Surveillance and Intelligence Gathering.** Apart from detecting and preventing crime, the legislation enabling the BPS also requires the police to maintain internal security. When the Botswana Defense Force was created to respond to external threats, the preservation of internal security fell to the specialized unit of the police known as the Special Branch. In the first two decades or so after independence, Botswana was a "frontline" state serving as a refuge for South African antiapartheid groups. During this period the Special Branch monitored the activities of these groups and sought to prevent South African undercover agents from operating outside their jurisdiction. Since the collapse of the apartheid regime in South Africa, tensions have eased considerably.

Today, internal security has been reorganized as the Security Intelligence Services overseen by a director-general (deputy commissioner). Besides a presidential detachment, the intelligence service is organized regionally with operations in each of the three divisions and an agency for the west and north-central areas as well. Present-day concerns of the Security Intelligence Services include the ripple effects of a simmering border dispute with Namibia and the current instability in Zimbabwe.

**Police Officers Killed in the Line of Duty.** Police officers are seldom killed in the line of duty. From 2000 to 2002 the number of police deaths averaged seventy-four per year. The largest share of these deaths, however, was attributable to illness, most likely the consequence of the HIV/AIDS epidemic, which has devastated Botswana.

**Police Statistics.** The cumulative effect of the colonial administration was a legacy of egregious underdevelopment. At the time of independence, a gross national product per capita of US\$14, the product of an economic system based on subsistence agriculture and animal husbandry, was the third lowest in the world. Only eight secondary schools operated throughout the entire country, responsible for a net secondary school enrollment of 3%. An infant mortality rate of 112 per 1,000

live births and a life expectancy rate of 49 for females (46 for males) indicated a seriously deficient quality of life.

The level of police services during this period reflected Botswana's impoverished status. Two years after attaining independence, the police establishment for the entire country totaled 689 officers and more than one-third of those were members of the Police Mobile Unit. The largest contingent of officers was stationed in the Northern Division, whose headquarters was in Francistown, the principal city at the time. Although police headquarters was located in Gaborone, the institutional infrastructure of the capital was in the process of being constructed. Except for the precincts in the larger population centers, most police stations had fewer than ten officers assigned to them. Only seven individuals, including the commissioner and deputy commissioner, occupied ranks greater than senior superintendent, suggesting a small centralized command structure.

By 1980 the BPF had almost tripled to nearly 2,000 officers. The largest detachments were the 280 officers assigned to District #3, which included Gaborone, Molepolole, and Mochudi, and District #1 (192 officers), which served the Francistown area. Of almost equal size was District #10 (183 officers), located in the eastern region near the South African border, which served an expanding population drawn to a large copper-nickel mining operation in Selebe-Phikwe. By this time metropolitan growth had overwhelmed the capacity of the single police station (Central Police Station) that had served Gaborone since independence and a second station (Urban Police Station) was constructed in the new settlements that had taken root. One-quarter of the force was now assigned to police headquarters that besides its administrative agencies also housed the Police Training College, the SSG, and the Criminal Investigations Department command structures.

A decade later the BPF had expanded to 4,130 serving officers and the primacy of Gaborone had become much more pronounced. The Molepolole and Mochudi regions were now served by separate districts (District #11 and #12, respectively) and District #3, which had been augmented by two additional police stations (Broadhurst and Tlokweg), was given exclusive jurisdiction over central Gaborone and the metropolitan growth to the north and east. Moreover, a separate Gaborone West District (#13) was created to handle the needs of the periurban expansion to the west, particularly the area known as Naledi, where many rural migrants had settled. Combined, these two districts meant that more than 700 officers were assigned to the Gaborone metropolitan area. Also noteworthy was the 100-man detachment (a fourfold increase since 1980)

assigned to Jwaneng, the site of one of the largest diamond mines in the world.

At the turn of the twenty-first century the establishment of the BPS had increased substantially to 6,424 officers. By virtue of its importance as the administrative and commercial center of Botswana's mineral based economy and one of Africa's fastest growing cities, the policing of Gaborone has continued to assume the most prominent role. District #3, served by 504 officers and now including an additional station (Borakanelo) to complement its four existing precincts, has been eclipsed by District #13 (525 officers) responsible for the exponential growth of the city's western and southern sectors. Of the 10 police stations in the entire country with more than 100 officers assigned to them, 6 are located within the Gaborone metropolitan area. The SSG (Antiriot Police) also bivouacs in Gaborone and grew significantly (755 officers in 1999) since 1980, when only 79 officers were enlisted in this branch.

## HUMAN RIGHTS

Botswana is a multiparty, parliamentary democracy with all the requisite institutional practices normally associated with the democratic process. In general, the police respect the rights accorded to citizens by constitutional guarantees. Detainees must be charged within forty-eight hours, have the right to contact a family member, and may retain counsel of their choice. In most cases, the police comply with these strictures except that in practice most defendants are unable to afford counsel (except in capital cases, the government does not provide counsel for indigents) and in rural villages, legal assistance is not always readily available. Although suspects have the right to remain silent, there have been reports that the police occasionally resort to intimidation and other extralegal measures to obtain evidence or confessions. As a rule, the police do not interfere with constitutional provisions ensuring freedom of assembly and association and the right to move freely from place to place.

With regard to the rights of women, traditional practices often consign females to a status of second-class citizens. Customary law grants husbands the right to "chastise" their wives and consequently domestic abuse is widespread. Since there is no legal provision that empowers the police or prosecutors to take action, the police seldom intervene in such instances.

## CRIME

**Criminal Identification and Forensics.** The Criminal Investigations Department (CID) is charged with the responsibility of collecting evidence and identifying criminal suspects. The Criminal Records Bureau maintains an archive of fingerprint classifications and identifications in

an attempt to match crime scene prints with individuals having previous criminal records. Besides CID headquarters in Gaborone, there is an agency presence in each of the three divisions. The CID also has jurisdictional command over the Diamond and Narcotics Squad, the Serious Crime Squad, and the Central Arms Registry, which maintains a current roster of licensed firearms that can be used to trace handguns.

The scientific support for criminal investigations is conducted by the Police Forensic Science Laboratory. A large share of its work involves drug tests though it also conducts blood alcohol, toxicology, ballistic, and physical chemistry analysis. The laboratory's contribution is also particularly helpful in the area of forensic serology and pathology, where its analyses have assisted in cases of sexual assault and murder. DNA trace evidence analysis is currently beyond the ability of forensic scientists in Botswana.

**Crime Statistics.** As it has for centuries and still does to a considerable extent, social life among the Tswana people is regulated by a normative system of social control based on deference to customary authority. Consequently, everyday social interactions have been governed largely by traditional practices and the policing of routine order has seldom accounted for a significant share of the law enforcement task. Low arrest rates for offenses that disrupt orderly civic relations (e.g., public intoxication, disorderly conduct, prostitution.) imply that the normal order maintenance function of the police is not a priority. The sole exception to this pattern of policing has been the enforcement of the laws relating to common assault. Since independence, when a colonial prohibition against the sale and consumption of European-style beer and spirits was repealed, the police frequently have been called on to intercede in such conflicts, most of which are alcohol-related encounters. From 1966 to 1970, for example, 64% of all arrests for crimes against persons involved common assaults. Arrest rates for common assaults increased substantially until 1980, when annual rates stabilized thereafter at about 50 per 10,000, suggesting an optimal level of police tolerance for these forms of minor conflicts.

Like common assault incidents, most cases of serious crimes against persons have been unpremeditated, often arising as a product of some trivial provocation. Throughout the independence period, rates for homicide and forcible rape have been exceedingly low. By contrast, the incidence of aggravated assault has been steadily rising during this period constituting between 25 to 30% of all arrests for crimes against persons. Most of the altercations, however, are unintended and situational

resembling the profile of common assaults. Of greater concern is the trajectory of arrest rates for robbery. At the time of independence, arrest rates for larceny-violence were lower than homicide rates and remained relatively low until, beginning in the 1990s, the arrest rate began to increase significantly. Nevertheless, while this increase is troubling, armed robbery does not yet pose a major problem for the police. Few of the targets are commercial establishments and most are interpersonal interactions involving small sums or articles of little value.

Considering the social inequalities between the commercial/civil service elite and the indigent rural migrants who inhabit the shantytowns of Gaborone, an increase in urban property crime would hardly be surprising. Indeed, the prevention of petty theft has been one of the central police tasks since the end of the colonial era. The incidence of petty larceny increased steadily until, for ten years starting in 1974, arrest rates attained a plateau of stability averaging almost 58 per 10,000. Beginning in 1985, however, roughly coinciding with a visible affluence generated by mineral sector revenues, the arrest rate began to rise sharply and within ten years had doubled. Though of a lesser magnitude, the same pattern prevailed for burglary cases. The arrest rate for burglary in 1966 (8 per 10,000) rose incrementally during the early 1970s, stabilized between 1975 and 1985, and increased precipitously in the 1990s. By 1994 police interventions for burglaries stood at 58 per 10,000, nearly twice what it had been a decade earlier.

## CORRECTIONAL SYSTEM

**Prison Conditions.** Prison violence is a problem. HIV/AIDS and tuberculosis take a heavy toll on the prison population. Violence is endemic and often leads to rape or death. There is no independent monitoring of prison conditions by international human rights organizations.

**Prison Statistics.** Botswana has 23 prisons with 6,105 inmates or 339 prisoners per 100,000 population. The largest is the maximum security prison at Francistown. Nearly 25.1% of the prisoners are pretrial detainees and 5% are women. The official capacity of the prison system is 3,870 and the occupancy rate is 157.8%. Men are held separately from women and juveniles from adults. A new prison for male juveniles opened in 2004. Prisons are supervised by the Prison Commission, which has the right to release terminally ill prisoners and prisoners sentenced to less than a year under an extramural labor program.

*Frederick P. Roth*

# Brazil

---

**Official country name:** Federative Republic of Brazil

**Capital:** Brasília

**Geographic description:** The largest country in South America, stretching from the Atlantic Ocean eastward to the headwaters of the Amazon River; it touches the borders of every country in South America except Chile and Ecuador

**Population:** 186,112,794 (est. 2005)

## LAW ENFORCEMENT

**History.** Police in Brazil originate from the colonial period. After Brazil's discovery, Portugal did not show immediate interest in the new land and did not abandon the land due to constant invasion by foreigners, notably the French.

The first expeditions focused on patrolling the coast rather than on colonizing the land. However, some facilities were installed along the coast, thus leaving settlers to guarantee Portugal's ownership. Those settlers played a multiple role as harvesters, members of a defense force, and police officers.

The first organized troop was settled in the town of São Vicente in 1542 and its missions meant to expel a Spanish force that threatened the Capitany. Further on, three troop lines in the colony were formed: The first one was paid and its aim was external defense. The second, also paid, had the role of internal safety, or the police. And the third one, formed by volunteers, helped to supply the failures of the two previous ones. The three were composed of citizens who, when not needed for

internal or external services, would exercise their usual activities: they were harvesters, tradesmen, and teachers. During the colonial period, although there were these divisions in lines, there was no structural difference among the troops of external defense and maintenance of the internal order.

The constant wars with the Spanish colonies, which extended beyond their independence and the boring life of the colony before and of the vice kingdom afterward, would foster the use of military people in internal actions (rare ones) and in external actions (more frequent ones).

Until the early nineteenth century the second- and third-line troops would play the role of the police in the São Paulo Capitany. They were well-trained and well-dressed units.

*The French Influence in the Creation of the Military Police.* In seventeenth-century France the military people were in charge of the security in general (internal and external). They were the marshals and were

active in France until the eighteenth century (Illuminism). Then came the Human Rights Declaration in 1789 and its twelfth article, which created a “public force” to guarantee the rights set in the declaration. Napoléon Bonaparte’s troops would spread the notion of those troops to all of Europe. Inspired by the French police, Portugal created the Royal Police. And so, when the Portuguese royal family came to Brazil, they brought along with them the Royal Police, which was reorganized and named the Court Police (Rio de Janeiro). Independence disorganized the Royal Police. Later on, the Regency government passed a law on October 9, 1831, that created the Body of Permanent Municipality in the Court and the same was done in the provinces. The former Royal Police was reorganized, but it was also the birth of the military police.

**Federal Police History.** In March 1944, in the old capital of the republic, Rio de Janeiro, the Federal District Police was transformed into the Distrito Federal Segurança Pública (DFSP; Public Security Federal Department). Although it had the name “federal,” the DFSP only performed in the area of the federal district, as regards the public safety performing at national level only in the area of maritime police, air police, and borders.

In mid-1946 the tasks of the DFSP were extended to all the national territory in some cases, such as the clandestine commerce of drugs and crimes against the public faith, when it was the National Revenue Service interest. However, with the new federal constitution, which was passed on September 18, 1946, the states began to have powers to fulfill their needs of government and administration and thus considered the existence of a safety department with national performance as a kind of limitation of this autonomy.

With the move of the federal capital in 1960, the DFSP was transferred to Brasília, and so the state of Guanabara remained with the public safety services as well as the great majority of its active personnel. Due to the scarcity of personnel, the DFSP had to be restructured, and the police departments in England, the United States, and Canada served as models. By November 16, 1964, it had attributions in all the national territory. In 1967 the DFSP changed its name, and the Departamento de Polícia Federal (DPF; Federal Police Department) emerged, as per article 210 of Decree Law Number 200.

**Fire Brigade History.** The province capital was as large as three hills and construction began to become more valuable. The idea of how to fight possible fires began to be analyzed. In case of fire, women, men, and children would stand in line and from the nearest well they would pass water buckets hand to hand until they reached the fire location. In 1851 the first municipal regulations regarding fighting fire were passed, due to a fire that had occurred in December 1850. Two pumps

were acquired, which were not used until 1862, because in those twelve years, no fire had occurred. On March 10, 1889, a team to fight fires was set up in the capital of the State of São Paulo, it was made up of twenty men.

The fire brigade began to expand in the country in 1943, by making agreements with the municipalities and an organizational process at the state level began. At that time, there were 1,212 active officials.

In 1959 the radio network was inaugurated, thus making communication among the cars and headquarters easier, the cars could be guided in the best way to take, and how the fire was evolving; it also centralized the requests and distributed them in a rational manner among the posts. One year later, the alarm boxes were inactivated, but the telephone was not fulfilling all the needs of the population. There were just a few lines and the numbers were not easy to memorize. After 23 years, the emergency line 193 would be adopted.

In 1964, the School Company was inaugurated and the course for Officers was created. In 1967 the Central Station was demolished and a new one built.

Due to two big catastrophic fires that occurred in São Paulo in the Andraus Building (1972) and Joelma Building (1974), hundreds of lives were lost. Because of this, auto-pumps were imported, as well as auto-platforms, command and support vehicles and all cars had radios installed besides an improvement of legal requirements regarding fire prevention.

In 1990, to improve the quality of prehospital assistance in salvage events, a rescue system was implemented in Greater São Paulo and in more than 14 municipalities, formed by personnel, specialized vehicles, and helicopter support.

**Federal Road Police History.** Federal Road Police was created by the Brazilian president Washington Luiz on July 24, 1928, by means of the Decree Law Number 18.323, which defined the traffic rules at that time. In 1935 Antonio Felix Filho, who was considered the first patrol man, was called by the administrator, Natal Crosato, to organize the inspection services on Rio de Janeiro–Petropolis, Rio-São Paulo, and Uniao Industria roads.

At that time, the heavy rains demanded better road signs and some detours and red lamps were used during the night. Filho, with Carlos Rocha Miranda, founded the first police group called the Traffic Inspectors in 1935.

In December 1945 Decree Law Number 8.463 (also known as Jopert Law) created the National Department of Roads and in came the denomination of Federal Road Police.

**State Road Police History.** On January 10, as per State Decree Number 17.868, the state, at that time being governed by Ademar Pereira de Barros, the Road Police Patrol was created. It consisted of sixty men and was commanded by Lieutenant Jose de Pina Figueiredo, who belonged to the Public Forces, which were responsible for inspecting the recently inaugurated Anchieta Road.

From November 16, 1962, on, the Road Police became a fraction of the Paulista Police, being called Road Police Inspection, then the Force of Road Police, and finally Road Police Inspection Command.

Directly subordinate to the Interior Police Command, its jurisdiction comprises all the entire road network in the state of São Paulo. The network is divided into three units: the first BPRv (located in São Bernardo do Campo City), the second BPRv (located in Bauru City), and the third BPRv (located in Rio Claro City). Made up of 3,700 men, its function is to inspect 24,000 kilometers of roads.

It has acquired modern and latest generation equipment, such as breathalyzers and radars. In 1989 the Road Ostensive Tactics was created. Its vehicles are equipped with heavy weapons that are intended to combat the organized gangs involved in truck robberies and/or their cargoes.

The Road Police actions focus on providing safety to the users by using preventive police inspection, helping to avoid accidents, issuing tickets when some illegal actions are performed, visiting schools and clubs, making audiovisual demonstrations, supporting authority escorts, escorting dangerous products and excess cargo, among others.

As of 2005 its 134 operational bases operated as support posts, supported to the public, and functioned as centers for vaccination campaign and for collecting sweaters for the poor people in the winter season. They also work jointly with the State Revenue Service to prevent tax evasion and with the Road Department to inspect the intermunicipal bus lines.

The state of São Paulo Road Police, like the major police departments around the world, are totally computerized. They have computer terminals that provide information about vehicles and drivers and that are directly linked to the National Registry of Auto Vehicles (which is accessed through the Data Processing Federal Service), the Civil Police, the traffic departments of seventeen states, and the Operational Information System of the Military Police. Concerned with the updating and improvement of the personnel, now that the New Brazilian Traffic Code is in force, the Road Police Inspection Command Instruction Office offers refresher and specialization courses so as to train the troops from all states and from some neighboring Latin American

countries. Following its twentieth anniversary, the Road Police opened its doors to Brazilian women. Initially, forty female police officers worked under the Anchieta/Imigrantes System, and this proved to be very successful.

To reach and improve the means to combat criminality, the Group of Motorcycle Men of Road Police was created, whose mission is to provide support to the areas of bigger criminality rates as well as to act in escorts and provide agility in events such as traffic jams, accidents, and so on. In 1998 thirteen vehicles were specially designed for preemergency support in events with dangerous products, with the intention of preventing and/or minimizing the incidence of accidents in this area of transport.

**Civil Police History.** The São Paulo Police was created by the Secretariat of Justice Affairs and the first São Paulo Police chief was Counselor Rodrigo Antonio Monteiro de Barros.

In 1904 the secretary of justice proposed the creation of a career police department, but only on December 23, 1905, in the Jorge Tibirica government, as per Law Number 979, did the measure became active, and Secretary of Justice Washington Luis Pereira de Sousa was in charge of the first actions to organize it. With this law, it was run by a police chief, who reported to the Department of Justice.

In 1906 the police chief post was eliminated so that the police were run by the Secretariat of Justice Affairs and Public Security. In 1927 the Central Police Department was created and several police departments became subordinate to it. In 1928 the police regulation was edited, thus consolidating the pertinent provisions of the police service.

In 1930 the Secretariat of Public Safety was created, as per Decree Number 4.789, and the police force was separated from the Secretariat of Justice and were subordinate to the new department of the existing police corporations.

**Military Police History.** On December 15, 1831, the Body of Permanent Municipals was created in São Paulo, which consisted of 100 police officers (walking officers) and 30 officers on horseback.

## **Structure and Organization.**

### ***Principal Agencies and Divisions.***

**Federal Police:** Acting in all the national territory, the Federal Police Department has a modern and functional structure that allows centralized planning, coordination, control, and decentralized execution.

Its current structure allows for excellent performance, besides favoring the integration with several departments of the federal administration.

The General Management has support and technical departments, in Brasília, which are responsible for planning, coordination, and control tasks. For the execution activities, the DPF has 27 regional superintendencies, 54 federal police stations, 12 advanced units, 2 fluvial bases, and 2 terrestrial bases.

*Military Police:* Based on the structure as set by federal legislation, the Military Police of the State of São Paulo is organized in way to achieve efficiency and effectiveness in military police actions. It is divided into a number departments:

- General Management Departments
- Sectorial Management Departments
- Support Departments
- Special Support Departments
- Execution Departments
- Especial Execution Departments
- Military Police Special Departments

*Federal Road Police:* The Federal Road Police, which is a permanent department and career oriented, patrols the federal roads. Its mission is related to public safety and safety norms. It renders assistance to the traffic accident victims and protects the country's property.

In 1990–1991 the Federal Road Police became part of the organizational structure of the Ministry of Justice. This department became part of the Traffic Secretary of the Ministry of Justice. Shortly after the turn the century, due to Decree Number 1796, the Federal Road Police Department became part of the Planning Secretary for Public Safety National Actions of the Ministry of Justice. After being integrated to the organizational structure of the Ministry of Justice, the Federal Road Police Department had five directors.

*Local Police:* The Metropolitan Civil Police was created in 1986. However, it has not been able to define and create a definite identity yet. The inexistence of a career plan, the lack of material resources, the lack of planning of its actions, the lack of clear political priorities, and difficulties relating to other police departments are some of the problems that show the poor understanding of the role of this police, not only by the police officers themselves but also by the Municipal Administration and the community.

The high rate of violence, criminality, and social exclusion in the municipality of São Paulo, linked to the existence of a devaluated municipal police, have been the key factors that made Mayor Martha Suplicy present a bill to the city council that led to the creation of the Urban Safety Municipal Secretary.

The Urban Safety Municipal Secretary, which was created on July 26, 2002, as per Law Number 13.396, inaugurated a new urban safety concept and the Metropolitan Civil Police is the main executor of this policy. The role of the Metropolitan Civil Police is regarded as preventive and community police, and its priority is to promote an administrative and philosophical restructuring of the department and to create material conditions to the good development of its performance.

To do so, the Urban Safety Municipal Secretary will supply bullet-proof light jackets to all police officers who work on the streets and will renew the fleet of small- and medium-sized vehicles, motorcycles, and bicycles. In 2005 a team was constituted to develop the Career Plan and a law was under study by the city council that would create the Metropolitan Civil Police Disciplinary Regulation.

The Urban Safety Municipal Secretary has also created several departments to provide support to its safety police. Among them are:

- A safety training center
- An independent and autonomous general corrective magistrate
- Community city committees
- Special projects

*Traffic Police:* Crimes in the Traffic, one of the Urban Safety Municipal Secretary departments, consists of Police Assistance, Notary Public Office, Support Team, Operation Basic Teams, Crime Technical Sector, and Clerical Sector. The objective is to report traffic accidents that result in death or serious injury of uncertain or unknown authorship and also criminal violations to the Brazilian Traffic Code.

*Regional Special Performance Group:* The state of São Paulo provides the Regional Special Performance Group for the prevention and repression of organized crime in seven regions of the state. The role of units are as follows: robbery and receiving of automobiles and aircrafts, theft and receiving of cargo, money laundering, illicit traffic of narcotic substances, and crimes practiced by civil servants against the public administration.

*Salaries.* The salaries are based on the public legislation, because police officers are considered civil servants.

*Retirement Age.* The civil servant has the right to retirement when the following occurs: men (thirty-five years of work), women (thirty years of work); also, in proportion to the period of service: thirty years for men and twenty-five for women. If she is sixty years old and he is sixty-five, they can go for retirement even if the period

*A child watches a policeman patrol the streets of Rocinha's shantytown in Rio de Janeiro, Brazil, October 31, 2005. Authorities suspected gang members were behind the killing of a local drug lord, who was shot in the city's largest slum. Drug lords, often linked to corrupt local politicians and police, have exerted control over the slums of Rio de Janeiro for decades.*

AP IMAGES.

of service has not been completed. The civil servant who is seventy years old will go on compulsory retirement.

**Police at Work.** The State of São Paulo Military Police renders its services to the community by performing several modes of police actions:

- Patrolling—mobile activity
- Permanence—static activity in a risky location or fixed location inside the module, being able to communicate
- Diligence—search and seizure of objects or people in the act or by a judge's order
- Escort—activity destined to the custody of people or property in dislocation

- Checking—collecting data or evidence for subsequent actions
- Warning—warning of the police officer to the citizen so that he or she may change his or her behavior and attempt to avoid any illegal act
- Orientation—the police officer clarifies to the citizen safety measures that he or she may adopt to prevent occurrence of any illegal act
- Prison—the military police takes the citizen to the competent authority and as there is evidence of any illegal action in the act or a judge's order, the citizen will be kept in custody and at the justice's disposal
- Assistance—essential support to the public
- Charging—the police officer registers, in writing, his or her participation in the event, reporting about the essential aspects for legal and statistical purposes, normally done on the Police Report Form

**Education and Training.** Concerned with police training, the Military Police keeps professional programs and specialization courses for all employees. In addition, it keeps five special departments that teach the basics for scientific improvement of the corporation.

**Barro Branco Military Police Academy.** The Barro Branco Military Police Academy, created by Law 1.244, on December 27, 1910, was named at that time, Company of the Public Force, and later became the Military Police School. It has the following purposes:

- Graduating people to exercise positions and inherent functions at the Military Police, such as teaching and providing professional instruction, leadership, and command in the corporation
- The development, promotion, and diffusion of the culture, science, sport, and police knowledge through teaching and research
- Rendering services to the community through extension programs and civil subjects

The winter area of Barro Branco, located next to Cantareira Mountain, in the municipal district of São Paulo, has been regularly occupied by the Military Police since 1983. The remodeling, at that time, by the Public Force, coincides with the installation, in the area of the shot line (1904) and other support facilities.

The present building, inaugurated in 1944, has sheltered several formation and extension courses of the Military Police held for officers and enlisted men.

In 1950 it became the Center of Formation and Extension until 1969 when, exclusively destined to form, to specialize, and to improve officers, it had its curricula restructured and was renamed the Military Police Academy.

As Barro Branco Military Academy since 1978, the school started to be exclusively devoted to form the future officers, with the creation of two new teaching units in the Military Police: the Center of Extension and Superior Studies, which took the responsibility for the formation of the officers, and the Center of Specialization of Officers and Enlisted Men, which was responsible to provide further studies to the professionals of the Military Police.

**Center for the Formation and Improvement of Enlisted Men.** The immediate origin of the Center for the Formation and Improvement of Enlisted Men goes back to the creation of the Battalion of Guards, on September 1, 1936. The School of Sergeants, as it is known, is responsible for the Formation of Sergeants and for the Improvement of Sergeants, promotes exams for the Formation of Corporal PM, which enables the soldier to perform his new function, the Course of Specialization of Enlisted Men Teaching Monitors makes them able to teach in the several existing courses in the corporation, and it receives soldier students that accomplish the second phase in this center. Between 2004 and 2005 four courses of Formation of Sergeants were completed, eleven courses of Specialization of Enlisted Men Teaching Monitors, with 2,829 sergeants to help the community and 797 monitors to work for the corporation.

**Police Officer Formation Center.** This center has the purpose of increasing the development of the Military Police soldiers' formation, by standardization and uniformization, in a corporation level; it was created, on October 2, 1984.

With Decree 37.548, on September 29, 1993, CFSd was renamed Center for the Formation of Soldiers of the Military Police Colonel Eduardo Assumpção, being attributed a fair homage to the memory of the former general commander of the corporation, who did a lot for this Formation Unit.

Thus, assimilating the necessary modifications and adapting itself in the best way to assist the soldiers, as new candidates, to the Military Police career, the CFSd—Colonel Assumpção, Department of Support for Teaching, subordinate to the Teaching and Instruction Council of the Military Police, continues to promote the accomplishment, advice, and inspection of CFSd PM in the state of São Paulo. It is also responsible for the accomplishment of extension apprenticeships of enlisted men; police drivers extension apprenticeship of officers; and police driving instructor and extension apprenticeship of enlisted men—Community Police.

**Center of Superior Studies.** The center is an organ of teaching support, subordinate to the Teaching and Instruction Council of the corporation, and is responsible for the updating and further knowledge of the officers

through the course of extension of officers and the Police College. It provides two types of programs:

- **Course of Extension of Officials:** Updates the professional knowledge of the Military Police captains, enabling them to exercise the functions of officers and to help in the planning of the legal missions attributed to the corporation.
- **Center of Superior Studies:** Provides a master's degree; the Course of Superior Studies updates the knowledge of the superior officers, enabling them to be promoted to the Military Police colonel's position and exercise functions in the political and strategic ambit of the corporation.

**Physical Education School.** Created in 1910, the School of Physical Education of the Military Police is the oldest School of Physical Education in Brazil. Inside of the organizational structure of the Military Police of the state of São Paulo, it is the organ of higher education of the corporation entrusted the physical education teachers' formation for the Military Police of Brazil and nowadays is devoted to the instructors' formation for the Brazilian Air Force. Located on Av. Cruzeiro do Sul, 548, it possesses a 42,000-square-meter "campus," a Laboratory of Effort, Clinic of Physical Therapy, classrooms, dressing rooms, two semi-Olympic swimming pools (including a heated one), three courts adapted for several sports, an indoor gym, area for track and field, and a soccer field.

Besides the teachers' formation, it develops research in the physical education area and activities for the community through schools of sports initiation in swimming, soccer, basketball, judo, exercises for the elderly, clinics of postural rehabilitation, services for children in need and the handicapped, and physical rehabilitation in its physiotherapy clinic.

For community attendance, it develops several sports events open to the public such as bicycling meetings and vacation camps for children.

**Uniforms and Weapons.** Police officers receive two units of shirts, trousers, boots, belts, and caps. The uniforms do not differ from state to state. The only change is the insignia on the shirt.

**Recruitment and Conditions of Service.** To have a police career, one needs to go through a public examination, disclosed in a notice in the *State Daily Gazette*, subject to the existence of vacancies in the several units of the São Paulo State Police.

## HUMAN RIGHTS

The job of a police officer is one of the most dangerous and risky in the modern world. In Brazil the vast majority of the police officers receive low salaries. They are

generally unprotected and are exposed to becoming victims. As the salaries are low, they use their days off to make extra money, when they have no support from the corporation. Therefore, they are often murdered when their identity is discovered.

## CRIME

**Crime Statistics.** Kidnapping in the state of São Paulo decreased 63% between 2002 and 2003. The figure went from 321 cases in 2002 to 118 cases in 2003. In the capital city, the decrease was 35%. In 2002, 184 cases were registered and in 2003 there were 84 kidnappings.

The rate of homicides has decreased in the state 7.6%. In the capital city, there was a decrease of 7.84%. In the greater São Paulo, there was a decrease of 8.89% and in the countryside a decrease of 6.21%. Homicide attempts decreased by 3.11% in 2003.

In 2003 the police registered twenty-three slaughters (multiple homicide) in the capital city and solved twenty-two cases. According to a study of the Department of Homicides and Protection to the Person (DHPP), the number of slaughters registered in 2003 was 42.5% lower than the number registered in 2002.

In 2003 the police registered a decrease of 6.81% in vehicle thefts in the state in relation to 2002. In the capital city, there was a decrease of 6.54% and in the interior there was a 0.21% decrease. Comparing the fourth quarter of 2003 with the same period in 2002, there was a decrease of 9% in car robberies in the state, 7% in the capital, 15% in greater São Paulo, and 5% in the interior.

The number of drug seizures also increased in 2003. In 2003, 13.9 people were arrested in the state as opposed to 12.1 in 2002, representing an increase of 14.80%. In the capital city, there was an increase of 49% in traffic criminals caught in the act, from 2.9 in 2002 to 3.2 in 2003. In greater São Paulo, there was an increase of 41% in drug seizure and in the interior drug dealers' arrests increased 92%.

Over 55,000 tons of marijuana was seized. The volume was 112% higher than in 2002. In 2002 in the greater São Paulo area marijuana seizure increased 816%. In the capital city, marijuana seizure increased 146% in 2003: 24.6 tons of this drug was seized compared to 10 tons in 2002.

An increase of 89% in cocaine seizure occurred in 2002. In the interior, cocaine seizure increased 266%, rising from 323 kilos in 2002 to 1 ton in 2003.

In 2003 the seizure of weapons increased. The increase was 4.18% in the state. The seizure totaled 39,551 weapons in 2003. In the capital city, 12,622 weapons were seized in 2003.

The number of prisons of adults and adolescents increased in 2003. In the state of São Paulo 97,663 prisoners were processed. The number increased 8.22% in relation to 2002, which registered 90,242 prisoners.

In 2003, 24,818 prisoners were processed, representing an increase of 3.29% in relation to 2002, when 24,027 prisoners were registered. In greater São Paulo, there was an increase of 21.53% in the number of prisoners in 2003, from 16,380 prisoners in 2002 to 19,906. The interior registered an increase of 6.23% in the number of prisons in 2003. In 2003, 52,939 prisoners were processed compared to 49,385 prisons in 2002.

The number of people arrested in the state in 2003 was 73% higher than in 2002.

There were 756 reports of resistance followed by death due to riots that involved military police officers in the state in 2003. This number corresponds to 0.53% of arrested people in 2003.

In the capital city, 38,592 people were arrested in 2003. The increase was 6.96% higher than in 2002. In greater São Paulo, the number of arrested people went from 20,121 in 2002 to 24,136 in 2003, representing an increase of 19.95%. In the interior, the growth of arrested people was 8.36% between 2002 and 2003. In 2003, 80,699 people were arrested in the interior of São Paulo.

In 2003 the Military Police performed 90% more operations than in 2002 (107,734 compared to 56,530).

## CORRECTIONAL SYSTEM

Brazil does not actually have one, but several correctional systems and detention centers in Brazil are managed by the state governments. That is, every one of the twenty-six state governments as well as the government of the federal district manages a separate set of locations with distinct organizational structure. Independent police sometimes use supplementary laws of criminal execution. The independence that the states possess when they establish the criminal policy reflects the variety in such diverse issues such as levels of overpopulation, monthly cost per prisoner, and salaries of prison agents.

The criminal systems do not follow a rigid model. More often, the state executive power, which is led by the governor, manages the prison system by means of the Secretariat of Justice, while the Public Safety Secretariat, which is in charge of the police forces, manages the police offices. In the state of São Paulo the prison system has its own secretariat as recommended by the Law of Criminal Execution. In the state of Amazonas, however, both the prisons and the police offices were controlled by the Public Safety Secretariat.

**Prison Conditions.** Brazil manages one of the ten biggest criminal systems in the world. However, its prison rate, that is, the ratio of prisoners per population is relatively moderate. With an approximate rate of 183 prisoners per 100,000 inhabitants, Brazil has fewer people in prisons per capita than many other countries in the region and much less than the United States.

#### Prison Statistics.

- Total Prison Population: 330,642
- Prison Population Rate per 100,000: 183
- Pretrial Detainees: 23.8%
- Female Prisoners: 3.3%
- Number of Prisons: 868
- Official Capacity of Prison System: 180,953
- Prison Occupancy Level: 182.7%

# Brunei

---

**Official country name:** Negara Brunei Darussalam  
**Capital:** Bandar Seri Begawan  
**Geographic description:** Country in the northwest off the island of Borneo, an enclave of Malaysia  
**Population:** 372,361 (est. 2005)

## LAW ENFORCEMENT

**History.** The first uniformed police force was created by the British authorities in 1905, seventeen years after they took the Brunei sultanate under their protection. Under the command of the resident, this was a small detachment of the Straits Settlement Police. In 1921 this force received the formal designation of the Brunei State Police, to which the title “Royal” was added in 1965.

**Structure and Organization.** The sultan is also the inspector general of the Royal Brunei State Police. Directly under the sultan, the commissioner of police is the operational head of the force. Territorially, the country is divided into two police districts: Brunei, with headquarters at Bandar Seri Begawan, and Belait, with headquarters at Kuala Belait.

Operationally, there are three branches:

- Operational, including reserve units, marine branch, ports and airports, the Royal Guard, training, and the two operational districts.
- Administrative, including transportation, communications, personnel, and buildings.

- Criminal investigation, including the internal security branch known simply as the Special Branch; Interpol; and fingerprint and criminal records. Specialized units include the Marine Police, the Airport Police, and the Royal Guard. A volunteer police unit guards the oil fields. There is also a Police Reserve Unit with two companies.

In descending order, the principal service grades are:

- Commissioner
- Deputy Commissioner
- Assistant Commissioner
- Senior Superintendent
- Superintendent
- Deputy Superintendent
- Assistant Superintendent

- Chief Inspector
- Senior Inspector
- Inspector
- Subinspector
- Sergeant Major
- Sergeant
- Corporal
- Constable

**Education and Training.** Training for all grades is provided at the Police Training Center at Manggis.

**Uniforms and Weapons.** A blue peaked cap is worn with a silver-gray shirt and khaki slacks. Officers wear bush jackets instead of the shirt for normal duties. The police officers are generally armed and are issued rifles, pistols, and automatic weapons for emergencies.

#### **Police Statistics.**

- Total Police Personnel: 3,510
- Population per Police Officer: 106

#### **HUMAN RIGHTS**

Under an autocratic Islamic sultan, the subjects of Brunei have no human rights—there is no freedom of political activity, religion, the press, assembly, or association. Labor rights are circumscribed and foreign workers are exploited. The judiciary is subservient to the administration and the judges themselves are terrified of the ruler. Under the Internal Security Act, citizens may be detained without trial for years.

#### **CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 932.9. Of which:

- Murder: 1.5
- Assault: 1.2
- Burglary: 79.8
- Automobile Theft: 57.5

#### **CORRECTIONAL SYSTEM**

The prison system is administered by the director of the Prisons Department under the Ministry of Home Affairs.

**Prison Conditions.** Prisoners are generally treated humanely, but there are exceptions. Caning is mandatory for forty-two drug-related and other criminal offenses and is part of the sentence in 80% of criminal convictions. Convicted juveniles are housed together with adults, but females are placed in separate sections.

**Prison Statistics.** There is only one central prison in the sultanate with 463 prisoners, yielding a prison occupancy rate of 127 per 100,000 population. A new detention facility was opened in Tutong to accommodate the growing prison population.

- Total Prison Population: 463
- Prison Population Rate per 100,000: 127
- Pretrial Detainees: 8.4%
- Female Prisoners: 8%
- Number of Prisons: 2

# Bulgaria

---

**Official country name:** Republic of Bulgaria

**Capital:** Sofia

**Geographic description:** Located in the Balkan Peninsula in southeastern Europe, bordering the Black Sea

**Population:** 7,450,349 (est. 2005)

## LAW ENFORCEMENT

**History.** Past events in Bulgaria provide a foundation for understanding the structure of the current law enforcement system. As a nation, Bulgaria can trace its roots back to 681, when the Cyrillic alphabet was introduced. Christianity is currently the primary religion; however, there is a sizable Turkish minority that is Islamic. Bulgaria has a population of over 7.4 million; 9.4% are Turks and 4.7% are Roma. Slightly less than three-quarters of Bulgaria's population is urban. Sofia is the capital and has a population of 1.2 million. Since the fall of the communist regime in 1989, Bulgaria has had a parliamentary republic. In April 2004 Bulgaria was admitted to NATO and is making progress toward joining the European Union.

As a modern political entity, Bulgaria first emerged in 1878, winning independence after almost 500 years of Ottoman rule. Thus, Bulgaria began its own criminal justice system only with the Penal Act of 1896, which was influenced by the Hungarian and Russian ones. Despite being physically located on Europe's periphery, Bulgaria was well within the mainstream of the European criminal justice system. During the interwar period law enforcement

activity was directed toward rooting out corruption and cracking down on political dissent. By 1934 Bulgaria was no longer a parliamentary democracy. Legislation was passed that made people liable for acts committed retroactively. However, the collapse of the pro-Axis monarchy in 1944 and the establishment of a pro-Soviet regime in 1946 caused some changes in Bulgaria's legal code.

The adoption of the Bulgaria's first Communist-era Penal Code in 1956 reflected the influence of the Soviet Union. Corrective labor without imprisonment and the political notion of social danger replaced unlawfulness as a prime criminal characteristic. Also, punishment of crimes against the state and public property were strengthened. Bulgaria, however, diverged from the Soviet model. For instance, the main Western concepts of criminal legislation concerning crime, guilt, criminal liability, and statutes of limitations were retained.

In the post-Communist era Bulgaria's criminal justice system began to reflect the classical Western model. Bulgaria's 1991 constitution enshrines a separation of

powers among the legislative, executive, and judicial branches. The judiciary is composed of the court, the prosecutor's office, and the investigative bodies, which are all independent of one another. Criminal proceedings, with only a few exceptions, are open to the public. The age of legal responsibility is fourteen; however, there is a special category for juvenile offenders between the ages of fourteen and eighteen. Prosecutors and court officials have more discretion in juvenile proceedings; thus, juveniles do not typically receive prison sentences that are as long as those that adult offenders receive. Furthermore, Bulgaria's criminal justice system has evolved to include protection of private property by police forces.

**Structure and Organization.** The police forces of Bulgaria are organized through the Ministry of the Interior. There are five major police branches:

1. National Security Service
2. National Police Service
3. National Service for Combating Organized Crime
4. National Border Police Service
5. National Gendarmerie Service

The National Security Service has more of a counter-intelligence than a police function. Some of its goals are to crack down on terrorism, illegal drugs, and arms trafficking. The National Police Service has a wide range of responsibilities. Besides maintaining public order and investigating crimes, it is also in charge of traffic, passport regulation, and the issuing of identification cards. The National Service for Combating Organized Crime is, as the title suggests, aimed at eliminating Mafia organizations. In particular, this service focuses on eliminating drug trafficking and counterfeiting. It also maintains a presence on Bulgaria's borders. The National Border Service has the responsibility of maintaining Bulgaria's territorial sovereignty. Not only does it protect Bulgaria's land borders but it also defends the skies and waterways. The National Gendarmerie Service has a strategic role of primarily combating terrorism and providing stability in towns and villages.

Within the Ministry of the Interior there are twenty-eight regional directorates divided by territory. The regional directorate directors are responsible for maintaining order in their territory and they report directly to the interior minister. The directors have police, security, and antiorganized crime units at their disposal.

**Retirement Age.** Police officers are eligible for retirement at the age of fifty or after serving for twenty years.

**Police at Work.** Increased attention to Bulgarian police at work is reflected in the updating of their handbook. They are encouraged to apply restraint when dealing

with suspects and psychological training is emphasized. The importance of the moral and ethical behavior of police officers is an important theme of the handbook. Additionally, nondiscriminatory practices are urged.

**Police-Community Relations.** At the national level, there are regular daily press briefings. There are also phone numbers that citizens and journalists can call to get information. Furthermore, there is contact information on Bulgarian police Web sites.

**Local Police.** Local police are required to report to their districts, which, in turn, report to the interior minister. It is still a fairly centralized system, a reflection of its communist heritage.

**Special Police.** The National Service for Combating Organized Crime, the National Border Police Service, the National Gendarmerie Service, and the National Security Service can all be considered special police.

**Riot Police.** The National Police Service and the National Gendarmerie Service function as the riot police.

**Traffic Police.** The traffic police are part of the National Police Service. Not only are they responsible for the traffic but they are also register cars and ensure that they pass the regulations designed to make them safe to drive on Bulgaria's roads.

**Education and Training.** The major Bulgarian police academy, located in Sofia, offers four-year bachelor's degrees, two-year master's degrees, and a doctorate. Spaces are limited; there are 10 slots available for those with a military background, 10 from a nonmilitary background, and 5 for women. Students are given a stipend, which is 40% to 60% of the first-year salary of a police officer. There is only one slot available for the doctoral program. The academy is a modern facility with computers and faculty who have strong academic backgrounds. For sergeants, the training is carried out in four public schools for a period of one year. As a member of NATO and as a potential future member of the European Union, Bulgarian training and education standards may shift to reflect the requirements of these organizations.

**Uniforms and Weapons.** There has been a recent change in the style of Bulgarian police uniforms. Gone are the Soviet-era uniforms. In their place are dark blue and navy blue uniforms more in the fashion of the western European police services. This is only natural, since Bulgaria has become a part of NATO. What is distinctive about the uniform is the patch of a lion on the left shoulder, which serves as a symbol of Bulgaria.

The police carry pistols. They also have bullet-proof vests available. Antiterrorist and antiriot police are armed

*Police officers investigate a bomb explosion site in the Black Sea resort town of Obzor, Bulgaria, July 13, 2005. A two-year-old girl and her parents were killed as a bomb destroyed their car. Several others passing by were injured and investigators suspected that the incident might have been related to an underworld score settling. AP IMAGES.*

with more advanced weapons, such as semiautomatic weapons.

**Hierarchy and Ranks.** There is a militaristic structure with officer and sergeant ranks. Civilians are also recruited to fulfill administrative duties.

**Transportation, Technology, and Communications.** The Bulgarian radio equipment is standard. In recent years the police forces have begun developing Web sites. Although they do not have detailed information yet, there is basic geographic data. At the national level, the Ministry of the Interior provides a wealth of information, including the organization of the police, names and contact information of officials, and current news stories about the Bulgarian police. However, there is still a lack of detailed statistical information.

**Surveillance and Intelligence Gathering.** The National Security Service, and to a lesser extent the National Gendarmerie Service, provides much of the intelligence gathering. Counterintelligence is the primary function of the National Security Service while the National

Gendarmerie Service handles strategic matters. The National Police Service also gathers intelligence on crimes.

#### **HUMAN RIGHTS**

Bulgaria has been criticized in several areas: torture and excessive police force, treatment of the mentally ill, and abuse of ethnic minorities. The International Helsinki Federation for Human Rights states that the use of force is the rule rather than the exception when Bulgarian police apprehend suspects. There have also been suspicious suicides by suspects while in the custody of the Bulgarian police. A survey carried out among prisoners showed that 43% had been tortured or ill treated after their arrest. On the positive side, the Ministry of the Interior requires that criminal suspects be read their rights, with a signed statement by the suspect. Also, the nongovernmental organizations have been given greater access to Bulgarian prisons.

People have been arbitrarily put in social-care centers. Conditions are so poor in these centers that patients have died from starvation. There have been reported beatings of patients by the staff and bedridden patients have been

completely neglected. Also, there has been a shortage of doctors at these facilities with untrained staff filling in the gaps. The facilities are located in remote areas of the country, thus making them inaccessible to medical specialists.

Human rights organizations have also condemned Bulgaria for the ill treatment of the Roma minority. Racist groups have targeted the Roma and the police have been slow to protect the minority. Also, there has been a rise in the amount of anti-Semitic literature released by Bulgarian publishing houses. There have been reported cases of Nazi symbols being scrawled on walls in Roma neighborhoods and on a Jewish school. Still, no racist Bulgarian political party has any significant electoral support.

## CRIME

After the end of Communism, Bulgaria experienced a substantial increase in crime. Although this may be due to new methods of accounting, some forms of crime, such as Mafia-related crime, have definitely grown. During recent years, however, crime has noticeably leveled off.

**Criminal Identification and Forensics.** The Bulgarian National Police Service has the primary responsibility for conducting investigations, which lead to the identification of criminals. Information is not readily available on the forensic techniques that they use.

**Organized Crime.** Organized crime remains a problem in Bulgaria. As with many former Communist countries, many of the fired government employees found work with either Mafia organizations or private security firms. The focal point of organized crime includes drug trafficking, counterfeiting, and extortion. Former government officials have used their old connections to set up their own criminal syndicates. Also, entrepreneurs have created their own Mafias to exploit the new market economy. The embargo on goods to Serbia-Montenegro during the wars of Yugoslav succession fueled the growth of criminal networks. The effect of organized crime is demonstrated by both the high coverage in the mass media and the prevention efforts proclaimed by official sources in the Ministry of the Interior. Bulgaria has one police agency, the National Service for Combating Organized Crime, that focuses on eradicating organized crime. Bilateral treaties have been signed with bordering countries to eliminate the criminal syndicates.

## CORRECTIONAL SYSTEM

There are several kinds of prisons in the corrections system. They include ones for juveniles, open, semiopen, and closed corrections labor systems. The type of establishment a prisoner is sentenced to is announced during

the punishment part of the trial. Halfway houses were added to the Bulgarian penal system in 1997. The death penalty has not been used in Bulgaria since 1990.

**Prison Conditions.** There are no laws regulating space in Bulgarian prisons. This can lead to overcrowding, which in some prisons reached 200%. Cells in Bulgarian prisons are small, and the buildings are old.

**Prison Statistics.** In 2002 there were 9,422 inmates in Bulgarian prisons and halfway houses. Over 800 inmates were in 74 investigative detention centers (International Helsinki Federation for Human Rights 2003). There are fourteen prisons and one juvenile detention center in Bulgaria (Bulgarian Law Portal 2004).

- Total Prison Population: 11,060
- Prison Population Rate: 143
- Pretrial Detainees: 17.5%
- Female Prisoners: 3.2%
- Juvenile Prisoners: 1.3%
- Number of Prisons: 15
- Official Capacity of the Prison System: 8,738
- Prison Occupancy Level: 126.5%

## MOST SIGNIFICANT ISSUE FACING THE COUNTRY

In many ways Bulgaria remains a country in transition. Thus, it is only natural that the law enforcement situation reflects this phase. Bulgaria is now a part of NATO, and it hopes to join the European Union in several years. As Bulgaria moves closer to the international community, there will be increasing pressure to conform to international standards. Since the 1990s Bulgaria has provided police forces for the NATO administration of Bosnia, and it has agreed to train Iraqi police forces. As part of the Schengen Plan, Bulgaria is required to modernize its police and criminal justice system; it has already begun to do so. As Bulgaria moves ahead, the most significant issue will be whether the country continues ahead with its plans to strengthen its ties to the international community or remains mired in the past. If Bulgaria joins with the international community, it will have increased its chances of having an effective criminal justice system. If it falls behind, Bulgaria will have less help in combating the problems of organized crime, torture, and official corruption.

# Burkina Faso

---

**Official country name:** Burkina Faso

**Capital:** Ouagadougou

**Geographic description:** A landlocked country in West Africa

**Population:** 13,925,313 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The security apparatus consists of the Gendarmerie, which is controlled by the Ministry of Defense; the National Police, which is controlled by the Ministry of Security; and the municipal police, which is controlled by the Ministry of Territorial Administration. The Presidential Guard is an autonomous security force.

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 9. Of which:

- Murder: 0.4
- Assault: 1.7

## CORRECTIONAL SYSTEM

**Prison Conditions.** Prison conditions are harsh. The prison diet is poor and inmates have to rely on the kindness of relatives. There are separate facilities for men,

women, and children, but these facilities are typically crowded, with common rooms rather than individual cells.

**Prison Statistics.** The prison administration is under a director who reports to the Ministry of Justice. There are eleven prisons in the country with an official capacity of 1,650 and a prison population of 2,800. Per 100,000 population, the prison population rate is 23. Of all inmates, 58.3% are pretrial detainees, 1% are women, and 2.4% are juveniles. The largest prison at Bobo-Dioulasso, built in 1947, houses over 1,000 prisoners, even though it is designed to hold half that number.

# Burma (Myanmar)

---

**Official country name:** Union of Burma

**Capital:** Rangoon (known by the country's government as Yangon)

**Geographic description:** Country in Southeast Asia extending 800 miles from China to Malaysia; bordered by India and Bangladesh on the west and China, Laos, and Thailand on the east

**Population:** 42,909,464 (est. 2005)

## LAW ENFORCEMENT

**History.** The Myanmar Police Force (MPF) traces its origins to the colonial days when the British set up a Western-style police force to establish law and order among the different principalities that made up the country. The principal units of this police administration were the Burma Police Service, with several special units, such as the Criminal Investigation Department and Special Intelligence Department.

Until 1967 the police forces were subordinate to the army, and relations between the two were strained. Major police grievances were the imposition of army regulations, low supply priorities compared with the military and alleged lack of army support to outlying police posts during insurgent attacks. After becoming independent of the army in 1967, police morale improved, and personnel received better pay scales and equipment.

**Structure and Organization.** The MPF is the successor to the Burma Police. It is organized under the Ministry of Home Affairs and consists of the Civil Police and the

Yangon City Police. Although organizationally independent of the army, the military continue to dominate the upper echelons of the police force. The general headquarters is in Yangon under a director general (with the rank of a major general), assisted by a deputy director general. Often, the director general is a senior army officer, and army officers hold most of the other senior posts. The director general reports directly to the minister of home affairs. The Police Council made up of ranking police, army, and cabinet officials is the senior policy-making body.

The average city police headquarters is housed in a frame building enclosed by a fence or barbed wire, and most offers basic facilities for administration, housing, and supply storage. Most rural posts are strictly utilitarian, generally consisting of a rustic fortlike compound, closely guarded and surrounded by barbed wire. Rural posts are bases of operation for fixed guard posts and area-surveillance patrols.

**Principal Agencies and Divisions.** The Yangon headquarters has two special departments and two principal staff sections: the Supply and Finance Section and the Administrative and Training Section. There is no separate operations directorate; rather, the chain of command runs directly from the office of the director general to the subordinate units in the field.

Two special units are the Criminal Investigation Department (CID) and the Special Investigations Department (SID), the latter concerned more with intelligence-gathering and counterintelligence work. Half of the SID personnel are stationed in Yangon, and the rest are dispersed throughout the country. The CID staff is distributed among three bureaus: the Crime Bureau, the Scientific Bureau, and the Railway Police Bureau.

The Yangon Police is an autonomous metropolitan force operating exclusively within the capital city and its environs. It is headed by a director and has an estimated strength of 10,000. In addition to regular law enforcement, it is responsible for the registration of motor vehicles, the surveillance of foreigners, and the security of the Port of Yangon. Other routine duties include the usual police activities associated with urban life, such as sanitation, traffic control, and the suppression of vice.

The Civil Police comprises all forces stationed outside the capital and forms the bulk of the MPF. Its uniformed personnel are patrolmen on the beat and rural constables. Its members often act as guards of government buildings and assist the army in operations against insurgents. The Civil Police is organized into fourteen subordinate geographic regions corresponding to the administrative divisions and the constituent states. Each region is headed by a director or vice director and is subdivided into districts, stations, and outposts. Much of the operational control is exercised by the army through its Security and Administrative Committees composed of civil and military officials at various levels. Police battalions are specialized units in urban areas. There are nine such battalions reporting directly to the director general. Seven are in Yangon, one is in Mandalay, and one is in Rakhine State.

**Salaries.** Grades in the MPF conform closely to those of the colonial British police force. Ranks below the director level range from constable to superintendent through corporal, sergeant, station officer, and inspector. Successive pay increases since the mid-1960s have brought police compensation into line with equivalent army ranks.

**Education and Training.** Most basic police training in modern techniques originated with a U.S. program that lasted from 1950 to 1965. The Police Officers Academy in Mandalay conducts annual courses for officer candidates and also has a course of advanced instruction for

officers at the intermediate level. The Central Training Institute at Pyin-Oo-Lwin offers training courses for officers. Two other training facilities provide six-month training courses for constables. The Criminal Investigation Division offers specialized training for detectives.

**Uniforms and Weapons.** Police uniforms closely resemble British tropical military wear. Army khaki uniforms with distinctive insignia are worn in the field and in hot weather. For garrison or urban duty, enlisted men wear blue trousers with a bluish-gray Angora shirt. Headgear is either a beret or a wide-brimmed Gurkha hat. Non-commissioned officers wear chevrons on the right sleeve only. Officers have a blue or khaki service coat and a peaked service cap or beret for field duty. Noncommissioned officers are armed with a pistol, while patrolmen carry a baton, unless issued with other weapons during emergencies. The Metropolitan division of the Yangon City Police has a distinctive uniform consisting of a white jacket worn with dark blue trousers or breeches. The police have their own decorations: four medals, one of which is reserved for officers, and the others are given for gallantry, distinguished service, and conspicuous devotion to duty. The two higher awards carry with them a monetary allowance, rated according to the rank of the recipient.

**Transport, Technology, and Communications.** As with training, most police equipment originated in the United States. Police vehicles, such as trucks, sedans, jeeps, or motorcycles, are adequate to meet local needs. Rural patrols are conducted mostly by motor vehicles, but the force also has many patrol boats covering rivers and coastal areas. All but the most remote outlying posts are tied into the police communications network, linking them with the headquarters in Yangon.

**Surveillance and Intelligence Gathering.** Counterintelligence activities are conducted by the National Intelligence Bureau (NIB) and the Bureau of Special Investigations (BSI). The NIB is made up of various intelligence and specialized security agencies, such as the Military Intelligence Service of the Ministry of Defense. Headed by a director, the NIB is a component of the Central Security and Administrative Committee. The BSI is directly under the office of the chairman of the Revolutionary Council. It was originally organized to investigate corruption among political leaders and government employees, but this aspect of its work has fallen into disuse. The agency is now engaged mostly in investigating possible threats to the regime.

#### Police Statistics.

- Total Number of Police Personnel: 64,981
- Population per Police Officer: 660

## HUMAN RIGHTS

The country has one of the most oppressive regimes in the world in terms of human rights. Citizens are subject to the arbitrary and brutal dictates of the military regime. Security forces routinely commit extrajudicial killings and rape in insurgent areas. Arbitrary arrest and detention of opposition leaders has been condemned by the international community. Persons suspected of pro-democratic activities are subject to surveillance and harassment. Homes are searched without warrants and persons relocated forcibly. Private citizens and political activists “disappear” for several days or weeks and, sometimes, permanently.

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 64.5. Of which:

- Murder: 1.9
- Assault: 26.9
- Burglary: 0.1
- Automobile Theft: 0.1

## CORRECTIONAL SYSTEM

The prison administration, under the direction of the Ministry of Home Affairs, is regulated by the provisions of the Penal Code, which appears as Volume VIII of the Burma Code. The system is loosely organized, however, and most detention facilities receive little central guidance or supervision. There is a prison facility of some kind in most towns of any size, but most of them are old buildings in poor repair. According to the best available information, there are about 40 detention facilities in the country, about 10 of which are central prisons, 20 district jails, and 10 subjails and guardhouses. Most consist of a frame or log enclosure surrounded by a barbed-wire fence. There are also quarry, agricultural,

livestock-breeding, rubber plantation, labor utilization, and rehabilitation camps. There are also a women’s center and a reformatory for juvenile offenders, called a training school.

**Prison Conditions.** None of the country’s penal institutions is known to have workshops or handicraft facilities, and none has teachers, social workers, vocational training instructors, or medical personnel assigned to their permanent staff. Prison conditions are harsh. Mortality rates in the labor camps are very high. In prisons, food, clothing, and medical supplies are short. Bedding, if any, consists of a single mat on the floor. Prisoners rely on their families, who are allowed to visit once every two weeks for 15 minutes per visit, to provide basic necessities. HIV infection rates are high due to communal use of syringes for injections. Political prisoners are separated from common prisoners, juveniles from adults, and men from women. Many prisoners die in prison and in some cases are shot to death when they become too weak to work on construction projects.

## Prison Statistics.

- Total Prison Population: 60,000
- Prison Population Rate per 100,000: 140
- Pretrial Detainees: 12.9%
- Female Prisoners: 17.8%
- Juvenile Prisoners: 1.6%
- Number of Prisons: 94
- Official Capacity of the Prison system: 26,100
- Occupancy Level: 144.3%

*George Thomas Kurian*

# Burundi

---

**Official country name:** Republic of Burundi

**Capital:** Bujumbura

**Geographic description:** A landlocked country in central Africa

**Population:** 6,370,609 (est. 2005)

## LAW ENFORCEMENT

**History.** The earliest police force in Burundi was set up under the German occupation that began in 1896 and ended during World War I, when the Belgians took over the country. The Belgians did not create a discrete police force but used Congolese soldiers to police the country. Toward the end of their rule, the Belgians created a national police and a Gendarmerie recruited almost entirely from the Tutsis.

**Structure and Organization.** There are three branches engaged in law enforcement in Burundi: the National Police, which polices the major towns; the Judicial Police; and the Gendarmerie. All the branches are headquartered in Bujumbura and are headed by directors who report to the Ministry of the Interior.

The central directorate is organized into four sections: administrative, secretariat general documentation, identification, and professional training. There are field offices in all major towns and provincial offices in the sixteen provinces. The general documentation section includes bureaus of information, publicity, statistics, and central archives. The Judicial Police, created in 1967, has field offices called Mobile Judicial Police

Units, each commanded by a brigade chief. They collect evidence and arrest criminals.

Rural policing is undertaken by the Gendarmerie.

Since the beginning of the ethnic conflict, many police functions have been performed by Tutsi-dominated armed paramilitary civil defense units known ironically as the Guardians of the Peace. Members of the Guardians of the Peace are unpaid and poorly trained, and some are even conscripted. Being unpaid, they live by threatening and harassing people. They also recruit children to do their work and are known to beat, rape, harass, and extort money. They are responsible for most of the street killings in the country.

**Education and Training.** Officers of the Judicial Police are recruited by the Ministry of Justice on the basis of competitive examinations. Successful candidates are admitted to the Professional Training Center for an eighteen-month training cycle. After completion they are appointed

## *Burundi*

as probationary police officers for twelve months. Candidates to the National Police and the Gendarmerie are trained at the Police Academy at Bujumbura.

### **HUMAN RIGHTS**

Members of the security forces routinely commit serious human rights violations. They are responsible for tens of thousands of killings. No members of the security forces are disciplined or punished for their roles in mass killings. According to Amnesty International, there is widespread torture of children, including sexual abuse and beatings with sticks and electric flexes. The Burundian Association for the Defense of the Rights of Prisoners estimates that 45% of prisoners are tortured. The judiciary is weak and powerless, and security forces refuse to cooperate with civilian prosecutors and judges. There are also unexplained abductions and disappearances. Rapes of women by security forces are commonplace occurrences. Civilians are subject to arbitrary arrest and detention for long periods of time. Those arrested sometimes disappear and never return to their homes.

### **CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 156. Of which:

- Murder: 9.7
- Assault: 10.8
- Burglary: 2
- Automobile Theft: 0.2

### **CORRECTIONAL SYSTEM**

Several types of prisons were constructed under the German and Belgian colonial regimes. Each province has a central prison and a work camp for long-term prisoners. The most important prisons are at Rumonga (near Bujumbura), Gitega, and Muhinga.

**Prison Conditions.** Prison conditions are harsh, reflecting the political strife in the country. Prisoners are not provided food but have to rely on family members for food and water. Many prisoners die from malnutrition and hunger. Disease is rampant, and inmates receive no medical care. Juveniles are placed in the same cells as adults and are subject to violence and sexual exploitation. Political prisoners and pretrial detainees are placed in the same prisons with hardened criminals. International and local human rights monitors are denied access to visit prisoners, especially those political prisoners involved in the ethnic conflicts.

**Prison Statistics.** Overall, there are eleven prisons under the control of the Directorate General of Prison Affairs, which is part of the Ministry of Justice. These prisons have an official capacity of 3,750 but actually hold a total of 8,647 inmates, yielding an overcrowding level of 230.6%. Unofficial estimates place the prison population at 12,000. The incarceration rate is 129 per 100,000 people. Of the prison population, 59.4% are pretrial detainees, 2.5% are females, and 1.7% are juveniles.

# Cambodia

---

**Official country name:** Kingdom of Cambodia

**Capital:** Phnom Penh

**Geographic description:** Southeast Asian country bordering on the Gulf of Thailand

**Population:** 14,500,000 (est. 2005)

## LAW ENFORCEMENT

**History.** The history of Cambodia's legal system is one of the most varied in the world. Until the Communist and later Vietnamese takeover, law enforcement was the responsibility of the Royal Khmer Police under the authority of a secretary of state in the Ministry of the Interior. It was a loosely centralized force that included the National Police, patterned after the French *Sûreté*; the municipal police in Phnom Penh; rural town police; and the paramilitary Surface Defense Force—a constabulary composed of the Provincial Guard and the *Chivapul*, a local volunteer militia. The police were reorganized in May 1970 when most of its component elements were transferred to the army. After the imposition of martial law in 1970, the provost marshal and the military police handled the general maintenance of law and order, including traffic control. The National Police continued to act as a bureau of investigation and surveillance under a central commissariat. Under Pol Pot, the police name was changed to People's Militia. The National Police was restored to its former status after the restoration of constitutional monarchy in the late 1990s. In 1998 Cambodia's security consisted of (1) the Royal Cambodian Armed forces, (2) the National Police, and (3) the *gendarmerie*.

**Structure and Organization.** The National Police is administered by a general directorate subordinate to the Ministry of the Interior. Details of its deployment and organization are not known. The national headquarters contains five main sections:

- Criminal
- Economic
- Immigration
- Administrative
- Special Police

The Municipal Police in Phnom Penh, with ten precincts under a commissariat, have additional responsibilities, including covert operations and the security of government installations and officials.

### Police Statistics.

- Total Police Personnel: 6,308
- Population per Police Officer: 1,980

#### **HUMAN RIGHTS**

The government's record in the area of human rights is mixed. The police and the military engage in political and nonpolitical killings and are rarely prosecuted. Torture, beatings, and other forms of physical mistreatment of persons held in police custody are a serious problem throughout the country. Police officials use physical and psychological torture and severely beat criminal detainees during interrogation.

#### **CORRECTIONAL SYSTEM**

Cambodia maintains three national prisons and twenty-four municipal and provincial prisons; a prison camp is maintained on an island in the Gulf of Thailand offshore from the town of Keb in Kampot province. The prison system is administered by a director in the Ministry of the Interior.

**Prison Conditions.** Prison conditions are harsh and marred by overcrowding, health problems, food and water shortages, malnutrition, and poor security. In 2003 some 50 prisoners died of disease while in custody. There is no separation of juvenile prisoners from adults, persons

detained for minor offenses from violent criminals, or male from female prisoners. Regulations allow families to provide prisoners with food and other necessities, but they often have to bribe prison guards to do so. Human rights groups and lawyers are sometimes denied permission to meet prisoners in private or to monitor prison conditions.

#### **Prison Statistics.**

- Total Prison Population: 6,778
- Prison Population Rate per 100,000: 47
- Pretrial Detainees: 31.3%
- Female Prisoners: 5.1%
- Juvenile Prisoners: 4.2%
- Foreign Prisoners: 2.1%
- Number of Prisons: 27
- Official Capacity of the Prison System: 5,665
- Occupancy Level: 112%

*George Thomas Kurian*

# Cameroon

---

**Official country name:** Republic of Cameroon

**Capital:** Douala

**Geographic description:** Country in central west Africa bordering on the Bight of Biafra where the coast curves into west Africa

**Population:** 16,988,132 (est. 2005)

## LAW ENFORCEMENT

**History.** Cameroon's law enforcement traditions are derived from three colonial masters: the Germans (1884–1916), the French (1916–1945), and the British (1945–1961). The French police traditions have prevailed and remain strong. The General Delegate for National Security (GDSN; the national police) and the National Gendarmerie are primarily responsible for law enforcement. The Gendarmerie was officially established in 1960 by transferring members of the French Guard and the Cameroonian Guard preindependence security forces. Members of the Old Civic Guard in the Bamileke area were also brought into the new national force. The total Gendarmerie strength of 3,000 included mobile gendarmes. The organizational structure and command hierarchy of the Gendarmerie were similar to those of the armed forces, and its officers were, in effect, military officers assigned to internal security duties. By 1965, all command and supervisory posts in the Gendarmerie were held by Cameroonians, and French personnel were withdrawn. In 1966 the Republican Guard was created to protect the presidential palace and as an honor guard for state occasions.

**Structure and Organization.** The prison system is administered by the director of the Penitentiary Administration under the Ministry of Justice. The country is divided into a number of districts, each containing general police stations (or commissariats), regional judicial police units, and frontier posts. The judicial police units are concerned with investigating serious crimes. Each province has one legion of gendarmerie, called the Provincial Gendarmerie. In addition, the Operational Command of the internal security forces maintains a special prison at Kosovo.

**National Gendarmerie.** The National Gendarmerie's responsibilities include highway patrolling and traffic control and investigation and surveillance of suspects. This agency is sometimes used by the government as a counterweight to the army.

**General Delegate for National Security.** The GDSN, the second law enforcement agency, is commanded

## Cameroon

by a delegate general on the presidential staff. It maintains regional offices in all parts of the country and handles routine police work in all large towns.

**Education and Training.** Education for all ranks is provided by the national police academy in Yaounde. There are small training schools for recruits in Douala and Garoua.

**Uniforms and Weapons.** The uniform consists of khaki bush shirts and a navy-blue cap. All personnel carry an automatic pistol.

### Police Statistics.

- Total Police Personnel: 13,833
- Population per Police Officer: 1,170

## HUMAN RIGHTS

Cameroon has one of the worst human rights records in Africa. The security forces detain, beat, and otherwise abuse suspects and detainees with impunity. Few security personnel are ever charged with violence against citizens, and they ignore prosecutors and judges. The judiciary is corrupt, inefficient, and subject to political influence. The Operational Command of the security forces was found guilty of mass murders of civilians and the detention of people in their own prison facility. The country has several mass graves, including one in the Forest of Monkeys and another off the Old Road between Douala and Edea, where bodies were abandoned in pits or buried. Another crime-fighting unit, the Israeli-trained Light Intervention Battalion, has been accused of summary executions. There are reports of disappearances of persons in the custody of security forces. They are believed to have been summarily executed, and their bodies have never been found. The Operational Command are believed to torture and otherwise abuse detainees and suspects. Security forces harass and threaten journalists and others and use roadblocks to extract bribes. The government rarely investigates or punishes officials involved in these abuses.

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 78. Of which:

- Murder: 0.4
- Assault: 1.2
- Burglary: 1.2
- Automobile Theft: 5.1

## CORRECTIONAL SYSTEM

**Prison Conditions.** Prison conditions are harsh. Prisons are seriously overcrowded and unsanitary. Prisoners are kept in dilapidated colonial-era prisons where the number of detainees is four to five times the official capacity. Health and medical care are nonexistent and inmates' families are required to bring in food to their relatives in prison. Douala's New Bell Prison contains seven water taps for 3,500 prisoners. Prison officials routinely beat, torture, and otherwise abuse prisoners, often to obtain forced confessions. Many of the prisoners die as a result of the mistreatment. Prisoners are reportedly chained and flogged in their cells. Two forms of physical abuse commonly reported are the "bastinade," in which the victim is beaten on the soles of the feet, and the "balancoire," in which the victim is hung from a rope while being beaten on the genitals. Other forms of degrading treatment include stripping, confinement in small cells, and denial of access to sanitation facilities. In the north, the government has permitted Lamibe, or chiefs, to detain individuals in private buildings, where they are tortured and where many die from mistreatment.

Corruption among prison officials is widespread. Prisoners are often bribed by prison officials for special favors or treatment, including temporary freedom. For a weekly bribe of \$20 paid to the superintendent, prisoners can buy freedom for twelve hours. Prisoners use their free time to steal in order to bribe the officials again.

Juvenile prisoners are often incarcerated with adults, occasionally in the same cells or wards, where they are sexually abused. Prisoners awaiting trial are routinely housed with convicted prisoners. Likewise, women are held in the same prison complexes as men, often in the same cells. In some cases, prisoners are kept beyond their release dates because the relevant files are lost. In one case, a prisoner was released 13 years after his release date, and other detainees have spent six years in jail without a trial.

The Cameroonian League for Human Rights has published statistics detailing the overcrowding in Cameroonian prisons (official capacity in parentheses):

- Yaounde-Kondengui: 9,530 (2,500)
- Douala New Bell: 7,000 (1,500)
- Bamenda: 4,855 (330)
- Bafoussam: 5,225 (850)
- Edea: 4,255 (750)
- Dschang: 6,845 (715)
- Garoua: 4,636 (280)
- Nkongsamba: 8,753 (630)

**Prison Statistics.**

- Total Prison Population: 21,000
- Prison Population Rate per 100,000: 125
- Pretrial Detainees: 65.0%
- Number of Prisons: 67
- Official Capacity of the Prison System: 6,749
- Occupancy Level: 296.3%

*George Thomas Kurian*

# Canada

---

**Official country name:** Canada

**Capital:** Ottawa

**Geographic description:** All of North America outside the United States, Mexico, and Greenland. Largest country in the Western Hemisphere and the second-largest country in the world.

**Population:** 32,805,041 (est. 2005)

## LAW ENFORCEMENT

**History.** On December 12, 2003, Prime Minister Paul Martin announced the formation of a new Ministry of Public Safety and Emergency Preparedness Portfolio that consists of the Department of Public Safety and Emergency Preparedness (DPSEP) and seven agencies:

- The Royal Canadian Mounted Police (RCMP)
- The Canadian Security Intelligence Service
- Correctional Service Canada (CSC)
- The National Parole Board of Canada (NPB)
- The Canada Firearms Centre
- The Canada Borders Services Agency

The DPSEP and the seven agencies are responsible for Canada's policing, law enforcement, corrections and conditional releases, and national security. Under the DPSEP's control has been placed the Department of the Solicitor General (formerly in charge of the portfolio agencies), the Office of Critical Infrastructure Protection and Emergency Preparedness (formerly under National

Defense) and the National Crime Prevention Centre. The details of this major organizational change were still being worked out as of 2005 and—as with the U.S. Department of Homeland Security—it will likely be several years before the dynamics of the new organizational relationships are fully understood.

Policing in Canada, as in most countries, is a function of geographic, social, economic, and political factors that have shaped the country. As in the United States, the earliest days of policing in Canada were characterized by a fragmented, local, and ad-hoc approach to law enforcement. While a night-watchman force made an appearance as early as 1651 in Quebec, the officers did not gain a law enforcement role until 1673 with the imposition of the British justice of the peace system. The position of constable was introduced to the French-speaking provinces in 1787, most particularly in the cities of Montreal and Quebec.

Police forces did not begin to appear in the English-speaking areas until the mid- to late eighteenth century.

The development of policing in Upper Canada (now Ontario) followed a pattern similar to that of England, and English settlers incorporated the roles of sheriffs, constables, and justices of the peace into their settlements. In 1792 English common law was established as the law for Upper Canada, followed by the Parish and Town Officers Act of 1793. This act provided for the appointment of high constables who would in turn appoint citizens to serve as constables in each parish or township in the high constable's provincial district. Similarly, the governor of Newfoundland was empowered by royal proclamation in 1792 to appoint constables and justices of the peace. This constabulary-based system lasted until about the mid-nineteenth century. A rise in the perception of a crime problem—if not the actual development of a crime problem—eventually led municipalities to develop more modern police forces. For instance, a police force of six men replaced Toronto's night watchmen in 1835, and the Municipal Institutions of Canada Act of 1858 authorized municipalities to form police forces overseen by boards of commissioners. Through most of the late nineteenth century, a police presence was found mostly at the municipal level, following the English constabulary tradition. Organized policing came to the Canadian west even later. Partly due to sparse settlement and partly due to low rates of serious crime, the first organized police force did not arrive in British Columbia until 1858 with the onset of the gold rush. A formal provincial force was formed in 1871 when British Columbia joined the Confederation.

In 1867 the British North American Act delegated to the provinces the establishment of their own police forces, courts, and correctional institutions, defining for the provincial level a key role in the administration of justice. One year later, the first federal police force—the Dominion Police Force—was formed primarily to protect government buildings and property and to enforce counterfeiting laws. At the same time, under the provisions of the 1867 act, the provinces proceeded to establish their own forces. The 1867 act would have seemed to end any question of provincial leadership in law enforcement. However, the provincial forces proved to be less than effective—mostly due to considerable political interference. This situation, combined with the establishment of a new federal police force in the west, would have profound consequences for how provincial police services were to be delivered.

**Structure and Organization.** The terms *police officer* and *peace officer* are used interchangeably in Canada. Such officers are defined broadly in Canada's Criminal Code and include mayors, members of the CSC, customs or excise officers, fishery guardians, and pilots in command of aircraft (Department of Justice, Canada, Criminal

Code R.S. 1985, c. C-46, s. 2). The basic duties of Canadian police officers are similar to those of the United States and the United Kingdom and include law enforcement, order maintenance, and service.

All policing in Canada is divided among three levels: federal, provincial, and municipal. Canada has ten provinces: Alberta, British Columbia, Manitoba, New Brunswick, Newfoundland, Nova Scotia, Ontario, Prince Edward Island, Quebec, and Saskatchewan. In addition, there are three territories: the Northwest Territory, the Yukon Territory, and the Nunavut Territory.

There are three primary police forces in Canada:

- The RCMP, Canada's largest police force, is both the national and federal police force. As a result of contractual agreements, the RCMP provides policing services for eight of the ten provinces (excluding Ontario and Quebec and parts of Newfoundland and Labrador) and over two hundred municipalities.
- The Ontario Provincial Police (OPP), the police force for the province of Ontario, is the largest in Ontario and the second largest in Canada. It is responsible for areas in the province that do not have municipal or regional police services.
- The Sûreté du Québec, meaning Quebec security or safety, is Quebec's provincial police force. It provides service to areas in the province that do not have municipal or regional police forces and as such is primarily present in small rural and suburban areas. It also polices the provincial highways and is responsible for crime investigation in the province.

The national government is responsible for enforcement of federal laws and statutes as well as for providing policing services for the territories. In addition, the federal government runs a penitentiary and parole system. Criminal laws are set forth in the Criminal Code of Canada promulgated by Parliament. The criminal code is enforced by all federal, provincial, and local police forces. In theory, the administration of justice is dealt with in the provinces. Provinces and municipalities each have responsibility for their own criminal justice organizations and infrastructures although the lines dividing governmental levels are more blurred than organizational flow charts might indicate, and each province and municipality differs in its approach to its law-enforcement responsibilities.

The organization and structure of municipal police forces—and their relationship with provincial structures—vary widely across Canada. As of 2003, there were approximately 515 municipal or regional police forces, with the RCMP providing contract service to over two hundred of those forces. Municipal forces can range in

size from one to six thousand. The Metro Toronto police force is comparable in size to the OPP. Most of the municipalities bear much of the cost of such forces, with some aid from the provincial governments. At the same time, provincial forces can and do provide many specialized services that the municipal forces—especially the small ones—cannot. For example, the OPP provides such resources as Tactical Response Units (TRUs), similar to the U.S. SWAT team, canine units, bomb disposal, divers, helicopters, and major crime investigative units. Most municipal forces are overseen by police boards, but the boards vary widely in the extent to which they are involved in budgets and daily operations. In addition to the Criminal Code, municipal police forces enforce the provincial statutes within their jurisdiction as well as any relevant municipal bylaws. They also have the authority to enforce some federal statutes, such as the Narcotics Control Act.

There are two main trends evident in municipal policing. The first is regionalization. In order to offset the inefficiency of having multiple independent forces in close proximity to each other, a number of the municipal forces have joined together to form regional forces, such as the Montreal Urban Community Police and the Peel Regional Police Force. Though the first regional forces were created in the 1960s, the trend has grown significantly over the subsequent decades. Another trend can be seen in the growing amount of provincial control over municipal forces. The most obvious example is the framework set up in Quebec (discussed below), but it is also evident in efforts to standardize training through a central provincial training facility (such as the Ontario Police College and the British Columbia Police Academy) and through such efforts as uniform policing standards, discipline codes, and procedures for submitting citizen complaints.

*Police-Community Relations.* Community relations—and more specifically, community policing—has become relatively ingrained in the approaches of the main Canadian police forces. Community policing has taken front and center since the 1990s in the RCMP. In a 1990 report on the future of Canadian policing, the Solicitor General Pierre Cadieux predicted that community policing would give frontline officers unprecedented autonomy to work with communities to solve local problems. At the same time, there was a belief that such efforts already fit well with the detachment structure of the organization. The more formal implementation of community policing—mostly that of decentralization of authority—would simplify already existing relationships and allow detachment commanders more flexibility to address individual community needs. Some policing scholars argued, however, that any of the organizational

reforms that came with community policing were more a result of financial pressures and served merely to leave detachments with more responsibility and fewer resources.

Nevertheless, included in the readings for the Cadet Training Program is a report titled *The Environment of Policing by the Year 2000*. A large section of the report discusses community policing, which it refers to as a “a growing Canadian consensus.” The report seeks to introduce cadets to key aspects of community policing, such as close contact with local community members and seeking solutions to underlying problems rather than merely reacting to incidents. The report makes clear that such approaches are to be an integral part of their detachment activities. Community policing is not simply an RCMP project but has taken hold among a number of Canadian jurisdictions. The OPP refers to community policing on its Web site as the “only” way to do business and devotes a section within Strategic Services to the issue.

## ROYAL CANADIAN MOUNTED POLICE

**History.** When Canada purchased much of the Canadian west from the Hudson Bay Company in 1873, it established the Northwest Mounted Police. The “Royal” designation was added in 1904, and the RNWMP force received its new name in 1920 when it was merged with the Dominion Police Force and ultimately took its place as the national policing agency. The new force was established ostensibly to maintain order in the new territories. Other reasons behind its creation include the protection of the native population from unscrupulous traders, the establishment of political and economic sovereignty over the vast territory to ensure orderly settlement by white settlers, and settling labor disputes. In order to accomplish these objectives, the early Mounties had a wide range of powers, including the power to arrest, to conduct trials, and to impose sentences. The extent of their powers engendered a great deal of dislike on the part of both settlers and federal legislators. The image of the clean-cut, heroic Mountie may not have been entirely accurate—at least initially. Historians have found evidence of desertion, drunkenness, and illicit alliances with women.

Originally, the RCMP was designed to be a federal force meant to police federal territories. However, when Alberta and Saskatchewan joined the confederation in 1905, they established their own provincial forces (as had the other provinces under the 1867 act) and then proceeded to contract with RNWMP to provide the service under a cost-sharing arrangement. After twelve years of this arrangement, both provinces created their own forces, in truth with disastrous results. The Saskatchewan force folded in 1928 and the Alberta force

in 1932. The RCMP resumed provincial policing services for both provinces. Over the next twenty years, this type of contractual arrangement expanded into most of the other provinces. As of 2005, only two provinces—Ontario and Quebec—maintain their own provincial police forces.

**Structure and Organization.** As of April 2005, the RCMP had 22,557 active personnel. The RCMP is Canada's federal police force and is organized under the Royal Canadian Mounted Police Act (R.S.C. 1985, C.R.-10). It is designed to enforce the federal criminal laws of Canada, such as the Bank Act, Customs Act, Food and Drugs Act, Income Tax Act, and Narcotic Control Act, as well as a number of criminal code offenses involving fraud and theft against the federal government, counterfeiting, various white-collar crimes involving securities and banking, and bankruptcy. This is different than in the United States, where federal law enforcement responsibilities tend to be divided among different agencies responsible for different issues or regulatory areas.

A commissioner heads the RCMP and is assisted by four deputy commissioners, each in charge of a specific region: Central, Atlantic, Northwest, and Pacific. This regional structure is relatively new, dating only from 1996. The regional structure was designed to increase contact between the RCMP and the community and give frontline officers greater resources. Fifteen divisions—each under the direction of a commanding officer—are divided among the four regions and referred to by an alphabetical designation. Each division in turn consists of a number of detachments. The number of detachments in each region and the size of each detachment vary considerably. In each case, however, the approximately 652 detachments across Canada form the key operational units of the RCMP and are the main point of contact with citizens. Contract policing involves 47% of RCMP personnel in provincial and municipal duties.

In addition to several administrative directorates, the mandate of the RCMP is supported by a deputy commissioner of Operations and an assistant commissioner of National Police Services (NPS). The NPS in particular is responsible for providing forensic and identification resources to RCMP detachments and to provincial, regional, and municipal police forces throughout Canada. Operations houses units involved in federal and international operations, such as border security, drug enforcement, and financial crimes. Also under the Operations umbrella are the protective services for government officials, Parliament members, and visiting dignitaries. Finally, the Operations Directorate houses the Criminal Intelligence Directorate, the Community, Contract, and Aboriginal Police Services (under which

the RCMP as provincial and municipal forces are administered), and Technical Operations.

The ranks of the RCMP are divided between commissioned and noncommissioned members. Commissioned members include the commissioner, deputy commissioners, assistant commissioners, chief superintendents, superintendents, and inspectors. The noncommissioned ranks are the corps sergeant major, sergeant major, staff sergeant major, staff sergeant, sergeant, and corporal.

**Salaries.** Benefits are paid to RCMP members beginning with their period as cadets. Cadets at the academy receive an allowance to cover food, accommodation, insurance, and travel to and from the academy. When they finish their time at the academy, cadets become regular member constables. And as of 2005, they received an annual salary of C\$40,523. Within 36 months, salaries increase incrementally to C\$65,660 annually. Annual leave is based on time of service as follows:

- 0–5 years: 15 days annual vacation
- 5–10 years: 20 days annual vacation
- 10 or more years: 25 days annual vacation

#### **Special Police.**

**Specialized Units and Riot Police.** Emergency Response Teams (ERTs) are designed to deal with situations where the danger levels are higher than the expectations and operational limits required of regular police personnel. As of 2001, there were twenty-eight teams across Canada. They specialize in such things as serious-crime arrest warrants, hostage rescue, armed and barricaded subjects, and protective duties. The teams can work as separate units or with special operations units, such as drug enforcement teams and police service dog teams. Criteria for selection include at least three years experience in the RCMP and particularly strong shooting skills. Specialized skill designations within the unit include assaulter, sniper/observer, and helicopter rappel master.

**Traffic Police.** The RCMP is responsible for traffic enforcement in all three territories and eight provinces in which it holds contracts and for traffic enforcement on the federal highways within the National Capital region. Each province and territory has a divisional traffic coordinator who is responsible for all detachment efforts in this area. Approximately 10 percent of the strength of the RCMP contract divisions is involved in traffic services on a permanent basis. Traffic efforts by the RCMP are centered on three main issues: seat-belt compliance, public education regarding traffic violations, and the impaired driver. In particular, research by the RCMP has shown that the 10 percent of the population that does not wear a seat belt is responsible for 40 percent of traffic deaths.

*Chinese President, Hu Jintao, and his wife, Liu Yongqing, arrive with Royal Canadian Mounted Police at Rideau Hall in Ottawa, September 8, 2005. Hu's visit to the official residence of Governor General Adrienne Clarkson was focused on celebrating 35 years of diplomatic ties and growing trade and energy agreements between China and Canada. AP IMAGES.*

**Education, Training, and Recruitment.** Training opportunities vary widely across Canadian policing levels. As part of the regionalization efforts, a number of provinces have training facilities at which all provincial and municipal police in that province are trained. For example, in British Columbia, municipalities train their police at the Justice Institute of British Columbia's Police Academy. The institute also trains other provincial criminal justice employees, such as court personnel, probation officers, and corrections staff.

The RCMP has its own academy but also runs the Canadian Police College (CPC), which was established in 1976 and offers training not only for RCMP members but for law enforcement personnel across Canada. There are also regional programs available for officers who cannot travel to Ottawa. Courses offered by the CPC include bloodstain analysis, collision analysis and reconstruction, senior police administration, hostage and other crisis situations, explosives training, fingerprint classification, intelligence analysis, investigative training and major case management, office safety instructors, polygraph examina-

tion and forensic interviewing, the Violent Crime Linkage Analysis System (ViCLAS), and a number of courses under the CPC's Technological Crime Learning Institute.

In addition to running the CPC, the RCMP maintains separate training programs for its cadets. RCMP training runs for twelve months and begins with six months at the Police Training Depot at Regina, Saskatchewan. The six months at Regina are spent in a combination of academic courses and physical training. This is followed by another six months of field training at a regional detachment under the supervision of experienced members.

The RCMP requires applicants to be nineteen years of age, hold Canadian citizenship, be of good character, be proficient in both French and English, hold a valid driver's license, meet the required educational level, and pass a medical exam and aptitude tests. Postings depend on a combination of member preference and force needs, with postings to the territories limited to fixed terms.

**Uniforms and Weapons.** The traditional and much-beloved red serge, the RCMP's formal and ceremonial

uniform, and the chocolate-brown, wide-brimmed Stetson hats are now only used for ceremonial occasions. RCMP members have a variety of uniforms at their disposal. The modern working uniform has replaced the scarlet jacket with a brown one, worn with blue trousers and a peaked cap. The badges and insignia worn by the members vary between commissioned and noncommissioned ranks. The insignia for the commissioned ranks represents various combinations of a crown, a star, a crossed sword, and a baton. The badges can be worn on epaulettes, as shoulder boards, or as slip-ons. The noncommissioned rank insignia is based on the British army insignia and is embroidered on epaulette slip-ons. There are also specialized badges for appointments such as sharpshooter, special constable, student, auxiliary member, air services, musical ride member, emergency response team, first aid instructor, dog handler, instructor, and piper.

As of 1988, RCMP members carry Smith and Wesson .38 special revolvers along with the Winchester .308 rifle. In addition, specialized weapons are used by such units as ERTs. Some of these weapons include 9mm pistols, H&K MP5 weapons, and M16 assault rifles.

