Soc. And we admit that the user is not the same with the things which he uses?

Al. Yes.

Soc. Then the shoemaker and the harper are to be distinguished from the hands and feet which they use?

Al. That is clear.

Soc. And does not a man use the whole body?

Al. Certainly.

Soc. And that which uses is different from that which is used?

Al. True.

Soc. Then a man is not the same as his own body?

Al. That is the inference.

Soc. What is he, then?

Al. I cannot say.

Soc. Nay, you can say that he is the user of the body.

Al. Yes.

130 *Soc.* And the user of the body is the soul?

Al. Yes, the soul.

Soc. And the soul rules?

Al. Yes.

Soc. Let me make an assertion which will, I think, be universally admitted.

Al. What is that?

Soc. That man is one of three things.

Al. What are they?

Soc. Soul, body, or the union of the two.

Al. Certainly.

Soc. But did we not say that the actual ruling principle of the body is man?

Al. Yes, we did.

Soc. And does the body rule over itself?

Al. Certainly not.

Soc. It is subject, as we were saying?

Al. Yes.

Soc. Then that is not the principle which we are seeking?

Al. It would seem not.

Soc. But may we say that the union of the two rules over the body, and consequently that this is man?

Al. Very likely.

Soc. The most unlikely of all things; for if one of the members is subject, the two united cannot possibly rule.

Al. True.

Soc. But since neither the body, nor the union of the two, is man, either man has no real existence, or the soul is man?

Al. Just so.

Soc. Is anything more required to prove that the soul is man?

Al. No; I think that the proof is sufficient.

Soc. If the proof, although not quite precise, is fair, we may be satisfied;—more precise proof will be supplied when we have discovered that which we were led to omit, from a fear that the enquiry would be too much protracted.

Al. What was that?

Soc. What I meant, when I said that absolute existence must be first considered; but now, instead of absolute existence, we have been considering the nature of individual existence, and this may, perhaps, be sufficient; for surely there is nothing belonging to us which may be more properly said to exist than the soul?

Al. There is nothing.

Soc. Then we may truly conceive that you and I are conversing with one another, soul to soul?

Al. Very true.

Soc. And that is just what I was saying before—that I Socrates, am not arguing or talking with the face of Alcibiades, but with the real Alcibiades; or in other words, with his soul.

Al. True.

Soc. Then he who bids a man know himself, would have him know his soul?

Al. That appears to be true.

131 *Soc.* He, then, whose knowledge only extends to the body, knows the things of a man, and not the man himself?

Al. That is true.

Soc. Then neither the physician regarded as a physician, nor the trainer regarded as a trainer, knows himself?

Al. He does not.

Soc. Then the husbandmen and the other craftsmen are very far from knowing themselves, for they would seem not even to know their own belongings? When regarded in relation to the arts which they practise they are even further removed, for they only know the belongings of the body, which minister to the body.

Al. That is true.

Soc. Then if temperance is the knowledge of self, in respect of his art, none of them is temperate?

Al. I agree.

Soc. And this is the reason why their arts are accounted vulgar, and are not such as a good man would practise?

Al. Quite true.

Soc. Again, he who cherishes his body cherishes not himself, but what belongs to him?

Al. That is true.

Soc. But he who cherishes his money, cherishes neither himself nor his belongings, but is in a stage yet further removed from himself?

Al. I agree.

Soc. Then the money-maker has really ceased to be occupied with his own concerns?

Al. True.

Soc. And if any one has fallen in love with the person of Alcibiades, he loves not Alcibiades, but the belongings of Alcibiades?

Al. True.

Soc. But he who loves your soul is the true lover?

Al. That is the necessary inference.

Soc. The lover of the body goes away when the flower of youth fades?

Al. True.

Soc. But he who loves the soul goes not away, as long as the soul follows after virtue?

Al. Yes.

Soc. And I am the lover who goes not away, but remains with you, when you are no longer young and the rest are gone?

Al. Yes, Socrates; and in that you do well, and I hope that you will remain.

Soc. Then you must try to look your best.

Al. I will.

Soc. The fact is, that there is only one lover of Alcibiades, the son of Cleinias; there neither is nor ever has been seemingly any other; and this only darling in whom he rejoices is Socrates, the son of Sophroniscus and Phaenarete.

Al. True.

Soc. And did you not say, that if I had not spoken first, you were on the point of coming to me, and enquiring why I only remained?

Al. That is true.

Soc. The reason was that I only love you, whereas other men love what belongs to you; and your beauty, which is not you, is fading away, just as your true self is beginning to bloom. And ¹³² I will never desert you, if you are not spoiled and deformed by the Athenian people; for the danger which I most fear is that you will become a lover of the people and will be spoiled by them. Many a noble Athenian has been ruined in this way. For the demus of the great-hearted Erechtheus is of a fair countenance, but you should see him naked; wherefore observe the caution which I give you.

Al. What caution?

Soc. Practise yourself, sweet friend, in learning what you ought to know, before you enter on politics; and then you will have an antidote which will keep you harmless.

Al. Good advice, Socrates, but I wish that you would explain to me in what way I am to take care of myself.

Soc. Have we not made an advance? for we are at any rate tolerably well agreed as to what we are, and there is no longer

any danger, as we once feared, that we might be taking care not of ourselves, but of something which is not ourselves.

Al. That is true.

Soc. And our first duty will be to take care of the soul, and look to that?

Al. Certainly.

Soc. Leaving the care of our bodies and of our properties to others?

Al. Very good.

Soc. But how can we have a perfect knowledge of the things of the soul?—For if we know them, the inference is that we shall know ourselves. Can we really be ignorant of the excellent meaning of the Delphian inscription, of which we were just now speaking?

Al. What have you in your thoughts, Socrates?

Soc. I will tell you what I suspect to be the meaning and lesson of that inscription. Let me take an illustration from sight, which I imagine to be the only one suitable to my purpose.

Al. What do you mean?

Soc. Consider; if some one were to say to the eye, 'See thyself,' as you might say to a man, 'Know thyself,' what is the nature and meaning of this precept? Would not his meaning be:—That the eye should look at that in which it would see itself?

Al. Clearly.

Soc. And what is the object in looking at which, we see ourselves?

Al. Clearly, Socrates, in looking at mirrors and the like.

Soc. Very true; and is there not something of the nature of a mirror in our own eyes?

Al. Certainly.

Soc. Did you ever observe that the face of the person looking into the eye of another is reflected as in a mirror in the visual
133 organ which is over against him, and which is called the pupil—there is a sort of image of the person looking?

Al. That is quite true.

Soc. Then the eye, looking at another eye, and at that in the eye which is most perfect, and which is the instrument of vision, will there see itself?

Al. That is evident.

Soc. But looking at anything else either in man or in the world, and not to what resembles this, it will not see itself?

Al. Very true.

Soc. Then if the eye is to see itself, it must look at the eye, and at that part of the eye where sight which is the virtue of the eye resides?

Al. True.

Soc. And if the soul, my dear Alcibiades, is ever to know herself, must she not look at the soul; and especially at that part of the soul in which her virtue resides, and which is like herself?

Al. I agree, Socrates.

Soc. And do we know of any part of our souls more divine than that which has to do with wisdom and knowledge?

Al. There is none.

Soc. Then this is that part of the soul which resembles the divine, and he who by looking at this knows all that is divine, will be most likely to know himself?

Al. That is plain.

Soc. And self-knowledge we agree to be wisdom?

Al. True.

Soc. But if we have no self-knowledge and no wisdom, can we ever know our own good and evil?

Al. How is that possible, Socrates?

Soc. You mean, that if you did not know Alcibiades, there would be no possibility of your knowing that what belonged to Alcibiades was really his?

Al. That would indeed be impossible.

Soc. Nor should we know that we were the persons to whom anything belonged, if we did not know ourselves?

Al. How could we?

Soc. And if we did not know our own belongings, neither should we know the belongings of our belongings?

Al. Clearly not.

Soc. Then we were not altogether right in acknowledging just now that a man may know what belongs to him and yet not know himself; nay, rather he cannot even know the belongings of his belongings; for the discernment of the things of self, and of the things which belong to the things of self,

appear all to be the business of the same man, and of the same art.

Al. That is to be supposed.

Soc. And he who knows not the things which belong to himself, will in like manner be ignorant of the things which belong to others?

Al. Very true.

Soc. And if he knows not the affairs of others, he will not know the affairs of states?

Al. Certainly not.

Soc. Then such a man can never be a statesman?

Al. He cannot.

Soc. Nor an economist?

Al. He cannot.

134 *Soc.* He will not know what he is doing?

Al. He will not.

Soc. And will not he who is ignorant fall into error?

Al. Assuredly.

Soc. And if he errs, he will fail both in his public and private capacity?

Al. Yes, indeed.

Soc. And failing, will he not be miserable?

Al. Very.

Soc. And what will become of those for whom he is acting?

Al. They will be miserable also.

Soc. Then he who is not wise and good cannot be happy?

Al. He cannot.

Soc. The bad, then, are miserable?

Al. Yes, very.

Soc. And not he who has riches, but he who has wisdom, is delivered from his misery?

Al. Clearly.

Soc. Cities, then, if they are to be happy, do not want walls, or triremes, or docks, or numbers, or size, Alcibiades, without virtue?

Al. Indeed they do not.

Soc. And you must give the citizens virtue, if you mean to administer their affairs rightly or nobly?

Al. Certainly.

Soc. But can a man give that which he has not?

Al. Certainly not.

Soc. Then you or any one who means to govern and superintend, not only himself and the things of himself, but the state and the things of the state, must in the first place acquire virtue.

Al. That is true.

Soc. You have not therefore to obtain power or authority, in order to enable you to do what you wish for yourself and the state, but justice and wisdom.

Al. That is true.

Soc. You and the state, if you act wisely and justly, will act according to the will of God?

Al. Certainly.

Soc. As I was saying before, you will look only at what is bright and divine, and act with a view to them?

Al. Yes.

Soc. In that mirror you will see and know yourselves and your own good?

Al. Yes.

Soc. And so you will act rightly and well?

Al. Yes.

Soc. In which case, I will be security for your happiness.

Al. I accept the security.

Soc. But if you act unrighteously, your eye will turn to the dark and godless, and being in darkness and ignorance of yourselves, you will probably do deeds of darkness.

Al. Very possibly.

Soc. For if a man, my dear Alcibiades, has the power to do what he likes, but has no understanding, what is likely to be the result, either to him as an individual or to the state—for 135 example, if he be sick and is able to do what he likes, not having the mind of a physician—having moreover tyrannical power, and no one daring to reprove him, what will happen to him? Will he not be likely to have his constitution ruined?

Al. That is true.

Soc. Or again, in a ship, if a man having the power to do what he likes, has no intelligence or skill in navigation, do you see what will happen to him and to his fellow-sailors?

Al. Yes ; I see that they will all perish.

Soc. And in like manner, in a state, and where there is any power and authority which is wanting in virtue, will not the result be the same?

Al. Certainly.

Soc. Not royal power, then, my good Alcibiades, should be the aim either of individuals or states, if they would be happy, but virtue.

Al. That is true.

Soc. And before they have virtue, to be commanded by their betters, is better for men as well as for children?

Al. That is evident.

Soc. And that which is better is also nobler?

Al. True.

Soc. And what is nobler is more becoming?

Al. Certainly.

Soc. Then to the bad man slavery is more becoming, because better?

Al. True.

Soc. Then vice is slavish?

Al. Yes.

Soc. And virtue is the attribute of a freeman?

Al. Yes.

Soc. And, O my friend, is not slavery to be avoided?

Al. Certainly, Socrates.

Soc. And are you now conscious of your own state? And do you know whether you are a freeman or not?

Al. I think that I am very conscious indeed of my own state.

Soc. And do you know how to escape out of a state which I do not even like to name to my beauty?

Al. Yes, I do.

Soc. How?

Al. By your help, Socrates.

Soc. That is not well said, Alcibiades.

Al. What ought I to have said?

Soc. By the help of God.

Al. I agree ; and I further say, that our relations are likely to be reversed. From this day forward, I must and will follow you

as you have followed me ; I will be the disciple, and you shall be my master.

Soc. O that is rare ! My love breeds another love : and so like the stork I shall be cherished by the bird whom I have hatched.

Al. Strange, but true ; and henceforward I shall begin to think about justice.

Soc. And I hope that you will persist ; although I have fears, not because I doubt you ; but I see the power of the state, which may be too much for both of us.

MENEXENUS.

INTRODUCTION.

THE *Menexenus* has more the character of a rhetorical exercise than any other of the Platonic works. The writer seem to have wished to emulate Thucydides, and the far slighter work of Lysias. In his rivalry with the latter, to whom in the *Phaedrus* Plato shows a strong antipathy, he is entirely successful, but he is not equal to Thucydides. The *Menexenus*, though not without real Hellenic interest, falls very far short of the rugged grandeur and political insight of the great historian. The fiction of the speech having been invented by Aspasia, is well sustained, and is in the manner of Plato; notwithstanding the anachronism which puts into her mouth an allusion to the peace of Antalcidas, an event occurring forty years after the date of the supposed oration. But Plato, like Shakespeare, is careless of such anachronisms, which are not supposed to strike the mind of the reader. The effect produced by these grandiloquent orations on Socrates, who does not recover after having heard one of them for three days and more, is truly Platonic.

Such discourses, if we may form a judgment from the three which are extant (for the so-called Funeral Oration of Demosthenes is a bad and spurious imitation of Thucydides and Lysias), conformed to a regular type. They began with Gods and ancestors, and the legendary history of Athens, to which succeeded an almost equally fictitious account of later times. The Persian war usually formed the centre of the narrative; in the age of Isocrates and Demosthenes the Athenians were still living on the glories of Marathon and Salamis. The *Menexenus* casts a veil over the weak places of Athenian history. The war of Athens and Boeotia is a war of liberation; the Athenians gave back the Spartans taken at Sphacteria out of kindness—indeed, the only fault of the city

was too great kindness—their enemies were more honoured than the friends of others (cp. Thucyd. ii. 41, which seems to contain the germ of the idea); we democrats are the true aristocracy of virtue. These are the platitudes and falsehoods in which Athenian history is disguised.

The author of the *Menexenus*, whether Plato or not, is evidently intending to ridicule the practice, and at the same time to show that he can beat the rhetoricians in their own line, as in the *Phaedrus* he may be supposed to offer an example of what Lysias might have said, and of how much better he might have written in his own style. The orators had recourse to their favourite *loci communes*, one of which, as we find in Lysias, was the shortness of the time allowed them for preparation. But Socrates points out that they had them always ready for delivery, and that there was no difficulty in improvising any number of such orations. To praise the Athenians among the Athenians was easy,—to praise them among the Lacedaemonians would have been a much more difficult task. Socrates himself has turned rhetorician, having learned of a woman, Aspasia, the mistress of Pericles; and any one who had had far inferior teachers to him,—say, one who had learned from Antiphon the Rhamnusian—would be quite equal to the task of praising men to themselves. When we remember that Antiphon is described by Thucydides as the best pleader of his day, the satire on him and on the whole tribe of rhetoricians is transparent.

The ironical assumption of Socrates, that he must be a good orator because he had learnt of Aspasia, is not coarse, as Schleiermacher supposes, but is rather to be regarded as fanciful. Nor can we say that the offer of Socrates to dance naked out of love for Menexenus, is any more unPlatonic than the threat of physical force which *Phaedrus* uses towards Socrates (286 C). Nor is there any real vulgarity in the fear which Socrates expresses that he will get a beating from his mistress, Aspasia: this is the natural exaggeration of what might be expected from an imperious woman. Socrates is not to be taken seriously in all that he says, and Plato, both in the *Symposium* and elsewhere, is not slow to admit a sort of Aristophanic humour. How a great original genius like Plato might or might not have written, what was his conception of humour, or what limits he would have prescribed to himself, if any, in drawing the picture of the Silenus Socrates, are problems which no critical instinct can determine.

On the other hand, the dialogue has several Platonic traits, whether original or imitated may be uncertain. Socrates, when he departs from his character of a 'know nothing' and delivers a speech, generally pretends that what he is speaking is not his own composition. Thus in the *Cratylus* he is run away with (410 E); in the *Phaedrus* he has heard somebody say something (235 C)—is inspired by the *genius loci* (238 D), and the like. But he does not impose on Menexenus by his dissimulation. Without violating the character of Socrates, Plato, who knows so well how to give a hint, or some one writing in his name, intimates clearly enough that the speech in the *Menexenus* like that in the *Phaedrus* is to be attributed to Socrates. The address of the dead to the living at the end of the oration may also be compared to the numerous addresses of the same kind which occur in Plato, in whom the dramatic element is always tending to prevail over the rhetorical. The remark has been often made, that in the Funeral Oration of Thucydides there is no allusion to the existence of the dead. But in the *Menexenus* a future state is clearly, although not strongly, asserted.

Whether the *Menexenus* is a mere imitation of Plato or an original work, remains uncertain; in either case, the thoughts appear to be partly borrowed from the Funeral Oration of Thucydides. Internal evidence seems to leave the question of authorship in doubt. There are merits and there are defects which might lead to either conclusion. The form of the greater part of the work makes the enquiry difficult; the introduction and the finale certainly wear the look either of Plato or of a skilful imitator of Plato. In this uncertainty the express testimony of Aristotle, who quotes, in the *Rhetoric*¹, the well-known words, 'It is easy to praise the Athenians among the Athenians,' from the Funeral Oration, may perhaps turn the balance in its favour. It must be remembered also that the work was famous in antiquity, and is included in the Alexandrian catalogues of Platonic writings.

¹ i. 9, 30; iii. 14, 11.

MENEXENUS.

PERSONS OF THE DIALOGUE.

SOCRATES and MENEXENUS.

Steph. *Socrates.* Whence come you, Menexenus? Are you from the
234 Agora?

Menexenus. Yes, Socrates; I have been at the council.

Soc. And what might you be doing at the council? And yet I need hardly ask, for I see that you, believing yourself to have arrived at the end of education and of philosophy, having had enough of them, and, being now grown up, are going higher, and intend to govern us old men like the rest of your family, which has always provided some one who kindly took care of us.

Men. Yes, Socrates, I shall be ready to hold office, if you allow and advise that I should, but not if you think otherwise. I went to the council chamber because I heard that the council was about to choose some one who was to speak over the dead. For you know that there is to be a public funeral?

Soc. Yes, I know. And whom did they choose?

Men. No one; they delayed the election until to-morrow, but I believe that either Aeschines or Dion will be chosen.

Soc. O Menexenus! death in battle is certainly in many respects a noble thing. The dead man gets a fine and costly funeral, although he may have been poor, and an elaborate speech is made over him by a wise man who has long ago prepared what he has to say, although he who is praised may not have been good for much. The speakers praise him for what he has done and for what he has not done—that is the beauty of them—and they steal away our souls with their

embellished words; in every conceivable form they praise the ²³⁵ city; and they praise those who died in war, and all our ancestors who went before us; and they praise ourselves also who are still alive, until I feel quite elevated by their laudations, and I stand listening to their words, Menexenus, and become enchanted by them, and all of a sudden I imagine myself to have grown up into a greater and nobler and finer man than I was before. And if, as often happens, there are any foreigners who accompany me to the speech, I become suddenly conscious of having a sort of triumph over them, and they seem to experience a corresponding feeling of admiration at me, and at the greatness of the city, which appears to them, when they are under the influence of the speaker, more wonderful than ever. This consciousness of dignity lasts me more than three days, and not until the fourth or fifth day do I come to my senses and know where I am; in the meantime I have been living in the Islands of the Blest. Such is the art of our rhetoricians, and in such manner does the sound of their words keep ringing in our ears.

Men. You are always making fun of the rhetoricians, Socrates; this time, however, I am inclined to think that the speaker who is chosen will not have much to say, for he has been called upon to speak at a moment's notice, and he will be compelled almost to improvise.

Soc. But why, my friend, should he not have plenty to say? Every rhetorician has speeches ready made; nor is there any difficulty in improvising that sort of stuff. Had the orator to praise Athenians among Peloponnesians, or Peloponnesians among Athenians, he must be a good rhetorician who could succeed and gain credit. But there is no difficulty in a man's winning applause when he is contending for fame among the persons who are being praised.

Men. Do you think not, Socrates?

Soc. Certainly 'not.'

Men. Do you think that you could speak yourself if there should be a necessity, and if the council were to choose you?

Soc. That I should be able to speak is no great wonder, Menexenus, considering that I have an excellent mistress in the art of rhetoric,—she who made so many good speakers, and one

who was the best among all the Hellenes—Pericles, the son of Xanthippus.

Men. And who is she? I suppose that you mean Aspasia.

Soc. Yes, I do; and besides her I had Connus, the son of
 236 Metrobius, as a master, and he was my master in music, as she was in rhetoric. No wonder that a man who has received such an education should be a finished speaker; even the pupil of very inferior masters, say, for example, one who had learned music of Lamprus, and rhetoric of Antiphon the Rhamnusian, might make a figure if he were to praise the Athenians among the Athenians.

Men. And what would you be able to say if you had to speak?

Soc. Of my own wit, most likely nothing; but yesterday I heard Aspasia composing a funeral oration about these very dead. For she had been told, as you were saying, that the Athenians were going to choose a speaker, and she repeated to me the sort of speech which he should deliver, partly improvising and partly from previous thought, putting together fragments of the funeral oration which Pericles spoke, and, I believe, she composed.

Men. And can you remember what Aspasia said?

Soc. I ought to be able, for she taught me, and she was ready to strike me because I was always forgetting.

Men. Then why will you not rehearse what she said?

Soc. Because I am afraid that my mistress may be angry with me if I publish her speech.

Men. Nay, Socrates, let us have the speech, whether Aspasia's or any one else's, no matter about that. I hope that you will oblige me.

Soc. But I am afraid that you will laugh at me if I continue the games of youth in old age.

Men. Far otherwise, Socrates; let us by all means have the speech.

Soc. Truly I have such a disposition to oblige you, that if you bid me dance naked I should not like to refuse, since we are alone. Listen then. If I remember rightly, she began as follows, with the mention of the dead:—

There is a tribute of deeds and of words. The departed have

already had the first, when going forth on their destined journey they were attended on their way by the state and by their friends; the tribute of words remains to be given to them, as is meet and by law ordained. For noble words are a memorial and a crown of noble actions, which are given to the doers of them by the hearers. A word is needed which will duly praise the dead and gently admonish the living, exhorting the brethren and descendants of the departed to imitate their virtue, and consoling their fathers and mothers and the survivors, if any, who may chance to be alive of the previous generation. What ²³⁷ sort of a word will this be, and how shall we rightly begin the praises of these brave men? In their life they rejoiced their own friends with their virtue, and their death they gave in exchange for the salvation of the living. And I think that we should praise them in the order in which nature made them good, for they were good because they were sprung from good fathers. Wherefore let us first of all praise the goodness of their birth; secondly, their nurture and education; and then let us set forth how noble their actions were, and how worthy of the education which they had received.

And first as to their birth. Their ancestors were not strangers, nor are these their descendants sojourners only, whose fathers have come from another country; but they are the children of the soil, dwelling and living in their own land. And the country which brought them up is not like other countries, a stepmother to her children, but their own true mother; she bore them and nourished them and received them, and in her bosom they now repose. It is meet and right, therefore, that we should begin by praising the land which is their mother, and that will be a way of praising their noble birth.

The country is worthy to be praised, not only by us, but by all mankind; first, and above all, as being dear to the Gods. This is proved by the strife and contention of the Gods respecting her. And ought not the country which the Gods praise to be praised by all mankind? The second praise which may be fairly claimed by her, is that at the time when the whole earth was sending forth and creating diverse animals, tame and wild, she our mother was free and pure from savage monsters, and out of all animals selected and brought forth man, who is

superior to the rest in understanding, and alone has justice and religion. And a great proof that she was the mother of us and of our ancestors, is that she provided the means of support for her offspring. For as a woman proves her motherhood by giving milk to her young ones (and she who has no fountain of milk is not a mother), so did this our land prove that she was going to be the mother of men, for in those days she alone and first of all brought forth wheat and barley for human food, which ²³⁸ is the best and noblest sustenance for man, whom she regarded as her true offspring. And these are truer proofs of motherhood in a country than in a woman, for the woman in her conception and generation is but the imitation of the earth, and not the earth of the woman. And of the fruit of the earth she gave a plenteous supply, not only to her own, but to others also; and after that she made the olive to spring up to be a boon to her children, and to help them in their toils. And when she had herself nursed them and brought them up to manhood, she gave them Gods to be their rulers and teachers, whose names are well known, and need not now be repeated. They are the Gods who first ordered our lives, and gave us arts to supply our daily needs, and taught us the possession and use of arms for the guardianship of the country.

Thus born into the world and thus educated, the ancestors of the departed lived and made themselves a government, which I ought briefly to commemorate. For government is the nurture of man, and the government of good men is good, and of bad men bad. And I must show that our ancestors were trained under a good government, and for this reason they were good, and our contemporaries are also good, among whom our departed friends are to be reckoned. Then as now, and indeed always, from that time to this, speaking generally, our government was an aristocracy—a form of government which receives various names, according to the fancies of men, and is sometimes called democracy, being really an aristocracy of the many who love virtue. For kings we have always had, first hereditary and then elected, and authority is mostly in the hands of the people, who dispense offices and power to those who appear to be most deserving of them. Neither is a man rejected from weakness or poverty or obscurity of origin, nor honoured by reason of the

opposite, as in other states, but there is one principle—he who appears to be wise and good is a governor and ruler. The basis of this our government is equality of birth; for other states are made up of all sorts and unequal conditions of men, and therefore their governments are unequal; there are tyrannies and there are oligarchies, in which the one party are slaves and the others masters. But we and our citizens are brethren, the children all of one mother, and we do not claim to be one another's masters or servants; but the natural equality of birth compels us to seek for legal equality, and to recognize no superiority except in the reputation of virtue and wisdom. 239

And so their and our fathers, and these, too, our brethren, having been brought up in all freedom, and nobly born, did both in their public and private capacity many noble deeds famous over the whole world. They were the deeds of men who thought that they ought to fight both against Hellenes for the sake of Hellenes on behalf of freedom, and against barbarians in the common interest of Hellas. The time would fail me to tell of their defence of their country against the invasion of Eumolpus and the Amazons, or of their defence of the Argives against the Cadmeians, or of the Heracleids against the Argives; besides, the poets have already declared in song their glory to all mankind, and therefore any commemoration of them in prose which we might attempt would hold a second place. They have their reward of them, and I say no more; but there are other worthy deeds of which no poet has worthily sung, and which are still wooing the poet's favour. Of these I am bound to make honourable mention, and shall invoke others to sing of them also in lyric and other strains, in a manner becoming the actors. And first I will tell how the Persians, lords of Asia, were enslaving Europe, and how the children of this land, who were our fathers, held them back. Of these I will speak first, and praise their valour, as is meet and fitting. He who would rightly estimate them should place himself in thought at that time, when the whole of Asia was subject to the third king of Persia. The first king, Cyrus, by his valour freed the Persians, who were his countrymen, and subjected the Medes, who were their lords, and he ruled over the rest of Asia, as far as Egypt; and after him came his son, who ruled all the accessible part of Egypt

and Libya ; the third king was Darius, who extended the land boundaries of the empire to Scythia, and with his fleet held the
240 sea and the islands. None presumed to be his equal ; the minds of all men were enthralled by him—so many and mighty and warlike nations had the power of Persia subdued. Now Darius had a quarrel against us and the Eretrians, because, as he said, we had conspired against Sardis, and he sent 500,000 men in transports and vessels of war, and 300 ships, and Datis as commander, telling him to bring the Eretrians and Athenians to the king, if he wished to keep his head on his shoulders. He sailed against the Eretrians, who were reputed to be amongst the noblest and most warlike of the Hellenes of that day, and they were numerous, but he conquered them all in three days ; and when he had conquered them, in order that no one might escape, he searched the whole country after this manner : his soldiers, coming to the borders of Eretria and spreading from sea to sea, joined hands and passed through the whole country, in order that they might be able to tell the king that no one had escaped them. And from Eretria they went to Marathon, expecting to bind the Athenians in the same yoke of necessity in which they had bound the Eretrians. Having effected one-half of their purpose, they were in the act of attempting the other, and none of the Hellenes dared to assist either the Eretrians or the Athenians, except the Lacedaemonians, and they only came the day after the battle ; but the rest were panic-stricken and remained quiet, happy that they had escaped for a time. He who has present to him that conflict will know what manner of men they were who received the onset of the barbarians at Marathon, and chastened the pride of the whole of Asia, and by the victory which they gained over the barbarians first taught other men that the power of the Persians was not invincible, but that hosts of men and the multitude of riches alike yield to virtue. And I assert that those men are the fathers not only of ourselves, but of our liberties and of the liberties of all who are on the continent, for that was the action to which the Hellenes looked back when they ventured to fight for their own safety in the battles which followed : they became disciples of the men of Marathon. To them, therefore, I assign in
241 my speech the first place, and the second to those who fought

and conquered in the sea fights at Salamis and Artemisium, for of them, too, one might have many things to say; of the assaults which they endured by sea and land, and how they repelled them. But I will mention only that act of theirs which appears to me to be the noblest, and which was next in order of succession to Marathon, for the men of Marathon only showed the Hellenes that it was possible to ward off the barbarians by land, the many by the few; but there was no proof that they could be defeated by ships, and at sea the Persians retained the reputation of being invincible in numbers and wealth and skill and strength. This is the glory of the men who fought at sea, that they dispelled the second fear which had hitherto possessed the Hellenes, and so made the fear of numbers, whether of ships or men, to cease among them. This was the effect, and thus the soldiers of Marathon and the sailors of Salamis became the schoolmasters of Hellas; the one teaching and habituating the Hellenes not to fear the barbarians at sea, and the others not to fear them by land. Third in order, for the number and valour of the combatants, and third in the salvation of Hellas, I place the battle of Plataea. And now the Athenians and Lacedaemonians shared in the struggle; they were all united in this greatest and most terrible conflict of all, and for this their virtue will be celebrated in times to come, as they are now celebrated by us. But at a later period many Hellenic tribes were still on the side of the barbarians, and there was a report that the great king was going to make a new attempt upon the Hellenes, and therefore justice requires that we should also make mention of those who crowned the previous work of our salvation, and drove and purged away all barbarians from the sea. These were the men who fought by sea at the river Eurymedon, and who went on the expedition to Cyprus, and who sailed to Egypt and divers others places; and they should be gratefully remembered by us, because they compelled the king to look at home instead of plotting the destruction of Hellas.

And so the war against the barbarians was fought out to the 242 end by the whole city on their own behalf, and on behalf of their countrymen. There was peace, and our city was held in honour; and then, as prosperity makes men jealous, there succeeded a jealousy of her, and jealousy beget envy, and so she became

engaged against her will in a war with the Hellenes. On the breaking out of war, our citizens met the Lacedaemonians at Tanagra, and fought for the freedom of the Boeotians; the issue was doubtful, and was decided by the engagement which followed. For when the Lacedaemonians had gone on their way, leaving the Boeotians, whom they were aiding, on the third day after the battle of Tanagra, our countrymen conquered at Oenophyta, and righteously restored those who had been unrighteously exiled. And they were the first after the Persian war who fought on behalf of liberty in aid of Hellenes against Hellenes; they were brave men, and freed those whom they aided, and were the first too who were honourably interred in this sepulchre by the state. Afterwards there was a mighty war, in which all the Hellenes joined, and devastated our country, which was very ungrateful of them; and our countrymen, after defeating them in a naval engagement and taking their leaders, the Spartans, at Sphagia, when they might have destroyed them, spared their lives, and gave them back, and made peace, considering that they should war with their fellow-countrymen only until they gained a victory over them, and not because of the private anger of the state destroy the common interest of Hellas; but that with barbarians they should war to the death. Worthy of praise are they also, who waged this war, and are here interred, for they proved, if any one doubted the superior prowess of the Athenians in the former war with the barbarians, that their doubts had no foundation—showing by their victory in the civil war with Hellas, in which they subdued the other chief state of the Hellenes, that they could conquer single-handed those with whom they had been allied in the war against the barbarians. After the peace there followed a third war, which was of a terrible and desperate nature, and in this many brave men who are here interred lost their lives—many of them

243 who had conquered Sicily, whither they had gone over the seas to fight for the liberties of the Leontines, to whom they were bound by oaths, and on whose behalf many trophies were raised by them; but, owing to the distance, the city was unable to help them, and they lost heart and came to misfortune, their very enemies and opponents winning more renown for virtue and temperance than the friends of others. Many also fell in naval

engagements at the Hellespont, after having in one day taken all the ships of the enemy, and defeated them in other naval engagements. And what I call the terrible and desperate nature of the war, is that the other Hellenes, in their extreme animosity towards the city, should have entered into negotiations with their bitterest enemy, the king of Persia, whom they, together with us, had expelled;—him, without us, they again brought back, barbarian against Hellenes, and all the hosts, both of Hellenes and barbarians, were united against Athens. And then shone forth the power and value of our city. Her enemies had supposed that she was exhausted by the war, and her ships were blockaded at Mitylene. But the citizens themselves embarked, and came to the rescue with sixty other ships, and their valour was confessed of all men, for they conquered their enemies and delivered their friends. And yet by some evil fortune they were left to perish at sea, and therefore are¹ not interred here. Ever to be remembered and honoured are they, for by their valour not only that sea-fight was won for us, but the entire war was decided by them, and through them the city gained the reputation of being invincible, even though attacked by all mankind. And that reputation was a true one, for the defeat which came upon us was our own doing. We were never conquered by others, and to this day we are still unconquered by them; but we were our own conquerors, and received defeat at our own hands. Afterwards there was quiet and peace abroad, but there sprang up war at home; and, if men are destined to have civil war, no one could have desired that his city should take the disorder in a milder form. How joyful and natural was the reconciliation of those who came from the Piræus and those who came from the city; with what moderation did they order the war against the tyrants in Eleusis, and how differently from what the other Hellenes expected! And the reason of this ²⁴⁴ gentleness was the veritable tie of blood, which created among them a friendship as of kinsmen, faithful not in word only, but in deed. And we ought also to remember those who then fell by one another's hands, and on such occasions as these to reconcile them with sacrifices and prayers, praying to those who have power over them, that they may be reconciled even as we are

¹ Reading *οὐ κείνται*.

reconciled. For they did not assail one another out of malice or enmity, but they were unfortunate. And that such was the fact we ourselves are witnesses, who are of the same race with them, and have mutually received and granted forgiveness of what we have done and suffered. After this there was perfect peace, and the city had rest; and her feeling was that she forgave the barbarians, who had severely suffered at her hands and severely retaliated, but that she was indignant at the ingratitude of the Hellenes, when she remembered how they had received good from her and returned evil, having made common cause with the barbarians, depriving her of the ships which had once been their salvation, and dismantling our walls, when we had prevented their walls from falling. She thought that she would no longer defend the Hellenes, when enslaved either by one another or by the barbarians, and did accordingly. This was our feeling, while the Lacedaemonians were thinking that the champions of liberty had fallen, and that their business was to subject the remaining Hellenes. And why should I say more? for the events of which I am speaking happened not long ago and we can all of us remember how the chief peoples of Hellas, Argives and Boeotians and Corinthians, came to feel the need of us, and, what is the greatest miracle of all, the Persian king himself was driven to such extremity as to come round to the opinion, that from this city, of which he was the destroyer, and from no other, his salvation would proceed.

And if a person desired to bring a deserved accusation against our city, he would find only one charge which he could justly urge—that she was too compassionate and too much inclined to favour the weak. And in this instance she was not able to hold out or keep her resolution of refusing aid to her injurers when
245 they were being enslaved, but she was softened, and did in fact send out aid, and delivered the Hellenes from slavery, and they were free until they afterwards enslaved themselves. Whereas, to the great king she refused to give the assistance of the state, for she could not forget the trophies of Marathon and Salamis and Plataea; but she allowed exiles and volunteers to assist him, and they were his salvation. And she herself, when she was compelled, entered into the war, and built walls and ships, and fought with the Lacedaemonians on behalf of the Parians. Now

the king fearing this city, when he saw the Lacedaemonians giving up the war at sea, asked, as the price of his alliance with us and the other allies, the Hellenes on the continent, whom the Lacedaemonians had already given up to him, he thinking that we should refuse, and that then he might have a pretence for being quit of us. About the other allies he was mistaken, for the Corinthians and Argives and Boeotians, and the other states, were quite willing to give them up, and swore and covenanted, that, if he would give them money, they would leave the Hellenes of the continent in his hands, and we alone refused to give them up and swear. Such was the noble disposition of this city, so sound and healthy was the spirit of freedom among us, which is the natural enemy of the barbarian, because we are pure Hellenes, having no mixture of barbarians. For we are not like many others, descendants of Pelops or Cadmus or Egyptus or Danaus, who are by nature barbarians, and yet pass for Hellenes, and dwell among us; but we are pure Hellenes, having no admixture of foreigners, and therefore the hatred of the foreigner has passed unadulterated into the life-blood of the city. The result of our refusal was that we were again isolated, because we were unwilling to be guilty of the base and unholy act of giving up Hellenes to barbarians. And so we were in the same case as when we were subdued before; but, by the favour of Heaven, we managed better, for we ended the war without the loss of our ships or walls or colonies; the enemy was only too glad to be quit of us. Yet in this war we lost many brave men, such as were those who fell owing to the ruggedness of the ground at the battle of Corinth, or by treason at Lechaem. Brave men, too, were those who delivered the Persian king, and drove the Lacedaemonians from the sea. I remind you of them, and you must ²⁴⁶ celebrate them together with me, and do honour to their memories.

Such were the actions of the men who are here interred, and of others who have died on behalf of their country; many and glorious things I have told you of them, and there are yet many more and more glorious things remaining to be told, which many days and nights would not suffice to tell. Let them not be forgotten, and let every man remind their descendants that

they also are soldiers who must not desert the ranks of their ancestors, or fall behind from cowardice. Even as I exhort you this day, and in all future time and on every occasion on which I meet with any of you shall continue to remind and exhort you, O ye sons of heroes, that you strive to be the bravest of men. And I think that I ought now to repeat to you what your fathers desired to have said to you who are their survivors, when they went out to battle, in case anything happened to them. I will tell you what I heard them say, and what, if they had only speech, they would fain be saying, judging from what they then said. And you must imagine that you hear them saying what I now repeat to you :—

Sons, the event proves that your fathers were brave men ; for we might have lived dishonourably, but have preferred to die honourably rather than bring you and your children into disgrace, and rather than dishonour our own fathers and forefathers ; considering that life is not life to one who is a dishonour to his race, and that to such an one neither men nor Gods are friendly, either while he is on the earth or after death in the world below. Remember our words, then, and whatever is your aim let virtue be the condition of the attainment of your aim, and know that without this all possessions and pursuits are dishonourable and evil. For neither does wealth bring honour to the owner, if he be a coward ; of such an one the wealth belongs to another, and not to himself. Nor does beauty and strength of body, when dwelling in a base and cowardly man, appear comely, but the reverse of comely, making the possessor more conspicuous, and manifesting forth his cowardice. And all knowledge, when separated from justice and virtue, is seen to be cunning and not wisdom ; wherefore make this your first and last and only and
 247 everlasting desire, that if possible you may exceed not only us but all your ancestors in virtue ; and know that to excel you in virtue only brings us shame, but that to be excelled by you is a source of joy to us. And we shall most likely be defeated, and you will most likely be victors in the contest, if you learn so to order your lives as not to misuse or waste the reputation of your ancestors, knowing that to a man who has any self-respect, nothing is more dishonourable than to be honoured, not for his own sake, but on account of the reputation of his ancestors.

The honour of parents is a fair and noble treasure to their posterity, but to have the use of a treasure of wealth and honour, and to leave none to your successors, because you have neither money nor reputation of your own, is alike base and dishonourable. And if you follow our precepts you will be received by us as friends, when the hour of destiny brings you hither; but if you neglect our words and are disgraced in your lives, no one will welcome or receive you. This is the message which is to be delivered to our children.

Some of us have fathers and mothers still living, and we would urge them, if, as is likely, we shall die, to bear the calamity as lightly as possible, and not to condole with one another; for they have sorrows enough, and will not need any one to stimulate them. While we gently heal their wounds, let us remind them that the Gods have heard the chief part of their prayers; for they prayed, not that their children might live for ever, but that they might be famous and brave. And this, which is the greatest good, they have attained. A mortal man cannot expect to have everything in his own life turning out according to his will; and they, if they bear their misfortunes bravely, will be truly deemed brave fathers of the brave. But if they give way to their sorrows, either they will be suspected of not being our parents, or we of not being such as our panegyrists declare. Let not either of the two alternatives happen, but rather let them be our chief and true panegyrists, who show in their lives that they are true men, and had men for their sons. The ancient saying, 'never too much,' appears to be, and really is, well said. For he whose happiness rests with himself, if possible, wholly, and if not, as far as is possible,—who is not ²⁴⁸ hanging in suspense on other men, or changing with the vicissitude of their fortune,—has his life ordered for the best. He is the temperate and valiant and wise; and when his riches come and go, when his children are given and taken away, he will remember the proverb—'neither rejoicing overmuch nor grieving overmuch,' for he relies upon himself. And such we would have our parents to be—that is our word and wish, and as such we now offer ourselves, neither lamenting overmuch, nor fearing overmuch, if we are to die at this instant. And we entreat our fathers and mothers to retain these feelings throughout their

future life, and to be assured that they will not please us by sorrowing and lamenting over us. But, if the dead have any knowledge of the living, they will displease us most by making themselves miserable and by taking their misfortunes to heart, and they will please us best if they bear their loss lightly and temperately. For our life will have the noblest end which is vouchsafed to man, and should be glorified rather than lamented. And if they will direct their minds to the care and nurture of our wives and children, they will soonest forget their misfortunes, and live more honourably and uprightly, and in a way that is more agreeable to us.

This is all that we have to say to our families: and to the state we would say—Let her take care of our parents and sons, educating the one in principles of order, and worthily cherishing the old age of the other. But we know that she will of her own accord take care of them, and does not need exhortation from us.

These, O ye children and parents of the dead, are the words which they bid us proclaim to you, and which I do proclaim to you with the utmost good will. And on their behalf I beseech you, the children, to imitate your fathers, and you, parents, to be of good cheer about yourselves; for we will nourish your age, and take care of you both publicly and privately in any place in which one of us may meet one of you who are the parents of the dead. And the care which the city shows you yourselves know; for she has made provision by law concerning the parents
 249 and children of those who die in war; and the highest authority is specially entrusted with the duty of watching over them above all other citizens, in order to see that there is no wrong done to them. She herself takes part in the nurture of the children, desiring as far as it is possible that their orphanhood may not be felt by them; she is a parent to them while they are children, and when they arrive at the age of manhood she sends them to their several duties, clothing them in armour; she displays to them and recalls to their minds the pursuits of their fathers, and puts into their hands the instruments of their fathers' virtues; for the sake of the omen, she would have them begin and go to rule over their own houses arrayed in the strength and arms of their fathers. And she never ceases honour-

ing the dead every year, celebrating in public the rites which are proper to each and all; and in addition to this, holding gymnastic and equestrian festivals, and musical festivals of every sort. She is to the dead in the place of a son and heir, and to their sons in the place of a father, and to their parents and elder kindred in the place of a protector—ever and always caring for them. Considering this, you ought to bear your calamity the more gently; for thus you will be most endeared to the dead and to the living, and your sorrows will heal and be healed. And now do you and all, having lamented the dead together in the usual manner, go your ways.

Such, Menexenus, was the oration of Aspasia the Milesian.

Men. Truly, Socrates, I marvel that Aspasia, who is only a woman, should be able to compose such a speech; she must be a rare one.

Soc. Well, if you are incredulous, you may come with me and hear her.

Men. I have often met Aspasia, Socrates, and know what she is like.

Soc. Well, and do you not admire her, and are you not grateful for her speech?

Men. Yes, Socrates, I am very grateful to her or to him who told you, and still more to you who have told me.

Soc. Very good. But you must take care not to tell of me, and then at some other time I will repeat to you many more excellent political speeches of hers.

Men. Fear not; only let me hear them, and I will keep the secret.

Soc. Then I will keep my promise.

THE REPUBLIC.

INTRODUCTION.

THE Republic of Plato is the longest of his works with the exception of the Laws, and is certainly the greatest of them. There are nearer approaches to modern metaphysics in the Philebus and in the Sophist. The Politicus or Statesman is more ideal; the form and institutions of the State are more clearly drawn out in the Laws; as works of art, the Symposium and the Protagoras are of higher excellence. But no other Dialogue of Plato has the same largeness of view and the same perfection of style; no other shows an equal knowledge of the world, or contains more of those thoughts which are new as well as old, and not of one age only but of all. Nowhere in Plato is there a deeper irony or a greater wealth of humour or imagery, or more dramatic power. Nor in any other of his writings is the attempt made to interweave life and speculation, or to connect the State with philosophy. Neither must we forget that the Republic is but the third part of a still larger work which was to have included an ideal history of Athens, as well as a political and physical philosophy. Again, Plato may be regarded as the 'captain' (*ἀρχηγός*) or leader of a goodly band of followers; for in the Republic is to be found the original of Cicero's *De Republica*, of St. Augustine's *City of God*, of the *Utopia* of Sir Thomas More, and of the numerous other imaginary States which are framed upon the same model. The Republic of Plato is also the first treatise upon education, of which the writings of Milton and Locke, Rousseau, Jean Paul, and Goethe are the legitimate descendants. Like Dante or Bunyan, he has a revelation of another world; in the early Church he exercised a real influence on theology, and at the Revival of Literature on politics. Even the fragments of his words when 'repeated at second hand' (Sym. 215 D), have in all ages ravished the hearts of men, who have seen reflected in them their own higher nature. He is the father of idealism in philosophy, in politics, in literature. And many of the latest conceptions of modern thinkers and statesmen, such as the unity of knowledge, the

reign of law, and the equality of the sexes, have been anticipated in a dream by him.

The argument of the Republic is the search after Justice, the nature of which is first hinted at by Cephalus, the just and blameless old man—then discussed on the basis of proverbial morality by Socrates and Polemarchus—then caricatured by Thrasymachus and partially explained by Socrates—reduced to an abstraction by Glaucon and Adeimantus, and having become invisible in the individual reappears at length in the ideal State which is constructed by Socrates. The State introduces the subject of education, of which the first outline is drawn after the old Hellenic model, providing only for an improved religion and morality, and more simplicity in music and gymnastic, and greater harmony of the individual and the State. But this leads to the conception of a higher State, in which ‘no man calls anything his own,’ and in which there is neither ‘marrying nor giving in marriage,’ and ‘kings are philosophers’ and ‘philosophers are kings;’ and there is another and higher education, intellectual as well as moral and religious, of science as well as of art, and not of youth only but of the whole of life. Such a State soon begins to degenerate, and is hardly to be realized in this world. The old quarrel of poetry and philosophy which has been more lightly touched in the earlier books of the Republic is then fought out to the end. Poetry is discovered to be an imitation thrice removed from the truth, and Homer, as well as the dramatic poets, having been condemned as an imitator, is sent into banishment along with them. And the idea of the State is supplemented by the revelation of a future life.

The division into books, like all similar divisions¹, is probably later than the age of Plato. The natural divisions are five in number;—(1) Book I and the first half of Book II down to p. 368, which is introductory; the first book containing a refutation of the popular and sophistical notions of justice, and concluding, like some of the earlier Dialogues, without arriving at a definite conclusion. To this is appended a restatement of the nature of justice according to common opinion, and an answer is demanded to the question—What is justice, stripped of appearances? The second division (2) includes the remainder of the second and the whole of the third and fourth books, which are mainly occupied with the construction of the first State and the first education.

¹ Cp. Sir G. C. Lewis in the *Classical Museum*, vol. ii. p. 1.

The third division (3) consists of the fifth, sixth, and seventh books, in which philosophy rather than justice is the subject of enquiry, and the second State is constructed on principles of communism and ruled by philosophers, and the contemplation of the idea of good takes the place of the social and political virtues. In the eighth and ninth books (4) the perversions of States and the individuals which correspond to them are reviewed in succession; and the nature of pleasure and the principle of tyranny are further analysed in the individual character. The tenth book (5) is the conclusion of the whole, in which the relations of philosophy to poetry are finally determined, and the happiness of the citizens in this life, which has now been assured, is crowned by the vision of another.

Or a more general division into two parts may be adopted; the first (Books I—IV) containing the description of a State framed generally in accordance with Hellenic notions of religion and morality, while in the second (Books V—X) the Hellenic State is transformed into an ideal kingdom of philosophy, of which all other governments are the perversions. These two points of view are really opposed, and the opposition is only veiled by the genius of Plato. The Republic, like the Phaedrus (see vol. i. p. 85 foll.), is an imperfect whole; the higher light of philosophy breaks through the regularity of the Hellenic temple, which at last fades away into the heavens (592 B). Whether this imperfection of structure arises from an enlargement of the plan; or from the imperfect reconciliation in the writer's own mind of the struggling elements of thought which are now first brought together by him; or, perhaps, from the composition of the work at different times—are questions, like the similar question about the Iliad and the Odyssey, which are worth asking, but which cannot have a distinct answer. In the age of Plato there was no regular mode of publication, and an author would have the less scruple in altering or adding to a work which was known only to a few of his friends. There is no absurdity in supposing that he may have laid his labours aside for a time, or turned from one work to another; and such interruptions would be more likely to occur in the case of a long than of a short writing. In all attempts to determine the chronological order of the Platonic writings on internal evidence, this uncertainty about any single Dialogue being composed at one time is a disturbing element, which must be admitted to affect longer works, such as the Republic and the Laws, more than shorter ones. But, on the other hand,

the seeming discrepancies of the Republic may only arise out of the discordant elements which the philosopher has attempted to unite in a single whole, perhaps without being himself able to recognise the inconsistency which is obvious to us. For there is a judgment of after ages which few great writers have ever been able to anticipate for themselves. They do not perceive the want of connexion in their own writings, or the gaps in their systems which are visible enough to those who come after them. In the beginnings of literature and philosophy, amid the first efforts of thought and language, more inconsistencies occur than now, when the paths of speculation are well worn and the meaning of words precisely defined. For consistency, too, is the growth of time; and some of the greatest creations of the human mind have been wanting in unity. Tried by this test, several of the Platonic Dialogues, according to our modern ideas, appear to be defective, but the deficiency is no proof that they were composed at different times or by different hands. And the supposition that the Republic was written uninterruptedly and by a continuous effort is confirmed by numerous references from one part of the work to another.

The second title, 'Concerning Justice,' is not the one by which the Republic is quoted, either by Aristotle or generally in antiquity, and, like the other second titles of the Platonic Dialogues, may therefore be assumed to be of later date. Morgenstern and others have asked whether the definition of justice, which is the professed aim, or the construction of the State is the principal argument of the work. The answer is, that the two blend in one, and are two faces of the same truth; for justice is the order of the State, and the State is the visible embodiment of justice under the conditions of human society. The one is the soul and the other is the body, and the Greek ideal of the State, as of the individual, is a fair mind in a fair body. In Hegelian phraseology the State is the reality of which justice is the idea. Or, described in Christian language, the kingdom of God is within, and yet is imagined to be a Church or external kingdom. Or, to use a Platonic image, justice and the State are the warp and the woof which run through the whole texture. And when the constitution of the State is completed, the conception of justice is not dismissed, but reappears under the same or different names throughout the work, both as the inner law of the individual soul, and finally as the principle of rewards and punishments in another life. The virtues are based on justice, of which common honesty in buying and

selling is the shadow, and justice is based on the idea of good, which is the harmony of the world, and is reflected both in the institutions of states and in the motions of the heavenly bodies (cp. Tim. 47). The *Timaeus*, which takes up and continues the political rather than the ethical side of the *Republic*, yet contains many indications that the same law is supposed to reign over nature and over man.

Too much, however, has been made of this question both in ancient and modern times. There is a stage of criticism in which all works, whether of nature or of art, are referred to design. Now in ancient writings, and indeed in literature generally, there remains often a large element which was not comprehended in the original design. For the work grows under the author's hand; new ideas occur to him in the act of writing; he has not thought out the argument to the end before he begins. The reader who seeks to find some one idea under which the whole may be conceived, must necessarily seize on the vaguest and most general. Thus Stallbaum, who is dissatisfied with the ordinary explanations of the argument of the *Republic*, imagines himself to have found the true argument 'in the representation of human life in a State perfected by justice, and governed according to the idea of good.' There may be some use in such general descriptions, but they can hardly be said to express the design of the writer. The truth is, that we may as well speak of many designs as of one; nor need anything be excluded from the plan of a great work to which the mind is naturally led by the association of ideas. To Plato himself, the question 'what was the principal argument of the *Republic*,' would have been hardly intelligible, and therefore need not longer detain us (cp. the Introduction to the *Phaedrus*, p. 85, 86).

Is not the *Republic* the vehicle of three or four great truths which, to Plato's own mind, are most naturally represented in the form of the State? Just as in the Jewish prophets the reign of Messiah or 'the day of the Lord' only convey, to us at least, their great spiritual ideals, so through the Greek State Plato reveals to us his own thoughts about divine perfection, which is the idea of good—about human perfection, which is justice—about poets and tyrants who are the false teachers and evil rulers of mankind—about 'the world' which is the embodiment of them. We have no need to discuss whether such a State is practicable or not, or whether the outward form or the inward life came first in the mind of the writer. For the practicability of his ideas

has nothing to do with their truth; and the highest thoughts to which he attains may be truly said to bear the greatest 'marks of design'—justice more than the external framework of the State, the idea of good more than justice. It is in the fifth, sixth, and seventh books of the Republic that he reaches the 'summit of speculation,' at the same time that he fails most to satisfy the requirements of a modern reader, and these, notwithstanding their defects, may therefore be regarded as the most important, as they are also the most original, portions of the work.

It is not necessary to discuss at length a minor question which has been raised by Boeckh, respecting the imaginary date at which the conversation was held (the year 411 B.C. which is proposed by him will do as well as any other); for a writer of fiction, and especially a writer who, like Plato, is notoriously careless of chronology, only aims at general probability. Whether all the persons mentioned in the Republic could ever have met at any one time is not a difficulty which would have occurred to an Athenian reading the work forty years later, or to Plato himself at the time of writing (any more than to Shakespeare in a parallel case); and need not greatly trouble us now. Yet this may be another of those questions having no answer 'which are worth asking,' because the investigation shows that we cannot argue historically from the dates in Plato, and have therefore no need to waste time in inventing far-fetched reconcilements of them in order to avoid chronological difficulties, such, for example, as the conjecture of C. F. Hermann, that Glaucon and Adeimantus are not the brothers but the uncles of Plato, or the fancy of Stallbaum that Plato intentionally left anachronisms indicating the dates at which some of his Dialogues were written.

The principal characters in the Republic are Cephalus, Polemarchus, Thrasymachus, Socrates, Glaucon, and Adeimantus. Cephalus appears in the introduction only, Polemarchus drops at the end of the first argument, and Thrasymachus is reduced to silence at the close of the first book. The main discussion is carried on by Socrates, Glaucon, and Adeimantus. Among the company are Lysias the orator and Euthydemus the sons of Cephalus and brothers of Polemarchus, an unknown Charmantides—these are mute auditors; also there is Cleitophon, who once interrupts (340 A), and there, as in the Dialogue which bears his name, appears as the friend and ally of Thrasymachus.

Cephalus, the father of Polemarchus and his two brothers, is the patriarch of the house who has been appropriately engaged in offering a sacrifice. He is the pattern of an old man who has almost done with life, and is at peace with himself and with all mankind. He feels that he is drawing nearer to the world below, and seems to linger around the memory of the past. He is eager that Socrates should come to visit him, fond of the poetry of the last generation, happy in the consciousness of a well-spent life, glad at having escaped from the tyranny of youthful lusts. His love of conversation, his kindness, his indifference to riches, even his garrulity, are interesting traits of character. He is not one of those who have nothing to say, because their whole mind has been absorbed in making money. Yet he acknowledges that money has a value in taking away the temptation to dishonesty. The respectful attention shown to him by Socrates, who must however be asking questions of him as of all men, should also be noted. The moderation with which old age is pictured by him as a very tolerable portion of existence is characteristic, not only of him, but of Greek feeling generally, and contrasts with the exaggeration of Cicero in his work on old age. The evening of life is described by Plato in the most expressive manner, yet with the fewest possible touches. As Cicero remarks, the aged Cephalus would have been out of place in the discussion which follows, and which he could neither have understood nor taken part in without a violation of dramatic propriety (cp. Lysimachus in the *Laches*, 89).

His 'son and heir' Polemarchus has the frankness and impetuosity of youth; he is for detaining Socrates by force in the opening scene, and will not 'let him off' (449 B) on the subject of women and children. Like Cephalus, he is limited in his point of view, and represents the proverbial stage of morality which has rules of life rather than principles; and he quotes Simonides as his father had quoted Pindar. But after appealing to this authority he has no more to say; the answers which he makes are only elicited from him by the dialectic of Socrates. He has not yet experienced the influence of the Sophists like Glaucon and Adeimantus, nor is he sensible of the necessity of refuting them; he belongs to the pre-Socratic age. He is incapable of arguing, and is bewildered by Socrates to such a degree that he does not know what he is saying. From his brother Lysias (*contra Eratosth.* p. 121) we learn that he fell a victim to the thirty tyrants, but no allusion is

here made to his fate, nor to the circumstance that Cephalus and his family were of Syracusan origin, and had migrated to Athens.

The 'Chalcedonian giant,' Thrasymachus, of whom we have already heard in the *Phaedrus* (p. 267), is the personification of the Sophists according to Plato's conception of them, in some of their worst characteristics. He is vain and blustering, refusing to discourse unless he is paid, fond of making an oration, and hoping in that way to escape the inevitable Socrates; but a mere child in argument, and unable to foresee that the next 'move' (to use a Platonic expression) will 'shut him up' (487 B). He has reached the stage of framing general notions, and in this respect may be regarded as in advance of Cephalus and Polemarchus. But he is incapable of defending them in a discussion, and vainly tries to cover his confusion with banter and insolence. He can only make an irrelevant appeal to the experience of daily life. Whether such doctrines as are attributed to him by Plato were really held either by him or by any other Sophist is uncertain:—in the eagerness for generalization such fundamental errors might easily grow up, and are certainly put into the mouths of speakers in *Thucydides*; but we are concerned at present with Plato's description of him, and not with the historical reality. The inequality of the contest adds greatly to the humour of the scene. He is utterly helpless in the hands of Socrates, who knows how to touch all the springs of vanity and weakness in him. His determination to cram down their throats, or put 'bodily into their souls' his own words, elicits a cry of horror from Socrates. The state of his temper is quite as worthy of remark as the process of the argument. Nothing is more amusing than his complete submission when he has been once thoroughly beaten. At first he seems to carry on the discussion with reluctance, but soon with apparent good-will, and he even testifies his interest at a later stage by one or two occasional remarks (v. 450 A, B). When attacked by *Glaucón* (vi. 498 C, D) he is humorously protected by Socrates: 'as one who has never been his enemy and is now his friend.'

When Thrasymachus has been silenced, the two principal respondents, *Glaucón* and *Adeimantus*, appear on the scene: here, as in Greek tragedy (cp. *Introd.* to *Phaedo*), three actors are introduced. At first sight the two sons of *Ariston* may seem to wear a family likeness, like the two friends *Simmias* and *Cebes* in the *Phaedo*. But on a nearer examination of them the similarity vanishes, and they are seen to be

distinct characters. Glaucon is the impetuous youth who can 'just never have enough of fechtng' (cp. the character of him in Xen. Mem. iii. 6); the man of pleasure who is acquainted with the mysteries of love (v. 474 D); the 'juvenis qui gaudet canibus,' and who improves the breed of animals (v. 459 A); the lover of art and music (iii. 398 D, E) who has all the experiences of youthful life. He is full of quickness and penetration, piercing easily below the clumsy platitudes of Thrasymachus to the real difficulty; he turns out to the light the seamy side of human life, and yet does not lose faith in the just and true. It is Glaucon who seizes what may be termed the ludicrous relation of the philosopher to the world, to whom a state of simplicity is 'a city of pigs,' who is always prepared with a jest (iii. 398 C; iv. 427; v. 450, 451, 468 C; vi. 509 C; ix. 586) when the argument offers him an opportunity, and is ever ready to second the humour of Socrates and to appreciate the ridiculous, whether in the connoisseurs of music (vii. 531 A), or in the lovers of theatricals (v. 475 D), or in the fantastic behaviour of the citizens of democracy (viii. 557 foll.). His weaknesses are several times alluded to by Socrates (iii. 402 E; v. 474 D, 475 E), who, however, will not allow him to be attacked by his brother Adeimantus (viii. 548 D, E). He is a soldier, and, like Adeimantus, has been distinguished at the battle of Megara (368 A, anno 456?). The character of Adeimantus is deeper and graver, and the profounder objections are commonly put into his mouth. Glaucon is more demonstrative, and generally opens the game; Adeimantus pursues the argument further. Glaucon has more of the liveliness and quick sympathy of youth; Adeimantus has the maturer judgment of a grown-up man of the world. In the second book, when Glaucon insists that justice and injustice shall be considered without regard to their consequences, Adeimantus remarks that they are regarded by mankind in general only for the sake of their consequences; and in a similar vein of reflection he urges at the beginning of the fourth book that Socrates fails in making his citizens happy, and is answered that happiness is not the direct aim, but the indirect consequence of the good government of a State. In the discussion about religion and mythology, Adeimantus is the respondent (376-398), but at p. 398 C, Glaucon breaks in with a slight jest, and carries on the conversation in a lighter tone about music and gymnastic to the end of the book. It is Adeimantus again who volunteers the criticism of common sense on the Socratic method

of argument (vi. 487 B), and who refuses to let Socrates pass lightly over the question of women and children (v. 449). It is Adeimantus who is the respondent in the more argumentative, as Glaucon in the lighter and more imaginative portions of the Dialogue. For example, throughout the greater part of the sixth book, the causes of the corruption of philosophy and the conception of the idea of good are discussed with Adeimantus. At p. 506 C, Glaucon resumes his place of principal respondent; but he has a difficulty in apprehending the higher education of Socrates, and makes some false hits in the course of the discussion (526 D, 527 D). Once more Adeimantus returns (viii. 548) with the allusion to his brother Glaucon whom he compares to the contentious State; in the next book (ix. 580) he is again superseded, and Glaucon continues to the end (x. 621 B).

Thus in a succession of characters Plato represents the successive stages of morality, beginning with the Athenian gentleman of the olden time, who is followed by the practical man of that day regulating his life by proverbs and saws; to him succeeds the wild generalization of the Sophists, and lastly come the young disciples of the great teacher, who know the sophistical arguments but will not be convinced by them, and desire to go deeper into the nature of things. These too, like Cephalus, Polemarchus, Thrasymachus, are clearly distinguished from one another. For neither in the Republic, nor in any other Dialogue of Plato, is a single character repeated.

The delineation of Socrates in the Republic is not wholly consistent. In the first book we appear to have more of the real Socrates, such as he is depicted in the earliest Dialogues of Plato and in the Apology. He is ironical, provoking, questioning, the old enemy of the Sophists, ready to put on the mask of Silenus as well as to argue seriously. But in the sixth book his enmity towards the Sophists abates; he acknowledges that they are the representatives rather than the corrupters of the world (vi. 492 A). He also becomes more dogmatic and constructive, passing beyond the range either of the political or the speculative ideas of the real Socrates. In one passage (vi. 506 C) Plato himself seems to intimate that the time had now come for Socrates, who had passed his whole life in philosophy, to give his own opinion and not to be always repeating the notions of other men. There is no evidence that either the idea of good or the conception of a perfect state were comprehended in the Socratic teaching, though he

certainly dwelt on the nature of the universal and of final causes (cp. Xen. Mem. i. 4; Phaed. 97); and a deep thinker like him, in his thirty or forty years of public teaching, could hardly have failed to touch on the nature of family relations, for which there is also some positive evidence in the Memorabilia (Mem. i. 2, 51 foll.) The Socratic method is nominally retained; and every inference is either put into the mouth of the respondent or represented as the common discovery of him and Socrates. But any one can see that this is a mere form, the affectation of which grows wearisome as the work advances. The method of enquiry has passed into a method of teaching in which by the help of interlocutors the same thesis is looked at from various points of view. The nature of the process is truly characterized by Glaucon, when he describes himself as a companion who is not good for much in an investigation, but can see what he is shown (iv. 432 C), and may, perhaps, give the answer to a question more aptly than another (v. 474 A; cp. 389 A).

Neither can we be absolutely certain that Socrates himself taught the immortality of the soul, which is unknown to his disciple Glaucon in the Republic (x. 608 D; cp. vi. 498 D, E); nor is there any reason to suppose that he used myths or revelations of another world as a vehicle of instruction, or that he would have banished poetry or have denounced the Greek mythology. His favourite oath is retained, and a slight mention is made of the *daemonium*, or internal sign, which is alluded to by Socrates as a phenomenon peculiar to himself (vi. 496 C). A real element of Socratic teaching, which is more prominent in the Republic than in any of the other Dialogues of Plato, is the use of example and illustration (*τὰ φορτικὰ αὐτῷ προσφέροντες*, iv. 442 E): 'Let us apply the test of common instances.' 'You,' says Adeimantus, ironically, in the sixth book, 'are so unaccustomed to speak in images.' And this use of examples or images, though truly Socratic in origin, is enlarged by the genius of Plato into the form of an allegory or parable, which embodies in the concrete what has been already described, or is about to be described, in the abstract. Thus the figure of the cave in Book VII is a recapitulation of the divisions of knowledge in Book VI. The composite animal in Book IX is an allegory of the parts of the soul. The captain and the ship and the true pilot in Book VI are a figure of the relation of philosophers to the State which is about to be described. Other figures, such as the dog (ii. 375 A, D; iii. 404 A, 416 A; v. 451 D),

or the marriage of the portionless maiden (vi. 495, 496), or the drones and wasps in the eighth and ninth books, also form links of connexion in long passages, or are used to recall previous discussions.

Plato is most true to the character of his master when he describes him as 'not of this world.' And with this the paradox of the ideal state and the other paradoxes of the Republic, though they cannot be shown to have been speculations of Socrates, are in harmony. He is not any nearer the common opinions of mankind when he is constructing than when he is destroying. But it must also be observed that this opposition to the world in the latter part of the work turns to a sort of ironical pity or love. Men in general are incapable of philosophy, and are therefore at enmity with the philosopher; but their misunderstanding of him is unavoidable (vi. 494 foll.; ix. 589 D): for they have never seen him as he truly is in his own image; they are only acquainted with artificial systems in which there is no native force of truth—words which admit of another application. Their leaders have nothing to measure with, and are therefore ignorant of their own stature. But they are to be pitied or laughed at, not to be quarrelled with; they mean well with their nostrums, if they could only learn that they are cutting off a Hydra's head (iv. 426 D, E). This moderation towards those who are in error is one of the most characteristic features of Socrates in the Republic (vi. 499-502). In all the different representations of Socrates, whether of Xenophon or Plato, and amid the differences of the earlier or later Dialogues, he always retains the character of the unwearied and disinterested seeker after truth, without which he would have ceased to be Socrates.

Leaving the characters we may now analyse the contents of the Republic, and then proceed to consider (1) The general aspects of this Hellenic ideal of the State, (2) The modern lights in which the thoughts of Plato may be read.

BOOK I. The Republic opens with a truly Greek scene—a festival in honour of the goddess Bendis which is held in the Piræus; to this is added the promise of an equestrian torch-race in the evening. The whole work is supposed to be recited by Socrates on the day after the festival to a small party, consisting of Critias, Timæus, Hermocrates, and another; this we learn from the first words of the Timæus.

When the rhetorical advantage of reciting the Dialogue has been gained, the attention is not distracted by any reference to the audience;

nor is the reader further reminded of the extraordinary length of the narrative. Of the numerous company, three only take any serious part in the discussion; nor are we informed whether in the evening they went to the torch-race, or talked, as in the Symposium, through the night. The manner in which the conversation has arisen is described as follows:—Socrates and his companion Glaucon are about to leave the festival when they are detained by a message from Polemarchus, who soon appears accompanied by Adeimantus, the brother of Glaucon, and with playful violence compels them to remain, promising them not only the torch-race, but the pleasure of conversation with the young, which to Socrates is a far greater attraction. They return to the house of Cephalus, Polemarchus' father, who is now in extreme old age, and is found sitting upon a cushioned seat crowned for a sacrifice. 'You should come to me oftener, Socrates, for I am too old to go to you; and at my time of life, having lost other pleasures, I care the more for conversation.' Socrates asks him what he thinks of age, to which the old man replies, that the miseries and discontents of age are to be attributed to the tempers of men, and that age is a time of peace in which the tyranny of the passions is no longer felt. Yes, replies Socrates, but the world will say, Cephalus, that you are happy in old age because you are rich. 'And there is something in what they say, Socrates, but not so much as they imagine—as Themistocles replied to the Seriphian, "Neither you, if you had been an Athenian, nor I, if I had been a Seriphian, would ever have been famous," I might in like manner reply to you, Neither a good poor man can be happy in age, nor yet a bad rich man.' Socrates remarks that Cephalus appears not to care about riches, and would like to know what he considers the chief advantage of them. Cephalus answers that when you are old the belief in the world below grows upon you, and then to have done justice and never to have been compelled to do injustice through poverty, or to have deceived any one, is felt to be an unspeakable blessing. Socrates, who is evidently preparing for an argument, next asks, What is the meaning of the word justice? To tell the truth and pay your debts? No more than this? Or must we admit exceptions? Ought I, for example, to put back into the hands of my friend, who is a madman, the sword which I borrowed of him when he was in his right mind? 'There must be exceptions.' 'And yet,' said Polemarchus, 'the definition given has the authority of Simonides.' Here Cephalus retires to look after the sacrifices, and

bequeaths, as Socrates says, the possession of the argument to his heir, Polemarchus. The description of old age is finished, and Plato, as his manner is, has touched the key-note of the whole work in asking for the definition of justice, just raising the question which Glaucon afterwards pursues respecting external goods, and preparing for the concluding mythus of the world below in the slight allusion of Cephalus. The portrait of the just man is a natural frontispiece or introduction to the long discourse which follows, and may perhaps imply that in all our perplexity about the nature of justice, there is no difficulty in discerning 'who is a just man.' The first explanation has been supported by a saying of Simonides; and now Socrates has a mind to show that the resolution of justice into two unconnected precepts, which have no common principle, fails to satisfy the demands of dialectic.

He proceeds: What did Simonides mean by this saying of his? Did he mean that I was to give back arms to a madman? 'No, not in that case, not if the parties are friends, and evil would result. He meant that you were to do what was proper, good to friends, and harm to enemies.' Every act does something to somebody; and following this analogy, Socrates asks, What is this due and proper thing which justice does, and to whom? He is answered that justice does good to friends and harm to enemies. But in what way good or harm? 'In making alliances with the one, and going to war with the other.' Then in time of peace what is the good of justice? The answer is that justice is of use in contracts, and contracts are money partnerships. Yes; but how in such partnerships is the just man of more use than any other man? 'When you want to have money safely kept and not used.' Then justice will be useful when money is useless. And there is another difficulty: justice, like the art of war or any other art, must be of opposites, good at attack as well as at defence, at stealing as well as guarding. But then justice is a thief, though a hero notwithstanding, like Autolycus, the Homeric hero, who was 'excellent above all men in theft and perjury'—to such a pass have you and Homer and Simonides brought us; though I do not forget that the thieving must be for the good of friends and the harm of enemies. And still there arises another question: Are friends to be interpreted as real or seeming; enemies as real or seeming? And are our friends to be only the good, and our enemies to be the evil? The answer is, that we must do good to our seeming and real good friends, and evil to our seeming and real evil enemies—good to the good, and evil

to the evil. But ought we to render evil for evil at all, for this will only make men more evil? Can justice produce injustice any more than the art of horsemanship can make bad horsemen, or heat produce cold? The final conclusion is, that no sage or poet ever said that the just return evil for evil; this was a maxim of some rich and mighty man, Periander, Perdiccas, or Ismenias the Theban (about B.C. 398-381). . .

Thus the first stage of aphoristic or unconscious morality is shown to be inadequate to the wants of the age; the authority of the poets is set aside, and through the winding mazes of dialectic we make an approach to the Christian precept of forgiveness of injuries. Similar words are applied by the Persian mystic poet to the Divine being when the questioning spirit is stirred within him:—‘If because I do evil, Thou punishest me by evil what is the difference between Thee and me?’ In this both Plato and Khèyam rise above the level of many Christian (?) theologians. We may note in passing the antiquity of casuistry, which not only arises out of the conflict of established principles in particular cases, but also out of the effort to attain them, and is prior as well as posterior to our fundamental notions of morality. The ‘interrogation’ of moral ideas; the appeal to the authority of Homer; the conclusion that the maxim, ‘Do good to your friends and harm to your enemies,’ being erroneous, could not have been the word of any great man (cp. ii. 380 A, B), are all of them very characteristic of the Platonic Socrates.

. . . Here Thrasymachus, who has made several attempts to interrupt, but has hitherto been kept in order by the company, takes advantage of a pause and rushes into the arena, beginning, like a savage animal, with a roar. ‘Socrates,’ he says, ‘what folly is this?—Why do you agree to be vanquished by one another in a pretended argument?’ He then prohibits all the ordinary definitions of justice; to which Socrates replies that he cannot tell how many twelve is, if he is forbidden to say 2×6 , or 3×4 , or 6×2 , or 4×3 . At first Thrasymachus is reluctant to argue; but at length, with a promise of payment on the part of the company and of praise from Socrates, he is induced to open the game. ‘Listen,’ he says; ‘my answer is that might is right, justice the interest of the stronger: now praise me.’ Let me understand you first. Do you mean that because Polydamas the wrestler, who is stronger than we are, finds the eating of beef for his interest, the eating of beef is also for our interest, who are not so strong? Thrasymachus is indignant at the illustration, and explains his meaning to be that the rulers make laws for

their own interests. But suppose, says Socrates, that the ruler or stronger makes a mistake—then the interest of the stronger is not his interest. Thrasymachus is saved from this speedy downfall by his disciple Cleitophon, who introduces the word ‘thinks;’—not the actual interest of the ruler, but what he thinks to be his interest, is justice. The contradiction is escaped by the unmeaning evasion: for though his real and apparent interests may differ, what the ruler thinks to be his interest will always be what he thinks to be his interest.

Of course this was not the original assertion, but Socrates is not disposed to quarrel about words, if, as he significantly adds, his adversary has changed his mind. In what follows Thrasymachus does in fact withdraw his admission that the ruler may make a mistake, for he affirms that the ruler as a ruler is infallible. Socrates is quite ready to accept the new position, which he equally turns against Thrasymachus by the help of the analogy of the arts. Every art or science has an interest, but this interest is to be distinguished from the accidental interest of the artist, and is only concerned with the good of the things or persons which come under the art. And justice has an interest which is the interest not of the ruler or judge, but of those who come under his sway.

Thrasymachus is on the brink of the inevitable conclusion, when he makes a bold diversion. ‘Tell me, Socrates,’ he says, ‘have you a nurse?’ What a question! Why do you ask? ‘Because, if you have, she neglects you and lets you go about drivelling, and has not even taught you to know the shepherd from the sheep. For you fancy that shepherds and rulers never think of their own interest, but only of their sheep or subjects, whereas the truth is that they fatten them for their use, sheep and subjects alike. And experience proves that in every relation of life the just man is the loser and the unjust the gainer, especially where injustice is on the grand scale, which is quite another thing from the petty rogueries of swindlers and burglars and robbers of temples. The language of men proves this—our gracious and blessed tyrant and the like—all which tends to show (1) that justice is the interest of the stronger; and (2) that injustice is more profitable and also stronger than justice.’

Thrasymachus, who is better at a speech than at a close argument, having deluged the company with words has a mind to escape. But the others will not let him go, and Socrates adds a humble but earnest request that he will not desert them at such a crisis of their fate. ‘And

what can I do more for you?' he says; 'would you have me put the words bodily into your souls?' God forbid! replies Socrates; we only want you to be consistent in the use of terms, and not to employ 'physician' in an exact sense, and then again 'shepherd' or 'ruler' in an inexact sense,—whereas the ruler in himself and the shepherd in himself are looking only to the good of their flocks and not to their own: but you will insist that the ruler likes being in office. 'No doubt about it,' replies Thrasymachus. Then why are they paid? Is not the reason, that their interest is not comprehended in their art, and is therefore the concern of another art, the art of pay, which is common to the arts in general, and therefore not identical with any one of them. Nor would any man be a ruler unless he were induced by the hope of reward or the fear of punishment; the reward is money or honour, the punishment is the necessity of being ruled by a man worse than himself. And if a State (or Church) were composed entirely of good men, they would be affected by the last motive only; and there would be as much 'nolo episcopari' as there is at present of the opposite. . . .

The satire on existing governments is heightened by the simple and apparently incidental manner in which the last remark is introduced. There is a similar irony in the argument that the governors of mankind do not like being in office, and that therefore they demand pay.

Enough of this: the other assertion of Thrasymachus is far more important—that the unjust life is more gainful than the just. Now, as you and I, Glaucon, are not convinced by him, we ought to try and answer him, and as we cannot number the gains of either kind of life, we had better proceed by making mutual admissions of the truth to one another.

Thrasymachus had asserted that perfect injustice was more gainful than perfect justice, and after a little hesitation he is induced by Socrates to admit the still greater paradox that injustice is virtue and justice vice. Socrates praises his frankness, and assumes the attitude of one whose only wish is to understand the meaning of his opponents. At the same time he is weaving a net in which Thrasymachus is finally enclosed. The admission is elicited from him that the just man only seeks to gain an advantage over the unjust, but not over the just, while the unjust would gain an advantage over either. Socrates, in order to test this statement, employs once more the favourite analogy of the arts. The musician, doctor, skilled artist of any sort, does not seek to gain more than the

skilled, but only more than the unskilled (that is to say, he works up to a rule, standard, law, and does not exceed it), whereas the unskilled makes random efforts at excess. Thus the skilled falls on the side of the good, and the unskilled on the side of the evil, and the just is the skilled, and the unjust is the unskilled.

There was great difficulty in bringing Thrasymachus to the point; the day was hot and he was streaming with perspiration, and for the first time in his life he was seen to blush. But his other thesis that injustice was stronger than justice has not yet been refuted, and Socrates now proceeds to the consideration of this, which, with the assistance of Thrasymachus, he hopes to clear up; the latter is at first churlish, but in the judicious hands of Socrates is soon restored to good humour: Is there not honour among thieves? Is not the strength of injustice only a remnant of justice? Is not absolute injustice absolute weakness also? A house that is divided against itself cannot stand; two men who quarrel detract from one another's strength, and he who is at war with himself is the enemy of himself and the gods. Not wickedness therefore, but semi-wickedness flourishes in states,—a remnant of good is needed in order to make union in action possible,—there is no kingdom of evil in this world.

There is another question to be answered: Is the just or the unjust the happier? To this we answer, that every art has an end and an excellence or virtue by which the end is accomplished. And is not the end of the soul happiness, and justice the excellence of the soul by which happiness is attained? Justice and happiness being thus shown to be inseparable, the question whether the just or the unjust is the happier, has disappeared.

Thrasymachus replies: 'Let this be your entertainment, Socrates, at the festival of Bendis.' Yes; and a very good entertainment with which your kindness has supplied me, now that you have left off scolding. And yet not a good entertainment—but that was my own fault for tasting of many things. First of all the nature of justice was the subject of our enquiry, and then whether justice is virtue and wisdom, or evil and folly; and then the comparative advantages of just and unjust: and the sum of all is that I know not what justice is; how then shall I know whether the just is happy or not?...

Thus the sophistical fabric has been demolished, chiefly by appealing to the analogy of the arts. 'Justice is like the arts (1) in having no

external interest, and (2) in not aiming at excess, and (3) justice is to happiness what the implement of the workman is to his work.' At this the modern reader is apt to stumble, because he forgets that Plato is writing in an age when the arts and the virtues, like the moral and intellectual faculties, were still undistinguished. Among early enquirers into the nature of human action the arts helped to fill up the void of speculation; and at first the comparison of the arts and the virtues was not perceived by them to be fallacious. They only saw the points of agreement in them and not the points of difference. Virtue, like art, must take means to an end; good manners are both an art and a virtue; character is naturally described under the image of a statue (362 D, 540 C); and there are many other figures of speech which are readily transferred from art to morals. The next generation cleared up these perplexities; or at least supplied after ages with a further analysis of them. The contemporaries of Plato were in a state of transition, and had not yet fully realized the common-sense distinction of Aristotle, that 'virtue is concerned with action, art with production' (Nic. Eth. vi. 4), or that 'virtue implies intention and constancy of purpose,' whereas 'art requires knowledge only' (Nic. Eth. ii. 3). And yet in the absurdities which follow from some uses of the analogy (cp. 333 E, 334 B), there seems to be an intimation conveyed that virtue is more than art. This is implied in the conclusion that 'justice is a thief,' and in the dissatisfaction which Socrates expresses at the final result.

The second of the three arguments, 'that the just does not aim at excess,' has a real meaning, though wrapped up in an enigmatical form. That the good is of the nature of the finite is a peculiarly Hellenic sentiment, which may be compared with the language of those modern writers who speak of virtue as fitness, and of freedom as obedience to law. The mathematical or logical notion of limit easily passes into an ethical one, and even finds a mythological expression in the conception of (*φθόνος*) envy. Ideas of measure, equality, order, unity, proportion, still linger in the writings of moralists; and the true spirit of the fine arts is better conveyed by such terms than by superlatives.

'When workmen strive to do better than well,
They do confound their skill in covetousness.'

(King John, Act iv. Sc. 2.)

The harmony of the soul and body (402 D), and of the parts of the

soul with one another (442 C), a harmony 'fairer far than that of musical notes,' is the true Hellenic mode of conceiving the perfection of human nature.

In what may be called the epilogue of the discussion with Thrasymachus, Plato argues that evil is not a principle of strength, but of discord and dissolution, just touching the question which has been often treated in modern times by theologians and philosophers, of the negative nature of evil (cp. on the other hand, x. 610). In the last argument we trace the germ of the Aristotelian doctrine of an end and a virtue directed towards the end, which again is suggested by the arts. The final reconciliation of justice and happiness and the identity of the individual and the State are also intimated. Nothing is concluded; but the tendency of the dialectical process, here as always, is to enlarge our conception of ideas, and to widen their application to human life.

BOOK II. Thrasymachus is pacified, but the intrepid Glaucon insists on continuing the argument. He is not satisfied with the indirect manner in which, at the end of the last book, Socrates had contrived to dispose of the question 'Whether the just or the unjust is the happier.' He begins by dividing goods into three classes:—first, goods desirable in themselves; secondly, goods desirable in themselves and for their results; thirdly, goods desirable for their results only. He then asks Socrates in which of the three classes he would place justice. In the second class, replies Socrates, among goods desirable for themselves and also for their results. 'Then the world in general are of another mind, for they say that justice belongs to the troublesome class of goods which are desirable for their results only. Socrates answers that this is the doctrine of Thrasymachus which he rejects. Glaucon thinks that Thrasymachus was too ready to listen to the voice of the charmer, and proposes to consider the nature of justice and injustice in themselves and apart from the results and rewards of them which the world is always dinning in his ears. He will first of all speak of the nature and origin of justice; secondly, of the manner in which men view justice as a necessity and not a good; and thirdly, he will prove the reasonableness of this view.

'To do injustice is said to be a good; to suffer injustice an evil.' As the evil is discovered by experience to be greater than the good, the sufferers, who cannot also be doers, make a compact that they will

have neither, and this compact or mean is called justice, but is really the impossibility of doing injustice. No one would observe such a compact if he were not obliged. Let us suppose that the just and unjust have two rings, like that of Gyges in the well-known story, which make them invisible, and then no difference will appear in them, for every one will do evil if he can. And he who abstains will be regarded by the world as a fool for his pains. Men may praise him in public out of fear for themselves, but they will laugh at him in their hearts. (Cp. Gorgias, 483 B.)

‘And now let us frame an ideal of the just and unjust. Imagine the unjust man to be master of his craft, seldom making mistakes and easily correcting them; having gifts of money, speech, strength—the greatest villain bearing the highest character: and at his side let us place the just in his nobleness and simplicity—being, not seeming—without name or reward—clothed in his justice only—the best of men who is thought to be the worst, and let him die as he has lived. I might add (but I would rather put the rest into the mouth of the panegyrists of injustice—they will tell you) that the just man will be scourged, racked, bound, will have his eyes put out, and will at last be crucified [literally *impaled*][—]and all this because he ought to have preferred seeming to being. How different is the case of the unjust who clings to appearance as the true reality! His high character makes him a ruler; he can marry where he likes, trade where he likes, help his friends and hurt his enemies; having got rich by dishonesty he can worship the gods better, and will therefore be more loved by them than the just.’

I was thinking what to answer, when Adeimantus, like an Homeric hero, ‘brother helping brother,’ desired to join in the already unequal contest. He considered that the most important point of all had been omitted: ‘the grand error has been that men are taught to be just for the sake of rewards; parents and guardians make reputation the incentive to virtue. And other advantages are promised by them of a more solid kind; e. g. wealthy marriages, and high offices which depend upon the good opinion of mankind. There is the picture in Homer of fat sheep and heavy fleeces, rich corn-fields and trees toppling with fruit, which the gods provide in this life for the just. And the Orphic poets add a similar picture of another. Musaeus gets his heroes down in the world below, and has the ‘saints feasting on couches,

with garlands on their heads, enjoying as the meed of virtue a gross paradise of immortal drunkenness. Some go further, and speak also of a fair posterity in the third and fourth generation. But the wicked are drowned by them in a slough of despond, or made to carry water in a sieve. Our description of the infamy and sufferings of the just is transferred by them to the unjust. This is all that their imagination supplies.

‘Take another kind of argument which is found both in poetry and prose:—“Virtue,” as Hesiod says, “is honourable but difficult”—“steep is the way and narrow is the gate;” but vice is easy and profitable—“broad is the way and many walk therein.” And you may often see the wicked in great prosperity and the righteous afflicted by the will of heaven. And mendicant prophets knock at rich men’s doors, promising to atone for the sins of themselves or their fathers in a pleasant easy manner with festive games, or with charms and invocations to get rid of an enemy good or bad by divine help and at a small charge;—they appeal to a heap of books professing to be written by Musaeus and Orpheus, and carry away the minds of whole cities, and promise to “get souls out of purgatory;” and if we refuse to listen to them, no one knows what will happen to us.

‘When a lively-minded ingenuous youth hears all this, what will be his conclusion? “Will he,” in the language of Pindar, “make justice his high tower, or fortify himself with crooked deceit?” Justice, he reflects, without the appearance of justice, is misery and ruin; injustice has the promise of a glorious life. Appearance is master of truth and lord of happiness. To appearance then he will turn,—he will put on the show of virtue and trail behind him the fox of Archilochus. I hear some one saying that “wickedness is not easily concealed,” to which I reply that “nothing great is easy.” And even if there is a risk of being discovered, union and force and rhetoric will do much; and although they cannot prevail over the gods, still how do we know that there are gods? Only from the poets, who acknowledge that they may be appeased by sacrifices. Then why not sin and pay for indulgences out of your sin? For if the righteous are unpunished, the wicked may be unpunished and have the pleasure of sinning too. But is there not a danger of the world below? Nay, my friends, says the argument, there are mysteries and atoning power who will set that matter right, as the poets, who

are the sons of the gods, tell us, and this is confirmed by the authority of the State.

‘On what principle can we resist such arguments in favour of injustice? Add good manners, and, as the wise tell us, we shall fare well both with gods and men; we shall make the best of both worlds. Who that is not a miserable caitiff will refrain from smiling at the praises of justice? Even if a man knows the better part he will not be angry with other men; for he knows also that more than human virtue is needed to save a man, and that he only praises justice who is incapable of injustice.

‘And the origin of the evil is that all men from the beginning, heroes, poets, instructors of youth, have always asserted “the temporal dispensation,” the honours, glories, profits, expediencies of justice. Had they been taught in early youth the power of justice and injustice inherent in the soul, and unseen by any human or divine eye, they would not have needed others to be their guardians, but every one would have been the guardian of himself. And this is what I want you to show, Socrates;—other men use arguments which rather tend to strengthen the position of Thrasymachus that “might is right;” but from you I expect better things. And please, as Glaucon said, to exclude reputation; let the just be thought unjust and the unjust just, and do you still prove to us the superiority of justice.’ . . .

The thesis, which for the sake of argument has been maintained by Glaucon, is the converse of that of Thrasymachus—not right is the interest of the stronger, but right is the necessity of the weaker. Starting from the same premises he carries the analysis of society a step further back;—might is still right, but the might is the weakness of the many combined against the strength of the few.

There have been theories in modern as well as in ancient times which have a family likeness to the speculations of Glaucon; e. g. that power is the foundation of right; or that a monarch has a divine right to govern well or ill; or that virtue is self-love or the love of power; or that war is the natural state of man; or that private vices are public benefits. All such theories have a kind of plausibility from their partial agreement with experience. For human nature oscillates between good and evil, and the motives of actions and the origin of institutions may be explained to a certain extent on either hypothesis according to the character or point of view of a particular thinker.

But theories of this sort do not represent the real nature of the State, which is based on a vague sense of right gradually corrected and enlarged by custom and law (although capable also of perversion), any more than the origin of society, which is to be sought in the family and in the social and religious feelings of man. Nor do they represent the average character of individuals, which cannot be explained simply on a theory of evil, but has always a counteracting element of good. And as men become better such theories appear more and more untruthful to them, because they are more conscious of their own disinterestedness. A little experience may make a man a cynic; a great deal will bring him back to a truer and kindlier view of the mixed nature of himself and his fellow men.

The two brothers ask Socrates to prove to them that the just is happy when they have taken from him all that in which happiness is ordinarily supposed to consist. Not that there is (1) any absurdity in the attempt to frame a notion of justice apart from circumstances. For the ideal must always be a paradox when compared with the ordinary conditions of human life. Neither the Stoical ideal nor the Christian ideal is true as a fact, but they may serve as a basis of education, and may exercise an ennobling influence. An ideal is none the worse because 'some one has made the discovery' that no such ideal was ever realized. (Cp. v. 472 D.) And in a few exceptional individuals who are raised above the ordinary level of humanity, the ideal of happiness may be realized in death and misery. This may be the state which the reason deliberately approves, and which the utilitarian as well as every other moralist may be bound in certain cases to prefer.

Nor again, (2) must we forget that Plato, though he agrees generally with the view implied in the argument of the two brothers, is not expressing his own final conclusion, but rather seeking to dramatize one of the aspects of ethical truth. He is developing his idea gradually in a series of positions or situations. He is exhibiting Socrates for the first time undergoing the Socratic interrogation. Lastly, (3) the word 'happiness' involves some degree of confusion because associated in the language of modern philosophy with conscious pleasure or satisfaction, which was not equally present to his mind.

Glaucon has been drawing a picture of the misery of the just and the happiness of the unjust, to which the misery of the tyrant in Book IX is

the answer and parallel. And still the unjust must appear just; that is 'the homage which vice pays to virtue.' But now Adeimantus, taking up the hint which had been already given by Glaucon (358 C), proceeds to show that in the opinion of mankind justice is regarded only for the sake of rewards and reputation, and points out the advantage which is given to such arguments as those of Thrasymachus and Glaucon by the conventional morality of mankind. He seems to feel the difficulty of 'justifying the ways of God to man.' Both the brothers touch upon the question, how far the morality of actions is determined by their consequences (cp. iv. 420 foll.); and both of them go beyond the position of Socrates, that justice belongs to the class of goods not desirable for themselves only, but desirable for themselves and for their results, to which he recalls them. In their attempt to view justice as an internal principle, and in their condemnation of the poets they anticipate him. The common life of Greece is not enough for them; they must penetrate deeper into the nature of things.

It has been objected that justice is honesty in the sense of Glaucon and Adeimantus, but is taken by Socrates to mean all virtue. May we not more truly say that the old-fashioned notion of justice is enlarged by Socrates, and becomes equivalent to universal order or well-being, first in the State, and secondly in the individual? He has found a new answer to his old question 'whether the virtues are one or many,' viz. that one is the ordering principle of the three others. In seeking to establish the purely internal nature of justice, he is met by the fact that man is a social being, and he tries to harmonise them as well as he can. There is no more inconsistency in this than was inevitable in his age and country; there is no use in turning upon him the cross lights of modern philosophy, which, from some other point of view, would appear equally inconsistent. Plato does not give the final solution of philosophical questions for us; nor can he be judged of by our standard.

The remainder of the Republic is developed out of the question of the sons of Ariston. Three points are deserving of remark in what immediately follows:—First, that the answer of Socrates is altogether indirect. He does not say that happiness consists in the contemplation of the idea of justice, and still less will he be tempted to affirm the Stoical paradox that the just man can be happy on the rack. But first he dwells on the difficulty of the problem and insists on restoring man to his natural condition, before he will answer the question at all. He

too will frame an ideal, but his ideal comprehends not only abstract justice, but the whole relations of man. Under the fanciful illustration of the large letters he implies that he will only look for justice in society, and that from the State he will proceed to the individual. His answer in substance amounts to this,—that under favourable conditions, i.e. in the perfect State, justice and happiness will coincide, and that when justice has been once found, happiness may be left to take care of itself. That he falls into some degree of inconsistency, when in the tenth book (612 A) he claims to have got rid of the rewards and honours of justice, may be admitted; for he has left those which exist in the perfect State. And the philosopher ‘who retires under the shelter of a wall’ (vi. 496) can hardly have been esteemed happy by him, at least not in this world. Still he maintains the true attitude of moral action. Let a man do his duty first, without asking whether he will be happy or not, and happiness will be the inseparable accident which attends him. ‘Seek first the kingdom of God and his righteousness, and all these things shall be added unto you.’

Secondly, it may be remarked that Plato preserves the true character of Greek thought in beginning with the State and in going on to the individual. First ethics, then politics is the order of ideas to us; the reverse is the order of history. Only after many struggles of thought does the individual assert his right as a moral being. In early ages he is not one, but one of many, the citizen of a State which is prior to him; and he has no notion of good or evil apart from the law of his country or the creed of his church. And to this type he is constantly tending to revert, whenever the influence of custom, or of party spirit, or the recollection of the past becomes too strong for him.

Thirdly, we may observe the confusion or identification of the individual and the State, of ethics and politics, which pervades early Greek speculation, and even in modern times retains a certain degree of influence. The subtle difference between the collective and individual action of mankind seems to have escaped early thinkers, and we too are sometimes in danger of forgetting the conditions of united human action; either elevating politics into ethics, or lowering ethics to the standard of politics. The good man and the good citizen only coincide in the perfect State; and this perfection cannot be attained by legislation acting upon them from without, but, if at all, by education fashioning them from within.

... Socrates praises the sons of Ariston, 'inspired offspring of the renowned hero,' as the elegiac poet terms them; but he is at a loss to understand how they can argue so eloquently on behalf of injustice while their character shows that their own arguments have no influence on them. He does not know how to answer them, although he is afraid of deserting justice in the hour of need. He therefore makes a condition, that having weak eyes he shall be allowed to read the large letters first and then go on to the smaller. He means to say, that he must be allowed to look for justice in the State first, and shall then proceed to the individual. This is agreed, and Socrates begins to construct the State.

Society arises out of the wants of man. His first want is food; his second a house; his third a coat. The sense of these needs and the possibility of satisfying them by exchange, draw individuals together on the same spot; and this is the beginning of a State, which we take the liberty to invent, although necessity is the real inventor. There must be first a husbandman, secondly, a builder, thirdly, a weaver, to which may be added a cobbler. Four or five citizens at least are required to make a city. Now men have different natures, and one man will do one thing better than many; and business waits for no man. Hence there must be a division of labour into different employments; into wholesale and retail; into workers, and makers of workmen's tools; into shepherds and husbandmen. A city which includes all this will have far exceeded the limit of four or five, and yet not be very large. But then again imports will be required, and imports necessitate exports, and this implies variety of produce in order to attract the taste of purchasers; also merchants and ships. In the city too we must have a market and money and retail trades, otherwise buyers and sellers will never meet, and the valuable time of the producers will be wasted in vain efforts at exchange. If we add hired servants the State will be complete, and we may guess that somewhere in the intercourse of the citizens with one another justice and injustice will appear.

Here follows a rustic picture of their way of life. They build houses, and produce corn and wine, and make coats and shoes. They are lightly clad in summer while at their work, but well shod and clothed in winter. Their principal food is flour and meal, of which they make noble puddings, and these they serve up on a mat of reeds or clean

leaves. They repose on couches strewn with yew and myrtle, passing their time in pleasant converse with one another, hymning the gods over their wine, and taking care not to have too many children. 'Yes, Socrates,' said Glaucon, 'but you should give them a relish.' Yes, I replied, and a relish they shall have—salt and olives and cheese and potherbs and chestnuts which they will roast at the fire, indulging in moderate potations. Fed on such a diet they will live in peace and health, and bequeath a similar life to their descendants. Glaucon said, 'Tis a city of pigs, Socrates.' Why, I replied, what do you want more? 'Only the conveniences of life, which every one has,—sofas to lie upon, tables to eat from, also meats and sweets.' I see that you want not only a State, but a luxurious State; and possibly in the more complex frame we shall sooner find justice and injustice. Then our ideas will have to enlarge themselves; the fine arts must go to work—every instrument and ornament of luxury in furniture and dress and food will be wanted in every form. There will be dancers, painters, sculptors, musicians, cooks, barbers, tire-women, nurses, artists; and we must not forget the swincherds and neatherds too for the animals, and physicians to cure the disorders of which luxury is the source. And to feed all these superfluous mouths we shall need a part of our neighbours' land, and they will want a part of ours: and this is the origin of war, which may be traced to the same causes as other political evils. Our city will now require the slight addition of a camp, and the citizen will be converted into a soldier. But then our old doctrine of the division of labour must not be forgotten. The art of war cannot be learned in a day, and there must be a natural aptitude for military duties. There will be some war-like natures who have this aptitude—dogs keen of scent and swift of foot to pursue, and strong of limb to fight. And as spirit is the foundation of courage, such natures, whether of men or animals, will be full of spirit. And here arises a difficulty:—these spirited natures are apt to bite and devour one another; the union of gentleness to friends and fierceness against enemies appears to be an impossibility, and the guardian of a State requires both qualities. Who then can be a guardian? After a pause, Socrates adds that the image of the dog suggests a way of escape. For in dogs too there is a double character of gentleness to friends and enmity to strangers. Your dog is a philosopher and judges by the rule of knowing or not knowing; and philosophy, whether in man or beast, is the parent of gentleness. And the human watchdogs too

must be philosophers or lovers of learning which will make them gentle. And how are they to be learned without education ?

But what is education? Is any better than the old-fashioned sort which is comprehended under the name of music and gymnastic? Music includes literature, and literature is of two kinds, true and false. 'What do you mean?' he said. I mean that children hear stories before they learn gymnastics, and that the stories are mostly untrue, or have only one or two grains of truth in a bushel of falsehood. Now early life is very impressible, and children ought not to be allowed to learn what they will have to unlearn when they grow up; and in order to prevent this we must have a censorship of nursery tales, banishing some and keeping others. Some of them are very improper, as we may see in the great instances of Homer and Hesiod, who really are to blame, for they not only tell lies but bad lies; stories about Uranus and Saturn, which are immoral as well as false, and which should never be spoken of to young persons or indeed at all; or, if at all, then in a mystery after the sacrifice, not of an Eleusinian pig, but of some unprocurable animal. Shall our youth be encouraged to beat their fathers by the example of Zeus, or our citizens be incited to war by seeing the wars of the gods and giants embroidered on the robe of Athene? Shall they hear the narrative of Hephaestus binding his mother, and of Zeus sending him flying for helping her when she was beaten? Even if such tales are capable of a mystical interpretation, the interpretation is not obvious to the young at the age when impressions are most powerful. But if any one asks what tales are to be allowed, to that, Adeimantus, you and I answer that we are legislators and not book-makers; we only lay down the principles according to which books are to be written, but to write them is the duty of others.

And our first principle is, that God is to be represented as he is; not as the author of all things, but of good and of good only. We are not to be told that he is the steward of good and evil, or that he has two casks full of destinies, as Homer says; or that Athene and Zeus incited Pandarus to break the treaty; or that God caused the sufferings of Niobe, or of Pelops, or the Trojan war; or that he picks a quarrel with men when he wants to destroy them. Either these were not the actions of the gods, or God was just, and men were all the better for being punished. But that the deed was evil, and God the author of

the deed, is not to be said or sung in any well-ordered commonwealth by old or young, and is suicidal, immoral, impious. This is our first and great principle,—God is the author of good only.

And the second principle is like unto it:—With God is no variability or change of form; he is no Proteus. Reason teaches us this; for if we suppose a change in God, he must be changed either by another or by himself. By another?—but the best works of nature and art and the noblest qualities of mind are least liable to be changed by any external force. By himself?—but he cannot change for the better, and he will hardly change for the worse. He remains for ever fairest and best in his own image. Therefore we refuse to listen to the poets who tell us of the goddess Here begging in the likeness of a priestess or of other deities who prowl about at night in strange disguises; all that blasphemous nonsense with which mothers fool the manhood out of their children is got at secondhand from the poets and ought to be suppressed. But some one will say that God, who is himself unchangeable, may take a form in relation to us. Why should he? For gods as well as men hate the lie in the soul or principle of falsehood; and as for any other form of lying which is used for a purpose and is regarded as innocent in certain exceptional cases—what need have the gods of this? For they are not ignorant of antiquity like the poets, nor are they afraid of their enemies, nor is any madman a friend of theirs. God then is true, he is absolutely true; he changes not, he deceives not, by day or night, by word or sign. This is our second great principle,—God is true. Away with the lying dream of Agamemnon in Homer, and the accusation of Thetis against Apollo in Aeschylus. . . .

In order to give clearness to his conception of the State, Plato proceeds to trace the first principles of mutual need and of division of labour in an imaginary community of four or five citizens. Gradually this community increases; the division of labour extends to countries; imports necessitate exports; a medium of exchange is required, and retailers sit in the market-place to save the time of the producers. These are the steps by which Plato constructs the first or primitive State, introducing the elements of political economy by the way. As he is going to frame a second or civilized State, the simple naturally comes before the complex. But although, like Rousseau, he indulges in a picture of primitive life, which has indeed often had a great influence

on the imagination of mankind, he does not seriously mean to say that one is better than the other (cp. *Politicus*, p. 272); nor can any inference be drawn from the description of the first state taken apart from the second, such as Aristotle appears to draw in the *Politics*, book iv. 4, 12.

The disappointment of Glaucon at the 'city of pigs,' the ludicrous description of the ministers of luxury in the more refined state, and the afterthought of the necessity of doctors, the illustration of the nature of the guardian taken from the dog, the desirableness of offering some almost unprocurable victim when impure mysteries are to be celebrated, the behaviour of Zeus to his father and of Hephaestus to his mother, are touches of humour which have also a serious meaning. In speaking of education Plato rather startles us by affirming that a child must be trained in falsehood first and in truth afterwards. Yet this is not very different from saying that children must be taught through the medium of imagination as well as reason; that their minds can only develop gradually, and that there is much which they must learn without understanding (cp. iii. 402 A). This is also the substance of Plato's view, though he must be acknowledged to have drawn the line somewhat differently from modern ethical writers respecting truth and falsehood. To us economies or accommodations would not be allowable unless they were required by the human faculties or necessary for the communication of knowledge to the simple and ignorant. We should insist that the word was inseparable from the intention, and that we must not be falsely true; i. e. speak or act falsely in support of what was right or true. But Plato would limit the use of fictions only by requiring that they should have a good moral effect, and that such a dangerous weapon as falsehood should be employed by the rulers alone and for great objects.