#### **Transportation, Technology, and Communications.**

Motor vehicles and other transport equipment have been a part of the RCMP since 1916. The RCMP has worked with government contractors and manufacturers to develop vehicle specifications unique to policing needs. Approximately 35 percent of the RCMP fleet consists of marked and unmarked patrol cars, mid-sized unmarked cars for surveillance, larger sedans for VIP transport, station wagons or vans for such things as dog teams or extra cargo, trucks for towing and off-road operations, and specialty trucks designed to carry teams and equipment necessary for emergency response, underwater recovery, and explosive disposal. As of January 2004, the RCMP fleet contained 5,600 cars, 2,350 trucks, 34 motorcycles, 481 snowmobiles, 181 all-terrain vehicles, 27 tractors, 3 buses, and 1 gas railway car.

The current RCMP Air Service dates back to 1946. Its responsibilities include patrol, transportation, and searches. Equipment includes approximately seven helicopters and fifteen planes. The RCMP's Marine Services currently maintains five patrol vessels for transportation and patrol in areas otherwise inaccessible. Crews range from three to four members under a sergeant or corporal. Crew members must go through the regular RCMP training as well as additional training in seamanship, navigation, and engine operation. In addition to the patrol vessels, the RCMP also maintains some 377 boats for inland waters and are involved in the enforcement of the Canada Shipping Act, the Migratory Birds Convention Act, and small-vessel regulations.

The RCMP has a number of programs and units designed to take advantage of the technological innovations relevant to modern policing. Within the purview of the deputy commissioner of operations, Technical Operations provides a wide variety of technical support for the RCMP mandate. The Technical Investigations branch uses technology to develop covert methods of surveillance, special entry, and audio-visual analysis. In addition to its surveillance and intelligence activities, this is also the branch that develops the expertise needed for response to terrorist incidents involving explosives and manages the Canadian Bomb Data Centre. Other branches not only develop and maintain RCMP's information technology systems but develop and maintain the procedures and policies needed to secure those systems. Technology also plays a role in protecting the personnel and property of the RCMP using such methods as armored systems, mechanical security services, closed-circuit video systems, and access control. These are the purview of Protective Technical Services. Finally, since technology and communications equipment is as much in the hands of the criminals as the RCMP, the Technical Crime Branch develops ways to detect and counter crime using information technology while the Technical Security Branch is responsible for various aspects of securing the systems of the federal government.

As with any modern-day police force, the RCMP makes use of a number of computerized databases to communicate with its own detachments as well as provide information and intelligence to provincial and municipal forces across Canada. For example, the Central Bureau of Counterfeits includes a database containing the serial numbers of all counterfeit notes. All Canadian law enforcement agencies have access to this database for investigation and community education. Another key database that takes advantage of computer technology is the ViCLAS, designed to track violent serial offenders. Modeled after a system in use by the U.S. Federal Bureau of Investigation (FBI), the Canadian version was developed in the 1990s. There are ten ViCLAS centers, seven of which are maintained by the RCMP. The OPP and the Sûreté maintain a center each, as do the Nova Scotia Provincial Police and the Montreal Urban Community Police. The OPP center is the largest. Each center handles its own data entry and bookkeeping. The files are then transmitted electronically to the OPP center to be placed on the main system. Data entry is handled by specialists who have experience in the investigation of sexual assaults and homicides as well as backgrounds in the humanities and computers.

*Surveillance and Intelligence Gathering.* The RCMP's Criminal Intelligence Program was established in 1991 in order to centralize RCMP criminal intelligence

functions for greater efficiency and effectiveness to managing the flow of criminal information/intelligence into and within the force. The program deals with both tactical intelligence (to assist with specific investigations) and strategic intelligence (to assist with policies developed to deal with organized crime and those crimes having national security implications for Canada). The program is divided into a number of components: Criminal Organizations Branch, Security Offenses, Criminal Analysis, Central Program Services, and Critical Incident Response. There is also a Criminal Intelligence Management Steering Committee at the headquarters level and one such committee at each division level to determine priorities and overall direction.

In addition, the Criminal Intelligence Service Canada (CISC) is composed of member law enforcement agencies throughout Canada with permanent criminal intelligence units and is responsible for enforcing provincial and federal statutes. Staff of the CISC's central bureau and nine provincial bureaus are drawn from members of the RCMP and other law enforcement and government agencies. The focus of the CISC is on organized crime groups, organized crime at marine ports, and outlaw motorcycle gangs. It also releases an annual report on organized crime in Canada. In 2003 those issues included contraband tobacco and alcohol, the diamond industry, firearms, technology and crime, sexual exploitation of children, and street gangs. The report also highlights recent activities of organized crime groups and recent operations of Canadian law enforcement agencies.

**Police Officers Killed in the Line of Duty.** Although it rarely happens, RCMP members have been killed in the line of duty. In the event of such a tragedy, families can choose to have the officer buried at the RCMP Training Depot at Regina, Saskatchewan. Memorial services are held every year at the depot for those lost throughout the RCMP's history. Their names are inscribed in a memorial at Regina and are also inscribed—along with all other Canadian law enforcement personnel deceased in the line of duty—as part of a memorial on Parliament Hill in Ottawa. On the last Sunday of September, a memorial ceremony is held on the Parliament Hill to honor them.

### Crime.

**Criminal Identification and Forensics.** With the exception of the large municipal or regional police forces, most of the specialized resources and expertise related to the forensic sciences are the purview of provincial forces, such as the OPP or the Sûreté, or are found in the RCMP. Providing such resources and expertise to local forces across Canada is the mandate of the RCMP's NPS. Under the direction of an assistant commissioner, the NPS consists of two directorates: Forensic Laboratory

Services (FLS) Directorate and Forensic Information and Identification Services.

The FLS serves as Canada's federal forensic laboratory, similar to the role played by the FBI's laboratories in the United States, and consists of six laboratories: five regional labs (Vancouver, Edmonton, Regina, Winnipeg, and Halifax) and the central lab in Ottawa. The six labs encompass approximately three hundred personnel, including scientists and support staff. The expertise available in FLS encompasses the full spectrum of forensic activities and includes testing and examination of alcohol, biological materials, chemicals, counterfeit and other documents (including handwriting analysis), firearms, and toxicology. A photographic services division provides support—in the form of visual aids—for use in court testimony and other presentations. In addition, the Scientific Information Centre provides a complete library of forensic information and databases available to all Canadian law enforcement agencies. Specialists and almost all technologists working in the FLS must have formal advanced education in the relevant subject matter, and all must undergo some period as an understudy working in the lab under more experienced members.

**Organized Crime.** The Canadian Criminal Code defines a criminal organization as “a group, however organized, that is composed of three or more persons in or outside of Canada, and [that] has as one of its main purposes or main activities the facilitation or commission of one or more serious offenses that, if committed, would likely result in the direct or indirect receipt of a material benefit, including a financial benefit, by the group or any of the persons who constitute the group” (Department of Justice, Canada, Criminal Code R.S. 1985, c. C-46, s. 467.1). Key organized crime activities, according to the RCMP, include drug trafficking, fraud, counterfeiting, money laundering, migrant and contraband smuggling, and illegal gaming. The most popular contraband smuggled into Canada by organized crime (besides drugs) include tobacco, liquor, jewelry, computer components, pornography, and firearms. Organized crime is approached through a combination of efforts at federal, provincial, and municipal levels.

There is no single directorate with an organized crime mandate within the RCMP. Instead, experts, analysts, and financial investigators are assigned throughout a number of divisions and programs dealing with organized crime issues. For example, organized criminal activity dealing with drugs is addressed through the Federal Services Drug Enforcement Branch while the Economic Crime Branch focuses on pirated and counterfeit goods as well as financial crimes and money laundering. The Financial Crime Program includes a Commercial Crime Branch that deals with business-related and white-collar

crimes while Integrated Market Enforcement Teams involve lawyers, financial investigators, and other experts in going after the most serious cases of corporate and market fraud.

Organized crime is also a focus of the Proceeds of Crime Branch (POCB). This branch targets unreported wealth of selected organized crime figures under the auspices of the Income Tax Act. Over half of the units in the POCB are integrated units, which include forensic accountants, Revenue Canada personnel, and Department of Justice lawyers. One of the biggest successes for this branch came in 1997 when the seized assets of a criminal organization in British Columbia included eight homes, six tugboats, and an oceangoing freighter.

### ONTARIO PROVINCIAL POLICE (OPP)

**Structure and Organization.** The OPP is headed by a commissioner who reports directly to the deputy minister of community safety in the Ministry of Community Safety and Correctional Services. As of December 2005, the OPP consisted of 5,300 uniformed members, 2,300 civilian members, and 850 auxiliary officers. The OPP also contracts to provide services to a number of Ontario municipalities. Indeed, the OPP is the only provincial force to hold such contracts within Ontario. It provides policing services to 128 municipalities under ninety-nine different contracts, and over 60 percent of the uniformed members are engaged in municipal policing.

The provincial responsibilities of the OPP include oversight of provincial highways and most waterways, assisting municipal forces with resources and expertise, assisting with First Nations Policing, and assisting with any major incidents requiring a large number of officers. To fulfill these responsibilities, the OPP is divided into four service organizations: Strategic Services, Corporate Services, Field and Traffic Services, and Investigation/Organized Crime. Each is broken down into several sections.

A number of sections demonstrate where OPP has placed its emphasis in recent years. For example, as part of Investigation/Organized Crime, the Drug Enforcement Section is responsible for a Joint Task Force that combines all levels of law enforcement and addresses both street-level drug crimes and—in conjunction with the Organized Crime Section—criminal trafficking organizations. Before 1973 these responsibilities were undertaken by the RCMP. The section is also responsible for drug education programs in the province. The Child Pornography Section was established in 1975 to deal with the investigation of production, importation, exportation, sales, distribution, accessing, and possession of child pornography as well as to assist other police forces in the province that lack the resources for such investiga-

tions. The section also enforces the laws against child luring.

Much of Canada's law enforcement is concerned with community involvement and crime prevention, and the OPP is no exception. Its Crime Prevention section is divided into such units as crime stoppers, youth issues, senior assistance, abuse issues, community issues, and a rural and agricultural crime team. The OPP is also heavily involved in community education on everything from elder abuse and auto theft to securing commercial buildings. The section also sponsors a Cottage Watch program similar to the neighborhood watch programs in the United States. Rescue services are also part of OPP's mandate, hence the creation of the Provincial Canine Search and Rescue Capabilities database. This database provides a searchable list of all uniformed and volunteer dog teams. To be on the list, the teams must be certified by the OPP, which requires meeting a number of standard skills criteria.

**Salaries.** The OPP is broken down between cadet levels, probationary constables, and permanent constables. The salaries for permanent constables are increased incrementally by time of service running from 18 months to seven years. As of December 2005, cadets were paid C\$29,585 and those who served three to seven years received C\$69,254 annually.

### Special Police.

**Specialized Units and Riot Police.** Units designed to deal with more specialized weapons and tactical situations or with specialized search and rescue operations are organized within the Field and Traffic Support Bureau. These units offer resources, training, and manpower at both the provincial and municipal levels. Included among these units are the ERTs. Three TRUs—located in Barrie, London, and Odessa—provide additional support to OPP detachments and consist of twelve members each. There are also two six-person teams for underwater operations and rescues, as well as seven explosive disposal units.

**Traffic Police.** Traffic enforcement is managed in the approximately 163 detachments that make up the six regions within Field and Traffic Services. These efforts are aided by a number of support activities placed under the Field and Traffic Support Bureau. Focusing on traffic enforcement efforts are units designed to coordinate all-terrain vehicle enforcement, enforcement of snowmobile regulations, the availability and accuracy of speed management and measurement devices, initiatives encouraging designated drivers, collision investigation and reconstruction programs, and a program partnering the OPP with the Ontario Federation of Snowmobile Clubs.

**Education, Training, and Recruitment.** The OPP maintains training facilities at the Provincial Police Academy in Orillia and the Ontario Police College at Alymer. Training for OPP cadets is a seventeen-week process beginning with a one-week orientation at Orillia, followed by twelve weeks at the Ontario Police College. They then return to the academy for four more weeks.

The OPP lists the following as its basic conditions of appointment: Canadian citizen or permanent resident, eighteen to sixty-five years of age, Ontario grade twelve or the equivalent, a valid driver's license with no more than six demerit points, no current criminal record, certified in first aid and CPR, passing a credit and background check, and possessing a valid Certificate of Results (gained through a number of tests and requirements administered by OPP). Fixed-term postings for the OPP range from two to six years depending on the location. In 2001 the OPP began to offer monetary incentives for accepting duration postings.

**Uniforms and Weapons.** The OPP's uniforms consist of navy blue Stetson hat, shirt, and trousers, with a light blue/gray stripe down the trouser leg. As of 1988, OPP patrol constables used a .38-caliber revolver.

**Transportation, Technology, and Communication.** The OPP contracts with manufacturers for vehicles with a specialized police package similar to that of the RCMP. The OPP receives the vehicles at their general headquarters where they are then fitted out with all the equipment needed for police cars; including lights, siren and loud-speaker systems, emergency equipment, safety cage, door locking systems, and decals (for those vehicles designated for municipal policing contracts, the decal may be that of the contracting jurisdiction). The basic patrol car is a four-door V8 sedan. In regions where road conditions may be more of a concern, the patrol car will more likely be a patrol sport-utility vehicle. These will be outfitted with the same package and equipment as the cruisers. Specialty vehicles include tactical and rescue vehicles, prisoner vans, and vehicles equipped for underwater search and rescue teams, technical accident investigation vehicles, as well as two helicopters, a passenger plane (up to seven passengers), and a fifth-wheel trailer are provided for each region for handling emergency management, major crime investigations or disasters. Also, headquarters and each region have seasonal vehicles such as snowmobiles, all-terrain vehicles, boats for lakes and rivers, some bicycles, and even a few horses for mounted patrols.

**Surveillance and Intelligence Gathering.** The Investigation Support Bureau houses the Intelligence Section, which collects, analyzes, and disseminates intelligence on groups and individuals involved in organized,

sophisticated, and professional crimes. As such, there seems to be some overlap with the Organized Crime Section of the Investigation Bureau. However, the Intelligence Section is also charged with proactively addressing terrorism at the domestic and international level. Technical support for surveillance activities needed to gather intelligence and investigate crimes is provided by the Technical Support Section, which also addresses legal issues involved in electronic surveillance.

There is also a CISC counterpart in Ontario. The Criminal Intelligence Service Ontario's mandate is to promote the sharing of information and analysis of criminal intelligence among all law enforcement agencies in Ontario. It also provides funding and resources to local and regional agencies and forms one of the provincial bureaus that make up the CISC.

### Crime.

**Criminal Identification and Forensics.** The OPP's forensic resources are to be found in the sections and units of the Investigation Support Bureau. There are two sections in the bureau specifically dealing with forensic issues—the Behavioral Sciences Section and the Forensic Identification and Photographic Services Section. The Investigation Support Bureau also includes a unit dedicated to the investigation of electronic crimes—those that use electronic equipment or the Internet as tools of criminal activity.

**Organized Crime.** Within the Investigations Bureau of the OPP is the Organized Crime Section. Established in 2001, it is composed of a number of separate units with varying substantive mandates: illegal gaming, auto theft, enforcement of weapons and precious metals smuggling laws, and a unit dealing—as in the RCMP—with the proceeds of crime. The unit's mandate includes the provision of both organized crime intelligence and investigative assistance to other OPP units as well as regional and local forces throughout the province. Included in the Organized Crime Section are unique teams called Repeat Offender Parole Enforcement (ROPE) squads formed in December 2001 to combine the resources of federal, provincial, regional, and local agencies in apprehending fugitives. In March 2002 the squads were expanded to include a Special Apprehension Team to deal with high-risk fugitives who also have immigration warrants. These teams work closely with the RCMP. In 2003, the ROPE squads had apprehended 368 individuals.

OPP efforts against organized crime can also be found in the Anti-Racket Section, which deals especially with complex fraud investigations. The section also investigates political corruption, secret commissions, check and payment card fraud, health services fraud, and frauds

against seniors. It is composed of twelve teams, a detective superintendent, and a detective inspector.

## SÛRETÉ DU QUÉBEC

**Organization and Structure.** The head of the Sûreté du Québec reports to the minister of public security. The Sûreté enforces the law throughout Quebec as well as applicable municipal laws in municipalities in which it provides services. In addition, it maintains a central information service available to all forces in the province and provides specialized services for joint operations with municipal and native police forces. Also, the Sûreté serves a consultant role in the organization and structure of native police forces. A police board was established in 2000 to supervise the Sûreté's activities.

Unlike the OPP, there is no provision for the Sûreté to enter into formal contracts to provide police services to the municipalities. Nevertheless, as one of only two provinces in Canada with its own provincial service, Quebec has dealt with a number of issues—both financial and professional—with regard to the relationship between its provincial and municipal forces. Over the last decade of the 1900s, these issues culminated in some rather sweeping reforms for the way the forces at both levels are organized.

Up until 1991, Quebec law required any locality of more than five thousand residents to maintain their own police force. Jurisdictions below that number could choose between forming their own force or drawing on the services of the Sûreté. However, according to the Ministry of Public Security, many municipalities that should have formed their own forces used instead the services of the Sûreté, which at the time were provided free of charge. This put the communities that were in compliance with the law at a considerable financial disadvantage. In response, in 1991 the government of Quebec began charging for the Sûreté's services, putting in place a differential rate system based on number of inhabitants. This led to the creation of a number of new local forces in jurisdictions of all sizes. Nonetheless, problems still remained. For example, because of the rate system, many decisions about policing services were being made based on financial concerns rather than an accurate assessment of policing needs for individual locations. In 1997 new measures were adopted to address both the amounts charged for Sûreté policing and the division of responsibilities between Sûreté and local forces. At the same time, a number of task forces and reports reflected long-term examinations into the structure of municipal and local policing in Quebec.

By the end of 2000, 123 municipal police forces existed in Quebec. This was almost double the number of local forces in Ontario designed to serve 60 percent

fewer residents. In addition, problems were identified in the following areas: overly fragmented organizational structure, a wide variety in the level of service provided, police-force instability due to high turnover rates, operational inefficiency, and lack of effective distribution of costs. The result was a much-needed overhaul in the way police services are divided between the municipal and provincial level. The new reforms resulted in the development of six different levels of service, depending on the size of the population to be served. The new framework specifies what types of services each force needs to provide. These services are divided into several categories, including policing, investigations, emergency measures, and support services. The constable-level police officers in the Sûreté are referred to as agents. From there, the ranks are (from lowest to highest): sergeant, lieutenant, captain, inspector, chief inspector, deputy-director general, and director general.

**Salaries.** Beginning officers earn approximately C\$32,000 based on C\$18.37 per hour with a 1,746 hour annual maximum. After six years, salaries can reach between C\$59,000 and C\$67,000. After one year as a sergeant, salaries hover around C\$72,000. Lieutenants start at approximately C\$78,000 and captains around C\$88,000. Salaries thereafter increase at about ten percent for each increase in rank.

**Police at Work.** The key vehicles for patrol work are Chevrolet Impalas and Ford Crown Victorias. The Sûreté units most involved in riot control and special tactical requirements are called Emergency Units.

**Education, Training, and Recruitment.** As in the United States, increasing efforts are being made at recruiting police officers at a higher level of formal education. The Sûreté takes that one step further by recruiting its candidates from community college programs that include classes in policing, criminal justice, liberal arts, and social sciences. As part of the Police Act of 2000, the former Quebec Police Institute was replaced by L'École nationale de police du Québec. The school provides basic training in all aspects of police work, including management, and is overseen by a training and research commission.

**Uniforms and Weapons.** Members of the Sûreté wear olive-green tunic and trousers, with khaki shirts for agents and sergeants and white shirts for officers. Sûreté agents carry as their main service weapon the 9-mm Glock.

### Crime.

**Criminal Identification and Forensics.** The Sûreté's laboratory—known as the Laboratoire de sciences judiciaires et de médecine légale—provides forensic services both for itself and the local police forces based on

levels of service. Services provided by the laboratory include analysis of the presence of drugs, medication, poisonous substances and alcohol, genetic profiles leading to identifications of suspects and victims, recreation of crime scenes, analysis of crime scenes, analysis of the cause of fires or explosions, ballistics and other weapons analysis, and the examination of marks such as footprints and tire prints.

#### HUMAN RIGHTS

The key human rights issue for Canadian law enforcement agencies involves the treatment of, and relationship with, the Aboriginal peoples. The Aboriginal peoples are divided into three groups: The Inuit of the Arctic region, concentrated mostly in the Northwest Territories; First Nations, the Native Indians consisting of over six hundred bands, 55 percent of whom live on reserves; and the Metis, people of mixed Indian and non-Indian blood and who are most prominent in both rural and urban areas of the prairie region and the Northwest Territories.

The Aboriginal communities tend to make up a disproportionate percentage of both criminal prosecutions and of the corrections system in general. In addition, there is a sense in the Aboriginal communities that members of the police forces are unaware of and insensitive to the cultural and social structures and needs of the communities and, consequently, act in ways that increase the negative effects of the criminal justice system on these communities.

A number of measures and programs has been established to deal with these highly sensitive issues and are part and parcel of efforts to improve overall relations between Aboriginal communities and government institutions. The RCMP's Commissioner's National Aboriginal Advisory Committee was established in 1990. It consists of thirteen Aboriginal members who meet in various communities throughout Canada as a forum in which to discuss issues of recruitment, training, and community relations. The RCMP also trains a number of facilitators to use a variety of Aboriginal forums to mitigate disputes before resorting to the criminal justice system. The RCMP also runs a Community Suicide Prevention Program and, in an effort to provide more opportunities for Aboriginal youth and increase the number of applications from members of the Aboriginal community, it also runs an Aboriginal Youth Training Program. This program provides summer employment for Aboriginal youth that combines training at the depot at Regina with work at a detachment near the youth's home. Additional programs include the First Nations Community Policing Service, Aboriginal Policing Directorate, and the Aboriginal Cadet Development Program.

#### CORRECTIONAL SYSTEM

The Canadian correctional system is divided into two levels: federal and provincial. The federal system is responsible for the penitentiary system and the national parole system for inmates released from the penitentiaries. Under the provincial system, each province is responsible for its own correctional system and deals with all persons subject to the criminal justice system but not sentenced to a penitentiary. Unlike the U.S. system, where one's assignment to a correctional system depends on where and at what level the crime was committed, the Canadian system is divided simply by length of sentence. Those sentenced to two years or more of incarceration are sent to the penitentiary system; those sentenced to less than two years—or to one of the integrative options—are the responsibility of the provincial system in which the crime was committed.

The death penalty was abolished in Canada in 1976, so the harshest sentence possible is life without possibility of parole. Even then, inmates rarely spend their entire life in prison. Maximum sentences generally fall into several categories: life, 14 years, 10 years, 5 years, or 2 years. If no maximum penalty is specified, the default is usually five years. Indeterminate sentences are used only for the most dangerous offenders.

**Correctional Service Canada.** The federal correctional system operates under the Corrections and Conditional Release Act of 1992, which replaced the old Penitentiary and Parole Act. According to section three of that act, the purpose of the correctional system is to “contribute to the maintenance of a just, peaceful, and safe society by . . . carrying out sentences imposed by the courts through safe and humane custody and supervision of offenders; and . . . assisting the rehabilitation of offenders and their reintegration into the community as law-abiding citizens through the provision of programs in penitentiaries and in the community” (Corrections and Conditional Release Act, 1992, c. 20, s. 3). To that end, the CSC is responsible for: “a) the care and custody of inmates; b) the provision of programs that contribute to the rehabilitation of offenders and to their successful reintegration into the community; c) the preparation of inmates for release; d) parole, statutory release supervision and long-term supervision of offenders; and e) maintaining a program of public education about the operations of the service” (Corrections and Conditional Release Act, 1992, c. 20, s. 5; 1997, c. 17, s. 13.).

The CSC, as well as the NPB, was part of the Solicitor General's portfolio until 2003. It became one of the portfolio agencies of the new Ministry of Public Safety and Emergency Preparedness. The service is headed by a commissioner. In 2000 that position was appointed to Lucie McClung, who was the first woman

ever to hold that post. The commissioner is assisted by a number of deputy and assistant commissioners. The service divides its operations and facilities into five regions, each headed by a deputy commissioner.

Overall policy for all federal facilities is set by the headquarters staff in Ottawa, with regional commissioners maintaining administrative responsibility for the facilities in their respective regions. The CSC runs fifty-three penitentiaries of varying levels (including five women's institutions and one women's healing lodge) and seventeen community corrections centers. They also oversee seventy-one parole offices through nineteen district offices. To administer and oversee all of these facilities, the CSC is divided into eight sectors, each under the command of a deputy or assistant commissioner: women offenders, correctional operations and programs, policy planning and coordination, community engagement, performance assurance, corporate services, human resource management, and communications and consultation. As of March 2001, the CSC consisted of slightly more than fifteen thousand employees.

**Parole.** The NPB decides when inmates are released from the penitentiary system. Forty-five full-time members are appointed to the NPB by the governor general for ten-year terms. There are also part-time members appointed for three-year terms. The board divides its responsibilities into the same five regions as the CSC. Provincial parole boards have been established only by Quebec, Ontario, and British Columbia. Although all provinces have the authority to establish their own boards, the remaining provinces use the NPB. In those cases, provincial members are selected by the lieutenant governor and are responsible for offenders in provincial facilities.

There are several types of parole available. Full parole requires that offender serve seven years or one-third of the sentence, whichever is smaller. Before being granted full parole, offenders usually start on day parole. This is available to offenders six months before they are eligible for full parole and is designed to ease their transition from inmate to parolee. First-time nonviolent offenders may also be eligible for accelerated parole whereby after one-third of the sentence has been served, the board can grant full parole to an offender without the offender having to appear before the board.

For those not granted full parole when eligible, statutory release is available after two-thirds of the sentence is served. Statutory release is no longer considered a right as it once was. The NPB can deny statutory release for violent offenders or some drug crimes. Parole by exception is rarely used but is available for situations where an offender is terminally ill or where "confinement seriously jeopardizes [the offenders] mental or physical state" (Terrill 1999).

Offenders can also apply for a temporary absence after serving one-half their sentence. These absences can be with or without escort and range anywhere from two days to two months. Reasons for temporary absences include health care, family reasons, and humanitarian reasons. The Corrections and Conditional Release Act discusses the criteria for temporary absences and eligibility for parole. These include a structure for the absence, good behavior during the sentence, and a determination that the offender "will not, by reoffending, present an undue risk to society during the absence" (Corrections and Conditional Release Act 1992, c. 20, s. 116).

The agency granting the parole is also responsible for supervising the offender once he or she is back in the community. A wide range of conditions can be imposed on parolees. Some of the most common include good behavior, no association with known criminals, reporting to a parole officer or to the local police, remaining within the parole board's jurisdiction, keeping the board informed of address and employment, refraining from alcohol and substance use, and a prohibition against possessing any firearms.

**Probation.** As indicated in the Corrections and Conditional Release Act, there is a strong emphasis on reintegration of offenders into the community, and much of the infrastructure is geared toward that end. Indeed, incarceration is seen as the last alternative, with the goal of sentencing being to impose the least-restrictive alternative possible. For that reason, most of those convicted of criminal offenses are placed on some form of probation or other alternative to incarceration and remanded to the purview of the provinces.

There are a number of nonincarceration alternatives available in the Canadian criminal justice system. At the minimum, an offender can be discharged with no penalty after a plea of guilty. Such discharges are even possible after an offender has been found guilty. Certain conditions can also be placed on an offender who, after completion of those conditions, can have the offense discharged. Fines are the most frequently used sanction. There is no statutory limit on the amount an offender can be fined. Instead, the amount must be reasonably related to the offense and the offender's ability to pay. If an offender is sentenced to prison time, that sentence can be suspended and held over the offender's head pending completion of certain conditions. A sentence can also be served intermittently—for instance, on the weekends when it does not interfere with an offender's ability to maintain employment. Finally, an offender can be sentenced to community service or community service can be part of a sentence of probation.

Probation can be part of a condition for discharge or a suspended sentence, or it can form the sentence in and

of itself. Probation is administered by the provinces and is usually imposed for a year although it can go up to three years. There are numerous possible conditions that can be imposed as part of probation. In addition to the ones for parole, probation conditions can include restitution, payment of fines, community service, job training, and other life-skills education.

**Prison Conditions.** Once an offender is sentenced, information is gathered on the offender from a number of sources, including police, family members, employers, counselors, and neighbors. Upon arrival at a penitentiary, the offender undergoes an assessment to determine the factors that led to the criminal behavior, and that assessment leads to a correctional plan. An offender's progress in meeting that correctional plan is the primary factor in all decisions relating to the offender, including parole and other release decisions.

Prisoners in federal penitentiaries are generally housed one to a cell although two inmates per cell is sometimes unavoidable. Exercise is provided daily, and inmates are "entitled to essential health care and access to nonessential mental health care that facilitates the offender's rehabilitation and enhances the likelihood of reintegration into the community" (Terrill 1999). A variety of religious services are offered, as well as numerous institutional programs. Among these programs are work assignments or work release; vocational training; life-skills courses (anger management, parenting skills, leisure education); counseling for sex offenders, domestic violence, and substance abuse; and education (including adult education, secondary education, and college-level courses). Programs specifically directed at female inmates include surviving abuse and trauma and mother-child programs designed to foster a relationship between the incarcerated mother and young children. For Aboriginal offenders, there is an Aboriginal Liaison Service, special spiritual services, and a violence prevention program ("In Search of Your Warrior") based on Aboriginal spirituality and culture. In addition, CSC operates three Aboriginal lodges while the Aboriginal communities operate another forty-five under an agreement with the solicitor general.

Family visits are encouraged. One visit is allowed every two months and can last up to seventy-two hours in some cases. Inmates meeting certain criteria may use private, separate facilities to renew or continue personal relationships.

In an effort to provide inmates with job skills upon release, CSC runs a special agency called Correctional Services of Canada (CORCAN), which is responsible for providing training and employment to offenders in federal institutions. CORCAN employs almost four thousand inmates, with working conditions structured as

much as possible to replicate the outside world. Pay for employed offenders runs from C\$5.25 to C\$6.90 per day (compared with C\$1-2.50 per day allowance for unemployed offenders). Suspension of pay is one of the sanctions available as a disciplinary action.

The 1992 act governs the discipline of inmates by listing the offenses for which discipline can be imposed and providing an approved list of sanctions for those offenses (Corrections and Conditional Release Act 1992, c. 20, s. 40-44). The purpose of the disciplinary system is "to encourage inmates to conduct themselves in a manner that promotes the good order of the penitentiary, through a process that contributes to the inmate's rehabilitation and successful reintegration into the community" (Corrections and Conditional Release Act 1992, c. 20, s. 38).

There are a number of grievance procedures available to offenders who believe they have been wrongly disciplined. Offenders may file a complaint informally or in writing to the CSC. They may also write to a number of elected and appointed officials with responsibility for corrections issues, as well as file a complaint with the corrections inspector who reports directly to the solicitor general. Finally, inmates in some circumstances have recourse to the federal courts as well as the Appeal Division of the NPB.

**Prison Statistics.**

- Total Prison Population: 36,389
- Prison Population Rate per 100,000: 112
- Pretrial Detainees: 28%
- Female Prisoners: 5%
- Juvenile Prisoners: 10.7%
- Number of Prisons: 168
- Official Capacity of the Prison System: 34,030
- Occupancy Level: 95.5%

# Cape Verde

---

**Official country name:** Republic of Cape Verde

**Capital:** Praia

**Geographic description:** Two groups of islands in western Africa in the North Atlantic Ocean

**Population:** 418,224 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The principal law enforcement agency is the Public Order Police or the *Policia de Seguranca Publica* under the National Directorate of Security and Public Order under the Ministry of the Interior. It encompasses not only regular uniformed police but also plainclothes Criminal Investigation Police, the Judiciary Police, and the Economic and Fiscal Police who combat smuggling. Internal security functions are also carried out by the National Security Department. The prison system is under the Ministry of Justice.

### Police Statistics.

- Total Police Personnel: 3,981
- Population per Police Officer: 110

## CORRECTIONAL SYSTEM

**Prison Conditions.** Prison conditions are substandard and have experienced overcrowding, poor sanitation, malnutrition, and lack of medical assistance. Women and men are held separately but juveniles are housed with

adults, and pretrial detainees are housed with convicted criminals.

### Prison Statistics.

- Total Prison Population (including pretrial prisoners): 755
- Prison Population Rate per 100,000: 188
- Female Prisoners: 5%
- Juvenile Prisoners: 3%
- Foreign Prisoners: 4.5%
- Pretrial Detainees: 36.5%
- Number of Prisons: 11
- Official Capacity of the Prison System: 1,997

*George Thomas Kurian*

# Central African Republic

---

**Official country name:** Central African Republic

**Capital:** Bangui

**Geographic description:** Landlocked country in central Africa, north of the Democratic Republic of Congo, part of the Lower Sahel

**Population:** 3,799,897 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The three principal law enforcement agencies are: the National Police Force (Sûreté Nationale), which polices urban areas, the paramilitary National Gendarmerie, which polices rural areas, the Presidential Security Unit under the Ministry of Defense, and the judiciary police, which performs criminal investigation functions.

## CORRECTIONAL SYSTEM

**Prison Conditions.** Most prisons do not have a budget for medicine and food. Police station cells where detainees are kept are in worse condition and are overcrowded. Food, clothing, and medicine intended for prisoners are often diverted by prison officials for their own use. Prisoners are often used by officials and judges as personal servants. The only prisons where prisoners receive better treatment are at Bouar and Bangassou, where religious organizations are permitted to care for them.

**Prison Statistics.** The largest prison is Ngaragba in Bangui, which was destroyed during 1996 mutinies and was rebuilt in 2003.

- Total Prison Population (including pretrial detainees and remand prisoners): 4,168
- Prison Population Rate per 100,000: 110
- Pretrial Detainees: 65%
- Number of Prisons: 56
- Official Capacity of the Prison System: 6,000

*George Thomas Kurian*

# Chad

---

**Official country name:** Republic of Chad

**Capital:** N'Djamena

**Geographic description:** Landlocked country in central Africa, south of Libya

**Population:** 9,826,419 (est. 2005)

## LAW ENFORCEMENT

**History.** Until 1960, Chad was part of French Equatorial Africa and shared a police force, the *Sûreté*, with the other three members of the federation. Internal strife and rebellions have wrought various changes in policing the country; however, in 2005 several agencies had responsibility for national security, including three policing organizations: the National Police (*Sûreté Nationale*), the National Gendarmerie (a military police force created in 1960), and the Nomadic National Guard (GNNT).

**Structure and Organization.** The *Sûreté* reports to the Ministry of Public Security and Immigration, and the Gendarmerie, and GNNT report to the Ministry of Defense.

***The Sûreté Nationale.*** The *Sûreté* serves as both the police force of the major towns and the national police force. Its duties include the maintenance of law and order, crime prevention, maintenance of criminal records and identification files, control of immigration, national security intelligence operations, and border patrol. A separate judicial police operates under the direction of the courts, with authority to investigate crimes and detain and arrest people. Other elements of the *Sûreté* are a vice

squad, the Presidential Palace Guard, and the National Police Academy. Agents of the *Sûreté* are uniformed and carry light arms. In emergencies, they call upon their own quasi-military units, the Chadian Security Companies. These units were originally part of the *Sûreté* as a constabulary security force, with the structure and arms of the light infantry units, including weapons such as mortars.

***The National Gendarmerie.*** The National Gendarmerie is organized in two different types of formations: a twenty-five-person mobile platoon of gendarmes assigned for mob control, and brigades of four and eight gendarmes whose primary duties include regular police work and patrol in small towns and rural areas. The gendarmes are usually armed with rifles or machine guns as well as pistols. In a typical situation, gendarmerie in the Mongo district in central Chad has nine brigades and two mobile platoons although police work in the town of Mongo itself is performed by the urban corps of

the police. Most of the National Gendarmerie is concentrated in the southern and southwestern parts of the country although some units are located in Abeche in east-central Chad.

*The Nomadic National Guard.* The National Guard has no central headquarters. Instead, the companies are allocated to the various prefectures to perform guard duty or other security services as assigned by the local prefect. The National Guard also performs ceremonial duties in the capital and protects government buildings against terrorists. Although National Guard members are given light infantry weapons, they are not as well trained or equipped as the other security forces. Its forces have no basic police powers.

**Education and Training.** Police training is undertaken primarily at the National Police Academy, which provides an eight-month course for recruits, and at the Officers' School at N'Djamena. High-ranking officers are sent to France or Israel for additional training. The average educational level of the average policeman is quite low, and many have no formal schooling. Training is slow and perfunctory.

**Police Statistics.**

- Total Police Personnel: 9,087
- Population per Police Officer: 1,081

**HUMAN RIGHTS**

Security forces commit numerous violations of human rights, including abductions, rapes, murders, tortures, and other abuses, but they are almost never punished or disciplined. Although security forces are centrally controlled, governmental oversight outside the capital is difficult. As a result, policemen commit human rights abuses with impunity. They also use arbitrary arrest and detention to threaten the local population.

**CORRECTIONAL SYSTEM**

Prisons are administered by the Director of the Penitentiary Administration under the Ministry of Justice.

**Prison Conditions.** Prison conditions are harsh, characterized by overcrowding, poor sanitation, and absence of medical facilities. Prisoners receive little food and are given meat only once a year. Only those who can bribe the guards receive medical attention. The law authorizes forced labor in prison. Women are kept separate from men but juveniles are housed with adults.

**Prison Statistics.** The largest facility is N'Djamena's Central Prison, with 700 inmates. The following statistics are for that prison only:

- Pretrial Detainees: 22.6%
- Female Prisoners: 2.4%
- Juvenile Prisoners: 3.3%
- Foreign Prisoners: 1.3%
- Official Capacity: 320
- Occupancy Level: 249.1%

The following statistics are for the entire prison system:

- Total Prison Population: 3,883
- Prison Population Rate per 100,000: 40
- Number of Prisons: 46

*George Thomas Kurian*

# Chile

---

**Official country name:** Republic of Chile

**Capital:** Santiago

**Geographic description:** A fringe along the western side of the South American continent bordering the South Pacific on the west and Argentina on the east, extending 2,600 miles between northern and southern extremities but only 100 miles wide on average

**Population:** 15,980,912 (est. 2005)

## LAW ENFORCEMENT

**History.** The first police organization in the country was established in Santiago in 1758. This consisted of a squadron of fifty men, called the Queen's Dragoons, quartered near the governor's palace. The then governor, Manuel de Amat y Junient, directed this unit to protect the citizens from the increasing number of robberies and assaults by armed bands. As this force became more effective, its name was changed to Chilean Dragoons and its size was increased. By 1850 its strength had grown to three hundred. In 1903 it was incorporated into the army as the Regiment of the Gendarmes, and in 1927 the unit was placed under the Ministry of the Interior by presidential decree. The name was changed to Carabineros de Chile, and it was made responsible for the internal security of the entire country. A second organization responsible for law enforcement is the Investigaciones, and a third is the Judicial Police Force, known as the Gendarmerie de Chile.

### Structure and Organization.

**Carabineros de Chile.** At the head of the organization is the director general, whose offices are in the Zonal

Headquarters in Santiago. Under the headquarters are the prefectures, first-rank police stations; *comisarias*, second-rank police stations, *subcomisarias*, third-rank police stations; and *tenencias*, fourth-rank police stations; and *retenes*, police posts and advance guards. The director general functions as the liaison between the Minister of the Interior and the organizational units and personnel of his command. The senior police chief in each province is directly subordinate to the *intendente*, the provincial representative of the president of the republic, and the police chief in each department of the province is subordinate to its governor. The country is divided into three zones for internal security administration: The Northern Zone comprises the departments of Tarapacá, Antofagasta, Atacama, Coquimbo, Aconcagua, and Valparaíso. The Southern Zone comprises the departments of O'Higgins, Calchagua, Curico, Talca, Linares, Maule, Nuble, Concepcion, Arauco and Bío-Bío. The Extreme Southern Zone comprises Malleco, Cautin, Valdivia, Osorno, Llanquihue, Chiloe, Aisen, and Magallanes.

For operational purposes, the Carabineros are divided into seventeen departments, and ten prefectures. The departments are: Analysis and Evaluation; Armaments and Munitions; Borders and Boundaries; Civil Action; Data Processing; Drug Control and Prevention of Offenses; Finance; Forestry; Internal Security; Legal, Minors; Police Services; Public Relations; Social Action; Supply; Traffic Control and Transport. The prefectures are: Santiago Central, East, West, North, South, Air Police, Minors, Radio Patrol, Special Forces, and Traffic. The Carabineros is also the municipal police in Santiago. The city is divided into thirty-five *comisarias*, of which twenty-six are territorial and the remaining are operational. The Carabineros Information Service is the intelligence-gathering arm of the Carabineros.

The Carabineros is considered one of the most efficient and effective police forces in South America. It patrols not only the rural and urban areas but also the most isolated sections of the country. In addition, they are engaged in a number of relief and rehabilitation efforts. It runs facilities for the housing and schooling of homeless boys three to eighteen years of age. In many of the more remote areas of the country, it assists in educational programs and in the improvement of public sanitation. It is also regularly called upon to provide first-aid and rescue services.

**Investigaciones.** The Investigaciones has the responsibility for investigations and civilian investigation activities. The total strength of the Investigaciones is only one-tenth of that Carabineros. There is a high degree of collaboration between the two forces, as well as exchange of information and joint use of facilities.

The headquarters of the Investigaciones is in Santiago. In addition to the offices of the director general and his deputy, there are the offices of the provincial inspector, the secretary general, and the director of the technical school; and the departments of personnel, foreign and international police, administration, sanitation, welfare, and justice. The Special Units Prefecture is divided into six brigades: fraud, murder, robberies, vehicle theft, vice, and women. Substations are located in the provinces of Antofagasta, La Serena, Valparaíso, Santiago, Talca, Concepción, Temuco and Valdivia. Personnel are located in urban centers throughout the country and perform investigative duties in connection with reported crimes and collect intelligence information concerning both criminal and internal security matters. This agency supervises a National Identification Bureau, which contains registers of the fingerprints of all citizens taken when they reach the age of twenty-one. The bureau issues to all adult citizens identification cards, which must be carried on their persons.

**The Gendarmerie de Chile.** The Gendarmerie de Chile is independent of other police forces and reports to the Ministry of Justice. It runs probation and prison services.

**Uniforms and Weapons.** Police officers wear khaki gabardine military-style uniforms with four pockets and open neck, worn over a fawn shirt and khaki tie with a khaki peaked cap.

The inventory of the Carabineros includes .38-caliber revolvers, machine guns, automatic rifles, carbines, shotguns, revolvers, and gas grenades. The weapon of first instance is the wooden club.

**Education and Training.** The Carabineros run two training schools, one for the regular personnel and the other for staff officers. The Escuela de Carabineros provides basic training and the Instituto Superior de Carabineros offers postgraduate and refresher courses. Specialists graduate from the Centro de Especialidades de Instrucción de los Carabineros and noncommissioned officers (NCOs) from Escuela de Suboficiales de Carabineros. Competitive physical and mental examinations are required for admission to the ranks of the Carabineros. This places them in a higher educational status than the average army conscript. They are also required to be skilled in a number of related areas, such as sanitation, health, education, and welfare.

#### Police Statistics.

- Total Police Personnel: 32,612
- Population per Police Officer: 490

#### HUMAN RIGHTS

The government generally respected its citizens' human rights. The most serious problems continued to be excessive use of force by the police and physical abuse in jails. Detainees are not often advised promptly of the charges against them nor granted a timely hearing before a judge. The law provides that if a member of the police force uses "torture or unlawful coercion," either physical or mental, or orders them to be applied, or commits them against a person under arrest or detention, the officer would be sentenced to imprisonment. Officers who know about the abuse and have the necessary power and authority to prevent or stop it and fail to do so would be considered accessories to the crime. This law has had an important impact on the Investigaciones but less so on the Carabineros. Courses in human rights have become part of the core curriculum in police academies for both rank-and-file police and officers.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 1,366. Of which:

- Murder: 4.5
- Assault: 84.8

*A Peruvian resident is detained in Chile for protesting against former Peruvian President Alberto Fujimori outside the judicial police academy in Santiago, November 8, 2005. Fujimori was arrested in Chile on charges of corruption and massacres that occurred in Peru. He was attempting to return to Peru to run for reelection after spending five years in exile in Japan. AP IMAGES.*

- Burglary: 488
- Auto Theft: 12.9

#### CORRECTIONAL SYSTEM

The Prison Administration, which is under the Ministry of Justice, was organized in 1930. Previously, penal institutions had functioned more or less independently and were not responsible to the central administration. There are 124 penal institutions throughout the country. They are classified generally according to the length of the inmates' sentences. There are 65 prisons for persons whose sentences do not exceed 60 days and for those awaiting trial or under trial, 31 for prisoners sentenced to a period of from 61 days to 5 years, and 6 for persons serving sentences longer than 5 years.

There are twenty-two correctional institutions for women, supervised by a religious order that assists women who are either pending trial, under trial, or serving sentences, whatever their duration. On Santa Maria Island, west of Concepción, there is an agricultural institution for offenders who are not considered dangerous and who, because of their former occupations, wish to work in an agricultural institution in semifreedom. There is also a special rehabilitation center for delinquent minors in Santiago. In the provinces, minors are detained in special sections of adult prisons and segregated from adults as much as possible.

The usual procedure for imposition of a prison sentence comprises four stages. The first stage is solitary confinement, which lasts a minimum of one month and imposes maximum restrictions. The second stage usually runs through four phases: The first phase usually puts an

end to the isolation of the prisoner, allowing the prisoner to communicate with his or her family. The prisoner also receives a small remuneration for work and is obliged to attend classes. During the second phase, the remuneration is increased and the right of communication is expanded to include persons other than immediate family members. During the third and fourth phases, living conditions and the size of the remuneration are gradually increased. The minimum duration of the second stage is one year, but it may be prolonged in the case of bad behavior. During the third stage the prisoner is confined to the cell only at night and receives maximum remuneration for work and the right to communicate freely. The duration of the fourth stage, the period of conditional release, is half the length of the sentence for first offenders. Offenders are considered for conditional release during the semiannual visits of the judges to the penal institutions and are based on information provided by the prison board. Conditional release is granted by decree and may be revoked if the offender breaks any conditions. The criminal code imposes on offenders sentenced to a period over sixty-one days the obligation to work.

Prison labor is utilized on a number of income-generating public projects, such as public works, including the construction and improvement of public roads, bridges, dams, buildings, and parks; the drainage and clearing of lands; and the preservation of forests. It is also used in the manufacture of goods, such as office supplies and furnishings, clothing and bedding, road signs, and automobile license plates. Under a contract system, inmates are hired out to private contractors, who provide the necessary tools. Although the work is carried out entirely within prison confines, the prison administration takes no part in the operations or in the sale of the goods produced. The contractor reimburses the government for its convict labor on a per capita basis as well as for the use of prison facilities.

The guarding, maintenance and supervision of prisoners are almost completely in the hands of private contractors, who reimburse the state at a fixed rate per prisoners and unit of time and who are authorized to employ prisoners outside prison confines. There are two varieties of this system: one in which prisoners return to the prison at night, and the other in which they remain under the control of the contractor at all times.

The Directorate of Prison Workshops administers workshops where prisoners work in accordance with their aptitudes, as determined by the Institute of Criminology. Theoretical and practical training are given in printing, carpentry, mechanics, and foundry work under the direction of a foreman. The criminal code also permits prisoners to do free work of their own choosing, either alone or in tandem with other inmates, provided it conforms to prison regulations.

All prisoners are entitled to social security benefits under the Social Security Law of 1952. Six percent of earnings are paid by the state to the Social Security Service to provide for illness, old age, and invalidity. In addition, working inmates are entitled to protection under the Family Allowance Act of 1953, under which annual payments are made to wives and children. They are also covered under workers' compensation laws and receive wages during hospitalization.

The administrative and custodial personnel of prisons undergo a period of technical and practical training in a technical school at Santiago. Professional prison personnel are recruited after an examination.

**Prison Conditions.** Prisons are overcrowded and antiquated. Women's facilities tend to be less crowded than men's and have somewhat better conditions. Juvenile offenders under the age of eighteen are housed separately, but some are housed in separate sections of adult prisons.

#### **Prison Statistics.**

- Total Prison Population: 38,560
- Prison Population Rate per 100,000: 241
- Pretrial Detainees: 40.4%
- Female Prisoners: 6.3%
- Juvenile Prisoners: 1.4%
- Number of Prisons: 145
- Official Capacity of the Prison System: 23,533
- Occupancy Level: 134.3%

# China

---

**Official country name:** People's Republic of China (PRC)

**Capital:** Beijing

**Geographic description:** This country occupies a strategic location in Asia, with the Pacific Ocean to the east and an overland route to Central Asia and eastern Europe to the west, it is bordered by fifteen countries: North Korea, Russia, Japan, Mongolia, Kazakhstan, Kyrgyzstan, Pakistan, Tajikistan, Afghanistan, India, Laos, Bhutan, Myanmar (Burma), Nepal, and Vietnam; the total land area is 3,705,406 square miles

**Population:** 1,306,313,812 (est. 2005)

## LAW ENFORCEMENT

**History.** China's recorded history covers a span of almost 4,000 years, and its legal and social control system has evolved through tumultuous political and social upheavals. Although the Han Chinese represent the largest single ethnic group in the country, with few exceptions there are not strong territorial boundaries, and the Han people are represented in most the thirty-four provinces, including the Hong Kong Special Administration Region and the Macao Special Administration Region.

Chinese colonialization (colonization) has a history dating back thousands of years, and various periods in history reveal both tragedy and triumph, conquerors and conquered. The development of a legal system began in China as a means of strengthening the power of rulers. The first recorded evidence of this is a set of laws

inscribed in bronze written in the second half of the sixth century B.C.E.

Law during the early periods stressed the importance of uniform rules, rights, and privileges with a system of rewards and punishments that were designed to eliminate some forms of injustice and favoritism and to better define criminal activity. The law in early China did not develop out of custom or of common practice in settling disputes, nor is it the result of a convention translating a common will. Early law was based on the power of the state, the emperor, as being supreme. The Chinese emperor's rule has a long history of more than 2,000 years, with great social and political turmoil leading to ever-changing dynasties. The Chinese traditional legal rule of the emperor may be best described as an intricate web of relations based ultimately on the family and policed by a labyrinth of mutually self-controlled units.

Han-fei-tzu (died 233 B.C.E.), the founder of the Chinese Legalist School, had set up many important

concepts on “Rule by Law” that were contrary to the “Rule by Moral and Education” of Confucius. He established a philosophical framework for legalism that stressed that knowledge of the law should be a primary goal for society; this is in contrast to the preceding emperors in China’s history who had merged Legalist concepts with Confucianism so as to gain the greatest control over people’s behaviors and minds. According to Han, law must exclude uncertain and variable judgments, and it must be objective. The judge’s task is to define the crime correctly, and in doing so, this identifies sanctions, as they are written.

Under the Han emperors, modifications of legal principles changed slowly, with punishment based on the nature and duration of mourning by the victim’s family in cases of murder or manslaughter. Dignitaries sentenced to death were permitted to commit suicide.

Between the third and seventh centuries a system of penal laws emerged; the most elaborate description available today being in the T’ang code of the seventh century. During the Han period convicts and debtors were employed as “slaves” in the workshops. Merchants were not generally looked on with favor, and emphasis was placed on working for the state.

The Han period brought a higher degree of civilization to China, as classical studies and intellectual curiosity were encouraged. Village meetings and discussion groups were seen as a means of supporting social integration.

From the beginning of the third century to the end of the sixth (the Wei, the Jin, the South dynasty, the North dynasty, the Sui and T’ang Empires) many changes took place in China. Penal legislation was strengthened and the New Code (Hsin-ly) in 229 represented an important step in Chinese law.

The next major period in Chinese jurisprudence was the period from 1800 to 1900. During this time national independence was lost during financial and economic failures, compounded by corruption, and saw a major social explosion that began in 1870 and lasted twenty years. Western nations, using economic and military power, joined by Japan, virtually eliminated the state and social structure as the economy collapsed. The first half of the nineteenth century saw the continuing decline of the empire and the introduction of Western powers with expansionist aims. The success of the East India Company, due almost solely to the import of opium into China in exchange for tea and other goods, also helped fuel expansion of the British Empire in India.

The “opium war” of 1839 represented the Chinese government’s last ditch stand to control a menace that had gripped the country and was creating a trade imbalance that threatened to destroy the economy. Chinese

efforts to end England’s monopoly on opium virtually fell apart when British naval and military contingents launched a series of attacks against those attempting to stop the opium trade. Opium became the main cargo of the shipping industry, which was licensed by the East India Company and the American clippers.

In 1843 China granted for the first time extraterritorial rights to England in which British citizens were beyond Chinese legal jurisdiction. This gave the British a significant political advantage in Hong Kong, a small island that was ceded to Britain in 1842. The Hong Kong Special Autonomous Region (SAR) included the vast area of Kowloon and the New Territories around the mainland peninsula. In 1897 the British paid 21 million silver dollars to lease the Hong Kong SAR for ninety-nine years, setting the stage for further British incursions into the region. Slowly, China gave up its independence to foreign powers. It had lost its edge in agriculture, production, and modernization, falling behind many smaller countries. In 1997 Hong Kong was returned to Chinese control.

After Sun Yat-sen’s death in 1925, and under the leadership of Chiang Kai-shek, who had wrested power from Wang Ching-wei, the political chairman, the 100,000-man Kuomintang Army, with the cooperation of the armies of the warlords, moved to capture the north of China.

However, in March 1927 Chiang broke with the Nationalist government, feeling secure that he had the backing of the powerful Shanghai business community, which also represented foreign interests. On April 18, 1927, Chiang proclaimed a new government with himself at the head. He rapidly took Beijing, and made strong progress toward unification of the country. Eventually, Chiang’s Kuomintang (KMT) Party emulated Western views, and his own personal philosophy was directed toward a strong central authority designed to eliminate dissent. He formed a political police, known as the “blue shirts,” and a so-called Census Bureau of the KMT central committee and a Census Bureau of Chiang’s central military commission whose mission it was to detect liberals and revolutionaries. He was beholden to the big banks, particularly in Shanghai and the influence of a relatively few rich families, such as the Songs, one of whom was his brother-in-law.

Hanging over the government was the threat of Japan, which had occupied the northern provinces of China since 1931. This threat, and continuing battles with the warlords, occupied much of the government’s time and money. In July 1937 Japan invaded China, marking yet another dark period in the country’s history. Meanwhile, dissatisfaction with the KMT regime grew as

peasant groups formed unions that were directed by Communist dissidents.

Until 1949 a Chinese middle class began to emerge largely as a result of the Western trade influence during this period. Armies were supported by foreign powers, such as the U.S. support of Chiang. Widespread corruption and the abuse of government power eventually resulted in the development of peasant militias and an internal civil war led by Mao Zedong. The conflict ended in a decisive battle in the winter of 1948–1949, in which more than a half-million Nationalist soldiers succumbed to the Communist troops. With the remnants of his army, Chiang fled to Taiwan. On October 1, 1949, the PRC was born.

Many of the government leaders and more wealthy citizens fled to Taiwan under the leadership of the KMT government, then known as Formosa, where the government was established with U.S. support.

The situation facing China's leadership on the founding of the People's Republic was less than hopeful. Under the leadership of Mao, the army moved quickly to control the land and within two years had unified the country, which included the liberation of Tibet in May 1951. In 1959 the Tibet Rebellion and the departure of the Dalai Lama nullified the agreement. Only Hong Kong, Taiwan, Macao, and a few islands off the coast remained under what the Chinese perceived as foreign control. In 1997 Hong Kong reverted to Chinese control as the 100-year lease with the British government ended.

The early years of the PRC were characterized by propaganda and indoctrination over economic growth and management, under the strong personal influence of Mao, resulting in a "unified" country under relatively strong central control. Mao's idea was to establish a "People's Democratic Dictatorship," a combination of Soviet Russia's Proletariat Dictatorship with the Chinese traditional rule in the new republic. In the early years of the republic the main task for the criminal justice system and police was the suppressing of counterrevolutionaries and safeguarding and facilitating political movements by legal means. Mao said in 1949, "The state apparatus, including the army, the police, and courts are the instruments for the oppression of antagonistic classes, it is violence." Factional struggles within the Communist Party resulted in the so-called Cultural Revolution, which lasted from 1966 to 1976 and saw intellectuals and high officials denounced and castigated. The emergence of the Red Guards, in response to an appeal by Mao, brought anarchy. Eventually, it was not clear who was in power, as street battles, invasions of homes, assaults, and murders characterized this period. It was also a period of hero worship toward Mao.

During this period the legal system was ignored and sabotaged. Apart from law being abolished at that time, the legal organs were largely eliminated. People's courts at various levels became paralyzed, and procuratorates were abolished altogether. Judges, teachers of law, and practicing lawyers were among the first to be sent to the countryside and the last to return. Law enforcement was placed in the hands of the Red Guards and the People's Militia. During those years the Chinese people suffered a "lawless" orientation. After 1976 political and legal organs throughout the country conducted a judicial review drive of the counterrevolutionary cases. During the Cultural Revolution, 1.2 million cases were disposed of in the country. By the end of June 1980 the people's court at different levels had reexamined 1.13 million cases. Among these, 251,000 wrong cases were redressed, involving 267,000 people—of which counterrevolutionary cases took up 175,000, involving 184,000 people. In addition, 76,000 ordinary criminal cases were redressed, involving 82,000 people. In handling criminal and counterrevolutionary cases there was neither legal prosecution nor legal sentence. The line between guilty and not guilty in cases was often confused, and a great many unjust, false, and wrong sentences were handed down.

During this period Deng Xiaoping and Liu Shaoqi, as leaders of the Party Central Committee, reportedly had doubts about the direction of the Cultural Revolution and attempted to ease conflicts between various factions. However, their attempts were rebuffed by Mao. During this period China was virtually closed to the rest of the world.

In February 1972 President Richard Nixon made his historic visit to China. By 1973 Zhou Enlai had reemerged and moved to stabilize the country. He is credited with reinstating many former officials, but he came under attack. In March 1973 the Party Central Committee, supposedly at the proposal of Mao, moved to reinstate Deng Xiaoping, and in December he was once again elected to the Political Bureau.

In January 1975 Zhou Enlai was named premier and Deng Xiaoping as vice premier, hindering efforts of the "old guard" to control the government. Mao's death on September 9, 1976, saw a failed effort by Mao's wife to take over the government, and she and three of her cohorts, known as the Gang of Four, were imprisoned. With Zhou in ill health, Deng assumed the reigns of power, and with it the beginning of major changes.

Between 1976 and the early 1980s the country began to move toward more open relationships with other countries, particularly those in the Soviet bloc. On April 26, 1984, President Ronald Reagan visited China, which began a wave of reform. This was the beginning of a new era in which Deng Xiaoping came to power and

fostered more openness with the West. Greater emphasis was placed on the rule of law, and a massive program to educate lawyers and revise the criminal justice system began.

From the mid-1980s to the present a period of economic growth was characterized by many management and policy revisions and the restructuring of the government. Progress was marred by the Tiananmen Square incident in 1989, in which hundreds of civilians, police officers, and soldiers were killed in widespread protests throughout the country.

After a period of international criticism and economic setbacks, a renewed level of economic growth began and by 1993 China had moved into prominence as a major trade nation. The death of Deng Xiaoping in 1997 marked the beginning of a new era of leadership under Jiang Zemin, who continued to foster economic growth and efforts to establish the rule of law as a guiding principle. Reform movements in education, business, and criminal justice organizations continued in earnest. Issues of human rights and civil liberties became more prominent among the populace and continue to be hotly debated to this day.

In October 2002 a new generation of Chinese leaders came to power under the leadership of Hu Jintao, the general secretary of the Central Committee of Communist Party of China (CPC) and president of the PRC, and Wen Jiabao, member of the Standing Committee of Politburo. Hu and Wen lead a group of nine that forms the Standing Committee of Politburo of CPC Central Committee. Luo Gan of this group is in charge of judicial affairs.

China venerates Mao, but many, if not most, of his principles of socialism, egalitarianism, revolutionary zeal, and a communal concept are disappearing rapidly with entrepreneurial reforms and a market economy. Despite external criticism on several fronts, the country has made much progress in improving the plight of its citizens and political reform is slowly beginning to take shape.

**Structure and Organization.** There are four levels of organization within the Ministry of Public Security:

1. Provincial and special municipality levels (which include Beijing, Shanghai, Tianjin, and Chongqin, all of which report directly to the central government)
2. Prefecture and municipal level
3. County and subbureaus at the rural and urban district level
4. Stations at the township (communes) and city district level

The local public security organizations operate under an arrangement that provides input and some control from local government officials as well as the ministry officials and authorities above the unit. For example, public security officials within a township will work with local government, but also report to the bureau or provincial authorities above them, as well as to the Ministry of Public Security. In major cases they will usually call on assistance from the larger units, particularly in criminal investigations or civil disorder. Since the 1990s, because local governments provide much of the budget, they have had more say in police operations. There are also public security units of a specialized nature that may operate in cooperation with other ministries. Some of these include:

- The Armed Police, consisting of conscripts, which have a dual reporting relationship, to the Ministry of Public Security and to the Central Military Commission of the CPC
- Police in the Ministry of Railways
- Police in the Ministry of Transportation
- Police in the Civil Aviation Administration
- Police in the Ministry of Forestry

All these units are under the jurisdiction of the Ministry of Public Security.

The Ministry of Public Security at the central government provides unified leadership and guidance to all public security work and directs all the professional police forces and the armed police forces. There are twenty-eight bureaus, several research institutes, and one publishing house under the Ministry of Public Security (MPS). In addition, there is one Political Department and one Office of General Affairs, of which both have higher official status than a bureau.

- Political Department: basically administers police personnel and education. Under the Political Department there is the Personnel and Training Bureau and the Propaganda Bureau, which is in charge of the People's Public Security Daily and the Public Publishing House.
- Office of General Affairs: takes care of paper work for the ministry and provides secretarial work for the minister and his deputies.
- Bureau of Domestic Security Defense (First Bureau): maintains the surveillance of known or suspected counterrevolutionaries and directs the investigation of all sabotage and political offenses, which are "acts endangering the PRC committed with the intent of overthrowing the political power of the dictatorship

of the proletariat (renamed people's democracy) and the socialist system.”

- Bureau of Economic Crime Investigation (Second Bureau): in charge of economic crimes, such as copyright violation, smuggling, loan sharking, and others.
- Bureau of Public Order Management (Third Bureau): directs general activities of the police, including the administration of household registration, and census. It directs the affairs of the Public Security Committees at the local level, and in 1994 assumed responsibility for the adoption of police patrol in urban areas.
- Bureau of Border Security (Fourth Bureau): supervises the border police and helps customs houses in the checking of imports and exports.
- Bureau of Criminal Investigation (Fifth Bureau): is in charge of the investigation of criminal cases. It also maintains the Interpol China Bureau.
- Bureau of Entry and Exit Control (Sixth Bureau): is in charge of entry and exit of aliens and citizen passports.
- Bureau of Fire Fighting Administration (Seventh Bureau): is in charge of the country's fire fighting and prevention.
- Bureau of Security Guard Duty (Eighth Bureau): provides security guards for people from abroad and personal protection for ordinary government or state leaders. It also provides protection of physical facilities.
- Bureau of Security of the General Office of the Central Committee of Communist Party (Ninth Bureau): is in charge of CPC leaders. It is different from the Eighth Bureau. It is affiliated with the MPS in name only and is really commanded by the head of the General Office of the Central Committee of Communist Party.
- Bureau of Public Security of the Ministry of Railway (Tenth Bureau).
- Bureau of Surveillance for Security of Public Information Networks (Eleventh Bureau): is in charge of the work of electronic computers' application in public security organs and directs computer security in the country and the prevention of computer crime.
- Bureau of Operative Technological Support (Twelfth Bureau).
- Bureau of Detention Facilities Management (Thirteenth Bureau).
- Bureau of Public Security of the Ministry of Transportation (Fourteenth Bureau).
- Bureau of Public Security of Civil Aviation Administration (Fifteenth Bureau).
- Bureau of Public Security of the National Forestry Bureau (Sixteenth Bureau).
- Bureau of Traffic Control (Seventeenth Bureau)
- Bureau of Legal Affairs (Eighteenth Bureau): drafts and compiles laws and policies regarding public security.
- Bureau of Foreign Affairs (Nineteenth Bureau): is responsible for liaison, as well as other business regarding international relations.
- Bureau of Supply and Finance (Twentieth Bureau): supplies uniforms, firearms, vehicles, and other needed equipment for all police forces. It is also in charge of a budget and handles accounts.
- Bureau of Narcotic Control Bureau (Twenty-first Bureau): is similar to U.S. Drug Enforcement Agency.
- Bureau of Science and Technology (Twenty-second Bureau): coordinates scientific and technological research in the public security sector.
- Bureau of Information Communication (Twenty-third Bureau).
- Bureau of Illegal Trafficking Crime Investigation (Twenty-fourth Bureau): founded in 1998.
- Bureau of Counterterrorism (Twenty-seventh Bureau): is founded in 2002 in the wake of the September 11 terrorist attack in the United States.
- Bureau of Securities Crime Investigation (Twenty-eighth Bureau): is founded in 2002 to combat rising speculation and other crimes in the securities market.
- Bureau of Retired Ranking Officials: is in charge of care for retired ranking officials from the Ministry of Public Security.

*Research Institutes.*

- Research Institute for Police Equipments (First Institute).
- Research Institute for Forensic Science (Second Institute).
- Institute for Information Science and Technology (Third Institute).
- Research Institute for Public Security (Fourth Institute).
- Research Institutes for Fire Fighting separately in Shanghai, Sichuan province, Tianjin City.

*Police at Work.* Following graduation from one of the educational or training institutions, a police officer will be assigned to a particular specialization, which may also involve some subspecialization within the unit to which he or she is assigned. Except for criminal investigation, most officers will be assigned to a uniformed section. Most police in China are unarmed.

Promotions in the police service are somewhat different from those in major Western nations. Introduction of a formal rank system in 1993 was designed, in part, to provide a greater degree of professional advancement. Nevertheless, once assigned an individual will likely spend the rest of his or her career in the same assignment. Exceptions are those in upper management, who have greater flexibility.

The functional titles and designated ranks in 1992 were:

Minister	Commissioner General
Deputy or Vice Minister	Deputy Commissioner General
Assistant Minister	Commissioner First Class
Director	Commissioner Second Class
Deputy Director	Commissioner Third Class
Division Director	Supervisor First Class
Deputy Division Director	Supervisor Second Class
Section Chief	Supervisor Third Class
Deputy Section Chief	Superintendent First Class
Section Chief (Sergeant)	Superintendent Second Class
Constable First or Second Class	Superintendent Third Class

There is a system of awards and citations, both for individuals and for units that are based on political quality, service ability, and merit to the revolution. Officers may also be disciplined, which can include demotion and criminal penalties in accordance with police regulations and criminal law. Article 10 of the Regulation on People's Police of the PRC states that police personnel who violate discipline and neglect their duty may be disciplined by warning, record of demerit, confinement, demotion, or dismissal. If a police officer violates the criminal law, he or she may be tried by a

people's court or a military court in accordance with the Criminal Law of the PRC.

Although a primary goal of the police officer is to prevent crime, much of his or her work is spent on other pursuits, particularly in the form of order maintenance.

Police stations, according to the Organic Regulations have ten functions, including upholding and enforcing the laws concerning public order and security, preventing and combating subversive and criminal activities, administering the household residence registration, guiding the work of the Public Security Protection Committees, and teaching the residents to observe and abide by laws.

Two aspects of these responsibilities are markedly different from Western police functions. The first concerns the administering residence registration, which requires that police keep track of all individuals living in the community, including visitors. This assignment is carried out by census officers who maintain periodic contact with each household. The second is in working with and guiding the Neighborhood Public Security Committees that, in essence, manage a neighborhood watch system using volunteers and residents who live in the community. The impact of this program would boggle the mind of most Westerners, for virtually the whole community plays some role in personal security, from grandmothers and retired persons, who are present during the day, to volunteer workers, who patrol the streets and community at night. What a surprise it is to hear a bell ringing in the heart of Shanghai, carried by a volunteer, reminding residents that it is 8:00 P.M. and that they should lock their doors and windows.

Public Security Committees are elected by residents and work under the guidance of police stations. First established in the 1950s, they now number 1.2 million across China, with more than 5.8 million members, of which 360,000 are retired workers. Additionally, there are 2.6 million public security groups with 6.3 million members. Altogether, about 12 million people are involved in more than 3.8 million public security organizations. Thus, between 2 and 4 percent of the population are involved in security-related activities.

Among the functions of these committees are educating people on crime prevention, providing neighborhood watch activities, controlling crime, and assisting police. They have no judicial or investigative powers, but they help the police by gathering information and sponsoring citizen patrols and crime prevention programs. According to one estimate, about half the criminal cases are solved as a result of the cooperation of these committees.

Officers are placed in charge of public security patrol in commercial areas and other public places such as railway stations, ports, wharves, hotels, hostels, markets,

**Convicted drug dealers are paraded before crowds at a public sentencing rally in China's Guizhou province, June 24, 2005.** The event, which included an antidrug educational show, was held in the city of Guiyang and occurred shortly before the country celebrated its International Anti-Drugs Day. AP IMAGES.

cinemas, theaters, and stadiums where criminals can hide easily and commit offenses.

**Police-Community Relations.** As noted earlier, China's cities are divided first into districts and then neighborhoods. Each neighborhood is controlled by a subdistrict of the government. A collection of residential committees report to the subdistrict, and below them are residential groups, which represent the grassroots level.

Both the Public Security Committee and the Mediation Committee play important parts in the everyday life of the Chinese people. Usually, those selected to serve on these committees are individuals who are widely respected by the community. In some instances individuals may be appointed to the committee by a higher authority, although this apparently varies significantly from city to city. These committees also report to the government and the judiciary or people's courts. Most of the power exercised by these committees is based on social and peer pressure, for the committees do not have the formal authority to demand an individual's presence,

to conduct interviews or interrogations, or to punish or detain. However, they are extremely powerful and exercise control and have strong public support. The alternative is formal action by the police or courts, which is not generally considered a favorable option by most citizens.

One of the key roles played by the police is in popularizing the law and making people aware of their rights. In working with the committees they have a ready-made system that is designed to foster communication and conflict resolution; much of the minor criminal and nuisance activity that occupies American courts is handled unofficially through these committees.

Increasing economic reform has resulted in a new form of policing as the introduction of joint ventures and other international enterprises has created a greater need for security. Much of this work is being undertaken by cooperative security firms that began to form in 1985. For the most part, these firms are supervised by Public Security officials. They frequently employ former servicemen and retired policemen.

Training for security firms is less organized than for the police service and varies greatly between cities, although new regulations are currently under way. Most training is carried out by either public security organizations or by representatives of the joint ventures.

### Special Police.

*Armed Police.* One of the more interesting units is the Chinese People's Armed Police Force, which has the responsibility as a domestic guard, similar in some ways to the U.S. National Guard, but which consists almost entirely of conscripts. The Armed Police also maintains border control activities and serves as the fire brigade.

The force is under the dual leadership of both the Ministry of Public Security and the Central Military Commission of the Central government, as well as the Central Committee of the Party. For practical purposes the day-to-day operations and supervision of the Armed Police fall under the ministry, although it should be noted that most of the commanders are career military personnel, without a traditional law enforcement background.

There are four functional units within the Armed Police:

- The internal security force that serves as guards for government and other key facilities throughout the country. This unit might be generally defined in Western terms as a security service. Until recently, there were no private security firms in the country because most facilities were state owned, and such activities were carried out by the Armed Police, some traditional police units, and frequently by volunteers of the neighborhood security committees. The quality of the Armed Police varies greatly depending on assignment. As might be imagined, those guarding dignitary offices and residences are generally well trained and motivated. In 1992 roving patrols of armed police officers were implemented in many cities, representing a distinct departure from past practices.
- The Border Security Force, somewhat like the U.S. Border Patrol, but more closely resembling the border guards of Eastern bloc countries before 1989, is a large force consisting mostly of conscripts. It is generally boring duty, and the level of training is minimal and traditionally military. This force also maintains responsibility for ports of entry, such as airports.
- Firefighting brigades receive basic training in firefighting techniques, but there is cause for concern about their effectiveness, especially in the larger cities. With the advent of high-rise buildings, especially hotels, there is reason for increased concern.

- Correctional center guards have the responsibility for security at public security detention facilities and for handling the transfer of prisoners. This unit is not to be confused with guards in the prisons and work camps run by the Ministry of Justice.

**Education and Training.** Most police officers are expected to have completed twelve years of education, although there are exceptions. Individuals usually join the police service in one of three ways: by completing a general college course or having completed four years of study at one of the many police colleges or law schools. A select group of individuals will attend the People's Public Security University in Beijing, which might be likened to the "West Point" of policing in China. A second and common method of entry is by having completed military service and being approved for further police training. Most individuals are selected at the local level on the basis of examinations, after which they must complete a two-year training program. Persons with prior military training or who transfer from other organs of government usually complete an abbreviated training program. The following educational programs are available.

#### *Universities (four-year and graduate programs).*

There are three higher education institutes, which are directly affiliated with the Ministry of Public Security:

- Public Security University—Beijing
- Criminal Police (Investigation) College—Shenyang
- Chinese People's Armed Police Academy in Langfang City, Hebei province

Students of these three institutes are from all provinces of China and they must take a nationwide exam for admission at the same time as all other colleges and universities.

Besides these institutes, there are several provincial police colleges that can provide four- and three-year programs. These colleges include:

- Zhejiang Provincial Police College
- Jiangsu Provincial Police College
- Hubei Provincial Police College

Students of these provincial police colleges are from local provinces, and they must pass the national admission exam. The goal of the four-year programs is to cultivate high-grade specialized public security personnel and to train the leading cadres above the rank of directors of the county public security bureaus or sections. There are several other types of educational institutions charged with the education and training of police in the PRC. As of 2004, these included:

- Ten three-year colleges managed by local governments, the Education Commission, and the Ministry of Public Security. Students are local and take a nationwide examination after completing high school. Some in-service officers are accepted for a two-year program.
- Eighty people's police schools (the equivalent of police academies) recruit from senior middle schools and other students according to the characteristics and needs of public security work. The average time spent by police officers in these schools is two years.
- Eleven in-service administrative colleges that provide specialized training in a variety of management and technical skills.
- One hundred public security cadres schools that offer three- to six-month courses, usually for in-service or specialized training.
- In-service training is localized training based on long-term plans and general demands made by the Ministry of Public Security.

*Government and Provincial Schools.* Run by governments of provinces, autonomous regions, and municipalities under the State Council, these schools are responsible for training directors of county public security bureaus and leaders of the public security branch bureaus in municipalities and their subordinates, such as department directors, section chiefs, substation chiefs, squad heads, rear-service personnel, and professional specialists.

To gain admission to one of the four-year police colleges or the Public Security University, an individual must pass the national college entrance examination or the national adult college entrance examination. All students in the country who wish to pursue a college education must complete the national examination, which is a competitive program. They must indicate their area of interest and the college they wish to attend. The number of people wishing to join the police service has traditionally been high, although the past decade has seen greater numbers of students seeking admission to language academies and programs that will offer an opportunity to work in joint ventures or hotels, where pay is much more attractive. Nevertheless, given the large number of students wanting to go to college and the limited spaces available, the police service continues to draw many capable candidates.

When an applicant has been selected, he or she (females represent about 15 percent of the younger generation of police officers) will attend either a two- or four-year program. Individuals with a military background may have some of the requirements waived.

*Police Training.* A major thrust in the past decade has been toward modernizing police training. There are police colleges in all the provinces and additional programs in the larger cities. In 1994 there were 285 police schools throughout China, of which 29 were universities and colleges, 156 were secondary professional schools, and 100 were police cadre schools. Of these, there were 80 higher police academies, with more than 43,000 students and 3,500 instructors, and 45 secondary police academies with about 78,000 students and a teaching staff of 3,400. Those selected for entrance to the Public Security University in Beijing are viewed largely as the future leaders of the police service. An individual will major in a field of study, such as police administration, criminal investigation, law, or public order. The Police Officer's College in Beijing, which was more technical in nature, prepares individuals for specialized operations, such as forensic science, computer technology, and traffic, was amalgamated with the Public Security University in 1998.

For example, the curriculum of the four-year program of the public order major in the Public Security University includes fifty required courses and twenty-three electives. Courses range from the areas of sociology and psychology to police management, from criminalistics and forensics to computer operations. There is also a heavy emphasis on physical fitness and fighting skills because of the general absence of carrying deadly weapons in public.

There are 100 cadre schools that are somewhat similar to American police academies that offer shorter courses, for example, to army veterans and in-service courses for serving policemen, who will attend three- to six-month courses on a periodic basis. In 1986 there were an estimated 60,000 such students. By 1990 the number had reached 100,000, with another 100,000 officers involved in self-study programs with plans to enter college. Between 1984 and 1989 more than 500,000 officers attended schools or colleges, with 26,000 completing either three- or four-year programs, and 50,000 completing two-year programs.

Between 1983 and 1989 the percentage of officers with three-year degrees increased from 3.2 percent to 13.2 percent, and those with some education beyond high school went from 32 percent to 52 percent. Between 1991 and 1995 the ministry set goals that will increase the number of college graduates to 22 percent, and education above high school to 90 percent. Since the start of the twenty-first century, all new recruits must have a three-year degree or above.

*The People's Public Security University.* With approximately 10,000 students, the Public Security University resembles a service academy more than a

traditional university. The program is rigorous. During summers students return to their home provinces to gain experience by working with their local forces. In less than a decade the curriculum has been completely redeveloped, and in recent years it has sent faculty abroad for further education and has brought in instructors from other countries as visiting experts. The university maintains a close relationship with the Office of International Criminal Justice at the University of Illinois, as well as with other American universities.

There are more than ten departments in the university, such as the Department of Public Order Management, the Department of Investigation, and the Department of Traffic Control. There are 466 faculty members, of which 49 are full professors and 187 are associate professors. Nearly all faculty members are active police officers, except for some emeritus professors who are retired. To advance professionalism in the faculty, more and more graduates with masters or doctoral degrees have joined the faculty. These graduates do not have prior police experience. However, faculty members are encouraged by the ministry to have one year of working experience at a grassroots public security organ in each five-year period. In fact, faculty members must have at least six months of experience in the Bureau of Security Guard Duty or at local public security organs before they are appointed as associate professor or full professor.

The leadership of the campus represents an enlightened group of senior officials who have been struggling to introduce new technology and modern police management. Shortly after the Tiananmen Square incident, senior officials spoke of the problems facing the police, who are not equipped, either by training or with equipment, to handle large demonstrations with minimum force. They speak with admiration of the South Korean police and their handling of student demonstrations. Most officers recognize the failures of Tiananmen Square and are perhaps thankful that the police were not called on in those difficult final days in June 1989.

There are, as might be expected in any academic institution, differences in theory and approach. Several instructors have visited the United States and other countries, and representatives of the police service have been attending a two-week course each fall run by the International Center for Sociological and Penological Studies in Messina, Italy. The course, which is attended by police representatives each year from about seventy-five countries, provides an opportunity for comparison and for learning about other police systems. This important effort to learn more about modern police practices is having a positive impact on training, particularly in the areas of community relations and human rights.

**Police Colleges.** The police colleges located in the provinces and larger cities generally prepare individuals for middle management positions with the police hierarchy. Emphasis on political education, which at one time represented about 50 percent of the curriculum, has been reduced significantly. Nevertheless, an important aspect of the learning environment emphasizes loyalty and responsibility. Emphasis is also placed on loyalty to the Communist Party, and a large percentage of those who graduate will become members of the party if they have not already been accepted.

The curriculum of the police colleges places greater emphasis on professional subjects. Since the beginning of the 1980s a large part of the curriculum is devoted to the study of law. The legal reform movement is viewed as central to police training, and the importance of following legal precepts is drilled into recruits. Each officer's retention depends largely on where in the ministry he or she is assigned on graduation.

In 1993 the Ministry of Public Security took a major step in signing an agreement with the Office of International Criminal Justice at the University of Illinois at Chicago. This agreement brought thirty-six senior police officials to the United States for one month of training, which included site visits to the FBI Academy in Quantico, Virginia, and to police departments in Chicago, New York, and Los Angeles.

#### **Police Statistics (as of 2002).**

- 1.7 million Chinese police officers
- 30,000 community policing stations
- 60,000 officers dedicated to community policing
- Provided security for 75,000 big events in 2002
- Responded to 52,000 disasters that required rescue service in 2002
- Answered 1,440,000 calls for public assistance in 2002

#### **HUMAN RIGHTS**

During 2003 politically motivated and other arbitrary and unlawful killings occurred. The official press reported extrajudicial killings, but no nationwide statistics were available. Deaths in custody because of police use of torture to coerce confessions from criminal suspects continued to occur. Beating deaths during administrative detention also occurred and sparked public calls for reform.

According to the U.S. Department of State, several hundred Falun Gong adherents reportedly have died in detention because of torture, abuse, and neglect since the crackdown on Falun Gong began in 1999. Trials involving

capital offenses sometimes took place under circumstances where the lack of due process or a meaningful appeal bordered on extrajudicial killing. Nongovernmental organizations reported over 1,000 executions during the year, including dozens on June 26 to mark international anti-drug day. Amnesty International reported that China executed more persons than any other country. In 2002 officials reportedly carried out over 4,000 executions after summary trials as part of a nationwide “strike hard” campaign against crime. The actual number of persons executed was likely far higher than the number of reported cases. The government regarded the number of death sentences it carried out as a state secret, but stated that the number of executions decreased during the year. Some foreign academics estimate that as many as 10,000 to 20,000 persons are executed each year.

The law prohibits torture; however, the State Department reports that police and other elements of the security apparatus employ torture and degrading treatment in dealing with some detainees and prisoners. The Prison Law forbids prison guards from extorting confessions by torture, insulting prisoners’ dignity, and beating or encouraging others to beat prisoners. While senior officials acknowledge that torture and coerced confessions are chronic problems, they do not take sufficient measures to end these practices. Former detainees report credibly that officials use electric shocks, prolonged periods of solitary confinement, incommunicado detention, beatings, shackles, and other forms of abuse.

Since the start of the twenty-first century efforts have been made to strengthen historically weak regulation and management of law enforcement agencies; however, judicial oversight is limited and checks and balances are absent. Many police and law enforcement units in the country remain poorly trained and lack basic investigation skills. Corruption at the local level is widespread. Police officers reportedly coerce victims, take individuals into custody without due cause, arbitrarily collect fees from individuals charged with crimes, and mentally and physically abuse victims and perpetrators.

The Chinese government strictly regulates the establishment and management of publications and does not permit citizens to publish or broadcast criticism of senior leaders or opinions that directly challenge Communist Party rule. The party and government continue to control many and, on occasion, all print and broadcast media tightly and use them to propagate the current ideological line. All media employees are under explicit, public orders to follow CPC directives and “guide public opinion,” as directed by political authorities. Both formal and informal guidelines continue to require journalists to avoid coverage of many politically sensitive topics. These public orders, guidelines, and statutes greatly restrict the

freedom of broadcast journalists and newspapers to report the news and lead to a high degree of self-censorship. The government continues an intense propaganda campaign against the Falun Gong.

The government continues to encourage expanded use of the Internet; however, it has taken steps to increase monitoring of the Internet and to place restrictions on the information available. While only a small percentage of the population has access the Internet, use among intellectuals and opinion leaders is widespread and growing rapidly. China’s Internet control system employs more than 30,000 persons and is allegedly the largest in the world. According to a 2002 Harvard University report, the government blocked at least 19,000 sites during a 6-month period and may have blocked as many as 50,000. At times, the government blocks the sites of some major foreign news organizations, health organizations, educational institutions, Taiwanese and Tibetan businesses and organizations, religious and spiritual organizations, democracy activists, and sites discussing the June 4 Tiananmen massacre.

#### CORRECTIONAL SYSTEM

Except for capital punishment, which is used primarily to set an example, the Chinese philosophy toward corrections is based on an intrinsic belief in rehabilitation. It is a widely held belief among officials in all aspects of the justice system, government leaders, and people from all walks of life that individuals who commit crimes, for the most part, can be reintegrated into society. Undoubtedly, this has a lot to do with the recidivism rate that, despite an increase, continues to be one of the lowest in the world. Even today, except for several major cities, the rate of return to prison is estimated to be between 7 and 20 percent throughout the country.

With the founding of the People’s Republic in 1949, a Bureau of Prisons was established and reported to the Ministry of Justice. However, in 1951 responsibility for prisons was transferred to the Ministry of Public Security, and in 1983 was transferred back to the Ministry of Justice.

In 1980 there were between 700,000 and 800,000 prisoners, which rose to 1.1 million in 1990, and 1.3 million in 1993. Of these, according to official sources, about 10 percent are classified as political prisoners, which is a label reserved for those convicted of a counter-revolutionary crime. The increase in prisoners is attributed to a higher rate of crime, economic conditions, and a changing social environment. Between 4 and 5 percent of the prison population is serving a life term or is on a suspension from execution.

In 1990 there were 674 prisons (reform through labor institutions), which included 35 juvenile reformatories.

This did not include detention houses, which are managed by public security. There are two types of detention facilities: those that hold individuals for trial (usually no longer than six months) and those that hold persons for up to fifteen days for “administrative violations,” which are not classified as crimes.

For the most part, the Chinese philosophy emphasizes punishment as a means of deterrence and uses a system of rewards and punishments to influence behavior. Reduction in sentence is the most common form of reward, and in the first six months of 1988 almost 100,000 prisoners had their sentences reduced or were paroled. Reductions in sentence and paroles are approved by the people’s courts usually on the basis of recommendations from the correctional authorities. Additionally, inmates may be given material rewards, such as extra visiting privileges, commendations known as “merit marks,” or better work assignments.

Using the carrot-and-stick approach, the correctional authorities may also recommend that the courts increase a sentence if an individual commits another crime while in prison, which is loosely defined. The prison administration also has the power to impose other sanctions, such as confinement, work reassignment, and denial of visiting privileges; in cases where an individual has escaped or helped others escape or resisted labor and engaged in illegal acts, it may enforce an increased stay in a labor-reform camp.

Incarceration in China is in one of the following institutions:

- Prisons are basically for holding those important criminal offenders who have already been sentenced to the death penalty with suspension or life imprisonment, but are unfit for labor outside of prison.
- Detention houses are mainly for confining in custody offenders whose cases have not been adjudged and for holding those criminal offenders who have been sentenced to less than two years of imprisonment, but where it would be inconvenient to confine in a reform through labor camp.
- Reform through labor institutions are for holding criminal offenders who have been sentenced and are appropriate for labor outside of prison.
- Reeducation through labor institutions hold those who do not engage in proper employment and who steal, swindle, or engage in other such acts, but are not prosecuted for criminal responsibility. This includes those who violate the regulations of public security administration and who have the capacity to labor, but refuse to do so for a long period.

- Juvenile reformatories discipline offenders aged between fourteen and eighteen. These reformatories fulfill the role of both reform through labor and reeducation through labor institutions.
- In most correctional institutions, there is a special section for female offenders, separate from males, that is under the supervision of female correctional officers.

Reform through reeducation is described as a coercive measure applied to those who loaf or violate law and discipline or who do not engage in proper employment and is intended to further preserve public order and to benefit socialist construction. The primary difference, however, is in the method by which an individual reaches the institution. Reform through education can be implemented without a court action by public security agencies and can be instituted for infractions of public security regulations, refusing to work, hooliganism, or other acts “not prosecuted for criminal responsibility.”

**Prison Conditions.** Conditions in penal institutions for both political prisoners and common criminals are generally harsh and frequently degrading. Prisoners and detainees are often kept in overcrowded conditions with poor sanitation, and their food often is inadequate and of poor quality. Many detainees rely on supplemental food and medicines provided by relatives, but some prominent dissidents are reportedly not allowed to receive supplemental food or medicine from relatives. According to released political prisoners, in many provinces it is standard practice for political prisoners to be segregated from each other and placed with common criminals. Released prisoners report that common criminals beat political prisoners at the instigation of guards. Some prominent political prisoners receive better than standard treatment.

#### Prison Statistics.

- Prison Population Total: 1,549,000 (as of October 2003—National Prison Administration)
- Prison Population Rate: 119 (November 2003)
- Female Prisoners: 4.4% (January 2003)
- Juvenile Prisoners: 0.7% (mid-2003)
- Foreign Prisoners: 0.03% (1997)
- Number of Prisons: 689

Recent prison population trend:

1995	1,236,543
1998	1,440,000
2001	1,428,126

**Official country name:** Republic of Colombia

**Capital:** Bogotá

**Geographic description:** A large country in northern South America, south of Panama

**Population:** 42,954,279 (est. 2005)

## LAW ENFORCEMENT

**History.** In the pre-Columbian age the conquest with the arrival of Spanish conquistadors and the colonial periods ruled by Spain, there was no law enforcement except for the military. Viceroy José de Ezpeleta Galdeano created a police force in Bogotá in 1791. In 1890 Carlos Holguín sanctioned Law 90 that created a National Police; this law allowed the government to contract, either in the United States or in Europe, someone capable of organizing the new National Police. In 1891 the French began helping Colombia build a police force; the force was organized by a commissar of France's National Police, Juan María Marcelino Gilbert. At the time Colombia's police force consisted of approximately 450 men. By 1899 there were 944 men in the National Police, and they were divided into eight divisions. During the Thousand Days' War, the National Police came under the governing of the Ministry of Military until 1901. Law 41, decreed on November 4, 1915, divided the National Police into three sections: one section dealt with security and monitoring, the second was a Civil Guard, and the third became the Judicial Police.

On May 4, 1946, the political police unit was created, organized by the Conservative president Mariano

Ospina Pérez; the police were used to threaten, terrify, and murder Liberals. Two years later on April 9 the political police inspired greater fear in what was known as La Violencia, which lasted until the 1960s. During the 1950s the National Police department was moved to the jurisdiction of the Ministry of National Defense from that of the Ministry of the Government. In January 1978 Colombia's Congress granted the police and the military a license to kill. This was intended to handle the widespread terror and narcotics that had increased since 1966 with the founding of the Fuerzas Armadas Revolucionarias de Colombia (FARC; Revolutionary Armed Forces of Colombia), the Ejército de Liberación Nacional (ELN; National Liberation Army), and the Movimiento 19 de Abril (M-19; April 19 Movement). In 1988 the National Police was Colombia's principal law enforcement organization. As indicated by Colombia's 1991 constitution, the National Police is part of the armed forces with headquarters located in Bogotá.

**Structure and Organization.** The 1991 constitution states that there are four main branches in the armed forces: air force, navy, army, and the National Police. The National Police deal specifically with public order and internal affairs. Each branch is barred from involvement in political matters, and only the armed forces may produce or possess weapons, munitions, and explosives without special permission.

The National Police is modeled after the military branches and its organization parallels the headquarters' command, which is divided into distinct operational sections including personnel, intelligence, operations, and logistics.

**Hierarchy and Ranks.** The hierarchy is like that of the army and each wears the representative symbol of his or her rank on the uniform. The official hierarchy is as follows:

- General
- Lieutenant Colonel
- Second Lieutenant Colonel
- Major General
- Major
- Brigadier General
- Captain
- Colonel
- Lieutenant

The executive level's hierarchy is the following:

- Commissioner
- Intendente
- Assistant Paymaster
- Subintendente
- Intendente Jefe
- Patrullero

The noncommissioned officers' hierarchy is the following:

- Sergeant Major
- Second Sergeant
- First Sergeant
- First Corporal
- Sargento Viceprimero
- Second Corporal

**Police-Community Relations.** The relationship between the National Police and the community has been strained at best. Robert H. Davis (1993) mentions

that *liberticida* was a term coined by journalists to describe the effect of the government security laws passed in 1927–1928 to allow national police forces greater latitude in suppressing alleged threats to the state. Since then, the relationship between the police and community has not improved much. Also, according to Davis, there have been scandals linking the police with murders, the destruction of unions, and more. During the 1980s some believed that the mayors and civil magistrates that had input in law enforcement matters were a corrupting influence.

**Local Police.** The National Police's primary duties are to handle common crimes along with narcotics interdiction and some counterinsurgency work. They are also to participate in rural areas in civic action and riot control. Other duties include traffic regulation enforcement, public recreation area supervision, gold and emerald mines security, and transportation of valuables between government banks and on the national railroads. The National Police also provide guards for the prison system and the necessary administration.

**Special Police.** A number of specialized units in the National Police fall under the jurisdiction of the Ministry of Defense. The Agrupación de Fuerzas Especiales Antiterroristas Urbanas (AFEAU; Urban Counterterrorist Special Forces Group), which consists of approximately 100 personnel from all branches of the armed forces as well as the National Police, is led by the commander of the armed forces. The AFEAU was formed out of the failed assault on the Palace of Justice in Bogotá. Sniper teams, assault teams, a crisis management team, and a hostage negotiation team make up the AFEAU. Little is known about this unit's actual operations, though available information states that the AFEAU provides security at the guest residences and meeting sites attended by the presidents of various nations. In support of this security effort unit operators conduct preemptive raids on suspected safe houses thought to be housing individuals who pose potential threats to the event.

Another specialized unit is the Unidad Antisecuestro y Extorsion (UNASE; Antikidnapping and Extortion Unit). The UNASE was created in response to a record number of kidnappings in Bogotá in 1991, and its specialty is hostage rescue. The guerrilla groups FARC and ELN are frequently the perpetrators of kidnapping for ransom. Being a part of the highly trained specialized UNASE team is dangerous. Members are often involved in shootouts with these terrorists. The ranks of UNASE are filled by members of the police force. UNASE units are based in major Colombian cities such as Cali, Bogotá, Barranquilla, and Bucaramanga. Part of the UNASE is

**Colombian police escort guerrilla commander Omaira Rojas from the Valledupar maximum security jail to a flight that will extradite her to the United States, March 9, 2005.** Rojas, a woman known as “Sonia,” was a commander in the Revolutionary Armed Forces of Colombia (FARC) and believed to be a key member of drug trafficking and illegal activities. Amid fears that Rojas would be assassinated by her former colleagues, authorities put her in a bulletproof vest and helmet. AP IMAGES.

Centro de Información Anti-Extorsión y Secuestro (CIAES; Antiextortion and Kidnapping Center), which is a unit of the Ministry of Defense Joint Intelligence Center established in the mid-1980s. The staff includes members of the National Police and other branches of the armed forces.

The Grupo Operacional Contra Extorsión y Secuestros (GOES) is a National Police unit whose mission is to rescue kidnap victims of terrorists and criminals. The GOES was started in the mid-1980s and consists of roughly 150 men who are assigned to major cities such as Bogotá, Barranquilla, Cali, and Medellín. These members are volunteers, as are the members of all the other groups; however, these volunteers must serve for at least two years.

There are several special police units such as the Radio Patrol Group, Antismuggling Group, Private Surveillance Group, Highway Police, Tourist Police, Juvenile Police, Railroad Police, Antinarcotics Police, Judicial Police, and the National Police’s Carabineros.

The National Police’s Carabineros is a special police force that carries out counterinsurgency missions, frequently in conjunction with army units, and is located at each national territorial capital.

It was not until the 1980s when the Judicial Police came under the jurisdiction of the National Police (formerly under the Ministry of Justice). Among their main duties, they are required to conduct criminal investigations and to assist in the preparation of court cases.

**Riot Police.** The Riot Police are authorized to use appropriate force to disperse violent gatherings. In the case of nonviolent unlawful gatherings, law enforcement officials may use force only if the odds of injury to the public are increased by the decision not to intervene.

**Education and Training.** Besides the International Criminal Investigative Training Assistance Program (ICITAP) there are two professional schools for members of the National Police: General Santander Police Cadet

School and Jiménez de Quesada Noncommissioned Officers School, which are both located in Bogotá. The cadet school is a two-year program, and enrollment in the program is needed to receive a commission in the National Police. Completion of additional training is required for promotions. For noncommissioned officers each advancement in rank requires completion of a five-month course. The National Police also operates seven smaller police schools in various locations throughout the country, which offer a five-month basic training course for recruits as well as in-service training; the coursework at these programs includes subjects as diverse as Colombian history and riot control.

See the "Application of the Code of Conduct for Law Enforcement Officials" for screening procedures, qualifications, requirements, and training received in the various schools. According to this application, officers (inspectors) are trained for three years, and the training period for noncommissioned officers and ordinary staff is one year.

Members of the AFEAU are trained at a school in Facatativá. This is an intense, varied curriculum that includes close-quarters combat, marksmanship, hand-to-hand combat, air assault operations, and development of specific rescue skills.

**Uniforms and Weapons.** Embroidered or metallic symbols are displayed on the officers' uniforms to represent their ranks. Generals wear ten-point metallic stars of equal points worn on their epaulets and shoulders; the colonel's insignia is three bars with two laurel branches united in the form of a semicircle and are worn on the epaulets and shoulders; the lieutenant colonel wears two bars instead of the three with the laurel branches; and the major has only one bar with the branches. Subordinate officers have metallic bars (three for captain, two for lieutenant, and one for second lieutenant). At the executive level there are six different ranks, each with an embroidered patch of olive green in the shape of a shield that is 8 centimeters long and 6 centimeters wide with the Star of the Police in the center; bars are angled and inverted, and different numbers of bars varying in thickness represent the different ranks. At the next level are subofficials with different ranks in different shapes (rectangular for a sergeant major, and the rest with a small point at the bottom) with the Star of the Police in the center and angles going both to the top or bottom with numbers varying depending on rank.

**Transportation, Technology, and Communications.** The National Police possess aircraft, some of which were added to their inventory in 2001 by the U.S. government. There is also documentation concerning the National Police using Black Hawk helicopters.

The National Police also have vehicles at their disposal for transportation of personnel and supplies around Bogotá and other locations. Beginning in 2001 the National Police had 240 Narcotics Affairs Section (NAS; U.S. embassy) donated vehicles. The inventory included 5 Yamaha XT-225 motorcycles and 5 Suzuki FR-100 motorcycles, 2 1987 international buses, 1 1975 Oskosh fire engine (out of service), and 5 1985–1986 Backhoe tows (one in good condition and one out of service).

Computer equipment used by the National Police was donated by the NAS. Such equipment was needed for property inventory control, aerial reconnaissance data collection and storage, and human resources and training management. The equipment was also needed for the production of internal publications and standard operating procedures. According to the same report, there are computers (200), printers (26), and scanners (96) in the headquarters, administration, and at Guaymaral, as well as laptops used by officers assigned to administrative and intelligence duties.

A great deal of communications equipment was purchased by the NAS for their role in the Colombian National Police. In 2001 the NAS also hired a communications and weapons personal service contract advisor to work with the National Police to determine the proper balance between new and older easier-to-use technology to provide the National Police with the most practical mix of communications equipment. The National Police was supplied with radios of different makes and models as well as computers, digital cameras, printers, photocopiers, satellite phones, repeaters, and encryption decoders by the United States in 2001.

**Surveillance and Intelligence Gathering.** In 2004 the ICITAP began an intense training program to prepare the Colombian Judicial Police in pertinent areas of the accusatory trial system. The curriculum involved topics related to surveillance and intelligence gathering, such as evidence collection at crime scenes, search warrants, airport/border checkpoints, witness statements, admissions made by defendants, expert witness testimony, management of surveillance evidence, photographic evidence, report writing, and how to successfully introduce each of these types of evidence in court.

**Police Officers Killed in the Line of Duty.** During the 1970s and 1980s the National Police came under severe attack by the nation's drug cartels, and the leaders of these cartels offered freelance hit-men a standard price for each officer killed. Since 1984 an estimated 2,000 officers have been killed in the line of duty, and several hundred are still being held hostage by the guerrillas. A report at

the beginning of 2003 listed 236 Colombian police officers killed in the previous year.

**Police Statistics.** In 1997 there were 4,263 female police personnel and 88,995 male personnel. Colombia's National Police have an estimated 120,000 members. According to a UN report, the total police budget and cost of financial resources for 1997 was over US\$1 million.

## HUMAN RIGHTS

The most serious violations of human rights in Colombia are the right to life and humane treatment, and the major source of this violence comes from armed dissident groups such as the FARC and ELN. Paramilitary groups, like the *Autodefensas Unidas de Colombia* (United Self-Defense Groups of Colombia), contribute to the violence with their involvement in the drug trade, which is another factor contributing to the violence in Colombia. The rate of kidnappings in Colombia is the highest in the world, and it has an annual murder rate of roughly 89.5 murders per 100,000 residents. According to the Inter-American Commission on Human Rights (1999), the socioeconomic situation, with the wealth in the minority, is another contributing factor to this problem.

Plan Colombia is President Andres Pastrana's program to enhance respect for human rights and promote the rule of law, which the United States is assisting in. The human rights initiatives include:

1. Human rights screening
2. \$48.5 million for support for human rights programs and security for human rights workers, which will provide training and support for human rights nongovernmental organizations as well as the government investigators and prosecutors, including a specialized human rights task force
3. \$65.5 million for administration of justice programs
4. Removing collaboration between paramilitaries and security force members
5. Promoting peace

## CRIME

Colombia is considered one of the most dangerous countries in the world. The security situation in Colombia is volatile. In certain areas there is widespread violence by narcotraffickers, paramilitary groups, guerrilla and terrorist organizations, and other criminal elements.

Crimes range from violent to petty: bombing, kidnapping for ransom, scams, and thefts. Besides the crimes that tourists must worry about before traveling are the

crimes committed in every country and city such as homicides, robberies, thefts, embezzling, rape, and bribery.

**Criminal Identification and Forensics.** The ICITAP works with a variety of Colombian law enforcement agencies to develop new techniques in forensics. In 2000 the ICITAP initiated forensic training and development activities in full partnership with the country's four forensic laboratories for the purpose of enhancing the delivery of complete and timely forensic information to investigators, especially in cases involving human rights violations. The organizational boundaries of the four laboratory systems were eliminated by standardizing forensic protocols and procedures; installing automated systems including the Automated Fingerprint Identification System, the Integrated Ballistic Identification System, the Combined DNA Index System, and digital imaging databases; interconnecting the laboratories for sharing information and searching various databases; and providing electronic and wireless access to investigators and prosecutors in the field.

**Organized Crime.** Discussion of organized crime in Colombia tends to focus on the three most prominent narcoterrorist groups: the FARC, ELN, and AUC.

Colombia's main left-wing insurgent organizations are the ELN and FARC, which are heavily involved in the narcotics industry. Through extortion and kidnapping for ransom, the FARC is mostly self-financed. By the early 1990s, 62 percent of its income could be traced to the drug industry. According to the U.S. Drug Enforcement Administration, the FARC controls large areas of Colombia's eastern lowlands and rain forest, which are the country's primary cocoa-cultivation and cocaine-processing regions, while the ELN operates primarily along Colombia's northeastern border with Venezuela and in central and northwestern Colombia. The ELN is known for kidnapping, hijacking, bombing, and extortion. It is also noted that the FARC often kidnaps to obtain ransom fees, while other citizens pay a fee for the promise that their family members will be left alone.

The AUC is a right-wing paramilitary group that came into being in the late 1980s. Its stated goal is to protect the interests of the regional elites, with subtle backing by the Colombian military. By its own admission, up to 70 percent of its income is derived from the drug trade. Several offshoot groups of the AUC have been noted to raise funds through extortion or by protecting laboratory operations in northern and central Colombia. Despite these groups' involvement in the drug trade, they are not necessarily close with the country's drug cartels.

**Crime Statistics.** In 1997 the grand total of recorded crimes in Colombia was 1,613,629. There were 23,200 successful homicides, and of those only 56 were unsuccessful attempts; however, there were 6,427 unintentional homicides. Assaults totaled at 46,367, of which 1,423 were rapes. There were 27,014 robberies, of which 9,511 were major thefts. Of the total thefts, 36,499, about 29,089 were automobile thefts and 32,682 were burglaries. Total recorded frauds for Colombia in 1997 were at 2,466 and embezzlements were at 2,318. Drug offenses claim a total of 14,596. Bribery crimes totaled forty.

Out of all the crimes committed or attempted, 114,515 people were brought into initial formal contact with the police and/or the criminal justice system; being suspected, arrested, and cautioned were included as initial formal contacts. From these suspects, 9,287 were female and 105,228 were male. There were 105,231 adults and 9,284 juveniles. Of the crimes committed and people brought to trial, 135,220 were prosecuted (the discrepancy between the total suspected of crimes and those prosecuted vary for different reasons, one being that a suspect may have been brought in more than once for different charges).

In 2002 there were 28,230 homicides and 2,931 kidnappings. Of those kidnapped, 236 were rescued. In 2003 the National Police statistics claimed that homicides dropped by a quarter and kidnappings by a third compared to the previous year.

### CORRECTIONAL SYSTEM

Colombia uses an inquisitorial legal system, which is where the court is actively involved in deciding the facts of the case. Legal assistance is supplied and appeals are submitted by lawyers.

**History of Penal Codes/Correctional System Laws.** Prisons in Colombia have been around since 1633, when women were imprisoned after being accused of witchcraft. With colonization came the necessity for laws; in 1837 a penal code was decreed, then rewritten in 1858 and 1873. The 1886 constitution restored the 1858 penal code (with some amendments). In 1938 the present code came into effect. Colombia's constitution has undergone several changes and has been influenced by many, especially France's Napoleonic Code. Capital punishment was abolished by the 1863 constitution and again by the 1991 constitution; also written into the 1991 constitution is the prohibition of exile, life imprisonment, and extradition (especially for drug-related offenses).

**Prison Conditions.** Overcrowding is a large problem with the Colombian prisons. Because of this overcrowd-

ing, many prisoners have to sleep in the bathrooms. Another major problem with the prisons is the mishandling of prisoners by guards and other prisoners.

Prisoners receive three meals a day and can prepare their own meals with special permission, and when there is not enough food to go around, the prisoners must pay. There are cold showers every day, but there are no private bathrooms, and long hair, along with facial hair, is banned for both sexes. There are no ambulance services and not enough medical assistance personnel. There are opportunities for work such as washing clothes, but there is not always enough work for everyone. Prisoners have access to money through personal prisoner accounts through the consular office, which can be used to buy things from the cafeteria. Prisoners are allowed weekly visits from three family members. Marital visits may occur once a month and visits (of both kinds) may be suspended. Prisoners sometimes have to pay to receive their mail, but prison authorities must be present when prisoners open anything that is suspicious. Correspondence courses are available for educating prisoners, but it is not always possible to pursue such a course because the studies must be done during the prisoner's free time and it is not always possible for the exams to be administered in prison.

These are, at best, idealized possibilities and realities. What is actually occurring in the prison systems is much more horrible. There is supplying of weapons to prisoners from guards and military personnel to execute extremists and other radical political party members as well as personal enemies. Guards themselves will beat and abuse prisoners. Political prisoners are imprisoned for nothing more than believing in something or even living in an area considered to be politically dangerous. There are several human rights groups involved in political prisoners rights such as the Committee in Solidarity with Political Prisoners.

**Prison Statistics.** The total of people incarcerated per 100,000 inhabitants was 104.96 (42,028 people, both adults and juveniles), which is the same total for convicted persons admitted to prison in the same year. Of the total number of convicted prisoners, 2,520 were female and 54 were foreigners.

The total number of adult prisons, excluding temporary jail lockups, totaled 168, with a total of 32,859 beds available for adults. In 1997 there was a shortage of 9,169 beds, presuming that these people were not all in temporary jail lockup. The total number of prison staff was 5,879, with only 8 of these staff members being female.

# Comoros

---

**Official country name:** Union of the Comoros

**Capital:** Moroni

**Geographic description:** A group of islands in the Mozambique Channel in southern Africa

**Population:** 671,247 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The national police is the Gendarmerie headquartered at Moroni with detachments on the other islands. The force is under the Ministry of the Interior. The authority of the national police in the outer islands is at best tenuous.

### Police Statistics.

- Total Police Personnel: 608
- Population per Police Officer: 1,104

## CORRECTIONAL SYSTEM

Prisons are administered by the director of the penitentiary administration under the Ministry of the Interior.

**Prison Conditions.** Prison conditions are substandard and are characterized by poor sanitation, overcrowding, inadequate medical facilities, and poor diet. Juveniles are exempt from imprisonment. Female inmates are kept separate from males but pretrial detainees are housed with convicted felons.

**Prison Statistics.** The total prison population is 200, of which some 100 are pretrial detainees. The prison population is 30 per 100,000 population.

*George Thomas Kurian*

# Congo, Democratic Republic of the

---

**Official country name:** Democratic Republic of the Congo

**Capital:** Kinshasa

**Geographic description:** The largest country in central Africa occupying most of the Congo River basin

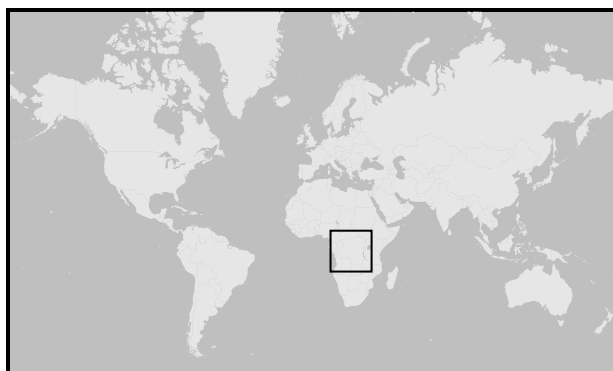

**Population:** 60,085,804 (est. 2005)

## LAW ENFORCEMENT

**History.** Under its original organization the colonial Force Publique combined the functions of a police force and an army, and this dual role was retained unchanged until shortly after World War I. At that time, the Belgians reorganized the force and created a mixed organization composed of Garrison Troops for general military purposes and Territorial Service Troops for police duties. Although they remained an integral part of the Force Publique and could revert to the direct command of the military commander when needed, the Territorial Service Troops were deployed throughout the colony and, under the command of the provincial governors, primarily performed a constabulary function.

The Territorial Service troops became the Gendarmerie in 1959 and, following independence a year later, were incorporated into the Armée Nationale Congolese (ANC). The strength of the Gendarmerie at independence was about 3,000, but almost all the officers and many of the noncommissioned officers were Belgians. Most the Belgians in the Gendarmerie left the country in the wake of ANC mutinies and a general European exodus, and the Gendarmerie found itself,

almost overnight, entirely Africanized and depleted of its top brass. Besides the Gendarmerie, two other police forces—the Chief's Police and the Territorial Police—existed under colonial rule and were carried into post-independence Congo.

The Chief's Police were rural police forces used to maintain order as well as to fulfill the functions of messengers, jailors, and court attendants. Although these small police units were uniformed, they did not carry firearms, their pay was low, and they received practically no training. The Territorial Police was a more formal organization and at independence numbered more than 6,000 troops stationed throughout the country. Each province administered and supported its own force, which in most cases was officered by former Belgian policemen. Besides the conventional mission of maintaining law and order, the Territorial Police operated prisons, guarded public buildings, and reinforced the Chief's Police when needed. Detachments of the

Territorial Police were permanently located in the provincial capitals and performed all the civil police functions of a municipal force. Territorial Police personnel were uniformed and armed, and recruits received six months training before being assigned. In the mining areas of Katanga, a special police force recruited, financed and controlled by the Union Minière de Haute-Katanga policed mines and the camps but were agents of the company rather than the colonial administration.

After the departure of the Belgians, the Territorial Police all but disintegrated. Many policemen deserted to join the rebels. The police system had to be rebuilt over the next four years with the help of the United Nations, Nigeria, Belgium, and the United States. Nigeria and Belgium sent in experienced police advisers, and the United States undertook a broad assistance program to provide specialized training as well as necessary arms and equipment.

The task of restoring an effective police system was exacerbated by the continuing disorder during the mid-1960s and by the increase in the number of provinces from six to twenty-one. Each new province hastened to form its own police force, and the shortage of trained personnel led to serious problems. After the Mobutu coup, the number of provinces was cut from twenty-one to eight, thus reducing the size of the police bureaucracy and allowing the concentration of trained personnel in fewer establishments. The most noteworthy development, however, was the enactment of laws in 1966 nationalizing all existing police forces under the centralized control of what was then known as the Ministry of the Interior and standardizing police organization and equipment. Ministries were later transformed into state commissions.

The 1966 laws that established the National Police gave this unit responsibility for all police functions in both urban and rural areas. The strength of the force was set at 20,000, and by 1970 it was 22,000 strong.

Operating forces of the National Police were divided into nine detachments, one for each province and one for the capital. Although the central authority was maintained at Kinshasa, the detachments stationed in the various cities were under the command of a police commissioner, who was directly responsible to the mayor. In cases of major breaches of the peace, such as riots, the mayor had the authority to request Gendarmerie units to supplement the police.

The laws established a system of ranks comparable to that of the armed forces. The personnel authorization provided for 1,400 officers and 6,600 noncommissioned officers. The top police rank of inspector general was equivalent to a brigadier general in the army. Enlistment was voluntary, and women were admitted in small numbers. Training, mostly by Belgian instructors, was conducted at Kinshasa and Lubumbashi.

On August 1, 1972, President Mobutu Sese Seko dissolved the National Police and transferred its functions to the National Gendarmerie. By two edict laws—Number 72-031 of July 31, 1972, and Number 71-041 of August 30, 1972—Mobutu decreed the makeup of the National Gendarmerie, which assumed the role of the National Police. The change was not merely cosmetic, as was the case with many of Mobutu's other administrative changes. Police jurisdiction was taken away from the Ministry of the Interior and restored to the Ministry of Defense in a return to the concept of the colonial Force Publique.

While the result of the change was a concentration of power in the hands of the president, maintenance of law and order became more difficult at the lower levels. Whereas before the merger the mayor had direct authority over a police detachment, this was not the case with the Gendarmerie. Instead of issuing an order, the mayor had to send in a request to the local commander that, more often than not, went unanswered. As a result, urban authorities turned to the local disciplinary brigade, the Youth of the Popular Movement of the Revolution, which was not intended to act as general police but which had been formed to maintain discipline in the party. In many cases the disciplinary brigades usurped the regular function of the Gendarmerie.

After the fall of Mobutu and the seizure of power by Joseph Kabila, the National Police was revived and placed under the Ministry of the Interior.

**Structure and Organization.** The national government has control over only some areas of the country. The rest are controlled by rebel forces drawn from neighboring countries. Civil order is maintained only sporadically.

Similar to the structure that prevailed before 1972, the National Police is headed by a chief commissioner, who reports directly to the Ministry of the Interior and the president. The police are divided into divisions and brigades, apart from specialized services. Each of the major towns has a communal police force. It is usually under the control of the mayor, although in larger towns the force is headed by a commissioner who is an officer of the Judicial Police. In criminal matters the police work under the direction of the provincial prosecutor. The larger units have special sections dealing with criminal and traffic offenses as well as uniformed patrols.

The Judicial or Criminal Police is commanded by a general commissioner under the Ministry of Justice. Its personnel operate under the authority and control of the public prosecutor. The Judicial Police deal only with the most serious crimes. Each of the Judicial Police brigades is headed by a commissioner, who is in charge of criminal investigations and who assists the public prosecutor in preparing cases for the courts.

*Protestors are arrested by riot police in Kinshasa, Democratic Republic of Congo, January 10, 2005. Thousands of demonstrators were protesting a government decision to delay national elections in Congo's capital. Security forces reacted by firing bullets and tear gas into the crowds, killing at least three people. AP IMAGES.*

The Rural Police are stationed in small towns and villages. Each unit may consist of one or more constables. Grouped into brigades, rural police constables are responsible to the mayor for general duties and to the public prosecutor for criminal matters.

**Education and Training.** The civil war has made it difficult for the government to recruit trained personnel for police work. Depending on local conditions, able-bodied men and children are conscripted and forced to serve, often without regular pay. Only minimal training, mostly in the use of antiquated firearms, is provided. There is a Police Training College in Kinshasa, a legacy of colonial days, but it lacks professional teachers and equipment.

#### **Police Statistics.**

- Total Police Personnel: 57,754
- Population per Police Officer: 910

#### **HUMAN RIGHTS**

Both the government security forces and the rebel armies commit serious human rights abuses, particularly in the eastern part of the country and in the Ituri area. The

rebels are responsible for large-scale killings, cannibalism, burning of entire villages, disappearances, torture, rape, dismemberment, mutilation, extortion, robbery, and forcible recruitment of child soldiers. In many places there is no organized law enforcement. Those who possess weapons often control the local population, terrorizing them and extorting money, goods, and services. In government areas detention without charge is a serious problem.

#### **CORRECTIONAL SYSTEM**

The basis of Congolese criminal law is the 1940 penal code developed by the Belgians.

The administration of prisons is the responsibility of the commissioner of prisons. The major penitentiaries are in the regional capitals, while smaller prisons and detention centers are in the other large towns. Some detention centers are located in police stations, court buildings, and military bases. The main prisons are the Makala National Penitentiary and Reeducation Center and the Rururu Prison in Bas-Congo.

**Prison Conditions.** Conditions in the larger prisons have improved in areas where the central government has reestablished control. Inmates in these prisons receive mattresses and straw mats. Although medical care

remains inadequate, prison doctors are available. Families are allowed to bring food to their relatives in prison, but guards continue to demand bribes to receive small favors. Conditions in the smaller prisons, however, remain harsh. Usually, there are no toilets, mattresses, or medical care; even light, air, and water are scarce. Prisoners are often beaten and tortured. Visitors are barred and petty corruption is common. Conditions are often worse in prisons operated illegally by the security services. In areas not under government control, prisoners are abused and tor-

tured by rebel forces and foreign troops. Inmates are placed in closed metal containers and then beaten and tortured. A number of prisoners have died of suffocation, dehydration, and exhaustion after being sealed inside such containers without food, ventilation, or water. Detainees are forced to sleep on cement or dirt floors without bedding and without access to sanitation or potable water.

*George Thomas Kurian*

# Congo, Republic of the

---

**Official country name:** Republic of the Congo

**Capital:** Brazzaville

**Geographic description:** An equatorial country on the west coast of central Africa

**Population:** 3,039,126 (est. 2005)

## LAW ENFORCEMENT

**History.** The National Gendarmerie, heir to the French Gendarmerie, was organized in 1961 as an integral part of the army with a strength of about 500 men. Before 1969 the Gendarmerie headquarters in Brazzaville controlled its territorial units through three subordinate field headquarters: the Southern Command at Pointe-Noire and the Central and Northern Commands at Brazzaville. Additional mobile platoons were located at each command headquarters for use as reserve strike forces during emergencies. In 1969 the territorial organization was modified to conform to the six military zones. The three commands were abolished and the Gendarmerie units were redistributed among the six military zones. Mobile reserve units were retained at Brazzaville, Pointe-Noire, Dolisie, and Jacob. The Gendarmerie command was integrated into that of the military by placing the senior Gendarmerie unit commander under the authority of the military zone commander.

**Structure and Organization.** The police and security forces of Congo consist of the National Gendarmerie and the Sûreté Nationale. The Gendarmerie is a lightly

armed provincial or state police based on the French model. The Sûreté Nationale is a relatively small civilian force and investigative unit. It is also known as the National Police or Security Service. It carries out regular urban police duties and is also in charge of immigration control, fraud, black marketing, and certain crimes against the state. It is part of the Directorate General of Security Services under the office of the presidency. The police are also responsible for the operation of the civil defense and the fire department. Motorized elements are equipped with light trucks and jeeps.

**Education and Training.** Officers are trained at the National Police School in Brazzaville and in the French police academies.

## Police Statistics.

- Total Police Personnel: 4,280
- Population per Police Officer: 710

## HUMAN RIGHTS

Congo has been through two civil wars and as a result the human rights situation has deteriorated considerably. The security forces, as well as the police, are responsible for preying on the people and they engage in summary executions, rape, beatings, arbitrary arrest and detention, looting, theft, and solicitation of bribes. There are no means of disciplining or controlling wayward policemen who are charged with these abuses.

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 32. Of which:

- Murder: 1.5
- Assault: 4.7
- Burglary: 0.2
- Automobile Theft: 0.2

## CORRECTIONAL SYSTEM

The penal system consists of institutions for both adult offenders and juveniles. The prisons are in the larger towns such as Brazzaville, Pointe-Noire, Fort-Rousset, Ouessou, Gamboma, Owando, Djambala, and Mossendjo. Many detainees are held in police stations.

**Prison Conditions.** Prisoners are not separated by gender, age, or status. Pretrial detainees are held with hardened criminals. Detainees held in police stations as well as prisons are subject to beatings, overcrowding, extortion, and other forms of inhuman and degrading treatment.

**Prison Statistics.** The Prison Administration of the Ministry of Justice runs 5 national penitentiaries with 918 inmates. The prison population rate is 38 per 100,000 population.

*George Thomas Kurian*

# Cook Islands

---

**Official country name:** Cook Islands

**Capital:** Avarua

**Geographic description:** A group of islands in the South Pacific Ocean

**Population:** 21,388 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** Under the authority of the prime minister, the minister of police is responsible for the maintenance of law and order. He is assisted by the chief of police headquartered in Avarua. Most of the policemen are on Rarotonga, and many outlying islands have no police presence at all or, at best, are served by a single constable. All policemen are natives.

**Education and Training.** Selected members are sent to New Zealand for training and after their return are assigned to conduct in-service training for their fellow officers at a small school established at the police headquarters. Courses last about one week and provide additional information by the distribution of all lectures to police in outer areas. Mobile training schools also tour the islands periodically. In addition, some members of the force are brought to Rarotonga each year for refresher training.

**Uniforms and Weapons.** Police officers wear short-sleeved shorts and slacks of khaki cotton drill, a red tie, brown shoes, and a peaked cap of matching khaki color. They are not armed with either firearms or batons, but each officer is issued a pair of handcuffs.

## CORRECTIONAL SYSTEM

The traditional practice of controlling public behavior through social sanctions imposed by the family and local village councils reduces the need for formal penal institutions. In fact, there is only one correctional facility: a plantation at Arorangi that produces commercial crops. Its official capacity is sixty-eight, but the occupancy level is only one-third. Prisoners fulfill their sentences by working on the plantation.

**Prison Statistics.** The total prison population is 19, yielding a prison population rate of 90 per 100,000 population. Of the total prison population, 5.3 percent are pretrial detainees and 5.3 percent are female.

*George Thomas Kurian*

# Costa Rica

---

**Official country name:** Republic of Costa Rica

**Capital:** San José

**Geographic description:** A Central American country bordering both the Caribbean Sea and the North Pacific Ocean

**Population:** 4,016,173 (est. 2005)

## LAW ENFORCEMENT

**History.** Costa Rica is one of the few nations in the world that has renounced a national army. Its security forces are limited to the Town and Village Police Force and to a small well-trained constabulary known as the Guardia Civil (Civil Guard), an organization made up entirely of volunteers. Its elimination of the military establishment and the small size of its police force are explained by a number of factors: the low incidence of crime, the law-abiding nature of the Costa Rican people, a court system respected for its integrity and efficiency, and freedom from political violence, turbulence, and anarchy.

**Structure and Organization.** The structure of the police force is determined by the constitution, which directs the president to maintain “a necessary public force.” The president of the republic is designated the commander in chief of all public forces. Law enforcement responsibilities are dispersed among many agencies as a deterrent against possible misuse. The largest of these agencies is the Ministry of Public Security. There is no top-level supervisory staff, and the operational coordination

among the various law enforcement agencies is left to the local commanders. Four separate ministries are involved with various aspects of public order and security, each with its functional areas. These are the Presidency (Special Intervention and Police Reserve), Ministry of Public Security (Civil Guard, Rural Guard, Border Police, Drug Control Police, and Immigration and Alien Affairs Police), Ministry of Justice (Correctional Police), and Ministry of Public Works and Transportation (Transport Police).

The Civil Guard, which is the senior element of the police forces, has a Presidential Guard, a largely ceremonial unit. It also operates a small air and maritime force, and it may be transformed in the case of a national emergency or external threat into the nucleus of a national army. The Civil Guard performs standard law-enforcement functions: prevention and detection of crime, patrolling streets and highways, and control of traffic. The Civil Guard is under the control of the Ministry of Public Security through its director general.

The minister is concerned primarily with policy and the director general with day-to-day operations. Besides the direct supervision of the Civil Guard, the director general has a number of staff and operational responsibilities, such as plans, operations, and intelligence. In the Operations Section he directs the detective force, traffic force, transport maintenance, communications, and the bands. The minister has a principal assistant, designated an administrative supervisor, whose responsibilities include personnel, supply, budgets, medical services, and immigration control. Two other ministers have jurisdiction over certain Civil Guard activities. The minister of government is in charge of budgetary allocations for supplies and equipment. The minister of the presidency has jurisdiction over the National Police School, which recruits and trains police officers at all levels.

The Civil Guard is responsible for law enforcement in the national capital and six provincial capitals. It is organized along military lines, using military titles and terminology and its equipment is designed primarily for tactical military rather than civil police action. Most of its equipment is of U.S. origin and many of its officers are trained in the United States.

The grade structure for both officers and noncommissioned officers parallels that of the U.S. Army but offers no grade higher than colonel, which is held by the director. His assistant holds the rank of lieutenant colonel. Officers in charge of service units are designated first or second commanders. In the noncommissioned officer category, the grades of senior and chief master sergeants are not established. In 2001 new civilian ranks were introduced into the force.

The Civil Guard is organized into companies that range from 80 to 350 men, generally averaging approximately 100. Normally, about half of the Civil Guard's total personnel are stationed in San José. Two companies, with a complement of 900 people, are assigned to police duties in the city. They are augmented by a radio patrol unit, which is a permanent mobile strike force. Also permanently stationed in San José is the Presidential Guard. This is an elite corps whose sole function is to guard the person and palace of the president. This is a crack company that admits only the cream of the crop and is generally considered to be the best-trained unit in the force.

A third Civil Guard company, stationed in the capital on a rotating basis, performs no standard duties but is engaged in full-time training. At the conclusion of the training cycle, its personnel are assigned to regular duty and replaced by those of another company. The company in training serves as a ready reserve and is considered to be on call for use in case of an emergency or for dispatch to any threatened area. It is also charged with the store of

arms and ammunition of the entire Civil Guard. This involves repair, storage, and issue of weapons.

Each of the six provincial companies constitutes the police force of the capital of its respective province. These companies are loosely supervised on a national level by the director general but distance from the capital and dearth of supervisory personnel result in considerable degree of autonomy and independence in action. Companies are rotated periodically between mountain and coastal provinces and each gets its turn to participate in the concerted training program.

The staff element of the Civil Guard is directly under the director general in San José. It determines policy and directs operations, and its services are available not only to the Civil Guard but to all police agencies throughout the nation through the Plans and Operations Section and the Intelligence Section. The Civil Guard also operates police auxiliary services, such as communications, detection and investigation, traffic control, motor maintenance, and bands. Another staff responsibility is the Air and Sea Force, which operates a few coastal patrol boats and light aircraft. Communications are handled by the Department of Radio Communications, which operates all police radio networks linking the headquarters with each of the six provincial companies. The Detective Force is a plainclothes detective organization that is responsible for all criminal investigation on a nationwide basis. The Traffic Force regulates and controls traffic on all roads and highways, licenses vehicles and operators, and enforces traffic laws. The Central Traffic Court handles all traffic violations. The Civil Guard's bands provide music for ceremonies and official concerts. It is in charge of the School of Police Music, a sixty-piece band in San José, and a thirty-piece band in each of the provincial capitals.

Besides the regular Civil Guard, there is a voluntary reserve, made up mostly of teenagers who meet weekly for drill and instruction by the regular forces. They are furnished a uniform with a special insignia, a shoulder patch showing a black panther in an orange circle. Sometimes, Civil Guard members participate in civic and development projects.

**Special Police.** Besides the Civil Guard, there are three other police forces: the Town and Village Police, the Fiscal Guard comprising the Treasury Police and the Customs Police, and the Judicial Police.

The Town and Village Police is the law enforcement agency in the rural and smaller urban communities. It operates under the Ministry of Government. Besides regular police duties, it is assigned judicial authority, in which it conducts summary trials for violations of the Police Code and carries out any sentences imposed. In many outlying communities the police are the only representatives of the government, and people turn to them

**Red Cross workers and Costa Rican police prepare to search for the bodies of two U.S. children after a seaplane crashed 180 miles northwest of San José, July 18, 2005. The crash occurred near the Flamingo Beach Marina on the Pacific coast and the children's mother was also killed in accident. AP IMAGES.**

for public services of all kinds. A police agent becomes the arbiter of local disputes and the focal point for the dissemination of government information and mail and telegraph delivery. In some small communities with high illegitimacy rates, the police are often called on to determine paternity and care for abandoned children.

The administration of the Town and Village Police is along political and administrative lines. Each of the seven provinces are divided into two or more cantons, which in turn consist of two or more districts. Overall, police supervision is exercised by an inspector general appointed by the Minister of Government and six locally appointed provincial inspectors, but operational authority lies with the provincial governor. However, the governor has no police authority within his own capital where the power rests with the Civil Guard controlled by San José.

The police chief (*jefe politico*) at the canton level and the principal police agent (*agente principal de policia*) in the district constitute the police executives in their respective areas. They act as a combination mayor, magistrate, and police chief rolled into one. In some districts

the principal police agent also serves as the postmaster. In addition, there are 1,500 auxiliary agents (*agentes auxiliares*) who perform basic police duties at the canton or district level or who are scattered in one or more smaller villages or hamlets.

The Fiscal Guard comprises two units: the Treasury Police and the Customs Guard. It functions under the Ministry of Economy and Finance. The Treasury Police is the only law enforcement agency with legal authority to investigate political matters and to enter and search buildings. Its responsibilities include control of narcotics, intoxicants, countersubversion, cattle inspection, contraband activities, and protection and conservation of natural resources. It maintains detachments in fifty-five locations throughout the country, and its members patrol their areas by foot, animal transport, and motor vehicle. The Customs Police monitors the collection of customs fees and enforces regulations on imports and exports.

The Judicial Police is a small force under the control of the Supreme Court. It is administratively part of the Ministry of Justice.

**Education and Training.** All police positions are appointive and there is no assured tenure for personnel. This means that there is at least a 40 percent turnover with every incoming administration. The 1994 Police Code is designed to depoliticize and professionalize the police force. The Law for Strengthening the Civilian Police replaces military ranks with civilian titles and establishes a promotion system linked to the officer's educational attainment. The Civil Guard is considered to be one of the best-trained police forces in Latin America. The National Police Academy in San José trains all officers and noncommissioned officers. Every year a group of Guardsmen receive training in the United States. The Federal Bureau of Investigation runs one of its Law Enforcement Training Academies in San José.

**Uniforms and Weapons.** The uniforms and insignia of the police forces are virtually indistinguishable from those of their U.S. counterparts. The garrison uniform is olive-green wool in winter and khaki cotton in summer. There are blue dress and white dress uniforms for officers and a short white jacket for enlisted men for ceremonial occasions. All ranks are supplied with battle dress and fatigues. Headgear ranges from the peaked service cap to a fatigue hat or steel helmet. The various police units wear the same uniforms with minor changes in insignia, and the Traffic Police add a seasonal uniform consisting of a white shirt and green trousers.

Both officers and noncommissioned officers use U.S. Army-grade insignia. Insignia are worn as in the U.S. practice, one exception being the officer's dress blue, where the emblem of rank is worn on the sleeve cuff instead of the shoulder strap. Officers and men also display their insignia of rank in front of their headgear. Special units, such as signal, medical, and ordnance, have their own insignia.

#### Police Statistics.

- Total Police Personnel: 8,250
- Population per Police Officer: 486

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 868. Of which:

- Murder: 5.3
- Assault: 11.1
- Burglary: 232.4
- Automobile Theft: 263

#### CORRECTIONAL SYSTEM

The prison system is composed of two national penitentiaries and a number of prisons and detention facilities

distributed throughout the country. The penitentiaries are run by the Ministry of Social Welfare, while the subordinate facilities are operated by the local authorities. The Central Penitentiary is in San José and is used as a detention facility for persons awaiting trial and as a maximum-security prison for dangerous criminals. The San Lucas penitentiary, on an island in the Gulf of Nicoya, southwest of Puntarenas, is a model institution and a minimum-security prison for less serious offenders. Surrounded by shark-infested waters, it was initially believed to be escape-proof until a series of successful escapes in the early 1960s led to its conversion to a prison-farm type of facility emphasizing rehabilitation rather than punishment. Families are permitted to visit inmates each week, and conjugal visits for husbands and wives are authorized.

Outside these two penitentiaries, the prison system is loosely organized with little centralized direction or control. Local authorities have a free hand in methods and procedures. There are jails and detention facilities in most communities down to the canton level, and these range from simple enclosures with little security and few amenities to well-constructed buildings with sound protection and adequate accommodations.

The Civil Guard maintains a jail in each of the provincial capitals, and the political chief is responsible for facilities at the cantonal level. The size and character of these facilities is determined by the size of the community and its crime rate.

**Prison Conditions.** In all prisons the rising crime rate has created problems of overcrowding, unsanitary conditions, and insecurity. The National Criminology Institute reported a total prison population of 11,858 in 2002, an overpopulation of 839. There is severe overcrowding in the smaller jails. The most overcrowded prisons are Liberia with 90 percent and Heredia with 87 percent. Five additional facilities have been opened and three have been renovated since 1996 as part of a plan to reduce overcrowding. New facilities have been opened in Guacimo and existing facilities have been expanded in San Carlos and Cartago.

Under the Penal Code's Organic Judicial Law magistrates are required to visit jails in their jurisdictional area at least once a week to hear complaints and confer with the wardens. Prison conditions are considered generally fair and meet international standards. Prisoners are separated by sex and by level of security, and convicted prisoners are kept apart from most pretrial detainees. An ombudsman investigates complaints of prisoner abuse and refers serious cases to the public prosecutor. Illegal narcotics are readily available in prisons, and drug use is common.

**Prison Statistics.**

- Total Prison Population: 7,619
- Prison Population Rate per 100,000: 177
- Pretrial Detainees: 39.5%
- Female Prisoners: 6.8
- Juvenile Prisoners: 0.7%
- Number of Prisons: 26
- Official Capacity of the Prison System: 6,996
- Occupancy Level: 108.9%

*George Thomas Kurian*

# Côte d'Ivoire

---

**Official country name:** Republic of Côte d'Ivoire

**Capital:** Yamoussoukro

**Geographic description:** A country in West Africa on the Gulf of Guinea, bounded on the east by Ghana, on the north by Burkina Faso and Mali, and on the west by Guinea and Liberia

**Population:** 17,298,040 (est. 2005)

## LAW ENFORCEMENT

**History.** The Gendarmerie is the oldest branch of Ivorian police, dating back to 1854, when the metropolitan French service was extended to West Africa and a Senegal detachment with jurisdiction over the present Côte d'Ivoire was formed. Initially, it was officered exclusively by Frenchmen and consisted of local militia strengthened by cadres of metropolitan Gendarmerie. In 1900 the militia gave way to an organized corps of professional policemen and became the French Gendarmerie of West Africa, remaining as such until independence. In 1912 Africans were first admitted to officer rank. Throughout its colonial existence the Gendarmerie enjoyed the status of an elite corps and was generally respected and admired. Since independence it has retained this stature, and in manning, equipment, and appropriations it generally appears to be somewhat favored over the Sûreté.

The forerunners of the Sûreté Nationale were local police forces known as *gardes-cercles*, formed at administrative centers to supplement the Gendarmerie, who were too few in number to handle minor police matters.

The local forces were not supported financially by the central government, and the authority of each was limited to the immediate area. Some moves were made to absorb these separate units into the centrally controlled Gendarmerie, but, in time, the distinct functions of the local and territorial police came to be recognized, and the two branches became permanent institutions.

The metropolitan Sûreté extended its jurisdiction to the Afrique Occidentale Française (Federation of French West Africa) in 1924. Under the direction of an inspector general headquartered at Dakar in Senegal, police units were designated Services Extérieurs and stationed in each colony under a single local authority. The various forces were organized into urban (*commissariats*) and rural departments (*postes de police*.)

Following independence, the colonial police organization was retained intact by Côte d'Ivoire. All top positions remained in the hands of Frenchmen until 1962, when an Ivorian was named to the top post as

police commissioner of Abidjan and another Ivorian was named director of the Sûreté. In the following years the Sûreté has been augmented by several new posts, notably at Abengourou and Adjame. By 1962 most major towns had Sûreté units, including urban stations at Beoumi, Bouaffle, and Divo, and mobile brigades at Seguela and Korhogo. In addition, the Sûreté had been given responsibility for border control, with eight stations at strategic border sites.

**Structure and Organization.** Responsibility for internal security is shared by three ministries in a coordinated, multilayered pattern adapted from the French colonial system. The Ministry of the Interior looks after the territorial and local police force known as the Sûreté Nationale; the Ministry of Internal Security is charged with state security and national police functions; and the Ministry of Defense controls the Gendarmerie.

Côte d'Ivoire has three separate police organizations: the Gendarmerie Nationale, the Sûreté Nationale, and the National Security Police. All three forces are patterned closely after the police of metropolitan France, organized along French lines and standards, and steeped in French doctrine and practice.

**Gendarmerie.** For administrative purposes, the Gendarmerie is part of the defense establishment and is separate and distinct from the police. Functionally, however, it is virtually indistinguishable from the police. Like the other military services, the Gendarmerie is under the Minister of Defense but is normally administered and controlled through a chain of command outside the military. Its commandant is directly subordinate to the Minister of Defense, except in times of emergency, when he is under the command of the armed forces' chief of staff. The Gendarmerie is manned entirely by voluntary enlistees; many of its members are army veterans who are encouraged to enter its ranks after completing their military service. Officially designated as the senior service, the Gendarmerie takes precedence over all other services. It furnishes ceremonial units for state occasions and provides military police for the other branches of the armed forces.

Operational command is exercised on a territorial basis through commandants assigned to each of the country's four administrative departments. Organization conforms to the metropolitan system and is based on the legion, one of which is assigned to each of the four departments. Legions have no fixed strength or echelons but consist of a variable number of subordinate units, based on the needs of the departments where they serve. In general, each legion is composed of two elements: departmental companies and mobile squadrons.

Departmental companies, comprising a variable number of brigades, man fixed stations and carry out patrolling, investigative, and special duties. Mobile squadrons, consisting of a number of platoons, constitute reserve elements for quelling public disturbances.

The grade structure of the Gendarmerie closely parallels that of the army, but a corporal is designated as brigadier, a sergeant is *marechal des logis* and privates are called *gardes*. Specialists, such as *gardes clarion* for bugler and *garde chauffeur* for a driver, attach a descriptive term to their title.

The Gendarmerie uniforms are entirely of French design with only minor changes to accommodate African character. The basic uniform is khaki shorts or trousers. French-style shoulder boards are worn with a trefoil braid. The headgear is a peaked garrison cap with the distinctive device of a vertical bayonet.

**Sûreté Nationale.** The Sûreté Nationale is the proper police service under the direct administrative authority of the Ministry of the Interior. It is headed by a director appointed by the president. Headquarters maintains firm control over policy and operations, although the field units have a considerable degree of autonomy.

Besides subsections charged with inspection and administration, the Sûreté maintains a small Directorate for Territorial Security, whose members work directly out of the headquarters. These plainclothes agents constitute the criminal investigation department. They are also charged with identification, public morals, and anti-vice activities, the latter principally in the major cities. Other units of the Sûreté include the Antiriot Brigade and the Republican Security Company.

Directly below the Sûreté headquarters, active police forces are grouped under a central Prefecture de Police, headed by a director. The senior police officials, regardless of their operational station, are members of the Corps of Officers (including commissioners) or Corps of Inspectors of the Prefecture. Normally, a police officer or inspector in an outlying station would have little contact with the office of the central prefecture unless summoned to the headquarters.

The central prefecture is in effect the command element of the active police forces, which comprise the auxiliary police, the Police School, and the Service de Police. The auxiliary elements consist of small units assigned to specialist duties, such as airport police, traffic control, sanitation, and border patrol. The bulk of these forces are assigned to the Abidjan area.

The Service de Police, sometimes called Police d'État, is the principal component of the law enforcement system and includes both urban and rural forces stationed throughout the country. Its uniformed

members are the *gardiens de la paix*, or peace officers, and include patrolmen on the beat, country constables, defenders of the law, and protectors of people and property. They also function as police *judiciaire*, that is, criminal police authorized to apprehend the lawbreaker and bring him or her before the bar of justice. Generally unarmed, they are only issued weapons during emergencies. They wear a blue uniform with a blue kepi. Badges and piping are in silver.

The *gardiens de la paix* are supervised by officers de paix, who rank below officers de police, the staff officers at the higher echelons. The Service de Police consists of two major components: the Corps Urbains and the Postes de Territoire. The former are the city police departments, ranging in size from a small station commanded by an inspector to stations on the commissariat level headed by a commissioner. If the size warrants, the force is organized into companies, generally commanded by an *officer de paix* or a noncommissioned officer. The company, or in the case of rural police the brigade, is the smallest administrative police unit.

Postes de Territoire are the headquarters of the rural police who patrol the outlying areas. The central station is usually in a small town centrally located in the unit's area of responsibility. Each force consists of mobile brigades (sometimes called mobile intelligence brigades), which conduct regular surveillance of their assigned territory and are ready to move quickly to any threatened locality in an emergency. Most brigades have some motorized equipment and can transport small groups in motorcycles or trucks.

*Gardiens de la paix* make up the bulk of the country's police, accounting for some 10 percent of the overall strength. Vacancies are filled by competitive examinations, for which a diploma indicating completion of elementary education is required.

There are five grades of *gardiens de la paix*. After a recruit has satisfactorily passed his or her *stagiaire*, or probationary period, he or she may move up to fourth-echelon status and from there move progressively to the first echelon, at which point he or she may be appointed a noncommissioned officer. The police noncommissioned officer status closely corresponds to that of the army, with ranks from brigadier (corporal) to adjutant (warrant officer). Within each noncommissioned grade provision is also made for in-grade promotions, also known as echelons. The highest rank a noncommissioned officer can reach is *adjutant chef de let echelon*. From there he or she would have to advance to officer rank, where the system departs from army equivalents and reverts to police designations, from *officer de paix* through *commissaire*.

**The National Security Police.** The National Security Police under the Ministry of Internal Security is an investigative agency with some national law enforcement functions. The various directorates of the National Security Police are responsible for public security, internal and cross-frontier traffic, counterespionage, intelligence gathering, criminal investigation, narcotics and drugs control, and the administration of sixteen national police districts. In the larger cities and towns the National Security Police cooperates with the municipal police forces; in the smaller communities and in rural areas it works with the local police and the National Gendarmerie. The ministry's Regional Security Directorate includes three separate divisions grouping the commissariats for subprefects, major urban centers, and the Frontier Police. The Special Police, the Frontier Police, and the Abidjan Port Police are grouped under the Central Commissariat.

The National Security Police Public Security Directorate consists of the uniformed national police and the Companies for the Security of the Republic (CRS), which are at the immediate disposal of the Minister for Internal Security for deployment throughout the country. In emergencies prefects can call on CRS units for assistance. The other directorates are responsible for intelligence gathering, counterespionage, and criminal investigation.

**Education and Training.** Under the colonial regime most police training was conducted on the job in local units. Selected noncommissioned officers and, in time, officers were sent either to the police school at Dakar or, more selectively, to Paris. Generally, recruit training was undertaken at the local unit level. The training was limited to French personnel who were expected to provide job guidance to the natives.

In 1962, soon after independence, the Centre de Formation Professionnelle de la Police opened in Abidjan to provide a centralized training program and to speed up the Africanization of the officer corps. In 1963 the center became the official police school. Renamed the National Police Academy in 1967, the school graduates nearly 500 officers annually. It also serves as a regional training center for francophone Africa. The academy's basic course of study varies from six months to two years and includes forensic medicine, judicial procedure, criminal investigation, criminology and criminal psychology, police administration, computer technology, and communications. Admission is through direct recruitment or entrance examinations. Candidates for commissioner are required to have credits toward a law degree to gain entrance and to complete their law degree to graduate. Those who fail to do so are admitted to the police officer corps. Commissioners are

also recruited among police officers who fulfill certain length-of-service requirements set by police ordinance. Police officer candidates, who also undergo a two-year training program, are admitted directly to the academy with a bachelor's degree or are recruited by examination from among police officers with at least three years of service.

The training facilities of the Gendarmerie are considered to be among the country's best. Its school at Camy Akouedo, near Abidjan, is a high-caliber institution with a thorough curriculum and excellent physical facilities. Training lasts for about eleven months, at the end of which graduating constables receive a police aptitude certificate and noncommissioned officers receive an equivalent diploma. The academy also offers eight-week in-service training courses for noncommissioned officers and motorcycle police.

#### Police Statistics.

- Total Police Personnel: 3,621
- Population per Police Officer: 4,777

#### HUMAN RIGHTS

Since the beginning of the civil war in Côte d'Ivoire, the human rights situation has deteriorated. In 2002 members of the security forces committed more than 200 extrajudicial killings, and there were also several cases of disappearances. Human rights groups reported the existence of death squads close to top government officials that targeted opposition figures. Several mass graves have been uncovered since the start of the civil war. Arbitrary arrests and detention and beatings of suspects are routine. Security forces particularly target persons of foreign descent, often called Dioulas, who are suspected of assisting the rebels. The police are not held accountable for violations of human rights or for extrajudicial killings. The eight gendarmes who were charged with the Yopougon massacre in 2000 were acquitted by the judge after a token trial.

The human rights record of the rebels is also poor. They killed more than 100 gendarmes and civilians in Bouaké and elsewhere in the north.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 67. Of which:

- Murder: 2.5
- Assault: 13.1
- Burglary: 73.1
- Automobile Theft: 11

#### CORRECTIONAL SYSTEM

The French penal code remains the basis of Ivorian jurisprudence.

The Côte d'Ivoire has thirty-three prisons under the jurisdiction of the Ministry of the Interior. The prison service is headed by a commissioner. The principal prison is the Abidjan Arrest and Correction Center, which houses 5,200 inmates. The two largest prisons at Yopougon, near Abidjan, and Bouaké account for about one-half of the prison population. The other large prisons are at Man, Bouafle, Divo, and Korhogo. A large proportion of the prisoners are expatriate Africans from neighboring countries.

Men and women are held separately, and male minors are held separately from adult men. There is practically no vocational training, and although prisoners routinely perform such tasks as cleaning public markets and maintaining roads, they do little or no gainful work. Prisons serve as punitive and custodial facilities rather than as rehabilitative institutions. The vast majority of the prisoners have no access to legal assistance.

**Prison Conditions.** Because of overcrowding, prisoners brutalize other inmates for sleeping space and rations. The daily food allowance per prisoner is \$0.12 a day, the cost of serving one helping of cornmeal mush. Families often supplement the food ration, and at some prisons inmates grow their own vegetables. The Red Cross helps to feed prisoners without families, and Doctors without Borders supplements the meager medical facilities. There are press reports of a flourishing drug trade and prostitution in the prisons. In 2001 poor treatment and conditions resulted in the death of more than 160 prisoners. Prison conditions for women and children remain difficult. Many female prisoners engage in sexual relations with guards to get food and privileges. There are no health facilities for women inmates and no facilities for taking care of infants who remain with their mothers in prison.

#### Prison Statistics.

- Total Prison Population: 10,355
- Prison Population Rate per 100,000: 62
- Pretrial Detainees: 35.6%
- Female Prisoners: 2.3%
- Juvenile Prisoners: 3.9%
- Number of Prisons: 33

*George Thomas Kurian*

# Croatia

---

**Official country name:** Republic of Croatia

**Capital:** Zagreb

**Geographic description:** A country in southeastern Europe on the eastern side of the Balkan Peninsula occupying most of the Adriatic coast

**Population:** 4,495,904 (est. 2005)

## LAW ENFORCEMENT

**History.** To understand the history of Croatia, one must travel back to the seventh century, when the Croats reached their present homeland, and in 679 entered into a treaty with Pope Agatho and became Christianized during the rule of Prince Viselav in 800. In 852 the name Hrvat (Croat) was recorded in a letter for the first time on the Adriatic coast, and in May 21, 879, Pope John VII blessed the Croatian Prince Branimir, Croatian clergy, and Croatian people in St. Peter's Church in Rome, causing Croatia to be recognized for the first time around the world. In 925 Croatia emerged as a nation-state under Ban Tomislav, who united Pannonian and Dalmatian Croatia and was crowned the first Croatian king. Religiously, Croatia also made strides when in 1094 the bishopric of Zagreb was established under the archdiocese of Ostrogon until 1180 and the archdiocese of Kalocza from 1180 to 1152, when finally Zagreb became, in 1852, an independent archdiocese.

As Croatia began to grow nationally, Croatia and Hungary became allies in 1102 and formed a special union called the Pacta Conventa, where Croatia remained independent but acknowledged the Hungarian king as its

sovereign. Also in 1527 at Cetingrad the Croatian nobility elected Ferdinand of Habsburg, who pledged to uphold the laws and customs of the Croatian kingdom and to defend Croatia from the Ottomans. However, in the nineteenth century Croatia's nationalism was revived and the movement labored to terminate the Germanic and Hungarian rule over Croatia. In 1848 Croats, led by Ban Josip Jelačić, ordered the reorganization of the Habsburg monarchy. Twenty years later, in 1868, the Croatian-Hungarian Treaty was adopted. This treaty politically recognized the Croatian people by granting them their own Parliament and autonomy in education, religion, and judiciary matters. At this time the Croatian language was also recognized as an official language.

In the early 1900s the Kingdom of Croats, Serbs, and Slovenes was formed, which was later called Yugoslavia. This resulted in the disbanding of the Croatian Parliament and the authority that it represented.

In addition, several Croatian representatives were killed in the Belgrade Assembly of 1928. During World War II Germany separated Yugoslavia, thereby allowing for some recognition of Croatia, but the Croatian statehood could not develop because of the dominance of Yugoslavia.

Croatia finally emerged as a sovereign and independent state, and in 1990 the first free democratic elections were held. Franjo Tudjman won the election and became the president of a unified Croatia. Yugoslavia did not want to release its grip on Croatia, which declared independence on October 8, 1991. Bitter fighting continued for the next four years before Serbian armies were mostly removed from the remaining Croatian soil.

**Structure and Organization.** The organization of the Republic of Croatia is based on a political parliamentary democracy. The head of state is the president, who is also the commander in chief of the armed forces. The president is elected for a five-year period. A prime minister heads the government and is responsible to the Croatian Parliament (Sabor), which consists of the House of Representatives (Zastupnicki dom). The House of Representative members serve four-year terms. Because of the history of the Republic of Croatia and its need for independence, a new constitution was adopted on December 22, 1990. The constitution was further amended in November 2000.

Police organization is based on the Police Law of 2000. The General Police Directorate of the Ministry of Interior of the Republic of Croatia consists of a total number of 19,622 police officers. In addition, there are also 1,518 civil servants and civil service employees who are employed within the General Police Directorate. These civil service workers do not have any police powers.

The General Directorate comprises Police Headquarters, Criminal Police Headquarters (organized crime, war crimes, economic crimes, and drug-related crimes), State Border Administration, Security Headquarters, Police Operational and Communications Center, Special Police Headquarters, and Criminal Forensic Center.

The police officers in Croatia can advance through the ranks. These ranks are dependent on their level of education, their years of service, their position, and passing both the exam to achieve a new rank and the yearly evaluations. The following ranks have been established for police officers:

- Chief Police Adviser
- Police Adviser
- Chief Police Inspector
- Independent Police Inspector
- Senior Police Inspector

- Police Inspector
- Senior Police Sergeant
- Police Sergeant
- Senior Police Officer
- Police Officer

**Salaries.** A police officer's salary consists of a base salary that is dependent on the complexity of a police officer's position. There is also an annual increase of 0.5 percent for every year of service. Besides the base salary, there is a supplemental salary that is based on one's rank, effectiveness at work, special working environments, endangerment, and duties. The Croatian government determines the salary scale in conjunction with the degrees of difficulty of a police officer's post.

**Police-Community Relations.** The Croatian police have consistently been working at improving their relations with the community. One of the methods that they have used in developing this relationship is community policing. Instead of using traditional methods, community policing allows the police to develop partnerships with the community it serves. It is really a friendship or bond of trust that will cause the police to better understand a community and thereby make acceptable solutions to problems. One of the community policing methods that the police have used is visiting schools. Also, the relationship between the police and media can have an effect on community policing techniques. The police and media relationship was realized by a *Globus* journalist, Nelija Vrzina, and Korenica's police chief, Drazen Zivcic and their trip to Portugal was organized by the OSCE Mission to Croatia, the Croatian Ministry of Interior, and the Portuguese government. In June 2003 they met with Portuguese police officials and were able to gain a close-up view of the Portuguese community policing system.

**Special Police.** Since 1992 a specialized Border Police Course has been conducted for the police officers at the posts of the state border protection (control and surveillance). Because the Republic of Croatia is not a landlocked country, Croatian police officers are also trained to carry out their activities at sea. After police officers complete basic police training, those who are assigned with protecting the state border (both sea and land or blue and green borders) undergo special training in accordance to the Curricula of Border Police Training. These regulations are closely monitored to provide consistency and protection to the Croatian border.

The border police officers who work at sea have to receive additional maritime training to perform their official duties on police vehicles. The lowest maritime qualification that a police officer operating a police sea

vessel must have is “sailor-engineer.” The exams and certificates for this particular position are orchestrated by the Harbor Master’s Office, which is an organizational unit within the Ministry of Maritime Affairs, Transport, and Communications. To operate larger police sea vessels, police officers attend further courses and take the exams at the Faculties of Maritime Studies, while the respective certificates of completion of studies are issued by the Harbor Master’s Office.

The airport police officers who are stationed at the jobs of operating the X-ray machines are also required to complete professional training for their occupations through the X-ray operators courses that are organized and carried out by the Ministry of the Interior. Their position is to perform protective checkups of passengers and hand baggage. The airport police officers who deal with antiexplosive protection also receive special training for their position through the antiexplosive protection courses that are organized by the Ministry of the Interior. Furthermore, there are professional seminars on management and the implementation of regulations that are organized at the national level at least once a year for the border police management staff.

In addition, the training of service dogs is conducted yearly by the Center for the Training of Dog Handlers and Service Dogs. The center conducts four types of courses: for attacks, for the tracking of humans, for the detection of drugs, and for the detection of explosives. The main objective of these courses is tactical training of teams (dog handlers and service dogs). Approximately 50 percent of the teams have been trained so far of the number envisioned by the Ministry of the Interior.

**Education and Training.** The current system of police education in Croatia consists of several stages. The first stage begins with the admittance of people from the civilian population who are between the ages of nineteen and twenty-five. They start their training at the Police School, which lasts for nine months. Some of these courses may be conducted in German or English. The second stage begins after completing the nine months of the basic education and passing the final exam. At this stage, the police trainee can be employed for about twelve months. During the police trainee stage, the trainees also experience practical training at police stations under mentors for a period of six months. After completion of the trainee stage, the trainees have to take the state-licensing exam, which is mandatory for all future civil servants. On passing the state-licensing exam, the police trainees can now be known as police officers. They now have access to about 100 yearly lectures and different forms of professional training. The training and lecture material is all based on fieldwork. Specialized courses are available to officers who apply to work in traffic police,

*A Croatian police officer secures a location near the British Embassy in Zagreb, after an explosion occurred inside the embassy, September 19, 2005. Investigators said a Croatian criminal, who was employed as a security guard, accidentally detonated a hand grenade in the building’s mailroom and sustained minor injuries. AP IMAGES.*

border police, or criminal police. The certificates that they earn allow them to work in that special area of certification. In addition, there are also courses in police management, instructor training, and foreign languages.

The basic requirements for a border control police officer is the completion of secondary school. This is practical because the educational system in the Republic of Croatia includes at least one foreign language in primary and secondary schools. Therefore, all the border police officers have some basic knowledge of at least one foreign language.

**Uniforms and Weapons.** Most of the police officers use the 9mm caliber PARA handgun. The older handguns, 7.65 Br. mm and 7.62 x 25 mm, are still in use and will be eventually replaced by the 9mm PARA handgun. However, there are some police officers who also have other types of firearms and this includes the police officers of special services. Their various types of equipment

and usage are carefully controlled by the appropriate legal acts.

**Police Statistics.** The regular or basic police are the most numerous with approximately 11,930 officers, the border police with 3,478 officers, and the crime police with 2,931 officers. These figures constitute an occupancy rate of 97.86 percent in the General Police Directorate. There are 20 police administrations and 174 police stations in the Republic of Croatia. This is based on the size of their respective areas, population, crime rates, offenses and misdemeanors, and the characteristics of traffic routes and geographic positions. The headquarters of the General Police Directorate are composed of the Police Directorate, Crime Police Directorate, Borders Directorate, Operation-Communication Center, Special Police Headquarters, Security Office, and Criminal Forensics Center.

**Transportation, Technology, and Communications.** The Croatian police have different types of European-made vehicles at their disposal, and they all meet the necessary standards for successful policing work. All the vehicles are fitted with special equipment that conforms to the European Union standards such as light and sound signaling devices and vehicles equipped for the transport of people who have been arrested. As of 2005 the Ministry of the Interior used approximately 4,649 vehicles.

For the protection of the blue border, the maritime police have seventy-six vessels available: type A with a length longer than 14 meters, type B with a length between 8 and 14 meters, and type C with a length up to 8 meters. There are 5 type A vessels, 17 type B, and 54 type C, with 19 of these being used on inland waters by the border police. Since most of these vessels are outdated and heavily used, the restoration and replacement of new vessels is planned for the future. For example: type C police vehicles that are used for the protection of the state border at sea are not fast enough to intercept the expeditious speedboats that are used by the different types of smugglers. Maritime police officers also oversee the fishing in the area of the Croatian fishing sea and the preserving of hydro archaeological sites from devastation. To maintain surveillance of the blue border, police officers also employ a variety of technical devices such as radars, GPS, binoculars, night-vision devices, radios, and so on. The maritime police force is also assisted by the Croatian Navy Force, which aids in the surveillance of the state border. The Croatian Navy Force uses its stationary radars that cover the entire Croatian sea territory and is able to report any suspicious vehicles or activities to the maritime police, who can then proceed to the reported location at sea.

The monitoring of the green border (hills and forests) is carried out primarily on foot and with car patrols. The police officers use equipment such as vehicles, off-road vehicles, motorcycles, binoculars, night-vision devices, and radios. However, the police do lack the specialized night-surveillance equipment, such as thermo-vision instruments (mobile, stationary, and manual) and a new generation of night-vision devices. Also, the security of the green border is conducted from the air by Special Police helicopters that operate in accordance with a flight schedule. This flight schedule is dependent on the conditions that are presented to the police at different sections of the state border. The police have seven helicopters, which are old and in terrible condition. These helicopters also have no night-flying equipment. Another problem is their location around the larger cities such as Zagreb or Split, which decreases their response time. The German and Slovenian police agencies are aiding the Croatian police in conjunction with the National Action Plan for the Republic of Croatia, which is based on the Stability Pact for Southeastern Europe and in the context of the implementation of the Integrated Border Management Twinning Project for the border police.

There are a number of different forms of communication that are used by the Croatian police force. They include radio communications, routes and data transmission, and the mobile radio-operator networks.

For radio communications, the police use an analogue radio system (handheld, mobile, and stationary radio equipment), both VHF and UHF, which covers the entire area of the Republic of Croatia; a pager radio calling system that covers the area of the Republic of Croatia; and a Tetra digital radio system with deficient coverage, but the system is currently being formed until the analogue radio system is entirely replaced.

The TT-communications of the police incorporate digital MD-110 switchboards that handle both speech signals and fax data transmission and enable communications between computers and computer networks all through the Republic of Croatia. This system can also connect to the public telephone network. There is also a digital MD-45 switchboard that has the most secure form of communications and connects all police administrations and police stations in the Republic of Croatia.

The routes and data transmissions of the police employ multiplexers that are linked to the telecommunication service provider. This links all police administrations with the Ministry of Interior headquarters, and this communication occurs at a speed of 2 Mbps.

The IP communications of the police is based on standard Ethernet 100/10s utilizing the computer networks that are based on a cable infrastructure within the buildings. Police are able to communicate with the

central information system and the Ministry of the Interior via standard terminal devices connecting with a Telnet link or a TCP/IP link.

Finally, standard GSM devices are used to communicate via the mobile radio operators network. According to central computer records, Croatian police make over one million transmissions a day. During peak hours there may be between twenty-five to thirty transmissions per second. Also, during working hours there may be approximately 2,500 of the 5,000 terminals that are active at the same time. To maintain the statistical data, that is, the entering and updating, the Ministry of the Interior operates on two central computers, an IBM 9672/RC6 and an IBM 2064-102.

*Surveillance and Intelligence Gathering.* To protect the national security of the Republic of Croatia, a number of agencies have been formed, such as the Intelligence Agency, the Counterintelligence Agency, and the Military Security Agency. These agencies systematically collect, analyze, process, and evaluate all the information pertinent to national security.

#### HUMAN RIGHTS

According to Human Rights Watch, in comparison to the 1990s, the new Croatian government seems committed to respecting the human rights of its citizens and refugees. The Croatian government has also been cooperating with the International Criminal Tribunal for the former Yugoslavia (ICTY) providing the necessary documentation in relation to Operation Storm and Operation Flash. Both operations in 1995 were offensives against rebel Serbs. ICTY investigators have also been permitted to examine the site of an alleged 1991 massacre of Serb civilians in the town of Gospic. Although over 10,000 Serbs have returned to Croatia, they still seem to suffer discrimination from members of the Croatian Democratic Union, who dominate local authorities. Many chose to leave Croatia and the mistrust between the Croats and Serbs continues.

#### CRIME

**Criminal Identification and Forensics.** Housed within the General Police Directorate is the Criminal Forensics Center, which conducts the technical crime and forensic investigations. The Criminal Forensics Center is in charge of perpetrators, solving the most severe criminal cases, and supervising technical crime investigations in other organizational units of the Ministry of the Interior. The center also participates in the betterment of employees through an ongoing training program that keeps everyone current on technical criminal investigations, regulations, and preliminary investigations in both judicial criminal investigations and in the evidentiary

hearings. The center is also in charge of training the border police in the new methods of counterfeiting and keeping them abreast of the different tactics of protection. These training programs are conducted via seminars, such as the Border Police Seminar or the seminar for RTG operators.

**Organized Crime.** On October 19, 2001, the Republic of Croatia adopted the Act on the Office for the Suppression of Corruption and Organized Crime. The purpose of this act was to create a special entity or office to fight corruption and organized crime. The Organized Crime Department has ten police officers who are managed by the department head. However, there are additional police officers from the other twenty police administrations who are also involved in the suppression of organized crime. Therefore, the total number of police officers involved in resisting organized crime is 276, which includes 49 senior officials. The police officers receive special training in their fight against organized crime through seminars, both local and international, and Police Academy courses.

According to the 2002 statistics, the police and customs confiscated various smuggled or trafficked goods that had an approximate value of 26.5 million HRK (1 HRK is equivalent to US\$0.16, and 1,000 HRK is equivalent to US\$162.82). The smuggled goods that were seized include cigarettes (7.3 million HRK), foodstuffs (12 million HRK), technical merchandise (1.5 million HRK), spirits (0.5 million HRK), textiles, motor fuel, and other goods (approximately 5.2 million HRK). In 2001 the total value was similar, while in 2000 the value was approximately 34.5 million HRK.

**Crime Statistics.** In 2002 there were 75,362 criminal offences that were detected, which includes filed complaints. This amount is 0.5 percent less than in 2001. Approximately 65 percent of the 2002 criminal offenses were solved. The crime ratio is 1,720 criminal offences per 100,000 inhabitants. A breakdown of the 2002 offenses report reveals that approximately 78 percent of offenses fall into the area of general crime, 11.6 percent related to drug abuse, 9 percent from economic crime (including the criminal offence of corruption), 3.7 percent offenses committed against underage persons, 1.3 percent criminal offences in relation to organized crime, and 0.2 percent criminal offences of special security concern (explosions, terrorism, and war crimes). Also, in 2002 there were 951 criminal offenses related to organized crime. While the rates of crime are declining, the number of drug seizures and convictions did increase during 2000 and 2002.

## CORRECTIONAL SYSTEM

Croatia has twenty-one prisons with a total prison population of 3,010 and a prison population rate of 68 per 100,000. Nearly 32.4 percent of the prisoners are pretrial detainees, 3.9 percent are females, and 1.2 percent juveniles. The official capacity of the prison system is 3,004, which is close to the actual number of prisoners.

**Prison Conditions.** Prison conditions generally meet international standards. The government permits visits of prisons by independent human rights observers.

# Cuba

---

**Official country name:** Republic of Cuba

**Capital:** Havana

**Geographic description:** The largest island in the Caribbean, south of Florida and between the Caribbean Sea and North Atlantic Ocean

**Population:** 11,346,670 (est. 2005)

## LAW ENFORCEMENT

**History.** The modern Cuban police system dates from the U.S. occupation of the island. The colonial police system, based mostly on the Spanish model, operated directly under the governor. The United States, which ruled the island from 1900 to 1902, introduced many new organizational features that gave more powers to the local police chiefs. These features were retained during Cuba's period of semi-independence under the American protectorate created by the terms of the Platt Amendment. However, with the rise of Fidel Castro, the Soviet model was adopted as the basis of the Cuban police.

**Structure and Organization.** The National Revolutionary Police falls under the authority of the Vice Ministry of Internal Order. It is the successor to the General Directorate of Public Order, created in 1961, when all the police and investigative forces in the country were merged. In the 1970s the various departments concerned with public order were given some autonomy under the direction of the vice ministry. There were three general directorates under this vice ministry, the most important

one being the General Directorate of the National Revolutionary Police. The police forces were supplemented by the armed forces, the militia, and the Committees for the Defense of the Republic. The National Revolutionary Police was a relatively small force of no more than 10,000, but it was complemented by a much larger 50,000-member auxiliary made up of militia members assigned to police duties. The two other general directorates were concerned with fire prevention and extinction and penal establishments.

At the turn of the twenty-first century the Ministry of the Interior was divided into three vice ministries in charge of five general directorates. The functions supervised by the vice ministries fall into three categories of which the Vice Ministry for Internal Order and Crime Prevention is the largest. The Vice Ministry for Security is charged with the internal detection and prevention of threats to national security. The Technical Vice Ministry handles foreign espionage and intelligence gathering.

The Technical Investigations Office of the Vice Ministry for Internal Order and Crime Prevention deals with all investigations in the criminal field, other than counter revolutionary activity. It includes the fingerprinting section, the Department of Crime Prevention, and the Legal Advisory Office. Juvenile delinquency, a major problem, is dealt with by the Juvenile Affairs Office. Also under the vice ministry is the Associations Registration Department, which closely monitors potentially dangerous groups, such as religious organizations, and the National Section of Identification Card System and Population Registry. This latter unit fights slackness, idleness, and delinquency by registering workers and their families with the Ministry of Interior. To be eligible for state employment, pensions, and state housing, citizens need an identification card. This is coupled with a work record card listing merits, demerits, and crimes as well as the place of residence and nature of work.

The most important agency under the supervision of the Vice Ministry for Security is the State Security Department (Departamento Seguridad de Estado, DSE), which is the secret police charged with the investigation, prevention, and prosecution of counterrevolutionary activity. It was originally known as G-2. Persons arrested by the DSE were, until recently, tried by the revolutionary tribunals. Agents of the DSE function as part of the regular patrols conducting surveillance in collaboration with the local Committee for the Defense of the Revolution and the National Revolutionary Police. These agents wear uniforms and have military rank and employ informants and covert agents to infiltrate suspect agencies, enterprises, and organizations and to report on homosexuals, dissident intellectuals, and saboteurs. The Vice Ministry for Security also administers naturalization and immigration affairs and the border guards. The border patrol is primarily a sea operation.

The third vice ministry of the Ministry of Interior is the Technical Vice Ministry, which deals with intelligence activities abroad. It is ideologically oriented and performs only a limited law enforcement role.

The police are assisted by citizen groups known as Committees for the Defense of the Revolution (CDR), who perform basic vigilante duties in their neighborhoods and conduct surveillance. As a logical extension of their primary function of revolutionary vigilance, they have developed a crime prevention role. They patrol the streets unarmed and report unusual activities to the police or the militia. All CDR members stand guard duty for about four hours one night each month, report lazy workers and absentees, and check on the observance of state regulations, especially pertaining to morals. More than 80 percent of the adult population are believed to be active members of the CDR. They are organized on a

geographical basis under the direction of a national directorate, six provincial directorates, 200 district directorates, 4,500 sectional directorates, and more than 30,000 base or neighborhood committees.

Since the 1990s the National Revolutionary Police have been streamlined through improved training, better vehicles, and modern communication equipment. The presence of uniformed police officers on the streets reflects a greater concern by the regime over a growing problem. To assist the regular police in their increased responsibilities, a new black-bereted brigade known as the Special Brigade was created in 1998. The main role of the Special Brigade is preventive, often in helping identify and arrest the hustlers and pimps who prey on foreign tourists. The force members also work closed with the National Revolutionary Police in coordinating the neighborhood-based anticrime groups under the Unified Prevention and Vigilance System, which concentrates on economic crimes and antisocial behavior.

#### Police Statistics.

- Total Police Personnel: 17,000
- Police Personnel per 100,000 Population: 667

#### HUMAN RIGHTS

Cuba is widely recognized as being among the nations of the world with the worst human rights records. The core of the issue is the nature of the political system in which the Communist Party remains the sole legal political institution and no dissidence is tolerated. The government does not brook active political opposition, however mild, and has developed a sophisticated system to deal with such opposition, using the police as the engine of oppression. Those who challenge the regime are subject to harassment, loss of employment, and even imprisonment. Although the government has never released any figures, it is estimated that at any given time there are thousands of political prisoners in Cuban jails. In dealing with imprisoned dissidents the government routinely seeks to force them to participate in reeducation and rehabilitation efforts. They are also required to perform wage labor and wear prison uniforms. Political prisoners who refuse to do so are known as *plantados* and are accorded the harshest treatment. They are placed on a restricted ration, denied contacts with visitors or fellow prisoners, and refused medical treatment. They may be placed in sealed cells or the same cells as prisoners convicted of violent crimes.

#### CORRECTIONAL SYSTEM

The prison system is under the jurisdiction of the Ministry of Interior's Directorate of Penitentiary Establishments. There are 294 prisons and correctional

*Police help transport people in areas hit hard by coastal flooding in Havana, Cuba, October 25, 2005. Hurricane Wilma raged off the coast of the island's capital city and generated monstrous waves. Havana's famous Malecon seawall was damaged and most major streets were flooded. AP IMAGES.*

work camps located throughout the island with a total prison population of about 55,000 or 487 per 100,000. These prisons include 40 maximum security facilities, 30 minimum security prisons, and more than 200 work camps or farms (*granjas*), where those convicted of less serious offenses are housed. The work farms are for common criminals and certain political prisoners who are thought to be capable of rehabilitation. Prisoners on work farms provide a significant workforce that builds apartments and schools and raises crops. Of the prisons, nineteen are closed, meaning that the detainees are not allowed any contact with the outside world. Prisoners in closed prisons do not do productive labor (although they might do hard labor) and are not eligible for rehabilitation programs. The most notorious of these prisons are the Castillo del Principe in Havana, La Cabana Fortress, Boniato Prison, San Serverino Castle, and America Libre, a women's prison. In addition, police stations, offices of the Ministry of Interior's Department of State Security, and even the headquarters of the Ministry of Interior at Villa Marista are often used as prisons.

**Prison Conditions.** Cuba is considered to have one of the highest per capita confinement ratios in all Latin America. A number of pretrial detainees are also held in prisons; many may be confined six to nine months or longer before being brought to trial. Darker-skinned Cubans are reportedly overrepresented in the prison system. Conditions in prisons are substandard, unhealthy, and not in compliance with the United Nations Standard Minimal Rules for the Treatment of Prisoners. The most common problems are inadequate food, overcrowding, inadequate or denied medical attention, and forced participation in reeducation programs. Since 1968 Amnesty International reports that conditions in the prisons and the treatment of prisoners have improved. The deprivations, abuse, and torture suffered by political prisoners has been discontinued in response to international pressures. In 1999 the government revised the penal code to prohibit the use of corporal punishment on prisoners and the use of any means to humiliate prisoners; however, the revised code failed to establish penalties for committing such acts, and they continue to occur in practice.

Detainees and prisoners, both common and political, are subjected to vigorous interrogations that are designed to coerce them into signing incriminating statements, to force collaboration with authorities, or to intimidate victims. Sometimes, prisoners are held in punitive isolation or punishment cells, usually located in the basement of a prison. No reading materials are allowed, and family visits are reduced to ten minutes. There is no

access to lawyers while in the punishment cell. Prison guards and state security officials subject political prisoners to threats of physical violence, systematic psychological intimidation, or imprisonment in cells with violent criminals or state security agents posing as prisoners.

*George Thomas Kurian*

# Cyprus

---

**Official country name:** Republic of Cyprus

**Capital:** Nicosia

**Geographic description:** An island in the eastern Mediterranean, south of Turkey

**Population:** 780,133 (est. 2005)

## LAW ENFORCEMENT

**History.** The country of Cyprus is located in the Mediterranean Sea just south of Turkey. The proof of civilization dates back to past 2700 B.C.E. In modern times it was a part of the Ottoman Empire until annexation by Britain in 1914. As a commonwealth of Britain until 1960, many of Britain's laws were adopted when Cypriots began to self-govern themselves. Turkey claimed Cyprus until a treaty with Britain in 1924, wherein Turkey renounced any ownership claims. Eighty-five percent of the island's people are Greek, while about 12 percent are Turkish; the remaining 3 percent is made up of other ethnic groups. Greece supported an attempt by Cypriots to take power away from the Turkish minority. Turkey stepped in and by 1975 effectively split the island in two. As of 2005, there was a buffer zone separating the Turkish northern part of the island from the Greek southern part. The United Nations patrols this "green line" to keep the peace, which has been tenuous since the split.

**Structure and Organization.** Originally, the 1960 constitution set forth guidelines for a presidential system using three separate branches: executive, legislative, and

judicial. Under this constitution there remains a system of power sharing to help ensure the rights of the Turkish Cypriot minority. Out of eighty seats in the unicameral legislative branch, twenty-four are set aside for Turkish Cypriots, although none is filled. The current Cypriot president, Tassos Papadopoulos, became president in 2003 and will serve a five-year term. The vice president position is currently vacant due to the fact that it is reserved for a Turkish Cypriot. The two positions together appoint the Supreme Court judges. This branch hears appeals from the assize and district courts. Both of these courts can act as courts of original jurisdiction for criminal cases throughout Cyprus. They levy fines and determine punishment for criminal charges brought to them through law enforcement efforts.

Police in government-controlled Cyprus (Greek Cyprus) operate under civilian command to enforce the laws passed down through legislature. The 3,700 police officers in service are commanded by the chief of police who answers to the minister of justice and public order.

*A commando soldier from the Cyprus Defense Forces Alpine Unit takes part in training exercises on Troodos Mountain, February 17, 2005. About 1,000 soldiers and special police officers took part in these outdoor training exercises among the island's highest mountain range. AP IMAGES.*

Along with the deputy chief he commands the assistant chiefs, who in turn administer the four main departments of the police force:

- Training—Police Academy and recruitment
- Administration—Research and development, auditing and inspecting, personnel
- Operations—Criminalistic service (lab work, fingerprints, photographs), Criminal Investigations Division, drug enforcement
- Support Services—Unit services (Mobile Immediate Action Unit, Presidential Guard), scientific and technical support, traffic and transportation, aliens and immigration

These four departments support the seven police districts that provide enforcement for the country. Certain specialized units are used to assist the government in maintaining order. The Cyprus Information Service is a branch of the police, but it receives its orders from the president. It focuses on security issues involving

the country and common crime. The Mobile Immediate Action Unit consists of elite officers who provide protection for high-ranking dignitaries and embassies and assault teams in case of terrorist attack.

**Education and Training.** Newly recruited officers go through a twenty-one-week academy at the Police Training School in Athalassa. At the school they learn the law and proper procedures for enforcement, such as that arbitrary arrest and detention is against the law, that warrants must be issued for arrest or before entering a private residence, that no one can be held more than a day without an extension being filed, and that charges usually are filed within ten days. Officers have a right to join associations and use them for collective bargaining, but they cannot strike, as that would cause a threat to public safety. Some of the higher-ranking officials are sent to Britain to study at Scotland Yard.

**Transportation, Technology, and Communications.** Much of the equipment use by the Cyprus police comes from the military. In the 1960s the police were used as a

tool of the military during the separation of the Turkish State. Their equipment includes armored cars and light artillery. They also began using helicopters and patrol boats in the early 1990s to step up efforts against narcotic trafficking.

#### Police Statistics.

- Total Police Strength: 4,154
- Population per Police Officer: 188

#### HUMAN RIGHTS

Cypriots have a number of rights guaranteed to them through their constitution. Some of these rights include protection from cruel, inhumane, or degrading treatment or punishment; no arbitrary arrest, detention, or exile; a fair public trial; and freedom of speech, assembly, and religion. There have been new laws passed to help protect women's rights in domestic abuse. Spousal abuse is now easier to report and prosecute and steps have been taken to ensure that filed reports are treated as serious offenses instead of as family disputes.