A Greek in the age of Plato attached no importance to the question whether his religion was an historical fact. He was just beginning to be conscious that the past had a history; but he could see nothing beyond Homer and Hesiod. Whether their narratives were true or false did not seriously affect the political or social life of Hellas. Men only began to suspect that they were fictions when they recognised them to be immoral. And so in all religions: the consideration of their morality comes first, afterwards the truth of the documents in which they are recorded, or of the events natural or

supernatural which are told of them. But in modern times, and in Protestant countries perhaps more than in Catholic, we have been too much inclined to identify the historical with the moral; and some have refused to believe in religion at all, unless a superhuman accuracy was discernible in every part of the record. The facts of an ancient or religious history are amongst the most important of all facts; but they are frequently uncertain, and we only learn the true lesson which is to be gathered from them when we place ourselves above them. These reflections tend to show that the difference between Plato and ourselves, though not unimportant, is not so great as might at first sight appear. For we should agree with him in placing the moral before the historical truth of religion; and, generally, in disregarding those errors or misstatements of fact which necessarily occur in the early stages of all religions. We know also that changes in the traditions of a country cannot be made in a day; and are therefore tolerant of many things which science and criticism would condemn.

A singular conception which occurs towards the end of the book is the lie in the soul; this is connected with the Platonic and Socratic doctrine that involuntary ignorance is worse than voluntary. The lie in the soul is a true lie, the corruption of the highest truth, the deception of the highest part of the soul, from which he who is deceived has the least power of delivering himself. For example, to represent God as false or immoral, or, according to Plato, as deluding men with appearances or as the author of evil; or again, to affirm with Protagoras that 'knowledge is sensation,' or that 'being is becoming,' or with Thrasymachus 'that might is right,' would have been regarded by Plato as a lie of this hateful sort. The greatest unconsciousness of the greatest untruth, e. g. if, in the language of the Gospels, 'he who was blind' were to say 'I see,' is another aspect of the state of mind which Plato is describing. The lie in the soul may be further compared with the sin against the Holy Ghost (Luke xii. 10), allowing for the difference between Greek and Christian modes of speaking. To this is opposed the lie in words, which is only such a deception as may occur in a play or poem, or allegory or figure of speech, or in any sort of accommodation,—which though useless to the gods may be useful to men in certain cases. Socrates is here answering the question which he had himself raised, i. 331 C, about the propriety

of deceiving a madman. He is also contrasting the nature of God and man. For God is Truth, but mankind can only be true by appearing sometimes to be partial, or false. Reserving for another place the greater questions of religion or education, we may note further, (1) the approval of the old traditional education of Greece; (2) the preparation which Plato is making for the attack on Homer and the poets; (3) the preparation which he is also making for the use of economies in the State; (4) the familiar use of the allegorical interpretation of the poets in the age of Plato, which here, as in the *Phaedrus*, is rejected by him; (5) the contemptuous and at the same time euphemistic manner in which here as below (iii. 390) he alludes to the *Chronique Scandaleuse* of the gods.

BOOK III. There is another motive in purifying religion, which is to banish fear; for no man can be courageous who is afraid of death, or who believes the tales which are repeated by the poets concerning the world below. A gentle request should be made to them by the authorities not to abuse hell, accompanied by an intimation that their tales are untrue, and the reverse of inspiring to heroes. The licenser is desired to expunge obnoxious passages, such as the chilling words of Achilles:—‘I would rather be a serving-man than rule over all the dead;’ and the verses which tell of the squalid mansions, the senseless shadows, the flitting soul mourning over her lost strength and youth, the soul with a gibber going beneath the earth like smoke, the souls of the suitors which flutter about like bats—all this sort of thing Homer and the other poets must not be angry at our erasing. The terrors and horrors of Cocytus and Styx, ghosts and sapless shades, and the rest of their Tartarian nomenclature, must vanish. Such tales may have their use; but they frighten people out of their wits, and are not the proper food for soldiers. As little can we admit the sorrows and sympathies of the Homeric heroes:—Achilles, the son of a goddess, lying first on his back, and then on his face, then starting up and sailing along the sea-shore; or Priam, the cousin of the gods, crying aloud, rolling in the mire. A good man is not altogether prostrated at the loss of children or fortune. Neither is death terrible to him; and therefore lamentations over the dead should not be practised by men of note; they should be the concern of women and of inferior persons only, whether women or men. Still worse is the attribution of such weakness to the gods; as when the goddesses say, ‘Alas! my

travail!' and worst of all, when the king of heaven himself laments his inability to save Hector, or sorrows over the impending doom of his dear Sarpedon. Such a character of God, if not ridiculed by our young men, is likely to be imitated by them. Nor should our citizens be given to excess of laughter—'Such violent delights' are followed by a violent re-action. The description in the Iliad of the gods shaking their sides at the clumsiness of Hephaestus would not be admitted by you, says Socrates, addressing Glaucon. 'By me?—No,' replies the other, 'but you attribute to me what I never said.'

Truth should have a high place among the virtues, for falsehood is of no use to the gods and is useful only as a medicine in the case of men. The State physician or ruler may occasionally employ this medicine, but the subject must not in return tell a lie to the ruler; any more than the patient would tell a lie to his physician, or the sailor to his captain. If the ideal State is ever realized, the false word of any common man should be regarded as treason.

In the next place our youth must be temperate, and temperance consists in obedience to the rulers and abstinence from sensual pleasures. That is a lesson which Homer teaches in some places: 'The Achaeans marched breathing prowess in silent awe of their leaders;'—and a very different lesson in other places: 'O heavy with wine, who hast the eyes of a dog, and the heart of a stag.' Language of the latter kind is not likely to impress the lesson of self-control on the minds of youth. The same may be said of his praises of eating and drinking and of his dread of starvation; also of the verses in which he tells with much circumstance of the rapturous loves of Zeus and Here, which made the former forget his intention of honouring Achilles; or of how Hephaestus detained Ares and Aphrodite in a net on a similar occasion. There is a nobler strain heard in the words:—'Endure, my soul, thou hast endured worse.' Nor must we allow our citizens to receive bribes, or to say, 'Gifts persuade the gods, gifts reverend kings;' or to applaud the ignoble advice of Phoenix to Achilles that he should get money out of the Greeks before he assisted them; or the meanness of Achilles himself in taking gifts from Agamemnon; or his requiring a ransom for the body of Hector; or his cursing of Apollo; or his insolence to the river-god Scamander; or his dedication to the dead Patroclus of his own hair which had been already dedicated to the other river-god Spercheius; or the fit of cruelty which made Cheiron's pupil drag the body of Hector round the walls, and slay the captives at the pyre, especially as he is

avaricious also, which seems to be a contradiction. The amatory exploits of Peirithous and Theseus, Zeus' and Poseidon's sons are equally unworthy. Either these sons of gods were not the sons of god, or they were not such as the poets imagine them, any more than the gods themselves are the authors of evil. The youth who believes that such things are done by those who have the blue blood of heaven flowing in their veins will be too ready to imitate their example.

Enough of gods and heroes ;—what shall we say about men? What the poets and story-tellers say?—that the wicked prosper and the righteous are afflicted, or that justice is another's gain? Not this at all events, which is the opposite of the truth. But in raising the question at all we are anticipating the definition of justice, and had therefore better defer the enquiry.

Enough of the subject of poetry ; next follows style. Now all poetry is a narrative of events past, present, or to come ; and narrative is of three kinds, the simple, imitative, and a composition of the two. An instance will make my meaning clear. The first scene in Homer is of the last or mixed kind, being partly description and partly dialogue. But if you throw the dialogue into the 'oratio obliqua' (I am no poet and therefore I drop the metre), the priest came and (do not say 'spoke these words,' but) prayed the gods that the Achaeans might take Troy and have a safe return if Agamemnon would only give him back his daughter, and the other Greeks assented, but Agamemnon was wroth, and so on,—then the whole becomes descriptive, and the poet is the only speaker left ; or, if you omit the narrative, the whole becomes dialogue. These are the three styles—which of them is to be admitted into our State? 'Do you ask whether tragedy and comedy are to be admitted?' Yes, but perhaps there is something more involved ; and indeed the question has been already answered, for we have decided that one man cannot in his life play many parts. And therefore he cannot both live and act, or compose both tragedy and comedy, or be a rhapsodist and actor at once. Human nature is coined into very small pieces, and as our guardians have their own business already, which is the care of freedom, they will have enough to do without imitating. But if they imitate they should not imitate any meanness or baseness, but the good only ; for the mask which the actor wears is apt to become his face. We cannot allow men to play the parts of women, young or old, quarrelling or weeping, scolding their husbands, or setting up their

necks against the gods,—least of all when making love or in labour. They must not represent slaves, or bullies, or cowards, or drunkards, or madmen, or blacksmiths, or neighing horses, or bellowing bulls, or sounding rivers, or a raging sea. A good or wise man will be willing to perform good and wise actions, but he will be ashamed to play an inferior part which he has never practised; and he will prefer the descriptive style with as little imitation as possible. The man who has no self-respect, on the contrary, will imitate anybody and anything; sounds of nature, cries of animals; he will whistle like the wind, rattle like hail, growl like thunder, and play on any instrument; also he will bark like a dog, baa like a sheep, and crow like a cock; his whole performance will be imitation of gesture and voice. Now in the descriptive style there are few changes, but in the dramatic there are a great many. Poets and musicians use either, or a compound of both, and this compound is very attractive to youth and their teachers as well as to the vulgar. But our State in which one man plays one part only, and a cobbler is a cobbler, and a ploughman a ploughman, is not adapted for complexity. And when one of these polyphonus pantomimic gentlemen offers to exhibit himself and his poetry we will fall down and worship him as a sweet creature, and a holy and wonderful being; he shall be anointed with myrrh and have a garland of wool set upon his head—but then we shall bid him turn about and go to the next city, for we are patrons of the rough, honest poet, and will not depart from our original models (ii. 379 foll.; cp. *Laws*, vii. 817.)

Next as to the music. A song or ode has three parts,—the subject, the harmony, and the rhythm; of which the two last are dependent upon the first. As we banished strains of lamentation, so we may now banish the mixed Lydian harmonies, which are the harmonies of lamentation; and as our citizens are to be temperate, we may also banish convivial harmonies, such as the Ionian and pure Lydian. Two remain,—the Dorian and Phrygian, the first for war, the second for peace; the one expressive of courage, the other of obedience, or instruction, or religious feeling. And as we reject varieties of harmony, we shall also reject the queer, many-stringed, variously-shaped instruments which give utterance to them, and in particular the flute, which is more complex than any of them. The lyre and the harp may be permitted in the town, and the Pan's-pipe in the fields. Thus we have made a purgation of music, and will now make a purgation of metres. They should be like the harmonies, simple and suitable to the occasion. There were four notes of

the tetrachord, and there are three ratios of metre $\frac{3}{2}$ $\frac{2}{1}$ $\frac{2}{1}$, which have all their characters, and the feet have different characters as well as the rhythms. But about this you and I must ask Damon, the musician, who speaks, if I remember rightly, of a martial measure as well as of dactylic, trochaic, and iambic rhythms, which he arranges so as to compensate and equalize with one another. We only venture to affirm the general principle that the style is to conform to the subject and the metre to the style; and that the simplicity and harmony of the soul should be reflected in them. This principle of simplicity has to be learnt by every one in the days of his youth, and may be gathered anywhere from painting and embroidery, or any other creative and constructive art, as well as from the forms of plants and animals; it runs through nature as well as art, and has a wide kindred in the world.

Other artists as well as poets should be warned against meanness or unseemliness. Sculpture and painting as well as music must conform to the law of simplicity. And he who violates it cannot be allowed to work in our city, and to corrupt the taste of our citizens. For images of deformity are like a hurtful pasture, and day by day, little by little, our guardians gather evil from them, which becomes a festering mass of evil in the soul. Place them only where they may breathe the air of health and beauty, amid fair sights and sounds, and they will quickly drink in from surrounding objects sweet and harmonious influences; and this is the great power of music, which more than any other influence enters into the soul and gives the sense of deformity and beauty. At first the effect is unconscious; but when reason arrives then he who has been thus trained welcomes her as the friend whom he always knew. As in learning to read, first we acquire the elements or letters separately, and afterwards their combinations, and do not recognize the reflections of them in the water until we know the letters themselves;—in like manner we must first attain the elements or essential forms of temperance and courage and liberality and magnificence and the like, and then trace the combinations of them in life and experience. There is a music of the soul which answers to the harmony of the world; and the fairest object of a musical soul is the fair mind in the fair body. Some defect in the latter may be excused, but not in the former. True love is the daughter of temperance, and temperance is utterly opposed to the madness of bodily pleasure. Enough has been said of music, which makes a fair ending with love.

Next we pass on to gymnastics; about which I would remark, that the soul is related to the body as a cause to an effect, and therefore if we educate the mind we may leave the education of the body in her charge, and need only give a general outline of the course to be pursued. In the first place the guardians must abstain from strong drink, for they should be the last persons to lose their wits. Whether the habits of the palaestra are suitable to them is more doubtful, for the ordinary gymnastic is a sleepy, heavy sort of thing, and when left off suddenly is apt to be dangerous. And our warrior athletes must be wide-awake dogs, having all their senses about them, and must also be inured to all changes of food and climate. Hence they will require a finer sort of training and a simpler gymnastic, which will be twin sister to their simple music; and for their diet a rule may be found in Homer, who gives his heroes no fish although they were living at the sea-side, nor boiled meats which involve an apparatus of pots and pans; and, if I am not mistaken, he nowhere mentions sweet sauces. Sicilian cookery, and Attic confections, and Corinthian courtezans, which are to gymnastic what Lydian and Ionian melodies are to music, must not be allowed among our citizens. Where gluttony and intemperance prevail the town begins to fill with doctors and pleaders, who open their halls for practice; and law and medicine give themselves airs as soon as the freemen of a State go out and buy them. But what can show a more disgraceful state of education than the importation of justice from abroad because you have none of your own at home? And yet there *is* something more disgraceful still in the further stage of the same disease, when men have learned to take a pleasure and pride in the twists and turns of the law; not considering how much better it would be for them so to order their lives as to have no need of a nodding justice. And there is a similar disgrace in employing a physician, not for the cure of wounds or epidemic disorders, but because a man has blown himself out like a bladder, and has got more diseases than he knows the names of, or than ever existed in the days of Asclepius. For observe how simple is the Homeric practice of medicine. Eurypylos after he has been wounded drinks a posset of Pramnian wine, which is of a heating nature; and yet the sons of Asclepius blame neither the damsel who gives him the drink, nor Patroclus who is attending on him. The truth is that this modern system of nursing diseases was introduced by Herodicus the trainer; who, being of a sickly constitution, by a compound of training and

medicine tortured first himself and then a good many other people, and died a long time after he ought to have died. But Asclepius was a statesman, and refused to practise this art, because he knew that the citizens of a well-ordered State have no leisure to be ill, and therefore he adopted the rough 'kill or cure' method, which artisans and labourers employ. 'They must be at their business,' they say, 'and have no time for swathing and dieting: if they recover, well; and if they don't, there is an end of them.' Whereas the rich man is supposed to be a gentleman who can afford to be ill. Do you know a maxim of Phocylides,—that 'when a man begins to be rich' (or, perhaps, a little before) 'he should practise virtue?' But how can excessive care of health be inconsistent with an ordinary occupation, and yet consistent with the practice of virtue? A man ought to be thinking of something, and he says that philosophy gives him the headache, and never does anything because he is always unwell. And this was the reason why Asclepius and his sons practised no such art. They were in the interest of the public, and did not wish to preserve useless lives, or raise up a puny offspring to wretched sires. Honest diseases they honestly cured; and if a man was wounded, like Eurypylos in Homer, he might drink a sack posset, and he recovered all the same. But they would have nothing to do with persons whose lives were of no use either to themselves or to others, even though they might have made large fortunes out of them. And as to the story of Pindar, that Asclepius was slain by a thunderbolt for restoring a rich man to life, that is a lie; following our old rule we must say either that he did not take bribes, or that he was not the son of a god.

Glaucon then asks Socrates whether the best physicians and the best judges will not be those who have had severally the greatest experience of diseases and of crimes. Socrates draws a distinction between them. The physician should have had experience of disease in his own body, for he cures with his mind and not with his body. But the lawyer controls mind by mind; and therefore he should have no experience of evil in his own person. Where then is he to gain experience? How is he to be wise and also innocent? When young a good man is apt to be deceived by evil doers, because he has no pattern of evil in himself; and therefore the judge should be advanced in years; his youth should have been innocent, and he should have acquired an insight into evil by extended observation of others. This is the ideal of a judge; the criminal turned detective is wonderfully suspicious and cautious, but

when he is in company with good men who have the experience of age, he is at fault, for he foolishly imagines that every one is as bad as himself. Vice may be known of virtue, but cannot know virtue. This is the sort of medicine and this the sort of law which will prevail in our State; they will be healing arts to better natures; but the evil body will be left to die by the one, and the evil soul will be put to death by the other. And the need of either will be greatly diminished by good music which will give harmony to the soul, and good gymnastic which will give health to the body. Not that this division of music and gymnastic really corresponds to soul and body; for they are equally concerned with the soul, which requires both of them, and is tamed by the one and aroused and sustained by the other. The two together supply our guardians with their twofold nature. The passionate disposition which has too much gymnastic is hardened and brutalized, the gentle or philosophic character which has too much music becomes enervated. While a man is singing and twittering and pouring music like water through the funnel of his ears, the edge of his soul gradually wears away, and the passionate or spirited element is melted out of him. Too little spirit is easily wasted; too much is converted into nervous irritability. So, again, the athlete by feeding and training has his courage doubled, but he soon grows stupid; his senses are never purged, and like a wild beast he is ready to do everything by blows and nothing by counsel or policy. There are two principles in man, reason and passion, and the gods have given two arts corresponding to them, and not to the soul and body, as some vainly say—music and gymnastic; the unity of which makes a harmony higher far than the concord of musical notes. And the true musician is he who attempts them—he shall be the presiding genius of our State.

The next question is, Who are to be our rulers? First, the elder must rule the younger; and the best of the elders will be the best guardians. He who guards best is he who loves best, and he who loves others has an interest in them and sympathy with them. Those then must be selected by us who have always been devoted to the good of their country. And a watch must be put over them to discover whether at every epoch of life they have retained the same opinions and held out against force and enchantment. For time and persuasion and the love of pleasure may enchant a man into a change of purpose, and force may compel him. And therefore we must choose for our guardians men of known

firmness, who have been tried by many tests, like gold in the refiner's fire, and have been passed first through dangers then through pleasure, and at every age have come out of such trials victorious and without stain in full command of themselves and their principles; having all their faculties in harmonious exercise for their country's good. Those who attain this degree of virtue are worthy of the highest honours both in life and death. It would perhaps be better to speak of the others whom we before called guardians as auxiliaries or allies, and to reserve the higher title for the more select class.

And now for one noble, useful lie, a lie upon a grand scale, to be the corner-stone of our State,—in the belief of which, O that we could train our rulers! and at any rate let us make the attempt with the rest of the world. I know not how to give utterance to my ideas, and yet what I am going to tell is only a republication of the Phœnician story of Cadmus and his earthborn men—which has often happened in past times, but not in our own; for the age of miracles has ceased, and the world is an unbelieving world. I am ashamed to look you in the face as I repeat the audacious tale, which I would have you impart in regular gradation, first to the rulers, then to the soldiers, and lastly to the people. The lie is as follows:—The citizens shall be told that their youth was a dream, and that during all that time in which they seemed to be undergoing a process of education they were really being fashioned in the womb of the earth, their alma mater and true parent, who sent them up when they were ready; and that they are bound to protect and cherish her whose children they are, and to regard each other as brothers and sisters. 'I do not wonder at your being ashamed to propound such a fiction.' There is more behind. These brothers and sisters have different natures, and some of them God made to rule, whom he fashioned of gold; others he made of silver, to be helps; others again to be husbandmen and craftsmen, and these were formed by him of brass and iron. But sometimes a golden parent may have a silver son, or a silver parent a golden son, and then nature orders a transposition of ranks; the eye of the ruler must not be pitiful towards his offspring if he has to descend in the social scale; for an oracle says 'that the State will come to an end if governed by a man of brass.' Is there any possibility of making our citizens believe all this? 'Not in the present generation, but in the next, perhaps, yes.'

Now let the earthborn men go forth under the command of their

rulers, and look about and pitch their camp in a high place, which will be safe against enemies descending upon the fold, and also against insurrections from within. There let them sacrifice and set up their tents; for soldiers they are to be and not shopkeepers, the watchdogs and guardians of the sheep; and luxury and avarice will turn them into wolves and tyrants. Their habits and their dwellings should correspond to their education. They should have no property; their pay should only meet their expenses; and they should have common meals. Gold and silver we will tell them that they have from God, and this divine gift in their souls they must not alloy with that earthly dross which passes under the name of gold. They only of the citizens may not touch it, or be under the same roof with it, or drink from it; it is the accursed thing. Should they ever acquire houses or lands or money of their own, they will become householders and tradesmen instead of guardians, enemies and tyrants instead of helpers, and the hour of ruin, both to themselves and the rest of the State, will be at hand.

The religious and ethical aspect of Plato's education will hereafter be considered under a separate head. Some lesser points may be more conveniently noticed in this place.

1. The constant appeal to the authority of Homer, whom, with grave irony, Plato, after the manner of his age, summons as a witness about ethics and psychology, as well as about diet and medicine; attempting to distinguish the better lesson from the worse (390), sometimes altering the text from design (388, and, perhaps, 389); more than once quoting or alluding to Homer inaccurately (391, 406), after the manner of the early logographers, turning the Iliad into prose (393), and delighting to draw far-fetched inferences from his words, or to make ludicrous applications of them. He does not, like Heracleitus, get into a passion with the sacred books of his countrymen, but uses their forms of expression as a vehicle of a higher truth. His conclusions are always sound, although the premises are fallacious. These fanciful appeals to Homer add a charm to Plato's style, and at the same time they have the effect of a satire on the follies of Homeric interpretation. They may be compared with modern citations from Scripture, which have often a great rhetorical power even when the original meaning of the words is changed. The real, like the Platonic Socrates, as we gather from the *Memorabilia* of Xenophon, was fond of making similar adaptations. (i. 2, 58; ii. 6, 11.)

Great in all ages and countries, in religion as well as in law and literature, has been the art of interpretation.

2. 'The style is to conform to the subject and the metre to the style.' Notwithstanding the fascination which the word 'classical' exercises over us, we can hardly maintain that this rule is observed in all the Greek poetry which has come down to us. We cannot deny that the thought often exceeds the power of lucid expression in Æschylus and Pindar; or that the style gets the better of the thought in the Sophist-poet Euripides. Only perhaps in Sophocles is there a perfect harmony of the two; in him alone do we find a grace of language like the beauty of a Greek statue, in which there is nothing to add or to take away; at least this is true of single plays or of large portions of them. The connexion in the Choruses and in the Greek lyric poets generally is often a tangled thread which in an age before logic the poet was unable to draw out. Many thoughts and feelings mingled in his mind, and he had no power of disposing or arranging them. For there is a subtle influence of logic which requires to be transferred from prose to poetry, just as the music and perfection of language are infused by poetry into prose. In all ages the poet has been a bad judge of his own meaning (Apol. 22 B.); for he does not see that the word which is full of associations to his own mind is obscure and unmeaning to that of another; or that the sequence which is clear to himself is puzzling to others. In modern literature it would be easy to point out long passages, and even whole poems, in which there is no proportion between style and subject: in which any half-expressed figure, any harsh construction, any distorted collocation of words, any remote sequence of ideas is admitted; and there is no voice coming sweetly from nature, or music adding the expression of feeling to thought. As if there could be poetry without beauty, or beauty without ease and clearness. The obscurities of early Greek poets arose necessarily out of the state of language and logic which existed in their age. They are not examples to be followed by us; for the use of language ought in every generation to become clearer and clearer. Like Shakespere, they were great in spite, not in consequence, of their imperfections of expression. But there is no reason for returning to the necessary obscurity which prevailed in the infancy of literature. The English poets of the last century were certainly not obscure; and we have no excuse for losing what they had gained, or for going back to the earlier or transitional age which preceded them. The thought of our own times has not

outstripped language; a want of Plato's 'art of measuring' is the real cause of the disproportion between them.

3. In the third book of the Republic a nearer approach is made to a theory of art than anywhere else in Plato. His views may be summed up as follows:—True art is not fanciful and imitative, but simple and ideal,—the expression of the highest moral energy, whether in action or repose. To live among works of plastic art which are of this noble and simple character, or to listen to such strains, is the best of influences,—the true Greek atmosphere, in which youth should be brought up. That is the way to create in them a natural good taste, which will have a feeling of truth and beauty everywhere. For though the poets are to be expelled, still art is recognized as another aspect of reason—like love in the Symposium, extending over the same sphere, but confined to the preliminary education and acting through the power of habit (vii. 522 A.); and this conception of art is not limited to strains of music or the forms of plastic art, but pervades all nature. The Republic of Plato, like the Athens of Pericles, has an artistic as well as a political side.

There is hardly any mention in Plato of the creative arts; only in two or three passages does he even allude to them. He is not lost in rapture at the great works of Phidias, the Parthenon, the Propylea, the statues of Zeus or Athene. He would probably have regarded any abstract truth of number or figure (529 E) as higher than the greatest of them. Yet it is hard to suppose that some influence, such as he hopes to inspire in youth, did not pass into his own mind from the works of art which he saw around him. We are living upon the fragments of them, and find in a few broken stones the standard of truth and beauty. But in Plato this feeling has no expression; he nowhere says that beauty is the object of art; he seems to deny that wisdom can take an external form (Phaedrus, 250 E); he does not distinguish the fine from the mechanical arts. Whether or no, like some writers, he was thinking of his own friends without naming them, it is at any rate remarkable that the greatest perfection of the fine arts should coincide with an almost entire silence about them. In one other passage (iv. 420) he tells us that a work of art, like the State, is a whole; and this conception of a whole and the love of the newly-born mathematical sciences may be regarded, if not as the inspiring, at any rate, as the regulating principles of Greek art (cp. Xen. Mem. iii. 10. 6; and Sophist, 235, 236).

4. Plato makes the true and subtle remark that the physician had

better not be in robust health; and should have known what illness is in his own person. But the judge ought to have had no similar experience of evil; he is to be a good man who having passed his youth in innocence, became acquainted late in life with the vices of others. And therefore, according to Plato, a judge should not be young, as, according to Aristotle, a young man is not fit to be a hearer of moral philosophy. The bad, on the other hand, have a knowledge of vice, but no knowledge of virtue. It may be doubted, however, whether this train of reflection is well founded. In a remarkable passage of the *Laws* (xii. 950 B) it is acknowledged that the evil may form a correct estimate of the good. The union of gentleness and courage in book ii. at first seemed to be a paradox, yet was afterwards ascertained to be a truth. And Plato might also have found that the intuition of evil may be consistent with the abhorrence of it. There is a directness of aim in virtue which gives an insight into vice. And the knowledge of character is in some degree a natural sense independent of any special experience of good or evil.

5. One of the most remarkable conceptions of Plato, because un-Greek and also very different from anything which existed at all in his age of the world, is the transposition of ranks. In the Spartan state there had been enfranchisement of Helots and degradation of citizens under special circumstances, but nothing like that 'open career' which he promises to his citizens. Two principles are indicated by him: first, that there is a distinction of ranks dependent on circumstances prior to the individual: second, that this distinction is and ought to be broken through by personal qualities. He embodies the conception in a myth, here, as elsewhere, adapting mythology to the wants of the State. Every Greek state had a myth respecting its own origin; the Platonic republic may also have a tale of earthborn men. The gravity and verisimilitude with which the tale is told, and the analogy of Greek tradition, are a sufficient verification of the 'monstrous falsehood.' Ancient poetry had spoken of a gold and silver and brass and iron age succeeding one another, but Plato supposes these differences in the natures of men to exist together in a single state. Mythology supplies a figure under which the lesson may be taught (as Protagoras says, 'the myth is more interesting'), and also enables Plato to touch lightly on new principles without going into details. In this passage he shadows forth a general truth, but he does not tell us by what steps the transposition of ranks is to be effected. Indeed throughout the *Republic* he allows the lower ranks to fade into

the distance. We do not know whether they are to carry arms, and whether in the fifth book they are or are not included in the communistic regulations respecting property and marriage. Nor is there any use in arguing strictly either from a few chance words, or from the silence of Plato, or in drawing inferences which were beyond his vision. Aristotle, in his criticism on the position of the lower classes, does not perceive that the poetical creation is 'like the air, invulnerable,' and cannot be divided by the shafts of his logic. (Pol. 2, 5, 18 fol.)

6. Lesser matters of style may be remarked. (1) The affected ignorance of music, which is Plato's way of expressing that he is passing lightly over the subject. (2) The tentative manner in which here, as in the second book, he proceeds with the construction of the State. (3) The description of the State sometimes as a reality (389 D; 416 B), and then again as a work of imagination only (cp. 534 C; 592 B); these are the arts by which he sustains the reader's interest. (4) Connecting links (e. g. 408 C with 379), or the preparation (394 D) for the entire expulsion of the poets in book x. (5) The companion pictures of the lover of litigation and the valetudinarian (405), the satirical jest about the maxim of Phocylides (407), the manner in which the image of the gold and silver citizens is taken up into the subject (416 E), and the argument from the practice of Asclepius (407), should not escape notice.

BOOK IV. Adeimantus said: 'Suppose a person to argue, Socrates, that you make your citizens miserable, and this by their own free-will; they are the lords of the city, and yet instead of having lands, and houses, and furniture, and gold, and silver, and sacrifices, and hospitalities of their own, like other men, they live as mercenaries and are always mounting guard.' You may add, I replied, that they are on board wages, and have no money to spend on a journey or a lady of pleasure, which, as the world goes, is thought to be happiness. 'Well, suppose all this, what answer do you give?' My answer is, that our guardians may or may not be the happiest of men,—I should not be surprised to find in the long-run that they were,—but this is not the aim of our constitution, which was designed for the good of the whole and not of any one part. If I went to a sculptor and blamed him for having painted the eye, which is the noblest feature of the face, not purple but black, he would reply: 'The eye must be an eye, but you ought to look at the statue as a whole.' Now I can well imagine a fool's paradise, in

which everybody is eating and drinking, clothed in purple and fine linen, and potters lie on sofas and have their wheel at hand, that they may work a little when they please; and cobblers and all the other classes of a State lose their distinctive character. And a State may get on without cobblers; but when the guardians degenerate into boon companions, then the ruin is complete. Remember that we are not talking of peasants keeping holiday, but of a State in which every man is expected to be doing his own work, and sharing with the rest. The happiness resides not in this or that class, but in the State as a whole. I have another remark to make:—A middle condition is best for artisans; they should have money enough to buy tools, and not money enough to be independent of their business. And will not the same condition be best for our citizens? Give them neither poverty nor riches, for the one is the parent of meanness, and the other of luxury, and both of discontent. ‘But then, Socrates, how will our city go to war, not having the sinews of war, especially against a rich enemy?’ There may be a difficulty in fighting against one enemy, but there is no difficulty in fighting against two of them. In the first place, remember that the contest will be carried on by trained warriors against well-to-do citizens: and might not a regular boxer upset more than one stout gentleman, stepping lightly back himself and making a sudden turn upon them—in hot weather especially? ‘Yes, many a one.’ And suppose, that before engaging we send ambassadors to one of the two cities, saying, ‘Silver and gold we neither have nor can have, do you help us and take our share;’—who in such a case would choose to fight with the lean, wiry dogs, instead of joining with them against the fatted sheep? ‘But if the wealth of many states coalesce in one, shall we not be in danger?’ I am amused to hear you use the word ‘state’ of any but our own State. They are ‘states,’ but not ‘a state,’ many in one;—a game of states at which men play¹. For every state, however small, has two nations, rich and poor, struggling within her, which you may set one against the other. But our State, while at unity with herself and fixed in her principles, will be the mightiest of Hellenic states, and will always have numerous allies and few enemies.

To the size of the state there is no limit but the necessity of unity; it must be neither too large nor too small to be one. This is a matter of

¹ In allusion to a game called cities or states (*πόλεις*.)

secondary importance, like the principle of transposition which was intimated in the parable of the men dug out of the earth. The meaning was that every man should do that for which he was fitted, and be at one with himself, and then the whole city would be united. But all these things are secondary, if education, which is the great matter, be duly regarded. When the wheel has once been set in motion, the speed is always increasing; and each generation improves upon the preceding, both in physical and moral qualities. The care of the governors should be directed to preserve music and gymnastic from innovation; alter the songs of a country, and you will soon end by altering its laws. When Homer praises new songs, he must not be supposed to praise new kinds of song. Damon assures me that new chants cannot be introduced without danger to the whole political system. The change appears innocent at first, and begins in play; but the evil soon becomes serious, working secretly upon the characters of individuals, then upon social and commercial relations, and lastly upon the institutions of a state; and there is ruin and confusion everywhere. But if education remains in the established form, there will be no danger. A restorative process will be always going on; the spirit of law and order will raise up what has fallen down. Nor will any rules be needed for the lesser matters of life—such as when to sit down and when to stand, when to speak and when to be silent, and what mode of tonsure is the true pattern. Like is always inviting like for good or for evil. Education will correct deficiencies and supply the power of self-government. Far be it from us to legislate about the appointment of judges and the order of causes, harbour and market duties; let the guardians take care of education, and education will take care of all other things.

But without education they may mend and cobble and doctor as they please, they will make no progress, any more than a patient who asks the physician to cure him and will not give up his luxurious mode of living. If such persons are told that they will never improve unless they alter their habits, then they grow angry; they are charming people. ‘Charming,—nay, the reverse of charming.’ I see that these gentlemen are not in your good graces, nor the state which is like them. And such states there are which first make solemn ordinances that no one under penalty of death shall alter the constitution, and then suffer themselves to be flattered into and out of anything; and he who indulges them and fawns upon them, is their leader and saviour? ‘Yes, the men

are as bad as the states.' But do you not admire their cleverness? 'Nay, some of them are stupid enough to believe what the people tell them.' And when all the world is telling a man that he is eight feet high, and he has no measure, how can he believe otherwise? But don't get into a passion: to see our statesmen trying their nostrums, and fancying that they can cut off at a blow the Hydra-like rogueries of mankind, is as good as a play. Minute enactments are superfluous in good states, and are useless in bad ones.

And now what remains of the work of legislation? Nothing for us; but to Apollo the god of Delphi we leave the ordering of the greatest of all—that is to say, religion. Only our ancestral deity sitting upon the centre and navel of the earth will be trusted by us if we have any sense in an affair of such magnitude. No foreign god shall be supreme in our realms. . .

Here, as Socrates would say, let us 'reflect' (*σκοπῶμεν*) on what has preceded: thus far we have spoken not of the happiness of the citizens, but only of the well-being of the State. They may be the happiest of men, but our principal aim in founding the State was not to make them happy. They were to be guardians, not holiday-makers. In this pleasant manner is presented to us the famous question both of ancient and modern philosophy, touching the relation of duty to happiness, of right to utility.

First duty, then happiness, is the natural order of our moral ideas. The utilitarian principle is valuable as a corrective of error, and shows to us a side of ethics which is apt to be neglected. It may be admitted further that right and utility are co-extensive, and that he who makes the happiness of mankind his object has one of the highest and noblest motives of human action. But utility is not the historical basis of morality; nor the aspect in which moral and religious ideas commonly occur to the mind. The greatest happiness of all is, as we believe, the far-off result of the divine government of the universe. The greatest happiness of the individual is certainly to be found in a life of virtue and goodness. But we seem to be more assured of a law of right than we can be of a divine purpose, that 'all mankind should be saved;' and we infer the one from the other. And the greatest happiness of the individual may be the reverse of the greatest happiness in the ordinary sense of the term, and may be realised in a life of pain, or in a voluntary death. Further, the word 'happiness' is full of ambiguity, and may mean either

pleasure or an ideal life, happiness subjective or objective, in this world or in another, of ourselves individually or of all men everywhere. We are apt to include under the same expression the happiness of ourselves and others—principles which, though involving one another, are also opposed by us as benevolence and self-love. The word has not the definiteness or the sacredness of truth and right; it does not equally appeal to our higher nature, and has not sunk into the conscience of mankind. For these reasons the greatest happiness principle is not the true foundation of ethics. But though not the first principle, it is the second, which is like unto it, and is often of easier and wider application. For many actions are neither right nor wrong, except in so far as they tend to the happiness of mankind.

The same question reappears in politics, where the useful or expedient seems to claim a larger sphere and to have a greater authority. For concerning political measures, we chiefly ask: How will they affect the happiness of mankind? Yet here too we may observe that what we term expediency is merely the law of right limited by the conditions of human society. Right and truth are the highest aims of government as well as of individuals; and we ought not to lose sight of them because we cannot directly enforce them. They appeal to the better mind of nations; and sometimes, even when misunderstood, they are too much for merely temporal interests to resist. All the higher class of statesmen have in them something of that idealism which Pericles is said to have gathered from the teaching of Anaxagoras. They recognise that national character is of greater value than material comfort and prosperity. And this is the order of thought in Plato; first, he expects his citizens to do their duty, and then under favourable circumstances, that is to say, in a well-ordered State, their happiness is assured. That he was far from excluding the modern principle of utility in politics is sufficiently evident from other passages, in which the most beneficial is affirmed to be the most honourable (457 B), and also the most sacred (458 E).

We may note (1) The manner in which the objection of Adeimantus here, as at the commencement of Book VI, is designed to draw out and deepen the argument of Socrates. (2) The conception of a whole as lying at the foundation both of politics and of art, in the latter supplying the only principle of criticism, which, under the various names of harmony, symmetry, measure, proportion, unity, the Greek seems to have applied to works of art. (3) The requirement that the State should be

limited in size, after the traditional model of a Greek state. (4) The humorous pictures of the lean dogs and the fatted sheep, of the light active boxer upsetting two stout gentlemen at least, of the 'charming' patients who are always making themselves worse; or again, the playful assumption that there is no State but our own; or the grave irony with which the statesman is excused who believes that he is eight feet high because he is told so, and having nothing to measure with is to be pardoned for his ignorance—he is too amusing for us to be seriously angry with him. (5) The light and superficial manner in which religion is passed over when provision has been made for two great principles,—first, that religion shall be based on the highest conception of the gods (ii. 377 foll.), secondly, that the true national or Hellenic type shall be maintained.

Socrates proceeds: But where amid all this is justice? Son of Ariston, tell me where. Light a candle and search the city, and get your brother and the rest of our friends to help in seeking for her. 'Nonsense,' replied Glaucon, 'what were you saying about the impiety of deserting justice in the hour of need?' Well, I said, I will lead the way, but do you follow. My notion is, that our State being perfect will contain all the four virtues—wisdom, courage, temperance, justice. If we eliminate the three first, the unknown remainder will be justice.

First then, of wisdom: the State which we have called into being will be wise because politic. And policy is one among many kinds of skill,—not the skill of the carpenter, or of the worker in metal, or of the husbandman, but the skill of him who advises about the interests of the whole State. Of such a kind is the skill of the guardians, who are a small class in number, far smaller than the blacksmiths, but in them is concentrated the wisdom of the State. And if this small ruling class have wisdom, then the whole State will be wise.

Our second virtue is courage, which we have no difficulty in finding in another class—that of soldiers. Courage may be defined as a sort of salvation—the never-failing salvation of the opinions which law and education have prescribed concerning dangers. You know the way in which dyers first prepare the white ground and then lay on the dye of purple or of any other colour. The colours which are dyed in this way become fixed, and no soap or lye will ever wash them out. And laughable is the shabby washed-out look of any colour which has not been dyed in this way. Now the ground is education, and the laws are the

colours; and if the ground is properly laid, neither the soap of pleasure nor the lye of pain or fear will ever wash them out. The power which preserves right opinion about danger I would ask you to call 'courage,' adding the epithet 'political' or 'civilized' in order to distinguish it from the brute courage of barbarians and from a higher courage which may hereafter be discussed.

Two virtues remain; shall we skip one and go to the other? 'Let us rather take them in their order; first temperance, then justice.' More than the preceding virtues temperance suggests the idea of harmony. Some light is thrown upon the nature of this virtue by the amusing description of a man as master of himself—the absurdity of which is that the master is also the servant. The expression is really a term of praise, meaning that the better principle in a man masters the worse. There are in cities whole classes—of women, slaves and the like—who correspond to the worse, and a few only to the better; and in our State the former class are held under control by the latter. Now to which of these classes does temperance belong? 'To both of them.' And if in any state temperance dwells, that must be ours; and we were right in describing temperance as a harmony which is diffused through the whole, making the dwellers in the city to be of one mind, and uniting the upper and middle and lower classes like the strings of an instrument, whether you suppose them to differ in wisdom, strength or money. This unity, in whatever way acquired, is called temperance.

And now we are near the spot; let us draw in and surround the cover and watch with all our eyes, lest justice should slip away and escape. Tell me if you see the thicket move first. 'Nay, I would have you lead.' Well then, offer up a prayer and follow. There is no path, and the way is dark; we must push on. I begin to see a track. 'Good news.' It is there and will not escape. Why, Glaucon, our dulness of scent is quite disgraceful! Shall we not be laughed at? While we are straining our eyes into the distance, justice is tumbling out at our feet. We are as bad as the people who sweep the house to look for a thing which they have in their hands. Have you forgotten our old principle of the division of labour, or of every man doing his own business, concerning which we spoke at the foundation of the State—what but this was justice? Is there any other virtue remaining which can compete with wisdom and temperance and courage in the scale of political virtue? For every one having his own is the great object of government; and the great

object of trade is that every man should do his own business. Not that there is much harm in a carpenter trying to be a cobbler, or a cobbler transforming himself into a carpenter; but great evil may arise from the cobbler leaving his last and turning into a guardian or legislator, or when a single individual is trainer, warrior, legislator, all in one. And this evil is injustice, or every man doing another's business. I do not say that as yet we are in a condition to arrive at a final conclusion. For the definition which we believe to hold good in states has still to be tested by the individual. Having read the large letters we will now come back to the small. From the two together a brilliant light may be struck out. . . .

Socrates proceeds to discover the nature of justice by a method of residues. Each of the first three virtues corresponds to one of the three parts of the soul, and one of the three classes in the State, although the third, temperance, has more of the nature of a harmony than the two first. If there be a fourth virtue, that can only be sought for in the relation of the three parts in the soul or classes in the State to one another. It is obvious and simple, and for that very reason has not been found out. The modern logician will be inclined to object that ideas cannot be separated like chemical substances, but that they run into one another and may be only different aspects or names of the same thing, and such in this instance appears to be the case. For the definition here given of justice is verbally the same as one of the definitions of temperance given by Socrates in the Charmides (162 A), which however is only provisional, and is afterwards rejected. And so far from justice remaining over when the other virtues are eliminated, the justice and temperance of the Republic can with difficulty be distinguished. Temperance, although compared to a harmony, appears to be the virtue of a part only, and one of three, whereas justice is a universal virtue of the whole soul. Justice seems also to differ in degree from temperance; for whereas temperance is the harmony of discordant elements, justice is the perfect order by which all natures and classes do their own business, the right man in the right place, the division and co-operation of all the citizens. Justice, again, is a more abstract notion than the other virtues, and therefore, from Plato's point of view, the foundation of them, to which they are referred and which in idea precedes them. The proposal to omit temperance is a mere trick of style intended to avoid monotony. (Cp. vii. 528.)

There is a famous question in the earlier Dialogues of Plato (cp. Protagoras 329, 330; Ar. Nic. Ethics, vi. 13. 6), 'Whether the virtues are one or many?' This receives an answer which is to the effect that there are four cardinal virtues (now for the first time brought together in ethical philosophy), and one supreme over the rest, which is not like Aristotle's conception of universal justice, virtue relative to others, but the whole of virtue relative to the parts. To this universal conception of justice or order in the first education and in the moral nature of man, the still more universal conception of the good in the second education, and in the speculative division, seems to succeed. Both might be equally described by the terms 'law,' 'order,' 'harmony;' but while the idea of good embraces all time and all existence, the conception of justice is not extended beyond man.

Socrates is now going to identify the individual and the State. But first he must prove that there are three parts of the individual soul. His argument is as follows:—Quantity makes no difference in quality. The word 'just,' whether applied to the individual or to the State, has the same meaning. And the term 'justice' implied that the same three principles in the State and in the individual were doing their own business. But are they really three or one? There is a small matter for consideration. 'A very small matter,' is the ironical reply. Nay, the reverse of small; I should rather think one which will never be brought to a conclusion by the methods which we are now employing; there is a surer, but that is also a longer way, which would take up too much time. 'The shorter will satisfy me.' Well then, you would admit that the qualities of states mean the qualities of the individuals who compose them? Ask the question why the Scythians and Thracians are passionate, or our own race intellectual, or the Egyptians and Phoenicians covetous,—there is no difficulty in replying that individuals are of such or such a character, but there is great difficulty in determining whether the several principles are one or three; whether, that is to say, we reason with one part of our nature, desire with another, are angry with another, or whether the whole soul comes into play in each sort of action. This enquiry, however, requires a very exact definition of terms. The same thing in the same relation cannot be affected in two opposite ways. But there will be no impossibility in a man standing still, yet moving his arms, or in a top which is fixed on one spot going round upon its axis. There is no necessity to mention all the possible

exceptions; let us provisionally assume that opposites cannot do or be or suffer opposites in the same relation. And to the class of opposites belong assent and dissent, desire and avoidance. And one form of desire is thirst and hunger: and here arises a new point,—thirst is thirst of drink, hunger is hunger of food; not of warm drink or of a particular kind of food, with the single exception of course that the very fact of our desiring anything implies that it is good. When relative terms have no attributes, their correlatives have no attributes; when they have attributes, their correlatives also have them. For example, the term 'greater' is simply relative to 'less,' and knowledge refers to a subject of knowledge. But on the other hand, a particular knowledge is of a particular subject. Again, every science has a distinct character, which is defined by an object; medicine, for example, is the science of health, although not to be confounded with health. Having cleared our ideas thus far, let us return to the original instance of thirst, which has a definite object—drink. Now the thirsty soul may feel two distinct impulses; the animal one saying Drink; the rational one, which says Do not drink, and is in direct contradiction to the former. Here are two contradictory acts of the soul; the one derived from reason, the other from desire; these two then are proved to be distinct principles in the soul. Is passion a third principle or, as our first impression may lead us to suppose, akin to desire? There is a story of a certain Leontius which throws some light on this question. He was coming up from the Piraeus by the way beneath the wall, and he passed a spot where there were dead bodies lying by the executioner. He felt a longing desire to see them and also an abhorrence of them; at first he turned away and shut his eyes, then, suddenly tearing them open, he said,—'Take your fill, ye wretches, of the fair sight.' Now is there not here a third principle which is often found to come to the assistance of reason against desire, but never of desire against reason? This is passion or spirit, of the separate existence of which we may further convince ourselves by putting the following case:—When a man suffers justly, if he be of a generous nature he cannot chafe or boil or get into a state of righteous indignation at the hardships which he undergoes: but when he suffers unjustly, his indignation is his great support; hunger and thirst cannot tame him; the spirit within him must do or die, until the voice of the shepherd, that is, of reason, bidding his dog bark no more, is heard within. This shows that passion is the ally of reason. Is passion then the same as reason?

No, for the former exists in children and brutes; and Homer affords a proof of the distinction between them when he says, 'He smote his breast, and thus rebuked his soul.'

And now, after much tossing in the argument, we have reached land, and are able to infer that the virtues of the State and of the individual are the same. For wisdom and courage and justice in the State are severally the wisdom and courage and justice in the individuals who form the State. Each of the three classes will do the work of his own class in the State, and each part in the individual soul; reason, the superior, and passion, the inferior, will be harmonized by the influence of music and gymnastic. The counsellor and the warrior, the head and the arm, will act together in the town of Mansoul, and music and gymnastic will put them in commission over the desires. The courage of the warrior is that quality which preserves a right opinion about dangers in spite of pleasures and pains. The wisdom of the counsellor is that small part of the soul which has authority and reason. The virtue of temperance is the friendship of the ruling and the subject-principle, both in the State and in the individual. Of justice we have already spoken; and the notion before given may be further confirmed by common instances. Will the just state or the just individual steal, lie, commit adultery, or be guilty of impiety to gods and men? 'No.' And is not the reason of this that the several principles, whether in the state or in the individual, do their own business? And justice is the quality which makes just men and just states. Moreover, our old division of labour, which required that there should be one man for one use, was a dream or anticipation of what was to follow; and that dream has now been realized in justice, which begins by binding together the three chords of the soul, and then acts harmoniously in every relation of life. And injustice, which is the habit of being a busybody and of doing another man's business, and which tries to rule and ought to serve, is the opposite of justice, and is inharmonious and unnatural, being to the soul what disease is to the body; for in the soul as well as in the body, good or bad actions produce good or bad habits. And virtue is the health and beauty and wellbeing of the soul, and vice is the disease and weakness and deformity of the soul.

Again the old question returns upon us: Is justice or injustice the more profitable? The question has become ridiculous. For injustice, like mortal disease, is suicidal. Come up with me to the hill which over-

hangs the city and look down upon the single form of virtue, and the infinite forms of vice, among which are four special ones, characteristic both of states and of individuals. And there is one other form of the true state in which reason rules under one of two names—monarchy and aristocracy. So that there are five forms in all, both of states and of souls. . . .

In attempting to prove that the soul has three separate faculties, Plato takes occasion to discuss what makes difference of faculties. And the criterion which he proposes is difference in the working of the faculties. The same faculty cannot produce contradictory effects. But the path of early reasoners is beset by thorny entanglements, and he will not proceed a step without first clearing the ground. This leads him into a tiresome digression, which is intended to explain the nature of contradiction. First, the contradiction must be at the same time and in the same relation. Secondly, no extraneous word must be introduced into either of the terms in which the contradictory proposition is expressed: for example, thirst is of drink, not of warm drink. He implies, what he does not say, that if, by the advice of reason, or by the impulse of anger, a man is restrained from drinking, this proves that thirst, or desire under which thirst is included, is distinct from anger and reason. But suppose that we allow the term 'thirst' or 'desire' to be modified, and say an angry thirst, or a revengeful desire, then the two spheres of desire and anger overlap and become confused. This case therefore has to be excluded. And still there remains an exception to the exception in the use of the term 'good,' which is always implied in the object of desire. These are the discussions of an age before logic; and any one who is wearied by them should remember that they are necessary to the clearing up of ideas in the first development of the human faculties.

The psychology of Plato extends no further than the division of the soul into the rational, irascible, and concupiscent elements, which, as far as we know, was first made by him, and has been retained by Aristotle and succeeding ethical writers. The chief difficulty in this early analysis of the mind is to define exactly the place of the irascible faculty (*θυμὸς*), which may be variously described under the terms righteous indignation, spirit, passion. It is the foundation of courage, which includes in Plato moral courage, the courage of enduring pain, and of surmounting intellectual difficulties, as well as of meeting dangers in war. Though irrational, it inclines to side with the rational: it cannot be

aroused by punishment when justly inflicted: it sometimes takes the form of an enthusiasm which sustains a man in the performance of great actions. It is the 'lion heart' with which the reason makes a treaty (ix. 589 B). On the other hand it is negative rather than positive; it is indignant at wrong or falsehood, but does not, like Love in the Symposium and Phaedrus, aspire to the vision of Truth or Good. It is the peremptory military spirit which prevails in the government of honour. It differs from *ὀργή*, which is simply anger, having no accessory notion of righteous indignation. Although Aristotle has retained the word, yet we may observe that 'passion' has with him lost its affinity to the rational and has become indistinguishable from anger (*ὀργή*). And to this vernacular use Plato himself in the Laws seems to revert (ix. 836 B), though not always (v. 731 A).

There is a difficulty in understanding what Plato meant by 'the longer way' (435 D): he seems to intimate some metaphysic of the future which will not be satisfied with arguing from the principle of contradiction. In the sixth and seventh books (compare Sophist and Parmenides) he has given us a sketch of such a metaphysic; but when Glaucon asks for the final revelation of the idea of good, he is put off with the declaration that he has not yet studied the preliminary sciences. How he would have filled up the sketch, or argued about such questions from a higher point of view, we can only conjecture. Perhaps he hoped to find some *a priori* method of developing the parts out of the whole; or he might have asked which of the ideas contains the other ideas, and possibly have stumbled on the Hegelian identity of the 'ego' and the 'universal.' The most certain and necessary truth was to Plato the universal; and to this he was always seeking to refer all knowledge or opinion, just as in modern times we are always seeking to rest them on the opposite pole of experience.

BOOK V. I was going to enumerate the four forms of vice or decline in states, when Polemarchus—he was sitting a little farther from me than Adeimantus—taking him by the coat and leaning towards him, said something in an undertone, of which I only caught the words, 'Shall we let him off?' 'Certainly not,' said Adeimantus, raising his voice. What or whom, I said, are you not going to let off? 'You,' he said. Why? I again asked. 'Why, because we think that you are not dealing fairly with us in omitting women and children, of whom you

have slyly disposed under the general formula that friends have all things in common.' And was I not right? 'Yes,' he replied, 'but there are many sorts of communism or community, and we want to know which of them is right. The company, as you have just heard, are resolved not to let you off without a further explanation.' Thrasy-machus said, 'Do you think that we have come hither to dig for gold, or to hear you discourse?' Yes, I said; but the discourse should be of a reasonable length. Glaucon added, 'Yes, Socrates, and there is reason in spending the whole of life in such discussions; but without further consideration of us proceed in your own manner, and tell us how this community is to be carried out, and how the interval between birth and education is to be filled up.' Well, I said, the subject has several difficulties—What is possible? is the first question. What is desirable? is the second. 'Fear not,' he replied, 'for you are speaking among friends, who will put a fair and liberal construction on what is said by you.' That, I replied, is anything but a consolation; I shall destroy my friends as well as myself. Not that I mind a little innocent laughter; but he who kills the truth is a murderer. 'Then,' said Glaucon, laughing, 'in case you should murder us we will acquit you beforehand, and just as in a criminal cause he who is acquitted is not guilty, you shall be acquitted and not guilty.'

Socrates proceeds:—The guardians of our State are to be watch-dogs, and their properties and families must be ordered with a view to their duties. Dogs are not divided into hes and shes, nor do we take the masculine gender out to hunt and leave the females at home to look after their puppies. They have the same employments—the only difference between them is that the one are stronger and the other weaker. But if women are to have the same employments as men, they must have the same education—they must be taught music and gymnastics, and the art of war. I know that a great joke will be made of their riding on horseback and carrying weapons; the sight of the naked old wrinkled women showing their agility in the palestra will certainly not be a vision of beauty, and may be expected to become a famous jest. But we must not mind the wits; there was a time when they might have laughed at our present gymnastics. All is habit: people have at last found out that the exposure is better than the concealment of the person, and now they laugh no more. Evil only should be the object of ridicule; 'Honi soit qui mal y pense.'

The first question is, whether women are able either wholly or partially to share in the employments of men. And here we may be charged with inconsistency in making the proposal at all. For we started originally with the division of labour; and the diversity of employments was based on the difference of natures. But is there no difference between men and women? Nay, are they not wholly different? *There* was the difficulty, Glaucon, which made me unwilling to speak of family relations. However, when a man is out of his depth, whether in a pool or in an ocean, he can only swim for his life, and may hope to be saved by Arion's dolphin, or some other miracle. Let us try then and find a way out, if we can.

The argument is, that different natures have different uses, and the natures of men and women are said to differ. 'Exactly.' But observe, Glaucon, that this is only a verbal opposition. We courageously repeat, different natures for different uses, never considering that the difference may be purely nominal and accidental; for example, a bald man and a hairy man are opposed in a single point of view, but you cannot infer that because a bald man is a cobbler a hairy man ought not to be a cobbler. Now why should such an inference be erroneous? Simply because the opposition between them is partial only, like the difference between a male physician and a female physician, not running through the whole nature, like the difference between a physician and a carpenter. And if the difference of the sexes is only that the one beget and the other bear children, this does not prove that they ought to have distinct educations. Admitting that women differ from men in capacity, do not men equally differ from one another? Has not nature scattered all the qualities which our citizens require, whether as philosophers or physicians or weavers or makers of cakes, indifferently up and down among the two sexes? and even in the peculiar pursuits of women, are they not often, though in some cases superior to men, ridiculously enough surpassed by them? Women are the same in kind, and have the same aptitude or want of aptitude for medicine or gymnastic or war, but in a less degree. One woman will be a good guardian, another not; and the good must be chosen to be help-meets to our guardians. If however their natures are the same, the inference is that their education must also be the same; there is no longer anything unnatural or impossible in a woman learning music and gymnastic. And the education which we give them will be the very best, far better than that of

cobblers, and will train up the very best women, and nothing can be better for the State than this. Therefore let them strip, clothed in their chastity, and share in the toils of war and in the defence of their country; he who laughs at them is a fool for his pains.

The first wave is past, and the argument is compelled to admit that men and women have common duties and pursuits. A second and greater wave is rolling in—community of wives and children; is this expedient? is this possible? The expediency I do not doubt, but I am not so sure of the possibility. ‘Nay, I think that a considerable doubt will be entertained on both subjects.’ I meant to have escaped the trouble of proving the first, but as you have detected the little stratagem I must even submit. Only allow me to feed my fancy like the solitary in his walks, with a dream of what might be, and then I will return to the question of what can be.

In the first place our rulers will enforce the laws and make new ones where they are wanted, and their allies or ministers will obey. You, as legislator, have already selected the men; and now you shall select the women. After the selection has been made, they will live in common houses and have their meals in common, and will be brought together by a necessity more certain than that of mathematics. But they cannot be allowed to live in licentiousness; that is an unholy and unlawful thing, which the rulers are determined to prevent. For the avoidance of this, holy marriage festivals will be instituted, and their holiness will be in proportion to their usefulness. And here, Glaucon, I should like to ask (as I know that you are a breeder of birds and animals), Do you not take the greatest care in the mating? ‘Certainly.’ And there is no reason to suppose that less care is required in the marriage of human beings. But then, our rulers must be physicians, and use many medicines in their treatment of the body corporate; some falsehoods too, which are allowed by us in the practice of medicine. The good must be paired with the good as often as possible, and the bad with the bad as seldom as possible, and the offspring of the one must be reared, and of the other destroyed; in this way the flock will be preserved in prime condition. Hymeneal festivals will be celebrated at times fixed with an eye to population, and the brides and bridegrooms will meet at them, but not too often; and by an ingenious system of lots the rulers will contrive that the brave and the fair come together, and that those of inferior breed are paired with inferiors—the latter will ascribe to chance what

is really the invention of the rulers. And when children are born, the offspring of the brave and fair will be carried to an enclosure in a certain part of the city, and there attended by suitable nurses; the rest will be hurried away to places unknown. The mothers will be brought to the fold and will suckle the children; care however must be taken that none of them recognise her own offspring; and if necessary other nurses may also be hired. The trouble of watching and getting up at night will be transferred to attendants. 'Then the wives of our guardians will have a fine easy time when they are in the family way.' And quite right too, I said, that they should.

The parents ought to be in the prime of life, which for a man may be fixed at thirty years—from twenty-five, when he has 'passed the point at which the speed of life is greatest,' to fifty-five; and at twenty years for a woman—from twenty to forty. Any one above or below those ages who partakes in the hymeneals shall be guilty of impiety; also every one who forms a marriage connexion at other times without the consent of the rulers. This applies to those who are within the specified ages, after which they may range at will, provided they avoid the prohibited degrees of parents and children, or of brothers and sisters, which last, however, are not absolutely prohibited, if a dispensation from the oracle be procured. 'But how shall we know the degrees of affinity, when all things are common?' The answer is, that brothers and sisters are such as are born seven or nine months after the espousals, and their parents those who are then espoused, and every one will have many children and every child many parents.

Socrates proceeds: I have now to prove that this scheme is advantageous and also consistent with our entire polity. The greatest good of a State is unity; the greatest evil, discord and distraction. And there will be unity where there are no private pleasures or pains or interests; where if one member suffer all the members suffer, if one citizen is touched all are quickly sensitive—and the least hurt to the little finger of the State runs through the whole body and vibrates to the soul. For the true State has the feelings of an individual, and is injured as a whole when any part is affected. Every State has subjects and rulers, who in a democracy are called rulers, and in other States masters: but in our State they are called saviours and allies; and the subjects who in other States are termed slaves, are by us termed nurturers and paymasters, and those who are termed comrades and colleagues in other

places, are by us called fathers and brothers. And whereas in other States members of the same government regard one of their colleagues as a friend and another as an enemy, in our State no man is a stranger to another; for everybody whom he meets is bound to him by ties of blood, and these names and this way of speaking will have a corresponding reality—brother, father, sister, mother, repeated from infancy in the ears of children, will not be mere words. Then again the citizens will have all things in common, and having common property they will have common pleasures and pains.

Can there be strife and contention among those who are of one mind; or lawsuits about property when men have nothing but their bodies which they call their own; or suits about violence and insult when every one is bound to defend himself? For young men will take the law into their own hands; if they are angry they will fight, and this will be an antidote against the gathering of conspiracies. But no younger man will strike an elder; two guardians will hold him back, reverence and fear,—reverence which will prevent him from laying hands on his kindred, and fear that the rest of the family may retaliate. Moreover, they will be rid of the lesser evils of life; there will be no flattering of rich men for the sake of a dinner, or heaping up of money for the support of their families, or borrowing and not paying. But I need not enter further into particulars. Let me say in conclusion, that when compared with the citizens of other States, ours will be Olympic victors, and crowned with blessings greater still,—they and their children having a better maintenance during life, and after death an honourable burial. Nor has the happiness of the individual been sacrificed to the happiness of the State (cp. iv. 419 E); our Olympic victor has not been turned into a cobbler, but he has a happiness beyond that of any cobbler. At the same time, if any conceited youth begins to dream of appropriating the State to himself, we shall do well to read him the lesson out of Hesiod, that ‘half is better than the whole.’ ‘If he were to consult me, I should say to him, Stay where you are, having such a brave life.’

But is such a community possible?—as among other animals, so also among men; and if possible, in what way possible? About war there is no difficulty; the principle of communism is adapted to military service. Parents will take their children to look on at a battle, just as potters’ boys are trained to the business by looking on at the wheel. And to the parents themselves, as to other animals, the sight of their young

ones will prove a great incentive to bravery. Young warriors must learn, but they must not run into danger, although a certain degree of risk is worth incurring when the benefit is great. The young creatures should be placed under the care of experienced veterans, and they should have wings—that is to say, swift and tractable steeds on which they may fly away and escape. One of the first things to be done is to teach a youth to ride.

Cowards and deserters shall be degraded to the class of husbandmen; gentlemen who allow themselves to be taken prisoners, may be presented to the enemy. But what shall be done to the hero? First of all he shall be crowned by all the youths in the army; secondly, he shall receive the right hand of fellowship; and thirdly, do you think that there is any harm in his being kissed? We have already determined that he shall have more wives than others, in order that he may have as many children as possible. And at a feast he shall have more to eat; we have the authority of Homer for honouring brave men with ‘perpetual chines,’ which is an appropriate compliment, because meat is a very strengthening thing. Fill the bowl then, and give the best seats and meats to the brave—may they do them good! And he who dies in battle will be at once declared to be of the golden race, and will, as we believe, become one of Hesiod’s guardian angels. He shall be worshipped in the manner prescribed by the oracle after death; and not only he, but all other benefactors of the State who die in any other way, shall be admitted to the same honours.

The next question is, How we shall treat our enemies? Shall Hellenes be enslaved? No; for there is too great a risk of the whole race passing under the yoke of the barbarians. Or shall the dead be despoiled? Certainly not; for that sort of thing is an excuse for skulking, and has been the ruin of many an army. There is meanness and feminine malice in making an enemy of the dead body, when the soul which was the owner has fled—like a dog who cannot reach his assailants, and quarrels with the stones which are thrown at him instead. Thirdly, arms should not be offered up in the temples of the Gods, for they are a pollution when taken from brethren. And for similar reasons there should be a limit to the devastation of Hellenic territory—the houses should not be burnt, nor more than the annual produce carried off. For war is of two kinds, civil and foreign; the first of which is properly termed ‘discord,’ and only the second ‘war;’ and war between Hellenes

is in reality civil war—a quarrel in a family, which is ever to be regarded as unpatriotic and unnatural, and ought to be prosecuted with a view to reconciliation in a true phil-Hellenic spirit, as of those who would chasten but not utterly enslave. The war is not against a whole nation who are a friendly multitude of men, women, and children, but only against a few guilty persons; and when they are punished peace will be restored. That is the way in which Hellenes should war against one another—and against barbarians, as they war against one another now.

‘But, my dear Socrates, in all this you are only getting away from the main question: Is such a State possible? I grant all and more than you say about the blessedness of being one family—fathers, brothers, mothers, daughters, going out to war together; but I want to ascertain the possibility of this ideal State.’ If I loiter for a moment, I said, you make a descent upon me. The first wave and the second wave I have hardly escaped, and now you will certainly drown me with the third. When you see the towering crest of the wave, I expect you to take pity. ‘Not a whit.’

Then let me begin by reminding you that we were led to form our ideal polity in the search after justice, and the just man answered to the just State. Is this ideal at all the worse for being impracticable? Would the picture of a perfectly beautiful man be any the worse because no such man ever lived? Can any reality come up to the idea? Nature will not allow words to be fully realised; but if I am to try and realise the ideal of the State in a measure, I think that an approach may be made to the perfection of which I dream by one or two, I do not say slight, but possible changes in the present constitution of States. I would reduce them to a single one—the great wave, as I call it, at which I expect your laughter to be as the letting out of water. *Until, then, kings are philosophers, or philosophers are kings, cities will never cease from ill: no, nor the human race; nor will our ideal polity ever come into being.* I know that this is a hard saying, which few will be able to receive. ‘Socrates, all the world will take off his coat and rush upon you with sticks and stones, and therefore I would advise you to prepare an answer.’ You got me into the scrape, I said. ‘And I was right,’ he replied; ‘however, I will stand by you as a sort of do-nothing, well-meaning ally.’ Having the help of such a champion, I will do my best to maintain my position. And first, I must explain of whom I speak and what sort of natures these are who are to be philosophers and rulers. As you

are a man of pleasure, I dare say that you have not forgotten how indiscriminate lovers are in their attachments; they love all, and turn blemishes into beauties. The snub-nosed youth is said by them to have a winning grace; the beak of another has a royal look; the featureless are faultless; the dark are manly, and the fair are angels; the sickly have a new term of endearment invented expressly for them, which is 'honey-pale.' Lovers of wine and lovers of ambition also desire their objects in every form. Now here comes the point:—The philosopher too is a lover of knowledge in every form; he has an insatiable curiosity. 'But will curiosity make a philosopher? Are the lovers of sights and sounds, who let out their ears at every Dionysiac festival in country as well as town, to be called philosophers?' They are not true philosophers, but only an imitation. 'Then how are we to describe the true?'

You would acknowledge the existence of abstract ideas, such as justice, beauty, good, evil, which are severally one, yet in their various combinations appear to be many. Those who recognize these realities are philosophers; whereas the other class hear sounds and see colours, and understand their use in the arts, but cannot attain to the true or waking vision of absolute justice or beauty or truth; they have not the light of knowledge, but of opinion, and what they see is a dream only. Perhaps he of whom we say the last will be angry with us; can we offer him any consolation without revealing the fact that he is not in his right mind? Come, then, and let us reason with him; if he has knowledge we rejoice to hear it, but knowledge must be of something which is, as ignorance is of something which is not; and there is a third thing, which both is and is not, and is matter of opinion only. Opinion and knowledge, then, having distinct objects, must also be distinct faculties. And by faculties I mean powers unseen and distinguishable only by the difference in their objects, as opinion and knowledge differ, since the one is liable to err but the other is unerring, and is the mightiest of all our faculties. If being is the object of knowledge, and not-being of ignorance, and these are the extremes, opinion must lie between them, and may be called darker than the one and brighter than the other. This intermediate or contingent matter is and is not at the same time, and partakes both of existence and of non-existence. Now I would ask my good friend, who denies abstract beauty and justice, and affirms a many beautiful and a many just, whether everything he sees is not in some point of view different—the beautiful

ugly, the pious impious, the just unjust? Is not the double also the half, and are not heavy and light relative terms which pass into one another? Everything is and is not, as in the old riddle—‘A man and not a man shot and did not shoot a bird and not a bird with a stone and not a stone.’ The mind cannot be fixed on either alternative; and these ambiguous, intermediate, erring, half-lighted objects, which have a disorderly movement in the region between being and not-being, are the proper matter of opinion, as the immutable objects are the proper matter of knowledge. And he who grovels in the world of sense, and has only this uncertain perception of them, is not a philosopher, but a lover of opinion only.

. . . The fifth book is the new beginning of the Republic, in which the community of property and of family are first maintained, and the transition is made to the kingdom of philosophers. For both of these Plato, after his manner, has been preparing in some chance words of Book IV (424 A), which fall unperceived on the reader’s mind, as they are supposed at first to have fallen unperceived on the ear of Glaucon and Adeimantus. The ‘paradoxes,’ as Morgenstern terms them, of this book of the Republic will be reserved for another place; a few remarks on the style, and some explanations of difficulties, may be briefly added.

First, there is the image of the waves, which serves for a sort of scheme or plan of the book. The first wave, the second wave, the third and greatest wave come rolling in, and we hear the roar of them. All that can be said of the extravagance of Plato’s proposals is anticipated by himself. Nothing is more admirable than the hesitation with which he proposes the solemn text, ‘Until kings are philosophers,’ &c.; or the reaction from the sublime to the ridiculous, when Glaucon describes the manner in which the new truth will be received by mankind.

Some metaphysical and critical difficulties may be noted. Among them may be reckoned the imperfect execution of the communistic plan—nothing is told us of the application of communism to the lower classes; nor is the table of prohibited degrees capable of being made out. Plato is afraid of incestuous unions, but at the same time he does not wish to bring before us the fact that the city would be divided into families of those born seven and nine months after each hymeneal festival. The singular expression (460 E) which is employed

to describe the age of five-and-twenty may perhaps be taken from some poet.

In the delineation of the philosopher, the illustrations of the nature of philosophy derived from love are more suited to the apprehension of Glaucon, the Athenian man of pleasure, than to modern tastes or feelings. They are partly facetious, but also contain a germ of truth. That science is a whole remains a true principle of inductive as well as of metaphysical philosophy; and the love of universal knowledge is still the characteristic of the philosopher in modern as well as in ancient times.

At the end of the fifth book Plato introduces the figment of contingent matter, which occurs here for the first time in the history of philosophy. He did not remark that the degrees of knowledge in the subject have nothing corresponding to them in the object. With him a word must answer to an idea; and he could not conceive of an opinion which was an opinion about nothing. On the other hand, the conception of not-being was dark and mysterious to the mind of early thinkers (Sophist, 254 A); they did not see that this terrible apparition which threatened destruction to all knowledge was only a logical determination. In the attempt to introduce order into the first chaos of human thought, Plato seems to have confused perception and opinion, and to have failed to distinguish the contingent from the relative. In the Theaetetus the first of these difficulties begins to clear up; in the Sophist the second; and for this, as well as for other reasons, both these dialogues are probably to be regarded as later than the Republic.

BOOK VI. Having determined that the many have no knowledge of true being, and have no clear patterns in their minds of justice, beauty, truth, and that philosophers have such patterns, we have now to ask whether they, or the many shall be rulers in our State; and who can doubt that philosophers should be chosen, if they have the other qualities which are required in a ruler? For they are lovers of the knowledge of the eternal and of all truth; they are haters of falsehood; their meaner desires are absorbed in the interests of knowledge; they are spectators of all time and all existence; and in the magnificence of their contemplation the life of man is as nothing to them, nor is death fearful. Also they are of a social, gracious disposition, equally free from cowardice and arrogance. They learn and remember easily; they

are harmonious, well-regulated minds ; truth flows to them sweetly by nature. Can the god of Jealousy himself find any fault with such an assemblage of good qualities ?

Here Adeimantus interposes an objection. ‘No man,’ he says, ‘can answer you, Socrates ; but every man feels that this is owing to his own deficiency in the power of arguing. He is carried away little by little, until at last the discrepancy between the premises and the conclusion is enormous. The argument is like a game of draughts in which the unskilful player is reduced to his last move by his more skilful antagonist. And in this new game, of which words are the counters, the disputant is out-argued ; but nevertheless he may be in the right. He may know, in this very instance, that those who make philosophy the business of their lives, generally turn out rogues if they are bad men, and fools if they are good. What do you say ?’ I should say that he is quite right. ‘Then how is such an admission reconcilable with the doctrine that philosophers should be kings ?’

I shall answer you in a figure which will give you an opportunity of judging how poor a hand I am at the invention of allegories. The relation of good men to their governments is so peculiar, that in order to defend them I must take an illustration from that world of fiction in which painters find their winged dragons and other fabulous monsters. Conceive the captain, whether of a ship or of a fleet, taller by a head and shoulders than all his sailors, yet a little deaf, a little blind, and rather ignorant of the seaman’s art. The sailors are wanting to steer, although they know nothing and have learnt nothing of the art of steering ; and they have a theory, which no one is allowed to doubt under pain of death, that the art cannot be learned. If the care of the helm is refused them, they drug the captain’s posset and bind him hand and foot ; having got rid of him, they take possession of the ship, and make themselves at home with the stores. He who joins in the mutiny is termed an able seaman, a good pilot, and what not ; they are ignorant that the true pilot is another sort of man, who must observe the wind and the stars, and who must and will have authority—but such an one is called by them a fool, prater, star-gazer. And now, I said, do you interpret the parable to those who ask why the philosopher has such an evil name, and make them understand that not he, but those who refuse to use him, are to blame for his uselessness. The philosopher should not blow a trumpet before him, or beg of mankind to be

put in authority over them. The wise man is not to seek the rich, but every man, whether rich or poor, must knock at the door of the physician when he has need of him. Now the captain is the people; the pilot is the philosopher—he whom in the parable they call star-gazer, and the mutinous sailors are the mob of politicians by whom he is rendered useless. Not that these are the worst enemies of philosophy, who is far more dishonoured by her own professing sons when they are corrupted by the world. Need I recall the original image of the philosopher? Did we not say of him just now, that he loved truth and hated falsehood, and that he could not rest in the multiplicity of phenomena, but was led by a sympathy in his own nature to the contemplation of the absolute? All the virtues as well as truth, who is the leader of them, took up their abode in his soul. But as you were observing, if we turn aside to view the reality, we see that the persons who were thus described, with the exception of a small and useless class, are utter rogues.

The point which has to be considered, is the origin of this corruption in nature. Every one will admit that the philosopher, in our description of him, is a rare being. But what numberless causes tend to destroy these rare beings! There is no good thing which may not be a cause of evil—health, wealth, strength, rank, and the virtues themselves, when placed under unfavourable circumstances. For as in the animal or vegetable world the strongest seeds most need the accompaniment of good air and soil, so the best of human characters turn out the worst when they fall upon an unsuitable soil; whereas weak natures hardly ever do any considerable good or harm; they are not the stuff out of which either great criminals or great heroes are made. The philosopher follows the same analogy: if he have suitable training he is the best of all men; if left to himself he becomes, when surrounded by evil influences, the worst of all. Some persons say that the Sophists are the corrupters of youth; but do they really corrupt them in any appreciable degree? Is not public opinion the real Sophist who is everywhere present—in those very persons, in the assembly, in the courts, in the camp, in the applauses and hisses of the theatre re-echoed by the surrounding hills? Will not a young man's heart leap for joy in the midst of these discordant sounds? and will any education save him from being carried away in the torrent of praise or blame? Nor is this all. For if he will not yield to opinion, there follows the gentle compulsion of exile or death. What principle of rival Sophists or anybody else can overcome in such

an unequal contest? Characters there may be more than human, who are exceptions—God may save a man, but not his own strength. Further, I would have you consider that the hireling Sophist only gives back to the world their own opinions; he is the keeper of the monster, who knows how to flatter or anger him, and observes the meaning of his inarticulate grunts. Good is pronounced to be what pleases him, and evil is what he dislikes, and truth and beauty have no other standard but the taste of the brute, and the rules which embody this are the Sophist's wisdom. Such is the condition of those who make public opinion the test of truth, whether in art or in morals. The curse is laid upon them of being and doing what they approve, and when such men attempt first principles the failure is ludicrous. Think of all this and ask yourself whether the world is more likely to be a believer in the unity of the idea, or in the multiplicity of phenomena. And the world if not a believer in the idea cannot be a philosopher, and must therefore be a persecutor of philosophers. There is another evil:—the world does not like to lose the gifted nature, and so they flatter the young [Alcibiades] into a magnificent opinion of his own capacity; the tall, proper youth begins to expand, and is dreaming of kingdoms and empires. If at this instant a friend whispers to him, 'Now the gods lighten thee; thou art a great fool and must be educated;' do you think that he will listen? Or suppose a better sort of man who is attracted towards philosophy, will they not make Herculean efforts to spoil and corrupt him? Are we not right in saying that philosophical parts, no less than riches, may divert him? Men of this class [Critias] often become politicians—they are the authors of great mischief in states, and sometimes also of great good. And thus philosophy is deserted by her natural protectors, and others enter in and dishonour her, and take away her good name. Vulgar little minds see the land open and rush from the prisons of the arts into her temple. A clever mechanic having a soul coarse as his body, thinks that he will gain caste by becoming her suitor. For philosophy, even in her fallen estate, has a dignity of her own—and he, like a bald little blacksmith's apprentice as he is, having made some money and got out of durance, washes and dresses himself as a bridegroom and marries his master's daughter. What will be the issue of such marriages? Will they not be vile and bastard, devoid of truth and nature? 'They will.' Small, then, is the remnant of genuine philosophers; there may be a few who are citizens of small states, in which politics are not worth

thinking of, or who have been detained by Theages' bridle of ill health; for my own case of the oracular sign is almost singular, and too rare to be worth mentioning. And these few when they have tasted the pleasures of philosophy, and have taken a look at that den of thieves and place of wild beasts, which is human life, will stand aside from the storm under the shelter of a wall, and try to preserve their own innocence and to depart in peace. 'A great work, too, will have been accomplished by them.' Great, yes, but not the greatest; for man is a social being, and can only attain his highest development in the society which is best suited to him.

Enough, then, of the causes why philosophy has such an evil name. Another question is, Which of existing states is suited to her? There is none; for at present she has no abiding-place on earth, and may be compared to the exotic seed which degenerates in a strange soil. Only in her proper state will she be shown to be of heavenly growth. 'And is her proper state ours or some other?' Ours in all points but one, which was left undetermined. You may remember our saying that some living mind or witness of the legislator was needed in states. But we were afraid to enter upon a subject of such difficulty, and now the question recurs and has not grown easier:—How may philosophy be safely studied? Let us bring her to the light of day, and make an end of the inquiry.

In the first place, I say boldly that nothing can be worse than the present mode of study. The fashion is, that for a few years in the days of youth, and in the intervals of household matters and business, persons get a smattering of philosophy, but run away as soon as they approach the real difficulty, which is dialectic. Later, they perhaps accompany a dilettante friend at his request to a lecture on philosophy. Years advance, and the sun of philosophy, like that of Heracleitus, sets, unlike that of Heracleitus, never to rise again. Now this order ought to be entirely reversed; education should never finish—beginning with gymnastics in youth, which will minister to philosophy in after life; but as the man strengthens increasing the gymnastics of the soul. Then, when nature begins to decay and active life is over, he should return to philosophy again and for ever. 'You are in profound earnest, Socrates, and I think that the world will be equally earnest in withstanding you—no one more likely than our friend Thrasymachus.' Do not make a quarrel between Thrasymachus and me, who were never enemies and are now very good friends. And I shall do my best to persuade him and all

mankind, and if I cannot, I will at any rate make a preparation for another life, when after coming to the birth again we hold similar discourses. 'That will be a long time hence.' Not long, I said, in comparison with eternity. I do not wonder that the many will not believe, for they have never seen natural unities of ideas, but only ingenious juxtapositions; not free and generous thoughts, but tricks of controversy and quips of law;—a perfect man ruling in a perfect state, even a single one they have not known. And we foresaw that there was no chance of perfection either in states or individuals until a necessity was laid upon that second small class of philosophers—not the rogues, but those whom we call useless—of taking the government; or until the sons of kings were inspired with a true love of philosophy. Whether in the infinity of past time there ever has been, or is in some distant land, or will be hereafter, an ideal such as we have described, we stoutly maintain that there has been and might be such a state wherever the Muse of philosophy rules. Will you say that the world is of another mind? O, my friend, do not revile the world! They will be of another mind if they are gently entreated, and learn the true nature of the philosopher. Who can hate a man who loves them? or be jealous of one who has no jealousy? A few such natures there may be, but it is not the common temper. Consider, again, that the many hate not the true but the false philosophers—the hirelings who are not the shepherds and who enter in by force, and are always speaking of persons and not of principles, which is unlike the spirit of philosophy. For the true philosopher has no time to think of the quarrels of men; his eye is fixed on the eternal order in accordance with which he moulds himself into the Divine image (and not himself only, but the characters of other men), and is the creator of the virtues private as well as public. And when mankind see that the happiness of states is only to be found in that image, will they be angry with us for attempting to delineate it? 'Certainly not. But what will be the process of delineation?' The artist will do nothing until he has made a *tabula rasa*; on this he will draw the constitution of a state, glancing often at the divine truth of nature, and from that deriving the godlike among men, mingling the two elements, rubbing out and painting in, until there is a perfect harmony or fusion of the divine and human. But perhaps the world will doubt the existence of such an artist. What will they doubt? That the philosopher is a lover of truth, having a nature akin to the best?—and if they admit this will they still

quarrel with us for making philosophers our kings? 'They will be less disposed to quarrel.' Let us assume then that they make peace. Still, a person may hesitate about the probability of the son of a king being a philosopher. And we do not deny that they are very liable to be corrupted; but yet surely in the course of ages there might be one exception—and one is enough. If one son of a king were a philosopher, and had obedient citizens, he might bring the ideal polity into being. Hence we conclude that our laws are not only the best, but are also, though with difficulty, attainable.

I gained nothing by evading the troublesome questions which arose concerning women and children. I will be wiser now and acknowledge that we must go to the foundation of another question: What is to be the education of our guardians? It was agreed that they were to be lovers of their country, and were to be tested in the refiner's fire of pleasures and pains, and those who came forth pure and remained fixed in their principles were to have honours and rewards in life and after death. That was what we were saying, when, like a coy maiden, the argument put on her veil and turned into another path. There was an unwillingness to make the assertion which I now hazard,—that our guardians must be philosophers. You remember all the contradictory elements, intellectual as well as moral, which met in the philosopher. How difficult to find them all in a single person! The steadfast, immoveable nature which has not the wit to run away in battle is apt to go to sleep at a lecture on philosophy. And yet these opposite elements are both necessary, and therefore, as we were saying before, the aspirant must be tested in pleasures and dangers; and also, as we must now further add, in the highest branches of knowledge. You will remember, that when we spoke of the virtues mention was made of a longer road, which you were satisfied to leave unexplored. 'Enough seemed to us to have been said.' Enough, my friend; but what is enough while anything remains wanting? Of all men the guardian should be the last to faint in the search after truth; he must be prepared to take the longer road, or he will never reach the summit of perfection. 'What, is there a higher region of truth above the four virtues?' Yes, there is; and of the virtues too he must not only get an outline, but a clear and distinct vision. (Strange that we should be so precise about trifles, so confused and inaccurate about the highest truths!) And of this truth you have heard before a hundred times at least, although you put on that pro-

voking air of unconsciousness—the idea of good, about which we know so little, and without which though a man gain the world he has no good of it. Some people imagine that the good is wisdom; but this involves a circle,—the good is wisdom, wisdom is of the good. According to another notion the good is pleasure; but this involves the absurdity that good is bad, because there are bad pleasures as well as good. Again, the good must have reality; a man may desire the appearance of virtue, but he will not desire the appearance of good. And ought our guardians then to be ignorant of this supreme principle, of which every man has a presentiment, and upon which all things depend, and without which no man has any real knowledge of anything? ‘But, Socrates, what is this supreme principle, knowledge or pleasure, or what other? You may call me a troublesome fellow, but I say that you have no business to be always repeating the doctrines of others instead of giving us your own.’ Have I any business to say what I do not know? ‘You may offer an opinion.’ And will the crooked way of opinion content you where you ought to require the straightforwardness of certainty, or will you be satisfied with the cloudiness of opinion when you might have the light of science? ‘I will ask you to give such an explanation of the good as you did before of “temperance” and “justice;” —that will be enough.’ I wish that I could, but in my present mood I am not able to reach to the height of the knowledge of the good. To the parent or principal I cannot introduce you, but to the child begotten in his image, which I may compare with the interest on the principal, I will. (Audit the account, and do not let me give you a false statement of the debt.) You remember our old distinction of the many beautiful and the one beautiful, the particular and the universal, the objects of sight and the objects of thought? Did you ever consider that the objects of sight imply a faculty of sight which is the most complex and costly of our senses, requiring not only objects of sense, but also a medium, which is light; without which the sight will see nothing and the colours will remain blank? Which light is the noble bond between the perceiving faculty and the thing perceived, and the god who gives us light is the sun, who is the eye of the day, and is not to be confounded with the eye of man. The sun, or eye of the day, is what I call the child of the good, standing in the same relation to the visible world as the good to the intellectual. When the sun shines the eye sees, and in the intellectual world where truth is, there is sight and light. Now that which is

the sun of intelligent natures, is the idea of good, the cause of knowledge and truth, yet fairer and other than they are, and standing in the same relation to them in which the sun stands to light. O inconceivable height of beauty, which is above knowledge and above truth! ('You cannot surely mean pleasure,' he said. Peace, I replied.) And this idea of good, like the sun, is also the cause of growth, and the author not of knowledge only, but of being, and far exceeds being in dignity and power. Glaucon said, with a comical air of earnestness: 'By heaven! that is a reach of thought more than human.' I must lay the exaggeration to your door, for you made me utter my fancies. 'Nay,' he said, 'go on with the image, for I suspect that there is more behind.' There is, I said; and bearing in mind our two suns or principles, imagine further their corresponding worlds—one of the visible, the other of the intelligible—you may assist your fancy by figuring the distinction under the image of a line divided into two unequal parts, and may again subdivide each part into two lesser segments representative of the stages of knowledge in either sphere. The lower half of the lower or visible sphere will consist of shadows and reflections, and the upper half of the same sphere will contain real objects in the world of nature or of art. The sphere of the intelligible will also have two divisions,—one of mathematics, in which there is no ascent but all is descent; no inquiring into premises, but only drawing of inferences. In this division the mind works with figures and numbers, the images of which are taken not from the shadows, but from the objects, although the truth of them is seen only with the mind's eye; and they are used as hypotheses without being analysed. Whereas in the other division reason uses the hypotheses as stages or steps in the ascent to the idea of good, to which she fastens them, and then again descends, walking firmly in the region of ideas, and of ideas only, in her ascent as well as descent, and finally resting in them. 'I partly understand,' he replied; 'you mean that the ideas of science are superior to the hypothetical, metaphorical conceptions of geometry and the other arts or sciences, whichever is to be the name of them; and the latter conceptions you refuse to make subjects of pure intellect, because they have no first principle, although when resting on a first principle, they pass into the higher sphere.' You understand me very well, I said. And now to those four divisions of knowledge you may assign four corresponding faculties—pure intelligence to the highest sphere; active intelligence to the second; to the third, faith; to the fourth,

the perception of likenesses—and the clearness of the several faculties will be in the same ratio as the truth of the objects to which they are related.

... Like Socrates, we may recapitulate the virtues of the philosopher. In language which seems to reach beyond the horizon of that age and country, he is described as 'the spectator of all time and all existence.' He has the noblest gifts of nature, and makes the highest use of them. All his desires are absorbed in the love of wisdom, which is the love of truth. None of the graces of a beautiful soul are wanting in him; neither can he fear death, or think much of human life. The ideal of modern times hardly retains the simplicity of the antique; there is not the same originality either in truth or error which characterized the Greeks. The philosopher is no longer living in the unseen, nor is he sent by an oracle to convict mankind of ignorance; nor does he regard knowledge as a system of ideas leading upwards by regular stages to the idea of good. The eagerness of the pursuit has abated; there is more division of labour and less of comprehensive reflection upon nature and human life as a whole; more of exact observation and less of anticipation and inspiration. Still, in the altered conditions of knowledge, the parallel is not wholly lost; and there may be a use in translating the conception of Plato into the language of our own age. The philosopher in modern times is one who fixes his mind on the laws of nature in their sequence and connexion, not on fragments or pictures of nature; on history, not on controversy; on the truths which are acknowledged by the few, not on the opinions of the many. He is aware of the importance of 'classifying according to nature,' and will try to 'separate the limbs of science without breaking them.' (Phaedr. 265 E.) There is no part of truth, whether great or small, which he will dishonour; and in the least things he will discern the greatest. (Parmen. 130 C.) Like the ancient philosopher he sees the world pervaded by analogies, but he can also tell 'why in some cases a single instance is sufficient for an induction' (Mill's Logic 3, 3, 3), while in other cases a thousand examples would prove nothing. He inquires into a portion of knowledge only, because the whole has grown too vast to be embraced by a single mind or life. He has a clearer conception of the divisions of science and of their relation to the mind of man than was possible to the ancients. Like Plato, he has a vision of the unity of knowledge, not as the beginning of philosophy to be attained by a study of elementary mathematics, but as

the far-off result of the working of many minds in many ages. He is aware that mathematical studies are preliminary to almost every other; at the same time, he will not reduce all varieties of knowledge to the type of mathematics. He too must have a nobility of character, without which genius loses the better half of greatness. Regarding the world as a point in immensity, and each individual as a link in a never-ending chain of existence, he will not think much of his own life, or be greatly afraid of death.

Adeimantus objects first of all to the form of the Socratic reasoning, thus showing that Plato is aware of the imperfection of his own method. He brings the accusation against himself which might be brought against him by a modern logician—that he extracts the answer because he knows how to put the question. In a long argument words are apt to change their meaning slightly, or premises may be assumed or conclusions inferred with rather too much certainty or universality; the variation at each step may be unobserved, and yet at last the divergence becomes considerable. Hence the failure of attempts to apply arithmetical or algebraic formulæ to logic. The imperfection, or rather the higher and more elastic nature of language, does not allow words to have the precision of numbers or of symbols. And this quality in language impairs the force of an argument which has many steps.

The objection, though fairly met by Socrates in this particular instance, may be regarded as implying a reflection upon the Socratic mode of reasoning. And here, as at p. 506 B, Plato seems to intimate that the time had come when the negative and interrogative method of Socrates must be superseded by a positive and constructive one, of which examples are given in some of the later dialogues. Adeimantus further argues that the ideal is wholly at variance with facts; for experience proves philosophers to be either useless or rogues. Contrary to all expectation (cp. p. 497 for a similar surprise) Socrates has no hesitation in admitting the truth of this, and explains the anomaly in an allegory, first characteristically depreciating his own inventive powers. In this allegory the people are distinguished from the professional politicians, and, as at pp. 499, 500, are spoken of in a tone of pity rather than of censure under the image of 'the noble captain who is not very quick in his perceptions.'

The uselessness of philosophers is explained by the circumstance that mankind will not use them. The world in all ages has been divided

between contempt and fear of those who employ the power of ideas and know no other weapons. Concerning the false philosopher, Socrates argues that the best is most liable to corruption; the finer nature is more likely to suffer from alien conditions. There are some kinds of excellence which spring from a peculiar delicacy of constitution; this is evidently true of the poetical and imaginative temperament, which often seems to depend on impressibility, and hence can only live in a certain atmosphere. The man of genius has greater pains and greater pleasures, greater powers and greater weaknesses, and often a greater play of character than is to be found in ordinary men. He can assume the disguise of virtue or disinterestedness without having them, or veil personal enmity in the language of patriotism and philosophy,—he can say the word which all men are thinking, and is ever ready to take various forms as the situation changes. An Alcibiades, a Mirabeau, or a Napoleon the First, are born either to be the authors of great evils in states, or ‘of great good when they are drawn in that direction.’

Yet the thesis, ‘*corruptio optimi pessima*,’ cannot be maintained generally or without regard to the kind of excellence which is corrupted. For the alien conditions which are corrupting to one nature, may be the elements of culture to another. In general a man can only receive his highest development in a congenial state or family, among friends or fellow-workers. But also he may sometimes be stirred by adverse circumstances to such a degree that he rises up against them and reforms them. And while weaker or coarser characters will extract good out of evil, say in a corrupt state of the church or of society, and live on happily, allowing the evil to remain, the finer or stronger natures may be crushed or spoiled by surrounding influences—may become misanthrope and philanthrope by turns; or in a few instances, like the founders of the monastic orders, or the Reformers, owing to some peculiarity in themselves or in their age, may break away entirely from the world and from the church, sometimes into great good, sometimes into great evil, sometimes into both. And the same holds in the lesser sphere of a convent, a school, a family.

Plato would have us consider how easily the best natures are overpowered by public opinion, and what efforts the rest of mankind will make to get possession of them. The world, the church, their own professions, any political or party organization, are always carrying them off their legs and teaching them to apply high and holy names to their

own prejudices and interests. The 'monster' corporation to which they belong judges right and truth to be the pleasure of the community. The individual becomes one with his order; or, if he resists, the world is too much for him, and will sooner or later be revenged on him. This is, perhaps, a one-sided but not wholly untrue picture of the maxims and practice of mankind when they 'sit down together at an assembly,' either in ancient or modern times.

When the higher natures are corrupted by politics, the lower take possession of the vacant place of philosophy. This is described in one of those continuous images in which the argument, to use a Platonic expression, 'veils herself,' and which is dropped and reappears at intervals. Then arises the question,—Why the citizens of states are inimical to philosophy? The answer is, that they do not know her. And yet there is also a better mind of the many; they would believe if they were taught. But hitherto they have only known a conventional imitation of philosophy, words without thoughts, systems which have no life in them; a [divine] person uttering the words of beauty and freedom, the friend of man holding communion with the Eternal, and seeking to frame the state in that image, they have never known. The same double feeling respecting the mass of mankind has always existed among men. The first thought is that the people are the enemies of truth and right; the second, that this only arises out of an accidental error and confusion, and that they do not really hate those who love them, if they could be educated to know them.

In the latter part of the sixth book, three questions have to be considered: 1st, the nature of the longer and more circuitous way, which is contrasted with the shorter and more imperfect method of Book IV; 2nd, the heavenly pattern or idea of the state; 3rd, the relation of the divisions of knowledge to one another and to the corresponding faculties of the soul.

1. Of the higher method of knowledge in Plato we have only a glimpse. Neither here nor in the Phaedrus or Symposium, nor yet in the Philebus or Sophist, does he give any clear explanation of his meaning. He would probably have described his method as proceeding by regular steps to a system of universal knowledge, which inferred the parts from the whole rather than the whole from the parts. This ideal logic is not practised by him in the search after justice, or in the analysis of the parts of the soul; there, like Aristotle in the Nicomachean Ethics,

he argues from experience and the common use of language. But at the end of the sixth book he conceives another and more perfect method, in which all ideas are only steps or grades or moments of thought, forming a connected whole which is self-supporting, and in which consistency is the test of truth. He does not explain to us in detail the nature of the process. Like many other thinkers both in ancient and modern times his mind seems to be filled with a vacant form which he is unable to realize. He supposes the sciences to have a natural order and connexion in an age when they can hardly be said to exist. He is hastening on to the 'end of the intellectual world' without even making a beginning of them.

In modern times we hardly need to be reminded that the process of acquiring knowledge is here confused with the contemplation of absolute knowledge. In all science *a priori* and *a posteriori* truths mingle in various proportions. The *a priori* part is that which is derived from the most universal experience of men, or is universally accepted by them; the *a posteriori* is that which grows up around the more general principles and becomes imperceptibly one with them. But Plato erroneously imagines that the synthesis is separable from the analysis, and that the method of science can anticipate science. In entertaining such a vision of *a priori* knowledge he is sufficiently justified, or at least his meaning may be sufficiently explained by the similar attempts of Descartes, Kant, Hegel, and even of Bacon himself, in modern philosophy. Nor can we deny that in ancient times knowledge must have stood still, and the human mind been deprived of the very instruments of thought, if philosophy had been strictly confined to the results of experience.

2. Plato supposes that when the tablet has been made blank the artist will fill in the lineaments of the ideal state. Is this a pattern laid up in heaven, or mere vacancy on which he is supposed to gaze with wondering eye? The answer is, that such ideals are framed partly by the omission of particulars, partly by imagination perfecting the form which experience supplies. (Phaedo 74.) Plato represents these ideals in a figure as belonging to another world; and in modern times the idea will sometimes seem to precede, at other times to co-operate with the hand of the artist. As in science, so also in creative art, there is a synthetical as well as an analytical method. One man will have the whole in his mind before he begins; to another the processes of mind and hand will be simultaneous.

3. There is no difficulty in seeing that Plato's divisions of knowledge are based, first, on the fundamental antithesis of sensible and intellectual which pervades the whole pre-Socratic philosophy; in which is implied also the opposition of the permanent and transient, of the universal and particular. But the age of philosophy in which he lived seemed to require a further distinction;—numbers and figures were beginning to separate from ideas. The world could no longer regard justice as a cube, and was learning to see, though imperfectly, that the abstractions of sense were distinct from the abstractions of mind. Between the Eleatic being or essence and the shadows of phenomena, the Pythagorean principle of number found a place, and was, as Aristotle remarks, a conducting medium from one to the other. Hence Plato is led to introduce a third term which had not hitherto entered into the scheme of philosophy. He had observed the use of mathematics in education; they were the best preparation for higher studies. The subjective relation between them further suggested an objective one; although the passage from one to the other is really imaginary. (*Metaph.* I, 6, 4.) For metaphysical and moral philosophy has no connexion with mathematics; number and figure are the abstractions of time and space, not the expressions of purely intellectual conceptions. When divested of metaphor, a straight line or a square has no more to do with right and justice than a crooked line with vice. The figurative association was mistaken for a real one; and thus the three latter divisions of the Platonic proportion were constructed.

There is more difficulty in comprehending how he arrived at the first term of the series, which is nowhere else mentioned, and has no reference to any other part of his system. Nor indeed does the relation of shadows to objects correspond to the relation of numbers to ideas. Probably Plato has been led by the love of analogy (*cp.* *Timaeus*, p. 32 B) to make four terms instead of three, although the objects perceived in both divisions of the lower sphere are equally objects of sense. He is also preparing the way, as his manner is, for the shadows of images at the beginning of the seventh book, and the imitation of an imitation in the tenth. The line may be regarded as reaching from unity to infinity, and is divided into two unequal parts, and subdivided into two more; each lower sphere is the multiplication of the preceding. Of the four faculties, faith in the lower division has an intermediate position, contrasting equally with the vagueness of the perception of

shadows (*εἰκασία*) and the higher certainty of understanding (*διάνοια*) and reason (*νοῦς*).

The difference between understanding and mind or reason (*νοῦς*) is analogous to the difference between acquiring knowledge in the parts and the contemplation of the whole. True knowledge is a whole, and is at rest; consistency and universality are the tests of truth. To this self-evidencing knowledge of the whole the faculty of mind is supposed to correspond. But there is a knowledge of the understanding which is incomplete and in motion always, because unable to rest in the subordinate ideas. Those ideas are called both images and hypotheses—images because they are clothed in sense, hypotheses because they are assumptions only, until they are brought into connexion with the idea of good.

The method of Socrates is hesitating and tentative, awaiting the fuller explanation of the idea of good, and of the nature of dialectic in the seventh book. The imperfect intelligence of Glaucon, and the reluctance of Socrates to make a beginning, mark the difficulty of the subject. The allusion to Theages' bridle and to the oracular sign, which here, as always in Plato, is only prohibitory; the reference to a future state of existence, which is unknown to Glaucon in the tenth book; the surprise in the answers at 487 E and 497 B; the fanciful irony of Socrates, where he pretends that he can only describe the strange position of the philosopher in a figure of speech; the original remark that the Sophists, after all, are only the representatives and not the leaders of public opinion; the picture of the philosopher standing aside in the shower of sleet under a wall; the 'right noble thought' that the highest truths demand the greatest exactness; the hesitation of Socrates in returning once more to his well-worn theme of the idea of good; the ludicrous earnestness of Glaucon—are characteristic and interesting features.

BOOK VII. After this I took up my parable, and said: Imagine human beings living in a sort of underground den which has a mouth wide open towards the light; they have been there from childhood, and, having their necks and legs chained, can only see before them. At a distance there is a fire, and between the fire and the prisoners a raised way, and a low wall built along the way, like that over which marionette players show their puppets. Above the wall are seen moving figures, who hold in their hands various works of art, and among them images of men and animals, wood and stone, and some of the passers by

are talking and others silent. 'A strange parable,' he said, 'and strange captives.' They are ourselves, I replied; and they see nothing but the shadows which the fire throws on the wall of the cave; to these they give names, and if we add an echo which returns from the wall, the voices of the passengers will seem to proceed from the shadows. Suppose now that you suddenly turn them round and make them look with pain and grief to themselves at the real images; will they believe them to be real? Will not their eyes be dazzled, and will they not try to get away from the light to something which they are able to behold without blinking? And suppose further, that they are dragged up a steep and rugged ascent into the presence of the sun himself, will not their sight be darkened with the excess of light? Some time will pass before they get the habit of perceiving at all; and at first they will be able to perceive only shadows and reflections in the water; then they will recognize the moon and the stars, and will at length behold the sun in his own proper place as he is. Last of all they will conclude:—This is he who gives us the year and the seasons, and is the author of all that we see. How will they rejoice in passing from darkness to light! How worthless to them will seem the honours and glories of the den or cave out of which they came! As Homer says: 'Better to be the servant of a poor master than a prince over all the dead.' And now imagine further, that they descend into their old habitations;—in that underground dwelling they will not see as well as their fellows, and will not be able to compete with them in the measurement of the shadows on the wall; there will be many jokes about the man who went on a visit to the sun and lost his eyes—men should not do such things—and if they find anybody trying to set free and enlighten one of their number, they will put him to death, if they can catch him. Which things are an allegory: The cave or den is the world of sight, the fire is the sun, the way upwards is the way to knowledge, and in the world of knowledge the idea of good is last seen and with difficulty, but when seen is inferred to be the author of good and right—parent of the lord of light in this world and of truth and understanding in the other. He who attains to the beatific vision is always going upwards; he is unwilling to descend into political assemblies and courts of law; for his eyes are apt to blink at the images or shadows of images which they behold in them—he cannot enter into the ideas of those who have never in their lives understood the relation of the shadow to the substance. Now blindness is of two

kinds, and may be caused either by passing out of darkness into light or out of light into darkness, and a man of sense will distinguish between them, and will not laugh equally at both of them, but the blindness which arises from fulness of light he will deem blessed, and pity the other; or if he laugh at the blinking idiot looking up at the sun, he will have more reason to laugh than the inhabitants of the den at those who descend from above. There is a further lesson taught by this parable of ours. Some persons fancy that instruction is like giving eyes to the blind, but we say that the faculty of sight was always there, and that the soul only requires to be turned round towards the light. And this is conversion; other virtues are almost like bodily habits, and may be acquired in the same manner, but intelligence has a diviner life, and is indestructible, turning either to good or evil according to the direction given. Did you never observe how the mind of a clever rogue peers out of his eyes, and the more clearly he sees, the more evil he does? Now if you take such an one and circumcise his passions, and cut away from him the leaden weights which drag him down and keep the eye of his soul fixed upon the ground, the same faculty in him will be turned round, and he will behold the truth as clearly as he now discerns his meaner ends. And have we not decided that our rulers must neither be so uneducated as to have no fixed rule of life, nor so over-educated as to be unwilling to leave their paradise for the business of the world? And we must choose out the natures who are most likely to ascend to the light and knowledge of the good, and not allow them to do as they do now. I mean to say that they must not be allowed to remain in the region of light, but must be forced down again among the captives in the den to partake of their labours and honours. 'Is not this hard? and what if they had rather not?' You should remember, my friend, that our purpose in framing the State was not that our citizens should do what they like, but that they should serve the State for the common good of all. May we not fairly say to our philosopher,—Friend, we do you no wrong; for in other States philosophy grows wild, and a wild plant owes nothing to the gardener, but you we have trained to be the rulers and kings of our hive, and therefore we must insist on your descending into the darkness of the den? You must, each of you, take your turn, and become able to use your eyes in the dark, and with a little practice you will see ten thousand times as well as those who quarrel about the shadows, whose knowledge is a dream only, whilst yours is a

waking reality. It may be that the saint or philosopher who is best fitted, may also be the least inclined to rule, but necessity is laid upon him, and he must no longer live in the heaven of ideas. And this will be the salvation of the State. For those who rule must not be those who are desirous to rule; and, if you can offer to our citizens a better life than that of rulers generally is, there will be a chance that the rich, not only in this world's goods, but in virtue and wisdom, may bear rule. And the only life which is better than the life of political ambition is that of philosophy, which is also the best preparation for the government of a State.

Then now comes the question,—How shall we create our rulers; what way is there from darkness to light? How like departed spirits may they be raised from the world below into the upper air? The change is effected by philosophy, which is not the turning over of an oyster shell, but the conversion of a soul from night to day, from becoming to being. And what training will draw the soul upwards? Our former education had two branches,—gymnastic, which was occupied with the body, and music, the sister art, which infused a natural harmony into mind and literature; but neither of these sciences gave any promise of doing what we want. What have we left? All that remains to us is that universal science which is the primary element of all the rest. ‘What is that?’ A small matter—one, two, three—or in other words, number, of which I say that all arts and sciences are partakers. ‘Very true.’ Including the art of war? ‘Yes, certainly.’ Then there is something very ludicrous about Palamedes in the tragedy, coming in and saying that he had invented number, and counted the ranks and set in order the ships. For if Agamemnon could not count his feet (and without number how could he?) he must have been a pretty sort of general indeed. No man should be a soldier who cannot count, and indeed he is hardly to be called a man. But I am not speaking of these practical applications of arithmetic, for number, in my view, is rather to be regarded as a conductor to thought and being. I will explain what I mean by the last expression:—Things sensible are of two kinds; the one class invite or stimulate the mind, while in the other the mind acquiesces. Now the stimulating class are the things which suggest contrast and relation. For example, suppose that I hold up to the eyes three fingers—a fore finger, a middle finger, a little finger—the sight equally recognizes all three fingers, but cannot distinguish which is first, second, or third. Or again, suppose two objects to be relatively great

and small, these ideas of greatness and smallness are supplied not by the sense, but by the mind. And the perception of their contrast or relation quickens and sets in motion the mind, which is puzzled by the confused intimations of sense, and has recourse to number in order to find out whether the things indicated are one or more than one. Number replies that they are two and not one, and are to be distinguished from one another. Again, the sight beholds great and small, but only in a confused chaos, and not until they are distinguished does the question arise of their respective natures, leading on to the distinction between the visible and intellectual. And that was what I meant when I spoke of stimulants to the intellect; I was thinking of the contradictions which arise in perception. The idea of unity, for example, like that of a finger, does not arouse thought unless involving some conception of plurality; but when the one is also the opposite of one, the contradiction gives rise to reflection. An example of this is afforded by any object of sight; and what is true of one is true of all number. It raises the mind out of the foam and flux of generation to the contemplation of being, having lesser military and retail uses also. The retail use is not required by us; but as our guardian is to be a soldier as well as a philosopher, the military one may be retained. No science can be more suitable for our higher purpose, when pursued for the sake of knowledge only, and not in the spirit of a shopkeeper. Great is the power of arithmetic in giving abstraction; for numbers are pure abstractions, and the true arithmetician indignantly denies that his unit is capable of division. You may divide, but he insists that you are only multiplying; his one is not material or divisible into parts, but an unvarying and absolute equality; and this shows the purely intellectual character of his study. Note also the great power which arithmetic has of sharpening the wits; no other discipline is equally severe, or an equal test of ability in general, or equally improving to a stupid man.

Let our second branch of education be geometry. 'I can easily see,' replied Glaucon, 'that in manœuvring an army or taking up a position, the skill of the general will be more than doubled by his knowledge of geometry.' Not much will be required for this purpose; the use of geometry, to which I refer, is the assistance given by it in the contemplation of the idea of good, and the compelling the mind to look at true being, and not at generation only. Yet the present mode of pursuing these studies, as any one who is the least of a mathematician is

aware, is mean and ridiculous; they are made to look downwards to the arts, and not upwards to eternal existence. The geometer is always talking of squaring, subtending, apposing, as if he had in view action; whereas knowledge is the real object of the study. It should elevate the soul, and create the mind of philosophy; it should raise up what has fallen down, not to speak of lesser uses in war and military tactics, and in the improvement of the faculties.

Shall we propose as a third branch of our education—astronomy? ‘Very good,’ replied Glaucon; ‘the knowledge of the heavens is good at once for husbandry, navigation, military tactics.’ I like your way of giving useful reasons for everything in order to conciliate the world. Nor do I deny that there is a difficulty in proving to mankind that education is not only useful information but an illumination and purification of the soul—better than ten thousand eyes, for by that alone is truth seen. Now, will you appeal to mankind in general or to the philosopher? or would you prefer to look to yourself only? ‘Every man is his own best friend.’ Then take a step backward, for we are out of order, and insert the third dimension which is of solids, after the second which is of planes, and then you may proceed to solids in motion. But the properties of the third dimension can hardly be said to be as yet discovered. Solid geometry is not popular and has not the patronage of the State, nor is the use of it fully recognized; the difficulty is great, and the votaries of the study are full of conceit and impatient of direction. Still the charm of the pursuit wins upon men, and, if government would lend a little assistance, there might be great progress made. ‘Very true,’ replied Glaucon, ‘I admit the charm; and I understand you now to begin with plane geometry, and to place next geometry of solids, which you omitted as being a pursuit likely to raise a smile; thirdly, astronomy, or the motion of solids.’ Yes, I found the more haste the less speed.

‘Very good,’ he said; ‘and, now that the missing link is supplied, let us proceed to astronomy, about which I am willing to speak in your lofty strain. No one can fail to see that the contemplation of the heavens draws the soul upwards.’ I am an exception, then; astronomy as studied at present appears to me to draw the soul not upwards, but downwards. Star-gazing is just looking up at the ceiling—no better; a man may float on his back by land or by water—he may look up or look down, but there is no science in that. The vision of knowledge of which I speak is seen not with the eyes, but with the mind. All the

magnificence of the heavens is but the embroidery of a copy which falls far short of the divine Original, and teaches nothing about the absolute harmonies or motions of things. Their beauty is like the beauty of figures drawn by the hand of Daedalus or any other great artist, which may be used for illustration, but no mathematician would seek to obtain from them true conceptions of equality or numerical relations. How ridiculous then to look for these in the map of the heavens, in which the imperfection of matter comes in everywhere as a disturbing element, marring the symmetry of day and night, of months and years, of the sun and stars in their courses. Only by problems can we place astronomy on a truly scientific basis. Let the heavens alone, and exert the intellect.

Still, mathematics admit of other applications, as the Pythagoreans say, and we agree. There is a sister science of harmonical motion adapted to the ear as astronomy is to the eye, and there may be other applications also. Let us inquire of the Pythagoreans about them, not forgetting that we have an aim higher than theirs, which is the relation of these sciences to the idea of good. The error which pervades astronomy also pervades harmonics. The musicians put their ears in the place of their minds. 'Yes,' replied Glaucon, 'I like to see them laying their ears alongside of their neighbours' faces—some saying, "that's a new note," others declaring that the two notes are the same.' Yes, I said; but you mean the gentlemen who are always twisting and torturing the strings of the lyre, and who quarrel about the tempers of the strings, as though they were human beings. These empirics are not the people of whom I am speaking; I refer rather to the Pythagorean harmonists, whom we were about to consult. Their error is, that they investigate only the numbers of the consonances which are heard, and ascend no higher,—of the true numerical harmony which is unheard, and is only to be found in problems, they have not even a conception. 'That last,' he said, 'must be a marvellous thing.' A thing of value, I replied, if pursued with a view to the good—if pursued in any other spirit, useless.

All these sciences are the prelude of the strain, and are profitable if they are regarded in their natural relations to one another. 'I dare say, Socrates,' said Glaucon; 'but such a study will be an endless business.' What study do you mean—of the prelude, or what? For all these things are only the prelude, and you surely do not suppose that a mere mathematician is also a dialectician? 'Certainly not. In all my expe-

rience I have hardly ever known a mathematician who could reason.' And yet, Glaucon, is not true reasoning that hymn of dialectic which is the music of the intellectual world, and which was by us compared to the effort of sight, when from beholding the shadows on the wall we arrived at last at the images which gave the shadows? Even so the dialectical faculty withdrawing from sense arrives by the pure intellect at the contemplation of the idea of good, and never rests but at the very end of the intellectual world. And the royal road out of the cave into the light, and the blinking of the eyes at the sun and turning to contemplate the shadows of reality—not the shadows of an image only; this progress and gradual acquisition of a new faculty of sight by the help of the mathematical sciences, is the elevation of the soul to the contemplation of the highest ideal of being.

'I agree in what you say, as far as I understand you. But now, leaving the prelude, let us proceed to the hymn. What, then, is the nature of dialectic, and what are the paths which lead thither?' Dear Glaucon, you cannot follow me here. There can be no revelation of the absolute truth to one who has not been disciplined in the previous sciences. But that there is a science of absolute truth, which is attained in some way very different from those now practised, I am confident. For all other arts or sciences are relative to the wants and opinions of men, and are designed for generation and production, or again for the preservation and support of life; and the mathematical sciences are but a dream and hypothesis, never attaining to the dignity of true knowledge, because never analysing their own principles. Dialectic only does away with hypotheses, and rises to the principle which is above them, converting and gently leading the eye of the soul out of the barbarous slough of ignorance into the light of the upper world, with the help of the sciences which we have been describing—sciences, as they are often termed, although they require some other name, implying greater clearness than opinion and less clearness than science, and this in our previous sketch was understanding. And so we get four names—two for intellect, and two for opinion,—reason or mind, understanding, faith, knowledge of shadows—which make a proportion—being : becoming : : intellect : opinion —and science : belief : : understanding : knowledge of shadows. Dialectic may be further described as that science which defines and explains the essence or being of each nature, which distinguishes and abstracts the good, and is ready to do battle against all opponents in the cause of

good. To him who is not a dialectician life is but a sleepy dream; and many a man is in his grave before he is well waked up. And would you have the children of your ideal State, who are to be your governors, intelligent beings, or stupid as posts? 'Certainly not the latter.' Then you must train them in dialectic, which will teach them to ask and answer questions, and is the coping-stone of the sciences.

I dare say that you have not forgotten how our rulers were chosen; and the process of selection may be carried a step further:—As before they must be constant and valiant, and, as far as possible, good-looking, and of noble manners, but now they must also have the qualities which will be likely to profit by education; that is to say, they must be quick at learning, for the soul soon gets tired of mental gymnastics in which the toil is not divided with the body. And they must be retentive, solid, diligent, laborious natures, who combine intellectual with moral virtues,—not lame and one-sided, diligent in bodily exercise and indolent in mind, or conversely;—not a maimed soul, which hates falsehood and yet unintentionally is always losing the pearl of truth in the mire of ignorance; not a bastard or feeble person, but sound in wind and limb, and in perfect condition for the great gymnastic trial of the mind. Justice herself can find no fault with natures such as these, who will be the saviours of our State; disciples of another sort would only make philosophy more ridiculous than she is at present. Forgive my enthusiasm; I had forgotten that we were not in earnest, and became excited; when I see her trampled under foot, I am angry at the authors of her 'disgrace. 'I did not notice that you were more excited than you ought to have been.' But I felt that I was. Now do not let us forget another point in the selection of our disciples—that they must be young and not old. For Solon is mistaken in saying that an old man can be always learning—he can no more learn than he can run. Youth is the time of study, and here we must remember that the mind is free and dainty, and, unlike the body, must not be made to work against the grain. Learning in youth should be a sort of play, in which the natural bent is detected. As in training them for war, the young dogs should at first only taste blood; but when the necessary gymnastics are over which during two or three years divide life between sleep and bodily exercise, then the education of the soul will become a more serious matter. At twenty years of age, after various trials in which 'muscular philosophy' is not to be neglected, a selection must be made of the more promising disciples, with whom

a new epoch of education will begin. The sciences which they have hitherto learned in fragments will now be viewed in a more comprehensive way, and brought into relation with each other and with true being; the power of combining them is the test of speculative and dialectical ability. And afterwards there shall be trials for still higher honours; and at thirty a further selection shall be made of those who are able to withdraw from the world of sense into the abstraction of ideas. But at this point, judging from present experience, there is a danger that dialectic may be the source of many evils. The danger may be illustrated by a parallel case:—Imagine a person who has been brought up in wealth and luxury amid a crowd of flatterers, and who is suddenly informed that he is a supposititious son. He has hitherto honoured his reputed parents and disregarded the flatterers, and now he does the reverse;—this is just what happens with a man's principles. There are certain doctrines which he learnt at home and which had a sort of parental authority over him. Presently he finds that imputations are cast upon them; a troublesome querist comes and asks, 'What is the just and good?' or proves that virtue is vice and vice virtue, and his mind becomes unsettled, and he ceases to love, honour, and obey them as he has hitherto done. He is seduced into the life of pleasure, and becomes a lawless person and a rogue. The case of such speculators is very pitiable, and, in order that our thirty years' old pupils may not deserve this pity, let us take every possible care that young persons do not study philosophy too early. For a young man is a sort of puppy who only plays with an argument; he pulls and tears at all who come near him; and is reasoned into and out of his opinions every day; he soon begins to believe nothing, and brings himself and philosophy into discredit. A man of thirty has too much sense to run on in this way; he will argue and not merely contradict, and the moderation of his character will increase the honour of the pursuit. As we said before, the students of philosophy must be orderly and constant, not any chance aspirant or intruder. What time shall we allow for this second gymnastic training of the soul?—say, twice the time required for the gymnastics of the body; six, or perhaps five years, to commence at thirty, and then for fifteen years let the student go down into the den, and command armies, and gain experience of life. At fifty let him return to the end of all things, and have his eyes uplifted to the idea of good, and order his life after that pattern; if necessary, taking his turn at the

helm of State, and training up others to be his successors. When his time comes he shall depart in peace to the islands of the blest. He shall be honoured with sacrifices, and be worshipped as a god if the Pythian oracle approves; and at any rate, he shall be revered as a man.

‘You are a statuary, Socrates, and have made a perfect image of our governors.’ Yes, and of our governesses, for the women will share in all things with the men. And you will admit that our State is not a mere aspiration, but may really come into being in the way which we have described, when there shall arise philosopher-kings, one or more, who will despise the pomps and vanities of this present world, and will be the servants of justice only in the administration of the State. ‘And how will they commence their administration?’ The first step will be to send away into the country all those who are more than ten years of age, and begin on those who are left.

... At the commencement of the sixth book, Plato anticipated his explanation of the relation of the philosopher to the world in an allegory; in this, as in other passages, following the order which he prescribes in education, and proceeding from the concrete to the abstract. At the commencement of Book VII, under the figure of a cave having an opening towards a fire and a way upwards to the true light, he returns to view the divisions of knowledge, exhibiting familiarly, as in a picture, the result which had been hardly won by a great effort of thought in the previous discussion; at the same time casting a glance onward at the dialectical process, which is represented by the way leading from darkness to light. The shadows, the images, the reflection of the sun and stars in the water, the stars and sun themselves, severally correspond,—the first, to the realm of fancy and poetry,—the second, to the world of sense,—the third, to the abstractions or universals of sense, of which the mathematical sciences furnish the type,—the fourth and last to the same abstractions, when seen in the unity of the idea, from which they derive a new meaning and power. The true dialectical process begins with the contemplation of the real stars, and not mere reflections of them, and ends with the recognition of the sun, or idea of good, as the parent not only of light but of warmth and growth. To the divisions of knowledge the stages of education partly answer;—first, there is the early education of childhood and youth in the fancies of the poets, and in the laws and customs of the State;—then there is the training

of the body to be a warrior athlete, and a good servant of the mind;— and thirdly, after an interval follows the education of later life, which begins with mathematics and proceeds to philosophy in general.

There seem to be two great aims in the philosophy of Plato,—first, to realize abstractions; secondly, to connect them. According to him, the true education is that which draws men from becoming to being and to a comprehensive survey of all being. He desires to develop in the human mind the faculty of seeing the universal in all things; until at last the particulars of sense drop away and the universal alone remains. He never understood that abstractions, as Hegel says, are ‘mere abstractions’—of use when employed in the arrangement of facts, but adding nothing to the sum of knowledge when pursued apart from them, or with reference to an imaginary idea of good. Still the exercise of the faculty of abstraction has enlarged the powers of the human mind, and played a great part in the education of the human race. Plato appreciated the value of this, and saw that the faculty might be quickened by the study of number and relation. All things in which there is opposition or proportion are suggestive of reflection. The dull impression of sense evokes no power of thought or of mind, but when objects of sense ask to be compared and distinguished, then philosophy begins. The science of arithmetic first suggests such distinctions. There follow in order the other sciences of plain and solid geometry, and of solids in motion, one branch of which is astronomy or the harmony of the spheres,—to this is appended the sister science of the harmony of sounds. Plato seems also to hint at the possibility of other applications of arithmetical or mathematical proportions.

The modern mathematician will readily sympathise with Plato’s delight in the properties of pure mathematics. He will not be disinclined to say with him:—Let alone the heavens, and study the beauties of number and figure in themselves. He too will be apt to depreciate their application to the arts. He will observe that Plato has a conception of geometry, in which figures are to be dispensed with; thus in a distant and shadowy way seeming to anticipate the possibility of working geometrical problems by a more general mode of analysis. He will remark with interest on the backward state of solid geometry, which, alas! was not encouraged by the aid of the State in the age of Plato; and he will recognise the grasp of Plato’s mind in his ability to conceive of one science of solids in motion including the earth as well as the

heavens,—not forgetting to notice the intimation to which allusion has been already made, that besides astronomy and harmonics the science of solids in motion may have other applications. Still more will he be struck with the comprehensiveness of view which led Plato, at a time when these sciences hardly existed, to say that they must be studied in relation to one another, and to the idea of good, or common principle of truth and being. But he will also see (and perhaps without surprise) that in that stage of physical and mathematical knowledge, Plato has fallen into the error of supposing that he can construct the heavens *a priori* by mathematical problems, and determine the principles of harmony irrespective of their adaptation to the human ear. The illusion was a natural one in that age and country. The simplicity and certainty of astronomy and harmonics seemed to contrast with the variation and complexity of the world of sense;—hence the circumstance that there was some elementary basis of fact, some measurement of distance or time on which they must ultimately rest, was overlooked by him. The modern predecessors of Newton fell into errors at least equally great; and Plato can hardly be said to have been very far wrong, or may even claim a sort of prophetic insight into the subject, when we consider that the greater part of astronomy at the present day consists of abstract dynamics, by the help of which most astronomical discoveries have been made.

The metaphysical philosopher from his point of view recognizes mathematics as an instrument of education,—which strengthens the power of attention, develops the sense of order and the faculty of construction, and enables the mind to grasp under simple formulæ the quantitative differences of physical phenomena. But while acknowledging their value in education, he sees also that they have no connexion with our higher moral and intellectual ideas. In the attempt which Plato makes to connect them, we easily trace the influences of the old Pythagorean notions. There is no reason to suppose that he is speaking of the ideal numbers at p. 525 E; but he is describing numbers which are pure abstractions, to which he assigns a real and separate existence, which, ‘as the teachers of the art’ (meaning probably the Pythagoreans) would have affirmed, repel all attempts at subdivision, and in which unity and every other number are conceived of as absolute. The truth and certainty of numbers, when thus disengaged from phenomena, gave them a kind of sacredness in the eyes of an ancient philoso-

pher. Nor is it easy to say how far ideas of order and fixedness may have had a moral and elevating influence on the minds of men, 'who,' in the words of the *Timaeus*, 'might learn to regulate their erring lives according to them' (47 C). It is worthy of remark that the old Pythagorean ethical symbols still exist as figures of speech among ourselves. And those who in modern times see the world pervaded by universal law, may also see an anticipation of this last word of modern philosophy in the Platonic idea of good, which is the source and measure of all things, and yet only an abstraction. (Cp. *Philebus*, sub fin.)

Two passages seem to require more particular explanations. First, that which relates to the analysis of vision. The difficulty in this passage may be explained, like many others, from differences in the modes of conception prevailing among ancient and modern thinkers. To us, the perceptions of sense are inseparable from the act of the mind which accompanies them. The consciousness of form, colour, distance, is indistinguishable from the simple sensation, which is the medium of them. Whereas to Plato sense is the Heraclitean flux of sense, not the vision of objects in the order in which they actually present themselves to the experienced sight, but as they may be imagined to appear confused and blurred to the half-awakened eye of the infant. The first action of the mind is aroused by the attempt to set in order this chaos, and the reason is required to frame distinct conceptions under which the confused impressions of sense may be arranged. Hence arises the question, 'What is great, what is small?' and thus begins the distinction of the visible and the intelligible.

The second difficulty relates to Plato's conception of harmonics. Three classes of harmonists are distinguished by him:—first, the Pythagoreans, whom he proposes to consult (as in the previous discussion on music he will consult Damon) and who are acknowledged to be masters in the art, but are nevertheless deficient in the knowledge of its higher import and relation to the good; secondly, the mere empirics, whom Glaucon appears to confuse with them, and whom both he and Socrates ludicrously describe as experimenting by mere auscultation on the intervals of sounds. Both of these fall short in different degrees of the Platonic idea of harmony, which must be studied in a purely abstract way, first by the method of problems, and secondly as a part of universal knowledge in relation to the idea of good.

The allegory has a political as well as a philosophical meaning. The

den or cave represents the narrow sphere of politics or law (cp. the description of the philosopher and lawyer in the *Theaetetus*, 172-176), and the light of the eternal ideas is supposed to exercise a disturbing influence on the minds of those who return to this lower world. In other words, their principles are too wide for practical application; they are looking far away into the past and future, when their business is with the present. The ideal is not easily reduced to the conditions of actual life, and may often seem to be at variance with them. And at first, those who return are unable to compete with the inhabitants of the den in the measurement of the shadows, and are derided and persecuted by them; but after a while they see the things below in far truer proportions than those who have never ascended into the upper world. The difference between the politician turned into a philosopher and the philosopher turned into a politician, is symbolized by the two kinds of disordered eyesight, the one which is experienced by the captive who is transferred from darkness to day, the other, of the heavenly messenger who voluntarily for the good of his fellow-men descends into the den. In what way the brighter light is to dawn on the inhabitants of the lower world, or how the idea of good is to become the guiding principle of politics, is left unexplained by Plato. Like the nature and divisions of dialectic, of which Glaucon impatiently demands to be informed, perhaps he would have said that the explanation could not be given except to a disciple of the previous sciences. (Compare *Symposium* 210 A.)

Some modern elements of thought may be noted in this part of the *Republic*. We seem to hear the echo of our own times in the complaints which Plato utters respecting the dangers of speculation in youth. The minds of young men become unsettled, and their extravagance brings discredit on philosophy and on themselves. They argue about the laws and opinions in which they have been brought up, and soon begin to think that one thing is as good as another. Their position is ingeniously compared to that of a supposititious son, who has made the discovery that his reputed parents are not his real ones, and, in consequence, they have lost their authority over him. The distinction between the mathematician and the dialectician is also noticeable. Plato is very well aware that the faculty of the mathematician is quite distinct from the higher philosophical sense which recognizes and combines first principles (531 E). The contempt which he expresses at p. 533 for distinctions of words, the danger of involuntary falsehood, the apology

which Socrates makes for his earnestness of speech, are highly characteristic of the Platonic style and mode of thought. The quaint notion that if Palamedes was the inventor of number Agamemnon could not have counted his feet; the art by which we are made to believe that this State of ours is not a dream only; the gravity with which the first step is taken in the actual creation of the State, namely, the sending out of the city all who had arrived at ten years of age, in order to expedite the business of education by a generation, are also truly Platonic. (For the last, compare the passage at the end of the third book (415 D), in which he expects the lie about the earthborn men to be believed in the second generation.)

BOOK VIII. And so we have arrived at the conclusion, that in the perfect State wives and children are to be in common; and the education and pursuits of men and women, both in war and peace, are also to be common, and kings are to be philosophers and warriors. And a further conclusion is, that our soldiers are to live in common houses, and to have all things in common; they are to be warrior athletes receiving no pay, but only their food from the other citizens. Now let us return to the point at which we digressed, and recover the track. ‘That is easily done,’ he replied: ‘You were speaking before we entered on the subject of women and children, of the State which you had constructed, and of the individual who answered to this, both of whom you affirmed to be good, although of both you were able to show still more excellent things; and you said that of inferior States there were four forms and four individuals corresponding to them, which although deficient in various degrees, were all of them worth inspecting with a view to determining the relative happiness or misery of the best or worst man. Then Polemarchus and Adeimantus interrupted you, and this led to another argument,—and so here we are.’ Suppose that we put ourselves again in the same position, and do you repeat your question. ‘I should like to know what the constitutions are of which you spoke?’ Besides the perfect State there are only four of any note:—first, the famous Lacedæmonian or Cretan commonwealth; secondly, oligarchy, a State full of evils; thirdly, democracy, which follows next in order; fourthly, tyranny, which is the disease or death of all governments; and there are other intermediate forms which are more commonly found among barbarians than among Hellenes. Now, States are not made of ‘oak and rock,’ but of

flesh and blood ; and therefore as there are five States there must be five human natures in individuals, which correspond to them. And first, there is the ambitious nature, which answers to the Lacedæmonian State ; secondly, the oligarchical nature ; thirdly, the democratical ; and fourthly, the tyrannical. This last will have to be compared with the perfectly just, which is the fifth, that we may know which is the happier, and then we shall be able to determine whether the argument of Thrasymachus or our own is the more convincing. And as before we began with the State and went on to the individual, so let us do now—beginning with timocracy, let us go on to the timocratical man, and then proceed to the other forms of government, and the individuals who answer to them.

But how did timocracy arise out of the perfect State ? Plainly, like all changes of government, from division in the rulers ; for a government which is united cannot be moved. But whence came division ? ‘ Sing, heavenly Muses,’ as Homer says ; may we not suppose them to speak to us as to children, putting on a solemn face in jest ? ‘ And what will they say ?’ They will say that human things are fated to decay, and even the perfect State will not escape when the wheel comes full circle in a period short or long. Plants or animals have times of fertility and sterility, which the intelligence of the rulers alloyed by sense will not enable them to ascertain, and children will be born out of season. For whereas divine creations are in a perfect cycle or number, the human creation is in a number which declines from perfection, and has four terms and three intervals of numbers, increasing, waning, assimilating, dissimilating, and yet perfectly commensurate with each other. The base of the number with a fourth added (or which is 3 : 4), multiplied by five and cubed, gives two harmonies :—The first a square number, which is a hundred times the base (or a hundred times a hundred) ; the second, an oblong, being a hundred squares of the rational diameter of a figure the side of which is five, subtracting one from each square or two perfect squares from all, and adding a hundred cubes of three. This entire number is geometrical and contains the rule or law of generation. And when this law is neglected marriages will be unpropitious ; the inferior offspring who are then born will in time become the rulers, and the State will decline, and education will fall into decay, and gymnastic be preferred to music, and the gold and silver and brass and iron will form a chaotic mass, and thus will division arise. Such is the Muses’ answer to our question. ‘ And a true answer.’ Of course ; for how can

the answer of the Muses be other than true?—‘But what more have the Muses to say?’ They say that the two races, the iron and brass, and the silver and gold, will draw the State different ways;—the one to trade and moneymaking, and the others having the true riches and not caring for money, will resist them—there will be a contest, which will end in a compromise; they will agree to have private property, and will enslave their fellow-citizens who were once their friends and nurturers. But they will retain their warlike character, and their chief occupation will be to make war, and to control their subjects. This is the origin of that middle state which is intermediate between aristocracy and oligarchy.

The new form of government resembles the ideal in obedience to rulers and contempt for trades and handicrafts, in the institution of common meals, and in devotion to warlike and gymnastic exercises. But corruption has crept into philosophy, and simplicity of character, which was once her note, is now looked for only in the military class. Arts of war begin to prevail over arts of peace; the ruler is no longer a philosopher; as in oligarchies, there springs up among them an extravagant love of gain—get another man’s and save your own, is their principle; and they have dark places in which they hoard their gold and silver, for the use of their women and others; they take their pleasures by stealth, like boys who are running away from their father, the law; and their education is not inspired by the Muse, but imposed by the strong arm of power. The leading characteristic of the State is party spirit and ambition.

And what manner of man answers to such a State? ‘In love of contention,’ replied Adeimantus, ‘he will be like our friend Glaucon.’ Perhaps, yes, he may be like him in that, but not in other ways; for he is self-asserting and ill-educated, yet fond of literature and of hearing recitations, although himself not a speaker,—fierce with slaves, but not truly above them—obedient to rulers, and a lover of power and honour, which he hopes to gain by deeds of arms—fond, too, of gymnastics and of hunting. As he advances in years he grows more and more avaricious, having never known a saviour or guardian—that is to say, reason and music—which are the only saviours of men. His origin is as follows:—His father may probably have been a good man dwelling in an ill-ordered State, who has retired from public life and is ready to waive his rights in order that he may be at peace. His mother is angry

at her loss of precedence among other women ; she is disgusted at the selfishness of her husband, and her woman's tongue expatiates to her son on the unmanliness and indolence of his father. 'Yes,' said Adeimantus, 'that is the way with all women.' Yes, I said, and you may observe also that the old family servant takes up the tale, and says to the youth :—'When you are grown up you must be more of a man than your father, and proceed against debtors and avenge insults.' All the world are agreed that the man who minds his own business is an idiot, while a busybody is highly honoured and esteemed. The young man hears and sees this, and he also hears his father's words and sees his ways, and as he is naturally well disposed, although liable to be perverted by evil influences, he rests at a middle point and becomes ambitious and a lover of honour.

And now, as Æschylus says, 'Set another man over against another city;' or rather, let the city come first. The next form of government is oligarchy, in which the rule is of the rich only. No eyes are needed to see how this form of government springs out of the last. 'How is that?' The private treasury is the beginning of the decline; the possession of gold and silver leads to new fashions of expense, and the citizens and their wives break the law. One draws another on, and the multitude are infected; riches are thrown into the scale, and virtue kicks the beam;—lovers of money take the place of lovers of honour; misers of politicians; and, in time, political privileges are confined by law to the rich. The latter change is commonly effected by fear or violence.

Thus much of the origin,—let us next consider the evils of oligarchy. Would a man who wanted to be safe on a voyage take a bad pilot because he was rich, or refuse a good one because he was poor? And does not the analogy apply still more to the State? And there are yet greater evils: two nations are struggling together in one—the rich and the poor; and the rich dare not put arms into the hands of the poor, and are unwilling to pay for defenders out of their own money. And have we not already condemned that State in which the same persons are warriors as well as shopkeepers? The greatest evil of all is that a man may sell his property and have no place in the State; while there is one class which has enormous wealth, the other is entirely destitute. But observe that these destitutes had not really any more of the governing nature in them when they were rich than now that they are poor; they were miserable spendthrifts always. They are the drones

of the hive ; only whereas the actual drone is unprovided by nature with a sting, the 'unfeathered, two-legged things,' which we call drones, do not all agree in this respect, for some of them are without stings and some of them have dreadful stings ; in other words, there are paupers and there are rogues. In the cellars and underground places of an oligarchical city you will always find this scum of the earth, which includes nearly everybody but the governing class. And this state of things originates in bad education and in bad government.

Like State, like man,—the change in the latter begins with the representative of timocracy ; he walks at first in the ways of his father, who may have been a statesman, or general, perhaps ; and presently he sees him 'fallen from his high estate,' the victim of informers, dying in prison or exile, or by the hand of the executioner. The lesson which he learns from this is one of caution ; he leaves the dangerous arena of politics, and makes money ; hoping to retrieve his father's losses, he represses his pride and saves pence. Avarice is enthroned as his bosom's lord, and assumes the style of the Great King, and the newest Persian fashions. The rational and spirited elements sit humbly on the ground, the one immersed in calculation, the other absorbed in the admiration of wealth. The love of honour turns to love of money ; the conversion is instantaneous. And the man goes through the same process as the State ; he is mean, saving, toiling, the slave of one passion which is the master of the rest, a skinflint, a hoarder, who chooses a life which the vulgar approve : Is he not the very image of the State ? He has had no education, or he would never have allowed the blind god of riches to lead the dance within him. And being uneducated he will have many slavish desires, some beggarly, some knavish, breeding in his soul. Shall I tell you where you may detect him ? If he is the trustee of an orphan, and has the power to defraud, he will prove that he is not without the will, and that his passions are only restrained by fear and not by reason. He will be respectable in his dealings generally but when he has to spend another man's money, he will show that he has the desires of a drone. Hence he leads a divided existence ; in which the better desires mostly prevail. But when he is contending for prizes and other distinctions, he is afraid to incur a loss which is to be repaid only by barren honour ; in time of war he fights with a small part of his resources, and usually saves his money and loses the victory.

Next comes democracy and the democratic man, out of oligarchy and the oligarchical man. Insatiable avarice is the ruling passion of an oligarchy; they allow vice and extravagance among the citizens in order that they may be enriched by the sale of a spendthrift's property; and no man can serve two masters, wealth and virtue. In this disorderly condition of things men of family often lose their property or rights of citizenship, and there they are, not only poor and in debt, but a fixture in the State, with their stings out and arms in their hands—ready for any desperate enterprise against the new owners of their property and against the State. The usurer with stooping walk pretends not to see them; he passes by on the other side, and leaves his sting—that is, his money—in any one else who will be his victim; and many a man has to pay the parent or principal sum multiplied into a family of children, and is reduced into a state of dronage by him. The only way of diminishing this glaring evil is either to limit a man's use of his property, or to insist that the lender shall lend at his own risk, and have no protection from the law. But in an oligarchy the ruling class do not want to apply a remedy; they are careful only of money, and as careless of virtue as the poorest of the citizens. Now there are occasions on which the governors and the governed meet together,—at festivals, on a journey, voyaging or fighting. The wiry, sunburnt pauper finds that in the hour of danger he is not despised; he sees the rich man under an umbrella puffing and panting, and draws the conclusion which he privately imparts to his companions,—‘that our people are not good for much;’ and as a sickly frame is made ill by a mere touch from without, or sometimes without external impulse is ready to fall to pieces of itself, so from the least cause, perhaps from some offer of aristocratic or democratic help, or with no cause at all, the city, like the sick man, falls ill and fights a battle for life or death. And democracy comes into power when the poor are the victors, killing some and exiling some, and giving equal shares in the government to all the rest.

The manner of life in such a State is that of democrats; there is freedom and plainness of speech, and every man does what is right in his own eyes, and has his own way of life. Hence arise the most various developments of character; the State is like a piece of embroidery of which the colours and figures are the manners of men, and there are many who, like women and children, prefer this variety to real beauty and excellence. The State is not one but many, like a bazaar

at which you can buy anything. The great charm is, that you may do as you like; you may govern if you like, let it alone if you like; go to war and make peace if you feel disposed, and all quite irrespective of anybody else. When you condemn men to death they remain alive all the same; a gentleman is desired to go into exile, and he stalks about the streets like a hero, and nobody sees him or cares for him. Take another look at the free and lordly nature of democracy, how grandly she sets her foot upon all our fine theories of education,—how little does she care for the training of her statesmen! The only qualification which is demanded by her is the profession of patriotism. Such is democracy;—a pleasing, lawless, various sort of government, distributing equality to equals and unequals alike.

Let us now inspect the individual democrat; and first, as in the case of the State, we will trace his antecedents. He is the son of a miserly oligarch, and has been taught by him to restrain the love of unnecessary pleasures. Perhaps for the sake of clearness I ought to explain the meaning of this latter term; necessary pleasures are those which are good, and which we cannot do without; unnecessary pleasures are those which do no good, and of which the desire might be eradicated by early training. For example, the pleasures of eating and drinking are necessary and healthy, up to a certain point; beyond that point they are alike hurtful to body and mind, and the excess may be avoided. When in excess, they may be rightly called expensive pleasures, in opposition to the useful ones. And the drone, as we called him, was the slave of these unnecessary pleasures and desires, whereas the miserly oligarch is subject only to the necessary.

The oligarch changes into the democrat in the following manner:—The youth who has had a mean and miserly bringing up, gets a taste of the drone's honey; he meets with wild reckless companions, who introduce him to every new pleasure. Thus the change begins; and, as in the State, so in the individual, there are allies on both sides, temptations from without and passions from within; there is reason also and external influences of parents and friends in alliance with the better nature; and these two factions or armies are in violent conflict with one another. Sometimes the party of order prevails, but then again new desires and new disorders arise, and the whole mob of passions get possession of the Acropolis, that is to say, the head, which they find unguarded—void of acquirements and virtues, best sentinels over the lives of men dear to

the gods. Falsehoods and illusions ascend to take their place; the prodigal goes back into the country of the Lotophagi or drones, and openly dwells there. And if any offer of alliance or parley of individual elders comes from home, the false spirits shut the gates of the castle and permit no one to enter,—there is a battle, and the victory is with them; and then they banish modesty, which they call folly, and thrust away temperance; and all law and order are quickly despatched over the border by them and the rabble which are at their heels. And when the house is clean swept and garnished, their favourite is initiated by them in great mysteries;—they dress up the exiled vices in bright array, and bring them back again crowned with garlands, and give them new names. Insolence they call good breeding, anarchy freedom, waste magnificence, impudence courage. Such is the change from the use of the necessary pleasures to the unnecessary ones; after this the youth is divided impartially between them; and if he be fortunate and not too far gone in his badness, when he gets older and the turbulence of his passions begins to pass away, he receives back some of the exiles and lives in a sort of equilibrium; he indulges first one pleasure and then another, as they offer; and if reason comes and tells him that some pleasures are good and honourable, and others bad and vile, she is not admitted into the citadel—he shakes his head and says that they are all alike, and he will have no invidious distinctions between them. Thus he lives in the fancy of the hour; sometimes he is drunken and lapped in wine and song; then he will drink water only and get thin; he takes to the gymnasium or he does nothing at all; then again he would be a philosopher or a politician, and he jumps up and says just what comes into his head; or again, he would be a warrior or a man of business; he is

‘Every thing by starts and nothing long.’

There remains still the finest and fairest of all men and all States—tyranny and the tyrant. Tyranny springs from democracy much in the same way that democracy springs from oligarchy. ‘How do you mean?’ Both arise from excess; the one from excess of wealth, the other from excess of freedom. ‘The great natural good which makes life worth having,’ says the democrat, ‘is freedom.’ And this exclusive love of freedom and regardlessness of everything else, is the cause of the change from democracy to tyranny. The State, served by evil cupbearers, swills the strong wine of freedom, and unless her rulers give her a

plentiful draught, breaks out and beats them; loyal citizens are called good for nothing, hereditary bondsmen and the like; equality and fraternity of governors and governed, is the approved principle. Anarchy is the law, not of the State only but of private houses, and is diffused over all. Father and son, citizen and foreigner, teacher and pupil, old and young, are all on a level; fathers and teachers fear their sons and pupils, and the wisdom of the young man is a match for the elder, and the old imitate the jaunty manners of the young because they are afraid of being thought morose. Slaves whom you have bought with money are on a level with their masters and mistresses, and there is no difference between men and women. And why, as Æschylus says, should I not utter the word which comes to my lips? The very animals in a democratic State have a freedom which is unknown in other places. The she-dogs are as good as their she-mistresses, and horses and asses march along with dignity and run their noses against anybody who comes in their way;—such exuberance is there and superabundance of freedom. ‘I have often experienced what you describe in my country walks.’ At last the skins of the citizens become so sensitive that they cannot endure the yoke of laws, written or unwritten; they would have no man call himself their master. Such is the fair, glorious beginning of things out of which tyranny springs. ‘Glorious, indeed; but what is to follow?’ The ruin of oligarchy is the ruin of democracy; there is a law of contraries; the greatness of anything goes before a fall. The excess of freedom passes into the excess of slavery, and the greater the freedom the greater the slavery. You will remember that in the oligarchy were found two classes—rogues and paupers, who were compared by us to drones with and without stings. These two classes are to the State what phlegm and bile are to the human body; and the duty of the State-physician, or legislator, is to purge them away in the same manner that a bee-keeper would cut out the cells of drones. Now in a democracy, too, there are drones, but of a much more dangerous sort than in the oligarchy; there they are inert and unpractised, here they are full of life and animation; and the keener sort speak and act, while the others buzz about the bema and prevent their opponents from being heard. And there is another class in democratic States, of respectable, thriving individuals,—these are like a sponge, to be squeezed when the drones have need of their possessions; there is moreover a third class, who are the labourers and the artizans, and they make up the mass of the people.

When the people meet, they are omnipotent, but there is a difficulty in bringing them together unless they are attracted by a little honey; and the rich supply the honey, of which the demagogues keep the greater part for themselves and give the others a taste only. The possessions of the rich begin to be taken, and they are compelled to protect themselves; when they see the demagogues urging on their followers to do what they would not do of themselves, they are driven mad by the stings of the drones, and become downright oligarchs in self-defence. Then follow informations and convictions for treason. The people have some protector whom they nurse into greatness, and from this root the tree of tyranny springs. The nature of the change is indicated in the old fable of the temple of Zeus Lycaeus: the story is, that he who tastes human flesh mixed up with the flesh of other victims will be turned into a wolf. Even so the protector, who in his hour of popularity tastes human blood, and slays some and exiles others with or without pretence of law, and proclaims abolition of debts and division of lands, must either perish or become a wolf—that is, a tyrant. Perhaps he is driven out, but he soon comes back from exile in full power; and then if his enemies cannot get rid of him by legal means, they plot his assassination. Thereupon the friend of the people makes his well-known request to them for a body-guard, which they readily grant, thinking only of his danger and not of their own. Then let the rich man make to himself wings, and not ‘turn back to take anything in the house,’ for he will never run away again if he does not do so then. And the Great Protector, instead of his vast bulk lying upon the earth, overstrides others, and stands like a colossus in the chariot of State, a full-blown tyrant now. Let us enquire into the nature of his happiness.

In the early days of his tyranny he has a smile and ‘Peace be with you,’ for everybody; he is not a ‘dominus,’ no, not he: he has only come to put an end to debt and the monopoly of land. Having got rid of foreign enemies, he makes himself necessary to the State by always going to war. War-taxes depress the poor and keep them at work; this has the incidental advantage of preventing them from conspiring against him; and he can only get rid of bolder spirits by handing them over to the enemy,—hence he must be always stirring up war. Then comes unpopularity; some of those who assisted in setting him up have the courage to tell him a piece of their minds. The consequence is, that he must put them out of the way; he will always be keeping a sharp

look-out on the high spirited, the wise, the wealthy; and such is his blessed condition of life, that he is obliged to make a purgation of them. 'And what a purgation!' Yes, he purges away the good as the physician purges away the bad; he has to choose between death and a hateful and shameful life. And the more hated he is, the more he will require trusty guards; but whom will he trust, and where will he get them? 'They will come flocking like birds, for pay.' You mean that he will hire drones out of foreign parts; would he not rather obtain them on the spot? 'But how is that possible?' He will take the slaves from their owners and make them his body-guards; these are his trusted friends, from whom alone he receives the tribute of love and admiration. Verily the tragedians are wise, and Euripides wiser than any of them, who says,—

'Tyrants are wise by converse with the wise;'

and now, behold these wise men who are the companions of tyrants. Moreover, he magnifies tyranny as a state of superhuman glory; and this is an excellent reason, as the tragic poet will allow if he has any wit, why we should refuse to admit him into our State. 'I think that he may have wit enough for that.' He will go to other cities, and gather the mob about him with grand and plausible words, and change commonwealths into tyrannies and democracies,—receiving honours and rewards, first of all from tyrants, secondly from democracies, but the higher he and his friends ascend constitution hill, the more their honour will fail and become 'too asthmatic to mount.' To return to the tyrant;—how will he support that rare army of his? First, by robbing the temples of their treasures, which will enable him to lighten the taxes; then he will take all his father's property, and spend it on his companions, male or female. Now his father is the demus, and if the demus gets angry, and says that a great hulking son ought not to be a burden on his parents, and tells him to depart and take his riotous crew with him, then will the parent know what a monster he has been fostering in his bosom, and that the son whom he would fain expel is too strong for him. 'You do not mean to say that he will beat his father?' Yes, he will, after having taken away his arms. 'Then he is a parricide, and a cruel, unnatural son to a parent whom he is bound to cherish and maintain.' And the people have jumped from the fear of slavery into slavery, out of the smoke into the fire. Thus liberty, when out of all order and reason, passes into the worst form of slavery.

... In the previous books Plato has described the ideal State; now he returns to the perverted or declining forms, on which he had lightly touched at the end of book iv. These he describes in a succession of parallels between the individuals and the State, tracing the origin of either in the State or individual which has preceded them. He begins by asking the point at which he digressed; and is thus led shortly to recapitulate the substance of the three former books, which also contain a parallel of the philosopher and the State.

Of the first decline he gives no intelligible account; he would not have liked to admit the most probable causes of the fall of his ideal State, which to us would appear to be the impracticability of communism or the natural antagonism of the ruling and subject classes. He throws a veil of mystery over the origin of the decline, which he attributes to ignorance of the law of population. Of this law the famous geometrical figure or number is the expression. Like the ancients in general, he had no idea of the gradual perfectibility of man or of the education of the human race. His ideal was not to be attained in the course of ages, but was to spring in full armour from the head of the legislator. When good laws had been given, he thought only of the manner in which they were likely to be corrupted, or of how they might be filled up in detail or restored in accordance with their original spirit. He appears not to have reflected upon the full meaning of his own words, 'in the brief space of human life, nothing great can be accomplished' (x. 608 B); or again, as he afterwards says in the *Laws* (iii. 676), 'infinite time is the maker of cities.' The order of constitutions which is adopted by him represents an order of thought rather than a succession of time, and may be considered as the first attempt to frame a philosophy of history.

The first of these declining States is timocracy, or the government of soldiers and lovers of honour, which answers to the Spartan State; this is a government of force, in which education is not inspired by the Muses, but imposed by the law, and in which all the finer elements of organization have disappeared. The philosopher himself has lost the love of truth, and the soldier, who is of a simpler and honester nature, rules in his stead. The individual who answers to timocracy has some noticeable qualities. He is described as ill educated, but, like the Spartan, a lover of literature; and although he is a harsh master to his servants he has no natural superiority over them. His character is based upon a reaction against the circumstances of his father, who in a troubled

city has retired from politics, and his mother, who is dissatisfied at her own position, is always urging him towards the life of political ambition. Such a character may have had this origin, and indeed Livy attributes the Licinian laws to a feminine jealousy of a similar kind (vii. 34). But there is obviously no connection between the manner in which the timocratic State springs out of the ideal, and the mere accident by which the timocratic man is the son of a retired statesman.

The two next stages in the decline of constitutions have even less historical foundation. For there is no trace in Greek history of a polity like the Spartan or Cretan passing into an oligarchy of wealth, or of the oligarchy of wealth passing into a democracy. The order of history appears to be different; first, in the Homeric times there is the royal or patriarchal form of government, which a century or two later was succeeded by an oligarchy of birth rather than of wealth, and in which wealth was only the accident of the hereditary possession of land and power. Sometimes this oligarchical government gave way to a government based upon a qualification of property, which, according to Aristotle's mode of using words would have been called a timocracy; and this in some cities, as at Athens, became the conducting medium to democracy. But such was not the necessary order of succession in States; nor, indeed, can any order be discerned in the endless fluctuation of Greek history (like the tides in the Euripus), except, perhaps, in the almost uniform tendency from monarchy to aristocracy in the earliest times. At first sight there appears to be a similar inversion in the last step of the Platonic succession, for tyranny instead of being the natural end of democracy, in early Greek history appears rather as a stage leading to democracy; the reign of Peisistratus and his sons is an episode which comes between the legislation of Solon and the constitution of Cleisthenes; and some secret cause common to them all seems to have led the greater part of Hellas at her first appearance in the dawn of history, e. g. Athens, Argos, Corinth, Sicyon, and nearly every State with the exception of Sparta, through a similar stage of tyranny which ended either in oligarchy or democracy. But then we must remember that Plato is describing rather the contemporary history of the Sicilian States, which was an alternation between democracy and tyranny, than the ancient history of Athens or Corinth.

The portrait of the tyrant himself is just such as the later Greek delighted to draw of Phalaris and Dionysius, in which, as in the lives of

mediaeval saints or mythic heroes, the conduct and actions of one were attributed to another in order to fill up the outline. There was no enormity which the Greek was not ready to believe of them; the tyrant was the negation of government and law; his assassination was glorious; there was no crime, however unnatural, which might not with probability be attributed to him. In this, Plato was only following the common thought of his countrymen, which he embellished and exaggerated with all the power of his genius. There is no need to suppose that he drew from life; or that his knowledge of tyrants is derived from a personal acquaintance with Dionysius. The manner in which he speaks of them would rather tend to render doubtful his ever having 'consorted' with them, or entertained the schemes which are attributed to him in the *Epistles*, of regenerating Sicily by their help.

Plato describes with a sort of amusement the follies of democracy, of which the political condition is reflected in social life. He conceives democracy as a state of individualism or dissolution; in which every one is doing what is right in his own eyes. Of a people animated by a common spirit of liberty, rising as one man to repel the Persian host, which is the leading idea of democracy in Herodotus and Thucydides, he never seems to think. But if he is not a believer in liberty, still less is he a lover of tyranny. His deeper and more serious condemnation is reserved for the tyrant, who is the ideal of wickedness and also of weakness, and who in his utter helplessness and suspiciousness is leading an almost impossible existence, without that remnant of good which, in Plato's opinion, was required to give power to evil (book i. p. 352). This ideal of wickedness living in helpless misery, is the reverse of that other portrait of perfect injustice ruling in happiness and splendour, which first of all Thrasymachus, and afterwards the sons of Ariston had drawn, and is also the reverse of the king whose rule of life is the good of his subjects.

Each of these governments and individuals has a corresponding ethical gradation: the ideal State is under the rule of reason, not extinguishing but harmonising the passions, and training them in virtue; in the timocracy and the timocratic man one virtue still remains, but has superseded all the rest—the constitution, whether of the State or of the individual, is based, first, upon courage, and secondly, upon the love of honour, which is hardly to be esteemed a virtue. In the second stage of decline the virtues have altogether disappeared, and the love of gain has succeeded

to them; in the third stage, or democracy, the various passions are allowed to have free play, and the virtues and vices are impartially cultivated. But this freedom, which leads to many curious extravagances of character, is in reality only a state of weakness and dissipation. At last, one monster passion takes possession of the whole nature of man—this is tyranny. In all of them excess—the excess first of wealth and then of freedom, is the element of decay.

The eighth book of the Republic abounds in pictures of life and fanciful allusions; the use of metaphorical language is carried to a greater extent than anywhere else in Plato. We may remark, first, the description of the two nations in one, which become more and more divided, as in the feudal ages, and perhaps in our own times, so also among the Greeks; the notion of democracy expressed in a sort of Pythagorean formula as equality among unequals; the free and easy ways of men and animals, which are characteristic of liberty, as foreign mercenaries and universal mistrust are of the tyrant. The proposal that mere debts should not be recoverable by law is a speculation which has often been entertained by reformers of the law in modern times, and is in harmony with the tendencies of modern legislation. Debt and land were the two great difficulties of the ancient lawgiver; and we may be said to have almost, if not quite, solved the one of these difficulties but hardly the other.

Still more remarkable are the corresponding portraits of individuals: there is the family picture of the father and mother and the old servant of the timocratical man, and the outward respectability and inherent meanness of the oligarchical; the uncontrolled licence and freedom of the democrat, in which the young Alcibiades seems to be depicted, doing right or wrong as he pleases, and who at last, like the prodigal, goes into a far country (note here the play of language by which the democratic man is himself represented under the image of a State having a citadel and receiving embassies); and there is the wild-beast nature, which breaks loose in his successor. The hit about the tyrant being a parricide; the representation of the tyrant's life as an obscene dream; the rhetorical surprise of the more miserable than the most miserable of men in book ix.; the requirement that the poets will have the good sense to see that if they are the friends of tyrants they ought to be excluded from the State; the continuous image of the drones who are of two kinds, swelling at last into the monster drone having wings (see *infra*, book ix.), are among Plato's happiest touches.

There remains to be considered the great difficulty of this book of the Republic, the so-called number of the State. This is a puzzle almost as great as the Number of the Beast in the Book of Revelation, and though apparently known to Aristotle, is referred to by Cicero as a proverb of obscurity (Ep. ad Att. vii. 13, 5). And some have imagined that there is no answer to the puzzle, and that Plato has been practising upon his readers. But such a deception as this is inconsistent with the manner in which Aristotle speaks of the number (Pol. v. 12, 7), and would have been ridiculous to any reader of the Republic who was acquainted with Greek mathematics. As little reason is there for supposing that Plato intentionally used obscure expressions; the obscurity only arises from our want of familiarity with the subject. On the other hand, Plato himself indicates that he is not altogether serious, and in describing his number as a solemn jest of the Muses, he appears to imply some degree of satire on the symbolical use of number.

Our hope of understanding the passage depends principally on an accurate study of the words themselves; on which a faint light is thrown by the parallel passage in the ninth book. Another help is the allusion in Aristotle, who makes the important remark that the latter part of the passage (from *ὦν ἐπίτριτος πυθμῆν, κ.τ.λ.*) describes a solid figure¹. Some further clue may be gathered from the appearance of the Pythagorean triangle, which is denoted by the numbers 3, 4, 5, and in which, as in every right-angled triangle, the squares of the two lesser sides equal the square of the hypotenuse ($3^2 + 4^2 = 5^2$ or $9 + 16 = 25$).

Plato begins by speaking of a perfect or cyclical number (cp. Tim. 39 D); i. e. a number in which the sum of the divisors equals the whole; this is the divine or perfect number in which all lesser cycles or revolutions are complete; he also speaks of a human or imperfect number, having four terms and three intervals of numbers which are related to one another as roots to powers, and which he describes as assimilating and dissimilating, waxing and waning; in these he finds certain proportions, which give two 'harmonies,' the one square, the other oblong; but he does not say that the square number answers to the divine, or the oblong number to the human cycle.

¹ Pol. v. 12, 8:—'He says that the cause (of the change in the perfect state) is the instability of all things, and their changing in a certain period; and that this is dependent on certain progressions of number, when a root in the ratio of 3:4 joined with the number 5 gives two harmonies, meaning when the number of the diagram becomes solid.'

Nor is there any trace in the passage that this second or imperfect number either has reference to a period of time, or is the number of the population of the State. Plato is only thinking of some progression of number with which he chooses to connect the regulation of births. There would be less confusion if, instead of being termed the number of the world and of the State (of which nothing is said in Plato), the two numbers were called respectively the divine and human number of marriage or generation. For Plato does not suppose their influence to extend to anything but births. They preside over these in the same mysterious manner in which the stars preside over them, or in which, according to the Pythagoreans, opportunity, justice, marriage, are represented by some number or figure.

I need not repeat the translation and explanations of terms given in the text, in which I have supposed the number to be 8000. This interpretation derives a certain degree of plausibility,—first, from the circumstance that the numbers suggested in the first half of the passage coincide with the series of numbers which denote the interval between royal and tyrannical pleasure; secondly, the number 8000 is the ancient number of the Spartan citizens (Herod. vii. 34), and would be what Plato might have called ‘a number befitting the population of a city;’—the mysterious disappearance of the Spartan population may possibly have suggested to him the first cause of his decline of States; thirdly, the lesser or square ‘harmony’, of 400 might be a symbol of the guardians—the larger or oblong ‘harmony’, of the people, and the numbers 3, 4, 5 might refer to the three orders in the State or parts of the soul, the four virtues, the five forms of government. But in this explanation no clear connection is shown between the first and second half of the passage, nor are the words of Aristotle (*ὅταν γένηται στέρεος*) sufficiently explained. And the phrase *ἐπίτριτος πύθμην* seems to mean, not the number 3 with a third added (4), but the ratio of 4 : 3. For there would be no meaning in thus describing the number 4. And the connection with the Pythagorean triangle, the sides of which are represented by 3, 4, 5, would be lost.

More may be urged in defence of the number 216, which is adopted by Schleiermacher and ably supported by Dr. Donaldson (Proc. of the Philolog. Society, vol. i. p. 81 foll.). According to the latter, the *θείον γεννητόν* is the world (?); the *ἀνθρώπειον* either man or the State (?); *αὐξήσεις δυνάμεναι τε καὶ δυναστευόμεναι* multiplications of the square by its square root (?); similar numbers are those whose factors, or the sides

of the figures represented by them, are in the same ratio, e. g. 3 and 27; increasing numbers are those which are less than the sum of their parts, e. g. 12 and 18; *προσήγορα* is used of numbers which are expressible in the same terms of one another, e. g. 8, 12, 18, 27 ($\frac{2}{3}$), ῥητὰ when expressible at all in terms of one another; *ἐπίρριτος πυθμῶν* is the fundamental number $\frac{4}{3}$; *ἁρμονίαν ἴσιν κ.τ.λ.* a square number multiplied by 100,—this is the first harmony. The second harmony is a cube of the same number, and is also described as 100 (*ἰσομήκη μὲν τῆ*), multiplied by the sum of the three following terms:—(1) the square of the rational diameter of 5, less 1, = 48; (2) two incommensurable diameters, i. e. the two first irrationals, 2 and 3; (3) the cube of 3, = 27, and divided by the cube of 3. The first series of numbers is 8 : 12 :: 18 : 27, or the cubes of 2 and 3 with their mean proportionals. The first harmony is $(\frac{4}{3} \times 5)^2 = 100 \times \frac{2^2}{3^2} = \frac{400}{9}$. The second harmony is

$$(48 + 5 + 27) \times 10^2 \times \frac{1}{3^3} = 1000 \times \frac{2^3}{3^3} = \frac{8000}{27}.$$

The period of the world is defined by the first perfect number 6, that of the State by the cube of 6 = 216 = $5^3 + 4^3 + 3^3$; this, taking the roots of the cubes (5, 4, 3), represents the sides of the Pythagorean triangle, and has various other numerical and harmonic properties, e. g. 216 = $2^3 \times 3^3$ (cp. the first series); again, $\frac{4}{3} \times 5 = \frac{2}{3} \times 10$ (the Pythagorean *tetractys*), and $\frac{4}{3} \times \frac{3}{2} = 2$. The number 216 is also the period of Pythagorean metempsychosis.

Other interpreters have suggested the number 5040, which is the number of citizens in the Laws; or 17,500, which is the addition of the square of 100 (10,000) + 4800 + 2700, making a series 10,000 : 7500 : 4800 : 2700, of which the first is supposed to be the perfect or square number, and the three last stand to one another in the ratios of $5^2 : 4^2 : 3^2$. The number has also been supposed to be 50, apparently because the number 50 is equivalent to the squares of the three sides of the sacred triangle, and this is the opinion of Philo; or 10, which multiplied to the fourth power gives 10,000, and is supposed to be the perfect number, as 5 is the imperfect number: or again, the number is said to be made up of the two progressions of the Pythagorean tetractys 1 : 2 : 4 : 8 and 1 : 3 : 9 : 27. All these explanations show curious coincidences of number, which may put us on our guard against accepting other coincidences, but none of them is self-proving. A later explanation—that of Weber—deserves more notice.

He argues rightly for the substantial genuineness of the text; and supposes that the first division of the passage contains a general

description of the proportions which are to be found in the second half ; and explains 'assimilating and dissimilating' and 'waxing and waning' numbers respectively as numbers which form squares or which form oblongs. The increments of number which give these proportions are said to 'equal' and be 'equalled in power' (*δυναμέναι καὶ δυναστευόμεναι*), because they are obtained by multiplying powers of 3, 4, 5—the numbers of the Pythagorean triangle, of which the hypotenuse is said to 'equal in power' the two lesser sides. The numbers themselves are 6400, 4800, 3600, and 2700, which are then gained afresh by multiplying the numbers 4×5 and 3×5 (*ἐπίτριτος πυθμῆν πεμπάδι συζυγείς*) with the sides of the Pythagorean triangle :—

| First Series. | Second Series. |
|----------------------------------|-----------------------------|
| i. e. $3 \times 4 \times 5 = 60$ | $3 \times 3 \times 5 = 45$ |
| $4 \times 4 \times 5 = 80$ | $4 \times 3 \times 5 = 60$ |
| $5 \times 4 \times 5 = 100.$ | $5 \times 3 \times 5 = 75.$ |

The former series squared, and multiplied with the second, gives the following results :—

| | |
|-------------------|--------------------------|
| $60^2 = 3,600$ | $60 \times 45 = 2,700$ |
| $80^2 = 6,400$ | $80 \times 60 = 4,800$ |
| $100^2 = 10,000.$ | $100 \times 75 = 7,500.$ |

Thus two convenient series of numbers are obtained which agree with the description already given in the first part of the passage, and with the explanation of assimilating and dissimilating numbers as square and oblong. But there is no proof that this was the manner in which Plato intended the roots 3 : 5 and 4 : 5 to be multiplied. Nor is it likely that he would have used the term *τρίς ἀξήθεις* to mean, not the raising of them to the third power, but the multiplication of them by 3, 4, 5. Nor is there any reason to suppose with Weber, that the words, 'this whole number is geometrical' refer only to the second of the two harmonies, or that the word *τέλειος* would be applied in such a passage as this (in which periods of revolution are spoken of) to any but a cyclical number ; or that the first harmony answers to the perfect number.

And here we take leave of the difficulty, without attempting a further solution. The meaning of many words in the passage is so uncertain that there is little probability of our finding the answer to the riddle. Among uncertain expressions may be reckoned, *δυναμέναι, δυναστευόμεναι, ὁμοιούντων, ἀνομοιούντων, αὐξόντων, φθινόντων, ἐπίτριτος πυθμῆν πεμπάδι συζυγείς* ; and even the words *ἁρμονία, τέλειος, αὐξήσεις, ἐν ᾧ πρῶτω, γεωμετρικός,*

are variously explained; again, the clause *δεομένων . . . δευῖν* may be either taken as an explanation of *ἀρρήτων* or as a further subtraction of 100, so that the entire number becomes either 4900 or 4800. And there is the further uncertainty of the relation of the first to the second half of the passage, and of the two harmonies to one another.

The discovery of the riddle would be useless, and would throw no light on ancient mathematics. The point of interest is that Plato should have used such a symbol, and that so much of the Pythagorean spirit should have prevailed in him. His general meaning is that divine creation is perfect, and represented or presided over by a perfect or cyclical number; human generation is imperfect, and represented or presided over by an imperfect number or series of numbers. The number 5040, which is the number of the State in the *Laws*, is expressly based by him on utilitarian grounds, namely, the convenience of the number for division; but in this passage he is thinking of Pythagorean symbols and not of utility. The contrast of the perfect and imperfect number may have been easily suggested by the corrections of the cycle, which were made first by Meton and secondly by Callippus; (the latter is said to have been a pupil of Plato). Of the degree of importance or of exactness to be attributed to the problem, the number of the tyrant in book ix. ($729 = 365 \times 2$), and the slight correction of the error in the number $5040 \div 12$ (*Laws*, 771 C) may furnish a criterion. There is nothing surprising in the circumstance that those who were seeking for order in nature and had found order in number, should have imagined one to give law to the other. Plato believes in a power of number far beyond what he could see realized in the world around him; and may even be thought to have a prophetic anticipation of the discoveries of Quetelet and others that numbers depend upon numbers; e. g.—in population, the numbers of births and the respective numbers of children born of either sex on the respective ages of parents, i. e. on other numbers.

BOOK IX. Last of all comes the tyrannical man, about whom we have to enquire, Whence he is, and how does he live—in happiness or in misery? There is, however, a previous question of the nature and number of the appetites, which I should like to consider first. Some of them are unlawful, and yet admit of being chastened and weakened in various degrees by the power of reason and law. ‘What appetites do you mean?’ I mean those which are awake when the reasoning powers

are asleep, which get up and walk about naked without any self-respect or shame ; and there is no conceivable folly or crime, however cruel or unnatural, of which, in imagination, they may not be guilty. ' True,' he said, ' very true.' But when a man's pulse beats temperately ; and he has supped on a feast of reason and come to a knowledge of himself before going to rest, and has satisfied his desires just enough to prevent their perturbing his reason, which remains clear and luminous, and when he is free from quarrel and heat,—the visions which he has on his bed are least irregular and abnormal. I want you to bear in mind, for I have something more to say about this, that even in good men there is such an irregular wild-beast nature, which peers out in sleep.

To return :—You remember what was said of the democrat ; that he was the son of a miserly father, and that he encouraged the saving desires and repressed the ornamental and expensive ones ; presently he got into fine company, and began to entertain a dislike to his father's narrow ways ; and being a better man than the corrupters of his youth, he came to a mean, and led a life, not of lawless or slavish passion, but of regular and successive indulgence. Now imagine a generation to have passed away. The youth has become a father, and has a son who is exposed to the same temptations, and has companions who lead him into every sort of iniquity, which they call liberty, and he has parents and friends who try to keep him right. The counsellors of evil find that their only chance of retaining him is to implant in his soul a monster drone, or love ; while other desires buzz around him and mystify him with sweet sounds and scents, this monster love takes possession of him and carries him off, and puts an end to every true or modest thought or wish that remains in him. Love has of old been called a tyranny, and drunkenness is a tyranny, and a madman has in him the spirit of a tyrant, and is fancying that he can rule over gods and men. And the tyrannical man, whether made by nature or habit, is just a drinking, lusting, furious sort of animal.

And how does such an one live ? ' That is for you to tell me, not for me to tell you.' Well then, I fancy that he will live amid revelries and harlotries, and love will dwell in the house, lord and master of all that is therein. Many desires require much money, and so he spends all that he has and borrows more ; and when he has nothing the young ravens are still in the nest in which they were hatched, crying for food. Love, whose attendants they are, sets them on ; and they must be gratified by

force or fraud, or if not, they become painful and troublesome; and as the new pleasures take the place of the old ones, so the son will be for taking away the inheritance of his parents; if they show signs of refusing, he will defraud and deceive them; and if they openly resist, do not you think that he will possibly be guilty of some tyrannical action? 'I can only say, that I should not much like to be in their place.' But, O heavens, Adeimantus, to think that for some new-fangled love of a harlot or for the waxen beauty of a youth, he will give up his old father and mother, best and dearest of friends, or even enslave them to the fancies of the hour. Truly a tyrannical son is a blessing to his father and mother. He takes their property first; and when that comes to an end, and he finds his lusts beginning to swarm in him, he turns burglar or pick-pocket, or robs a temple. Love, attended by them, gets the better of the thoughts of his youth, and he becomes always in life and reality the monster that he was sometimes in sleep. Love is his tyrant, under the rule of whom he is strong in all violence and lawlessness; ready for any deed of daring that will supply the wants of his rabble-rout, whether coming from without or generated within. In a well-ordered State there are only a few such, and these in time of war go out and become the mercenaries of a tyrant. But in time of peace they stay at home and do mischief; they are the thieves, burglars, footpads, cutpurses, man-stealers of the community; and if they are able to speak, they come out in another line as false-witnesses and informers. 'Yes,' said he, 'and a small catalogue of crimes truly, even if the perpetrators of them are not numerous.' Yes, I said; but small and great are relative terms, and the greatest crimes which are done by them do not approach the tyrant; whom this class waxing numerous and strong create out of their number. If the people yield, well and good; but, if they resist, then the old story is repeated—as he beat his father and mother, so now he beats his old fatherland and motherland, and places his mercenaries over them. Such men in their early days live with flatterers, and they themselves flatter others, and are all things to all men, in order to gain their ends; but they soon discard them, when they have no need of them; they are always either masters or servants, never the friends of anybody; no tyrant ever tasted the joys of friendship. And they are utterly treacherous and unjust, if the nature of justice be at all understood by us. They are the waking reality of the dream which we described; and he who is the most of a tyrant by nature, and leads the life of a tyrant for

the longest time, will be the worst of them, and being the worst of them, will also be the most miserable.

Like man, like State,—the tyrannical man will answer to tyranny, which is the extreme opposite of the royal State; for one is the best and the other the worst. We need not stop to enquire which is which, but may at once proceed to the next question, Which is the happier? And great and terrible as is the outward appearance of the tyrant sitting upon a throne in the midst of his satellites, let us not be afraid to go in and ask; and the answer is, that the monarchical is the happiest, and the tyrannical the most miserable, of States. And may we not ask the same question about the men themselves, requesting some one to look into them who is able to penetrate the inner nature of man, and will not be struck all of a heap like a child by the vain pomp of tyranny. I will suppose that he is one who has lived with him, and has seen him in his undress when he is no longer a hero, and perhaps in the hour of trouble and danger. Let him who has seen all this speak to us of his happiness and misery.

Assuming that we ourselves are the impartial judge for whom we seek, let us begin by comparing the individual and State, and ask first of all, whether the State is likely to be free or enslaved—Will there not be a little freedom and a great deal of slavery? And the freedom is of the bad, and the slavery of the good; and this is true of the man as well as of the State; for his soul is full of meanness and slavery, and the better part is that which is enslaved, and the madman and beast have power over him. He cannot do what he would, and his mind is full of confusion; taking the whole man, he is the reverse of a freeman. And the State will be poor and not rich, and the man's soul will be poor. And the State will be full of groaning and lamentation and sorrow, and will be the most miserable of States, and the man will be full of sorrows, and the most miserable of men. No, not the most miserable, for there is yet a more miserable. 'Who is that?' The tyrannical man who has the misfortune also to become a public tyrant. 'There I suspect that you are right.' Say rather, I am sure, for the word 'suspect' is out of place in such an enquiry as this of ours. He is like a wealthy owner of slaves, only he has more of them than any private individual; and, as you know, the owners are not generally in any fear of their slaves. But why? Because the whole city is in a league which protects the individual. Suppose however that one of these owners and his household

is carried off by a god into a wilderness, where there are no freemen to help him (he is the master say of about fifty slaves);—will he not be in an agony of terror?—will he not be compelled to flatter his slaves and to promise them many things much against his will? And suppose the same god who carried him off were to surround him with neighbours who declare that no man has any right to have slaves, and that the owners of them should be punished with death. ‘Still worse and worse! He will be in the midst of his enemies.’ And is not our tyrant such an imprisoned, captive soul, who is made up of fears and loves, who has a swarm of passions which he is incapable of indulging; living indoors always like a woman, and being jealous of those who have the freedom of going about and seeing the world?

Having so many evils, will not the most miserable of men be still more miserable in a public station? Master of others when he is not master of himself, like a sick man who is compelled to be an athlete,—he is the meanest of slaves and most abject of flatterers; wanting all things, and having all his desires craving about him; always in fear and distraction, like the State of which he is the representative. His jealous, hateful, faithless temper grows worse with command; he is more and more faithless, envious, unrighteous, the most wretched of men, and the cause of wretchedness to himself and to others. And so let us have a final trial and proclamation; need we hire the herald, or shall I proclaim the result? The son of Ariston (the best) is of opinion that the best and justest of men is also the happiest, and that this is he who is the most royal master of himself; and that the unjust man is he who is the greatest tyrant of himself and of his State. ‘Let the proclamation be made.’ And I add further—‘seen or unseen by gods or men.’

This is our first proof. The second is derived from the three kinds of pleasure, which answer to the three elements of the soul—reason, passion, desire; under which last is comprehended avarice as well as sensual appetite, while passion may be said to include ambition, party-feeling, love of reputation. Reason, on the other hand, is solely directed to the attainment of truth, and may be truly described as a lover of knowledge and wisdom, careless of money and reputation. In accordance with the difference of men’s natures, one of these three principles is in the ascendant—love of wisdom, love of honour, love of gain, having their several pleasures corresponding to them. Interrogate now the three natures, and each one will be found praising his own pleasures

and depreciating those of others. The money-maker will contrast the vanity of knowledge with the solid advantages of gold and silver. The ambitious man will think knowledge which is without honour all smoke and nonsense; whereas the philosopher will regard only the fruition of truth, which is not far from the heaven of pleasure, and will deem all other pleasures to be necessary rather than good. Now, how shall we decide between them? 'I cannot say.' Well, is there any better criterion than experience and knowledge? And which of the three has the truest knowledge and the widest experience? The experience of youth makes the philosopher acquainted with the two kinds of desire, but the avaricious and the ambitious man never taste the pleasures of truth and wisdom. Honour he has equally with them; for the wise man is honoured as well as the great and rich; they are 'judged of him,' but he is 'not judged of them,' for they never attain to the knowledge of true being. And his instrument is reason, whereas their measure is wealth and honour; and if by reason we are to judge, his good will be the truest. And so we arrive at the result that the pleasure of the rational part of the soul, and a life passed in such pleasure is the pleasantest. He who has a right to judge judges thus. And next comes the life of ambition, and, in the third place, that of money.

Twice has the just man overthrown the unjust—once more, as in an Olympian contest, first offering up a prayer to the saviour Zeus, let him try a fall. A wise man whispers to me that the pleasures of the wise are true and pure; all others are a shadow only. Let us examine this: Is not pleasure opposed to pain, and is there not a mean state which is neither? When a man is sick, nothing is more pleasant to him than health. But this he never found out while he was well. In pain he desires only to cease from pain; his wishes reach no further. When he is in an ecstasy of pleasure, on the other hand, rest is painful to him. Thus rest or cessation is both pleasure and pain. But can that which is neither become both? Again, pleasure and pain are motions, and the absence of them is rest; but if so, how can the absence of either of them be the other? Thus we are led to infer that the contradiction is an appearance only, and witchery of the senses. And these are not the only pleasures, for there are others which have no preceding pains. Pure pleasure then is not the absence of pain, nor pure pain the absence of pleasure; although most of the pleasures which reach the mind through the body are of this character, and have not only their reactions when

they depart, but their anticipations before they come. Shall I find a simile which will help to describe them? There is in nature an upper, lower, and middle region, and he who passes from the lower to the middle imagines that he is going up and is already in the upper world; and if he were taken back again would think, and truly think, that he was descending. All this arises out of his ignorance of the true upper, middle, and lower regions. And a like confusion happens with pleasure and pain, and with many other things. The man who compares grey with black, calls grey white; and the man who compares absence of pain with pain, calls the absence of pain pleasure. Again, hunger and thirst are inanitions of the body, ignorance and folly of the soul; and food is the satisfaction of the one, and knowledge of the other. Now which is the purer satisfaction—that of eating and drinking, or that of knowledge? Consider the matter thus: The satisfaction of that which has more existence is truer than of that which has less. And the invariable and immortal has a more real existence than the variable and mortal, and has a corresponding measure of knowledge and truth. And the soul has more existence and truth and knowledge than the body, and is therefore more really satisfied and has a more natural pleasure. Those who feast only on earthly food, are always going at random up to the middle and down again; but they never pass into the true upper world, or have a taste of true pleasure. Like animals, their heads are always turned towards the ground, and their bodies are leaning on the dining-table; they butt at one another with iron horns and hoofs, and kill one another by reason of their insatiable lust, for they are not filled with true being, and their vessel is leaky. (Cp. Gorgias, 243 A, foll.) Their pleasures are mixed with pain, and are mere shadows of pleasure, coloured and intensified by contrast, and therefore intensely desired; and men go fighting about them, as Stesichorus says that the Greeks fought about the shadow of Helen at Troy, in ignorance of the truth.

The same may be said of the passionate element, whether the ruling motive be ambitious envy, party violence, or angry discontent. The desires of the ambitious soul, as well as of the covetous, have an inferior satisfaction. Only when under the guidance of reason do either of the other principles do their own business or attain the pleasure which is natural to them. When not attaining, they compel the other parts of the soul to pursue a shadow of pleasure which is not theirs. And the more distant they are from philosophy and reason, the more distant they will

be from law and order, and the more illusive will be their pleasures. The desires of love and tyranny are the farthest from law, and those of the king are nearest to it. There is one genuine pleasure, and two spurious ones: the tyrant goes beyond even the latter; he has run away altogether from law and reason. Nor can the measure of his inferiority be told, except in a figure. The tyrant is the third removed from the oligarch, and has therefore not a shadow of his pleasure, but the shadow of a shadow only. The oligarch, again, is thrice removed from the king, and thus we get the formula 3×3 , which is the number of a surface, representing the shadow which is the tyrant's pleasure, and if you like to cube this number of the beast you will find that the measure of the difference amounts to 729; the king is 729 times more happy than the tyrant. And this extraordinary number is *nearly* equal to the number of days and nights in a year ($365 \times 2 = 730$); and is therefore concerned with human life. This is the measure of the interval between a good and bad man in happiness only,—what must be the difference between them in comeliness of life, in beauty and virtue?

Perhaps you may remember some one saying at the beginning of our discussion that the unjust man was profited if he had the reputation of justice? Now that we have determined the nature of justice and injustice, let us make an ideal image of the soul like the fabulous monsters of mythology, which will personify his words. First of all, fashion a multitudinous many-headed beast, having a ring of heads of all manner of animals, tame and wild, and able to produce and change them at pleasure. 'That would be no easy task for a statuary; but as imagination can create anything, I will do as you say.' Suppose now another form of a lion, and another of a man; the second smaller than the first, and the third smaller than the second, and join them together and cover them outside with a human skin, in which you completely conceal all that is within. When this has been done, let us tell the supporter of injustice that he is feeding up the two beasts and starving the man, whom they torment and hate. The maintainer of justice, on the other hand, is aiming at strengthening the man; he is nourishing the gentle principle within him, and making an alliance with the lion heart, in order that he may be able to keep down the many-headed hydra, and bring all into unity with each other and with themselves. Thus in every point of view, whether in relation to pleasure, honour, or advantage, the just man is right, and the unjust wrong.

Come then, let us reason with the unjust, who is not intentionally in error. 'Sweet sir,' we will say to him, 'is not the noble that which subjects the beast to the man, or rather to the God in man; the ignoble, that which subjects the man to the beast?' He must assent. But if so, who would receive gold on condition that he was to degrade the noblest part of himself under the worst?—who would sell his son or daughter into the hands of brutal and evil men, for any amount of money? And will he sell his own fairer and diviner part without any compunction to the most godless and foul? Would he not be a traitor worse than Eriphyle, who sold her husband's life for a necklace? And intemperance is the letting loose of the multiform monster, and pride and sullenness are the growth and increase of the lion and serpent element, as on the other hand, luxury and effeminacy are caused by a too great relaxation of spirit. Flattery and meanness again arise when the spirited element is subjected to avarice, and the lion is habituated to become a monkey. The real disgrace of handicraft arts is, that those who are engaged in them have no control over themselves; they have to flatter, instead of mastering their desires; therefore we say that they should be placed under the control of the better principle in another because they have none of their own; not, as Thrasymachus imagined, to the injury of the subjects, but for their good. And our intention in educating the young, is to give them self-control; the law desires to nurse up in them a higher principle, and when they have acquired this, they may go their ways.

'What, then, shall a man profit, if he gain the whole world' and become more and more wicked? Or what shall he profit by escaping discovery, if the concealment of evil prevents the cure? Whereas if he had been punished, the brutal part of him would have been silenced, and the gentler element liberated; and he would have begun to add to temperance justice, and to justice wisdom, which is a union fairer far than the combination of beauty and health and strength in the body in the same degree that the soul is fairer than the body. He who has understanding will honour knowledge above all, and to this direct his energies; in the next place he will keep under his body, not only for the sake of health and strength, but for the sake of creating in himself the most perfect harmony of body and soul. In the acquisition of riches, too, he will aim at order and harmony; he will not be led by the admiration of the vulgar to heap up wealth without measure, but he will fear that the increase of wealth will disturb the constitution of his own soul. For the same

reason he will only accept such honours as will make him a better man; any others he will decline. 'Then,' said he, 'he will not be a politician if this be his chief care.' By the dog of Egypt, he will, I said, in his own city, but probably not in his native country, unless by some divine accident. 'I understand you,' he said, 'to mean that he will be a citizen of the ideal city, which has no place upon earth.' But in heaven, I replied, there is a pattern, of such a city, and he who has eyes to see it may order his life after that image. Whether such a state is or ever will be matters not; he will act according to that pattern and no other.

. . . . The most remarkable points in the 9th Book of the Republic are:—(1) the account of pleasure; (2) the number of the interval which divides the king from the tyrant; (3) the pattern which is in heaven.

1. Plato's account of pleasure is remarkable for moderation, and in this respect contrasts with the later Platonists and the views which are attributed to them by Aristotle. He is not, like the Cynics, opposed to all pleasure, but rather desires that the several parts of the soul shall have their natural satisfaction; he even agrees with the Epicureans in describing pleasure as something more than the absence of pain. This is proved by the circumstance that there are pleasures which have no antecedent pains (as he also remarks in the *Philebus*), such as the pleasures of smell, and also the pleasures of hope and anticipation. In the previous book (pp. 558, 559) he had made the distinction between necessary and unnecessary pleasure, which is repeated by Aristotle, and he now observes that there are a further class of 'wild beast' pleasures, corresponding to Aristotle's *θηρίότης*. He dwells upon the relative and unreal character of sensual pleasures and the illusion which arises out of the contrast of pleasure and pain, pointing out the superiority of the pleasures of reason, which are at rest, over the fleeting pleasures of sense and emotion. The pre-eminence of royal pleasure is shown by the fact that reason is able to form a judgment of the lower pleasures, while the two lower parts of the soul are incapable of judging the pleasures of reason. Thus, in his treatment of pleasure, as in many other subjects, the philosophy of Plato is 'sawn up into quantities' by Aristotle; the analysis which was originally made by him became in the next generation the foundation of technical distinctions. Both in Plato and Aristotle we may observe the illusion under which the ancients fell of regarding the transience of pleasure as a proof of its unreality, and of confounding

the permanence of the intellectual pleasures with the unchangeableness of the knowledge from which they are derived. Neither do we like to admit that the pleasures of knowledge, though more elevating, are not more lasting than other pleasures, and are almost equally dependent on the accidents of our bodily state. (Cp. *Introd. to Philebus.*)

2. The number of the interval which separates the king from the tyrant, and royal from tyrannical pleasures is 729, the cube of 9, which Plato characteristically designates as a number concerned with human life, because *nearly* equivalent to the number of days and nights in the year. He is desirous of proclaiming that the interval between them is immeasurable, and invents a formula to give expression to his idea. Those who spoke of justice as a cube, of virtue as an art of measuring (*Prot.* 357 A), saw no inappropriateness in conceiving the soul under the figure of a line, or the pleasure of the tyrant as separated from the pleasure of the king by the numerical interval of 729. And in modern times we sometimes use metaphorically what Plato employed as a philosophical formula. 'It is not easy to estimate the loss of the tyrant, except perhaps in this way,' says Plato. So we might say, that although the life of a good man is not to be compared to that of a bad man, yet you may measure the difference between them by valuing one minute of the one at an hour of the other ('one day in thy courts is better than a thousand'), or you might say that 'there is an infinite difference.' But this is not so much as saying, in homely phrase, 'they are a thousand miles asunder.' And accordingly Plato finds the natural vehicle of his thoughts in a progression of numbers; this arithmetical formula he draws out with the utmost seriousness, and both here and in the number of generation seems to find an additional proof of the truth of his speculation in forming the number into a geometrical figure. In speaking of the number 729 as proper to human life, he probably intended to intimate that one year of the tyrannical = 12 hours of the royal life.

The simple observation that the comparison of two solids is effected by the comparison of the cubes of their sides, is the mathematical groundwork of this fanciful expression. There is some difficulty in explaining the steps by which the number 729 is obtained; the oligarch is removed in the third degree from the royal and aristocratical, and the tyrant in the third degree from the oligarchical, but we have to arrange the terms as the sides of a square and to count the oligarch twice over,

thus reckoning them not as = 5 but as = 9. The square of 9 is passed lightly over as only a step towards the cube.

3. Towards the close of the Republic, Plato seems to be more and more convinced of the ideal character of his own speculations. At the end of the 9th Book the pattern which is in heaven takes the place of the city of philosophers on earth. The vision which has received form and substance at his hands, is now discovered to be at a distance. And yet this distant kingdom is also the rule of man's life. (Bk. vii. 540 E.) ('Say not lo! here, or lo! there, for the kingdom of God is within you.') Thus a note is struck which prepares for the revelation of a future life in the following Book. But the future life is present still; the ideal of politics is to be realized in the individual.

BOOK X. Many things pleased me in the order of our State, but there was nothing which I liked better than the regulation about poetry. The division of the soul throws a new light on our exclusion of imitation. I do not mind saying to you, what I would rather not have you repeat to the poets and their votaries, that all poetry is an outrage on the understanding of the hearers, if they have not that balm of knowledge which heals error. I have loved Homer ever since I was a boy, and he appears to me to be the great author and master of tragic poetry. But much as I love the man, I love truth more, and therefore I must speak out: and first of all, let me ask you to explain what is imitation, for really I do not understand? 'How likely then that I shall understand!' That may very well be, for the duller often sees better than the keener eye. 'That is true, but in your presence I can hardly venture to say what I think.' Then suppose that we begin in our old fashion, with the doctrine of universals;—let us assume the existence of beds and tables. There is one idea of a bed, or of a table, which the maker of each had in his mind when making them; he did not make the ideas of beds and tables, but he made beds and tables according to the ideas. And is there not a maker of the works of all workmen? 'A rare artist that!' Wait a little, and you may have some reason for your exclamation: He of whom I speak makes not only vessels but plants and animals, himself, and all other things; the earth and heaven, and things under the earth; he makes the Gods also. 'He must be a wizard, indeed!' But do you not see that there is a sense in which you could do the same? You have only to take a mirror, and catch the

reflection of the sun, and the earth, and plants and animals, and yourself in it,—there now you have made them. ‘Yes, in appearance, but not in reality.’ Exactly so; and the painter is such a creator as you are with the mirror, and he is even more unreal than the carpenter, although neither the carpenter nor any other artist can be supposed to make the absolute bed. ‘Not if philosophers may be believed.’ Nor is there any reason for wondering that his bed has but an imperfect relation to the truth. Reflect:—Here are three beds; one in nature, which is made by God; another, which is made by the carpenter; and the third, by the painter; and there are three artists, who preside over them,—God, the maker of the bed, the painter. God only made one, nor could he have made more than one; for if there had been two, there would always have been a third—more absolute and abstract than either, under which they would have been included. We may therefore conceive God to be the natural maker of the bed, and in a lower sense the carpenter is also the maker; but the painter may be more properly described as the imitator of what the other two make; he has to do with a creation which is thrice removed from reality. And the tragic poet is an imitator, and, like every other imitator, is thrice removed from the king and from the truth. The painter imitates not the original bed, but the bed made by the carpenter. And this, without being really different, appears to be different, and has many points of view, of which only one is caught by the painter, who represents everything because he represents a piece of everything, and that piece an image. And he can paint any artist, although he knows nothing of their arts; and this with sufficient skill to deceive children or simple people. Let us now imagine some one to come to us and tell us of his having met a man who knows all that everybody knows, and better than anybody. Should we not infer him to be a simpleton who has no discernment of truth and falsehood, and has met with a wizard or enchanter, whom he fancied to be all-wise? And when we hear persons saying that Homer and the tragedians know all the arts and all the virtues, must we not infer that the persons who say these things are under a similar delusion? they do not see that the poets are imitators, and that their creations are only imitations. ‘Very true.’ But if a person could create as well as imitate, he would rather leave some permanent work and not an imitation only; he would rather be the receiver than the giver of praise. ‘Yes, for then he would have more honour and advantage.’

Let us now interrogate Homer and the poets. Friend Homer, say I to him, I am not going to ask you about medicine, or any art to which your poems incidentally refer, but about their main subjects,—war, military tactics, politics. If you are only twice and not thrice removed from the truth—not an imitator or an image-maker, please to inform us what good you have ever done to mankind? Is there any city which professes to have received laws from you, as Sicily and Italy have from Charondas, Sparta from Lycurgus, Athens from Solon? Or was any war ever carried on by your counsels? or is any notion or invention attributed to you, as there is to Thales and Anacharsis? Or is there any Homeric way of life, such as Pythagoras taught, in which you instructed men, and which is called after you? ‘Nothing of the kind is recorded, and indeed that companion of Homer who had the misfortune to be called Flesh-child [Creophylus], was more unfortunate in his breeding than he was in his name, if, as tradition says, Homer in his lifetime was allowed by him and his other friends to starve.’ Yes, that is the tradition; but could this ever have happened if Homer had really been the educator of Hellas? Would he not have had many attached followers? If Protagoras and Prodicus persuaded their contemporaries that no one could manage house or State without them, (at which their admirers were so greatly delighted that they were ready to carry them about on their heads,)—is it at all likely that Homer and Hesiod would have been allowed to go about as beggars, I mean if they had really been able to do the world any good,—would not mankind have sought after them more than after gold and silver, and have followed them about in order to get education? But they did not; and therefore we may infer that Homer and all the poets are only imitators, who do but imitate the appearances of things. For as a painter by a knowledge of figure and colour can paint a cobbler without any practice in cobbling, so the poet can put the colours of language on any art, and give harmony and rhythm to the cobbler and also to the general; and you know how mere narration, when deprived of the ornaments of metre, is like a face which has lost the beauty of youth and never had any other. Once more, the imitator has no knowledge of reality, but only of appearance. The painter paints, and the worker in metal or leather makes a bridle and reins, but neither understands the use of them—the knowledge of this is confined to the horseman; and so of other things. Thus we have three arts: one of use, another of invention, a third of imitation;

and the user furnishes the rule to the two others. The flute-player will know the good and bad flute, and the maker will put faith in him; but the imitator will neither know nor have faith—neither science nor true opinion can be ascribed to him. Imitation, then, is devoid of knowledge, being only a kind of play or sport,—and the tragic and epic poets are imitators in the highest degree.

And now let us enquire, what is the faculty in man which answers to imitation? Allow me to explain my meaning thus:—Objects are differently seen when in the water and when out of the water, when near and when at a distance; and the painter or juggler makes use of this variation to impose upon us. And the art of measuring and weighing and calculating comes in to assist our bewildered minds, and save them from the power of appearance; for, as we were saying, two contrary opinions of the same about the same and at the same time, cannot both of them be true. But which of them is true is determined by the art of calculation; and this is allied to the better faculty in the soul, as the arts of imitation are to the worse. And the same holds of the ear as well as of the eye, of poetry as well as painting. There is a further aspect of poetical imitation, which I invite you to consider. The imitation is of actions voluntary or involuntary, in which there is an expectation of a good or bad result, and present experience of pleasure and pain. But is a man in harmony with himself when he is the subject of these conflicting influences? Is there not rather a contradiction in him? Let me further ask, whether he is more likely to control sorrow when he is alone or when he is in company with others? ‘The latter.’ Feeling would lead him to indulge his sorrow, but reason and law control him and bid him be patient, since he cannot know whether his affliction is good or evil, and no human thing is of any great consequence, and sorrow is certainly a very great impediment to the good counsel which he so greatly needs. For when we stumble, we should not, like children, set up a cry, holding the part affected in our hands; but, when the dice have once fallen, we should take the measures which reason prescribes, not making a lament, but finding a cure. And the better part of us is ready to follow reason, while the irrational principle is full of sorrow and distraction at the recollection of our troubles. Unfortunately, however, this latter furnishes the chief materials of the imitative arts. Whereas reason is ever in repose and cannot easily be displayed, especially to a mixed multitude who have no experience of her. Thus the poet is like the painter in two ways:

first he paints an inferior degree of truth, and secondly, he is concerned with an inferior part of the soul. He indulges the feelings, while he enfeebles the reason; and we refuse to allow him to have authority over the mind of man; for he has no measure of greater and less, and is a maker of images and very far gone from truth.

But we have not yet mentioned the heaviest count in the indictment, the power which poetry has of injuriously exciting the feelings. When we hear Homer, or some tragedian, reciting at length the sorrows of heroes lamenting and beating their breasts, you know that we sympathize with them and praise the poet; and yet in our own sorrows such an exhibition of feeling is regarded as effeminate and unmanly (cp. *Ion*, 535 E). Now, ought a man to feel pleasure in seeing another do what he hates and abominates in himself? Remember that he gives way to a sentiment which in his own case he would control; he is off his guard because the sorrow is another's; and he thinks that he may indulge his feelings without disgrace, and will be the gainer by the pleasure. But a further consequence quickly follows. For he who begins by weeping at the sorrows of others, will end by weeping at his own. The same is true of comedy,—you may often laugh at buffoonery which you would be ashamed to utter, and the love of coarse merriment on the stage will at last turn you into a buffoon at home. Poetry feeds and waters the passions and desires, instead of withering and starving them; she lets them rule instead of ruling them. And therefore, when we hear the encomiasts of Homer affirming that he is the educator of Hellas, and that he is profitable for the administration of human things, we may allow that they have good intentions as far as their light extends, and agree with them in thinking Homer a great poet and tragedian. But we shall continue to maintain our prohibition of all poetry which goes beyond hymns to the Gods and praises of famous men. Not pleasure and pain, but law and reason shall rule in our State.

These are our reasons for expelling poetry; but lest she should charge us with discourtesy, let us also make an apology to her. We will say to her that there is an ancient quarrel between poetry and philosophy, and many are the civilities which pass between them, such as the saying of 'the she-dog, yelping against her mistress,' and 'the philosophers who are ready to circumvent Zeus,' and the 'philosophers who are paupers;' and there are numberless other signs of ancient enmity between them. Nevertheless we are not enemies to her, or to the

sister arts of imitation, and will gladly allow her to return upon the condition that she will speak or sing in her own defence. For we acknowledge that we are charmed by her; (you would acknowledge, would you not, that you are a lover of Homer?) but if she cannot show that she is useful as well as delightful, we must do violence to ourselves, and like rational lovers renounce our loves, though endeared to us by early associations. Having come to years of discretion, we know that poetry is not truth, and that a man should be careful how he introduces her to that state or constitution which he himself is; for there is a mighty issue at stake—mightier than appears—the good or evil of the human soul. And it is not worth while to forsake justice and virtue for the attractions of poetry, any more than for the sake of honour or wealth. ‘I agree with you.’

And yet the rewards of virtue are greater far than I have described. ‘And can we conceive still greater honours?’ Why, yes; I said, in the brief span of life there can be no greatness worth mentioning. Shall an immortal being care about anything short of eternity? ‘I should think not; but what do you mean?’ Do you not know that the soul is immortal? ‘Good heavens,’ he said, looking hard at me, ‘you do not mean to say that you can prove that.’ Quite easily, I said. ‘I should like to hear this argument, of which you make so light.’

You would admit that there is an element of good and evil, which is the salvation and corruption of all things. And all things have their own corrupting element; and if this does not destroy them nothing else will. And the soul has her own corrupting principles, which are injustice, intemperance, cowardice, and the like. But none of these destroy the soul in the same sense that disease destroys the body. The soul may be full of all iniquities, but is not by reason of them all brought any nearer to death. For nothing ever perished by external affection of evil, which was not destroyed from within. The body, which is one thing, cannot be destroyed by food, which is another, unless infected from within. Neither can the soul, which is one thing, be corrupted by the body, which is another, unless she herself is corrupted. And as no bodily evil can infect the soul, neither can any bodily evil destroy the soul. Nothing of the nature of fever or any other disease—not even the dissection of the body into the minutest fragments—can kill the soul, unless these things can be shown to render the soul unholy and unjust. But no one will ever prove that the souls of men will become

more unjust because of death. And if a person has the audacity to deny this, the answer is—then why do criminals require the hand of the executioner, and not die of themselves? ‘Truly,’ he said, ‘injustice would not be very terrible if it brought a cessation of evil; but I should be inclined to think that the injustice which may destroy others may greatly quicken and stimulate the life of the unjust.’ There you are right. If the natural inherent evil of the soul be unable to destroy the soul, hardly will anything else destroy her. But the soul which cannot be destroyed either by internal or external evil must endure for ever, and lasting for ever, must be immortal. Now if this be true, souls will always exist in the same number. They cannot diminish, because they cannot be destroyed; nor yet increase, for the increase of the immortal must come from something mortal, and so all would end in immortality. Neither is the soul variable and diverse; for that which is immortal must be of the fairest and simplest composition. If we would conceive her truly, she must be viewed pure as at birth by the light of reason; then we shall behold justice and injustice far more clearly than now; in her present condition we see her only like the sea-god Glaucus, knocked about and crushed by the waves, overgrown with sea-weed and shells, and anything but what she by nature is. Her true image is to be seen in philosophy, when she is holding converse with the divine and immortal and eternal;—thereby we may conceive what she would be if she were wholly devoted to such pursuits;—now she is bruised and maimed in the sea, which is the world, and has been crushed against the rocks and covered with earth and stones, which adhere to her from the entertainments of earth. Then you might see her true nature and know whether she is simple or not,—her state and form in this present world have been sufficiently described.

Thus far I have said nothing of the rewards and honours which Homer and Hesiod attribute to her. Justice in herself has been shown to be best for the soul in herself, though a man may put on a Gyges’ ring and have a helmet of Hades too. And now you shall repay me what you borrowed in the argument; and I will enumerate the rewards of justice in life and after death. I granted, for the sake of argument, as you will remember, that evil might perhaps escape the knowledge of Gods and men, although this was really impossible. And now that I have shown that justice has reality, you must grant me also that she has the palm of appearance. In the first place, the just man is known

to the Gods, and he is therefore the friend of the Gods, and he will receive at their hands every good, always excepting such evil as is the necessary consequence of former sins. All things therefore may be supposed to end in good to him, either in life or after death, even what appears to be evil; for the Gods have a care of him who desires to be in their likeness. And what shall we say of men? Is not honesty the best policy? The clever rogue makes a great start at first, but he looks foolish when he appears at the goal with his ears trailing on his shoulders and without a crown; whereas the true runner perseveres to the end, and receives the prize. And you must allow me to repeat all the blessings which you attributed to the fortunate unjust,—they are rulers in the city, can marry and give their children in marriage to whom they like; and the evils which you attributed to the unfortunate just, do really fall in the end on the unjust, although, as you implied, their sufferings may be more genteelly veiled in silence.

But all the blessings of this present life are as nothing when compared with those which await good men after death. 'I should like to hear about them.' Come, then, and I will tell you a tale not taken from the 'Pilgrim's Progress,' and yet a story of a valiant man, Er, the son of Armenius, who was supposed to have died in battle, and when he had been put on the funeral pyre and had lain there twelve days, he came to life again, and told what he had seen in the world below. He said that when his soul left the body, he went with a great company to a wonderful place, in which there were two chasms near together in the earth beneath, and two chasms corresponding to them in the heaven above. And there were judges sitting in the intermediate space, bidding the just ascend by the heavenly way on the right hand, having the seal of their judgment set upon them before; and the unjust, having the seal behind, were bidden to descend in like manner by the way on the left hand. Him they told to look and listen, as he was to be their messenger and to carry to men the tidings of the world below. And he looked and saw the souls when they had been judged departing at either chasm; some who came from earth, were dusty and worn with travel; others, who came from heaven, were clean and bright. They seemed to have been a long way, and were glad to meet and rest in the meadow; and there they discoursed with one another of the things which they had seen in the other world. Those who came from the earth wept at the remembrance of their sorrows, while the spirits from

heaven spoke of glorious sights and heavenly bliss. He said that for every evil deed they were punished tenfold, and the journey was of a thousand years' duration, because the life of man was reckoned as a hundred years—all the cruelties and treacheries and impieties which they had done they also suffered—and the rewards of virtue were in the same proportion. He added something hardly worth repeating about infants dying almost as soon as they were born. Of parricides and other murderers he had tortures still more terrible to narrate. He was present when one of the spirits asked,—Where is Ardiaeus the great? (Now this Ardiaeus was a horrible wicked tyrant, who had murdered his old father, and his elder brother, a thousand years before.) The answer was, 'He comes not hither, and will never come.' And I myself, he said, actually saw this sight of terror. For at the entrance of the chasm, as we were about to reascend, Ardiaeus appeared, and some other sinners—most but not all of whom had been tyrants—and just as they fancied that they were returning to life, the chasm gave a roar, and then fiery wild-looking men who knew the meaning of the sound, seized him and some others, and bound them hand and foot and threw them down, and dragged them along at the side of the road, lacerating them and carding them, and explaining to the passers-by, that they were going to be cast into hell. The greatest terror of the pilgrims ascending was lest they should hear the voice, and when there was silence one by one they passed up with joy. To these sufferings there were corresponding delights.