#### CRIME

With the country being split in two during the 1970s a high occurrence of violent crime would be expected, but the opposite was true. In 2002 only two people were murdered. Other violent crime is seemingly low also. Robberies totaled thirty-eight and five people were incarcerated for sexual offenses. In contrast, crimes such as burglary and theft and those involving drugs have relatively high numbers, 1,228, 948, and 436, respectively, in 2002.

Turkish and Lebanese drug traffickers use Cyprus as a transshipment point to Europe. The drugs are trafficked through Cypriot container shipping and currency is shipped back the same way. In ten years the number of drug crimes has increased from 77 to 436. This is in part because of strict legislation against trafficking and drug possession. Also, Cypriot police work closely with other countries to fight against drug crimes. This has significantly increased the number of seizures and arrest.

#### CORRECTIONAL SYSTEM

Only one prison, the Nicosia Central Prison, services Cyprus and is located in and named after the capital of Cyprus. As of 2005, 355 offenders populated the prison. Law guarantees freedom from cruel and inhumane treatment, medical treatment, and regular visits. The prison population remains mixed, as violent and hardened criminals are placed in the same population as those offenders

servicing time for less violent acts. Prison conditions meet or exceed the minimum international standards according to the U.S. Department of State.

#### Prison Statistics.

- Total Prison Population: 355
- Prison Population Rate per 100,000: 50
- Pretrial Detainees: 13.2%
- Female Prisoners: 5.8%
- Juvenile Prisoners: 7%
- Number of Prisons: 1
- Official Capacity of the Prison System: 290
- Occupancy Level: 119%

#### MOST SIGNIFICANT ISSUE FACING THE COUNTRY

Illicit drugs and trafficking in persons remain the top concerns for the Cypriot justice system. Heroin and hashish from Turkey and Lebanon are trafficked through Cyprus bound for Europe. Steps have been made in technology and through cooperation with other countries to reduce drug crimes.

Trafficking in women for use in prostitution remains a problem, but new laws before the legislature would change the crime from a misdemeanor to a felony. Women are recruited to travel to Europe on a work visa and then their passport is taken away by their employers. The same is true of eastern European women being transported to Cyprus.

# Czech Republic

---

**Official country name:** Czech Republic

**Capital:** Prague

**Geographic description:** A landlocked country in central Europe

**Population:** 10,241,138 (est. 2005)

## LAW ENFORCEMENT

**History.** In 1918 the independent Czechoslovak Republic was established. Its police forces copied the structure of the police that operated under the Austro-Hungarian monarchy. The police were placed under the Ministry of Interior and the police officers were managed by the police headquarters located in bigger cities or by the police commissariats in smaller cities. The police were divided into the uniformed and nonuniformed (criminal) police. The countryside was outside the authority of police in cities and the tasks of the police forces were fulfilled by the gendarmerie.

During the period of Communist regime the police force was reorganized into the unified organization called Corps on National Security and it was often misused as a tool of political power, especially its special service, called State Security. It targeted the political opponents of the regime. After the collapse of the Communist regime in 1989, this service was abolished and the whole police corps went through a profound change concerning both the organization and the staff and it was renamed to the Police of the Czech Republic.

**Structure and Organization.** A fundamental piece of police legislation is Act Number 283/1991 Coll., which

regulates the organization and activity of the Police of the Czech Republic. Police are under the jurisdiction of the Ministry of the Interior. The chief of police is appointed by the minister of interior with the approval of the Czech government.

Police are generally divided into uniformed and nonuniformed police officers. Uniformed police are responsible for the public order and security and they comprise the Police on the Beat, the Traffic Police, the Alien and Border Police, the Railway Police, the Air Service, and some special departments, such as the Department of the Protection of Constitutional Authorities. Nonuniformed police are responsible chiefly for the detection and investigation of crime and they comprise above all the Criminal Police and the Investigation Service. The scope of activity of some police departments and units covers the whole territory of the Czech Republic (e.g., Department for Detection of Organized Crime, Unit for the Detection of Corruption and Financial

Crime, National Anti-Drug Headquarters, Air Service, Rapid Employment Unit, Institute of Criminalistics, and Office for Documentation and Investigation of Communism Crimes), while other police forces that act within the regions are managed by the regional police headquarters.

The police force employs police officers as well as civilians. Police officers are divided into three categories. The lowest is represented by warrant officers with six internal grades (the basic rank is staff sergeant), then there are officers with seven internal grades from second lieutenant to colonel, and finally there are generals with three grades: major general, lieutenant general, and colonel general. Warrant officers and officer ranks are conferred by the police authorities, while the general rank can be conferred by the decision of the president of the Czech Republic on the basis of a governmental proposal.

**Salaries.** Police salaries are generally higher than the average salary in the Czech Republic. In 2003 the salary was up to 14,000 Czech crowns per month, but it was distinctly lower in comparison to other law enforcement authorities such as judiciary or state attorneys. Pay is based on rank and the performed function, but there is also a possibility of some differential surcharges.

**Police at Work.** Police of the Czech Republic are managed by the General Police Headquarters, headed by the chief of police. Police forces consist in formations (departments and services) acting within the whole territory of the Czech Republic and are managed centrally. Formations have regionally limited activity. The individual departments, services, regional headquarters, and other organizational units of the police forces are headed by directors and appointed by the chief of police.

**Police-Community Relations.** Basic and substantive information about the police and their activity is at the disposal of the public on the Web pages of the Czech Ministry of Interior (<http://www.mvcr.cz>). To facilitate the communication with the media, there are authorized press agents at police headquarters and services. Information and preventive police units designated for communication with the public with special attention paid to children were established in the framework of local police departments. Police officers are involved in the preparation and implementation of crime prevention programs in the cities and communities and collaborate with the representatives of municipal councils, other state institutions, and nongovernmental organizations. Missing persons and wanted offenders are regularly published on television stations. Citizens may contact the police quickly and directly using a special phone line.

**Local Police.** Local police in the Czech Republic may be established by a decision of the municipal council on the

basis of the Act on the Local Police Number 553/1991 Coll. The local police are responsible for the public order, especially in providing protection and safety of persons and property, to observe the rules of public peace and coexistence of citizens, to maintain traffic safety, and to disclose the minor offenses and administrative misdemeanors. The local police are headed by the magistrate/mayor or by a charged member of the board of a municipal council. The local police collaborate closely with the police of the Czech Republic.

Only Czech citizens above twenty-one years of age can serve as members of the local police on the condition that they fulfill the qualification requirements stipulated by the Ministry of Interior and have not been sentenced for an intentional crime. Even though the local police are armed, the use of guns is allowed only in emergencies (life-threatening situations or the risk of escape of a dangerous offender).

The uniform of local police is usually of a black color. Its appearance is determined by the public notice of municipal authority while its obligatory details are fixed by the Ministry of the Interior.

Besides the Police of the Czech Republic and the local police, there are many private security agencies. They are defined as a so-called licensed trade under the conditions regulated by the Act on Commercial Activity Number 455/1991 Coll. They are usually hired to protect objects, buildings, events, and so on.

**Special Police.** The police services most often met by the public are the Police on the Beat and Traffic Police. There are about 16,000 police officers serving in 606 local departments and some special departments (e.g., Riverine Police, Mounted Police, and Subway Police) of the Police on the Beat. In the line of duty, there were 213 police officers of the Police on the Beat injured in 2001 (but still, the incidents when a police officer from any police service was killed in the line of duty have been an exceptionally low number). An important statistic concerns the activity of the Traffic Police with regard to the high number of traffic accidents in the Czech Republic (185,664 accidents in 2001 with 1,219 deaths). The Alien and Border Police are managed centrally and are responsible for the protection of state borders and supervision over the stay and residence regulations for foreigners in the Czech Republic. Their departments are situated in all regions of the Czech Republic and along the state borders. They administer also three facilities for foreign citizens to be banished from the Czech Republic.

Special police departments and units are established at different levels of the organizational structure of the Police of the Czech Republic. In the framework of the General Police Headquarters there are departments

*Police and firemen work near the wreck of a car accident between Hranice and Belotin, Czech Republic, August 1, 2005.*  
AP IMAGES.

taking care of the police horses and dogs, but also the department of pyrotechnics and department of special diving services. The Special Rapid Employment Unit is designated for intervention against the most dangerous offenders such as terrorists, kidnappers, organized criminals, escaped prisoners, and so on. In 2001 this unit was involved in 36 actions with 115 persons apprehended.

A special role has been designated for the Office for Documentation and Investigation of Communism Crimes, which serves under the deputy chief of police. This office provides not only the description and documentation of the political terror committed within the period of communist regime but it also investigates the concrete crimes of this kind and proposes criminal prosecution of offenders.

Special police forces consist also of the Air Service, which provides security and transport services, including search of lost or missing persons, and the Department of the Protection of Constitutional Authorities, which ensures the security of protected persons and buildings of embassies.

The Department of International Police Collaboration is included under the General Police Headquarters. The

Czech Republic has been an Interpol member for years. With regard to Europol, the agreement on the collaboration for fighting serious transnational crime was signed in 2002 by the minister of interior of the Czech Republic and the director of the European Police Office. With regard to this agreement, Europol was established within the Czech Police. This group forms the preparatory basis for the Czech national unit of Europol. Similarly, the group Sirene was established as a basis of the future national bureau for the coordination of tasks of the Czech police necessary for the fulfillment of the Schengen Convention.

**Education and Training.** More than 50 percent of the current police officers entered the Czech police after the fall of the Communist regime in 1989. Only a Czech citizen above eighteen may serve as a police officer on the condition that he or she was not sentenced for an intentional crime; went through military service; meets the mental, health, and physical requirements; and graduated from high school. An official oath is taken and one begins as a staff sergeant (those who graduate from a university begin as a second lieutenant). The probation period is usually twelve months and the new police

officer must pass the basic course and praxis, an optional, specialized course. Additional education is possible at the Police High School (there are about 2,000 students) or at the Police Academy, which is a university institution (in 2001 about 1,900 police officers studied at the Police Academy).

Police officers are entitled to have longer holiday periods in comparison to other citizens (thirty-seven days per year and seven additional days in case of extreme difficult service). They may also use medical preventive care. The police officers who before 1993 served at least eighteen years may retire at an early age (fifty-five to fifty-seven years of age); the normal age limit to retire is now sixty-two to sixty-three years.

**Uniforms and Weapons.** Uniformed police wear jackets and peaked caps with dark-blue and gray pants; special police units wear a black uniform. The police emblem is sewed on the left arm, and the police badge is worn over the heart.

Police officers are armed with a 9mm handgun, which is produced by the Czech Armory in Uherske Hradiste. Police on the Beat are also equipped with truncheons. More effective weapons such as machine rifles, shotguns, and special rifles are at the disposal of special units and in cases of exigency.

**Transportation, Technology, and Communications.** Vehicles used by the Police of the Czech Republic are mostly of Czech origin; a certain number of fast cars and motorcycles originated from abroad. The Air Service uses Bell U.S. helicopters. The police also use special technology such as devices for disposing of explosives, night-seeing equipment, and so on. Traffic Police are equipped to measure speed with devices that are connected with video and analyzer; they also have devices that prevent cars from passing or getting away. There has been a considerable effort to improve the police computer systems. An integral communication system was introduced a few years ago.

**Surveillance and Intelligence Gathering.** The amendment of the Police Act Number 152/1995 Coll. extended the scope of police special investigative tools beyond the interception of communication introduced in 1991 to the possibility of using an undercover agent (for detection of corruption, serious economic criminal activity, and crimes committed for benefit of criminal conspiracy; the agent must be a police officer and may be used with the consent of the respective judge). Undercover agents may also be used for the transfer of objects (feigning of a purchase, sale, or other manner of transfer of an object whose possession generally requires a special permit or its possession is inadmissible). The amendment to the Criminal Procedure Code adopted

by the Act Number 265/2001 Coll. incorporated into this act some provisions that facilitate the use of information gained by the police operative tools as evidence in criminal proceedings under specified conditions.

## HUMAN RIGHTS

Police officers are obliged to respect and preserve human rights guaranteed by the constitution of the Czech Republic. Nobody may be prosecuted or deprived of his or her freedoms other than for the reasons and in the manner stipulated by the law. The accused or suspected person arrested by the police must be immediately informed of the reasons, questioned, and released within forty-eight hours or committed to court. The gaining, handling, and saving of personal data by the police is also strictly regulated by the law. The criminality of police officers is investigated by the independent Inspection of the Ministry of Interior.

The Criminal Police and Investigation Service conduct detection and investigation of crimes. Several special units have been included within this service. Besides the units that are focused on organized crime and drugs, there are special units for the detection of corruption and financial crime, such as the Special Activities Department.

## CRIME

**Criminal Identification and Forensics.** The Institute of Criminalistics works under the General Police Headquarters. It is a member of the European Network of Forensic Science Institutes. Czech police use all the usual methods and techniques of identification. Criminalistic and technical expert laboratories operate in the county police headquarters.

**Organized Crime.** There is not a special antiorganized crime act in the Czech Republic. The appropriate legislation was created via more partial amendments of existing legal norms (e.g., the Criminal Code, Criminal Procedure Code, Police Act, and so on). The concept for combating organized crime has been determined by governmental conception adopted in 1996 and updated in 1997 and 2000. Organized crime was defined in the Criminal Code as criminal conspiracy, which means an association of several persons with an internal organizational structure that has a division of functions and distribution of activities and that is aimed at the systematic commission of intentional criminal activity.

The police and judiciary system bear the greatest deal of responsibility for combating organized crime. No special authorities exist outside the police structure for detecting and investigating specific types of crime, including organized crime.

Within the framework of the Criminal Police and Investigation Service that conduct detection and investigation of crimes, special units have been established that focuses on organized crime and some other serious forms of crime. This includes the Department for Detection of Organized Crime (established in 1994; within this department there is also a special antiterrorist division besides the divisions of trafficking in people, guns, explosives and nuclear materials, violent organized crimes, forgery, and so on) and the National Anti-Drug Headquarters. In 2001 the National Anti-Drug Headquarters reported that 243 offenders were apprehended. In the same year the Department for Detection of Organized Crime apprehended 987 offenders.

### CORRECTIONAL SYSTEM

The Prison Service of the Czech Republic administers the prison system. The Prison Service is a department of the Ministry of Justice. The minister of justice manages the Prison Service through a director general, whom he appoints and replaces. The director general is responsible to the minister of justice for the work of the Prison Service.

There are fifteen prisons in the Czech Republic (including custodial prisons); four prisons have a capacity of more than 1,000 places for prisoners, while the capacity of most prisons is 300 to 600. Individual prisons are established and abolished by the minister of justice. The head of each prison is the director appointed and recalled by the director general of the Prison Service.

Under the relevant legislation (Act Number 555/1992 Coll., which was amended by Act Number 460/2000 Coll. defining the status and tasks of the Prison Service), the Prison Service is responsible for the enforcement of custody and prison sentences. With appropriate socialization programs, it influences the persons serving a term of imprisonment so that the punishment served will have a positive effect on their life after they are released. The Prison Service is also engaged in economic activity within the scope required for the inmates to be assigned work when serving a sentence (or even when in custody).

Another important task of the Prison Service is maintaining order and safety in the buildings of the judiciary.

The Prison Service is divided into prison guards, justice guards, and administrative service. Prison guards and justice guards have the status of an armed service. Prison guards guard, present, and escort detainees and inmates, whereas justice guards maintain order and safety in court buildings, the public prosecutor's office buildings, and in the buildings of the Ministry of Justice. The administrative service handles the organizational,

economic, educational, and other specialized activities in the prison system, including medical service.

The Prison Service also has a separate organizational unit called the Institute of Education, which organizes the vocational training of staff working in the prison system.

**Prison Conditions.** There are four basic types of prisons:

- Supervision
- Control
- Security
- Stricter security

Meanwhile, various types of wards may be established in any given prison.

Besides the basic types of prisons, there are special prisons for juveniles. The court decides which kind of prison the convicted will serve his or her sentence in. As a rule, those who have been sentenced for a crime of negligence and who have never been sentenced before for an intentional crime are sent to a supervision prison. Offenders who have committed a crime of negligence and have served a sentence of imprisonment before for an intentional crime or who have been sentenced for an intentional crime for which the maximum term is two years are sent to a control prison. Those who are convicted for intentional crimes are usually sent to a security prison unless lower-security prisons are considered. Offenders who are sentenced for life, who have committed a particularly serious crime for which a prison sentence of at least eight years is imposed, or who have committed intentional crimes and have absconded from custody or from a prison in the last five years are placed in stricter security prisons.

Act Number 169/1999 Coll. regulates prison sentences. Under this act (Art. 2) a sentence or penalty may only be enforced in a manner that respects the personal dignity of the convicted person and limits the harmful effects of imprisonment; however, it may not endanger the required protection of society. The inmates must be treated in a manner that safeguards their health and, if the term of the sentence so permits, such attitudes and skills should be encouraged that will help the inmates return to the community outside and be able to live an independent law-abiding life.

Prisoners are placed in cells and the men and women are always separated. As a rule, juvenile prisoners are also separated from adult inmates, repeat offenders from those convicted and serving a sentence for the first time, those convicted for intentional crimes from those convicted of crimes through negligence. Prisoners with mental or behavioral disorders are also situated separately, as

are certain other groups of convicted persons requiring special treatment. A special group is formed of prisoners serving life sentences. They are placed in specially allocated areas of selected maximum security prisons.

Prisons are establishments for the collective accommodation of prisoners. The one-cell-one-prisoner system cannot be applied as yet in view of the structural design of the premises because the interior layout in most prisons was dimensioned for the traditional placement of the convicted in groups of prisoners. A long-term problem is also the overall lack of space for prisoners, their leisure activities, and the needs of the prison staff.

The Prison Sentence Act guarantees the rights of prisoners and complies with the European Prison Rules and other international documents (the United Nations Human Rights Convention, and so on).

Prisoners are ensured an eight-hour period of sleep daily, time for personal hygiene and clean up, meals, at least one hour for outdoor exercise, and a reasonable period for personal leisure.

Prisoners are issued prison clothes suitable for the weather conditions and sufficient to protect their health. Prisoners have a right to medical care and treatment. In the event of illness or injury, they may be put in the prison hospital; in extreme cases, a prisoner's sentence may be discontinued for a necessary period to be spent in a hospital or for treatment outside prison. At their own request and if prison conditions permit, female prisoners can keep their children, usually up to the age of three, so they may look after them while serving their sentence. So far this has been applied only rarely in actual practice.

Prisoners have the right to receive visiting relatives for a total of three hours in one calendar month. Visits usually take place in rooms designed for this purpose and at times set by the prison director.

In exceptional cases, the prison director may permit visits in rooms not controlled by Prison Service authorities. Here, a prisoner may be allowed undisturbed personal contact with his or her spouse during the course of the visit.

Prisoners are entitled to receive and send correspondence at their own expense and in general without restriction. However, the Prison Service is entitled to check correspondence for security reasons. It is forbidden to check correspondence between the prisoner and his lawyer or between the prisoner and state authorities (this also applies to foreign consulates or international organizations).

Prisoners are also ensured the right to religious services and other services serving humanitarian purposes. Prisons allow (usually on days of rest) joint religious ceremonies to be held for prisoners. Attendance at these religious ceremonies is, of course, voluntary. Legal

regulations set out the conditions under which officials of registered churches and religious communities may cooperate with prisons to provide religious services.

Prisons also allow appropriate authorities (including nongovernmental and charity organizations) to provide prisoners with social services or other forms of charity to help prepare prisoners for their future independent life when released.

Prisoners are entitled to order daily newspapers, magazines, and books at their own expense and may borrow appropriate publications (including legal regulations) from the prison library to satisfy their cultural needs. A prisoner can also buy food and personal articles in the prison shop. If a prisoner is sent money, it is transferred to his or her account, which is opened and maintained by the prison.

Prisoners with the required aptitude can attend basic schools or secondary vocational schools or take various courses to improve their specialist skills. Prisoner education is usually provided in the educational centers of the Prison Service. Prisoners may be allowed a higher form of study. Prisoners serving a sentence in a low-security prison (with supervision and control), or in a prison for juveniles, may be allowed free movement outside the prison to attend school (classes, examinations, and so on).

A persistent problem is the lack of job opportunities for prisoners. Only about 50 percent can be assigned work. The working conditions of prisoners are subject to the same regulations as those applying to the rest of the working population. Prisoners are entitled to a wage depending on the quantity and quality of work. A government decree sets out in detail the conditions for the remuneration of prisoners who are assigned work while serving a sentence. Deductions are made from a prisoner's wages to pay child support if the prisoner is obliged to do so and/or to cover the costs of imprisonment and custody and other debts of the convicted. Total deductions may not exceed 86 percent of the net wage. The remainder of the wage is the prisoner's pocket money and any amount left over is deposited in his or her personal account. If a disciplinary penalty is imposed, the pocket money may be reduced.

In the case of convicted juveniles, an individualized approach to treatment is increasingly applied to prevent the negative effects of isolation of juveniles from society as much as possible during their imprisonment. Convicted juveniles should be treated in a manner that develops their mental, emotional, and social maturity. Emphasis is placed on acceptance and awareness of personal responsibility for the crime they committed. Educational and work activities of convicted juveniles should be directed at obtaining knowledge and skills that

will help them to find employment once they are released from prison.

The public prosecutor regularly inspects the places where custody and imprisonment are enforced. He is entitled to visit at any time all places where prison sentences are served, inspect prison documents, talk to the prisoners without the presence of other persons, and request relevant explanations from the Prison Service. The supervision of the public prosecutor does not override the obligation of the Prison Service authorities to perform their own control activities. The Ministry of Justice through the minister's general inspectorate is also directly involved in control and supervision activities.

**Custody.** Accused persons who have not yet been convicted and are held in prisons are subject to custodial arrangements. Because this concerns restriction of personal freedom, custody conditions have to be governed by the law (and not merely by a decree of the Ministry of Justice). This came with the Custody Act Number 293/1993 Coll. (amended by several provisions in 2000). The fundamental principle of custody is the presumption of innocence, meaning that nobody taken into custody may be considered guilty until pronounced guilty by a final court decision. As such, during custody the accused may be subjected to only such restriction as is necessary to achieve the purpose of custody, to observe prison rules, and to maintain security (to prevent escape). The human dignity of the accused may not be abused and he or she may not be subjected to physical or mental pressure.

Immediately after being taken into custody, foreigners must be informed of their right to contact the diplomatic bodies of their respective country, and the officials of these diplomatic bodies may visit their citizens in custody without any restrictions.

Foreigners account for about 10 percent of those convicted and serving a term of imprisonment in Czech prisons. About 20 percent of accused foreigners are held in custody. The majority of the foreigners are from Poland, Germany, Slovakia, Ukraine, Belarus, Moldavia and the former Yugoslavia, Vietnam, and Arab countries.

At the beginning of the 1990s the Czech Republic acceded to the international Convention on the Extradition of Convicted Persons (the convention came into force for the Czech Republic on August 1, 1992). Convicted persons may be extradited on the basis of bilateral agreements on legal force that the Czech Republic has concluded with several countries. Several dozen people are extradited from the Czech Republic every year to serve prison sentences in other countries.

**Conditional Release.** Prisoners who have served half of a pronounced sentence and proved by their behavior and observance of their duties that they have reformed sufficiently to be expected to live an orderly life in the future may be released on parole.

Prisoners who are sentenced for serious crimes, an exhaustive list of which is given in the law, may be conditionally released only after serving two-thirds of their sentence. Those sentenced for life may be conditionally released only after serving at least twenty years of their sentence.

There is no unity of opinion in professional circles regarding conditional release from prison. Some people rightly argue that parole is actually counterproductive to the purpose of life imprisonment, while others point out that even life prisoners should be allowed to live in the hope that there is a chance of release, which may positively motivate their behavior in prison.

The court sets a probation period for parole of between one and seven years. The court may impose reasonable restrictions and obligations on a paroled prisoner, such as addiction treatment, training to acquire work or social skills and education programs, refraining from visiting unsuitable places, and other similar restrictions. The court may also impose supervision of the paroled prisoner. Supervision includes regular personal contact between the paroled prisoner and his or her probation officer. The purpose of supervision is to monitor and control the behavior of the person on parole. The probation officer determines whether the paroled prisoner is complying with the conditions imposed by the court and is receiving professional guidance and assistance that is intended to help him or her live an orderly and lawful life.

#### **Prison Statistics.**

- Total Prison Population: 19,521
- Prison Population Rate per 100,000: 191
- Pretrial Detainees: 16.1%
- Female Prisoners: 4.7%
- Juvenile Prisoners: 0.8%
- Number of Prisons: 15
- Official Capacity of the Prison System: 15,689
- Occupancy Level: 115.6%

# Denmark

---

**Official country name:** Kingdom of Denmark

**Capital:** Copenhagen

**Geographic description:** Located on an archipelago north of Germany on the Baltic Sea; also includes three major islands: Jutland, Sjaelland, and Fyn

**Population:** 5,432,335 (est. 2005)

## LAW ENFORCEMENT

**History.** The first Danish penal code came into existence in 1683. This was the first attempt at a systematic arrangement of criminal law in Denmark. This penal code relied on the notion that all men were equal under the law. However, it is interesting to note that this penal code did not centralize the criminal processing by transferring prosecution of criminal cases to the exclusive authority of the Crown. Rather, the process of creating criminal law was one of trial and error, with four penal codes being drafted between the years of 1833 and 1841. With these revisions, judges were given discretion in sentencing depending on the seriousness of the offense and the circumstances of the offender, instead of being restricted by a set of mandatory statutory penalties. By 1866 Denmark had a modern criminal code.

During this process of penal code revision, democratic principles of government were introduced to the kingdom of Denmark. Among other things, it established *nulla poena sine lege*, which is the principle of legality. *Straffeloven* is the current criminal code in effect in present-day Denmark. This code was introduced and put into action in 1933. The Danish criminal process

allows for minimum and maximum sentences instead of mandatory reactions. Judges are given a wide degree of discretion and significant cross-jurisdictional disparity exists.

**Structure and Organization.** According to the 1849 Constitutional Act, the branches of the Danish government are separated into the legislature (the queen and parliament), the executive (the queen through her ministers), and the judiciary. Parliament is in charge of making the laws and determining the structure in which the police function. However, it is the minister for justice who is responsible for the Danish police.

The police departments of Denmark, the Faeroe Islands, and Greenland form one national force. All are employed directly by the state. The minister for justice also acts as the chief police authority, exercising his powers through the national commissioner, the commissioner of the Copenhagen Police, and the chief constables. Fifty-four police districts (plus the Faeroe Islands

and Greenland) divide Denmark, with district police headquarters in each district. These headquarters operate on a twenty-four-hour basis, and some headquarters also have substations. These substations have daytime hours, but do not operate on a twenty-four-hour basis. Certain police officers also work what is called "rural beats" in the more meagerly populated areas of the country.

Police in Denmark make an effort to provide safety in the local neighborhoods by utilizing community police posts that are located in a number of towns in many police districts. This is done to create increased security by strategically locating the posts as close to the local authorities and the citizens as possible. Traditional police duties are mainly handled by the community police. In cases that require the use of more officers, districts across the boundaries have readily available manpower.

**Principle Agencies and Divisions.** The police force in Denmark is a compilation of the Uniform Branch and the Criminal Investigation Department. These groups are under the employment of the National Commissioner's Office. There is a probationary period of three years that begins from the initial employment. During the probationary period, police officers experience the core of their basic police training. The training lasts for an extended period of about four years in all.

The organizational structure of the National Commissioner's Office has eight departments and five operational units in the Danish Police Service that assist the police districts: the Forensic Technical Department, the Serious Crime Squad, the Dogs Section, the Traffic Patrols, and the Special Operations and Response Team. The national commissioner also supervises the general organization of the Copenhagen commissioner and the chief constables, while also establishing general guidelines for the performance of police duties. The day-to-day supervision and execution of police duties, as well as any specific decisions, are handled in the police districts. The Copenhagen commissioner or the chief constables are responsible for these actions.

The National Center of Investigative Support Uniformed Branch is in department A and contains Traffic Patrols, Tactical Support Unit, Special Operations and Response Team, Dogs Section, Serious Crime Squad, Forensic Technical Department, International Relations, Interpol Copenhagen, Special Economic Crime Squad, and the Crime Prevention Council.

The Personnel and Recruitment Department is in department B and contains Appointments, Personnel Administration, Disciplinary and Health Matters, International Postings, Organization Development, Staff Development and Personnel Policy, and the Staff Medical Officer.

Department C contains Budgets and Accounts, Radio and Motor Section, Uniforms and Equipment, Audit Section, Office Supplies, Ministry of Justice Department of Forensic Psychiatry, and the Museum of Police History.

The Data Department is located in department D where the IT Section, Central Motor Vehicle Register, Central Criminal Register, Central Weapons Register, Passport and Driving License Section, and the Central Register of Parking Fines are located.

Department E is the Aliens Division (the authority responsible in cases concerning police work with aliens) as well as Information and Documentation Services. The Aliens Division contains the Sandholm Center and the Task Force. The Information and Documents Services is made up of the Web editor, Publications, Statistics, Victim Counseling Secretariat, and the Property Index/Photograph Archive.

The Police College is located in department F, which contains Basic Training, Leadership and Management Training, and Further Training. Department G is solely made up of the National Security Service. Finally, Department H houses the Building Surveying Department, which contains the Building Surveying Section and the Maintenance Section.

**Police at Work.** As of 2001 there were 10,228 police officers working in the Denmark policing system. This means that there was one officer for every 190 civilians in Denmark. Furthermore, the police are subdivided into plainclothes criminal investigators, uniformed patrolmen, traffic police officers, immigration police, and other categories.

Under the Administration of Justice Act the police may apprehend a person to confirm his or her identity. However, to take into custody a person suspected of criminal acts the suspicion must be strong and a rather serious offense must be involved. The decision to arrest a person is made by the police at their own discretion. Nonetheless, according to the constitution, arrests for a period of more than twenty-four hours come under the scrutiny of the court. A person who is arrested for a prolonged period can be held for no more than seventy-two hours. When time for detention has been exceeded, the person must be released and the release time must be reported. Detention for those persons on remand can only be decided by a court. Also, persons who are suspected of committing a criminal act will in most cases be released after sufficient questioning in the police station. This is true even if the person is formally charged with a crime.

Any complaints over police behavior are handled by a local committee that consists of the chief of police, two police staff members, members pointed out by the municipality, and a representative for the defense lawyer's

*An anti-Bush demonstrator stands in front of police in Copenhagen, Denmark, July 6, 2005. Thousands of demonstrators marched from the U.S. Embassy in Copenhagen to Denmark's Parliament to protest against a visit by U.S. President George W. Bush. Authorities arranged one of the biggest security operations the country has seen amid concerns over the president's visit. AP IMAGES.*

association. This committee makes decisions on whether to investigate or not. Investigations can occur through either the public prosecutor or by the city court. Committees have the option to refuse to investigate if the complaint is considered groundless or if the case is considered to have been inadequately claimed.

Matters dealing with use of force among police are discussed by the national commissioner, who states that pistols and batons may be used when the situation is deemed necessary. The use of these weapons is mainly to prevent harm to a person or to arrest dangerous criminals. Firearms can be used to avoid dangerous attacks on state institutions and to disperse an assembly that is considered unlawful, has the potential to incite violence, or may lead to a dangerous attack. Any incident where the use of a firearm and/or a police baton occurs must be reported in writing to the national commissioner. In 1993 there were 245 reports concerning the use or threat of use of firearms filed, and a total of 359 reports concerning the use of police batons.

When dealing with search and seizure, suspects and their homes or any place where pertinent objects or wanted

persons are most likely to be found may be searched. Conditions for search and seizures depend on whether the place to be searched is a public place or a private home, whether it is necessary to act swiftly, or whether the person consents to the search. In any case two independent witnesses will be summoned to the search unless the suspect waives his right to the witnesses. In cases where an improper search occurs, compensation may be awarded for any disgrace caused by the search. However, items of proof or loot may be seized wherever they are found.

**Education and Training.** Recruits for the Danish police are to be in good physical condition, good economic and personal condition, and have a good academic record in school. Other basic requirements are: applicants must be at least twenty-one years old and a Danish citizen or have the right to citizenship. Applicants may not have a criminal record. All applicants must be in good health with normal hearing and no color blindness. Likewise, applicants must have a driving license. Furthermore, applicants should be under twenty-nine years old, reasonably tall, physically strong, and physically suited to police

work. Fluency in a foreign language is a plus. Other characteristics should include maturity, good interpersonal skills, and the ability to make effective decisions while under stress.

It is not important which occupations one has had, what education or training one has obtained, whether one has done military service, or attended a folk high school. What is important is that a candidate can handle unexpected situations, stay calm, and act sensibly in presented situations.

The basic training for police is a three-year-long process. It consists of both school education and practical training. The school education includes two courses that last a total of eight months each. These courses are held at the Police Academy in Copenhagen. The academy also offers other special courses that cover areas such as the environment, IT crime, and international relations, as well as leadership courses. The rest of the training occurs on the job. Chiefs of police must achieve a master's degree in law.

Nonetheless, Greenland's police officer basic training takes place in Greenland and the Faeroe Islands select their own police probationers, but they are trained at the Police Academy in Copenhagen.

**Uniforms and Weapons.** The Danish police are equipped with 7.65 caliber pistols and tear gas. Riot uniforms consist of helmets, visors, and plastic shields. Only in events where the threat of gunfire is suspected are bulletproof vests used.

**Transportation, Technology, and Communications.** In 1993 the Danish police utilized a total of 2,245 vehicles. These vehicles averaged approximately 17,000 miles per year; also, the number of police turnouts totaled 471,076. The vehicles are equipped with data terminals to access offender records. Police officers also use radio communication and computers to assist them.

## HUMAN RIGHTS

The inflow of ethnically and racially diverse refugees and immigrants provoked a degree of tension between Danes and immigrants (mostly Iranians, Palestinians, Pakistanis, and Sri Lankans until late 1992; refugees are now mainly coming from Somalia and the former Yugoslavia). In response to publicity concerning the involvement of foreigners in street crime and allegations of social welfare fraud committed by refugees, the Parliament passed tighter immigration laws that took effect on January 1, 1999. Family reunification is now more difficult, and immigrants and refugees can no longer acquire permanent residence by living in the country for eighteen months; rather, they must now reside for three years and demonstrate that they have integrated into society.

Furthermore, immigrants receive a special integration allowance that is 20 percent lower than the social benefits that a citizen receives. Critics claim that this provision violates the 1951 United Nation Convention Relating to the Status of Refugees.

Incidents of racial discrimination and racially motivated violence occur, but are rare in Denmark. The government effectively investigates and deals with cases of racially motivated violence. However, in November 1999 Copenhagen experienced some of its worst rioting in years. The rioters were protesting a High Court decision to expel a twenty-three-year-old Turkish citizen. Although not a Danish citizen, the individual grew up and had close family in Denmark, including a wife and child. Despite this, the court ordered the expulsion after a three-year jail term for armed robbery.

Furthermore, the problem of trafficking in women for the purpose of prostitution remained a focus of government concern during 1999. Of particular concern is the importation of women from eastern Europe and Southeast Asia. These women are lured by the prospect of higher wages and a better life and find themselves forced into a life of prostitution by the individuals who brought them into the country and who are suspected of being part of organized crime. No concrete statistics are available as to how many women are involved in prostitution. The minister of justice's plans, announced in 1998, to convene a commission in March 1999 to look into the problem were dropped without explanation.

In light of terrorist activity Denmark has approved an antiterrorism bill. This bill was approved even though certain nongovernmental organizations and industry groups voiced their opposition to it. This bill was initiated into law in June 2002. This antiterrorism legislation makes it mandatory for telecommunications and Internet providers to register and store traffic data for up to one year. Secretly installed snooping software for those computers owned by criminal suspects is also a power granted to law enforcement through this bill. This particular software is designed to record keystroke data and then transmit it to the law enforcement agency electronically. Only serious crimes will constitute use of this software, and it will also require an interception warrant. Those crimes punishable by imprisonment for six years or more, including narcotics offences, homicide, assault and battery, causing danger to other people's lives and health, theft, computer crimes, trafficking of refugees and child pornography, crimes against national security, and the public order constitute a serious crime.

## CRIME

**Organized Crime.** In 2002 a broad range of organized crime occurred in Denmark committed by several

different ethnic groups. Biker groups and in some cases other gangs (in part Danish) were also of some concern in relation to organized crime and those criminal acts bordering on organized crime. The community of bikers that reside in Denmark has been a concern for many years. However, street gangs and the crime they commit can be compared to those crimes committed by biker groups. Police efforts to deal with street gangs coincide with those used to deal with the biker community. Progress has been made in recent years in dealing with street gangs and maladjusted young people. However, there are still substantial problems that are caused by street gangs. Crime prevention efforts and problem-oriented policing will continue in relation to these individuals. Central monitoring of gang areas by the police will be limited to the extent that is appropriate. To a large degree, monitoring will take place only at a police-district or regional level. By constant, national monitoring will occur in those areas where street gangs are comparable to the biker community.

In 2002, often in cooperation with Danes, people from several different European Union member states were behind narcotics crime. Citizens of European Union countries were also involved in smuggling, financial crime, and counterfeiting. It is also well known that numerous amounts of cases of persons of Polish ethnicity have been involved in raiding and narcotics smuggling that is either considered organized crime or could fall into the category thereof. In addition, Polish criminal networks have committed large thefts stemming from parked vehicles to burglaries and ordinary shoplifting.

Russians are hardly noticeable in the organized criminal activities in Denmark. There are networks of Russians that are connected to the trafficking of women. In other cases, Russians are suspected of participating in the planning of criminal activities aimed against or covering Denmark.

Networks originating from Serbia-Montenegro have been in current investigations in relation to narcotics crime and have shown that they are notorious for smuggling heroin into Denmark. Also, there is information that supports the notion that these Serbian-Montenegro networks also supply large shipments of heroin to all of Scandinavia, Switzerland, and Germany. They are also suspected to have ties to the biker community of Denmark.

Albanians played a noteworthy role in the smuggling of heroin in 2002. They are fortunately having great difficulty in obtaining their supply of heroin. This is a direct result of investigations in recent years. Scandinavian countries and the Czech Republic are the primary cooperatives in the investigations with the authorities in Denmark. There have also been quite a

few investigations that can connect the Albanians to the smuggling of cocaine.

Some of the child-pornography materials subsequently discovered by police officers while involved in unrelated investigations are believed to have come from the Far East. Nonetheless, many of the women found in massage parlors are of Thai ethnicity and have been recruited from Thailand. These women are often recruited by other Thai women in Denmark who are usually associated with the sex-trade industry.

The smuggling of large quantities of cigarettes, with Denmark acting as a destination or transit country, was connected with Lithuanians in 2002. Furthermore, a network of Lithuanians was implicated in the distribution of counterfeit U.S. dollars. Lithuanian criminal networks are also known to break into parked vehicles and burglarize residential areas.

Bank robberies in Denmark for 2002 were linked to Estonian criminals. The trafficking of women was also associated with people from the Baltic countries. Ethnic Russians residing in the Baltic States are frequently implicated in this type of crime as well.

There is no direct evidence to substantiate that South American individuals, groups, or cartels are active in Denmark. However, it is assumed that South Americans have some association with the supply of cocaine that has entered into the Danish market in 2002.

In 2002 organized crime occurred in the greater part of the urban areas of Denmark. Nonetheless, it has spread throughout the country. Denmark is mainly used as a transit country in relation to organized crime. Denmark cooperates with the Nordic police and customs (including what is known as the PTN cooperation between the Nordic police and customs authorities), the Task Force in the Baltic Sea Region, which deals with organized crime, the European Union, and Interpol. Denmark held both the chairmanship of the Task Force on Organized Crime in the Baltic Sea Region up to the end of 2004 and the presidency of the European Union in the second half of 2002.

It is the continuous consensus that organized crime is committed in Denmark, particularly including crimes committed by those in the biker community. However, in 2002 organized crime in Denmark was at a relatively meek level. There still remains cooperation between the biker community and other organized groups (in certain cases international). An example of this derives from the smuggling and dealing in narcotics. Foreign networks, especially European, have used Denmark for their more elevated criminal activity. However, this in no way suggests that international criminal organizations have taken over or even have a real controlling impact in Denmark. As of 2002 there was no indication that organized crime

had in any way posed influence on public administration, law enforcement authorities, or the political arena. There also had been no incident of any public administrators, law enforcement officers, or political icons being involved with organized crime.

Danish criminal law is in fact monistic, meaning that violations of the law are not divided into categories such as felony/misdemeanor or crime. However, this does not mean that major and minor offenses are treated the same.

Fifteen is the age of criminal responsibility in Denmark. The legal classification of criminal offenses is identified in the special part of the Criminal Code or in separate statutes. General circumstances for imposing criminal penalties are located in the general part of the Criminal Code, which applies to separate statutes as well. Sanctions that are described in the general part of the Criminal Code are uniform no matter if the criminal offense consists of an infraction of the Criminal Code or of separate statutes.

**Crime Statistics.** From 1991 to 2001 Denmark had an approximate 9 percent decrease in overall crime. Total crimes recorded by the police in 1991 were 517,775, whereas the total in 2001 was 473,290. Furthermore, homicides in Denmark had a 41 percent decrease between the years 1991 and 2001. Specifically, there were eighty-eight homicides in Denmark in 1991 and this number dropped to fifty-two in 2001. By contrast, other violent crimes increased by 15 percent between the years 1991 and 2001, rising from 13,963 incidents to 16,010 as recorded by the police. Robberies also increased from 2,523 in 1991 to 3,192 in 2001, resulting in a 27 percent increase. Domestic burglaries declined by 7 percent going from 34,648 in 1991 to 32,274 in 2001. Motor vehicle theft took a strong plunge with an overall decline of 31 percent between 1991 and 2001 (there were approximately 42,701 domestic burglaries in 1991 and this dropped to 29,464 in 2001). Finally, drug trafficking also went down by 2 percent during the same ten-year period, from 171 incidents in 1991 to 168 recorded incidents in 2001.

#### CORRECTIONAL SYSTEM

The correctional service controls fifteen prisons, one institution for inmates needing psychiatric treatment, and forty local jails. Five of the prisons and the psychiatric institution are closed, meaning that they are secured by an external ring wall as well as by internal precautions like secured buildings and electronic security systems combined with relatively dense staffing. The staff does not carry arms. Being used as remand detention institutions, the local jails are also closed. The remaining nine prisons are open institutions, where inmates are physi-

cally able to leave the institution. Two of the closed prisons have both male and female inmates. In one of these prisons there is cohabitation between men and women within units. There are also two open prison departments for women.

The Danish correctional system is based on three types of punishment: ordinary imprisonment, lenient imprisonment, and day fines. In special cases, dangerous offenders may be sentenced to indeterminate preventive detention. Imprisonment may be meted out with determinate sentences from thirty days to sixteen years or life, lenient imprisonment from seven days to six months. Imprisonment may be imposed in the form of suspended or nonsuspended sentences. Since 1982 the rules governing probation and suspended sentences formed the basis of an experiment with community service orders, and from 1992 the scheme was made permanent.

The Department of Prisons and Probation is the central agency of the entire Prison and Probation Service and is headed by the director-general of prisons and probation. The field of responsibility for the director-general is enforcement of all penal sanctions and effectuation of remand in custody. The Prison and Probation Services in Greenland and on the Faeroe Islands are also within the director-general's field of responsibility. The Danish Criminal Code and the Danish system of sanctions also apply to the Faeroe Islands, while a special Criminal Code with a special system of sanctions applies to Greenland.

**Prison Conditions.** Denmark prisons and jails are all state institutions; they are under the administration of the Ministry of Justice Department of Prisons and Probation. As of 1992 there were a total of about 2,600 personnel including the prison guards and vocational staff. Prison personnel were also comprised of about 680 social welfare officers, teachers, health officers, vicars, and office clerks. Subsequently, this makes the inmate to prison staff ratio almost 1:1. Although the figures on the gender distribution are not available for Denmark's prison system, the prison staff is noted as being a mixed group of men and women.

The standard training and qualifications for prison guards are good physical condition, good personal and economic conditions, and satisfactory academic achievement. However, the new recruits who are inquiring about being a prison guard usually need to be between the ages of twenty-one and twenty-nine, of Danish citizenship, and have never been convicted of a crime. Prison personnel learn the details of their duties at the Prison Educational Center. All prison wardens are required to possess a university law degree.

Deprivation of liberty is in fact the true punishment in Denmark; the inmate still maintains his or her civil

rights during the sentence. Any other restrictions placed on the inmate besides the deprivation of liberty occur only if necessary. In accordance with the principle of normalization, an inmate's experience in prison must in some way be comparable to a normal life in the community. This is done to the best ability of the correctional system. These conditions are basically constant and apply to persons who serve sentences in a local prison and in a closed prison. However, the physical conditions particularly in the small local prisons have some differences as it pertains to the term of the sentence. For the most part, local prisons in Denmark are usually half-full with remanded prisoners; the remaining space is used to house convicted criminals.

As a general rule, inmates have their own cell. Each cell is about 75 square feet. The local prisons have single cells, as well as two- and three-person cells. Nonetheless, the decision has been made to eliminate three-person cells in all possible cases.

A convicted offender has one month or less from his or her sentencing date until he or she can expect to start serving a sentence. The offender has the opportunity to use this time to make arrangements for lodging during the sentence, arrange to store belongings, make arrangements with his or her current employer or place of education, take care of any financial matter, and make inquiries as to how a spouse and/or children (if any) are to survive during his or her imprisonment. The offender is allowed to bring certain personal belongings, which include clothes, television, radio, books, and pictures.

In adherence to the principle of normalization, most prisons have implemented a "do-it-yourself" cooking system, where the inmate is responsible for buying and preparing his or her own food. Inmates are also allowed to write and receive letters from whomever they wish; correspondence is read only in unique cases. In open prisons, access to coin- or card-operated pay phones are available to the inmates. Also, in some closed prisons the inmates are allowed to use card-operated pay phones for phone calls to telephone numbers approved by the authorities. This trend is soon to be available in all closed prisons. Inmates are also allowed to receive unsupervised visits from relatives in single rooms or in their cells; only in certain exceptional cases will these visits be supervised.

Usually, inmates serve their sentences with other inmates; however, inmates have the option to serve their sentence in segregation. In recent years a growing number of vulnerable inmates have felt threatened and intimidated by other dominant inmates. Because of this and other reasons, segregated sentences have increased.

Remanded prisoners generally do associate with other inmates in the local prison. However, the court may decide that due to police investigations, the

remanded prisoner is to be segregated or placed in solitary confinement. Typically, 9 to 10 percent of remanded prisoners are in fact segregated from the other inmates. The police can also monitor the letters and visits to remanded prisoners to have a more secure investigation.

#### **Prison Statistics.**

- Total Prison Population: 3,774
- Prison Population Rate per 100,000: 70
- Pretrial Detainees: 29%
- Female Prisoners: 4.6%
- Juvenile Prisoners: 0.6%
- Number of Prisons: 57
- Official Capacity of the Prison System: 3,960
- Occupancy Level: 95.3%

#### **MOST SIGNIFICANT ISSUES FACING THE COUNTRY**

Perhaps the most widely cited criminal issue within Denmark revolves around the trafficking and smuggling of human beings. This is largely intertwined with the sex-trade industry that is so strongly associated with Denmark. The smuggling of women into Denmark for purposes of prostitution is a recurring problem. Smuggling of women and girls from Thailand, eastern Europe, and Russia has been noted as occurring at high levels. However, it should be pointed out that much of this is in the way of smuggling rather than forceful abduction of the victim.

Another crime problem in Denmark is Internet-based child pornography. This has been cited as a continuing problem and many raids have been made of suspected child-pornography distributors. In fact, Danish police have acted in conjunction with the United States in investigating child Internet pornography, which resulted in a national sweep that led to over 100 arrests across the country. These raids took place in thirty-nine of Denmark's fifty-four police districts. This has been noted as the most large-scale enforcement action against child pornography in Denmark policing history.

Finally, Denmark has experienced difficulty in dealing with the influx of immigrants within its borders. Some of this immigration is legal, and some is illegal. This has resulted in many reports of police difficulties with the minority and immigrant populations within Denmark. Whether these issues are largely media driven is yet to be determined. Still, the combination of eastern European immigration, worldwide migration of women in the legal sex trade, and the illegal smuggling of Asian women has caused a confluence of problems that is hard for Danish authorities to unravel. These issues, along

with the open borders, drug legalization, and the open sex-trade industry, have resulted in a conundrum of social issues for police. Nonetheless, Denmark maintains a relatively safe and peaceful society that is not plagued by crime or turmoil—an indicator of stability achieved through open tolerance that is so commonly associated with the Danish culture.

# Djibouti

---

**Official country name:** Republic of Djibouti

**Capital:** Djibouti

**Geographic description:** A country in eastern Africa in the region adjacent to the Horn, bordering the Gulfs of Tadjoura and Aden

**Population:** 476,703 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The 8,000-member National Police Force, under the Ministry of the Interior, is responsible for internal security and border control. The Gendarmerie Nationale, a police force that patrols rural areas, is under the Ministry of Defense. It is also responsible for the president's security. The elite Republican Guard that also serves the president, is a detail of the Gendarmerie. A small intelligence service reports directly to the president.

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 252. Of which:

- Murder: 4.2
- Assault: 124.2
- Burglary: 45.0
- Automobile Theft: 0.5

## CORRECTIONAL SYSTEM

The corrections system is administered by the penitentiary administrator under the Ministry of Justice. There are four prisons in Djibouti, with the largest being Gabode. Many of the prisoners are illegal immigrants from Ethiopia.

**Prison Conditions.** Prison conditions are harsh. The government is sometimes forced to shorten prison sentences to avoid overcrowding. Inmates are required to pay bribes to authorities to permit them to receive food brought by family members. Medical care is nonexistent. There are no educational or rehabilitation programs. Women and children are usually housed separately. Female inmates are often raped by prison guards. Juveniles and pretrial detainees are sometimes housed in the same facilities as convicted felons.

**Prison Statistics.**

- Total Prison Population: 384
- Prison Population Rate per 100,000: 61
- Pretrial Detainees: 57.2%
- Number of Prisons: 4

*George Thomas Kurian*

# Dominica

---

**Official country name:** Commonwealth of Dominica

**Capital:** Roseau

**Geographic description:** An island in the Caribbean Sea between the Dominica Channel and the Dominica Passage

**Population:** 69,029 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The Dominica Police Force is an agency that was formed by the British and inherited by the independent republic. It is headed by a chief of police who is also the traffic commissioner. There are twenty police stations on the island. Training is provided by the Police Training School at Morne Bruce, northeast of Roseau.

The police have an Internal Affairs Department that investigates public complaints against the police. The unit received fifty-five complaints during 2003, of which twenty-two alleged excessive use of force. Several officers attend human rights training courses in Trinidad.

Since Dominica does not have a military force, there is a Special Service Unit within the police force to serve any external security needs.

### Police Statistics.

- Total Police Personnel: 232
- Population per Police Officer: 297

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 9,567. Of which:

- Murder: 7.9
- Assault: 682.4
- Burglary: 1,736
- Automobile Theft: 77.6

## CORRECTIONAL SYSTEM

Prisons are administered by the superintendent of prisons of the Dominica Prisons Service under the Office of the Prime Minister.

**Prison Conditions.** Although prison conditions are austere, inmates are provided work therapy, music, sports programs, educational opportunities, and counseling.

Prisoners have access to fresh pork from pigs raised at the prison. Women are segregated from men and juveniles from adults, but pretrial detainees are housed with convicted felons.

**Prison.** There is only one prison on the island, the Goodwill Prison at Roseau, with an official capacity of

175 and a total prison population of 298. The occupancy level is 143.3 percent. The incarceration rate is 420 per 100,000 population. Of the total inmate population, 43.4 percent are pretrial detainees and 2.1 percent are female.

*George Thomas Kurian*

# Dominican Republic

---

**Official country name:** Dominican Republic

**Capital:** Santo Domingo

**Geographic description:** This country occupies the eastern two-thirds of Hispaniola, the second-largest island in the Caribbean

**Population:** 8,950,034 (est. 2005)

## LAW ENFORCEMENT

**History.** The National Police was formed in 1936 through a merger of the municipal police of Santo Domingo and other towns.

**Structure and Organization.** The National Police is headed by a director general, who reports to the secretary of state for interior and police. The director general is assisted by a deputy director and two secretariats, one for internal affairs and planning and the other for public relations. Administration and operations are carried out by three sections: Administration and Support, Police Operations, and Special Operations. Each section is headed by an assistant secretary general.

The Administration and Support section supervises personnel, education and training, and finances and is responsible for the logistical system, communications, transportation records, and the police laboratory. The Police Operations section carries out routine police operations, including patrolling, traffic control, criminal investigations, rural operations, and control of civil disturbances. Patrolling is done on foot, on horseback and bicycle, and in automobiles, airplanes and boats. The

Special Operations section is essentially the Secret Police in charge of covert operations and intelligence gathering. Four regional directors are directly subordinate to the assistant director general of police operations. The regional headquarters are Santo Domingo, San Pedro de Macorís, Santiago de los Caballeros, and Barahona.

Besides law enforcement duties, the National Police is also active in civic projects.

**Education and Training.** Cadets and officers receive training at the Police Academy in Santo Domingo. The academy was established in the early 1970s with aid from the United States. National Police personnel also receive training in the U.S. Federal Bureau of Investigation Academy at Quantico, Virginia.

**Uniforms and Weapons.** Regular police officers wear gray shirts, caps, trousers, and ties, with a shield on the left breast.

**Police Statistics.**

- Total Police Personnel: 14,795
- Population per Police Officer: 605

**HUMAN RIGHTS**

The National Police has a long record of human rights violations and extrajudicial killings. Prisoners and detainees are subjected to torture and beatings, suspects and their relatives are arbitrarily arrested, citizens' privacy rights are violated, and excessive force is used in dispersing demonstrators. More than 250 people die at the hands of the police annually. Many persons with prior criminal records have been incorporated into the police ranks. A Police Reform Commission has been set up to modify existing police law and afford more accountability in police activities.

The police make frequent sweeps or roundups in low-income, high-crime neighborhoods in which they arbitrarily arrest and detain individuals. They then detain individuals for up to twenty days or more while they look for a reason to charge them with a crime, even though the law permits such detentions only for a maximum of forty-eight hours without a judge's order. Such detainees are frequently beaten. Police also arrest and detain relatives, parents, siblings, or spouses of detainees as a means of forcing a confession.

**CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: n/a. Of which:

- Murder: 15.8
- Assault: 28.4
- Burglary: 154
- Automobile Theft: 14

**CORRECTIONAL SYSTEM**

After the Dominican Republic achieved independence, the French criminal code was adopted in 1845. It was revised in 1867 and 1884. The death penalty was abolished in 1924. The maximum penalty is hard labor for thirty years.

The national penitentiary is La Victoria in Santo Domingo, where all prisoners sentenced to more than two years are incarcerated. Twenty other towns have prisons or equivalent facilities. Of these, the largest are in Santiago, La Vega, Puerto Plata, San Francisco de Macorís, Moca, San Juan, San Cristóbal, and Barahona. Working prisoners receive payment, of which 30 percent goes to the family of the prisoner, 25 percent to the

prison workshops, 25 percent to the pension fund, and 20 percent to the prisoner himself.

A warden is responsible for running each prison and reports to the attorney general. The General Directorate of Prisons falls under the authority of the Public Ministry. A police or military colonel appointed for three- or six-month periods reports to the warden. However, in practice the colonel is in charge of the prison and the warden has little or no power. Some prisons are totally out of the control of the authorities and are operated by armed inmates who charge other prisoners for basic amenities.

**Prison Conditions.** Prison conditions are harsh. Reports of torture and mistreatment are common. The prisons are seriously overcrowded, health and sanitary conditions are poor, and some prisons are outside the control of prison authorities. Given that the General Directorate of Prisons is seriously underfunded, the prisoners are expected to bribe the guards. Furthermore, there is little to no medical care because of the lack of supplies and physicians.

Those who cannot afford to pay for beds are forced to sleep on the floor or in the dirt and therefore are known as "frogs." Inmates receive only one meal per day at a cost of \$0.50 per day, and the food is inedible. There is extensive drug and arms traffic within the prisons, as well as prostitution and sexual abuse, including abuse of minors. Visitors have to bribe guards to visit prisoners. The Najayo Prison was built to hold 850 inmates; as of 2005 it held more than 2,840 persons, most of whom suffered from various illnesses. Conditions at La Victoria Prison were equally deplorable. It housed four times the number of inmates it was designed to hold. Conditions in the female prison wings are somewhat better, but female inmates are prohibited from receiving conjugal visits. Some prison guards force women to act as prostitutes in return for food and protection. Although the law requires juveniles to be separated from adults, they are often mixed with the general prison population. Juvenile prisoners are forced into sexual servitude in return for protection. Pretrial detainees are held with convicted prisoners and are not separated by crime.

**Prison Statistics.** In the 35 prisons around the country with a total capacity of 9,000, police hold more than 13,836 prisoners and detainees. The military controls 22 prisons with a total of 5,069 prisoners. Of the total prison population, 79.8 percent are pretrial detainees, 3.1 percent are female, and 1.6 percent are juvenile. The official capacity of the prison system is 8,561 and the occupancy rate 175.3 percent.

*George Thomas Kurian*

# East Timor

---

**Official country name:** Democratic Republic of Timor-Leste

**Capital:** Dili

**Geographic description:** A country located on the eastern half of the island of Timor in Southeast Asia, northwest of Australia, in the Lesser Sunda Islands at the eastern end of the Indonesian Archipelago; it also includes the Oecussi (Ambeno) region in the northwest portion of the island, and the islands of Pulau Altauro and Pulau Jaco

**Population:** 1,040,880 (est. 2005)

## LAW ENFORCEMENT

**History.** East Timor became the twenty-first century's newest democratic country after a long and hard struggle. Although economically poor, the Timorese people voted for independence from Indonesia and subsequently witnessed the birth of a new country.

Following the announcement of the vote results, the country's previous institutions and infrastructure, including the police, prosecution, judiciary, and correctional system, collapsed. Beside this massive physical destruction, East Timor was faced with a critical shortage of skilled professionals in almost all areas including judges, prosecutors, police officers, and correction officers. This enormous devastation and vacuum posed a serious threat to the development of the new nation.

**Structure and Organization.** Following the successful restoration of peace and security, a transitional adminis-

tration was established and endowed with overall responsibility for the administration of East Timor, including providing security and maintaining law and order. The creation of a new police service that was credible, professional, and impartial was a major part of this role. In this regard, East Timor's Police Service (ETPS) was officially established on August 10, 2001.

The name of the ETPS was respectively changed to Timor-Leste Police Service (TLPS) and Policia Nacional de Timor Leste. The established strength of the new police service was set at 3,000 officers.

The first East Timorese police commissioner was appointed on October 15, 2001. Gradually, Timorese officers have been appointed to key positions within the organization, including the director of police academy, the deputy commissioner operations, the deputy commissioner administration, the chief of operations, the national investigations, and the district commanders.

ETPS officers have executive policing powers throughout the country. The UNPOL police commissioner had overall responsibility over international and national police officers until May 20, 2005, when the final withdrawal of UNPOL was scheduled.

ETPS is one of only a few examples of establishing a police service from scratch in a postconflict society. Because of this fact, the police service is still in need of further national and international assistance to stand on its feet.

**Education and Training.** A training program was designed based on international democratic policing standards. The basic training program lasts for twelve weeks. However, a four-week intensive course is available for former police officers.

A comprehensive selection system for the recruits was established and began registering potential recruits in early 2000. This system provides a selection process that is free of any kind of discrimination and political influence.

Applicants for the ETPS must be of good character and be a resident of East Timor, must not be less than eighteen years of age by the time of application, and must have a high school education. The selection process includes a selection interview, a physical, and medical tests. Applicants must not have any criminal convictions in any court of law of a competent jurisdiction. Besides this selection criteria, the list of candidates are published on a prominent public notice board of the respective districts before final clearance. This system is aimed to invite any objection from the villagers on the grounds of previous criminal records, militia activities, or involvement with criminal characters.

All persons who successfully complete the selection procedure are accepted for basic training at East Timor Police Academy as cadets.

The first basic training course commenced at East Timor Police Academy on March 27, 2000, with fifty

cadets from different districts. On July 12, 2000, the first forty-eight officers—thirty-six men and twelve women—graduated. Thereafter, the officers were deployed to their respective districts as recruit agents to continue their training and development under the supervision of UNPOL field training officers.

After completing the three-month Field Training Program, the recruit agents are qualified for entry into the East Timor Police Service. Recruit agents in the ETPS are subject to a six-month probationary period once they have completed all the training requirements. After the probationary period, the recruit agents are promoted to the rank of agent.

Officers seeking promotion are subject to the ETPS promotion procedures, which are based on merit and skill levels. After completing the middle- and senior-level supervisory courses, officers are then considered for promotion to the relevant rank.

## CORRECTIONAL SYSTEM

There are three prisons in East Timor: Gleno, Becora, and Baucau. The prison facilities are deteriorating. Prison guards are reported to be ill disciplined and prisoners complain of mistreatment. Only Becora Prison has separate facilities for juveniles. Female inmates have separate quarters. There are two full-time social workers to look after women, the elderly, and the mentally ill.

# Ecuador

---

**Official country name:** Republic of Ecuador

**Capital:** Quito

**Geographic description:** A country in western South America bordering the Pacific Ocean at the equator

**Population:** 13,363,593 (est. 2005)

## LAW ENFORCEMENT

**History.** Under Article 120 of the 1945 constitution the primary responsibility for the preservation of public order rests with the National Civil Police. The first police force was established by the 1830 constitution, which required municipal councils to create their own police departments with appropriate regulations. For the first thirty years as an independent nation, the police systems were under the control of either the municipalities or the army. The police evolved slowly under a provincial aegis until 1937, when the first national police organization was formed. Control of the police reverted to the central government. In 1951 the name was changed from National Civil Guard to National Civil Police.

**Structure and Organization.** The National Civil Police makes up about 60 percent of the total personnel strength of all law enforcement agencies. The National Civil Police is headed by a commander, who reports directly to the minister of government. The administration consists of four operational divisions and the National Training Institute. The four divisions are: the Urban Service, the Rural Service, the Traffic Service, and the Criminal Investigative Division. The commander is

assisted by a staff that includes four sections: personnel, intelligence, operations, and logistics.

The country is divided into four police districts with headquarters in Quito, Riobamba, Cuenca, and Guayaquil. The first district includes the provinces of Carchi, Imbabura, Pichincha, Cotopaxi, Napo, and Pastaza; the second includes the provinces of Los Ríos, Bolívar, Tungurahua, and Chimborazo; the third includes the provinces of Cañar, Azuay, Loja, Morona-Santiago, and Zamora-Chinchipec; and the fourth or coastal district includes the provinces of Esmeraldas, Manabí, Guayas, and El Oro. The Galápagos Islands are included in the fourth district. The police in Guayaquil and Quito are organized in regiments of about 700 people each, while the 22 provinces have police corps that vary in size according to the size of their population. The Nineteenth Corps is on Isabela Island in the Galápagos Islands.

The urban police is a separate force in larger towns and cities. In 1972 a Tourist Police was established in

*Police stand outside the gates of the Brazilian ambassador's residence in Quito, Ecuador, April 21, 2005. Security around the embassy was increased after Brazil granted asylum to former Ecuador president Lucio Gutierrez, who was inside after being removed from office by Congress. Street protests over claims of abuse of power and misrule forced Gutierrez's ouster. AP IMAGES.*

Quito and Guayaquil. The Tourist Police consists of people who are fluent in English and well versed in the country's art, folklore, and history. In 1971 the police radio network in Quito and Guayaquil was improved, and a voice-operated network was extended throughout the country with forty base stations and some mobile units operating on a twenty-four-seven basis.

The Rural Police serve in scattered units throughout the country outside towns and cities. The local police chief also serves as the judge in minor cases. The Petroleum Police watches over and protects oil installations in the eastern zone.

The Traffic Division of the National Civil Police functions on all streets and highways except in Guayas province, which has its own autonomous Traffic Police. The division issues licenses, controls traffic signals, and investigates traffic accidents. Motor traffic is confined mainly to Quito and Guayaquil and to the Pan American Highway, which passes through the length of the country.

The Criminal Investigative Division was a separate unit until 1964, when it was placed directly under the

National Civil Police. It is a plainclothes force that investigates all crimes. Interpol has an Ecuadorian section with headquarters in Quito.

The Customs Police is under the Ministry of Finance. Its officers and men are suspected of being heavily corrupt and of colluding with smugglers. Other police agencies include the Ministerial Military Police in charge of public buildings, the Drug Squad, and the Juveniles Brigade.

**Police at Work.** Police corruption is a major problem. Both the military and the police have been implicated in narcotics trafficking. Off-duty police officers have been implicated in armed robberies and auto thefts. Allegations of bribery, police abuse, torture of detainees, deaths in custody, and extrajudicial killings are widespread. Few police officers are convicted, even when they have been indicted for these crimes.

**Education and Training.** Most of the National Civil Police commissioned officers are graduates of the National Training Institute. The Police Academy is in

## *Ecuador*

Quito, and the course for cadets is three years. Officers are trained at the Officers' Training School. Lower ranks are trained at the Other Ranks' Training School. Recruitment is limited to Ecuadorian citizens between twenty-one and thirty years of age with at least a primary education.

### **Police Statistics.**

- Total Police Personnel: 50,707
- Population per Police Officer: 263

### **HUMAN RIGHTS**

The government's human rights record is poor. There are credible reports that the police commit extrajudicial killings, especially in response to demonstrations. Persons are subject to arbitrary arrest and prolonged detention. There is violence and pervasive discrimination against Afro-Ecuadorians and indigenous people. Police who torture and mistreat detainees are not prosecuted, disciplined, or punished.

### **CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 587. Of which:

- Murder: 25.9
- Assault: 35.6
- Burglary: 164.5
- Automobile Theft: 52.9

### **CORRECTIONAL SYSTEM**

The penal code was adopted in 1938. Capital punishment is outlawed. The maximum sentence is fifteen years of hard labor.

The corrections system is operated by the National Directorate of Prisons under the Ministry of Government. The two largest prisons are the Garcio Moreno Prison in Quito and Penitenciario del Littoral in Guayaquil. There is also a municipal jail in Quito and jails in all the provincial capitals except those in the

eastern part of the country. There is one agricultural penal colony, the Colonia, Penal de Mera, on the bank of the Pastaza River.

One of the most modern penal establishments is that in the northern city of Tulcán near the Colombian border. It is divided into three sections—male, female, and minor offenders—and has a modern classroom.

### **PRISON CONDITIONS**

Prisons in the tropical highland areas tend to be worse than those in the highlands. Overcrowding is a serious problem. The Thomas Larrea Prison in Portoviejo was built to hold 150 prisoners but as of 2005 it had a population of more than 300. Traumatic injuries caused by fights between inmates account for more than 65 percent of all deaths in prisons. There is also increasing drug use among prisoners. Pretrial detainees are not held separately from convicted prisoners. There are no separate facilities for dangerous criminals and there are no effective rehabilitation programs. New prisons have not been constructed because of lack of financial resources. However, the amount allocated for prison rations in 2003 was increased to \$0.70 per day. According to a legislative provision, those who are held without trial for a certain period may obtain their freedom immediately. Women and juveniles are held separately from men and conditions are better in women's sections than in others.

### **Prison Statistics.**

- Total Prison Population: 13,045
- Prison Population Rate per 100,000: 100
- Pretrial Detainees: 62.4%
- Female Prisoners: 8.8%
- Number of Prisons: 34
- Official Capacity of the Prison System: 6,800
- Occupancy Level: 191.8%

*George Thomas Kurian*

# Egypt

---

**Official country name:** Arab Republic of Egypt

**Capital:** Cairo

**Geographic description:** Occupies the lower end of the Nile Delta in the northeastern corner of the African continent and the Sinai Peninsula, the land bridge between Asia and Africa

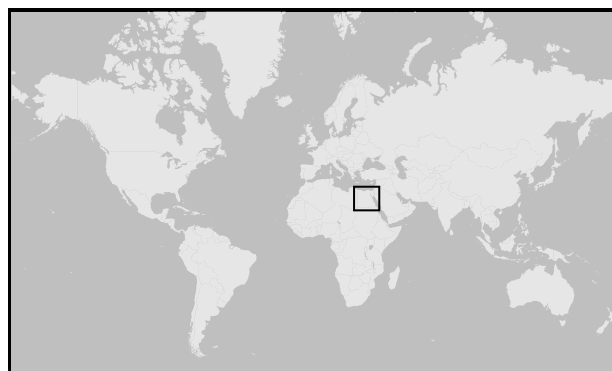

**Population:** 77,505,756 (est. 2005)

## LAW ENFORCEMENT

**History.** Under the rule of the Ottoman Empire, Egypt had a corrupt and oppressive police system that treated the population with the disdain of an occupying power. Contacts between the fellahin in rural areas and the police were few, but confrontational when they occurred. The police were concerned only with securing the rights of the state and the powerful. Each law enforcement official, down to the *umdah*, or the village headman, pressed hard on those below him to placate those above him. The police and internal security matters were divided among various ministries, each rife with corruption and competing with other agencies for power and authority. Because of overlapping responsibilities, there was endless chaos and morale was poor. At the same time, the police did nothing to curb the high rate of individual and group violence caused by the propensity of the fellah to take the law into his own hands and retaliate against all forms of perceived injustice by government officials, neighbors, or relatives.

The army officer's coup that overthrew the monarchy initiated a series of police reforms. All police func-

tions were integrated in the Ministry of the Interior. Standards of recruitment and performance were raised, a training program was initiated, and a serious effort was made to educate the public about the rule of law.

During the first ten years of the Nasser regime, police organization and morale were strengthened and the incidence of serious crimes were reduced. Although the regime was authoritarian some limits were placed on the arbitrary nature of police behavior and conduct. The trend continued under Anwar Sadat, who succeeded Gamal Abdel Nasser. The police training program was modernized, better police equipment was introduced, and a police anticorruption campaign was launched. The notorious Turah prison was demolished. Some of these reforms were expanded by Muhammad Hosni Said Mubarak, Sadat's successor. As a result, Egypt has a more modern police system than any other Arab state.

**Structure and Organization.** The Police and Security Service is a national organization with its headquarters

in Cairo under the Ministry of the Interior. There are parallel subordinate elements in each governorate, town, and village. Besides criminal investigation and maintenance of law and order, the police have a broad range of responsibilities that include prison administration, immigration control, and suppression of smuggling, security intelligence, traffic, and emergency relief. The police are also used to supervise elections and facilitate the Haj, the annual pilgrimage to Mecca. In times of war or martial law, the police are subject to military direction. Military training, a major part of basic police training, reflects their historical tradition as a paramilitary force.

The National Police is organized along military lines with the line of command running from the minister of the interior down through sequentially lower echelons. The organization betrays Turkish, French, and British influences and the centralized flavor it acquired under the monarchy. The total strength of the force is 117,560, of which some 10 percent are officers. In addition, there are 70,000 security militia and village watchmen who as police auxiliaries perform night guard duties in rural areas.

A presidential decree in 1971 reorganized police and security affairs under eight departments of the Ministry of the Interior: State Security Investigations, Emigration and Nationality, Inspection, Criminal Investigation, Transport and Communications, Administrative Affairs, Police Support, and Officers' Affairs and Personnel Affairs. In August 1971 the minister of the interior took over three general departments and assigned the rest to four deputy ministers. Those grouped directly under the minister were State Security Investigations and Organization and Public Relations. Under the deputy minister for public security were Public Safety, Travel, Immigration and Passports, Port Security, Criminal Evidence Investigations, Emergency Police Rescue, Ministerial Guards, and Central Police Reserves. Under the deputy minister for special police were Prison Administration, Militia and Civil Defense, Police Transport and Communication, Traffic, and Tourism. Under the deputy minister for personnel affairs and training were the Police College, the Institute for Advanced Police Studies, the Enlisted Training Administration, Personnel, and the Policemen's Sports Association. Under the deputy minister for administrative and financial affairs were General Administration, Police Supplies and Procurement, Budgets, Accounting, Construction, and Legal Affairs.

The new Police Authority Law passed by the People's Assembly in 1972 identified the president of the republic as the chief of police and the minister of the interior as the superior of police. The minister is assisted by the Supreme Police Council in the formulation of policy. This law created the new positions of first

undersecretary and undersecretary to be filled by senior police officials.

In each governorate a director of police commands all police in that jurisdiction. Both the governor and the director of police answer to the minister of the interior on all police matters. In the district subdivisions of the governorate, district police commandants have similar positions and functions at that level. While municipal and district police have modern facilities in larger cities, this is not the case in villages with a population of 5,000 or fewer, where the force is poorly manned and often horse-mounted. Only about one-eighth of the villages have even a police station. A village or rural district station typically includes an officer in charge with the grade of captain or major, ten to twenty policemen of lower grades, and various numbers of village guards. The typical station has two floors, quarters upstairs for the commander and policemen on duty, and two or three duty rooms, two cells, and a stable for six or eight horses on the lower level.

For operational purposes, Egypt is divided into three districts. District One includes the headquarters in Cairo and the Cairo and Alexandria governorates. District Two includes the governorates of lower Egypt, the Suez Canal area, Giza, Beni Suef, and El Faiyûm. District Three encompasses all the remaining governorates.

Also under the Ministry of the Interior are the State Security Investigations Sector, which conducts investigations and interrogates detainees, and the Central Security Force, which enforces curfews and bans on public demonstrations.

*Grades, Promotions, and Discipline.* The police assignment and transfer system, under which up to one-fourth of those of officer rank are shifted annually, was revised in 1972. In District One, the tour of duty is set at five to ten years, in District Two at four to five years, and in District Three at three years. In District Three, which is the least desirable assignment, there are extra inducements, such as extra leave. After training, initial assignments for new policemen, with some exceptions, are made in their home areas, but the transfer of policemen under probation is prohibited. Initial appointments of the Police College graduates are made in accordance with a set priority of governorates, starting with Cairo. Similarly, the large cities have priority for the appointment of new municipal policemen of the constable first grade.

The law of 1972 reidentified all police ranks. In the officer grades, these are the same as in the army, starting with the major general and descending to the first lieutenant. Below the first lieutenant is the grade of lieutenant-chief police warrant officer, followed by three descending grades of police warrant officers. The munic-

*Police stand guard outside the remains of Ghazala Gardens Hotel in Sharm al-Sheikh, Egypt, July 24, 2005. A series of car bombs exploded outside the luxury hotel and a nearby coffee shop in the Egyptian Red Sea resort town. At least 88 people were killed, making the attacks the worst in the nation's history. AP IMAGES.*

ipal police patrolmen or constables have the grades of first or second assistant policemen. Enlisted police-soldiers have the usual four military grades of master-sergeant, sergeant, corporal, and private. The irregular part-time and other security watchmen have the grades of chief of guards, deputy chief guards, and guards. Regular police insignia are the same as those of the army.

Personal history files dating from birth are kept on all officers, and reports are added annually in January before the preparation of promotion and transfer orders, which are customarily issued in July and August. Annual reports are seen by the officer concerned and approved by the Supreme Police Council before they go into the files.

Promotion through the rank of brigadier general is according to seniority and vacancy except in the case of major general, which is by selection. The mandatory retirement age is sixty, but major generals can receive up to three years of extension. Police pensions are set at 80 percent of pay at the time of retirement and 85 percent for disability in the line of duty.

Disciplinary action in the police service may be judicial or administrative. In the former case, it is regulated by the Ministry Justice Law of 1966 and is administered by the Ministry of the Interior in cooperation with military authorities. In the history of modern Egyptian police, there was only one occasion when there was a police mutiny. It happened in 1986 when 10,000 members of the Central Security Command went on a rampage and destroyed public and private property and stormed a prison south of Cairo and freed most of the convicts there. The death toll in the uprising was officially estimated at 107. Following the mutiny, which was put down by the army, President Mubarak fired the minister of the interior.

**Education and Training.** With some exceptions, officers must be graduates of the Police College at Cairo, and all men entering the service must complete a three-month course conducted at the college. Particular attention is given to the training of officers in modern methods and

techniques and selected cadres are sent to foreign police schools. The Police College is in the Al Abbasiyah suburb of Cairo on a 40-acre tract equipped with a laboratory and facilities for police dogs and horses. The college's Institute of Advanced Police Studies offers training for officers above the rank of lieutenant.

Officer candidates must be born of Egyptian parents and are required to have a grade average of 55 percent in secondary school, except for the sons or brothers of men who were killed in active military or police duty and sons of police or military officers. The curriculum includes security administration, French and English language studies, military drill, civil defense, fire fighting, criminal investigation, forensic medicine, sociology, radio communication, first aid, anatomy, and cryptology. Also emphasized are public relations and military subjects, such as infantry and cavalry training, marksmanship, group leadership, and field training. Graduates of the two-year program receive a degree of bachelor of police studies and are commissioned police lieutenants. The annual number of new officers has been estimated at over 1,000. Advanced officer training is given at the college's Institute for Advanced Police Studies, and graduation from this school is required for advancement beyond the rank of lieutenant colonel.

The three-month basic course at the Police College for enlisted ranks maintains a military environment, but stresses police activities and techniques. On completion of this course, the students are sent to their assigned units, where they receive additional on-the-job training. Some noncommissioned officers are sent to police schools abroad.

In 1975 the school instituted a doctoral program in criminology and a two-year program to commission as first lieutenants selected applicants already holding degrees in medicine, engineering, and law. Not all training is conducted at the Police College. Other schools exist, such as a criminal evidence investigation institute and a police communications institute.

**Uniforms and Weapons.** The basic uniform consists of a khaki close-neck tunic worn over matching trousers with a khaki peaked cap. There are variations of this standard uniform depending on the type of duty and the region.

#### **Police Statistics.**

- Total Number of Police: 21,497
- Population per Police Officer: 3,605
- Percentage Female: 19%

#### **HUMAN RIGHTS**

The human rights record of the Egyptian police remains troubling. Security forces mistreat and torture prisoners,

arbitrarily arrest and detain persons, and hold detainees in prolonged pretrial detention. Local police routinely kill and torture persons who are not even suspects and often engage in mass arrests and security sweeps. There are many reports of disappearances of persons while in police custody. Thousands of persons are detained administratively under the Emergency Law on suspicion of terrorist or political activity. The total number of persons thus held exceeds 15,000.

#### **CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 3,693. Of which:

- Murder: 1.6
- Assault: 0.7
- Automobile Theft: 3.1

#### **CORRECTIONAL SYSTEM**

Prison administration is under the jurisdiction of the Ministry of the Interior. Prison officials usually are graduates of police or military schools. The Higher Council of Prisons monitors prison administration. Reforms instituted after the 1952 coup include the installation of separate facilities for women and juveniles, provision of medical services, and increased emphasis on rehabilitation. First offenders are not stigmatized with a criminal record for minor breaches and provision was made for assisting a prisoner's family in need.

Penal institutions are divided into penitentiaries, general prisons, district jails, and reformatories for juvenile offenders. Criminals with the heaviest sentences are sent to penitentiaries, where they are subjected to hard labor under strict supervision. Solitary confinement is imposed as a disciplinary measure for bad behavior. General prisons are located in the governorates to house offenders sentenced to terms of three months or less. The village police station lockups are for temporary incarceration only and are not regarded as penal institutions.

**Prison Conditions.** Almost all prisons are overcrowded, unsanitary, and poorly maintained. Most of the prisons were built in the early part of the twentieth century and are dilapidated. Overcrowding also occurs in the four juvenile institutions. Medical facilities in prison are substandard and tuberculosis is widespread. Some prisons are closed to the public. Lack of proper hygiene, food, clean water, proper ventilation, and recreation activities combine to make prison life extremely harsh.

Prisons are regularly inspected. Officials found guilty of brutality or negligence are subject to summary dismissal, although this rarely happens. Except in the penitentiaries, prisoners are offered educational and

rehabilitative programs and each prison has a literacy center in which illiterates receive basic schooling. There are restrictions on visits to prisoners incarcerated for political reasons.

The government does not permit the International Red Cross and other human rights monitors to visit the prisons. Lawyers are not permitted to meet their clients in prison.

**Prison Statistics.** There are forty-three prisons in the country, of which thirty are general prisons, not counting the district jails. The total prison population is estimated at 61,845. The incarceration rate per 100,000 population is 87. Pretrial detainees make up 16.7 percent of the prison population and females 4.3 percent.

*George Thomas Kurian*

# El Salvador

---

**Official country name:** Republic of El Salvador

**Capital:** San Salvador

**Geographic description:** A country in Central America bordering the North Pacific Ocean

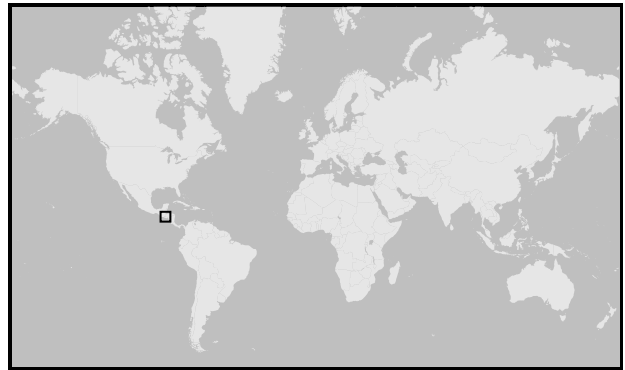

**Population:** 6,704,932 (est. 2005)

## LAW ENFORCEMENT

**History.** Formed in 1912, the Civil Guard was set up by Spanish officers, who patterned the new organization after the Spanish Guardia Civil. The National Police, organized in its present form in 1945, is the outgrowth of a number of predecessor bodies since colonial times. Before independence, the Corps of Watchmen patrolled the towns and main highways at night. The first unified police force was established in 1843 with the formation of the Corps of Police, which was charged with maintaining law and order in the urban districts. This body eventually became the National Police. In 1868 the Civil Guard was founded to augment the Corps of Watchmen. Although at first their sphere of operations included both urban and rural areas, in time they became an exclusively rural force until 1912, when they were supplanted by the National Guard. In 1992 all these agencies were combined into the National Civil Police under a director general.

**Structure and Organization.** The National Civil Police consists of the National Guard, the National Police, and the Treasury Police. All three are paramilitary organizations commanded by army officers subordinate to the Ministry of Defense. Each force, although centralized

and directed by its own commander, works in close coordination with the armed forces.

The National Guard is a constabulary-type force engaged primarily in rural police duties. It is distributed throughout the country in five infantry commands comprising fourteen separate companies. Each command has its headquarters in the principal city within its jurisdiction, usually a departmental capital, and assigns its companies as needed to the surrounding rural areas. The men wear army-type uniforms and are armed with standard infantry weapons.

The National Police is primarily an urban force. It is a centralized force under a director general with headquarters in San Salvador. It constitutes the Department of Public Security within the Ministry of National Defense. Although directly controlled from the capital, local detachments enjoy considerable autonomy.

Police headquarters comprise three major branches: the general, investigative, and traffic. The fire department

*The director of the El Salvador police department, Ricardo Meneses, meets with gang members attending a gang prevention program in San Bartolo. In 2005 several Central American authorities and U.S. federal agents announced new efforts to share information and coordinate initiatives to address gang issues. As part of these efforts the FBI, California police, and Central American authorities mentioned they would open a liaison office in San Salvador. AP IMAGES.*

is also under its jurisdiction. The general branch includes all policemen on the beat. Investigative policemen are plainclothes detectives and forensic laboratory technicians concerned with criminal investigation and detection. The traffic police work almost exclusively in the larger towns and cities. Except for traffic policemen who carry only a billy club, most policemen are armed with a billy club and a pistol. In addition, the Night and Bank Watch Corps engage in night patrols and bank surveillance. Regionally, the National Police is divided into four regions: western, central eastern, metropolitan, and para-central. Regions are subdivided into twenty-one operational divisions broadly coterminous with the fourteen local government districts. Special National Civil Police units include: Air Corps, antinarcotics, arms and explosives, crime statistics, discipline investigation, firearms support, human rights, intelligence, juvenile and family, logistics, maritime, mounted, personnel, public order,

public relations, support, tourist police, environmental, hostage rescue, border and immigration control, and protective services for dignitaries.

The Treasury Police is a small corps organized in 1926 for customs duties and control of contraband activities. It operates primarily at airports, seaports, and border areas, with headquarters in the capital. Its agents wear army uniforms and are unarmed, but they usually work with armed members of the National Guard.

Officer grades of the National Police and Treasury Police start at subinspector and ascend through inspector, second commandant, first commandant and director general. Noncommissioned officer ranks are the same as in the army and a patrolman is called an agent.

**Uniforms and Weapons.** Officers wear olive-green long- or short-sleeved shirts with matching caps. Those in other ranks wear beige shirts and coffee-colored trousers

with a Sam Browne belt with a pouch and holster in black and a helmet. The traffic police wear the same uniform but with black knee boots. Insignia of rank consist of silver or gold bars—and one and two silver bars for subinspector and inspector, respectively, and one or two gold bars for second commandant and first commandant, respectively. The director general wears the insignia of army rank.

#### **Police Statistics.**

- Total Police Personnel: 6,354
- Population per Police Officer: 1,055

#### **HUMAN RIGHTS**

The government generally respects human rights, but there remain serious problem areas. Some police officers kidnap persons for profit, use excessive force, and mistreat detainees. There are special police courts that hold disciplinary proceedings against National Civil Police charged with human rights abuses. In 2000 a presidential commission was established to investigate alleged police misconduct. The commission's recommendations led to new legislation strengthening the powers of the Police Inspector General to summarily remove police officers charged with crimes or misconduct. More than 551 policemen were dismissed in 2001.

#### **CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 879. Of which:

- Murder: 36.9
- Assault: 71.1
- Automobile Theft: 82

#### **CORRECTIONAL SYSTEM**

The constitution prescribes that the penal system shall be designed for the rehabilitation of prisoners rather than solely for punishment. Article 168 states, "The State shall organize penitentiaries with the aim of reforming offenders, educating them and teaching them industrious habits, looking toward their rehabilitation and the prevention of crime."

Overall direction and administration of the prison system is vested in the director general of penal and rehabilitation centers under the minister of justice. The

prison system consists of three national penitentiaries and thirty jails or preventive detention facilities distributed throughout the country. The penitentiaries are operated by the federal government, while subordinate facilities are administered by local authorities. Three penitentiaries—in Ahuachapán, Santa Ana, and San Vicente—house approximately one-half of the prison population.

Each of the country's departments has at least one jail or detention facility, and there is one in every departmental capital. The Department of San Salvador, however, has no facility for men, although there is a prison for women in Lake Ilopango. There is one institution for women, at Santa Ana. Prison facilities range from simple frame enclosures with little security and few amenities to well-constructed, professionally planned buildings with sound protection and adequate accommodations. Other than the penitentiaries, the prison system is loosely organized and receives little guidance or control.

**Prison Conditions.** From 1997 to 1999 the prison population fell about 23 percent as the result of the implementation of new penal and sentencing codes that limit preventive detention to serious crimes. Even with this decrease, however, the prisons exceed the official capacity by more than 4,800 prisoners. Because of lack of holding cells, pretrial detainees are often sent to regular prisons, where they are placed with violent criminals. Gang violence plagues the prison system, especially in the country's three largest and oldest penitentiaries. The media report incidents of prisoners torturing fellow prisoners in La Esperanza Prison. Annually, about twenty-five prisoners die as a result of prison violence.

#### **Prison Statistics.**

- Total Prison Population: 12,117
- Prison Population Rate per 100,000: 184
- Pretrial Detainees: 42.3%
- Female Prisoners: 5.5%
- Number of Prisoners: 21
- Official Capacity of the Prison System: 7,312
- Occupancy Level: 165.7%

*George Thomas Kurian*

# Equatorial Guinea

---

**Official country name:** Republic of Equatorial Guinea

**Capital:** Malabo

**Geographic description:** A small country on the west coast of central Africa bordering the Bight of Biafra, where the African shoreline bends west; includes the island of Bioko, where the capital is located

**Population:** 535,881 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The national police force is the Guardia Civil based on the colonial Spanish force of the same name. It functions under the Ministry of State Security. Security forces commit numerous human rights abuses.