Now when they had rested seven days, on the eighth day the souls of the pilgrims resumed their journey, and in four days came to a spot whence they looked down upon a column of light, in colour like a rainbow, only brighter and clearer. One day more brought them to the place, and looking along the column at the ends they saw the chain of light which encompasses heaven and earth, after the manner of the rope which fastens a trireme. At the extremities of the chain there was the distaff of Necessity, on which all the heavenly bodies turned;—the hook and spindle were of adamant, and the whorl of a mixed substance. And the form of the whorl was like a number of boxes fitting into one another with their edges turned upwards, making together a single whorl which was pierced by the spindle. Now the outermost had the rim broadest, and the inner whorls were smaller and smaller, and had their rims narrower. The largest (or fixed stars) was spangled

—the seventh (or sun) was brightest—the eighth (or moon) shone by the light of the seventh—the second and fifth (Saturn and Mercury) were most like one another and yellower than the eighth—the third (Jupiter) had the whitest light—the fourth (Mars) was red—the sixth (Venus) was in whiteness second. The whole had one motion, but while this was revolving in one direction the seven inner circles were moving in the opposite, with various degrees of swiftness and slowness. The spindle turned on the knees of Necessity, and a Siren stood hymning upon each circle, while Lachesis, Clotho, and Atropos, the daughters of Necessity, sat on thrones at equal intervals, singing of past, present, and future, responsive to the music of the Sirens; Clotho from time to time guiding the outer circle with a touch of her right hand; Atropos with her left hand touching and guiding the inner circle; Lachesis in turn putting forth her hand to guide both of them from time to time. On their arrival the pilgrims went to Lachesis, and there was an interpreter who arranged them, and taking from her knees lots, and samples of lives, got up into a pulpit and said: ‘Mortal souls, hear the words of Lachesis, the daughter of Necessity. A new period of mortal life has begun, and you may choose what divinity you please—the responsibility of choosing is with you—God is blameless.’ After speaking thus, he cast the lots among them and each one took up the lot which fell near him. He then placed on the ground before them the samples of lives, many more than the souls present, and there were all sorts of lives of men and animals. There were tyrannies ending in misery and exile, and lives of men and women famous for their different qualities; and also mixed lives, made up of wealth and poverty, sickness and health. And here, beloved Glaucon, is the great risk of human life, and therefore the whole of education should be directed to the acquisition of such a knowledge as will teach a man to refuse the evil and choose the good. He should know all the combinations which occur in life—of beauty with poverty or with wealth,—of knowledge with external goods,—and at last choose with reference to the nature of the soul, regarding that only as the better life which makes men better, and leaving the rest. And a man must take with him an iron sense of truth and right into the world below, that there too he may remain undazzled by wealth or the allurements of evil, and be determined to avoid the extremes and choose the mean. For this, as the messenger reported the interpreter to have said, is the true happi-

ness of man; and any one, as he proclaimed, may, if he choose with understanding, have a good lot, even though he come last. 'Let not the first be careless in his choice, nor the last despair.' He spoke; and when he had spoken, he who had drawn the first lot chose a tyranny: he did not see that he was fated to devour his own children—and when he discovered his mistake, he wept and beat his breast, blaming not himself, as the interpreter had bidden him, but chance and the Gods and anybody rather than himself. He was one of those who had come from heaven, and in his previous life had been a citizen of a well-ordered State, but he had only habit and no philosophy. And this was the reason why he, like many others, made a bad choice, because he had no experience of life, whereas those who came from earth and had seen trouble were not in such a hurry to choose. And for this reason and because the lot was a chance, there was often an exchange of lives from good to evil. Whereas if a man followed the pursuits of philosophy while he was upon earth, and had been moderately fortunate in his lot, he might not only be happy here, but his pilgrimage from this world to the other, and from the other to this, would be smooth and heavenly. Nothing was more curious than the spectacle of the choice, at once sad and laughable and wonderful; most of the souls only seeking to avoid their own condition in a previous life. He saw the soul of Orpheus changing into a swan because he would not be born of a woman; there was Thamyras becoming a nightingale; musical birds, like the swan, choosing to be men; the twentieth soul, which was that of Ajax, preferring the life of a lion to that of a man, in remembrance of the injustice which was done to him in the judgment of the arms; and Agamemnon, from a like enmity to human nature, passing into an eagle. About the middle was the soul of Atalanta choosing the honours of an athlete, and next to her Epeus going into the nature of a workwoman; among the last was Thersites, who was changing himself into a monkey. Thither, the last of all, came Odysseus, and chose the lot of a private man, which lay neglected and could hardly be found, and when he found it he went away rejoicing, and said that he was weary of ambition, and that if he had been first instead of last, he would have made the same choice. And he saw men passing into animals, and wild and tame animals passing into one another.

When all the souls had chosen they went to Lachesis, who sent with

each of them their genius or attendant to fulfil their lot. He first of all brought them under the hand of Clotho, and drew them within the revolution of the spindle impelled by her hand; from her they were carried to Atropos, who made the threads irreversible; whence, without turning round, they passed beneath the throne of Necessity; and when they had all passed, they moved on in scorching heat to the desert of Forgetfulness and rested at evening by the river Unmindful, whose water could not be retained in any vessel; of this they had all to drink a certain quantity—some of them drank more than was required, and he who drank forgot all things. Er himself was prevented from drinking. When they had gone to rest, about the middle of the night there were thunderstorms and earthquakes, and suddenly they were all driven divers ways, shooting like stars to their birth. Concerning his return to the body, he only knew that awaking suddenly in the morning he saw himself lying on the pyre.

Thus, Glaucon, the tale has been saved, and will be our salvation if we believe that the soul is immortal, and hold fast to the heavenly way of Justice and Knowledge. So shall we pass undefiled over the river of Lethe, and be dear to ourselves and to the Gods, and have a crown of reward and happiness both in this world and also in the millennial pilgrimage of the other.

The Tenth Book of the Republic of Plato falls into two divisions; first, resuming an old thread which has been interrupted, Socrates assails the poets, who, now that the nature of the soul has been analysed, are seen to be very far gone from the truth; and secondly, having shown the reality of the happiness of the just, he demands that appearance shall be restored to him, and then proceeds to prove the immortality of the soul. The argument, as in the *Phaedo* and *Gorgias*, is supplemented by the vision of a future life.

Why Plato, who was himself a poet, and whose dialogues are poems and dramas, should have been hostile to the poets as a class, and especially to the dramatic poets; why he should not have seen that truth may be embodied in verse as well as in prosè, and that there are some indefinable lights and shadows of human life which can only be expressed in poetry—some elements of imagination which always entwine with reason; why he should have supposed epic verse to be

inseparably associated with the impurities of the old Hellenic mythology; why he should try Homer and Hesiod by the unfair and prosaic test of utility,—are questions which have always been debated amongst students of Plato. Though unable to give a complete answer to them, we may show—first, that his views arose naturally out of the circumstances of his age; and secondly, we may elicit the truth as well as the error which is contained in them.

He is the enemy of the poets because poetry was declining in his own lifetime, and a theatrocracy, as he says in the *Laws* (iii. 701 A), had taken the place of an intellectual aristocracy. Euripides exhibited the last phase of the tragic drama, and in him Plato saw the friend and apologist of tyrants, and the Sophist of tragedy. The old comedy was almost extinct; the new had not yet arisen. Dramatic and lyric poetry, like every other branch of Greek literature, was falling under the power of rhetoric. There was no 'second or third' to Æschylus and Sophocles in the generation which followed them. Aristophanes, in one of his later comedies (*Frogs*, 89 foll.), speaks of 'thousands of tragedy making prattlers,' whose attempts at poetry he compares to the chirping of swallows; 'their garrulity went far beyond Euripides;'—'they appeared once upon the stage, and there was an end of them.' To a man of genius who had a real appreciation of the godlike Æschylus and the noble and gentle Sophocles, though disagreeing with some parts of their 'theology' (*Rep.* ii. 380), these 'minor poets' must have been contemptible and intolerable. There is no feeling stronger in the dialogues of Plato than a sense of the decline and decay in literature as well as in politics which marked his own age. Nor can he have been expected to look with favour on the licence of Aristophanes, now at the end of his career, who had begun by satirizing Socrates in the *Clouds*, and in a similar spirit forty years afterwards had satirized the founders of ideal commonwealths in his *Eccleziastusæ*, or *Female Parliament* (cp. x. 606 C).

There were other reasons for the antagonism of Plato to poetry. The profession of an actor was regarded by him as a degradation of human nature, for 'one man in his life' cannot 'play many parts;' the characters which the actor performs seem to destroy his own character, and to leave nothing which can be truly called himself. Neither can any man live his life and act it. The actor at the theatre is a figure of the actor in the world. Taking this view Plato is more decided in his expulsion of the dramatic than of the epic poets, though he must have known that

the Greek tragedians afforded noble lessons and examples of virtue and patriotism, to which nothing in Homer can be compared. But great dramatic or even great rhetorical power is hardly consistent with firmness or strength of mind, and dramatic talent is often incidentally associated with a dissolute character.

In the Tenth Book Plato introduces a new series of objections. First, he says that the poet or painter is an imitator, and in the third degree removed from the truth. His creations are not tested by rule and measure; they are only appearances. In modern times we should say that art is not merely imitation, but rather the expression of the ideal in forms of sense. Even adopting the humble image of Plato, from which his argument derives a colour, we should maintain that the artist may enoble the bed which he paints by the folds of the drapery, or by the feeling of home which he introduces; and there have been modern painters who have imparted such an ideal interest to a blacksmith's or a carpenter's shop. The eye or mind which feels as well as sees can give dignity and pathos to a ruined mill, or a straw-built shed [Rembrandt], to the hull of a vessel 'going to its last home' [Turner]. Still more would this apply to the greatest works of art, which seem to be the visible embodiment of the divine. Had Plato been asked whether the Zeus or Athene of Pheidias was the imitation of an imitation only, would he not have been compelled to admit that something more was to be found in them than in the form of any mortal; and that the rule of proportion to which they conformed was 'higher far than any geometry or arithmetic could express?' (Polit. 257 A.)

Again, Plato objects to the imitative arts that they express the emotional rather than the rational part of human nature. He does not admit Aristotle's theory, that tragedy or other serious imitations are a purgation of the passions by pity and fear; to him they appear only to afford the opportunity of indulging them. Yet we must acknowledge that we may sometimes cure disordered emotions by expressing them; and that they often gain strength when pent up within our own breast. All indulgence of the feelings is not to be condemned. For there may be a gratification of the higher as well as of the lower,—thoughts which are too deep or too sad to be expressed by ourselves, may find an utterance in the words of poets. Every one would acknowledge that there have been times when they were consoled and elevated by strains of music or by the sublimity of architecture. Plato has himself admitted,

in the earlier part of the Republic, that the arts might have the effect of harmonizing as well as of enervating the mind; but in the Tenth Book he regards them through a Stoic or Puritan medium. He asks only 'what good have they done?' and is not satisfied with the reply, that 'they have given innocent pleasure to mankind.'

He tells us that he rejoices in the banishment of the poets, since he has found by the analysis of the soul that they are concerned with the inferior faculties. He means to say that the higher faculties have to do with universals, the lower with particulars of sense. The poets are on a level with their own age, but not on a level with Socrates and Plato; and he was well aware that Homer and Hesiod could not be made a rule of life by any process of legitimate interpretation; his ironical use of them is in fact a denial of their authority; he saw, too, that the poets were not critics—as he says in the Apology, 'any one was a better interpreter of their writings than they were themselves.' (22 C.) He too had ceased to be a poet when he became a disciple of Socrates; though, as he tells us of Solon, 'he might have been one of the greatest of them, if he had not been deterred by other pursuits.' (Tim. 21 C.) Thus from many points of view there is an antagonism between Plato and the poets, which was foreshadowed to him in the old quarrel between philosophy and poetry. The poets, as he says in the Protagoras (316 E), were the Sophists of their day; and his dislike of the one is reflected on the others. He regards them generally as the enemies of reasoning and abstraction, though in the case of Euripides more with reference to his immoral sentiments about tyrants and the like. For Plato is the prophet who came to convince the world—first of the fallibility of sense and opinion, and secondly of the reality of abstract ideas. Whatever strangeness there may be in modern times in opposing philosophy to poetry, which to us seem to have so many elements in common, the strangeness will disappear if we conceive of poetry as allied to sense, and of philosophy as equivalent to thought and abstraction. Unfortunately the very word idea, which to Plato is expressive of the most real of all things, is associated in our minds with an element of subjectiveness and unreality. We may note also how he differs from Aristotle who declares poetry to be truer than history, for the opposite reason, because it is concerned with universals, not like history, with particulars (Poet. ix. 3).

The things that are seen are opposed in Scripture to the things that

are unseen—they are equally opposed in Plato to universals and ideas. To him all particulars appear to be floating about in a world of sense; they have a taint of error or even of evil. There is no difficulty in seeing that this is an illusion; for there is no more error or variation in an individual man, horse, bed, &c., than in the class man, horse, bed, &c.; nor is the truth which is displayed in individual instances less certain than that which is conveyed through the medium of ideas. But Plato, who is deeply impressed with the real importance of universals as instruments of thought, attributes to them an essential truth which is imaginary and unreal; for universals may be often false and particulars true. Had he attained to any clear conception of the individual, which is the synthesis of the universal and the particular; or had he been able to distinguish between opinion and sensation, which the ambiguity of the words *δόξα*, *φαίνεσθαι*, *εἰκὸς* and the like, tended to confuse, he would not have denied truth to the particulars of sense.

But the poets are also the representatives of falsehood and feigning in all departments of life and knowledge, like the sophists and rhetoricians of the Gorgias and Phaedrus; they are the false priests, false prophets, lying spirits, enchanters of the world. There is another count put into the indictment against them by Plato, that they are the friends of the tyrant, and bask in the sunshine of his patronage. Despotism in all ages has had an apparatus of false ideas and false teachers at its service—in the history of Modern Europe as well as of Greece and Rome. For no government of men depends solely upon force;—without some corruption of literature and morals—some appeal to the imagination of the masses—some pretence to the favour of heaven—some element of good giving power to evil (cp. i. 352) tyranny, even for a short time, cannot be maintained. The Greek tyrants were not insensible to the importance of awakening in their cause a Pseudo-Hellenic feeling; they were proud of successes at the Olympic games; they were not devoid of the love of literature and art. Plato is thinking in the first instance of Greek poets who had graced the courts of Dionysius or Archelaus: and the old spirit of freedom is roused within him at their prostitution of the Tragic Muse in the praises of tyranny. But his prophetic eye extends beyond them to the false teachers of other ages who are the creatures of the government under which they live. He compares the corruption of his contemporaries with the idea of a perfect society, and gathers up into one mass of error and evil the errors of mankind; to him they are

personified in the rhetoricians, sophists, poets who deceive and govern the world.

A further objection which Plato makes to poetry and the imitative arts is that they excite the emotions. Here the modern reader will be disposed to introduce a distinction which appears to have escaped him. For the emotions are neither bad nor good in themselves, and are not most likely to be controlled by the attempt to eradicate them, but by the moderate indulgence of them. And the vocation of art is to present thought in the form of feeling, to enlist the feelings on the side of reason, to inspire even for a moment courage or resignation; perhaps to suggest a sense of infinity and eternity in a way which mere language is incapable of attaining. True, the same power which in the purer age of art embodies gods and heroes only, may be made to express the voluptuous image of a Corinthian courtesan. But this only shows that art, like other outward things, may be turned to good and also to evil, and is not more closely connected with the higher than with the lower part of the soul. All imitative art is subject to certain limitations, and therefore necessarily partakes of the nature of a compromise. Something of ideal truth is sacrificed for the sake of the representation, and something in the exactness of the representation is sacrificed to the ideal. Still, works of art have a permanent element; they idealize and detain the passing thought, and are the intermediates between sense and ideas.

In the present stage of the human mind, poetry and other forms of fiction may certainly be regarded as a good. But we can also imagine the existence of an age in which a severer conception of truth has either banished or transformed them. At any rate we must admit that they hold a different place at different periods of the world's history. In the infancy of mankind poetry, with the exception of proverbs, is the whole of literature, and the only instrument of intellectual culture; in modern times she is the shadow or echo of her former self, and appears to have a precarious existence. Milton in his day doubted whether an epic poem was any longer possible. At the same time we must remember, that what Plato would have called the charms of poetry have been partly transferred to prose; he himself admits *ῥητορεία* in the *Politicus*, and proposes to find in the strain of law (*Laws* vii. 811) a substitute for the old poets. Among ourselves the creative power seems often to be growing weaker, and scientific fact to be more engrossing and overpowering to the mind than formerly. The illusion of the feelings commonly called love, has hitherto been the inspiring influence of modern poetry and romance,

and has exercised a humanizing if not a strengthening influence on the world. But may not the stimulus which love has given to fancy be some day exhausted? The modern English novel which is the most popular of all forms of reading is not more than a century or two old: will the tale of love a hundred years hence, after so many thousand variations of the same theme, be still received with unabated interest?

Art cannot claim to be on a level with philosophy or religion, and may often corrupt them. It is possible to conceive a mental state in which all artistic representations are regarded as a false and imperfect expression, either of the religious ideal or of the philosophical ideal. The fairest forms may be revolting in certain moods of mind, as is proved by the fact that the Mahommedans, and many sects of Christians, have renounced the use of pictures and images. The beginning of a great religion, whether Christian or Gentile, has not been 'wood or stone,' but a spirit moving in the hearts of men. The disciples have met in a large upper room or in 'holes and caves of the earth'; in the second or third generation, they have had mosques, temples, churches, monasteries. And the revival or reform of religions, like the first revelation of them, has come from within and has generally disregarded external ceremonies and accompaniments.

But poetry and art may also be the expression of the highest truth and the purest sentiment. Plato himself seems to waver between the two opposite views—when, as in the third Book, he insists that youth should be brought up amid wholesome imagery; and again in Book x, when he banishes the poets from his Republic. Admitting that the arts which some of us almost deify have fallen short of their higher aim, we must admit on the other hand that to banish imagination wholly would be suicidal as well as impossible. For nature too is a form of art; and a breath of the fresh air or a single glance at the varying landscape would in an instant revive and reillumine the extinguished spark of poetry in the human breast. In the lower stages of civilization imagination more than reason distinguishes man from the animals; and to banish art would be to banish thought, to banish language, to banish the expression of all truth. No religion is wholly devoid of external forms; even the Mahometan who renounces the use of pictures and images has a temple in which he worships the Most High, as solemn and beautiful as any Greek or Christian building. Feeling too and thought are not really opposed; for he who thinks must feel before he can execute:—And the highest

thoughts, when they become familiarized to us, are always tending to pass into the form of feeling.

Plato does not seriously intend to expel poetry from human life. But he feels strongly the unreality of poets; and he is protesting against the degeneracy of them in his own day as we might protest against the want of serious purpose in modern poetry, against the unseemliness or extravagance of some of our novelists, against the time-serving of preachers or public writers, against the regardlessness of truth, which to the eye of the philosopher seems to characterize the greater part of the world. For we too have reason to complain that our poets and novelists 'paint inferior truth' and are concerned 'with the inferior part of the soul'; that the readers of them become what they read and are injuriously affected by them. And we look in vain for that healthy atmosphere of which Plato speaks: 'the beauty which meets the sense like a breeze and insensibly draws the soul, even in childhood, into harmony with the beauty of reason.'

For there might be a poetry which would be the hymn of divine perfection, the harmony of justice and truth among men: a strain which should renew the youth of the world, as in primitive ages the poet was men's only teacher and best friend: which would find materials in the living present as well as in the romance of the past, and might subdue to the fairest forms of speech and verse the intractable materials of modern civilization: which might elicit the simple principles, or, as Plato would have called them, the essential forms of truth and goodness out of the variety of opinion and the complexity of modern society: which would preserve all the good of each generation and leave the bad unsung: which should be based not on vain longings or faint imaginings, but on a clear insight into the nature of man. Then the tale of love might begin again in poetry or prose, two in one, united in the pursuit of knowledge, or the service of God and man; and feelings of love might still be the incentive to great thoughts and heroic deeds as in the days of Dante or Petrarch; and many types of manly and womanly beauty might appear among us, rising above the ordinary level of humanity, and many lives which were like poems (*Laws*, vii. 817 B) be not only written but lived among us. A few such strains have been heard among men in the tragedies of Æschylus and Sophocles, whom Plato quotes, not, as Homer is quoted by him, in irony, but with deep and serious approval; in the poetry of Milton and Wordsworth, and in passages of other English

poets,—first and above all in the Hebrew prophets and psalmists. Shakespeare has taught us how great men should speak and act; he has drawn characters of a wonderful purity and depth; he has ennobled the human mind, but, like Homer (Rep. x. 599 foll.), he ‘has left no way of life.’ The next greatest poet of modern times, Goethe, is concerned with ‘a lower degree of *truth*’; he paints the world as a stage on which ‘all the men and women are merely players’; he cultivates life as an art, but he furnishes no ideals of life and action. The poet may rebel against any attempt to set limits to his fancy; and he may argue truly that moralizing in verse is not poetry. Possibly, like Mephistopheles in Faust, he may retaliate on his adversaries. But the philosopher will still be justified in asking ‘How may the heavenly gift of poesy be devoted to the good of mankind?’

Returning to Plato, we may observe that a similar mixture of truth and error appears in other parts of the argument. He is aware of the absurdity of mankind framing their whole lives according to Homer; just as in the Phaedrus he intimates the absurdity of interpreting mythology upon rational principles; both these were the modern tendencies of his own age, which he deservedly ridicules. On the other hand, his argument that Homer, if he had been able to teach mankind anything worth knowing, would not have been allowed by them to go about begging as a rhapsodist, is both false and contrary to the spirit of Plato. (Cp. Rep. vi. 489 A foll.) It may be compared with that other paradox of the Gorgias, that ‘no statesman was ever unjustly put to death by the city of which he was the head’; and that ‘no Sophist was ever defrauded by his pupils.’ (Gorg. 519 foll.)

The argument for immortality seems to rest on the absolute dualism of soul and body. Admitting the existence of the soul, we know of no force which is able to put an end to her. She is not destroyed by her own proper evil, which is sin; and still less can she be by any other. Yet Plato has acknowledged that the soul may be so overgrown by the incrustations of earth as to lose her original form, and in the Timæus he recognizes more strongly than in the Republic the influence which the body has over the mind, denying even the voluntariness of human actions, on the ground that they proceed from physical states. (Tim. 86.) In the Republic, as elsewhere, he wavers between the original soul which has to be restored, and the character which is developed by training and education.

The vision of another world is ascribed to Er, the son of Armenius, who is said by Clement of Alexandria to have been Zoroaster. The tale has certainly an oriental character, and may be compared with the pilgrimages of the soul in the Zend Avesta (cp. Haug, *Zend Avesta*, p. 197). But no trace of acquaintance with Zoroaster is found elsewhere in Plato's writings, and there is no reason for giving him the name of Er, the Pamphylian. The philosophy of Heracleitus cannot be shown to be borrowed from Zoroaster, and still less the myths of Plato.

The local arrangement of the vision is less distinct than that of the Phaedrus and Phaedo. Astronomy is mingled with symbolism and mythology; the great sphere of heaven is represented under the symbol of a cylinder or box, containing the orbits of the planets and the fixed stars; this depends upon a spindle which turns on the knees of Necessity; the revolutions of the eight orbits are guided by the fates, and their harmonious motion produces the music of the spheres. Through the innermost or eighth of these, which is the moon, is passed the pole or axis; but it is doubtful whether this is the continuation of the column of light, from which the travellers contemplate the heavens. The words of Plato imply that they are connected, but not the same; the column of light is clearly not of adamant. The cylinder containing the orbits of the stars is almost as much a symbol as the figure of Necessity turning the spindle;—for the outermost rim is the sphere of the fixed stars, and nothing is said about the intervals of space which divide the paths of the stars in the heavens. The description is both a picture and an orrery. The column of light is probably not the milky way, which is neither straight, nor like a rainbow, but the imaginary axis of the earth. This is compared to the rainbow in respect not of form but of colour, and not to the undergirders of a trireme, but to the straight rope running from prow to stern in which the undergirders meet.

The orrery of the Republic differs in its mode of representation from the circles of the same and of the other in the Timaeus. In both the fixed stars are distinguished from the planets, and they move in orbits without them, although in an opposite direction: in the Republic (as in the Timaeus) they are all moving round the axis of the world, but we are not certain that in the former they are moving round the earth. No distinct mention is made in the Republic of the circles of the same and other; although both in the Timaeus and in the Republic the motion of the fixed stars is supposed to coincide with the motion

of the whole. The relative thickness of the rims is perhaps designed to express the relative distances of the planets. Plato probably intended to represent the earth, from which Er and his companions are viewing the heavens, as stationary in place; but whether or not herself revolving, unless this is implied in the revolution of the axis, is uncertain. (Cp. Timæus.) The spectator might be supposed to look at the heavenly bodies, either from above or below. The earth is a sort of earth and heaven in one, like the heaven of the Phædrus, on the back of which the spectator goes out to take a peep at the stars and is borne round in the revolution. There is no distinction between the equator and the ecliptic. But Plato is no doubt led to imagine that the planets have an opposite motion to that of the fixed stars, in order to account for their appearances in the heavens. In the description of the meadow, and the retribution of the good and evil after death, there are traces of Homer.

The description of the axis as a spindle, and of the heavenly bodies as forming a whole, partly arises out of the attempt to connect the motions of the heavenly bodies with the mythological image of the web, or weaving of the Fates. The giving of the lots, the weaving of them and the making of them irreversible, which are ascribed to the three Fates—Lachesis, Clotho, Atropos, are obviously derived from their names. The element of chance in human life is indicated by the order of the lots. But chance, however adverse, might be overcome by the wisdom of man, if he knew how to choose aright; there was a worse enemy to man than chance, and this was himself. He who was moderately fortunate in the number of the lot—even the very last comer—might have a good life if he chose with wisdom. And as Plato does not like to make an assertion which is unproven, he more than confirms this statement a few sentences afterwards by the example of Odysseus, who chose last. But the virtue which is founded on habit is not sufficient to enable a man to choose; he must add to virtue knowledge, if he is to act rightly when placed in new circumstances. The routine of good actions and good habits is an inferior sort of goodness; and, as Coleridge says, ‘Common sense is intolerable which is not based on metaphysics,’ so Plato would have said, ‘Custom is worthless which is not based upon philosophy.’

The freedom of the will to refuse the evil and to choose the good is distinctly asserted. ‘Virtue is free, and as a man honours or dishonours

her he will have more or less of her.' The life of man is 'rounded' by necessity; there are circumstances prior to birth which affect him. (Cp. Pol. 273 B.) But within the walls of necessity there is an open space in which he is his own master, and can study for himself the effects which the variously compounded gifts of nature or fortune have upon the soul, and act accordingly. All men cannot have first choices in everything. But the lot of all men is good enough, if they choose wisely and will live diligently.

The verisimilitude which is given to the pilgrimage of a thousand years, by the intimation that Ardiaeus had lived a thousand years before; the coincidence of Er coming to life on the twelfth day after he was supposed to have been dead with the seven days which the pilgrims passed in the meadow, and the four days during which they journeyed to the column of light; the precision with which the soul is mentioned who chose the twentieth lot; the passing remarks that there was no definite character among the souls, and that the souls which had chosen ill blamed any one rather than themselves; or that some of the souls drank more than was necessary of the waters of forgetfulness, while Er himself was hindered from drinking; the desire of Odysseus to rest at last, unlike the conception of him in Dante and Tennyson; the feigned ignorance of how Er returned to the body, when the other souls went shooting like stars to their birth,—add greatly to the truthfulness of the narrative. They are such touches of nature as the art of Defoe might have introduced when he wished to win credibility for marvels and apparitions.

There still remain to be considered some points which have been intentionally reserved to the end: (I) the Janus-like character of the Republic, which presents two faces—one an Hellenic state, the other a kingdom of philosophers. Connected with the latter of the two aspects are (II) the paradoxes of the Republic, as they have been termed by Morgenstern: (α) the community of property; (β) of families; (γ) the rule of philosophers; (δ) the analogy of the individual and the State, which, like some other analogies in the Republic, is carried too far. We may then proceed to consider (III) the subject of education as conceived by Plato, bringing together in a general view the education of youth and the education of after life; lastly, (IV), some light may be

thrown on the Republic of Plato by his imitators; and hence we may take occasion to consider the nature and value of political ideals.

I. Plato expressly says that he is intending to found an Hellenic State (Book v. 470 E). Many of his regulations are characteristically Spartan; such as the prohibition of gold and silver, the common meals, the training of youth in a military gymnastic, the gymnastic exercises of the women. The life of Sparta was the life of a camp (Laws ii. 666 E), enforced even more rigidly in time of peace than in war; the citizens, like Plato's citizens, were forbidden to trade—they were to be soldiers and not shopkeepers. Nowhere else in Greece was the individual so completely subjected to the State; the time when he was to marry, the education of his children, the food which he was to eat, were prescribed by law. Some of the best enactments in the Republic, such as the reverence to be paid to parents and elders, and some of the worst, such as the exposure of deformed children, are borrowed from the practice of Sparta. The encouragement of friendships between men and youths, or of men with one another, as affording incentives to bravery, is also Spartan, and in Sparta a nearer approach was made than in any other Greek State to equality of the sexes, and to community of property; while there was probably less of licentiousness in the sense of immorality, the tie of marriage was regarded more lightly than in the rest of Greece. The 'suprema lex' was the preservation of the family, and the interest of the State. The coarse strength of a military government was not favourable to purity and refinement; and the excessive strictness of some regulations seems to have produced a reaction. Of all Hellenes the Spartans were most accessible to bribery; several of the greatest of them might be described in the words of Plato as having a 'fierce secret longing after gold and silver.' Though not in the strict sense communists, the principle of communism was maintained among them in their division of lands, in their common meals, in their slaves, and in the free use of one another's goods. Marriage was a public institution: and the women were educated by the State, and sang and danced in public with the men.

Many traditions were preserved at Sparta of the severity with which the magistrates had maintained the primitive rule of music and poetry; as in the Republic of Plato, the new-fangled poet was to be expelled. Hymns to the Gods, which were the only kind of music allowed at Sparta, are the only kind which he has admitted into his ideal State.

The council of elder men also corresponds to the Spartan *gerusia*; and the freedom with which they are permitted to judge about matters of detail agrees with what we are told of that institution. Once more, the military rule of not spoiling the dead or offering arms at the temples; the moderation in the pursuit of enemies; the importance attached to the physical well-being of the citizens; the use of warfare for the sake of defence rather than of aggression, are features probably suggested by the spirit and practice of Sparta.

To the Spartan type the ideal State reverts in the first decline; and the character of the individual timocrat is borrowed from the Spartan citizen. The love of Lacedaemon not only affected Plato and Xenophon, but was shared by many undistinguished Athenians; there they seemed to find a principle which was wanting in their own democracy. The *εὐκοσμία* of Sparta attracted them, that is to say, not the goodness of their laws, but the spirit of order and loyalty which prevailed there. Fascinated by the idea, they would imitate the Lacedaemonians in their dress and manners; they were known to the contemporaries of Plato as 'the persons who had their ears bruised,' like the Roundheads of the Commonwealth. The love of another church or country when seen at a distance only, the longing for an imaginary simplicity in civilized times, the desire of what we are not, are tendencies of the human mind which are often displayed among ourselves. Such feelings would meet with a response in the Republic of Plato.

But there are other features of the Platonic Republic, as, for example, the literary and philosophical education, and the grace and beauty of life, which are the reverse of Spartan. Plato wishes to give his citizens a taste of Athenian freedom as well as of Lacedaemonian discipline. His individual genius is purely Athenian, although in theory he is a lover of Sparta; and he is something more than either—he has also a true Hellenic feeling. He is desirous of humanizing the wars of Hellenes against one another; he acknowledges that the Delphian God is the grand hereditary interpreter of all Hellas. The spirit of harmony and the Dorian mode are to prevail, and the whole State is to have an external beauty which is the reflex of the harmony within. But he has not yet found out the truth which he afterwards enunciated in the Laws (i. 628 D)—that he was a better legislator who made men to be of one mind, than he who trained them for war. The citizens, as in other Hellenic States, democratic as well as aristocratic, are really

an upper class; for, although no mention is made of slaves, the lower classes are allowed to fade away into the distance, and are represented in the individual by the passions. Plato has no idea either of a social State in which all classes are harmonised, or of a federation of the world in which different nations have a place. His city is equipped for war rather than for peace, and this would seem to be justified by the ordinary condition of Hellenic States. The myth of the earth-born men is an embodiment of the orthodox tradition of Hellas, and the allusion to the four ages of the world is also sanctioned by the authority of Hesiod and the poets. Thus we see that the Republic is partly founded on the ideal of the old Greek *polis*, partly on the actual circumstances of Hellenic States. Plato, like the old painters, retains the traditional form, and like them he has also a vision of a city in the clouds.

There is yet another thread which is interwoven in the texture of the work; for the Republic is not only a Dorian State, but a Pythagorean league. The way of life which was connected with the name of Pythagoras, like the Catholic monastic orders, showed the power which the mind of an individual might exercise over his contemporaries, and might naturally suggest to Plato the possibility of reviving such 'mediaeval institutions.' The Pythagoreans, like Plato, enforced a rule of life and a moral and intellectual training. The influence ascribed to music, which to us seems exaggerated, is also a Pythagorean feature, and is not to be regarded as representing the real influence of music in the Greek world. More nearly than any other government of Hellas, the Pythagorean league of three hundred was an aristocracy of virtue. For once in the history of mankind 'the philosophy of order or *κόσμος*, expressing and consequently enlisting on its side the combined endeavours of the better part of the people, obtained the management of public affairs and held possession of it for a considerable time' (until about B.C. 500). Probably only in states prepared by Dorian institutions would such a league have been possible. The rulers, like Plato's *φύλακες*, were required to submit to a severe training in order to prepare the way for the education of the other members of the community. Long after the dissolution of the Order, eminent Pythagoreans, such as Archytas of Tarentum, retained their political influence over the cities of Magna Grecia. There was much here that was suggestive to the kindred spirit of Plato, who had doubtless meditated deeply on the

'way of life of Pythagoras' and his followers. Slight traces of Pythagoreanism are to be found in the mystical number of the State, in the number which expresses the interval between the king and the tyrant, in the doctrine of transmigration, in the music of the spheres, as well as in the great though secondary importance ascribed to mathematics in education.

But as in his philosophy, so also in the form of his State, he goes far beyond the old Pythagoreans. He attempts a task really impossible, which is to unite the past of Greek history with the future of philosophy, analogous to that other impossibility, which has often been the dream of Christendom, the attempt to unite the past history of Europe with the kingdom of Christ. Nothing actually existing in the world at all resembles Plato's ideal State; nor does he himself imagine that such a State is possible. This he repeats again and again; e. g. in the Laws (Book v. 739), where, casting a glance back on the Republic, he admits that the perfect state of communism and philosophy is unattainable in the present state of the world, though still to be retained as a pattern. The same doubt is implied in the earnestness with which he argues in the Republic (Book v. 472 D) that ideals are none the worse because they cannot be realized in fact, and in the chorus of laughter, like 'the letting out of water,' which, as he anticipates, will greet the mention of his proposals, though like other writers of fiction, he uses all his art to give reality to his inventions. When asked how the ideal polity can come into being, he answers ironically, when one son of a king becomes a philosopher; he designates the fiction of the earth-born men as 'a noble lie'; and at the end of the ninth Book, when he has completed the structure, he fairly tells you that his Republic is a vision only which in some sense may have reality, but not in the vulgar one of a reign of philosophers upon earth. It has been said that Plato flies as well as walks, but this hardly expresses the whole truth, for he flies and walks at the same time, and is in the air and on firm ground in successive instants.

Niebuhr has asked a trifling question, which may be briefly noticed in this place—Was Plato a good citizen? If by this is meant, Was he loyal to Athenian institutions? he can hardly be said to be the friend of democracy: but neither is he the friend of existing forms of government; all of them he regarded as 'states of faction' (Laws viii. 832 C); none of them came up to his ideal of a voluntary rule over voluntary subjects,

which seems indeed more nearly to describe democracy than any other, and the worst of them is tyranny. The truth is, that the question has hardly any meaning when applied to a great philosopher whose writings are not meant for a particular age and country, but for all time and all mankind. The decline of Athenian politics was probably the motive which led Plato to frame an ideal State, and the Republic may be regarded as reflecting the departing glory of Hellas. As well might we complain of St. Augustin, whose great work 'The City of God' originated in a similar motive, for not being loyal to the Roman Empire; or even a nearer parallel might be afforded by the first Christians, who cannot fairly be charged with being bad citizens because, though 'subject to the higher powers,' they were looking forward to a city which is in heaven.

II. The idea of the perfect State is full of paradox when judged of according to the ordinary notions of mankind. The paradoxes of one age often become the commonplaces of the next; but the paradoxes of Plato are at least as paradoxical to us as they were to his contemporaries. The modern world has either ridiculed them as absurd or denounced them as unnatural and immoral; yet since they are the thoughts of one of the greatest of human intelligences, and of one who has done most to elevate morality and religion, they seem to deserve a better treatment at our hands. We may have to address the public, as Plato does poetry, and assure them that we mean no harm to existing institutions. But still the consideration of social questions in their most abstract form, may not be without use as a speculation, even if incapable of being reduced to practice.

(a) The first paradox is the community of goods, which is mentioned slightly at the end of the third Book, and seemingly, as Aristotle observes, is confined to the guardians; at least no mention is made of the other classes. But the omission is not of any real significance, and probably arises out of the plan of the work, which prevents the writer from entering into details.

Aristotle censures the community of property much in the spirit of modern political economy, as tending to repress industry, and as doing away with the spirit of benevolence. Modern writers almost refuse to consider the subject, which is supposed to have been long ago settled by the common opinion of mankind. But it must be remembered that the sacredness of property is a notion far more fixed in modern than in ancient times. The world has grown older, and is therefore more conservative. Primitive society offered many examples

of land held in common, either by a tribe or by a township, and such may probably have been the original form of landed tenure. Ancient legislators had invented various modes of dividing and preserving the divisions of land among the citizens; according to Aristotle there were nations who held the land in common and divided the produce, and there were others who divided the land and stored the produce in common. The evils of debt and the inequality of property were far greater in ancient than in modern times, and the accidents to which property was subject from war, or revolution, or taxation, or other legislative interference, were also greater. All these circumstances gave property a less fixed and sacred character. The early Christians are believed to have held their property in common, and the principle is sanctioned by the words of Christ himself, and has been maintained as a counsel of perfection in almost all ages of the Church. Nor have there been wanting instances of modern enthusiasts who have made a religion of communism; in every age of religious excitement, notions like Wycliffe's 'inheritance of grace' have tended to prevail. A like spirit, but fiercer and more violent, has appeared in politics. 'The preparation of the Gospel of peace' is also the red flag of Republicanism.

We can hardly judge what effect Plato's views would have upon his own contemporaries; they would perhaps have seemed to them only an exaggeration of the Spartan commonwealth. Even modern writers would acknowledge that the right of private property is based on expediency, and may be interfered with in a variety of ways for the public good. Any other mode of vesting property which was found to be more advantageous, would in time acquire the same basis of right; 'the most useful,' in Plato's words, 'would be the most sacred.' The lawyers and ecclesiastics of former ages would have spoken of property as a sacred institution. But they only meant by such language to oppose the greatest amount of resistance to any invasion of the rights of individuals and of the Church.

When we consider the question, without any fear of immediate application to practice, in the spirit of Plato's Republic, are we quite sure that the received notions of property are the best? Is the distribution of wealth which is customary in civilized countries the most favourable that can be conceived for the education and development of the mass of mankind? Can 'the spectator of all time and all existence' be quite convinced that one or two thousand years hence, great changes will not have

taken place in the rights of property, or even that the very notion of property, beyond what is necessary for personal maintenance, may not have disappeared? This was a distinction familiar to Aristotle, though likely to be laughed at among ourselves. Such a change would not be greater than some other changes through which the world has passed in the transition from ancient to modern society; as, for example, the emancipation of the serfs in Russia, or the abolition of slavery in our West India colonies, or greater than the interval which separates the Eastern village community from the Western world. And to accomplish such a revolution in the course of centuries, would not imply a more rapid rate of progress than has actually existed during the last fifty or sixty years. The kingdom of Japan has changed more in five or six years, than Europe in five or six hundred. Many opinions and beliefs which have been cherished among ourselves quite as strongly as the sacredness of property have passed away, and the most untenable propositions respecting the right of bequests or entail have been maintained with as much fervour as the most moderate. The reflection will occur that the state of society can hardly be final in which the interests of thousands are perilled on the life or character of a single person. And many will indulge the hope that the state in which we live will be only transitional, and may conduct to a higher state, in which property, besides ministering to the enjoyment of the few, may also furnish the means of the highest culture to all, and will be a greater benefit to the public generally, and also more under the control of public authority. There may come a time when the saying, 'Have I not a right to do what I will with my own,' may appear to be a barbarous relic of individualism; when the possession of a part may be a greater blessing to each and all than the possession of the whole is now to any one.

Such reflections appear visionary to the eye of the practical statesman, but they are within the range of possibility to the philosopher. He can imagine that in some distant age or clime, and through the influence of some individual, the notion of common property may or might have sunk as deep into the heart of a race, and have become as fixed to them, as private property is to us. He knows that this latter institution is not more than two or three thousand years old: may not the end revert to the beginning? In our own age even Utopias may affect the spirit of legislation, and the philosopher may be allowed sometimes to feast his imagination with speculations which he will never realize.

The objections that would be generally urged against Plato's community of property, are the old ones of Aristotle, that motives for exertion would be taken away, and that disputes would arise when each was dependent upon all. Mankind could never become disinterested, or regard the interests of the community as the interests of the individual. But it may be doubted whether our present individualism is not rather an artificial result of the industrial state of modern Europe. Moral and political feelings seem from time to time to rise up and reassert themselves, even in a world bound hand and foot in the chains of economic necessity. And if we cannot expect the mass of mankind to become disinterested, at any rate we seem to observe in them the growth of a spirit of party and a power of organization which fifty years ago would never have been suspected. The same forces which have revolutionized the political system of Europe, may affect a similar change in the social and industrial relations of mankind. And if we suppose the influence of some good as well as neutral motives working in the community, there will be no absurdity in expecting that the mass of mankind having power, and becoming enlightened about the higher possibilities of human life, when they learn how much more is attainable for all than is at present the possession of a favoured few, may pursue the common interest with an intelligence and persistency which the world has not yet seen.

(β) Neither to the mind of Plato or Aristotle did the doctrine of community of property at all present the same difficulty, or appear the same violation of the common Hellenic sentiment, as the paradox of the community of wives and children. This he prefaces by another proposal, that the pursuits of men and women shall be the same, and that to this end they shall have a common training and education. Male and female animals have the same pursuits—why not also the two sexes of man?

But here we seem to have fallen into a contradiction with our former principle, that different natures should have different pursuits. Men and women differ: are they capable then of the same pursuits? Is not the proposal inconsistent with our notion of the division of labour? The objection is no sooner raised than answered, for, according to Plato, there is no organic difference between men and women, but only the accidental difference of the one bearing and the other begetting children. Following the analogy of the other animals, Plato contends that all natural gifts are scattered about indifferently among men and women, though there may be a superiority of degree on the part of the men.

The objection on the score of delicacy to men and women partaking of the same gymnastic exercises, is met by Plato's assertion that the existing feeling is a matter of habit.

That Plato should have emancipated himself from the ideas of his own country and from the example of the East, shows a wonderful independence of mind. He is conscious that women are half the human race, and in some respects the most important half (*Laws*, vi. 781 B). He brings philosophy to bear upon a question which both in ancient and modern times has been chiefly regarded in the light of custom or feeling. The Greeks had noble conceptions of womanhood in the goddesses Athene and Artemis, and in the heroines Antigone and Andromache. But these ideals had no counterpart in actual life. The Athenian woman was in no way the equal of her husband; she was not the entertainer of his guests or the mistress of his house, but only his housekeeper and the mother of his children. She took no part in military or political matters; nor is there any instance in the later ages of Greece of a woman becoming famous in literature. 'Hers is the greatest glory who has the least renown among men,' is the historian's conception of feminine excellence. A very different ideal of womanhood is held up by Plato to the world; she is to be the companion of the man, and to share with him in the toils of war and in the cares of the government. She is to be similarly trained both in bodily and mental exercises. She is to lose as far as possible the incidents of maternity and the characteristics of the female sex.

The modern antagonist of the equality of the sexes would argue that the differences between men and women are not confined to the single point urged by Plato; that sensibility, gentleness, grace, are the qualities of women, while energy, strength, higher intelligence, are to be looked for in men. And the criticism is true: the differences affect the whole nature, and are not, as Plato supposes, confined to a single point. But neither can we say how far these differences are due to education and the opinions of mankind, or physically inherited from the habits and opinions of former generations. Women have been always taught, not exactly that they are slaves, but that they are in an inferior position, which is also supposed to have compensating advantages; and to this position they have conformed. Add to this that the physical form may easily change in the course of generations through the mode of life; and the weakness or delicacy, which was once a matter of opinion, may pass into a physical fact. The difference between the two sexes varies greatly in different

countries and ranks of society, and at different ages in the same individuals. And Plato may have been right in denying that there was any ultimate difference in the sexes other than that which exists in animals, because all other differences may be conceived to disappear in other states of society, or under different circumstances of life and training.

(γ) The first wave having been passed, we proceed to the second—community of wives and children. ‘Is it possible? Is it desirable?’ For, as Glaucon intimates, and as we far more strongly insist, ‘Great doubts may be entertained about both these points.’ Any free discussion of the question is impossible, and mankind are perhaps right in not allowing the ultimate bases of social life to be examined. Still, the manner in which Plato arrived at his conclusions should be considered. For here, as Mr. Grote has remarked, is a wonderful thing, that one of the wisest and best of men should have entertained ideas of morality which are wholly at variance with our own. And if we would do Plato justice, we must examine carefully the character of his proposals. First, we may observe that the relations of the sexes supposed by him are the reverse of licentious: he seems rather to aim at an impossible strictness. On the other hand, there is no sentiment or imagination in the connections which men and women are supposed to form; human nature is reduced to the level of the animals, neither exalting to heaven, nor yet abusing the natural instincts. All that world of poetry and fancy which the passion of love has called forth in modern literature and romance would have been banished by Plato (see above p. 144 foll.). The arrangements of marriage in the Republic are directed to one object—the improvement of the race. In successive generations a great development both of bodily and mental qualities might be possible. The experience of animals showed that mankind could within certain limits receive a change of nature. And as in animals we should commonly elect the best for breeding, and destroy the others, so there must be a selection made of the human beings whose lives are worthy to be preserved.

We start back horrified from this Platonic ideal, in the belief, first, that the higher feelings of humanity are far too strong to be crushed out; secondly, that if the plan could be carried into execution we should be poorly recompensed by improvements in the breed for the loss of the best things in life. The greatest regard for the weakest and meanest of human beings—the infant, the criminal, the insane, the idiot—truly seems to us one of the noblest results of Christianity. We

have learned, though as yet imperfectly, that the individual man has an endless value in the sight of God, and that we honour Him when we honour the darkened and disfigured image of Him (cp. Laws xi. 931 A). This is the lesson which Christ taught in a figure when He said, 'their angels do always behold the face of My Father which is in heaven.' Such lessons are only partially realized in any age; they were foreign to the age of Plato, as they have very different degrees of strength in different times or countries of the Christian world. To the Greek the family was a religious and customary institution binding the members together by a tie inferior in strength to that of friendship, and having a less solemn and sacred sound than that of country. The relationship which existed on the lower level of custom, Plato imagined that he was raising to the higher level of nature and reason; while from the modern and Christian point of view we regard him as sanctioning murder and destroying the first principles of morality.

The great error in these and similar speculations is that the difference between man and the animals is forgotten in them. The human being is regarded with the eye of a dog- or bird-fancier (v. 459 A), or at best of a slave-owner; the higher or human qualities are left out. The breeder of animals aims chiefly at size or speed or strength; in a few cases at courage or temper; most often the fitness of the animal for food is the great desideratum. But mankind are not bred to be eaten, nor yet for their superiority in fighting or in running or in drawing carts. Neither does the improvement of the human race consist in the increase of the bones and flesh, but in the growth and enlightenment of the mind. Hence there must be 'a marriage of true minds' as well as of bodies, of imagination and reason as well as of lusts and instincts. Men and women without feeling or imagination are justly called brutes; yet Plato takes away these qualities and adds nothing in their place, not even the desire of a noble offspring, since parents are not to know their own children. The most important transaction of social life, he who is the idealist philosopher, converts into the most brutal. For the pair are to have no relation to one another, except at the hymeneal festival; their children are not theirs, but the state's; nor is any tie of affection to unite them. Yet here the analogy of the animals might have saved Plato from a gigantic error, if he had 'not lost sight of his own illustration' (ii. 375 D). For the 'nobler sort of birds and beasts' (v. 459 A) nourish and protect their offspring and are faithful to one another.

An eminent physiologist thinks it worth while 'to try and place life on a physical basis.' But should not life rest on the moral rather than upon the physical? The higher comes first, then the lower; first the human and rational, afterwards the animal. Yet they are not absolutely divided; nor is there any meaning when we are speaking of a composite nature like that of man, in opposing the two principles to one another. Neither is the moral the limit of the physical, but the expansion and enlargement of it—the highest form which the physical is capable of receiving. As Plato would say, the body does not take care of the body, and still less of the mind, but the mind takes care of both. In all human action not that which is common to man and the animals is the characteristic element, but that which distinguishes him from them. Even if we admit the physical basis, and resolve all virtue into health of body, '*la façon que notre sang circule,*' still on merely physical grounds we must come back to ideas. Mind and reason and duty and conscience, under these or other names, are always reappearing. There cannot be health of body without health of mind; nor health of mind without the sense of duty and the love of truth (cp. Charm. 156 D, E).

That the greatest of ancient philosophers should in his regulations about marriage have fallen into the error of separating body and mind, does indeed appear surprizing. Yet the wonder is not so much that Plato, as Mr. Grote remarks, should have entertained ideas of morality at variance with our own, but that he should have contradicted himself to an extent which is scarcely conceivable, falling in an instant from the height of idealism into the crudest animalism. Rejoicing in the newly found gift of reflection, he appears to have thought out (?) a subject about which he had better have followed the enlightened feeling of his own age. The general sentiment of Hellas was opposed to his monstrous fancy. The old poets, and in later time the tragedians, showed no want of respect for the family, on which much of their religion was based. But the example of Sparta, and perhaps in some degree the tendency to defy public opinion, seems to have misled him. He will make one family out of all the families of the state. He will select the finest specimens of men and women and breed from these only.

Yet because the illusion is always returning (for the animal part of human nature will from time to time assert itself in the disguise of philosophy as well as of poetry, and also because any departure from established morality, even where this is not intended, is apt to be un-

settling) it may be worth while to draw out a little more at length the objections to the Platonic marriage. In the first place history shows that wherever polygamy has been largely allowed the race has deteriorated. One man to one woman is the law of God and nature. All the great civilized peoples of the world at some period before the age of written records, have become monogamists; and the step when once taken has never been retraced. The exceptions allowed to a few individuals among Brahmins or Mahometans, are of that sort which may be said to prove the rule. The connexions formed between superior and inferior races hardly ever produce a noble offspring, because they are licentious. Barbarous nations when they are introduced by Europeans to vice die out; polygamist peoples either import and adopt children from other countries, or dwindle in numbers, or both. Dynasties and aristocracies which have disregarded the laws of nature have decreased in numbers and degenerated in stature; 'marriages de convenance,' leave their enfeebling stamp on the offspring of them. (Cp. *King Lear*, Act i. Sc. 2.) The marriage of near relations, or the marrying in and in of the same family tends constantly to weakness or idiocy in the children, sometimes assuming the form as they grow older of passionate licentiousness. The common prostitute rarely has any offspring. By such unmistakable evidence is the authority of morality asserted in the relations of the sexes: and so many more elements enter into this 'mystery' than are dreamed of by Plato and some other philosophers.

Recent enquirers have indeed arrived at the conclusion that among primitive tribes there existed a community of wives as of property, and that the captive taken by the spear, was the only wife or slave whom any man was permitted to call his own. The prevalence of such customs among some of the lower races of man, and the survival of peculiar ceremonies in the marriages of some civilized nations, are thought to furnish a proof of similar customs having been once universal. There can be no question that recent discoveries have considerably changed our views respecting the first appearance of man upon the earth. We know more about the aborigines of the world than formerly, but our increasing knowledge shows above all things how little we know. With all the helps which written monuments afford, we do but faintly realize the condition of man two thousand or three thousand years ago. Of what his condition was 200,000 or

300,000 years, when he was perhaps lower and nearer the animals than any tribe now existing upon the earth, we cannot even entertain conjecture. Plato and Aristotle (*Laws* iii. 676 foll., *Arist. Met.* xi. 8, 19, 20) may have been more right than we imagine in supposing that some forms of civilization were discovered and lost several times over. If we cannot argue that all barbarism is a degraded civilization, neither can we set any limits to the degeneracy of which the human race may be capable from war, disease, or isolation. And if we are to draw inferences about the origin of marriage from the practice of barbarous nations, we should also consider the remoter analogy of the animals. Many birds and animals, especially the carnivorous, have only one mate, and the love and care of offspring which seems to be natural is inconsistent with the primitive theory of marriage. If we go back to an imaginary state in which men were almost animals and the companions of them, we have perhaps as much right to argue from the animal to the human as from the barbarous to the civilized man. The record of animal life on the globe is fragmentary—the connecting links are wanting and cannot be supplied; the record of social life is still more fragmentary and precarious. Even if we admit that our first ancestors had no such institution as marriage, still the stages by which men passed from outer barbarism to the comparative civilization of China, Assyria, and Greece, or even of the ancient Germans, are wholly unknown to us.

Such speculations are apt to be unsettling, because they seem to shew that an institution which was thought to be a revelation from heaven, is only the growth of history and experience. We ask what is the origin of marriage, and we are told that like the right of property, after many wars and contests, it has gradually arisen out of the selfishness of barbarians. We stand face to face with human nature in its primitive nakedness. We are compelled to accept, not the highest but the lowest account of the origin of human society. But on the other hand we may truly say that every step in human progress has been in the same direction, and that in the course of ages the idea of marriage and of the family has been more and more defined and consecrated. The civilized East is immeasurably in advance of any savage tribes; the Greeks and Romans have improved upon them; the Christian nations have been stricter in their views of the marriage relation than any of the ancients. In this as in so many other things,

instead of looking back with regret to the past, we should look forward with hope to the future. We must sanctify that which we believe to be the most holy, and that 'which is most useful will be the most holy.' There is more reason for maintaining the sacredness of the marriage tie, when we see the benefit of it, than when we only felt a vague religious horror about the violation of it. But in all times of transition, when established beliefs are being undermined, there is a danger that in the passage from the old to the new we may insensibly let go the moral principle, finding an excuse for listening to the voice of passion in the uncertainty of knowledge, or the fluctuations of opinion.

Strength and health are not the only qualities to be desired; there are the more important considerations of mind and character and soul. We know how human nature may be degraded; we do not know how by artificial means any improvement in the breed can be effected. The problem is a complex one, for if you go back four steps (and these at least enter into the composition of a child) there are commonly thirty-two progenitors to be taken into account. Many curious facts, rarely admitting of proof, are told us respecting the inheritance of disease or character from a remote ancestor. We can trace the physical resemblances of parents and children in the same family,

'Sic oculos, sic ille manus, sic ora ferebat';

but scarcely less often the differences which distinguish children both from their parents and from one another. We are told of similar mental peculiarities running in families, and again of a tendency, as in the animals, to revert to a common or original stock. But we have a difficulty in distinguishing what is a true inheritance of genius or other qualities, and what is mere imitation or the result of similar circumstances. Great men and great women have rarely had great fathers and mothers. Nothing that we know of in the circumstances of their birth or lineage will explain their appearance. Of the English poets of the last and two preceding centuries scarcely a descendant remains,—none have ever been distinguished. So deeply has nature hidden her secret, and so ridiculous is the fancy which has been entertained by some that we might in time by suitable marriage arrangements or, as Plato would have said, by an ingenious system of lots, produce a Shakespeare or a Milton. Even supposing that we could breed men having the tenacity of bulldogs.

or like the Spartans, 'lacking the wit to run away in battle,' would the world be any the better? Many of the noblest specimens of the human race have been among the weakest physically. Tyrtæus or Aesop, or our own Newton, would have been exposed at Sparta; and some of the fairest and strongest men and women have been among the wickedest and worst. Not by the Platonic device of uniting the strong and fair with the strong and fair, regardless of sentiment and morality, nor yet by his other device of combining dissimilar natures (Polit. 310 A), have mankind gradually passed from the brutality and licentiousness of primitive marriage to marriage Christian and civilized.

Few persons would deny that we bring into the world an inheritance of mental and physical qualities derived first from our parents, or through them from some remoter ancestor, secondly from our race, thirdly from the general condition of mankind into which we are born. Nothing is commoner than the remark, that 'So and so is like his father or his uncle'; and an aged person may not unfrequently note a resemblance in a youth to some long-forgotten ancestor, observing that 'Nature sometimes skips a generation.' Admitting the facts which are thus described in a general way, we may however observe that there is no method of difference by which they can be defined or estimated. Nor is there any practical use which can be made of them. It may very likely be true, that if we knew more about our ancestors, these similarities would be even more striking to us. But still they would constitute a very small part of each individual. What we have received from our ancestors is a mere fraction of what we are or become. In the matter of our birth as in our nature generally, there are previous circumstances which affect us. But upon this platform of necessity or within this wall of circumstances, we have still the power of creating a life for ourselves by the informing energy of the human will.

There is another aspect of the marriage question to which Plato is a stranger. All the children born in his state are foundlings. It never occurred to him that the greater part of them, according to universal experience, would have perished. For children can only be brought up in families. There is a subtle sympathy between the mother and the child which cannot be supplied by other mothers, or 'strong nurses one or more' (Laws vii. 789 E). If Plato's 'pen' was as fatal as the Crèches of Paris, or the foundling hospital of Dublin, more than nine tenths of his children would have perished. There would have been

no need to expose or put out of the way the weaklier children, for they would have died of themselves. So emphatically does nature protest against the destruction of the family.

What Plato had heard or seen of Sparta was applied by him in a mistaken way to his ideal commonwealth. He probably observed that both the Spartan men and women were superior in form and strength to the other Greeks; and this superiority he was disposed to attribute to the laws and customs relating to marriage. He did not consider that the desire of a noble offspring was a passion among the Spartans, or that their physical superiority was to be attributed chiefly, not to their marriage customs, but to their temperance and training. He did not reflect that Sparta was great, not in consequence of the relaxation of morality, but in spite of it, by virtue of a political principle stronger far than existed in any other Grecian state. Least of all did he consider that Sparta did not really produce the finest specimens of the Greek race. The genius, the political inspiration of Athens, the love of liberty—all that has made Greece famous with posterity—were wanting among the Spartans. They had no Themistocles, or Pericles, or Aeschylus, or Sophocles, or Socrates, or Plato. The individual was not allowed to appear above the state; the laws were fixed, and he had no business to alter or reform them. Yet whence has the progress of cities and nations arisen, if not from remarkable individuals, coming into the world we know not how, and from causes over which we have no control? Something too much may have been said in modern times of the value of individuality. But we can hardly condemn too strongly a system which instead of fostering the scattered seeds or sparks of genius and character, tends to smother and extinguish them.

Still, while condemning Plato, we must acknowledge that neither Christianity, nor any other form of religion and society, has hitherto been able to cope with this most difficult of social problems, and that the side from which Plato regarded it is that from which we turn away. Population is the most untameable force in the political and social world. Do we not find, especially in large cities, that the greatest hindrance to the amelioration of the poor is their improvidence in marriage?—a small fault truly, if not involving endless consequences. There are whole countries too, such as India, or, nearer home, Ireland, in which a right solution of the marriage question seems to lie at the foundation of the happiness of the community. There are too many

people on a given space, or they marry too early and bring into the world a sickly and half developed offspring; or owing to the very conditions of their existence, they become emaciated and hand on a similar life to their descendants. But who can oppose the voice of prudence to the 'mightiest passions of mankind' (Laws viii. 835 C), especially when they have been licensed by custom and religion? In addition to the influences of education, we seem to require some new principles of right and wrong in these matters, some force of opinion, which may indeed be already heard whispering in private, but has never affected the moral sentiments of mankind in general. We almost unavoidably lose sight of the principle of utility, just in that action of our lives in which we have the most need of it. The influences which we can bring to bear upon this question are chiefly indirect. In a generation or two, education, emigration, improvements in agriculture and manufactures, may have provided the solution. The state physician hardly likes to probe the wound: it is beyond his art; a matter which he cannot safely let alone, but which he dare not touch:

'We do but skin and film the ulcerous place.'

When again in private life we see a whole family one by one dropping into the grave under the Ate of some inherited malady, and the parents perhaps surviving them, do our minds ever go back silently to that day twenty-five or thirty years before on which under the fairest auspices, amid the rejoicings of friends and acquaintances, a bride and bridegroom joined hands with one another? In making such a reflection we are not opposing physical considerations to moral, but moral to physical; we are seeking to make the voice of reason heard, which drives us back from the extravagance of sentimentalism on common sense. The late Dr. Combe is said by his biographer to have resisted the temptation to marriage, because he knew that he was subject to hereditary consumption. This little fact suggests the reflection, that one person in a thousand did from a sense of duty what the other nine hundred and ninety-nine ought to have done, if they had allowed themselves to think of all the misery which they were about to bring into the world. If we could prevent such marriages without any violation of feeling or propriety, we clearly ought; and the prohibition in the course of time would be protected by a 'horror naturalis' similar to that which, in all civilized ages and countries, has prevented

the marriage of near relations by blood. Mankind would have been the happier, if some things which are now allowed had from the beginning been denied to them; if the sanction of religion could have prohibited practices inimical to health; if sanitary principles could in early ages have been invested with a superstitious awe. But, living as we do far on in the world's history, we are no longer able to stamp at once with the impress of religion a new prohibition. A free agent cannot have his fancies regulated by law; and the execution of the law would be rendered impossible, owing to the uncertainty of the cases in which marriage was to be forbidden. Nor is there any reason to suppose that marriages are to any great extent influenced by considerations of this sort, which seem too distant to be able to make any head against the irresistible impulse of individual attachment. Lastly, no one can have observed the first rising flood of the passions in youth, the difficulty of regulating them, and the effects on the whole mind and nature which follow from them, the stimulus which the mere imagination gives to them, without feeling that there is something unsatisfactory in our method of treating them. That the most important influence on human life should be wholly left to chance or shrouded in mystery, and instead of being disciplined or understood, should be required to conform only to an external standard of propriety—cannot be regarded by the philosopher as a safe or satisfactory condition of human things.

Nor is Plato wrong in asserting that family attachments may interfere with higher aims. If there have been those who 'to party gave up what was meant for mankind,' there have certainly been those who to family gave up what was meant for mankind or for their country. The cares of children, the necessity of procuring money for their support, the flatteries of the rich by the poor, the exclusiveness of caste, the pride of birth or wealth, the tendency of family life to divert men from the pursuit of the ideal or the heroic, are as lowering in our own age as in that of Plato. And if we prefer to look at the gentle influences of home, the development of the affections, the amenities of society, the devotion of one member of a family for the good of the others, which form one side of the picture, we must not quarrel with him, or perhaps ought rather to be grateful to him, for having presented to us the reverse. Without attempting to defend Plato on grounds of morality, we may allow that there is an aspect of the world which has not unnaturally led him into error.

We hardly appreciate the power which the idea of the State, like all other abstract ideas, exercised over the mind of Plato. To us the State seems to be built up out of the family, or sometimes to be the framework in which family and social life is contained. But to Plato in his present mood of mind the family is only a disturbing influence which, instead of filling up, tends to disarrange the higher unity of the State. No organization is needed except a political, which is also a military one. The State is all-sufficing for the wants and feelings of man, and, like the idea of the Church in later ages, absorbs all interests and affections. In time of war the thousand citizens are to stand like a rampart impregnable against the world or the Persian host; in time of peace the preparation for war and their duties to the State, which are also their duties to one another, take up their whole life and time. The only other interest which is allowed to them besides that of war, is the interest of philosophy. When they are too old to be soldiers they are to retire from active life and to have a second novitiate of study and contemplation. There is an element of monasticism even in Plato's communism. If he could have done without children, he might have converted his Republic into a religious order. Neither in the *Laws* (v. 739 B), when the daylight of common sense breaks in upon him, does he retract his error. In the state of which he would be the founder, there is no marrying or giving in marriage: but because of the infirmity of mankind, he condescends to allow the law of nature to prevail.

(γ) But Plato has an equal, or, in his own estimation, even greater paradox in reserve, which is summed up in the famous text, 'Until kings are philosophers or philosophers are kings, cities will never cease from ill.' And by philosophers he explains himself to mean those who are capable of apprehending ideas, especially the idea of good; and to the attainment of this the second education is to be directed. Through a process of training which has already made them good citizens they are now to be made good legislators. We find with some surprise (not unlike the feeling which Aristotle in a well-known passage describes the hearers of Plato's lectures as experiencing, when they went to a discourse on the idea of good, expecting to be instructed in moral truths, and received instead of them arithmetical and mathematical formulæ) that Plato does not propose for his future legislators any study of finance or law or military tactics, but only of abstract mathematics, as a preparation for the still more abstract conception of good.

We ask, with Aristotle, what is the use of a man knowing the idea of good, if he does not know what is good for this individual, this state, this condition of society? We cannot understand how Plato's legislators or guardians are to be fitted for their work of statesmen by the study of the five mathematical sciences. We vainly search in Plato's own writings for any explanation of this seeming absurdity.

The discovery of a great metaphysical conception seems to ravish the mind with a prophetic consciousness which takes away the power of estimating its value. No metaphysical enquirer has ever fairly criticised his own speculations; in his own judgment they have been above criticism; nor has he understood that what appeared to him to be absolute truth may reappear in the next generation as a form of logic or an instrument of thought. And posterity have also sometimes equally misapprehended the real value of his speculations. They seem to them to have contributed nothing to the stock of human knowledge. The *idea* of good is apt to be regarded by the modern thinker as an unmeaning abstraction; but he forgets that this abstraction is waiting ready for use, and will hereafter be filled up by the divisions of knowledge. When mankind do not as yet know that the world is subject to law, the introduction of the mere conception of law or design or final cause, and the far-off anticipation of the harmony of knowledge, are great steps onward. Even the crude generalization of the unity of all things leads men to view the world with different eyes, and may easily affect their conception of human life and of politics, and also their own conduct and character. We can well imagine how a great mind like that of Pericles might derive a sort of elevation from his intercourse with Anaxagoras. To be struggling towards a higher but unattainable conception is a more favourable intellectual condition than to rest satisfied in a narrow portion of ascertained fact. And the earlier, which have sometimes been the greater ideas of science, are often lost sight of at a later period. How rarely can we say of any modern enquirer in the magnificent language of Plato, that 'He is the spectator of all time and of all existence!'

Nor is there anything unnatural in the hasty application of these vast metaphysical conceptions to practical and political life. In the first enthusiasm of ideas men are apt to see them everywhere, and to apply them in the most remote sphere. They do not understand that the experience of ages is required to enable them to fill up 'the intermediate

axioms.' Plato himself seems to have imagined that the truths of psychology, like those of astronomy and harmonics, would be arrived at by a process of deduction, and that the method which he has pursued in the Fourth Book, of inferring them from experience and the use of language, was imperfect and only provisional. But when, after having arrived at the idea of good, which is the end of the science of dialectic, he is asked, What is the nature, and what are the divisions of the science? he refuses to answer, and seems to imply that the state of knowledge which then existed in the world was not such as would allow the philosopher to enter into his final rest. The previous sciences must first be studied, and will, we may add, continue to be cultivated till the end of time, although in a sense far other than Plato could have conceived. But we may observe, that while he is aware of the vacancy of his own ideal, he is full of enthusiasm in the contemplation of it. Looking into the orb of light, he sees nothing, but he is warmed and elevated. The Hebrew prophet believed that faith in God would enable him to govern the world; the Greek philosopher imagined that contemplation of the good would make a legislator. There is as much to be filled up in the one case as in the other, and the one mode of conception is to the Israelite what the other is to the Greek. Both find a repose in a divine perfection, which, whether in a more personal or impersonal form, exists without them and independently of them, as well as within them.

There is no mention of the idea of good in the *Timæus*, nor of the divine Creator of the world in the *Republic*; and we are naturally led to ask in what relation they stand to one another? Is God above or below the idea of good? Or is the idea of good another mode of conceiving God? The latter seems to be the truer answer. To the Greek philosopher the perfection and unity of God was a far higher conception than his personality, which he hardly found a word to express, and which to him would have seemed to be borrowed from mythology. To the Christian, on the other hand, or to the modern thinker in general, it is difficult if not impossible to attach reality to what he terms mere abstraction; while to Plato this very abstraction is the truest and most real of all things. Hence, from a difference in forms of thought, Plato appears to be resting on a creation of his own mind only. But if we may be allowed to paraphrase the idea of good by the words 'intelligent principle of law and order in the universe, embracing equally

man and nature,' we find a meeting point between him and ourselves.

The question whether the ruler or statesman should be a philosopher is one that has not lost interest in modern times. In most countries of Europe and Asia there has been some one in the course of ages who has truly united the power of command with the power of thought and reflection, as there have been also many false combinations of these qualities. Some kind of speculative power is necessary both in practical and political life; like the rhetorician in the *Phaedrus*, men require to have a conception of the varieties of human character, and to be raised on great occasions above the commonplaces of ordinary life. Yet the idea of the philosopher-statesman has never been popular with the mass of mankind; partly because he cannot take the world into his confidence or make them understand the motives from which he acts; and also because they are jealous of a power which they do not understand. The revolution which human nature desires to effect step by step in many ages is likely to be precipitated by him in a single year or life. They fear also that in the pursuit of his greater aims he may disregard the common feelings of humanity. He is too apt to be looking into the distant future or back into the remote past, and unable to see actions or events which, to use an expression of Plato's, 'are tumbling out at his feet.' Besides, as Plato would say, there are other corruptions of these philosophical statesmen. Either 'the native hue of resolution is sicklied o'er with the pale cast of thought,' and at the moment when action above all things is required he is undecided, or general principles are enunciated by him in order to cover some change of policy; or his ignorance of the world has made him more easily fall a prey to the arts of others; or in some cases he has been converted into a courtier, enjoying the luxury of liberal opinions and accompanying them with illiberal actions. No wonder that mankind have been in the habit of calling statesmen of this class pedants, sophisters, doctrinaires, visionaries. For, as we may be allowed to say, a little parodying the words of Plato, 'they have seen bad imitations of the philosopher-statesman.' But a man in whom the power of thought and action are perfectly balanced, equal to the present, reaching forward to the future, 'such a one,' ruling in a constitutional state, 'they have not seen.'

But as the philosopher is apt to fail in the routine of political life,

so the ordinary statesman is also apt to fail in extraordinary crises. When the face of the world is beginning to alter, he is still guided by his old maxims, and is the slave of his inveterate party prejudices; he cannot perceive the signs of the times: instead of looking forwards he looks back; he learns nothing and forgets nothing; with 'wise saws and modern instances' he would stem the rising tide of revolution. He lives more and more within the circle of his own party, as the world without him becomes stronger. This seems to be the reason why the old order of things makes so poor a figure when confronted with the new, why churches can never reform, why most political changes are made blindly and convulsively. The great crises in the history of nations have often been met by an ecclesiastical positiveness, and a more obstinate reassertion of principles which have lost their hold upon a nation. The fixed ideas of a reactionary statesman may be compared to madness; he grows more and more convinced of the truth of his notions as he becomes more isolated, and would rather await the inevitable than in any degree yield to circumstances.

(δ) Plato, labouring under what, to modern readers, would appear to be a confusion of ideas, identifies the individual and the state—ethics with politics. He thinks that to be most of a state which is most like one man, and in which the citizens have the greatest uniformity of character. He does not see that the analogy of the individual and the state is partly fallacious, and that the will or character of a state or nation is really the balance or rather the surplus of individual wills, which are limited by the condition of having to act in common. The movement of a body of men can never have the pliancy or facility of a single man; the freedom of the individual, which is limited, becomes an imperfect necessity when transferred to a nation. The power of action and feeling is necessarily weaker and more uncertain when they are diffused through a community; hence arises the often discussed question, 'Whether a nation, like an individual, can have a conscience?' We hesitate to say that the characters of nations are nothing more than the sum of the characters of the individuals who compose them; because there may be tendencies in individuals which react upon one another; or a whole nation may be wiser than any one man; or may be animated by some common opinion or feeling which could not equally have affected the mind of a single individual. Plato does not appear to have analysed the complications which arise out of the

collective action of mankind. He is capable of discerning many of the illusions of language and logic, but he is not capable of seeing that analogies, though specious as arguments, might often have no foundation in fact, or of distinguishing between what is intelligible or vividly present to the mind, and what is true. In this respect he is far below Aristotle, who is comparatively seldom imposed upon by false analogies. In like manner Plato cannot see the difference between the arts and the virtues—at least he is always arguing from one to the other. His notion of music is transferred from harmony of sounds to harmony of life: in this he is assisted by the ambiguities of language as well as by the prevalence of Pythagorean notions. And having once identified the individual with the state, he imagines that he will find the succession of states paralleled in the lives of individuals.

Still, through this fallacious medium, a real enlargement of ideas is attained. When the virtues as yet presented no distinct conception to the mind, a great advance was made by the comparison of them with the arts; for virtue is partly art, and has an outward form as well as an inward principle. The harmony of music affords a lively image of the harmony of the world and of human life, and may be regarded as a splendid illustration which was naturally mistaken for a real analogy. In the same way the identification of ethics with politics has a tendency to give definiteness to ethics, and also to elevate and ennoble men's notions of the aims of government and of the duties of citizens; for ethics from one point of view may be conceived as an idealized law and politics; and politics, as ethics reduced to the conditions of human society. There have been evils which have arisen out of the attempt to identify them, and this has led to the separation or antagonism of them, which has been introduced by modern political writers. But we may also feel that something has been lost in their separation, and that the ancient philosophers who estimated the moral and intellectual wellbeing of mankind first, and the wealth of nations and individuals second, may have a salutary influence on some of the speculations of modern times. Many political maxims originate in a reaction against the opposite error; and when the errors against which they were directed have passed away, in their turn become errors.

III. Plato's views of education are in several respects remarkable; like the rest of the Republic they are partly Greek and partly ideal, beginning with the ordinary curriculum of the Greek youth, and extending

to after life. Plato is the first writer who distinctly expresses the thought that education is to comprehend the whole of life, and to be a preparation for another in which education is to begin again. This is the continuous thread which runs through the whole of the Republic, and which more than any other of his ideas admits of an application to modern life.

He has long given up the notion that virtue cannot be taught; and he is disposed to modify the thesis of the Protagoras, that the virtues are one and not many. Neither is he unwilling to admit the sensible world into his scheme of truth. Nor does he positively assert in the Republic the involuntariness of vice, which reappears, however, in the *Timaeus*, *Sophist*, and *Laws*. Nor do the so-called Platonic ideas recovered from a former state affect his theory of mental improvement. Still we observe in him the remains of the old Socratic doctrine, that true knowledge must be elicited from within, and is to be sought for in ideas, not in particulars of sense. Education will implant a principle of intelligence which is better than ten thousand eyes. There is also a trace of his old doctrine that the virtues are one, and of the Socratic notion that all virtue is knowledge; this is seen in the supremacy given to justice over the rest, and in the tendency to absorb the moral virtues in the intellectual, and to centre all goodness in the contemplation of the idea of good. The world of sense is still depreciated and identified with opinion, though admitted to be a shadow of the true, and to be the source from which the figures of geometry are derived. And in the Republic he has not altogether given up the involuntariness of vice; as is shown in the feeling that evil arises chiefly from ignorance, and by the tone in which the multitude is regarded as hardly responsible for what they do. A faint allusion to the doctrine of reminiscence occurs in the Tenth Book (621 A); but Plato's views of education have no more real connection with a previous state of existence than our own; he only proposes to elicit from the mind that which is there already. His conception of education is represented, not like many modern views, under the image of filling a vessel, but of turning the eye of the soul towards the light.

He begins with music or literature, which he divides into true and false, and then goes on to gymnastics; he takes no notice of infancy in the Republic, though in the *Laws* he gives sage counsels about the nursing of children and the management of the mothers; and

would have an education which is even prior to birth. But in the Republic he begins with the age at which the child is capable of perceiving ideas, and boldly asserts, in language which sounds paradoxical to modern ears, that he must be taught the false before he can learn the true. The modern and ancient philosophical world are not agreed in their conceptions of truth and falsehood; the one identifies truth almost exclusively with fact, the other with ideas. There is a like difference between ourselves and Plato, which is, however, partly a difference of words. For we too should admit that a child must learn many lessons which he imperfectly understands; he must be taught some things in a figure only, and some perhaps which he can hardly be expected to believe when he grows older; but we should limit the use of fiction by the necessity of the case. Plato would draw the line somewhat differently; according to him the aim of early education is not truth as a matter of fact, but truth as a matter of principle; the child is to be taught first simple religious truths, and then simple moral truths, and insensibly to learn the lesson of good manners and good taste. He proposes an entire reformation of the old mythology; like Xenophanes and Heraclitus he is sensible of the deep chasm which separates his own age from Homer and Hesiod, whom he quotes and invests with an imaginary authority, but only for his own purposes. The lusts and treacheries of the gods are to be banished; the terrors of the world below are to be dispelled; the misbehaviour of the Homeric heroes is not to be a model for youth. But there is another strain heard in Homer which may teach our youth endurance; and something may be learnt in medicine from the simple practice of the Homeric age. The principles on which religion is to be based are two only: first, that God is true; secondly, that he is good. Modern and Christian writers have often fallen short of these; they can hardly be said to have got beyond them.

Education, according to Plato, is to place youth in happy circumstances, in which no sights or sounds of evil, or allurements of passion, can hurt the character or vitiate the taste. They are to live in an atmosphere of health; the breeze is always to be wafting to them the impressions of truth and goodness. Could such an education be realized, or even could religious education be bound up with truth and virtue and good manners and good taste, that would perhaps be the best hope of human improvement. Plato, like ourselves, is looking forward to changes

in the moral and religious world, and is preparing for them. He recognizes the danger of unsettling young men's minds, and doing away with the sacredness of one set of ideas before we have anything to put in their place which has an equal hold on the mind. There is to be an absence of excitement in the Platonic Republic, and for this reason dramatic representations are excluded. Plato does not wish to have his children taken to the theatre; he thinks that the effect on the spectators is bad, and on the actors still worse. His idea of education is that of harmonious growth, in which are learnt the lessons of temperance and endurance, and the body and mind develop in equal proportions. The great principle which is to be recognized in all art and nature, and is to hold sway in education, is simplicity.

The next stage of education is gymnastic, which answers to the period of muscular growth and development. The simplicity which is enforced in music is extended to gymnastics; Plato is aware that the training of the body may be inconsistent with the training of the mind, and that bodily exercise may be easily overdone. Men are apt to have a headache or go to sleep at a lecture on philosophy, and this they attribute not to the true cause, which is the excess of bodily training, but to the nature of the subject. Two points are noticeable in Plato's theory of gymnastic:—First, that the time of learning them is entirely separated from the time of literary education. He seems to have thought that two things of an opposite and different nature could not be learnt at the same time. Here we can hardly agree with him, for, if we may judge by experience, the effect of spending three years between the ages of fourteen and seventeen in mere bodily exercise would be far from improving to the intellect. Secondly, he regards gymnastic not primarily as a training of the body, but of the mind, which is to discipline the passionate element, as music restrains the appetitive and calls forth the rational. His whole idea is based upon the notion that the body depends upon the mind, and is to be trained to its service. And doubtless the mind may exercise a very great and paramount influence over the body, if exerted not only at a particular moment, but in making preparation for the whole of life. Other writers had seen the error of Spartan discipline (Arist. Pol. viii. 4, 1 foll.; Thuc. ii. 37, 39). Plato was the first who asserted that music and gymnastic are not, as common opinion affirms, the one intended for the cultivation of the mind, the other of the body; but that they are both equally designed for the improvement of the mind.

The subject of gymnastic leads Plato to the sister subject of medicine, and this he further illustrates by the parallel of law. The modern disbelief in medicine has led in this, as in some other departments of knowledge, to a demand for greater simplicity; physicians are becoming aware that they often make diseases 'greater and more complicated' by their treatment of them. (Rep. iv. 426 A). In two thousand years their art has made but slender progress; what they have gained in the analysis of the parts is in a great degree lost by their feebler conception of the human frame as a whole. They have attended more to the cure of diseases than to the conditions of health; and the improvements in medicine have been more than counterbalanced by the disuse of gymnastics. Until lately they have hardly thought of air and water, the importance of which was well understood by the ancients; as Aristotle remarks, 'air and water, being the elements which we most use, have the greatest effect upon health.' (Polit. vii. 11, 4.) For ages physicians have been under the dominion of prejudices which have only recently given way; and now there are as many opinions in medicine as in theology, and almost as much scepticism about them. Plato has several good notions about medicine;—according to him, 'the eye cannot be cured without the rest of the body, nor the body without the mind.' (Charm. 156 E.) No man of sense, he says in the Timaeus, would take physic; and we heartily sympathize with him in the Laws when he declares that 'the limbs of the rustic worn with toil will derive more benefit from warm baths than from the prescriptions of a not over wise doctor.' On the other hand, we can hardly praise him when, in obedience to the authority of Homer, he depreciates diet, or approve of the inhuman spirit in which he would get rid of invalid and useless lives by leaving them to die. He does not seem to have considered that the 'bridle of Theages' might be accompanied by qualities which were of far more value to the State than the health or strength of the citizens; or that the duty of taking care of the helpless might be an important element of education in a State. The physician himself (this is a delicate and subtle observation) should not be a man in robust health; he should have experience of disease in his own person, in order that his powers of observation may be quickened in the case of others.

The perplexity of medicine is paralleled by the perplexity of law; in which, again, Plato would have men follow the golden rule of simplicity. Greater matters are to be determined by the legislator, but lesser matters

are to be left to the temporary regulation of the citizens themselves. Plato is aware that *laissez faire* is an important element of government. The diseases of a State are like the heads of a hydra, which multiply when they are cut off. The true remedy for them is not extirpation but prevention. And the way to prevent them is to take care of education, and education will take care of all the rest. So in modern times men have often felt that the only political measure worth having, the only one which would produce any certain or lasting effect, was a measure of national education.

When the first training in music and gymnastic is completed, there follows the first trial of active life. But soon education is to begin again from a new point of view. In the interval between the Fourth and Seventh Books we have discussed the nature of knowledge, and have thence been led to form a higher conception of what was required of us. For true knowledge, according to Plato, is of abstractions, and has to do, not with particulars or individuals, but with universals only; not with the beauties of poetry, but with the ideas of philosophy. And the great aim of education is the cultivation of the habit of abstraction. This is to be acquired through the study of the mathematical sciences. They alone are capable of giving ideas of relation, and of arousing the dormant energies of thought.

Mathematics in Plato's age comprehended a very small part of that which is now included in them; but they also bore a much larger proportion to the sum of human knowledge. They were the only organon of thought which the human mind at that time possessed, and the only measure by which the chaos of particulars could be reduced to rule and order. The faculty which they trained was naturally at war with the poetical or imaginative; and hence to Plato the difference between him who knew and who did not know mathematics, is like the difference between an educated and uneducated man. They gave a new sense of power and seemed to have an inexhaustible application, partly because their true limits were not yet understood. These Plato himself is beginning to investigate; though not aware that numbers and figures are the abstractions of sense, he recognized that the figures of geometry borrow their forms from the sensible world. He also seeks to find the ultimate ground of mathematical ideas in the idea of good; though in his conception of the relation of ideas to numbers, he falls very far short of the definiteness attributed to him by Aristotle (Met. i. 8, 24, ix. 17). But if he

failed to recognize the true limits of mathematics, he has also reached a point beyond them; in his view, ideas of number became secondary to a higher conception of knowledge. The one, the self-proving, is the only perfect truth to which all things ascend, and in which they finally repose.

This self-proving unity or idea of good is a mere vision of which no distinct explanation can be given, relative only to a particular stage in Greek philosophy. And yet such a vision may have an immense effect. Although the method of science cannot anticipate science, the idea of science in the future may be a great and inspiring principle in the mind. For in the pursuit of knowledge we are always pressing forward to something beyond us; and as a false conception of knowledge, for example, the scholastic philosophy, may lead men astray during many ages, so the true ideal, though vacant, may draw all their thoughts in a right direction. Whether the general expectation of knowledge, as this indefinite feeling may be termed, conforms truly to the laws of the mind, is of great importance; for a true conception of what knowledge ought to be may be often combined with a slender experience of facts. The correlation of the sciences, the consciousness of the unity of knowledge, the sense of the importance of classification, the unwillingness to stop short of certainty or to confound probability with truth, are important principles of the higher education. Although Plato could tell us nothing, and perhaps knew that he could tell us nothing, of the absolute truth, he has exercised an influence on human thought which even at the present day is not exhausted; and political and social questions may yet arise in which the thoughts of Plato may be read anew and receive a fresh meaning.

The *idea* of good is so called only in the Republic, but there are traces of it in other dialogues of Plato. It is a cause as well as an idea, and in this point of view may be compared with the creator of the Timaeus, who out of his goodness created all things. It corresponds to a certain extent with the modern conception of a law of nature, or of a final cause, or of both in one, and in this regard may be connected with the measure and symmetry of the Philebus. It is represented in the Symposium under the aspect of beauty, and is supposed to be attained there by stages of initiation, as here by regular gradations of knowledge. Viewed subjectively it is the process or science of dialectic. This is the science which, according to the Phaedrus, is the true basis of rhetoric, which alone is

able to distinguish the natures and classes of men and things; which divides a whole into the natural parts, and reunites the scattered parts into a natural or organized whole; which defines the abstract essences or universal ideas of all things and connects them; which pierces the veil of hypotheses and reaches the final cause or first principle of all; which regards the sciences in relation to the idea of good. This ideal science is the highest process of thought, and may be described as the mind talking to herself, and in another form is the everlasting question and answer—the ceaseless interrogative of Socrates. The dialogues of Plato are themselves the best examples of the nature and method of dialectic.

If we ask whether this science which Plato only half reveals to us is more akin to logic or to metaphysics, the answer is that they are not as yet distinguished in his mind. Nor has he determined whether his science of dialectic is at rest or in motion, concerned with the contemplation of absolute being, or with the process by which this is to be attained. Modern metaphysics may be described as the science of abstractions, or as the science of the evolution of thought; modern logic, when passing beyond the bounds of mere Aristotelian forms, may be defined as the science of method. The germ of both of them is contained in the Platonic dialectic; all metaphysicians have something in common with the ideas of Plato; all logicians have derived something from the method of Plato. But perhaps the nearest approach in modern philosophy to the universal science of Plato, is to be found in the Hegelian ‘succession of moments in the unity of the idea.’ Plato and Hegel alike seem to have conceived the world as the correlation of abstractions; and not impossibly they would have understood one another better than any of their commentators. There is, however, a difference between them: for whereas Hegel is thinking of all the minds of men as one mind, which develops the stages of the idea in different countries or at different times in the same country, with Plato these gradations are regarded only as an order of thought or ideas; the history of the human mind had not yet dawned upon him.

Many criticisms may be made on Plato’s theory of education. While in some respects he unavoidably falls short of modern thinkers, in others he is in advance of them. He is opposed to the modes of education which prevailed in his own time; but he can hardly be said to have discovered new ones. He does not see that education is relative to the

characters of individuals; he only desires to impress the same form of the state on the minds of all of them. He has no sufficient idea of the effect of literature on the formation of the mind, but he greatly exaggerates that of mathematics. He would put all impure sights and sounds out of the way of youth, but he does not seem to have considered that some degree of freedom is necessary for strengthening the character. His citizens would not have acquired that knowledge which in the Vision of Er is supposed to be gained by the pilgrims from their experience of evil. Neither is he aware of the power of habit: the thesis that good actions produce good habits, which is, perhaps, the greatest single principle of education, was first taught mankind, not by Plato, but by Aristotle.

On the other hand, Plato is far in advance of modern philosophers and theologians when he teaches that education is to be continued through life and will begin again in another. Following the precept of Solon, he would have 'every man grow old in learning many things,' although aware that some kinds of study could only be imposed upon the young. Himself ravished with the contemplation of the idea of good, and delighting in solid geometry (Rep. vii. 528) he has no difficulty in imagining that a lifetime might be passed happily in such pursuits. We who know how many more men of business there are in the world than real students or thinkers, are not equally sanguine. The education which he proposes for his citizens is really the ideal life of the philosopher or man of genius, interrupted for a time by application to practical duties—a life not for the many, but for the few.

Yet the thought of Plato may not be wholly incapable of application to our own times. Even if regarded as an ideal which can be only partially realized, it may have a great effect in elevating the characters of mankind, and raising them above the routine of their ordinary occupation or profession. It is the best form under which we can conceive the whole of life. Nevertheless it is not easy to carry out Plato's thought in detail. For the education of after life is necessarily the education which each one gives himself. Men and women cannot be brought together in schools or colleges at forty or fifty years of age; and if they could the result would be disappointing. The destination of most men is what Plato would call 'the Den' for the whole of life, and with that they are content. Neither have they teachers or advisers with whom they can take counsel in riper years. There is no schoolmaster who

can tell them of their faults, or inspire them with the higher sense of duty, or with the ambition of success in life; no Socrates who will convict them of ignorance; no Christ, or follower of Christ, who will reprove them of sin. Hence they have a difficulty in receiving the first element of improvement, which is self-knowledge. The hopes of youth no longer stir them; they rather wish to rest than to pursue great objects. A few only who have come across great men and women, or eminent teachers of religion and morality, have received a second life from them, and have lighted a candle from the fire of their genius.

The want of energy is one of the main reasons why so few persons continue to improve in later years. They have not the will, and they do not know the way. Genius has been defined as 'the power of taking pains'; but hardly any one has the power of taking pains through a long life. The care of children, the business of making money, the demands of a profession destroy the elasticity of the mind. There is no pressing necessity to learn—the stock of Classics or History or Natural Science which was enough for a man at twenty-five is enough for him at fifty. Neither is it easy to give a definite answer to any one who asks how he is to improve? For self-education consists in a thousand things, commonplace enough in themselves,—in adding to what we are by nature something of what we are not; in learning to see ourselves as others see us; in seeking out the society of superior minds; in observation of life and character; in receiving kindly the natural influence of different times of life; in any act or thought which is distinctly raised above the common practice or opinions of men.

Yet if any one is desirous of attempting to carry out more in detail the suggestion of Plato, some such counsels as the following may be offered to him:—That he shall choose the branch of knowledge to which his own mind most distinctly inclines, and in which he takes the greatest delight, either one which seems to connect with his own daily employment, or, perhaps, furnishes the greatest contrast to it. He may study from the speculative side the profession or business in which he is practically engaged. He may think seriously and with some degree of originality about his daily life. An hour a day passed in some scientific or literary pursuit will furnish as many facts as the memory can retain, and will give him 'a pleasure not to be repented of.' Neither need he form beforehand vast schemes never destined to be realized. Better to creep on quietly from one thing to another and to gain insensibly new

powers of mind and new interests in knowledge. But perhaps, as Plato would say, 'This is part of another subject' (Tim. 87 B); though we may also defend our digression by his example (Theaet. 72, 77).

IV. Others as well as Plato have chosen an ideal Republic as the form of conveying thoughts which they could not definitely express, or which were beyond the horizon of their own age. The classical writing which approaches most nearly to the Republic is the 'De Republica' of Cicero; but neither in this nor in any other of his dialogues does he rival the art of Plato. Like Socrates he turns away from the phenomena of the heavens to civil and political life. He would rather not discuss the 'two Suns' of which all Rome was talking, when he can converse about forms of government. He would confine the terms King or State to the rule of reason and justice, and he will not concede that title either to a democracy or to a monarchy. But under the rule of reason and justice he is willing to include the natural superior ruling over the natural inferior, which he compares to the soul ruling over the body. The two images of the just and the unjust are depicted by him and transferred to the state—Philus maintaining against his will the necessity of injustice as a principle of government, while Laelius supports the opposite thesis. His views of language and number are derived from Plato; like him, in the person of Scipio, he denounces the drama, and declares that if his life were to be twice as long he would have no time to read the lyric poets. The picture of democracy is translated by him word for word, though he has hardly shown himself able to 'carry the jest' of Plato. He converts into a stately sentence the humorous fancy about the animals, who 'are so imbued with the spirit of democracy that they make the passers by get out of their way' (i. 42). But his most remarkable imitation of Plato is the adaptation of the vision of Er, which is converted by Cicero into the 'Somnium Scipionis'; he has 'romanized' the myth of the Republic, adding an argument for the immortality of the soul taken not from the Republic but from the Phaedrus, and some other touches derived from the Phaedo and the Timaeus. Though a beautiful tale and containing splendid passages, the 'Somnium Scipionis' is very inferior to the vision of Er in dramatic power, and hardly allows the reader to suppose that the writer believes in his own description. Whether, as he says, his dialogues were framed on the model of the lost dialogues of Aristotle, or of Plato, to which they bear so many superficial resemblances, the

orator always appears in them; he is not conversing, but making speeches, and is never able to mould the intractable Latin to the grace and ease of the Greek Platonic dialogue. But if he is defective in form, much more is he inferior to the Greek in matter; he never in his philosophical writings leaves upon our minds the impression of an original thinker.

Plato's Republic has been said to be a church and not a state; and such an ideal of a city in the heavens has always hovered over the Christian world, and is embodied in St. Augustine's 'De Civitate Dei,' which is suggested by the decay and fall of the Roman Empire, much as the Republic of Plato is, by the decline of Greek politics. He stands in much the same relation to contemporary Rome as Plato did to his contemporaries in Greece. In all such parallels there is a certain degree of resemblance and also of difference, and the Christian Church is even more an ideal than the Republic of Plato and further removed from any existing institution. In many other respects the resemblance between the Republic and the great work of St. Augustine is merely nominal. The 'Civitas Dei' is a controversial treatise which maintains the thesis that the destruction of the Roman Empire is due not to the rise of Christianity but to the corruption of paganism. He has no sympathy with the old Roman life as Plato has with Greek life, nor has he any idea of the ecclesiastical kingdom which was to arise out of the ruins. The work of St. Augustine is a curious repertory of antiquarian learning and quotations, feeble in reasoning and criticism; entering little into the spirit of the ancient Roman life, but deeply penetrated with Christian ethics. He has no power such as Plato possessed of conceiving a different state of the world, or of feeling or understanding anything external to his own theology. Of all the ancient philosophers he is most attracted by Plato, though he is very slightly acquainted with his writings. He is inclined to believe that the idea of creation in the *Timæus* is derived from the narrative in Genesis; and he is strangely taken with the coincidence (?) of Plato's saying that 'the philosopher is the lover of God,' and the words of the Book of Exodus in which God reveals himself to Moses. (Exod. iii. 14.)

The 'Utopia' of Sir Thomas More is a surprising monument of his genius, and shows a reach of thought far beyond his contemporaries. The book was written by him at the age of about 34, and is full of

the generous sentiments of youth. He brings the light of Plato to bear upon the miserable state of his own country. Living not long after the Wars of the Roses, and in the dregs of the Catholic Church in England, he is indignant at the existing state of society, at the luxury of the nobility and gentry, at the sufferings of the poor, at the calamities caused by war. To the eye of More the whole fabric of the world seemed to be in decay, and by the picture of society as it was, described in the First Book of the *Utopia*, he places in the Second Book the ideal state which by the help of Plato he had constructed. The times were full of stir and intellectual interest. The distant murmur of the Reformation was beginning to be heard. To minds like More's, Greek literature was a revelation: there had arisen an art of interpretation, and the New Testament was beginning to be understood as it had never been before, and not often since, in its natural sense. The state of society there depicted appeared to him wholly unlike that of Christian commonwealths, in which 'he saw nothing but a certain conspiracy of rich procuring their own commodities under the name and title of the Commonwealth.' He thought that Christ, like Plato, 'instituted all things common,' for which reason, he tells us, the citizens of *Utopia* were the more willing to receive his doctrines¹. The community of property is a fixed idea with him, though he is aware of the arguments which may be urged on the other side². We wonder how in the reign of Henry VIII, though veiled in another language and published in a foreign country, such speculations could have been endured.

He is gifted with far greater dramatic invention than any one who succeeded him, with the exception of Swift. In the art of feigning he is a worthy disciple of Plato. Like him starting from a small portion of fact, he founds his tale with admirable skill on a few lines in the Latin narrative of the voyages of Amerigo Vespucci. He is very precise about dates and facts, and has the art of making us believe that the narrator of the tale must have been an eyewitness. We are fairly puzzled by his

¹ 'Howbeit, I think this was no small help and furtherance in the matter, that they heard us say that Christ instituted among his all things common, and that the same community doth yet remain in the rightest Christian communities.' (*Utopia*, English Reprints, p. 144.)

² 'These things (I say), when I consider with myself, I hold well with Plato, and do nothing marvel that he would make no laws for them that refused those laws, whereby all men should have and enjoy equal portions of riches and commodities. For the wise man did easily foresee this to be the one and only way to the wealth of a community, if equality of all things should be brought in and established.' (*Ib.* pp. 67, 68.)

manner of mixing up real and imaginary persons; his boy John Clement and Peter Giles, the citizen of Antwerp, with whom he disputes about the precise words which are supposed to have been used by the (imaginary) Portuguese traveller, Raphael Hythloday. 'I have the more cause,' says Hythloday, 'to fear that my words shall not be believed, for that I know how difficultly and hardly I myself would have believed another man telling the same, if I had not myself seen it with mine own eyes.' Or again, 'If you had been with me in Utopia, and had presently seen their fashions and laws as I did which lived there five years and more, and would never have come thence, but only to make the new land known here,' etc. More greatly regrets that he forgot to ask Hythloday in what part of the world Utopia is situated; he 'would have spent no small sum of money rather than it should have escaped him,' and he begs Peter Giles to see Hythloday or write to him and obtain an answer to the question. After this we are not surprised to hear that a Professor of Divinity (perhaps 'a late famous vicar of Croydon in Surrey,' as the translator thinks) is desirous of being sent thither as a missionary by the High Bishop, 'yea, and that he may himself be made Bishop of Utopia, nothing doubting that he must obtain this Bishopric with suit; and he counteth that a godly suit which proceedeth not of the desire of honour or lucre, but only of a godly zeal.' The design may have failed through the disappearance of Hythloday, concerning whom we have 'very uncertain news' after his departure. There is no doubt, however, that he had told More and Giles the exact situation of the island, but unfortunately at the same moment More's attention, as he is reminded in a letter from Giles, was drawn off by a servant, and one of the company from a cold caught on shipboard coughed so loud as to prevent Giles from hearing. And 'the secret has perished' with him; to this day the place of Utopia remains unknown.

The words of Phaedrus (275 B), 'O Socrates, you can easily invent Egyptians or anything,' are recalled to our mind as we read this lifelike fiction. Yet the greater merit of the work is not the admirable art, but the originality of thought. More is as free as Plato from the prejudices of his age, and far more tolerant. The Utopians do not allow him who believes not in the immortality of the soul to share in the administration of the state (cp. *Laws* x. 908 foll.), 'howbeit they put him to no punishment, because they be persuaded that it is in no man's power to believe what he list'; and 'no man is to be blamed for reasoning in support of

his own religion¹. In the public services 'no prayers be used, but such as every man may boldly pronounce without giving offence to any sect.' He says significantly (p. 143) 'There be that give worship to a man that was once of excellent virtue or of famous glory, not only as God, but also the chiefest and highest God. But the most and the wisest part, rejecting all these, believe that there is a certain godly power unknown, far above the capacity and reach of man's wit, dispersed throughout all the world, not in bigness, but in virtue and power. Him they call the Father of all. To him alone they attribute the beginnings, the increasings, the proceedings, the changes, and the ends of all things. Neither give they any divine honours to any other than him.' So far was More from sharing the popular religious beliefs of his time.

Nor is he less in advance of popular opinion in his political and moral speculations. He would like to bring military glory into contempt; he would set all sorts of idle people to profitable occupation, including in the same class, priests, women, noblemen, gentlemen, and 'sturdy and valiant beggars,' that the labour of all may be reduced to six hours a day. His dislike of capital punishment, and plans for the reformation of offenders; his detestation of priests and lawyers²; his remark that 'although every one may hear of ravenous dogs and wolves and cruel man-eaters, it is not easy to find states that are well and wisely governed,' curiously disagree with the notions of his age and with his own life. There are many points in which he shows a modern feeling and a prophetic insight like Plato. He is a sanitary reformer; he maintains that civilized states have a right to the soil of waste countries; he is inclined to the opinion which places happiness in virtuous pleasures, but herein, as he thinks, not disagreeing from those other philosophers who define virtue to be a life according to nature. His ceremonies before marriage; his *humane* proposal that war should

¹ 'One of our company in my presence was sharply punished. He, as soon as he was baptised, began, against our wills, with more earnest affection than wisdom, to reason of Christ's religion, and began to wax so hot in his matter, that he did not only prefer our religion before all other, but also did despise and condemn all other, calling them profane, and the followers of them wicked and devilish, and the children of everlasting damnation. When he had thus long reasoned the matter, they laid hold on him, accused him, and condemned him into exile, not as a despiser of religion, but as a seditious person and a raiser up of dissension among the people.' (p. 145.)

² Compare his satirical observation:—'They (the Utopians) have priests of exceeding holiness, and therefore very few.' (p. 150.)

be carried on by assassinating the leaders of the enemy, may be compared to some of the paradoxes of Plato. He has a charming fancy worthy of the *Timæus* that the Utopians learnt the language of the Greeks with the more readiness because they were originally of the same race with them. In several passages he alludes to Plato and quotes or adapts thoughts both from the *Republic* and from the *Timæus*. He prefers public duties to private, and is somewhat impatient of the importunity of relations. His citizens have no silver or gold of their own, but are ready enough to pay them to their mercenaries (cp. *Rep.* iv. 422, 423). There is nothing of which he is more contemptuous than the love of money. Gold is used for fetters of criminals, and diamonds and pearls for children's necklaces¹.

Like Plato he is full of satirical reflections on the governments of mankind and on the state of the world. He ridicules the new logic of his time; the Utopians could never be made to understand the doctrine of Second Intentions². He is very severe on the sports of the gentry; the Utopians count 'hunting the lowest, the vilest, and the most abject part of butchery.' He quotes the words of the *Republic* in which the philosopher is described 'standing out of the way under a wall until the driving storm of sleet and rain be overpast,' which admit of a singular application to More's own fate; although writing twenty years before (about the year 1514), he can hardly be supposed to have foreseen this. There is no touch of satire which strikes deeper than his quiet remark that the greater part of

¹ When the ambassadors came arrayed in gold and peacocks' feathers 'to the eyes of all the Utopians except very few, which had been in other countries for some reasonable cause, all that gorgeousness of apparel seemed shameful and reproachful. In so much that they most reverently saluted the vilest and most abject of them for lords—passing over the ambassadors themselves without any honour, judging them by their wearing of golden chains to be bondmen. You should have seen children also, that had cast away their pearls and precious stones, when they saw the like sticking upon the ambassadors' caps, dig and push their mothers under the sides, saying thus to them—"Look, mother, how great a lubber doth yet wear pearls and precious stones, as though he were a little child still." But the mother; yea and that also in good earnest: "Peace, son," saith she, "I think he be some of the ambassadors' fools.'" (p. 102.)

² 'For they have not devised one of all those rules of restrictions, amplifications, and suppositions, very wittily invented in the small *Logicals*, which here our children in every place do learn. Furthermore, they were never yet able to find out the second intentions; insomuch that none of them all could ever see man himself in common, as they call him, though he be (as you know) bigger than was ever any giant, yea, and pointed to of us even with our finger.' (p. 105.)

the precepts of Christ are more at variance with the lives of ordinary Christians than the discourse of Utopia¹.

The 'New Atlantis' is only a fragment, and far inferior in merit to the 'Utopia.' The work is full of ingenuity, but wanting in creative fancy, and by no means impresses the reader with a sense of credibility. In some places Lord Bacon is characteristically different from Sir Thomas More, as, for example, in the external state which he attributes to the governor of Solomon's House, whose dress he minutely describes, while to Sir Thomas More such external trappings appear simply ridiculous. Yet, after this programme of dress, Bacon adds the beautiful trait, 'that he had a look as though he pitied men.' Several things are borrowed from the Timæus; but he has injured the unity of style by adding thoughts and passages which are taken from the Hebrew Scriptures.