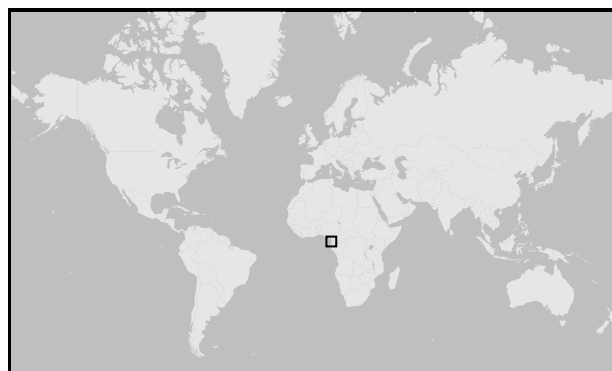

### Police Statistics.

- Total Police Personnel: 2,600
- Population per Police Officer: 206

## CORRECTIONAL SYSTEM

The main prison is the Black Beach Prison at Malabo. There is also a prison at Evinayong on the mainland.

Since Equatorial Guinea does not publish information on its prisons, little information is available on their

condition. It is believed that there are over forty prisons and Gendarmerie detention centers. Of these, the largest is the Black Beach Prison. Torture is routinely used in prisons to extract confessions and there are a number of deaths each year in prisons as a result of mistreatment. Prisoners do not receive medical care, and prisons do not have working toilets, drinkable water, or beds. Prison officials sexually assault female inmates and use them as unpaid labor or domestic help. Some prisoners do not receive any food for days. Male and female prisoners are not held in separate facilities nor are adult and juvenile prisoners.

*George Thomas Kurian*

# Eritrea

---

**Official country name:** State of Eritrea

**Capital:** Asmara

**Geographic description:** A country in eastern Africa bordering on the Red Sea

**Population:** 4,561,599 (est. 2005)

## LAW ENFORCEMENT

**History.** Located on the Horn of Africa, Eritrea is a surprisingly stable state considering the region in which it exists. Once an Italian colony, Eritrea was incorporated into Ethiopia after the fall of fascist Italy at the end of World War II. The Eritreans revolted against Ethiopian rule in 1961. Thirty years later, the Eritreans defeated the Ethiopians and declared independence. In 1996 Eritrea drafted its first constitution. However, a second war erupted with Ethiopia in 1998, and the constitution was never implemented. The United States helped to broker a cease-fire in 2000 and the United Nations ruled on the current border demarcation. As of 2005, United Nations' peacekeeping troops were patrolling the temporary security zone between Eritrea and Ethiopia.

**Structure and Organization.** The police structure in Eritrea closely resembles that of the new nation-state. The current police structure was taken directly from the remnants of the large wartime security force and has been restructured nearly every two years since Eritrea first gained independence from Ethiopia in 1991.

Police institutions in Eritrea were taken directly from the policing structures of the Eritrean People's

Liberation Front (EPLF), the guerrilla insurgent group responsible for the defeat of Ethiopia. By most reports, the EPLF had extremely well-organized and effective institutional structures.

Beginning with independence in 1991, the EPLF performed policing duties throughout the country. However, by the mid-1990s demobilization had begun in earnest, providing enough trained individuals to allow for an independent police force.

Eight provinces exist in Eritrea, each with some level of autonomy and responsibility for policing. However, the National Assembly outlines the internal and external policies of the government and regulates their implementation and approves the budget.

**Salaries.** Until 1994 the police in Eritrea were an unpaid force. In 1994 the police were paid around \$10. Intentions were to pay the police an annual salary of approximately \$240 by 1996. In 2002 the gross domestic product per capita was \$700.

**Police Statistics.** Official reports of the number of police officers in Eritrea are rather difficult to interpret given that in 1995 the number of officers was 162, yet one year earlier the official number was 314.

**Education and Training.** All officers in the Eritrean police force receive a two- to three-month basic training course. Police training is separate from corrections and fire fighting, focusing on driving, public order, photography, investigation, and management.

**Uniforms and Weapons.** Eritrean police wear no noticeable uniforms. However, it has been reported that some ranking officers wore blue shirts and epaulettes by 1996.

There is no official information regarding weaponry or equipment that the Eritrean police are known to carry. However, because the police come from the ranks of the Eritrean security forces, it is assumed that some weaponry is carried.

**Transportation, Technology, and Communications.** Only sketchy information is available about equipment available to Eritrean police. Most indicates that some military-type equipment is used, but that it is not modern equipment, and the police, in their subservient role to the security forces in Eritrea, are given the remnants of available equipment.

#### HUMAN RIGHTS

In September 2001 the Eritrean police force arrested eleven leaders of the ruling political party after they had sent a letter to President Isaias Afewerki requesting implementation of the democratic reforms provided for in the 1997 constitution.

Following these arrests, the police routinely arrested publishers, editors, and reporters and closed down all nongovernmental newspapers and magazines. Formal charges have never been filed against those detained. It is a violation of Eritrean law to detain an individual for more than thirty days without notice of charges.

Religious minorities are also routinely arrested for practicing their faith. Members of Pentecostal Christian churches and Jehovah's Witnesses are frequently arrested for practicing their faith. There have been so many arrests that some prisoners are being incarcerated in empty cargo containers. The Red Cross has been denied access to these prisoners.

#### CRIME

Most crime in Eritrea involves traffic violations and some petty theft. Much of the crime appears to be related to boredom, such as drinking and fighting.

#### CORRECTIONAL SYSTEM

The prison system is headed by a commissioner of prisons. There is a large prison at Asmara, while the other regional and local prisons are ramshackle structures.

**Prison Conditions.** Prison conditions are spartan, more because of budgetary problems than anything else. Women and men are held in separate facilities, but there are no juvenile detention facilities and pretrial detainees are housed with convicted prisoners. Prisoners are allowed three visits per week by family members.

**Official country name:** Republic of Estonia

**Capital:** Tallinn

**Geographic description:** Borders the Baltic Sea and the Gulf of Finland; it covers a total land area of 17,461 square miles, which includes 1,520 islands in the Baltic Sea

**Population:** 1,332,893 (est. 2005)

## LAW ENFORCEMENT

**History.** In the First Estonian Temporary Government established on February 24, 1918, the prime minister fulfilled the tasks of the minister of internal affairs. German occupation hampered the actual establishment of the state apparatus, and the first minister of internal affairs was in a prison camp until Germany surrendered on November 11, 1918.

The Second Temporary Government, in which the prime minister and the minister of internal affairs positions were filled by the same person, was formed on November 12 after the collapse of German rule. The first written acts of the Ministry of Internal Affairs were dated from November 13, 1918, and contained orders from the Bolsheviks for mayors and the chairmen of county councils to establish local governments and militia units.

The Third Temporary Government was formed on November 27, 1918, and by December 2 the initial structure of the Ministry of Internal Affairs was completed. The ministry consisted of the Minister's Office and the Administrative, Local Government, Technical, Health, Police, Religion and Statistics Departments,

which later were called Major Directorates. In addition, the ministry involved temporary government commissars, the Horses Mobilization Commission, Requisition and War Damage Assessment Commission, Commission on Fighting against Speculation and Usury, Insurance Committee, Immobile Commission, and Commission on Combating Illegal Alcohol. The need for these commissions came from the wartime situation; they were later dismantled.

The touchstone of the ministry's work was the Communist uprising on December 1, 1924, which was successfully suppressed by the national defense apparatus. Order was soon restored, and the Defense League was created under the guidance of the minister of internal affairs. In connection with the state of emergency the minister of internal affairs assumed the responsibilities of the governor general on January 7, 1925.

In the face of the difficult economic situation of the late 1920s and early 1930s, the Ministry of Internal

Affairs merged with the Court Ministry on July 1, 1929, and a joint Minister's Office was set up. On April 1, 1934, the ministries were separated again. On the one hand, the economic crisis was coming to an end and, on the other hand, the Ministry of Internal Affairs became much more important in an environment in which state intervention in all areas of life significantly increased.

During this time the Ministry of Internal Affairs consisted of the Administrative Department, the Police Directorate, and the Border Directorate. On November 23, 1934, the Administrative Department was divided in two: the General Department and the Local Government Department; because of this, the state's role in controlling local government significantly increased.

*The Police Service.* External police subordinate to local government was established during the war for independence, but from December 2, 1918, the Police Directorate of the Ministry of Internal Affairs coordinated the work of the police. On December 17, 1919, the communal police was abolished and the national police, subordinate to the Police Directorate, was set up. The independent criminal police, subordinate to the Ministry of Courts, was established on January 5, 1920.

The training of professional staff was extremely important at this time as few officers came over from the Russian police. A two-grade Police School was opened in 1925: the higher-grade educated constables and the lower-grade trained common policemen. The image of the profession can be characterized by the fact that there were 350 to 400 applicants for 40 places in both courses in the late 1930s. The school trained 500 constables and 530 policemen in 15 years.

The police structure was put to the test by the Communist revolt on December 1, 1924, and by the extremist right-wing independence war movement in the early 1930s. In connection with the growth of the military threat in the world in the late 1930s, the need for a national civil defense system was high on the agenda. The high commander of the military forces and the minister of internal affairs agreed that this task should be given to the police, which set up the office of a civil air defense inspector on November 10, 1934. The Inspectorate was responsible for fire safety arrangements throughout Estonia as the inspector headed the Fire Corps.

*Border Guards.* On May 30, 1922, the legislature made the Border Service subordinate to the Ministry of Internal Affairs. The government's regulation of November 20, 1922, established a Border Directorate that was later renamed a service. Administratively, the Border Guards were subordinated to the minister of

internal affairs, who gave them their assignments, but the staff consisted only of professional military men.

The Border Service was taking in noncommissioned officers and officers from the military and had to provide special training for them. Nearly 50 cordon leaders, 600 guards, and more than 70 dog guides were trained before the war. The men's ammunition and equipment significantly improved, particularly the vehicles. This enabled the number of border guards to be reduced from 2,000 men to approximately 1,000.

*Local Government Service.* The Ministry of Internal Affairs' hold was strong over Estonia during the war for independence. The first Estonian constitution established a regime where the state interfered little with the activities of cities, counties, and rural municipalities. The second and third constitutions notably changed the situation, resulting in the setting up of a special department at the ministry. In 1934–1937 local governments had only nominal freedom; the ministry appointed officials and directly controlled their work.

The Estonian police disappeared in the summer of 1940, when Estonia formally lost its independence to the Soviet Union. After the war the Estonian Communist Party (ECP) became the preeminent organization in the republic. Most of these new members were Russified Estonians who had spent most of their lives in the Soviet Union. Not surprisingly, Estonians were reluctant to join the ECP and thus take part in the Sovietization of their own country.

As part of the Sovietization process, regular policing duties fell largely to the Ministry of Internal Affairs, which was the successor to the People's Commissariat of Internal Affairs. After Joseph Stalin's death in 1953, the Soviet Union underwent a period of relative stability politically and, in the ensuing decades, attempts at limited reform of the Ministry of Internal Affairs were undertaken. Not until the 1980s and particularly with the advent of glasnost did meaningful reform become possible.

*The Reemergence of Estonian Policing.* In February 1990 Estonia's Supreme Soviet eliminated paragraph 6 of the republic's constitution, which had guaranteed the Communist Party of the Soviet Union's (CPSU) leading role in society. The final blow came at the ECP's Twentieth Congress in March 1990, when it voted to break with the CPSU. The party splintered into three branches, then consolidated into a pro-CPSU (Moscow) faction and an independent Estonian Communist Party.

The Police Act, passed on September 20, 1990, created a transition period during which the dissolution of the Soviet militia and the formation of the Estonian police was to be completed. The Estonian police was

reestablished within the jurisdiction of the Ministry of Internal Affairs in March 1991. That was almost half a year before Estonia regained its independence. The act remained in force until May 1998, when a new Police Service Act was passed, specifying personnel recruitment, working conditions, benefits, ranks, and regulations concerned with leaving the police force.

**Structure and Organization.** The Ministry of Internal Affairs of Estonia is headquartered in Tallinn and is headed up by the minister, who is responsible for a wide range of tasks. These include ensuring national security, protecting public order, guarding and protecting the state border, ensuring the border regime, arranging matters related to civil defense and fire and rescue services, protecting local government, regional development, citizenship, migration, churches, and congregations, as well as drafting appropriate legal acts.

The Ministry of Internal Affairs supervises five central agencies: the Police Board, the Security Police Board, the Board of Border Guard, the Citizenship and Migration Board, and the Rescue Board. It also administers the Inspection of Data Protection and Public Service Academy, which is an educational institution providing applied higher education in the field of policing as well as in other fields of administration of the Ministry of Internal Affairs.

The Police Board manages, directs, and coordinates the activities of all police units under its administration. It is headed by the director general, who is appointed by the government on recommendation from the minister of internal affairs.

The Estonian police structure consists of two larger independent branches: the State Police Department and the Security Police Department. The State Police is responsible for public order and internal security, crime prevention and crime detection, and carrying out pretrial criminal investigations. The Security Police is responsible for maintaining the state's constitutional and territorial integrity, protecting state secrets, conducting counterintelligence, and fighting against terrorism and corruption.

At the regional level the police force is divided up into seventeen prefectures, each of which is responsible for several police stations. The police prefects are appointed by the minister of internal affairs following proposals from the director general of the Police Board. These regional services are responsible for general police tasks such as maintaining public order, fighting crime, and assisting the public.

The police are further structurally divided into two main branches: the Central Criminal Police and the Constabulary. Until May 1998 the Traffic Police existed as a separate branch and was then integrated into the

jurisdiction of the prefectures. The Estonian police has four national units: the Central Law Enforcement Police, the Central Criminal Police, the Forensic Service Center, and the Police School.

**Central Law Enforcement Police.** The main tasks of the Central Law Enforcement Police are to analyze and coordinate the activities of the police in the area of law enforcement (e.g., crime prevention), to participate in ensuring public order and performing traffic supervision, to process misdemeanors, to protect the president, the chairman of the Parliament, the prime minister and the official guests of the state, to guard locations assigned by the government, and to train police dogs.

**Central Criminal Police.** The Central Criminal Police coordinates the activities of the Criminal Police in the whole country and manages the international cooperation of the criminal police. The Criminal Police investigates crimes committed by criminal organizations, drug crimes, economic crimes, and computer-related crimes exceeding the service areas of prefectures. It also investigates crimes related to money laundering and those that require extensive international cooperation.

**Forensic Service Center.** The main tasks of the Forensic Service Center are to conduct forensic examinations covering eighteen main areas including fingerprinting, ballistics, and others. The center performs extensive data collection and maintains the relevant databases. It is responsible for providing the appropriate professional training for its personnel as well as for equipping the police agencies with forensic-related equipment.

**Salaries.** In Estonia the police officer is generally underpaid. Keeping in mind the peculiarities of police work and the stress and danger involved, the average salary of \$450 to \$500 per month is considered low. Before passage of the Police Service Act, the police did not have official benefits like health and life insurance and a special pension.

**Police at Work.** The highest ranking police officer holds the title of Director General of the Police. A police officer is defined as a person employed in the police service, and he or she is a state official.

In 2004 the Estonian police set four main priorities:

1. Implement the new community-based police structure
2. Improve the fight against drug-related crime, juvenile delinquency, and domestic violence
3. Reduce the number of traffic victims by enhancing traffic supervision
4. Improve the fight against crime on the international level

**Police-Community Relations.** Public opinion of the police is increasingly positive as training increases and improves. However, as in most places, people fail to report crime because of the belief that police are unable to assist the victim or apprehend the suspect. Also, people generally believe the damages caused by a crime are too trivial. Media play a leading role in forming the opinion of the police—police failures, corruption, indifference to citizen concerns, and incompetence frequently are highlighted.

During the summer the Estonian police hold a Police Family Day, and in 2001 there were more than 2,000 participants from all over Estonia. The event is developing into an important tradition.

**Police Officer Ranks.** The position of a police officer is divided into basic categories according to the educational and other basic requirements.

The ranks for higher police officers are:

- National Police Commissioner
- National Security Police Commissioner
- Deputy National Police Commissioner
- Deputy National Security Police Commissioner
- Police Chief
- Deputy Police Chief
- Police Prefect
- Deputy Police Prefect
- Police Counselor
- Chief Superintendent
- Superintendent

The ranks for senior police officers are:

- Leading Police Inspector
- Leading Constable
- Senior Police Inspector
- Police Inspector
- Constable

The ranks for junior police officers are:

- Junior Police Inspector
- Junior Constable

**Awards and Celebrations.** When entering the service, all police officers take the police oath. The festive receptions of the Police Director General traditionally takes place on Police Day (November 12) and on the National Anniversary. Police Day is celebrated by awarding police employees with Police Crosses of Merit, by a

formal police ball, and by commemorating police officers killed in the line of duty.

The Police Cross of Merit was established in 1993 to award police officers for long-term service or noteworthy performance of duties, including instances of bravery in the performance of duties, and, in exceptional cases, to notice people who are not police officers for noteworthy services to the Estonian police.

On the tenth anniversary of the reestablished Police Service, police officers who had served ten years in the police and foreigners who had shown special support to the Estonian police were rewarded with the Police Commemorative Cross.

**Education and Training.** A basic police training center was created in 1990 near the resort town of Pamu. A degree can be obtained from the Estonian Public Service Academy's Police College founded in 1992. The first class graduated in 1996. From 1996 to 1998, 197 officers earned degrees at the academy. About 15 percent of the Estonian police officers have not received specialized training.

The main color of the emblem of the Estonian police is blue, which is one of the colors of the national flag and symbolizes peace and stability. The emblem is a shield. Against the blue background, the emblem features a lion holding the small coat of arms of Estonia in its front paws. Since the lion has always characterized nobility and courage, it was also chosen as the heraldic animal of the Estonian police. Holding the small coat of arms in the front paws, the lion shows readiness to protect the public and the state's interests. The emblem was first used by the Estonian police in 1935.

## UNIFORMS AND WEAPONS

The Estonian police use everyday, ceremonial, and special uniforms. The uniform is dark blue; the everyday shirt is light blue. The buttons of the uniform have three lions on them and are gold in color. The overalls of the police are dark blue, except for special units, which use black overalls. On the left sleeve is a patch depicting the lion on the blue public shield and above it is the word *Politsei*.

The traditional uniform hat is octagonal and the female uniform also includes a uniform hat. In addition, the police wear caps while performing duties and winter hats in winter.

**Police Statistics.** With a staff of slightly less than 5,000 (1,500 are women), the police force is a large public organization, considering the size of Estonia. Of these, 3,500 are police officers (more than 950 are women).

Policing in Estonia still carries little prestige, in part a holdover from the legacy of the Soviet era. In addition, the burgeoning market economy offers more attractive opportunities than law enforcement. Between retirements and staff downsizing, a number of officers have left the service in recent years. In 1992 the police had a staff of 6,807 with 81.5 percent of the positions filled. By the end of 1997 there were 1,200 fewer police staff positions. At the same time, the percentage of positions filled fluctuated between 75 and 81.5 percent. Between 1993 and 1997, 3,975 new police officers were recruited. During this same period 1,386 officers were released from duty. In 1998, 686 police officers (13 percent of the force) were, for various reasons, released from duty.

From 1991 on the police force staff has constantly been growing older. Between 1992 and 1997 the percentage of police personnel under the age of twenty-five dropped from 36.5 to 17 percent. At the same time, the percentage of thirty-five to fifty-five-year-olds has risen from 27 to 39 percent. In 1992 there were 2,010 who were twenty-five years old or younger, by 1997, the number had dropped to 764. At the same time, the average length of service kept rising. In 1992 the percentage of officers with a length of service of up to three years was 38 percent, by 1997, it had dropped to 11 percent. At the same time, the percentage of officers with a length of service of over fifteen years rose from 18 to 27 percent. These statistics indicate that the issue is not the natural ageing of the police personnel, but young people are leaving the force and not joining the police.

## CRIME

Alcohol remains a problem in Estonia and is seen as a common characteristic in the commission of crime. Sixty to 70 percent of violent crimes, 80 percent of violent crime committed by juveniles, 40 percent of traffic accidents, 50 percent of drownings, as well as vehicle theft and hooliganism are connected to alcohol.

From 1988 to 1992 crime increased almost 400 percent, and from 1992 to 1998 it rose 11 percent, mostly because of the increased incidence of property crime. Violent crime reached its peak in 1994 and after that decreased steadily. New crime categories have appeared in Estonian crime such as drug-related crimes, organized crime, and white-collar crime.

**Organized Crime.** In the early 1980s crime groups were not well organized, as they concentrated mainly on fraud, pocket picking, and illegal money exchange. More potent organized crime spread to Estonia during perestroika, as the business opportunities increased and politics became more liberal than in the past. Independence in 1991 and

the subsequent commitment to a market economy were two factors that influenced the rapid expansion of organized crime.

Estonian organized crime groups began extensive smuggling in precious metals from Russia through Estonia to the West, a period often referred to as the "Metal age." During the early 1990s Estonia ranked in the world's top-ten exporters of nonferrous metals.

Most turf wars between organized crime groups were fought during this period and statistics of violent crimes and homicides peaked. Since 1994 Russia and Estonia have passed many laws to regulate and limit the metal trade, border controls have been tightened, and regional cooperation in the prevention of organized crime has increased.

Gradually, most organized crime groups shifted to more profitable forms of illegal business, such as different forms of economic crime, tax evasion, and drug smuggling. As of 2005, the situation appeared stable and links to Russia, Finland, and elsewhere in the Baltic Sea region were established.

According to Estonian police figures, there are about ten to twenty organized criminal groups divided according to ethnicity into Estonian and Russian (including Ukrainian and Belarusian). There is also some divergence in their activities, although the division is not absolute. Russian criminal groups concentrate mainly on racketeering, theft, vehicle trade, and violent crimes, whereas the Estonians specialize in economic crime, tax evasion, and smuggling. As of 2005, transnational Estonian organized crime was predominantly about smuggling drugs, alcohol, and other illegal or high-tax goods from Russia to Finland, Sweden, and elsewhere in the Baltic Sea region. However, Finnish and Swedish criminal groups had also organized themselves in Estonia for drug production, smuggling, and recruiting prostitutes.

**Narcotics.** Tourism and soft border controls between European Union members has resulted in relatively safe transit routes for heroin, amphetamine, and cannabis products from the Netherlands, Belgium, and the Scandinavian countries to Estonia. The abuse of, and trafficking in, illegal drugs is rising rapidly.

The United Nations report "Ecstasy and Amphetamines, Global Survey 2003" lists Estonia among countries with the widest use of amphetamine-type stimulants. Decreasing amphetamine prices on the local market and the record amounts of seized drugs indicate the increasing popularity of amphetamines among Estonia's drug users. In 2003 locally produced amphetamines almost displaced heroin and synthetic heroin in the local market. The popularity of homemade poppy products has been rising in Estonia's economically

depressed areas. Several cannabis-growing sites were also found in 2003. Police assert that the majority of locally produced cannabis is consumed in Estonia.

According to law enforcement authorities, Ecstasy has entered the domestic market in the wake of successful efforts to make heroin more difficult to obtain, including the imprisonment of key dealers and closure of sales sites. At the same time, Ecstasy's price has remained low, an indication of domestic manufacture. Police authorities in Estonia are concerned not only about cross-border drug trafficking but also about the growing domestic manufacture of illicit drugs, including amphetamines, Ecstasy, and opiates.

The 2003 discovery and closure of one of the biggest Ecstasy factories in the Nordic and Baltic states and the closure of two drug laboratories producing amphetamines, followed by seizures of record amounts of illegal drugs, demonstrate the country's growing involvement in the international narcotics trade.

According to the Ministry of Internal Affairs, of the total narcotics business in Estonia, transit accounts for approximately 70 percent and local use 30 percent. The closure of drug labs is forcing some amphetamine producers to move to Finland. However, Estonia is still reportedly a key supplier of illicit synthetic drugs to the Nordic countries. In addition, a new route of trafficking in drugs has appeared. In response to the continuously increasing demand and higher prices in Russia, there have been several cases of trafficking amphetamine and Ecstasy from Estonia to Russia.

**Trafficking in Persons.** The law prohibits trafficking in persons; however, women are trafficked and there are reports of victims of trafficking younger than eighteen years old. Articles 133 and 134 of the Penal Code criminalize enslaving and abduction and provide prosecution for trafficking. The maximum penalty for trafficking is twelve years imprisonment.

Women are trafficked to Nordic countries and western Europe. Some nongovernmental organizations speculate that approximately 500 people are trafficked per year, although this figure appears grossly understated. There are no reliable statistics available on the extent of the problem. Reported job advertisements placed in local newspapers to recruit women are in some cases associated with international prostitution rings.

The government established a national roundtable headed by the Ministry of Internal Affairs to draft a national action plan to combat trafficking and participated in the work of the Trafficking in Women Group of the Task Force on Organized Crime in the Baltic Sea Region.

The Ministry of Social Affairs, in cooperation with the Nordic Council of Ministers, initiated a large-scale antitrafficking campaign, mostly geared toward prevention. The campaign has drawn public attention to the issue of trafficking in persons and promoted international cooperation to address the problem.

## CORRECTIONAL SYSTEM

Prisons fall under the direction of the Ministry of Justice. The Department of Prisons of the Ministry of Justice manages and supervises prison administration and operations of the institutions. It also enforces sentences of imprisonment imposed by courts as well as decisions to remand a person for trial or take him or her into custody in connection with a trial. The main task of the Department of Prisons is to organize the work of prisons, places of preliminary detention, extradition camps, supervision, execution of pretrial investigation of prison crimes, and surveillance.

On January 1, 2000, the Board of Prisons was reorganized into the Department of Prisons and the administration and control of prisons was subordinated directly to the Ministry of Justice.

The Department of Prisons is divided into three divisions: the Punishment Implementation Division, the Social Welfare Division, and the Legal and Development Division. There are eight closed prisons and one open prison in Estonia. Of the total prison population, approximately 3,200 are convicted inmates and about 1,300 are awaiting trial. The number of prisoners has remained relatively constant throughout the whole independence period.

Educational opportunities are available in most Estonian prisons under the academic guidance of the Ministry of Education, while infrastructure and budget issues are addressed by the Ministry of Justice. Besides general education, inmates have available a variety of vocational specializations: electric and gas welder, locksmith, electrician, painter-plasterer, mason, gardener, salesman, real estate maintenance, and others. The social welfare component of the corrections system provides lectures and training on preparing for and coping with freedom, managing a family, learning to cook, how to find a job, and so on.

## PRISON CONDITIONS

Prison conditions vary greatly in the small Baltic country. For example, in the capital the Tallinn Prison, built just after World War II, has been undergoing a phased renovation that is expected to continue until at least 2007. There are 350 convicted and 650 pretrial prisoners held there; the population consists mostly of Russian inmates with about 30 percent Estonians. Generally, pretrial

prisoners are held in worse conditions than convicted prisoners; the cells are smaller, there is less fresh air, worse medical conditions, and about one-third are infected with HIV. Tallinn Prison reflects the systemwide shortages typical of Estonian prisons; adequate space, updated facilities, and professional staff including counselors and teachers are lacking.

By contrast, the Tartu Prison, the crown jewel of the system, is new, having opened its doors in November 2002. It is Estonia's first post-Soviet prison and, at more than \$30 million, it is the second most expensive building in Estonia. The Tartu facility is equipped with an integrated x-ray system, 200 DVD-recorded security cameras, 7 social workers, 4 psychiatrists, and 4 chaplains. Convicted inmates generally have larger cells and more privileges than pretrial detainees.

Generally, one problem for long-term inmates is that they were incarcerated before the collapse of the Soviet Union in 1991. The shock of the rapidly changing society as well as the challenge of reintegrating into a society they are unfamiliar with poses serious difficulties. The overall system will experience even more challenges. As some prisons close, inmate overcrowding in other facilities will be exacerbated.

Prison conditions remain poor, although there have been some improvements. A lack of funds and trained staff continue to be a serious problem. Overcrowding in the antiquated Tallinn Prison persists. The percentage of prisoners suffering from tuberculosis was much higher than in the general population. The government has refurbished some prison buildings. Modest gains have been made in hiring new prison staff and retaining existing personnel. Work and study opportunities for prisoners increased slightly as the government implemented new programs. The government is considering new regulations that would reduce significantly the number of persons incarcerated and thereby alleviate overcrowding. In 2002, 341 prisoners had been released under the government's early release program. Unlike previous years, there were no reports of prisoners killed by other prisoners.

**Prison Statistics.** In 2000 the majority of prisoners were those convicted of property crimes (52.9%). Compared to the previous year, the number and proportion of those convicted for robbery had increased (424 persons or 13% in 2000 and 353 persons or 11.8% in 1999). Thirty-three percent of inmates had committed violent crime. The average term of imprisonment in 2000 was 4.7 years. The most frequent term was five to ten years of imprisonment, and this had been set for 38.4 percent of

convicted prisoners. The general trend is the lengthening of sentences.

The average age of convicted inmates was 27.7 years in 2000 and 29.5 years in 1999. Since 2002 the average age of prison inmates has decreased. The largest age group is still thirty-one to forty year olds.

In 2002 there were 238 criminal proceedings initiated against inmates. Most offenses committed in prisons were related to production, possession, consumption of alcoholic beverages, or the possession and use of narcotic drugs.

- Total Prison Population: 4,571
- Prison Population Rate: 339 (based on an estimated national population of 3.21 million at beginning of 2003)
- Pretrial Detainees: 23.7 percent
- Female Prisoners: 5.2 percent
- Juvenile Prisoners: 4.9 percent
- Foreign Prisoners: 35.8 percent
- Number of Prisons: 8
- Official Capacity of Prison System: 4,850
- Occupancy Level: 94.2 percent

Recent prison population trend (year, prison population total, prison population rate per 100,000 of national population):

1992	4,778	(306)
1995	4,401	(295)
1998	4,811	(331)
2001	4,803	(351)

# Ethiopia

---

**Official country name:** Federal Democratic Republic of Ethiopia

**Capital:** Addis Ababa

**Geographic description:** A landlocked country in the Horn of Africa

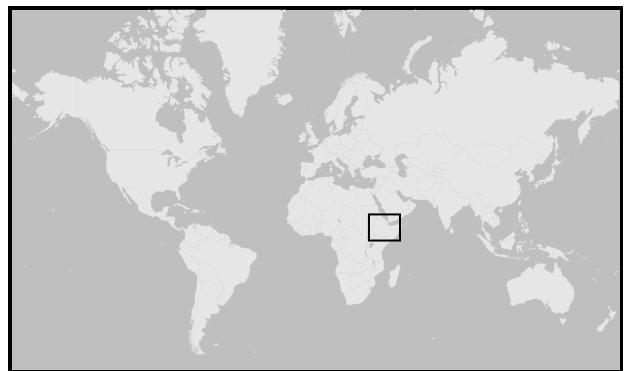

**Population:** 73,053,286 (est. 2005)

## LAW ENFORCEMENT

**History.** The first formal Ethiopian police force was formed in 1935 in Addis Ababa and four other cities, where they were trained by British instructors. The Imperial Ethiopian Police was organized in 1942 under British auspices as a centralized national police force with paramilitary and constabulary units.

In 1956 the separate urban police forces were merged with the national police. Originally administered as a department of the Ministry of the Interior, the national police evolved by the 1970s into an independent agency commanded by a commissioner of police directly responsible to the emperor. Local control over the police was minimal, despite imperial proclamations that granted governors general police authority in their regions. Assistant police commissioners in each district were assigned to work in conjunction with the governors general, but in practice administration was directed from Addis Ababa. The national police force was, however, assisted by the regional units of the Territorial Army, which was commanded by the governor general, and by an unpaid civilian auxiliary in remote areas.

Police posts were found in all cities and larger towns and at strategic points along the main roads in the countryside. The police were usually locally recruited and were familiar with the areas they served, but they were viewed as hostile by the general populace. Police operations generally emphasized a punitive rather than a preventive function.

By 1974 the national police numbered approximately 28,000 in all branches, including 6,800 in a mobile emergency force, 1,200 frontier guards, and a 3,200-member commando unit with rapid reaction capability. Paramilitary forces were equipped with weapons and vehicles provided by West Germany and commandos and frontier guards were trained by Israelis. About 5,000 constabulary police, mostly recruited locally, and 2,500 commandos were stationed in Eritrea.

One of the first acts of the Communist military government, known as the Dergue, or Provisional Military Administrative Council, after the 1974 coup

that ended the monarchy, was to circumscribe the authority of the national police, which was strongly identified with the old regime. Police constables were accused of protecting landowners against peasants in the countryside and arresting supporters of the military regime in Addis Ababa.

The national police were thoroughly reorganized after 1977. Overall, command was vested in a commissioner who was loyal to the Communist rulers. The army assumed a larger role in criminal investigation and in maintaining public order. Local law enforcement duties, normally carried out by the constabulary, were taken over by the People's Protection Brigades. The police commando units were integrated into the army's Eighth Division.

**Structure and Organization.** After the end of the Communist regime, the police force was cleansed of its Marxist elements and brought back to its original organizational structure. At the head of the police hierarchy is the Federal Police Commission operating under a commissioner. It includes several subdirectorates, including the Officer's Training College, Aviation Section, Airport and Railway Police, and a hospital. There are provincial headquarters in each of the provincial capitals. At both the national headquarters and at the provincial headquarters there are the following departments: Transport and Maintenance, Customs Police, Buildings Department and General Stores, Criminal Investigations, Traffic, and Radio Communications.

A high percentage of rural constables can neither read nor write and do not keep records of their activities. Many crimes are traditionally considered to be private matters and are often ignored by the police unless one of the interested parties files a complaint. In contrast, the Addis Ababa police are highly efficient and are organized into uniformed, detective, and traffic units, a riot squad, a Police Air Wing with light aircraft, and a police laboratory. Some women are assigned to police units in large cities and are generally employed in administrative positions or in keeping custody of female prisoners. National police officers are paid according to a basic wage scale that applies to members of the armed forces.

There are two other police forces in Ethiopia: the Emergency Strike Force and the Finance Police.

**Education and Training.** Police constables are recruited for service at an early age and trained in their native regions. Standards of training are not uniform. In-service or specialized training is limited outside Addis Ababa. Officers are commissioned after completion of a cadet course at Sendafa Police College near Addis Ababa. The school was opened in 1946 and staffed until 1960 by Swedish instructors. Candidates for the two-year course

must have a secondary school education or its equivalent. Instruction at Sendafa includes general courses in police science, tactics, traffic control, sociology, criminology, and first aid. Practical training is given midway in the two-year program and may entail field service. A limited number of cadets who pass the final examinations with distinction are selected for further specialized training. The Police College also offers short-term courses and refresher training for service officers both in the police and in the military.

**Uniforms and Weapons.** The basic police uniform consists of stone-colored trousers and long-sleeved shirts worn with dark-blue belts and blue caps. A type of windbreaker is worn over the top in inclement weather.

As a rule, police in constabulary units are armed only with batons. Small arms are usually kept in designated armories and are issued for specific tasks. Weapons used in paramilitary units include heavy machine guns, submachine guns, automatic rifles, side arms, mortars, grenades, tear gas, light armored vehicles, and other equipment designed for riot control. The Addis Ababa police are equipped with cars and vans, but in rural areas the constable's sole means of transportation is a mule or horse.

#### Police Statistics.

- Total Police Personnel: 59,901
- Population per Police Officer: 1,219

#### HUMAN RIGHTS

Principal human rights problems are extrajudicial killings, mistreatment of detainees, arbitrary arrest and detention, and prolonged pretrial detention. No known actions are taken against members of the security forces responsible for torturing, beating, or abusing persons.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 258.3. Of which:

- Murder: 6.5
- Assault: 77.8
- Burglary: 1.4
- Automobile Theft: 1.4

#### CORRECTIONAL SYSTEM

The Fetha Negast (Law of Kings), which was introduced into Ethiopia during the seventeenth century, was the penal code and the basis for criminal justice procedure until 1930, when the emperor Haile Selassie introduced a penal code that, although primitive in its philosophy,

*Police work to contain supporters of Ethiopia's ruling party, the People's Revolutionary Democratic Front, as they struggle for water being thrown from a truck, May 7, 2005. The scene took place during an election rally in Addis Ababa, shortly after campaigning for the country's parliamentary elections ended. The weekend vote marked the first time international observers monitored the balloting process in a race that challenged an authoritarian regime that has been in power since 1991. AP IMAGES.*

strove for modernity in its application. In 1958 a revised penal code drafted by a Swiss legal expert became effective, and it was augmented by a criminal procedures code drafted by a prominent British jurist. After the 1974 coup and the overthrow of the monarchy, both the codes were modified to reflect the Marxist ideology of the new rulers, but these modifications did not survive the end of Marxist rule.

Prison administration is under the control of the federal prison administrator. Each administrative unit, including 556 districts, 102 subregions, and 14 regions, plus Addis Ababa and other major cities, has at least one prison facility and usually more than one. Addis Ababa's Akaki Prison, considered the country's most modern facility, is the central regional prison for Shewa. It has a separate wing for female inmates. The largest number of prisoners are believed to be housed in Alem Baqaqn ("the end of the world"), which was built in Addis Ababa by King Menelik II in the nineteenth century. Other large prisons include the headquarters of the Central

Investigation Division, the Zeway Prison, and Menelik's former palace.

**Prison Conditions.** Prison life is brutal and consists of exhausting work and beatings. Recreational facilities are virtually nonexistent, and there is no program of assistance to prisoners after they are released. Conditions in smaller prisons and holding cells are worse. According to an Amnesty International report, cells are infested with pests, unventilated, and lack in the most basic sanitary facilities. Medical attention is inadequate and not available in all facilities. Even the seriously ill are rarely given hospital treatment, so prisoners simply die. Death of a prisoner is viewed with relief by cellmates because it relieves overcrowding. Many prisoners share a common cell.

There is an emphasis on work as a means of production, but not as a means of rehabilitation. The largest prison industry is weaving cotton rugs and carpets, usually on primitive looms. Other activities include carpentry, blacksmithing, metalworking, jewelry making, basket weaving, flour milling, and baking. Prisoners receive

about 10 percent of the income from materials produced by them.

The care and welfare of the prisoner is the responsibility of his or her family and not the states. Prisoners are expected to provide for their own bedding and buy their own candles. Families are also expected to provide food and clothing.

A prison farm at Robi in the Arsi region holds about 1,000 prisoners. A single institution oversees the rehabilitation of male juvenile criminal offenders. There are no

comparable facilities for girls, who are usually remanded to the custody of their parents or guardians.

**Prison Statistics.**

- Total Prison Population: 65,000
- Prison Population Rate per 100,000: 92
- Number of Prisons: 114

*George Thomas Kurian*

# Fiji

---

**Official country name:** Republic of the Fiji Islands

**Capital:** Suva

**Geographic description:** An island group in the South Pacific Ocean

**Population:** 893,354 (est. 2005)

## LAW ENFORCEMENT

**History.** The Fijian Police Force is a British creation. At the time of independence, it had a strength of 752 uniformed members. A supplementary force of 600 constables, paid on an hourly basis, augmented the regular force when necessary. There was also a small contingent of uniformed guards at Nadi International Airport near Suva. The structure of the police establishment was retained after independence with few changes.

**Structure and Organization.** Under the supervision of the prime minister, the Fijian Police Force is commanded by the commissioner of police with his headquarters at Suva. The control post is organized as a typical command and staff facility containing the office of the commissioner and his deputy, the Special Branch, the Criminal Investigation Division, the Immigration Branch, the Training Department, the Police School, and the band. Below headquarters level, there are four major police districts, whose boundaries correspond to the territorial ones. These police districts are further subdivided into a variable number of provinces depending on the size of the population. Each province consists of a number of stations and posts. Indians are well represented in the police force.

The functions of the former Fiji Intelligence Service were absorbed by the Police Special Branch in 2000.

**Education and Training.** Recruitment is open to all Fijians. Applicants must be between eighteen and twenty-seven years of age, be at least five feet seven inches tall, be physically fit, and have completed grade school. Men are given six months basic training at Nases, from which they graduate as constables. Nases also provides general training for all grades and ranks as well as a special leadership course for junior ranks.

**Uniforms and Weapons.** Fijian and Indian members of the police force wear different uniforms. Ethnic Fijian wear blue shorts, white *sulus* or sarongs, red cummerbunds, black belts, and sandals. They do not wear headgear of any kind. Indian constables wear blue caps fitted with a badge, blue shirts or blue slacks, and black shoes. Both groups carry truncheons but no firearms. When

engaged in rural patrols, both wear khaki uniforms, Fijians with shorts and Indians with slacks.

#### **Police Statistics.**

- Total Strength of the Police Force: 2,074
- Population per Police Officer: 431

#### **HUMAN RIGHTS**

A number of human rights violations are related to the tensions between the two leading communities: the native Fijians and the immigrant Indians. After the 2000 takeover of Parliament and the subsequent military coups, considerable violence was directed against Indo-Fijians, and the police sometimes participated in the violence. Corruption is another major problem. Undertrained police officers receive only on-the-job instruction, which contributes to the problem of corruption. The Police Department's Internal Affairs Unit is required to investigate complaints of police brutality and corruption, but such investigations rarely lead to punishment of the offenders.

#### **CORRECTIONAL SYSTEM**

Prisons are administered by the commissioner of prisons with headquarters at Suva. He controls fourteen penal institutions. The largest is that at Suva. Three other prisons are located at Viti Levu, and one each in Vanua Levu, Taveuni, and Rotuma Islands. A prison farm is located at Maboro, near Suva. There is a new detention

center at Nukulau Island outside of Suva that holds the 2,000 coup leaders.

Penal policy is based on rehabilitation. Recidivism is low. Prisoners are provided with facilities for academic as well as vocational training. Recreational programs are available, and inmates are encouraged to engage in competitive team games. The prison farm employs inmates to produce food and offers them training in agriculture and animal husbandry.

**Prison Conditions.** Prison conditions do not meet international standards, and conditions especially at Suva and Naboro prisons are extremely harsh. The government lacks the resources to improve prison conditions.

#### **Prison Statistics.**

- Total Prison Population: 1,130
- Prison Population Rate per 100,000: 133
- Pretrial Detainees: 9.7%
- Female Prisoners: 2.3%
- Juvenile Prisoners: 0.0%
- Number of Prisons: 14
- Official Capacity of the Prison System: 987
- Occupancy Level: 110.1%

# Finland

---

**Official country name:** Republic of Finland

**Capital:** Helsinki

**Geographic description:** On the Scandinavian Peninsula in northern Europe, between Sweden and Norway on the west and Russia on the east

**Population:** 5,223,442 (est. 2005)

## LAW ENFORCEMENT

**History.** How the Finnish people came to live in the area known as Finland is debated. Some scholars believe that the original home of the Finnish people was in what is now known as west central Siberia. It is a recognized fact that the Finnish people came to the region they call Finland several thousand years ago.

It is known with the introduction of Christianity by King Eric of Sweden that a relationship between the Swedish people and Finnish people began around 1154. The Finnish people became incorporated into Sweden's political and military systems after the 1362 election of the Swedish king. Around the twelfth century the Swedish language became the dominant language of the people. Though Finland belonged to the dual kingdom of Sweden-Finland, its inhabitants were allowed to manage local affairs themselves. In 1432 Finland was able to have representation in the Kingdom of Sweden's governing body known as the Riksdag (Diet of the Four Estates). In 1809 the Russian Army under the command of Alexander I conquered the Finnish region and Finland was ceded by Sweden to Russia. Finland became a grand

duchy of the Russian Empire and remained so until the end of 1917.

When the Bolshevik Revolution in Russia erupted on December 6, 1917, Finland declared its independence. In 1918 Finland erupted into a catastrophic civil war between the Whites and the Reds. In only a few months about 30,000 Finns perished. Most of the casualties were a result of summary executions and deaths of individuals in detention camps. This civil war resulted in the deaths of 1 percent of the population.

World War II again brought war to the Finnish people. The Finnish Army fought the Soviet Union in the Winter War of 1939–1940 and again in the Continuation War of 1941–1944. The Lapland War of 1944–1945 had the Finnish Army fighting the retreating Germans who were fleeing northern Finland. In 1947 Finland signed a peace treaty with the Soviet Union. Finland had to reduce its defense forces and concede

territories. It also agreed to pay \$300 million gold for war reparations to the Soviet Union. In 1948 Finland signed an Agreement of Friendship, Cooperation, and Mutual Assistance with the Soviet Union. This treaty obligated Finland and the Soviet Union to come to each others aid in time of war.

In 1991 the dissolution of the Soviet Union occurred and Finland began to seek greater participation in Western political and economic structures. In 1995 Finland became a member of the European Union.

Concerning the development of Finnish police, in 1816 in the town of Turku, the Chambers of Police were established to keep order, prevent crimes and breaches of the peace, and act as courts for minor offenses. These Chambers of Police became officially known as police departments in 1861. In 1903 all the different town police departments became part of the state administration. The Police Act of 1925 brought the rural police with the town police under the same set of regulations. The Police Act of 1967 superseded all previous legislation and regulations pertaining to the police. In 1973 amendments were made to the Police Act of 1967 in an effort to improve relations between the police and the public.

Per the 1973 amendment, the Finnish police were organized under the direction of the Ministry of the Interior, which is responsible for local and regional administration and for internal security in Finland. Under the minister of the interior's authority are the Police Department, Department for Rescue Services, Immigration Department, and the Frontier Guard Department. The Ministry of the Interior's Police Department is the Supreme Police Command of Finland. The Police Department is responsible for managing and developing police activities and for making decisions on national strategies. The Supreme Police Command creates procedures for all other police departments. The Police Department also provides expertise for internal security matters and attends to matters related to private security, money collection, lotteries, firearms, and amusement machines. The national police commissioner is in charge of the operations of the Police Department and makes decisions on police strategies and priorities. The national police commissioner is also responsible for public relations, cooperation with interest groups, and strategies concerning international operations.

The national police units in Finland consist of the National Bureau of Investigation, the National Traffic Police, and the Security Police.

**Structure and Organization.** The government of Finland is a constitutional republic, with the current constitution taking effect on July 17, 1919. To ensure a system of checks and balances, the government is divided into three

overlapping branches: executive, legislative, and judicial. The executive branch includes the president, the prime minister, and the Council of State.

The president is elected for a six-year term. The president's primary responsibility is national security and foreign affairs. The president is the chief of the armed forces but does not make decisions related to war. The president has the power to initiate legislation, pocket veto, and the right to call Eduskunta (Parliament) to session. The Council of State executes the president's executive decisions, and his legislative powers are implemented by the Eduskunta. The president determines what legislative proposals are sent to the Eduskunta after the Council of State drafts the government bills and he or she approves them. It is important that the president works well with the members of the Eduskunta if he or she wishes to accomplish his or her goals. The president has the power to nominate ministers, but his or her choices have to be accepted by the Eduskunta. He or she can be removed from office and tried by the Supreme Court if the Eduskunta decides by a three-quarters majority that he or she has committed treason.

The prime minister heads the Council of State and Prime Minister's Office. The Prime Minister's Office is responsible for monitoring implementation of the different governmental programs and assisting the prime minister in the general management of government functions. The Prime Minister's Office also coordinates Finland's European Union policy. The prime minister is the political leader of the government and is responsible for mediating the different views on government policy by the various groups represented in the government. The Finnish constitution was rewritten in March 2000 and increased the prime minister's authority. The president can dissolve the Eduskunta and call fresh elections only with the authority of the prime minister. The prime minister chairs sessions of the government and has the right to decide the order of business in these sessions. The prime minister will also stand in for the president in cases where it is known in advance that the president will be abroad during decision-making times in sessions of the government.

The Council of State shares executive power with the president and is responsible for managing the governmental machinery. This branch writes and prepares most legislation and bills presented to the Eduskunta. There are thirteen ministries in Finland. All matters to be decided by the government are prepared in these ministries. Each ministry has an area of responsibility with an appointed minister. Any matter in the government that does not fall within the scope of one of these ministries is handled by the Prime Minister's Office. One important member of the Council of State is the chancellor of justice. The president appoints this position for life. He or she is not a minister but is obliged to attend all

meetings of the council to review its proceedings for legality. He or she also reviews the actions of the president and reports infractions to the Council of State. The Responsibility of Ministers Act of 1922 is a constitutional act and was set up as an indirect way of controlling the president's actions. Since many of the president's decisions are approved by the Council of State, ministers can be held liable for approving an illegal act.

Finland's legislative body consists of a 200-member parliament known as the Eduskunta. The Eduskunta was formed in 1906 after a military defeat in East Asia weakened the Russian Empire. The Parliament Act of 1928 decided that members of the Eduskunta were to be elected for four-year terms. All citizens who are twenty years of age or older and are not in the professional military may serve in the Eduskunta. The Eduskunta is the country's highest governing body because it represents the people and the people have sovereign power. The Eduskunta is closely tied to the president and the Council of State. "Neither the President nor the Council of State is able to carry out many executive functions without the support of the Eduskunta" (Solsten and Meditz 1990). The Eduskunta approves the government's annual budget and any loans contracted. Treaties have to be approved by the Eduskunta and this body decides if the country is to go to war to declare peace. The Eduskunta can hold the government accountable and can call for the impeachment of the president if necessary.

The Ministry of Justice is responsible for the development of laws and participates in the law drafting at the institutions of the European Union. The Ministry of Justice also heads and supervises the enforcement of punishments. Finland's judicial power is exercised through independent courts that are guaranteed by the constitution. In Finland the law is codified and there is no writ of habeas corpus or bail. In Finland there are sixty-six district courts and six appellate courts. The highest court in the country is the Finland Supreme Court. The Supreme Court is located in Helsinki, which is the capital of Finland. The Supreme Court hears appeals from the appellate courts where allegations of errors may have occurred. The president appoints the chief justice of the Supreme Court and the other Supreme Court justices. There are eight special administrative courts in Finland. These courts hear appeals against decisions of administrative authorities. These appeals can go all the way to the Supreme Administrative Court, which consists of a five-judge panel. The supreme prosecutor in Finland is the prosecutor general. There are also special civil courts with judgment-rendering powers. Prosecutors in the local level courts are called district prosecutors.

The Police Department of the Ministry of the Interior is at the head of the organization. Under the Police Department of the Ministry are the "provincial police commands, the national units, the police training establishments, the Police Technical Centre, Police IT Management Agency and functionally also the Helsinki District Police" (Finnish Police 2005).

The Finnish police structure is broken down from top to bottom by the following:

- National Police Commissioner
- Deputy National Police Commissioner
- Provincial Police Commissioner
- Helsinki Police Chief
- Chief of a National Unit (National Bureau of Investigation, Security Police, National Traffic Police)
- Inspector General of the Police
- Inspector General of the Police Head of Training
- Inspector General of the Provincial Police
- Helsinki Deputy Police Chief
- Deputy Chief of a National Unit (National Bureau of Investigation, Security Police, National Traffic Police)
- Chief Police Inspector
- Police Chief
- Rural Police Chief
- Chief Superintendent of the Supreme Police Command
- Provincial Chief Superintendent
- Deputy Police Chief
- Chief Police Inspector of the National Traffic Police
- Chief Inspector of the Supreme Police Command
- Provincial Chief Inspector
- Chief Inspector
- Sergeant
- Senior Constable
- Constable
- Police Cadet

*Principle Agencies and Divisions.* Finland has five separate provinces and one province of the Åland Islands, which is self-ruled. The five provinces are administered by provincial boards and headed by a governor. Each one of these boards is directly responsible to the Ministry of the Interior. The responsibilities of these provinces include police work, civil defense, planning, social services, and

the collection of taxes and fees. Below the level of the provinces is the county, which is then divided into cities, towns, and communes. These are headed by municipal and communal councils that are elected by proportional representation every four years. The Swedish-speaking Åland Islands are geographically located between Finland and Sweden. The provincial council consists of thirty delegates who are elected by the citizens of the Ålands.

Finland's military consists of a defense force of approximately 35,000 people. Finland uses a mandatory conscription for all males to serve six to twelve months, which means the military can field approximately 400,000 personnel in the event of an emergency. Women are permitted to serve, but only on a volunteer basis.

**Salaries.** Since the country of Finland is a part of the European Union, it has adopted the euro as its standard form of currency. A beginning police officer in Finland makes approximately €1,700 a month. The pay scale for the police in Finland is based on experience, job description, rank, and other factors. The total cost of police operations in Finland for 2002 amounted to approximately €533.5 million, of which 80 percent went to the payment of police salaries. The police receive most of their funding from the state budget. The Supreme Police Command prepares the budget proposals and the Ministry of the Interior negotiates with the Ministry of Finance. The police budget is then approved by the Eduskunta when the state budget is approved. Once the state budget has been approved, the Supreme Police Command determines the allocations for each of the units it supervises.

**Retirement Age.** The average age of a Finnish police officer is 41.9 years. A police officer can receive full retirement at age sixty-five. Between the ages of sixty to sixty-four the pension will be reduced.

**Police at Work.** The Finnish police operate under the Police Act, which requires the police to safeguard the country's legal and social system and to maintain order and security. The police are also required to prevent and investigate crime and bring suspects to prosecutors for consideration of charges. The Police Act allows for the police to prioritize their duties, with life-threatening situations always taking priority. The police are allowed to detain any individual for up to twenty-four hours for refusing or giving false information. The police may also detain an individual who is incapable of taking care of him- or herself because of intoxication or a mental illness. They have the right to order a crowd to disperse if it is becoming disorderly or is obstructing traffic. The police can take temporary possession of dangerous substances, objects, or explosives if these items pose an imminent threat. The police must discharge their duties in an

acceptable and fair manner to promote understanding and cooperation. The actions that the police take must not cause any more damage or inconvenience than is necessary. The police are not to infringe on the people's rights any more than is absolutely necessary to perform their duties. The police are to maintain order and security through issuing advice, requests, and orders.

**Police-Community Relations.** In 1999 the Finnish government passed a resolution ensuring that the community-policing model was adopted throughout the country. The principal idea is that controlling and preventing offenses can be successful if the community and police work together to determine the underlying causes of the offenses or disturbances. The Finnish police also set up a security plan for all municipalities. One way the Finnish police incorporate community policing is through the use of bicycle police officers. In community policing, bicycle officers have replaced those officers who conducted foot patrols. Bicycles are slower than vehicles and the officers can better observe their environment. This makes the officers more visible and accessible to the public, making it easier to put a face to the police officers that patrol their communities.

**Local Police.** There are 90 district police departments in Finland with approximately 280 service points. State local districts with each district having its own police department organize the local police. "The function of each district police department is to maintain general law and order, prevent crime, investigate crime and other events that threaten public order and safety, to carry out traffic control and surveillance and promote traffic safety, and perform all other duties prescribed by law or otherwise assigned to the police" (Finnish Police 2005). Not all district police departments are open twenty-four hours a day. There are twenty-four police alarm centers and emergency response centers that are open twenty-four hours a day. Each district police department is also responsible for license services in its state local district. The local police are supported and trained by the Police Department of the State Provincial Office. The responsibility of the Provincial Police Command is to allocate resources for the local police, organize responsibilities of the local police service, and supervise police operations.

**Special Police.** Finland's special police forces consist of the National Bureau of Investigation, the Mobile Police, Security Police, and the Central Criminal Police.

The National Bureau of Investigation is responsible for preventing and investigating international and organized crime. This unit develops crime prevention and investigation methods. It also investigates professional, financial, and other serious crimes.

The Mobile Police (Liikkuva Poliisi) were originally formed in 1930 to prevent smuggling, to control highway traffic, and to assist local police forces in the event of civil disturbances. This unit also has the responsibility of providing security for the president, security at the Helsinki airport, and passport control along the Russian border. They also enforce hunting and fishing regulations and attempt to prevent the illegal smuggling and manufacture of alcohol and drugs. The Mobile Police have a department in each province and command units in larger communities.

The Security Police (Suojelupoliisi) were formed in 1948 and headquartered in Helsinki. The Security Police can be described as the Finnish counterpart to the Federal Bureau of Investigation. It is a civilian-only unit and is not part of the military. The Security Police's primary responsibilities are counterespionage, preventing activities that might threaten Finland's internal security, and combating terrorism.

The Central Criminal Police (Keskusrikospoliisi) were formed in 1954. They are responsible for assisting other police units in the country against serious crime. They also are tasked with investigating white-collar crime. They have advanced technical means at their disposal and maintain Finland's fingerprint and identification files.

**Riot Police.** The Finnish Mobile Police have the responsibility for riot control. The Finnish military also has special units that undergo extensive training in crowd control in the event their services are required during a crisis.

**Traffic Police.** The National Traffic Police in Finland are part of the National Bureau of Investigation. "The function of the National Traffic Police is to maintain public order and safety, carry out traffic control and surveillance, improve traffic safety, prevent crimes, and investigate crimes and other events that endanger public order and safety" (Finnish Police 2005). The National Traffic Police concentrate their efforts on motorways and other major roads and are responsible for the surveillance of heavy vehicles.

The local police concentrate their efforts mainly in built-up areas. The role of the traffic officer is to conduct speed surveillance using radar guns, laser detectors, instruments that measure speed, and automatic speed surveillance equipment. While the goal is to reduce speeding, the police can only take action against violators when the limit is exceeded by 5 kilometers per hour in built-up areas and by 10 percent everywhere else. "A driver caught speeding is usually stopped right away and is required to pay either a petty fine or the appropriate number of day-fines" (Finnish Police 2005). The system of day-fines is based on the violator's net income,

not a set fine. The police also attempt to reduce driving under the influence of alcohol or other intoxicants.

**Education and Training.** The Finnish police train at the Finland National Police School and the Police College. Both of these training and education institutes are directly under the command of the Police Department of the Ministry of the Interior. The Police School provides instruction to earn a Diploma in Police Studies and the Senior Officer's Certificate. The Police School also provides advanced and continuing education. The Police School is located in Tampere. The Police College is located in Espoo and provides research, development, and training for commanding officers and other leaders.

A diploma in police studies from the Police School takes approximately two and half years. There are approximately 110 study weeks with 6 to 7.5 months of fieldwork in different police units located in different parts of the country. Areas of training include field activities, traffic, crime prevention, legal studies, behavioral studies, and communication. Field activities include general police studies, police communication systems and their use, use of force, firearms training, physical education, and first responder. The traffic section includes the study of traffic and vehicle training. Crime prevention includes the study of criminal tactics, criminal techniques, and police information systems. Legal studies includes the study of police administration, the criminal justice system, criminal procedure law, and civil law. Behavioral studies and communication include the study of Finnish, Swedish, and English, information technology, psychology, and ethics.

At the Police School student recruiting and selection are the responsibility of the National Police School Selection Unit. The school accepts applications year round. Police cadets are selected on the basis of aptitude and entrance exam. The National Police School Selection Unit and the Recruitment Committee also select the students for the Noncommissioned Police Officer's Certificate Program. Once students receive their diploma, they are assigned to a police position. In 2002 the Finnish police forces were in financial difficulty, so not all the graduating students were immediately placed into police positions.

**Uniforms and Weapons.** Police uniforms are divided into categories for different purposes, then each member of the police has a specific uniform for the job he or she holds. There are different uniforms for field officers and for desk officers. These uniforms are not to be mixed. It is against the law in Finland for any person other than police personnel to wear any uniform or anything resembling a uniform that can be confused as a police uniform. The same is true for the police emblem or anything

*Sargent Markku Limingoja stands before a prototype police car he designed to stop speeders in Oulu, Finland, August 20, 1996. The vehicle is equipped with a harpoon mounted on the front bumper and is intended to be used to ram into the trunk of a fleeing car. The harpoon locks into place with hydraulically operated barbs and then aids the officer in bringing the suspect's vehicle to a halt. AP IMAGES.*

resembling the police emblem. A police chief may authorize the wearing of a police uniform by a citizen for special performances or events. The different uniforms of the Finnish police are the official dress uniform, the ceremonial uniform, summer and winter field uniforms, service uniform, pullover, overcoat, training overalls, bicycle uniform, motorcycle uniform, and snowmobile overalls.

The Finnish police have the right to use force when justified. They are entitled to use force to overcome resistance, remove a person from a scene, apprehend a person, prevent a person imprisoned or apprehended from escaping, removing an obstacle, prevent an imminent crime, or prevent some other dangerous act or event. While the Finnish police do carry firearms, they are to use other nonlethal forms of weapons when possible, such as batons or gas sprays. The use of a firearm is

reserved for only the most serious of cases. The Finnish police “will always try to go about their duties by issuing advice, requests and orders rather than using force” (Finnish Police 2005).

**Police Officers Killed in the Line of Duty.** Finland has not had many law enforcement officers killed while in the line of duty. In October 1997 Sergeant Eero Holsti and Senior Constable Antero Palo were murdered by an assailant in an alley way in Helsinki. Compared to other European countries, the number of law enforcement officers who have been killed in the line of duty is low.

**Police Statistics.** The Finnish police forces as a whole consisted of approximately 10,974 personnel in 2002. There were approximately 7,745 police officers, 538 cadets,

and 2,691 other staff. Women accounted for approximately 24.3 percent of all police personnel, and approximately 12.2 percent of police officers. Senior police officers accounted for approximately 2,444 officers. Commanding officers accounted for approximately 627 officers. There were 4,529 regular officers, 409 guards, 144 police chiefs, and 2,282 officers and other staff. As of 2002 there was only 1 woman police chief in the country.

There were approximately 928,000 calls for service in 2002. This figure increased from the previous year by approximately 5,700 calls. Emergency calls accounted for approximately 3.2 percent of the total amount of calls for service. According to Finnish police statistics, “many of the calls involved intoxicated persons, public disturbances, vandalism, domestic calls and drunken driving” (Finnish Police 2005).

The Personnel Barometer Survey looks at the prevalence of exhaustion symptoms among police personnel. Finnish police personnel have a high rate of occupational fatigue affecting approximately 9.7 percent of the police personnel. “The largest risk group at local police level was made up of those on desk duties, in criminal investigation and in license administration; the lowest risk of exhaustion was associated with public order and security, internal administration and guard duties” (Finnish Police 2005). According to the Finland Police Department, “one of the challenges for development and management of the police in future years will be to reduce the level of occupational fatigue” (Finnish Police 2005).

**Transportation, Technology, and Communications.** The Finnish police use a wide array of vehicles, including cars, vans, snowmobiles, jet skis, boats, bicycles, and motorcycles. The police identifiers and other equipment such as lights, sirens, and radios are fitted at the Police Technical Center. The most commonly used vehicle is the Volkswagen Transporter, which accounts for approximately one-third of all vehicles. This vehicle is a minivan-style vehicle that can be used as an office, a dog-handling vehicle, or a vehicle-weighing unit. The police patrol car is the four-door sedan Ford Mondeo. Most of these vehicles are equipped with a two-liter gas engine. There are approximately 150 police motorcycle officers. Most of these officers ride the BMW 1200. “Police motorcycles are used mostly in traffic surveillance work but also in various PR duties, motorcycle escort duties, at public events and in community policing” (Finnish Police 2005). Motorcycle officers are also used by the Security Police and the Police School. The police vehicles are used for approximately seven years and then sold in auctions.

The main information system used by the Finnish authorities is the Schengen Information System. This system maintains personal information of citizens. The

Joint Supervisory Body oversees the technical support function of the Schengen Information System. Everyone has the right to request that the Joint Supervisory Body verify that the personal information is lawful and correct. “A request for information or scrutiny must be presented to the District Police, from where the request must be forward without delay to the Data Protection Ombudsman” (Finnish Police 2005). Citizens are restricted from the Suspect Data System and the Operation Data System of the Security Police.

The Finnish police launched their official Web site in 2002. They have been successful in placing reporting forms for firearms, lotteries, and public events online. The Finnish police are expecting to completely modernize their information systems and create a new service system. They expect to have this accomplished by 2010.

**Surveillance and Intelligence Gathering.** The Finland Civilian Intelligence Service falls under the responsibility of the Security Police. Counterespionage and the prevention of activities that pose a threat to Finnish internal security is its mission. Because Finland is an open society, it will always be more vulnerable than a closed society. The Finnish Security Police have increased in competence and have been given increased resources. Finland has a stable internal environment. There are a few groups who protest and demonstrate, but they are neither well organized nor considered a threat. The major targets are civil servants in the state administration, scientists, and experts in business.

The Finland Military Intelligence Service is the General Staff Intelligence Division (Pääesikunnan Tiedusteluosasto). It operates under the Ministry of Defense. Responsible for the integrity of the territory of the country, it monitors the national territory and gathers intelligence by land, sea, and air.

## HUMAN RIGHTS

The Finnish government generally respects human rights. It allows for freedom of speech and press, peaceful assembly and association, religion, and the right to a fair and public trial. The government does not allow arbitrary or unlawful deprivation of life, torture, or other cruel and inhuman treatment or punishment, arbitrary arrest, detention, or exile, or arbitrary interference with privacy, family, home, or correspondence.

## CRIME

Crime in Finland is considered low when compared to most European countries or to the United States. In recent years there has been an increase in crime, but the country is still considered safe. Because the crime rate in Finland is so low, police operations are generally underfunded. Finland has one of the smallest police

departments of any European country. The increases in crime have come from rapid urbanization in the 1970s, but have since leveled off. In the early 1990s Finland's economy dipped into a recession, causing crime rates to again drop off especially in the area of thefts. Since the economy has improved, crime rates have again increased, but only by a slight margin.

**Criminal Identification and Forensics.** The Central Criminal Police are responsible for maintaining Finland's fingerprint and identification files. The police cadets are introduced to forensics in the police academy. A 2002 review by the national police commissioner discussed the importance of crime scene examinations and called for improved registration of personal descriptions and DNA identifiers. The Finnish police are in the same situation as most police departments when it comes to resources: they are trying to do more with less. It has been recognized that the necessary specialization that is needed is not possible in small units. The national police commissioner requested that the local units be reorganized to provide flexibility in the use of resources for criminal investigations and to increase specialization. The Finnish police were expected to be fully reorganized by 2005.

**Organized Crime.** The Central Bureau of Investigation has identified seventy-three organized crime groups that operate throughout the country. Of these groups, twenty-nine meet the European Union's definition of organized crime. These groups total approximately 750 members. The Finnish police work closely with the Baltic States and Russia on the spread of cross-border crime. Cross-border crime is continuing to increase, especially in those crimes involving financial gain. The organized crime groups are involved in laundering money from the selling of narcotics and economic crime, smuggling of taxed goods, organizing illegal immigration, and prostitution. Since joining the European Union, the Finnish police are working closely with other European countries on trying to get a handle on the widespread problem of organized crime. Some of the elements of the organized crime groups are from the former Soviet Union and eastern Europe.

**Crime Statistics.** In 2002 there were approximately 737,000 crimes reported to the police with a clearance rate of approximately 523,000. Violent crimes such as homicides, assault, robberies, and sex offenses leveled off. There are 129 to 155 homicides a year mostly because of alcohol-related quarrels. In 2002 there were approximately 28,000 assaults and 372 attempted homicides. Sex offenses increased by 20 percent, but this statistic varies because of the sensitive nature of reporting this type of crime. The ten-year average for robberies has remained stable at approximately 2,120 a year and is

highest in the urbanized regions. Theft statistics fluctuate and are based on the economic condition of the country. Economic upswings generally bring an increase in theft. Traffic crime including drunk driving has decreased. There were only 413 traffic fatalities recorded in 2002. Finland has one of the smallest narcotics markets in western Europe. Narcotic offenses have increased since the 1990s. In 2001 there were 9,372 drug-related sentences given out. This increase in recorded narcotic crime is partly because of more aggressive control efforts. Juvenile crime has remained stable over the last twenty years. Most juvenile offenses are related to alcohol possession and identity documents. Car thefts, damage to property, robberies, and thefts make up approximately 45 percent of the crimes juveniles commit.

## CORRECTIONAL SYSTEM

The Ministry of Justice is in charge of the prison system in Finland. The prison system includes closed and open institutions. Closed institutions include 1 juvenile prison, 7 central prisons, and 9 provincial prisons. There is 1 training center, 5 open prisons, 5 open colonies, and 7 open units connected to closed prisons. Closed prisons house inmates who are sentenced to prison and persons serving imprisonment for nonpayment of fines. Some closed prisons are also used to hold pretrial detainees. Open prisons house individuals who are working or who are being considered for release. There are two prison hospitals for medical and psychiatric treatment of the inmates. The Prison Court is a special court under the Ministry of Justice. This court decides on the incarceration of dangerous recidivists and whether youth offenders are to serve their sentence in a juvenile prison.

**Prison Conditions.** Prisoners are given the opportunity to work, study, and take part in other activities accepted by the institution. Prisoners in closed institutions mainly do work at the institution. Prisoners at open institutions perform work on roads, airports, official buildings, and historical monuments. Prisoners are paid for their work and in open prisons can use cash. The prison conditions in Finland are considered good and are closely monitored by the European Committee for the Prevention of Torture and Inhuman or Degrading Treatment or Punishment. Physical exercise and other directed activities are organized for the inmates. There are also leisure-time activities in which inmates can exercise or work on a hobby. Prisoners may receive guests and unsupervised visits by families may be granted. Prisoners are given the opportunity to apply for leave after half of their sentence has been served. Leaves may be granted for a maximum of six days and nights during a four-month period.

## *Finland*

**Prison Statistics.** In 2000 the number of prisoners serving sentences was approximately 2,855. The largest prisoner group was being held for violent crimes. Every fifth prisoner was serving a sentence for homicide or attempted homicide. Studies show that 60 percent of the prisoners will return to prison within five years. For inmates under twenty-one years of age, the return rate is approximately 90 percent. The number of prisoners under twenty-one years of age was 123. The number of women prisoners was 142. There were approximately 400 pretrial detainees being held in prison.

### **MOST SIGNIFICANT ISSUE FACING THE COUNTRY**

Finland is a welfare state, and the future of this welfare state is a major concern for both the citizens and the government. The Finnish population is aging and the number of people needing care is increasing, while the number of people who are actively working is decreasing. The welfare system and the pension system are growing in cost because of the aging population. For Finland to maintain economic growth and employment, the country will have to revamp its welfare system.

**Geographic description:** Country on the west coast of western Europe

**Population:** 60,656,178 (est. 2005)

## LAW ENFORCEMENT

**History.** Given the fundamental mission of police forces as being law enforcement, a progressive evolution throughout history has permitted the emergence of police as an institution, vis-à-vis justice and army. At the same time, the necessity of maintaining public peace and order has been used as a tool by kings in their effort to impose their preeminence over the lords, bishops, and municipalities. In that sense, the institution of provosts (judge, military governor, and police official) by Henri I in 1032 can be considered as a first step. However, the royal agents have cohabited for centuries with representatives of the local lordships. In 1254 Louis IX reorganized the police and institutes the Royal Watch. In the countryside, insecurity being chiefly caused by former soldiers, the military justice of the marshals took charge of public tranquillity step by step, and in 1544 its troops, the *maréchaussée*, were organized by François I and given jurisdiction over ordinary crime. It was the ancestor of the Gendarmerie (*gens d'armes* means “armed people”). In 1667 Louis XIV instituted the general lieutenant of police, a judge and police chief, who retained regulative power over matters under his jurisdiction in the city of Paris. This institution was extended to other cities.

During the French Revolution elected police chiefs (commissaries) were instituted in all cities wherever necessary. In 1796 a Ministry of General Police was created, and in 1800 a Préfet de Police in Paris. In rural areas the Gendarmerie was restructured in 1790 with permanent stations. Its present basic authority is a decree of May 20, 1903. On November 17, 1808, the Napoleon Code of Criminal Information (Code d’instruction criminelle) regulated criminal investigations by the police and created the Office of Judicial Police Officer.

At the beginning of the twentieth century the administration of police in the most important cities passed from the mayor to the state, and mobile criminal squads were created. Two distinct administrations were placed in charge of police duties: the Prefecture of Police in Paris and the National Security for the rest of the territory. They were unified in 1966 under the appellation of National Police; however, the Paris prefecture has maintained a broad autonomy. Nine years before, on

December 31, 1957, the Penal Procedure Code took the place of the Napoleon Code and gave a new legal framework to police criminal investigations. The orientation of that text, more favorable to the rights of the individual, was reinforced by the law of June 15, 2000. More recently, a law of August 29, 2002, for internal security, followed by a law of March 18, 2003, have reorganized and modernized the police force to deal more efficiently with an increase of crime.

**Structure and Organization.** Although France is a centralized country, police forces are divided as a result of historical evolution into two main law enforcement agencies: National Police, a civilian police force that holds jurisdiction essentially in cities of 10,000 inhabitants and over, and Gendarmerie, a military police force, holding jurisdiction mainly in the countryside. In addition, there are municipal police forces, with limited powers and some other bodies with some police prerogatives.

In France, the National Police is under the Ministry of Interior. The Direction Générale de la Police Nationale (National Police General Directorate) headed by a prefect constitutes one of the branches of that department and the general director takes his orders directly from the minister. On January 1, 2003, it employed 144,356 agents. It is divided into central, regional, and local units.

At the central level, three directorates are in charge of administration and management:

1. Administration Directorate, in charge of personnel, finances, budget, equipment
2. Training Directorate, in charge of training programs and schools
3. General Inspectorate, in charge of control and discipline, investigates the misconduct and offenses committed by members of the force

Eight central directorates or services coordinate the territorial units and act directly through their own active departments.

The Central Directorate of Public Security is in charge of public order and general prevention and suppression of crime. Having no central operational units, it manages and controls 79,124 local and territorial police officers both in uniform and plainclothes. It administers police stations in local districts in mainland France and overseas territories as well.

The Compagnies Républicaines de Sécurité (Republican Security Companies) consists of 15,106 mobile uniformed military-like troops performing public order missions (antiriot interventions and securitization of crowds, especially in case of mass demonstrations), traffic

circulation surveillance on highways, and mountain rescue. Their central headquarters, previously a branch of the Public Security Division, became autonomous in 1985. It is divided into bureaus: Staff, Budget, Equipment, General Affairs, Training, Operations, and Transmissions. The companies themselves are located at a regional level.

The Criminal Investigations Central Directorate is in charge of prevention and suppression of serious criminal activities. Its 4,354 agents participate in criminal procedure within the framework of the code and under justice control. In contrast to the preceding directorates, it does not only perform liaison, coordination, and command regional departments but also directs operative units with national territorial jurisdiction, specialized in particularly dangerous criminal categories, and both collects information and performs interventions (National Central Offices including Gendarmerie, customs, and treasury officers). It is divided into four subdirectorates.

*Criminal Affairs*

*Operations:*

- National Central Office for the Suppression of Organized Crime (Répression du banditisme), with four (and eventually five) local detachments called Search and Intervention Squads
- National Central Office for the Suppression of Illicit Drug Trafficking
- National Antiterrorist Division, which includes the National Central Office for the Control of Firearms and Explosives Trafficking
- National Central Office to Combat Traffic of Cultural Goods
- National Central Office for the Suppression of Traffic in Human Beings

*Economic and Financial Affairs*

*Offenses against Business Law:*

- National Central Office for the Suppression of Major Financial Crimes
- National Central Office for the Suppression of Counterfeit Currencies
- National Central Office to Combat Crime against Information and Communication Technologies (cybercrime)

The Forensic Science and Identification Subdirectorate (Sous-direction de la Police technique et scientifique) manages five police laboratories (Paris, Lyon, Marseille, Lille, and Toulouse). The Central Identification Department (Identité Judiciaire) runs the national fingerprints computerized index file. The Central Criminal Documentation

Unit operates the central index file, the wanted persons index file, circulation of identification or arrest messages, the stolen vehicles index file, and the National Automated Genetic Prints (DNA).

The central director of criminal police heads the French Interpol National Central Bureau. A Central Operative Police Cooperation Unit regroups Police, Gendarmerie, and Customs. A justice liaison uses Interpol, Schengen, and Europol cooperation and channels Survey and Control Training.

Following the 2002 and 2003 laws on internal security a reorganization plan of this directorate is on its way. It will essentially create a new Central National Office for the search of wanted people and fugitives and a new database at the National Central Office for the suppression of serious financial crime. There are changes at the regional level as well.

The Central Intelligence Directorate (CID; Direction Centrale des Renseignements Généraux) collects intelligence on political, economic, and social matters. Its duty of surveillance of political parties has been abandoned since 1995, and now it concentrates its efforts on foreigners, violence, external relations, and overseas territories. The directorate also holds jurisdiction over gambling and racing. It is divided into four subdirectorates:

- Research and analysis, in relation with external sections
- Social upheavals, cities and suburbs, social analysis (violence in the cities), communication, and financial research
- Racing and gambling (not only surveillance but also criminal investigations)
- Methods and staff (3,076 agents)

Changes were implemented in 2004 that improved the efficiency of the directorate concerning urban violence and antiterrorism action.

The Border Police Central Directorate (Direction Centrale de la Police aux Frontières) is in charge of ports, airports, and border police. It also holds jurisdiction over surveillance and suppression of illicit immigration. For that purpose, a Central National Office for the Repression of Illicit Immigration and Employment of Illicit Migrants, similar to those of CID, has been instituted within this directorate. It also includes the Legal and International Affairs Subdirectorate, directly under the director's authority, an operations room, and a national escort unit in charge of accompanying illicit migrants back to their country of origin. The directorate coordinates action of its regional sections and 7,339 agents.

The Territorial Security Directorate (Direction de la Sécurité du Territoire) is in charge of prevention and suppression of all activities presenting a threat to the security of the national territory. Its organization is classified.

The VIP Protection Service (Service de Protection des Hautes Personnalités) is in charge of protecting the president (along with Gendarmerie), the prime minister and members of the government, as well as foreign chiefs of states and of governments during official visits in France. It is also in charge of organizing security during travels of the French dignitaries in France or abroad. In such cases, it works in full cooperation with the competent service of the country concerned, for instance, the U.S. Secret Service. This service is divided into three subdirectorates:

- VIP Security
- Foreign Dignitaries (including a "Europe" antenna in Strasbourg)
- Operational Management

The International Technical Police Cooperation Service (Service de Coopération Technique International de Police) organizes actions of partnership concerning police and security with some countries that have cooperation agreements (training, technical assistance, advice, and so on) with France.

The central directorate includes three subdirectorates:

- Technical and Institutional Cooperation
- Information and Communication
- Management and Finance

In addition, police attaches are posted in embassies abroad, as technical advisers, or lead a delegation to coordinate action at regional level.

Due to historical reasons some regions located outside of the European continent are under French sovereignty. They belong to two categories in terms of their legal status:

- French overseas departments are administered, managed, and ruled exactly as any of the French departments in mainland France. These departments are Martinique, Guadeloupe, French Guyana, and La Réunion.
- French overseas territories and territorial communities are granted different degrees of autonomy. They are headed by a general administrator or high commissioner instead of a prefect, and each has its own particular territorial assembly. These territories are Wallis and Futuna,

French Polynesia, Antarctic French Territory, New Caledonia, Mayotte, Saint Pierre and Miquelon.

Regardless of the difference in their administrative status concerning law enforcement and corrections, the overseas French departments and territories are ruled the same way as mainland France.

In the overseas French departments and territories, the police work in the cities inhabited by 10,000 persons and more that constitute districts:

- There are two districts in Guadeloupe (Pointe à Pitre and Capesterre)
- Two districts in Martinique (Fort de France and Le Lamentin)
- One district in French Guyana (Cayenne)
- Four districts in La Réunion (Saint Denis, Port des Galets, Saint Benoit, and Saint Pierre)
- One district in New Caledonia (Nouméa)
- One district in French Polynesia (Papeete)

Employing a total of 1,500 agents, they are organized in the same fashion as in metropolitan France.

Three delegations for overseas territories corresponding to Republican Security Companies are based in Guadeloupe, with jurisdiction to Antilles and Guyana, La Réunion, and New Caledonia. In case of necessity, some additional troops could be sent from mainland France.

As in Continental French Territory, criminal investigations are conducted by public security agents. In addition, the Criminal Investigations Central Directorate created an Interregional Criminal Police Directorate for the regions of Antilles and Guyana, and a special detachment of the Central National Office for the Suppression of Illicit Drug Trafficking, due to the importance of criminal traffics in the region.

In the same way as in mainland France there are departmental intelligence directorates in charge of collecting and transmitting intelligence.

In overseas French departments and territories the Gendarmerie performs the same duties as in mainland France, policing mainly the countryside, that is, the territory as a whole, but in the cities they conduct only specialized police actions, for instance in the field of criminal investigations. Its 167 brigades and posts ensure general policing. Six air transport brigades, 5 air sections, 10 boat brigades, and 12 motorized brigades facilitate the day-to-day work in an environment where distances are often much more important than on the European continent, especially in archipelagos. Seventeen investigation brigades perform the same criminal investigations duties

as in the French European territory assisted by 12 surveillance and intervention units and 5 brigades in charge of juvenile delinquency prevention. Five road traffic brigades ensure main roads surveillance and 9 Mobile Gendarmerie troops ensure public order maintenance. If necessary, other troops can be sent from mainland France.

As a whole, 2,828 gendarmes are posted in overseas departments and territories.

Correctional institutions in overseas French departments and territories are basically the same as in mainland France. They belong to the same entities of the Ministry of Justice: Corrections Department and Judicial Youth Protection.

Martinique, Guadeloupe, Guyana, and Réunion constitute regions of the Corrections Department, which is also present in overseas territories. According to the renovation plan, the arrest house of Saint-Denis de La Réunion is to be rebuilt, and a new prison is to be built in Basse-Terre. The same overseas departments are also considered as regions by Judicial Youth Protection.

The administrative status of the overseas French departments and territories is liable to change. It has been the case in the past, for instance, concerning New Caledonia. More recently, a prefect has been appointed in the French Antarctic territories, and changes in local representative assemblies have been proposed by referendum to the inhabitants of French Antilles, but it has been rejected. In any case, modifications are not expected to bring dramatic changes in the basic organization of law enforcement and corrections.

**Police at Work.** The budget of the National Police is a part of the budget of the Ministry of Interior. In 2003 it represented 5.4 billion euros (30.3 percent of the total). In 2004 the budget of the National Police is expected to rise by 5.7 percent.

The budget of the Gendarmerie is part of the Ministry of Defense. In 2003 it represented 4.25 billion euros (13.7 percent of the total).

Under the law of August 26, 2002, called the Law of Orientation and Programming for Internal Security, these budgets were expected to increase the following five years.

According to the budgetary provisions for 2004, police personnel represent 78.2 percent of the total personnel of the Ministry of Interior. The 145,243 agents of the General Directorate, although most of them wear a uniform, are civil servants and are remunerated according to the rules established for all civil servants, tempered by the fact that they are granted a special status, that is, they are represented by unions and elect their delegates, but do not have the right to go on strike.

The National Police personnel includes 13,273 administrative employees and 118,168 active agents, plus 12,915 security assistants (*adjoints de sécurité*), and young people recruited on the basis of a personal contract to assist the local police. This form of recruitment is likely to disappear in the near future. Since 1983 there have been 38,000 active women in all police functions.

The active agents are divided into three bodies, according to the rank and nature of the duties performed. Each of these bodies has its own recruitment modalities and corresponds to a certain level in the scale of remuneration.

In France police officers in the street are called Gardiens de la Paix (Guardians of the Peace). The word *flic* (cop) is familiar and, in certain contexts, can be considered derogatory. They are recruited after an examination and without any required university degree. They attend one-year training programs at one of the police schools. The training includes a probation period in a district. The 100,978 Guardians of the Peace perform all police duties in public security districts as well as in the Republican Security Companies.

The 15,150 police officers are by statute in charge of assisting or deputizing the Commissaires de Police. They can either be in command of the guardians or perform investigative duties as detectives or general intelligence agents. Nearly 60 percent are recruited by examination open to college graduates, 30 percent by an examination open to police agents after four years service, and 10 percent by choice among master sergeants after twenty years service in the corps. They receive eighteen months of training in the National Police Officers School.

In spite of a similar etymology, the French commissaire is not, as the American commissioner, the chief of police of a capital. He or she is closer to the British superintendent, or, in the United States, a precinct captain. The 1,955 commissaries are in command of all active agents of the National Police in districts, squads, and central offices. Nearly 60 percent are recruited by examination among university graduates at the master's level, 30 percent after an examination given to police personnel after four years service, and 10 percent from among commandants. New commissaries are trained during two years at the National Police Academy and probation periods. Ranks in this body are commissaire, principal, and commissaire divisionnaire. Promotions are decided by choice. The commissaries can have access to the rank of general supervisor (Contrôleur Général), general inspector (Inspecteur Général), and director; promotion to the higher ranks of the National Police are by decision of the Minister of Interior. In 2003 eighty-five of these top-ranking police officers administered all police departments on the national territory.

The gendarmes in Gendarmerie Nationale, which is a branch of the French Army, are commissioned or non-commissioned officers, although they receive instructions from the Minister of Interior for their police missions. The personnel includes 11,000 women agents.

Apart from personnel recruited on a contract basis and for a limited time (cadets and assistant gendarmes), the active personnel of the Gendarmerie Nationale includes noncommissioned and commissioned officers.

All gendarmes are noncommissioned officers and hold the rank of sergeant in the army. They are recruited after qualification tests and are trained for one year to qualify for a certificate. The 74,000 noncommissioned officers have the same hierarchic scale as in the army (*marechal des Logis chef, adjutant, and adjutant chef*, which correspond roughly to sergeant, master sergeant, and adjutant) and perform the duties of administrative or criminal police in Departmental or Mobile Gendarmerie units.

Gendarmerie officers are army officers, who are recruited from among officers graduating from military schools having chosen to serve in the Gendarmerie or after examination among university graduates. Noncommissioned officers may also become officers after examination if they hold the baccalaureate (high school and two years of college) or a special qualification certificate.

Ranks are the same as in the army: lieutenant, captain, major (commandant), lieutenant colonel, colonel, and general. In spite of the similarity of some of these appellations, the ranks in the Gendarmerie are not similar to those in the police. The Gendarmerie employs 4,087 commissioned officers.

The municipal police agents are appointed by the mayor of the city concerned and perform their mission after agreement by the prefect and the prosecutor. Their administrative status is that of civil servants of local communities, that is, a special category of public offices. The ranks are guardian, chief guardian, sergeant (brigadier), chief sergeant (brigadier chef), first chief sergeant (brigadier chef principal), and chief of the municipal police.

*Police-Community Relations.* The necessity to bring police closer to the population led to the adoption in 1999 of the concept of Proximity Police, which was inspired by community police experiments put into practice in northern European countries. Basically, police officers are assigned to a certain delimited urban territory to perform more quickly administrative and judicial duties. Patrols by walking or cycle riding agents are made more systematically, and officers are responsible for their results. That policy results in modifications in the organizational chart of the Public Security Directorate and the Prefecture of Police of Paris as well.

**Local and Regional Police.** The National Police basic local unit is the district (*circonscription*). There are 462 districts and 678 local police stations policing more than 1,600 cities of 10,000 inhabitants or more. Although they take their orders from the Public Security Directorate, the districts are nonspecialized units and participate both in public order maintenance and in crime prevention and detection. They constitute the emergency units of the police. Each district is divided into three sections:

- A Proximity Police Service (Service de Police de Proximité) is in charge of prevention and suppression of street crimes: patrols, reception of complaints, anticrime squad, block patrolling, and emergency intervention
- An Investigation Service (Service d'investigation et de recherche) in charge of criminal investigations
- A Public Order and Traffic Service (Service de l'Ordre Public et de la Sécurité routière)

Some districts have a local forensic police laboratory.

In the most important cities the *circonscription* is divided into several precincts. In that case, the officer in charge is called a commissaire central. Beginning in 2000 the *circonscriptions* were being reorganized.

A departmental public security director holds authority over all heads of *circonscriptions*. He advises the prefect on all police affairs. Usually, the commissaire central of the chief town of the department is also in charge of that duty.

The departmental directorate is linked to common operational services: command and radio, motorcycle squad, police dog patrol, and so on. In the most important towns there exists a mobile National Police Intervention Task Force (Groupe d'intervention de la Police Nationale) composed of specially trained agents with sophisticated equipment who are able to intervene quickly in serious situations such as hostage takings, difficult arrests, dangerous insane people, and so on. A General Intelligence Departmental Directorate is also located in the department's capital. The location of police services whose jurisdiction covers more than a department does not necessarily correspond to an administrative region.

Nine groups (Groupements) of Republican Security Companies are implanted in the defense areas. They manage the sixty-one companies distributed in the whole territory. The Interregional Air and Border Police Services are also implanted in the defense areas. Nineteen regional criminal investigation services (*services régionaux de Police Judiciaire*) with national (*ratione loci*) jurisdiction are in charge of criminal investigations in the most important cases, according to the previously mentioned

specialties concerning the Central CID. Some of these services are handled by local detachments. The reorganization plan now on its way foresees the creation of nine interregional criminal police directorates.

Due to its importance as the capital, seat of the government, and the number of its population (more than 9 million), Paris has always been considered as a distinct entity as far as police is concerned. After having been for years completely independent and recruiting its own agents, the Paris Police Department still possesses its distinct characteristics and constitutes an original element of the National Police.