Other writings on ideal States, such as the 'De Monarchia' of Dante, which is a dream of another Roman Empire, existing by the side of the Papacy, and, like that, deriving authority immediately from God—the divine right of this second power is established in true scholastic form, and by quotations from Scripture and the classics); the 'Oceana' of Harrington in which the Lord Archon, meaning Cromwell, is described not as he was but as he ought to have been; the 'Argenis' of Barclay, which is a political allegory of his own time, are too unlike Plato to be worth mentioning. The change of government in the time of the Commonwealth set men thinking about first principles, and gave rise to many works of this class. In the 'City of the Sun,' by Campanella, who wrote in the year 1623, a community of women and goods is established, and the principal magistrate, who is called the Sun, is elected after a strict examination in all kinds of science. This book is a very dull and inartistic performance; some of its worst features are a bad imitation of the Republic. There are no traces in Swift of an acquaintance with Plato. Nor do I observe any knowledge of his writings in Dante's 'De Monarchia,' which is in many ways the most remarkable of these modern works,

¹ 'And yet the most part of them is more dissident from the manners of the world now a days, than my communication was. But preachers, sly and wily men, following your counsel (as I suppose) because they saw men evil-willing to frame their manners to Christ's rule, they have wrested and wried his doctrine, and, like a rule of lead, have applied it to men's manners, that by some means at the least way, they might agree together.' (p. 66.)

though Dante is well acquainted with the Nicomachean Ethics and with Augustine's 'De Civitate Dei.'

Human life and conduct are affected by ideals in the same way that they are affected by the examples of eminent men. Neither the one nor the other are immediately applicable to practice, but there is a virtue flowing from them which tends to raise individuals above the common routine of society or trade, and to elevate States above the mere interests of commerce or the necessities of self-defence. Like the ideals of art they are partly framed by the omission of particulars; they require to be viewed at a certain distance, and are apt to fade away if we attempt to approach them. They gain an imaginary distinctness when embodied in a State or an individual, but still remain the visions of 'a world unrealized.' Most men live in a corner and see but a little way beyond their own home or place of occupation; they 'do not lift up their eyes to the hills'; they are not awake when the dawn appears. But in Plato, as from some 'tower of speculation,' we look into the distance and behold the future of the world and of philosophy. The ideal of the State and of the life of the philosopher; the ideal of an education continuing through life and extending equally to both sexes; the ideal of the unity and correlation of knowledge; the faith in good and immortality—are the vacant forms of light on which Plato is seeking to fix the eye of mankind.

THE REPUBLIC.

BOOK I.

PERSONS OF THE DIALOGUE.

SOCRATES, *who is the narrator.*

GLAUCON.

ADEIMANTUS.

POLEMARCHUS.

CEPHALUS.

THRASYMACHUS.

CLEITOPHON.

And others who are mute auditors.

The scene is laid in the house of Cephalus at the Piraeus; and the whole discourse is narrated the day after it actually took place to Timaeus, Hermocrates, Critias, and a nameless person, who all reappear in the Timaeus.

Steph.
327 I WENT down to the Piraeus yesterday with Glaucon the son of Ariston, that I might offer up a prayer to the goddess; and also because I wanted to see in what manner they would celebrate the festival of Bendis¹, which was a new thing. I was delighted with the procession of the inhabitants; this, however, was equalled or even exceeded in beauty by that of the Thracians. When we had finished our prayers and the spectacle was over, we turned in the direction of the city; and at that instant Polemarchus the son of Cephalus, who had caught sight of us at a distance as we were departing homewards, told his servant to run and bid us wait for him. The servant took hold of me by the cloak behind, and said: Polemarchus desires you to wait.

I turned round, and asked him where his master was.

He is coming, said the youth, if you will only wait.

Certainly we will, said Glaucon; and in a few minutes Pole-

¹ The Thracian Artemis.

marchus appeared, and with him Adeimantus, Glaucon's brother, Niceratus the son of Nicias, and several others who had been at the procession.

Polemarchus said to me: I perceive, Socrates, that you and your companion are already on your way to the city.

You are not far wrong, I said.

But do you see, he rejoined, how many we are?

I do.

And are you stronger than all these? for if not, you will have to remain where you are.

May there not be yet another possibility, I said, that we may persuade you to let us go?

But can you persuade us, if we refuse to listen to you? he said.

Of course not, replied Glaucon.

Then we are not going to listen; of that you may be assured.

Adeimantus added: Has no one told you that in the evening ³²⁸ there will be a torch-race with horses in honour of the goddess?

With horses! I replied: That is a novelty. Will the horsemen carry torches and pass them one to another during the race?

Yes, and not only so, but a festival will be celebrated at night, which you certainly ought to see. If we rise from supper in good time we may see this, and we shall find youths enough there with whom we can talk. Stay then, and do not be perverse.

Glaucon said: I suppose that we must stay.

Well, as you please, I replied.

Accordingly we went with Polemarchus to his house; and there we found his brothers Lysias and Euthydemus, and with them Thrasymachus the Chalcedonian, Charmantides the Pæanian, and Cleitophon the son of Aristonymus. There too was their father Cephalus, whom I had not seen for a long time, and I thought him very much aged. He was seated on a cushioned chair, having a garland on his head, for he had been holding a sacrifice in the court; and there were other chairs, arranged in a circle upon which we sat down by him. He welcomed me eagerly, and then he said:—

You don't come to see me, Socrates, as often as you ought. For if I were able to go to you I would not ask you to come to me. But at my age I can hardly get to the city, and there-

fore you ought to come oftener to the Piræus. For, indeed, I find that at my time of life, as the pleasures and delights of the body fade away, the love of discourse grows upon me. I only wish that you would come oftener, and be with your young friends here, and make yourself altogether at home with us.

I replied: There is nothing which I like better, Cephalus, than conversing with aged men like yourself; for I regard them as travellers who have gone a journey which I too may have to go, and of whom I ought to enquire, whether the way is smooth and easy, or rugged and difficult. And this is a question which I should like to ask of you who have arrived at that time which the poets call the 'threshold of old age'—Is life harder towards the end, or what report do you give of it?

329 I will tell you, Socrates, he said, what my own feeling is. Old men flock together; they are birds of a feather, as the proverb says; and at our meetings the tale of my acquaintance commonly is—I cannot eat, I cannot drink; the pleasures of youth and love are fled away: there was a good time once, but that is gone, and now life is no longer life. Some of them lament over the slights which are put upon them by relations, and then they tell you plaintively of how many evils their old age is the cause. But to me, Socrates, they seem to blame what is not to blame; for if old age were the cause, I too being old, and every other old man, would have felt the same. Such however is not my experience, nor that of others whom I have known. How well I remember the aged poet Sophocles, when in answer to the question, How does love suit with age, Sophocles,—are you still the man you were? Peace, he replied; most gladly have I escaped that, and I feel as if I had escaped from a mad and furious master. His words have often come into my mind since, and they seem to me still as good as at the time when I first heard them. For certainly old age has a great sense of calm and freedom; when the passions relax their hold, then, as Sophocles says, you have escaped from the control not of one mad master only, but of many. And of these regrets, as well as of the complaint about relations, Socrates, the cause is to be sought, not in men's ages, but in their characters and tempers; for he who

is of a calm and happy nature will hardly feel the pressure of age, but he who is of an opposite disposition will find youth and age equally a burden.

I listened in admiration, and wanting to draw him out, that he might go on—Yes, Cephalus, I said; but I suspect that people in general do not believe you when you say this; they think that old age sits lightly upon you, not because of your happy disposition, but because you are rich, and wealth is well known to be a great comforter.

You are right, he replied; they do not believe me: and there is something in what they say; not, however, so much as they imagine. I might answer them as Themistocles answered the Seriphian who was abusing him and saying that he was famous, not for his own merits but because he was an Athenian: ‘If ³³⁰ you had been an Athenian and I a Seriphian, neither of us would have been famous.’ And to those who are not rich and are impatient of old age, the same reply may be made; for neither can a good poor man lightly bear age, nor can a bad rich man ever be at peace with himself.

May I ask, Cephalus, whether you inherited or acquired the greater part of your wealth?

Acquired! Socrates; do you want to know how much I acquired? In the art of making money I have been midway between my father and grandfather: for my grandfather, whose name like my own was Cephalus, doubled and trebled the value of his inheritance; but my father Lysanias reduced the property below what I now have: and I shall be satisfied if I leave to my sons a little more than I received.

That was why I asked you the question, I said, because I saw that you were indifferent about money, which is a characteristic rather of those who have inherited their fortunes than of those who have acquired them; for the latter have a second love of money as a creation of their own, resembling the affection of authors for their own poems, or of parents for their children, besides that natural love of money for the sake of use and enjoyment which is common to them and all men. And hence they are very bad company, for they talk about nothing but the praises of wealth.

That is true, he said.

Yes, that is very true, but may I ask another question?—What do you consider to be the greatest blessing which you have reaped from wealth?

Not one, he said, of which I could easily convince others. For let me tell you, Socrates, that when a man thinks himself to be near death he has fears and cares which never entered into his mind before; the tales of a life below and the punishment which is exacted there of deeds done here were a laughing matter to him once, but now he is haunted with the thought that they may be true: either because of the feebleness of age, or from the nearness of the prospect, he seems to have a clearer view of the other world; suspicions and alarms crowd upon him, and he begins to reckon up in his own mind what wrongs he has done to others. And when he finds that the sum of his transgressions is great he will many a time like a child start up in his sleep for fear, and he is filled with dark forebodings.

331 But to him who is conscious of no sin, sweet hope, as Pindar charmingly says, is the kind nurse of age.

‘Hope,’ he says, ‘cherishes the soul of him who lives in holiness and righteousness, and is the nurse of his age and the companion of his journey;—hope which is mightiest to sway the restless soul of man.’

How admirable his words are! And the great blessing of riches, I do not say to every man, but to a good man, is, that he has had no occasion to deceive another, either intentionally or unintentionally; and when he departs to the other world he is not in any apprehension about offerings due to the gods or debts which he owes to men. Now the possession of wealth contributes greatly to truth and honesty; and therefore I say, that, setting one thing against another, of the many advantages which wealth has to give, in my opinion to a man of sense this is the greatest.

That is excellent, Cephalus, I replied; but then is justice no more than this—to speak the truth and pay your debts? And even to this are there not exceptions? If I have received arms from a friend when in his right mind and he asks for them when he is not in his right mind, ought I to give them back to him? No one would say that I ought, any more than they would say that I ought always to speak the truth to one who is in his condition.

You are quite right, he replied.

But then, I said, speaking the truth and paying your debts is not a correct definition of justice.

And yet, said Polemarchus, that is the definition which has the authority of Simonides.

I fear, said Cephalus, that I must look to the sacrifices; and therefore I now take leave of this argument, which I bequeath to you and Polemarchus.

Is not Polemarchus your heir? I said.

To be sure, he answered, and went away laughing to the sacrifices.

Tell me then, O thou heir of the argument, what did Simonides say, and according to you truly say, about justice?

He said that the return of a debt is just, and in that he appears to me to be right.

I should be sorry to doubt the word of such a wise and inspired man, but his meaning, though probably clear to you, is the reverse of clear to me. For he certainly does not mean, as we were just now saying, that I ought to return a deposit of arms or anything else to one who is not in his right senses; and yet a deposit cannot be denied to be a debt. 332

True.

Then when the person who asks me is not in his right mind I am not to make the return?

Certainly not.

Then Simonides did not mean to include that case when he said that justice was the payment of a debt?

Certainly not; for according to him a friend is under an obligation to do good to a friend and not evil.

I understand, I said, that the return of a deposit of gold to the injury of the receiver, if the two parties are friends, is not the return of a debt,—that is what you would imagine him to say?

Yes.

And are enemies also to have their debt or due?

To be sure, he said, they are to have what is due to them, and what is really due from an enemy to an enemy is that which is appropriate to him—that is to say, evil.

Simonides, then, after the manner of poets, would seem to have spoken of the nature of justice in a parable; for he really

meant to say that justice is the giving to each man what is appropriate to him, and this he termed his debt or due.

That must have been his meaning, he said.

By heaven! I replied; and if he were asked what due or appropriate thing is given by medicine, and to whom, what answer do you think that he would make?

He would surely reply that medicine gives drugs and meat and drink to human bodies.

And what due or appropriate thing is given by cookery, and to whom?

Seasoning to food.

And what is that which justice gives, and to whom?

If, Socrates, we are to be guided at all by the analogy of the preceding instances, then justice is the art which gives good to friends and evil to enemies.

That is his meaning then?

Yes.

And who is best able to do good to his friends and evil to his enemies in time of sickness?

The physician.

Or when they are on a voyage and amid the perils of the sea?

The pilot.

And in what sort of actions is the just man most able to do them good?

In wars and alliances.

But when a man is well there is no need of a physician?

No.

And he who is not on a voyage has no need of a pilot?

No.

Then in time of peace justice will be of no use?

I am very far from thinking so.

333 Then you think that justice may be of use in peace as well as war?

Yes.

Like husbandry which acquires corn, or like shoemaking which acquires shoes,—that is what you would say?

Yes.

And what similar use or power of acquisition has justice in time of peace?

In contracts, Socrates, justice is of use.
 And by contracts you mean partnerships?
 Exactly.

But is the just man or the skilful player a more useful or better partner at a game of draughts?

The skilful player.

And in the laying of bricks and stones is the just man a more useful or better partner than the builder?

Quite the reverse.

Then in what sort of partnership is the just man a better partner than the harp-player, as in playing the harp the harp-player is certainly a better partner than the just man?

In a money partnership.

But surely not in the use of money, Polemarchus; for you do not want a just man to be your counsellor in the purchase or sale of a horse; a man who is knowing about horses would be better for that, would he not?

Certainly.

And when you want to buy a ship, the shipwright or the pilot would be better?

True.

Then what is that joint use of silver or gold in which the just man is to be preferred?

When you want a deposit to be kept safely.

You mean when money is not wanted, but allowed to lie?

Precisely.

That is to say, justice is useful when money is useless?

That is the inference.

And when you want to keep a pruning-hook safe, then justice is useful to the individual and to the state; but when you want to use it, then the art of the vine-dresser?

Clearly.

And when you want to keep a shield or a lyre, and not to use them, you would say that justice is useful; but when you want to use them, then the art of the soldier or of the musician?

Certainly.

And so of all other things;—justice is useful when they are useless, and useless when they are useful?

That is the inference.

Then justice is not good for much. But let us consider this further point: Is not he who can best strike any kind of blow whether fighting or boxing best able to ward any kind of blow?

Certainly.

And he who can prevent or elude¹ a disease is best able to create one?

True.

And he is the best guard of a position who is best able to
334 steal a march upon the enemy?

Certainly.

Then he who is a good keeper of anything is also a good thief?

That, I suppose, is to be inferred.

Then if the just man is good at keeping, he is good at stealing money?

So the argument declares.

Then after all the just man has turned out to be a thief. And this is a lesson which I suspect you must have learnt out of Homer; for he, speaking of Autolycus, the maternal grandfather of Odysseus, who is a favourite of his, affirms that

He was excellent above all men in theft and perjury.

And so, you and Homer and Simonides are agreed that justice is a thief; who steals however 'for the good of friends and for the harm of enemies,'—that was what you were saying?

No, certainly not that, though I do not now know what I did say; but I still stand by the latter words.

Well, there is another question: Are friends to be interpreted as real or seeming, enemies as real or seeming?

Surely, he said, a man may be expected to love those whom he thinks good, and to hate those whom he thinks evil.

Yes, but do not persons often err in their judgment of good and evil: many who are not good appear to them to be good, and conversely?

That is true.

Then to them the good will be enemies and the evil will be their friends?

True.

¹ Reading φυλάξισθαι καὶ λαθεῖν.

And in that case they will be right in doing good to the evil and evil to the good?

Apparently.

But the good are just and would not do an injustice?

True.

Then according to your argument it is just to injure those who do no wrong?

Nay, Socrates; the doctrine is immoral.

Then I suppose that they ought to do good to the just and harm to the unjust?

I like that better.

But see the consequence:—Many a man who is ignorant of the world has friends who are bad friends, and then he ought to do harm to them; and he has good enemies whom he ought to benefit; but, if so, we shall be saying the very opposite of that which we affirmed to be the meaning of Simonides.

That is true, he said; and I think that we had better correct an error into which we have fallen in the use of the words 'friend' and 'enemy.'

What was the error, Polemarchus? I replied.

The error lay in the assumption that he is a friend who seems or is thought good.

And how is the error to be corrected?

We should rather say that he is a friend who is, as well as seems, good; and that he who seems only, and is not good, 335 only seems to be and is not a friend; and of an enemy the same may be said.

You would argue that the good are our friends and the bad our enemies?

Yes.

And instead of saying simply as we did at first, that it is just to do good to your friends and harm to your enemies, you would now say, It is just to do good to your friends when they are good and harm to your enemies when they are evil?

Yes, that appears to me to be the truth.

But then ought the just to injure any one at all?

Undoubtedly he ought to injure the wicked who are his enemies.

And when horses are injured, are they improved or deteriorated?

The latter.

Deteriorated, that is to say, in the good qualities of horses, not of dogs?

Yes, of horses.

And dogs are deteriorated in the good qualities of dogs, and not of horses?

Of course.

And will not men who are injured be deteriorated in that which is the proper virtue of man?

Certainly.

And that human virtue is justice?

To be sure.

Then men who are injured are of necessity made unjust?

That is the result.

But can the musician by his art make men unmusical?

Certainly not.

Or the horseman by his art make them bad horsemen?

Impossible.

And can the just by justice make men unjust, or speaking generally, can the good by virtue make them bad?

Assuredly not.

Nor can heat produce cold?

No.

Nor drought moisture?

Never.

Nor can the good harm any one?

Clearly not.

And the just is the good?

Certainly.

Then to injure a friend or any one else is not the act of a just man, but of the opposite, who is the unjust?

I think that what you say is quite true, Socrates.

Then if a man says that justice consists in repaying a debt, meaning that a just man ought to do good to his friends and injure his enemies, he is not really wise; for he says what is not true, if, as has been clearly shown, the injuring of another can be in no case just.

I agree with you, said Polemarchus.

Then you and I are prepared to take up arms against any

one who attributes such a saying to Simonides or Bias or Pittacus, or any other wise man or seer?

I am quite ready to join with you, he said.

Shall I whisper in your ear whose I believe the saying to be? 336

Whose?

I believe that Periander or Perdiccas or Xerxes or Ismenias the Theban, or some other rich and mighty man, who had a great opinion of his own power, first said that justice is doing good to your friends and harm to your enemies.

Most true, he said.

Yes, I said; but if this definition of justice also breaks down, what other can be offered?

Several times in the middle of our discourse Thrasymachus had made an attempt to get the argument into his hands, and had been put down by the rest of the company, who wanted to hear the end. But when I had done speaking and there was a pause, he could no longer hold his peace; and, gathering himself up like a wild beast, he came at us seeking to devour us. Polemarchus and I cowered in terror.

What folly has possessed you, Socrates? he said, with a roar. Why have you been knocking under to one another in this silly way? I say that if you want to know what justice really is, you should answer and not ask, and you should not pride yourself in refuting others, but have your own answer; for there is many a one who can ask and cannot answer. And do not tell me that justice is duty or advantage or profit or gain or interest, for that sort of watery stuff will not do for me; I must and will have a precise answer.

I was panic-stricken at these words, and trembled at the very look of him; and I verily believe that if I had not fixed my eye upon him, I should have been deprived of utterance: but now, when I saw his fury rising, I looked at him first, and therefore I was able to reply to him.

Thrasymachus, I said, with a quiver, have mercy on us. If Polemarchus and I have been guilty of a little mistake in the argument, I can assure you that the error was unintentional; and you, in your wisdom, should have pity upon us, and not be angry with us. If we were seeking for gold, you would not imagine that we were pretending only, or knocking under, as

you say, out of foolish complaisance to one another, and so losing our chance of finding it. Do not imagine, then, that we are only pretending to seek for justice, which is a treasure far more precious than gold.

337 How characteristic of Socrates! he replied, with a bitter laugh; —that's your ironical way! Did I not foresee—did I not tell you all, that he would refuse to answer, and try irony or any other shift, in order that he might avoid answering?

You are a philosopher, Thrasymachus, I replied, and well know that if you ask what numbers make up twelve, taking care to prohibit the person whom you ask from answering twice six, or three times four, or six times two, or four times three, 'for this sort of nonsense will not do for me,'—then obviously, if that is your way of putting the question to him, neither he nor any one can answer. And suppose he were to say, 'Thrasymachus, what do you mean? And if the true answer to the question is one of these numbers which you interdict, am I to say some other number which is not the right one?—is that your meaning?' How would you answer him?

Just as if the two cases were alike, he said.

Why should they not be? I replied; and even if they are not, but only appear to be so to the person who is asked, can he to whom the question is put avoid saying what he thinks, whether you and I forbid him or not?

I presume then that you are going to make one of the interdicted answers?

I dare say that I may, notwithstanding the danger, if upon reflection I approve of any of them.

But what if I give you a new and better answer, he said, than any of these? What do you deserve to have done to you?

Done to me! I can but suffer the penalty of ignorance; and the penalty is to learn from the wise—that is what I deserve to have done to me.

What, and no payment! a pleasant notion!

I will pay when I have the money, I replied.

But you have, Socrates, said Glaucon: and you, Thrasymachus, need be under no anxiety about money, for we will all make a contribution for Socrates.

Yes, he replied, and then Socrates will do as he always does—

not answer himself, but take and pull to pieces the answer of some one else.

Why, my good friend, I said, how can any one answer who knows, and says that he knows, just nothing; and who, even if he has some faint notions of his own, is told by a man of authority not to utter them? The natural thing is, that the speaker should be one who like yourself professes that he knows 338 and can tell; and I must earnestly request that you will kindly answer, for the edification of the company and of myself.

Glaucon and the rest of the company joined in my request, and Thrasymachus, as any one might see, was really eager to speak; for he thought that he had an excellent answer, and would distinguish himself. But at first he affected to insist on my answering; at length he consented to begin. Behold, he said, the wisdom of Socrates; he refuses to teach himself, and goes about learning of others, to whom he never even says Thank you.

That I learn of others, I replied, is quite true; but that I am ungrateful I wholly deny. Money I have none, and therefore I pay in praise, which is all I have; and how ready I am to praise any one who speaks well you will very soon find out when you answer; for I expect that you will answer well.

Listen, then, he said; I proclaim that might is right, justice the interest of the stronger. And now why do you not praise me?

Let me first understand you, I replied. Justice, as you say, is the interest of the stronger. What, Thrasymachus, is the meaning of this? You cannot mean to say that because Polydamas, the pancratiast, who is stronger than we are, finds the eating of beef for his interest, that to eat beef is equally for our interest who are weaker than he is, and right and just for us?

That's abominable of you, Socrates; you take the words in the sense which is most damaging to the argument.

Not at all, my good sir, I said; I am trying to understand them; and I wish that you would be a little clearer.

Well, he said, have you never heard that forms of government differ; there are tyrannies, and there are democracies, and there are aristocracies?

Yes, I know that.

And the government is that which has power in each state?

Certainly.

And the different forms of government make laws democratical, aristocratical, tyrannical, with a view to their several interests; and these laws, which are made by them for their own interests, they deliver to their subjects as justice, and punish him who transgresses them as a breaker of the law, and unjust. And that is what I mean when I say that in all states there is the same principle of justice, which is neither more nor less than the interest of the government; and as the government must be
339 supposed to have power, the only reasonable conclusion is, that everywhere there is one principle of justice which is the interest of the stronger.

Now I understand you, I said; and whether you are right or not I will try to learn. But let me first remark, that in describing justice you have yourself used the word 'interest' which you forbade me to use. I do not, however, deny that in your definition the words 'of the stronger' are added.

A slight addition you must allow, he said.

Great or small, never mind that; the simple question is, whether what you are saying is the truth. Now we are both agreed that justice is interest of some sort, but we are not agreed as to the additional words 'of the stronger;' and this is the point which I will now examine.

Proceed.

I will; and first tell me, Do you admit that it is just for subjects to obey their rulers?

I do.

But are the rulers of states absolutely infallible, or are they sometimes liable to err?

To be sure, he replied, they are liable to err.

Then in making their laws they may sometimes make them rightly, but they are not always right?

True.

When they make them rightly, they make them agreeably to their interest; when they are mistaken, contrary to their interest; you admit that?

Yes.

And the laws which they make must be obeyed by their subjects,—and that is what you call justice?

Doubtless.

Then justice, according to your argument, is not only obedience to the interest of the stronger but the reverse?

What are you saying? he asked flurriedly.

I am repeating what you were saying, I believe. But let us consider. Have we not admitted that the rulers may be mistaken about their own interest in what they command, and also that to obey them is justice? Has not that been admitted?

Yes.

Then you must also have acknowledged that justice is not the interest of the stronger, when the rulers who are stronger unintentionally command that which is to their own injury. For if, as you say, justice is the obedience which the subject renders to their commands, in that case, O thou wisest of men, is there any escape from the conclusion that the weaker are commanded to do not what is for the interest, but what is for the injury of the stronger?

Nothing can be clearer, Socrates, said Polemarchus.

Yes, said Cleitophon, interposing, if you are admitted as his witness. 340

But there is no need of any witness, said Polemarchus, for Thrasymachus himself acknowledges that rulers may sometimes command what is not for their own interest, and that for subjects to obey them is justice.

Yes, Polemarchus,—Thrasymachus said that for subjects to do what was commanded by their rulers was just.

Yes, but he also said that justice was the interest of the stronger, and, while admitting both these propositions, he further admitted that the stronger commands what is not for his own interest; whence follows that justice is the injury quite as much as the interest of the stronger.

But, said Cleitophon, he meant by the interest of the stronger what the stronger thought to be his interest, in which the weaker was to obey him; and this was affirmed to be justice.

That was not what he said, rejoined Polemarchus.

Never mind, I replied, if Thrasymachus says so now, let us accept his statement. Tell me, I said, turning to Thrasymachus,

did you mean by justice what the stronger thought to be his interest, whether really so or not?

Certainly not, he said. Do you suppose that I call him who is mistaken the stronger at the time when he is mistaken?

Yes, I said, I supposed that to be your meaning when you admitted that the ruler was not infallible and might be mistaken.

You are a slanderer, Socrates. Pray do you imagine that he who is mistaken about the sick is a physician in so far as he is mistaken and at the time that he is mistaken? or that he who errs in arithmetic or grammar is an arithmetician or grammarian in so far as he is mistaken and at the time that he is mistaken? True, we say that the arithmetician or grammarian or physician has made a mistake, but this is only a way of speaking; for the fact is that neither the grammarian nor any other person of skill ever makes a mistake in so far as he is what his name implies; they all of them err only when their skill fails them. No artist or sage or ruler errs at the time when he is what his name implies; though he is commonly said to err, and I adopted the common mode of speaking. But the more precise expression, since you will have precision, is that the ruler, as ruler, is unerring, and, being unerring, always commands that which is for his own interest; and the subject is required to execute his commands; and therefore, as I said at first and now repeat, justice is the interest of the stronger.

Indeed, Thrasymachus, and do you really think that I am a slanderer?

Certainly, he replied.

And do you suppose that I ask these questions with any special design of injuring you?

Nay, he replied, I am quite sure of it; and your dishonesty shall do you no good, for I shall detect you, and when detected you will be defeated.

I shall not make the attempt, my dear man; but to avoid anything of the kind occurring between us again, please to say, when you speak of a ruler or stronger whose interest the weaker is required to execute, do you speak of a ruler in the popular or in the strict sense of the term?

The ruler in the strictest of all senses, he said. And now cheat

and deceive if you can; I ask no quarter at your hands. But you won't be able.

And do you imagine, I said, that I am such a madman as to try and cheat Thrasymachus? I might as well try to shave a lion.

Why, he said, you made the attempt a minute ago, and you failed.

Enough, I said, of these civilities. I would rather ask you a question: Is the physician, in that strict sense of which you are speaking, a healer of the sick or a maker of money? And remember that I am now speaking of the true physician.

A healer of the sick, he replied.

And the pilot—that is to say, the true pilot—is he a captain of sailors or a mere sailor?

A captain of sailors.

The circumstance that he sails in the ship is not to be reckoned; this is an accident only, and has nothing to do with the name pilot, which is significant of his skill and of his authority.

Very true, he said.

Now, I said, each of these has an interest?

Certainly.

And the art has to find and provide for this interest?

Yes, that is the aim of the art.

And the interest of each of the arts is the perfection of each of them; nothing but that?

What do you mean?

I mean what I may illustrate negatively by the example of the body. Suppose you were to ask me whether the body is self-sufficing or has wants, I should reply: Certainly the body has wants; for the body may be ill and require to be cured, and has therefore interests to which the art of medicine ministers; and this is the origin and intention of medicine, as you will acknowledge. Am I not right?

Quite right, he replied.

342

But is the art of medicine or any other art faulty or deficient in any quality in the same way that the eye may be deficient in sight or the ear fail of hearing, and, in consequence of this defect, require another art to provide for the interests of seeing

and hearing? Has art in itself, I say, any similar liability to fault or defect, and does every art require another supplementary art to provide for its interests, and that another and another without end? Or have the arts only to look after their own interests? Or have they no need either of themselves or of another?—having no faults or defects, they have no need to correct them, either by the exercise of their own art or of any other—that is not required of them for the preservation of their interests; they have only to consider the interest of their subject-matter, for every art remains pure and faultless while remaining true—that is to say, while perfect and unimpaired? Take the words in your precise sense, and tell me whether I am not right.

Yes, clearly.

Then medicine does not consider the interest of medicine, but the interest of the body?

True, he said.

Nor does farriery consider the interests of farriery, but the interests of the horse; neither do any other arts care for themselves, for they have no needs, but they care only for that which is the subject of their art?

True, he said.

But surely, Thrasymachus, the arts are the superiors and rulers of their own subjects?

To this he assented with a good deal of reluctance.

Then, I said, no science or art considers or enjoins the interest of the stronger or superior, but only the interest of the subject and weaker?

He acquiesced in this too after a feint of resistance.

Then, I continued, no physician, in so far as he is a physician, considers his own good in what he prescribes, but the good of his patient; for the true physician is also a ruler having the human body as a subject, and is not a mere money-maker; that has been admitted?

Yes.

And the pilot likewise, in the strict sense of the term, is a ruler of sailors and not a mere sailor?

That has been admitted.

And such a pilot and ruler will provide and prescribe for the

interest of the sailor who is under him, and not for his own or the ruler's interest?

He gave a very reluctant 'Yes.'

Then, I said, Thrasymachus, there is no one in any rule who, in so far as he is a ruler, considers or enjoins what is for his own interest, but always what is for the interest of his subject and of his art; to that he looks, and that alone he considers in everything which he says and does.

When we had got to this point in the argument, and every 343 one saw that the definition of justice had been completely reversed, Thrasymachus, instead of replying to me, said: I want to know, Socrates, whether you have a nurse?

Why do you ask such a question, I said, instead of answering as you ought?

Why, because she leaves you to drivel, and never wipes your nose: her baby has not even been taught by her to know the shepherd from the sheep.

What makes you say that? I replied.

Because you fancy that the shepherd or neat-herd fattens or tends the sheep or oxen with a view to their own good and not to the good of himself or his master; and you further imagine that the rulers of states, who are true rulers, never think of their subjects as sheep, and that they are not studying their own advantage day and night. Oh, no; and so entirely astray are you in the very rudiments of justice and injustice as not even to know that justice and the just are in reality another's good; that is to say, the interest of the ruler and stronger, and the loss of the subject and servant; whereas the reverse is the truth in the case of injustice; for the unjust is lord over the truly simple and just: he is the stronger, and his subjects do what is for his benefit, and minister to his happiness, which is very far from being their own. Consider further, most foolish Socrates, that the just is always a loser in comparison with the unjust. First of all, in private contracts: wherever the unjust is the partner of the just you will find that the unjust man has always more and the just less. Next, in their dealings with the State: when there is an income-tax, the just man will pay more and the unjust less on the same amount of income; and when there is anything to be received the one gains nothing and the other much. Observe

also that when they come into office, there is the just man neglecting his affairs and perhaps suffering other losses, but he will not compensate himself out of the public purse, because he is just; moreover he is hated by his friends and acquaintance for refusing to serve them in unlawful ways. Now all this is reversed in the case of the unjust man. I am speaking, as before, of
344 injustice on a large scale in which the advantage of the unjust is most apparent, and my meaning will be most clearly seen if we turn to that highest form of injustice in which the criminal is the happiest of men, as the sufferers or those who refuse to do injustice are the most miserable—I mean tyranny, which by fraud and force takes away the property of others, not retail but wholesale; comprehending in one, things sacred as well as profane, private and public; for any one of which acts of wrong, if he were detected perpetrating them singly, he would be punished and incur great dishonour; since they who are guilty of any of these crimes in single instances are called robbers of temples, and man-stealers and burglars and swindlers and thieves. But when a man besides taking away the money of the citizens has made slaves of them, then, instead of these dishonourable names, he is called happy and blessed, not only by the citizens but by all who hear of his having achieved the consummation of injustice. For injustice is censured because the censurers are afraid of suffering, and not from any fear which they have of doing injustice. And thus, as I have shown, Socrates, injustice, when on a sufficient scale, has more strength and freedom and mastery than justice; and, as I said at first, justice is the interest of the stronger, whereas injustice is a man's own profit and interest.

Thrasymachus, when he had thus spoken, having, like a bathman, deluged our ears with his words, had a mind to go away. But the company would not allow this, and they compelled him to remain and defend his position; and I myself added my own humble request that he would not leave us. Thrasymachus, I said to him, excellent man, how suggestive are your words! And are you going away before you have fairly taught or learned whether they are true or not? Is the attempt to determine the way of man's life such a small matter in your eyes—to determine the way in which life may be passed by each one of us to the greatest advantage?

My reason is that I do not agree with you, he replied ¹.

Or rather you have no care or thought about us, Thrasy-machus, I said; and whether we live better or worse from not knowing what you say you know, is to you a matter of indifference. Prithee, friend, be obliging and exhibit your wisdom to us; any benefit which is conferred on a large party such as this is will not be unrewarded. For my own part I openly declare ³⁴⁵ that I am not convinced, and that I do not believe injustice to be more gainful than justice, even if uncontrolled and allowed to have free play. For, granting that there may be an unjust man who is able to commit injustice either by fraud or force, still this does not convince me of the superior advantage of injustice, and there may be others who are in the same predicament as myself. Perhaps we may be wrong; if so, you in your wisdom should convince us that we are mistaken in preferring justice to injustice.

And how am I to convince you, he said, if you are not already convinced by what I have just said; what more can I do for you? Would you have me put the proof bodily into your souls?

Heaven forbid! I said; I would only ask you to be consistent; or, if you change, change openly and let there be no deception. For I must remark, Thrasy-machus, if you will look back at what preceded, that although you began by defining the true physician in an exact sense, you did not observe a like exactness when speaking of the shepherd, and you thought that in so far as he is a shepherd he tends the sheep not with a view to their own good, but as a mere feaster or diner with a view to the pleasures of the table; or, again, as a trader with a view to the market, and not as a shepherd. Yet surely the art of the shepherd is concerned only with the good of his subjects; he has only to provide the best for them, since what is best for his art has been already provided when the duties of the shepherd are adequately fulfilled. And that was what I was saying just now about the ruler. I imagined that the art of the ruler, considered as ruler, whether in a state or in private life, could only regard the good of his flock or sub-

¹ Or with a question: Do you suppose that I deny that?

jects; whereas you seem to think that the rulers in states—and you are speaking of the true rulers—enjoy being in authority.

Think! Nay, I am sure of that.

Then why in lesser offices do men never take office willingly or without payment, unless under the idea that they govern for
346 the advantage of others and have no interest of their own? Let me ask you a question: Does not the difference of arts consist in their having different functions? And, my dear illustrious friend, do say what you think, that we may make a little progress.

Yes, that is the difference, he replied.

And each art gives us a particular good and not merely a general one—health, for example, is the good of medicine; safety at sea is the good of navigation?

Yes, he said.

And the art of payment has the special function of giving pay: but we do not confuse this with other arts; because the health of the pilot may be improved by a sea voyage, you would not say that navigation is the art of medicine—that is to say, if language is to be used in your exact manner?

Certainly not, he said.

Or because a man is in good health when he receives pay you would not say that medicine is the art of payment?

No, he said.

Nor would you say that medicine is the art of receiving pay because a man takes fees when he is engaged in healing?

Certainly not.

And we have admitted, I said, that the good of each art is specially confined to the art?

Yes.

Then, if there be any good which all artists have in common, that is to be attributed to something of which they all have the common use?

True, he replied.

And when the artist is benefited by receiving pay the advantage is gained by an additional use of the art of pay, which is not the art professed by him?

He gave a reluctant assent to this.

Then the pay is not derived by the artists from their respec-

tive arts. But the truth is, that while the art of medicine gives health, and the art of the builder builds a house, another art attends them which is the art of pay. The various arts may be doing their own business and benefiting that over which they preside, but would the artist receive any benefit from his art unless he were paid?

I suppose not.

But does he therefore confer no benefit when he works for nothing?

Certainly, he confers one.

Then now, Thrasymachus, there is no longer any doubt that neither arts nor governments provide for their own interests; but, as we were before saying, they rule for the interests of their subjects who are the weaker and not the stronger—to their good they attend and not to the good of the superior. And this is the reason, my dear Thrasymachus, why, as I was just now saying, no one is willing to govern; because no one likes to take in hand the reformation of evils which are not his concern without an equivalent; since the true artist obeys the rules of his art, ³⁴⁷ and does his work and gives his orders, never for himself or his own interest, but always for that of his subjects; and therefore in order that rulers may be willing to rule, they must be paid in one of three modes of payment, money, or honour, or a penalty for refusing.

How is that, Socrates? said Glaucon. The two first modes of payment are intelligible enough, but what the penalty is I do not understand, or how a penalty can be a payment.

You mean that you do not understand the nature of this payment which to the best men is the great inducement to rule? Of course you know that ambition and avarice are said to be and are a disgrace?

Very true.

And for this reason money and honour have no attraction for them; they do not wish to be directly paid for governing and so get the name of hirelings, nor by indirectly helping themselves out of the public revenues to get the name of thieves. And not being ambitious they do not care about honour; and therefore necessity must be laid upon them, and they must be induced to serve from the fear of punishment.

And this, as I imagine, is the reason why the forwardness to take office, instead of waiting to be compelled, has been thought dishonourable. Now he who refuses to rule is liable to be ruled by one who is worse than himself, than which no punishment can be greater. And the fear of this, as I conceive, induces the good to take office, not because they would, but because they cannot help; nor under the idea that they are going to have any benefit or enjoyment themselves, but as a necessity, and because they are not able to commit the task of ruling to any one who is better than themselves, or indeed as good. For the probability is that if a city were composed entirely of good men, then to avoid office would be as much an object of contention as to obtain office is at present; then we should have plain proof that the true ruler is not meant by nature to regard his own interest, but that of his subjects; and every wise man will therefore choose rather to receive a benefit from another than to have the trouble of conferring one. So far am I from agreeing with Thrasymachus that justice is the interest of the stronger. That, however, is a question which I will not now further discuss; but when Thrasymachus says that the life of the unjust is more advantageous than that of the just, his new statement appears to me to be a far more serious matter. Which of us is right, Glaucon? And which sort of life do you deem the most advantageous?

The life of the just, he answered.

348 Did you hear all the advantages of the unjust which Thrasymachus was rehearsing?

Yes, I heard him, but I was not convinced by him.

And would you desire to convince him, if we can only find a way, that he is saying what is not true?

Most certainly, he replied.

If, I said, he makes a set speech and we make another recounting all the advantages of being just, and he answers and we rejoice, there must be a numbering and measuring of the goods that are claimed on either side, and the end will be that we shall want judges to decide; but if we proceed in our enquiry as we lately did, by making admissions to one another, we shall unite the offices of judge and advocate in our own persons.

Very good, he said.

And which method do I understand you to prefer? I said.

That which you propose.

Well then, Thrasymachus, I said, suppose that you begin at the beginning and answer me. You say that perfect injustice is more gainful than justice?

Yes, that is what I say, and I have given you my reasons.

And what is your view about them? Would you call one of them virtue and the other vice?

Certainly.

I suppose that you would call justice virtue and injustice vice?

What a charming notion! So likely too, seeing that I affirm injustice to be profitable and justice no.

What else then?

The opposite, he replied.

And would you call justice vice?

No, I would rather say sublime simplicity.

Then would you call injustice malignity?

No; I would rather say discretion.

And do the unjust appear to you to be wise and good?

Yes, he said; at any rate those of them who are able to be perfectly unjust, and who have the power of subduing states and nations; but I dare say that you imagine me to be talking of cutpurses. Even this profession if undetected has its profits, though they are not worth mentioning when compared with the advantages which I have just mentioned.

I do not think that I misapprehend your meaning, Thrasy-machus, I replied; but still I cannot hear without amazement that you class injustice with wisdom and virtue, and justice with the opposite.

Certainly, I do class them as you suppose.

Now, I said, you are on more substantial and almost un-answerable ground; for if the injustice which you were maintaining to be profitable had been admitted by you or by other men to be vice and deformity, an answer might have been given to you on received principles; but now I perceive that you will call injustice strong and honourable, and to the unjust you will assign all the qualities which were assigned by us before to the just, seeing that you do not hesitate to rank injustice as wisdom and virtue. 349

That is exactly the truth, he replied.

Now, I said, I see that you are speaking your mind, and therefore I do not shrink from the argument; for I do believe, Thrasymachus, that now you are in earnest and are not amusing yourself at our expense.

What is it to you, he said, whether I am in earnest or not? your business is to refute the argument.

Very true, I said; and will you be so good then as to answer another question?—Does the just man try to gain any advantage over the just?

Far otherwise; if he did he would not be the simple amusing creature which he is.

And would he try to do more than is just?

He would not.

And how would he regard the attempt to gain an advantage over the unjust; would that be considered by him as just or unjust?

He would think that just, and would try to gain the advantage. But he could not.

Whether he could or could not, I said, is not the question. I simply asked whether the just man, while refusing to have more than another just man, would wish and claim to have more than the unjust?

Yes, he would.

And what of the unjust—does he claim to have more than the just man and to do more than is just?

Of course, he said, he claims to have and do more than all men.

And the unjust man will desire and do more than the unjust man, and will strive to get more than all?

True.

Let us put the matter thus, I said; the just does not desire more than his like but more than his unlike, whereas the unjust desires more than both like and unlike.

Nothing, he said, can be better than that statement.

And the unjust is good and wise, and the just is neither?

Good again, he said.

And is not the unjust like the wise and good and the just unlike them?

Of course, he said, he who is just is like the just, and the unjust is like the unjust.

Each of them, I said, is such as his like is?

Certainly, he replied.

Very good, Thrasymachus, I said; and now to take the case of the arts: you would admit that one man is a musician and another not a musician?

Yes.

And the musician is wise, and he who is not a musician is unwise?

True.

And he is good in as far as he is wise, and bad in as far as he is unwise?

Yes.

And you would say the same sort of thing of the physician?

Yes.

And do you think, my excellent friend, that a musician when he adjusts the lyre would desire or claim to exceed or have the advantage of a musician in the tightening and loosening the strings?

I do not think that he would.

But he would claim to exceed the non-musician?

Of course.

And what would you say of the physician? In prescribing 350 meats and drinks would he wish to go beyond another physician or beyond the art of medicine?

He would not.

But he would wish to exceed the non-physician?

Yes.

And about knowledge and ignorance in general; see whether you think that any man who has knowledge ever would wish to have the choice of saying or doing more than another man who has knowledge. Would he not rather say or do the same as his like in the same case?

That, I suppose, is not to be denied.

And what would you say of the ignorant? would he not desire to have more than either the knowing or the ignorant?

That, I suppose, must be as you say.

And the knowing is wise?

Yes.

And the wise is good?

True.

Then the wise and good will not desire to gain more than his like, but more than his unlike?

That is evident.

Whereas the bad and ignorant will desire to gain more than both?

Yes.

But did you not say, Thrasymachus, that the unjust exceeds both his like and unlike?

Yes, I did.

And you also said that the just will not exceed his like but his unlike?

Yes.

Then the just is like the wise and good, and the unjust like the evil and ignorant?

That is the inference.

And each of them is such as his like is?

That was admitted.

Then the just has turned out to be wise and good and the unjust evil and ignorant.

Thrasymachus made all these admissions, not fluently, as I repeat them, but with extreme reluctance; he perspired extraordinarily, the day being hot; and then I saw what I had never seen before, Thrasymachus blushing. As we were agreed that justice was virtue and wisdom, and injustice vice and ignorance, I proceeded to another point. Well, I said, Thrasymachus, that is now settled; but were we not also saying that injustice had strength; do you remember?

Yes, I remember, he said, but do not suppose that I approve of what you are now saying or have no answer; if I do not answer, that is because I know you would accuse me of haranguing; therefore either permit me to have my say out, or if you would rather ask, do so, and I will answer 'Go on,' as they say to story-telling old women, and will nod 'Yes' and 'No.'

Surely not, I said, if contrary to your real opinion.

Yes, he said, I will, to please you, since you will not let me speak. What else would you have?

Nothing in the world, I said ; and if you are so disposed I will ask and you shall answer.

Proceed.

Then I will repeat the question which I asked before, in order that our examination of the relative nature of justice and injustice may be carried on regularly. A statement was made that injustice is more powerful than justice, but now justice, having been identified with wisdom and virtue, is easily shown to be stronger than injustice, if injustice is ignorance ; no one can be any longer blind to that. But I want to view the matter, Thrasymachus, in a new way. You would not deny that a state may be unjust and may be unjustly attempting to enslave other states, or may have already enslaved them, and may be holding many of them in subjection ?

True, he replied ; and I will add that the best and most perfectly unjust state will be most likely to do so.

I know, I said, that such was your position ; but what I would further consider is, whether this power can be exercised without justice or only with justice.

If you are right in your view, and justice is wisdom, then only with justice ; but if I am right, then without justice.

I am delighted, Thrasymachus, to see you not only nodding 'Yes' and 'No,' but making answers that are quite excellent.

That is out of courtesy to you, he replied.

And very good of you too, I said ; would you have the goodness also to inform me, whether you think that an army, or a band of robbers and thieves, or any other gang of evil-doers could act at all if they injured one another ?

No indeed, he said, they could not.

But if they abstained from injuring one another, then they might act better ?

Yes.

And this is because from injustice spring divisions and hatreds and fighting, as from justice harmony and friendship ; is not that true, Thrasymachus ?

I agree, he said, because I do not wish to quarrel with you.

How good of you, I said ; but I should like to know also, if the effect of injustice is to cause hatred, will not injustice, whether existing among slaves or freemen, make them hate one

another and set them at variance and render them incapable of common action ?

Certainly.

And even if injustice be found in two only, will they not quarrel and fight, and become enemies to one another and to the just ?

They will.

And suppose injustice abiding in a single person, would your wisdom say that she loses or that she retains her natural power ?

Let us say that she retains her power.

Yet is not the power which injustice exercises of such a nature that wherever she takes up her abode, whether in a city, in an army, in a family, or in any other body, that body is, to
352 begin with, rendered incapable of united action by reason of sedition and distraction ; and also becomes its own enemy and at variance with all that opposes it, and with the just ? Is not this the case ?

Yes, certainly.

And is not injustice equally suicidal when existing in an individual ; in the first place rendering him incapable of action because he is not at unity with himself, and in the second place making him an enemy to himself and the just ? Is not that true, Thrasymachus ?

Yes.

And O my friend, I said, surely the gods are just ?

I et us assume that they are.

Then, as the gods are just, he will also be the enemy of the gods, and the just will be the friend of the gods ?

Take your fill of the argument, and fear nothing ; I will not oppose you, lest I should displease the company.

Well then, proceed with your answers, and let me have the rest of my feast. For we have already shown that the just are clearly wiser and better and abler than the unjust, and that the unjust are incapable of common action ; nay more, that to speak as we did of evil-doers ever acting vigorously together, is not strictly true, for if they had been perfectly evil, they would have laid hands upon one another ; but there must evidently have been some remnant of justice in them, or they would have injured one another as well as their victims, and then they would

have been unable to act together; they were but semi-villainous, for had they been whole villains, wholly unjust, they would have been wholly incapable of action. That, as I believe, is the truth of the matter, and not what you said at first. But whether the just have a better and happier life than the unjust is a further question which we also proposed to consider. I think that they have, and for the reasons which I have given; but still I should like to examine further, for this is no light matter, concerning nothing less than the true rule of life.

Proceed.

I will proceed by asking a question: Would you not think that a horse has some end?

I should.

And the end or use of a horse or of anything would be that which could not be accomplished, or not so well accomplished, by any other thing?

I do not understand, he said.

Let me explain: Can you see, except with the eye?

Certainly not.

Or hear, except with the ear?

No.

These then are the ends of these faculties?

They are.

But you can cut off a vine-branch with a carving-knife or with 353 a chisel?

Of course.

And yet not so well as with a pruning-hook made for the purpose?

True.

May we not say that this is the end of a pruning-hook?

We may.

Then now I think you will have no difficulty in understanding my meaning when I said that the end of anything was that which could not be accomplished, or not so well accomplished, by any other thing?

I understand your meaning, he said, and assent.

And as all things have ends, have they not also excellences? Need I ask again whether the eye has an end?

It has.

And has not the eye an excellence?

Yes.

And the ear has an end and an excellence also?

True.

And the same is true of all other things; they have each of them an end and a special excellence?

That is so.

Well, and can the eyes fulfil their end if they are wanting in their own proper excellence and have a defect instead?

How can they, he said, if they are blind?

You mean to say, if they have lost their proper excellence, which is sight; but I have not arrived at that point yet. I would rather ask the question more generally, and only enquire whether the things which fulfil their ends fulfil them by their own proper excellence, and fail of fulfilling them by their own defect?

Certainly, he replied.

I might say the same of the ears; when deprived of their own proper excellence they cannot fulfil their end?

True.

And the same observation will apply to all other things?

I agree.

And has not the soul an end which nothing else can fulfil? for example, to superintend and command and deliberate and the like. Are not these peculiar to the soul, and can they rightly be assigned to any other?

To no other.

And is not life to be reckoned among the ends of the soul?

Assuredly, he said.

And has not the soul an excellence also?

Yes.

And can she or can she not fulfil her ends when deprived of that excellence?

She cannot.

Then an evil soul must necessarily be an evil ruler, and the good soul a good ruler?

Yes, necessarily.

And we have admitted that justice is the excellence of the soul, and injustice the defect of the soul?

That has been admitted.

Then the just soul and the just man will live well, and the unjust man will live ill?

That is what your argument proves.

And he who lives well will be blessed and happy, and he who 354 lives ill the reverse of happy?

Certainly.

Then the just is happy, and the unjust miserable?

Granted.

But happiness and not misery is profitable. Then, my blessed Thrasymachus, injustice can never be more profitable than justice.

Let this, Socrates, be your entertainment at the Bendidea.

And for this I am indebted to you, I said, now that you have grown gentle towards me and have left off scolding. Nevertheless, I have not been well entertained; but that was my own fault and not yours. I may liken myself to an epicure who snatches a taste of every dish which is successively brought to table before he has fairly enjoyed the one before; and this has been the case with me. For before I had discovered the nature of justice, I left that enquiry and proceeded to consider whether justice was virtue and wisdom or evil and folly; and then arose a further question about the comparative advantages of justice and injustice, and I could not refrain from passing on to that. And the result of all is that I know nothing at all. For I know not what justice is, and therefore I am not likely to know whether it is or is not a virtue, nor can I say whether the just man is happy or unhappy.

BOOK II.

Steph. 357 WITH these words I was thinking that I had made an end of the discussion ; but the end, in truth, proved to be only a beginning. For Glaucon, who is at all times the boldest of men, was dissatisfied at Thrasymachus' retirement ; he wanted to have the battle out. So he said to me : Socrates, do you wish really to persuade us, or only to seem to have persuaded us, that to be just is always better than to be unjust ?

I should wish really to persuade you, I replied, if I could.

Then you certainly have not succeeded. Let me ask you now :—How would you arrange goods—are there not some which are desirable in themselves, and independently of their results, as, for example, mere innocent pleasures and enjoyments, upon which nothing follows ?

I think that there is such a class, I replied.

Is there not also a second class of goods which are desirable not only in themselves, but also for their results, such as knowledge, sight, health ?

Certainly, I said.

Thirdly, would you recognize a class of goods troublesome in themselves, yet profitable to us ; such, for example, as gymnastic exercises, or the healing and treatment of disease, and the business of money-making, which no one would choose for their own sakes, but only for the sake of some reward or result of them ?

There is, I said, this third class also. But why do you ask ?

Because I want to know in which of the three classes you would place justice ?

358 In the highest class, I replied,—among those goods which he who is to be happy desires for their own sakes as well as for their results.

Then the many are of another mind ; they think that justice is of the troublesome class of goods, which are to be pursued for the sake of rewards and reputation, but in themselves are rather to be avoided.

I know, I said, that this is their doctrine, and this was also the sentiment of Thrasymachus, when originally he blamed justice and praised injustice ; but I am slow of understanding.

I wish, he said, that you would hear me as well as him, and then I shall see whether you and I agree. For Thrasymachus seems to me to have been charmed by your voice, like a snake, sooner than he ought to have been ; and I am not yet satisfied with the account which has been given of the nature of justice and injustice. The rewards and results of them I leave ; but I want to know what they are themselves, and what power they have in the soul. If you please, then, I will revive the argument of Thrasymachus. And first I will speak of the nature and origin of justice according to the common view of them. Secondly, I will show that all men who practise justice do so against their will, deeming it not a good but a necessity. And thirdly, I will maintain that there is reason in this, for the life of the unjust is better far than the life of the just—if what they say is true, Socrates, since I myself am not of their opinion. But still I acknowledge that I am perplexed when I hear the voices of Thrasymachus and myriads of others dinning in my ears ; and, on the other hand, I have never yet heard the thesis that justice is better than injustice maintained in a satisfactory way. If I could hear the praises of justice and injustice considered in themselves, then I should be satisfied, and you are the person from whom I expect to hear this ; and therefore I will praise the unjust life to the utmost of my power, and the manner in which I speak will indicate also the manner in which I desire to hear you praising justice and censuring injustice. Will you say whether you approve of my proposal ?

Indeed I do ; nor can I imagine any theme about which a man of sense would oftener wish to converse.

I am delighted, he replied, to hear you say so, and shall begin by speaking of the nature and origin of justice.

They say that to do injustice is, by nature, good ; to suffer injustice, evil ; but that the evil is greater than the good. And

when men have done and suffered and had experience of both, 359 not being able to avoid the one and obtain the other, they think that they had better agree with one another to have neither, and thence arise laws and covenants among them; and that which is ordained by law they term lawful and just. This, as they affirm, is the origin and nature of justice;—there is a mean or compromise, between the best of all, which is to do and not to suffer injustice, and the worst of all, which is to suffer without the power of retaliation; and justice, being in a mean between the two, is tolerated not as a good, but as the lesser evil, and honoured by reason of the inability of men to do injustice. For no man who is worthy to be called a man would ever submit to such an agreement if he were able to resist; he would be mad if he did. Such is the received account, Socrates, of the nature and origin of justice.

Now that justice is only the inability to do injustice will best appear if we imagine something of this kind: suppose we give both the just and the unjust entire liberty to do what they will, and let us attend and see whither desire will lead them; then we shall detect the just man in the very act; the just and unjust will be found going the same way—following their interest, which all natures follow as a good, and are only diverted into the path of justice by the force of law. The liberty which we are supposing may be most conveniently given to them in the form of such a power as is said to have been possessed by Gyges, the ancestor of Croesus the Lydian¹. According to the tradition, Gyges was a shepherd in the service of the king of Lydia, and, while he was in the field, there was a storm and earthquake which made an opening in the earth at the place where he was feeding his flock. Amazed at the sight, he descended into the opening, where, among other marvels, he beheld a hollow brazen horse, having doors, at which he stooping and looking in saw a dead body of stature, as appeared to him, more than human, and having nothing on but a gold ring; this he took from the finger of the dead and reascended. Now the shepherds met together, according to custom, that they might send their monthly report concerning the flock to the king; and into their

¹ Reading Γύγη τῷ Κροίσου τοῦ Λυδοῦ πρόγονοι.

assembly he came having the ring on his finger, and as he was sitting among them he chanced to turn the collet of the ring towards the inner side of his hand, when instantly he became invisible, and the others began to speak of him as if he were no longer there. He was astonished at this, and again touching 360 the ring he turned the collet outwards and reappeared; thereupon he made trials of the ring, and always with the same result; when he turned the collet inwards he became invisible, when outwards he reappeared. Perceiving this, he immediately contrived to be chosen one of the messengers sent to the court, where he no sooner arrived than he seduced the queen, and with her help conspired against the king and slew him, and took the kingdom. Suppose now that there were two such magic rings, and the just put on one of them and the unjust the other; no man, they say, is of such an iron nature that he would stand fast in justice. No man would endure to be honest when he could safely take what he liked out of the market, or go into houses and lie with any one at his pleasure, or kill or release from prison whom he would, and in all respects be like a God among men. Then the actions of the just would be as the actions of the unjust; they would both take the same road. And this is surely a great proof that a man is just, not willingly or because he thinks that justice is any good to him individually, but of necessity, for wherever any one thinks that he can safely be unjust, there he is unjust. For all men believe in their hearts that injustice is far more profitable to the individual than justice, and he who argues as I have been supposing, will say that they are right. If you could imagine any one having this power of becoming invisible, and never doing any wrong or touching what was another's, he would be thought by the lookers on to be a most wretched idiot, although they would praise him to one another's faces, and keep up appearances with one another from a fear that they too might be sufferers of injustice. Enough of this.

Now, if we are to form a real judgment of the life of the just and unjust, we must isolate them; there is no other way; and how is the isolation to be effected? I answer: Let the unjust man be entirely unjust, and the just man entirely just; nothing is to be taken away from either of them, and both are to be

perfected for the fulfilment of their respective parts. First, let the unjust be like other distinguished masters of crafts; like the
 361 skilful pilot or physician, who knows intuitively his own powers and attempts only what is within their limits, and who, if he fails at any point, is able to recover himself. So let the unjust make his unjust attempts in the right way, and keep in the dark if he means to be great in his injustice: (he who is detected is nobody:) for the highest reach of injustice is, to be deemed just when you are not. Therefore I say that in the perfectly unjust man we must assume the most perfect injustice; there is to be no deduction, but we must allow him, while doing the most unjust acts, to have gained the greatest reputation for justice. If he has taken a false step he must be able to retrieve himself, being one who can speak with effect, if any of his deeds come to light, and force his way where force is required, and having gifts of courage and strength, and command of money and friends. And at his side let us place the just man in his nobleness and simplicity, being, as Aeschylus says, and not seeming. There must be no seeming, for if he seem to be just he will be honoured and rewarded, and then we shall not know whether he is just for the sake of justice or for the sake of honours and rewards; therefore, let him be clothed in justice only, and have no other covering; and he must be imagined in a state of life very different from that of the last. Let him be the best of men, and be esteemed to be the worst; then let us see whether his virtue is proof against infamy and its consequences. And let him continue thus to the hour of death; being just and seeming to be unjust. Then when both have reached the uttermost extreme, the one of justice and the other of injustice, let judgment be given which of them is the happier of the two.

Heavens! my dear Glaucon, I said, how energetically you polish them up for the decision, first one and then the other, as if they were two statues.

I do my best, he said. And now that we know what they are like there is no difficulty in tracing out the sort of life which awaits either of them. But as you may think the description of this a little too coarse, I will ask you to fancy, Socrates, that the words which follow are not mine. Let me put them into the mouths of the eulogists of injustice. They will tell you

that the just man who is thought unjust will be scourged, racked, bound—will have his eyes burnt out; and, at last, after suffering every kind of evil, he will be impaled. Then he will understand that he ought to seem only, and not to be, just; and that the words of Aeschylus may be more truly spoken ³⁶² of the unjust than of the just. For the unjust is pursuing a reality; at any rate, he does not live with a view to appearances—he wants to be really unjust and not to seem only:—

‘His mind has a soil deep and fertile,
Out of which spring his prudent counsels ¹.’

In the first place, he is thought just, and therefore bears rule in the city; he can marry whom he will, and give in marriage to whom he will; also he can trade and deal where he likes, and always to his own advantage, because he has no misgivings about injustice; and in every contest, whether public or private, he gets the better of his antagonists, and has gains, and is rich, and out of his gains he can benefit his friends, and harm his enemies; moreover, he can offer sacrifices, and dedicate gifts to the gods abundantly and magnificently, and can honour the gods or any man whom he wants to honour in far better style than the just, which is a very good reason why he should be dearer to the gods than the just. And thus, Socrates, gods and men unite in making the life of the unjust better than the life of the just.

I was going to say something in answer to Glaucon, when Adeimantus, his brother, interposed: Socrates, he said, you do not suppose that there is nothing more to be urged?

Why, what else is there? I answered.

The strongest point of all has not been even mentioned, he replied.

Well, then, according to the proverb, ‘Let brother help brother;’ and if he fails in any part do you assist him; although I must confess that Glaucon has already said quite enough to lay me in the dust, and take from me the power of helping justice.

Nonsense, he replied; I want you to hear the converse of Glaucon’s argument, which is equally required in order to bring

¹ Seven against Thebes, 574.

out what I believe to be his meaning ; I mean the argument of those who praise justice and censure injustice, with a view to their consequences only. Parents and tutors are always telling their sons and their wards that they are to be just ;
 363 but why? not for the sake of justice, but for the sake of character and reputation ; in the hope of obtaining some of those offices, marriages, and the like which Glaucon has enumerated among the advantages accruing to the unjust from a fair reputation. More, however, is made of appearances by this class than by the others ; for they throw in the good opinion of the gods, and will tell you of a shower of benefits which the heavens, as they say, rain upon the pious ; and this accords with the testimony of the noble Hesiod and Homer, the first of whom says, that for the just the gods make—

‘The oaks to bear acorns at their summit, and bees in the middle ;
 And the sheep are bowed down with the weight of their own fleeces¹ ;’

and many other blessings of a like kind are provided for them. And Homer has a very similar strain ; for he speaks of one whose fame is—

‘As the fame of some blameless king who, like a god,
 Maintains justice ; to whom the black earth brings forth
 Wheat and barley, whose trees are bowed with fruit,
 And his sheep never fail to bear, and the sea gives him fish².’

Still grander are the gifts of heaven which Musacus and his son Eumolpus offer the just ; they take them down into the world below, where they have the saints lying on couches at a feast, everlastingly drunk, with garlands on their heads ; their idea seems to be that an immortality of drunkenness is the highest meed of virtue. Some extend their rewards to the third and fourth generation ; the posterity, as they say, of the faithful and just shall survive them. This is the style in which they praise justice. But about the wicked there is another strain ; they bury them in a slough, and make them carry water in a sieve ; such is the employment which they assign to them in Hades, and while yet living they bring them to infamy, and inflict upon them the punishments which Glaucon described as the portion

¹ Hesiod, Works and Days, 230.

² Homer, Od. xix. 109.

of the just who are reputed to be unjust; nothing else does their invention supply. Such is their manner of praising the one and censuring the other.

Again, Socrates, let me mention another way of speaking about justice and injustice, which is not confined to the poets, but is also found in prose writers. The universal voice of man-³⁶⁴ kind is always declaring that justice and virtue are honourable, but grievous and toilsome; and that the pleasures of vice and injustice are easy of attainment, and are only censured by law and opinion. They say also that honesty is generally less profitable than dishonesty; and they are quite ready to call wicked men happy, and to honour them both in public and private when they are rich or have other sources of power, while they despise and neglect those who may be weak and poor, even though acknowledging them to be better than the others. But most extraordinary of all is their mode of speaking about virtue and the gods: they say that the gods apportion calamity and evil to many good men, and good and happiness to the evil. And mendicant prophets go to rich men's doors and persuade them that they have a power committed to them of making an atonement for their sins or those of their fathers by sacrifices or charms, with rejoicings and games; and they promise to harm an enemy, whether just or unjust, at a small charge; with magic arts and incantations binding the will of heaven, as they say, to do their work. And the poets are the authorities to whom they appeal, now smoothing the path of vice with the words of Hesiod:—

‘Vice may be found easily, and by crowds; the way is smooth and her dwelling-place is near. But before virtue the gods have set toil¹,

and a tedious and uphill road: then citing Homer as a witness that the gods may be influenced by men; for he also says:—

‘The gods, too, may be turned from their purpose; and men pray to them and avert their wrath by sacrifices and soothing entreaties, and by libations and the odour of fat, when they have sinned and transgressed².’

And they produce a host of books written by Musæus and Orpheus, who were children of the Moon and the Muses—that

¹ Hesiod, Works and Days, 287.

² Homer, Iliad, ix. 493.

is what they say—according to which they perform their ritual, and persuade not only individuals, but whole cities, that expiations and atonements for sin may be made by sacrifices and amusements which fill a vacant hour, and are equally at the service of the living and the dead; the latter sort they call
 365 mysteries, and they redeem us from the pains of hell, but if we neglect them no one knows what awaits us.

He proceeded: And now when the young hear all this said about virtue and vice, and the manner in which gods and men regard them, how are their minds likely to be affected, my dear Socrates; those of them, I mean, who are quickwitted, and, like bees on the wing, light on every flower, and out of all they hear, gather inferences as to the character and way of life which are best for them? Probably the youth will say to himself in the words of Pindar—

‘Can I by justice or by crooked ways of deceit ascend a loftier tower which may be a fortress to me all my life?’

For what men say is that, if I am really just without being thought just, there is no profit, but evident pain and loss. But if, though unjust, I acquire the character of justice, a heavenly life is to be mine. Since then, as philosophers say, appearance tyrannizes over truth and is lord of happiness, to appearance I must devote myself. I will have in front of me the painted form and figure of virtue; behind I will trail the subtle and crafty fox, as Archilochus, first of sages, counsels. But I hear some one exclaiming that wickedness is not easily concealed; to which I answer, Nothing great is easy. Nevertheless, this must be the way to happiness, and the way by which we must go if we follow in the steps of the argument. As to concealment, that may be secured by the formation of societies and political clubs. And there are professors of rhetoric who teach the philosophy of persuading courts and assemblies; and so, partly by persuasion and partly by force, I shall make unlawful gains and not be punished. Still I hear a voice saying that the gods cannot be deceived, neither can they be compelled. But what if there are no gods? or, suppose that the gods have no care about human things—why in either case should we care about concealment? And even if there are gods, and they have a care of us, yet we know about them only from tradition and the

genealogies of the poets ; and the poets are the persons who say that they may be influenced and turned by ‘ sacrifices and soothing entreaties.’ Let us be consistent then, and either believe both or neither. And if we believe them, why then we had better be unjust, and offer of the fruits of injustice ; for if we are just 366 we shall indeed escape the vengeance of heaven, but we shall lose the gains of injustice ; whereas, if we are unjust, we shall keep the gains, and by our sinning and praying, and praying and sinning, the gods will be propitiated, and we shall be forgiven. ‘ But there is a world below in which either we or our children will suffer for our deeds.’ Yes, my friend, will be the reply, but there are mysteries and atoning deities, and these have great power. That is what mighty cities declare ; and the children of the gods, who were their poets and prophets, affirm the same.

On what principle, then, shall we choose justice rather than the worst injustice? when, if we only unite the latter with a deceitful regard to appearances, we shall fare to our mind both with gods and men, here as well as hereafter, as say the most numerous and the highest authorities. Knowing all this, Socrates, how can any one who has any advantage of mind or person or rank or wealth, be willing to honour, or indeed refrain from laughing at the praises of justice? For even if there should be any one who is able to disprove my words, and who is satisfied that justice is best, still he is not angry with the unjust ; he is very ready to forgive them, knowing as he also does that men are not just of their own free will ; unless, peradventure, there be some one whom the divinity within him has inspired with a hatred of injustice, or who abstains because he has found knowledge—but no other man. He only blames injustice who, owing to cowardice or age or some weakness, has not the power of being unjust. And this is proved by the fact that when he obtains the power, he immediately becomes unjust to the full extent of his power.

The cause of all this, Socrates, was indicated by us at the beginning of the argument, when my brother and I told you how astonished we were to find that of all the professing panegyrists of justice—beginning with the heroes of old of whom any memorial has been preserved to us, and ending with the men

of our own time—no one has ever blamed injustice or praised justice except with a view to the glories, honours, and benefits which flow from them. No one has ever adequately described either in verse or prose the true essential nature of either of them abiding in the soul, and invisible to any human or divine eye; or shown that of all the things of a man's soul which he has within him, justice is the greatest good, and injustice the
367 greatest evil. Had this been the universal strain, had you sought to persuade us of this from our youth upwards, we should not have been on the watch to keep one another from doing wrong, but every one would have been his own watchman, because afraid, if he did wrong, of harbouring in himself the greatest of evils. I dare say that Thrasymachus and others would seriously hold the language which I have been only repeating, and more of the same sort about justice and injustice, grossly, as I conceive, perverting their true nature. But I am speaking with all my might, as I must confess, only because I want to hear you speak on the opposite side; and I would ask you to show not only the superiority of justice over injustice, but what they do to the possessor of them that makes the one to be a good and the other an evil to him. And please, as Glaucon requested of you, to exclude reputation; for unless you clothe the just in the garb of injustice, and the unjust in that of justice, we shall say that you do not praise justice, but the appearance of justice; we shall think that you are only exhorting us to keep injustice dark, and that you really agree with Thrasymachus in thinking that justice is another's good and the interest of the stronger, and that injustice is a man's own profit and interest, though injurious to the weaker. Now as you have admitted that justice is one of that highest class of goods which are desired as well for their results as, in a far greater degree, for their own sakes—just as sight or knowledge or health, or any other real and natural and not merely conventional goods, are desired for their own sakes—I would ask you to direct your praises to that one point only: I mean to the essential good of justice and evil of injustice. Let others praise the rewards and appearances of justice; that is a manner of arguing which, coming from them, I am ready to tolerate, but from you who have spent your whole life in

thinking about the question, unless I hear the contrary from your own lips, I expect something better. And therefore, I say, not only prove to us that justice is better than injustice, but show what they either of them do to the possessor of them, which makes the one to be a good and the other an evil, whether seen or unseen by gods and men.

I had always admired the genius of Glaucon and Adeimantus, but on hearing these words I was quite charmed, and said: 368 Sons of Ariston, that was not a bad beginning of the Elegiacs in which the admirer of Glaucon addressed you after you had distinguished yourselves at the battle of Megara:—

‘Ariston’s sons, divine offspring of a glorious hero.’

The epithet is very appropriate, for there is something truly divine in being able to argue as you have done for the superiority of injustice and remaining unconvinced by your own arguments. And I do believe that you are not convinced; as I infer from your general character, for had I judged only from your speeches I should have mistrusted you. But now trusting you I have all the greater mistrust of myself. For I am in a strait between two; on the one hand I feel my own inability to maintain the cause of justice—your unwillingness to accept the answer which I made to Thrasymachus about the superiority of justice over injustice proves to me that I am unequal to the task; and yet on the other hand I cannot refuse to help, for I fear that there may be a sin when justice is evil spoken of in standing by and failing to offer help or succour while breath or speech remain to me. And therefore I had best give such help as I can.

Glaucon and the rest entreated me by all means not to let the question drop, but to proceed in the investigation. They wanted to arrive at the truth, first, about the nature of justice and injustice, and secondly, about their relative advantages. I told them, what I really thought, that the search would be no easy one, and would require very good eyes. Seeing then, I said, we are no great wits, I think that we had better adopt a method which I may describe in this way; suppose a short-sighted person had been requested by some one to read small letters a long way off; and some one else told him that

he had seen the very same letters elsewhere written larger and on a larger scale—if they were the same and he could read the larger letters first, and then proceed to the lesser—that would have been thought a rare piece of good fortune.

Very true, said Adeimantus ; but how does the illustration apply to us?

I will tell you, I replied ; justice, which is the subject of our enquiry, is, as you know, sometimes spoken of as the virtue of an individual, and sometimes as the virtue of a State.

True, he replied.

And is not a State larger than an individual?

It is.

Then in the larger the quantity of justice will be larger and more easily discernible. I propose therefore that we enquire into the nature of justice and injustice as appearing in the State 369 first, and secondly in the individual, proceeding from the greater to the lesser and comparing them.

That, he said, is an excellent proposal.

And suppose we imagine the State as in a process of creation, and then we shall see the justice and injustice of the State in process of creation also.

Very likely.

When the State is completed there may be a hope that the object of our search will be more easily discovered.

Yes, more easily.

And shall we make the attempt? I said ; although I cannot promise you that the task will be a light one. Reflect therefore.

I have reflected, said Adeimantus, and am anxious that you should proceed.

A State, I said, arises, as I conceive, out of the needs of mankind ; no one is self-sufficing, but all of us have many wants. Can any other origin of a State be imagined?

There can be no other.

Then, as we have many wants, and many persons are needed to supply them, one takes a helper for one purpose and another for another ; and when these helpers and partners are gathered together in one habitation the body of inhabitants is termed a State.

True, he said. .

And they exchange with one another, and one gives, and another receives, under the idea that the exchange will be for their good.

Very true.

Then, I said, let us begin and create a State; and yet the true creator is necessity, who is the mother of our invention.

True, he replied.

Now the first and greatest of necessities is food, which is the condition of life and existence.

Certainly.

The second is a dwelling, and the third clothing and the like.

True.

And now let us see how our city will be able to supply this great demand. We may suppose that one man is a husbandman, another a builder, some one else a weaver—shall we add to them a shoemaker, or perhaps some other purveyor to our bodily wants?

Quite right.

The barest notion of a State must include four or five men.

Clearly.

And how then will they proceed? Will each give the result of his labours to all?—the husbandman, for example, producing for four, and labouring in the production of food for himself and others four times as long and as much as he needs to labour; or will he leave others and not be at the trouble of producing for them, but produce a fourth for himself in a fourth of the time, 370 and in the remaining three fourths of his time be employed in making a house or a coat or a pair of shoes?

Adeimantus thought that for him to labour at producing food only would be the better way.

Most probably it would, I replied; and I am reminded by your words that we are not all alike; there are diversities of natures among us which are adapted to different occupations.

Very true.

And will you have a work better done when the workman has many occupations, or when he has only one?

When he has only one.

Further, there can be no doubt that a work is spoilt when not done at the right time?

No doubt.

For business is not disposed to wait until the doer of the business is at leisure ; but the doer must be at command, and make the business his first object.

He must.

And if so, we must infer that all things are produced more plentifully and easily and of a better quality when one man does one thing which is natural to him and at the right time, and leaves other things.

Undoubtedly.

Then more than four citizens will be required ; for the husbandman will not make his own plough or mattock, or other implements of agriculture, if they are to be good for anything. Neither will the builder make his tools—and he too needs many ; and in like manner the weaver and shoemaker.

True.

Then carpenters, and smiths, and other artisans, will be sharers in our little State, which is already beginning to grow ?

True.

Yet even if we add neatherds, shepherds, and other herdsmen, in order that our husbandmen may have oxen to plough with, and builders as well as husbandmen may have beasts of burden for their carrying, while carriers and weavers make use of their fleeces and skins,—still our State will not be very large.

That is true ; yet neither will that be a very small State which contains all these.

Further, I said, to place the city on a spot where no imports are required is well nigh impossible.

Impossible.

Then there must be another class of citizens who will bring the required supply from another city ?

There must.

371 But if the trader goes empty-handed, taking nothing which those who are to supply the need want, he will come back empty-handed.

That is certain.

And therefore what they produce at home must be not only enough for themselves, but such both in quantity and quality as to accommodate those from whom their wants are supplied.

Very true.

Then more husbandmen and more artisans will be required?

They will.

Not to mention the importers and exporters, who are called merchants?

Yes.

Then we shall want merchants?

We shall.

And if merchandise is to be carried over the sea, skilful sailors will be needed, and in considerable numbers?

Yes, in considerable numbers.

Then, again, within the city, how will they exchange their productions? and for the sake of this, as you may remember, we made them into a society and constituted a State.

The way will be, that they will buy and sell.

Then they will need a market-place, and a money-token for purposes of exchange.

Certainly.

Suppose now that a husbandman, or possibly an artisan, brings some production to market, and he comes at a time when there is no one to exchange with him,—is he to leave his work and sit idle in the market-place?

Not at all; he will find people there who, seeing the want, take upon themselves the duty of sale. In well-ordered states they are commonly those who are the weakest in bodily strength, and therefore unable to do anything else; their only business is to be in the market, and take money of those who desire to buy goods, and in exchange for goods to give money to those who desire to sell.

This want, then, will introduce retailers into our State. Is not 'retailer' the term which is applied to those who sit in the market-place buying and selling, while those who wander from one city to another are called merchants?

Yes, he said.

And there is another class of servants, who are intellectually hardly on the level of companionship; still they have plenty of bodily strength for labour, which accordingly they sell, and are called, if I do not mistake, hirelings, hire being the name which is given to the price of their labour.

True.

Then hirelings will help to make up our population?

Yes.

And now, Adeimantus, is our State matured and perfected?

Surely.

Where, then, is justice, and where is injustice, and in which part of the State are they to be found?

372 Probably in the dealings of these citizens with one another. I cannot imagine any other place in which they are more likely to be found.

I dare say that you are right in your suggestion, I said; still, we had better consider the matter further, and not shrink from the task.

First, then, let us consider what will be their way of life, now that we have thus established them. Will they not produce corn, and wine, and clothes, and shoes, and build houses for themselves? And when they are housed, they will work in summer commonly stripped and barefoot, but in winter substantially clothed and shod. They will feed on barley and wheat, baking the wheat and kneading the flour, making noble puddings and loaves; these they will serve up on a mat of reeds or clean leaves, themselves reclining the while upon beds of yew or myrtle boughs. And they and their children will feast, drinking of the wine which they have made, wearing garlands on their heads, and having the praises of the gods on their lips, dwelling together in unity, and having a care that their families do not exceed their means; for they will have an eye to poverty or war.

But, said Glaucon, interposing, you have not given them a relish to their meal.

True, I replied, I had forgotten that; of course they will have a relish—salt, and olives, and cheese, and onions, and cabbages or any other vegetables which are fit for boiling; and we shall give them a dessert of figs, and pulse, and beans; and they will roast myrtle-berries and chestnuts at the fire, drinking in moderation. And with such a diet they may be expected to live in peace to a good old age, and bequeath a similar life to their children after them.

Yes, Socrates, he said, and if you were making a city of pigs, how else would you feed the beasts?

But what would you have, Glaucon? I replied.

Why, he said, you should give them the proprieties of life. People who are to be comfortable are accustomed to lie on sofas, and dine off tables, and they should have sauces and sweets in the modern fashion.

Yes, said I, now I understand: the question which you would have me consider is, not only how a State, but how a luxurious State is to be created; and possibly there is no harm in this, for in such a State we shall be more likely to see how justice and injustice grow up. I am certainly of opinion that the true and healthy constitution of the State is the one which I have described. But if you wish to see the State in a fever, I have no objection. For I suppose that many will be dissatisfied with the simpler way of life. They will be for adding sofas, and 373 tables, and other furniture; also dainties, and perfumes, and incense, and courtesans, and cakes, not of one sort only, but in profusion and variety; we must go beyond the necessaries of which I was at first speaking, such as houses, and clothes, and shoes; and the arts of the painter and the embroiderer will have to be set in motion, and gold and ivory and other materials of the arts will be required.

True, he said.

Then we must enlarge our borders; for the original healthy State is too small. Now will the city have to fill and swell with a multitude of callings which are not required by any natural want; such as the whole tribe of hunters and actors, of whom one large class have to do with postures and colours, another are musicians; there will be poets and their attendant train of rhapsodists, players, dancers, contractors; also makers of divers kinds of utensils, including women's ornaments. And we shall want more servants. Will not tutors be also in request, and nurses wet and dry, tirewomen and barbers, as well as confectioners and cooks; and swineherds, too, who were not needed and therefore had no place in the former edition of our State, but are needed now? They must not be forgotten: and there will be hosts of animals, if people are to eat them.

Certainly.

And living in this way we shall have much greater need of physicians than before?

Much greater.

And the country which was enough to support the original inhabitants will be too small now, and not enough?

Quite true.

Then a slice of our neighbours' land will be wanted by us for pasture and tillage, and they will want a slice of ours, if, like ourselves, they exceed the limit of necessity, and give themselves up to the unlimited accumulation of wealth?

That, Socrates, will be unavoidable.

And then we shall go to war, Glaucon,—that will be the next thing.

So we shall, he replied.

Then, without determining as yet whether war does good or harm, thus much we may affirm, that now we have discovered war to be derived from causes which are also the causes of almost all the evils in States, private as well as public.

Undoubtedly.

And our State must once more enlarge; and this time the enlargement will be nothing short of a whole army, which will
374 have to go out and fight with the invaders for all that we have, as well as for the precious souls whom we were describing above.

Why? he said; are they not capable of defending themselves?

No, I said; not if you and all of us were right in the principle which was acknowledged at the first creation of the State: that principle was, as you will remember, that one man could not practise many arts.

Very true, he said.

But is not war an art?

Certainly.

And an art requiring as much attention as shoemaking?

Quite true.

And the shoemaker was not allowed by us to be a husbandman, or a weaver, or a builder—in order that we might have our shoes well made; but to him and to every other worker was assigned one work for which he was by nature fitted, and he was to continue working all his life long at that and at no other, and not to let opportunities slip, and then he would become a good

workman. Now is there any more important work than to be a good soldier? And is war an art so easily acquired that a man may be a warrior who is also a husbandman, or shoemaker, or other artisan; although no one in the world would be a good dice or draught player who merely took up the game as a recreation, and had not from his earliest years devoted himself to this and nothing else? Mere tools will not make a man a skilled workman, or master of defence, nor be of any use to him who knows not the nature of each, and has never bestowed any attention upon them. How then will he who takes up a shield or other implement of war become a good fighter all in a day, whether with heavy-armed or any other kind of troops?

Yes, he said, the tools which would teach us how to use them would be of rare value

And the higher the duties of the guardian, I said, the more time, and art, and skill will be needed by him?

That is what I should suppose, he replied.

Will he not also require natural gifts?

Certainly.

Then we shall have to select natures which are suited to their task of guarding the city?

We shall.

And the selection will be no easy task, I said; but still we must endeavour to do our best as far as we can?

We must.

The dog is a watcher, I said, and the guardian is also a 375 watcher; and in this point of view, is not the noble youth very like a well-bred dog?

How do you mean?

I mean that both of them ought to be quick to see, and swift to overtake the enemy; and strong too if, when they have caught him, they have to fight with him.

All these qualities, he replied, will certainly be required.

Well, and your guardian must be brave if he is to fight well?

Certainly.

And is he likely to be brave who has no spirit, whether horse or dog or any other animal? Have you never observed how the presence of spirit makes the soul of any creature absolutely fearless and invincible?

I have.

Then now we have a clear idea of the bodily qualities which are required in the guardian.

True.

And also of the mental ones; his soul is to be full of spirit?

Yes.

But then, Glaucon, those spirited natures are apt to be furious with one another, and with everybody else.

There is the difficulty, he replied.

Whereas, I said, they ought to be gentle to their friends, and dangerous to their enemies; or, instead of their enemies destroying them, they will destroy themselves.

True, he said.

What is to be done then, I said; how shall we find a gentle nature which has also a great spirit, for they seem to be inconsistent with one another?

True.

And yet he will not be a good guardian who is wanting in either of these two qualities; and, as the combination of them appears to be impossible, this is equivalent to saying that to be a good guardian is also impossible.

I am afraid that what you say is true, he replied.

Here feeling perplexed I began to think over what had preceded. My friend, I said, we deserve to be in a puzzle; for we have lost sight of the simile with which we started.

What do you mean? he said.

I mean to say that there do exist natures gifted with those opposite qualities.

And where do you find them?

Many animals, I replied, furnish examples of them; our friend the dog is a very good one: you know that well-bred dogs are perfectly gentle to their familiars and acquaintances, and the reverse to strangers.

Yes, I know.

Then there is nothing impossible or out of the order of nature in our finding a guardian who has a similar combination of qualities?

Certainly not.

Would you not say that he should combine with the spirited nature the qualities of a philosopher?

I do not apprehend your meaning.

The trait of which I am speaking, I replied, may be also seen 376
in the dog, and is remarkable in an animal.

What trait?

Why, a dog, whenever he sees a stranger, is angry; when an acquaintance, he welcomes him, although the one has never done him any harm, nor the other any good. Did this never strike you as curious?

I never before thought of it, though I quite recognise the truth of your remark.

And surely this instinct of the dog is very charming;—your dog is a true philosopher.

Why?

Why, because he distinguishes the face of a friend and of an enemy only by the criterion of knowing and not knowing. And must not the creature be fond of learning who determines what is friendly and what is unfriendly by the test of knowledge and ignorance?

Most assuredly.

And is not the love of learning the love of wisdom, which is philosophy?

They are the same, he replied.

And may we not say confidently of man also, that he who is likely to be gentle to his friends and acquaintances, must by nature be a lover of wisdom and knowledge?

That we may safely affirm.

Then he who is to be a really good and noble guardian of the State will require to unite in himself philosophy and spirit and swiftness and strength?

Undoubtedly.

Then we have found the desired natures; and now that we have found them, how are they to be reared and educated? Is this an enquiry which may be fairly expected to throw light on the greater enquiry which is our final end—How do justice and injustice grow up in States? for we do not want to be tedious and irrelevant, or to leave out anything which is really to the point.

Ademantus thought that the enquiry would be of great use to us.

Then, I said, my dear friend, the task must not be given up, even if somewhat long.

Certainly not.

Come then, and let us pass a leisure hour in story telling, and our story shall be the education of our heroes.

By all means.

And what shall be their education? Can we find a better than the old-fashioned sort?—and this has two divisions, gymnastic for the body, and music for the soul.

True.

Shall we begin education with music, and go on to gymnastic afterwards?

By all means.

And when you speak of music, do you rank literature under music or not?

I do.

And literature may be either true or false?

Yes.

377 And the young are trained in both kinds, and in the false before the true?

I do not understand your meaning, he said.

You know, I said, that we begin by telling children stories which, though not wholly destitute of truth, are in the main fictitious; and these stories are told them when they are not of an age to learn gymnastics.

Very true.

That was my meaning in saying that we must teach music before gymnastics.

Quite right, he said.

You know also that the beginning is the chiefest part of any work, especially in a young and tender thing; for that is the time at which the character is being formed and most readily receives the desired impression.

Quite true.

And shall we just carelessly allow children to hear any casual tales which may be framed by casual persons, and to receive into their minds notions which are the very opposite of those which are to be held by them when they are grown up?

We cannot.

Then the first thing will be to have a censorship of the writers of fiction, and let the censors receive any tale of fiction which is good, and reject the bad; and we will desire mothers and nurses to tell their children the authorised ones only. Let them fashion the mind with these tales, even more fondly than they form the body with their hands; and most of those which are now in use must be discarded.

Of what tales are you speaking? he said.

You may find a model of the lesser in the greater, I said; for they are necessarily cast in the same mould, and there is the same spirit in both of them.

That may be very true, he replied; but I do not as yet know what you would term the greater.

Those, I said, which are narrated by Homer and Hesiod, and the rest of the poets, who have ever been the great story-tellers of mankind.

But which stories do you mean, he said; and what fault do you find with them?

A fault which is most serious, I said; the fault of telling a lie, and, what is more, a bad lie.

But when is this fault committed?

Whenever an erroneous representation is made of the nature of gods and heroes,—like the drawing of a limner which has not the shadow of a likeness to the truth.

Yes, he said, that sort of thing is certainly very blameable; but what are the stories which you mean?

First of all, I said, there was that greatest of all lies in high places, which the poet told about Uranus, and which was a bad lie too,—I mean what Hesiod says that Uranus did, and what Cronus did to him¹. The doings of Cronus, and the sufferings 378 which in turn his son inflicted upon him, even if they were true, ought certainly not to be lightly told to young and simple persons; if possible, they had better be buried in silence. But if there is an absolute necessity for their mention, a chosen few might hear them in a mystery, and in order to reduce the number of hearers they should sacrifice not a common [Eleusinian] pig, but some huge and unprocurable victim.

Why, yes, said he, those stories are certainly objectionable.

¹ Hesiod, *Theogony*, 154, 459.

Yes, Adeimantus, they are stories not to be narrated in our State; the young man should not be told that in committing the worst of crimes he is far from doing anything outrageous; and that if he chastises his father when he does wrong, in any manner that he likes, he will only be following the example of the first and greatest among the gods.

I quite agree with you, he said; in my opinion those stories are not fit to be repeated.

Neither, if we mean our future guardians to regard the habit of quarrelling as dishonourable, should anything be said of the wars in heaven, and of the plots and fightings of the gods against one another, which are quite untrue. Far be it from us to tell them of the battles of the giants, and embroider them on garments; or of all the innumerable other quarrels of Gods and heroes with their friends and relations. If they would only believe us we would tell them that quarrelling is unholy, and that never up to this time has there been any quarrel between citizens; this is what old men and old women should begin by telling children, and the same when they grow up. And the poets should be required to compose accordingly. But the narrative of Hephaestus binding Here his mother, or how on another occasion Zeus sent him flying for taking her part when she was being beaten,—such tales must not be admitted into our State, whether they are supposed to have an allegorical meaning or not. For the young man cannot judge what is allegorical and what is literal; anything that he receives into his mind at that age is apt to become indelible and unalterable; and therefore the tales which they first hear should be models of virtuous thoughts.

There you are right, he replied; that is quite essential: but, then, where are such models to be found? and what are the tales in which they are contained? when that question is asked, what will be our answer?

379 I said to him, You and I, Adeimantus, are not poets in what we are about just now, but founders of a State: now the founders of a State ought to know the general forms in which poets should cast their tales, and the limits which should be observed by them, but actually to make the tales is not their business.

Very true, he said; but what are these forms of theology which you mean?

Something of this kind, I replied :—God is always to be represented as he truly is; that is one form which is equally to be observed in every kind of verse, whether epic, lyric, or tragic.

Right.

And is he not truly good? and must he not be represented as such?

Certainly.

And no good thing is hurtful?

No, indeed.

And that which is not hurtful hurts not?

Certainly not.

And that which hurts not does no evil?

No.

And that which does no evil is the cause of no evil?

Impossible.

And the good is the advantageous?

Yes.

And the good is the cause of well-being?

Yes.

The good is not the cause of all things, but of the good only, and not the cause of evil?

Assuredly.

Then God, if he be good, is not the author of all things, as the many assert, but he is the cause of a few things only, and not of most things that occur to men. For few are the goods of human life, and many are the evils, and the good is to be attributed to God alone; of the evils the cause is to be sought elsewhere, and not in him.

That appears to me to be most true, he said.

Then we must not listen to Homer or to any other poet who is guilty of the folly of saying that two casks

‘Lie at the threshold of Zeus, full of lots, one of good, the other of evil lots¹;

and that he to whom Zeus gives a mixture of the two

‘Sometimes meets with evil fortune, at other times with good;’

but that he to whom is given the cup of unmingled ill,

‘Him wild hunger drives over the divine earth.’

¹ Iliad xxiv. 527.

And again—

‘Zeus, who is the dispenser of good and evil to us.’

And if any one asserts that the violation of oaths and treaties of which Pandarus was the real author¹, was brought about by Athene and Zeus, or that the strife and conflict of the gods was instigated by Themis and Zeus, he shall not have our approval²; neither will we allow our young men to hear the words of Aeschylus, that

380 ‘God plants guilt among men when he desires utterly to destroy a house.’

And if a poet writes of the sufferings of Niobe, which is the subject of the tragedy in which these iambic verses occur, or of the house of Pelops, or of the Trojan war, or any similar theme, either we must not permit him to say that these are the works of God, or if they are of God, he must devise some explanation of them such as we are seeking: he must say that God did what was just and right, and they were the better for being punished; but that those who are punished are miserable, and that God is the author of their misery—the poet is not to be permitted to say; though he may say that the wicked are miserable because they require to be punished, and are benefited by receiving punishment from God; but that God being good is the author of evil to any one, is to be strenuously denied, and not allowed to be sung or said in any well-ordered commonwealth by old or young. Such a fiction is suicidal, ruinous, impious.

I agree with you, he replied, and am ready to give my assent to the law.

Let this then be one of the rules of recitation and invention,—that God is not the author of evil, but of good only.

That will do, he said.

And what do you think of another principle? Shall I ask you whether God is a magician, and of a nature to appear insidiously now in one shape, and now in another—sometimes himself changing and becoming different in form, sometimes deceiving us with the semblance of such transformations; or is he one and the same immutably fixed in his own proper image?

I cannot answer you without more thought.

¹ Iliad ii. 69.

² Ib. xx.

Well, I said ; but if we suppose a change in anything, that change must be effected either by the thing itself, or by some other thing?

That is most certain.

And things which are at their best are also least liable to be altered or discomposed ; for example, when healthiest and strongest the human frame is least liable to be affected by meats, and drinks and labours, and the plant which is in the fullest vigour also suffers least from heat and wind, or other similar accidents.

Of course.

And this is true of the soul as well as of the body ; the bravest 381 and wisest soul will be least confused or deranged by any external influence.

True.

And further, as I should suppose, the same principle applies to all works of art—vessels, houses, garments ; and that when well made and in good condition, they are least altered by time and circumstances.

Very true.

Then everything which is good, whether made by art or nature, or both, is liable to receive the least change at the hands of others?

True.

But surely God and the things of God are absolutely perfect?

Of course they are.

He is therefore least likely to take many forms.

He is.

But suppose again that he changes and transforms himself?

Clearly, he said, that must be the case if he is changed at all.

And will he then change himself for the better, or for the worse?

If he change at all he must change for the worse, for we cannot suppose that he is deficient in virtue or beauty.

Very true, Adeimantus ; but then, would any one, whether God or man, desire to change for the worse?

Impossible.

Then God too cannot be willing to change ; being, as is supposed, the fairest and best that is conceivable, every God remains absolutely and for ever in his own form.

That necessarily follows, he said, in my judgment.

Then, I said, my dear friend, let none of the poets tell us that

‘The gods, taking the disguise of strangers, haunt cities in all sorts of forms¹;’

and let no one slander Proteus and Thetis, neither let any one, either in tragedy or any other kind of poetry, introduce Here disguised in the likeness of a priestess asking an alms

‘For the life-giving daughters of the river Inachus;’

let us have no more lies of that sort. Neither must we have mothers under the influence of the poets scaring their children with abominable tales of certain gods who, as they say,

‘Go about by night in the likeness of strangers from every land;’

let them beware lest they blaspheme against the gods, and at the same time make cowards of their children.

Heaven forbid, he said.

But although the gods are themselves unchangeable, still by witchcraft and deception they may make us think that they appear in various forms?

Suppose that, he replied.

Well, but can you imagine that God will be willing to lie, or make a false representation of himself, whether in word or deed?

382 I cannot say, he replied.

Do you not know, I said, that the true lie, if I may use such an expression, is hated of gods and men?

What do you mean? he said.

I mean this, I said,—that no one will admit falsehood into that which is the truest and highest part of himself, or about the truest and highest matters; there he is most afraid of a lie having possession of him.

Still, he said, I do not comprehend you.

The reason is, I replied, that you attribute some grand meaning to me; but I am only saying that deception, or being deceived or uninformed about realities in the highest faculty, which is the soul, and in that part of them to have and to hold the lie, is what mankind least like;—that, I say, is what they utterly detest.

¹ Hom. Od. xvii. 485.

There is nothing more hateful to them.

And, as I was just now remarking, this ignorance in the soul of him who is deceived may be called the true lie; for the lie in words is only a kind of imitation and shadowy image of a previous affection of the soul, not pure unadulterated falsehood. Am I not right?

Perfectly right.

The true lie is hated not only by the gods, but also by men?

Yes.

Whereas the lie in words is in certain cases useful and not hateful; in dealing with enemies—that would be an instance; or again, as a cure or preventive of the madness of those who are called your friends; also in the tales of mythology, of which we were just now speaking—because we do not know the truth about ancient traditions, we make falsehood as much like truth as may be, and so of use.

Very true, he said.

But can any of these reasons apply to God? Can we suppose that he is ignorant of antiquity, and therefore has recourse to invention?

That would be ridiculous, he said.

Then the lying poet has no place in our idea of God?

I should say not.

Peradventure again he may tell a lie because he is afraid of enemies?

That is inconceivable.

But he may have friends who are senseless or mad?

But no mad or senseless person can be a friend of God.

Then no motive can be imagined why God should lie?

None.

Then the superhuman and divine is absolutely incapable of falsehood?

Yes.

Then is God perfectly simple and true both in deed and word; he changes not; he deceives not, either by dream or waking vision, by sign or word.

Your words, he answered, are the very expression of my own 383 feelings.

You agree with me, I said, that this is the second type or

mould in which we are to cast our ideas about divine things. The Gods are not magicians who transform themselves, neither do they deceive mankind in word or deed.

I grant that.

Then, although we are lovers of Homer, we do not love the lying dream which Zeus sends to Agamemnon; neither will we praise the verses of Aeschylus in which Thetis says that Apollo at her nuptials

‘Was celebrating in song her fair progeny whose days were to be long, and to know no sickness. And in conclusion he raised a note of triumph over the blessedness of my lot, and cheered my soul. And I thought that the word of Phoebus, being divine and full of prophecy, would not fail. And now he himself who uttered the strain, he who was present at the banquet, and who said this—he is the very god who has slain my son!’¹

These are the kind of sentiments about the gods which will arouse our anger; and he who utters them shall be refused a chorus; neither shall we allow them to enter into education, meaning, as we do, that our guardians, as far as men can be, should be true worshippers of the gods and like them.

I entirely agree, he said, in the propriety of these principles, and promise to make them my laws.

¹ From a lost play.

BOOK III.

SUCH then, I said, are our principles of theology—some tales 386 are to be told, and others are not to be told to our disciples from their youth upwards, if we mean them to honour the gods and their parents, and to value friendship with one another.

Yes; and I think that our principles are right, he said.

But if they are to be courageous, must they not learn, besides these, other lessons also, such as will have the effect of taking away the fear of death? Can any man be courageous who has the fear of death in him?

Certainly not, he said.

And can he be fearless of death, or will he choose death in battle rather than defeat and slavery, who believes in the reality and the terror of the world below?

Impossible.

Then we must assume a control over this class of tales as well as over the others, and beg the relaters of them not simply to revile, but rather to commend the world below, intimating to them that their descriptions are untrue, and will do no good to our future warriors.

That will be our duty, he said.

Then, I said, we shall have to obliterate obnoxious passages, beginning with the verse,—

‘I would rather be a serf on the land of a poor portionless man who is not well to do, than rule over all the dead who have come to nought¹.’

We must also expunge the verse, which tells us how Pluto feared,

‘Lest the mansions grim and squalid which the gods abhor should be seen both of mortals and immortals².’

And again :—

‘O heavens! verily in the house of Hades there is soul and ghostly form but no mind³!’

¹ Od. xi. 489.

² Il. xx. 64.

³ Ib. xxiii. 103.

Again of Tiresias :—

‘To him alone did Persephone give mind, that he should be wise even after death; but the other souls are flitting shades¹.’

Again :—

‘The soul flying from the limbs had gone to Hades, lamenting her fate, leaving strength and youth².’

Again :—

387 ‘And the soul, with shrilling cry, passed like smoke beneath the earth³.’

And,—

‘As bats in hollow of mystic cavern, whenever any of them dropped out of the string falls from the rock, fly shrilling and hold to one another, so did they with shrilling cry hold together as they moved⁴.’

And we must beg Homer and the other poets not to be angry if we strike out these and similar passages, not because they are unpoetical, or unattractive to the popular ear, but because the greater the charm of them as poetry, the less are they meet for the ears of boys and men who are to be sons of freedom, and are to fear slavery more than death.

Undoubtedly.

Also we shall have to reject all the terrible and appalling names which describe the world below—Cocytus and Styx, ghosts under the earth, and sapless shades, and any similar words of which the very mention causes a shudder to pass through the inmost soul of him who hears them. I do not say that these horrible stories may not have a use of some kind; but there is a danger that the nerves of our guardians may become affected by them.

We have reason to fear that, he said.

Then there must be no more of them.

True.

Another and a nobler strain will be ours.

Clearly.

And shall we proceed to get rid of the weepings and wailings of famous men?

They will go with the others.

¹ Od. x. 495. ² Il. xvi. 856. ³ Ib. xxiii. 100. ⁴ Od. xxiv. 6.

But shall we be right in getting rid of them? Reflect: our principle is that the good man will not consider death terrible to a good man.

Yes; that is our principle.

And therefore he will not sorrow for his departed friend as though he had suffered anything terrible?

He will not.

Such an one, as we further maintain, is enough for himself and his own happiness, and therefore is least in need of other men.

True, he said.

And for this reason the loss of a son or brother, or the deprivation of fortune, is to him of all men least terrible.

Assuredly.

And therefore he will be least likely to lament, and will bear with the greatest equanimity any misfortune of this sort which may befall him.

Yes, he will feel such a misfortune far less than another.

Then we shall be right in getting rid of the lamentations of famous men, and making them over to women (and not even to women who are good for anything), or to men of a baser sort, 388 that those who are being educated by us to be the defenders of their country may scorn to do the like.

That will be very right.

Then we will once more entreat Homer and the other poets not to depict Achilles¹, who is the son of a goddess, first lying on his side, then on his back, and then on his face; then starting up and sailing in a frenzy along the shores of the barren sea; now taking the dusky ashes in both his hands² and pouring them over his head, or bewailing and sorrowing in the various modes which Homer has delineated. Nor should he describe Priam the kinsman of the gods as praying and beseeching,

‘Rolling in the dirt, calling each man loudly by his name³.’

Still more earnestly will we beg of him not to introduce the gods lamenting and saying,

‘Alas! my misery! Alas! that I bore the bravest to my sorrow⁴.’

But if he must introduce the gods, at any rate let him not dare

¹ Il. xxiv. 10.

² Ib. xviii. 23.

³ Ib. xxii. 414.

⁴ Ib. xviii. 54.

so completely to misrepresent the greatest of the gods, as to make him say—

‘O heavens! with my eyes I behold a dear friend of mine driven round and round the city, and my heart is sorrowful¹.’

Or again :—

‘Woe is me that I am fated to have Sarpedon, dearest of men to me, subdued at the hands of Patroclus the son of Menoetius².’

For if, my sweet Adeimantus, our youth seriously believe in such unworthy representations of the gods, instead of laughing at them as they ought, hardly will any of them deem that he himself, being but a man, can be dishonoured by similar actions; neither will he rebuke any inclination which may arise in his mind to say and do the like. And instead of having any shame or self-control, he will be always whining and lamenting on slight occasions.

Yes, he said, that is very certain.

Yes, I replied; but that is just what ought not to be, as the argument proved to us; and we must abide by our conviction until we find a better.

Truc.

Neither ought our guardians to be given to laughter. For a fit of laughter which has been indulged to excess almost always produces a violent reaction.

So I believe.

Then persons of worth, even if only mortal, must not be represented as overcome by laughter, and still less must such a representation of the gods be allowed.

389 Still less of the gods, as you say, he replied.

Then we shall not suffer such an expression to be used about the gods as that in which Homer describes how

‘Inextinguishable laughter arose among the blessed gods, when they saw Hephaestus bustling about the mansion³.’

On your views, we must not admit them.

On my views, if you like to father them on me; that we must not admit them is certain.

Again, truth should be highly valued; if, as we were saying, a lie is useless to the gods, and useful only as a medicine

¹ Il. xxii. 168.

² Ib. xvi. 433.

³ Ib. i. 599.

to men, then the use of such medicines should be restricted to physicians ; private individuals have no business with them.

Clearly not, he said.

Then if any persons are to have the privilege of lying, either at home or abroad, they will be the rulers of the State ; and they may be allowed to lie for the public good. But nobody else is to meddle with anything of the kind ; and for a private man to lie in return to the rulers is to be deemed a more heinous fault than for the patient or the pupil of a gymnasium not to speak the truth about his own bodily illnesses to the physician or trainer, or for a sailor not to tell the captain truly how matters are going on in a ship.

Most true, he said.

If, then, the ruler catches anybody beside himself lying in the State,

‘ Any of the craftsmen, whether he be priest or physician or carpenter ¹,’
he will punish him for introducing a practice which is equally subversive of ship or State.

Yes, he said, if our theory is carried into execution.

Next, will not our youth require temperance ?

Certainly.

Under temperance, speaking generally, are included obedience to commanders and command of self in sensual pleasures.

True.

Then would you praise or blame the injunction of Diomedes in Homer,

‘ Friend, sit still and obey my word ²,’

and the verses which follow,

‘ The Greeks marched breathing prowess ³,
. . . . in silent awe of their leaders ⁴,’

and other sentiments of the same kind ?

They are good.

What again of this line,

‘ O heavy with wine, who hast the eyes of a dog and the heart of a stag ⁵,’

and of the verses which follow ? Would you say that these, or 390

¹ Od. xvii. 383 sq.

² Il. iv. 412.

³ Ib. iii. 8.

⁴ Ib. iv. 431.

⁵ Ib. i. 225.

any other impertinent words which private men are supposed to address to their rulers, whether in verse or prose, are well or ill spoken?

They are ill spoken.

They may very possibly afford some amusement, but they do not conduce to temperance. And therefore they are likely to do harm to our young men—you would agree with me in that?

Yes.

And then, again, to make the wisest of men say that nothing in his opinion is more glorious than

‘When the tables are full of bread and meat, and the cup-bearer carries round wine which he draws from the bowl and pours into the cups¹;

is this fit or improving for a young man to hear? Or that other verse which affirms that

‘The saddest of fates is to die and meet destiny from hunger²?’

What would you say again to the tale of Zeus, who, while other gods and men were asleep and he the only person awake, lay devising plans, but forgot them all in a moment through his lust, and was so completely overcome at the sight of Here that he would not even go into the hut, but wanted to lie with her on the ground, declaring that he had never been in such a state of rapture before, even when they first met one another without the knowledge of their parents³; or that other tale of how Hephaestus, in consequence of a similar piece of work, bound Ares and Aphrodite⁴?

Indeed, he said, I am strongly of opinion that they ought not to hear that sort of thing.

But any deeds of endurance which are done or told by famous men, these they ought to see and hear; as, for example, what is said in the verses,

‘He beat his breast, and thus reproached his heart,
Endure, my heart; far worse hast thou endured⁵!’

Certainly, he said.

In the next place, we must not let them be receivers of gifts or lovers of money.

¹ Od. ix. 8.

² Ib. xii. 342.

³ Il. xiv. 281.

⁴ Od. viii. 266.

⁵ Ib. xx. 17.

Certainly not.

Neither must we sing to them of

‘Gifts persuading gods, and persuading reverend kings¹.’

Neither is Phoenix, the tutor of Achilles, to be approved or regarded as having given his pupil good counsel when he told him that he should take the gifts of the Greeks and assist them²; but that without a gift he should not be reconciled to them. Neither will we believe or allow Achilles himself to have been such a lover of money that he took Agamemnon’s gifts, or required a price as the ransom of the dead³.

Undoubtedly, he said, these are not sentiments which ought 391 to be approved.

Loving Homer as I do, I hardly like to say what I must say nevertheless, that in speaking thus of Achilles, or in believing these words when spoken of him by others, there is downright impiety. As little can I credit the narrative of his insolence to Apollo, where he says,

‘Thou hast wronged me, O far-darter, most abominable of deities. Verily I would be even with thee, if I had only the power⁴;

or his insubordination to the river-god⁵, on whose divinity he is ready to lay hands; or the dedication to the dead Patroclus of his own hair⁶, which had been previously dedicated to the other river-god Spercheus; or his dragging Hector round the tomb of Patroclus⁷, and his slaughter of the captives at the pyre⁸; of all this I cannot believe that he was guilty, any more than I can allow our citizens to believe that he, Cheiron’s pupil, the son of a goddess and of Peleus who was the gentlest of men and third in descent from Zeus, was in such rare perturbation of mind as to be at one time the slave of two seemingly inconsistent passions, meanness, not untainted by avarice, combined with overwhelming contempt of gods and men.

You are quite right, he replied.

And let us equally refuse to believe, or allow to be repeated, the tale of Theseus son of Poseidon, or of Perithous son of Zeus, going forth to perpetrate such a horrid rape; or of any other hero

¹ Quoted by Suidas as attributed to Hesiod.

² Il. ix. 515.

³ Ib. xxiv. 175.

⁴ Ib. xxii. 15 sq.

⁵ Ib. xxi. 130, 223 sq.

⁶ Ib. xxiii. 151.

⁷ Ib. xxii. 394.

⁸ Ib. xxiii. 175.

or son of a god daring to do such impious and horrible things as they falsely ascribe to them in our day: and let us compel the poets to declare either that these acts were not done by them, or that they were not the sons of gods;—both in the same breath they shall not be permitted to affirm. We will not have them teaching our youth that the gods are the authors of evil, and that heroes are no better than men; undoubtedly these sentiments, as we were saying, are neither pious nor true, for they are at variance with our demonstration that evil cannot come from God.

Undoubtedly.

And further they are likely to have a bad effect on those who hear them; for everybody will begin to excuse his own vices when he is convinced that similar wickednesses are always being perpetrated by the kindred of the gods,

‘The relatives of Zeus, whose paternal altar is in the heavens and on the mount of Ida,’

and who have

‘the blood of deities yet flowing in their veins¹.’

And therefore let us put an end to such tales, lest they engender
39² laxity of morals among the young.

By all means, he replied.

And now, is there any class of subjects which still remain to be considered? About gods and demigods and heroes and the world below we have already made regulations.

Very true.

And what shall we say about men? That is clearly the remaining portion of our subject.

Clearly so.

But we are not in a condition to answer this question at present.

And why not?

Because, if I am not mistaken, we shall have to say that poets and story-tellers make the gravest misstatements about men when they say that many wicked men are happy, and many good men miserable; and that injustice is profitable when undetected, whereas justice is another's gain and one's own loss—these things we shall forbid them to utter, and command them to sing and say the opposite.

¹ From the Niobe of Aeschylus.

To be sure we shall, he replied.

But if you admit that I am right in this, then I shall say that you have admitted the point which we have been all along trying to determine, viz. whether justice is in itself good.

You are right in reminding me of that, he said.

Well then, I said, about men we must defer coming to a final decision until we have discovered what justice is, and how naturally advantageous to the possessor, whether seen to be just or not.

Most true, he said.

Enough of the subjects of poetry: let us now speak of the style; and when this has been considered, both matter and manner will have been completely treated.

I do not know what you mean, said Adeimantus.

Then I must endeavour to explain. You are aware, I suppose, that all mythology and poetry is a narration of events, either past, present, or to come?

Certainly, he replied.

And narration may be either simple narration, or imitation, or a union of the two?

That again, he said, I do not quite understand.

I fear, I said, that I must be a ridiculous teacher when I cannot make myself better understood. Like a bad speaker, therefore, I will not take the whole of the subject, but will break a piece off as an illustration of my meaning. I dare say that you remember the first lines of the *Iliad*, in which the poet says that Chryses begs Agamemnon to release his daughter, and Agamemnon flies into a passion with Chryses, who invokes the anger of the gods against the Achaeans. I remember as far as these lines, 393

‘And he prayed all the Greeks, but especially the two sons of Atreus, the chiefs of the people,’

the poet is speaking in his own person; he never leads us to suppose that he is any one else. But in what follows he takes the person of Chryses, and then he does all that he can to make us believe that the speaker is not Homer, but the aged priest himself. And this is the general form of the narrative both in the *Iliad* and the *Odyssey*.

Yes.

And it remains a narrative both in the speeches which the poet recites and in the intermediate passages?

Quite true.

But when the poet speaks in the person of another, may we not say that he assimilates his style to that of the person who, as he informs you, is going to speak?

Certainly.

And this assimilation of himself to another, either by the use of voice or gesture, is the imitation of the person whose character he assumes?

Of course.

Then in this case the narrative of the poet may be said to proceed by way of imitation?

Very true.

Or, if the poet everywhere appears and never conceals himself, then again the imitation is dropped, and his poetry becomes simple narration. However, in order that I may make my meaning quite clear, I will return to my example. Suppose that Homer had said, 'The priest came, having his daughter's ransom in his hands, the suppliant of the Achaeans, and above all of the kings;' and then, instead of speaking in the person of Chryses, suppose that he had continued in his own person, the imitation would have passed into narration. He would have said (I am no poet, and therefore I drop the metre), 'Chryses came and prayed the gods on behalf of the Greeks that they might take Troy and return in peace, if Agamemnon would only give him back his daughter, taking the ransom, and reverencing the gods. Thus he spoke, and the other Greeks respected him and consented. But Agamemnon was wroth, and bade him depart and not come again, lest the sceptre and crown of the god should be of no avail to him—the daughter of Chryses, he said, should not be released until she had first grown old with him in Argos. And then he told him to go away and not to provoke him, if he intended to get home safely. And the old man went
394 away in fear and silence, and, having left the camp, he called upon Apollo by his many names, reminding him of everything which he had done pleasing to him, whether in building his temples, or offering sacrifice, and praying that his good deeds

might be returned to him, and that the Achaeans might expiate his tears by the arrows of the god,'—and so on. In this way the whole becomes narrative.

That I understand, he said.

Or you may suppose that the intermediate passages are omitted, leaving only the dialogue, which is the opposite case.

That again, he said, I understand ; you mean, for example, as in tragedy.

That is precisely my meaning ; and I believe that you now see clearly what you did not see before, that poetry and mythology are, in some cases, wholly imitative—instances of this are supplied by tragedy and comedy ; of the opposite style, in which the poet is the only speaker, the dithyramb is the best example ; and the combination of both is found in epic, and in some other styles of poetry. Do I take you with me ?

Yes, he said ; I now understand what you meant to say.

I will beg you also to recall what I began by saying, that we had done with the subject and might proceed to the style.

Yes, I remember.

In saying this, I meant to imply that we must come to an understanding about the mimetic art,—whether the poets, in narrating their stories, are to be allowed to imitate, and if so, whether in whole or in part, and if the latter, in what parts ; or should all imitation be prohibited ?

You mean, I suspect, to ask whether tragedy and comedy shall be admitted into our State ?

Yes, I said ; but there may be more than this in question : I really do not know as yet, but whither the argument may blow, thither we go.

And go we will, he said.

Then, Adeimantus, let me ask you whether our guardians ought to be imitators, or whether in fact this question has not been already answered by our previous recognition of the principle that one man can only do one thing well, and not many ; and that if he attempt many, he will altogether fail of gaining much reputation in any ?

Certainly.

And this is equally true of imitation ; no one man can imitate many things as well as he would imitate a single one ?

He cannot.

395 Then the same person will hardly be able to play the serious part of life, and at the same time be an imitator and imitate many other parts as well ; for even when two species of imitation are nearly allied, the same persons cannot succeed in both, as is plain in the case of tragedy and comedy—did you not say that they are imitations?

Yes, I did ; and you are right in thinking that the same persons cannot succeed in both.

Any more than they can be rhapsodists and actors at once.

True.

Neither are actors the same as comic and tragic poets ; yet all these are imitations.

Yes, they are imitations.

And human nature, Adeimantus, appears to have been coined into yet smaller pieces, and to be as incapable of imitating many things well, as of performing well the actions of which the imitations are copies.

Quite true, he replied.

If then we would retain the notion with which we began, that our guardians are to be released from every other art, and to be the special artificers of freedom, and to minister to this and have no other end, they ought not to practise or imitate anything else ; and, if they imitate at all, they should imitate from youth upward the characters which are suitable to their profession—the temperate, holy, free, courageous, and the like ; but they should not depict or be skilful at imitating any kind of illiberality or other baseness, lest from imitation they should come to be what they imitate. Did you never observe how imitations, beginning in early youth, at last sink into the constitution and become a second nature of body, voice, and mind?

Yes, certainly, he said.

Then, I said, we will not allow those for whom we profess a care and desire that they should be good men, to imitate a woman, whether young or old, quarrelling with her husband, or striving and vaunting against the gods in conceit of her happiness, or when she is in affliction, or sorrow, or weeping ; and certainly not one who is in sickness, love, or labour.

Very right, he said.

Neither must they represent slaves, male or female, doing the offices of slaves?

They must not.

And surely not rogues or cowards, or any who do the reverse of what we have prescribed—jesting, scolding, reviling, in drink or out of drink; or otherwise sinning against themselves or others in word or deed, as the manner of such is. Neither ³⁹⁶ should they be trained to imitate the action or speech of madmen; for madness, like vice, is to be known only to be avoided.

Very true, he replied.

Any more than they may imitate smiths or other artificers, or oarsmen, or boatswains, or the like?

Impossible, he said; how can they imitate that with which they will have no concern at all?

And would you have them imitate the neighing of horses, the bellowing of bulls, the murmur of rivers and roll of the ocean, thunder, and all that sort of thing?

Nay, he said, if madness is forbidden, then neither may they copy the behaviour of madmen.

You mean, I said, if I understand you rightly, that there is one sort of narration which may be used or spoken by a truly good man, and that there is another sort which will be exclusively adapted to a man of another character and education.

And which are these two sorts? he asked.

Suppose, I answered, that a just and good man in the course of narration comes on some saying or action of another good man,—I should imagine that he will like to personate him, and will not be ashamed of this sort of imitation: he will be most ready to play the part of the good man when he is acting firmly and wisely; in a less degree when his steps falter owing to sickness or love, or from intoxication or any other mishap. But when he comes to a character which is unworthy of him, he will not make a study of that; he will disdain his inferiors, and will wear their likeness, if at all, for a moment only when they are doing some good; at other times he will be ashamed to play a part which he has never practised, nor will he like to fashion and frame himself after the baser models; he feels that the

serious use of such an art would be beneath him, and his mind revolts at it.

That is what I should expect, he replied.

Then he will adopt a mode of narration such as we have illustrated out of Homer, that is to say, his style will be both imitative and narrative; but there will be very little of the former, and a great deal of the latter. Do you agree?

Certainly, he said; that is the model which such a speaker
397 must necessarily take.

But another sort of character will narrate anything, and, the worse he is, the more unscrupulous he will be; nothing will be beneath him: moreover he will be ready to imitate anything, not as a joke, but in right good earnest, and before a large audience. As I was just now saying, he will attempt to represent the roll of thunder, the noise of wind and hail, or the creaking of wheels, and pulleys, and the various sounds of flutes, pipes, trumpets, and all sorts of instruments: also he will bark like a dog, bleat like a sheep, and crow like a cock; his entire art will consist in imitation of voice and gesture, and there will be very little narration.

That, he said, will be his mode of speaking.

These, then, are the two kinds of style?

Yes.

And you would agree with me in saying that one of them is simple and has but slight changes; and if the harmony and rhythm are also chosen for their simplicity, the result is that the speaker, if he speaks correctly, is always pretty much the same in style, and keeps within the limits of a single harmony (for the changes are not great), and also keeps pretty nearly the same rhythm?

That is quite true, he said.

Whereas the other style requires all sorts of harmonies and all sorts of rhythms, if the music is to be expressive of the variety and complexity of the words?

That is also perfectly true, he replied.

And do not the two styles, or the mixture of the two, comprehend all poetry, and every form of expression in words? No one can say anything except in one or other of them or in both together.

They include all, he said.

And shall we receive one or both of the two pure styles? or would you include the mixed?

I should prefer only to admit the pure imitator of virtue.

Yes, I said, Adeimantus; but the mixed style is also very charming: and indeed the pantomimic, which is the opposite of the one chosen by you, is the most popular style with children and their instructors, and with the world in general.

I do not deny it.

But I suppose you mean to say that such a style is unsuitable to our State, in which human nature is not twofold or manifold, for one man plays one part only?

Yes; quite unsuitable.

And this is the reason why in our State, and in our State only, we shall find a shoemaker to be a shoemaker and not a pilot also, and a husbandman to be a husbandman and not a dicast also, and a soldier a soldier and not a trader also, and the same of all the other citizens?

True, he said.

And therefore when any one of these clever multiform gentlemen, who can imitate anything, comes to us, and makes a proposal to exhibit himself and his poetry, we will fall down and worship him as a sweet and holy and wonderful being; but we must also inform him that there is no place for such as he is in our State,—the law will not allow them. And so when we have anointed him with myrrh, and set a garland of wool upon his head, we shall send him away to another city. For we mean to employ for our souls' health the rougher and severer poet or story-teller, who will imitate the style of the virtuous only, and will follow those models which we prescribed at first when we began the education of our soldiers.

That, he said, we certainly will, if we have the power.

Then now, my friend, I said, that part of music or literary education which relates to the story or myth may be considered to be finished; for the matter and manner have both been discussed.

I think so too, he said.

Next in order will follow melody and song.

That is plain.

Every one can see what we ought to say about them, if we are to be consistent with ourselves.

I fear, said Glaucon, laughing, that the word 'every one' hardly includes me, for I cannot at the moment say, though I may guess.

At any rate you can tell that a song or ode has three parts—the words, the melody, and the rhythm;—that degree of knowledge I may presuppose?

Yes, he said; so much as that you may.

And as for the words, there will be no difference between words which are and which are not set to music; both will conform to the same laws, and these have been already determined by us?

Yes.

Also the melody and rhythm will go with the subject?

Certainly.

And we were saying, as you may remember, in speaking of the words, that we had no need of lamentation and strains of sorrow?

True.

And which are the harmonies expressive of sorrow? As you are a musician, I wish that you would tell me.

The harmonies which you mean are the mixed or tenor Lydian, and the full-toned or bass Lydian, and others which are like them.

These then, I said, must be banished; even to women of virtue and character they are of no use, and much less to men.

Certainly.

In the next place, drunkenness and softness and indolence are utterly at variance with the character of our guardians.

Of course.

Then I must ask you again, which are the soft or drinking harmonies?

399 The Ionian, he replied, and the Lydian; they are termed 'solute.'

Well, and are these of any military use?

Quite the reverse, he replied; but then the Dorian and the Phrygian appear to be the only ones which remain.

I answered: Of the harmonies I know nothing, but I want to have one warlike, which will sound the word or note which

a brave man utters in the hour of danger and stern resolve, or when his cause is failing, and he is going to wounds or death or is overtaken by some other evil, and at every such crisis meets fortune with calmness and endurance; and another to be used by him in times of peace and freedom of action, when there is no pressure of necessity, and he is seeking to persuade God by prayer, or man by instruction and advice; or on the other hand, which expresses his willingness to listen to persuasion or entreaty or advice, and which represents him when he has accomplished his aim, not carried away by success, but acting moderately and wisely, and acquiescing in the event. These two harmonies I ask you to leave; the strain of necessity and the strain of freedom, the strain of the unfortunate and the strain of the fortunate, the strain of courage, and the strain of temperance; these, I say, leave.

And these, he replied, are the very ones of which I was speaking.

Then, I said, if only the Dorian and Phrygian harmonies are used in our songs and melodies, we shall not want multiplicity of notes or a panharmonic scale?

I suppose not.

Then we shall not maintain the artificers of lyres with three corners and complex scales, or of any other many-stringed curiously-harmonised instruments?

Certainly not.

But what do you say to flute-makers and flute-players? Would you admit them when you reflect that in this composite use of harmony the flute is worse than all the stringed instruments put together, for even the panharmonic music is only an imitation of the flute?

Clearly not.

There remain then only the lyre and the harp for use in the city, and you may have a pipe in the country.

Yes, certainly; thus far the argument is clear.

That we should prefer Apollo and his instruments to Marsyas and his instruments is not at all strange, I said.

Not at all, he replied.

And so, by the dog of Egypt, we have been unconsciously purging the State, which not long ago we termed luxurious.

We have done wisely, he replied.

And now let us finish the purgation, I said. Next in order to harmonies, rhythms will naturally follow, and they should be subject to the same rules, for we ought not to have complex or manifold systems of metre, but rather to discover what rhythms are the expressions of a courageous and harmonious life; and the words should come first, and the rhythms should be adapted to them, not the rhythms first and the words afterwards. To say what rhythms they are will be your business, as you have already taught me the harmonies.

But, indeed, he replied, I cannot tell you. I only know that there are some three principles of rhythm ($\frac{1}{2}$, $\frac{1}{3}$, $\frac{2}{3}$) out of which metrical systems are framed, just as in sounds there are four elements¹ into which the harmonies are resolved; that is an observation which I have made. But what is the character of these metres I am unable to say.

Then, I said, we shall have to take Damon into our counsels; and he will tell us what rhythms are expressive of meanness, or insolence, or fury, or other unworthiness, and what there are remaining for the expression of opposite feelings. And I think that I have an indistinct recollection of his mentioning a complex Cretic rhythm; also a dactylic and heroic, which he arranged, I know not how, so that the rise and fall of the foot were equal (e.g. as in dactylic and anapaestic rhythms) and unequally so as to become short and long (as in iambic or trochaic rhythms, where there is a proportion); and, unless I am mistaken, he spoke of an iambic as well as of a trochaic rhythm, and assigned to them short and long quantities². Also in some cases he appeared to praise or censure the movement of the foot quite as much as the rhythm; or perhaps a combination of the two; for I am not certain what he meant. This, however, as I was saying, had better be referred to him, for the subject is difficult, you know?

¹ i. e. the four notes of the tetrachord.

² Socrates expresses himself carelessly in accordance with his assumed ignorance of the details of the subject. In the first part of the sentence he appears to be speaking of paonic rhythms which are in the ratio of $\frac{2}{3}$; in the second part, of dactylic rhythms, which are in the ratio of $\frac{1}{3}$; in the last clause, of iambic and trochaic rhythms, which are in the ratio of $\frac{1}{2}$ or $\frac{2}{7}$.

To be sure.

But you have no difficulty in discerning that grace or the absence of grace is the effect of good or bad rhythm accompanying good or bad style : and the same is true of good or bad harmony ; for our principle is that rhythm and harmony are regulated by the words, and not the words by them.

Certainly, he said, they should follow the words.

And the words and the character of the style will depend on the temper of the soul ?

Yes.

And everything else on the style ?

Yes.

Then good language and harmony and grace and rhythm depend on simplicity,—I mean the simplicity of a truly and nobly ordered mind, not that other simplicity which is only a euphemism for folly ?

Very true, he replied.

And if our youth are to do their work in life, must they not make these graces and harmonics their perpetual aim ?

They must.

And all life is full of them, as well as every creative and constructive art—painting, weaving, embroidery, the art of building, and the manufacture of vessels, as well as the frames of animals and of plants ; in all of them there is grace or the absence of grace. And absence of grace and inharmonious movement and discord are nearly allied to ill words and ill nature, as grace and harmony are the sisters of godness and virtue and bear their likeness.

That is quite true, he said.

But shall our superintendence go no further, and are the poets only to be required by us to express the image of the good in their works as the condition of producing in our State ? Or is the same control to be exercised over other artists, and are they also to be prohibited from exhibiting the opposite forms of vice and intemperance and meanness and indecency in sculpture and building and the other creative arts ; and is he who does not conform to this rule of ours to be prevented from practising his art in our State, lest the taste of our citizens be corrupted by him ? We would not have our guardians grow up amid images

of moral deformity, as in some noxious pasture, and there browse and feed upon many a baneful herb and flower day by day, little by little, until they silently gather a festering mass of corruption in their own soul. Let our artists rather be those who are gifted to discern the true nature of beauty and grace; then will our youth dwell in the land of health, amid fair sights and sounds; and beauty, the effluence of fair works, will visit the eye and ear, like a healthful breeze from a purer region, and insensibly draw the soul even in childhood into harmony with the beauty of reason.

There can be no nobler training than that, he replied.

And therefore, I said, Glaucon, musical training is a more potent instrument than any other, because rhythm and harmony find their way into the secret places of the soul, on which they mightily fasten, imparting grace, and making the soul graceful of him who is rightly educated, or ungraceful of him who is ill-educated; and also because he who has received this true education of the inner being will most shrewdly perceive omissions or faults in art and nature, and with a true taste, 402 while he praises and rejoices over and receives into his soul the good, and becomes noble and good, he will justly blame and hate the bad, now in the days of his youth, even before he is able to know the reason why; and when reason comes he will recognise and salute her as a friend with whom his education has made him long familiar.

Yes, he said, I quite agree with you in thinking that on these grounds education should be in music.

Just as in learning to read, I said, we want to know the various letters in all their recurring sizes and combinations; not slighting them as unimportant whether they be large or small, but everywhere eager to make them out; and not thinking ourselves perfect in the art until we recognise them wherever they are found:

True—

Or, as we recognise the reflection of letters in the water, or in a mirror, only when we know the letters themselves; the same art giving us the knowledge of both:

Exactly—

Even so, as I maintain, neither we nor our guardians, whom we

have to educate, can ever become musical until we and they know the essential forms of temperance, courage, liberality, magnificence, and their kindred, as well as the contrary forms, in all their combinations, and can recognise them and their images wherever they are found, not slighting them either in small things or great, but believing them all to be within the sphere of one art and study.

Most assuredly.

And when a beautiful soul harmonizes with a beautiful form, and the two are cast in one mould, that will be the fairest of sights to him who has an eye to contemplate the vision?

The fairest indeed.

And the fairest is also the loveliest?

That may be assumed.

And the man who has the spirit of harmony will be most in love with the loveliest; but he will not love him who is of an inharmonious soul?

That is true, he replied, if the deficiency be in his soul; but any merely personal defect he will not mind, and will love all the same.

I perceive, I said, that you have or have had experiences of that sort, and I agree. But let me ask you another question: Have temperance and the excess of pleasure any affinity?

Nay, he said, for pleasure deprives a man of the use of his faculties quite as much as pain.

But has pleasure no affinity to any other virtue?

None whatever.

403

Any affinity to wantonness and intemperance?

Yes, the greatest.

And is there any greater or keener pleasure than that of bodily love?

None, certainly; and there is none which is more irrational.

Whereas true love is a love of beauty and order—temperate and harmonious?

Quite true, he said.

Then nothing violent or irrational must be allowed to approach true love?

Nothing.

Then no irrational pleasure must be allowed to approach the

lover and his beloved, for they can have no affinity with such pleasure if their mutual love is to be of the right sort?

No, indeed, Socrates, it must never come near them.

Then I suppose that in the city which we are founding you would make a law that a friend should use no other familiarity to his love than a father would use to his son, and then only for a virtuous end, and he must first have the other's consent; and this rule is to limit him in all his intercourse, and he is never to go further, or, if he exceeds, he is to be deemed guilty of coarseness and bad taste.

I quite agree, he said.

Thus much of music, which makes a fair ending; for what should be the end of music if not the love of beauty?

I agree, he said.

After music comes gymnastic, in which our youth are next to be trained.

Certainly.

And gymnastic as well as music should receive careful attention in childhood, and continue through life. Now my belief is,—and this is a matter upon which I should like to have your opinion, but my own belief is,—not that the good body improves the soul, but that the good soul improves the body. What do you say?

Yes, I agree.

Then, if we have educated the mind, the minuter care of the body may properly be committed to the mind, and we need only describe the outlines of the subject for brevity's sake.

Very good.

That they must abstain from intoxication has been already remarked by us; for of all persons a guardian should be the last to get drunk and not know where in the world he is.

Yes, he said; that a guardian should require another to guard him is ridiculous indeed.

But next, what shall we say of their food; for the men are athletes in the great contest of all—are they not?

Yes, he said.

404 And will the usual gymnastic exercises be suited to them?

I cannot say.

I am afraid, I said, that such exercise is but a sleepy sort of

thing, and rather perilous to health. Do you not observe that athletes sleep away their lives, and are liable to most dangerous illnesses if they depart, in ever so slight a degree, from their customary regimen?

Yes, I do.

Then, I said, a finer sort of training will be required for our warrior athletes, who are to be like wakeful dogs, and to see and hear with the utmost keenness; in the many changes of water and also of food, of summer heat and winter cold, which they will have to endure, they must not be liable to break down in health.

That is quite my view, he said.

The really excellent gymnastic is twin sister of that simple music which we were just now describing.

How so?

Why, I conceive that there is a gymnastic also which is simple and good; and that such ought to be the military gymnastic.

What do you mean?

My meaning may be learned from Homer; he, you know, feeds his heroes, when they are campaigning, on soldiers' fare; they have no fish, although they are on the shores of the Hellespont, and they are allowed nothing but roast meat—which only requires a fire, and is therefore the most convenient diet for soldiers—and not boiled, as this would involve a carrying about of pots and pans.

True.

And I can hardly be mistaken in saying that sweet sauces are nowhere mentioned in Homer. In proscribing them, however, he is not singular, as all professional athletes know that a man who is to be in good condition should take nothing of the kind.

Yes, he said; and knowing this, they are quite right in not taking them.

Then you would not approve of Syracusan dinners, and the refinements of Sicilian cookery?

I think not.

Nor, if a man is to keep his health, would you allow him to have a Corinthian girl as his fair friend?

Certainly not.

Neither would you approve of the delights, as they are esteemed, of Athenian confectionary?

I should not.

All such feeding and living may be likened to the composition of melody and song in the panharmonic style, and in all the rhythms.

Exactly.

There complexity engendered licence, and here disease; whereas simplicity in music was the parent of temperance in the soul, and simplicity in gymnastic of health in the body.

Most true, he said.

405 But when intemperance and diseases multiply in a State, halls of justice and medicine are always being opened; and the arts of the doctor and the lawyer begin to give themselves airs, finding how keen is the interest which not only the slaves but the freemen of a city take about them.

Most true.

And yet what greater proof can there be of a bad and disgraceful state of education than this, that not only the meaner classes and the artisans are in need of the high skill of physicians and judges, but also those who would pretend to have had a liberal education? Is it not disgraceful, and a great sign of the want of education, that a man should have to go abroad for his law and physic because he has none of his own at home, and must therefore surrender himself into the hands of others?

Of all things, he said, the most disgraceful.

Would you say 'most,' I replied, when you consider that there is a further stage of the evil in which a man is not only a life-long litigant, passing his days always in the courts, either as plaintiff or defendant, but is led by his bad taste even to pride himself on this; he is ready to fancy that he is a master in cunning; and he will take every crooked turn, and wriggle into and out of every hole, bending like a withy¹ and getting out of the way of justice: and all for what?—in order to gain small points not worth mentioning, he not knowing that so to order his life as to be able to do without a nodding judge is a far

¹ Reading *λυγιζόμενος*.

higher and nobler sort of thing. Is not that still more disgraceful?

Yes, he said, that is still more disgraceful.

Well, I said, and to require the help of medicine, not when a wound has to be cured, or on occasion of an epidemic, but just because, by their lives of indolence and luxury, men fill themselves with waters and winds, as if their bodies were a marsh, compelling the ingenious sons of Asclepius to find names for diseases, such as flatulence and catarrh; is not this, too, a disgrace?

Yes, he said, those are certainly strange and newfangled names of diseases.

Yes, I said, and I do not believe that there were such diseases in the days of Asclepius; and this I infer from the circumstance that the hero Eurypylos, after he has been wounded in Homer, drinks a posset of Pramnian wine besprinkled with flour and grated cheese, which are certainly rather inflammatory, and yet the sons of Asclepius who were at the Trojan war do not blame the damsel who gives him the drink, or rebuke Patroclus, who is treating his case. 406

Well, he said, there is something strange in a person who was in his condition having such a drink given to him.

Not strange, I replied, if you bear in mind that in former days, as is commonly said, before the time of Herodicus, the guild of Asclepius did not practise our present system of medicine, which may be said to educate diseases. But Herodicus, being a trainer, and himself of a sickly constitution, by a happy combination of training and doctoring, found out a way of torturing first and chiefly himself, and secondly the rest of the world.

How was that? he said.

By the invention of lingering death; for he had a mortal disease which he perpetually tended, and as recovery was out of the question, he passed his entire life as a valetudinarian; he could do nothing but attend upon himself, and he was in constant torment whenever he departed in anything from his usual regimen, and so dying hard, by the help of science he struggled on to old age.

A rare reward of his skill!

Yes, I said; a reward which a man might fairly expect who

could not be made to see that, if Asclepius did not instruct his descendants in valetudinarian arts, the omission arose not from ignorance or inexperience of such a department of medicine, but because he knew that in all well-ordered states every individual has an occupation to which he must attend, and therefore has no leisure to spend in continually being ill. This we remark in the case of the artisan, but, ludicrously enough, do not apply the same rule to people of the richer sort.

How do you mean? he said.

I replied: When a carpenter is ill he asks the physician for a rough and ready cure; an emetic or a purge or a cautery or the knife,—these are his remedies. And if any one tells him that he must go through a course of dietetics, and swathe and swaddle his head, and all that sort of thing, he replies at once that he has no time to be ill, and that he sees no good in a life which is spent in nursing his disease to the neglect of his ordinary calling; and therefore bidding good-bye to this sort of physician, he resumes his customary diet, and either gets well and lives and does his business, or, if his constitution fails, he dies and has no more trouble.

Yes, he said, and a man in his condition of life ought to use this summary art of medicine.

407 Has he not, I said, an occupation; and what profit would there be in his life if he were deprived of his occupation?

Very true, he said.

But we do not say of the rich man that he has an appointed work, which if he does not do, he ought to die.

He is generally supposed to have nothing to do.

Then you never heard of the saying of Phocylides, that as soon as a man has a livelihood he should practise virtue?

Nay, he said, I think that he need not wait till then.

I do not want to raise that question, I replied; but I want to know whether the practice of virtue is obligatory on the rich, and ought to be a necessity of life to him; and, if so, whether this dicting of disorders, which is an impediment to the application of the mind in carpentering and the mechanical arts, does not equally stand in the way of the maxim of Phocylides?

Of that, he replied, there can be no doubt; such excessive care of the body, when carried beyond the rules of gymnastic, is

most inimical to the practice of virtue, and equally incompatible with the management of a house, an army, or an office of state.

¹ Yes, and even more incompatible, I replied, with any kind of study or thought or self-reflection; and this is the worst part of the affair—there is a constant suspicion that a headache is to be ascribed to philosophy, and hence all practising or making trial of virtue in the higher sense is absolutely stopped; for a man is always fancying that he is ill, and bemoaning the state of his body.

Yes, likely enough.

And therefore our politic Asclepius may be supposed to have exhibited the power of his art only to persons who, being generally of healthy constitution and habits of life, had a definite ailment; such as these he cured by purgations and operations, and bade them live as usual, herein consulting the interests of the State; but bodies which disease had penetrated through and through he would not have attempted to cure by gradual processes of evacuation and infusion: he did not want to lengthen out useless lives, or that weak fathers should beget weaker sons;—if a man was not able to live in the ordinary way he had no business to cure him; for he would have done no good either to the man himself, or to the State.

Then, he said, you regard Asclepius as a statesman.

Clearly, I said; and this is shown also by the example of his sons who, as you may observe, were heroes as well as physicians ⁴⁰⁸ at the siege of Troy. I dare say that you remember how, when the arrow of Pandarus wounded Menelaus, they

‘Sucked the blood out of the wound, and sprinkled soothing remedies²,’

but they never prescribed what the patient was afterwards to eat or drink in the case of Menelaus, any more than in the case of Eurypylus; the remedies, as they conceived, were enough to heal any man who was healthy and sound; and even though he did chance to drink a posset of Pramnian wine, he might get well all the same. But they would have nothing to do with unhealthy and intemperate subjects, whose lives were of no use either to themselves or others; the art of medicine was not designed for

¹ Making the answer of Socrates begin at τὸ δὲ μέγιστον.

² Iliad iv. 218.

their good, and though they were as rich as Midas, the sons of Asclepius would have declined to attend them.

They were very sensible people, those sons of Asclepius.

As they were bound to be, I replied. Nevertheless, the tragedians and Pindar, in violation of our principles, while acknowledging that Asclepius was the son of Apollo, say also that he was bribed into healing a rich man who was at the point of death, and this was the reason why he was struck by lightning. But we, in accordance with our previously-declared rule, will not believe both;—if he was the son of a god, we maintain that he was not avaricious; or, if he was avaricious, he was not the son of a god.

All that, Socrates, is excellent; but I should like to put a question to you. Ought there not to be good physicians in a State, and are not the best those who have treated the greatest number of constitutions good and bad, just as good judges are those who are acquainted with all sorts of moral natures?

Yes, I said, I quite agree about the necessity of having good judges and good physicians. But do you know whom I think good?

Will you inform me?

Yes, if I can. Let me however note that in the same question you join two things which are not the same.

How so? he asked.

Why, I said, you join physicians and judges. Now skilful physicians are those who, from their youth upwards, have combined with the knowledge of their art the greatest experience of disease; they had better not be robust in health, and should have had all manner of diseases in their own persons. For the body, as I conceive, is not the instrument with which they cure the body; in that case we would not allow them ever to be sickly; but they cure the body with the mind, and the mind which is or has become sick can cure nothing.

That is very true, he said.

409 But with the judge the case is different; he governs mind by mind, and he ought not therefore to have been reared among vicious minds, and to have associated with them from youth upwards, in order that, having gone through the whole calendar of crime, he may quickly infer the crimes of others like their

diseases from the knowledge of himself; but the honourable mind which is to form a healthy judgment ought rather to have had no experience or contamination of evil habits when young. And this is the reason why in youth good men often appear to be simple, and are easily practised upon by the evil, because they have no examples of what evil is in their own souls.

Yes, he said, that very often happens with them.

Therefore, I said, the judge should not be young; he should have learned to know evil, not from his own soul, but from late and long observation of the nature of evil in others: knowledge, and not his own experience, should be his guide.

Yes, he said, that is the ideal of a judge.

Yes, I replied, and he will be a good man (which is my answer to your question); for he is good whose soul is good. Whereas your cunning and suspicious character, who has committed many crimes, and fancies himself to be a master in wickedness, when he is among men who are like himself, is wonderful in his precautions against others, because he judges of them by himself: but when he gets into the company of men of virtue, who have the experience of age, he appears to be a fool again, owing to his unseasonable suspicion; he cannot recognise an honest man, because he has nothing in himself which will tell him what an honest man is like; at the same time, as the bad are more numerous than the good, and he meets with them oftener, he thinks himself, and others think him, rather wise than foolish.

Most true, he said.

Then the good and wise judge whom we are seeking is not this man; the other is better suited to us; for vice cannot know virtue, but a virtuous nature, educated by time, will acquire a knowledge both of virtue and vice: the virtuous, and not the vicious man has wisdom—in my opinion.

And in mine also.

This is the sort of medicine, and this is the sort of law, which you will sanction in your state. They will minister to better natures, giving health both of soul and of body; but the bad nature they will in the case of the body leave to die, and the diseased and incurable soul they will put to death themselves.

That is clearly best both for them and for the State.

And thus our youth, having been educated only in that simple music which infuses temperance, will be reluctant to go to law.

Clearly.

And in the same way simple gymnastic will incline him to have as little as possible to do with medicine.

That I quite believe.

The very exercises and toils which he undergoes are intended to stimulate the spirited element of his nature, and not to increase his strength; he will not, like common athletes, use exercise and regimen to develop his muscles.

Very right, he said.

Neither are the two arts of music and gymnastic really designed, the one for the training of the soul, the other for the training of the body.

But what is the real object?

I believe, I said, that the teachers of both have in view chiefly the improvement of the soul.

How can that be? he asked.

Did you never observe, I said, the effect on the mind of exclusive devotion to gymnastic, or the opposite effect of an exclusive devotion to music?

In what way shown? he said.

In producing a temper of hardness and ferocity, or again of softness and effeminacy, I replied.

Yes, he said, I am quite aware that your mere athlete becomes too much of a savage, and that the mere musician is melted and softened beyond what is good for him.

Yet surely, I said, the fierce quality gives spirit, and, if educated rightly, will be valiant, but, if exaggerated, is likely to become hard and brutal.

That I quite think.

The philosopher will have the quality of gentleness. And this, when too much indulged, will turn to softness, but, if educated rightly, will be gentle and modest.

True.

Whereas in our judgment the guardians ought to have both these qualities?

Certainly they ought.

The qualities should be harmonized?

Beyond question.

And the harmonious soul is both temperate and valiant?

411

Yes.

And the inharmonious is cowardly and boorish?

Very true.

And, when a man allows music to play and pour over his soul through the funnel of his ears those sweet and soft and melancholy airs of which we were just now speaking, and his whole life is passed in warbling and the delights of song; in the first stage of the process the passion or spirit which is in him is tempered like iron, and made useful, instead of brittle and useless. But, if he carries on the softening process, in the next stage he begins to melt and waste, until he has wasted away his spirit and cut out the sinews of his soul; and he makes a feeble warrior.

Very true.

If the element of spirit is naturally weak in him this is soon accomplished, but if he have a good deal, then the power of music weakening the spirit renders him excitable;—he soon flames up, and is speedily extinguished; instead of having spirit he becomes irritable and violent and very discontented.

Exactly.

And so in gymnastics, if a man takes violent exercise and is a great feeder, and the reverse of a great student of music and philosophy, at first the high condition of his body fills him with pride and spirit, and he becomes twice the man that he was.

Certainly.

But if he do nothing else, and never cultivates the Muses, even that intelligence which there may be in him, having no taste of any sort of learning or enquiry or thought or music, grows feeble and dull and blind, because never roused or sustained, and because the senses are not purged of their mists.

True, he said.

And he ends by becoming a hater of philosophy, uncivilized, never using the weapon of persuasion,—he is like a wild beast, all violence and fierceness, and knows no other way of dealing; and he lives in all ignorance and evil conditions, and has no sense of propriety and grace.

That is quite true, he said.

And as there are two principles of human nature, one the spirited and the other the philosophical, some God, as I should say, has given mankind two arts answering to them (and only indirectly to the soul and body), in order that these⁴¹² two principles may be duly attuned and harmonized with one another.

That I am disposed to believe.

And he who mingles music with gymnastic in the fairest proportions, and best attempers them to the soul, may be called the true musician and harmonist in a far higher sense than the tuner of the strings.

I dare say, Socrates.

And such a presiding genius will be always required in our State if the government is to last.

Yes, he will be absolutely necessary.

Such, then, are our principles of nurture and education. There would be no use in going into further details about their dances, their hunting or chasing with dogs, their gymnastic and equestrian contests; for these all follow the general principle, and having found that, we shall have no difficulty in discovering them.

I dare say that there will be no difficulty.

Very well, I said; and what is the next question? Must we not ask who are to be rulers and who subjects?

Certainly.

There can be no doubt that the elder sort must rule the younger.

Clearly.

And that the best of the elder sort must rule.

That is also clear.

Now, are not the best husbandmen those who are most devoted to husbandry?

Yes.

And as we must have the best of guardians for our city, must they not be those who have most the character of guardians?

Yes.

And to this end they ought to be wise and efficient, and to have a special interest in the State?

True.

And a man will be most likely to care about that which he happens to love?

To be sure.

And he will be most likely to love that which he regards as having the same interests with himself, and anything the good or evil fortune of which he imagines to involve as a result his own good or evil fortune, and to be proportionably careless when he is less concerned?

Very true, he replied.

Then there must be a selection. Let us note among the guardians those who in their whole life show the greatest desire to do what is for the good of their country, and will not do what is against her interests.

Those are the right men.

They will have to be watched at every turn of their lives, in order that we may see whether they preserve their resolution, and never, under the influence either of force or enchantment, forget or cast off their duty to the State.

How cast off? he said.

I will explain to you, I replied. A resolution may go out of a man's mind either with his will or against his will; with his will when he gets rid of a falsehood, against his will whenever he ⁴¹³ is deprived of a truth.

I understand, he said, the willing loss of a resolution; the meaning of the unwilling I have yet to learn.

Why, I said, do you not see that men are unwillingly deprived of good, and willingly of evil? Is not to have lost the truth an evil, and to have the truth a good? and you would allow that to conceive things as they are is to have the truth?

Yes, he replied; I agree with you in thinking that mankind are deprived of truth against their will.

And is not this involuntary deprivation caused either by theft, or force, or enchantment?

Still, he replied, I do not understand you.

I fear that I must have been talking darkly, like the tragedians. I only mean that some men change and others forget; persuasion steals away the hearts of one class, and time of the other; and this I call theft. Now you understand me?

Yes.

Those again who are forced, are those whom the violence of some pain or grief compels to change their opinion.

I understand, he said, and you are quite right.

And you would also agree with me in saying that the enchanted are those who change their minds either under the softer influence of pleasure, or the sterner influence of fear?

Yes, he said; everything that deceives may be said to enchant.

Therefore, as I was just now saying, we must enquire who are the best guardians of their own conviction that the interest of the State is to be the rule of all their actions. We must watch them from their youth upwards, and make them perform actions in which they are most likely to forget or to be deceived, and he who remembers and is not deceived is to be selected, and he who fails in the trial is to be rejected. That will be the way?

Yes.

And there should also be toils and pains and conflicts prescribed for them, in which they will give further proof of the same qualities.

Very right, he replied.

And then, I said, we must try them with enchantments—that is the third sort of test—and see what will be their behaviour: like those who take colts amid noises and cries to see if they are of a timid nature, so we must take our youth amid terrors of some kind, and again pass them into pleasures, and try them more thoroughly than gold is tried in the fire, in order to discover whether they are armed against all enchantments, and of a noble bearing always, good guardians of themselves and of the music which they have learned, and retaining under all circumstances a rhythmical and harmonious nature, such as will be most serviceable to the man himself and to the State. And he who at every age, as boy and youth and in mature life, has come out of the trial victorious and pure, shall be appointed a ruler and guardian of the State; he shall be honoured in life and death, and shall receive sepulture and other memorials of honour, the greatest that we have to give. Him we must choose, and reject the opposite of him. I am inclined to think that this is the sort of way in which our rulers and guardians should be appointed. I speak generally, and not with any pretension to exactness.

And, speaking generally, I agree with you, he said.

And perhaps the word 'guardian' in the fullest sense ought to be applied to this higher class only who are our warriors abroad and our peacemakers at home, and who save us from those who might have the will or the power to injure us. The young men whom we before called guardians may be more properly designated auxiliaries and allies of the principles of the rulers.

In that I agree with you, he said.

How then may we devise one of those needful falsehoods of which we lately spoke—just one royal lie which may deceive the rulers, if that be possible, and at any rate the rest of the city?

What sort of lie? he said.

Nothing new, I replied; only an old Phoenician tale of what has often occurred before now in other places, (as the poets say, and have made the world believe,) though not in our time, and I do not know whether such an event could ever happen again, or would be believed, if it did.

How your words seem to hesitate on your lips!

You will not wonder, I replied, at my hesitation when you have heard.

Speak, he said, and fear not.

Well then, I will speak, although I really know not how to look you in the face, or in what words to utter the audacious fiction, which I propose to communicate gradually, first to the rulers, then to the soldiers, and lastly to the people. They are to be informed that their youth was a dream, and the education and training which they received from us an appearance only; in reality during all that time they were in process of formation and nourishment in the womb of the earth, where they themselves and their arms and appurtenances were manufactured; and when they were completed, the earth, their mother, sent them up; and, their country being their mother and also their nurse, they are bound to advise for her good, and to defend her against attacks, and her citizens they are to regard as children of the earth and their own brothers.

I think, he said, that you did well to be ashamed of the lie which you were going to tell.

Nay, I replied, there is more coming; I have only told you 415

half. Citizens, we shall say to them in our tale, you are brothers, yet God has framed you differently. Some of you have the power of command, and these he has composed of gold, wherefore also they have the greatest honour; others of silver, to be auxiliaries; others again who are to be husbandmen and craftsmen he has made of brass and iron; and the species will generally be preserved in the children. But as you are of the same original family, a golden parent will sometimes have a silver son, or a silver parent a golden son. And God proclaims to the rulers, as a first principle, that above all they should watch over their offspring, and see what elements mingle in their nature; for if the son of a golden or silver parent has an admixture of brass and iron, then nature orders a transposition of ranks, and the eye of the ruler must not be pitiful towards his child because he has to descend in the scale and become a husbandman or artisan, just as there may be others sprung from the artisan class who are raised to honour, and become guardians and auxiliaries. For an oracle says that when a man of brass or iron guards the State, it will then be destroyed. Such is the tale; is there any possibility of making our citizens believe in it?

Not in the present generation, he replied; I do not see any way of accomplishing this; but their sons may be made to believe, and their sons' sons, and posterity after them.

I see the difficulty, I replied; yet the fostering of such a belief will make them care more for the city and for one another. Enough, however, of the fiction, which may now fly abroad upon the wings of rumour, while we arm our earth-born heroes, and lead them forth under the command of their rulers. Let them look around and select a spot whence they can best prevent insurrection, if any prove refractory within, and also defend themselves against enemies, who like wolves may come down on the fold from without; there let them encamp, and when they have encamped, let them sacrifice and prepare their dwellings.

And what sort of dwellings are they to have?

Dwellings which will shield them against the cold of winter and the heat of summer.

I suppose that you mean houses, he replied.

Yes, I said; but they must be the houses of soldiers, and not of shop-keepers.

What is the difference? he said.

That I will endeavour to explain, I replied. To keep watch-dogs, who, from want of discipline or hunger, or some evil habit or other, would turn upon the sheep and worry them, and behave not like dogs but wolves, would be a foul and monstrous thing?

Truly monstrous, he said.

And therefore every care must be taken lest our auxiliaries, as they are stronger than our citizens, should prevail over them, and become savage tyrants instead of gentle allies to them?

Yes, care should be taken.

And would not education be the best preparation and safeguard of them?

But they are well-educated, he replied; education is a safeguard which they already have.

I cannot be so confident, my dear Glaucon, I said; I am much more certain that they ought to be, and that true education, whatever that may be, will greatly tend to civilize and humanize them in their relations to one another, and to those who are under their protection.

True, he replied.

And not only their education, but their habitations, and also their means of subsistence, should be such as will neither impair their virtue as guardians, nor tempt them to prey upon the other citizens. Any man of sense will say that.

He will.

Then now let us consider what will be their way of life, if they are to realize our idea of them. In the first place, none of them should have any property beyond what is absolutely necessary; neither should they have a private house or treasury closed against any one who has a mind to enter; their provisions should be only such as are required by trained warriors, who are men of temperance and courage; they should agree to receive from the citizens a fixed rate of pay, enough to meet the expenses of the year and no more, and they will go to mess and live together like soldiers in a camp. Gold and silver we will tell them that they have from God; the diviner metal is within them, and they have therefore no need of the other earthly dross which passes under the name of gold, and ought not to pollute the divine by

417 earthly admixture, for that commoner metal has been the source of many unholy deeds ; but their own is undefiled. And they alone of all the citizens may not touch or handle silver or gold, or be under the same roof with them, or wear them, or drink from them. And this will be their salvation, and the salvation of the State. But should they ever acquire homes or lands or moneys of their own, they will become housekeepers and husbandmen instead of guardians, enemies and tyrants instead of allies of the other citizens ; hating and being hated, plotting and being plotted against, they will pass through life in much greater terror of internal than of external enemies, and the hour of ruin, both to themselves and to the rest of the State, will be at hand. For all which reasons may we not say that these are to be the regulations of our guardians respecting houses and all other things, and that such shall be our laws ?

Yes, said Glaucon.

BOOK IV.

HERE Adeimantus interposed a question: How would you ⁴¹⁹ answer, Socrates, said he, if a person were to say that you make your citizens miserable, and miserable of their own accord; for they are the actual owners of the city, and are none the better; whereas other men acquire lands, and build large and handsome houses, and have everything handsome about them, offering sacrifices to the gods on their own account, and practising hospitality; moreover, as you were saying just now, they have gold and silver, and all that is usual among the favourites of fortune, while our poor citizens are no better than mercenaries who are fixed in the city and do nothing but mount guard?

Yes, I said; and you may add that they are only fed, and not ⁴²⁰ paid in addition to their food, like other men; and therefore they cannot make a journey of pleasure; they have no money to spend on a mistress or any other luxurious fancy, which, as the world goes, is thought to be happiness; and many other accusations of the same nature might be added.

But, said he, let us suppose all that included in the charge.

You mean to ask, I said, what is to be our answer?

Yes.

If we proceed along the path which we are already going, I said, my belief is that we shall find the answer. Even if our guardians were such as you describe, there would not be anything wonderful in their still being the happiest of men; but let that pass, for our object in the construction of the State is the greatest happiness of the whole, and not that of any one class; and in a State which is ordered with a view to the good of the whole, we think that we are most likely to find justice, and in the ill-ordered State injustice: and, having found them, we shall

then be able to decide which of the two is the happier. At present we are constructing the happy State, not piecemeal, or with a view of making a few happy citizens, but as a whole; and by-and-by we will proceed to view the opposite kind of State. If we were painting a statue, and some one were to come and blame us for not putting the most beautiful colours on the most beautiful parts of the body—for the eyes, he would say, ought to be purple, but they are black—in that case we might fairly answer, Sir, do not imagine that we ought to beautify the eyes to such a degree that they are no longer eyes; but see whether, by giving this and the other features their due, we make the whole beautiful. And so I would say now, do not compel us to assign to the guardians a sort of happiness which will make them anything but guardians; for we also should have no difficulty in clothing our husbandmen in fine linen, and setting crowns of gold on their heads, bidding them till the ground no more than they like. There would be nothing easier than to allow our potters to repose on couches, and feast by the fireside, passing round the glittering bowl, while their wheel is conveniently at hand, and working at pottery as much as they like, and no more; in this way we may make every class happy—and then, as you imagine, the whole State will be happy. But do not suggest this; for, 421 if we listen to you, the husbandman will be no longer a husbandman, the potter will cease to be a potter, and no class in the State will have any distinct character. Now this is not of much importance where the corruption of society, and pretension to be what you are not, extends only to cobblers; but when the guardians of the laws and of the government are only seemers and not real guardians, that, you will observe, is the utter ruin of the State: as, on the other hand, with them alone rests the order and happiness of a State. If we then really mean that our guardians are to be the saviours and not the destroyers of the State, and the advocate of the other view is talking of peasants at a festival, enjoying a life of revelry rather than fulfilling the duties of citizens, we mean different things, and he is speaking of something which is not a State. And therefore we must consider whether in appointing our guardians we look to their greatest happiness, or whether this principle of happiness does not rather reside in the State as a whole. But if so, the

guardians and auxiliaries, and all others equally with them, must be compelled or induced to do their own work in the best way; and then the whole State growing up in a noble order, the several classes will receive the proportion of happiness which nature assigns to them.

I think that you are quite right.

I wonder whether you will agree with another remark which occurs to me.

What may that be?

There seem to be two causes of the deterioration of the arts.

What are they?

Wealth, I said, and poverty.

How do they act?

The process is as follows: When a potter becomes rich he no longer takes the same pains with his art?

Certainly not.

He grows more and more indolent and careless?

Very true.

And the result is that he becomes a worse potter?

Yes; he greatly deteriorates.

But, on the other hand, if he has no money, and is unable to buy tools or instruments, he will not work equally well himself, nor will he teach his sons or apprentices to work equally well.

Certainly not.

Then workmen and also their works are alike apt to degenerate under the influence both of poverty and of wealth?

That is evident.

Here, then, is a discovery of new evils, I said, which the guardians will have to watch, or they will creep into the city unobserved.

What evils?

Wealth, I said, and poverty; for the one is the parent of ⁴²² luxury and indolence, and the other of meanness and viciousness, and both of discontent.

That is very true, he replied; but still I should like to know, Socrates, how our city will be able to go to war, especially against an enemy who is rich and powerful, if deprived of the sinews of war.

There may possibly be a difficulty, I replied, in going to war

with one such enemy ; but there is no difficulty where there are two of them.

How so ? he asked

In the first place, I said, our side will be trained warriors fighting against an army of rich men.

That is true, he said.

And do you not suppose, Adeimantus, that a single boxer who was perfect in his art would easily be a match for two stout and well-to-do gentlemen who were not boxers ?

Hardly, if they came upon him at once.

What, not, I said, if he were able to run away and then turn and strike at the one who first came up ? And supposing he were to do this several times under the heat of a scorching sun, might he not, being an expert, overturn more than one stout personage ?

Certainly, he said, there would be nothing wonderful in that.

And yet rich men are probably not so inferior to others in boxing as they are in military qualities.

Likely enough.

Then probably our athletes will be able to fight with three or four times their own number ?

I agree with you, for I think you right.

And suppose that, before engaging, our citizens send an embassy to one or two of the cities, telling them the truth : Silver and gold we neither have nor are permitted to have ; in that we are not like you ; do you therefore come and help us in war, and take the spoils of the other city. Who, on hearing these words, would choose to fight against lean wiry dogs, rather than, with the dogs on their side, against fat and tender sheep ?

That is not likely ; and yet there might be a danger to the poor State if the wealth of many others were to coalesce in one.

But how simple of you to use the term State at all of any but our own !

Why so ?

You ought to speak of other states in the plural number ; for they are many in one—a game of cities at which men play. Any ordinary city, however small, is in fact two cities, one the city of the poor, the other of the rich, at war with one another ; and in either division there are many smaller

ones, and you would make a great mistake if you treated them as single States; but if you deal with them as many, and give the money or means or persons of the one to the others, you will always have a great many friends and not many enemies. And your State, while the wise order which has now been prescribed continues to prevail in her, will be the greatest of States, not in reputation or appearance only, but in deed and truth, though she number not more than a thousand defenders. A State which is her equal you will hardly find, either among Hellenes or barbarians, though many that appear to be as great and many times greater.

That is most true, he said.

And this, I said, will be the best limit for our rulers to fix when they are considering the size of the State and the amount of territory which they are to include, and beyond which they will not go.

What is the limit?

The State may increase to any size which is consistent with unity; that, I think, is the limit.

Very good, he said.

Here then, I said, is another order which will have to be conveyed to our guardians,—that our city is to be neither large nor small, but of such a size as is consistent with unity.

And surely, said he, this is not a very severe order which we impose upon them.

And the other, said I, of which we were speaking before is lighter still,—I mean the duty of degrading the offspring of the guardians when inferior, and of elevating the offspring of the lower classes, when naturally superior, into the rank of guardians. The intention was, that, in the case of the citizens generally, we should put each individual man to the use for which nature designed him, and then every man would do his own business, and be one and not many, and the whole city would be one and not many.

Yes, he said; there will be even less difficulty in that.

These things, my good Adcimantus, are not, as might be supposed, a number of great principles, but trifles all, if care be taken, as the saying is, of the one great thing,—a thing, however, which I would rather call not great, but enough for our purpose.

What may that be? he asked.

Education, I said, and nurture. For our citizens are well educated, and grow into sensible men, they will easily see their way through all these, as well as other matters which I do not mention; such, for example, as marriage, the possession of
424 women and the procreation of children, which will all follow the general principle that friends have all things in common, as the proverb says.

That will be the best way of settling them.

Also, I said, the State, if once started well, goes on with accumulating force like a wheel. For good nurture and education implant good constitutions, and these good constitutions having their roots in a good education improve more and more, and this improvement affects the breed in man as in other animals.

True, he said.

Then to sum up: This is the point to which, above all, the attention of our rulers should be directed,—that music and gymnastic be preserved in their original form, and no innovation made. They must do their utmost to maintain this. And when any one says that mankind most regard

‘The song which is the newest that the singers have¹,’

they will be afraid that he may be praising, not new songs, but a new kind of song; and this ought not to be praised, nor is this to be regarded as the meaning of the poet; for any musical innovation is full of danger to the State, and ought to be prevented. So Damon tells me, and I can quite believe him;—
X he says that when modes of music change, the fundamental laws of the State always change with them.

Yes, said Adeimantus; and you may add my suffrage to Damon’s and your own.

Then, I said, our guardians must lay the foundations of their fortress in music?

Yes, he said; and the licence of which you speak very easily creeps in.

Yes, I replied, in the form of amusement; and at first sight appears harmless.

¹ Od. i. 352.

Why, yes, he said, and there is no harm; were it not that little by little the spirit of licence, finding a home, penetrates into manners and customs; whence, issuing with greater force, it invades agreements between man and man, and from agreements goes on to laws and constitutions, in utter recklessness, and ends, Socrates, by an overthrow of all things, private as well as public.

Is that true? I said.

That is my belief, he replied.

Then, as I was saying, our youth should be educated in a stricter rule from the first, for if education becomes lawless, and the youths themselves become lawless, they can never grow up ⁴²⁵ into well-conducted and meritorious citizens.

Very true, he said.

And the education must begin with their plays. The spirit of law must be imparted to them in music, and the spirit of order, attending them in all their actions, will make them grow; and if there be any part of the State which has fallen down, will raise it up again.

Very true, he said.

Thus educated, they will have no difficulty in rediscovering any lesser matters which have been neglected by their predecessors.

What do you mean?

I mean such things as these:—when the young are to be silent before their elders; how they are to show respect to them by sitting down and rising up; what honour is due to parents; what garments or shoes are to be worn; the mode of dressing the hair; deportment and manners in general. You would agree with me?

Yes.

You would think, as I do, that there is small wisdom in legislating about such matters,—I doubt if it is ever done; nor are any precise verbal enactments about them likely to be lasting.

Impossible.

We may assume, Adeimantus, that the direction in which education starts a man will determine his future life. Does not like always attract like?

To be sure.

Until he reaches some one rare and grand result, which may be good, and may be the reverse of good.

That is not to be denied.

And for this reason, I said, I shall not attempt to legislate further about them.

Naturally enough, he replied.

Well, and about the business of the agora, and the ordinary dealings between man and man, or again about agreements with artisans; about insult and injury, or the order in which causes are to be tried, and the appointment of juries, what would you say? there may be also questions about any impositions and exactions of market and harbour dues which may be required, and in general about the regulations of markets, police, harbours, and the like. But, oh heavens! shall we condescend to legislate on any of these particulars?

I think, he said, that there is no need to impose laws about them on good men; what regulations are necessary they will find out soon enough for themselves.

Yes, I said, my friend, if God will only guard the laws which we have given them.

And without divine help, said Adeimantus, they will go on for ever making and mending their laws and their lives in the hope of attaining perfection.

You would compare them, I said, to those invalids who, having no self-restraint, will not leave off their habits of intemperance?

Exactly.

426 Yes, I said; and what a delightful life they lead! they are always doctoring and increasing and complicating their disorders, and always fancying that they will be cured by some nostrum which somebody advises them to try.

That is often the case, he said, with invalids such as you describe.

Yes, I replied; and the charming thing is that they deem him their worst enemy who tells them the truth, which is simply that, unless they give up eating and drinking and lusting and sleeping, neither drug nor cautery nor spell nor amulet nor any other remedy will avail.

Charming! he replied. I see nothing charming in going into a passion with a man who tells you what is good.

These gentlemen, I said, do not seem to be in your good graces.

Assuredly not.

Nor would a State which acts like them stand high in your estimation. And do not States act like them, which are ill governed? For they begin by proclaiming to their citizens that no one, under penalty of death, shall alter the constitution of the State; and at the same time, he who conforms to their politics and most sweetly serves them, who indulges them and fawns upon them and has a presentiment of their wishes, and is skilful in gratifying them, he is deemed to be their good man, and the wise and mighty one who is to be held in honour by them?

Yes, he said; the States are as bad as the men; and I am far from approving of them.

But do you not admire, I said, the coolness and dexterity of these ready ministers of political corruption?

Yes, he said, I do; but not of all of them, for there are some whom the applause of the multitude has deluded into the belief that they are really statesmen, and they are not much to be admired.

What do you mean? I said; you should have more feeling for them. When a man cannot measure, and a great many others who cannot measure declare that he is four cubits high, can he help believing what they say?

He cannot.

Well, then, do not be angry with them; for are they not as good as a play, trying their hand at legislation, and always fancying that by reforming they will make an end of frauds between man and man, and the other rascalities which I was mentioning, not knowing that they are in reality cutting away the heads of a hydra?

Yes, he said; that is just what they are doing.

I conceive, I said, that the true legislator will not trouble himself with enactments of this sort in an ill-ordered any more than in a well-ordered State; for in the former they are useless, and in the latter there will be no difficulty in inventing them, and many of them will naturally flow out of our previous regulations.

What, then, he said, is still remaining to us of the work of legislation?

Nothing to us, I replied; but to Apollo, the god of Delphi, there remains the ordering of the greatest and noblest and chiefest of all.

What is that? he said.

The institution of temples and sacrifices, and in general the service of gods, demigods, and heroes; also the ordering of the repositories of the dead, and the rites which have to be observed in order to propitiate the inhabitants of the world below. For these are matters of which we are ignorant, and as founders of a city we should be unwise in trusting them to any interpreter but our ancestral deity. He is the god who sits in the centre, on the navel of the earth, and he is the interpreter of religion to all mankind.

You are right, and we will do as you propose.

But where, amid all this, is justice? son of Ariston, tell me where. Now that our city has been made habitable, light a candle and search, and get your brother and Polemarchus and the rest of our friends to help, and let us see whether we can discover where is justice and where is injustice, and in what they differ from one another, and which of them the man who would be happy should have for his portion, whether perceived or unperceived by gods and men.

Nonsense, said Glaucon; did you not promise to search yourself, saying that to desert justice in her need would be an impiety?

Very true, I said; and as you remind me, I will be as good as my word; but you must join.

We will, he replied.

Well, then, I hope to make the discovery in this way: I mean to begin with the assumption that our State, if rightly ordered, is perfect.

That is most certain.

And being perfect, is therefore wise and valiant and temperate and just.

That is likewise clear.

And whichever of these qualities we find in the State, the one which is not found will be the residue?

Very good.

Suppose the number of terms to be four, and we were searching for one of them, that one might be known to us at first, and there would be no further trouble; or, if we knew the other three first, and could eliminate them, then the fourth would clearly be the remainder.

Very true, he said.

And is not a similar method to be pursued about the virtues, which are also four in number?

Clearly.

First among the virtues found in the State, wisdom comes into view, and in this I detect a certain peculiarity.

What is that?

The State which we have been describing is said to be wise as being good in counsel?

Very true.

And good counsel is clearly a kind of knowledge, for not by ignorance, but by knowledge, do men counsel well?

Clearly.

And the kinds of knowledge in a State are many and diverse?

Of course.

There is the knowledge of the carpenter; but is that the sort of knowledge which gives a city the title of wise and good in counsel?

Certainly not; that would only give a city the reputation of skill in carpentering.

Then a city is not to be called wise because possessed of knowledge which counsels for the best about wooden implements?

Certainly not.

Nor by reason of a knowledge which advises about brazen implements, he said, nor as possessing any other similar knowledge?

Not by reason of any of them, he said.

Nor by reason of agricultural knowledge; that would give the city the name of agricultural?

Yes.

Well, I said, and is there any knowledge in our recently-

founded State among any of the citizens which advises, not about any particular thing in the State, but about the whole State, and considers what may be regarded as the best policy, both internal and external?

There certainly is.

And what is this knowledge, and among whom found? I asked.

It is the knowledge of the guardians, he replied, and is found among those whom we were just now describing as perfect guardians.

And is there any name which the city derives from the possession of this sort of knowledge?

The name of good in counsel and truly wise.

And do you suppose that there will be as many of these true guardians as there are blacksmiths in a city?

No, he replied; the blacksmiths will be far more numerous.

Will they not be the smallest of all the classes who receive a name from the profession of some kind of knowledge?

Much the smallest.

And by reason of this smallest part or class of a State, which is the governing and presiding class, and of the knowledge which resides in them, the whole State, being thus naturally
429 constituted, will be wise; and Nature appears to have ordained that this, which has the only knowledge worthy to be called knowledge, should be the smallest of all classes.

Most true.

Thus, then, I said, the nature and place in the State of one of the four virtues has somehow or other been discovered.

And, in my humble opinion, very satisfactorily discovered, he replied.

Again, I said, there is no difficulty in seeing the nature of courage, and in what part that quality resides which gives the name of courageous to the State.

How do you mean?

Why, I said, every one who calls any State courageous or cowardly, will be thinking of the part which fights and goes out to battle on the State's behalf.

No one, he replied, would ever think of any other.

The rest of the citizens may be courageous or may be

cowardly, but their courage or cowardice will not, as I conceive, have the effect of making the city either one or the other.

Certainly not.

The city will be courageous in virtue of a portion of the citizens in whom resides a never-failing quality preservative of that opinion about things to be feared and not to be feared in which the legislature educated them; and this is what you term courage.

I should like to hear what you are saying once more, for I do not think that I perfectly understand you.

I mean that courage is a kind of salvation.

Salvation of what?

The salvation, I said, of the opinion about proper objects of fear which the law implants through education; and I mean by the word 'never-failing' to intimate that in pleasure or in pain, or under the influence of desire or fear, a man preserves, and does not lose this opinion. Shall I give you an illustration of my meaning?

If you please.

You know, I said, that the dyers, when they want to dye wool for making the true sea-purple, begin by selecting their white colour first; this they prepare and dress with much care and pains, in order that the white ground may take the purple hue in full perfection. The dyeing then proceeds; and whatever is dyed in this manner becomes a fast colour, and no washing with lyes any more than without lyes can take away the bloom. I dare say that you know how purple or any other colour looks when the ground has not been duly prepared?

Yes, he said; I know that they have a washed-out and ridiculous appearance.

Then now, I said, you will understand what our object was in selecting our soldiers, and educating them in music and gymnastic; we were contriving influences which would prepare them to take the dye of the laws in perfection, and the colour of their opinion about dangers and of every other opinion was to be indelibly fixed by their nurture and training, and not to be washed away by such potent lyes as pleasure—mightier agent far in washing the soul than any soda or lye; or by sorrow, fear, and desire, which are the mightiest of all other solvents. And

this sort of universal saving power of true opinion in conformity with law about real and false dangers, I call and maintain to be courage, unless you disagree.

But I agree, he replied; for I suppose that you mean to exclude mere uninstructed courage, such as that of a wild beast or of a slave—this, in your judgment, is not courage in conformity with law, and ought to have another name.

Most certainly.

Then I may infer that this is courage?

Why, yes, said I, you may, and if you add the words ‘of a citizen,’ you will not be far wrong;—hereafter, if you like, we will carry the examination further, but at present we are seeking not for courage but justice; and for the general purpose of our enquiry we have said enough.

You are right, he replied.

Two virtues remain to be discovered in the State—first, temperance, and then justice, which is the great object of our search.

Very true.

Now, can we find justice without troubling ourselves about temperance?

I do not know how that can be accomplished, he said, nor do I desire that justice should be brought to light and temperance lost sight of; and therefore I wish that you would do me the favour of considering temperance first.

Certainly, I replied, I cannot be wrong in granting you a favour.

Then do as I ask, he said.

Yes, I replied; I will; and as far as I can at present see, the virtue of temperance has more of the nature of symphony and harmony than the preceding.

How so? he asked.

Temperance, I replied, is the ordering or controlling of certain pleasures and desires; this is implied in the saying of ‘a man being his own master;’ and there are other traces of the same notion.

No doubt, he said.

There is something ridiculous in the expression ‘master of himself;’ for the master is also the slave and the slave the

master ; and in all these modes of speaking the same person is denoted.

Certainly.

The meaning is, I believe, that the human soul has a better principle, and has also a worse principle ; and when the better principle controls the worse, then a man is said to be master of himself ; and this is a term of praise : but when, owing to evil education or association, the better principle, which is less, is overcome by the worse principle, which is greater ; in this case he is blamed and is called the slave of self and unprincipled.

Yes, there is reason in that.

And now, I said, look at our newly-created State, and there you will find one of these two conditions realized ; for the State, as you will acknowledge, may be justly called master of itself, if the words 'temperance' and 'self-mastery' truly express the rule of the better part over the worse.

Yes, he said, I have looked, and perceived the truth of what you say.

Moreover, I said, the manifold and complex pleasures and desires and pains are found in children and women and servants, and in the lower classes of the free citizens.

Certainly, he said.

Whereas the simple and moderate desires which follow reason, and are under the guidance of mind and true opinion, are confined to a few, and those the best born and the best educated.

Very true.

And these, as you may perceive, have a place in our State, but the meaner desires of the many are held down by the virtuous desires and wisdom of the few.

That I perceive, he said.

Then if there be any city which may be described as master of its pleasures and desires, and master of itself, ours may claim such a designation ?

Certainly, he replied.

And also that of temperate, and for the same reasons ?

Yes.

And if there be any State in which rulers and subjects will be agreed about the question who are to rule, that again will be our State ?

Undoubtedly.

And the citizens being thus agreed among themselves, in which class will temperance be found—in the rulers or in the subjects?

In both, as I should imagine, he replied.

Do you observe that we were pretty right in our anticipation that temperance was a sort of harmony?

Why so?

Why, because temperance is unlike courage and wisdom, each of which resides in a part only, the one making the State wise and the other valiant; but that is not the way with temperance, which extends to the whole, and runs through the notes of the scale, and produces a harmony of the weaker and the stronger and the middle class, whether you suppose them to be stronger or weaker in wisdom or strength or numbers or wealth, or whatever else may be the measure of them. Most truly then do we describe temperance as the natural agreement of superior and inferior, both in states and individuals, about which of the two elements shall rule.

I entirely agree with you.

And so, I said, we may consider three of the virtues to have been discovered in our State. There remains the last of them, which must be justice, if we only knew what that was.

The inference is obvious.

The time then has arrived, Glaucon, when, like huntsmen, we should surround the cover, and look sharp that justice does not slip away, and pass out of sight, and get lost; for beyond a doubt she is somewhere near: watch therefore and strive to get a sight of her, that you may be first and tell me.

I wish that there were any chance of my doing so, he said; if you treat me as a follower who has just eyes enough to see what you show him, that is about as much as I am good for.

Offer up a prayer with me and follow.

I will, but you must show me the way.

Here is no path, I said, and the wood is dark and perplexing; still we must push on.

Let us push on.

Here I saw something: Halloo! I said, I begin to perceive a track, and I believe that the quarry will not escape.

That is good news, he said.

Truly, I said, we are very stupid.

Why so?

Why, my good sir, when we first began, ages ago, there was justice tumbling about at our feet, and we, fools that we were, failed to see her, like people who go about looking for what they have in their hands: and that was the way with us; we looked away into the far distance, and this, I suspect, was the reason why we never saw her.

What do you mean?

I mean to say that in reality we, having long been speaking and hearing of her, failed to recognise her.

I get impatient at the length of your exordium.

Well then, tell me, I said, whether I am right or not: You 433 remember the original principle of which we spoke at the foundation of the State, that every man, as we often insisted, should practise one thing only, that being the thing to which his nature was most perfectly adapted;—now justice is this principle or a part of it.

Yes, we often said that one man should do one thing only.

Further, we affirmed that justice was doing one's own business, and not being a busybody; we said so again and again, and many others have said the same.

Yes, we said so.

Then this doing in a certain way one's own business may be assumed to be justice. Do you know why?

I do not, and should like to be told.

Because I think that this alone remains in the State when the other virtues of temperance and courage and wisdom are abstracted; and, that this is the ultimate cause and condition of the existence of all of them, and while remaining in them is also their preservative; and we were saying that if the three were discovered by us, justice would be the fourth or remaining one.

That follows of necessity.

Still, I said, if a question should arise as to which of these four qualities contributed most by their presence to the excellence of the State, whether the agreement of rulers and subjects, or the preservation in the soldiers of the opinion which the law ordains about the true nature of dangers, or wisdom and watchfulness in the rulers would claim the palm, or whether this

which I am about to mention, and which is found in children and women, bond and free, artisan, ruler, subject, is not the one which conduces most to the excellence of the State,—this quality, I mean, of every one doing his own work, and not being a busybody,—the question would not be easily determined.

Certainly, he replied, to answer the question would not be easy.

Then the power of each individual in the State to do his own work appears to compete with the other virtues of wisdom, temperance, and courage?

Yes, he said.

And the virtue which enters into this competition is justice?

Exactly.

Look at the matter in another light. Are not the rulers in a State those to whom you would entrust the office of determining causes?

Certainly.

And they will act on the principle that individuals are neither to take what is another's, nor to be deprived of what is their own?

Yes; that will be their principle.

Which is a just principle?

Yes.

Then on this view also justice will be admitted to be the having and doing what is a man's own, and belongs to him?

434 Very true.

Think, now, and say whether you agree with me. Suppose a carpenter to be doing the business of a cobbler, or a cobbler of a carpenter; and suppose them to exchange implements or prerogatives, or the same person to be doing the work of both; do you think that any great harm would happen to the State?

Certainly not.

But when the cobbler or any other man whom nature designed to be a trader, having his heart lifted up by wealth or strength or the number of his followers, or any like advantage, attempts to force his way into the class of warriors, or a warrior into that of legislators and guardians, for which he is unfitted; or when one man is trader, legislator, and warrior all at once, then I think you will agree with me that this interchange of duties and

implements and this meddling of one with another is the ruin of the State.

Most true.

Then, I said, as there are three distinct classes, any meddling of them with one another, or the change of one into another, is the greatest harm to the State, and may be most justly termed evil-doing?

Precisely.

And the greatest degree of evil-doing to one's own city you would characterize as injustice?

Certainly.

This then is injustice; and conversely when the trader, the auxiliary, and the guardian do their own business, that is justice, and will make the city just.

I agree with you.

Let us not, I said, be over-positive as yet; but if, on trial, this conception of justice be verified in the individual as well as in the State, then there will be no longer any room for doubt; if not, there must be another enquiry. Let us, however, finish the old investigation, which we began, as you remember, under the impression that, if we could first examine justice on the larger scale, there would be less difficulty in discerning her in the individual. That larger example appeared to be the State, and accordingly we constructed one, as good a one as we could, knowing well that in the good State justice would be surely found. Let us now apply what we discovered there to the individual, and if they agree, we are satisfied; or, if there be a difference in the individual, we will come back to the State and have another trial of the theory. The friction of the two when rubbed together may possibly strike a light in which justice will shine forth, and the vision which is then revealed we will fix in our 435 souls.

That is reasonable, and let us do as you say.

I proceeded to ask: When two things, a greater and less, are called by the same name, are they like or unlike in so far as they are called the same?

Like, he replied.

The just man then, if we regard the idea of justice only, will be like the just State?

He will.

And a State was thought by us to be just when the three classes in the State severally did their own business; and also thought to be temperate and valiant and wise by reason of certain other affections and qualities of these same classes?

True, he said.

And so of the individual; we shall be right in arguing that he has the same three principles in his own soul, and may fairly receive the same appellations as possessing the affections which correspond to them?

Certainly, he said.

Once more then, O my friend, we have alighted upon an easy question—whether the soul has these three principles or not?

An easy question! Nay, rather, Socrates, the proverb holds that hard is the good.

Very true, I said; and I confess that the method which we are employing, in my judgment, seems to be altogether inadequate to the accurate solution of this question; for the true method is another and a longer one. Still we may arrive at a solution not below the level of the previous enquiry.

May we not be satisfied with that? he said;—under the circumstances, I am quite content.

I too, I replied, shall be extremely well satisfied.

Then faint not in pursuing the speculation, he said.

Can I be wrong, I said, in acknowledging that in the individual there are the same principles and habits which there are in the State; for if they did not pass from one to the other, whence did they come? Take the quality of passion or spirit;—it would be ridiculous to imagine that this quality, which is characteristic of the Thracians, Scythians, and in general of the northern nations, when found in States, does not originate in the individuals who compose them; and the same may be said of the love of knowledge, which is the special characteristic of our part of the world, or the love of money, which may, with
436 equal truth, be attributed to the Phoenicians and Egyptians.

Exactly, he said.

There is no difficulty in understanding this.

None whatever.

But the difficulty begins as soon as we raise the question

whether these principles are three or one; whether, that is to say, we learn with one part of our nature, are angry with another, and with a third part desire the satisfaction of our natural appetites; or whether the whole soul comes into play in each sort of action—to determine that is the difficulty.

Yes, he said; there lies the difficulty.

Then let us now try and determine whether they are the same or different.

How can we? he asked.

I replied as follows: The same thing clearly cannot act or be acted upon in the same part or in relation to the same thing, at the same time, in contrary ways; and therefore whenever this contradiction occurs in things apparently the same, we know that they are not really the same, but different.

Good.

For example, I said, can the same thing be at rest and in motion and at the same time in the same part?

Impossible.

Still, I said, let us have a more precise understanding, that we may not hereafter have a misunderstanding. Imagine the case of a man who is standing and also moving his hands and his head, and suppose a person to say that one and the same person is in motion and at rest at the same moment—to such a mode of speech we should object, and should rather say that one part of him is in motion while another is at rest.

Very true.

And suppose the objector to refine still further, and to draw the nice distinction that not only parts of tops, but whole tops, when they revolve, having their pegs fixed on the spot, are at rest and in motion at the same time (and he may say the same of anything which revolves in the same spot), his objection would not be admitted by us, because in such cases things are not at rest and in motion in the same parts of themselves; we should rather say that they have both an axis and a circumference; and that the axis stands still, for there is no deviation from the straight line; and that the circumference goes round. But if, while revolving, the axis inclines either to the right or left, forwards or backwards, then in no point of view can they be at rest.

That is the correct mode of describing them, he replied.

Then none of these objections will confuse us, or incline us to believe that the same thing at the same time, in the same part
437 or in relation to the same thing, can act or be acted upon in contrary ways.

Certainly not, according to my way of thinking.

Yet, I said, that we may not be compelled to examine all such objections, and prove at length that they are untrue, let us assume their absurdity, and go forward on the understanding that hereafter, if the assumption turn out to be untrue, the consequences which follow shall be withdrawn.

Yes, he said, that will be the best way.

Well, I said, would you not allow that assent and dissent, desire and refusal, attraction and repulsion, are all of them opposites, whether they are regarded as active or passive (for that makes no difference in the fact of their opposition)?

Yes, he said, they are opposites.

Well, I said, and hunger and thirst, and the desires in general, including willing and wishing,—all those you would refer to the classes already mentioned. You would say—would you not?—that the soul of him who desires is seeking after the object of desire; or that he is drawing to himself the thing which he wishes to possess: or again, when a person wills anything to be given him, his mind, longing for the realization of his desire, makes a sign of assent, as if he had been asked a question?

Very true.

And what would you say of unwillingness and dislike and the absence of desire; would you not refer these to the opposite class of repulsion and rejection?

Certainly.

Admitting this to be true of desire generally, let us suppose a particular class of desires,—shall we say those which are the most evident to sense, and which are termed hunger and thirst?

Let us take that class, he said.

The object of one is food, and of the other drink?

Yes.

And here comes the point: is not thirst the desire which the soul has of drink, and of drink only; not of drink qualified by anything else; for example, warm or cold, or much or little, or,

in a word, drink of any particular sort: but if the thirst be accompanied by heat, then the desire is of cold drink; or, if accompanied by cold, then of warm drink; or, if the thirst be excessive, then the drink which is desired will be excessive; or, if not great, the quantity of drink will also be small: but thirst pure and simple will desire drink pure and simple, which is the natural satisfaction of thirst, as hunger will desire food?

Yes, he said; in every case the simple desire is of the simple object, and the qualified desire of the qualified object.

But here a confusion may arise; and I should wish to guard ⁴³⁸ against an opponent starting up and saying that no man desires drink only, but good drink, or food only, but good food; for good is the universal object of desire, and thirst being a desire, will necessarily be thirst after good drink; and the same is true of every other desire.

Yes, he replied, the opponent would have something to say.

Nevertheless I should still maintain, that of relatives some have a quality attached to either term of the relation; others are simple and have their correlatives simple.

I do not know what you mean.

Well, you know of course that the greater is relative to the less?

Yes.

And the much greater to the much less?

Yes.

And the sometime greater to the sometime less, and the greater that is to be to the less that is to be?

Certainly, he said.

And so of more and less, and of other correlative terms, such as the double and the half, or again, the heavier and the lighter, the swifter and the slower, of hot and cold, and of any other relatives;—is not this true of all of them?

Yes.

And does not the same hold with the sciences? The object of science is knowledge (assuming that to be the true definition), but the object of a particular science is a particular kind of knowledge; I mean, for example, that the building of a house is a kind of knowledge which is defined and distinguished from other kinds of knowledge as the knowledge of house-building.

Certainly.

Because it has a particular quality which no other has?

Yes.

And it has this particular quality because it has an object of a particular kind ; and this is true of the other arts and sciences ?

Yes.

Now, then, if I have made myself clear, you will understand my original meaning in what I said about relatives. My meaning was, that if the first term of a relation is taken alone, the second is taken alone ; if the first term is qualified, the second is also qualified. I do not say that relatives need be 'in pari materiâ,' or that the science of health is healthy, or of disease necessarily diseased, or that the sciences of good and evil are therefore good and evil ; but only that, from having health and disease as an object, the science of medicine has come to be of a certain nature, and is hence called not merely science, but medical science.

I understand your meaning, and assent to you.

439 Would you not say that thirst is one of these relative terms, thirst being obviously——

Yes, thirst is relative to drink.

And a certain kind of thirst is relative to a certain kind of drink ; but thirst taken alone is neither of much nor little, nor of good nor bad, nor of any particular kind of drink, but of drink only ?

Certainly.

Then the soul of the thirsty one, in that he thirsts, desires only drink, and feels an impulse towards drink ?

That is plain.

And if you suppose something which pulls a thirsty soul away from drink, that must be different from the thirsty principle which draws him like a beast to drink ; for, as we were saying, the same thing cannot at the same time with the same part of itself act in contrary ways about the same.

Impossible.

No more than you can say of the archer that his hands push and pull the bow at the same time, but what you say is that one hand pushes and the other pulls.

Exactly, he replied.

And might a man be thirsty, and yet unwilling to drink ?

Yes, he said, that often happens.

And in such a case what is one to say ? Would you not say that there is something in the soul bidding a man to drink, and something else forbidding him, which is other and stronger than that which bids him ?

I should say so.

And the principle which forbids is derived from reason, and that which bids and attracts proceeds from passion and disease ?

Clearly.

Then we may fairly assume that they are two, and that they differ from one another ; the one with which a man reasons, we may call the rational principle of the soul, the other, with which he loves and hungers and thirsts and feels the flutterings of desire, may be termed the irrational or appetitive, the ally of sundry pleasures and satisfactions ?

Yes, he said, we shall not be far wrong in that.

Then let us say definitely that these are two principles which exist in the soul.

And what shall we say of passion, or spirit ? Is that a third, or akin to one of the preceding ?

I should be inclined to say—akin to desire.

Well, I said, there is a story which I remember to have heard, and on which I rely. The story is, that Leontius, the son of Aglaion, coming up one day from the Piraeus, under the north wall on the outside, observed some dead bodies lying on the ground by the executioner. He felt a longing desire to see them, and also a disgust and abhorrence of them ; for a time he turned away and averted his eyes, and then, suddenly overcome by the impulse, forced them open, and ran up, saying (to his eyes), Take your fill, ye wretches, of the lovely sight. 440

I have heard the story myself, he said.

The moral is, that anger differs from the desires, and is sometimes at war with them.

Yes ; that is the meaning, he said.

And are there not many other cases in which we observe that when a man's desires violently prevail over his reason, he reviles himself, and is angry at the violence within him, and that in this struggle, which is like the struggle of factions in a

State, his spirit is on the side of his reason ;—but for the passionate or spirited element to take part with the desires when reason decides that she should not be opposed¹, is a sort of thing which I believe that you never observed occurring in yourself, nor, as I think, in any one else?

Certainly not.

Suppose, I said, that a man thinks he has done a wrong to another, the nobler he is the less able he is to feel indignant ; his anger refuses to be excited at the hunger or cold or other suffering, which he deems that the injured person may justly inflict upon him?

True, he said.

But when he thinks that he is the sufferer of the wrong, then he boils and chafes, and is on the side of what he believes to be justice ; and because he suffers hunger or cold or other pain he is only the more determined to persevere and conquer ; he must do or die, and will not desist, until he hears the voice of the shepherd, that is, reason, bidding his dog bark no more.

The illustration is perfect, he replied ; and in our State, as we were saying, the auxiliaries were to be dogs, and to hear the voice of the rulers, who are their shepherds.

I perceive, I said, that you quite understand me ; there is, however, a further point which I would wish you to consider.

What point?

You remember that passion or spirit appeared at first sight to be a kind of desire, but now we should say the contrary ; for in the conflict of the soul spirit is arrayed on the side of the rational principle.

Most assuredly.

But a further question arises : Is spirit different from reason also, or only a kind of reason ; in which latter case, instead of three principles in the soul, there will be only two, the rational and the concupiscent ; or rather, as the State was composed of
441 three classes, traders, auxiliaries, counsellors, so may there not be in the individual soul a third element which is passion or spirit, and when not corrupted by education is the auxiliary of reason?

Yes, he said, there must be a third.

¹ Reading *μη δειν αντιπαρτεω*, without a comma after *δειν*.

Yes, I replied, if passion, which has already been shown to be different from desire, turn out also to be different from reason.

But that is easily proved by the case of young children, who are full of spirit almost as soon as they are born, whereas some of them never seem to attain to the use of reason, and all men late enough.

Excellent, I said, and the same thing is seen in brute animals, which is a further proof of the truth of what you are saying. And Homer, whose words we have already quoted, may be again summoned as a witness, where he says,

‘He smote his breast, and thus rebuked his soul¹;

for in those lines Homer has clearly supposed the power which reasons about the better and worse to be different from the unreasoning principle which is the subject of the rebuke.

Very true, he said.

And so, after much tossing, we have reached land, and are fairly agreed that the principles which exist in the State, like those in the individual, are three in number, and the same with them.

Exactly.

And must we not infer that the individual is wise in the same way, and in virtue of the same quality which makes the State wise?

Certainly.

And the same quality which constitutes bravery in the State constitutes bravery in the individual, and the same is true of all the other virtues?

Assuredly.

And the individual will be acknowledged by us to be just in the same way that the State was just?

That will also follow of course.

And the justice of the State consisted, as we very well remember, in each of the three classes doing the work of its own class?

We are not very likely to forget, he said.

And we must also remember that the individual whose several principles do their own work will be just, and will do his own work?

¹ Od. xx. 17.

Yes, he said, we must remember that too.

And ought not the rational principle, which is wise, and has the care of the whole soul, to rule, and the passionate or spirited principle to be the subject and ally?

Certainly.

And, as we were saying, the united influence of music and gymnastic will bring them into accord, nerving and sustaining the reason with noble words and lessons, and moderating and
442 soothing and civilizing the wildness of passion, by harmony and rhythm?

Quite true, he said.

And these two, thus nurtured and educated, and having learned truly to know their own functions, will rule¹ over the concupiscent part of every man, which is the largest and of all things most insatiable; over this they will keep guard, lest, waxing great with the fulness of bodily pleasures, as they are termed, and no longer confined to her own sphere, the concupiscent soul should attempt to enslave and rule those who are not her natural-born subjects, and overturn the whole life of man?

Very true, he said.

The two will be the defenders of the whole soul and the whole body against attacks from without; the one counselling, and the other fighting under his leader, and courageously executing his commands and counsels.

True.

And he is to be deemed courageous in whom the element of spirit holds fast in pain and in pleasure the command of reason about what he ought or ought not to fear?

Right, he replied.

And he is wise who has in him that little part which rules and gives orders; that part being supposed to have a knowledge of what is for the interest of each and all of the three other parts?

Assuredly.

And would you not say that he is temperate who has these same elements in friendly harmony, in whom the one ruling principle of reason, and the two subject ones of spirit and desire are equally agreed that reason ought to rule, and do not rebel?

¹ Reading *προστατήσεων*.

Certainly, he said, that is the true account of temperance whether in the State or individual.

And surely, I said, we have explained again and again how and by what means a man will be just.

That is very certain.

And is justice dimmer in the individual, and is her form different, or is she the same which we found in the State?

There is no difference in my judgment, he said.

Because, if any doubt is still lingering in our minds, a few commonplace instances will satisfy us of the truth of what I am saying.

What sort of instances do you mean?

If the case is put to us, must we not admit that the just State, or the man who is trained in the principles of such a State, will be less likely than the unjust to make away with a deposit of gold or silver? Would any one deny this? 443

No one, he replied.

Will the just man or citizen ever be guilty of sacrilege or theft, or treachery either to his friends or to his country?

That will be far from him.

Neither will he ever break faith where there have been oaths or agreements?

Impossible.

No one will be less likely to commit adultery, or to dishonour his father and mother, or to fail in his religious duties?

No one.

And the reason is that each part of him is doing its own business, whether in ruling or being ruled?

Very true.

Are you satisfied then that the quality which makes such men and such states is justice, or do you hope to discover some other?

Not I, indeed.

Then our dream has been realized; and as we were saying at the beginning of our work of construction, some divine power must have conducted us to a primary form of justice—that suspicion of ours has been now verified?

Yes, certainly.

And the division of labour which required the carpenter and

the shoemaker and the rest of the citizens to be doing each his own business, and not another's, was a shadow of justice, and therefore of use?

Clearly.

And justice was the reality and was concerned not with the outward man, but with the inward, which is the true self and concernment of man: for the just man does not permit the several elements within him to interfere with one another, or any of them to do the work of others, but he sets in order his own inner life, and is his own master, and at peace with himself; and when he has bound together the three principles within him, which may be compared to the higher, lower, and middle notes of the scale, and the intermediate intervals—when he has bound together all these, and is no longer many, but has become one entirely temperate and perfectly adjusted nature, then he will begin to act, if he has to act, whether in a matter of property, or in the treatment of the body, or in some affair of politics or private business; in all which cases he will think and call that which preserves and co-operates with this harmonious condition, just and good action, and the knowledge which presides over it, wisdom, and that which at any time destroys this condition, he
444 will call unjust action, and the opinion which presides over it ignorance.

You have said the precise truth, Socrates.

Very good; and if we were to affirm that we had discovered the just man and the just State, and the place of justice in each of them, we should not be telling a falsehood?

Most certainly not.

May we say so, then?

Let us say so.

And now, I said, injustice has to be considered.

Clearly.

Must not injustice be a quarrel which arises between the three parts of the soul—a meddlesomeness, and interference, and rising up of a part against the whole of the soul, an assertion of unlawful authority, which is made by a rebellious subject against a true prince, of whom he is the natural vassal,—what is this confusion and error but injustice and intemperance and cowardice and ignorance, and in general all vice?

Exactly so.

And if the nature of justice and injustice be known, then the meaning of acting unjustly and being unjust, or, again, of acting justly, will also be perfectly clear?

What do you mean? he said.

Why, I said, they are like disease and health; being in the soul just what disease and health are in the body.

How so? he said.

Why, I said, that which is healthy causes health, and that which is unhealthy causes disease.

Yes.

And just actions cause justice, and unjust actions cause injustice?

That is certain.

And the creation of health is the creation of a natural order and government of one another in the parts of the body; and the creation of disease is the creation of a state of things in which they are at variance with this natural order?

True.

And is not the creation of justice the creation of a natural order and government of one another in the parts of the soul, and the creation of injustice the opposite?

Exactly so, he said.

Then virtue is the health and beauty and well-being of the soul, and vice is the disease and weakness and deformity of the soul?

True.

And good practices lead to virtue, and evil practices to vice?

Assuredly.

Still our old question of the comparative advantage of justice 445 and injustice has not been answered: Which is the more profitable, to be just and do justly and practise virtue, whether seen or unseen of gods and men, or to be unjust and do unjustly, if only unpunished and unimproved?

In my judgment, Socrates, the question has now become ridiculous. We know that, when the bodily constitution is gone, life is no longer endurable, though pampered with all kinds of meats and drinks, and having all wealth and all power; and shall we be told that when the very essence of the vital principle

is undermined and corrupted, even though a man be allowed to do whatever he pleases, life is still worth having to him, if he be forbidden to escape from vice and injustice, and to attain justice and virtue ; for we now see the true nature of each.

Yes, I said, the question is, as you say, ridiculous. Still, as we are near the spot at which we may see the truth with our own eyes, let us not faint by the way.

Certainly not, he replied.

Come hither then, I said, ascend the hill which overhangs the city, and see the various forms of vice.

I am following you, he replied : proceed.

I said, We seem to have reached a height from which a man may look down and see that virtue is one, but that the forms of vice are innumerable ; there being four special ones which are deserving of note.

What do you mean? he said.

I mean, I replied, that there appear to be as many forms of the soul as there are forms of the State.

How many?

There are five of the State, and five of the soul, I said.

What are they?

The first, I said, is that which we have been describing, and which may be said to have two names, monarchy and aristocracy, accordingly as rule is exercised by one or by many.

True, he replied.

But I regard the two names as describing one form only ; for whether the government is in the hands of one or many, if the governors have been trained in the manner which we have supposed, the fundamental laws of the State will be maintained.

That is true, he replied.

BOOK V.

SUCH is the good and true State, and the good and true man 449 is of the same pattern ; and if this is right every other is wrong ; and the evil is one which affects not only the ordering of the State, but also the regulation of the individual soul, and exists in four forms.

What are they? he said.

I was proceeding to tell the order in which the four evil forms appeared to me to succeed one another, when Polemarchus, who was sitting just beyond Adeimantus on the further side, began to whisper to him. Stretching forth his hand, he took hold of the upper part of his coat by the shoulder, and drew him towards him, leaning forward himself and saying something, of which I only caught the words, ' Shall we let him off, or what? '

Certainly not, said Adeimantus, raising his voice.

What is it, I said, which you refuse to let off?

You, he said.

Still I asked for an explanation¹.

Why, he said, we think that you are lazy and mean to cheat us out of a whole chapter which is a very important part of the story ; and you fancy that we shall not notice your airy way of proceeding ; as if it were self-evident to everybody, that in the matter of women and children ' friends have all things in common. '

And was I not right, Adeimantus?

Yes, he said ; but what is right, in this as in every other case, has to be explained ; for a community may be of many kinds. Please, therefore, to say which you mean ; for we have been ex-

¹ Reading ἔτι ἐγὼ εἶπον.

pecting that you would tell us something about their family life—how they would bring children into the world, and rear them when they had arrived, and, in general, what is the nature of this community of women and children—as we are of opinion that the right or wrong management of such matters will have a great and paramount influence on the State for good or for evil. And now, since the question is still undetermined, and you are taking in hand another State, we have resolved, as you heard,
450 not to let you go until you give a satisfactory explanation of all this, as of the rest.

To that resolution, said Glaucon, you may regard me as saying Agreed.

And without more ado, said Thrasymachus, you may consider us all to be equally agreed.

I said, You do not know what you are doing in thus assailing me. What an argument are you raising! Just as I thought that I had finished, and was only too glad that I had laid this question to sleep, and was reflecting how fortunate I was in your acceptance of what I then said, you begin again, ignorant of what a hornet's nest of words you are arousing. Now I foresaw this coming trouble, and avoided it.

For what do you think that we are here? said Thrasymachus,—to find the philosopher's stone, or to hear discourse?

Yes, but discourse should have a limit.

Yes, Socrates, said Glaucon, and the whole of life is the only limit which wise men assign to the hearing of such discourses. But never mind about us; only get on and in your own way answer the question: What sort of community of women and children is this which is to prevail among the guardians? and how shall we manage the period between birth and education, which seems to require the greatest care? Tell us how these things will be.

Yes, my simple friend, but the answer is the reverse of easy; many more doubts arise about this than about our previous speculations. For the practicability of what is said may be doubted; and looked at in another point of view, whether the scheme, if ever so practicable, will be for the best, is also doubtful. Hence there arises a fear, as we draw near, lest our aspiration should be a dream only.

Fear not, he replied, for your audience will not be hard upon you ; they are not sceptical or hostile.

I said : My good friend, I suppose that you mean to encourage me by these words.

Yes, he said.

Then let me tell you that you are doing just the contrary ; the consolation would have been good had I believed myself that I knew what I was talking about : for to know and to declare the truth in matters of high interest which a man loves among wise men who love him is a safe thing and gives confidence ; but to carry on an argument when you are yourself only a doubting enquirer, which is my case, is a dangerous and 451 slippery thing ; and the danger is not that I shall be laughed at (of which the fear would be childish), but that I shall miss the truth where I have most need to be sure of my footing, and drag my friends after me in my fall. And I pray Nemesis not to visit upon me the words which I am going to utter. For I do indeed believe that to be an involuntary homicide is a less crime than to be a deceiver about the beauty or goodness or justice of institutions. And that is a risk which I would rather run among enemies than among friends, and therefore you do well to console me¹.

Glaucon laughed and said : Well then, Socrates, in case you and your argument do us any serious injury you shall be acquitted beforehand of the homicide, and shall not be held to be a deceiver ; take courage then and speak.

Well, I said, the law says that when a man is acquitted he is free from guilt, and what holds in the one case may hold in the other.

Then why should you mind ?

Well, I replied, I suppose that I must retrace my steps and say what I perhaps ought to have said before. The men have played out their part, and now comes the women's turn ; of whom I will proceed to speak, and the more readily as I am invited by you.

For men born and educated like our citizens, the only way, in my opinion, of arriving at a right conclusion about the possession and use of women and children is to follow the path on which

¹ Reading ὥστε εἶ με παραμυθεῖ.

we originally started, when we said about the men that they were to be the guardians and watchdogs of the herd.

True.

Let us proceed now to give the women a similar training and education, and see how far that accords with our design.

What do you mean?

What I mean may be put into the form of a question, I said : Do we divide dogs into hes and shes, and take the masculine gender out to hunt, or have them to keep watch and ward over the flock, while we leave the females at home, under the idea that the bearing and suckling their puppies hinder them from sharing in the labours of the males?

No, he said, they share alike ; the difference between them is in degrees of strength.

But can you use different animals for the same purpose, unless they are bred and fed in the same way?

You cannot.

Then, if women are to have the same duties as men, they must
45² have the same education?

Yes.

The education which was assigned to the men was music and gymnastic.

Yes.

Then women must be taught music and gymnastic and also the art of war, which they must practise like the men?

That is the inference, I suppose.

I should rather expect, I said, that several of our proposals, if they are carried out, being unusual, may appear ridiculous.

No doubt of it.

Yes, and the most ridiculous thing of all will be the sight of women naked in the palaestra, exercising with the men, especially when they get old ; they certainly will not be a vision of beauty, any more than the wrinkled old men who have anything but an agreeable appearance when they take to gymnastics—this, however, does not deter them.

Yes, indeed ; he said : according to present notions the proposal would appear ridiculous.

But then, I said, as we have determined to speak our minds, we must not fear the jests of the wits which will be directed

against this sort of innovation; how they will talk of women's attainments in music as well as in gymnastic, and above all about their wearing armour and riding upon horseback!

Very true, he replied.

Yet having begun we must go on and attack the difficulty; at the same time begging of these gentlemen for once in their life to be serious. Not long ago, as we shall remind them, the Greeks were of the opinion, which is still generally received among the barbarians, that the sight of a naked man was ridiculous and improper; and when first the Cretans and then the Lacedaemonians introduced naked exercises, the wits of that day might have ridiculed them equally.

No doubt.