The chief of police (*préfet de police*) by law has the power of regulations making (*Pouvoir réglementaire*), normally granted to the mayor in all other French cities, in all police matters. He is appointed by the government and takes his orders directly from the ministers.

The Paris Police Department employs 18,837 agents and holds its jurisdiction over the city itself and the three suburban departments. It includes administrative divisions that are in charge of preparing the prefect's decisions (Arrêtés), delivering licenses and authorizations, and more generally enforcing rules (General Policing: passports, identity cards, and foreigners' permissions to reside; Traffic, Transport, and Trade: driver's licenses, car registrations, and authorizations for dangerous activities; and Public Safety: dangerous buildings and so on).

Concerning more traditional police duties, the department was drastically reorganized in 1999; it includes five directorates:

- Public Peace and Traffic, which are in charge of ensuring public peace and freedom of movement, especially in case of public events and demonstrations, as well as protection of the institutions of the republic. For this purpose, the city is divided into three districts.
- Urban Proximity Police (Police Urbaine de proximité) coordinate the twenty police precincts (Commissariats d'arrondissements) that perform general police duties: patrols, public contacts, filing complaints, collecting material evidence in scenes of crimes, criminal investigations at local level, juvenile surveillance unit, and a local police laboratory. The police stations are open twenty-four hours a day.
- Criminal Investigation Department (Direction de la Police Judiciaire) is in charge of fighting organized, professional, or particularly serious crime. It is comprised by several units: Homicide Squad, Antigang Squad, Drugs Squad, Vice Squad, Juvenile Squad, Financial and White Collar Crime Squads, Suburban Departmental CID, Supervision, Staff Logistics, Laboratory, Fingerprint, and Computers.

This CID is popularly known as the “36 quai des Orfèvres” because of its location.

- General Intelligence Department provides general information, monitors violence and terrorism and foreigner surveillance, and oversees staff and equipment. It has no jurisdiction over gambling, which remains under the Central Directorate’s surveillance.
- Department of Logistics is in charge of equipment, 4,000 vehicles, River Police (four boats), one helicopter, computers, and telecommunications.

There is no English word to translate exactly the French *Gendarmerie*, perhaps because such an institution does not exist in English-speaking countries. In Canada the Royal Canadian Mounted Police is translated as *Gendarmerie Royale*, but the force is different from the French Corps.

The National Gendarmerie is a branch of the French Army. It belongs to the Ministry of Defense and performs both military and police duties. Although it works mainly in rural areas, its jurisdiction is national, and the gendarmes can by law operate even in towns. The Gendarmerie is a uniformed police force, and its members may act in plainclothes only in specific cases and with special authorization.

The National Gendarmerie’s organization shows this aspect in civil and military missions:

- Although the Gendarmerie is a part of the army, the General Directorate in the Department of Defense is headed by a civil servant, usually a prefect; in the framework of its nonmilitary missions, it usually works under the prefect of the department, and performs its criminal investigations under the prosecutor’s authority.
- The Gendarmerie’s territorial organization participates both in military and civil structures.
- The National Gendarmerie includes central command services and two branches: the Departmental Gendarmerie and the Mobile Gendarmerie.

At central level, it includes the General Inspectorate, the command of the nine training schools and ten technical specialized centers, and administrative and technical services. Departmental Gendarmerie covers the whole territory and employs 65,669 people.

At the local level, 3,499 territorial brigades serve in the cantons, administrative units that group between five and ten communes (municipalities). The gendarmes are quartered on the site and perform all the general police duties: administrative police, patrolling, traffic police,

emergency interventions, criminal investigations, assistance, and rescue. This action is specially important in rural areas, where their knowledge of the area and its inhabitants is particularly appreciated.

At the departmental level, the brigade coordination and command is organized into 397 companies, located at the subprefecture (Arrondissement) under a commissioned officer. These companies belong to departmental groups (Groupements), whose officer in command acts in concert with the prefect. Their 357 investigations units and 92 departmental investigation units are specialized in criminal investigations. Identification and forensic science units are in charge of collecting material evidence in scenes of crime. These elements (including DNA) are analyzed in a Gendarmerie Criminal Research Center. Over 308 police dog masters help the investigators and 227 surveillance and intervention squads reinforce action in nighttime operations. In addition, 5 river and 11 air sections, 17 mountain squads, 36 juvenile delinquency prevention squads, 93 road traffic surveillance motorized groups, and 133 highways security squads constitute specialized units.

At regional level, the groups of the same administrative region constitute a legion (31 for the whole territory), nine circumscriptions assemble the legions, under a general, within the framework of the military areas, and constitute three regions.

Each general in command of a legion of Departmental Gendarmerie also heads a legion of Mobile Gendarmerie. At departmental level, 123 squadrons perform the duties of maintaining public peace and order and general security. These mobile units reinforce the Departmental Gendarmerie in case of important crowd events, demonstrations, and so on. They constitute a reserve force at the disposal of the government and can be engaged at the prefect’s initiative, specially within the framework of emergency plans. These duties are performed by 16,875 gendarmes and officers.

A National Gendarmerie Security and Intervention Group includes a parachute detachment, the Security of the Presidency Group, and the National Gendarmerie Intervention Group (Groupe d’intervention de la Gendarmerie Nationale) and is composed of specially trained and equipped agents who intervene in difficult and dangerous situations such as hostage takings, terrorist attempts, and so on.

The Republican Guard (Garde Républicaine) contains two infantry regiments and a cavalry unit (the last mounted regiment of the French Army) that perform security and honor duties for high-ranking officials of the French Republic and for VIPs of foreign countries on official visits to France. They also perform riding patrols in the forests near Paris. It has 4,850 members.

*Troops from France's counterterrorist operations use ropes to descend from the Eiffel Tower during a demonstration in Paris, October 8, 2005. The event was held to celebrate the twentieth anniversary of RAID, the country's elite police force. RAID stands for Research, Assistance, Intervention and Deterrence. AP IMAGES.*

The duality of the main police forces in France is considered a source of inconvenience. As of 2005, the government was want to palliate this situation without fundamentally changing the status of the forces: the repartition of districts between the two police forces was under review and some of them were redistributed. Since 2002, intervention regional groups composed of gendarmes, customs, and police officers have been created to fight major crime (one per region). In 2003 their actions led to the incarceration of 1,087 criminals.

In France the mayor retains some police regulative powers and may request his city council to create a municipal police, even if the city has more than 10,000 inhabitants and benefits from the National Police system. The appointment of agents and their firearm licenses are submitted to the prefect's approval. These agents may ascertain infractions, but cannot undertake investigations. They may arrest people *flagrante delicto* but must report to National Police or Gendarmerie for any further action. Their first duty is to enforce the mayor's decisions (*Arrêtés*), but they play an important part in street traffic

and patrols. The Law on Internal Security of March 18, 2003, increased their responsibilities mainly in traffic matters.

In 2001, 3,027 cities, including Paris, had municipal police forces, whose importance varied according to that of the town itself. In eight cities, more than a hundred people were employed, and the Directorate of Prevention and Protection of Paris counted more than 600 agents. On the whole, 14,452 Municipal Police agents were employed in French territory in 2001.

In rural areas about 3,800 rural policemen were in charge of implementing the mayor's decisions concerning traffic and infractions to the Rural Code. They take their orders from the mayor and may carry a firearm on declaration by the mayor to the prefect.

The National Railway Company and the Parisian Transport Company have developed security departments that cooperate with National Police and Prefecture of Police to improve safety in stations and on rail, subway, and bus lines that are sometimes concerned with urban violence.

Although not formally considered as “police,” agencies belonging to the Ministry of Finance conduct investigations in the field of their jurisdiction, with particular procedural prerogatives. A cooperation with National Police and Gendarmerie has been set up in the matters of economic and financial crime, money laundering, trafficking, especially in drugs, and illicit immigration.

More than 4,000 enterprises deal with security in France, in fields like protecting commercial centers, private housing groups, and transport of funds, private detectives, and so on. Since 1995 the laws on security that regulate their activities to promote professionalism also grant them certain prerogatives in such matters as searches and interventions flagrante delicto, as specified in an official agreement.

**Education and Training.** National Police and Gendarmerie have their own police schools and academies for training newly recruited agents and to ensure their continuing education. The National Police has fourteen police training schools provide new Guardians of the Peace with a basic training, including sport, shooting, self-defense, police rules and regulations, and rudiments of law. Two police schools teach police officers.

Training includes more advanced law and management studies. One National Police Academy for the Commissaires de Police is granted a particular administrative status as a public teaching institution under the ministry of interior’s authority. Fifteen regional training centers are in charge of continuing education. To correct inequities in the seniority system, training probation periods are requested before any promotion.

The National Gendarmerie runs twenty-four schools and training centers that provide training to the newly recruited gendarmes and graduation certificates necessary to be promoted to certain ranks. In addition, under the direct authority of the minister of interior, an Advanced Studies of Internal Security Institute, in which Police, Gendarmes, Customs, Justice, and Education cooperate, conduct research and organize training and information sessions on all questions related to security.

**Uniforms and Weapons.** Each police officer is provided with a handgun (Manhurin F1 357 Magnum, Ruger SP101 38sp, or Beretta 92 FS 9mm Parabellum) and, if in uniform, a “defense stick.” The police also carry machine pistols (Beretta 12 SD 9mm Parabellum or MP5 9mm Parabellum) and grenade launchers (Ruger AMD). As of 2005, a program of extension of flash balls and other nonlethal weapons was being developed. At the end of 2003, all law enforcement and customs officers were equipped with a Sig Sauer SP 2022 handgun. The National Gendarmerie, being a military corps, carry

rifles, handguns, machine guns, and heavier weapons. Both Republican Security Companies and Mobile Gendarmerie units are provided with protection devices, such as shields, helmets, gas masks, and tear-gas grenades.

The legal conditions of use of firearms are different for police and Gendarmerie. The May 20, 1903, decree, in its article 174, provides that “armed force may be employed after summons, and when it is impossible to defend by any other way the ground held by gendarmes, or to immobilize people or vehicles.” Such a text does not apply to police officers. Judicial Supreme Court decisions restrict their right to use firearms to legal self-defense.

**Transportation, Technology, and Communications.** The police forces in France own a number of buildings and facilities necessary to ensure their presence in the whole territory as well as to quarter some of their troops. There are 1,971 police stations (*hôtels de police*) in urban areas and 110 barracks that quarter the Republican Security Companies. In addition, the National Police owns 19 retaining centers to house illicit immigrants during investigations, 34 schools and training centers, and 700 other facilities, such as workshops, garages, and telecommunications facilities.

The Gendarmerie Nationale owns 4,187 barracks representing both the local stations in rural areas (the gendarmes having their living quarters in the same place at which they are stationed) and the barracks of the Mobile Gendarmerie legions. In addition, the Gendarmerie have twenty-four schools and training centers and their own technical plants, garages, telecommunications facilities, and so on.

Mobility of police services is ensured by an important automobile fleet. The National Police owns a fleet of 1,818 heavy vehicles (buses, trucks, vans, water cannon cars, and so on), 18,658 cars of all nature (patrol cars, ordinary cars for CID, and so on), and 10,656 motorcycles. The Gendarmerie is equipped with 2,132 heavy vehicles, 25,235 cars, and 4,619 motorcycles.

The Information Technology and Communication System Directorate of the Ministry of Interior is given the responsibility to conceive and set up information processing and communication systems (telephony, radio telephony, data processing, computing, and office automation) for all departments of the ministry.

The National Police have a network of 59,830 terminals, with 21,191 of them being linked to the encrypted network of the Ministry of Interior. Furthermore, 827 microcomputers are embedded on vehicles and linked to the network, thus allowing access to police databases. The French National Central Bureau is linked to the Interpol Global Secured System.

Concerning telecommunications, 26,054 mobiles on vehicles and 34,304 mobiles for pedestrian patrolmen ensure a constant liaison of police officers with analogized network. A link through a numerical encrypted network is now in development with twelve departments already so equipped.

In the Gendarmerie, 53,000 microcomputers are at the gendarmes' disposal, with 2,000 of them being linked to the intranet system, and thus allowing access to all judicial databases and to the 7,000 microcomputers embedded on board vehicles. The Gendarmerie numerical telecommunication network covers ninety-seven departments.

**Police Officers Killed in the Line of Duty.** Law enforcement in France remains a dangerous activity. In 2003 9 police officers and 10 gendarmes died in the line of duty; 3,654 police officers and 915 gendarmes were wounded during operations.

## HUMAN RIGHTS

In France the first text providing for a protection of human rights is the 1789 Declaration of the Rights of Man and Citizen, especially its article 7: "Nobody can be accused, arrested, nor detained but in cases and following the forms provided by Law." France is a party to the December 10, 1948, International Bill of Human Rights and the November 4, 1950, European Convention on Human Rights.

As in all democratic countries, police cooperate in ensuring the respect of the fundamental rights of the citizens, especially in ensuring public peace. Performing that duty, police officers are particularly concerned with provisions concerning personal integrity and respect of fundamental rights.

Several dispositions of the Criminal Procedure Code, as amended by subsequent laws, are intended to protect human rights. For example, police custody (*garde-à-vue*) can last only twenty-four hours and can be extended only by the prosecutor or the judge. The judicial police officer must inform the person concerned of his or her rights (the obligation to notify his or her right to silence was withdrawn by the law of March 18, 2003). The suspect may meet a lawyer during the first hour of custody and request to be examined by a doctor. An effort is made to humanize the conditions of police custody (improvement of housing and food). Searches are also limited. Wiretappings and computer searches must be ordered by Justice.

If these dispositions are not respected, they are likely to involve annulment of the procedure, and provoke sanctions against the judicial police officer. It should be mentioned that, besides the French courts' jurisdiction, a recourse is open before the European Court of the

Human Rights that could condemn the country for infringement of the 1950 convention.

Databases must be created by decree after the formal agreement of a National Committee Computer Science and Freedom (Commission Nationale Informatique et Libertes). The inscription of new categories of persons in a database must be approved by law.

A Code of Ethics for the National Police (Decree 86592 of March 18, 1986) enumerates the police officers' obligations: loyalty, protection of fundamental rights, integrity, dignity, respect of professional secrecy, respect of human beings, and prohibition of illicit violence or humiliating treatments. It determines the conditions for use of licit force and use of firearms (licit self-defense) as well as control modalities.

A National Committee for Ethics on Security Matters (Commission Nationale de deontologie de la Securite) was created by the law of June 6, 2000. This committee is composed of seven personalities (justices, members of Parliament, and qualified persons) chaired by the former chief justice (Premier Président de la Cour de Cassation). Cases of suspected attempts to human rights can be referred to this committee by or through a member of Parliament. It conducts investigations and gives advice. It may also make suggestions to legislators.

At internal level police and Gendarmerie are accountable to specialized departments in charge of discipline and ethics. The National Police General Inspectorate and the Prefecture of Police General Inspectorate investigate and propose administrative sanctions against police officers committing infringements of discipline. They also conduct criminal investigations in such cases if necessary. For the Gendarmerie, the May 20, 1903, decree provides in its Title V conduct regulations, within the framework of the military discipline, a more general way than the 1986 decree for police.

## CRIME

Crime detection, prevention, and criminal investigations constitute the most important task of police forces. Actually, it could be said that almost all the efforts of police agencies, including public order maintenance and intelligence collection are directed toward crime prevention. Crime suppression constitutes the main condition of public peace, and disturbances to public order must in a democracy find their sanction before courts and by law. In that sense, the 7,200 emergency interventions a day made in 2002 by the National Police can be considered as efficient preventive and suppressive actions.

In 2003, 2,834,555 offenses of all categories were reported to or investigated by the National Police and 1,140,139 offenses by the Gendarmerie. Thus, 71.3 percent of the total were dealt with by a department whose

jurisdiction covers only 5 percent of the total territorial area and 50 percent of the population. (The figure for Paris corresponds to 6.9 percent of the total criminality.) The total number of crimes committed in 2003 (3,974,694) compared to that of 2002 (4,113,882) shows a decrease of 3.4 percent. Crimes committed in urban areas under National Police jurisdiction decreased by 3.3 percent, while those reported to the Gendarmerie decreased by 3.6 percent. Thus, for the first time since 1997 French criminal statistics show a decrease. That tendency is even more significant if one considers the figures for rural areas. The number of crimes reported to the Gendarmerie that increased by 11.9 percent in 2002, show in 2003 a decrease similar to that registered in the cities by the National Police. Of course, it is too early to draw any general conclusion from these figures. Actually, if one considers the situation on a long-term basis, it is obvious that France, as well as all industrialized countries, have experienced a drastic increase of crime since the mid-twentieth century. The rate of crime per 1,000 inhabitants, which was 13.73 in 1950 went up to 48.90 in 1980 and 69.32 in 2002. Such a situation led to a political backlash and finally brought about the adoption of the 2002 law on public security. The decrease registered in 2003 constitutes an encouraging vindication of such a policy.

Criminality in France mainly includes thefts, burglaries, housebreaking, and all kinds of robberies. These offenses are usually called street crimes (*Criminalité de voie publique*) and are one of the main sources of insecurity felt by the population. In 2003 they decreased by 9 percent. Economic and financial crime decreased by 1.6 percent, "important crime" by 6.7 percent, and armed robberies by 20.0 percent. By contrast, crimes against persons, including violence, threats and sexual assaults, increased by 7.3 percent. While drug-related crimes increased by 18 percent and the procuring of drugs by 12 percent, these increases are considered as the result of a better organization of the detection system. Actually, the number of crimes detected "on initiative" in absence of any complaint increased by 9 percent in 2003. In 2004, 232 persons were arrested for participation in terrorism-related activities.

In France, as well as in all democratic countries, police action against crime cannot be separated from justice. Actually, as the French legal criminal system is of the inquisitorial type, criminal investigations are strictly regulated by the Penal Procedure Code. Without delving in detail into the procedural system, it is necessary to mention some legal points that condition investigations.

In France all police officers cannot perform all acts of criminal investigations. They are by law divided into two categories: judicial police officers (*Officiers de Police Judiciaire*) and judicial police agents (*Agents de Police Judiciaire*). The capacity of the judicial police officer is

granted by Justice and can be withdrawn by Justice. Some acts of procedure can only be accomplished by judicial police officers, for instance, searches and police custody (*Garde à vue*). In application of the Law on Internal Security, expenses for 2,000 new judicial police officers are provided for in the 2003 budget.

There are three ways of investigations according to the circumstances: preliminary investigation, *flagrante delicto* investigation, and execution of "rogatory letters," that is, orders of a judge (*Juge d'instruction*).

The possibilities open to police officers differ accordingly. For instance, searches cannot be conducted in preliminary investigation without the agreement of the person concerned. Police detention is extended in investigations concerning certain types of crime, for instance, drugs and terrorism.

Police officers and gendarmes acting in criminal investigations are, according to the code, placed under the prosecutor's authority. As they already belong to different departments (Interior and Defense), this is likely to create some difficulties.

Territorial jurisdiction is also a possible source of problems: Some judicial police officers from the police and Gendarmerie are granted a national jurisdiction and it may happen that the two services work on the same case. Legal arrangements such as the 2002 decree giving the minister of interior an authority over Gendarmerie in agreement with the minister of defense, and the creation of new services as the regional investigating groups in which police officers and gendarmes participate are intended to palliate this difficulty. As far as criminal investigations are concerned, in case of conflict of jurisdiction it is up to the prosecutor or the judge to decide. It may also happen that, in the same case, a *Juge d'instruction* delivers orders at the same time to both agencies to perform different acts.

Actually, police and Gendarmerie local units hold general jurisdiction, receive complaints, collect material evidence on scenes of crimes, listen to witnesses, arrest criminals in the act, keep people under watch, and transmit the case to the prosecutor's office. Only difficult or specific cases are transmitted to specialized services such as Regional Criminal Police Services or one of the central offices, usually on the prosecutor's instructions or a decision of the hierarchy, for instance, CID headquarters in the Prefecture of Police of Paris acting in agreement with the prosecutor's office, which is located in the same building in the court house.

In 2003 the conviction rate was 29 percent (25% in 2002). Compared to the 313,546 police detention measures taken in 2002, that number increased by 12 percent. Elements of evidence have been collected concerning 639,000 suspected persons (an increase of

5% from 2002). Minors (under eighteen years old) represent 18 percent of the total number of suspects (21% in 2002). Over 35,000 illicit immigrants have been returned to their countries. That action is only possible thanks to international cooperation and to an intense effort to dismantle illicit networks, often linked to organized crime, that organize border crossings. Thus, 1,032 cases of illicit traffic in migrant people were transmitted to Justice in 2003.

Preventive action is developed principally in the field of the antiterrorist plan "Pirate Look Out" (Vigie pirate), which calls for a reinforcement of sensitive target surveillance and a noticeable increase of patrols by police, Gendarmerie, and even army in the streets and public places. It may be noted that such an action also discourages the ordinary street criminals.

Facing the large increase of juvenile crime, especially in suburban areas, including thefts, violence, vandalism, and street gangs, an important effort of prevention is directed toward minors: 108 juvenile squads, besides their judicial activities concerning crimes against minors or committed by minors, have developed preventive action, especially to prevent runaways and school truancy. Special referents have been instituted to make contact easier between police, juveniles, and their parents. Better cooperation between the police and education services creates a better informed community. In 2002, 9,637 such actions concerned 313,379 persons. At the same time, 212 antidrug training police officers gave 4,677 information sessions about the dangers associated with drug use and thus reached 157,352 persons, including 112,608 pupils and 15,169 parents and teachers.

National Police interventions in 2002 concerned 53,072 traffic accidents, totaling 1,540 killed and 66,419 wounded people. Gendarmerie interventions concerned 37,434 accidents, totaling 5,360 killed and 52,656 wounded people. In 2003 the number of traffic accidents decreased by 17 percent; 5732 persons were killed (a 21 percent decrease) and 111,300 wounded (a 19 percent decrease). Since 1995 safety on the roads has been included in the Programming Law as a priority, and noticeable efforts have been accomplished in suppression (speed control by radar) and prevention programs, particularly concerning children and youngsters. In 2002, 663,114 young people were informed and trained by police, and 377,636 by the gendarmes. Thanks to these efforts, the number of accidents decreased considerably (30.6% for accidents, 27.8% for killed persons, and 38% for wounded people between 1995 and 2002).

In 2002 the rescue teams of the Republican Security Companies made 12,447 interventions on beaches and 1,125 in mountains. Gendarmerie teams made 2,996 rescue interventions in mountains and 911 in the sea.

## CORRECTIONAL SYSTEM

Before the French Revolution corrections did not constitute an organized system. On the one hand, before the eighteenth century imprisonment was not considered as a penalty alone; punishment was essentially of corporeal nature such as death, gallows, hard labor, or transportation. Jail was mainly a place where people waited for being sentenced, executed, or transported. On the other hand, different sorts of prisons coexisted: jails linked to court houses, fortresses, general hospitals conceived in eighteenth century as asylums hosting poor people, detention quarters, poor houses where beggars were coerced to work, and state prisons like the Bastille, which held persons not sentenced in court but imprisoned by the king's order.

Only in the Age of Enlightenment, and in particular under Cesare Beccaria's influence, did deprivation of liberty become a way to punish criminals. The 1791 penal code instituted prison as a penalty for offenses and less serious felonies. A corrections department was created in 1795 in the Ministry of Interior. The First Empire followed the same way concerning the penal system. The central detention houses were created by a decree in 1808 to receive people sentenced to criminal imprisonment. The 1810 penal code created justice houses to detain people waiting for trial. They became departmental prisons in 1811. During the nineteenth century the correctional system followed the evolution of ideas concerning criminal science. In 1911 the Department of Corrections (Administration Penitentiaire) was linked to the Ministry of Justice. In 1938 hard labor was abolished.

After World War II the system was reformed toward the notions of rehabilitation and social reintegration. An ordinance of February 2, 1945, put forward the necessity of reeducating juvenile criminals. The death penalty was abolished in 1981, and in 1987 the mission of Prisons Service was determined by law as "playing a role in the enforcement of court decisions as well as in the maintenance of public safety. It facilitates the social reintegration of those sentenced by the courts and is organized to ensure the individualization of sentencing."

In France the Department of Corrections is under the Ministry of Justice. In addition, minors receive a special form of treatment, closer to education than to correction *proprio sensu*, in which another department within the Ministry of Justice, the Judicial Youth Protection (Protection Judiciaire de la Jeunesse), takes an important part.

Corrections do not concern police custody (*garde-à-vue*) but only execution of Orders of Justice, either concerning people placed in provisional detention awaiting trial, or people serving a term after having been sentenced in court.

Headed by a director appointed by a presidential decree on the advice of the minister of justice, the Corrections Department includes a central headquarters and decentralized services. At central level the director is the head of his or her cabinet, the General Inspectorate, the National Correction School, and central administrative units. Nine regional directors manage 185 correctional institutions (prisons).

The prison system is divided into several categories according to the length of the term to be served and the dangerous character of the inmates concerned: 5 central prisons receive people sentenced to long terms of imprisonment and high-risk inmates, 23 reintegration-oriented centers receive people serving a term of more than 1 year or showing definite potential for social rehabilitation, 28 penitentiary centers that include at the same time 2 of the preceding categories and 13 open prisons oriented to the day release program. There is 1 national prison hospital.

Alternative measures to imprisonment are an approach aimed at making the offender aware of his or her responsibilities. Persons concerned are placed under control of a special judge "for implementation of sanctions." On his or her request, they are followed up by 102 probation services. As of July 1, 2002, 132,374 people were followed up by these services. New techniques like electronic braces to keep people under watch and judicial control are being experimented with.

According to the ordinance of February 2, 1945, minors benefit of a special penal statute, concerning their responsibility, and their penal treatment as well. Imprisonment must be an exception, and measures taken by juvenile courts and judges are closer to education than to correction. A September 9, 2002, law modified some of the dispositions of that ordinance to adapt the institutions to the increase in juvenile delinquency. The measures can be implemented concurrently by an administrative body and private authorized associations.

The Judicial Youth Protection (*Protection Judiciaire de la Jeunesse*) is one of the directorates of the Ministry of Justice. It includes a central headquarters, 15 regional directorates, 100 departmental directorates, and 404 administrative institutions. Imprisoned minors are incarcerated in special quarters of prisons and watched by Judicial Youth Protection educators instead of wardens of the Corrections Department. Two hundred thirty-four educative action centers and education active homes receive minors placed by judges' decision, either after having committed an offense or living in unfavorable conditions. Fifty-three of them permit overnight lodging. Ninety-eight educative services near the courts are at the disposal of the judge (*Juge des Enfants*). Immediate placement centers receive minors in emergency cases for a three-month term to evaluate their situation and then advise the judge on

future options. Reinforced educative centers receive multi-recidivists or severely endangered minors. They are small educative units, receiving fewer than ten minors followed by an equivalent number of educators, for two- or three-month stays. The September 9, 2002, law created closed educative centers to receive minors under judicial control or sentenced to imprisonment with probation. Four hundred ninety-five recognized associations manage 1,158 institutions. Some of them have been officially recognized by Judicial Youth Protection and are entitled to receive minors on Justice orders as well as children in difficulty placed by Social Services.

The budget of the Department of Corrections for 2003 was 1492.5 million euros, representing 30 percent of the total budget of the Ministry of Justice.

**Prison Conditions.** A program for the construction of new prisons is intended to lead to an effective modernization of the penitentiary institution by closing the old obsolete units and providing a response to the need of adequacy to the modern conditions of life in detention. Two central houses and eighteen new penitentiary centers have been planned, which will incorporate wings for male, female, and adolescent inmates. They are expected to be completed by 2007 or 2008.

**Prison Statistics.** In 2003 there were more than 60,000 persons in custody. This number has doubled since the 1960s, and since the 1990s the length of terms has also increased.

The increase of crime rate during the second half of the twentieth century brought about an increase of the number of prisoners. While the number of prisoners increased, the number and quality of penitentiary institutions did not follow the same path. Thus, the problem of overpopulation, inadequacy, and decay of prisons has become a subject of polemics. Beginning at the start of the twenty-first century an effort was made to improve the situation.

According to the Corrections Department, the number of places available in 185 French prisons was, on June 1, 2003, 48,603 and the number of inmates 60,963. The prison population rate was 91 per 100,000. Pretrial detainees made up 35.7 percent of the prison population, female prisoners 3.8 percent, and juvenile prisoners 1 percent. The occupancy level was 117.5 percent. A program was established in 1987 to reduce overpopulation, its aim being to create 13,000 new individual places. Twenty-five new institutions have been built throughout metropolitan France, twenty-one of them being run by means of dual management: the prison service staff carry out purely correctional duties, while maintenance, transportation, accommodation,

## *France*

food service, health-service work, and vocational service are delegated to private companies.

On January 1, 2003, the Corrections Department consisted of 28,590 agents, including 22,358 warders, 1,949 probation officers, 503 social workers, and 380 prison directors and regional directors; in addition, the Corrections Department had recourse to 718 employees of private-associated bodies.

The National Corrections Department school performs staff initial training during one year for warders, and two years for directors. Staff members are also provided with permanent educational training.

The budget of Judicial Youth Protection for 2003 was 566 million euros, representing 11 percent of the total budget of the Ministry of Justice.

The number of juveniles under the care of the Judicial Youth Protection had increased considerably, from 50,562 in 1997 to 71,432 in 2001. In addition, juvenile delinquency has become tougher, the nature of crimes committed by juveniles is more serious, and the offenders are younger (the number of minors under thirteen involved in criminal offenses has increased). The Judicial Youth Protection appears as malfunctioning. The detention units, for instance, are located in prisons and are inadequate for educational programs. This is why credits have been adopted to create fifteen educational closed centers.

In 2002 the Judicial Youth Protection Department employed 7,078 agents, including 3,459 education

officers. To permit the proper functioning of the new educational centers, a five-year program was adopted for the recruitment and training of 1,250 new agents, 25 percent of them being budgeted in 2003.

In 2002, with an average of 20,936 inmates working in prisons, the rate of remunerated activities was 43.1 percent. Nearly 26,573 adult inmates and 2,968 detained minors received educational training, from alphabetization to university degree. The rate of imprisonment for 100,000 inhabitants in 2000 was 113, the rate of prison occupation density per 100 places was 97, and the rate of evasions per 100,000 inmates was 8.1. Thus, the situation of France among European countries appears as average.

French law enforcement and corrections agencies and corrections are being reorganized to meet more efficiently the increase of crime. This movement is not yet complete and in the following years some other modifications are likely to be brought to the structures of institutions and administrative status of personnel. Until now, the changes that have already occurred seem to have proved successful; since the beginning of 2003, a decrease of crime rate has been noticed. Of course, conclusions could possibly be drawn only over the long haul.

# French Polynesia

---

**Official country name:** Overseas Lands of French Polynesia

**Capital:** Papeete

**Geographic description:** Archipelago in the South Pacific Ocean, part of Oceania

**Population:** 270,485 (est. 2005)

## LAW ENFORCEMENT

**History.** On the conquest of Polynesia by the French, a Gendarmerie was established as the principal agent of law enforcement. There have been few structural changes since then.

**Structure and Organization.** The Gendarmerie is a quasi-military organization that is strictly disciplined, highly mobile, and armed and equipped for security patrol and other police duties in nonurban areas. Its basic personnel, including officers and noncommissioned officers, are recruited and trained in France, but the lower ranks are almost all native.

The basic operating unit of the Gendarmerie is the brigade, a small unit of five to fourteen men, commanded by an officer or noncommissioned officer, and stationed in one of the police districts or subdistricts. Brigades are organized into different formations for specialized duties, such as routine patrol traffic control, criminal investigation, counterintelligence, riot control, and general guard or escort assignment. About twenty-five brigades are assigned to each department.

Two or more brigades, usually but not always of mixed types, are grouped into larger units called companies. These units are responsible for security operations in territories that vary in size from one to several police districts. All companies, in turn, are subordinate to a single commander at the central headquarters at Papeete.

Besides the Gendarmerie, the mayor of Papeete is authorized to raise a local urban police force organized along the lines of the Sûreté Nationale in France. These forces are commanded by a chief of police (*préfet*). The police chief is trained in France, but most of the patrolmen (*gardiens de la paix*) are natives and are recruited and trained locally.

## CORRECTIONAL SYSTEM

The incidence of crime is low in French Polynesia. As a result, the only major penitentiary in is Papeete. There are detention centers on all the major islands.

*French Polynesia*

**Prison Conditions.** French Polynesia observes international standards in its treatment of prisoners.

**Prison Statistics.**

- Total Prison Population: 327
- Prison Population Rate per 100,000: 131

- Female Prisoners: 4.1%
- Number of Prisons: 3
- Official Capacity of the Prison System: 152
- Occupancy Level: 215.1%

# Gabon

---

**Official country name:** Gabonese Republic

**Capital:** Libreville

**Geographic description:** Central African country on the equator bordering the Atlantic Ocean

**Population:** 1,389,201 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** Organized along French lines, the police forces of Gabon comprise the National Police and the paramilitary Gendarmerie. The National Police is commanded by a high commissioner and the Gendarmerie by a commander in chief. The former has two operational units: the National Security Police (Sûreté Nationale) and the Judiciary Police.

The Gendarmerie consists of three brigades subdivided into companies: the Mouanda Company in the east, the Libreville, Makokou, and Oyem companies in the north, and the Lambarene, Moula, Port-Gentil, and Tchibanga companies in the south. Gendarmes are trained at the Gendarmerie School in Owendo.

### Police Statistics.

- Total Police Personnel: 1,030
- Population per Police Officer: 1,349

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 114. Of which:

- Murder: 1.4
- Assault: 17.9
- Burglary: 2.3
- Automobile Theft: 7.5

## CORRECTIONAL SYSTEM

The nation's thirty-two prisons and detention centers are run by the Prison Administration in Libreville.

**Prison Conditions.** Conditions in most prisons are harsh. Sanitation and medical care are nonexistent. Food is inadequate and is supplemented by supplies from relatives. Women are held separately from men, juveniles from adults, and pretrial detainees from convicted prisoners.

# Gambia, The

---

**Official country name:** Republic of the Gambia

**Capital:** Banjul

**Geographic description:** Smallest country in the continent of Africa, an enclave of Senegal in West Africa bordering the Atlantic Ocean

**Population:** 1,593,256 (est. 2005)

## LAW ENFORCEMENT

**History.** Before 1855 the enforcement of law and order and the prevention of smuggling on the River Gambia was in the hands of an armed militia and imperial troops. In 1855 a river police of ten men was formed with a vessel under the command of a European. In 1866 some of the imperial troops were withdrawn and replaced by trained constabulary. In 1870 all the imperial troops were withdrawn and the strength of the constabulary was raised to 100. In 1901 the strength of the force was 2 officers and 80 men. On the eve of independence in 1958 the strength of the force had grown to 284 officers and men. When the Gambia Regiment was deactivated, the force, now known as the Gambia Police Force, took over the defense role as well under an inspector general as commander.

**Structure and Organization.** The Gambia Police Force is commanded by an inspector general headquartered in Banjul, who reports to the secretary of state for the interior. Territorially, the country is divided into four operational divisions, including one division covering the capital. The operational divisions include a Criminal Investigations Department, a licensing office, and a traffic division. The police also supervise the fire brigade.

The inspector general also controls the Field Force, which is responsible for internal security and ceremonial duties.

**Education and Training.** Education is provided for all ranks at the Police Training School in Banjul.

**Uniforms and Weapons.** The uniform is either a khaki drill, short-sleeved, open-neck tunic worn with matching trousers or a gray bush shirt with black trousers. At night a black, closed-neck tunic is worn with matching trousers. A black peaked cap and a black leather belt complete the uniform.

The General Police are not armed but the Field Force is equipped with small arms and rifles.

## Police Statistics.

- Total Police Personnel: 428
- Population per Police Officer: 3,722

## HUMAN RIGHTS

The security forces, especially members of the National Intelligence Agency, commit many human rights abuses. They routinely harass journalists, detainees, prisoners, and members of the opposition. People are arrested arbitrarily and then held incommunicado for long periods. No actions are ever taken against the police officials responsible for killing civilians or depriving them of their rights.

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 89. Of which:

- Murder: 0.4
- Assault: 10.6
- Burglary: 5.6

## CORRECTIONAL SYSTEM

The prison system is administered by the commissioner of prisons of the Gambia Prisons Service under the Ministry of the Interior. There are three prisons in the

country, of which the largest is Central Prison at Banjul and the others are Janjanbureh and Jeshwang.

**Prison Conditions.** The International Committee of the Red Cross, which visited the Gambia prisons, reported that prison conditions met international standards. Prisoners receive three meals a day, each prison has an infirmary and outside doctors are brought in when necessary. However, the same report noted that the maximum-security prisoners are subjected to harsh conditions and confined to small individual cells for long periods. Some have to sleep on the floor. There are also reports of beatings and deliberate malnourishment.

**Prison Statistics.** The official capacity of the three prisons is 780, but the actual prison population is only 450. The occupancy level is 58 percent of capacity. The incarceration rate is 32 per 100,000 persons. Of the total prison population 18.5 percent are pretrial detainees, 1.2 percent are female, and 66.7 percent are foreigners.

*George Thomas Kurian*

# Georgia

---

**Official country name:** Georgia (Sak'art'velo)

**Capital:** Tbilisi

**Geographic description:** Borders Armenia, Azerbaijan, Russia, Turkey, and the Black Sea and controls much of the Caucasus Mountains and the routes through them

**Population:** 4,677,401 (est. 2005)

## LAW ENFORCEMENT

**History.** On November 7, 1917, the Bolshevik Party staged a coup in Russia and established Soviet power. The leading political parties of the Transcaucasus refused to recognize the new power and on November 17 set up a local administration: the Transcaucasian Commissariat. Soon the Transcaucasian Federation was established, but it was short lived. On May 26, 1918, the National Council of Georgia declared Georgia's independence.

On May 7, 1920, Soviet Russia and Georgia signed a treaty according to which Russia recognized the independence and sovereignty of the Georgian Democratic Republic. What seemed a new dawn for Georgia was fleeting. After the Sovietization of Azerbaijan and Armenia in February 1921, the Bolshevik armies invaded Georgia. The forces were unequal and on February 25, 1921, units of the Red Army entered the capital, Tbilisi.

Under Communist hegemony, the beleaguered nation once again became the realm of foreign power. In 1924, after an attempted uprising led by Georgian Mensheviks, more than 5,000 Georgians were executed. Although Joseph Stalin and his chief of secret police,

Lavrenty Beria, were both Georgians, the Georgian people were given no reprieve under their oppressive regime. Georgia had to pass through the ordeal of industrialization and collectivization, suffering severely during the depressions of the 1930s. During World War II 300,000 Georgian soldiers were killed.

In 1990 multiparty elections were held and, on the April 9, 1991, the legislature declared the independence of Georgia. On the wave of anticommunist sentiments, the dissident, Zviad Gamsakhurdia, was elected president. However, he was unable to rule the country at that crucial juncture. Although earlier a victim of totalitarianism, as president he tried to build a totalitarian regime. His unpredictable international policy almost completely isolated Georgia.

In the winter of 1991–1992 a military rebellion by the opposition forced Gamsakhurdia to leave Georgia. Unable to cope with many international, economic, and other domestic problems, the State Council invited

Eduard Shevardnadze, the former secretary of the Georgia Communist Party and former Soviet Foreign Minister, to Georgia. Shevardnadze obtained the overwhelming majority of votes in the elections that followed in October 1992 and was confirmed as chairman of the Parliament of the Republic of Georgia. On August 24, 1995, a new constitution was adopted and three months later, after presidential elections were held, Shevardnadze was installed as the president of Georgia.

In November 2003 Georgia held parliamentary elections that were denounced by local and international observers as being grossly rigged. Candidate Mikhail Saakashvili claimed that he had won the elections (a claim supported by independent exit polls) and urged Georgians to demonstrate against Shevardnadze's government and engage in nonviolent civil disobedience against the authorities.

Massive political demonstrations (the so-called Rose Revolution) were held in Tbilisi between November 20 and November 23, with over 100,000 people participating and listening to speeches by Saakashvili and other opposition figures. After an increasingly tense two weeks of demonstrations, Shevardnadze bowed to the inevitable and resigned as president on November 23.

On January 4, 2004, Saakashvili won the presidential election in Georgia with more than 96 percent of the vote. He ran on a platform of opposing corruption and improving pay and pensions. He has promised to improve relations with the outside world.

**Structure and Organization.** The Ministry of Internal Affairs (MIA) and the Prosecutor General's Office have primary responsibility for law enforcement. The MIA controls both the police and the Internal Troops, which have heavy weapons and are responsible for maintaining domestic order in cases of emergency. The police are divided into functional departments, such as Criminal Investigation, Traffic Police, and others corresponding to their responsibility. In addition, it has been responsible for issuance of passports and visas as well as running fire departments and prisons. The Ministry of State Security plays a significant role in internal security. In times of internal disorder, the government may call on the MIA or the military.

In 2002 the MIA created a seven-person unit to specifically combat trafficking. The unit received support from the American Bar Association's Central and Eastern European Law Initiative, the International Organization for Migration, and other organizations. Local nongovernmental organizations worked closely with the public defender's office, the body primarily responsible for referring victims to prosecuting authorities.

Information on policing in that part of the world is particularly difficult to access, and Georgia is no different. According to the MIA, Georgia had approximately 30,000 officials from various departments, including 6,400 Internal Troops, 1,850 police academy personnel (1,360 students), and 665 in the passport and visa department. There were 1,749 civilians among the police, besides 14,592 officers and 12,863 privates. A separate police protection department, with 9,700 officers and an independent budget and source of income, provides security and protection of private businesses. This estimate of 30,000 officials apparently includes various departments, such as fire and emergency units, which do not serve a policing function.

While nongovernmental organizations cite the figure as closer to 35,000, others estimate it to be 80,000, and some go as high as 200,000. Another MIA figure said that the number of police officers in 2000 was slightly less than 14,000.

Regardless of the size of the police force, there is little doubt that it is an organization in the throes of major change. In March 2004 200 high-ranking officers in the MIA were essentially dismissed on orders from the minister. Most of these were heads of regional and district units. It may be that these officials were implicated in corruption and bribe taking or simply part of the endless political shuffles in the MIA. The following month the MIA announced that it would be totally restructured, a number of services would be abolished, and police would be equipped with modern technology. The police would be demilitarized, losing armored vehicles such as tanks and armored personnel carriers. In its place, a gendarmerie is to be created. In June 2004 the Ministry of Interior announced that it was forming the "universal police patrol" that will perform the functions of investigators, road and environmental police, and firefighters. It was described as a "Western-type unit" and was operational by the end of 2004. According to officials, 130 "high-class" vehicles were ordered to equip the new unit.

The Georgian armed forces are responsible for defending the nation's borders against attack, but daily monitoring and controlling the borders is the responsibility of the State Department of the State Border Guards. As of 2005 it was an independent governmental structure. Consisting of 5,500 personnel, the Border Guards is now responsible for all of Georgia's land borders and its seacoast. At present, however, many of these borders are not secure because of separatist movements in several parts of the country.

Key objectives of the Border Guards are to prevent the illegal smuggling of drugs, weapons, or sensitive materials (such as nuclear fissile material across

Georgia's borders), prevent the illegal movement of migrant populations or terrorists into or through Georgia, and protect Georgia's economic well-being by enforcing customs regulations.

The government of Georgia places special emphasis on ensuring that the oil pipelines and other vital economic assets in the country remain secure. Primary responsibility for protecting the pipeline rests with the President's Special Protective Service, but the armed forces play a role as well. In April 1999 Georgia hosted a multinational military exercise in which its forces trained with units from Azerbaijan and Ukraine in tactics and techniques for defending the pipelines.

**Police at Work.** The possibilities for success in policing Georgia are seriously hampered by extremely low salaries and the inability of the government to pay them without interruption. In 2003 the state minimum wage was \$10.80 (20 lari) a month. There was no state-mandated minimum wage for private-sector workers. Generally speaking, the minimum wage was not sufficient to provide a decent standard of living for a worker and family. Police salaries begin at about \$100 per month (200 lari).

One source of frustration for police officers is the government's inability to pay salaries in a predictable manner; delays can be days, weeks, or even months. As in many other sectors of society, police officers frequently engage in a wide variety of activities to supplement official salaries. The most visible of these activities is the solicitation of bribes from drivers by the traffic police. Other activities include engaging in smuggling activities and extorting businesspeople. It is common in that part of the world that police officers will pay to be promoted. Sums are so high that the only way to raise the money or repay a lender is by becoming a full participant in official corruption.

The involvement of police officers in such activities creates a constant tension between law enforcement and journalists that takes a variety of forms. In one dramatic illustration, in September 2002 more than twenty police officers allegedly entered the local Zugdidi television station, which provided footage for an exposé on police involvement in smuggling gasoline to the neighboring separatist region of Abkhazia, and beat employees and destroyed equipment. Following an internal police investigation, the deputy police chief was dismissed and the station continued to broadcast.

Georgian police generally work in an environment that is highly politicized, heavily influenced by criminal organizations, and is an increasingly active transit corridor for narcotics. The police force is ill equipped and unprepared to handle effectively the challenges it faces.

In 2001 Georgia formed a commission to reform its law enforcement agencies. The commission developed a strategy for reorganization that was forwarded to the Georgian National Security Council; however, no significant changes were made. In this environment of pervasive corruption and low law enforcement salaries, combined with the growing opportunities in illicit markets, there is little reason for optimism in the near term.

The 2001 reform effort came on the tail of a 1996 MIA internal reform effort to reduce corruption. It, too, failed to achieve any meaningful results. Parliament's Commission on Corruption charged several former senior government officials with corruption; however, no senior official in the government at that time was charged. Georgia's anticorruption efforts are hampered by the widespread acceptance of corruption within Georgian society.

During 2003 the MIA fired 97 police officers, lowered the ranks of 27 officers, and ordered a variety of administrative and criminal punishments for 281 officers. In July 2003 a former policeman was found guilty of the 2001 killing of an independent television journalist and sentenced to thirteen years in prison. The journalist's wife alleged that he was killed in connection with his investigation into ties between senior government officials and Chechen separatists. In August 2003 the deputy of the head of an MIA district office was arrested. At the time, he was under the influence of drugs and was found with large quantities of heroin on his person. During the search, three pistols were found in his flat, two of which did not have registration numbers.

In general, officers were held accountable for abuses only in extreme cases and changes to the Criminal Procedure Code weakened a detainee's ability to substantiate claims of such abuses. In the first eight months of 2003, 182 cases against MIA employees were sent to the Prosecutor General's Office for investigation, which resulted in the opening of criminal cases against 18 persons. Many observers claimed that prosecutors were frequently reluctant to open a criminal case against police or they closed a case for lack of evidence.

#### Police Statistics.

- Total Strength of Police Force: 11,500
- Population per Police Officer: 407
- Percentage of Women: 8.5%

#### HUMAN RIGHTS

As is the case with police forces throughout the region, the Georgian police are frequently alleged to commit human rights abuses, whether on the streets or in prison facilities. Police frequently rely on confessions to

**Georgian President Mikheil Saakashvili inspects police forces in Tbilisi, September 18, 2005.** *The event was part of a celebration to mark the first anniversary of the country's Patrol Police unit. Saakashvili disbanded the country's force of traffic police after concerns of corruption and ineffectiveness. He then created the Patrol Police, modeling the unit's responsibilities after U.S. police departments.* AP IMAGES.

prove cases rather than on collecting evidence. These confessions are often extracted through the use of enormous psychological pressure and physical abuse. Overall, there is insufficient official accountability in a system that relies heavily on personal contacts, family and clan ties, weak governmental supervision, and extensive corruption. Encountering tales of police officers beating a suspect, threatening violence against citizens, or forcibly breaking up protests is a regular occurrence.

While there are instances of police officials apparently being arrested, tried, and convicted in connection with the abuses they allegedly had delivered, frequently the charges are less than the situation warrants and, in some cases, those who are sent to prison are released early. In a typical example, a traffic police inspector, who was sentenced to two years imprisonment for "exceeding his authority" in connection with the death of one individual, was released nine months early. "Exemplary behavior when in detention" was cited as the reason for the release. The

victim had been severely beaten by several traffic police officers and died in a hospital two days later of multiple fractures and other serious injuries.

Human rights observers and lawyers noted that abuses occurred more frequently at the time of arrest and in police stations, rather than in pretrial detention facilities, and said that a growing number of confessions were made in police stations. According to human rights observers, those who suffered such abuse were routinely held for long periods in pretrial detention to give their injuries time to heal. Police often claimed that injuries were sustained during or before arrest. Police agents within the prison population also allegedly committed abuses in pretrial detention facilities. Also, guards frequently abused children in the pretrial detention facility that held street children.

To counter incidents of torture and abuse in pretrial detention facilities by police officials, an ombudsman instituted a rapid reaction group in January 2002 with

the support of the Organization for Security and Cooperation in Europe. This pilot project had the mandate to provide an immediate response to all claims of human rights violations during the most critical phase, the first seventy-two hours of a person's detention. The ombudsman reported that the rapid reaction group registered forty-seven cases of human rights violations in the first six months of 2003. The rapid reaction group essentially ceased to function following the appointment of the ombudsman to the Central Election Commission.

Outside the prison the situation is not any better. The government dismissed three police officers in a police station in Tbilisi for severely beating and threatening to rape a teenage boy in January 2002. The same month, police beat and mistreated a young man, causing extensive scarring and wounds, including the pulling out of four fingernails. The official report found that the injuries were sustained during arrest. The government took no disciplinary action and closed the case.

The April 2002 United Nations Human Rights Commission review of the country's compliance with the International Covenant on Civil and Political Rights cited systemic problems with the criminal justice and prison systems and continued widespread use of torture and arbitrary detention by police. In issuing recommendations for improving the country's treatment of detainees and prisoners, the committee requested that the government report on progress in addressing its specific concerns within twelve months rather than waiting for its third periodic report scheduled for 2006.

Local police and security officials are known to harass or deny protection to nontraditional religious minority groups, particularly members of Jehovah's Witnesses. The police only sporadically intervened to protect such minorities from attacks by Orthodox extremists. Police participation or facilitation of attacks are believed to have diminished somewhat; however, the MIA (including the police) and the Prosecutor General's Office generally failed to pursue criminal cases against Orthodox extremists for their attacks against religious minorities. On the few occasions in which there were investigations into such attacks, they proceeded slowly.

The Parliament's Committee on Human Rights and Ethnic Relations and local human rights groups independently investigate claims of abuse. There was a significant increase in the number of claims filed; however, many claimants failed to follow through after filing, allegedly because of fear. The committee noted that since the presidential election in 2000 claims shifted from requests for economic assistance to complaints about mistreatment and violations by the police and the prosecutor's office and the failure of the prosecutor's office to pursue criminal investigations of alleged violators.

Ethical standards for the police were put into force during 2002. Human rights groups welcomed the initiative but noted that a culture of corruption could undermine the ability of officers to observe the stipulations of the draft document. Police training on ethics, the rights of prisoners, standards of behavior for police, and information on how to report abuses of human rights were credited with improving police awareness of human rights. Following the resignation of Shevardnadze, the minister of internal affairs announced a comprehensive reform program to eradicate corruption and improve professionalism.

Such notes of optimism are tempered by the realities facing law enforcement and the society at large.

#### CRIME

	1999	2002
Total Registered Crime:	14,148	15,662
Premeditated Murder:	244	263
Rape:	35	52
Robbery:	286	399

Crime statistics should always be handled with great care; in the case of Georgia and other former Soviet states, they are relatively meaningless. Locked in an ideological battle with the West, Soviet reality urged the creation of fictitious figures across most sectors of the economy and society to portray a positive image to the outside world. The depiction of crime was one of the most important sectors for manipulation as the Soviet Union attempted to demonstrate the superiority of communism and its promise of the disappearance of crime. According to police officials, the practice of producing fraudulent statistics (*pripiska*) continues long after the demise of the Soviet Union. Latent crime has always been assumed to be rather high.

Compared to the instability of the early 1990s, the crime picture has appeared to have stabilized in the latter part of the decade. Given the near constant political tension and continuing poor economic condition of the country, though, the foundations of the society are not yet firm enough to preclude an increase in crime over time.

Everyday life is permeated by corruption all the way up to the highest levels in government. Owing in part to the legacy of the Soviet Union, corruption is systemic and little is done without some form of it playing a role.

Economic crime, such as embezzlement, is rife. At the beginning of August 2001 the International Federation of Red Cross and Red Crescent Societies discontinued aid programs in Georgia because of embezzlement of large amounts of money by the chairman of the Georgian Red Cross. In a typical example of

corruption, vital medication, which reaches Georgia with humanitarian aid, is usually sold by corrupt civil servants on the black market with the help of intermediaries.

As in most countries, theft of personal property is one of the most frequently occurring crimes. In the post-Soviet era more goods have become available, increasing the opportunities for theft.

Politically motivated murder, assassinations, kidnappings, blackmail, and violent settlement of disputes are not unusual. Organized crime continues to play a major role in the region. The system of close-knit family and clan-based relations makes it difficult to counter effectively such phenomena. Their activities are wide ranging and include narcotics trafficking, trafficking in people, embezzlement, extortion, and insinuating themselves into the political process.

It is believed that a considerable portion of crime goes unreported. People commonly believe that there is little police can do in response to a plea for assistance. In fact, it is generally believed that any contact with police should be kept to a minimum. Police are not well trained in responding to the needs of the citizenry and have a reputation for dealing harshly with complainants, either extorting money from them or accusing them of causing their own victimization in some way.

As a result of a threat posed by organized crime groups, highway bandits, and other groups, foreigners are at risk. Foreign businesspeople have been kidnapped and held for ransom in a number of cases. As across the region, it is common for drivers, particularly those driving foreign model vehicles, to be stopped in cities by the traffic police soliciting bribes or by highway bandits threatening and extorting drivers.

In recent years there have been many violent attacks directed against religious minorities in Georgia. The victims are primarily Jehovah's Witnesses, but also include Pentecostals, Baptists, and members of the Assembly of God. Incidents include the burning of literature, the destruction of private property, and the beating (sometimes severe) of believers.

**Narcotics.** Given its geographic location at the crossroads of Europe and Asia, Georgia could emerge as a major transit route. Local involvement in drug trafficking remains limited but is increasing and cigarette and alcohol smuggling are already major criminal activities. Even though the function of detection of illegal smuggling on the borders was transferred from Customs to the newly established Operational Investigative Unit under the Ministry of Tax and Revenue, this movement did little to reduce drug trafficking and other smuggling. Although the government is aware of the potential problems, counternarcotics remains a low-priority issue

for Georgian law enforcement agencies. Interdiction efforts are hampered by the fact that Georgia does not have effective control of all of its territory or of its borders.

Georgia is not a significant producer of narcotics or precursor chemicals; a small amount of marijuana is grown in the foothills of the Caucasus Mountains, largely for domestic consumption. Despite the small size of the economy and the rudimentary banking system, money laundering is becoming a problem. The proceeds from lucrative cigarette and alcohol smuggling are recycled through Georgia's poorly regulated banking system.

Georgia is also believed to be a secondary transit route for heroin smuggled from Afghanistan through Iran and then on to Europe. Afghan morphine and heroin base destined for Turkey is also presumed to transit Georgia. Narcotics trafficking routes through Georgia include an east-west route with narcotics moving from Turkmenistan and Kazakhstan by way of the Caspian Sea to the Azerbaijani capital, Baku. They are then shipped north via Russian land routes and enter Georgia. From Tbilisi, drugs are shipped to Turkey, Romania, and Ukraine.

Responsibility for counternarcotics efforts is shared by the MIA and the Security Ministry. The MIA has primary responsibility for combating cultivation and distribution of narcotics while the Security Ministry has primary responsibility for interdicting the flow of narcotics through Georgia. In practice, the two agencies have competed for influence and control, which has led to a lack of coordination between them. In addition, all the relevant law enforcement agencies in Georgia suffer from a lack of resources.

The Georgian government's estimates on the extent of narcotics cultivation are unreliable and do not include those areas of the country that are outside the central government's control. Nor does the Georgian government have reliable statistics on the volume of drugs transiting the country. In 1997 drug seizures were small in scale and did not increase significantly over previous years, reflecting the fact that Georgia is still only a secondary transit route. However, the central government lacks effective control over large parts of its territory and borders, including most of its maritime border.

With that said, the official figures regarding drug seizures and arrests rose by a modest amount from 2002 to 2003. The MIA reported that during the first half of 2003 the counternarcotics unit of the ministry uncovered 4,183 drug-related cases; criminal proceedings were initiated in 1,813 of them, which is 50 cases more than the previous year, and 2.8 kilograms of heroin was seized by the counternarcotics unit, which is 1.2 kilograms more than previous year. In addition, 7 kilograms of

opium and 25.6 kilograms of marijuana were discovered by the police during the same six months. Approximately 31.6 tons of cannabis were destroyed during an MIA special operation called Cannabis-2003. There is no other known narcotics crop or synthetic drug production in Georgia.

In 2003 the MIA began a serious campaign to reveal drug users within the ministry and the Special Internal Investigative Department was established. Twenty-four ministry employees were fired during the year. The National Antinarcotics Bureau investigated 736 drug-related cases. Criminal proceedings were initiated in 304 cases, which was 117 more than in 2002.

**Trafficking in Persons.** Trafficking in persons is rapidly becoming one of the major challenges to law enforcement all across the world. Georgia is not without its problems; the country is both a source and transit country for trafficked persons. Given the level of salaries, equipment, coordination, and morale of law enforcement, it is of little surprise that customs and border officials are believed to be involved in the trafficking of persons.

In 2002 the MIA created a seven-person unit to combat trafficking. In June 2003 the legislature passed amendments to the criminal code criminalizing trafficking in persons. The government initiated two cases under this article in the criminal code, but they had not been brought to trial by the end of the year. Other cases were initiated against some traffickers using fraud statutes. In January 2003 the government announced its Action Plan for Combating the Trafficking of Persons and government-wide meetings were held in June. Trafficking is punished by five to twelve years' imprisonment, but if the perpetrator commits the same offence several times and toward several persons, it is punishable from eight to twenty years' imprisonment.

Women are trafficked from Georgia to Turkey, Greece, Israel, and western Europe to work in bars, restaurants, or as domestic help. Many work in the adult entertainment industry or as prostitutes. It is also believed that Russian and Ukrainian women are trafficked through the country to Turkey, sometimes using fraudulently obtained passports. There are reports of Russian and Ukrainian women being sent to beach resorts in the summer months to work as prostitutes; however, the country is generally not a destination for trafficked persons. There are also some reports of trafficking in children. Men may be trafficked in higher numbers than women, working as laborers in southern Russia. Others travel to Greece as agricultural laborers. Frequently, trafficking victims refuse to return home because their opportunities abroad are still greater than back at home.

Jobs abroad offered through tourism firms or employment agencies often lure trafficked persons. Many of the women working in the adult entertainment sector as prostitutes are informed, or led to believe, that they would be employed as waitresses in bars and restaurants or as domestic help.

There are currently no government programs to help victims, although several nongovernmental organizations do function to assist trafficked victims. Assistance frequently comes in the form of hotlines offering psychological support. The Georgian government has initiated some antitrafficking training for police in the regions and created a working group with the nongovernmental organization community. The government also operates a hot line that is directly connected to the Ministry of Interior's Antitrafficking Unit. These officers have also received antitrafficking training, yet few victims call the police and report these crimes.

#### CORRECTIONAL SYSTEM

The Ministry of Justice is responsible for overall administration of the prison system; however, the law permits MIA personnel to continue to staff the facilities. The MIA maintains several of its own cells in various prisons. Legislation permits the MIA to conduct investigations among inmates without judicial approval to gather evidence for trials.

**Prison Conditions.** Prison conditions continue to be inhumane and life threatening. The April 2002 UN Human Rights Commission review of the country's compliance with the International Covenant on Civil and Political Rights cited systemic problems with the prison system and continued widespread use of torture and arbitrary detention by police. The frequency of torture in Georgian prisons is attributed to several factors, including the entrenched culture of impunity among law enforcement officials committing illegal actions, the low level of police training, and the overemphasis on confessions rather than evidence gathering. The number of tortures is believed to be higher than reported since victims often come to an unofficial agreement with the police after the event, including securing their release in exchange for nondisclosure of the event or become an informant of the police in return for freedom. Victims may also withdraw complaints lodged against police for fear of reprisals against them or their families for pursuing their complaint.

Prison facilities are unsanitary, overcrowded, and understaffed and are in desperate need of repair. Tbilisi facilities typically have 16 or more persons to a cell designed for 10 to 12 people. In other facilities it is not uncommon to find 40 inmates to a cell.

Men and women are held separately, and a new facility for women opened in August 2002. Juveniles are held separately in a specially constructed facility that opened in 2002; however, juveniles are frequently not separated from other inmates in MIA temporary detention facilities. Pretrial detainees are often kept with convicted prisoners because of overcrowding.

Most prison facilities lack proper ventilation, plumbing, lighting, waste disposal, or sanitary medical facilities. Regional penitentiaries and pretrial detention facilities are without electricity for months. It is worth mentioning that about \$2 is allocated per prisoner per day in Georgia while in, for example, the Czech Republic, that figure is ten times higher. In the United States, it is approximately \$40.

These conditions have spurred a spate of dramatic reactions of protest from inmates, ranging from attempted suicide and self-mutilation to rioting. There are also sporadic hunger strikes by prisoners. Hunger strikes and self-mutilation frequently involve sewing one's mouth closed. In February 2003 a prisoner went on a hunger strike and sewed his mouth shut to protest the investigation into his case by the State Prosecutor's Office. Although prison doctors removed the sutures the same day, the strike lasted a week. In July of the same year, two prisoners, who were arrested for mugging a taxi driver, protested the allegedly false charges through one day of self-mutilation. One mutilated himself with nails while the other sewed his own mouth shut. The prisoners contended that police had extorted money and gold from one of the prisoners. An independent investigation reportedly confirmed this.

In January 2003 rioting broke out when a special MIA team was brought into a Tbilisi prison to conduct a search for forbidden objects. Three police officers and up to thirty prisoners were injured in the fighting. Police confiscated two AKM submachine guns, five hand grenades, homemade bombs, several dozen knives, and other banned items including a large quantity drugs and many mobile phones. Mobile phones are increasingly used to coordinate plans to riot or escape or to organize crimes that are perpetrated outside the prison.

Violence in the prisons is exacerbated by the inordinate delays in payment of salaries to guards. The guard staff is demoralized by loss of promotion possibilities because of penitentiary reform efforts. Guards have little motivation to conduct themselves in the proper manner. Rape by guards and inmates is a common problem.

Added to the litany of problems experienced by the prison system is the widespread nature of tuberculosis and other diseases, both of which are common features throughout the region. According to the U.S. Department of State, since 1998 the International Committee of the

Red Cross (ICRC) has treated at least 2,200 inmates infected with tuberculosis. According to the ICRC, the incidence of tuberculosis is 200 times higher in detention facilities than in the general public.

Alternative noncustodial punishments, such as probation, fines, and social work, are rarely applied by the courts. A draft law on noncustodial punishments and probation, aimed at reducing prison numbers, was reported to be due for consideration by the Georgian authorities. Other initiatives, such as taking judges on visits to prisons so they could see conditions there for themselves, were instituted in an effort to encourage more use of existing noncustodial measures.

Other steps have been taken in recent years to alleviate some of the more pressing problems. For example, in some cases prison construction had been accelerated in an attempt to address overcrowding using the sale of scrap metal from prison facilities to finance the construction. Corrupt administrators were fired and inmates were released to reduce overcrowding.

#### Prison Statistics.

- Total Prison Population: 6,406
- Prison Population Rate: 148 (based on an estimated national population of 4.32 million in September 2003)
- Pretrial Detainees: 38.7%
- Female Prisoners: 1.7%
- Juvenile Prisoners: 1%
- Foreign Prisoners: 1.4%
- Number of Institutions: 17
- Official Capacity of Prison System: 10,195
- Occupancy Level: 62.8%

Recent prison population trend (year, prison population total, prison population rate per 100,000 of national population):

1995	8,048	(179)
1998	10,406	(248)
2001	7,688	(202)

# Germany

---

**Official country name:** Federal Republic of Germany

**Capital:** Berlin

**Geographic description:** Located in Central Europe and bordering on the Baltic and the North Seas

**Population:** 82,431,390 (est. 2005)

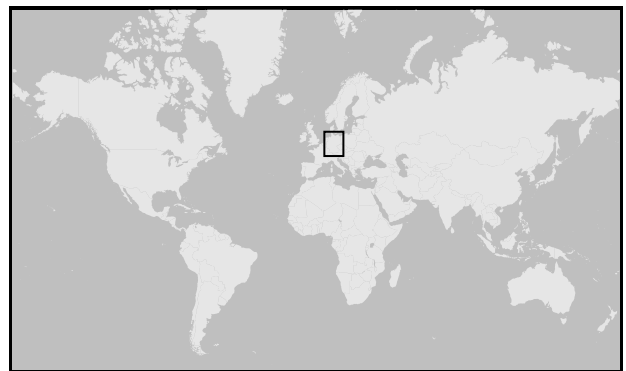

## LAW ENFORCEMENT

**History.** The first organized police forces in Germany date back to the early nineteenth century, when Napoléon Bonaparte's idea, to establish a Gendarmerie Nationale in France, was adopted by some German kingdoms. After World War II the German police was under the supervision of the military regional governments of the Allies. With the new German constitution of 1949 and the foundation of eleven states in the early 1950s in West Germany, these states got the power to establish their own police forces. In East Germany (under the Soviet government) a central police force was established.

The former People's Police (Volkspolizei) of the Democratic Republic was dissolved on unification, and its members (after checking their involvement in the former Stasi organization) have been integrated into the police force of the so-called new states. The Ministry for State Security, popularly known as Stasi, the offices of which had been stormed in popular uprisings and whose files had been removed into Western custody, was dissolved.

The police are part of the executive force. This is ruled in article 20(3) of the German constitution (legislation concerning separation of power). Each of

the (now after the reunification in 1990) sixteen German states has its own police law and its own police force (furthermore, there is a federal border police, the Bundeskriminalamt, as a federal investigation agency, and the federal customs). The police laws of the sixteen states deal with the prevention of crime, the preservation of public security and order, and the warding off of impending danger. Further police tasks arise out of the criminal procedure code, which deals with prosecution of crimes as well as laws arising out of or existing next to it. The criminal justice code applies to the whole Federal Republic. The authorities and officials of the police force must investigate crimes and take all measures necessary to prevent a crime from being covered. This principle of legality is the most unique regulation: the police as neither an institution nor the police officer himself is allowed to dismiss a case. This is possible only by the office of the public prosecutor, where every case has to be reported. According to the criminal justice code, the police are assistant public officials to the state

attorney's office. The public prosecutor is solely responsible for prosecution of crimes. However, individual measures (e.g., arrests, searches, and impoundments) can be authorized by the police if there is no time to contact a public prosecutor or a judge. The attorney of state also may give orders to the police. In most investigations (especially concerning minor and medium crime), however, the necessary measures are taken without the cooperation of the state attorney; the case is merely sent to the state attorney office, once the police investigations are completed. The state attorney makes the decision on whether or not to prosecute the case.

**Structure and Organization.** There is no nationwide German police force, and law enforcement remains a province reserved to the sixteen different states. Each state maintains its own force, where both patrol police (uniformed) and detectives (plainclothes) are working together in the same force. The uniformed or patrol police deal mainly with general public security functions, with traffic problems and accidents, and with minor crimes. Detectives or criminal investigation police are responsible for all other crimes. The total number of police officers on duty (patrol police, detectives, and border police) was 266,000 in 2002, resulting in one officer for 330 inhabitants. Considering the shift system, illness, training, administrative tasks in ministries, and so on, the "real" number is between one officer available for between 8,000 and 10,000 inhabitants at a given moment.

The Federal Crime Agency (Bundeskriminalamt; BKA) assists the federal and state units as a clearing agency regarding criminals and criminal actions. Federal officers investigate certain actions, however, notably those inimical to the security of the state or criminal actions that transcend the confines of any given state.

The German Border Guard (Bundesgrenzschutz), as the BKA under the Federal Ministry of Interior, is responsible for identification checks and policing the borders (especially at train stations, airports, and streets, crossing the border). Since some years, this institution is cooperating more and more with the state police forces, for example, in patrolling train stations and areas close to streets and shopping areas. What is called *Sicherheitspartnerschaft* (security partnership) is in the light of the German constitution a difficult undertaking, because the constitution separates the state administration (of which, the police are a part) forces from the federal administration (the federal police forces). A police officer of a given state is not allowed to cross the border to another (German) state. He or she has to call police force colleagues of the respective state; only in a case of emergency can he or she cross the boarder. Furthermore, he or she is not allowed to use firearms or to arrest an offender.

The responsibilities and powers of the BKA are regulated by law. The mandate is defined in the German constitution and in the BKA law. The headquarters of this federal agency are in Wiesbaden. The BKA is subordinate to the Federal Ministry of the Interior. As the central police agency in Germany, the BKA has the task of coordinating crime suppression at the national and international levels. All official communications between the German police and other countries are routed through the BKA. The BKA investigates outstanding cases of international crime as defined by law either on its own initiative or whenever a public prosecutor's office puts it in charge of such investigations because of the significance of the criminal offense in question. The BKA is also responsible for protecting the members of the constitutional organs of the federation. The BKA serves as the international criminal police force of the Federal Republic of Germany, which means that the BKA is responsible for investigations and searches involving many cases in the field of international organized crime. In 2002 a total of 4,509 people worked in the BKA.

Nearly, but not all unlawful (criminal) acts dealt with by the police, including attempts subject to punishment, are recorded in the police crime statistics. Drug offenses handled by the customs authorities are also included. Breaches of regulations and road traffic offenses are not covered. In addition, offenses committed outside the Federal Republic of Germany and offenses against the criminal laws of the individual German states are not included. Offenses by children, who cannot be held responsible under criminal law because of their age, and by mentally ill people, who also cannot be held responsible under criminal law, are included as well. The statistics are prepared by the BKA. The Police Crime Statistics Yearbooks since 1997 and the corresponding tables of time-series data starting in 1987 are published on the BKA homepage (<http://www.bka.de>). The data provided by the sixteen State Criminal Police Offices are presented in the form of tables and graphics along with commentaries. In 2002, 6,507,394 cases were recorded in the Federal Republic of Germany. The offense rate (number of cases per 100,000 inhabitants) for 2002 was 7,893. Although the number of theft cases has decreased continuously during the last years, theft still dominates the overall crime statistics with a share of about 47 percent.

On average, about half of all crimes are solved, but the rate of resolution varies substantially between individual areas of crime. The resolution rate for breaking into and stealing cars is about 10 percent, while for murder and manslaughter it is 95 percent.

The informational value of police crime statistics is limited by the fact that the police do not learn about all the criminal offenses that are committed. The extent to

*Officers of a special police force leave the Islamic Center in Munich, Germany, April 14, 2005. As part of nationwide efforts to crack down on terrorism, police conducted raids across the country in search of evidence of terrorist activities. AP IMAGES.*

which crime goes unreported depends on the type of offense, and this can vary over the course of time in response to a variety of factors (e.g., public willingness to report offenses and the intensity of crime detection efforts). Thus, the police crime statistics do not provide an exact reflection of crime, but one that is more or less accurate depending on the specific type of offense. There exists no nationwide and yearly victim survey in Germany.

The BKA criminal records include more than 4 million items of personal data on people who have committed serious offenses of supraregional significance. By this means, suspects can be identified quickly, innocent people cleared of suspicion, and links between crimes discovered. As of 2005, fingerprint sheets of more than 3,037,000 people were on file at the BKA. Based on these files, in 2001 the BKA was able to link fingerprints to specific people in approximately 38 percent of the cases handled by the identification service.

In the central photograph collection at the BKA, there are over 6 million photographs of more than 2,705,000 people. The photographs are requested by

both German and foreign police offices for a wide variety of purposes. In 2001 more than 51,000 photographs were sent to other offices, 22 percent of these to offices in foreign countries. Since 1998 there has been a central DNA analysis database at the BKA intended to assist in the quick and accurate identification of repeat offenders who have committed serious crimes. In 2002 more than 163,000 data records were included in the DNA analysis database, 11 percent of which were crime scene prints of offenders yet unidentified. In 2001 the clear-up rate was 16 percent, that is, about every sixth stored DNA sample helped to identify links between crimes or perpetrators.

The electronic police information system at the BKA (known as INPOL) is indispensable for searches and investigative work. The INPOL wanted-people database currently contains about 892,000 arrest requests, including 667,000 expulsion orders/deportations of foreigners as well as 187,000 circulations issued for the purpose of locating people. The INPOL property database includes approximately 8.7 million items that are the subject of searches because of possible links to crimes.

An additional computer-assisted information system designed to store and retrieve data on people and property is the Schengen Information System (SIS), which can be used for searches in the countries that are parties to the Convention Applying the Schengen Agreement (CAS). Establishment of the SIS is a significant compensatory measure following elimination of border controls at the internal borders of the CAS countries. Supplementary Information Request at the National Entry at the BKA is the national central office for information exchange relating to SIS searches. Within seconds, the search data can be accessed from more than 30,000 terminals located throughout the Schengen area. In early 2002 more than 10,541,00 wanted notices were included in the SIS. Of these, approximately 9,307,000 involved property searches and 1,234,000 involved searches for people. About one-third of all wanted notices are submitted by Germany.

**Salaries.** The police salary system is divided into three levels according to the service of the police (middle, high, and higher). Each rank has its own salary grade. The lowest rank receives salary according to 2,100 euros; the highest rank goes up to 5,400 euros (2004). Thus, ten salary grades are available. In addition, extra monthly payments are made for shift work. Whether or not an officer ascends from one rank to the next or changes from one level of service to the next depends on his or her performance and special training.

**Retirement Age.** The retirement age is sixty years for all police officers. Early retirement is possible only in case of illness. This results in up to more than forty years on duty, if an officer starts his or her career at the age of eighteen (in the past, not unusual; today, with higher school levels demanded, the age is between twenty and twenty-four). Part-time or fixed-time contracts are not possible (only part time for women).

**Hierarchy and Ranks.** Altogether, there are ten different ranks on three levels (middle, high, and higher). Approximately 50 percent of all police officers belong to the middle ranks, 45 percent to high ranks, and less than 5 percent to higher ranks.

**Police-Community Relations.** Community relations, press, and media are under the responsibility of a special police officer of each local police force.

#### **Special Police.**

**Riot Police.** In a state of national emergency the federal government may commandeer the services of various state police units, with the standby police reserve that is trained and equipped by each state for action during civil emergencies. This standby police reserve is also used by riot police in each state. Usually, police recruits have to join this police force for between one

and three years after their initial training and before they are submitted to a local police force.

**Education and Training.** Recruitment for new officers is organized by the state police schools that conduct the initial training; sometimes, assessment centers are used to select the qualified officers for further training and promotion, but usually the evaluation of the supervisors or senior officers is used for selection. Usually, it is not possible to join the police force after the age of twenty-six, and other criteria may apply (minimum height, maximum weight, body-mass factor, IQ-tests, fitness and medical-checks, and so on).

Police recruits are given usually two and a half years of training that consists of theoretical as well as practical components (dual system). The recruits gain knowledge and skills in law subjects, intervention training, psychology, political science, sport, self-defense, and shooting training as well as behavioral training (in the form of role playings). Once the training is completed, the recruit has acquired the necessary qualification for the middle ranks (constable). To change from the middle ranks to the high ranks requires an additional two and a half years of study at a police university or college. Once the police student (who gets paid for his or her study time) has successfully completed his or her studies he or she is qualified for the high ranks and receives the grade and diploma of a bachelor of science in public administration and police and is promoted to the rank of an superintendent (Kommissar).

To proceed to the higher ranks, another two years of studies at a police college in a state and the Police Management Academy in Münster-Hiltrup are necessary. This academy (to be converted into a formal police university in 2005 with a master's degree in police administration) is a central training institution for all the states.

The BKA trains its own officers. Officer candidates receive their training during a three-year course of study at the Federal College of Public Administration as a preparation for service. The course of studies is divided into a theoretical phase and a practical phase, each of which lasts eighteen months. The BKA also provides training for civil servants at the state and federal levels to qualify them as experts in the fields of forensic science and fingerprinting. Special police training courses, advanced training in scientific and technical fields, foreign-language courses, and task-oriented operational training complete the educational program. Furthermore, the BKA provides basic and advanced training for police officers from other countries.

**Uniforms and Weapons.** The German police use both the Walther P99 and the Heckler and Kock P2000. The

use of a firearm is permitted only if the general requirements for the use of immediate coercion have been met and using bodily force, devices aiding bodily force, or batons have been applied without success or it is obvious that their application will prove unsuccessful. Firearms may only be used against people, if the success of police measures cannot be achieved by using them against objects. A firearm may not be used if there is a high probability of endangering innocent people. If using a firearm is the only means to avert a direct threat to life, this does not apply. Firearms may only be used:

- Against a person to prevent or to interrupt the commission of an offense that according to the circumstances appears to be a crime punishable by law with at least one year imprisonment
- An offense that is to be committed or that is being committed by using or carrying along a firearm or explosives
- To apprehend a person trying to escape arrest or having his or her identity checked if this person is caught committing an act, which according to the circumstances appears to be a crime or an offense that is committed using or carrying along a firearm
- To prevent escape or to recapture a person who is being or was being detained as a result of being sentenced for committing a crime, in protective custody, because the person is suspected of having committed a crime, because of a judicial decision, or because he or she is suspected of having committed a crime, if indications are that this person will use a firearm or explosives

Consequently, the use of a gun by a police officer is a rare event in Germany.

**Transportation, Technology, and Communications.** There is no nationwide, homogeneous equipment because of the federal structure of the German police. This results in different patrol cars (from Mercedes, Audis, VWs, and BMAs, to foreign models like Renault or Fiat) and different equipment (firearms, pepper spray, batons, and so on).

The same is true for technology and communications. Usually, modern technology is provided either by the BKA or by a central state crime agency state (Landeskriminalamt—every state has one office). Radio and other communication is also inhomogeneous and recently under discussion (introduction of digitalized radios and communication with other European police forces).

**Surveillance and Intelligence Gathering.** Closed-circuit television, bugging operations, undercover operations,

and other techniques are under discussion in Germany because of data protection laws.

**Police Officers Killed in the Line of Duty.** Between zero and nine police officers are killed every year in the line of duty, mostly as a result of gunshots. Officers killed in traffic or other accidents are not included.

#### Police Statistics.

- Total Strength of the Police Force: 265,000
- Population per Police Officer: 311

#### HUMAN RIGHTS

Amnesty International has published three reports on misconduct by police officers in Germany, the latest in January 2004 (available at <http://web.amnesty.org/report2003/deu-summary-eng>). Cases of police misconduct, excessive use of force, or misuse of powers are investigated by special police departments, and each and every case has to go to the public prosecutor. Nevertheless, more than 90 percent of all cases are dropped by the prosecutor's office. Special commissions, ombudsman, and other systems or police complaints authorities as a means to handle citizen complaints and unlawful police violence are not available in Germany.

During the last years, the misuse of power by German police officers was mainly discussed because of a possible xenophobic background. The structural problem of police leadership was also discussed as a possible background of these unlawful acts against foreigners or members of subcultures, but also against journalists. There has been a trend to establish guidelines, ethical standards, and codes of ethic all over Europe during the last decade. It seems that nearly every police force has its own code of ethics. This might be a result of the discussions on police integrity and police accountability, which started in nearly every European country during the last years. Whether or not these guidelines or codes really have an effect is unknown.

#### CRIME

**Criminal Identification and Forensics.** This is under the responsibility of the detectives branch; for more serious cases, the central state crime agencies or the BKA is called in.

**Organized Crime.** The following definition of organized crime is used by the German police: "Organized crime is the planned commission of criminal offenses determined by the pursuit of profit and power which, individually or as a whole, are of considerable importance and involve more than two people, each with his/her own assigned

tasks, who collaborate for a prolonged or indefinite period a) by using commercial or business-like structures, b) by using force or other means of intimidation or c) by exerting influence on politics, the media, public administration, judicial authorities or the business sector.” This definition does not cover terrorist offenses. For a report by the BKA for 2002, data were included regarding 424 investigations. In 367 investigations, criterion (a) applied (“by using commercial or business-like structures”), in 210 investigations criterion (b) (“by using force or other means of intimidation”), and in 81 investigations criterion (c) applied (“by exerting influence on politics, the media, public administration, judicial authorities or the business sector”).

In 2002 verifiable cases of exerting influence on politics, the media, public administration, judicial authorities, and the business sector were recorded in eighty-one (19.2%) of the investigations. Thus, this organized crime criterion was met much less frequently than the other criteria in the organized crime definition. The threshold to reprehensible forms of influence is much lower than that for acts of corruption punishable under criminal law. A relatively small number of investigations (sixteen) established acts of corruption by or involving public officials or corruption in business dealings. A project implemented by the BKA in 2002 concerning the links between corruption and organized crime led to the assessment being made that crimes involving corruption are not an integral element of organized crime in Germany but seems to be one means used more or less professionally.

The total losses arising in the period under review amounted to 3.1 billion euros. As in previous years, the highest losses arose from economic crime and tax offenses. The profit made by criminal organizations is estimated at approximately 1.5 billion euros. The largest profits were achieved with crime in connection with the business world, with tax and customs offenses, and with drug smuggling and trafficking. In about every fourth investigation action was taken to ensure assets were confiscated. In these investigations cash, money held in bank accounts, real estate, and motor vehicles worth a total of about 31 million euros were provisionally seized. The largest assets were provisionally seized in investigations connected with drug smuggling and trafficking, crime in connection with the business world, and tax and customs offenses. Large assets were seized from suspects belonging to German and Turkish organized crime groups.

The number of suspects per investigation ranged from 3 to 337 people and averaged 20 people. Twenty percent of the groups comprised suspects of only one nationality. In the remaining investigations the groups had members from as many as fifteen nationalities; in most cases, two or three nationalities were represented.

**Crime Statistics.** More than half of all preliminary investigation proceedings against known suspects are dropped by the public prosecutor because of lack of sufficient evidence or because of reasons of discretionary prosecution. More than 25 percent are passed on to the courts by means of a charge/application for penal orders. The remaining cases are settled in other ways, for example, by passing them on to another public prosecutor or by referring them for private prosecution. The number of charges and/or applications for penal orders and the number of discontinuances at the prosecutor’s discretion are almost the same. Among proceedings settled by pressing charges or through an application for a penal order there was a shift of emphasis toward the more efficient option of summary proceedings without trial. A conviction substantiated in a hearing before a deciding court has become the exception. Of all people sanctioned, 50 percent are currently sanctioned informally by dropping the case with or without conditions, and this occurs despite sufficient evidence. The large scope for variation in assessment granted by these norms leads to considerable regional differences. With a share of more than 80 percent, fines are by far the most frequent form of punishment. Most convictions are now dealt with in written summary proceedings without trial. The suspended sentence of imprisonment is the second most commonly applied sanction under general criminal law. Approximately 80 percent were sentenced to pay a fine, 14 percent their sentence was suspended, and 6 percent were given an unconditional prison sentence, which normally leads to the offender being actually imprisoned. The suspended sentence and/or conditional sentence has developed into a criminal sanction in its own right. On average, more than two-thirds of all custodial sentences are unconditionally suspended on probation.

Youth court law (YCL) and general criminal law (Penal Code) provide for two different systems of legal consequences: YCL provides for better opportunities for a differentiated, educational reaction than general criminal law, to prevent recidivism. YCL applies to all juveniles, that is, people from fourteen to less than eighteen years of age, without exception. The youth court, which also has jurisdiction of so-called young adults, that is, people from eighteen to less than twenty-one years of age, must decide whether to administer YCL or the general (adult) Penal Code.

In 2002, 893,005 people were sentenced by penal courts, and 719,751 were convicted to fines or prison sentences (121,990 women). Compared to other European countries, the Federal Republic of Germany sentences an above-average number of people to imprisonment.

## CORRECTIONAL SYSTEM

The German correctional system is—as the police system—under the responsibility of the states. The Federal Ministry of Justice is responsible only for the statistics of the penitentiary system. Each state is responsible for its own correctional system and deals with all people subject to the criminal justice system, and/or sentenced to a penitentiary. Within the states, the assignment to a correctional system depends on where the crime was committed, the length of sentence, and special needs of the prisoner. Once a convicted offender enters the penitentiary system after a court decision, during a given period (usually between three weeks and three months) the special department of the prison is responsible for all the necessary tests to find out what kind of treatment might be necessary and/or what kind of job during the prison term might be useful for the prisoner. The death penalty is abolished by constitution, so the harshest sentence possible is life without possibility of parole—but even then inmates rarely spend their entire life in prison. Maximum sentences (without life) are up to fifteen years. There are no indeterminate sentences in Germany.

The placement of a convicted person under probationary supervision and his or her allocation to a probation officer as a probationer or client, represents, according to the law, nothing more than a special form of instruction, which is aimed at preventing the convicted person from committing further offenses. Besides the primary suspension of custody, contained directly in the sentence, a so-called conditional discharge from imprisonment is possible as a secondary suspension of custody, which means that a prison sentence or youth imprisonment is suspended after the offender has served part of the sentence.

**Prison Conditions.** The execution of prison sentences, including imprisonment, juvenile imprisonment, preventive detention, detention pending trial, and other forms of detention (e.g., detention pending deportation), currently takes place in 237 independent correctional institutions. The number of women in the prison system is relatively small (just over 4 percent of all prisoners and detainees). Since the mid-1990s, more and more prisons reported overcrowding because of longer prison sentences. As a result, prison cells, which were designed for one inmate, are used for two, and those designed for two are used for three inmates.

Corrective treatment during imprisonment includes not only such measures as alphabetization, basic school education, academic, adult, vocational, and further education but also practical elements for daily life such as social training. In special cases therapy in its narrower sense may also be considered. The Prison Act includes many individual regulations aimed at securing the release

of prisoners as early as possible and preparing their integration or reintegration into society. However, because of overcrowding and an increasing number of inmates not able to speak the German language, there is a shift away from socialization to keeping inmates in a safe place.

**Prison Statistics.** In 2003 approximately 62,594 convicted criminals were inmates in 237 general penal institutions, of whom 2,775 were women and 822 under eighteen years of age. The prison population rate was 96 per 100,000. Some 4,000 were imprisoned for failure to pay a fine. Approximately 6,500 were in reformatory detention outside the prison system, of whom some 4,000 were inmates of psychiatric hospitals. Approximately 20,000 were in detention pending trial. The official capacity of the prison system was 79,378 and the occupancy level was 99.9 percent.

The development of sanctioning practices within criminal law relating to young offenders is characterized by a shift away from formal sanctions toward informal reactions that avoid conviction (diversion) and a shift away from custodial toward noncustodial sanctions. In general, criminal law is increasingly characterized by the application of informal and noncustodial formal sanctions. With a share of more than 80 percent, fines are by far the most frequent form of punishment.

Since the beginning of the 1990s, the absolute number of offenders sentenced to immediate imprisonment or youth custody has increased significantly. The number of offenders sentenced to unconditional imprisonment in 1998 was approximately 27 percent higher than in 1990, in the case of unconditional youth custodies this was as high as 45 percent.

At the end of December 1999, approximately 6,200 people were in reformatory detention outside the prison system, of whom 3,900 were inmates of psychiatric hospitals, 1,700 were in special institutions, and some 600 were detained in one form or another under a preliminary detention order issued by the investigating judge or the trial court. Among the other types of deprivation of liberty, detention pending trial has particular qualitative and quantitative significance. In March 2000 approximately 18,000 were in detention pending trial.

## LAW ENFORCEMENT

**History.** The origins of the police forces of the Gold Coast (as Ghana was known in colonial times) lie in efforts by a committee of merchants to protect trading depots and routes. In 1830 colonial merchants hired a number of men as guards and escorts. Following the signing of a treaty between the British and the local chiefs the Gold Coast Militia and Police (GCMP) was established in 1844. It numbered about 120 men. The force was disbanded in 1860 and superseded by a corps of about ninety men, known as the Queen's Messengers. The paramilitary duties of GCMP were assumed by the regular military units. During the Ashanti Wars, the Queen's Messengers were combined with the Hausa Constabulary, who were imported from Lagos, into the Gold Coast Armed Police Force. At the end of the wars, in 1876, the British converted this armed force into the Gold Coast Constabulary, which existed until 1901. In that year the constabulary was split into two. The paramilitary functions were transferred to the Gold Coast regiment and the police functions were vested in the Gold Coast Police Force. The British established a protectorate over northern territories in 1901 for which a Northern Territories Constabulary was created in 1907.

The constabulary was absorbed into the Gold Coast Police Force shortly after World War I; it was a unified force that existed basically unchanged until Ghana gained independence in March 1957.

During the 1950s the British instituted various reforms in the police administration to modernize, enlarge, centralize, control, and better equip the force. The main effort, though, focused on the Africanization of the force. Ghanaians had been superior police officers during the early colonial period, yet, around 1900 and 1910, the British began to restrict their access to higher positions in all branches of the administration. This race-based discrimination against qualified Ghanaians was one the main thrusts of the nationalist agitation. In 1951, 64 out of 80 superior police officers were expatriates; by 1958 only 11 expatriates remained out of 128 superior officers. In 1958 President Kwame Nkrumah appointed the first Ghanaian commissioner of police, E. R. T. Madjitey. By the early 1960s the only

expatriates still with the force were a few technical advisers and instructors. In other ways, the force was modernized and transformed. A woman's branch was formed in 1952, a police reserve was established in 1956, and Ghana joined Interpol in 1958.

The regime of President Nkrumah was a turbulent period for the Ghana Police Force. There was mutual dislike between the president and the police top brass. This distrust deepened after an unsuccessful assassination attempt on the president's life by a police constable. The police force was disarmed; the commissioner and nine senior police officers were sacked; eight others were detained; the Border Guards unit was detached from the Police Force and placed under the military; and the size of the force was reduced from 13,247 in 1964 to 10,709 in 1965.

The plot to overthrow Nkrumah was first hatched by two senior police officials, who managed to recruit a number of conspirators in the police and army. When the coup was successful and Nkrumah was overthrown in February 1966, the police rounded up Nkrumah's party leaders and placed them in protective custody. Police involvement in a coup against a duly elected civilian administration was a first for Africa, and it has not been repeated since in any African country except for the 1981 coup in the Gambia, which had no military. Various police officers were named as regional and district administrators by the immediate post-Nkrumah administration and they were more readily accepted by the public than their military counterparts. The size of the police force rose to 17,692 in 1966, to 19,895 in 1968. The Border Guards unit was restored to police control, though it was once again taken away and made an autonomous unit in 1972.

Resources and equipment of the police were increased. A 1968 study mission, under the auspices of the Office of Public Safety of the U.S. Agency for International Development, found the communications, transport, and forensic resources of the police force in bad shape. It found that higher police officials were devoting more time to their administrative duties than to crime fighting and law enforcement. On the basis of the report, the U.S. government provided transport and communications supplies and training for specialists in record management.

**Structure and Organization.** From its inception until the adoption of the republican constitution of 1960 the police were considered as part of the civil service of the colonial, and later, independent state. The 1960 constitution declared the police to be a separate public service and it renamed the Ghana Police Force the Ghana Police Service under the control of the president and the Public

Service Commission. It established a Police Council to advise on administrative and disciplinary procedures in the force. In 1974 the National Redemption Council passed the Police Force Act (Act 350) amending the Police Act of 1970 by decree to make the Police Service an autonomous public service, responsible for its own development and accountability. The Ghana Police Service was placed, along with immigration, prisons, and the national fire service, under the jurisdiction of the Ministry of Internal Affairs.

Under Act 350 the police is charged with "prevention and detection of crime, the apprehension of offenders, the maintenance of public order, and the safety of persons and property." The police are also responsible for the licensing of motor vehicles, the issuing of driver licenses, the control of motor traffic, the licensing of firearms, the issuing of permits for ammunition, the inspection of weights and measures, and the licensing of selected trades, such as goldsmiths and domestic servants.

The Ghana Police Service is organized into ten regional commands and several groups and branches associated with the national headquarters. The service is under the operational control of the inspector general (a title created in 1966). The Police Council, first established in the 1969 constitution, advises the inspector general on all matters pertaining to personnel and policy. The inspector general reports directly to the minister of internal affairs and through him to the president.

Regional commands coincide with the administrative divisions of the country with the addition of a regional command for Tema Harbor, the country's main port. Each region is commanded by a deputy or assistant commissioner and is divided into divisions, districts, stations, and posts. There are 52 districts and 558 stations and posts.

Police powers and functions are delimited by the constitution and by administrative regulations and statutes protecting human rights. Police are trained to regard themselves as servants. They are required to inform suspects of their rights before being arrested. The use of firearms and force is allowed only in self-defense.

The Ghana Police Force is divided into two branches: Escort Police and General Police. The Escort Police, accounting for half the force in strength, is engaged in patrol duties. The General Police deal with routine police responsibilities, such as station, court and clerical duties, traffic control, and technical work. The two groups receive different training.

Functionally, the Ghana Police Service is divided into five groups: General Administration, Criminal Investigations Department, Special Branch, Police Hospital, and National Ambulance Service.

**General Administration.** The General Administration is responsible for administrative matters regarding personnel, welfare, operations, planning and development, and public relations. It is divided into the following administrative units:

- The Paymaster General and Controller's Office dealing with pay, finances, and audit
- The Quartermaster General deals with supplies and stores
- Recruitment and Training controls the Police Depot (which handles recruitment) and the Police College
- The Licensing Unit deals with both the licensing of motor vehicles and driving permits as professional licensing
- The Armored Car Section, stationed in Accra, established in 1958 to serve as a mobile reserve force in cases of serious civil disorders
- The Mounted Squadron, stationed in Accra and Tamale, is used for crowd control, town patrol, and ceremonial escorts
- The Force Mechanical Engineer Unit is split into a works division, responsible for minor building projects and repairs on existing police buildings, and a mechanical division, responsible for the maintenance and repair of all police vehicles; its main workshop is at Accra, but there are local units at all regional centers
- The Communications Unit is charged with the planning, installation, and maintenance of all police stations and is also responsible for telecommunications, computers, and internal radio communications; most of the equipment used is of U.S. origin
- The Women's Corps was established in 1952 with twelve recruits; it deals mainly with matters affecting women, children, and juvenile delinquents, but it also does occasional probation work and traffic duties
- The Motor Traffic Unit controls the highway patrol squad and runs the police driving school

**Criminal Investigations Department.** The Criminal Investigations Department (CID) is responsible for the investigation of all serious crimes. It runs the Criminal Records Office and Fingerprint Bureau and the Forensic Science Laboratory, founded in 1959. It also prosecutes criminal cases on court. Members of the CID are stationed at all regional command levels. The national headquarters, located in Accra, has eleven sections:

- Registry of Correspondence
- Criminal Records Office and Fingerprints Bureau

- Crime Branch
- Forensic Science Laboratory
- Fraud Squad
- Flying Squad
- Central Firearms Registry
- Crime Statistics
- Legal Section
- Interpol National Office
- Detective Training School

**Special Branch.** The Special Branch is concerned with national security and does counterinsurgency and counterterrorism work. It also provides protection for VIPs.

**Police Hospital.** The Police Hospital was established in 1975 to look after the medical needs of police officers.

**Other Police Units.** The Police Band attached to the Accra headquarters entertains at police and other ceremonial functions. Elements of a small harbor police unit, equipped with motor launches, are stationed at Tema and Takoradi. The railway police was established in 1948. Its detachments are stationed at Accra, Tema, Takoradi, Cape Coast, Winneba, and other important towns.

**Education and Training.** Recruitment to the Ghana Police Service is at two levels: rank and file and commissioned officers. All recruits must be between eighteen and thirty-four years of age, five feet eight inches tall (women must be at least five feet four inches), be physically fit and pass a medical examination, and have no criminal record. Applicants for the Escort Police must have a minimum facility in spoken English and applicants for the General Police must possess a Middle School Leaving Certificate, while applicants for the commissioned officer corps must possess a degree from a recognized university. Almost all the General Police are recruited in the south, whereas most Escort Police come from the north.

Entry into the commissioned officer corps is also by promotion from the inspectorate level. Such recruits must be recommended by their superiors and pass a written examination and oral interview.

Recruits for the General Police are trained at the Police Training Center at Accra. Escort Police are trained at a subdepot at the coastal town of Elmina near the Cape Coast. Escort Police are trained at regional depots as well. Recruits receive a nine-month course of instruction in physical training, drill, unarmed combat, baton use, first aid, and firearms training. Escort Police receive additional instruction in escort and patrol duties. General Police receive additional training in criminal law and

procedures, methods of investigation, current affairs, and social sciences.

The Ghana Police College, founded in 1959 at Accra, gives a nine-month officer cadet course for new recruits to the officer ranks and two- to six-week refresher courses in general and technical subjects. The courses teach criminal law and procedure, laws of evidence, public administration, finance, police standing orders, practical police work, and general and social science. There is a heavy emphasis on physical fitness. On successful completion of the course, cadets are sworn in and promoted to assistant superintendent.

#### **Police Statistics.**

- Total Police Personnel: 32,651
- Population per Police Officer: 644

#### **HUMAN RIGHTS**

In recent years the Ghana Police Service has come under severe criticism following incidents of police brutality, corruption, and negligence. Public confidence in the police is low and mobs often attack police stations to protest police inaction, delay in prosecuting suspects, rumors of collaboration with criminals, and plea bargains that let the suspects off the hook. The Ghana Governance and Corruption Survey completed in 2001 found that the police were among “the least trusted, the least effective, and most corrupt” government agency. Police corruption was a serious problem. A survey conducted in 2001 by the Center for Democratic Government showed that 67 percent of the respondents said they had paid bribes to the police.

#### **CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: NA. Of which:

- Murder: 2.2
- Assault: 418.9
- Burglary: 1.5

#### **CORRECTIONAL SYSTEMS**

The structure of the penal and correctional system was established during the colonial era and few modifications have been made since then. The criminal law administered by all courts is completely statutory and based on the criminal code, which itself is based on colonial legislation founded on English law.

Two of the three broad categories of offenses cited in the code deal with offenses against the person. The third category defines a wide list of offenses against public order, health, and morality. Some of the offenses are

peculiarly African: drumming with intent to provoke disorder, smuggling of cocoa, and trial by ordeal. Besides the provisions of the criminal code there are a number of statutes and enactments that have the force of law. Under the Criminal Procedure Code of 1960 habeas corpus is allowed and defendants are entitled to trial by jury if they so choose. There are five degrees of punishments: death sentence, life imprisonment for first degree felonies, ten years’ imprisonment for second degree felonies, and three levels of lesser jail sentences for misdemeanors.

The corrections system is divided into adult and juvenile. The penal system proper is governed by the Prisons Ordinance, which lays down basic rules for prison operation and treatment of prisoners. The 1969 constitution established a Prison Service whose director is appointed by the president and is responsible to the minister of the interior. Prison polices are laid down by the Prison Services Board, consisting of a member of the Public Services Commission as chairman, a Prison Service director, a medical officer of the Ghana Medical Association, a representative of the attorney general, the principal secretary of the Ministry of Social Affairs, and three others appointed by the president, one of whom must be a woman and the other two religious functionaries. The Prison Services Board is required to review the state of the nation’s prisons every two years and to hear complaints of the mistreatment of prisoners.

Prison Service is a career service. Most of the prisons are seriously understaffed and overcrowded. Service standards require one staff member for every three prisoners, but ratios of one to eight are not uncommon. However, the quality and competence of prison officers and guards, called warders, have steadily improved over the years. Most of them are recruited from the more literate Ewe and Ga ethnic groups. The service runs a school and depot at Maamobi, near Accra, for the purpose of training prison warders. The facility also offers a six-month training course for senior staff members, special courses for matrons, and preparatory courses for promotion examinations.

No new prisons have been built in recent years and many of the older ones are more than 100 years old—colonial forts converted into prisons with few or no modern facilities. Of the twenty-seven prisons controlled by the Prison Service, six central prisons are located in Accra. They are Ussher Fort, James Fort, Secondi, Kumasi, Tamale, and Nsawam. They house not only hardened criminals but also local detainees and petty offenders. Ussher Fort is the top maximum-security prison. Two central prisons for women—at Ekuasi and Sekondi—handle all offenders whose sentences exceed

three months. For short-term confinement of local offenders and persons under remand, the central prisons are supplemented by fifteen small local prisons, six of which have annexes for women. Two open prison camps house convicts who have demonstrated good behavior. However, since independence, James Camp, near Accra, and Ankaful, near Cape Coast, are the only facilities now suffering from overcrowding. Both have industrial workshops and farms where prisoners can work.

Within the correctional system, remand homes, probation homes, and industrial schools are operated by the Ministry of Labor and Social Welfare. Remand homes where juveniles are held in custody by court order are located in Accra, Sekondi, Cape Coast, and Kumasi. There are three probation homes: for boys in Accra and Jacobu Ashanti and for girls in Kumasi.

**Prison Conditions.** Prison conditions are substandard with poor ventilation, sanitation, and food. Only Maamobi reformatory has sports facilities and only Ankaful has adequate medical facilities. The prisoner's daily food allowance is less than \$0.60 a day, so prisoners

have to rely on family or outside groups for food and medicines. Bedding is available for only 30 percent of the inmates. Overcrowding contributes to a high incidence of communicable diseases, and medical facilities are inadequate. In 2002, 134 prisoners died in the country's prisons, including 9 from malnutrition.

**Prison Statistics.**

- Total Prison Population: 11,379
- Prison Population Rate per 100,000: 54
- Pretrial Detainees: 26.4%
- Female Prisoners: 2%
- Juvenile Prisoners: 1.3%
- Number of Prisons: 42
- Official Capacity of the Prison System: 7,554
- Occupancy Level: 145.4%

## LAW ENFORCEMENT

**History.** The police institution in Greece dates from the ancient times as does the history and the language of the country. From the ancient Greek words *polis* and *politeia* derives the Latin *politia* and the terms used in different languages *police*, *polizei*, and so on. Distinguished representatives of the ancient Greek intelligentsia had observed the importance of public order. The great philosopher Aristotle had written that “a town is impossible to function without the necessary Authorities and it is impossible to exist when there is no order.”

The Athenian orator Demosthenes noted that “there is nothing more beautiful for human kind than order” and the dramaturge Sophocles taught from the theater stage “there is nothing worse than anarchy.” The information on the police institution in ancient Greece comes from the works of historians, philosophers, and poets as well as from inscriptions found after excavations in various archaeological sites.

In Athens there were a number of administrative agents entrusted with police duties. Reference is made to market inspection police, police agronomists, metronomes, wheat guards, trade intendants, gynaeconomes, road builders, wall constructors, fountain intendants, and

post guards. Police duties were also exercised by the mayors, the generals, the polemarch, the chairman of the People’s Assembly, and the first of the nine archons, the so-called eponymos.

All citizens, even the most famous ones, had the possibility to participate in all these police tasks. It is known that Themistocles had been a fountain intendant and Demosthenes a wheat intendant. The basic characteristics of the Athenian police institution were its social character and the inexistence of a secret police—natural characteristics of the city where democracy was born and flourished. According to inscriptions, the police organization in the other Greek cities of the mainland and the insular area, of the Middle East and of southern Italy, was similar to the Athenian.

The Greek police institutions remained intact during the first two centuries of the Roman conquest, when the Greek cities were still maintaining certain independence. The Greek systems of government collapsed under the

rule of the emperor Karakallas. This is the period of the beginning of the general implementation of the Roman police institutions that were not different from those of the Greeks.

During the years of the Byzantine Empire these institutions form progressively their own Greek character, the basic points of which are maintained during the entire period of the Turkish domination in Greece and in the Balkans, as a system of local self-government under military control. Its members have participated actively to the national revolution of 1821.

With the creation of the new independent Greek state (1830) after the war for independence, a dual police system was established, having at the same time a Gendarmerie at a general level and a Municipal Police at a local level. This system with different organizational variations as to the Municipal Police was in effect until 1906, when the Gendarmerie undertook the surveillance of the entire country.

In 1920 the dual police system came back into effect with the maintenance of the Gendarmerie and the creation of the City Police. Between 1921 and 1925 the new Police Corps gradually established itself in the cities of Athens, Piraeus, Patras, and Corfu. This police system was in effect until 1984, when the Gendarmerie and the City Police were amalgamated into one corps, under the name Hellenic Police.

*Character, Administration, and Mission.* The Hellenic Police consists in a special armed force with its own laws and regulations, which vary from the provisions governing the civil personnel. It has a military qualification and discipline. The emblem of the Hellenic Police is a composition of signs portraying the official state emblem, an olive tree branch and the classic pair of scales, both ancient Greek symbols of peace and justice. The competence of the Hellenic Police extends to the entire state. The only sectors it does not survey are those that fall within the competence of the Port Police and the Customs Authorities. With these two authorities the police maintain a close cooperation within all service echelons.

From an administrative point of view the Hellenic Police is responsible to the Ministry of Public Order. The history and the meaning of the term *public order* is the same as that of the term formulated with particular emphasis, as mentioned earlier, by the prominent representatives of the ancient Greek intelligentsia: Aristotle, Demosthenes, and Sophocles. The Fire Department also belongs to the Ministry of Public Order.

In the context of the Resolutions of the Ministers Cabinet and the other government organizations, the Ministry of Public Order is responsible for laying down the general policy concerning public order and the

security of the country. The minister of public order supervises all the services of the ministry and instructs, coordinates, and surveys their operation. The chief of the Hellenic Police is responsible for its command and is directly responsible to the minister for the exercise of his duties.

The principal missions of the Hellenic Police are to safeguard and maintain public order, to ensure the civil defense of the country, and to contribute in the safeguard of the national defense in cooperation with the armed forces. Besides these principal missions the police have other specific duties: the maintenance of order in courts, the transfer of prisoners, the external guarding of prisons, the trial of minor offenses or violations, the conduct of preliminary investigations under the supervision of the Office of the Public Prosecutor, the issue of police provisions setting penalties for violations, the participation, with other state organizations, in matters concerning road traffic, public health, the protection of the environment, protection of juveniles, crime prevention, and so on.

**Structure and Organization.** The organization of the Ministry of Public Order has a decentralizing character and includes two categories of services: central and regional.

Central services are the offices of the minister, the assistant minister, and the secretary general of the ministry and the headquarters of the chief of the Hellenic Police and of the two lieutenant generals. Central services also form the branches of Police Security and Order and Administrative Support, and Financial-Technical and Informatics as well as the offices of the Chief of the Exchequer, the Audit Department, the Legal Adviser of the Administration, the Ordered Expenses Officers, and the Statistics Office of the National Statistics Service of Greece.

Regional services are the General Police Directorates of Attica and Thessalonica, 3 general police inspectorates, 12 police inspectorates, 51 police departments of prefectures and the services belonging to the latter, namely the police stations, security stations, traffic stations, market inspection stations, and aliens sections, and police posts.

The services that cover rural areas exercise general police duties. The branches form the organizational framework of the function, competence, and activities of the Ministry of Public Order and there is a fair distribution of the work to the various competent and specialized services and personnel. When it is deemed necessary, the branches cover each other's work through coordination by the ministry and the chief of the Hellenic Police.

The Branch of Police Security and Order consists of the departments of General Policing, Traffic, Public Security, State Security, Aliens, and International Police Cooperation.

The Branch of Administrative Support consists of the departments of Police Personnel, Civil Personnel, Studies, Computer Information, Training, Financial Matters, Technical Matters, and Public Relations. Administrative support is also offered by six self-sufficient services, which are directly responsible to the minister of public order: the departments of Health, Exchequer and Audit, Financial Inspection, Financial Management, Management of Materials, and Technical Applications of South Greece. Seven other self-sufficient services are directly responsible to the chief of police: the Directorate for the Confrontation of Special Violent Crimes, for the Security of Olympic Games, for Internal Affairs, for the Security of the President of the Republic, for the Security of the President and the Members of the Government, for Criminological Researches, and of Aerial Means.

The General Police Directorates of Attica and Thessalonica consist of the Department of Police, Traffic, Security, Police Operations, Direct Action, and Market Inspection and of the subordinate services, namely the subdirections, Sections, Police Stations, and Police Posts charged with the specific competence, or in the cases of services covering rural areas.

The decentralization of the Police Departments of the Prefectures is ensured with the three general police inspectorates, which have their seat in Athens, Patras, and Thessalonica, and the twelve police inspectorates, which cover the same number of large districts of the mainland and the insular area. The police departments in each prefecture form the basis of the local command organization of the police services. To make this organization more successful, there are two police departments providing their services exceptionally in two large prefectures. The work of the Police Departments of the Prefectures is coordinated and supervised directly by twelve police inspectors under the supervision of three general police inspectors.

At the headquarters of the General Police Directorate of Thessalonica and of the Police Departments of the Prefectures, there is a Prefectural Police Committee formed by the prefect, the police director, a representative of the local association of municipalities and communities, a magistrate, and a representative of the fire department when it concerns fire protection.

The task of the committee is to make decisions on urgent problems affecting the socioeconomic life and public order and security in the prefecture, as well as to propose to the Ministry of Public Order measures for the

better organization and operation of the services in the prefectures. To this aim, the committee accepts and examines reports from all legal persons or other recognized collective legal organizations of the prefecture.

The decentralization of the services of the Hellenic Police is promoting the competence through a transfer of the chief and the heads of the branches, to the heads of large regional services and the transfer of the competence of the latter to their subordinates in command.

Since 1999 a special Directorate of Internal Affairs was created to combat every kind of corruption.

There are also:

- A special antiterrorist repressive unit
- A section for the neutralization of explosives
- A service of aerial means with a certain number of helicopters
- A unit of police dogs specialized in the detection of drugs and explosives

During these last years a certain number of legislative and administrative initiatives led to the creation of new police services, for example, the institution of proximity policing with the so-called policeman of the neighborhood, the participation of police officers in the local councils for crime prevention, and the creation of the Council of Strategic and Crisis Management and of the Council for the Coordination and Strategy of Public Order.

**Public Order.** The general policing of the country belongs to the competence of the branch of police Security and Order. The head of the branch is a lieutenant general. Through the five staff departments belonging to it, the branch directs, controls, and coordinates the policing of the entire country, which is undertaken by the regional-operational police services. Each staff member is responsible for matters under his or her competence on a staff level and coordinates at the same time the action of the regional services.

The Public Order sector deals with matters concerning the maintenance of order at public gatherings and meetings or at places to which the public has access. In cooperation with other competent services this sector enforces the law concerning public health and hygiene, the operation of public centers, city planning, labor, market inspection, and so on. The police services are mainly busy with the taking of measures in various public social manifestations and in particular athletic events that surpass 40,000 spectators.

The services are also engaged in the operation control of public institutions and services and in the enforcement of the market inspection legislation concerning the

*Police and protesters clash outside of the Ano Liossia landfill, north of central Athens on June 21, 2005. Demonstrators attempted to push their way past riot police at a rally protesting the disposal of partially treated sewage at the landfill. Officers fired tear gas at the demonstrators, injuring at least eight people. AP IMAGES.*

quality of food supplies, the prosecution of adulteration, and the conduct of sample controls on all items necessary to life. Among the essential duties of the Police Order units are the protection of public benefit organizations and services, the guarding of vulnerable targets of criminal acts, the security of money delivery, the transfer of prisoners, and the maintenance of order in court sessions. The Police Order units are also responsible for the enforcement of the legislation on tourism concerning the operation of tourist enterprises, their activities, and the transfer and service of tourists in the country.

The responsibility for the planning, organization, administration, and control of the relevant work of the regional Police Order units belongs to the General Policing Department of the Ministry of Public Order, which consists in three sections: Elaboration of Other Measures, Market Inspection, and Operations.

**Traffic Police.** The Traffic Police sector is, among other things, responsible for ensuring an easy, smooth, rapid, economical, and safe road circulation of pedestrians and vehicles. The traffic services of the Hellenic Police are assigned with the task of controlling and regulating road traffic and of investigating road accidents that occur in the road and railroad network of the entire country.

For certain violations of the Road Traffic Regulations and other relevant provisions, stricter penalties are imposed on the offender, apart from the administrative or penal fines, namely the suspension of the driving license and the vehicle registration papers as well as the removal of the number plates of the vehicle.

The Police Traffic services use the following for their work: patrol vehicles, cranes, motorcycles, special vehicles adapted in such a way to be used for investigation, and other common passenger vehicles with conventional

number plates. Special technical plans are also used for the control of speed, noise, gases, driving under the influence of alcohol, and so on. In Athens a closed television circuit is used for traffic control. In cases of heavy traffic helicopters are used for the coordination of the Road Traffic units.

The policing of the national roads is carried out by organized mobile units operating in the framework of the General Police Departments and the Prefectural Police Departments. Besides the control of the circulation and the investigation of accidents these units also cooperate with the competent state services to help eliminate the various situations that render circulation impossible or dangerous and with the detection and restoration of damages to the road or road signs.

The planning, organization, supervision, and control of the work of the Regional Services are undertaken by the Police Traffic Department of the Ministry of Public Order.

**State Security.** The State Security Department as a central staff service directs, controls, and coordinates the work of the regional services of the police on state security matters. The principal duty of the police is the protection of the state and of the democratic system of the country, pursuant to the constitution and the legislation, against any undermining act in cooperation with other competent services. The protection of life, of the physical integrity of the citizens, of normal smooth living conditions, of individual rights, of security in general, and of the social tranquillity is a task that belongs to the police. As a consequence, the police are called to eliminate all damages against these fundamental social properties. Such a danger could be the international terrorism. Given Greece's geographic position, terrorism, as an international problem, affects the country. The Hellenic Police is making a great effort to suppress terrorism. It has in its service experienced police officers that have been subjected to social training. It adopts strict security measures at the international airports; it controls the entry and exit points of the country, surveys suspected persons, and cooperates with all competent services of the country and of other countries. The international cooperation is indispensable for the elimination of terrorism and for putting an end to the cruel terrorist activities against innocent and unsuspecting persons.

**Public Security.** In general, the Public Security sector includes matters relating to the prevention and the suppression of crime in its traditional and modern form. In particular, the Public Security Service provides for the prevention and suppression of common crime, as well as of organized crime; controls the trafficking in human beings and the illicit traffic of drugs and antiquities; implements the provisions concerning

casinos, gambling and morals, and the provisions concerning the protection of currency and exchange; surveys and controls areas frequented by suspect offenders of common crime; and searches for wanted persons or persons who have disappeared and for stolen goods. It uses scientific and technical methods for the investigation of crimes in cooperation with international police organizations and police forces of other countries.

To be able to complete its mission, the Public Security Service is divided into staff and operation sections, which cover the entire country. The staff work consists in the organization, planning, and coordination of regional services, which have as its main task the prevention and suppression of crime. In the completion of its mission, it is assisted by the National Criminological Research Service, by modern scientific and technological means, and by expert personnel it has at its disposal. The measures taken by the police authorities for the prevention and suppression of crime are considered satisfactory, without ignoring of course the existence of certain defects resulting from the permanently changing modus operandi of the criminals and from the existence of a great number of illegal immigrants during the 1990s.

**Aliens Directorate.** The great number of foreigners that came in Greece—legally or illegally—after 1990 led to an upgrade of the former Service for Aliens to the status of a directorate. It comprises four departments: Immigration and Administrative Measures, Citizenship, Political Asylum, and Guardianship of the Borders.

**International Police Cooperation.** This sector maintains relations and cooperation with the respective police services of other countries, as well as with international and European police organizations. In the framework of this cooperation, the Hellenic Police exchanges information, experience, and knowledge with the police forces of other countries. Decisions, enactments, and conclusions of international meetings and conferences on matters of police interest are also observed.

The Hellenic Police ensures the communication of its services and of the judicial and other state authorities with the general secretariat of the International Criminal Police Organization (Interpol) and the National Central Offices of Member States in view of the prevention and the effectiveness of the prosecution and suppression of crime; as well as with Europol and with the competent services of the Schengen Agreement and so on.

The coordination of the Hellenic Police with Interpol has two basic aims: (1) transmitting and receiving information on wanted criminals, their extradition, and the transfer to Greece of nationals who have committed a crime and who are extradited by foreign countries and (2) exchange of information concerning wanted persons who have disappeared or articles that have been stolen or lost.

Since 1981 Greece has been a member of the European Union (then European Communities). The Hellenic Police is informed on the regulations, directives, and resolutions issued by the organs of the European Union that fall into its competence. At the same time, the police force is informed on any changes in the community legislation on police matters and does what is necessary for the harmonization of the Greek legislation with the community legislation.

A special cooperation was developed between the Hellenic Police and the police forces of the other member states of the European Union. Meetings are organized regularly for expert police officers and at a ministerial level, and solutions accepted by all are found to the various problems. This cooperation came about for the successful confrontation of public order and security problems that arose from the abolition of the intercommunity borders and the free circulation of persons, goods, services, and funds, after 1992, as provided by the Single European Act of 1986.

*Administrative and Technical Support.* The administrative support is one of the two branches of the Ministry of Public Order. Its task is to provide the means, the services, and the personnel necessary for the achievement of its mission and to conduct the relevant procedures.

The branch consists in central and regional services dealing with matters concerning the personnel training, studies in planning, organization, police tactics, legal matters, documentation, computers, financial and technical matters, and public relations. The basic objective pursuit of the branch is to combine the scientific knowledge and experience of those participating in it, both police and civil personnel with the final aim of achieving a permanent qualitative and quantitative improvement of the police task in all aspects.

To achieve this aim, the administrative support is enforced by the rationally chosen technical supply of the necessary means. For this purpose, there is a close collaboration between the competent central and regional services responsible for planning and organizational matters, police tactics, personnel, training, computers, supplies, material management, technical means, telecommunications, vehicles, and equipment and building facilities.

The responsibility for the maintenance and the control of the efficiency of the technical means belongs to the Direction and Subdirection of Technical Applications of South and North Greece, as the two large technical units are called, in Athens and Thessalonica, respectively. These units also provide direct technical assistance to the central and regional services within their competence.

An important work of administrative support at the level of the Ministry of Public Order is offered by the Computers Department. The Hellenic Police was one of the first public services to introduce the computerized system in various police services. It possesses sophisticated equipment and expert police and civil personnel who have scientific knowledge on the electronic processing of information.

The applications developed cover to a great extent both the administrative and economic area and the police area. The Computer Department has four sections: Administration and Technical Matters, Analysis and Planning, Computer Operation and Control System, and Data Input. All these sections advance their work within the framework of a special program for the development of the computer system in various police applications.

From a general point of view the entire philosophy of the technical support has as a main axis the modernization in view of providing essential services to society and of protecting it from groups of organized crime, who, as it is well known, use means and methods of modern technology.

*Personnel.* The personnel of the Ministry of Public Order (in what concerns the Hellenic Police) are distinguished into police and civil personnel. There is also a fundamental distinction into main police forces, special guardians, and guardians of the borders.

There are 41,325 men and 4,500 women serving in the main police forces, 4,080 men and 500 women as guardians of the borders, and 2,250 men as special guardians. Twenty-two women head departments and services; since 2002 the Hellenic Police appointed its first woman major general.

Within the main police force the rank series are:

*Senior Executive Officers:*

- Police Lieutenant General
- Police Major General
- Police Brigadier General

*Higher Officers:*

- Police Colonel
- Police Lieutenant Colonel
- Police Major

*Lower Ranks:*

- Police Captain
- Police Lieutenant
- Police Second Lieutenant

- Police Warrant Officer
- Police Sergeant
- Police Constable

One of the three lieutenant generals is the chief of the Hellenic Police and the other two are supervisors of the branches and are qualified as assistant chiefs. Two of the eight major generals are directors of the General Directorates of Attica and Thessalonica, three are general police inspectors, and three are supervisors of the central services. Twelve of the twenty brigadier generals are police inspectors. The remaining are supervisors of central and important regional services.

The police personnel are distinguished into two categories: specific and civil duties. The personnel of specific duties consists of officers in higher and lower ranks as well as lieutenants, sergeants, and constables, medical officers, chemists, technicians, typographers, musicians, and so on.

The civil personnel consist of employees with a university or a secondary education, posted in the following branches: administrative and economic, statistics, health, technical matters, computer information and engineering, translators and interpreters, librarians, chemists, and graphic arts.

There are also posts for special advisers, professional assistants, and special computer assistants as well as auxiliary personnel. The greater number of the civil personnel serves in the central and larger regional services. Several employees with university degrees are supervisors of departments and sections of the Administrative Support branch, exercise like commissioned officers in preliminary investigation, or function as public prosecutors at the trials of minor penal offenses or violations.

The organization of the Ministry of Public Order provides everything necessary for the professional progress, training, and specialization of the personnel as well as for the exercise of service duties under the best possible conditions for their security, their convenience, and the development of their personality. The organization also provides for the assignment of obligatory service to police lieutenants and constables who graduate from school. The duration of this service is ten and eight years, respectively. However, it offers the right to those who wish to leave the police, if after having served two-thirds of the time and if they estimate that their performance in the service would prove tedious for their professional career or would hinder the development of their personality.

In his or her spare time, the police officer may participate in any kind of cultural activities. A significant number of police officers successfully participate in such activities. The promotion of the police personnel is done

on the basis of their qualifications and aptitudes; competent police councils are the ones to decide. The salaries are unified and equivalent to those of the officers of the Greek armed forces.

Furthermore, several police officers distinguish themselves in poetry and literature in general, in historic research, in journalism, in writing books of a scientific nature, in music, and in fine arts. Many pieces of these police officers are published in the bimonthly police journal, which has a circulation of 60,000. The Hellenic Police issues two other journals. One is of religious content and the other deals with matters of international police cooperation and friendship. The same subjects are also dealt with in a newspaper issued by the General Police Directorate of Thessalonica.

**Education and Training.** Education and training are carried out in the Police Academy, which consists of the following schools: Constable School, Officers School, School for Further Training and Postgraduate Studies, and School of National Security.

The teaching staff of the Police Academy, apart from being police officers, includes scientists belonging to the teaching and research personnel of the universities and the highest educational institutions of the country and military, as well as employees from all sectors of the public administration and the public organizations, independent Greek and foreign scientists, expert technicians, and foreign-language teachers.

In all training, special attention is given to the teaching of human rights and police ethics, which is considered important when enforcing the law.

*Constable School.* The candidates for this school, men and women between eighteen and twenty-six years old, must be secondary school or equivalent school graduates and must pass the Pan-Hellenic examinations for entry into the different faculties and schools of Greek universities; they also have to pass special oral and written tests, which establish their mental and psychological condition, and must be physically fit and have good health.

The duration of the training lasts for two and a half years and includes basic police, law, and sociological and psychological studies, as well as training in weapon techniques, shooting, physical education, and self-defense. The graduates of this school are subjected to practical training in various big police departments before they are assigned to service.

*Officer's School.* This school is equivalent to the universities of the country. Fifty percent of the future officers, men and women up to thirty-five years old, are drawn from constables, sergeants, and warrant officers who pass written examinations. The rest come

from the general Pan-Hellenic examinations for entry into universities.

The duration of their studies and training at this school is four years. The candidates of the first group, who are already members of the police, are admitted directly to the second year. The training is professional and includes police, law, and sociological and psychological courses, as well as systematic foreign-language studies. The training also includes lectures by experts on matters of general interest, educational visits, and excursions.

**School for Further Training and Postgraduate Studies.** This school for the advanced training of officers has different sections designed to retrain, specialize, and reeducate Greek police officers of all ranks, as well as members of the civil personnel who are university graduates. Depending on the nature of advanced training, specialization, or reeducation, various courses are offered of a duration varying from one month to one year:

- The section designed to retrain warrant officers is of one-year duration, after which the officers are promoted to police lieutenants.
- The section for the professional training of police captains lasts for four months. The successful completion of these courses is a necessary requirement for their promotion to the rank of police major.
- There are also several advanced courses on scientific criminological studies, traffic matters, statistics, computers, police security matters, public order, combat of illegal trafficking, combat of illicit dealing in antiquities, drugs, environment protection, protection of national currency, public and state security, police operations, market inspection, tourism, and so on.
- There is also a section designed to offer a special training and education to officers, warrant officers, sergeants, constables, and civilians who belong to the teaching or training staff of the Police Academy and of the Schools of Fire Service.

**School of National Security.** This school was created in 1997. It offers to high-ranking officers of the Hellenic Police, the Fire Department, the Port Police, the army, and civil personnel of other ministries lecture subjects related to strategy and policy of national security. The attendance is of one-year duration.

Police personnel are also trained in the science of war, national defense, organization, management, and so on. This training takes place in special schools of the armed forces, public services, and organizations.

The police personnel may also follow training programs organized abroad and the expenses are either paid by those participating or by their service. Those studying in universities or other higher educational institutions are always facilitated, especially during the examination periods, by receiving a student's leave of absence.

Police officers who are university graduates and who have served five years in the police and are not over forty years old are entitled to a three-year leave of absence for further studies in the country or abroad.

#### Police Statistics.

- Total Strength of Police Force: 51,000
- Population per Police Officer: 209
- Percentage of Women: 11%

#### CRIME

**Crime Prevention and Penal Training of Juveniles.** The main services of the Ministry of Justice relating to the prevention and control of juvenile crime are:

**The Juvenile Protection Societies.** These societies are legal persons of public law, under the supervision of the Ministry of Justice. They function in the seat of each court of first instance and their aim is the prevention of juvenile crime; they support juveniles who display antisocial behavior or who are in danger of becoming perpetrators or victims of criminal acts because of inappropriate or absent family environment or for other unfavorable social conditions or reasons. Specially trained people undertake the child's care, along with the child's parents, and support the child from a psychological, moral, and social aspect. A seven-member administrative council manages each society; its members offer voluntary and unpaid services. Its resources come from a subsidy of the Ministry of Justice, donations, and bequests.

Where the necessary resources exist, the societies establish shelters, which offer hospitality and comprehensive support under family conditions to the children they protect, when parents are not fit for their upbringing or are unable to provide for their children. Children accommodated at shelters of these societies are offered, besides psychological support, education, professional training, medical care, recreation, and so on.

**The Probation Services for Juveniles.** These are regional services of the Ministry of Justice that operate in the seat of each court of first instance and are supervised by the judge for juveniles of the district. They constitute the primary noninstitutional service for juveniles' treatment who have committed criminal acts or who are in danger of becoming perpetrators or victims of criminal acts.

Probation officers for juveniles, who work with these juveniles on whom the reformatory measures of supervision have been imposed, staff them. They aid significantly the judge for juveniles judging the relevant cases. They also work with minors who are in danger of violating the law because of inappropriate or absent family environment or for other unfavorable social conditions, and provide comprehensive support to them and their families.

*The Juvenile Training Establishments.* The work of correctional treatment of young people of adolescent and postadolescent age (thirteen through twenty-one years old), who have committed a punishable act and are provisionally detained or serve penal reformation or other freedom-depriving sentence, is assigned to the Special Juvenile Detention Facilities. These are regional services of the Ministry of Justice where these young persons are detained, pending trial or sentencing. Young people over seventeen years old may be transferred to adult detention facilities. Young prisoners can remain in the special juvenile detention facilities after they complete their twenty-first year of age, for the purpose of completing the studies or vocational programs they attend. There are six special facilities and sections for juvenile detention in operation.

In case the juvenile court subjects the minor to the reformatory measure of placement to an education facility, this can be the Volos Education Institution for Male Minors, which is a regional service of the Ministry of Justice, or another suitable municipal, community, or private facility in the case of boys and in the case of girls in all the above except the Volos Institution. This institution hosts minors who display disobedient behavior or who have difficulties with social adaptation. It provides training, social support, education, and professional formation. Juveniles who live in a social environment of people who perpetrated criminal acts may enter this institution. During their stay at the institution juveniles study, participate in educational and professional orientation programs, and take part in entertainment, cultural, or athletic activities. They also have the opportunity to use experimental leave or leave for familial, educational, or health reasons. Administrative officers, social workers, psychologists, and trained staff work at the institution. It hosts up to twenty-five juveniles from Greece or other countries. The minor admitted to the Volos Education Institution for Male Minors is released when the imposed reformatory measure or restrictive condition of placement is lifted or when the age specified by law is attained.

#### CORRECTIONAL SYSTEM

The organization of the Greek system of corrections is based on general principles drawn from the constitution,

international conventions, laws and presidential decrees, as well as legislative acts authorized by them, using as legal basis the effective Code of Corrections.

The general principles are concerned with the rules of the execution of the sentences of the competent penal courts and the treatment of prisoners. Inviolable principles in the application of these rules constitute the treatment of prisoners equally and legally, the respect for their rights, and their legal protection. All the organs exercising the correctional policy are described in the Code of Corrections: the Central Scientific Prison Council, the Central Council for the Transfer of Prisoners, and the council of every prison. The code also determines the different categories of prisons and prisoners, the living conditions in prison and transfer, the application of different programs and the use of the prisoners' free time, their work, the beneficial calculation of days of prison sentence, and their communication with the social environment. Furthermore, the code describes the alternative ways of serving sentences, the measures taken for the correct operation of the prisons, the procedure for transferring prisoners, the ways of terminating sentences, the postpenitentiary care, and the supervision of the code's applications and its enforcement. The General Direction of Correctional Policy of the Ministry of Justice and the departments under it monitor the organization and operation of the correctional system.

The Greek prison system includes thirty operating detention institutions: closed prisons, judicial prisons, special adult detention establishments and rural prisons, therapeutic establishments, and special juvenile establishments. All these establishments are run by the Ministry of Justice.

During the last few years the Ministry of Justice ordered the construction of seventeen new prisons. They were in operation by the end of 2005. This is an effort to answer the important problem of prison overcrowding and inadequate prison conditions. Recent figures indicate there are more than 8,000 men and women (adults and minors) in Greek prisons that have a maximum capacity of a little more than 5,000. Taking the total number of releases from prison into account, up to 18 percent more prisoners of those admitted annually remain in prison. However, the rates of prisoners in Greece continue to remain relatively low in comparison with other European countries. This has not been achieved by alternative sentences, but with the conversion of imprisonment into fines.

The main lines of the organization of each one of these establishments include a director, a special work service, a health service, an administration or secretariat, a number of correctional officers (guards) supervised by a

chief correctional officer, and the necessary technicians and other staff.

Certain institutions are staffed with additional specialized personnel. The public prosecutor for the execution of sentences supervises the execution of sanctions, the protection of the rights of the detainees, and in general the immediate supervision of the prison.

**Prison Conditions.** Persons in custody are those serving freedom-depriving sentences, those under articles 69 and 71 of the penal code, those who have been arrested and are waiting for trial, those in execution of a civil court judgment, and those who have not paid a pecuniary penalty.

The treatment of persons in custody, for the time they live in the detention facilities, is governed by the rules of execution of freedom-depriving penalties and security measures, mainly in accordance with the applicable Code of Corrections.

For each person in custody, a full record and personnel card is kept at the respective detention facility. Nobody can take cognizance of such information. Only the competent officials of the correctional service, the person in custody, his or her legal representative, or a third party having a legitimate interest may know this information. In case of request by a third party, this must be authorized by the competent supervising prosecutor.

Consular authorities are informed of the placement of nationals in detention facilities and when they request pertinent information, it is provided to them, if the persons in custody consent to such request in writing.

**Medical Care.** The persons in custody do not bear or share in the cost of their medical, medicinal, or hospital care, given that all health care of these persons is provided free of charge and is of a level commensurate with that of the general population. They are charged only if they request a doctor of their choice.

**Work.** In every detention facility there are work positions for prisoners such as cleaning, bakery, kitchen, laundry, food stores, and so on, as well as farm-cattle-breeding work in agricultural prisons.

Such work is undertaken for three months and is renewable on a justified decision of the five-member prisoners work board. The board, which is presided by the competent supervising prosecutor, considers all applications for work submitted by persons in custody and decides on their approval or dismissal and on the allocation and supervision, working hours, and work conditions for persons in custody.

Persons in custody may also work for their own account and on an order by the state or private entity, at their place of detention or other place of detention

or other suitable place of the detention facility, on consultation between the employer and the prison council and provided the facility safety or smooth operation is not impeded thereby.

The work of a prisoner outside the detention facility may be organized if an agreement is reached between the employer (public or private entity) and the competent division of the Ministry of Justice and is implemented under the supervision of the management of the detention facility. In such a case a permit of quasi-free living is required, as well as the consent of the prisoners work board.

In principle, persons in custody working inside the detention facility for the operating requirements of such facility and in authorized work positions, depending on how heavy and how specialized such a work is, have the benefit of mitigation of their sentence on account of their days of work toward serving their sentence.

Besides such benefit, persons in custody working in various productive sectors—mainly in agricultural prisons and/or other detention facilities—such as in the bakeries, receive a token payment depending on the type of the work provided, from the special Ministry of Justice Account Funds for Work by Prisoners and the payment is deposited at the personal account of each prisoner, at the accounts office of the facility. Prisoners working for their own account within the detention facility and for the account of third parties are remunerated in conformance with the agreements signed. For work provided outside the detention facility to enterprises of the public or private sector, the remuneration is determined, on a per case basis, under a decision of the minister of justice, with due consideration to the applicable law on workers in general.

Prisoners working within the detention facility, depending on how heavy and dangerous such work is, for example, working for building construction crews, mechanical workshops, and so on, are insured against accidents; the relevant contributions to the Social Security Institution are borne by the Ministry of Justice.

For prisoners working outside the detention facility, with private units or enterprises, insurance coverage against accidents is provided and the Social Security Institution's contributions are borne by the prisoner-worker and the employer.

**Visits.** In principle, relatives up to the fourth degree may visit a person in custody at least once weekly while observing the visiting hours of each facility. Third parties, associations, or representatives of social or other bodies that the prison council estimates shall not have an adverse influence on the person in custody may visit the prisoner on the authorization of the prison council.

**Communication.** Every person in custody may freely communicate over the payphone located at a public area of the detention facility, which is only visually inspected, using a timecard bought at the detention facility, at hours specified by the prison council. Furthermore, every person in custody may send wherever and receive from anyone, without restriction, letters or telegrams, through the facility, the contents of which are not inspected. However, for security reasons or to avoid committing particularly serious crimes, the contents of every form of communication may be inspected under the safeguards specified by law.

**Leave.** The prison disciplinary board headed by the supervising prosecutor may grant persons in custody, on their request and under certain conditions, leaves of absence from the detention facility, the duration of which is counted as served time.

A main prerequisite for the granting of a regular leave, of a duration of one to five days, is that the convict has served one-fifth of his or her sentence without any workdays calculated therein and that his or her detention has lasted for at least three months, or in any manner, the two-fifths of his or her sentence, in which case the leave is increased up to eight days. In the case of a life sentence, detention must have lasted for at least eight years.

Furthermore, a main prerequisite for the granting of a regular leave, besides other elements considered by the competent board (such as the risk of committing new crimes, the risk of escape, and so on), is that no penal proceedings are pending against the convict for a punishable act of a felony degree. No leave is granted before at least two months have passed from the commencement or the dismissal of the previous leave and for a total duration of no more than forty days per year for each person in custody. A person who unjustifiably violates the terms of his or her leave is not entitled to another regular leave until one year has passed. An educational leave may be granted by the disciplinary board, under certain terms and conditions, depending on the level and the program of the school of attendance. Such leave may be continuous for attendance purposes or per exam session. Such leave may be revoked.

Finally, persons in custody may be granted, under a decision of the competent supervising prosecutor, special leave of absence for no more than twenty-four hours, under police escort or not, for fulfilling family, professional, and other extraordinary and unforeseeable needs. Such special leave may also be granted by the director of the facility, on promptly informing the supervising prosecutor, only (1) for the funeral of a spouse or a relative up to the second degree and (2) for a visit to a spouse or a relative up to the second degree for highly urgent conditions of their health.

**Discipline.** Persons in custody who have received disciplinary punishment may appeal against the decisions of the prison disciplinary board within a strict time limit of five days, only to the Judges Board of Misdemeanors of the place where the sentence is served and such board hears the appeal and renders an irrevocable decision.

In case the prison disciplinary board punishes a prisoner with confinement to a detention cell, the institution of an appeal does not suspend the execution of the decision, unless otherwise decided by the disciplinary board.

**Education and Vocational Training of Persons in Custody.** The persons in custody may participate in a program of vocational training inside or outside the facility or in a program of sport or other group activity inside the detention facility. In all education or training programs the qualifications awarded are equivalent with the corresponding ones awarded by education schools or centers of the same level without it being mentioned or implied that they were obtained in a detention facility.

The education of prisoners aims at their getting or completing education of all levels as well as their vocational training. The persons in custody may attend, if they so wish, any education units operating within the detention facilities or secondary and tertiary education establishments or vocational training institutes outside the detention facilities, making use of educational leaves. They may also enroll in a junior or senior high school in the area where the detention facility is located, being admitted as "privately instructed" and sit for the year-end and graduation examinations for obtaining the relevant diploma of study.

**Transfer of Prisoners.** If a person in custody wishes, for various reasons, to be transferred to another detention facility, he or she has to sign a simple application and submit it to the director of the facility, indicating the reasons and the facility or alternatively the facilities where he or she wishes to be transferred. The final decision on such a transfer is made by the Central Committee of Transfers after due consideration of all necessary information. No counsel is required for this procedure. No appeal or legal remedy against the decision of the Central Committee of Transfers is provided. In case the Central Committee of Transfers dismisses the request, a new request for transfer may be submitted after three months, except in case of special or important reasons.

Alien prisoners can be transferred to their country to serve the remainder of their term, provided the following are met:

- Their country has signed a convict transfer agreement with Greece or has acceded to the current Convict Transfer Convention of the Council of Europe

- They must be nationals of the country they request to be transferred
- The sentencing judgment must be irrevocable or they must have waived all legal remedies (appeals and so on)
- The sentence they shall continue serving in their country, after their transfer, should not be greater than the one imposed in Greece
- The remainder of their term in Greece should not be less than six months
- Their country should consent to such transfer

The procedure followed, if it is established that these conditions are met, is as follows: the prisoner has to fill and file a special application form obtained from the secretariat of the detention facility, then the secretariat compiles from the applicant's record all penal and other necessary information and forwards the whole documentation to the competent division of the Ministry of Justice. After being checked, it is transmitted along with the relevant application to the corresponding ministry of the prisoner's country, through the Ministry of Foreign Affairs, after being translated into the language of the receiving country. The judicial authorities of the foreign country are requested to advise the Greek Ministry of Justice on the acceptance of the application and the sentence to be imposed there under the applicable penal provisions of this country. The answer of the foreign country is communicated to the prisoner and, if he or she agrees to such a transfer, an approving decision is sent. The transfer is carried out on consultation between the police authorities of the two countries. The same procedure is followed also for Greek prisoners in a foreign country.

**Special Therapeutics Centers.** If a person in custody has a problem of dependency on toxic and narcotic substances and needs treatment or psychological support, help is available provided that he or she is truly willing to be helped. He or she may discuss the with the social worker of his or her detention facility; the social worker informs him or her on the action to be taken. In this field Greece has established independent detoxification centers for detained drug addicts.

The Center of Avlonas/Thiva has the ability to hold 250 drug-addicted persons; the Center of Kassandra/Chalkidiki can hold 360 drug-addicted persons. The program of these centers is dry, voluntary, multiphase, and takes about two years to complete. Its aims are:

- Physiological and psychological recovery from the drug dependency
- To abstain from breaking the law

- To train and educate
- To prevent relapse and to socially rehabilitate participants

For the implementation of the program, the Ministry of Justice has hired the necessary scientific staff for the safe and efficient operation of these special therapeutic centers.

**Service of a Sentence in Parts.** Service of a sentence in parts may be requested, through applying to the Judges Board of Misdemeanors of the place where the sentence is served, only by convicts who serve a sentence converted into money. The board renders a decision on the recommendation of the prison disciplinary board and hearing of the convict, and if affirmative, the decision specifies the terms of sentence serving and the obligations of the convict that, if not fulfilled, lead to the revocation of such decision. Those convicts that serve their sentence in parts are entitled to request special leave only; however, the right to a conditional release is maintained.

**Community Service.** Convicts who have the right to serve their sentence in parts may, in lieu of that, request by applying to the Judges Board of Misdemeanors, to provide community service in municipalities or other entities that have accepted it.

**Suspension of Sentence.** The law provides for a mandatory or discretionary suspension of a sentence, with or without supervision. The general condition of all suspended sentences is that the convicted person does not commit a new offense during the period of suspension (three to five years). Otherwise, the suspension is revoked and he or she shall serve the suspended sentence cumulatively with the new one.

- If an offender who has not been previously punished with a custodial sentence not exceeding one month is now punished with a sentence not exceeding two years of imprisonment, the court shall order the suspension of sentence for a definite period (three to five years), unless the court decides that the execution of the custodial sentence is absolutely necessary for individual deterrence (mandatory suspension without supervision).
- In cases where an offender is now punished with a sentence amounting to more than two years and less than three years of imprisonment, the court may order the suspension of sentence for the same definite period (three to five years). In this case the court considers, inter alia, the circumstances under which the offence was committed, the motives of the offender, the offender's previous life and character, and the necessity of the custodial sentences for purposes of individual deterrence (discretionary

suspension without supervision). In this case the court may set as a condition the prior payment of the judicial expenses and indemnity and compensation to the victim.

- A discretionary suspension with supervision is possible if the requirement of the previously mentioned articles 99 and 100 of the Greek penal code are fulfilled and the offender is now punished with more than three years and less than five years of imprisonment. In this case the court may order the suspension of sentence on certain conditions and under the supervision and care of a probation officer for the same definite period (three to five years).
- In the case of an alien convicted person when a supplementary sentence of expulsion from the country is pronounced, the court may order the suspension of the custodial sentence for an indefinite period and his or her immediate expulsion.

There is no possibility for a court to suspend a sentence only in part.

**Conditional Release.** Prisoners can be conditionally released if the conditions specified in articles 105 to 110A of the Greek penal code are met. The convicted persons are released if they have served two-fifths of their prison sentence for a misdemeanor, three-fifths for a felony, and twenty years if they are serving a life sentence.

The application for the conditional release of a person from custody is filed by the director of the detention facility one month before the completion of the time specified in article 105 of the penal code. The application is addressed to the prosecuting attorney of the court of misdemeanors of the place where the sentence is served, along with the other supporting documents (schedule of calculation of days in custody, report by the Social Service, and so on). The prosecuting attorney recommends on the granting or dismissal of the application to the Judges Board of Misdemeanors, which renders a final decision thereon.

**After Release Care and Support.** In cooperation with the Ministry of Labor and Social Security via the Greek Manpower Employment Organization, the Ministry of Justice applies subsidy programs for new work places of independent professionals for released individuals or juvenile offenders or juveniles who are in

a dangerous social environment. The individuals entering into these programs must have served at least a six-month consecutive sentence. Released individuals whose violation was drug related are not eligible for these programs.

The released persons concern also programs of the Greek Manpower Employment Organization of free subsidization for the establishment of a small enterprise. For social support or other assistance the released persons may apply to the Society for the Protection of Persons Released from Custody, which comes under the services of the head of the region in which the place of domicile of these persons is located.

#### Prison Statistics.

- Total Prison Population: 8,760
- Prison Population Rate per 100,000: 82
- Pretrial Detainees: 28.2%
- Female Prisoners: 5.9%
- Juvenile Prisoners: 6.9%
- Number of Prisons: 28
- Official Capacity of the Prison System: 5,584
- Occupancy Level: 156.9%

# Grenada

---

**Official country name:** Grenada

**Capital:** Saint George's

**Geographic description:** A Caribbean island between the Caribbean Sea and the Atlantic Ocean

**Population:** 89,502 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The Royal Grenada Police was established in 1873 as the militia and later evolved into the Grenada Constabulary. There are three police divisions on the island: Central, Western (with headquarters at Saint George's), and Eastern (with headquarters at Grenville). There are a number of operational units at the headquarters, including the Criminal Investigation Unit.

**Education and Training.** Most personnel are trained at the Barbados Training Center.

**Uniforms and Weapons.** The police uniform consists of blue serge trousers and a cotton shirt worn with a dark blue peaked cap.

### Police Statistics.

- Total Police Personnel: 444
- Population per Police Officer: 201

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 8,543. Of which:

- Murder: 7.8
- Assault: 98.9
- Burglary: 582.2

## CORRECTIONAL SYSTEM

Grenada has only one prison at Richmond Hill in Saint George's. It is administered by the superintendent of prisons, who is attached to the Prime Minister's Office.

**Prison Conditions.** Prison conditions meet international standards. The government permits visits of prisons by independent human rights observers.

*Grenada*

**Prison Statistics.** The official capacity of the Richmond Hill Prison is 115, but the total prison population is 297, 258 percent of capacity. The incarceration rate is 333 per 100,000 population. Of the total prison population,

15.2 percent are pretrial detainees, 3 percent are female, and 3.4 percent are juvenile.

*George Thomas Kurian*

# Guatemala

---

**Official country name:** Republic of Guatemala

**Capital:** Guatemala City

**Geographic description:** A country in Middle America bordering the Caribbean Sea on the east and the North Pacific Ocean on the west

**Population:** 14,655,189 (est. 2005)

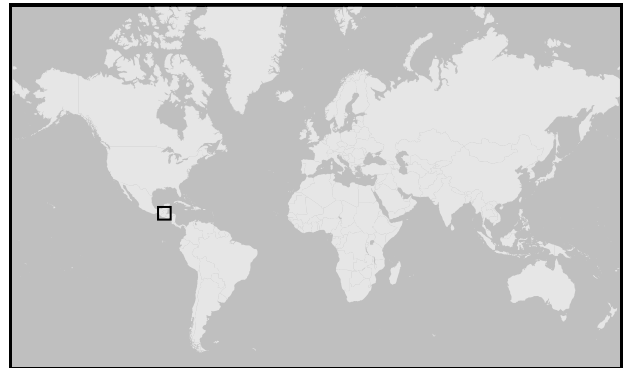

## LAW ENFORCEMENT

**History.** Historically, the police establishment was a quasi-military force whose chief and other supervisory personnel, the National Police, the Border Patrol, and the Judicial Police, were under the jurisdiction of the minister of government. The civilian police were stationed in the capital and a few other towns. All rural communities relied on the army or a locally appointed constabulary to maintain law and order.

**Structure and Organization.** The National Police Force is the primary law enforcement agency. The Border Patrol is in charge of the collection of tariffs, taxes, and other revenues on behalf of the Treasury Department. The Judicial Police (distinct from the enforcement arm of the courts) performs police investigation and intelligence gathering. All three agencies are under the Ministry of Government.

Although all three agencies have national jurisdiction in theory, the National Police and the Judicial Police operate almost exclusively in Guatemala City. Largely by default, the army performs civilian law enforcement and internal security functions in rural areas. A special

unit of the army, the Mobile Military Police, combats rural insurgency and banditry in rural areas without civilian police protection.

Some 6,200 small communities of 200 or more people (of which 4,000 are organized farms) have no organized police force. The local mayor, usually the justice of the peace, selects one or more individuals from the community to serve one or more years as local unpaid constables. They do not have the title of policeman but are recognized as lawmen.

Law enforcement has been modernized since the end of the civil war in 1996. The programs include a Central Complaints Division, a central crime laboratory, a fingerprinting system, model precincts, and rural mobile patrols.

The director general of the National Police, generally a senior active duty officer on loan from the Defense Department, reports directly to the minister of government. The police command structure is composed of a small staff in charge of operational divisions in the central

**Guatemala City police stand guard along a route that Pope John Paul II will travel as he visits the city, July 29, 2002.** The pope arrived in the country to officially recognize the sainthood of Brother Pedro, a seventeenth-century missionary often called “the St. Francis of the Americas,” during a special mass celebration. AP IMAGES.

headquarters and five regional zones. Control and authority are so highly centralized that even routine matters have to be approved by the director general.

The National Police has about two-thirds of its strength in the national capital, with the remainder deployed largely in the twenty-one departmental capitals under four zonal commands. The remaining outlying police units are assigned to departmental stations and substations in fewer than 100 other population centers. There are, however, fourteen mobile detachments that could readily be dispatched to trouble spots.

The major uniformed operational elements under central control in the capital and environs are the precinct enclave, a variety of patrol units (foot, motorcycle, jeep, and patrol car), and a Traffic Department with the combined functions of a Traffic Division and a Department of Motor Vehicles. Responsibility for accident investigation rests with another section of the uniformed police force.

In 1965 an investigative division was established within the National Police with a group of U.S.-trained police graduates. The Division of Administration and Services incorporates all the logistics and personnel support elements, such as the maintenance of buildings, supplies and vehicles, communication network, licensing, and detention centers.

*Hierarchies and Ranks.* The principal ranks are:

- Director General
- Deputy Director General
- Inspector General
- Corps Commander
- Deputy Corps Commander
- Section Commander
- Deputy Section Commander
- Inspector

- Subinspector
- Agent

#### Special Police.

**Judicial Police.** The Judicial Police is the principal intelligence gathering and investigative group. Almost all its personnel are stationed in Guatemala City, with only occasional assignments in outlying provinces. Members of the Judicial Police are more highly skilled and better paid than those of the National Police. In order of size, the three operational divisions of the Judicial Police are the Internal Division, the Transient Division, and the International Division.

**Border Patrol.** The Border Patrol was initially established in 1954 as a semimilitary uniformed and armed law enforcement body operating under the Ministry of the Treasury. Later, its operational control passed on to the Ministry of Government. The Border Patrol chief is headquartered in Guatemala City.

Patrol units of varying strength are assigned to each of the twenty-two departmental capitals and to most coastal or border departments. One or more additional units are located at strategic sites. Departmental chiefs are subject to the intermediate zonal command of the National Police but report directly to the Border Patrol chief. Nearly two-thirds of Border Patrol personnel are assigned to field units.

The Border Patrol has a wide range of prescribed duties, most of them relating to revenue and customs collection. It prevents smuggling, apprehends violators, and seizes contraband; enforces immigration and passport laws; prevents illegal manufacture and sale of alcoholic beverages; monitors ports of entry, customs warehouses, and authorized distilleries; enforces tariff laws and laws against counterfeiting and narcotics; and controls exports. In addition, Border Patrol members have gained additional responsibilities in counterterrorism and countersubversion activities, especially through subversion and infiltration. The Border Police is a mobile force with appropriate transportation and communication capabilities.

Currency and banking offenses are dealt with by the Special Investigative Section of the Bank of Guatemala.

**Education and Training.** Considerable emphasis is placed on increasing police effectiveness through training. The Police Academy in the capital is a small instructional unit that offers short training courses. Senior-grade personnel attend training courses in the United States, Panama, and Puerto Rico.

**Uniforms and Weapons.** Police officers wear dark blue trousers with a sky-blue stripe on the legs, a matching tunic, and a sky-blue shirt. The belt and tie are black and the soft, peaked cap is dark blue.

#### Police Statistics.

- Total Police Personnel: 19,364
- Population per Police Officer: 757

#### HUMAN RIGHTS

Even though the government generally respects human rights, extrajudicial killings by security forces are common.

Although there is a Presidential Commission on Human Rights, officials cover up or obstruct investigation of human rights abuses. Clandestine armed groups collude with security forces in social cleansing operations in which gang members, local delinquents, and former convicts are murdered. Arbitrary arrest and long pretrial detention pose serious threats to human rights. Most human rights violations are the result of the failure of the state to punish police officers who break the law. Transfer is the most common disciplinary action against errant officers.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 510. Of which:

- Murder: 27.4
- Assault: 77.1
- Burglary: 27.9
- Automobile Theft: 58.1

#### CORRECTIONAL SYSTEM

The director of prisons under the Ministry of Government is responsible for prisons and parole. The major penitentiaries for men are located on the outskirts of Guatemala City and in the departments of Quetzaltenango and Escuintla. The major penitentiary for women is Santa Teresa in Guatemala City. In addition, there are nineteen prisons for men and twenty for women in other departments, and a central house of correction for juveniles.

Local jails come under the jurisdiction of the police or the justice of the peace in towns and larger villages. Outlying Indian communities and many of the plantations maintain their own detention centers. Generally, convicted prisoners are kept separately from pretrial detainees. Women prisoners, who numbered 433 in 2001, are kept separately from men.

In 2000 a new maximum security facility opened. Also, a project to improve prison infrastructure was initiated involving improvements to fences and walls to prevent escapes.

**Prison Conditions.** Prison conditions are harsh but not life threatening. Corruption, much of it drug-related, is widespread. Overcrowding is not a major problem, although the major prison at Guatemala City is at

## *Guatemala*

75 percent more than its designed capacity. Jailbreaks are a matter of great concern because of the easy access of inmates to pistols, knives, and cell phones.

**Prison Statistics.** The average prison population at any given time is about 7,000, although the prisons are designed to hold only two-thirds of that number.

- Total Prison Population: 8,307
- Prison Population Rate per 100,000: 68

- Pretrial Detainees: 58%
- Female Prisoners: 5.3%
- Juvenile Prisoners: 6.2%
- Official Capacity of the Prison System: 7,233
- Occupancy Level: 112.9%

*George Thomas Kurian*

# Guinea

---

**Official country name:** Republic of Guinea

**Capital:** Conakry

**Geographic description:** In West Africa, bordering on Côte d'Ivoire, Sierra Leone, Liberia, Mali, Senegal, and Guinea-Bissau

**Population:** 9,467,866 (est. 2005)

## LAW ENFORCEMENT

**History.** Guinea was under French colonial rule until 1958. The French established a law enforcement force modeled on that of France. It had three major components: the Sûreté Nationale (national police), the Gendarmerie (rural police), and the Republican Guard. After independence, the new state adopted these institutions without change.

**Structure and Organization.** Internal security is one of the responsibilities of the Ministry of the Interior. Operational control of these forces rests with the General Directorate of Security Services (GDSS). It has six bureaus: Criminal Investigation, State Security, Economic Law Enforcement, Traffic Management, Public Safety, and Technical Services. The directorate is headed by a director assisted by a deputy.

As the governor of each administrative region is responsible for the maintenance of peace and order in his area, there is a dual responsibility for law enforcement. These responsibilities are not clearly demarcated, but the GDSS is concerned primarily with overall command and administration and control of security matters of national interest, whereas the local and regional administrations are

concerned with the distribution of security forces in their areas and their deployment during local disturbances.

Sûreté Nationale is the designation given to the civil police forces in all towns and cities. The GDSS controls the recruitment, training, and administration of the force, but operational control is vested in the governors of the administrative regions to which it is assigned. Each governor has attached to his staff a chief of police. The Sûreté Nationale is subdivided into precincts or town quarter detachments and these, in turn, into police posts. It sometimes functions in a political capacity against the opposition. A special section is charged with monitoring the activities of foreigners in the country, including their entry and exit. Sûreté Nationale detachments work at seaports and airports and at border crossing points.

The ranks in the Sûreté Nationale are:

- Police Commissioner
- Deputy Commissioner

- Inspector of Police
- Senior Sergeant Major
- Sergeant Minor
- Sergeant
- Corporal
- Private

The Gendarmerie is a paramilitary force that enforces law and maintains public order in rural areas where 80 percent of the population lives. The main force is divided into brigades, at least one of which is assigned to each administrative region. A brigade consists of six to thirty-six gendarmes and is ordinarily commanded by a lieutenant who is appointed by presidential decree. Besides the regular brigades assigned to administrative regions, some additional units—designated as Gendarmerie frontier brigades—are distributed along the border. The primary mission of the frontier brigades is to assist the Customs Service in its efforts to prevent smuggling and illegal border crossings. The Customs Service itself is a separate organization under the Ministry of Finance with some law enforcement units of its own.

Conakry has at least three Gendarmerie brigades—the port, the airport, and city brigades. Another Gendarmerie unit is the mobile detachment under the direct control of the Gendarmerie commander. There are also two so-called criminal brigades, one for the Fouta Djallon area and one for Conakry. They are authorized to make criminal investigations, collect fines, take depositions, and make special reports.

The system of grades and ranks in the Gendarmerie corresponds to that of the army. There are six lower ranks:

- Senior Sergeant Major
- Sergeant Major
- Sergeant
- Corporal
- Private First Class
- Private

The Garde Républicaine is a paramilitary organization that reinforces the Gendarmerie in the administrative divisions. In Conakry it guards the presidential palace and provides the band and motorcycle escort used for official welcoming ceremonies for visiting dignitaries. One company guards the political prison at Camp Alpha Yaya, near the Conakry Airport.

**Education and Training.** All police personnel are trained at the National Police School at Kankan.

#### Police Statistics.

- Total Police Personnel: 6,820
- Population per Police Officer: 1,388

#### HUMAN RIGHTS

Even though the government's human rights record is poor, it continues to respond to international critics. Most of the abuses are committed by members of the security forces. Members of the Presidential Guard, in particular, are responsible only to the president and commit abuses with impunity. They use torture and force to extract confessions. Many citizens view the security forces as corrupt, ineffective, and dangerous. They extort money from citizens at the many roadblocks, especially near border towns.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 18.4. Of which:

- Murder: 0.5
- Assault: 0.7
- Burglary: 0.7
- Automobile Theft: 0.1

#### CORRECTIONAL SYSTEM

The prison system was organized soon after independence, taking over the facilities built by the French. The general responsibility for the prison service was vested in the Ministry of Justice from 1958 to 1972, when it was transferred to the Ministry of the Interior and Security.

There are three kinds of penal facilities: the Camayeene Central Prison in Conakry, local prisons of which there is at least one in each administrative region, and undefined lockups maintained at the district level. There are thirty-four prisons in the country. Political prisoners are sent to security force installations for confinement. There are three such camps in the Conakry area: Camp Mamdou Boiro, Camp Almamy Samory, and Camp Alpha Yaya. Heads of penal facilities are generally former police commissioners.

**Prison Conditions.** There is widespread use of penal labor, a practice inherited from colonial times. Prison conditions are inhumane. Most inmates rely on supplemental assistance from friends and relatives to stay alive. Guards often demand bribes in exchange for food. There are reports of deaths because of malnutrition and unsanitary conditions. Because some cells are so small, some prisoners are forced to sleep on their knees. Some inmates are

routinely beaten and subjected to other forms of abuse. Female prisoners are subject to harassment and sexual assault by guards.

**Prison Statistics.**

- Total Prison Population: 3,070
- Prison Population Rate per 100,000: 37

- Pretrial Detainees: 51.3%
- Female Prisoners: 2%
- Juvenile Prisoners: 4.8%
- Number of Prisons: 34

*George Thomas Kurian*

# Guinea-Bissau

---

**Official country name:** Republic of Guinea-Bissau

**Capital:** Bissau

**Geographic description:** A West African country bordering the Atlantic Ocean, including the Bijagós Peninsula

**Population:** 1,416,027 (est. 2005)

## LAW ENFORCEMENT

**Structure and Organization.** The national law enforcement agency is the Policia de Seguranca Publica under the Ministry of the Interior. The police are poorly trained and funded and have to rely on the military for most law and order missions. The headquarters of the force is in Bissau, and there are police stations in all major urban centers. Many rural areas lack a police presence.

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 129. Of which:

- Murder: 0.5
- Assault: 8.7
- Burglary: 4
- Automobile Theft: 0.2

## CORRECTIONAL SYSTEM

Prisons are administered by the Judicial and Penitentiary Service of the Ministry of Justice. The country does not have formal prisons. Most prisoners are detained in makeshift detention facilities on military bases in Bissau and other cities.

**Prison Conditions.** Many prisoners are placed in incommunicado detention. The places of detention lack running water, medical facilities, and adequate sanitation. Men, women, and juveniles are held in separate facilities, and pretrial detainees are housed with convicted felons.

*George Thomas Kurian*

# Guyana

---

**Official country name:** Cooperative Republic of Guyana

**Capital:** Georgetown

**Geographic description:** A country in northern South America bordering the North Atlantic Ocean

**Population:** 765,283 (est. 2005)

## LAW ENFORCEMENT

**History.** The Guyana Police Force was established under Police Ordinance 10 of 1891 and has been continued under Chapter 77 of the Guyana Police Ordinance since independence in 1966. The name of the force was changed to Guyana Police Service in 1967.

**Structure and Organization.** The Guyana Police Service (GPS) is an armed semimilitary unit administered by a commissioner who reports to the minister of home affairs. The GPS consists of the regular police with the supernumerary, rural, and special constables. Among its areas of control are traffic control, national security, passports and immigration, registration of aliens, and firearms control. It includes a mounted branch trained for riot control. Members of the force are normally unarmed. The Fire Department, which was a part of the GPS until 1957, is now a separate organization.

Guyana is divided into seven police divisions commanded by senior officers based at their divisional headquarters except for the F Division, which is at the force headquarters in Georgetown. Police ranks are:

- Police Commissioner
- Senior Superintendent
- Superintendent
- Deputy Superintendent
- Chief Inspector
- Police Inspector
- Sergeant
- Corporal
- Constable

The two main administrative divisions are Line Operations and Staff Services. Line Operations is responsible for operational functions, while Staff Services is responsible for supply, personnel, data communications, transport, and other material. The Staff Services are carried out mainly at GPS headquarters and Line Operations mainly in the territorial divisions. Line Operations duties

***Brad Hogg of the Australian cricket team arrives at the Cheddi Jagan International Airport under police protection, April 2, 2003. Australia went on to beat the West Indies team in their first test match on April 10. AP IMAGES.***

include patrol and beat, traffic regulation and control, and criminal investigation. Staff Services duties encompass budgeting, planning and administration, police records system, purchasing, transportation, and the forensic science laboratory. In the territorial divisions, Staff Services function under Line Operations supervision while in the headquarters Line Operations functions are directly controlled and supervised by Lines Operations agencies.

**Education and Training.** The GPS runs the Police Training School in Georgetown for officers. Its graduates enter the service as sergeants.

**Uniforms and Weapons.** The working uniform consists of dark blue trousers and a short-sleeved, open-neck shirt, with a dark blue cap. Senior officers wear a khaki tunic with short sleeves and an open neck, with matching trousers and a dark blue cap.

**Police Statistics.**

- Total Police Personnel: 3,669
- Population per Police Officer: 208

**HUMAN RIGHTS**

The government generally respects the human rights of its citizens, but serious problems remain, such as extrajudicial killings and abuse of suspects. The United Nations Human Rights Commission has charged the government with being lax in investigating police abuses. The Police Complaints Authority is an independent body composed of five members who investigate complaints against police officers. The authority received sixty-nine complaints in 2000 and thirty-two in 2001. The Office of Professional Responsibility also investigates complaints against the police. Charges against police officers are heard in lower magistrate courts, where other police officers serve as prosecutors.

**CRIME**

**Crime Statistics.** Offenses reported to the police per 100,000 population: 1,277. Of which:

- Murder: 19.1
- Assault: 246

- Burglary: 365.8
- Automobile Theft: 32.2

### CORRECTIONAL SYSTEM

The Department of Prisons and Probation is under the portfolio of the minister of home affairs. The department is administered by a director who controls the main prisons at Georgetown, Mazaruni, and New Amsterdam. First offenders sentenced to short terms are sent to New Amsterdam, while those serving longer terms are held at Sibley Hall, Mazaruni. Repeat offenders serving more than three months are imprisoned at Mazaruni or Georgetown. Georgetown has a maximum security prison with facilities for training. Additional facilities include the prison at Lethem, a reformatory for young offenders, a junior school for delinquent boys, and a remand home and probation hostel in Georgetown for probational juveniles. The Ruimveldt police station is the only juvenile holding facility.

Responsibility of the care of prisoners is that of the Department of Prisons and Probation, under the supervision of a chief probation officer. The department is also responsible for the administration of two juvenile schools: the Essiquibo Boys' School and the Belfield Girls' School.

**Prison Conditions.** Prison and jail conditions are poor, especially in police holding cells. Georgetown Camp Street Prison, the country's largest, is extremely overcrowded. It is designed to hold 500 inmates but

has a population of 800. In 2001 members of a United Kingdom Prison Reform Team found major problems in prison conditions, including infringement of basic human rights. Inmates generally protest police brutality and long delays in trials. Sanitary and medical conditions in holding facilities are worse than in the prisons. Such jails are bare, overcrowded, and damp. Few have beds, washbasins, furniture, or utensils. Meals are normally unavailable and inmates depend on friends or relatives to bring them food. Cells rarely have sanitary facilities. In Brickdam lockup in Georgetown, prisoners sleep on a thin pallet on concrete floors.

Conditions are somewhat better in women's prisons, especially those in New Amsterdam. They have vocational and educational courses and counseling by psychiatrists.

### Prison Statistics.

- Total Prison Population: 1,295
- Prison Population Rate per 100,000: 169
- Pretrial Detainees: 36.1%
- Female Prisoners: 3.8%
- Juvenile Prisoners: 0.5%
- Number of Prisons: 5
- Official Capacity of the Prison System: 1,250
- Occupancy Level: 103.6%

*George Thomas Kurian*

# Haiti

---

**Official country name:** Republic of Haiti

**Capital:** Port-au-Prince

**Geographic description:** Occupies the western half of the island of Hispaniola, the second-largest island in the Caribbean

**Population:** 8,121,622 (est. 2005)

## LAW ENFORCEMENT

**History.** Historically, the police department was a relatively weak and poorly organized agency overshadowed by the military. Under dictator François (Papa Doc) Duvalier, many normal police duties were carried out by his personal police force, the Tonton Macoutes, dreaded, unpaid thugs virtually licensed to terrorize, kill, and extort the general population. After Duvalier's death in 1971, the Tonton Macoutes were renamed the National Security Volunteers by Duvalier's son and successor, Jean-Claude (Baby Doc) Duvalier and continued to terrorize the country. Following the U.S. invasion of Haiti in 1995, a formal police force was established under American auspices as the Haitian National Police (HNP).

**Structure and Organization.** The director general controls the Judicial Police, the Coast Guard, the Prison System, the inspector general, and the HNP. The Judicial Police controls the Antinarcotics unit, and the Palace and Presidential Guard is under the president's direct command. The bulk of the HNP is composed of the Administrative Police. Other specialized HNP units are:

- Crisis-Response SWAT team
- Crowd Control
- Forensics
- Special Investigations (which investigates high-profile political killings)
- Special Weapons
- Tactics

Allegations of corruption, incompetence, and narcotics trafficking affect all levels of the HNP. Some members of local government councils exercise arrest authority without legal sanction.

**Education and Training.** New cadets for the HNP are chosen on the basis of political and personal favoritism. Police officers attend a six-month training course at the Police Academy, which was built by the United States.

*Haitian police leave a makeshift military compound in Port-au-Prince, February 10, 2005. The police attempted to arrest former soldiers, among them Remissainthe Ravix, who were accused of killing four police officers. Much of Haiti's violence was attributed to the 2004 coup that forced president Jean-Bertrand Aristide from office. AP IMAGES.*

#### Police Statistics.

- Total Police Personnel: between 2,500 and 3,500
- Population per Police Officer: 400

#### HUMAN RIGHTS

Haiti has had a poor human rights record even before President Jean-Bertrand Aristide was elected in 1990, but it worsened under him. There are constant reports of extrajudicial killings by members of the HNP. Members of the opposition and their spouses are routinely arrested. Police officers use excessive force in making arrests or controlling demonstrations. Local officials also arrest their opponents arbitrarily and are rarely punished. Police frequently beat suspects, and torture and other forms of abuse are pervasive. Beating with fists, sticks, and belts is the most common form of abuse. Other forms of mistreatment include burning with cigarettes, choking, hooding, *kalot marassa* (severe boxing of the ears leading to ear damage), and electric shock. Police

officers implicated in these abuses are never prosecuted. They are generally dismissed and then rehired.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 701.

#### CORRECTIONAL SYSTEM

The Penal Code of Haiti was first promulgated in 1835 and amended nine times between 1846 and 1935. It recognizes three categories of offenses: felonies, misdemeanors, and police contravention, and defines four forms of penalties: death, life imprisonment with forced labor, imprisonment for a stated number of years with forced labor, and simple imprisonment. Death sentences are executed by a firing squad in a public area.

Prisons and penitentiaries are under the administration of Penitentiary Administration Management. There are two penitentiaries: Fort Dimanche and the National

## *Haiti*

Penitentiary, both in Port-au-Prince. Prisons are in the cities of Les Cayes, Hinche, Gonaïves, Cap Haitien, and Port-de-Paix. Fort National Prison in Port-au-Prince is the prison facility expressly for women and juveniles. Prison labor is for state use only, and prisoner-made goods are available to public agencies.

**Prison Conditions.** Prison conditions are harsh. Prisoners in the Casernes Dessalines—former army barracks and now detention centers—are kept in degrading circumstances, stripped to their underwear in cells without windows or lights and with only buckets for toilets. Prisoners are sometimes punished by withholding medical treatment. Convicts are not separated from pretrial detainees, neither are the violent separated from the nonviolent. There are also frequent prison riots to protest abuse by prison guards.

An average of five prisoners die each month due to various causes, including malnutrition.

### **Prison Statistics.**

- Total Prison Population: 3,519 (1,899 in the National Penitentiary)
- Prison Population Rate per 100,000: 44
- Pretrial Detainees: 83.5%
- Female Prisoners: 3.3%
- Official Capacity of the Prison System: 2,000
- Occupancy Level: 184.7%

*George Thomas Kurian*

# Honduras

---

**Official country name:** Republic of Honduras

**Capital:** Tegucigalpa

**Geographic description:** Country in Central America, bordering the Caribbean Sea between Guatemala and Nicaragua and bordering the North Pacific Ocean between El Salvador and Nicaragua

**Population:** 6,975,204 (est. 2005)

## LAW ENFORCEMENT

**History.** Until 1963, the Honduran police force was known as the Civil Guard. After a military coup in that year, the name was changed to Special Security Corps. It later became the Public Security Force, which, in 1997, became the National Preventive Police and was placed under civilian control.

**Structure and Organization.** Technically, the National Preventive Police commander, an army officer, is the minister of security, but day-to-day operations are under the immediate control of a director general. Most police personnel are drawn from the army. The director general is assisted by a staff consisting of subdirector general, an inspector general, a legal adviser, and a public relations department. Administrative and logistics sections, a finance office, telecommunications service, and a medical service complete the headquarters. Police handle public security, counter-narcotics, and border patrol duties. Police are supported by the military upon presidential authority, and the military participates in joint patrols with police in an attempt to control the high levels of criminal and gang activity.

The police forces are underfunded, undertrained, understaffed, and corrupt. They are ineffective in controlling gang violence, kidnapping, and other forms of crime.

**Education and Training.** The National Preventive Police training school in Tegucigalpa conducts a variety of courses for both recruits and career officers. Subjects taught include police communications, patrol, investigation, first aid, control of civil disturbances, infantry instruction, civil procedure, the criminal code, interrogation, and control of contraband. From time to time, senior officers are sent to the United States for further study.

## Police Statistics.

- Total Police Personnel: 6,308
- Population per Police Officer: 1,105

*Honduran police officers pay their respects to slain officer Simon Ávila at the Academia Nacional de Policía in Tegucigalpa, July 25, 2005. Ávila was one of five Honduran police officers killed in one weekend during confrontations with gang members in the capital city. AP IMAGES.*

## HUMAN RIGHTS

The government generally respects the human rights of its citizens. However, members of the security forces are accused of committing extrajudicial killings in collusion with private and vigilante groups. Security-force personnel beat and otherwise abuse detainees. In many instances where security personnel are charged with violations before civilian courts, there are no convictions.

The police force, which includes the Preventive Police and the General Directorate of Criminal Investigation (DGIC) is subject to investigation by the Internal Affairs Office regarding public complaints of police behavior. The Internal Affairs Office reports to the minister of security. Both the Preventive Police and the DGIC have an Office of Professional Responsibility, which conducts internal reviews of police misconduct, such as off-duty criminal conduct and ethics violations. The Ministry of Security has suspended or dismissed numerous agents and officers for corruption and abuse of authority.

## CRIME

Because of the high rate of gang violence, intimidation of people in poor neighborhoods, and kidnapping of many well-known and wealthy people, a well-founded perception has arisen that corrupt security personnel are involved.

**Crime Statistics.** Offenses reported to the police per 100,000 population: 392. Of which:

- Murder: 154
- Assault: 44.4
- Burglary: 4.3
- Automobile Theft: 25.8

## CORRECTIONAL SYSTEM

The prison system is under the control of the Ministry of the Interior and is administered by the General Directorate of Penitentiaries headed by a director general. Retired military officers work as guards in some areas,

and some Preventive Police also are used as guards. The central penitentiary is in Tegucigalpa; other major ones are at San Pedro Sula, Tela, and Choluteca. In 2002 the government opened a model 1,500-bed prison farm at Sula Valley. The government operates juvenile detention centers in Tamara, El Carmen, and El Hatillo.

**Prison Conditions.** The Law of the Rehabilitation of the Delinquent establishes regulations for prison conditions, including minimum conditions for sanitation and security. Prisoners suffer from overcrowding and malnutrition and are subject to other forms of abuse, including rape. Pretrial detainees are not separated from convicted felons. Prison escapes, through bribery and other means, remain frequent. Prison gang-related violence often results in multiple deaths. The mentally ill and those with tuberculosis and AIDS are housed with the general prison population. Only wealthy prisoners have private cells, decent food, and conjugal visits. The prison budget allows only \$0.40 per day for food and medicine for each prisoner. Most prisoners have to rely on friends and relatives for their daily necessities. Women are incarcerated in separate facilities but do not have conjugal visit privileges.

The 1996 Unsentenced Prisoner Law mandates the release from prison of any detainee whose case has not

come to trial and whose time in detention exceeds the maximum prison sentence for the crime of which he or she is accused. However, judicial inefficiency and corruption and lack of resources clog the criminal justice system with pretrial detainees, and prisoners await trial for an average of 22 months—some more than five years. Under the Criminal Procedure Code, convicted persons older than 60 accused of nonfelony crimes, the terminally ill, and pregnant or lactating women may serve their sentences under house arrest.

**Prison Statistics.**

- Total Prison Population: 11,236
- Prison Population Rate per 100,000: 158
- Pretrial Detainees: 78.6%
- Female Prisoners: 5.2%
- Number of Prisons: 24
- Official Capacity of Prison System: 9,080
- Occupancy Level: 123.7%

*George Thomas Kurian*

# Hungary

---

**Official country name:** Republic of Hungary

**Capital:** Budapest

**Geographic description:** Landlocked country in the Carpathian Basin in central Europe, northwest of Romania and east of Austria.

**Population:** 10,006,835 (est. 2005)

## LAW ENFORCEMENT

**History.** Hungary's modern criminal law system is founded on ancient Roman-Germanic law and heavily influenced by European law of the Middle Ages. Its modern system is based on developments that began when its first criminal law code and criminal proceedings code was passed between 1896 and 1897. These changes were minor; however, after World War II and the formation of the party-state in 1948, socialist law was adopted, which strongly impacted the criminal justice system. During that period, Hungary implemented two different criminal law codes and three criminal proceedings codes, which created significant change within the legal system (Pusztai 1995).

As with most criminal justice systems in the prior Soviet Eastern bloc, Hungary's criminal justice system was politically controlled and, as such, was regulated by the impulses of the party leader at the time rather than by the laws of the country. In association with efforts toward creating a democracy that began in the late 1980s was the establishment of a fully independent judicial system. A new criminal law code was drafted

in 1990, which was subsequently modified considerably to conform with the European Human Rights Convention.

**Structure and Organization.** The Ministry of the Interior is responsible for all public administration, safety, order, and internal security. As such, it controls all armed security organizations, namely:

- The Hungarian National Police (HNP)
- The Security Police
- The Border Guard

The ministry is also responsible for other operations, such fire prevention and passport control.

**Principal Agencies and Divisions.** Hungary's centralized state police force is a hierarchical system, the highest-ranking agency being the HNP, which is headed by the chief police commissioner who holds the rank of police general. The HNP control several divisions, the

two primary law enforcement divisions being Directorate General for Criminal Investigations and the Directorate General for Public Security. It also controls special units and regional organizations. The Directorate General for Criminal Investigations is responsible for the:

- Organized Crime Directorate
- Criminal Logistics Directorate
- International Law Enforcement Cooperation Center
- Analysis and Coordination Directorate
- Forensics and Research Institute
- Financial Investigation Directorate

The Directorate General for Public Security is responsible for the:

- Traffic Enforcement Department
- General Police Duties Department
- Police Administration Department
- Airport Security Service

Special units and regional organizations are the:

- Rapid Response Unit
- Republican Guards
- Budapest Metropolitan Police Headquarters (22 district police stations)
- County Police Headquarters (19, with 131 town police stations)

**Salaries.** The free-market economy has caused policing to become less attractive as a profession, with subsequent high attrition rates and difficulty retaining qualified employees, as many younger and more educated police officers are attracted to the higher wages offered in the private sector. In 1995, in an effort to encourage applicants, NPA employees received a 24-percent pay increase, bringing their salary to 40,000 Hungarian forints—approximately US\$296.00—per month (Szabo 1996).