But when experience showed that to let all things be uncovered was far better than to cover them up, and the ludicrous effect to the outward eye vanished before the approval of reason, then the man was seen to be a fool who laughs or directs the shafts of his ridicule at any other sight but that of folly and vice, or seriously inclines to measure the beautiful by any other standard but that of the good.

Very true, he replied.

First, then, whether the question is to be put in jest or in earnest, let us ask about the nature of woman: Is she capable 453 of sharing either wholly or partially in the actions of men, or not at all? And is the art of war one of those arts in which she can or can not share? That will be the best way of commencing the enquiry, and will probably lead to the fairest conclusion.

That will be best.

Suppose that we take the other side and begin by arguing against ourselves, and so the adversary's position will be fairly defended.

Why not? he said.

Then let us put a speech into the mouths of our opponents. They will say: 'Socrates and Glaucon, no adversary need convict you, for you yourselves, at the first foundation of the State, admitted the principle that every one was to do his own work according to his nature.' And certainly, if I am not mistaken there was such an admission made by us. Then he will proceed

to say: 'Is there not the greatest difference between the natures of men and women?' And we shall reply: Of course, there is. And he will ask 'whether men and women ought not to have different tasks imposed upon them, such as are agreeable to their different natures?' Certainly they ought. 'Have you not then fallen into a great inconsistency in saying that men and women, who are entirely different, ought to perform the same actions?'—What defence will you make for us, my good Sir, against any one who offers these objections?

That is not an easy question to answer when asked suddenly; and I shall and I do beg of you to draw out the case on our side.

There, Glaucon, is the difficulty which made me unwilling to take in hand any law about women and children; and this is not the only difficulty.

Why yes, he said, there is something of a difficulty.

Yes, I said, but the fact is that when a man is out of his depth, whether he has fallen into a swimming bath or into the ocean, he has to swim all the same.

Very true.

And must not we swim and make for some haven, in the hope that Arion's dolphin or some other miraculous help may save us?

I suppose so, he said.

Well then, let us see if we can discover any way of escape. Our principle was that different natures ought to have different pursuits, and that men's and women's natures are different. And now what are we saying?—that different natures ought to have the same pursuits,—this is the inconsistency which is charged upon us.

Precisely.

454 Verily, Glaucon, I said, glorious is the power of the art of contradiction!

Why do you say so?

Because I think that many a man falls into the practice against his will. When he thinks that he is reasoning he is really disputing, just because he cannot define and divide, and so know that of which he is speaking; and he will pursue a merely verbal opposition in the spirit of contention and not of fair discussion.

Yes, he replied, such is very often the case ; but what has that to do with us and our argument ?

A great deal ; for there is certainly a danger of our getting unintentionally into a verbal opposition.

In what way ?

Why we valiantly and pugnaciously insist upon the verbal truth, that different natures ought to have different pursuits, but we never considered at all what was the meaning of sameness or difference of nature, or why we distinguished them when we assigned different pursuits to different natures.

Why, no, he said, that was never considered by us.

I said : Suppose that by way of illustration we were to ask the question whether there is not an opposition in nature between bald men and hairy men ; and if there is, then, if bald men are cobblers, forbid the hairy men, or if the hairy men are cobblers, then forbid the bald men to be cobblers ?

That would be a jest, he said.

Yes, I said, a jest ; and why ? because we never meant when we constructed the State, that the opposition of natures should extend to every difference, but only to those differences which affected the pursuit in which the individual is engaged ; we should have said, for example, that a man and a woman when they both have the soul¹ of a physician may be said to have the same nature.

True.

Whereas the physician and the carpenter are different ?

Certainly.

And if, I said, the male and female sex appear to differ in their fitness for any art or pursuit, we should say that such pursuit or art ought to be assigned to one or the other of them ; but if the difference consists only in women bearing and men begetting children, this does not amount to a proof that a woman differs from a man in that respect of which we are speaking ; and we shall therefore continue to maintain that our guardians and their wives ought to have the same pursuits.

Very true, he said.

The next step will be to desire our opponent to show how, in

¹ Reading *ιατρικὸν μὲν καὶ ἰατρικὴν τὴν ψυχὴν ὄντας.*

455 reference to any of the pursuits or arts of citizens, the nature of a woman differs from that of a man?

That will be fair.

And perhaps he, like yourself, will reply that to give an answer on the instant is not easy; a little reflection is needed.

Yes, perhaps.

Suppose then that we invite him to come along with us in the argument, and then we may hope to show him that there is no special function which a woman has in the administration of the State.

By all means.

Let us say to him: Come now, and we will ask you a question:—when you said that one man has natural gifts and another not, was this your meaning?—that the former will acquire a thing easily which the latter will have a difficulty in acquiring; a little learning will lead the one to discover a great deal; whereas the other, after a great deal of learning and application, will only forget what he has learned; or again, you may mean, that the one has a body which is a good servant to his mind, while the body of the other is at war with his mind;—would these be the sort of differences which distinguish the man of capacity from the man who is wanting in capacity?

The existence of such differences, he said, will be universally allowed.

Can you mention any pursuit of man in which the male sex has not all these qualities in a far higher degree than the female? Need I waste time in speaking of the art of weaving, and the management of pancakes and preserves, in which womankind does really appear to be great, and in which for her to be beaten is the most absurd of all things?

You are quite right, he replied, in maintaining the general inferiority of the female sex; at the same time many women are in many things superior to many men, though, speaking generally, what you say is true.

And so, I said, my friend, in the administration of a State neither a woman as a woman, nor a man as a man has any special function, but the gifts of nature are equally diffused in both sexes; all the pursuits of men are the pursuits of women also, and in all of them a woman is only a weaker man.

Very true.

Then are we to impose all our enactments on men and none of them on women?

That will never do.

One woman has a gift of healing, another not; one is a musician, and another is not a musician?

Very true.

And one woman has a turn for gymnastic and military exercises, and another is unwarlike and hates gymnastics?

Beyond question.

And one woman is a philosopher, and another is an enemy of philosophy; one has spirit, and another is without spirit?

That is also true.

Then one woman will have the temper of a guardian, and another not; for was not the selection of the male guardians determined by these sort of differences?

Very true.

Then the woman has equally with the man the qualities which make a guardian; she differs only in degrees of strength?

Obviously.

And those women who have such qualities are to be selected as the companions and colleagues of our guardians, since they resemble them in ability and character?

Very true.

And being of the same nature with them, ought they not to have the same pursuits?

They ought.

Then, as we were saying before, there is nothing unnatural in assigning music and gymnastic to the wives of the guardians: to that point we come round again.

Very good.

The law which thus enacted, instead of being an impossibility or mere aspiration, was agreeable to nature, and the contrary practice, which prevails at present, is in reality a violation of nature.

That appears to be true.

There was, first, the possibility, and secondly, the advantage of our proposed arrangement, which had to be considered?

Yes.

And the possibility has been allowed?

Yes.

The very great advantage has next to be acknowledged?

Clearly.

You will admit that the same education which makes a man a good guardian will make a woman a good guardian; for their original nature is the same?

Yes.

I should like to ask you a question: Would you say that all men are equal in excellence, or is one man better than another?

The latter.

And in our imaginary commonwealth which do you reckon the better, the guardians who have been brought up on our model system or the cobblers whose education has been cobbling?

What a ridiculous question!

You have answered me, I replied. Well, and may we not further say that our guardians are the best of our citizens?

Far the best.

And will not their wives be the best women?

Yes, again I say the very best.

And can there be anything better for the interests of the State than that the men and women of a State should be as good as possible?

There can be nothing better.

457 And our course of music and gymnastic will accomplish this? Certainly.

Then we have made an enactment not only possible but in the highest degree advantageous to the State?

True.

Then let the wives of our guardians strip, for their virtue will be their robe, and let them share in the toils of war and the defence of their country; only in the distribution of labour the lighter labours are to be assigned to the women, who are the weaker vessels, but in other respects their duties are to be the same. And as for the man who laughs at naked women exercising their bodies from the best of motives, his laughter is

‘A fruit of unripe wisdom,’

and he himself is ignorant of what he is laughing at, or what he

is about ;—for that is, and ever will be, the best of sayings, *That the useful is the noble and the hurtful is the base.*

Very true.

Here, then, is one difficulty in our law about women which we have escaped ; the wave has not swallowed us up alive for enacting that the guardians of either sex should have all their pursuits in common ; to the utility and possibility of this the argument is its own witness.

Yes, that was a mighty wave which you have escaped.

Yes, I said, but a much greater is coming ; you will not think much of this when you see the next.

Go on ; let me see.

The law, I said, which is the sequel of this and of all that has preceded, is to the following effect,—‘that the wives of these guardians are to be common, and their children also common, and no parent is to know his own child, nor any child his parent.’

Yes, he said, that is a much greater wave than the other ; and the utility as well as the possibility of such a law is far more doubtful.

I do not think, I said, that there can be any dispute about the very great utility of having wives and children in common ; the possibility is quite another matter, and will be very much disputed.

I think that a good many doubts may be raised about both questions.

You insist on joining the two questions, I replied. Now I meant that you should admit the utility ; and in this way, as I thought, I should escape from one of them, and then there would remain only the possibility.

But that little attempt is detected, and therefore you will please to give a defence of both.

Well, I said, I submit to my fate. Yet grant me a little favour : let me feast my mind as day dreamers are in the habit of feast- 458
ing themselves with their own dreams when they are walking alone ; for before they have discovered any means of effecting their wishes—that is a matter which never troubles them—they would rather not tire themselves by thinking about possibilities ; but assuming that what they desire is already theirs, they pursue

their plan, and delight in detailing what they are going to do when their wish has come true—that is a way which they have of not doing much good to a capacity which was never good for much. I too am beginning to lose heart, and would wish to reserve the question of possibility, which, for the present only, I will assume, if you will allow me, and so proceed to enquire what measures the rulers will take for the execution of the plan, which, if executed, I will prove to be of the greatest use to the State and to the guardians. I will ask you, if you have no objection, to assist me, first of all, in considering the advantages of the measure, and then I will return to the question of possibility.

I have no objection ; proceed.

First, I think that if our rulers and their auxiliaries are to be worthy of the name which they bear, there must be willingness to obey in the one and the power of command in the other ; the guardians must themselves obey the laws and imitate their spirit in the details which are entrusted to them.

That is right, he said.

You, I said, in the capacity of their legislator, having selected the men, will now select the women who as far as may be are of like natures with them, and give them to them, and they will live in common houses and meet at common meals. None of them will have anything specially his or her own ; they will be together, and will be brought up together, and will associate at gymnastic exercises. And so they will be drawn by a necessity of their natures to have intercourse with each other—necessity is not too strong a word, I think ?

Yes, he said ;—necessity, not geometrical, but another sort of necessity which lovers know, and which is far more convincing and constraining to the mass of mankind.

True, I said ; and this, Glaucon, like all the rest, must proceed after an orderly fashion,—in a city of the blessed, licentiousness is an unholy thing which the rulers will forbid.

Yes, he said, and so they ought.

Then clearly our plan will be to make matrimony as holy as possible, and the most beneficial marriages will be the most holy ?

459 Exactly.

And how can marriages be made most beneficial?—that is a question which I put to you, because I observe in your house hunting dogs, and of the nobler sort of birds not a few. Now, do tell me, have you not attended to their pairing and breeding?

In what particulars?

Why, in the first place, although they are all of a good sort, are not some better than others?

True.

And do you breed from them all indifferently, or do you take care to breed from the best only?

From the best.

And do you take the oldest or the youngest, or only those of ripe age?

I choose only those of ripe age.

And if care was not taken in the breeding, your dogs and birds would deteriorate?

Certainly.

And the same principle holds of horses and of animals in general?

Undoubtedly.

Good heavens! my dear friend, I said, what consummate skill will our rulers need if the same principle holds of the human species!

Certainly, the same principle holds; but why does this involve such a high requirement?

Because, I said, our rulers will have to practise upon the body corporate with medicines. Now you know that when patients do not require medicines, but have only to be put under a regimen, the inferior sort of practitioner is deemed to be good enough; but when medicine has to be given, then the doctor should be more of a man.

That is quite true, he said; but to what are you alluding?

I mean, I replied, that our rulers will find a considerable dose of falsehood and deceit necessary for the good of their subjects: we were saying that they might be used with advantage as medicines.

Very true.

And this lawful use of them seems likely to be often needed in the regulations of marriages and births.

How so?

Why, I said, the principle has been already laid down that the best of either sex should be united with the best as often as possible, and the inferior with the inferior; and that they should rear the offspring of the one sort of union, but not of the other, if the flock is to be maintained in first-rate condition. Now these goings on must be a secret which the rulers only know, or there will be a further danger of our herd, as the guardians may be termed, breaking out into rebellion.

Very true.

Had we not better appoint certain festivals at which the brides and bridegrooms will be brought together and sacrifices will be
460 offered and suitable hymeneal songs composed by our poets: the number of weddings is a matter which must be left to the discretion of the rulers, whose aim will be to preserve the average of population? There are many other things which they will have to consider, such as the effects of wars and diseases and any similar agencies, in order to prevent the State becoming either too large or too small.

Certainly, he replied.

We shall have to invent some ingenious kind of lots which the less worthy may draw on each occasion of our bringing them together, and then they will accuse their own ill-luck and not the rulers.

To be sure, he said.

And I think that our braver and better youth, besides their other honours and rewards, might have greater facilities of intercourse with women given them; their bravery will be a reason, and such fathers ought to have as many sons as possible.

True.

And the proper officers, whether male or female or both, for offices are to be held by women as well as by men—

Yes.

The proper officers will take the offspring of the good parents to the pen or fold, and there they will deposit them with certain nurses who dwell in a separate quarter; but the offspring of the inferior, or of the better when they chance to be deformed, will be put away in some mysterious, unknown place, as decency requires.

Yes, he said, that must be done if the breed of the guardians is to be kept pure.

They will provide for their nurture, and will bring the mothers to the fold when they are full of milk, taking the greatest possible care that no mother recognises her own child ; and other wet-nurses may be had if any more are required. Care will also be taken that the process of suckling shall not be tedious to them ; and they will have no trouble or getting up at night, but will hand over all this to the nurses and attendants.

You suppose the wives of our guardians to have a fine easy time of it when they are having children.

Why, said I, and so they ought. Let us, however, proceed with our scheme. As we were saying, the parents should be in the prime of life.

Very true.

And what is the prime of life? May not that be defined as a period of about twenty years in a woman's life, and thirty in a man's?

Which years do you mean to include?

A woman, I said, may begin to bear children to the State at twenty years of age, and continue to bear until forty ; a man may begin at five-and-twenty, when he has passed the point at which the pulse of life beats quickest, and continue to beget children until he be fifty-five.

Certainly, he said, both in men and women those years are 461 the prime of physical as well as of intellectual vigour.

Any one above or below the prescribed ages who takes part in the public hymeneals shall be said to have done an unholy and unrighteous thing ; the child of which he is the father, if it steals into life, will have been conceived under other auspices than those of sacrifice and prayers, which at each hymeneal priestesses and priests and the whole city will offer, that the new generation may be better and more useful than their good and useful parents, whereas his child will be the offspring of darkness and strange lust.

Very true, he replied.

And the same law will apply to any one of those within the prescribed age, who forms a connection with any woman in the prime of life without the sanction of the rulers ; for we shall

say that he is raising up a bastard to the State, uncertified and unconsecrated.

Very true, he replied.

This applies, however, only to those who are within the specified age: after that we allow them to range at will, except that a man may not marry his daughter or his daughter's daughter, or his mother or his mother's mother; and women, on the other hand, are prohibited from marrying their sons or fathers, or son's son or father's father, and so on in either direction. And we grant all this, accompanying the permission with strict orders to them to prevent any embryo which may come into being from seeing the light; and if any force a way to the birth, they must understand that the offspring of such an union cannot be maintained, and arrange accordingly.

That also, he said, is a reasonable proposition. But how will they know who are fathers and daughters, and so on?

They will never know. The way will be this:—dating from the day of the hymenical, the bridegroom who was then married will call all the male children who are born in the seventh and the tenth month afterwards his sons, and the female children his daughters, and they will call him father, and he will call their children's children his grandchildren, and they will call the elder generation grandfathers and grandmothers. All who were begotten at the same time with them will be called their brothers and sisters, and these will be forbidden to intermarry. This, however, is not to be understood as an absolute prohibition of such marriages; if the lot favours them, and they receive the sanction of the Pythian oracle, the law will allow them.

Quite right, he replied.

Such is the scheme according to which the guardians of our State are to have their wives and families in common. And now you would have the argument prove that this community is consistent with the rest of our polity, and also that nothing can be better—would you not?

462 Yes, certainly.

Shall we begin by asking of ourselves what we conceive to be the greatest good, and what ought to be the chief aim of the legislator in the organization of a State, and what is the greatest

evil, and then consider whether our previous description has the stamp of the good or of the evil?

By all means.

Can there be any greater evil than discord and distraction and plurality where unity ought to reign? or any greater good than the bond of unity?

There cannot.

And there is unity where there is community of pleasures and pains—where all the citizens are glad or sorry on the same occasions?

No doubt.

Yes; and where there is no common but only private feeling, a State is disorganized—when you have one half of the world triumphing and the other sorrowing at the same events happening to the city and the citizens?

Certainly.

Such differences commonly originate in a disagreement about the use of the terms 'meum' and 'tuum,' mine and his.

Exactly.

And is not that the best-ordered State in which the greatest number of persons apply the terms 'mine' and 'not mine' in the same way to the same thing?

True, very true.

Or that again which most nearly approaches to the condition of the individual—as in the body, when but a finger is hurt, the whole frame, drawn towards the soul and forming one realm under the ruling power therein, feels the hurt and sympathizes all together with the part affected, and we say that the man has a pain in his finger; and the same expression is used about any other part, which has a sensation of pain at suffering or of pleasure at the alleviation of suffering.

Very true, he replied; and I agree with you that in the best-ordered State there is the nearest approach to this common feeling which you describe.

Then when any one of the citizens experiences any good or evil, the whole State will make his case their own, and either rejoice or sorrow with him?

Yes, he said, that is what will happen in a well-ordered State.

It will now be time, I said, for us to return to our State and

see whether this or some other form is most in accordance with these principles.

Very good.

463 Our State like every other has rulers and subjects?

True.

All of whom will call one another citizens?

Of course.

But is there not another name which people give to their rulers in other States?

Generally they call them masters, but in democratic States they simply call them rulers.

And in our State what other name besides that of citizens do the people give the rulers?

They are called saviours and helpers, he replied.

And what do the rulers call the people?

Their maintainers and foster-fathers.

And what do they call them in other States?

Slaves.

And what do the rulers call one another in other States?

Fellow-rulers.

And what in ours?

Fellow-guardians.

Did you ever know an example in other States of a ruler who would speak of one of his colleagues as a friend and of another as not a friend to him?

Yes, very often.

And the friend he describes and regards as one in whom he has an interest, and the other as one in whom he has no interest?

Exactly.

But would any of your guardians speak of one of their fellows as a friend and of another as not a friend to him?

Certainly not; for every one whom they meet will be regarded by them either as a brother or sister, or father or mother, or son or daughter, or as the child or parent of those who are thus connected with him.

Capital, I said; but let me ask you once more: Shall they be a family in name only; or shall they always act as if they were a family? For example, in the use of the word 'father,' would the care of a father be implied and the filial reverence and

duty and obedience to him which the law commands ; and is the violator of these duties to be regarded as an impious and unrighteous person who is not likely to receive much good either from the hands of God or man? Are these to be the strains which the children will hear repeated in their ears by all the citizens about their parents and kindred when they are pointed out to them?

These, he said, and none other ; for what can be more ridiculous than for them to utter the names of family ties with the lips only and not to act upon them?

Then in our city the language of harmony and concord will be more often heard than in any other. As I was describing before, when any one is well or ill, the universal word will be 'mine is well' or 'mine is ill.'

Most true.

464

And agreeably to this mode of thinking and speaking, were we not saying also that they will have their pleasures and pains in common?

Yes, and so they will.

And they will have a common interest in the same which they will call 'my own,' and having this common interest they will have a common feeling of pleasure and pain?

Yes, they will have a far greater community of feeling.

And the reason of this, over and above the general constitution of the State, will be that the guardians have a community of women and children?

That will be the chief reason.

And this unity of feeling we admitted to be the greatest good, as was implied in our own comparison of a well-ordered State to the relation of the body and the members, when affected by pleasure or pain?

That we acknowledged, and very rightly.

Then the community of wives and children is clearly the source of the greatest good to the State?

Certainly.

And this agrees with the other principle which we were affirming,—that the guardians were not to have houses or lands or any other property ; their pay was to be their food, which they were to receive from the other citizens, and they were to have

no private expenses; for we intended them to preserve their true character of guardians.

Right, he replied.

Both the community of property and the community of families, as I am saying, tend to make them more truly guardians; they will not tear the city in pieces by differing about 'meum' and 'tuum;' the one dragging any acquisition which he has made into a house of his own, where he has a separate wife and children and private pleasures and pains, and another into another; but all will be affected as far as may be by the same pleasures and pains because they are all of one opinion about what is near and dear to them, and therefore all tend towards a common end.

Certainly, he replied.

And as they have nothing but their persons which they can call their own, suits and complaints will have no existence among them; they will be free from all those quarrels of which money or children or relations are the occasion.

Of course they will.

Neither will trials for assault or insult ever be likely to occur among them. For that equals should defend themselves against equals we shall surely maintain to be fair and right; and make
465 the protection of the person a matter of necessity.

That is good, he said.

Yes; and there is a further good in the law; viz. that if a man has cause of offence against another he will satisfy his resentment and be less likely to make a commotion in the State.

Certainly.

To the elder shall be assigned the duty of ruling and chastising the younger.

Clearly.

Nor can there be a doubt that the younger will not strike or do any other violence to an elder, unless the magistrates command him; nor will he slight him in any way. For there are two guardians, shame and fear, mighty to prevent him: shame, which makes men refrain from laying hands on those who are to them in the relation of parents; fear, that the injured one will be succoured by the others who are his brothers, sons, fathers.

That is true, he replied.

Then in every way the laws will help the citizens to keep peace with one another?

Yes, there will be no want of peace.

And as the guardians will never quarrel among themselves there will be no danger of the rest of the city being divided either against them or against one another.

None whatever.

I hardly like to speak of the little meannesses of which they will be rid, for they are beneath mention. Such, for example, as the flattery of the rich by the poor, and all the pains and pangs of bringing up a family, finding the money to buy the necessaries of their household, borrowing and then repudiating, getting how they can, and giving the money into the hands of women and slaves to keep—what people suffer in this way is mean enough and obvious enough, and not worth speaking of.

Yes, he said, a man has no need of eyes in order to perceive that.

And from all these evils they will be delivered, and their life will be blessed as the life of Olympic victors and yet more blessed.

How?

The Olympic victor, I said, is deemed happy in receiving a part only of the happiness which is the lot of our citizens, who have won a more glorious victory and have a more complete maintenance at the public cost. For the victory which they have won is the salvation of the whole State; and the crown with which they and their children are crowned is the fulness of all that life needs; they receive rewards from the hands of their country while living, and after death have an honourable burial.

Yes, he said, they are indeed glorious rewards.

Do you remember, I said, how in the course of the previous discussion¹ some one who shall be nameless accused us of 466 making our guardians unhappy—they had nothing and might have possessed all things—to whom we replied that on some future occasion we might perhaps consider the question, but that, as at present advised, we would make our guardians truly guardians, and that we were fashioning the State not with a view to the happiness of any particular class, but of the whole?

Yes, I remember.

¹ Pages 419, 420 St.

And what do you say, now that the life of our protectors is made out to be far better and nobler than that of Olympic victors; will you compare such a life with that of shoemakers, or any other artisans, or of husbandmen?

Certainly not.

At the same time I must repeat what I was before saying, that if any of our guardians shall get into his head the youthful conceit, that he ought to have a happiness which would make him no longer a guardian, and is not content with this safe and harmonious life, which, in our judgment, is of all lives the best, but shall proceed to monopolize the State, then he will have to learn how wisely Hesiod spoke, when he said, 'half is better than the whole.'

If he were to consult me, I should say to him: Stay where you are, having the promise of such a life.

And you agree then, I said, that men and women are to have a common way of life such as we have described—common education, common children; and they are to watch over the citizens in common whether abiding in the city or going out to war; they are to guard together, and to hunt together like dogs; and always and in all things women are to share with the men? And in so doing they will act for the best and will not violate, but preserve the natural relation of the sexes.

I agree with you, he replied.

The enquiry, I said, has yet to be made, whether such a community will be found possible—as among other animals, so also among men—and if possible, in what way possible?

That, he said, is just the question which I was going to ask.

There is no difficulty, I said, in seeing how war will be carried on by them.

How?

Why, of course they will go on expeditions together; and will take with them any of their children who are strong enough, that, like the children of artisans in general, they may look on at the work which they will have to do when they are grown
467 up; and besides looking on they will be able to help and be of use in war, and to wait upon their fathers and mothers. Did you never observe in the arts how the potters' boys look on and help, long before they touch the wheel?

Certainly.

And shall potters be more careful than our guardians in educating their children and giving them the opportunity of seeing and practising their duties?

The notion would be ridiculous, he said.

There is also the effect on the parents, with whom, as with other animals, the presence of their cubs will be the greatest incentive to valour.

That is quite true, Socrates; and yet if they are defeated, which may often happen in war, how great the danger is! the children will be lost as well as their parents, and the State will never recover.

True, I said; but would you never allow them to run any risk?

I am far from saying that.

Well, but if they are ever to run a risk should they not run the risk when there is a chance of their improvement?

Clearly.

Whether the future soldiers do or do not see war in the days of their youth is a very important matter, for the sake of which some risk may fairly be incurred.

Yes, very important.

Our first requirement will be that the children should see war, and we must also contrive that they shall see in safety; then all will be well.

True.

Their parents may be supposed to have ordinary common sense and understanding of the risks of war; they will know what expeditions are safe and what dangerous?

That may be assumed.

And they will take them on the safe expeditions and be cautious about the dangerous ones?

True.

And they will place them under the command of experienced veterans who will be their leaders and teachers?

Very properly.

Still, the dangers of war cannot be always foreseen; there is a good deal of chance about them?

True.

Then against such chances the children must be at once

furnished with wings, in order that in the hour of need they may fly away and escape.

What do you mean? he said.

I mean that we must mount them on horses in their earliest youth, and when they have learnt to ride, take them on horseback to see war: the horses must not be spirited and warlike, but the most tractable and yet the swiftest that can be had. In this way they will get an excellent view of what is hereafter to be their
468 business; and if there is danger they have only to follow their elder leaders and escape.

I believe you are right, he said.

Next, as to war; what are to be the relations of your soldiers to one another and to their enemies? I should be inclined to propose that the soldier who leaves his rank or throws away his arms, or is guilty of any other act of cowardice, should be degraded into the rank of a husbandman or artisan. What do you think?

By all means, I should say.

And he who allows himself to be taken prisoner may even be made a present of to his enemies; he is their lawful prey, and they may do as they like with him.

Certainly.

But the hero who has distinguished himself, what shall be done to him? In the first place, he shall receive honour in the army from his youthful comrades; every one of them in succession shall crown him. What do you say?

I approve.

And what do you say to his receiving the right hand of fellowship?

To that too, I agree.

But you will hardly agree to my next proposal.

What is your proposal?

That he should kiss and be kissed by them?

Most certainly, and I should be disposed to go further, and say: Let no one whom he has a mind to kiss refuse to be kissed by him while the expedition lasts. So that if there be a lover in the army, whether his love be youth or maiden, he may be more eager to win the prize of valour.

That is good, I said. That the brave man is to have more wives than others has been already determined; and he is to

have first choices in such matters more than others, in order that he may have as many children as possible.

Agreed.

Again, there is another manner in which, according to Homer, brave youths should be honoured ; for he tells how Ajax¹, after he had distinguished himself in battle, was rewarded with long chins, which seems to be a complement appropriate to a hero in the flower of his age, being not only a tribute of honour but also a very strengthening thing.

Very true, he said.

Then in this, I said, Homer will be our teacher ; and we too, at sacrifices and on the like occasions, will honour the brave, whether men or women, with hymns

‘and seats of precedence, and meats and flowing goblets²;

and in honouring them, we shall also be training them.

That, he replied, is excellent.

Yes, I said ; and when a man dies gloriously in war shall we not say, in the first place, that he is of the golden race ?

To be sure.

Nay, have we not the authority of Hesiod for affirming that when they are dead

‘They are holy angels upon the earth, authors of good, averters of ill, the 469 guardians of speech-gifted men ?’

Yes ; and we believe him.

We must enquire of the god how we are to order the sepulture of divine and heroic personages, and do as he bids ?

By all means.

And in ages to come we will do service to them and worship at their shrines as heroes. And not only they but any who are pre-eminently good, whether they die from age, or in any other way, shall be admitted to the same honours.

That is very right, he said.

Next, how shall our soldiers treat their enemies ? What do you say about this ?

In what respect do you mean ?

¹ Iliad, vii. 321.

² Ibid. viii. 162.

Probably Works and Days, 121 foll.

I mean, shall they be made slaves? Do you think that Hellenes ought to enslave Hellenes, or allow others to enslave them, if they can help? Should not their custom be to spare them, considering the danger which there is that the whole race may one day fall under the yoke of the barbarians?

To spare them is infinitely better.

Then no Hellene should be owned by them as a slave; that is a rule which they will observe and advise the other Hellenes to observe.

Certainly, he said; that is the way to unite them against the barbarians and make them keep their hands off one another.

Next as to the slain; ought the conquerors, I said, to take anything but their armour? Does not the practice of despoiling an enemy afford an excuse for not facing the battle? They skulk about the dead, pretending that they are fulfilling a duty, and many an army before now has been lost from this love of plunder.

Very true.

And is there not illiberality and avarice, and a degree of meanness and womanishness, in robbing a corpse and making an enemy of the dead body when the real enemy has walked away and left only his fighting gear behind him,—is not this rather like a dog who cannot get at his assailant, quarrelling with the stones which strike him instead?

Exactly like a dog, he said.

Then we must abstain from spoiling the dead or hindering their burial?

Yes, he replied, we must.

Neither, as our object is to preserve good feeling among the
470 Hellenes, shall we offer up the arms of Hellenes at any rate, at the temples of the gods; nay, we have some reason to be afraid that such an offering may be a pollution unless commanded by the god himself?

Very true.

Again, as to the devastation of an Hellenic territory or the burning of houses, what is to be the practice?

Will you let me have the pleasure, he said, of hearing your opinion?

Both should be forbidden, in my judgment ; I would take the annual produce and no more. Shall I tell you why ?

Pray do.

Why, you see, there is a difference in the names 'discord' and 'war,' and I imagine that there is also a difference in their natures ; the one is expressive of what is internal and domestic, the other of what is external and foreign ; and the first of the two is properly termed discord, and only the second, war.

That is a very just distinction, he replied.

Shall I further add that the Hellenic race is all united together by ties of blood and friendship, and alien and strange to the barbarians.

Very good, he said.

And therefore when Hellenes fight with barbarians and barbarians with Hellenes, they will be described by us as being at war when they fight, and by nature enemies, and this kind of antagonism should be called war ; but when Hellenes fight with one another we shall say that Hellas is then in a state of disorder and discord, they being by nature friends ; and such enmity is to be called discord.

I agree.

Consider then, I said, when that which is now acknowledged by us to be discord occurs, and a city is divided, if both parties destroy the lands and burn the houses of one another, how wicked does the strife appear—how can either of them be a lover of his country ? for no true lover of his country would tear in pieces his nurse and mother : there might be reason in the conqueror depriving the conquered of their harvest, but still they would have the idea of peace in their hearts and not go on fighting for ever.

Yes, he said, a better temper than the other.

And when you found a state, will it not be an Hellenic state ?

It ought to be, he replied.

Then will not the citizens be good and civilized ?

To be sure.

And will they not be lovers of Hellas, and think of Hellas as their own land, and share in the common temples ?

Most certainly.

And any difference that arises among Hellenes will be re-

471 garded by them as discord only—a quarrel among friends, which is not to be called a war?

Certainly not.

Then they will quarrel as those who intend some day to be reconciled?

Certainly.

They will use friendly correction, but will not enslave or destroy their opponents; they will be correctors, not enemies?

Just so.

And as they are Hellenes themselves they will not devastate Hellas, nor will they burn houses, nor ever suppose that the whole population of a city—men, women, and children—are equally their enemies, for they know that the guilt of war is always confined to a few persons and that the many are their friends. And for all these reasons they will be unwilling to waste their lands and rase their houses; their enmity to them will only last until the many innocent sufferers have compelled the guilty few to give satisfaction?

I agree, he said, that our citizens should thus deal with their Hellenic enemies; and with barbarians as the Hellenes now deal with one another.

Then let us enact this law for our guardians:—that they are neither to devastate the ground nor to burn houses.

Agreed; and we may agree also that these, like all our previous enactments, are excellent.

But still, Socrates, I must say, that if you are allowed to go on you will entirely forget the other question which at the commencement of this discussion you thrust aside:—Is such an order of things possible, and how, if at all? For, admitting the possibility, I am quite ready to acknowledge that the plan has every advantage. I will add, what you have omitted, that your citizens will be the bravest of warriors, and will never leave their ranks, for they will all know one another, and each will call the other father, brother, son; and if you suppose the women to join their armies, whether in the same rank or in the rear, either as a terror to the enemy, or as auxiliaries in case of need, I know that they will then be made altogether invincible; and there are many domestic advantages which might be mentioned as well, and these also I fully acknowledge: but, as I admit all these

advantages and as many more as you please, if this State of yours were to come into being, say no more of them; let us now turn to the question of possibility and ways and means—all the rest may be left.

If I loiter¹ for a moment, you instantly make a raid upon me, 472 I said, and have no mercy; I have hardly escaped the first and second waves, and you seem not to be aware that you are now bringing upon me the third, which is the greatest. When you have seen and heard the third wave, I think you will acknowledge that some fear and hesitation was natural, considering the extraordinary character of the proposal which I have to offer.

The more appeals of this sort which you make, he said, the more determined are we that you shall tell us how such a State is possible: speak out and at once.

Let me begin by reminding you that we found our way hither in the search after justice and injustice.

True, he replied; but what of this?

I was only going to ask whether, if we have discovered them, we are to require that the just man should in nothing fail of absolute justice; or may we be satisfied with an approximation, and the attainment in him of a higher degree of justice than is to be found in other men?

The approximation will be enough.

And we enquired into the nature of absolute justice and into the character of the perfectly just and the possibility of his existence, and into injustice and the perfectly unjust, only that we might have an ideal. We were to look at them in order that we might judge of our own happiness and unhappiness according to the standard which they exhibited and the degree in which we resembled them, not with any view of showing that they could exist in fact.

True, he said.

How would a painter be the worse painter because, after having painted with consummate art an ideal of a perfectly beautiful man, he was unable to show that any such man could ever have existed?

He would not.

¹ Reading *στραγγενομένω*.

Well, and were we not creating an ideal of a perfect State?

To be sure.

And is our theory a worse theory because we are unable to prove the possibility of a city being ordered in the manner described?

Surely not, he replied.

That is the truth, I said. But if, at your request, I am to try and show how and under what condition the possibility is highest, I must ask you, having this in view, to repeat your former admissions.

What admissions?

473 I want to know whether ideas are ever realized in fact? Is not speech more than action, and must not the actual, whatever a man may think, fall short of the truth? What do you say?

I agree.

Then you must not insist on my proving that the actual State will in every respect coincide with the ideal: if we are only able to discover how a city may be governed nearly as we proposed, you will admit that we have discovered the possibility which you demand; and will be contented. I am sure that I should be contented—will not you?

Yes, I will.

Then let me next endeavour to show what is that fault in States which is the cause of their present maladministration, and what is the least change which will enable a State to pass into the truer form; and let the change, if possible, be of one thing only, or, if not, of two; at any rate, let the changes be as few and slight as possible.

Certainly, he replied.

I think then, I said, that there might be a revolution if there were just one change, which is not a slight or easy though still a possible one.

What is it? he said.

Now then, I said, I go to meet that which I liken to the greatest of the waves, yet shall the word be spoken, even though the overflowing of the laughing wave shall drown me in laughter and dishonour; and do you attend to me.

Proceed.

I said: Until, then, philosophers are kings, or the kings and

princes of this world have the spirit and power of philosophy, and political greatness and wisdom meet in one, and those commoner natures who follow either to the exclusion of the other are compelled to stand aside, cities will never cease from ill—no, nor the human race, as I believe—and then only will our State have a possibility of life and behold the light of day. This was the thought, my dear Glaucon, which I was wanting to utter if it had not seemed too extravagant; for to be convinced that in no other State can there be private or public happiness is indeed a hard thing.

Socrates, what do you mean? I would have you consider that the word which you have spoken, is one at which numerous persons, and very respectable persons too, pulling off their coat in a moment, and seizing any weapon that comes to 474 hand, will run at you might and main, intending to do heaven knows what; and if you don't prepare an answer, and put yourself in motion, you will be 'pared by their fine wits,' and no mistake.

You got me into the scrape, I said.

And I was quite right; however, I will do all I can to get you out; but I can only give you wishes and exhortations, and also, perhaps, I may be able to fit answers to your questions better than another—that is all. And now, having such an auxiliary, you must do your best to show the unbelievers that you are right.

I ought to try, I said, since you offer me such valuable assistance. And I think that, if there is to be a chance of our escaping, we must define who these philosophers are who, as we say, are to rule in the State; then we shall be able to defend ourselves: There will be discovered to be some natures who ought to rule and to study philosophy; and others who are not born to be philosophers, and are meant to be followers rather than leaders.

Then now for a definition, he said.

Follow me, I said, and I hope that I may somehow or other be able to give you a satisfactory explanation.

Proceed.

I dare say that you remember, and therefore I need not remind you, that a lover, if he is worthy of the name, ought to show his

love, not to some one part of that which he loves, but to the whole.

I believe that I must ask you to explain, for I really do not understand.

Another, I replied, might fairly answer thus; but a man of pleasure like you ought to know that all who are in the flower of their youth do somehow or other raise a pang or emotion in a lover's breast, and are thought by him to be worthy of his affectionate regards. Is not this a way which you have with the fair: one has a snub nose, and you praise his pleasant face; another's beak, as you say, has a royal look; while he who is neither snub nor hooked has the grace of regularity: the dark visage is manly, and the fair are angels; and as to the sweet 'honey pale,' as they are called, what is the very name but the invention of a lover who uses these pet names, and is not averse to paleness on the cheek of youth? In a word, there is no excuse which
475 you will not make, and nothing which you will not say, in order to preserve for your use every flower that has the bloom of youth.

If you will make me an authority in matters of love, for the sake of the argument, I assent.

And what do you say of lovers of wine? Do you not see them doing the same? They are glad of any pretext of drinking any wine.

Very good.

And the same is true of ambitious men; if they cannot be generals, they are willing to be captains; and if they cannot be honoured by really great and important persons, they are glad to be honoured by inferior people,—but honour of some kind they must have.

Exactly.

Once more let me ask: Does he who desires any class of goods, desire the whole class or a part only?

The whole.

And may we not say of the philosopher that he is a lover, not of a part of wisdom only, but of the whole?

True.

Then he who dislikes knowledge, especially in youth, when he has no power of judging what is good and what is not, such an

one we maintain not to be a philosopher or a lover of knowledge, just as he who refuses his food is not hungry, and may be said to have a bad appetite and not a good one?

There we are right, he said.

Whereas he who has a taste for every sort of knowledge and who is curious to learn and is never satisfied, may be justly termed a philosopher? Am I not right?

Glaucon said: If curiosity makes a philosopher, you will find many a strange being claiming the name. For all the lovers of sights have a delight in learning, and will therefore have to be included. Musical amateurs, too, are a folk wonderfully out of place among philosophers, for they are the last persons in the world who would come to anything like a philosophical discussion, if they could help, while they run about at the Dionysiac festivals as if they had let out their ears to hear every chorus; whether the performance is in town or country—that makes no difference—they are there. Now are we to maintain that all these and any who have similar tastes, as well as the professors of minor arts, are philosophers?

Certainly not, I replied, they are only an imitation.

He said: But who are the true philosophers?

Those, I said, who are lovers of the vision of truth.

That is also good, he said; but I should like to know what you mean?

To another, I replied, I might have a difficulty in explaining; but I am sure that you will admit a proposition which I am about to make.

What proposition?

That since beauty is the opposite of ugliness, they are two?

Certainly.

And inasmuch as they are two, each of them is one?

476

True again.

And of just and unjust, good and evil, and of every other class, the same remark holds: taken singly, each of them is one; but from the various combinations of them with things and persons and with one another, they are seen in various lights and appear many?

Very true.

And this is the distinction which I draw between the sight-

loving, art-loving, busy class and those of whom I am speaking, and who are alone worthy of the name of philosophers.

How do you distinguish them? he said.

The lovers of sounds and sights, I replied, are, as I conceive, fond of fine tones and colours and forms and all the artificial products that are made out of them, but their mind is incapable of seeing or loving absolute beauty.

True, he replied.

Few are they who are able to attain the sight of this.

Very true.

And he who, having a sense of beautiful things has no sense of absolute beauty, or who, if another lead him to a knowledge of that beauty is unable to follow—of such an one I ask, Is he awake or in a dream only? Reflect: is not the dreamer, sleeping or waking, one who puts the resemblance in the place of the real object?

I should certainly say that such an one was dreaming.

But take the case of the other, who recognises the existence of absolute beauty and is able to distinguish the idea from the objects which participate in the idea, neither putting the objects in the place of the idea nor the idea in the place of the objects—is he a dreamer, or is he awake?

He is wide awake.

And may we not say that the mind of the one has knowledge and that the mind of the other has opinion only?

Certainly.

But suppose that the latter quarrels with us and disputes our statement, can we administer any soothing cordial or advice to him, without revealing to him that there is sad disorder in his wits?

Good advice is what he certainly wants, he replied.

Come, then, and let us think of something to tell him. Suppose we begin by assuring him that he is welcome to any knowledge he may have, and that we are rejoiced at his having any. But we should like to ask him a question: Does he who has knowledge know something or nothing? (You must answer for him.)

I answer that he knows something.

Something that is or is not?

Something that is; for how can that which is not ever be known?

And are we assured, after looking at the matter in every point 477 of view, that absolute being is or may be absolutely known, but that not-being is utterly unknown and unknowable?

Nothing can be more certain.

Good. But if there be anything which is of such a nature as to be and not to be, that will have a place intermediate between pure being and the absolute negation of being?

Yes, between them.

And, as knowledge corresponded to being and ignorance to not-being, for that intermediate between being and not-being there has to be discovered a corresponding intermediate between ignorance and knowledge, if there be such?

Certainly.

Do we admit the existence of opinion?

Undoubtedly.

As being the same with knowledge, or another faculty?

Another faculty.

Then opinion and knowledge have to do with different kinds of matter corresponding to this difference of faculties?

Yes.

And knowledge is relative to being and knows being. But before I proceed I will make a division.

What division?

I will begin by placing faculties in a class by themselves: they are powers in us, and in all other things, by which we do as we do. Sight and hearing, for example, I should call faculties. Have I clearly explained the class which I mean?

Yes, I quite understand.

Then let me tell you my view about them. I do not see them, and therefore the distinctions of figure, colour, and the like, which enable me to discern the differences of some things, do not apply to them. In speaking of a faculty I think only of the end and the operation; and that which has the same end and the same operation I call the same faculty, but that which has another end and another operation I call different. Would that be your way of speaking?

Yes.

To return. Would you place knowledge among faculties, or in some other class?

Certainly knowledge is a faculty, and the most powerful of all faculties.

And is opinion also a faculty?

Certainly, he said; for opinion is that with which we are able to form an opinion.

And yet you were surely admitting a little while ago that knowledge is not the same as opinion?

478 Why, yes, said he: for how can any reasonable being ever identify that which is infallible with that which errs?

That is very good, I said, and clearly shows that we are conscious of a distinction between them?

Yes.

Then knowledge and opinion having distinct powers have also distinct ends or subject-matters?

That is certain.

Being is the end or subject-matter of knowledge, and knowledge is the knowledge of being?

Yes.

And opinion is to have an opinion?

Yes.

And is the subject-matter of opinion the same as the subject-matter of knowledge?

Nay, he replied, that is already disproven; if difference in faculty implies difference in the end or subject-matter, and opinion and knowledge are distinct faculties, the subject-matter of knowledge cannot be the same as the subject-matter of opinion.

Then if being is the subject-matter of knowledge, something else must be the subject-matter of opinion?

Yes, something else.

Well then, is not-being the subject-matter of opinion? or, rather, how can there be an opinion at all about not-being? Reflect: when a man has an opinion, has he not an opinion about something? Can he have an opinion which is an opinion about nothing?

Impossible.

He who has an opinion has an opinion about some one thing?

Yes.

And not-being is not one thing but, properly speaking, nothing?

True.

Of not-being, ignorance was assumed to be the necessary correlative; of being, knowledge?

True, he said.

Then opinion is not concerned either with being or with not-being?

Not with either.

And can therefore neither be ignorance nor knowledge?

That seems to be true.

Then is opinion to be sought without and beyond either of them, in a greater clearness than knowledge, or in a greater darkness than ignorance?

Neither.

Then I suppose that opinion appears to you darker than knowledge, but lighter than ignorance?

Both; and in no small degree.

And also to be within and between them?

Yes.

Then you would infer that opinion is intermediate?

No question.

But were we not saying before, that if anything appeared to be of a sort which is and is not at the same time, that sort of thing would appear also to lie in the interval between pure being and absolute not-being; and that the corresponding faculty is neither knowledge nor ignorance, but will be found in the interval between them?

True.

And in that interval there has now been discovered a thing which we call opinion?

There has.

Then what remains to be discovered is the object which partakes equally of the nature of being and not-being, and cannot rightly be termed either, pure and simple; this unknown term, when discovered, we may truly call the subject of opinion, and assign to each their due—to the extremes the faculty of the extreme and to the mean the faculty of the mean.

True.

479 This being premised, I would ask the gentleman who is of opinion that there is no absolute or unchangeable idea of beauty—in whose opinion the beautiful is the diverse—he, I say, your lover of beautiful sights, who cannot bear to be told that the just is one, and the beautiful is one, or that anything is one—to him I would appeal, saying, Best of men, of all these beautiful things is there one which will not be found ugly; or of the just, which will not be found unjust; or of the holy, which will not also be unholy?

No, he replied; the beautiful will in some point of view be found ugly; and the same is true of the rest.

And may not the many which are doubles be also halves?—doubles, that is, of one thing, and halves of another?

Yes.

And things great and small, heavy and light, will not be denoted by these any more than by the opposite names?

True; both those and the opposite names will always attach to all of them.

And can any one of those many things which are called by particular names be said to be this rather than not to be this?

He replied: They are like the punning riddles which are asked at feasts or the children's puzzle about the eunuch aiming at the bat, with what he hit him, as they say in the puzzle, and what the bat was sitting upon; for these immediate objects of which I am speaking are a riddle also, and have a double sense: nor can you fix them in your mind, either as being or not-being, or both or neither.

Then what do you do with them? I said. Can they have a better place than between being and not-being? For they are clearly not in greater darkness or negation than not-being, or more full of light and existence than being.

That is quite true, he said.

Thus then we seem to have discovered that the many things which are esteemed beautiful or good by the multitude, are tossing about in some region which is half-way between pure being and pure not-being?

We have.

Yes; and we had before agreed that anything of this kind

which we might find was to be described as matter of opinion, and not as matter of knowledge; being the intermediate flux which is caught and detained by the intermediate faculty.

Granted.

Then those who see the many beautiful, and who yet neither see, nor can be taught to see, absolute beauty; who see the many just, and not absolute justice, and the like,—such persons may be said to have opinion but not knowledge?

That is certain.

But those who see the absolute and eternal and immutable may be said to know, and not to have opinion only?

Neither can that be denied.

The one love and embrace the subjects of knowledge, the other those of opinion? The latter are the same, as I dare say you will remember, who listened to sweet sounds and gazed 480 upon fair colours, but would not tolerate the existence of absolute beauty.

Yes, I remember.

Shall we then be guilty of any impropriety in calling them lovers of opinion rather than lovers of wisdom, and will they be very angry with us for thus describing them?

I shall tell them that they ought not to be angry at a description of themselves which is true.

But those who love the truth of each thing are to be called lovers of wisdom and not lovers of opinion.

Assuredly.

BOOK VI.

484 AND thus, Glaucon, after the argument has gone a weary way, the true and the false philosophers have at length appeared in view.

I do not think, he said, that the way could have been shortened.

I suppose not, I said ; and yet I believe that we might have a nearer view of both of them if there were not many other questions awaiting us, which he who desires to see in what the life of the just differs from that of the unjust must consider.

And what question is next in order ? he asked.

Surely, I said, there can be no doubt about that. Inasmuch as philosophers only are able to grasp the eternal and unchangeable, and those who wander in the region of the many and variable are not philosophers, I must ask you which of the two kinds should be the rulers of our State ?

And how can we truly answer that question ?

Ask yourself, I replied, which of the two are better able to guard the laws and institutions of our State ; and let them be our guardians.

Very good.

Neither, I said, can there be any question that the guardian who is to keep anything should have eyes rather than no eyes ?

There can be no question of that.

And are not those who are truly and indeed without the knowledge of the true being of each thing, and have in their souls no clear pattern, and are unable as with a painter's eye to look at the very truth and to that original to repair, and having perfect vision of the other world to order the laws about beauty, goodness, justice in this, if not already ordered, and to guard and preserve the order of them—are they not, I say, simply blind ?

Assuredly, he replied, that is very much their condition.

And shall they be our guardians when there are others who, besides being their equals in experience and not inferior to them in any particular of virtue, have also the knowledge of the truth?

There can be no reason, he said, for rejecting those who have this great and pre-eminent quality, if they do not fail in any ⁴⁸⁵ other respect.

Suppose then, I said, that we determine how far they can unite this and the other excellences.

By all means.

In the first place, as we began by observing, the nature of the philosopher was to be ascertained; about which, if we are agreed, then, if I am not mistaken, we shall also be agreed that such an union of qualities is possible, and that those in whom they are united, and those only, should be rulers in the State. Let us assume that philosophical minds always love knowledge of a sort which shows them the eternal nature not varying from generation and corruption.

Agreed.

And further, I said, let us admit that they are lovers of all true being; there is no part whether greater or less, or more or less honourable, which they are willing to renounce; as we said before of the lover and the man of ambition.

True.

There is another quality which they will also need if they are to be what we were saying.

What quality?

Truthfulness: they will never intentionally receive falsehood, which is their detestation, and they will love the truth.

Yes, that may be affirmed of them.

'May be,' my friend, I replied, is not the word; say rather, 'must be affirmed:' for he whose nature is amorous of anything cannot help loving all that belongs or is akin to the object of his affections.

Right, he said.

And is there anything more akin to wisdom than truth?

How can there be?

Or can the same nature be a lover of wisdom and a lover of falsehood?

Never.

The true lover of learning then must from his earliest youth, as far as in him lies, desire all truth?

Assuredly.

But then again, he whose desires are strong in one direction will have them weaker in others; they will be like a stream which has been drawn off into another channel.

True.

He whose desires are drawn towards knowledge in every form will be absorbed in the pleasures of the soul, and will hardly feel bodily pleasure—I mean, if he be a true philosopher and not a sham one.

That is most certain.

Such an one is sure to be temperate and the reverse of covetous; for the motives which make another man desirous to have and to spend, are no part of his character.

Very true.

486 Another criterion of the philosophical nature has also to be considered.

What is that?

There should be no secret corner of meanness; for littleness is the very opposite of a soul which is ever longing after the whole of things both divine and human.

Most true, he replied.

Then how can he who has magnificence of mind and is the spectator of all time and all existence, think much of human life?

He cannot.

Or can such an one account death fearful?

No indeed.

Then the cowardly and mean nature has no part in true philosophy?

Certainly not.

Or again: can he who is harmoniously constituted, who is not covetous or mean, or a boaster, or a coward—can he, I say, ever be unjust or hard in his dealings?

Impossible.

Then you will note whether a man is just and gentle, or rude

and unsociable; these are the signs which distinguish even in youth the philosophical nature from the unphilosophical.

True.

And there is another point which should be remarked.

What point?

Whether he has or has not a pleasure in learning; for no one will love that which gives him pain, and in which after much toil he makes little progress.

Certainly not.

And again, if he is forgetful and retains nothing of what he learns, will he not be an empty vessel?

That is certain.

Labouring in vain, he must end in hating himself and his fruitless occupation?

Yes.

Then the forgetful soul cannot be ranked among philosophers; a philosopher ought to have a good memory?

Certainly.

Yet again, the inharmonious and unseemly nature can only tend to disproportion?

Undoubtedly.

And do you consider truth to be akin to proportion or to disproportion?

To proportion.

Then, besides other qualities, let us seek for a well-proportioned and gracious mind, whose own nature will move spontaneously towards the true being of everything.

Certainly.

Well, and do not all these qualities go together, and are they not necessary to a soul, which is to have a full and perfect participation of being?

They are absolutely necessary, he replied.

487

And must not that be a blameless study which he only can pursue who has a good memory, and is quick to learn, noble, gracious, the friend of truth, justice, courage, temperance, who are his brethren?

The god of jealousy himself, he said, could find no fault with such a study.

And to these, I said, when perfected by years and education, and to these only you will entrust the State.

Here Adeimantus interposed and said: To this, Socrates, no one can offer a reply; but there is a feeling which those who hear you talk as you are now doing often experience, and which I may describe in this way: they fancy that they are led astray a little at each step in the argument, owing to their own want of skill in asking and answering questions; these little accumulate, and at the end of the discussion they are found to have sustained a mighty overthrow and reversal of their first notions. And as unskilful players of draughts are at last shut up by their skilled adversaries and have no piece to move, so they find themselves at last shut up and have no word to say in this new game of which words are the counters; and yet all the time they are in the right. The observation is suggested to me by what is now occurring. For any one of us might say, that although in words he is not able to meet you at each step in the argument, as a fact he sees that the votaries of philosophy who carry on the study, not only in youth with a view to education, but as the pursuit of their maturer years, for the most part grow into very strange beings, not to say utter rogues, and that those who may be considered the best of them, are made useless to the world by the very study which you extol.

Well, I said; and do you think that they are wrong?

I cannot tell, he replied; but I should like to know what is your opinion.

Hear my answer; I am of opinion that they are quite right.

Then how can you be justified in saying that cities will not cease from evil until philosophers rule in them, when philosophers are acknowledged by us to be of no use to them?

You ask a question, I said, to which I can only reply in a parable.

Yes, Socrates; and that is a way of speaking to which you are not at all accustomed, I suppose.

I perceive, I said, that you are vastly amused at having plunged me into such a hopeless discussion; and now you shall
488 hear the parable in order that you may judge better of the meagreness of my imagination: for the treatment which the

best men experience from their States is so grievous that no single thing on earth can be compared with them; and therefore if I would defend them I must have recourse to fiction, and make a compound of many things, like the fabulous unions of goats and stags which are found in pictures. Imagine then a fleet or a ship in which there is a captain who is taller and stronger than any of the crew, but he is a little deaf and has a similar infirmity in sight, and his knowledge of navigation is not much better. Now the sailors are quarrelling with one another about the steering; every one is of opinion that he ought to steer, though he has never learned and cannot tell who taught him or when he learned, and will even assert that the art of navigation cannot be taught, and is ready to cut in pieces him who says the contrary. They throng about the captain, and do all that they can to make him commit the helm to them; and if he refuses them and others prevail, they kill the others or throw them overboard, and having first chained up the noble captain's senses with drink or some narcotic drug, they mutiny and take possession of the ship and make themselves at home with the stores; and thus, eating and drinking, they continue their voyage with such success as might be expected of them. Him who is their partisan and zealous in the design of getting the ship out of the captain's hands into their own, whether by force or persuasion, they compliment with the name of sailor, pilot, able seaman, and abuse the other sort of man and call him a good-for-nothing; but they have not even a notion that the true pilot must pay attention to the year and seasons and sky and stars and winds, and whatever else belongs to his art, if he intends to be really qualified for the command of a ship; while at the same time he must and will be the steerer, whether other people like or not; and they think that to combine the exercise of command with the steerer's art is impossible¹. Now in vessels which are thus circumstanced and among sailors of this class, 489 how will the true pilot be regarded? Will he not be called by the mutineers a prater, a star-gazer, a good-for-nothing?

¹ Or, applying ὅπως δὲ κυβερνήσει to the mutineers, 'But only understanding (ἐπαίοντας) that he (the mutinous pilot) must rule in spite of other people, never considering that there is an art of command which may be practised in combination with the pilot's art.'

Of course, said Adeimantus.

I do not suppose, I said, that you would care to hear the interpretation of the figure, which is an allegory of the true philosopher in his relation to the State; for you understand already.

Certainly.

Then suppose you now take the parable to the gentleman who is surprised at finding that philosophers have no honour in their cities, and explain to him and try to convince him that their having honour would be far more extraordinary.

I will.

Say to him, that, in deeming the best of the votaries of philosophy to be useless to the rest of the world, he is right; but he ought to attribute their uselessness to the fault of those who will not use them, and not to themselves. The pilot should not humbly beg the sailors to be commanded by him—that is not the order of nature; neither are the wise to go to the doors of the rich (the ingenious author of this saying told a lie), for the truth is, that, when a man is ill, whether he be rich or poor, he must go to the physician's door—the physician will not come to him—and he who is asking to be governed, to the door of him who is able to govern. The ruler who is good for anything ought not to ask his subjects to obey him; he is not like the present governors of mankind, who may be compared to the mutinous sailors, and the true helmsman to those whom they call good-for-nothings and star-gazers.

Precisely, he said.

For these reasons, and among men like these, philosophy, the noblest pursuit of all, is not likely to be much esteemed by her adversaries; not that the greatest and most lasting injury is done to her by them, but by her own professing followers, the same of whom you suppose the accuser to say, that the greater number of them are arrant rogues, and the best are useless; in which opinion I agreed.

Yes.

And the reason why the good are useless has been now explained?

True.

Then shall we now endeavour to show that the corruption of

the greater number is also unavoidable, and that this is not to be laid to the charge of philosophy any more than the other?

By all means.

And let us ask and answer in turn, first going back to the description of the gentle and noble nature. Truth, as you will remember, was his captain, whom he followed always and in all things; failing in this, he was an impostor, and had no part or lot in true philosophy.

Yes, that was said.

Well, and is not this quality alone greatly at variance with our present notions of him?

Certainly, he said.

And have we not a right to say in his defence, that the true lover of knowledge is always striving after being—that is his nature; he will not rest in the multiplicity of individuals which is an appearance only, but will go on—the keen edge will not be blunted, neither the force of his desire abate until he have attained the knowledge of the true nature of every essence by a kindred power in the soul, and by that power drawing near and mingling and becoming incorporate with very being, having begotten mind and truth, he will know and live and grow truly, and then, and not till then, will he cease from his travail.

Nothing, he said, can be more just than such a description of him.

And will the love of a lie be any part of a philosopher's nature? Will he not utterly hate a lie?

He will.

And when truth is thè captain, we cannot suspect any evil of the band which he leads?

Impossible.

Justice and health will be of the company, and temperance will follow after?

True, he replied.

Neither is there any reason why I should again set in array the philosopher's virtues, as you will doubtless remember that courage, magnanimity, apprehension, memory, were his natural gifts. And you objected that, although no one could deny what I then said, still, if you leave words and look at facts, the persons who are thus described are some of them manifestly useless,

and the greater number wholly depraved ; we were then led to enquire into the grounds of these accusations, and we had arrived at the point of asking why are the many bad, which question of necessity brought us back to the examination and definition of the true philosopher.

Exactly.

And now we have to consider the corruptions of the philosophical nature, why so many are spoiled and so few escape spoiling—I am speaking of those whom you call useless but not
491 wicked—and after that we will consider the imitators of philosophy, what manner of natures are they who aspire after a profession which is above them and of which they are unworthy, and then, by their manifold inconsistencies, bring upon philosophy, and upon all philosophers, that universal reprobation of which we speak.

What are these corruptions, he said?

I will see if I can explain them to you. Every one will admit that a nature having in perfection all the qualities which make a philosopher, is a plant that rarely grows among men—there are not many of them.

They are very rare.

And what numberless causes may tend utterly to destroy these rare natures!

What causes?

In the first place there are their own virtues, their courage, temperance, and the rest of them, every one of which praiseworthy qualities (and this is a most singular circumstance) destroys and distracts from philosophy the soul which is the possessor of them.

That is very singular, he replied.

Then there are all the ordinary goods of life—beauty, wealth, strength, rank, and great connections in the State—which I have described generally, and therefore need not enlarge upon them ; —these also have a corrupting and distracting effect.

I know the goods which you mean, and I should like to know more precisely what you mean about them.

Grasp the truth as a whole, I said, and in the right way ; you will then have no difficulty in understanding the preceding remarks, and they will no longer appear strange to you.

And how am I to do so? he asked.

Why, I said, we know that when any germ or seed, whether vegetable or animal, fails to meet with proper nutriment or climate or soil, the greater the vigour, the more will it lack its proper qualities, for evil is a greater enemy to good than to the not-good.

Very true.

There is reason in supposing that the finest natures, when under alien conditions, receive more injury than the inferior, because the contrast is greater.

Very true.

And may we not say, Adeimantus, that the most gifted minds, when they are ill-educated, become the worst? Do not great crimes and the spirit of pure evil spring out of a fulness of nature ruined by education rather than from any inferiority, whereas weak natures are scarcely capable of any very great good or very great evil?

There I think that you are right.

And our philosopher follows the same analogy—he is like a ⁴⁹² plant which, having proper nurture, grows and matures into all virtue, but, if sown and planted in an alien soil, becomes the most noxious of all weeds, unless saved by some divine help. Do you really think, as people are fond of saying, that our youth are corrupted by Sophists, or that private teachers of the art corrupt them in any degree worth speaking of? Are not the public who say these things the greatest of all Sophists? And do they not educate to perfection alike young and old, men and women, and fashion them after their own hearts?

When is this accomplished? he said.

When they meet together, and the world sits down at an assembly, or in a court of law, or a theatre, or a camp, or at some other place of resort, and there is a great uproar, and they praise some things which are being said or done, and blame other things, equally exaggerating in both, shouting and clapping their hands, and the echo of the rocks and the place in which they are assembled redoubles the sound of the praise or blame—at such a time will not a young man's heart leap within him? Will the influences of education stem the tide of praise or blame, and not rather be carried away in the stream? And will he not

have the notions of good and evil which the public in general have—he will do as they do, and as they are, such will he be?

Yes, Socrates; necessity will compel him.

And yet, I said, there is a still greater necessity, which has not been mentioned.

What is that?

The gentle force of attainder or confiscation or death, which, as you are aware, these new Sophists and educators, who are the public, apply when their words are powerless.

Indeed they do: of that there can be no doubt.

Now what opinion of any other Sophist, or of any private man, can be expected to overcome in such an unequal contest?

None, he replied.

No, indeed, I said, even to make the attempt is a piece of folly; for there neither is, has been, nor ever can be, as I think, a better type of character, trained to virtue in despite of them¹—I speak, my friend, of man only; what is more than man, as the proverb says, is not included: for I would not have you ignorant that, in the present evil state of governments, whatever is saved and comes to good is saved by the power of God, as
493 you may truly say.

I quite assent, he replied.

Then let me crave your assent also to a further observation.

What are you going to say?

Why, that all those mercenary individuals, whom the world calls Sophists and esteems rivals, do but teach the collective opinion of the many, which are the opinions of their assemblies; and this is their wisdom. I might compare them to a man who should study the tempers and desires of a mighty strong beast who is fed by him—he would learn how to approach and handle him, also at what times and from what causes he is dangerous or the reverse, and what is the meaning of his several cries, and by what sounds, when another utters them, he is soothed or infuriated; and you may suppose further, that when, by constantly living with him, he has become perfect in all this he calls his knowledge wisdom, and makes a system or art, which he proceeds to teach, not that he has any real notion of what he

¹ Or, taking *παρὰ* in another sense, 'trained to virtue on their principles.'

is teaching, but he names this honourable and that dishonourable, or good or evil, or just or unjust, all in accordance with the tastes and tempers of the great brute, when he has learnt the meaning of his inarticulate grunts. Good he pronounces to be what pleases him and evil what he dislikes; and he can give no other account of them except that the just and noble are the necessary, having never himself seen, and having no power of explaining to others the nature of either, or the immense difference between them. Would not he be a rare educator?

Indeed he would.

And in what respects does he who thinks that wisdom is the discernment of the tastes and pleasures of the assembled multitude, whether in painting or music, or, finally, in politics, differ from such an one? For I suppose you will agree that he who associates with the many, and exhibits to them his poem or other work of art or the service which he has done the State, making them his judges, except under protest¹, will also experience the fatal necessity of producing whatever they praise. And yet the reasons are utterly ludicrous which they give in confirmation of their notions about the honourable and good. Did you ever hear any of them which were not?

No, nor am I likely to hear.

You recognise the truth of what has been said? Then let me ask you to consider further whether the world will ever be induced to believe in the existence of absolute beauty rather than 494 of the many beautiful, or of the absolute in each kind rather than of the many in each kind?

Certainly not.

Then the world cannot possibly be a philosopher?

Impossible.

And therefore philosophers must inevitably fall under the censure of the world?

They must.

And of individuals who consort with the mob and seek to please them?

That is evident.

¹ Putting a comma after τῶν ἀναγκαίων.

Then, do you see any way in which the philosopher can be preserved in his calling to the end? and remember what we were saying of him, that he was to have knowledge and memory and courage and magnanimity—these were admitted by us to be the true philosopher's gifts.

Yes.

Now, will not such an one be, from the first, in all things first among all, especially if his bodily endowments are like his mental ones?

Certainly, he said.

And his friends and fellow-citizens will want to use him as he gets older for their own purposes?

No question.

Falling at his feet, they will make requests to him and do him honour and flatter him, because they want to get into their hands now, the power which he will one day possess.

That often happens, he said.

And what will he do under such circumstances, especially if he be a citizen of a great city, rich and noble, and a tall proper youth? Will he not be full of boundless aspirations, and fancy himself able to manage the affairs of Hellenes and of barbarians, and therefore will he not dilate and elevate himself in the fulness of vain pomp and senseless pride?

To be sure he will.

Now, when he is in this state of mind, if some one gently comes to him and tells him that he is without sense, which he must have, but can only get it by slaving for it, do you think that, under such adverse circumstances, he will be easily induced to listen?

He would be very unlikely to listen.

But suppose further that there is one person who has feeling, and who, either from some excellence of disposition or natural affinity, is inclined or drawn towards philosophy, and his friends think that they are likely to lose the advantages which they were going to reap from his friendship, what will be the effect upon them? Will they not do and say anything to prevent his learning and to make his teacher powerless, using to this end private intrigues as well as public prosecutions?

495 There can be no doubt of it.

And how can one who is thus circumstanced ever become a philosopher?

Impossible.

Then were we not right in saying that even the very qualities which make a man a philosopher may, if he be ill-educated, serve to divert him from philosophy, no less than riches and their accompaniments and the other so-called goods of life?

We were quite right.

Thus, my excellent friend, is brought about the ruin and failure of the natures best adapted to the best of all pursuits, who, as we assert, are rare at any time; and this is the class out of whom come those who are the authors of the greatest evil to States and individuals; and also of the greatest good when the tide carries them in the direction of good; but a small man never was the doer of any great thing either to individuals or States.

That is most true, he said.

They fall away, and philosophy is left desolate, with her marriage rite incomplete: for her own have forsaken her, and while they are leading a false and unbecoming life, other unworthy persons, seeing that she has no protector, enter in and dishonour her; and fasten upon her the reproaches which her reprovers utter, who say of her votaries that some of them are good for nothing, and the greater number deserving of everything that is bad.

That is certainly said.

Yes; and what else would you expect, I said, when you think of the puny creatures who, seeing this land open to them—a land well stocked with fair names and showy titles—like prisoners who run away out of prison into a sanctuary, take a leap out of the arts into philosophy; those who do so being probably the cleverest hands at their own miserable crafts? For, although philosophy be in this evil case, still there remains a dignity about her which is not found in the other arts. And many are thus attracted by her whose natures are imperfect and whose souls are marred and disfigured by their meannesses, as their bodies are by their arts and crafts. Is not that true?

Yes.

Are they not exactly like a bald little tinker who has just

got out of durance and come into a fortune; he washes the dirt off him and has a new coat, and is decked out as a bridegroom going to marry his master's daughter, who is left poor and desolate?

496 The figure is exact.

And what will be the issue of such marriages? Will they not be vile and bastard?

There can be no question of it.

And when persons who are unworthy of education approach philosophy and make an alliance with her who is in a rank above them, what sort of ideas and opinions are likely to be generated? Will they not be sophisms captivating to the ear, yet having nothing in them genuine, or worthy of or akin to true wisdom?

No doubt, he said.

Then there is a very small remnant, Adeimantus, I said, of worthy disciples of philosophy: perchance some noble nature, brought up under good influences, and detained by exile in her service, who in the absence of temptation remains devoted to her; or some lofty soul born in a mean city, the politics of which he contemns or neglects; and perhaps there may be a few who, having a gift for philosophy, leave other arts, which they justly despise, and come to her;—and peradventure there are some who are restrained by our friend Theages' bridle (for Theages, you know, has had everything to draw him away; but his ill-health keeps him from politics). My own case of the internal sign is indeed hardly worth mentioning, as very rarely, if ever, has such a monitor been vouchsafed to any one else. Those who belong to this small class have tasted how sweet and blessed a possession philosophy is, and have also seen and been satisfied of the madness of the multitude, and known that there is no one who ever acts honestly in the administration of States, nor any helper who defends the cause of the just, by whose aid he may be saved. Such a defender may be compared to a man who has fallen among wild beasts—he would not join in the wickedness of his fellows, but neither would he be able alone to resist all their fierce natures, and therefore he would be of no use to the State or to his friends, and would have to throw away his life before he had done any good to himself or others. When

he reflects upon all this, he holds his peace, and does his own business. He is like one who retires under the shelter of a wall in the storm of dust and sleet which the driving wind hurries along; and when he sees the rest of mankind full of wickedness, he is content if only he can live his own life and be pure from evil or unrighteousness, and depart in peace and good-will, with bright hopes.

Yes, he said, and he will have done a great work before he departs.

A great work—yes; but not the greatest, unless he find a State suitable to him; for in a State which is suitable to him, he 497 will have a larger growth and be the saviour of his country, as well as of himself.

Enough, then, of the causes why philosophy is in such an evil name; how unjustly, has been explained: and now is there anything more which you wish to say?

Nothing more on that subject, he replied; but I should like to know which of the governments now existing is in your opinion the one adapted to her.

Not any of them, I said; and that is the very accusation which I bring against them—not one of them is worthy of the philosophic nature, and hence that nature is warped and deformed;—as the exotic seed which is sown in a foreign land becomes denaturalized, and is vanquished and degenerates into the native stock, even so this growth of philosophy, instead of persisting, receives another character. But if philosophy ever finds in the State that perfection which she herself is, then will be seen that she is in truth divine, and that all other things, whether natures of men or institutions, are but human;—and now, I know, that you are going to ask what that State is.

No, he said; there you are wrong, for I was going to ask another question—whether it is the State of which we are the founders and inventors, or some other?

Yes, I replied, ours in most respects; but you may remember our saying before that some living authority would always be required in the State whose idea of the constitution would be the same which guided you originally when laying down the laws.

That was said, he replied.

Yes, but imperfectly said; you frightened us with objections,

which certainly showed that the discussion would be long and difficult ; and even what remains is the reverse of easy.

What is that ?

The question how the study of philosophy may be so ordered as to be consistent with the preservation of the State ; for all great things are attended with risk ; as the saying is, 'hard is the good.'

Still, he said, let the point be cleared up, and the enquiry will then be complete.

I shall not be hindered, I said, by any want of will, but, if at all, by a want of power : of my zeal you shall have ocular demonstration ; and please to remark in what I am about to say how courageously and unhesitatingly I affirm that a State ought not to have philosophy studied in the present fashion.

In what fashion ?

498 At present, I said, even those who study philosophy in early youth, or in the intervals of money-making and house-keeping, do but make an approach to the most difficult branch of the subject, and then take themselves off—(I am speaking of those who have the most training, and by the most difficult branch I mean dialectic) ; and in after-life they perhaps go to a discussion which is held by others, and to which they are invited, and this they deem a great matter, as the study of philosophy is not regarded by them as their proper business : then, as years advance, in most cases their light is quenched more truly than Heracleitus' sun, for they are never lighted again ¹.

But what ought to be their course ?

Just the opposite. In childhood and youth their study, and what philosophy they learn, should be suited to their tender age : let their bodies be taken care of during the period of growth, to be hereafter the servants of philosophy ; as the man advances to mature intelligence, he should increase the gymnastics of the soul ; but when the strength of our citizens fails and is past civil and military duties, then let them range at will and have no other serious employment, as we intend them to live happily here, and, this life ended, to have a similar happiness in another.

¹ Heracleitus said the sun was extinguished every evening and relighted every morning.

How truly in earnest you are, Socrates! he said; I am sure of that; and yet most of your hearers, if I am not mistaken, are likely to be still more earnest in their opposition to you, and will never be converted; Thrasymachus least of all.

Do not raise a quarrel, I said, between Thrasymachus and me, who have just become friends, although, indeed, we were never enemies; for I shall go on using every effort until I either convert him and other men, or do something which avails against the day when they live again, and hold the like discourse in another state of existence.

You are speaking of a long time hence.

Rather, I replied, of a time which is as nothing in comparison with eternity. Nevertheless, I do not wonder at the many refusing to believe; for they never saw that of which we are now speaking realized; what they saw was a conventional imitation of philosophy, which consisted of words artificially brought together, not like these of ours having a natural unity. But a human being who in word and work is perfectly moulded, as far as he can be, into the proportion and likeness of virtue—such an one ruling in a city which bears the same image, they have never yet seen, in the case of a single man any more than of many— 499
do you think that they ever did?

No indeed.

No, my friend, nor have they often heard free and noble words; such as men use when they are earnestly and in every way seeking after truth, for the sake of knowledge, while they look coldly on the subtleties of controversy, of which the end is opinion and strife, whether they meet with them in the courts of law or in society.

They are strangers, he said, to the words of which you speak.

And this was what we foresaw, and this was the reason why truth forced us to admit that there is no chance of perfection, either in cities or governments or individuals, until a necessity was laid upon the second small class of philosophers (not the rogues, but those whom we termed useless), that they should take care of the State and obey the call of the State; or until kings themselves, or the sons of kings or potentates, were inspired with a true love of philosophy. Now I maintain that there is no reason in saying that either of these alternatives, or

both of them, is impossible; if they were, we might indeed be justly ridiculed as dreamers and visionaries. Am I not right?

Quite right.

If then, in the countless ages of the past, or at the present hour in some foreign clime which is far away and beyond our ken, the perfected philosopher is or has been or shall be hereafter compelled by a superior power to have the charge of the State, we are ready to assert to the death, that this our constitution has been, is, yea, and will be at any time, when the Muse of Philosophy is queen. There is no impossibility in all this; the difficulty of it is not denied by us.

I agree with you, he said.

But you will say that mankind in general are not agreed?

I should, he replied.

O my friend, I said, do not have such a bad opinion of mankind: they will surely be of another mind, if gently and with the view of soothing them and removing the evil name of too much learning, you show them the philosopher whom we have
500 just described, according to his true character and profession, and then they will see that you are not speaking of those whom they supposed; if they view him in this light, they will surely change their mind, and answer in another strain¹. Who can be at enmity with one who loves them, who that is himself gentle and free from envy will be jealous of one in whom there is no jealousy? Nay, let me answer for you, that a few such there may be, but not many who have so harsh a temper.

I entirely agree with you, he said.

And do you not think with me that the harsh feeling which the many entertain towards philosophy originates in the pretenders, who rush in where they are not invited, and are always reviling them, and finding fault with them, who make persons instead of things the theme of their conversation; and nothing can be more unbecoming in philosophers than this.

It is most unbecoming.

For he, Adeimantus, whose mind is fixed upon true being, has

¹ Reading ἢ καὶ ἐὰν οὕτω θεῶνται without a question, and ἀλλοίαν τοι: or, retaining the question and taking ἀλλοίαν δόξαν in a new sense: 'Do you mean to say really that, viewing him in this light, they will be of another mind from yours, and answer in another strain?'

no time to look down upon earthly affairs, or to be filled with malice and envy, warring against men; his eye is ever directed towards fixed and immutable principles, which he sees neither injuring nor injured by one another, but all in order moving according to reason; these he imitates, and to these he will, as far as he can, conform himself. Can a man help imitating that with which he holds reverential converse?

Impossible.

And the philosopher holding converse with the divine and immutable, becomes a part of that divine and immutable order, as far as nature allows; but all things are liable to be misunderstood.

Certainly.

And if a necessity be laid upon him of fashioning, not only himself, but human nature generally, whether in States or individuals, into that which he beholds elsewhere, think you that he will be an unskilful artificer of justice, temperance, and every civil virtue?

Anything but unskilful.

And if the world perceives that we are speaking the truth about him, will they be angry with philosophy? Will they disbelieve us, when we tell them that the State can only be happy which is planned by artists who make use of the heavenly pattern?

They will not be angry if they only understand, he replied. But what do you mean by the heavenly pattern?

501

I mean, that they will take the State for their tablet, and begin by making a clean surface, wiping out the manners of men, which is no easy task. But whether easy or not, herein will lie the difference between them and every other legislator,—they will have nothing to do either with individual or State, and will inscribe no laws, until they have either found, or themselves made, a clean surface.

They will be very right, he said.

Having effected this, they will proceed to trace an outline of the constitution.

No doubt.

And in the course of the work, as I conceive, they will often turn their eyes up and down: I mean that they will look at

absolute justice and beauty and temperance, and again at the human copy; and will inscribe the image of a man, selecting from and mingling the various elements of life; and this they will conceive according to that other image, which, when existing among men, Homer calls the form and likeness of God.

Very true, he said.

And one feature they will erase, and another they will insert, until they have made the ways of men, as far as possible, agreeable to the ways of God?

Indeed, he said, in no way could they make a fairer picture.

And now, I said, do you think that we are beginning to persuade those whom you described as rushing at us with might and main, that the painter of constitutions is such an one as we were praising,—he, I mean, at whom they were so much infuriated, because into his hands we committed the State, or are they growing calmer at what they hear?

Much calmer, if there is any sense in them.

Why, where can they still find any ground for objection? Will they doubt that the philosopher is a lover of truth and being?

They would not be so unreasonable.

Or that his nature, being such as we have delineated, is akin to the highest good?

Neither can they doubt that.

But again, will they tell us that such a nature, when properly trained, will not be perfectly good and wise if any ever was? Or will they prefer those whom we have set aside?

Surely not.

Then will they still be angry at our saying, that, until philosophers bear rule in States, the evils of States and individuals will never cease, nor will this our imaginary State ever be realized?

I think that they will be less angry.

Shall we assume that they are not only less angry but quite 502 gentle, and that they have been converted and for very shame cannot refuse to come to terms?

By all means, he said.

Then now we may assume that they have been converted. And will any one deny the other point, that there may be sons of kings who are philosophers?

No one, he said.

And when they have come into being will any one say that they must of necessity be destroyed ; for that they can hardly be saved is not denied even by us, but all will allow that, in the whole course of ages, peradventure a single one may be saved ?

Surely.

But, said I, one is enough ; let there be one man who has a city obedient to his will, and he might bring the ideal polity into being.

Yes, one is enough.

When the ruler has framed these laws and institutions, the citizens may possibly be willing to obey them ?

Certainly.

And that others should approve, of what we approve, is no miracle or impossibility ?

I think not.

But we have sufficiently shown, in what has preceded, that all this, if only possible, is assuredly for the best.

We have.

The conclusion is then, that our laws are best, and, though difficult of attainment, are not wholly unattainable.

Very good.

And now having arrived at the end of one difficulty, we have to discuss another ;—how and by what studies and pursuits will saviours of the constitution be formed, and at what ages are they to apply themselves to their several studies ?

Certainly.

I omitted the troublesome business of the possession of women, and the procreation of children, and the appointment of the rulers, because I knew that the perfect State would be eyed with jealousy and was difficult of attainment ; but that piece of cleverness was not of much use to me, for I had to discuss them all the same. The women and children are done with, but there remains the further question of the rulers which I must now investigate from the beginning. We were saying, as you will remember, that they were to be lovers of their country, tried by 503 the test of pleasures and pains, and neither in labours, nor fears, nor any other change of circumstances were to lose their patriotism—he was to be rejected who failed, but he who always came

forth pure, like gold tried in the refiner's fire, was to be made a ruler, and to receive honours and rewards in life and after death. That was the sort of thing which was being said, and then the argument turned aside and veiled her face ; not liking to stir the question which has now arisen.

I perfectly remember, he said.

Yes, my friend, I said, and I then shrank from hazarding the bold word ; but now let me dare to say—that the perfect guardian must be a philosopher.

Yes, he said, let that be proclaimed.

And do not suppose that there will be many of them ; for the gifts which we said were essential rarely grow together ; they are mostly found in shreds and patches.

What do you mean ? he said.

You are aware, I replied, that persons who have quick intelligence, memory, sagacity, shrewdness, and similar gifts, are not often of a nature which is willing at the same time to live orderly and in a peaceful and settled manner ; and this is equally true of the high-spirited and magnanimous ; they are driven any way by their impetuosity, and all solid principle goes out of them.

Very true, he said.

On the other hand, those steadfast, immovable, reliable natures which in a battle are impregnable to fear and can better be depended on, are equally immovable when there is anything to be learned ; they seem to be in a torpid state, and are apt to yawn and go to sleep over any intellectual toil.

Quite true.

And yet we were saying that both qualities were necessary in those to whom the higher education is to be imparted, and who are to share in any office or command.

Certainly, he said.

And will they be a class which is rarely found ?

Yes, indeed.

Then the aspirant must not only be tested in those labours and dangers and pleasures which we mentioned before, but there is another kind of probation which we did not mention—he must be exercised also in many kinds of knowledge, to see whether the soul will be able to endure the highest of all, or will faint under them, as many do amid the toils of the games.

Yes, he said, you are quite right in testing him. But what do you mean by the highest of all knowledge?

You may remember, I said, that we divided the soul into three parts; and distinguished the several natures of justice, temperance, courage, and wisdom?

Indeed, he said, if I had forgotten that, I should not deserve to hear more.

And do you remember, I said, what preceded the discussion of them?

To what do you refer?

We spoke, if I am not mistaken, of another longer and more circuitous way, at the end of which they were to appear in perfect beauty; we could, however, as we said, give an exposition of a popular sort, of a piece with what had preceded. And you replied that such an exposition would be enough for you, and so the enquiry was continued in what appeared to me to be a very inexact manner; but whether you were satisfied or not is for you to say.

Yes, he said, I thought and the others thought that you gave us a fair measure of truth.

But, my friend, I said, a measure of such things which in any degree falls short of the truth is not fair measure; for nothing imperfect is the measure of anything, although persons are too apt to be contented and think that they need search no further.

Not an uncommon case when people are indolent.

Yes, I said; and there cannot be any worse fault in a guardian of the State and the laws.

True.

The guardian then, I said, must be required to take the longer road, and toil at learning as well as at gymnastics, or he will never reach the height of that knowledge which is his proper calling.

What, he said, is there a knowledge still higher than these—higher than justice and the other virtues?

Yes, I said, there is. And of these too we must behold not the outline merely, as at present—nothing short of the most finished work should satisfy us. When little things are elaborated with an infinity of pains, in order that they may appear

in full clearness and precision, how ridiculous that the highest truths should not be held worthy of the greatest exactness!

A right noble thought; but do you suppose that we shall refrain from asking you which are the highest?

Nay, I said, ask if you will; but I am certain that you have often heard the answer, and now you either do not understand me or you mean to be troublesome; I incline to think the latter, 505 for you have been often told that the *idea* of good is the highest knowledge, and that all other things become useful and advantageous only by their use of this. You must have already guessed that of this I am about to speak, concerning which, as you have often heard me say, we know so little; and, without which, any other knowledge or possession of any kind will profit us nothing. Do you think that the possession of the whole world is of any value without the good? or of all knowledge without the beautiful and good?

Assuredly not.

You are doubtless aware that most people call pleasure good, and the finer sort of wits say knowledge? And you are aware too that the latter cannot explain the nature of knowledge, but are obliged after all to say that knowledge is of the good?

How ridiculous!

Yes, I said, that they should begin by reproaching us with our ignorance of the good, and then presume our knowledge of it—for good, they say, is the knowledge of the good, which implies that we understand them when they use the term ‘good’—is certainly ridiculous.

Most true, he said.

And those who make pleasure their good are in equal perplexity; for they are compelled to admit that there are bad pleasures as well as good.

Certainly.

And therefore to acknowledge that bad and good are the same?

True.

There can be no doubt about the numerous difficulties in which this question is involved.

There can be none.

Further, do we not see that many are willing to appear to

have or to do or to be the just and honourable without the reality; but no one is satisfied with the appearance of good—the reality is what they seek; in the case of the good appearance is despised by every one.

Very true, he said.

This then, which every man pursues and makes his end, having a presentiment that there is such an end, and yet hesitating because neither knowing the nature nor having the same sure proof of this as of other things, and therefore ⁵⁰¹ having no profit in other things,—is this, I would ask, a principle about which the best men in our State, to whom everything is to be entrusted, ought to be in darkness?

Certainly not, he said.

I am sure, I said, that he who does not know how the beautiful and the just are likewise good will not be worth much as a guardian of them; and I suspect that no one will have a true knowledge of them not having this knowledge.

That, he said, is a shrewd suspicion of yours.

And if we only have a guardian who has this knowledge our State will be perfectly ordered?

Of course, he replied; but I wish that you would tell me whether you conceive this supreme principle of the good to be knowledge or pleasure, or different from either?

Aye, I said, I knew quite well that a fine gentleman ¹ like you would not be contented with the thoughts of other men.

True, Socrates; and I must say that you who have passed a lifetime in the study of philosophy should not be always repeating the opinions of others, and never telling your own.

Well, but has any one a right to say positively what he does not know?

Not, he said, with the assurance of positivè certainty; he has no right to do that: but he may say what he thinks, as a matter of opinion.

And do you not know, I said, that all mere opinions are bad, and the best of them blind? You would not deny that those who have any true notion without intelligence are only like blind men who find their way along the road?

Very true.

¹ Reading *ἀνὴρ καλός*.

And do you wish to behold what is blind and crooked and base, when brightness and beauty are within your reach?

Still, I must implore you, Socrates, said Glaucon, not to turn away just as you are reaching the goal—if you will only give such an explanation of the good as you have already given of justice and temperance and the other virtues, we shall be satisfied.

Yes, my friend, and I shall be at least equally satisfied, but I cannot help fearing that I shall fail, and that in my zeal I shall make a fool of myself. No, sweet sirs, let us not at present ask what is the actual nature of the good, for to reach what is in my thoughts now is too much for me in my present mood. But of the child of the good who is likest him, I would fain speak, if I could be sure that you wished to hear—otherwise, not.

By all means, he said, tell us about the child, and you shall remain in our debt for an account of the parent.

507 I do indeed wish, I replied, that I could pay, and you receive, an account of the parent, and not, as now, of the offspring only; take, however, this by way of interest¹, and at the same time have a care that I do not render a false account, although I have no intention of deceiving you.

Yes, we will take all the care that we can : proceed.

Yes, I said, but I must first come to an understanding with you, and remind you of what I have mentioned in the course of this discussion, and at many other times.

What?

The old story, that there is a many beautiful and a many good, and so of other things which we describe and define; to all of them the term 'many' is applied.

True, he said.

And there is an absolute beauty and an absolute good, and of other things to which the term 'many' is applied there is an absolute; for they may be brought under a single idea, which is called the essence of each.

Very true.

The many, as we say, are seen but not known, and the ideas are known but not seen.

Exactly.

¹ A play upon *τόκος*, which means both 'child' and 'interest.'

And what is the organ with which we see the visible things?
The sight, he said.

And with the hearing, I said, we hear, and with the other senses perceive the other objects of sense?

True.

But have you remarked that sight is by far the most costly and complex piece of workmanship which the artificer of the senses ever contrived?

No, I never have, he said.

Then reflect: does the ear hear, and is the voice heard by virtue of some other nature which is required as a third condition before they can meet?

Nothing of the sort.

No, indeed, I replied; and the same is true of most, if not all, the other senses—you would not say that any of them requires such an addition?

Indeed not.

But you see that without such an addition there is no seeing or being seen?

How do you mean?

Sight being, as I conceive, in the eyes, and colour being also present in them, there is still required a third nature having a distinct use, without which the owner of the eyes will see nothing and the colours will be invisible.

Of what nature are you speaking?

Of that which you term light, I replied.

True, he said.

Noble, then, is the bond which links together sight and visibility, and great beyond other bonds by no small difference of nature; for light is their bond, and light is no ignoble thing?

Nay, he said, the reverse of ignoble.

And which, I said, of the gods in heaven would you say was the lord of this element? Whose is that light which makes the eye to see perfectly and the visible to appear?

You mean the sun, as you and all mankind say.

May not the relation of sight to this deity be described as follows?

How?

Neither sight nor the eye in which sight resides is the sun?

No.

Yet of all the organs of sense the eye is likest the sun?

Far the likest.

And the power which the eye possesses is a sort of effluence which is dispensed from the sun?

Exactly.

Then the sun is not sight, but the author of sight who is recognised by sight?

True, he said.

And this is he whom I call the child of the good, whom the good begat in his own likeness, to be in the visible world, in relation to sight and the things of sight, what the good is in the intellectual world in relation to mind and the things of mind?

Will you be a little more explicit? he said.

Why, you know, I said, that the eyes, when a person no longer directs them towards those objects on the colours of which the light of day is shining, but the moon and stars only, see dimly, and are nearly blind; they seem to have no clearness of vision in them?

Very true.

But when they are directed towards objects on which the sun shines, they see clearly and there is sight in them?

Certainly.

And the soul is like the eye: when resting upon that on which truth and being shine, the soul perceives and understands, and is radiant with intelligence; but when turned towards the twilight of becoming and perishing, then she has opinion only, and goes blinking about, and is first of one opinion and then of another, and seems to have no intelligence?

Just so.

Now, that which imparts truth to the known and the power of knowing to the knower is what I would have you term the idea of good, and that you will regard as the cause of science¹ and of truth, as known by us; beautiful too, as are both truth and knowledge, you will be right in esteeming this other nature as more beautiful than either; and, as in the previous instance, light and sight may be truly said to be like the sun, and yet not

¹ Reading *διανοοῦ*.

to be the sun, so in this other sphere, science and truth may be deemed like the good, but not the good; the good has a place of honour yet higher.

What a wonder of beauty that must be, he said, which is the author of science and truth, and yet surpasses them in beauty; for you surely cannot mean to say that the good is pleasure?

Speak not profanely, I replied; but please to consider the image in another point of view.

How?

Why, you would say that the sun is not only the author of visibility in all visible things, but of generation and nourishment and growth, though he himself is not a generation?

Certainly.

In like manner the good may be said to be not only the author of knowledge in all things known, but of their being and essence, and yet the good is not essence, but far exceeds essence in dignity and power.

Glaucon said, with a ludicrous earnestness: By the light of heaven, how amazing!

Yes, I said, and it all comes of you, for you have made me utter my fancies.

Nay, he said, but do not leave off; at any rate let us hear if there is anything more to be said about the similitude of the sun.

Yes, I said, there is a great deal more.

Then omit nothing, however slight.

I will do my best; but I fancy, I said, that a great deal will have to be omitted.

I hope not, he said.

You have to imagine, then, that there are two ruling powers, and that one of them is set over the intellectual world, the other over the visible. I do not say heaven, lest you should fancy that I am playing upon the name (*οὐρανός, ὄρατός*). May I suppose that you have this distinction of the visible and intelligible fixed in your mind?

I have.

Now take a line which has been cut into two unequal¹ parts,

¹ Reading *ἄνισα*.

and divide each of them again in the same proportion, and suppose the two main divisions to answer, one to the visible and the other to the intelligible, and then compare the subdivisions as to their relative clearness and want of clearness, and you will find that the first section in the sphere of the visible consists of 510 images. And by images I mean, in the first place, shadows, and in the second place, reflections in water and in solid, smooth and polished bodies and the like : Do you understand ?

Yes, I understand.

Imagine, now, the other section, of which this is only the resemblance, to include ourselves and the animals, and everything in nature and everything in art.

Very good.

Would you not admit that this latter section has a different degree of truth, and that the copy is to the object which is copied as the sphere of opinion is to the sphere of knowledge ?

Most undoubtedly.

Next proceed to consider the manner in which the sphere of the intellectual is to be divided.

In what manner ?

As thus :—There are two subdivisions, in the lower of which the soul uses the figures given by the former divisions as images ; the enquiry can only be hypothetical, and instead of going upwards to a principle descends to the other end ; in the higher of the two, the soul passes out of hypotheses, and goes up to a principle which is above hypotheses, making no use of images¹ as in the former case, but proceeding only in and by the ideas themselves.

I do not quite understand your meaning, he said.

Then I will try again ; for you will understand me better when I have made some preliminary remarks. You are aware that students of geometry, arithmetic, and the kindred sciences assume the odd and the even and the figures and three kinds of angles and the like in their several branches of science ; these are their hypotheses, which everybody is supposed to know, and of which therefore they do not deign to give any account either to themselves or others ; but they begin with these, and go on

¹ Reading ὧν περ ἐκείνο εἰκόνων.

until they arrive at last, and in a consistent manner, at their conclusion?

Yes, he said, I know.

And do you not know also that although they use and reason about the visible forms, they are thinking not of these, but of the ideals which they resemble; not of the figures which they draw, but of the absolute square and the absolute diameter, and so on—the forms which they draw or make, and which have shadows and images in the water of their own, are in turn used by them as images, but they are really seeking to behold the things themselves, which can only be seen with the eye of the mind?

That is true.

511

And of this kind I still spoke as intelligible, although in enquiring into it the soul is compelled to use hypotheses; not proceeding to a first principle because she is unable to ascend above hypotheses, but employing the objects of which the shadows below are resemblances in their turn as images, they having in relation to the shadows a greater distinctness, and therefore a higher value¹.

I understand, he said, that you are speaking of geometry and the sister arts.

And when I speak of the other division of the intellectual, you will also understand me to speak of that knowledge which reason herself attains by the power of dialectic, using the hypotheses not as first principles, but only as hypotheses—that is to say, as steps and points of departure into a region which is above hypotheses, in order that she may soar beyond them to the first principle of the whole; and clinging to this and then to that which depends on this, by successive steps she descends again without the aid of any sensible object, beginning and ending in ideas.

I understand you, he replied; not perfectly, for you seem to me to be describing a task far from easy; but, at any rate, I understand you to say that knowledge and being, which the science of dialectic contemplates, are clearer than the notions of the arts, as they are termed, which proceed from hypotheses

¹ Or, they 'when viewed in connexion with the ideas, being honoured and valued for their distinctness.'

only: these are also contemplated by the understanding, and not by the senses: yet, because they start from hypotheses and do not ascend to a principle, those who contemplate them appear to you not to exercise the higher reason upon them, although when a first principle is added to them they are cognizable by the higher reason. And the habit which is concerned with geometry and the cognate sciences I suppose that you would term understanding and not reason, as being intermediate between opinion and reason.

You have quite conceived me, I said; and now, corresponding to these four sections, let there be four faculties in the soul—reason answering to the highest, understanding to the second, faith or persuasion to the third, and knowledge of shadows to the last—and let there be a scale of them, and let us suppose that the several faculties have clearness in the same degree that their objects have truth.

I understand, he replied, and give my assent, and have arranged them as you say.

BOOK VII.

AND now, I said, let me show in a figure how far our nature 514 is enlightened or unenlightened :—Behold ! human beings living in an underground den, which has a mouth open towards the light and reaching all along the den ; they have been here from their childhood, and have their legs and necks chained so that they cannot move, and can only see before them ; for the chains are arranged in such a manner as to prevent them from turning round their heads. Above and behind them the light of a fire is blazing at a distance, and between the fire and the prisoners there is a raised way ; and you will see, if you look, a low wall built along the way, like the screen which marionette players have in front of them, over which they show the puppets.

I see.

And do you see, I said, men passing along the wall, some apparently talking and others silent, carrying vessels, and statues and figures of animals made of wood and stone and various 515 materials, which appear over the wall ?

You have shown me a strange image, and they are strange prisoners.

Like ourselves, I replied ; and they see only their own shadows, or the shadows of one another, which the fire throws on the opposite wall of the cave ?

True, he said ; how could they see anything but the shadows if they were never allowed to move their heads ?

And of the objects which are being carried in like manner they would only see the shadows ?

Yes, he said.

And if they were able to talk with one another, would they not suppose that they were naming what was actually before them ¹ ?

Very true.

¹ Reading *παρόντα*.

And suppose further that the prison had an echo which came from the other side, would they not be sure to fancy that the voice which they heard was that of a passing shadow?

No question, he replied.

Beyond question, I said, the truth would be to them just nothing but the shadows of the images.

That is certain.

And now look again, and see how they are released and cured of their folly. At first, when any one of them is liberated and compelled suddenly to turn his neck round and go up and look at the light, he will suffer sharp pains; the glare will distress him, and he will be unable to see the realities of which in his former state he had seen the shadows; and then imagine some one saying to him, that what he saw before was an illusion, but that now he is approaching real being and has a truer sight and vision of more real things,—what will be his reply? And you may further imagine that his instructor is pointing to the objects as they pass and requiring him to name them,—will he not be in a difficulty? Will he not fancy that the shadows which he formerly saw are truer than the objects which are now shown to him?

Far truer.

And if he is compelled to look at the light, will he not have a pain in his eyes which will make him turn away to take refuge in the objects of vision which he can see, and which he will conceive to be in reality clearer than the things which are now being shown to him?

Truc, he said.

And suppose once more, that he is reluctantly dragged up a steep and rugged ascent, and held fast until he is forced into the presence of the sun himself, do you not think that he
516 will be pained and irritated, and when he approaches the light he will have his eyes dazzled, and will not be able to see any of the realities which are now affirmed to be the truth?

Not all in a moment, he said.

He will require to grow accustomed to the sight of the upper world. And first he will see the shadows best, next the reflections of men and other objects in the water, and then the objects themselves; then he will gaze upon the light of the

moon and the stars ; and he will see the sky and the stars by night better than the sun or the light of the sun by day ?

Certainly.

And at last he will be able to see the sun, and not mere reflections of him in the water, but he will see him as he is in his own proper place, and not in another ; and he will contemplate his nature.

Certainly.

And after this he will reason that the sun is he who gives the seasons and the years, and is the guardian of all that is in the visible world, and in a certain way the cause of all things which he and his fellows have been accustomed to behold ?

Clearly, he said, he would come to the other first and to this afterwards.

And when he remembered his old habitation, and the wisdom of the den and his fellow-prisoners, do you not suppose that he would felicitate himself on the change, and pity them ?

Certainly, he would.

And if they were in the habit of conferring honours on those who were quickest to observe and remember and foretell which of the shadows when they moved went before, and which followed after, and which were together, do you think that he would care for such honours and glories, or envy the possessors of them ? Would he not say with Homer,

‘ Better to be a poor man, and have a poor master,’

and endure anything, rather than to think and live after their manner ?

Yes, he said, I think that he would rather suffer anything than live after their manner.

Imagine once more, I said, such an one coming suddenly out of the sun to be replaced in his old situation ; would he not be certain to have his eyes full of darkness ?

To be sure, he said.

And if there were a contest, and he had to compete in measuring the shadows with the prisoners who had never moved out of the den, while his sight was still weak, and before his eyes had become steady (and the time which would be

needed to acquire this new habit of sight might be very considerable), would he not be ridiculous? Men would say of him that up he went and down he came without his eyes; and that there was no use in even thinking of ascending; and if any one tried to loose another and lead him up to the light, let them only catch the offender, and they would put him to death.

No question, he said.

This entire allegory, I said, you may now append to the previous argument; the prison is the world of sight, the light of the fire is the sun, the ascent and vision of the things above you may truly regard as the upward progress of the soul into the intellectual world according to my poor belief, which, at your desire, I have expressed — whether rightly or wrongly God only knows. But, whether true or false, my opinion is that in the world of knowledge the idea of good appears last of all, and is seen only with an effort; and, when seen, is also inferred to be the universal author of all things beautiful and right, parent of light and of the lord of light in this world, and the source of truth and reason in the other; and is the power upon which he who would act rationally either in public or private life must have his eye fixed.

I agree, he said, as far as I am able to understand you.

Moreover, I said, you must not wonder that those who attain to this beatific vision are unwilling to descend to human affairs; for their souls are ever hastening into the upper world where they desire to dwell; which desire of theirs is very natural, if our allegory may be trusted.

Yes, very natural.

And is there anything surprising in one who passes from divine contemplations to the evil state of man, misbehaving himself in a ridiculous manner; if, while his eyes are blinking and before he has become accustomed to the surrounding darkness, he is compelled to fight in courts of law, or in other places, about the images or shadows of images of justice, and is endeavouring to meet the conceptions of those who have never yet seen the absolute justice?

Anything but surprising, he replied.

518 Any one who has common sense will remember that the

bewilderments of the eyes are of two kinds, and arise from two causes, either from coming out of the light or from going into the light, which is true of the mind's eye, quite as much as of the bodily eye; and he who remembers this when he sees any one whose vision is perplexed and weak, will not be too ready to laugh; he will first ask whether that soul of man has come out of the brighter life, and is unable to see because unaccustomed to the dark, or having turned from darkness to the day is dazzled by excess of light. And he will count the one happy in his condition and state of being, and he will pity the other; or, if he have a mind to laugh at the soul which comes from below into the light, there will be more reason in this than in the laugh which greets the other coming from above into the den.

That, he said, is a very just remark.

But if I am right, then certain professors of education must be mistaken in saying that they can put a knowledge into the soul which was not there before, like sight into blind eyes.

Nevertheless they do say so, he replied.

Whereas, our argument shows that the power is already in the soul; and that as the eye may be imagined unable to turn from darkness to light without the whole body, so too, when the eye of the soul is turned round, the whole soul must be turned round from the world of becoming into that of being, and learn by degrees to endure the sight of being, and of the brightest and best of being, or in other words, of the good.

Very true.

And there must be some art which will effect conversion in the easiest and quickest manner; not implanting eyes, for they exist already, but giving them a right direction, which they have not.

Yes, he said, such an art may be assumed.

And whereas the other so-called virtues seem to be akin to the body, being infused by habit and exercise and not originally innate, the virtue of wisdom has a divine element which always remains, and by this conversion is rendered useful and profitable, and is also capable of becoming hurtful and useless. Did you never observe the narrow intelligence flash- 519
ing from the keen eye of a clever rogue—how eager he is,

how clearly his paltry soul sees the way to his end ; he is the reverse of blind, but his keen eye-sight is forced into the service of evil, and he is dangerous in proportion to his cleverness ?

Very true, he said.

But what if there had been a circumcision of such natures in the days of their youth ; and they had been severed from those leaden weights, as they may be called, which were attached to them at their birth, and clinging to sensual pleasures, such as eating and drinking, drag them down and turn the vision of their souls upon the things that are below—if, I say, they had been released from them and turned in the opposite direction, the very same faculty in these persons would have seen the truth as keenly as they see what their eyes are turned to now.