**Police-Community Relations.** Since democratization in Hungary, civilians have come to expect the freedom to exercise their human rights with little interference from the police, and limitations on police authority has reshaped police community relations. This is particularly evident in the problematic and often confrontational association with ethnic minorities, particularly the Roma, an ethnic minority with a long history in Hungary and which experienced discrimination and segregation both before and during Communist rule. However, there remain serious problems in police treatment of ethnic minorities. According to the Project on Ethnic Relations 2000, There is a need to:

develop and implement an adequate civilian complaint process as well as policies and procedures related to police use of force... the credibility of police organizations are police fairness and integrity. The primary mechanisms through which police agencies reflect these issues are in procedures, policies, and practices they follow when addressing police misconduct, corruption, and criminality... the Hungarian National police appear to be unconcerned, otherwise distracted, or generally naive about the probable rate and nature of police corruption, misconduct, and criminality within their organization... The current policies related to police misconduct, corruption, and criminality convey a message that almost provides tacit approval for such behavior.

**Traffic Police.** Traffic police enforce traffic laws. When ticketed for traffic violations, offenders usually receive a postal check (money order) indicating the fine amount. This ticket can be paid for at any Hungarian post office. In some disputed cases, police confiscate the offender's passport, issuing in its place a receipt with an "invitation letter" for the offender to appear at a police station within two days to resolve the dispute. Once the dispute is resolved, the passport is returned.

Because Hungary has a policy of zero tolerance for driving under the influence of alcohol, traffic police conduct routine roadside checks at which Breathalyzer tests are given. Offenders receive jail time and/or fines and anywhere from one to five years in prison if damages or injuries occur. Police in Budapest and other areas follow the practice of widespread vehicle checkpoints to verify vehicle registration and other documentation. Also, it is against the law to use a cell phone while driving, and traffic police enforce this law.

**Education and Training.** A prospective police officer must have two years of secondary school, and to attain a higher rank, three years of college training is necessary (Pusztai 1995).

In 1995 the International Law Enforcement Academy (ILEA), an eight-week training program, was established in Budapest. The ILEA is operated by several law enforcement agencies from the United States, with whom Hungary encourages a growing partnership, especially in fighting organized crime. ILEA is a by-product of this partnership in which scores of Hungarian police officers have received training. Many Hungarian police have participated in shorter, specialized courses to learn techniques for fighting specialized crime. Because Hungarian and Ukrainian police students both attend the academy, a close working relationship has developed along the borders of the two countries, and together, they have

*Police officers arrive at the Arkad shopping mall as patrons are evacuated after bomb alerts in Budapest, Hungary, July 7, 2005. Two Budapest malls were evacuated and a third was searched following morning explosions in London, which killed 52 people. AP IMAGES.*

arrested several organized crime members (U.S. Department of Justice 1998).

**Uniforms and Weapons.** Uniforms are similar in style to the military but differ in color and vary depending on the type of duty. On-duty officers are equipped with a baton, gun, and radio, and special duty officers usually have bulletproof vests, combat helmets, and machine guns as well (Pusztai 1995).

**Transportation, Technology, and Communication.** There are approximately nine police officers to every automobile (Pusztai 1995). Before the change in the Hungarian political system in 1989, all cars were white and blue—either white with a blue stripe or blue with a white stripe. On the stripe was painted the word *Rendörseg* (Hungarian for “police”). After 1989, vehicles were increasingly painted just one color, typically white, again with the word *Rendörseg* written on the side and a colored police coat-of-arms painted on the hood. The police also operate a special river patrol

that includes a small fleet of Bayliner boats, which are painted white, and a fleet of helicopters, which are painted blue. Any deviation from these color patterns requires special permission from state officials.

Police have access to a computer-aided dispatch system as well as radio communications (Pusztai 1995).

**Police Statistics.** In 1990 police organizations employed 45,399 individuals:

- 29,727 Uniformed Officers
- 25,672 Plainclothes Officers
- 34,140 Men
- 11,259 Women

As of 1993, 24,000 uniformed police were employed in the traffic and public security forces and approximately 8,000 persons, such as detectives, criminal technicians, and investigators, were working in the criminal police forces (Pusztai 1995).

## HUMAN RIGHTS

While prohibited by Hungarian law, police brutality is a significant human rights problem. Detainees at police stations are often held in substandard conditions, mistreatment is common, and some detainees—particularly Roma, foreign prisoners, and minors—suffer physical and psychological violence and harassment.

Hungary has a history of blatant discrimination against the Roma population, with official statements in 1998 fostering stereotyping and prejudice against “Gypsies.” For example, in February 2001 approximately eighty police officers raided a Romani settlement during a wake and indiscriminately assaulted mourners and other people whose houses were searched and ransacked. According to one report, eight people detained during the raid were held for four hours without being questioned or charged with any crime. Police claimed their motive was to apprehend several suspects. However, civilians believed the raid was intended to intimidate László Vidák, a Romani man who had filed a complaint alleging that police officers had beaten him during interrogation almost two years earlier. One officer whom he accused of ill-treating him participated in the raid, during which Vidák was again said to have been severely beaten and required four days in hospital.

There have been reports that non-Afghan refugees and asylum seekers were transferred from the Debrecen refugee reception center to other centers while all Afghan refugees and asylum seekers were transferred from other centers to Debrecen. There, the Afghans were guarded by armed border guards and experienced restricted freedom of movement, a restriction that broke national and international human rights laws.

The HNP now provide human rights training to police officers as an integral part of the Police Secondary School and Police College curriculum. This training is, however, insufficient in that it seriously lacks the type of sociocultural diversity training that would promote improved police and minority relations and reduce discriminatory and brutal police and minority encounters.

## CRIME

**Organized Crime.** In 1999 the government announced that a central coordination unit would be established to combat organized crime through the compilation, exchange, and dissemination of information critical for an effective crackdown on Mafia-style activities. The unit would comprise representatives of the HNP, the Customs and Excise Board, the Crime-Fighting Directorate, and the Fiscal and Monetary Monitoring Office (“Hungary Human Rights Report” 2004). This action reflected that fact that white-collar crime was a serious growth industry both in terms of number of offenses and monetary

amounts involved. The criminal statute specifically targets forty-one categories of white-collar crime, including:

- Credit fraud
- Carrying out foreign trade operations without a proper license
- Breach of commercial secrecy
- Computer fraud
- Money laundering
- Counterfeiting
- Tax and social security fraud
- Bribery

**Crime Statistics.** Offenses reported to the police in 2001 were 465,694: Of which (per 100,000 population):

- Homicide: 2.5
- Violent Crime: 305.1
- Robbery: 32.86
- Motor Vehicle Theft: 122.7
- Drug Trafficking: 8.49

## CORRECTIONAL SYSTEM

**Prison Conditions.** Although prisons are overcrowded, they meet international standards. Men and women are housed separately, juveniles are housed separately from adults, and pretrial detainees held separately from convicted criminals. Education and vocational training is available although prisoners are not required to attend classes. They are, however, required to work. Remissions are not allowed although time off for good behavior is granted after serving a prescribed portion of the prison term. Prisoners are permitted to receive visitors once a month and as a reward for good behavior may be permitted to leave the prison for weekends or other specified periods. Prisoners are provided with individual and group therapy and medical care (Pusztai 1995).

### Prison Statistics.

- Total Prison Population: 16,419
- Prison Population Rate per 100,000 General Population: 163
- Pretrial Detainees: 24.6%
- Female Prisoners: 5.8%
- Juvenile Prisoners: 2.7%
- Foreign Prisoners: 4.2%
- Number of Prisons (including two hospitals): 35
- Official Capacity of Prison System: 11,400
- Occupancy Level: 145.1%

# Iceland

---

**Official country name:** Republic of Iceland

**Capital:** Reykjavík

**Geographic description:** Island in northern Europe, northwest of the United Kingdom, between the North Atlantic and the Greenland Sea

**Population:** 296,737 (est. 2005)

## LAW ENFORCEMENT

**History.** The first appearance of a sheriff or law enforcer was in 1264 under King Hakon the Old of Norway, to whom Iceland submitted as a vassal state. The Old Covenant makes provision for both sheriffs (*sýslumenn* or *Valsmenn*) and lawmen (*lögmenn*). The number, jurisdiction, and terms of office of the sheriffs varied at first. At the beginning, they seem to have been appointed by the king himself, but later, this task was assigned to the official known as captain of Iceland, or *hírostjorar*. Sheriffs were expected to arrest thieves and violent criminals with the help of farmers, collect fines, investigate crimes, question witnesses, sit on the courts of justice, detain criminals until their cases were heard, monitor trade, prevent illegal private enterprises, and monitor the passage of foreign ships through Icelandic waters.

A formal law enforcement system developed between 1751 and 1758 following imposition of a property tax by royal decree, which financed the building of a prison and keeping prisoners in detention. The first prison opened in 1764. In the same period, an industrial company called *Innrétingar* engaged caretakers to protect its factory. Later, their title was changed to watchmen, and

they were forerunners of the modern police. Their functions included raising the alarm in the event of a fire, watching out for unusual activities, and singing biblical verses to mark the hours. For their work, the night watchmen were equipped with an hourglass, a lantern, and a club with a spiked head. In 1791 the municipality of Reykjavík hired its first watchmen.

However, some of the night watchmen proved to be drunk and disorderly. Crime was rarely reported or punished, and theft was on the increase. To remedy the situation, two formal policemen were appointed in 1803, both Danish. In 1809 local parish directors were vested with police functions. During the next century, many towns engaged paid policemen: Akureyri in 1820, Ísafjörður in 1901, Hafnarfjörður in 1908, Siglufjörður in 1915, and Vestmannaeyjar in 1915. In 1880 the first legislation appeared relating to police work, followed by the Police By-Laws Act of 1891, which required all major population centers to appoint police officers.

Meanwhile in Reykjavík, the police establishment grew steadily in numbers and powers. The regular municipal force was increased to 3 in 1855, cut down to 2 in 1874, and expanded again to 3 in 1905. After 1860 the force was supplemented by night watchmen. The force increased to 9 men in 1918, 15 in 1829, 28 in 1930, 41 in 1933, and 60 in 1937. In 1923, the Reykjavík police station began functioning around the clock.

The first prison built in 1764 was discontinued. Penal practice reverted to flogging rather than incarceration as the major form of punishment. However, the Criminal Code of 1869 reestablished imprisonment as the principal punishment. A new prison was completed in 1873 in Skólavörðustígur.

In 1891 Reykjavík expanded the police jurisdiction to cover traffic. This was updated in 1914 through the passage of a Traffic Act. The act stipulated a maximum speed of 10 miles per hour in built-up areas. Violators were required to pay a fine of 100 *krónur* for each violation.

The Icelandic policeman's lot was not an easy one because of frequent rowdy behavior on the streets. Some of these incidents were caused by foreign sailors, and police were frequently assaulted with impunity. The police also had few resources. In Vestmannaeyjar, police had to lock up prisoners in their own bedrooms. Because of the lack of paddy wagons for carrying prisoners, police sometimes had to carry them on their shoulders.

In 1929 the Reykjavík Police was separated from customs, and the department was placed in charge of a commissioner of police. The first commissioner was Hermann Jónasson, who later became prime minister. He laid the foundations of the modern police system. He was instrumental in the passage of the Police Act in 1933, which provided the statutory basis for police financing. The act included provisions on the functions, rights, and duties of the police. It also authorized the minister of justice to call out the reserves in times of national emergency. The first steps were also taken in establishing a Criminal Investigation Department. Subsequent revisions of the act in 1940 and 1972 gave the minister of justice the power to transfer police in any jurisdiction in the island, gave police civil-service status, and laid down a clear chain of command from the commissioner down.

Under legislation passed in 1977, the State Criminal Investigation Police (SCIP) took over the task of criminal investigation that had previously been under the control of the Reykjavík Criminal Court and the commissioner of police. The director of SCIP worked in tandem with the director of public prosecutions. SCIP was abolished in 1997, and its functions were returned to the National

Commissioner of Icelandic Police (NCIP) and local police commissioners.

**Structure and Organization.** The legislative basis of the police force is the parliamentary acts of 1992 and 1997. They strengthened the authority of the NCIP and set clear rules regarding police functions, rights, and obligations. Under the NCIP are a number of specialized centers:

- Civil Protection Section
- Telecommunications Center
- Vehicle Fleet Coordinator
- Computer Department
- Special Task Force (operates a SWAT team and handles riot control)
- Alcohol Monitoring Department

The Police Act of 1997 also reflected changes introduced by the 1996 Code of Criminal Procedure. Since then, police commissioners handle prosecution of most criminal cases. At the headquarters, the chain of command runs from the minister of justice to the national commissioner, the deputy national commissioner, local commissioners in each district, the deputy commissioner in Reykjavík, the director of the Police College, deputy local commissioners, and constables. Ranks are as follows:

- Commissioner of Police
- Deputy Commissioner of Police
- Assistant Commissioner of Police
- Chief Superintendent
- Assistant Chief Superintendent
- Station Superintendent
- Division Superintendent
- Chief Inspector
- Inspector
- Sergeant
- Constable

For police purposes, Iceland is divided into districts that correspond to administrative districts. District commissioners also serve as commissioners of police, except in Reykjavík where there is a separate commissioner of police. Even when attached to a district, police wield powers in all parts of the island, and may exercise those powers in districts other than their own. Prosecutors are attached to each commissioner's office. The number of police at each level is determined by the minister of justice. Nationwide, there are 693 police officers in twenty-five police districts. Each police district corresponds to the administrative divisions of the country. Each district is

headed by a police commissioner. Criminal investigation of serious crimes is generally carried out at the headquarters although some major districts have their own investigative units. The director of public prosecutions oversees all investigations. The Special Task Force is an elite unit trained for dangerous interventions, hostage negotiations, and riot control.

The Reykjavík Police Department is unique in that two out of every five Icelanders live in the capital. Thus, the department has more sections than other towns. These sections are:

- Drug squad
- Forensic department
- Prevention and education department
- Traffic department
- Narcotics surveillance unit
- General department

Only in Reykjavík are there policewomen, and their number is small.

The NCIP and the Reykjavík police operate forensic departments and maintain laboratories where fingerprints, photograph archives, and a DNA database are housed. One task of the NCIP is to gather and process data on crimes and offenders for the benefit of criminological institutes and experts. Statistical data are published annually.

**Police-Community Relations.** In Reykjavík, special “community police” based in neighborhood police stations are responsible for studying the special needs of the community and establishing close working relations with the people there. They do this by visiting schools and distributing educational materials and taking part in local residents’ associations. They also work with professional social workers and parents in resolving problems relating to youth.

In the international community, Iceland plays an active role in many law enforcement programs, such as Interpol, Europol, and PTN. Since 2001 Iceland has been involved with fourteen other European states in the Schengen Agreement, under which identification checks were abolished at common borders while border control was tightened to combat illegal immigration and international crime. At the core of the agreement is a central database on criminals and their stolen items and documents. Each member state has a domestic central office, known as Sirene, where data are collected, evaluated, and circulated to other states. Icelandic police have also been called upon to serve as United Nations’ peacekeepers in Palestine, Bosnia, and Kosovo.

**Education and Training.** The principal institution for law enforcement education is the National Police College in Reykjavík. To qualify for admission, applicants must be citizens, aged between twenty and thirty-five, in good mental and physical health, have completed at least two years of postsecondary education, have good language skills and a driver’s license, be able to swim, and have a clean criminal record. They must also pass a special entrance examination. Students remain in the college for three years where they study law, police skills, Icelandic psychology, and ethics. They also undergo rigorous physical and practical training.

**Uniforms and Weapons.** Police uniform consists of black trousers and black jacket with brass buttons and insignia, white peaked caps, white shorts for inspectors and higher, and light blue shirts for lower ranks. Ranks are indicated by brass numbers for sergeants and constables and brass plates, stars, and small police badges for the higher ranks. Officers are armed with only a small baton or nightstick. They are permitted to use firearms or tear gas only in dangerous situations.

#### Police Statistics.

- Total Police Personnel: 693
- Population per Police Officer: 428

#### HUMAN RIGHTS

The government and the police generally respected the human rights of citizens, and the judiciary provided a firewall against human rights abuses.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 31,332. Of which:

- Murder: 0.7
- Burglary: 15.8
- Assault: 920.3

#### CORRECTIONAL SYSTEM

Prison sentences were legalized in Iceland only in the seventeenth century, prior to which offenders were whipped, branded, or executed. Hardened criminals were sent to Denmark where they served hard labor. Because transportation of criminals was expensive, a prison was built between 1865 and 1871 that was used for fifty years before being converted into the office of the prime minister. In 1874, another prison was built in Ísafjörður, which burned down in 1925. In the twentieth century, three more prisons were built, making the total number of current prisons five. Two are in the capital and three in the country. The largest, the Litla-Hraun, about 40 miles

## *Iceland*

southeast of Reykjavík and founded in 1929, is a state-of-the-art facility. In 1963 a farm, Kviabryggja, in western Iceland was converted into a prison, and in 1989 a former juvenile delinquency institution in Kópavogur was converted into a small prison for both men and women. On an average 240 persons finish their incarceration a year. The prison occupancy rate and the detention rate in Iceland is the lowest among western European countries.

**Prison Conditions.** Prison conditions generally meet international standards. Many inmates are reported to be heavy drug users, but there are no social services to help inmates overcome their drug addiction. In 2001 the Council of Europe charged that the authorities excessively used solitary confinement as a punishment. Because there are few women prisoners, men and women are sometimes held together in one facility. The vast majority of juvenile offenders is given probation or suspended sentences or

required to attend treatment programs. In the rare instances where juveniles are incarcerated, they are placed with adults.

### *Prison Statistics.*

- Total Prison Population: 117
- Prison Population Rate per 100,000: 39
- Pretrial Detainees: 7.8%
- Female Prisoners: 6.1%
- Juvenile Prisoners: 0.0%
- Number of Prisons: 5
- Official Capacity of the Prison System: 137
- Occupancy Level: 83.9%

**Geographic description:** The largest country in the Indian subcontinent, stretching north to south from the Himalayas to the Indian Ocean, west to east from the Arabian Sea to the Bay of Bengal

**Population:** 1,080,264,388 (est. 2005)

## LAW ENFORCEMENT

**History.** The modern Indian police force is the successor of the imperial police force of British India that had its origins in the police force set up by Sir Charles Napier in Sind in 1843, soon after the annexation of that province. He patterned his organization after the Royal Irish Constabulary. In contrast, other provinces of British India adopted the model of either the London Metropolitan Police Force or the older, indigenous, Mughal system. The Sind model was extended to Bombay (now Mumbai) in 1853 and Madras (now Chennai) in 1859. The Police Commission of 1860 recommended its adoption all over the country, and its principal features were codified in the Police Act of 1861. Under this act, policing was a civil function exercised by state governments, and the state police force was organized hierarchically on military lines under an inspector general of police who was responsible for the internal police administration and accountable to the state government. When India became independent in 1947, the new republic inherited the system from the British and did not make any radical change in its structure.

**Structure and Organization.** The Union Government of India—the government’s official name—encompasses twenty-eight states and seven union territories. All India Services, India’s highest civil administrative services, consists of the Indian Administrative Service, which modeled itself after the elite, preindependence Indian Civil Service; the Indian Police Service, which belongs to individual states and consists of high-ranking police officers, inspectors, and constables; and the Indian Forest Service. Police organization and operations are, in part under central (Union Government) control and in part under local (state and territorial) control. Prevention and detection of crime, apprehension of criminals, and maintenance of law and order are primarily the responsibility of states and territories. The Union Government also has two other police forces: the Central Bureau of Investigation (CBI), and the Central Police Reserve (CRP), which is used for guard duty, action against subversion, and to assist states during

emergencies such as civil disorder or natural calamities. The CRP is headed by a director general, with headquarters and main garrison in New Delhi. Other national-level agencies include the Defense Security Corps, a number of police schools, and the Constables Advanced Training Center and Women's Police Training Center, both in Ambala. The Central Industrial Security Force is authorized to protect state industrial undertakings. Union Government control of all police services is part of what was known during the British Raj as the "steel frame" of Indian administration, but it is a perennial irritant in Union-state relations.

Officers of the IPS are recruited competitively by the Union Public Service Commission and, except for those on headquarters staff duties, are assigned to the states, where the senior positions in state police services are under the operational direction of state governments. Lower grades are staffed by state police services. Although state forces operate separately, they are still governed by the Police Act of 1861 and are highly similar in organization and mode of operation. They are further characterized by functional division between unarmed and separately quartered and armed contingents. The former perform routine daily precinct duties while the latter are reserved for emergency situations where physical force may be required.

The police service is not the first preference among the aspirants for civil service. At the lower levels of subinspector of police and constable, however, a percentage of aspirants come by choice, drawn by the glamour of a uniform and the authority that comes with it. Although there is provision for direct entry at all three levels, 30% of the higher-level positions are reserved for those who rise from the lower cadres. Police candidates must be physically fit and at least five feet tall. Selection is on the basis of an interview following a physical test at the district level by the superintendent of police. Security clearance is necessary before appointment. There is also a hiring quota. This ensures a reasonably balanced communal and regional representation. The higher cadre of police service officers selected by the Union Public Service Commission is subject to a two-tier civil services competitive examination, conducted nationwide, followed by an interview. Also at this level, there is a marginal concession on age, a lower cutoff point as regards marks, and a reservation of 15% for scheduled castes and 7.5% for scheduled tribes (India's socially underprivileged and less-well-educated people). In recent years, women have been admitted to all ranks of the police organization, including the IPS.

**Principal Agencies and Divisions.** The Ministry of Home Affairs is the principal ministry concerned with law enforcement and the maintenance of peace and

order. Generally, the minister of home affairs ranks next to the prime minister in influence. As well as the IPS, CBI, and CRP, all police schools and laboratories, prisons and reformatories, as well as the Railway Police are organized under and responsible to the Ministry of Home Affairs in New Delhi. The ministry has seven attached agency offices and eleven principal subordinate offices, including the Police Division. Among the agencies are the Central Bureau of Intelligence—as distinct from the Central Bureau of Investigation—which provides the prime minister and cabinet with national security intelligence. This bureau also has operational control over the Central Fingerprint Bureau, the Central Detective Training School, and the Central Forensic Science Laboratory, all located in Kolkata. It is headed by an inspector general.

**Police at Work.** The normal working hours of the ordinary constable, either on patrol or other duty, consists of eight hours a day. Subinspectors and those above have no such limitation and may be expected to work as long as required. A typical police officer's work schedule includes some parade ground work, investigative duties, visits to homes or other places in pursuit of suspects, and appearances in court. Senior officers have additional duties, such as interviews, inspections, and special assignments. They are not expected to take vacations except for one month during a year. Although most police carry only a *lathi*—a bamboo staff sometimes weighted or tipped with iron—the use of force is justified under three sets of circumstances. The first is self-defense, the second is to prevent a suspect from escaping custody or apprehension, and the third is to disperse an assembly that has gathered in contravention of a judicial order. Police officers who use excessive force or have acted illegally are liable for prosecution as well as disciplinary action by the department.

**Local Police.** The primary responsibility for the maintenance of law and order rests with the states, and almost all police—with the exception of those in union territories—are in the state police services. What is remarkable about the state police forces is the continuity of traditions. For local government and police purposes, states are divided into districts, which are divided into subdistricts. Just as the inspector general answers to the minister of home affairs, the superintendent of police in each district answers to the district collector, the head of district civil administration, so called because, under the British, he was responsible for the collection of revenues. Thus, the principle of civilian control of the police force is reinforced at every level. The major cities of Mumbai, Chennai, Hyderabad, New Delhi, and Kolkata have separate municipal forces headed by commissioners who have the rank of inspector general.

The fundamental principles of police organization in India have remained fixed since 1861. One feature common to all state police forces is the division into unarmed and armed contingents. The former man the police stations, conduct investigations, respond to complaints, perform traffic duties, and patrol the streets, usually armed only with the lathi. Armed police, on the other hand, are garrisoned in cantonments—permanent military stations built under the British Raj. As a reserve strike force, they act only on orders from their chain of command but do not perform routine police functions. Variations occur among the states in the kinds of armament, communications, and training.

The top-four police grades are inspector general, deputy inspector general, superintendent, and assistant superintendent. All are IPS grades. In the state police services, the top grade is that of deputy superintendent, followed by inspector, subinspector, and assistant subinspector. These grades are filled by nongazetted officers who are analogous to noncommissioned officers in the army. Below them are the majority of police, in the grades of head constable and constable.

The domain of the state inspector general is divided for command and coordination into police ranges—each of three to five districts—each headed by a deputy inspector general. The first tier, the district police headquarters commanded by a superintendent, is the fulcrum of operations. The superintendent's responsibilities include police storehouses and armory and the district jail. The second tier consists of district police subdivisions, circles, and individual stations headed, respectively, by assistant or deputy superintendents, inspectors, and subinspectors. A station is typically manned by a subinspector, at least one head constable, and seven constables. It is at this level that most civilians have contact with the police. The two lowest grades make up about 94% of all police.

### Special Police.

*Auxiliary Police Forces.* In addition to the national and state police services, there are three categories of auxiliary police forces:

- Railway Police
- Rural Police
- Volunteer Police

The Indian Railways is among the most extensive in the world and is plagued by a high volume of crime. This presents a special jurisdictional conflict between local authorities and railway officials. To cope with this problem, two forces have been developed: The Railway Police, a special branch of the state police; and the Railway Protection Force, engaged solely in the protection of railway property. Rural Police are village watchmen, usually

called *chowkidars*, who assist the village head in patrolling villages and reporting crimes. They are paid partly by the state and partly by the community. Volunteer Police are a variety of home guard who receive minimal training and a stipend only when called up for training or duty. They also assist in relieving the pressure on police during sporting events and religious festivals.

*Traffic Police.* Traffic police are found in cities and towns. Although human traffic is high, motor vehicle traffic has, in recent decades, approached the degree of congestion found in Western countries. Standing in the hot Indian sun, when temperatures are in the high 100 degrees Fahrenheit, is a particularly onerous duty for traffic police. Speed restrictions are universally ignored, and there are few highways where radar surveillance is used to deter speeding. In most cities, traffic police are under a special deputy commissioner of police. Traffic police wear white, which makes them stand out in the crowd. Parking meters are rare, and in any case, few Indians obey parking regulations.

*Riot Police.* One of the main challenges to the Indian police forces is the conduct of elections and public demonstrations. Although the country is the largest democracy in the world, there is considerable political and religious violence that often gets out of control. India does not have a riot police as such, but the Reserve Police perform this role. The local police are authorized to use gas, lathi charge, and firearms. If these are not effective, then the Central Reserve Police are brought in. In rare cases, the army is brought in as well. The Reserve Police use steel helmets, bamboo shields, and sticks, but do not wear bulletproof vests because of the cost. Where students are involved, the police show greater restraint than when dealing with professional agitators. With the threat of terrorism, police also have begun to use more sophisticated methods, such as bomb-disposal squads and bomb-sniffing dogs. India has had fewer incidents of terrorism than other countries although it has a large and restive Muslim population.

**Education and Training.** There are three levels of entry into the police force. The first is as constable, for which at least a secondary-school education is required. For the second level of entry, the qualification is a degree in any discipline. Candidates have to sit for a written examination held by the state public service commission, and later for an interview. For scheduled castes and scheduled tribes, marginal concessions are given in respect to educational qualifications and age.

IPS officers are trained in the Sardar Vallabhai Patel National Police Academy at Hyderabad. The language of instruction is English, as foreign students also attend the academy. But all Indian officers have to learn Hindi. The

*Haryana police guard a government hospital in Gurgaon, India, where injured workers of a Honda subsidiary plant are being treated, July 25, 2005. Hundreds of workers clashed with police during a protest over the dismissal of four workers at the Gurgaon factory in northern India. AP IMAGES.*

one-year course for new entrants to the service covers police science, law criminology, police-community relations, and management, as well as parade-ground drills, use of arms, a physical fitness program, equestrian exercises, and martial arts. The institute also offers training for superintendents of police with six to eight years' service for a period of ten weeks. This course deals with administrative, criminological, and managerial problems at expert theoretical and practical levels. The academy conducts a two-week, top-management program for deputy inspectors.

Apart from the National Police Academy, there are police training colleges in most states for training of subinspectors. This one-year training covers roughly the same subjects, with more emphasis on investigation and

day-to-day management of police precincts. There is no horse riding and less management input, and more importance is given to local traditions, laws, and languages. Each state has one or more police training schools for constables. Here, they are instructed in foot drills, arms drills, use of arms, law, elements of investigations, and community relations.

Besides these direct-line institutions, there are central detective training schools in Kolkata, Hyderabad, and Chandigarh for police investigators. The Internal Security Academy at Mount Abu, Rajasthan, conducts coordinated courses for higher-level administrators in handling problems relating to terrorism and homeland defense. In addition, the Institute of Criminology and Forensic Science, New Delhi, conducts integrated training courses in criminology and forensic science for various agencies within the criminal justice system. An advanced six-week course in criminology, which this institution conducts, brings together senior police officers, district judges, senior prosecutors, prison superintendents, senior probation officers, and even officers of the armed forces to discuss trends and problems in the administration of criminal justice in light of criminological concepts and correctional practices. In addition, all central police organizations have their own training institutions where at the lower levels, the language of instruction is generally Hindi or one of the other thirteen regional languages and at the higher levels, English. All trainees are required to be proficient in Hindi and their own mother tongue. Once they complete the institutional training, entrants go through a period of on-the-job training during which competent seniors guide, supervise, and report on candidates before they are assigned to their stations.

Although the level of education and training among the elite officers of the IPS is high, the constable at the bottom of the police hierarchy is likely to have had very little education. Pay is low, hours long, chances of promotion slight, and public acceptability poor. Working conditions are often poor and dangerous. Petty corruption is rampant. Police are feared and not trusted. There is little honor in the work; the only honors they can aspire to are the President's Police and Fire Services Medal and the Police Medal for Distinguished Services.

**Uniforms and Weapons.** There are minor differences in the uniforms worn in the different states, but the uniforms worn by officers of the IPS are the same. The working dress consists of a khaki peaked cap, beret, or khaki pagri; khaki shirt with Sam Browne or web belt; or khaki bush shirt and slacks with a cloth belt; or khaki jacket (which is worn over a khaki shirt with a dark blue sailor knot tie). All higher officers of the IPS wear badges of rank. The inspector general wears a crossed sword and

baton and one star. His immediate subordinates wear the state emblem and one, two, or three stars. Inspectors wear three five-pointed stars and a ribbon, and their subordinates wear two stars or one, according to rank.

Regular police do not carry weapons. Armed police may carry heavy-caliber machine guns and rifles.

**Transportation, Technology, and Communication.** In the past, Indian police generally used horses or bullock carts for patrol duties. Since independence, animals have been replaced by motor vehicles, especially jeeps. In rural areas, the constables' ride on bicycles or use buses. The number of patrol vehicles is not adequate given the extent of the jurisdiction and the size of the population. Armed reserve units have trucks or vans in common. Response time, therefore, is slow. Even with sirens, police vehicles find it difficult to navigate through Indian roads crowded with cows, human beings, rickshaws, scooters, cars, and trucks. Helicopters and planes are rare.

Although lacking in the sophistication of transport vehicles, India has made great strides in the use of computers and radio telecommunications. Most police stations are connected through a VHF network. All criminal intelligence is stored in computers and processed online.

#### Police Statistics.

- Total Police Personnel: 1,299,000
- Population per Police Officer: 831

#### HUMAN RIGHTS

Although the quality of performance of the Indian police forces has improved in recent years, observers have noted that they command little respect among the public. As far back as 1902, a commission appointed by Lord Curzon, then viceroy of India, reported that the "police are generally regarded as corrupt and have utterly failed to gain the confidence and cooperation of the people." This still holds true. There is widespread corruption at the lower levels, which the public have almost come to accept. The corruption stems partly from the fact that police are poorly paid and expected to supplement their income as best as they can. Before independence, police were regarded as agents of oppression. Since independence, they are free of this stigma but remain objects of considerable hostility as officials who can be bought and sold and who mistreat the poor while allowing the rich to go free. While police generally respect human rights, there are persistent abuses generated by social and political dynamics. The most significant of these are:

- Extrajudicial killings
- Faked-encounter killings
- Custodial deaths through torture

- Excessive use of force by security forces combating insurgencies
- Torture
- Rape
- Arbitrary arrests
- Incommunicado detention
- Prolonged pretrial detention without charge
- Harassment
- Detention of human rights monitors
- Acquiescence in religiously motivated violence against Muslims and Christians

The Armed Forces Special Powers Act and the Disturbed Areas Act give police extraordinary powers of arrest and detention, which are used with impunity. The rape of women in custody is widely reported, and police officers have been implicated in the widespread trafficking in women.

Human rights' training is provided at the National Police Academy. Following the training program, there is usually some decrease in the police use of physical force, and complaints of police harassment and abuse generally decline. The Home Ministry reported that complaints lodged against the police declined in 2002 to 28,765 from 29,964 in 2001 and 32,123 in 2000.

#### CRIME

Criminal investigation is the function of the Criminal Investigation Department (CID), which functions as an auxiliary attached to most police departments. India is reputed to have invented the modern fingerprinting system, and every state has a forensic laboratory with the capacity to handle DNA evidence. There are two central forensic laboratories under the Ministry of Home Affairs, and some states have mobile laboratories, making these facilities available in rural areas. While polygraphs are not popular, forensic evidence is admissible in courts under the Indian Evidence Act, and the Identification of Prisoners Act of 1920 authorizes the photographing of prisoners soon after arrest. Identification parades are a major procedural ritual and are usually held at the local police station. CIDs are responsible for interrogation and identification, and they maintain kennels of police dogs.

Under the constitution, criminal jurisdiction belongs concurrently to the union territories and the states. The prevailing laws on crime and punishment are substantially embodied in two principal statutes: the Indian Penal Code and the Code of Criminal Procedure. These acts have precedence over any state legislation and cannot be altered or amended by the states. The Indian

## India

Penal Code was drafted by an English jurist in 1837 but did not come into force until 1862. Based mainly on English criminal law, the code has 23 chapters. There are six principal categories of punishment:

- Death
- Life imprisonment
- Rigorous imprisonment with hard labor
- Simple imprisonment
- Forfeiture of property
- Fine

Because of the federal division of powers under the constitution, some offenses have become exclusively union matters, some rest exclusively with the states, and others are joint. For example, legislation pertaining to the production and sale of alcoholic beverages is a state matter while the regulation of weapons, ammunition, and explosives is a federal matter governed by the Arms Act of 1959. States are responsible for public order, but preventive detention powers are shared by the Union Government and the states under the National Preventive Detention Act.

The penal machinery supporting the Indian Penal Code is the Code of Criminal Procedure of 1898. Most of the code rules are still in effect although many have been amended since independence. Many of them impinge on the constitutional guarantees of fundamental rights guaranteed by the constitution. For example, arrests and house searches require a warrant but may be carried out without one under urgent circumstances. Searches must usually take place in the presence of respectable witnesses and the owner of the premises. Vagrants and habitual offenders may be arrested without specific cause. Persons arrested without warrant must be brought before a magistrate without delay and, at the latest, within twenty-four hours. Release on bail is permitted. Warrants of any court are good throughout the land. People who conceal themselves to avoid the service of a warrant may be hailed into court through a public proclamation and their property attached.

Preventive action plays an important role in the judicial process. Peace bonds are used to prevent unlawful assembly and in the case of habitual criminals, seditionists, and vagrants. Police must file with the competent investigative officials written reports of offenses known to them. There are two principal kinds of trials: warrant cases, in which punishment can range from imprisonment for one year to death, and summons cases, which are tried before magistrates without formal charge.

**Crime Statistics.** Offenses reported to the police per 100,000 population: 594. Of which:

- Murder: 4.6
- Burglary: 15.6

## CORRECTIONAL SYSTEM

The constitution provides that the correction and custody of criminals are state functions. Central state prisons or jails can accommodate as many as one thousand inmates each whereas smaller district jails house fewer than one hundred. The prison system, managed under the Prisons Act of 1894 and the Prisoners Act of 1900, varies from state to state. The highest state official in jail administration is the inspector general of prisons, or in the absence of such an officer, the inspector general of police. At the district level, the superintendent of police is responsible for prisons. There are twenty model prisons scattered through eleven states. These prisons have no walls, yet the rate of escape from them is reportedly lower than that from maximum-security prisons.

**Prison Conditions.** Prison conditions are substandard. Most prisons are severely overcrowded because new prisons are not being built whereas crime is exploding, especially in urban areas. For example, the divisional jail in Bihar with a capacity of 55 inmates held 753. New Delhi's Tihar Jail held four times as many prisoners as capacity. Provision of medical care and food is woefully inadequate, and prisoners go on hunger strikes to protest these conditions. Normal daily prison rations consist of lentils and rice and nothing more. More than 1,157 deaths have been reported in judicial custody by the National Human Rights Commission. Many of these deaths are attributed to tuberculosis and HIV/AIDS. However, some deaths occur within hours or days of initial detention and are clearly due to torture. Custodial abuse is deeply rooted in police practices. Women are housed separately from men and juveniles are detained in rehabilitative facilities.

## Prison Statistics.

- Total Prison Population: 334,862
- Prison Population Rate per 100,000: 31
- Pretrial Detainees: 69.2%
- Female Prisoners: 3.2%
- Foreign Prisoners: 7.5%
- Number of Establishments: 1,135 (10 central prisons, 269 district prisons, 677 subprisons, 25 open prisons, 13 women's prisons, 12 Borstal schools, 9 juvenile camps, 25 special prisons)
- Official Capacity of the Prison System: 229,874
- Occupancy Level: 140.2%

*George Thomas Kurian*

# Indonesia

---

**Official country name:** Republic of Indonesia

**Capital:** Jakarta

**Geographic description:** Island chain along the equator in Southeast Asia, including some 3,000 islands, from small reefs to areas the size of France. Five large islands account for most of the area: Sumatra, Java, Kalimantan, Sulawesi, and Papua (formerly Irian Jaya)

**Population:** 241,973,879 (est. 2005)

## LAW ENFORCEMENT

**History.** While under Dutch rule (from the seventeenth century until Japanese occupation in 1942), the principal police force was the Dutch Allgemeene Politie, which functioned as a federal police force. In Java and Sumatra, the police were administered by the Recomba. Other states had their own police forces. Following independence from Japan in 1945, in 1946 the Mobile Brigade was formed to disarm the remnants of the Japanese soldiery. In 1947 all these forces were unified into a national police system, now called the Indonesian National Police (POLRI).

**Structure and Organization.** A number of state organs, with overlapping jurisdictions and operations, are charged with law enforcement and security in Indonesia. These include the national police, ordinary and special military units, the Kommando Operasi Pemulihan dan Ketertiban, (KOPKAMTIB), and the State Intelligence Coordinating Agency. The national police and KOPKAMTIB, however, are the predominant law enforcement agencies.

POLRI is directed and controlled by the central government and is headquartered in Jakarta. Under the Armed Forces' Reorganization Act of 1969, POLRI was incorporated as the fourth branch of the Armed Forces of the Republic of Indonesia (Angkatan Bersenjata Republik Indonesia [ABRI]) but was removed from ABRI's authority in 1999 although it remains under the jurisdiction of the minister of defense. POLRI is estimated to have grown from 140,000 in 1980 to 188,582 in 2002. In the aftermath of the 1965 aborted Communist coup, when POLRI was found to have been heavily infiltrated by members of the Indonesian Communist Party, the police suffered a decline in influence that has persisted to this day.

POLRI's headquarters includes four main staff sections: Intelligence, Personnel, Logistics, and Plans. The commander of the police has the title of chief, as distinct from the other three military services, whose heads are called chiefs of staff. Structurally, the police

are organized into seventeen districts (POLDA), reduced from twenty-one in early 1974; and four regional groupings consisting of Sumatra, Java and Madura, Kalimantan, and Sulawesi. Districts are subdivided at the Kabupaten, or regency level, each of which has three subdivisions. The primary police unit is the block, which may be a single street or section of a *kampung* (village).

Each district, with its headquarters in a provincial capital, has police units assigned to it, their strength and composition varying according the size of the population, area, and other characteristics. These units are organized as city police forces or rural police forces. Although they work in conjunction with the local government, they are operationally under the command of the district police commander, who reports directly to the national police headquarters.

POLRI headquarters are divided into four echelons:

- Top (the chief)
- Staff (assistant chief and inspectorate)
- Service (the secretariat and communications)
- Executive (identification, personnel, stores, traffic, finance, intelligence, firearms, health, law, provost, research and development, and crime laboratory)

Office ranks and enlisted grades were standardized for all police units after 1969. Thus, police ranks and grades were made identical at all levels to those of the other branches of the military although designations differ in some respects, no class of warrant officers exists, and corporals are ranked in the private rather than the noncommissioned officer class. Each rank is distinguished by a different badge:

- General: four stars under a crest
- Lieutenant General: three stars under a crest
- Major General: two stars under a crest
- Brigadier General: one star under a crest
- Colonel: three eagles
- Lieutenant Colonel: two eagles
- Major: one eagle
- Captain: three bars
- First Lieutenant: two bars
- Second Lieutenant: one bar
- Assistant Lieutenant I: two wavy bars
- Assistant Lieutenant II: one wavy bar
- Sergeant General: four gold chevrons
- Chief Sergeant: three gold chevrons

- Sergeant I: two gold chevrons
- Sergeant II: one gold chevron
- Corporal I: two brown chevrons
- Corporal II: one brown chevron
- Bhayangkara (Protector): two brown bars
- Bhayangkara II: one brown bar

Pay and emoluments are generally comparable with those of the armed forces. Some police units operate revenue-producing commercial companies, just as the armed forces do. The Mobile Brigade, for example, operates a transportation company, a whitewash factory, and a variety of banking and agricultural enterprises. Part of the police budget is derived from the profits of these companies.

Police ethics and conduct are regulated by a basic police law and by unpublished police regulations and procedural statutes. As with the other armed forces, the police maintain their own courts to try cases involving criminal infractions by their members. These are courts of first instance consisting of a panel of three judges and appeals courts.

Police personnel are recruited on a voluntary basis from applicants between the ages of eighteen and twenty-five, with at least a sixth-grade education. They are required to pass a written and oral competitive examination, be physically fit, and be free of moral turpitude and alcoholism. Officer personnel enter the ranks through graduation from the Armed Forces Academy. Academy cadets receive one year of training in a common curriculum, followed by three years of additional training at the police branch of the academy.

The police force is organized into a number of specialized elements that include the general uniformed police, consisting of the regular police, the traffic police, the women police, and the *perintis* (special) police; criminal investigation police; and security police. A special force, the Mobile Brigade, is maintained at the national headquarters, from which units are dispatched or assigned as needed. A small sea and air police force serves as a coast guard although they operate with outdated seacraft and aircraft. These together constitute the conventional law and order forces of the republic.

#### *General Uniformed Police.*

*Regular Police:* In urban neighborhoods and rural areas the regular police (Samapta Bhayangkara) operate out of police stations or posts staffed by squads of three to five police who perform normal patrol and guard duties.

*Traffic Police:* Traffic police are assigned mainly in urban areas where, in addition to controlling traffic and

*Indonesian police monitor an area of recent bomb attacks in Bali, October 5, 2005. Bali saw increased security measures and greater police presence in the wake of the bomb attacks, which killed 22 people and injured more than 100. AP IMAGES.*

patrolling highways, they supervise the licensing of vehicles, educate the public in traffic safety, and compile traffic statistics.

*Women Police:* Organized in 1951, the women police are concerned mainly with the welfare of women and children and social concerns. They specialize in prevention of crimes by or against women and children; suppression of prostitution and trafficking in women and children; control of pornography; and inspection of orphanages, institutions for the blind, hospitals, and rest homes.

*Perintis:* The *perintis* police are organized in units of twelve, drawn from members of the regular police willing to accept the risks involved in special high-risk assignments. Better-armed and more mobile than the regular police, they live in special barracks under rigid discipline. They have the

same uniform as the regular police but are distinguished by special badges.

*Criminal Investigation Police.* The Criminal Investigation Division is the central national crime-fighting force. It plays a major part in the investigation of criminal activity of a translocal nature, such as kidnapping, prostitution, counterfeiting, terrorism, organized brigandage, and criminal activities involving foreigners. Among other things, it handles fingerprinting and criminal registration, collects and analyzes criminal statistics, and maintains a crime laboratory. It is also the liaison agency with Interpol, which Indonesia joined in 1952.

*Security Police.* The Security Division has detachments at the district and city levels, along with major units at the national headquarters. The division's activities are

rarely made public but are believed to include counterterrorism and surveillance of political parties, known dissidents, labor unions, and the mass media.

**Mobile Brigade.** One of the oldest police units is the Mobile Brigade, formed in 1946. It was originally assigned the task of disarming the remnants of the Japanese soldiery after World War II, providing for the security of the chief of state and the capital city and related operations. Throughout the history of the republic, elements of the Mobile Brigade have been called upon in times of grave threats to national security, as in the military confrontation with Malaysia in the early 1960s, or in times of major disturbances, as in the suppression of the 1965 Communist coup.

The Mobile Brigade is organized along military lines, and its component battalions are equipped and maintained for operations in the manner of the army light infantry. It includes a parachute battalion and is supported by light armor and an efficient communications system. The brigade is based in Jakarta, where some of its units are permanently assigned as a guard for the president and the vice president, while other units are dispatched as task forces wherever needed. Units not so engaged are assigned to assist the regular police. Reflecting the general restoration of law and order in the country in the 1970s, the military orientation of the brigade was deemphasized in favor of a more conventional law enforcement role. Mobile Brigade personnel are engaged in civic action tasks under the armed forces' dual function policy.

**Education and Training.** Among police training institutions, the most important is the National Police Command and General Staff School established in Jakarta in 1964. Attendance at this school usually is a step toward higher assignment as a police inspector or commissioner. The Mobile Brigade maintains a specialized academy at Porong in East Java. A small and select number of officers attend police academies abroad, especially in the United States. The State Police School at Sukabumi in West Java provides basic training for all enlisted recruits as well as a more advanced training course. Police personnel are recruited on a voluntary basis from applicants between the ages of eighteen and twenty-five, with at least a sixth-grade education. They are required to pass a written and oral competitive examination, be physically fit, and be free of moral turpitude and alcoholism. Officer personnel enter the ranks through graduation from the Armed Forces Academy. Academy cadets receive one year of training in a common curriculum, followed by three years of additional training at the police branch of the academy to qualify promising enlisted men for higher positions.

**Uniforms and Weapons.** The police uniform is a light beige cotton shirt with short or rolled sleeves, worn open

at the neck, khaki trousers with combat-style boots (shoes for officers), and khaki-brown hats with dark bands. Rank insignias are worn on shoulder boards or on the sleeve. The standard weapon of the conventional police is the pistol, which is carried by all personnel. A small number of machine guns are available at various headquarters and police stations, primarily for the use of the *perintis*.

**Transportation, Technology, and Communication.** Jeeps and passenger cars are used by supervisory personnel and bicycles by the lower ranks.

**KOPKAMTIB.** KOPKAMTIB was created in late 1965 as a special organ to deal with pressing internal security problems. Its original function was to purge from the government and the armed forces Communists suspected of complicity in the 1965 abortive coup. It was also instrumental in enforcing the integration of the formerly semi-independent military services into an integrated armed forces after 1969. By 1974 KOPKAMTIB was a large and powerful organization, overshadowing all other law-enforcement agencies in the national security arena.

The KOPKAMTIB organization is shrouded in secrecy. It is believed to be an autonomous organ within the Department of Defense and Security but not a formal component of the Armed Forces of the Republic. Technically, it is only a command structure with regular military officers assigned to it. Below the central headquarters level, KOPKAMTIB officers are regular military commanders appointed concurrently to KOPKAMTIB positions. KOPKAMTIB does not recruit its personnel, although it maintains its own communication channels.

In addition to its countersubversive functions, KOPKAMTIB exercises certain inquisitorial oversights with respect to corruption and economic crimes. It has special competence in such sectors of the economy as the rice distribution system, which is basic to both public order and national development plans. Furthermore, KOPKAMTIB has authority to approve passport applications of Indonesians desiring to travel abroad for professional purposes.

KOPKAMTIB is an extralegal organ of government, but it is not a supergovernment. It is primarily an organ of political indoctrination and censorship. In 1973 it took a leading role in an official campaign against long hair in young people. It is the official censorship body for motion pictures, plays, and printed books and magazines. It also monitors academic and campus activities that could spill over into politics. Publishers and editors have to seek KOPKAMTIB clearance before obtaining a publishing permit from the Department of Information. Critical newspapers and magazines are sometimes banned outright. KOPKAMTIB has broad legal powers to arrest,

interrogate and detain individuals. Most of the human rights violations in the country stem from KOPKAMTIB personnel. Many attempts are periodically made to curb its awesome power and influence.

#### Police Statistics.

- Total Police Personnel: 188,581
- Population per Police Officer: 1,119

#### HUMAN RIGHTS

Indonesia has one of the worst human rights records in Southeast Asia, and as of the 2004 Country Report on Human Rights Practices, its record remained poor. Soldiers and police arbitrarily detain civilians and members of separatist movements, murdering, torturing, raping, and beating detainees. These abuses were most frequent in Aceh province on the northwest tip of Sumatra. Security force personnel commit severe abuses in other conflict zones, such as Papua, Moluccas, and Central Sulawesi. In Papua, the Mobile Brigade supported the anti-independence militias and committed assaults and rapes. Retired and active police officers known to have committed serious human rights violations have been promoted to senior positions in government and thus rewarded. Tribunals set up to try police charged with atrocities set free the majority of those charged. In the eastern part of the country, especially in the Moluccas and Central Sulawesi, police sided with Muslim terrorists against Christians and prevented displaced persons from returning to their homes. A number of killings and disappearances in Papua are attributed to the police and are linked to the government's ongoing efforts to crush the autonomy movement. There were more than 130 reported kidnapping victims throughout the country in 2003 alone. Police frequently use deadly force to apprehend suspects even in minor incidents. Occasionally, Mobile Brigade personnel use arson as a means of punishment. Human rights advocates blame police for many rapes that occur in conflict zones.

#### CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 120.9. Of which:

- Murder: 1
- Burglary: 4.4
- Assault: 1.8
- Automobile theft: 1.7

#### CORRECTIONAL SYSTEM

Penal institutions are administered by the Office of Prisons and Jails in the Department of Justice. They

include penitentiaries for those sentenced for severe offenses and local jails for lesser offenders. The largest and most important prisons are in Java. At least one prison and one or more local jail are in or near each major city. A penal colony with a capacity to house 6,000 inmates in a complex of nine separate prisons is on the island of Nusa Kampangan near the city of Tjilapjap in south-central Java.

There are specialized prisons for youth and in Java. Where it is not possible to house them in separate institutions, which is usually the case outside Java, juveniles and women are segregated from adult males.

In a category by itself is the penal colony on Buru Island, between Sulawesi and Papua. The colony occupies an area of 250,000 acres, divided into eighteen units of five hundred to one thousand prisoners each. Families are permitted to join prisoners for permanent residence on the island. Overall administration of the colony is in the hands of a special body called the Buru Resettlement Executive Body, headed by the attorney general. The physical security of the colony is in the hands of a military command that is part of the Fifteenth Area Command. The official goal is to eventually make the colony self-supporting.

**Prison Conditions.** Living conditions in Indonesia prisons vary considerably according to the kind and age of the facility. Newer prisons, such as those at Trenggalek and Tulungagung in East Java, are built to conform to international standards and contain modern features, such as running water, electricity, separate cells, sports fields, a hospital, and a library. More typical, however, are the crowded barracks that house twice as many inmates as they were designed for. Most have no electric lights or running water, have covered-pit toilets, and small windows, if any. Inmates sleep on mats spread on hard floors. In many cases, twelve prisoners share a 6-foot by 12-foot cell. Guards regularly extort money and mistreat prisoners.

Ordinarily, prisoners are permitted visits by family members and can receive limited amounts of food and other articles. Money for inmates may be deposited with prison authorities, to be issued to the inmates for cigarettes and personal necessities. Under some circumstances, prisoners are permitted to spend nights at home.

All prisons provide some kind of medical care although generally it is rudimentary. Some have resident doctors operating out of a small hospital. But in most cases, there is no doctor, and the hospital or clinic is supervised by a medical attendant working under the direction of a district civilian doctor who visits the prison about twice a week.

## *Indonesia*

Rehabilitation programs include literacy classes, religious training, and workshops to teach crafts and skills. Some prisons operate small industries or agricultural enterprises that sell their products on the local market. Proceeds are used to pay a small wage to the working inmates, to buy recreational equipment, and to maintain buildings and grounds. Most prisons operate trustee systems. Some have honor systems that permit prisoners to work outside the prison confines.

### **Prison Statistics.**

- Total Prison Population: 84,357
- Prison Population Rate per 100,000: 35

- Pretrial Detainees: 39.7%
- Female Prisoners: 3.7%
- Juvenile Prisoners: 5.2%
- Foreign Prisoners: 0.5%
- Number of Prisons: 378
- Official Capacity of the Prison System: 65,422
- Occupancy Level: 128.9%

# Iran

---

**Official country name:** Islamic Republic of Iran

**Capital:** Tehran

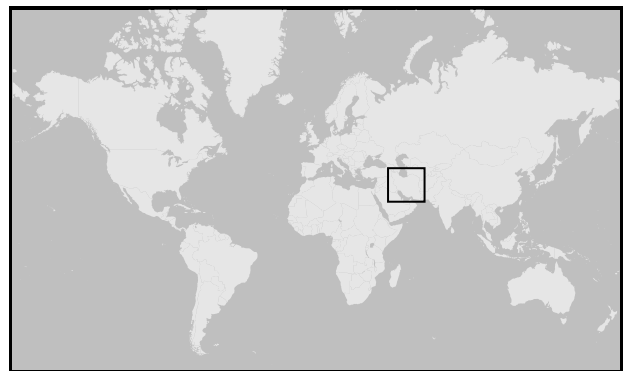

**Geographic description:** Middle Eastern country bordered by Iraq to the west, Afghanistan to the east, the Caspian Sea and Turkmenistan to the north, and the Persian Gulf and Gulf of Oman to the south

**Population:** 68,017,680 (est. 2005)

## LAW ENFORCEMENT

**History.** The two principal law enforcement agencies of Iran are the Gendarmerie and the National Police. The Gendarmerie, the older of the two police agencies, was founded in 1911. It has been completely reorganized twice—after World War II and after the 1979 Islamic revolution. Originally set up under the Ministry of Finance to control rural banditry so that taxes could be collected in the rural countryside, the Gendarmerie was organized and commanded by Swedish officers in its formative years. When Reza Pahlavi was crowned as Reza Shah in 1926, he absorbed the Gendarmerie into the army. The force remained unchanged until 1943, when it was given autonomy under the Ministry of the Interior. It retained this autonomy until 1980 when the mullahs (Muslims trained in Islamic law and doctrine) brought it back under army control and placed it under an army commander. A major landmark in the history of the Gendarmerie was the U.S. Mission to the Imperial Gendarmerie (GENMISH), which was assigned to Tehran from 1953 to 1956. Consisting of approximately twenty U.S. “advisers,” GENMISH was responsible for

developing the Gendarmerie as a modern force with U.S.-built weapons, light aircraft, helicopters, armored patrol cars and jeeps, trucks and motorcycles, and mobile radio network.

The National Police was founded in the early decades of the twentieth century when first Italian and then Swedish advisers offered police training to Iranians and founded the first school for training police officers. It was not, however, until 1921, that Reza Khan, shortly after his assumption of power, brought the various departments under the central control of the Ministry of the Interior. In its formative years, the National Police was essentially a paramilitary force, and the military orientation was prominent until the 1970s. By the mid-1970s, however, most of the military officers in the upper ranks, whose presence had been a cause of dissension among the career police officers below them, had been reassigned to the armed forces, leaving the National Police an entirely civil force.

The demilitarization of the National Police was accompanied by an upgrading in the quality of personnel, the modernization of virtually every aspect of the operation, and the doubling of the size of the force. During much of this period, these efforts were aided by the Public Safety Division under the U.S. Agency for International Development (USAID) training mission, which worked principally in the areas of training, communications, narcotics control, and traffic control. The mission was terminated during the 1960s. Perhaps the greatest progress was made in the area of recruitment and training.

In 1979 when the mullahs toppled the shah, both police agencies underwent their most dramatic transformation since their founding. However, both have retained their identity although in a vastly different setting. The dreaded SAVAK (acronym for the Organization for Intelligence and National Security), the shah's secret police organization, was replaced by SAVAMA (acronym for Information and Security Organization of the Nation), a theocratic *gestapo*. The Revolutionary Guard and *komitehs*, one of the primary organs of suppression, were introduced into the system to serve as Jacobin institutions for inspiring terror in the citizens, enforcing cruder forms of Islamic justice, and handling even routine law enforcement tasks with fervor.

#### Structure and Organization.

**Gendarmerie.** The Gendarmerie is found in more than 2,000 towns, and villages and outposts with a population of fewer than 5,000. The largest Gendarmerie unit is the district, of which there are fourteen. Districts, in turn, are divided into two or more regiments, each headquartered in a provincial town. About a third of the districts operate at brigade strength. Each regiment controls about six companies, the command posts of which are in the smaller municipalities. Finally, company areas are apportioned among posts—in villages, at road junctions, and in strategic rural areas—which are the smallest Gendarmerie units. Gendarmerie posts are of squad size and usually are under the command of an officer and two or more noncommissioned officers. Central headquarters are in Tehran. In addition to its stationary units, the Gendarmerie has numerous mobile units with the capability to go in hot pursuit of hostile persons or groups.

The duties of the Gendarmerie have expanded considerably since the early days when its mission was the suppression of the banditry. As it expanded, it performed a number of tasks in addition to its regular police functions:

- Apprehension of smugglers
- Maintenance of border security
- Traffic control on highways
- Backup support to the army in times of civil emergency or war

In a real sense, it represents the central government authority to much of the population and is a constant reminder of the authority of Tehran in a country where local authorities act as the repository of power.

**The National Police.** The National Police is about half the size of the Gendarmerie. Like the Gendarmerie, it is under the direction of the Ministry of the Interior. Its mission is to preserve law and order in all cities of more than 5,000 in population. In addition to the usual urban police activities, the National Police are responsible for:

- Conducting passport and immigration checks
- Issuance and control of citizens' identification cards and driver's licenses
- Vehicle licensing and registration
- Railroad and airport policing
- Prison management

The National Police are organized along hierarchical lines. Routine activities are carried out by city headquarters. Functions that exceed city jurisdiction are conducted by provincial headquarters, and those that exceed provincial jurisdiction are the responsibility of the national headquarters in Tehran. Organization also is horizontal. There are scores of different bureaus responsible for various police activities: prisons, selection, recruitment, traffic, communications, narcotics, passports and immigration, identification, intelligence and welfare.

#### Education and Training.

**Gendarmes.** Most gendarmes are volunteers, but some are conscripts who have completed their military service or inductees selected for duty. Most officers come from the military. In special cases, the army lends officers to the Gendarmerie, but they retain their army rank and eventually return to their units. Except for inducted enlisted personnel, who serve for two years, the usual enlistment period is five years, and the reenlistment period is three years. Most gendarmes make the service a career and stay in for twenty years, the minimum period required to obtain retirement benefits. Promotion for enlisted men is based on length of service, ability, and the recommendation of their immediate superior. A panel of examiners, appointed by the commanding general, must approve all promotions. The appointment of all senior officers must be approved by the cabinet.

Historically, morale among the gendarmes has been low. Low pay and poor living conditions in isolated posts combine to erode competence and integrity. Corruption is widespread. The general population hates and fears the gendarmes as agents of oppression who

*An Iranian policewoman wields her gun during the women's graduation ceremony at the Police Academy in Tehran, March 12, 2005. Sixty-five women joined the force to combat crimes committed by women. AP IMAGES.*

live by extortion and conduct illegal activities on the side. After the revolution, the Gendarmerie found themselves less powerful than the Revolutionary Guards and the neighborhood *komitehs*.

**National Police.** In the past, most members of the National Police were illiterate, unsuited for police work, and ill trained. Following USAID-initiated reforms in the 1970s, new recruitment standards resulted in a better cadre of policemen.

**Education and Training.** The pride of the force is the National Police University in Tehran, which houses training facilities for officers and enlisted men. To be accepted for officer school, an applicant must have a high school diploma and meet exacting physical and mental standards. Those who meet these standards spend three years studying police sciences at university level. The

successful cadet graduates as a second lieutenant with a licentiate degree. Subsequent promotions depend on length of service, quality of performance, and completion of further training. Upon reaching the rank of a lieutenant general, the officer reenters the university for a nine-month senior officer course, which consists of training in such fields as modern police tactics, administration, and planning. The course is mandatory for further promotion.

Recruit patrolmen also train for three months at the National Police University before becoming law enforcement officers. In addition to passing this course, enlisted men must pass a literacy test, show proof of grade school education, and pass physical and mental examinations. In-service training for both officers and patrolmen consists of a series of twelve-week courses in a variety of subjects, including criminal investigation, traffic regulation and control, civil disturbances control, law enforcement, prison management, and radio communications.

**Uniforms and Weapons.** The Gendarmerie uses the same basic uniform as the army and has the same rank structure. National Police uniforms consist of a navy-blue jacket and trousers for officers and navy-blue battle dress for other ranks. A navy-blue peaked cap (with a red band for officers) is worn by all ranks. All police personnel carry Walther automatic pistols.

## HUMAN RIGHTS

Under the Islamic clergy, the human rights situation in Iran has progressively deteriorated, with repression and discrimination against the regime's political opponents as well as religious minorities. Most human rights abuses are committed by paramilitary voluntary forces—virtual vigilantes known as *Basijis*—and gangs of thugs known as *Ansar-e-Hezbollah* who also act as vigilantes and intimidate and threaten people suspected of counter-revolutionary activities. Non-Muslims are prevented from obtaining government jobs and attending university, and many journalists and students are known to have disappeared at the hands of these entities. Security forces are responsible for killings, stoning and flogging, torture, arbitrary arrest, and detention without cause.

## CRIME

**Crime Statistics.** Offenses reported to the police per 100,000 population: 77. Of which:

- Murder: 0.5
- Assault: 47.7

## CORRECTIONAL SYSTEM

The penal system is governed by the Penal Code of 1925 as amended after the 1979 revolution to make it conform

more closely to the Sharia (the code of law derived from the Koran and teachings of Muḥammad). The original code classifies offenses on the French model into contraventions, or minor offenses, misdemeanors, and felonies, the last of which carry sentences of more than two years. There are three degrees of punishment for felonies:

- First degree: two to ten years
- Second degree: three to fifteen years
- Third degree: life imprisonment or execution

An amendment in 1960 authorized the detention of the insane in asylums, repeat offenders in deportation camps, vagabonds in work camps or agricultural colonies, alcoholics and drug addicts in rehabilitation centers, and juvenile delinquents in reeducation centers. There is no probation system, and those released early receive no supervision; the Sharia is oriented more toward retribution and punishment. Islamic law calls for death by stoning for moral transgressions, such as adultery; floggings and torture for sexual offenses; surgical amputation of four fingers of the right hand for stealing; and whipping for women who do not completely cover their hair and all of the body except hands and face or who wear makeup.

The prison system is officially under the Ministry of Justice, but the Ministry of the Interior has a voice in its operation and management. Each city and town has a prison. Tehran has two large prisons, including Qsar, the country's largest. There are three categories of prisons:

- Police jails, under Gendarmerie supervision in rural areas and National Police Supervision in towns and cities, used for preventive detention and short-term sentences
- Court prisons, under the criminal courts, used primarily for sentences of intermediate duration
- Penitentiaries, under direct military supervision, for long-term sentences

There are intermittent efforts to reform prisons and upgrade their conditions. Prison reform emphasized literacy training and providing gainful work to inmates, either in crafts inside or in farming outside prison walls.

Prisoners are paid for their work. Reforms have led to the opening of a small number of open prisons where inmates were allowed to work outside the prison, usually in road construction, forestry, and agriculture, without being subject to systematic supervision. The Quezelhasar Detention Center southwest of Tehran is considered a model prison, with sports facilities and small huts for conjugal visits. Conditional liberty, subject to police surveillance, may be granted to a prisoner who has served half the sentence in the case of a misdemeanor, two-thirds in the case of a felony, or twelve years in the case of life imprisonment.

**Prison Conditions.** Prison conditions are a matter for international concern, as they have deteriorated since the 1979 revolution because of the heavy influx of political prisoners and disregard for public opinion. Stories of torture and inhuman practices are rampant, especially in the notorious Ervin Prison in Tehran. The more common practices include mock executions, solitary confinement, beating on the soles of the feet, and blindfolding for long periods. Toilet facilities are inadequate or totally lacking. Medical treatment is rarely available; food is contaminated with dirt and bugs. Female prisoners are subject to rape and torture. Much of the prisoner abuse occurs in prisons run by the secret service and military, such as Prison 59 in Tehran.

**Prison Statistics.**

- Total Prison Population: 133,658
- Prison Population Rate per 100,000: 196
- Pretrial Detainees: 24.8%
- Female Prisoners: 3.5%
- Juvenile Prisoners: 1.3%
- Number of Prisons: 184
- Official Capacity of the Prison System: 65,000
- Occupancy Level: 243.1%

# Iraq

---

**Official country name:** Republic of Iraq

**Capital:** Baghdad

**Geographic description:** Middle Eastern country through which the Tigris and the Euphrates rivers flow, bordered by Iran to the east, Syria to the west, Turkey to the north, and Saudi Arabia and Kuwait to the south

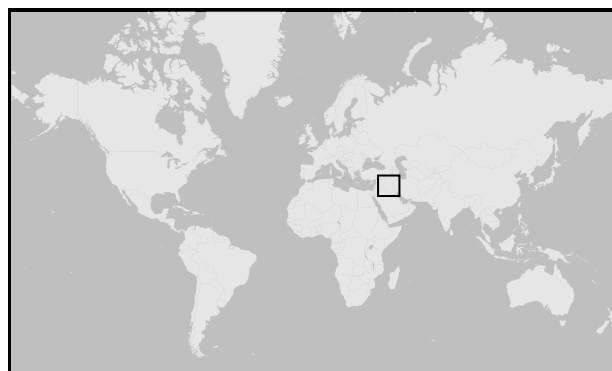

**Population:** 26,074,906 (est. 2005)

## LAW ENFORCEMENT

**History.** The Iraqi Police was formed in 1919 under British auspices. It was one of six paramilitary and internal security forces that kept law and order: The others were the People's Militia, the Youth Vanguard, the Border Guards, the Mobile Force, and the Department of General Intelligence (Al Mukhabarat). As of 2005, the Iraqi Police was still being reconstituted and reorganized following the U.S. and Allied forces invasion in March 2003, which ended the tortuous regime of President Saddam Hussein. It is expected it will be years before the country has a full-fledged and effective police force operationally independent of coalition occupation forces.

**Structure and Organization.** Before the Iraq-Kuwait conflict in 1990–1991, known as the Second Gulf War (the First Gulf War being the Iran-Iraq War of 1980–1988), the police functioned under a director general of police who was subordinate to the Ministry of the Interior. Territorially, the force was divided into 19 units—1 in Baghdad and 1 in each of the 18 governorates. Functionally, there were a number of specialized compo-

nents, including narcotics, railroads, and traffic. Police ranks were identical with that of the army.

The Mobile Force was a militarized police force used to support the regular force in countering major internal uprisings. It was armed with infantry weapons, artillery, and armored vehicles. The Border Guard was stationed principally in northern Iraq along the borders with Turkey, Iran, and Syria to guard against smuggling and infiltration. The Department of General Intelligence was Saddam Hussein's dreaded secret service, which he used to terrorize the population.

**Education and Training.** The Iraqi Police operate two main schools, both in Baghdad: the Police College for those with at least secondary school certificates, and the Police Preparatory School for those with only primary schooling.

**Uniforms and Weapons.** General police wear khaki drill uniforms while traffic policemen wear white. All carry side arms.

*An Iraq police officer inspects a damaged police car in Basra, April 5, 2005. The car was target of a roadside bomb attack that killed one officer and wounded three. Basra, located in southeast Iraq, is an area known for confrontations between secular Iraqi culture and Shi'ite Islam supporters. AP IMAGES.*

**Police Statistics.** In 2002 there were:

- Total Police Personnel: 1,71,442
- Population per Police Officer: 140

#### **HUMAN RIGHTS**

Hussein's regime had the worst human rights record in post-World War II history, both in the number of its victims and the range and severity of its abuses. Hundreds of thousands of people were killed, mostly Muslims and Kurds. Thousands were sent to torture chambers never to be found, and others were executed after being kept incommunicado for months. The death penalty was prescribed not only for opposing or insulting the president, but also for not supporting him openly. According to Amnesty International, more than 16,496 people disappeared during a ten-year period following the end of First Gulf War, most reported to be Kurds. Security forces systematically tortured prisoners. According to former prisoners, torture techniques included branding, electric shock administration to the

genitals, beating, removal of fingernails, amputation, burning with hot irons and blowtorches, suspension from rotating ceiling fans, dripping of acid onto the skin, breaking of limbs, denial of food and water, gouging out of the eyes, and solitary confinement in coffinlike compartments. Security forces sometimes returned the bodies of mutilated victims to their families. Women were raped in a systematic manner and videotapes of such rapes were used for blackmail.

#### **CRIME**

**Crime Statistics.** In 2002 offenses reported to the police per 100,000 population: 197. Of which:

- Murder: 7.1
- Assault: 34.7

#### **CORRECTIONAL SYSTEM**

The penal system was administered by the Ministry of Social Affairs and Labor and comprised eight prisons.

The largest prison in the country was the notorious Abu Ghreib Central Prison near Baghdad. Three other large ones were in the Basra, Babylon, and Nineveh governorates. Smaller centers of detention were located throughout the country. In addition, there were private and semiofficial prisons operated by the Baath Party (a secular Arab nationalist socialist party) to accommodate the overflow of inmates from the official system.

**Prison Conditions.** Prison conditions were inhumane and brutal. Hussein's regime reportedly conducted periodic "prison cleansing" campaigns to kill inmates in order to relieve overcrowding. Arbitrary arrests, prolonged detention, and incommunicado detention were some of the routine prison procedures. Many prisoners disappeared while in the prison system and were believed to have been summarily executed and buried in mass graves. Almost all political prisoners were tortured to elicit forced confessions.

Certain prisons were infamous for routine mistreatment of prisoners and detainees. Abu Ghreib, Baladiat,

Makasib, Rashidiyah, Radwaniyah, and others had torture chambers. Mentally ill patients were kept at Al-Shamma'iya Prison in Baghdad where they were tortured. The Al-Radwaniyah Detention Center was a former prisoner-of-war facility in Baghdad where there were mass executions. Many prisoners died as a result of beatings and torture. In certain detention facilities, certain prisoners were kept locked in metal boxes the size of coffins that reportedly were opened for only thirty minutes each day.

**Prison Statistics.** Statistics on prisoners were never released during Hussein's regime. In 2004:

- Total Prison Population: 15,000
- Prison Population Rate per 100,000 General Population: 58
- Number of Prisons: 8

*George Thomas Kurian*

# Ireland

---

**Official country name:** Ireland

**Capital:** Dublin

**Geographic description:** Occupies five-sixths of the island in the North Atlantic Sea west of Great Britain (the northern one-sixth is occupied by Northern Ireland)

**Population:** 4,015,676 (est. 2005)

## LAW ENFORCEMENT

**History.** Ireland's national police force is formally known as *An Garda Síochána na hÉireann*. This name, translated into English means "Guardians of the Peace of Ireland." Policing in Ireland has a rich history dating back to the eighteenth century, long before the development of *An Garda Síochána na hÉireann*. This tradition is highlighted by several dramatic political and organizational shifts, which have helped to bring about and shape the extremely modern and innovative police force commonly known simply as *An Garda Síochána*.

The first example of organized policing in Ireland was initiated with the Dublin Police Act of 1786. This act, as the name indicates, created a police force exclusively for the city of Dublin. However, during this era, most of the rest of Ireland had its policing needs met at the local level by watchmen. To serve the remainder of the country's changing policing needs, the Baronial Police (the "Old Barney's") was created in 1787. This police force, however, was ill-equipped to effectively handle anything more than minor problems, leaving serious issues to be dealt with by the military. Due to the extreme limitations on the

effectiveness of the Baronial Police, especially in dealing with everyday problems at the local level, many towns continued to utilize traditional watchmen systems to address local concerns. Recognizing the problematic limitations of the Baronial Police, Sir Robert Peel (chief secretary in Ireland from 1812 until 1818) took action to create a Peace Preservation Force in 1814 to supplement the Baronial Police and provide emergency policing services for the entire country.

After Peel left his position, policing in Ireland took a new turn. Of particular importance was the passing of the Constabulary Act of 1822, which created four separate police forces, each designated to serve a specific provincial area (Armagh, Daingean, Ballinrobe, and Ballincollig). The fragmentation of Ireland's police forces, however, proved to be a temporary organizational strategy. These provincial forces were ultimately consolidated with the Constabulary Act of 1836 and were officially titled the Constabulary of Ireland. In 1867 the name of the force

changed once again to the Royal Irish Constabulary (RIC).

The latter decades of the nineteenth century and the early years of the twentieth century was a time of relative stability for the RIC. During the years leading up to and including the War of Independence (the Anglo-Irish War) between 1919 and 1922, however, everything permanently changed. During the conflict, the police were subject to frequent violent attacks, and over four hundred police officers were killed during the four-year span of the war. Upon gaining independence in 1922 and the formal establishment of the government of the Irish Free State in 1923, the RIC was disbanded and replaced by the Civic Guard. The Civic Guard was later renamed *An Garda Síochána na hÉireann*, a title the force continues to hold to the present day. Political conditions that characterized the era made it a tremendous challenge for *An Garda Síochána* to establish itself as an accepted and legitimate component of the newly independent Irish government. However, both Irish society and *An Garda Síochána* have come a long way since the volatile era immediately following the War of Independence. The conditions under which the force operates, for instance, have improved vastly. The Republic of Ireland is characterized by an extremely high degree of political stability and is experiencing unprecedented economic prosperity. These factors have improved conditions under which the police force operates. Moreover, *An Garda Síochána* enjoys a strong, exceedingly positive relationship with the Irish public, and both parties deserve credit for contributing to keeping Ireland one of the safest societies in Europe.

Ireland's present-day police force is a modern organization equipped to handle even the most complex crime problems. Through the use of available technologies, this force is capable of responding to contemporary crime problems including computer crimes, identity theft, and international and domestic terrorism. Moreover, Ireland's national police force works diligently to maintain a respected reputation in regards to the protection of human rights and consideration for racial and cultural minorities. It also maintains an active role in the international law enforcement community, participating in joint endeavors (e.g., training programs, information sharing) with the European Union (EU) and Interpol. As a result, Ireland's national police force plays an important role in the global response to transnational organized crime and threats to international security.

*An Garda Síochána* offers a range of professional services equivalent to virtually any police force in the EU. This is especially noteworthy considering Ireland's relatively small population size. *An Garda Síochána's* emphasis on professionalism through rigorous educational and training standards for all officers serves as an example

to law enforcement organizations around the world. The initial investment made at the outset of each officer's career pays tremendous long-term dividends. These factors, among others, put *An Garda Síochána* in a position to continue to contribute to Ireland's status as of one of Europe's safest societies.

**Structure and Organization.** Ireland's national police force is headed by a government-appointed commissioner, Ireland's highest ranking law enforcement officer, who is responsible for overseeing all policing operations. Officers are overseen by the minister for justice, equality, and law reform. The police force is characterized by a relatively simple, albeit fragmented, organizational structure and is headquartered in Phoenix Park, Dublin, although there are numerous (over 700) decentralized police stations located throughout the country, which for law enforcement purposes is organized into six separate regions:

- Eastern
- Dublin Metropolitan
- South Eastern
- Southern
- Western
- Northern

Because the force provides policing services at the national, county, and local levels, effective officer deployment strategies are a vital prerequisite to the equitable administration of services. At the most basic level, most officers (*Gardai*) are deployed on a regional basis. Some specialists, on the other hand, work out of their respective bureaus and units, many of which are located at *An Garda Síochána* headquarters.

**Principal Agencies and Divisions.** Principal agencies and divisions of the national force include:

- Crime and Security
- Technical Bureau
- Drug Squad
- Intelligence

**Salaries.** At first glance, it appears that compared with other professionals in Ireland, *An Garda Síochána* officers receive competitive compensation for their services. However, there were lengthy salary negotiations in the late 1990s that resulted from officer demands for better wages. These demands culminated in a twenty-four-hour episode of the "blue flu" on May 1, 1998, when about 80% of the police force across the country called in sick in a show of force to protest the fact that salary negotiations had reached an impasse.

**Special Police.** A wide variety of specialized policing services are provided, each available to supplement the conventional regional police officers on an as-needed basis:

**Special Detective Unit.** The Special Detective Unit (SDU) is designated to deal with domestic security issues, including terrorism and crimes committed by paramilitary groups. The SDU includes the Emergency Response Unit, which is trained to respond to especially dangerous situations, such as those involving armed and dangerous suspects, and collecting and disseminating information pertaining to international and domestic terrorist threats, including the activities of paramilitary groups. In the process of fulfilling this role, the SDU gathers intelligence on dissident groups in the republic seeking to engage in subversive activities in Northern Ireland.

**Domestic Violence and Sexual Assault Investigation Unit.** Particularly complex cases related to intimate partner (domestic) violence and sexual crimes (e.g., sexual assault) are handled directly by the Domestic Violence and Sexual Assault Investigation Unit (DVSAIU). Generally, however, these crimes are handled by regular officers under guidance and supervision of the DVSAIU, which also provides training and assistance programs designed to enable officers to most effectively respond to these cases. In addition, the DVSAIU serves to coordinate multiagency solutions to these problems and, toward this end, cooperates with police agencies throughout the EU to address issues related to the illegal sex trade.

**Bureau of Fraud Investigation.** Investigation of crimes related to fraud is the responsibility of the Bureau of Fraud Investigation. Types of offenses dealt with include commercial fraud, credit card fraud, stolen checks, money laundering, and computer crimes. The following units are attached to this bureau:

- Assessment
- Commercial Fraud Investigation
- Computer Crime Investigation
- Money Laundering Investigation
- Stolen Check/Credit Card/Counterfeit

**National Drugs Unit.** Efforts to control drug use and distribution are led by the National Drugs Unit, which emphasizes the importance of controlling problems associated with drug trafficking both domestically and internationally. The unit is also heavily involved in the administration of drug education programs designed to reduce the demand for illicit substances, and unit personnel are actively engaged in these efforts in the community setting (such as in the various school systems).

*An Garda Síochána* has created other special bureaus and units to address different categories of crime,

especially those that tend to be related to organized criminal networks or organizations:

- Anti-Racketeering Unit
- Arts and Antiques Unit
- Stolen Motor Vehicle Investigation Unit
- Computer Theft Investigation Unit (part of the Bureau of Fraud Investigation)
- Post Office Investigation Unit
- Technical Bureau
- National Immigration Bureau

Support units include:

- Operational Support
- Air Support
- Dog Unit
- Mounted
- Water

Additional support services are provided by the forensic laboratory and drug squad, as well as units for fingerprinting, photographing, mapping, ballistics testing, and technical support. Most support units are centrally located at the Dublin-based headquarters.

**Education and Training.** In order to be considered for entry into *An Garda Síochána*, recruits must be at least eighteen years of age and no older than twenty-six. They are expected to be outstanding in terms of personal and professional conduct and be of good moral character and sound mental and physical health. Recruits are required to attend basic training and serve a probationary period prior to working as independent officers. In most respects, probationary officers have powers equivalent to those of their senior counterparts, yet their decisions and actions are subject to the added scrutiny of a rigorous, ongoing evaluation process. As a mandatory condition of service, all police officers are required to routinely attend in-service training requirements throughout their careers.

Training begins at *An Garda Síochána* College, an official institute for higher education located in Templemore, County Tipperary, operational since 1981. The range of coursework is designed to equip recruits to provide equitable services to all segments of the diverse Irish population and places considerable emphasis on community policing and conflict resolution. Entry-level membership is competitive and begins at the rank of student *Gardai*. The interdisciplinary training program consists of intensive coursework and fieldwork and is divided into five distinct but interrelated phases conducted over a two-year period.

During Phase one, the Primary Orientation Phase, students complete a twenty-week program in legal studies; social and psychological studies; policing theory, practices, and procedures; communications; management and organization; physical training, health and safety; and Irish studies. Trainees are required to be fluent in both the English and Irish languages. Phase two, the Broad Experiential Learning Phase, is a 22-week practical experience program undertaken at specially selected training stations under guidance of divisional training staff. Trainees then return to Garda College for Phase three, the Competency Development Phase, for an additional sixteen weeks. Upon successful completion, students are promoted to probationary status and stationed at a designated training station for four weeks. Phase four, the Deep Experiential Learning Phase, lasts thirty-eight weeks and is completed at selected placement stations. Phase five, Class Attendance, in which probationers attend classes at Garda College one day a month, completes the formal training program.

In addition to preparing student *Gardai* for service, Garda College offers veteran officers opportunities to complete specialist law enforcement training programs and even earn a bachelor's degree in police management.

**Uniforms and Weapons.** Garda uniforms are navy-blue trousers, jacket, tie, and peaked cap and a pale blue shirt. In July 2005 Garda introduced new operational uniforms, the new components consisting of a two-tone navy and yellow fluorescent jacket for visibility, utility belt to hold baton, handcuffs and other equipment, waterproof and lined blouson jacket with a detachable inner fleece, leather belt with brass buckle displaying the Garda crest, new cap and badge displaying corporate colors, and safety boots. Sergeants would wear a new-style shirt with a Chevron on the sleeve.

Unlike law enforcement officers in the United States but not unlike their counterparts in Britain, uniformed members of *An Garda Síochána* do not carry firearms. This comes as a surprise to many observers, but the police force's firearms policies have been used successfully for many decades. In fact, regular officers have not carried firearms since 1922 when the first commissioner, Michael Staines, commented "The *Garda Síochána* will succeed not by force of arms or numbers, but on their moral authority as servants of the people." Staying true to Staines's commitment to this day, uniformed officers are armed only with batons. Firearms (typically handguns) are, however, carried by detectives who customarily wear plainclothes.

#### **Transportation, Technology, and Communications.**

**Transportation.** *An Garda Síochána* operates a fleet of nearly 2,000 vehicles composed of cars, vans,

motorcycles, and specialty vehicles, as well as bicycle and mounted patrol units in some urban areas. The variety of vehicles utilized reflects the wide range of activities and services provided. For routine patrol purposes, officers generally drive light-duty patrol cars, vans, mid-size 4x4 sport utility vehicles, and motorcycles. A variety of specialty vehicles (e.g., large utility vans) uniquely equipped is available for use by specific bureaus and units. Air support by helicopter is also available.

**Technology.** As the twenty-first century began, technologically, *An Garda Síochána* was in a state of rapid and dramatic transition and growth. In 2000 the force made the switch to a high-tech crime data collection strategy with the adoption of PULSE, a sophisticated computer-based crime reporting system. Data are collected by the Crime Statistics Office, which reports findings to the parliament and publishes them in an annual report. PULSE provides significant long-term advantages for interpreting crime trends and providing in-depth analyses of crime patterns. Technological support is provided by the Technical Bureau. This bureau has multiple responsibilities, with primary functions, including provision of direct field assistance and laboratory-based support during crime-scene investigations. Its Mapping Section supports regular *Gardai* with surveying and mapping services to aid investigations, security provisions, and court exhibits. Additional sections and offices within the bureau include:

- Fingerprint Section
- Document and Handwriting Examination Section
- Photographic Section
- Forensic Liaison Office
- Ballistics Section
- Criminal Records Office

**Communications.** In the early twenty-first century, *An Garda Síochána* began implementing a new computer-aided dispatch system and subsequently equipping all *Garda* personnel with digital radios. The new digital system replaced the analog radio system in an effort to increase effectiveness and efficiency of communication. Specifically, the digital system was installed to enhance the quality, expand the range, and increase the reliability of communications throughout the force. The communications system control center was updated to facilitate the new communications network.

**Police Statistics.** Measured strictly in terms of personnel, *An Garda Síochána* is a small national police force, considering the organization provides the Irish public with virtually all of its policing services, even at the local level. Its small size is particularly noteworthy considering the size of the country's population, its uneven distribution, and the

## Ireland

fact that 1 million people live Dublin alone; the country's geographic size, of over 84,412 square kilometers; and the fact that the force manages seven hundred police stations.

- Total Police Personnel: 11,814
- Population per Police Officer: 310

### HUMAN RIGHTS

The basic laws of the Republic of Ireland are outlined in the constitution (*Bunreacht na hÉireann*), enacted in 1937. Laws passed by the British Parliament, which preexisted official Irish independence in 1922, are still effective with the exception of those formally repealed or deemed unconstitutional. The *Bunreacht na hÉireann* outlines the role of the democratic government and declares that the government's power is derived from the people.

By the close of the twentieth century, many countries internationally had enhanced efforts to ensure that all members of the public receive fair and equitable treatment from law enforcement officials. As this is a crucial aspect of effective policing, *An Garda Síochána* took great strides toward making this effort a reality in Ireland by promoting diversity awareness among officers. Recognizing the responsibility of the police to be sensitive to ethnic and cultural diversity issues, the Racial and Intercultural Office (GRIO) was established to provide training, oversight and guidance for *Gardai*. Moreover, the GRIO operates to raise awareness on issues relevant to minority communities and to formulate agency policies for appropriate police strategies in these areas.

*An Garda Síochána* takes issues related to human rights very seriously. The force has established a Human Rights Office to coordinate a partnership between the police and community groups. Representatives of the Human Rights Office work with the European Platform on Policing and Human Rights to identify and implement strategies for effectively addressing these issues. These efforts have resulted, for instance, in the development of a human rights course for inclusion in the *Garda* training program.

### CRIME

#### Criminal Investigations and Forensics.

*Forensics.* The forensics laboratory located at *An Garda Síochána* headquarters in Dublin provides support services to meet police officers needs throughout the country. The Fingerprint Section of the Technical Bureau provides the following array of services:

- Identification of specific persons by their criminal records
- Authentication of criminal history data

- Linking culprits to crime scenes
- Identifying unidentified dead bodies
- Technical examination of major crime scenes and exhibits
- Provision of expert fingerprint evidence in court
- Maintenance of fingerprint and palm-print databases in accordance with legislation
- Provision and maintenance of a separate fingerprint database relating to the fingerprinting of asylum seekers
- Training in the science of fingerprints to Garda personnel
- Training crime scene examiners in techniques for the recovery of finger and palm marks from crime scenes
- Searching of fingerprints received from Interpol and external police forces
- Searching finger and palm marks received from other jurisdictions
- External contacts

*Documents and Handwriting.* The Technical Bureau also staffs a variety of specialized sections to assist in criminal investigations: The Document and Handwriting Examination Section is responsible for comparing handwriting samples (to identify the author) as well as identifying the authenticity of various documents (to investigate instances of fraud, counterfeiting, etc.). The Photographic Section provides services related to crime-scene photography as well as training regular *Garda* officers in field photography techniques.

*Ballistics.* The Ballistics Section operates a sophisticated laboratory to provide a variety of support services, including:

- Examination and testing of all firearms and ammunition seized
- Examination of all explosive substances/devices seized
- Detailed technical examination of scenes of serious crime
- Restoration of erased/obliterated identification marks/numbers on suspected stolen property
- Examination of scenes of suspected arson
- Provision of expert service in shoe and tire prints, and tool marks to local scenes of crime examiners
- Examination and surveying of existing/proposed firearm shooting ranges

*Security and Intelligence.* The Security and Intelligence Section is responsible for intelligence gathering on criminal groups. Of particular concern to this section is

the potential for activities of paramilitary groups to create violence and threaten the peace process in Northern Ireland. The section is involved in monitoring organized crime groups, such as those originating from Eastern Europe, which became increasingly active throughout the rest of the EU over the last decade of the twentieth century and is actively involved in working partnerships and collaborations with their counterparts throughout the EU and the rest of the world. In 2001, for instance, *Garda* personnel attended an Intelligence Analysis Course administered by Europol.

**Organized Crime.** The most significant organized crime problem in the Republic of Ireland can be attributed to the overflow of paramilitary violence from Northern Ireland. While this has posed a significant challenge in previous decades, paramilitary activities (as is the case with paramilitary violence in Northern Ireland) has diminished considerably following the signing of the Good Friday Agreement in 1998. Nevertheless, *An Garda Síochána* plays a role in monitoring known paramilitary groups and working to prevent violence that may undermine the peace process. Of particular importance are the efforts of police officials throughout both the Republic of Ireland and Northern Ireland to make certain that these paramilitary groups comply with the weapons decommissioning requirements set forth by the Good Friday Agreement.