Very likely.

Yes, I said ; and there is another thing which is likely, or rather a necessary inference from what has preceded, that neither the uneducated and uninformed of the truth, nor yet those who never make an end of their education, will be able ministers of State ; not the former, because they have no single aim of duty which is the rule of their actions, private as well as public ; nor the latter, because they will not act at all except upon compulsion, fancying that they are already in the islands of the blest.

Very true, he replied.

Then, I said, the business of us who are the founders of the State will be to compel the best minds to attain that knowledge which has been already declared by us to be the greatest of all—they must continue to ascend until they arrive at the good ; but when they have ascended and seen enough we must not allow them to do as they do now.

What do you mean ?

I mean that they remain in the upper world : but this must not be allowed ; they must be made to descend again among the prisoners in the den, and partake of their labours and honours, whether they are worth having or not.

But is not this unjust ? he said ; ought we to give them an inferior life, when they might have a superior one ?

You have again forgotten, my friend, I said, the intention of the legislator, who did not aim at making any one class in the State happy above the rest ; the happiness was to be in the

whole State, and he held the citizens together by persuasion and necessity, making them benefactors of the State, and therefore benefactors of one another; to this end he created them, not ⁵²⁰ that they should please themselves, but they were to be his instruments in binding up the State.

True, he said, I had forgotten.

Observe, Glaucon, that there will be no injustice in compelling our philosophers to have a care and providence of others; we shall explain to them that in other States, men of their class are not obliged to share in the toils of politics: and this is reasonable, for they grow up at their own sweet will, and the government would rather not have them. Now the wild plant which owes culture to nobody, has nothing to pay for culture. But we have brought you into the world to be rulers of the hive, kings of yourselves and of the other citizens, and have educated you far better and more perfectly than they have been educated, and you are better able to share in the double duty. Wherefore each of you, when his turn comes, must go down to the general underground abode, and get the habit of seeing in the dark; for all is habit; and by accustoming yourselves you will see ten thousand times better than the dwellers in the den, and you will know what the images are, and of what they are images, because you have seen the beautiful and just and good in their truth. And thus the order of our State, and of your's, will be a reality, and not a dream only, as the order of States too often is, for in most of them men are fighting with one another about shadows and are distracted in the struggle for power, which in their eyes is a great good. Whereas the truth is that the State in which the rulers are most reluctant to govern is best and most quietly governed, and the State in which they are most willing, the worst.

Quite true, he replied.

And will our pupils, when they hear this, refuse to share in turn the toils of State, when they are allowed to spend the greater part of their time with one another in the heaven of ideas?

Impossible, he answered; for they are just men, and the commands which we impose upon them are just; there can be no doubt that every one of them will take office as a stern necessity, and not like our present ministers of State.

Yes, my friend, I said; and there lies the point. You must
 521 contrive for your future rulers another and a better life than
 that of a ruler, and then you may have a well-ordered State;
 for only in the State which offers this, will they rule who are
 truly rich, not in silver and gold, but in virtue and wisdom,
 which are the true blessings of life. Whereas if they go to the
 administration of public affairs, poor and hungering after their
 own private advantage, thinking that hence they are to snatch the
 good of life, order there can never be; for they will be fighting
 about office, and the civil and domestic broils which thus arise
 will be the ruin of the rulers themselves and of the whole State.

Most true, he replied.

And the only life which looks down upon the life of political
 ambition is that of true philosophy? Do you know of any
 other?

No, indeed, he said.

And those who govern ought not to be lovers of the task?
 For if they are, there will be rival lovers, and they will fight.

No question.

Whom then would you choose rather than those who are
 wisest about affairs of State, and who at the same time have
 other honours and another and a better life?

They are the men, and I will choose them, he replied.

Would you like us then to consider in what way such guardians
 may be called into existence, and how they are to be brought
 from darkness to light,—as some are said to have ascended from
 the world below to the gods?

Certainly I should, he replied.

The process, I said, is not the turning over of an oyster-shell¹,
 but the turning round of a soul from darkness visible to the
 upward path of truth and being².

Very true.

And should we not enquire what sort of knowledge has the
 power of effecting such a change?

Certainly.

What sort of knowledge is there which would draw the soul
 from becoming to being? And another consideration has just

¹ See note on Phaedr. 241 B.

² Reading οὐρανὸν ἐπάνωθεν.

occurred to me : You will remember that our young men are to be warrior athletes ?

Yes, that was said.

Then this new kind of knowledge must have another quality ?

What quality ?

Usefulness in war.

Yes, if possible.

There were two parts in our former scheme of education, were there not ?

True.

There was gymnastic which presided over the growth and decay of the body, and may therefore be regarded as having to do with generation and corruption ?

True.

Then that is not the knowledge which we are seeking to discover ?

No.

But what do you say of music, for that also entered to a certain extent into our scheme ?

That, he said, as you will remember, was the counterpart of gymnastic, and trained the guardians by the influences of habit, by harmony making them harmonious, and by rhythm rhythmical, although not giving them science ; and the words, whether fabulous or partly true, had kindred elements of rhythm and harmony in them. But musical knowledge was not of a kind which tended to that good which you are now seeking.

You are most accurate, I said, in your recollection ; for in music there certainly was nothing of the kind. But what branch of knowledge is there, my dear friend, which is of the desired nature ; since all the useful arts were reckoned mean by us ?

Undoubtedly ; and yet if music and gymnastic are excluded, and the arts are also excluded, what remains ?

Well, I said, there may be nothing left ; and then we shall have to take something which is of universal application.

What may that be ?

A something which all arts and sciences and intelligences use in common, and which every one ought to learn among the elements of education.

What is that ?

The little matter of distinguishing one, two, and three—in a word, number and calculation:—do not all arts and sciences necessarily partake of them?

Yes.

Then the art of war partakes of them?

To be sure.

Then Palamedes, when he appears in the play, proves Agamemnon ridiculously unfit to be a general. Did you never remark how he declares that he had invented number, and had numbered and set in array the ranks of the army at Troy; which implies that they had never been numbered before, and Agamemnon must be supposed literally to have been incapable of counting his own feet—how could he if he was ignorant of number? And if that is true, what sort of general must he have been?

I should say a very strange one, certainly.

Must not a warrior, then, I said, in addition to his military skill, have a knowledge of arithmetic?

Certainly he must, if he is to have the least understanding of military tactics, or indeed, I should rather say, if he is to be a man at all.

I should like to know whether you have the same notion which I have of this study?

What is your notion?

It appears to me to be a study which leads naturally to reflection, and is of the kind which we are seeking, but has never been rightly used; for it is really of use in drawing us towards being.

Will you explain your meaning? he said.

I will try, I said; and I wish you would consider and help me, and say 'yes' or 'no' when I attempt to distinguish in my own mind what branches of knowledge have this attracting power, in order that we may have clearer proof that arithmetic is one of them.

Explain, he said.

I mean to say that objects of sense are of two kinds; some of them do not invite thought because the sense is an adequate judge of them; while in the case of other objects there is a mistrust of the senses which imperatively demands enquiry.

You must be referring, he said, to the manner in which the senses are imposed upon by distance, and by painting in light and shade.

No, I said, that is not my meaning.

Then what is your meaning?

When speaking of uninviting objects, I mean those which do not pass from one sensation to another; inviting objects are those which give opposite sensations; in this latter case the sense coming upon the object, whether at a distance or near, gives no more vivid idea of anything in particular than of its opposite. An illustration will make my meaning clearer:—here are three fingers—a little finger, a second finger, and a middle finger.

Very good.

You may suppose that they are seen quite close. And here comes the point.

What is that?

Each of them equally appears a finger, whether seen in the middle or at the extremity, whether white or black, or thick or thin—it makes no difference; a finger is a finger all the same. And in all these cases the ordinary soul is not compelled to ask of thought the question what is a finger? for the sight never intimates to her that a finger is other than a finger.

True.

And therefore, I said, there is nothing here which invites or excites intelligence.

There is not, he said.

But is this equally true of the greatness and smallness of the fingers? Can sight adequately perceive them? and is no difference made by the circumstance that one of the fingers is in the middle and another at the extremity? And in like manner does the touch adequately perceive the qualities of thickness or thinness, or softness or hardness? And so of the other senses; do they give perfect intimations of such matters? Is not their mode of operation rather on this wise—the sense which is concerned ⁵²⁴ with the quality of hardness is necessarily concerned also with the quality of softness, and only intimates to the soul that the same thing is felt to be hard and soft?

Very true, he said.

And must not the soul be perplexed at this intimation of a hard which is also soft? What, again, is the meaning of light and heavy, if that which is light is also heavy, and that which is heavy, light?

Yes, he said, these intimations are very curious and have to be explained.

Yes, I said, and in these perplexities the soul naturally summons to her aid calculation and intelligence, that she may see whether the several objects announced are one or two.

True.

And if they turn out to be two, is not each of them one, and different?

Certainly.

And if each is one, and both are two, she will conceive the two as in a state of division, for if they were undivided they could only be conceived of as one?

True.

The eye certainly did behold both small and great, not divided but confused.

Yes.

Whereas the thinking mind, intending to light up the chaos, was compelled to reverse the process, and look at small and great as separate and not confused.

Very true.

And was not this the beginning of the enquiry 'What is great?' and 'What is small?'

Exactly so.

Here began the distinction of the visible and the intelligible.

Most true.

And that is an illustration of my meaning in describing impressions as inviting to the intellect, or the reverse—the inviting impressions are simultaneous with opposite impressions.

I understand, he said, and agree with you.

And to which class do unity and number belong?

I do not know, he replied.

Think a little and you will see that what has preceded will supply the answer; for if simple unity, and that only, can be adequately perceived by the sight or by any other sense, then, as we were saying in the case of the fingers, there will be nothing

to attract towards being ; but when there is some contradiction always present, and one is the reverse of one and involves the conception of plurality, then thought begins to be aroused within, and the soul perplexed and wanting to arrive at a decision asks 'What is absolute unity?' And this is the way in which the study of the one has a power of drawing and converting the ⁵²⁵ mind to the contemplation of true being.

And surely, he said, this occurs notably when we look at one, for the same thing is seen by us as one and as infinite in multitude?

Yes, I said ; and this being true of one must be equally true of all number?

Certainly.

And all arithmetic and calculation have to do with number?

Yes.

And they are conductors to truth?

Yes, in an eminent degree.

Then this is the sort of knowledge of which we are in search, having a double use, military and philosophical ; for the man of war must learn the art of number that he may know how to array his troops, and the philosopher also, because he has to rise out of the sea of change and lay hold of true being, if he would be an arithmetician.

That is true.

And our guardian is both warrior and philosopher?

Certainly.

Then this is a kind of knowledge which legislation may fitly prescribe ; and we must endeavour to persuade the principal men of our State to go and learn arithmetic, not as amateurs, but they must carry on the study until they see the nature of numbers in the mind only ; nor again, in the spirit of merchants or traders, with a view to buying or selling, but for the sake of their military use, and of the soul herself ; and because this will be the easiest way for her to pass from becoming to truth and being.

That is excellent, he said.

Yes, I said, and now having spoken of it, I must add how charming the science is ! and in how many ways it conduces to our desired end, if pursued in the spirit of a philosopher, and not of a shopkeeper !

How do you mean?

I mean, as I was saying, that arithmetic has a very great and elevating effect, compelling the soul to reason about abstract number, and rebelling against the introduction of visible or tangible objects into the argument. You know how steadily the masters of the art repel and ridicule any one who attempts to divide absolute unity when he is calculating, and if you divide, they multiply¹, taking care that one shall continue one and not become lost in fractions.

—That is very true.

526 Now, suppose a person were to say to them: O my friends, what are these wonderful numbers about which you are reasoning, in which, as you say, there is a unity such as you require, and each unit is equal, invariable, indivisible,—what would they answer?

They would answer, as I suppose, that they were speaking of those numbers which are only realized in thought.

Then you see that this knowledge may be truly called necessary, necessitating as it does the use of the pure intelligence in the attainment of pure truth?

Yes; that is a marked characteristic of it.

And have you further remarked, that those who have a natural talent for calculation are generally quick at every other kind of knowledge; and even the dull, if they have had an arithmetical training, gain in quickness, if not in any other way?

Very true, he said.

And indeed, you will not easily find a more difficult study, and not many as difficult.

You will not.

And, for these reasons, arithmetic is a kind of knowledge in which the best natures should be trained, and which must not be given up.

I agree.

Let this then be made one of our subjects of education.

¹ Meaning either (1) that they integrate the number because they deny the possibility of fractions; or (2) that division is regarded by them as a process of multiplication, and thus the unity and indivisibility of one is still maintained.

And next, shall we enquire whether the kindred science also concerns us?

You mean geometry?

Yes.

Certainly, he said; that part of geometry which relates to war is clearly our concern; for in pitching a camp, or taking up a position, or closing or extending the lines of an army, or any other military manœuvre, whether in actual battle or on a march, there will be a great difference in a general, accordingly as he is or is not a geometrician.

Yes, I said, but for that purpose a very little of either geometry or calculation will be enough; the question is rather of the higher and greater part of geometry, whether that tends towards the great end—I mean towards the vision of the idea of good; and thither, as I was saying, all things tend which compel the soul to turn her gaze towards that place, where is the full perfection of being, of which she ought, by all means, to attain the vision.

True, he said.

Then if geometry compels us to view being, it concerns us; if becoming only, it does not concern us?

Yes, that is what we assert.

Nevertheless, such a conception of the science is in flat contradiction to the ordinary language of geometricians, as will hardly be denied by those who have any acquaintance with their study: for they speak of squaring and applying and adding, having in view use only, and absurdly confuse the necessities of geometry with those of daily life; whereas knowledge is the real object of the whole science.

Certainly, he said.

Then must not a further admission be made?

What admission?

The admission that this knowledge at which geometry aims is of the eternal, and not of the perishing and transient.

That, he replied, may be readily allowed, and is true.

Then, my noble friend, geometry will draw the soul towards truth, and create the spirit of philosophy, and raise up that which is now unhappily allowed to fall down.

Nothing will be more effectual.

Then nothing should be more effectually enacted than that the inhabitants of your fair city should learn geometry. Moreover the science has indirect effects, which are not small.

Of what kind are they? he said.

There are the military advantages of which you spoke, I said; and in all departments of study, as experience proves, any one who has studied geometry is infinitely quicker of apprehension than one who has not studied it.

Yes, he said, the difference between a geometrician and one who is not a geometrician is very great indeed.

Then shall we propose this as a second branch of knowledge which our youth will study?

Let us make the proposal, he replied.

And suppose we make astronomy the third—what do you say?

I am strongly inclined to it, he said; the observation of the seasons and of months and years is quite essential to husbandry and navigation, and not less essential to military tactics.

I am amused, I said, at your fear of the world, which makes you guard against the appearance of insisting upon useless studies; and I quite admit the difficulty of believing that in every man there is an eye of the soul which, when by other pursuits lost and dimmed, is by these purified and re-illuminated; and is more precious far than ten thousand bodily eyes, for by this alone is truth seen. Now there are two classes of persons: one class who will agree with you and will take your words as a revelation; another class who have no understanding of them, and to whom they will naturally seem to be idle tales. And you had better decide at once with which of the two you are arguing; or, perhaps, you will say with neither, and that your chief aim in carrying on the argument is your own improvement; at the same time not grudging to others any benefit which they may derive.

I think that I should prefer to carry on the argument on my own behalf.

Then take a step backward, for we have gone wrong in the order of the sciences.

What was the mistake? he said.

After plane geometry, I said, we took solids in revolution, instead of taking solids in themselves; whereas after the second dimension the third, which is concerned with cubes and dimensions of depth, ought to have followed.

That is true, Socrates; but these subjects seem to be as yet hardly explored.

Why, yes, I said, and for two reasons:—in the first place, no government patronises them, which leads to a want of energy in the study of them, and they are difficult; in the second place, students cannot learn them unless they have a teacher. But then a teacher can hardly be found, and even if he could, as matters now stand, the students, who are very conceited, would not mind him. That, however, would be otherwise if the whole State patronised and honoured these studies; then they would find disciples, and there would be continuous and earnest search, and discoveries would be made; since even now, disregarded as they are by the world, and maimed of their fair proportions, and although none of their votaries can tell the use of them, still these studies force their way by their natural charm, and very likely they may emerge into light.

Yes, he said, there is a remarkable charm in them. But I do not clearly understand the change in the order. First you began with a geometry of plane surfaces?

Yes, I said.

And you placed astronomy next, and then you made a step backward?

Yes, and I have delayed you by my haste; the ludicrous state of solid geometry made me pass over this branch and go on to astronomy, or motion of solids.

True, he said.

Then assuming that the science now omitted would come into existence if encouraged by the State, let us go on to astronomy, which will be fourth.

The right order, he replied. And now, Socrates, as you rebuked the vulgar manner in which I praised astronomy before, my praise shall be more worthy of your own spirit. For every one, as I think, must feel that astronomy compels the soul to look upwards and leads us from this world to another.

I am an exception then, for I should rather say that those

who elevate astronomy into philosophy make us look downwards and not upwards.

What do you mean? he asked.

You, I replied, have in your mind a sublime conception of how we know the things above. And I dare say that if a person were to throw his head back and study the fretted ceiling, you would still think that his mind was the percipient, and not his eyes. And you are very likely right, and I may be a simpleton: but, in my opinion, that knowledge only which is of being and of the unseen can make the soul look upwards, and whether a man gapes at the heavens or blinks on the ground, seeking to learn some particular of sense, I would deny that he can learn, for nothing of that sort is matter of science; his soul is looking, not upwards, but downwards, whether his way to knowledge is by water or by land, in whichever element he may lie on his back and float.

I acknowledge, he said, the justice of your rebuke. Still, I should like to ascertain how astronomy can be learned in any manner more conducive to that knowledge of which we speak?

I answered: The starry heaven which we behold is wrought upon a visible ground, and therefore, although the fairest and most perfect of visible things, must necessarily be deemed inferior far to the true motions of absolute swiftness and absolute slowness, which are relative to each other, and carry with them that which is contained in them, in the true number and in every true figure. Now, these are to be apprehended by reason and intelligence, but not by sight.

True, he replied.

The spangled heavens should be used as a pattern and with a view to that higher knowledge; their beauty is like the beauty of figures or pictures wrought by the hand of Daedalus, or some other great artist, which we may chance to behold; any geometer who saw them would appreciate the exquisiteness of their workmanship, but he would never dream of thinking that in them he could find the true equal or the true double, or the truth of
530 any other proportion.

No, he said, to think so would be ridiculous.

And will not a true astronomer have the same feeling when he looks at the movements of the stars? Will he not think that

heaven and the things in heaven are framed by the Creator in the most perfect manner? But when he reflects that the proportions of night and day, or of both to the month, or of the month to the year, or of the other stars to these and to one another, are of the visible and material, he will never fall into the error of supposing that they are eternal and liable to no deviation—that would be monstrous; he will rather seek in every possible way to discover the truth of them.

I quite agree now that you tell me so.

Then, I said, in astronomy, as in geometry, we should use problems, and let the heavens alone if we desire to have a real knowledge of the science, and to train the reasoning faculty by the aid of it.

That, he said, is a work infinitely beyond our present astronomers.

Yes, I said; and there are many other things which must also have a similar extension given to them, if our legislation is to be of any use.

Can you tell me of any other suitable study?

No, he said, not without thinking.

Motion, I said, has many forms, and not one only; two of them are obvious enough; and there are others, as I imagine, which may be left to wiser heads than ours.

But where are the two?

There is a second, I said, which is the counterpart of the one already named.

And what may that be?

The second, I said, would seem relatively to the ears to be what the first is to the eyes; for I conceive that as the eyes are designed to look up at the stars, so are the ears to hear harmonious motions, and these are sister sciences—as the Pythagoreans say, and we, Glaucon, agree with them?

Yes, he replied.

But this, I said, is a laborious study, and therefore we had better go and learn of them; and they will tell us whether there are any other applications of these sciences. At the same time, we must not lose sight of our own higher object.

What is that?

There is a perfection which all knowledge ought to reach, and

which our pupils ought also to attain, and not to fall short of, as I was saying that they did in astronomy. For in the science of harmony, as you probably know, they are equally empirical.

53¹ The sounds and consonances which they compare are those which are heard only, and their labour, like that of the astronomers, is in vain.

Yes, by heaven! he said; and 'tis as good as a play to hear them talking about their condensed notes, as they call them; they put their ears alongside of their neighbours as if to get a sound out of them—one set of them declaring that they catch an intermediate note and have found the least interval which should be the unit of measurement; the others maintaining the opposite theory that the two sounds have passed into the same—either party setting their ears before their understanding.

You mean, I said, those gentlemen who tease and torture the strings and rack them on the pegs of the instrument: I might carry on the metaphor and speak after their manner of the blows which the plectrum gives, and make accusations against the strings, both of backwardness and forwardness to sound; but this would be tedious, and therefore I will only say that these are not the men, but that I am speaking of the Pythagoreans, of whom I was just now proposing to enquire about harmony. For they too are in error, like the astronomers; they investigate the numbers of the harmonies which are heard, but they never attain to problems—that is to say, they never reach the natural harmonies of number, or reflect why some numbers are harmonious and others not.

That, he said, is a thing of more than mortal knowledge.

A thing, I replied, which I would rather call useful; that is, if pursued with a view to the beautiful and good; but if pursued in any other spirit, useless.

Very true, he said.

Now, when all these studies reach the point of intercommunion and connection with one another, and come to be considered in their mutual affinities, then, I think, but not till then, will the pursuit of them have a value for our objects; otherwise they are useless.

I suspect so; but you are speaking, Socrates, of a vast work.

What do you mean? I said; the prelude or what? Do you

not know that all this is but the prelude to the actual strain which we have to learn? For you surely would not regard the skilled mathematician as a dialectician?

Assuredly not, he said; I have hardly ever known a mathematician who was capable of reasoning.

But do you imagine that men who are unable to give and take a reason will have the knowledge which we require of them? 53²

Neither can this be said any more than the other.

And so, Glaucon, we have at last arrived at dialectic. This is that strain which is of the intellect only, but which the faculty of sight will nevertheless be found to imitate; for sight, as you may remember, was finally imagined by us to behold real animals and the stars, and last of all the sun himself. And so with dialectic; when a person starts on the discovery of the absolute by the light of reason only, and without any assistance of sense, if he perseveres by pure intelligence, he attains at last to the idea of good, and finds himself at the end of the intellectual world, as in the other case at the end of the visible.

Exactly, he said.

Then this is the progress which you call dialectic?

True.

But the release of the prisoners from chains, and their translation from the shadows to the images and to the light, and the ascent from the underground den to the sun, while their eyes are weak and in his presence are vainly trying to look on animals and plants and the light of the sun, but are able to look upon the divine images¹ in the water, which are the shadows of true existence (not shadows of images cast by a light of fire, which compared with the sun is only an image)—this power of elevating the highest principle in the soul to the contemplation of that which is best in existence, with which we may compare the raising of the most luminous of the senses to the sight of that which is brightest in the visible world—this power is given, as I was saying, by all that study and pursuit of the arts which has been described.

I agree in what you are saying, he replied, which may be hard to believe, yet, from another point of view, is harder still to deny.

¹ Omitting *ἐνταῦθα δὲ πρὸς φαντάσματα*.

But whether denied or not, let us assume all this, which may be the theme of many another discussion; and now proceed at once from the prelude or preamble to the chief strain¹, and describe that in like manner. Say, then, what is the nature and what are the divisions of dialectic, and what are the paths which lead thither; for these paths will also lead to our final rest.

533 Dear Glaucon, I said, you will not be able to follow me here, though I would do my best, and you should behold not an image only but the absolute truth, according to my notion. Although I am not confident that I could tell you the exact truth, I am certain that you would behold something like the truth.

Doubtless, he replied.

But I must add, that the power of dialectic alone can reveal this, and only to one who is a disciple of the previous sciences.

Of that assertion you may be as certain as of the last.

And certainly no one will argue that there is any other method or way of comprehending all true existence; for the arts in general are concerned with the wants or opinions of men, or are cultivated for the sake of production and construction, or for the care of such productions and constructions; and as to the mathematical arts which, as we were saying, have some apprehension of true being—geometry and the like—they only dream about being, but never can they behold the waking reality so long as they leave the hypotheses which they use unexamined, and are unable to give an account of them. For when a man knows not his own first principle, and when the conclusion and intermediate steps are also constructed out of he knows not what, how can he imagine that such a conventional statement will ever become science?

Impossible, he said.

Then dialectic, and dialectic alone, goes directly to the first principle and is the only science which does away with hypotheses in order to make certain of them; the eye of the soul, which is literally buried in an outlandish slough, is by her taught to look upwards; and she uses as handmaids, in the work of conversion, the sciences which we have been discussing. Custom terms them sciences, but they ought to have some other name,

¹ A play upon the word νόμος, which means both 'law' and 'strain.'

implying greater clearness than opinion and less clearness than science: and this, in our previous sketch, was called understanding. But there is no use in our disputing about names when we have realities of such importance to consider.

No, he said; any name will do which expresses the thought clearly.

At any rate, we are satisfied, as before, to have four divisions; two for intellect and two for opinion, and to call the first division science, the second understanding, the third belief, and the fourth knowledge of shadows, opinion being concerned with becoming, and intellect with being; and so to make a pro- 534
portion—

As being : becoming : : pure intellect : opinion.

As science : belief : : understanding : knowledge of shadows.

But let us leave the further distribution and division of the objects of opinion and of intellect, which will be a long enquiry, many times longer than this has been.

As far as I understand, he said, I agree.

And do you also agree, I said, in describing the dialectician as one who has a conception of the essence of each thing? And may he who is unable to acquire and impart this conception, in whatever degree he fails, in that degree also be said to fail in intelligence? Will you admit that?

Yes, he said; how can I deny it?

And you would say the same of the conception of the good? Until a person is able to abstract and define the idea of good, and unless he can run the gauntlet of all objections, and is ready to disprove them, not by appeals to opinion, but to true existence, never faltering at any step of the argument—unless he can do all this, you would say that he knows neither absolute good nor any other good; he apprehends only a shadow, which is given by opinion and not by knowledge;—dreaming and slumbering in this life, before he is well awake here, he arrives at the world below, and has his final quietus.

In all that I should most certainly agree with you.

And surely you would not have the children of your ideal State, whom you are nurturing and educating—if the ideal ever becomes a reality—you would not allow the future rulers to be

like posts¹, having no reason in them, and yet to be set in authority over the highest matters?

Certainly not.

Then you will enact that they shall have such an education as will enable them to attain the greatest skill in asking and answering questions?

Yes, he said, I will, with your help.

Dialectic, then, as you will agree, is the coping-stone of the sciences, and is placed over them; no other science can be placed higher—the nature of knowledge can no further go?

I agree, he said.

535 But to whom we are to assign these studies, and in what way they are to be assigned, is a question which remains to be considered.

Yes, plainly.

You remember, I said, how the rulers were chosen before?

Certainly, he said.

The same natures must still be chosen, and the preference again given to the surest and the bravest, and, if possible, to the fairest; and, having noble and manly tempers, they should also have the natural gifts which will facilitate their education.

And what are they?

Such gifts as keenness and ready powers of acquisition; for the mind more often faints from the severity of study than from the severity of gymnastics: the toil is more entirely the mind's own, and is not shared with the body.

Very true, he replied.

Further, he of whom we are in search should have a good memory, and be an unwearied solid man who is a lover of labour in any line, or he will never be able to undergo the double toil and trouble of body and mind.

Certainly, he said; he must have natural gifts.

The mistake at present is, that those who study philosophy have no vocation, and this, as I was before saying, is the reason why she has fallen into disrepute: her true sons should study her and not bastards.

How do you mean?

¹ γραμμάς, literally 'lines,' probably the starting-point of a race-course.

In the first place, her votary should not have a lame or one-legged industry—I mean, that he should not be half industrious and half idle: as, for example, when a man is a lover of gymnastic and hunting, and all other bodily exercises, but a hater rather than a lover of the labour of learning or hearing or enquiring. Or he may have the other sort of lameness, and the love of labour may take an opposite form, and the man may be lame in another way.

Certainly, he said.

And as to truth, I said, is not a soul equally to be deemed halt and lame which hates voluntary falsehood and is extremely indignant at himself and others when they tell lies, but is patient of involuntary falsehood, and does not mind wallowing like a swinish beast in the mire of ignorance, and has no shame at being detected?

To be sure.

And, again, as to temperance and courage and magnanimity, 536 and every other virtue, should they not discern between the ways of the true son and of the bastard? for wherever States and individuals fail in discrimination, they unconsciously make a friend or perhaps a ruler of one who is in a figure a lame man or a bastard, from a defect in some one of these qualities.

That is very true, he said.

All these things, then, will have to be carefully considered, and those whom we introduce to this vast system of education and training must be sound in limb and mind, and then justice herself will have nothing to say against us, and we shall be the saviours of the State; but, if our pupils are men of another stamp, the reverse will happen, and we shall pour a still greater flood of ridicule on philosophy.

That would be discreditable.

Yes, certainly, I said; and yet, perhaps, in thus turning jest into earnest I am equally ridiculous.

In what respect?

I had forgotten, I said, that we were not in earnest, and spoke with too much excitement. For when I saw philosophy trampled under foot of men I could not help feeling a sort of indignation at the authors of her disgrace: and my anger made me vehement.

Indeed! I did not observe that you were more vehement than was right.

But I felt that I was. And now let me remind you that, although in our former selection we chose old men, we must not do so in this. Solon was under a delusion when he said that a man as he is growing older may learn many things—for he can no more learn than he can run; youth is the time of toil.

Very true.

And, therefore, calculation and geometry and all the other elements of instruction, which are a preparation for dialectic, should be presented to the mind in childhood; not, however, under any notion of forcing them.

Why not?

Because a freeman ought to be a freeman in the acquisition of knowledge. Bodily exercise, when compulsory, does no harm; but knowledge which is acquired under compulsion has no hold on the mind.

Very true.

Then, my good friend, I said, do not use compulsion, but let
537 early education be a sort of amusement; you will then be better able to find out the natural bent.

You are right there.

Do you remember our saying that the children, too, must be taken to see the battle on horseback; and that if there were no danger they might be led close up and, like young hounds, have a taste of blood given them?

Yes, I remember.

The same practice may be followed, I said, in other things—labours, lessons, dangers—and he who is most at home in all of them ought to be enrolled in a select number.

At what age?

At the age when the necessary gymnastics are over: the period whether of two or three years which passes in this sort of training is useless for any other purpose; for sleep and exercise are unpropitious to learning; and the trial of who is first in gymnastic exercises is one of the most important tests to which they are subjected.

Certainly, he replied.

After that time those who are selected from the class of

twenty years old will be promoted to higher honour, and the sciences which they learned without any order in their early education will now be brought together, and they will be able to see the natural relationship of them to one another and to true being.

Yes, he said, that is the only kind of knowledge which is everlasting.

Yes, I said; and the capacity for such knowledge is the great criterion of dialectical talent: the comprehensive mind is always the dialectical.

I agree with you, he said.

These, I said, are the points which you must consider; and those who have most of this comprehension, and who are most steadfast in their learning, and in their military and other public duties, when they arrive at the age of thirty will have to be chosen by you out of the select class, and elevated to higher honour; and you will have to prove them by the help of dialectic, in order to learn which of them is able to give up the use of sight and other senses, and in company with truth to attain absolute being. And here, my friend, great caution is required.

Why great caution?

Do you not remark, I said, how great the evil is which dialectic has introduced?

What evil? he said.

The lawlessness of which the professors of the art are full.

Very true, he said.

Do you think that there is anything unnatural in their case? or may I ask you to make some allowance for them?

What sort of allowance?

I want you, I said, by way of parallel, to imagine a supposititious son who is brought up in great wealth; he is one of a large and numerous family, and has many flatterers. When grown up he learns that his alleged are not his real parents; but who the real are he is unable to discover. Can you guess how he will be likely to behave towards his flatterers and his supposed parents, first of all during the period when he is ignorant of the false relation, and then again when he knows? Or shall I guess for you?

If you please.

Then I guess, that while he is ignorant of the truth he will be likely to honour his father and his mother and his supposed relations more than the flatterers; he will be less willing to see them in want, or to do any violence to them, or say anything evil of them, and he will be less willing to disobey them in important matters.

He will.

But when he has made the discovery, I should imagine that he would diminish his honour and regard for them, and would become more devoted to the flatterers; their influence over him would greatly increase; he would now live after their ways, and openly associate with them, and, unless he were of an unusually good disposition, he would think no more of his parents or other supposed friends.

Well, all that is extremely probable. But how is the image applicable to the disciples of philosophy?

In this way: you know that there are certain principles about justice and honour, which were taught us in childhood, and under their parental authority we have been brought up, obeying and valuing them.

That is true.

There are also opposite maxims and habits of pleasure which flatter and attract our soul, but do not influence those who have any sense of right, and they continue to obey and value the maxims of their fathers.

True.

Now, when a man is in this state, and the questioning spirit asks what is fair or honourable, and he answers as the legislator has taught him, and then arguments come again and again and refute his words, and he is driven into believing that nothing is fair any more than foul, or just and good any more than the opposite, and the same of all his time-honoured notions, do you think that he will still obey and value them?

Impossible.

And when he ceases to think them honourable and natural
539 as heretofore, and he fails to discover the true, can he be expected to pursue any life other than that which flatters his desires?

He cannot.

And from being a keeper of the law he is converted into a breaker of it?

Unquestionably.

Now all this is very natural in students of philosophy such as I have described, and also, as I was just now saying, most excusable.

Yes, he said ; and, I may add, pitiable.

Therefore, that your feelings may not be moved to pity about our citizens who are thirty years of age, every care must be taken in introducing them to dialectic.

Certainly.

There is a danger lest they should taste the dear delight too early ; for young men, as you may have observed, when they first get the taste in their mouths, argue for amusement, and are always contradicting and refuting others in imitation of those who refute them ; like puppy-dogs, they delight to tear and pull at all who come near them.

Yes, he said, there is nothing of which they are fonder.

And when they have made many conquests and received defeats at the hands of many, they violently and speedily get into a way of not believing anything that they believed before, and hence, not only they, but philosophy generally, has a bad name with the rest of the world.

Too true, he said.

But when a man begins to get older, he will no longer be guilty of such insanity ; he will imitate the dialectician who is seeking for truth, and not the eristic, who is contradicting for the sake of amusement ; and the greater moderation of his character will increase instead of diminishing the honour of the pursuit.

Very true, he said.

And did we not make special provision for this, when we said that the disciples of philosophy were to be orderly and steadfast, not, as now, any chance aspirant or intruder?

Very true.

Suppose, I said, that the study of philosophy be continued diligently and earnestly and exclusively for twice the number of years which were passed in bodily exercise—will that be enough?

Would you say six or four years? he asked.

Say five years, I replied; at the end of that time they must be sent down into the den and compelled to hold any military or other office which young men are qualified to hold: in this way they will get their experience of life, and there will be an opportunity of trying whether, when they are drawn all manner of ways by temptation, they will stand firm or flinch.

540 And how long is this stage of their lives to last?

Fifteen years, I answered; and when they have reached fifty years of age, then let those who still survive and have distinguished themselves in every deed and in all knowledge come at last to their consummation: the time has now arrived at which they must raise the eye of the soul to the universal light which lightens all things, and behold the absolute good; for that is the pattern according to which they are to order the State and the lives of individuals, and the remainder of their own lives also, making philosophy their chief pursuit; but, when their turn comes, toiling also at politics and ruling for the public good, not as if they were doing some great thing, but of necessity; and when they have brought up others like themselves and left them in their place to be governors of the State, then they will depart to the Islands of the Blest and dwell there; and the city will give them public memorials and sacrifices and honour them, if the Pythian oracle consent, as demigods, and at any rate as blessed and divine.

You are a sculptor, Socrates, and have made statues of our governors quite faultless.

Yes, I said, Glaucon, and of our governesses too; for you must not suppose that what I have been saying applies to men only and not to women as far as their natures can go.

There you are right, he said, if, as we described, they are to have all things in common with the men.

Well, I said, and you would agree (would you not?) that what has been said about the State and the government is not a mere dream, and although difficult not impossible, but only possible in the way which has been supposed; that is to say, when the true philosopher kings, one or more of them, are born in a State, despising the honours of this present world which they deem mean and worthless, above all esteeming right and the honour

that springs from right, and regarding justice as the greatest and most necessary of all things, whose ministers they are, and whose principles will be exalted by them when they set in order their own city?

How will they proceed?

They will begin by sending out into the country all the inhabitants of the city who are more than ten years old, and will take possession of their children, who will be unaffected by the habits of their parents; they will then train them in their own habits and laws, that is to say, in those which we have given them: and in this way the State and constitution of which we were speaking will soonest and most easily succeed, and the nation which has such a constitution will be most benefited.

Yes, that will be the best way. And I think, Socrates, that you have very well described how, if ever, such a constitution might come into being.

And have we not said enough of the State, and of the man who corresponds to the State, for there is no difficulty in seeing how we shall describe him?

There is no difficulty, he replied, and I say with you, enough.

BOOK VIII.

543 AND so, Glaucon, we have arrived at the conclusion that in the perfect State wives and children are to be in common; and education and the arts of war and peace are also to be common, and the best philosophers and the bravest warriors are to be their kings?

That, replied Glaucon, has been acknowledged.

Yes, I said; and we have further acknowledged that the governors, when appointed themselves, would take their soldiers and place them in houses such as we were describing; nor would any one say that anything which he had was his own—their houses were to be common; and about their property, you remember what we agreed?

Yes, I remember that no one was to have any of the ordinary possessions of mankind; they were to be warrior athletes and guardians, receiving from the other citizens, in lieu of annual payment, only their maintenance, and they were to take care of themselves and of the whole State.

True, I said; and now that this division of our work is concluded, let us find the point at which we digressed, that we may return into the old path.

There is no difficulty in returning, he replied; you were speaking then as now, as if you had finished the description of the State; and you said that such a State was good, and that the man was good who answered thereto, although you had more
544 excellent things to relate both of State and man. And you said further, that if this was the true form, then the others were false; and of the false forms, you said, as I remember, that there were four principal ones, and that their defects and the defects of the individuals corresponding to them, were worth examining. Having seen all the individuals, and finally agreed as to who was

the best and who was the worst of them, we might then consider, as you said, whether the best was not also the happiest, and the worst the most miserable. And when I asked you what the four forms of government were of which you spoke, then Polemarchus and Adeimantus put in their word; and you began again, and have found your way to the point at which we have now arrived.

Your recollection, I said, is most exact.

Then, like a wrestler, he replied, you must put yourself again in the same position; and let me ask the same questions, and do you give me the same answer which you were about to give me then.

Yes, if I can, I will, I said.

I shall particularly wish to hear what were the four constitutions of which you were speaking.

That, I said, is easily answered: the four governments of which I spoke, so far as they have distinct names, are, first, the Cretan and Spartan, which are generally applauded: next, there is oligarchy; this is not equally approved, and is a form of government which has many evils: thirdly, democracy, which naturally follows oligarchy, although different: and lastly comes tyranny, great and famous, which is different from them all, and is the fourth and worst disorder of a State. I do not know of any other constitution which can be said to have a distinct form. There are lordships and principalities which are bought and sold, and some other intermediate forms of government. But these nondescripts are oftener found among barbarians than among Hellenes.

Yes, he replied, there are said to be many curious forms of government among them.

Do you know, I said, that governments vary as the characters of men vary, and that there must be as many of the one as there are of the other? For you cannot suppose that States are made of 'oak and rock,' and not out of the human natures which are in them, and which turn the scale and draw other things after them?

Nay, he said, the States are as the men are; they grow out of human characters.

Then if the constitutions of States are five, the dispositions of individual minds will also be five?

Certainly.

Him who answers to aristocracy, and whom we rightly call
545 just and good, we have already described; and now we have to describe the inferior sort of natures, being the contentious and ambitious, who answer to the Spartan polity; also the oligarchical, democratical, and tyrannical. Let us place the most just by the side of the most unjust, and then we shall be able to compare the relative happiness or unhappiness of pure justice and pure injustice. And we shall know whether we are to pursue injustice, as Thrasymachus advises, or justice in accordance with the conclusions of the argument.

Certainly, he replied, we must do as you say.

Shall we follow our old plan, which we adopted with a view to clearness, of taking the State first and then proceeding to the individual, and begin with the government of honour (I know of no name for such a government other than timocracy, or perhaps timarchy)? We will compare with this the like character in the individual; and, after that, consider oligarchy and the oligarchical man; and then again we will turn our attention to democracy and the democratical man; and lastly, we will go and view the city of tyranny, and once more take a look into the tyrant's soul, and try to arrive at the final decision.

That way of viewing and judging of the matter will be very rational.

First, then, I said, let us enquire how timocracy (the government of honour) arises out of aristocracy (the government of the best). Clearly, all political changes originate in divisions of the actual governing power; for a government which is united, however small, cannot be moved.

Very true, he said.

In what way, then, will our city be moved, and in what manner will the two classes of auxiliaries and rulers disagree among themselves or with one another? Shall we, after the manner of Homer, pray the Muses to tell us 'how discord first arose?' Shall we imagine them in mockery, playing with us as if we were children, to speak to us in a lofty tragic vein, pretending to be in earnest?

How would they address us?

546 After this manner:—A city which is thus constituted can

hardly be shaken; but, seeing that everything which has a beginning has also an end, even our constitution will in time perish and come to dissolution. And this is the dissolution:— In plants that grow in the earth, as well as in animals that move on the earth's surface, fertility and sterility of soul and body occur when their circles are completed, which in short-lived existences pass over a short space, and in long-lived ones over a long space. But, to the knowledge of human fecundity and sterility all the wisdom and education of your rulers will not attain; the laws which regulate them will not be discovered by an intelligence which is alloyed with sense, but will escape them, and they will bring children into the world when they have no business. Now that which is of divine birth has a period which is contained in a perfect number¹, but that which is of human birth is contained in a number in which first² increments by involution and evolution giving three intervals and four terms of approximating and differentiating and increasing and waning numbers make all agreeable and commensurable³. The base of these (3) with a third added (4) when joined with a figure of five (20) and raised to the third power furnishes two harmonies; ⁴ the first a square which is a hundred times as great ($400 = 4 + 100$), and the other a figure having one side equal to the former, but oblong, consisting of a hundred numbers squared upon rational diameters of a square (i. e. omitting fractions), the side of which is five ($7 \times 7 = 49 \times 100 = 4900$), each of them being less by one (than the perfect square which includes the fractions, sc. 50) or less by⁵ two perfect squares of irrational diameters (of a square the side of which is five $= 50 + 50 = 100$); and a hundred cubes of three ($27 \times 100 = 2700 + 4900 + 400 = 8000$). Now this number represents a geometrical figure which has control over the good and evil of births. For when your guardians are ignorant of the

¹ i. e. a cyclical number, such as 6, which is equal to the sum of its divisors 1, 2, 3, so that when the circle or time represented by 6 is completed, the lesser times or rotations represented by 1, 2, 3 are also completed.

² i. e. declining from the perfect cycle.

³ Perhaps 3, 9, 27, 81; or $1 + 2 + 4 + 8 + 8 + 4 + 2 + 1 = 30$.

⁴ Or the first a square which is $100 \times 100 = 10,000$. The whole number will then be $17500 =$ a square of 100, and an oblong of 100 by 75.

⁵ Or, 'and consisting of two numbers squared upon irrational diameters,' &c. = 100. For other explanations of the passage see Introduction.

right seasons, and unite bride and bridegroom out of due time, the children will not be goodly or happy. And though only the best of them will be appointed by their predecessors, still they will be unworthy to hold their fathers' places, and when they come into power as guardians, they will soon be found to fail in taking care of us, the Muses, first by undervaluing music, and secondly gymnastic; and hence our young men will be less cultivated. In the succeeding generation rulers will be appointed who have lost the guardian power of testing the metal of your different races, which, like Hesiod's, are of gold and silver and
 547 brass and iron. And so iron will be mingled with silver, and brass with gold, and hence there will arise inequality and irregularity, which always and in all places are causes of enmity and war. Such is the origin of discord, wherever arising; and this is the answer of the Muses to us.

Yes, and we may assume that they answer truly.

Why, yes, I said, of course they answer truly; the Muses cannot do otherwise.

And what do the Muses say next?

When discord arose, then the two races were drawn different ways: the iron and brass fell to acquiring money and land and houses and gold and silver; but the gold and silver races, having the true riches in their own nature, inclined towards virtue and the ancient order of things. There was a battle between them, and at last they agreed to distribute their land and houses among individual owners; and they enslaved their friends and maintainers, whom they had formerly protected in the condition of freemen, and made of them subjects and servants; and they themselves were engaged in fighting and keeping watch against them.

I believe that you have rightly conceived the nature of the change.

And the new government which thus arises will be of a form intermediate between oligarchy and aristocracy.

Very true.

And now, after the change has been made, what will be their way of life? Clearly, the new State, being in a mean between oligarchy and the perfect State, will partly follow one and partly the other, and will also have some peculiarities.

True, he said.

In the honour given to rulers, in the abstinence of the warrior class from agriculture, handicrafts, and trades, in the institution of common meals, attention to gymnastics and military training—in all these the citizen will resemble the perfect State.

True.

But in the fear of admitting philosophers to power, because they are no longer simple and earnest, but are made up of mixed elements; and in turning from them to passionate and less complex characters, who are by nature fitted for war rather than peace; and in the value which they set upon military stratagems and contrivances, and in their everlasting wars—this State will be for the most part peculiar. 548

Yes.

Yes, I said; and men of this stamp will be covetous of money, like those who live in oligarchies; they will have a fierce secret longing after gold and silver, which they will hoard in dark places, having magazines and treasuries of their own for the deposit and concealment of them; also castles which are just nests for their eggs, and in which they will spend large sums on their wives, or on any others whom they please.

That is most true, he said.

And they are miserly because they have no means of openly acquiring the money which they prize; they will spend that which is another man's in their lust, stealing their pleasures and running away like children from the law, their father: they have been schooled not by gentle influences but by force, caring nothing about the Muse, the companion of reason and philosophy, and honouring gymnastic before music.

Undoubtedly, he said, the form of government which you describe is a mixture of good and evil.

Why, there is a mixture, I said; but one thing, and one thing only, is predominantly seen,—the spirit of contention and ambition; and these are due to the prevalence of the passionate or spirited element.

Assuredly, he said.

Such is the origin and such the character of this State, which has been described in outline only; the more perfect execution was not required, for a sketch is enough to show the type of the

most perfectly just and unjust ; and to go through all the States and all the characters of men, omitting none of them, would be an interminable labour.

Very true, he replied.

Who answers to this form of government—how did he come into being, and what is he like?

I think, said Adeimantus, that in the spirit of contention which characterises him, he is not unlike our friend Glaucon.

Perhaps, I said, he may be like him in that one point ; but there are other respects in which he is very different.

In what respects?

He should have more of self-assertion and be less cultivated, and yet a friend of culture ; and he should be a good listener, but 549 not a speaker. A person of this character is likely to be rough with slaves, not like the educated man, who is too proud for that ; and he will also be courteous to freemen, and remarkably obedient to authority ; he is a lover of power and a lover of honour ; claiming to be a ruler, not because he is a speaker, or on any ground of that sort, but because he is a soldier and has performed feats of arms ; he is also a lover of gymnastic exercises and of the chase.

Yes, that is the type of character which answers to timocracy.

Such an one will despise riches only when he is young ; but as he gets older he will be more and more attracted to them, because he has a piece of the avaricious nature in him, and is not single-minded towards virtue, having lost his best guardian.

Who was that ? said Adeimantus.

Philosophy, I said, tempered with music, who comes and takes up her abode in a man, and is the only saviour of his virtue throughout life.

Good, he said.

Such, I said, is the timocratical youth, and he is like the timocratical State.

Exactly.

His origin is as follows :—He is often the son of a brave father, who dwells in an ill-governed city, of which he declines the honours and offices, and will not go to law, but is ready to waive his rights in order that he may escape trouble.

And how does the son come into being ?

The character of the son begins to develop when he hears his mother grumbling at her husband for not having a seat in the government, of which the consequence is that she loses her precedence among other women. Further, when she sees her husband not very eager about money, and instead of battling and railing in the law courts or assembly, taking whatever happens to him quietly; and when she observes that his thoughts always centre in himself, while he treats her with very considerable indifference, she is annoyed, and says to her son that his father is only half a man and far too easy-going: not to mention other similar complaints which women love to utter.

Yes, said Adeimantus, they give us plenty of them, and in their own characteristic style.

And you know, I said, that the old servants of the family, who are supposed to be attached, talk privately in the same strain to the sons; and if they see any one who owes money to their father, or is wronging him in any way, and he fails to prosecute them, they tell the youth that when he grows up he must retaliate upon his injurers, and be more of a man than 550 his father. He has only to walk abroad and he hears and sees the same sort of thing: those who do their own business in the city are called simple, and held in no esteem, while the busy-bodies are honoured and applauded. The result is that the young man, hearing and seeing all these things—hearing, too, the words of his father, and having a nearer view of his way of life, and making comparisons of him and others—is drawn opposite ways: while his father is watering and nourishing the rational principle in his soul, the others are encouraging the passionate and appetitive; and he being not originally of a bad nature, but having kept bad company, is brought by their joint influence to a middle point, and gives up the kingdom which is within him to the middle principle of contentiousness and passion, and becomes proud and ambitious.

You seem to me to have described his origin perfectly.

Then we have now, I said, the second form of government and the second type of character?

We have.

Next, let us look at another man who, as Aeschylus says,

‘Is set over against another State ;

or rather, as our plan requires, begin with the State.

By all means.

I believe that oligarchy follows next in order.

And what manner of government do you term oligarchy?

A government resting on a valuation of property, in which the rich have power and the poor are deprived of power.

I understand, he replied.

Ought I not to describe, first of all, how the change from timocracy to oligarchy arises ?

Yes.

Well, I said, no eyes are required in order to see how the one passes into the other.

How ?

The accumulation of gold in the treasury of private individuals is the ruin of timocracy ; they invent illegal modes of expenditure, but what do they or their wives care about the law ?

Very true.

And then one seeing another prepares to rival him, and thus the whole body of the citizens acquires a similar character.

Likely enough.

After that they get on in trade, and the more they think of making a fortune the less they think of virtue ; for when riches and virtue are placed together in the scales of the balance, the one always rises as the other falls.

True.

551 And in proportion as riches and rich men are honoured in the State, virtue and the virtuous are dishonoured.

Clearly.

And what is honoured is cultivated, and that which has no honour is neglected.

That is the case.

And so at last, instead of loving contention and glory, men become lovers of trade and money, and they honour and reverence the rich man, and make a ruler of him, and dishonour the poor man.

They do so.

Whereupon they proceed to make a law which fixes a sum of money as the qualification of citizenship; the money is more or less accordingly as the oligarchy is more or less exclusive; and any one whose property is below the amount fixed is not allowed to share in the government; which changes in the constitution they effect by force of arms, if intimidation has not already done their work.

Very true.

And this, speaking generally, is the way in which oligarchy is established.

Yes, he said; but what are the characteristics of this form of government, and what are the supposed defects?

First of all, I said, consider the nature of the qualification. Just think what would happen if pilots were to be chosen according to their property, and a poor man refused permission to steer, even though he were a better pilot?

You mean that they would shipwreck?

Yes; and is not this true of the government of anything¹?

Yes, I should imagine so.

And would you say the same of a city too, or do you make an exception in favour of a city?

Nay, he said, the case of a city is still stronger, in proportion as the rule of a city is greater and more difficult.

This, then, will be the first great defect of oligarchy?

Clearly.

And here is another defect which is quite as bad.

What defect?

The inevitable division; such a State is not one, but two States, the one of poor men, the other of rich men, who are living on the same spot and ever conspiring against one another.

Yes, that is equally bad.

Another discreditable feature is the impossibility of carrying on any war. Either they arm and use the multitude, and then they are more afraid of them than of the enemy; or, if they do not use them in the hour of battle, they are oligarchs indeed, few to fight as they are few to rule. And at the same time their fondness for money makes them unwilling to pay taxes.

How discreditable!

¹ Omitting ἡ τιμος.

And, as we said before, under such a constitution, the same 552 persons are busy at many things, and are husbandmen, tradesmen, warriors, all in one. Does that seem well?

Anything but well.

There is another evil which is, perhaps, the greatest of all, and to which this State first begins to be liable.

What?

A man may sell all that he has, and another may possess his property, yet after the sale he may dwell in the city of which he is no longer a part, being neither trader, nor artisan, nor horseman, nor hoplite, but only poor and helpless.

Yes, that evil likewise begins first in this State.

The evil is certainly not prevented there; for oligarchies have both the extremes of great wealth and utter poverty.

True.

But think again. In his wealthy days, while he was spending his money, was a man of this sort a whit more good to the State for the purposes of which we were just now speaking? Or did he only seem to be a member of the ruling body, being really no more a ruler than he was a subject, but just a spendthrift?

As you imply, he seemed to be a ruler, but was only a spendthrift.

May we not say that this is the drone in the house who is like the drone in the honeycomb, and that the one is the plague of the city as the other is of the hive?

Just so, Socrates.

And God has made the flying drones, Adeimantus, all without stings, whereas of the walking drones he has made some without stings and others with dreadful stings; of the stingless class are those who in their old age end as paupers; of the stingers come all the criminal class, as they are termed.

Most true, he said.

Clearly then, whenever you see paupers in a State, somewhere in that neighbourhood there are hidden away thieves and cut-purses and robbers of temples, and other malefactors.

Clearly.

Well, I said, and in oligarchical States do you not find paupers?

Yes, he said ; nearly everybody is a pauper who is not a ruler.

And may we be so bold as to suppose that there are also many criminals to be found in them, rogues who have stings, and whom the authorities are careful to restrain by force?

Certainly, we may be so bold.

The existence of such persons is to be attributed to want of education, ill-training, and an evil constitution of the State?

True.

Such, then, is the form and such are the evils of oligarchy ; and there may be other evils.

Very likely.

Then now oligarchy, or the form of government in which 553 the rulers are elected for their wealth, may be regarded as dismissed. Let us next proceed to consider the nature and origin of the individual who answers to this State.

Yes, by all means.

Is not the manner of the change from the timocratical to the oligarchical man as follows? Suppose the representative of timocracy to have a son : at first he begins by emulating his father and walking in his footsteps, but presently he sees him founder in a moment on a sunken reef, and he and all that he has are lost ; he may have been a general or some other high officer who is brought to trial under a prejudice raised by informers, and either put to death, or exiled, or deprived of the privileges of a citizen, and all his property taken from him.

Nothing more likely.

And the son has seen and known all this—he is a ruined man, and his fear has taught him to knock ambition and passion headforemost from his bosom's throne ; humbled by poverty he takes to money-making and by mean and miserly savings and hard work gets a fortune together. Is not such an one likely to seat the concupiscent and covetous elements on the vacant throne? They will play the great king within him, and he will array them with tiara and collar and scimitar.

Most true, he replied.

And when he has made reason and spirit sit on the ground obediently on either side, and taught them to know their place, he compels the one to think only of the method by which lesser

sums may be converted into larger ones, and schools the other into the worship and admiration of riches and rich men, and to be ambitious only of wealth and of the pursuits which lead to it.

Of all conversions, he said, there is none so speedy or so sure as when the ambitious youth changes into the avaricious one.

And the avaricious, I said, is the oligarchical youth?

Yes, he said; at any rate the individual out of whom he came is like the State out of which oligarchy came.

Let us then consider whether there is any likeness between them.

554 Very good.

First, then, they resemble one another in the value which they set upon wealth?

Certainly.

Also in their penurious, laborious character; the individual only satisfies his necessary appetites, and confines his expenditure to them; his other desires he subdues, under the idea that there is no use in them?

True.

He is a shabby fellow, I said, who saves something out of everything and makes a purse for himself; and this is the sort of man whom the vulgar applaud. Is he not like the State which he represents?

That would be my view of him, he replied; at any rate money is highly valued by him as well as by the State.

Why, he is not a man of cultivation, I said.

I imagine not, he said; had he been educated he would never have made a blind god director of his chorus, or given him chief honour¹.

Excellent! I said. Yet consider: Will there not be found in him, owing to his want of cultivation, dronelike desires as of pauper and rogue, which are forcibly kept down by his general habit of life?

True.

Do you know where you will have to look if you want to discover his rogueries?

Where must I look?

¹ Reading *καὶ ἐτίμα μάλιστα*. *Εὖ, ἦν δ' ἐγώ*, according to Schneider's excellent emendation.

Let him be guardian of an orphan, or have some other great opportunity of acting dishonestly, and then he will show that in sustaining the reputation of uprightness which attaches to him in his dealings generally, he coerces his bad passions by an enforced virtue; not making them see that they are wrong, or taming them by reason, but by necessity and fear constraining them, and because he trembles for his possessions.

To be sure.

Yes, indeed, my dear friend, you will find that the natural desires of the drone commonly exist in him all the same, whenever he has the spending of another's goods.

Yes, and they will be strong in him too.

The man, then, will be at war with himself; he will be two men, and not one; but, in general, his better desires will be found to prevail over his inferior ones.

True.

For these reasons such an one will be more decent than many are; yet the true virtue of a unanimous and harmonious soul will be far out of his reach.

I should expect so.

And surely, the miser individually will be an ignoble competitor in a State for any prize of victory, or other object of honourable ambition; he is so afraid of awakening his expensive appetites and inviting them to help and join in the struggle; in true oligarchical fashion he fights with a small part only of his resources, and the result commonly is that he loses the prize and saves his money.

Very true.

Can we any longer doubt, then, that the miser and money-maker answers to the oligarchical State?

There can be no doubt.

Next comes democracy and the democratical man; the origin and nature of them we have still to learn, that we may compare the individual and the State, and so pronounce upon them.

That, he said, is our method.

Well, I said, and how does the change from oligarchy into democracy arise? Is it not on this wise?—The end which such a State desires is to become as rich as possible; and the rulers, who are aware that their own power rests upon property, refuse

to curtail by law the extravagance of the spendthrift youth because they will gain by their ruin ; they lend them money and buy their land and grow more wealthy and honourable than ever?

Exactly.

There can be no doubt that you cannot have in citizens of the same State the love of wealth and the spirit of moderation ; one or the other will be disregarded.

That is tolerably clear.

And in oligarchical States, from the general spread of carelessness and extravagance, men of good family have often been reduced to beggary?

Yes, often.

And still they remain in the city ; there they are, ready to sting and fully armed, and some of them owe money, some have forfeited their citizenship ; a third class are in both predicaments ; and they hate and conspire against those who have got their property, and anybody else, and are eager for revolution.

That is true.

On the other hand, the men of business, stooping as they walk, and pretending not even to see those whom they have already ruined, insert the sting—that is, their money—into some one else who is not on his guard against them, and recover the parent sum many times over multiplied into a family of children : and so they make drone and pauper to abound in the State.

556 Yes, he said, there are plenty of them, that is certain.

The evil is like a fire which is blazing up and which they will not extinguish either by placing restrictions on the disposition of property or—

What is the other remedy?

One which is the next best, and has the advantage of compelling the citizens to look to their characters :—Let there be an ordinance that every one shall enter into voluntary contracts at his own risk, and there will be less of this scandalous money-making, and the evils of which we were speaking will be greatly lessened in the State.

Yes, they will be greatly lessened.

At present the governors, induced by the motives which I have named, treat their subjects badly ; while they and their adherents, especially the young men of the governing class, lead a life

of luxury and idleness both of body and mind ; they do nothing, and are incapable of holding out against pleasure and pain.

Very true.

They care only for making money, and are as indifferent as the pauper to the cultivation of virtue.

Yes, quite indifferent.

Now in this state of things the rulers and their subjects come in one another's way, whether on a journey or some other occasion of meeting, or on a pilgrimage or a march as fellow-soldiers or fellow-sailors ; they observe each other in the moment of danger (and where danger is there is no fear that the poor will be despised by the rich), and very likely the wiry sunburnt poor man may be placed in battle at the side of a wealthy one who has never spoilt his complexion and has plenty of superfluous flesh—when he sees such an one puffing and at his wits'-end, can he avoid drawing the conclusion that men like him are only rich because no one has the courage to despoil them? And when they meet in private will not people be saying to one another 'our warriors are not good for much?'

Yes, he said, I am quite aware that this is their way of talking.

And, as where a body is weak the addition of a touch from without may bring on illness, and sometimes even when there is no external provocation a commotion may arise within, in the same way where there is weakness in the State there is also likely to be illness, of which the occasion may be very slight, one party introducing their democratical, the other their oligarchical allies, and the State falls sick, and is at war with herself ; and may be at times distracted, even when there is no external cause?

557

Yes, surely.

And then democracy comes into being after the poor have conquered their opponents, slaughtering some and banishing some, while to the remainder they give an equal share of freedom and power ; and this is the form of government in which the magistrates are commonly elected by lot.

Yes, he said, that is the nature of democracy, whether the revolution has been effected by arms, or whether fear has caused the opposite party to withdraw.

And now what is their manner of life, and what sort of a government have they? for as the government is such will be the man.

Clearly, he said.

In the first place, are they not free? and the city is full of freedom and frankness—a man may do as he likes.

They say so, he replied.

And where freedom is, the individual is clearly able to order his own life as he pleases?

Clearly.

Then in this kind of State there will be the greatest variety of human natures?

There will.

This, then, is likely to be the fairest of States, and will appear the fairest, being spangled with the manners and characters of mankind, like an embroidered robe which is spangled with every sort of flower. And just as women and children think variety charming, so there are many men who will deem this to be the fairest of States.

Yes.

Yes, my good Sir, and there will be no better in which to look for a government.

Why?

Because of the liberty which reigns there: they have a complete assortment of constitutions; and he who has a mind to establish a State, as we have been doing, must go to a democracy as he would to a bazaar at which they sell them, and pick out one that suits him; then, when he has made his choice, he may found his State.

He will be sure to have patterns enough.

And there being no necessity, I said, for you to govern in this State, even if you have the capacity, or to be governed unless you like, or to go to war when the others go to war, or to be at peace when others are at peace, unless you are disposed—there being no necessity also because some law forbids you to hold office or be a dicast, that you should not hold office or be a
558 dicast, if you take a fancy—is not that a way of life which for the moment is supremely delightful?

For the moment, yes.

And is not their humanity to the condemned¹ often charming? Under such a government there are men who, when they have been sentenced to death or exile, stay where they are and walk about the world; the gentleman parades like a hero, as though nobody saw or cared.

Yes, he replied, many and many a one.

See too, I said, the forgiving spirit of democracy, and the 'don't care' about trifles, and the disregard which she shows of all the fine principles which we were solemnly affirming at the foundation of the city—as when we said that, except in the case of some rare natures, never will there be a good man who in his early youth has not made things of beauty a delight and a study—how grandly does she trample our words under her feet, never giving a thought to the pursuits which make a statesman, and promoting to honour any one who professes to be the people's friend.

Yes, she is of a noble spirit.

These and other kindred characteristics are proper to democracy, which is a charming form of government, full of variety and disorder, and dispensing equality to equals and unequals alike.

We know her well.

Consider now, I said, what manner of man the individual is, or rather consider, as in the case of the State, how he is created.

Very good, he said.

Is not this the way—he is the son of the miserly and oligarchical father who has trained him in his own habits?

Exactly.

And, like his father, he keeps under by force the pleasures which are of the spending and not of the getting sort, being those which are called unnecessary.

Obviously.

Would you like, for the sake of clearness, to distinguish which are the necessary and which are the unnecessary pleasures?

I should.

Necessary pleasures are those of which we cannot get rid, and which benefit us when they are satisfied; both kinds are

¹ Or, 'the equanimity of the condemned.'

rightly called necessary, because our nature is necessarily attracted to them.

559 True.

And therefore we are not wrong in calling them necessary?

We are not.

Again, as to the desires which a man may get rid of, if he takes pains when young—of which the presence, moreover, does no good, and in some cases the reverse of good—shall we not be right in saying that all these are unnecessary?

Yes, certainly.

Suppose we select an example of either kind, in order that we may have a general notion of them?

Very good.

Will not the desire of eating, that is, of simple food and condiments, as far as they are required for health and strength, be of the necessary class?

That is what I should suppose.

The pleasure of eating is necessary in two ways; it does us good and is also needful to the continuance of life?

Yes.

But the condiments are only necessary in so far as they are good for health?

Certainly.

And the desire which goes beyond this of viands of a less simple kind, which might generally be got rid of, if controlled and trained in youth, and is hurtful to the body, and hurtful to the soul in the pursuit of wisdom and virtue, may be rightly called unnecessary?

Very right.

May we not say that these desires spend and the others make money because they conduce to production?

Certainly.

And of the pleasures of love, and all other pleasures, the same holds good?

True.

And the drone of whom we spoke was he who was surfeited in pleasures and desires of this sort, and was governed by the unnecessary desires, whereas he who was governed by the necessary was miserly and oligarchical?

Very true.

Again, let us see how the democratical man grows out of the oligarchical: the following, as I suspect, is commonly the process.

What?

When a young man who has been brought up as we were just now describing, in a vulgar and miserly way, has tasted drones' honey and has come to associate with fierce and dangerous natures who are able to provide for him all sorts of refinements and varieties of pleasure—then, as you may imagine, the change will begin of the oligarchical principle within him into the democratical.

Inevitably.

And as in the city like was helping like, and the change was effected by an alliance from without assisting one division of the citizens, so the young man also changes by a class of desires from without assisting the unsatisfied desires within him, that which is akin and alike again helping that which is akin and alike.

Certainly.

And if there be any ally which aids the oligarchical principle within him, whether the influence of friends or kindred, advising or rebuking him, then there arises a faction and an ⁵⁶⁰ opposite faction, and the result is a civil war.

It must be so.

And there are times when the democratical principle gives way to the oligarchical, and some of his desires die, and others are banished; a spirit of reverence enters into the young man's soul and order is restored.

Yes, he said, that sometimes happens.

And then, again, after the old desires have been driven out fresh ones spring up, which are akin to them, and because he their father does not know how to educate them, wax fierce and numerous.

Yes, he said, that is apt to be the way.

They draw him to his old associates, and holding secret intercourse with them, breed and multiply in him.

Very true.

At length they seize upon the citadel of the young man's soul, which they perceive to be void of all fair accomplishments and

pursuits and of every true word, which are the best guardians and sentinels in the minds of men who are dear to the gods.

None better.

False and boastful words and conceits mount upwards instead of them, and occupy the vacant post.

They are sure to do so.

And so the young man returns into the country of the lotus-eaters, and takes up his abode there in the face of all men ; and if any help be sent by his friends to the oligarchical part of him, the same vain conceits shut the gate of the king's fastness ; they will not allow the new allies to pass. And if private individuals venerable for their age come and parley they do not receive them ; there is a battle and they win : then modesty, which they call silliness, is ignominiously thrust into exile by them. They affirm temperance to be unmanliness, and her also they contemptuously eject ; and they pretend that moderation and orderly expenditure are vulgarity and meanness ; and, by the help of a rabble of evil appetites, they drive them beyond the border.

Yes, with a will.

And when they have emptied and swept clean the soul of him who is now in their power, and is being initiated by them in great mysteries, the next thing is to bring back to their house insolence and anarchy and waste and impudence in bright array, having garlands on their heads, with a great company, while they hymn their praises and call them by sweet names ; insolence they term breeding, and anarchy liberty, and waste magnificence, and impudence courage. And so the young man passes out of his original nature, which was trained in the school of necessity, into the freedom and libertinism of useless and unnecessary pleasures.

Yes, he said, the change in him is visible enough.

After this he lives on, spending his money and labour and time on unnecessary pleasures quite as much as on necessary ones ; but if he be fortunate, and is not too much intoxicated with passion, when he gets older, after the great tumult has passed away—supposing that he then re-admits into the city some part of the exiled virtues, and does not wholly give himself up to their successors—in that case he balances his pleasures and lives in a sort of equilibrium, putting the government of

himself into the hands of the one which comes first and wins the turn; and when he has had enough of that, then into the hands of another, and is very impartial in his encouragement of them all.

Very true, he said.

Neither does he receive or let pass into the fortress any true word of advice; if any one says to him that some pleasures are the satisfactions of good and noble desires, and others of evil desires, and that he ought to use and honour some and curtail and reduce others—whenever this is repeated to him he shakes his head and says that they are all alike, and that one is as honourable as another.

Yes, he said; that is the way with him.

Yes, I said, he lives through the day indulging the appetite of the hour; and sometimes he is lapped in drink and strains of the flute; then he is for total abstinence, and tries to get thin; then, again, he is at gymnastics; sometimes idling and neglecting everything, then once more living the life of a philosopher; often he is at politics, and starts to his feet and says and does whatever comes into his head; and, if he is emulous of any one who is a warrior, off he is in that direction, or of men of business, once more in that. His life has neither order nor law; so he goes on continually, and he terms this joy and freedom and happiness.

Yes, his life is all liberty and equality.

Yes, I said; and multiform, and full of the most various characters;—he answers to the State, which we described as fair and spangled. And many a man and many a woman will emulate him, and many a constitution and many an example of life is contained in him.

That is true.

Let him then be set over against democracy; he may truly be 562 called the democratic man.

Let that be his place, he said.

And now comes the most beautiful of all, man and State alike, tyranny and the tyrant; these we have to consider.

Quite true, he said.

Say then, my friend, how does tyranny arise—out of democracy of course?

Clearly.

And does not tyranny spring from democracy in the same way as democracy from oligarchy—I mean, after a sort?

How?

The good which oligarchy proposed and in which it originated, was excess of wealth. Am I not right?

Yes.

And the insatiable desire of wealth and the neglect of all other things for the sake of money-getting was also the ruin of oligarchy?

True.

And democracy has her own good, of which the insatiable desire brings her to an end?

What good?

Freedom, I replied; which, as they tell you in a democracy, is the glory of the State—and, that therefore in a democracy only will the freeman of nature deign to dwell.

Yes; the saying is often enough repeated.

I was going to observe, that the insatiable desire of this and the neglect of other things introduces the change in democracy, which occasions a demand for tyranny.

How so?

When a democracy which is thirsting for freedom has evil cup-bearers presiding over the feast, and has drunk too deeply of the strong wine of freedom, then, unless her rulers are very amenable and give a plentiful draught, she calls them to account and punishes them, and says that they are cursed oligarchs.

Yes, he replied, a very common thing.

Yes, I said; and loyal citizens are insulted by her as lovers of slavery and men of naught; she would have subjects who are like rulers, and rulers who are like subjects: these are men after her own heart, whom she praises and honours both in private and public. Now, in such a State, can liberty have any limit?

Certainly not.

By degrees the anarchy finds a way into private houses, and ends by getting among the animals and infecting them?

How do you mean?

I mean that the father gets accustomed to descend to the level

of his sons and to fear them, and the son to be on a level with his father, he having no shame or fear of either of his parents; and this is his freedom, and the metic is equal with the citizen and the citizen with the metic, and the stranger on a level with either.

563

Yes, he said, that is true.

That is true; and there are other slight evils, such as the following: the master fears and flatters his scholars, and the scholars despise their masters and tutors; and, in general, young and old are alike, and the young man is on a level with the old, and is ready to compete with him in word or deed; and old men condescend to the young and are full of pleasantry and gaiety; they do not like to be thought morose and authoritative, and therefore they adopt the manners of the young.

Quite true, he said.

The last extreme of popular liberty is when the slave bought with money, whether male or female, is just as free as his or her purchaser; nor must I forget to tell of the liberty and equality of the two sexes in relation to each other.

Why not, as Aeschylus says, utter the word which rises to our lips?

By all means, I replied—I say it then; and I must add that no one who does not know would believe, how much greater is the liberty which the animals who are under the dominion of men have in a democracy than in any other State: for truly, the she-dogs, as the proverb says, are as good as their she-mistresses, and the horses and asses have a way of marching along with all the rights and dignities of freemen; and they will run at any body whom they meet in the street if he does not leave the road clear for them: and all things are just ready to burst with liberty.

You tell me, he said, my own dream; for that is what often happens to me when I am taking a country walk.

And above all, I said, and as the result of all, see how sensitive the citizens become; they chafe impatiently at the least touch of authority, and at length, as you know, they cease to care even for the laws, written or unwritten; for they will have no one over them.

Yes, he said, I know it too well.

Such, my friend, I said, is the fair and glorious beginning out of which springs tyranny.

Glorious indeed, he said. But what is the next step?

The ruin of oligarchy is the ruin of democracy; the same disorder intensified by liberty dominates over democracy, the truth being that the excessive increase of anything often causes
564 a reaction in the opposite direction; and this is the case not only in the seasons and in vegetable and animal forms, but above all in forms of government.

True.

For the excess of liberty, whether in States or individuals, seems only to pass into excess of slavery.

Yes, the natural order.

Then tyranny naturally arises out of democracy, and a most aggravated form of tyranny and slavery out of the most extreme form of liberty.

As we might expect.

That, however, was not, as I believe, your question—you rather desired to know what is that disorder which is generated alike in oligarchy and democracy, and is the ruin of both?

True, he replied.

Well, I said, I meant to refer to the class of idle spendthrifts, of whom the more courageous are the leaders and the more timid the followers, the same whom we were comparing to drones, some stingless, and others having stings.

A very just comparison.

These two classes are the plagues of every city in which they are generated, being what phlegm and bile are to the body. And the good physician and lawgiver of the State ought, like the wise bee-master, to keep them at a distance and prevent, if possible, their ever coming in; and if they have anyhow found a way in, then he should have them and their cells cut out as speedily as possible.

Yes, indeed, he should.

Then, in order that we may see clearly what we are doing, let us imagine democracy to be divided into three classes, which exist in fact; for in the first place freedom creates rather more drones in the democratic than there were in the oligarchical State.

That is true.

But in the democracy they are more intensified.

How so?

Because in the oligarchical State they are disqualified and driven from power, and therefore they cannot train or gather strength; whereas in a democracy they are almost the entire ruling power, and the keener sort speak and act, while the rest sit buzzing about the bema and will not suffer a word to be said on the other side; and hence there is hardly anything in these States which is not their doing.

Very true, he said.

Then there is another class which is always being severed from the mass.

What is that?

They are the orderly class, which in a nation of traders is sure to be the richest.

Naturally so.

They are the most squeezable persons and yield the largest amount of honey to the drones.

Why, he said, there is little to be squeezed out of people who have little.

And this is called the wealthy class, and the drones feed upon them.

That is pretty much the case, he said.

565

There is also a third class of men who work for themselves, not politicians, and having little to live upon. And this, when assembled, is the largest and most powerful class in a democracy.

True, he said; but then the multitude is seldom willing to meet unless they get a little honey.

And do they not share? I said. Do not their leaders take as much as they can of the estates of the rich, and give to the people as much as they can consistently with keeping the greater part themselves?

Why, yes, he said, to that extent the people do share.

And the persons whose property is taken from them are compelled to defend themselves before the people as they best can?

Of course.

And then, although they may have no desire of change, the others charge them with plotting against the State and being friends of oligarchy?

True.

And the end is that when they see the people, not of their own accord, but through ignorance, and because they are deceived by slanderers, seeking to do them wrong, then at last they are forced to become oligarchs in reality whether they wish or no; they are driven to it by the stings of the drones goading them?

Exactly.

Then come impeachments and judgments and trials of one another.

True.

The people have always some champion whom they nurse into greatness.

Yes, that is their way.

This and no other is the root from which a tyrant springs; when he first appears above ground he is a protector.

Yes, that is quite clear.

How then does a protector begin to change into a tyrant? Clearly when he does what the man is said to do in the tale of the Arcadian temple of Lycaean Zeus.

What tale?

The tale is that he who has tasted the entrails of a single human victim minced up with the entrails of other victims is destined to become a wolf. Did you never hear it?

O yes.

And the protector of the people is like him; having a mob entirely at his disposal, he is not restrained from shedding the blood of kinsmen; by the favourite method of false accusation he brings them into court and murders them, making the life of man to disappear, and with unholy tongue and lips tasting the blood of his fellow citizens; some of whom he kills and others he banishes, at the same time proclaiming abolition of debts and partition of lands: and after this, what can be his
566 destiny but either to perish at the hands of his enemies, or from being a man to become a wolf—that is, a tyrant?

Inevitably.

This, I said, is he who begins to make a party against the rich.

The same.

And then he is driven out and comes back, in spite of his enemies, a tyrant full grown.

That is clear.

And if they are unable to drive him out, or get him condemned to death by public opinion, they form the design of putting him out of the way secretly.

Yes, he said, their usual way.

Then comes the famous request of a body-guard, which is made by all those who have got thus far in their career—'Let not the people's friend,' as they say, 'be lost to them.'

Exactly.

The people readily assent; all their fears are for him—they have no fear for themselves.

Very true.

And when a man who is wealthy and is also accused of being an enemy of the people sees this, then, my friend, as the oracle said to Croesus,

'By pebbly Hermus' shore he flees and rests not, and is not ashamed to be a coward.'

And quite right too, said he, for if he were, he would never be ashamed again.

But if he is caught he dies.

Of course.

And he, the protector of whom we spoke, is not fallen in his might, but himself the overthrower of many, is to be seen standing up in the chariot of State with the reins in his hand, no longer protector, but tyrant absolute.

No doubt, he said.

And now let us talk of the happiness of the man, and also of the State, in which a creature like him is generated.

Yes, he said, let us talk of that.

At first, in the early days of his power, he smiles upon every one and salutes every one;—he to be called a tyrant, who is making promises in public and also in private! liberating debtors, and distributing land to the people and to his followers, and wanting to be kind and good to every one.

Of course, he said.

But when he has disposed of foreign enemies, having reconciled himself with some of them and having destroyed others,

567 and there is nothing to fear from them, then he is always stirring up some war or other, in order that the people may require a leader.

To be sure.

Has he not also another object, which is that they may be impoverished by payment of taxes, and thus compelled to devote themselves to their daily wants and therefore less likely to plot against him?

Clearly.

Yes, and if he suspects any of them of having notions of freedom, and of being disloyal to him, he will have a good pretext for destroying them by giving them up to the enemy; and for all these reasons the tyrant must be always getting up a war.

He must.

Now he begins to grow unpopular.

A necessary result.

Then some of those who joined in setting him up, and who are in power—that is to say, the most courageous of them—speak their minds to him and to one another, and cast in his teeth the things which are being done.

Yes, that may be expected.

And the tyrant, if he means to rule, must get rid of them; he cannot stop while he has a friend or an enemy who is good for anything.

He cannot.

And therefore he must use his eyes and see who is valiant, who is high-minded, who is wise, who is wealthy; happy man, he is the enemy of them all, and must seek occasion against them whether he will or no, until he has made a purgation of the State.

Yes, he said, and a rare purgation.

Yes, I said, not the sort of purgation which the physicians make of the body; for they take away the worse and leave the better part, but he does the opposite.

If he is to rule, I suppose that he cannot help himself.

What a blessed alternative, I said, to be compelled to dwell only with the many bad, and hated by them, or not to live at all.

Yes, that is the alternative.

And the more detestable he is in his actions the more satellites and the greater devotion in them will he require?

Certainly.

And who are the devoted band, and where will he procure them?

They will flock to him, he said, of their own accord, if he pays them.

By the dog! I said, here are more drones, of every sort and from every land.

Yes, he said, there are.

But will he not desire to get them on the spot?

How do you mean?

He will rob the citizens of their slaves and set them free; he will then enrol them in his body-guard?

To be sure, he said, and he will be able to trust them best of all.

What a blessed fellow, I said, must this tyrant be; he has put to death the others and has these only for his trusted friends. 568

Yes, he said; they are his friends.

Yes, I said, and these are the new citizens whom he has called into existence, who admire him and live with him, while the good hate and avoid him.

Of course.

Verily, then, tragedy is a wise thing and Euripides a great tragedian.

Why so?

Why, because he is the author of that rare saying,

‘Tyrants are wise by living with the wise;’

and he clearly meant to say that the wise are¹ the companions of the tyrant.

Yes, he said, and he also praises tyranny as godlike; and many other things of the same kind are said by him and by the other poets.

And therefore, I said, the tragic poets being wise men will forgive us and others who have the perfect form of government, if we object to having them in our State, because they are the eulogists of tyranny.

¹ Or, ‘and now behold these wise men, who are.’

Yes, he said, those who have the wit will doubtless forgive us.

But still, I said, they go about to other cities and attract mobs, and hire voices fair and loud and persuasive, and draw the cities over to tyrannies and democracies.

Very true.

Moreover, they are paid for this and receive honour—the greatest honour from tyrants, and the next greatest from democracies; but the higher they ascend our constitution hill, the more their reputation fails, and seems unable from shortness of breath to proceed further.

True.

But we are digressing. Let us therefore return and enquire how the tyrant will maintain that fair and numerous and various and ever-changing army of his.

If, he said, there are sacred treasures in the city, he will confiscate them, and spend the proceeds; that is obvious. And in so far as they suffice, he will be able to diminish the taxes which he would otherwise have to impose.

And when these fail?

Why, clearly, he said, then he and his boon companions, whether male or female, will be maintained out of his father's estate.

I see your meaning, I said. You mean that the people from whom he has derived his being will maintain him and his companions?

Yes, he said; he must be maintained by them.

569 But what if the people go into a passion, and aver that a grown-up son ought not to be supported by his father, but that the father should be supported by the son? He did not bring him into the world in order that when he was grown up he himself should be the servant of his own servants and should support him and his rabble of slaves and companions; but that, having such a protector, he might be emancipated from the government of the rich and aristocratic, as they are termed. And so he bids him and his companions depart, just as any other father might drive out of the house a riotous son and his party of revellers.

By heaven, he said, then the parent will discover what a monster he has been fostering in his bosom; and, when he

wants to drive him out, he will find that he is weak and his son strong.

Why, you do not mean to say that the tyrant will use violence? What! beat his father if he opposes him?

Yes, he will; and he will begin by taking away his arms.

Then he is a parricide, and a cruel unnatural son to an aged parent whom he ought to cherish; and this is real tyranny, about which there is no mistake: as the saying is, the people, who would escape the smoke which is the slavery of freemen, has fallen into the fire which is the tyranny of slaves. Thus liberty, getting out of all order and reason, passes into the harshest and bitterest form of slavery.

True, he said.

Very well; and may we not say that we have discussed enough the nature of tyranny, and the manner of the transition from democracy to tyranny?

Yes, quite enough, he said.

B O O K IX.

57¹ LAST of all comes the tyrannical man ; about whom we have once more to ask, how is he formed out of the democratical? and how does he live, in happiness or in misery?

Yes, he said, he is the only one remaining.

There is, however, I said, a previous question which I should like to consider.

What question?

I do not think that we have adequately determined the nature and number of the appetites, and until this is accomplished the enquiry will always be perplexed.

Well, but you may supply the omission.

Very true, I said; and observe the point which I want to understand. Certain of the unnecessary pleasures and appetites are deemed to be unlawful; every one appears to have them, but in some persons they are controlled by the laws and by reason, and the better desires prevail over them—either they are wholly banished or they are few and weak; while in the case of others they are stronger, and there are more of them.

Which appetites do you mean?

I mean those which are awake when the reasoning and human and ruling power is asleep; when the wild beast in our nature, gorged with meat or drink, starts up and leaps about and seeks to go and satisfy his desires, there is no conceivable folly or crime, however shameless or unnatural—not excepting incest or parricide, or the eating of forbidden food—of which at such a time, you know, a man may not believe himself to be capable.

Most true, he said.

But when a man's pulse is healthy and temperate, and when before going to sleep he has awakened his rational powers, and

fed them on noble thoughts and enquiries, collecting himself in meditation; after having first indulged his appetites neither too much nor too little, but just enough to lay them to sleep, and prevent them and their enjoyments and pains from interfering with the higher principle—which he leaves in the solitude 572 of pure abstraction, free to contemplate and aspire to the knowledge of the unknown, whether in past, present, or future: when again he has allayed the passionate element, if he has a quarrel against any one—I say, when, after pacifying the two irrational principles, he rouses up the third, which is reason, before he takes his rest, then, as you know, he attains truth most nearly, and is least likely to be the sport of fanciful and lawless visions.

I quite agree.

In saying this I have been running into a digression; but the point which I desire to note is that in all of us, even in good men, there is a latent wild-beast nature, which peers out in sleep. Pray, consider whether I am right, and you agree with me.

Yes, I agree.

Remember then the character which we assigned to the democratic man. He was supposed from his youth upwards to have been trained under a miserly parent, and to have encouraged the saving appetites, and discountenanced the lighter and more ornamental ones?

True.

And then he got into the company of a more refined, licentious sort of people, and he took to their fashions, and began to have a dislike of his father's narrow ways. At last, being a better man than his corruptors, he was drawn in opposite directions and coming to a mean led a life, not of lawless and slavish passion, but of what he deemed moderate indulgences in various pleasures. After this manner the democrat was generated out of the oligarch?

Yes, he said; that is and always has been our view of him.

And now, I said, years will have passed away, and you must imagine this man, such as he is, to have a son, who is brought up in his father's principles; and then further imagine the same thing to happen to the son which has already happened to the father:—he is seduced into a perfectly lawless life, which is termed perfect liberty; and while his father and friends take part with

his moderate desires, the corruptors assist the opposite ones. These dire magicians and tyrant-makers at length begin to fear
573 that they will be unable to hold the youth, and then they contrive to implant in him a master passion, to be lord over his idle and spendthrift desires—like a monstrous winged drone—that is the only image which will adequately describe him.

Yes, he said, that is the only image of him.

And while the other lusts, amid clouds of incense and perfumes and garlands and wines, and all the dissoluteness of social life, are buzzing around him and flattering him to the utmost, there is implanted in him the sting of desire, and then this lord of his soul is in a frenzy; madness is the captain of the guard; and if he finds in himself any good opinions or appetites in process of formation, which have a sense of shame remaining, he puts an end to them, and casts them forth until he has purged away temperance and brought in madness to the full.

Yes, he said, that is the way in which the tyrannical man is generated.

And is not this the reason why of old love has been called a tyrant?

I should not wonder.

Further, I said, has not a drunken man also the spirit of a tyrant?

He has.

And you know that a man who is deranged and not right in his mind, will fancy that he is able to rule, not only over men, but also over the gods?

That he will.

And the tyrannical man in the true sense of the word comes into being when, either under the influence of nature, or habit, or both, he becomes drunken, lustful, passionate?

Exactly.

Such is the man and such is his origin. And next, how does he live?

That, as people facetiously say, you may as well tell me.

I imagine, I said, at the next step in his progress, that there will be feasts and carousals and revellings, and courtezans, and all that sort of thing; Love is the lord of the house within him, and orders all the concerns of his soul.

That is certain.

Yes; and every day and every night desires grow up many and formidable, and their demands are many.

They are indeed, he said.

His revenues, if he has any, are soon spent.

True.

Then he borrows, and part of his estate is taken from him.

Of course.

When he has nothing left, must not his desires, crowding in the nest like young ravens, be crying aloud for food; and he, goaded on by them, and especially by love himself on whom they dance attendance, is at his wits' end to discover whom he can defraud or despoil of his property, in order that he may gratify them? 574

Yes, that is sure to be the case.

He must have money, no matter how, if he is to escape horrid pangs and pains.

He must.

And as in himself there was a succession of pleasures, and the new got the better of the old and took away their rights, so he being younger will claim to have more than his father and his mother, and if he has spent his own share of the property, he will take a slice of theirs.

No doubt he will.

And if his parents will not give way, then he will try first of all to cheat and deceive them.

Very true.

And if he cannot, then he will plunder and force them.

Yes, probably.

And if the old man and woman struggle and fight, will the creature be very careful not to do anything which is tyrannical?

Nay, he said, I should not feel at all comfortable about his parents.

But, O heavens! Adeimantus, on account of some new-fangled love of a harlot, who is anything but a necessary connection, can you believe that he would strike the mother who is his ancient friend and necessary to his very existence, and would place her under the authority of the other, when she is brought under the same roof with her; or that, under like circumstances, he would do the same to his withered old father, first and most indis-

pensable of friends, for the sake of some newly-found blooming youth who is the reverse of indispensable?

Yes, indeed, he said; I believe that he would.

Truly, then, I said, a tyrannical son is a blessing to his father and mother.

He is indeed, he replied.

He first takes their property, and when that fails, and pleasures are beginning to swarm in the hive of his soul, then he breaks into a house, or steals the garments of some nightly wayfarer; next he proceeds to rob a temple; and while all this is going on, the old opinions about good and evil which he had when a child, and which were tending to¹ right, are overthrown by those others which have just been emancipated, and are now the guard and associates of love, and share his empire. These in former days, when he was a partisan of democracy and subject to the laws and to his father, were only let loose in the dreams of sleep. But now that he is under the tyranny of love, he becomes always and in waking reality what he was then very rarely and in a dream only; he will commit the foulest murder, or eat forbidden food, or be guilty of any other horrid act. Love is his tyrant, and lives lordly in him, and being
575 himself a king emancipated from all control, leads him on as a State is led into the performance of any reckless deed in order to maintain himself and his rabble, which evil communications have brought in from without, or which he himself has allowed to break loose within him by reason of a similar evil nature in himself. Have we not here a picture of his way of life?

Yes, indeed, he said.

And if there are only a few of them, and the rest of the people are well disposed, they go away and become the body-guard or mercenary soldiers of some other tyrant who may probably want them for a war; and if there is no war, they stay at home and do mischief in the city.

What sort of mischief?

For example, they are the thieves, burglars, cut-purses, foot-pads, robbers of temples, man-stealers of the community; and if they are able to speak they turn informers, and bear false witness, and take bribes.

¹ Reading τὰς δεικνύσας ποιοῦν, ἕτας.

A small catalogue of evils, even if the perpetrators of them are few in number.

Yes, I said ; but small and great are comparative terms, and all these things, in the misery and evil which they inflict upon a State, do not come within a thousand miles of the tyrant ; the people are such fools, and this noxious class and their followers grow numerous and become aware of their numbers, and then they choose him who has most of the tyrant in his soul, and make him their leader.

Yes, he said, they will choose him because he will be the most fit to be a tyrant.

If the people yield, well and good ; but if they resist him, as he began by beating his own father and mother, so now, if he has the power, he beats them, and will maintain his dear old fatherland or motherland, as the Cretans say, in subjection to his young retainers whom he has introduced to be their rulers and masters. Such is the end of his passions and desires.

Exactly.

Even in early days and before they get power, this is their character ; they associate only with their own flatterers or ready tools ; or if they want anything from anybody, they in their turn are equally ready to bow down before them : there is no attitude of kindness which they will not assume ; but when they 576 have gained their point they know them no more.

Yes, truly.

They are always either the masters or servants and never the friends of anybody ; the tyrant never tastes of true freedom or true friendship.

Certainly not.

And may we not call such men treacherous ?

No question.

Also they are utterly unjust, if we were right in our notion of justice ?

Yes, he said, and we were perfectly right.

Let us then sum up in a word, I said, the character of the worst man : he is the waking reality of what we dreamed.

Most true.

And this is he who being most of a tyrant by nature bears rule, and the longer he lives the more of a tyrant he becomes.

That is certain, said Glaucon, taking his turn to answer.

And will not he who has been shown to be the wickedest, be also the most miserable? and he who has tyrannized longest and most, most continually and truly miserable; although this may not be the opinion of men in general?

Yes, he said, inevitably.

And must not the tyrannical man be like the tyrannical State, and the democratical man like the democratical State; and the same of the others?

Certainly.

And as State is to State in virtue and happiness, man is to man?

To be sure.

Then comparing our original city, which was under a king, and the city which is under a tyrant, how do they stand as to virtue?

They are the opposite extremes, he said, for one is the very best and the other is the very worst.

There can be no mistake, I said, as to which is which, and therefore I will at once enquire whether you would arrive at a similar decision about their relative happiness and misery. And here we must not allow ourselves to be panic-stricken at the apparition of the tyrant, who is only a unit and may perhaps have a few retainers about him; but let us go into every corner and look all over the city, and then we will give our opinion.

A fair invitation, he replied; and I see, as every one must, that a tyranny is the wretchedest form of government, and monarchy the happiest.

And in estimating the men too, may I not fairly make a like
577 request, that I should have a judge whose mind can enter into and see through human nature; he must not be a child who looks at the outside and is dazzled at the pompous aspect which the tyrannical nature assumes to the beholder, but let him be one who has a clear insight. May I suppose that the judgment is given in the hearing of us all by one who is able to judge, and has dwelt in the same place with him, and been present at his daily life and known him in his family, where he may be seen stripped of his tragedy attire, and again in the hour of public

danger; he shall tell us about the happiness and misery of the tyrant when compared with other men?

That again, he said, is a very fair proposal.

Let us now assume this able and experienced judge to be ourselves, and then we shall have some one who will answer our enquiries.

By all means.

Let me ask you not to forget the parallel of the individual and the State; bearing this in mind, and glancing in turn from one to the other of them, will you tell me their respective conditions?

In what points? he asked.

Beginning with the State, I replied, would you say that a city which is governed by a tyrant is free or enslaved?

Nothing, he said, can be more completely enslaved.

And yet, as you see, there are masters and freemen in such a State?

Yes, he said, I see that there are—a few; but the people (speaking generally) and the best of them are disgracefully and miserably enslaved.

Then if the man is like the State, I said, must not the same hold of the man? his soul is full of meanness and serfdom—the best elements in him are enslaved; and there is a small ruling part, which is also the worst and maddest.

Inevitably.

And would you say that the soul of such an one is the soul of a freeman or of a slave?

He has the soul of a slave, in my judgment.

And the State which is enslaved under a tyrant is very far from acting voluntarily?

Very far, indeed.

And also the soul which is under a tyrant (I am speaking of the soul taken as a whole) is very far from doing as she desires; there is a gadfly which goads her, and she is full of trouble and remorse?

Certainly.

And is the city which is under a tyrant rich or poor?

Poor.

And the tyrannical soul must be always poor and insatiable? 578

True.

And must not such a State and such a man be always full of fear?

Yes, indeed.

Is there any State in which you will find more of lamentation and sorrow and groaning and pain?

Certainly not.

And is there any man in whom you will find more misery of the same kind than in the tyrannical man, who is in a fury of passions and desires?

Impossible.

Reflecting then upon these and similar evils, you held the tyrannical State to be the most miserable of States?

And I was right, he said.

Certainly, I said. And when you see the same evils in the tyrannical man, what do you say of him?

I say that he is by far the most miserable of all men.

There, I said, I think that you are wrong.

What do you mean?

I do not think that he has as yet reached the utmost extreme of misery.

Then who is more miserable?

One of whom I am about to speak.

Who is that?

He who is of a tyrannical nature, and instead of leading a private life is cursed with the further misfortune of being a public tyrant.

From what has been said, I gather that you are right.

Yes, I replied, but in this high argument of good and evil you should be a little more certain, and should not conjecture only.

That is very true, he said.

Let me then offer you an illustration, which may, I think, have an application to this subject.

What is your illustration?

The case of rich individuals in cities who possess many slaves: from them you may form an idea of the tyrant's condition, for they both have slaves; the only difference is that he has more slaves.

Yes, that is the difference.

You know that they live securely and have no fear of their servants?

What should they fear?

Nothing. But do you observe the reason of this?

Yes; the reason is, that the whole city is leagued together for the protection of each individual.

Very true, I said. But imagine that one of these owners is carried off by a god into the wilderness, where there are no freemen to help him—he and his household, and he is the master say of about fifty slaves—will he not be in an agony of apprehension lest he and his wife and children should be put to death by his slaves?

Yes, he said, he will be in the utmost alarm.

579

Will he not be compelled to flatter divers of his slaves, and make many promises to them of freedom and other things, much against his will?—he will become the servant of his servants.

Yes, he said, that will be the only way of saving his life.

And suppose that the same god who carries him off puts him down among neighbours who will not allow a man to be the master of another, and, if they catch him, are ready to inflict capital punishment upon him?

His case will be still worse, if you suppose him to be surrounded and watched by enemies.

And is not this the sort of prison in which the tyrant will be bound?—he being by nature such as we have described, is full of all sorts of fears and lusts. His soul is dainty and greedy, and yet he only, of all men, is never allowed to go on a journey, or to see the things which other freemen desire to see, but he lives in his hole like a woman hidden in the house, and is jealous of any other citizen who goes into foreign parts and sees anything of interest.

Very true, he said.

Such being his evil condition, am I not right in saying that the tyrannical man, ill-governed in his own person, whom you just now decided to be the most miserable of all, will be yet more miserable in a public station, when, instead of leading a private life, he is constrained by fortune to be a tyrant? He has to be master of others when he is not master of himself: he is like a

diseased or paralytic man who is compelled to pass his life, not in retirement, but fighting and combating with other men.

Yes, he said, the similitude is certainly most exact.

Is not his case utterly miserable? and does not the actual tyrant lead a worse life than him whom you determined to be worst?

Certainly.

He who is the real tyrant, whatever men may think, is the real slave, and is obliged to practise the greatest adulation and servility, and to be the flatterer of the vilest of mankind. He has desires which he is utterly unable to satisfy, and has more wants than any one, and is truly poor, if you know how to inspect the whole soul of him: all his life long he is beset with fear and is full of convulsions and distractions, even as the State which he resembles; and surely the resemblance holds?

True, he said.

580 Moreover, as we said before, he grows worse from having power: he becomes of necessity more jealous, more faithless, more unjust, more friendless, more impious, than he was at first; he entertains and nurtures every evil sentiment, and the consequence is that he is supremely miserable, and he makes everybody else equally miserable.

No man of any sense will dispute that.

Come then, I said, and as the general umpire in the games proclaims the result, do you also decide who in your opinion is first in the scale of happiness, and who second, and in what order the others follow: there are five of them in all—they are the royal, timocratical, oligarchical, democratical, tyrannical.

The judgment will be easily given, he replied; they shall be choruses entering on the stage, and I will award their places in the order in which they come in, by the criterion of virtue and vice, happiness and misery.

Need we hire a herald, or shall I announce, that the son of the best (Ariston) is of opinion that the best and justest man is also the happiest, and that this is he who is the most royal master of himself; and that the worst and most unjust man is also the most miserable, and that this is he who is the greatest tyrant of himself and of his State?

Make the proclamation, he said.

And shall I proclaim further, 'whether seen or unseen by gods and men'?

Do so.

Then this, I said, will be the first proof; and there is another, which may also have some weight.

What is that?

The second proof is derived from the nature of the soul: seeing that the individual soul, like the State, has been divided by us into three principles, the division may furnish a new demonstration.

Of what nature?

There are three pleasures which correspond to the three principles, and also three desires and governing powers.

How do you mean? he said.

There is one principle with which a man learns, another with which he is angry; the third, having many forms, has no single name, but is termed appetitive, from the extraordinary strength and vehemence of the pleasures of eating and drinking and the other sensual appetites; also money loving, because desires of this class are generally gratified by the help of money. 581

That is true, he said.

If we were to say that the loves and pleasures of this third part of the soul were concerned with gain, we should then be able to fall back on a single notion; and might truly and intelligibly describe this part of the soul as loving gain or money.

I agree.

Again, is not the passionate element wholly set on ruling and conquering and getting fame?

True.

Suppose we call it the contentious or ambitious—would the term be suitable?

Extremely suitable.

On the other hand, every one sees that the principle of knowledge is wholly directed to the truth, and cares less than either of the others for gain or fame?

Far less.

'Lover of wisdom,' 'lover of knowledge,' are titles which are rightly applicable to that part of the soul?

Certainly.

One principle prevails in the souls of one class of men, another in others, as may happen?

Yes.

Then we may begin by assuming that there are three classes of men—lovers of wisdom, lovers of honour, lovers of gain?

Exactly.

And there are three kinds of pleasures, which are their several objects?

Very true.

Now, if you examine the three classes, and ask of them in turn which of their lives is pleasantest, each will be found praising his own and depreciating that of others: the money-maker will contrast the vanity of honour or of learning if they bring no money with the solid advantages of gold and silver?

True, he said.

And the lover of honour—what will be his opinion? Will he not think that the pleasure of riches is vulgar, while the pleasure of learning, which has no meed of honour, he regards as all smoke and nonsense?

Very true.

But may we not suppose¹, I said, that the philosopher estimates other pleasures as nothing in comparison with the pleasure of knowing the truth², and in that abiding, ever learning, in the pursuit of truth, not far indeed from the heaven of pleasure? He calls the other pleasures necessary, meaning that if there were no necessity for them, he would not have them.

There can be no doubt of it, he replied.

Since, then, the pleasures of each class and the life of each are in dispute, and the question is not which life is more or less honourable, or better or worse, but which is the more pleasant or painless—how shall we know?

I cannot tell, he said.

Well, but what ought to be the criterion? Is any better than experience and wisdom and reason?

¹ Or, reading with Grasere and Hermann *τὴν οἰώμεθα*, and omitting *οὐδέν*, which is not found in the best MSS., 'How shall we say that the philosopher estimates the pleasures in comparison,' &c.

² Or, taking *τῆς ἡδονῆς οὐ πᾶν πόρρω* after *νομίξεν*, 'to go but a short way in pleasure;' i. e. to be shallow pleasures only in comparison.

There cannot be a better, he said.

Then, I said, reflect. Of the three individuals, which has the greatest experience of all the pleasures which we enumerated? Has the lover of gain greater experience of the pleasure of knowledge which is imparted by the truth than the philosopher has of the pleasure of gain?

The philosopher, he replied, has greatly the advantage; for he has always known the taste of the other pleasures from his youth upwards: but the lover of gain in all his experience has not of necessity tasted—or, I should rather say, even if he desired could hardly have tasted by any process of learning truth—the sweetness of intellectual pleasures.

Then the lover of wisdom has a great advantage over the lover of gain, for he has a double experience?

Very great indeed.

Again, has he greater experience of the pleasures of honour, or the lover of honour of the pleasures of wisdom?

Nay, he said, they are all honoured in proportion as they attain their object; for the rich man and the brave man and the wise man alike have their crowd of worshippers, and as they all receive honour they all have experience of the pleasures of honour, but the delight which is to be found in the knowledge of true being is known to the philosopher only.

His experience, then, will enable him to judge better than any one?

Far better.

And he is the only one who has wisdom as well as experience?

Certainly.

Further, the very faculty which is the instrument of judgment is not possessed by the covetous or ambitious man, but only by the philosopher?

What faculty?

Reason, which, as we were saying, ought to have the decision.

Yes.

And reasoning is peculiarly his instrument?

Certainly.

If wealth and gain were the criterion, then what the lover of gain praised and blamed would surely be truest?

Assuredly.

Or if honour or victory or courage, in that case the ambitious or contentious would decide best?

Clearly.

But since experience and wisdom and reason are the judges, the inference of course is, that the truest pleasures are those which are approved by the lover of wisdom and reason. And so we arrive at the result, that the pleasure of the intelligent
583 part of the soul is the pleasantest of the three, and that he of us in whom this is the ruling principle has the pleasantest life?

Unquestionably, he said, the wise man speaks with authority when he approves of his own life.

And what does the judge affirm to be the life which is next, and the pleasure which is next?

Clearly that of the soldier and lover of honour; who is nearer to himself than the trader.

Last comes the lover of gain.

Very true, he said.

Twice, then, has the just man overthrown the unjust; and now comes the third trial, which, after Olympic fashion, is sacred to Zeus the saviour: a sage whispers in my ear that no pleasure except that of the wise is quite true and pure—all others are a shadow only; and surely this will prove the greatest and most decisive of falls?

Yes, the greatest; but will you explain how?

If you will answer, I will think, I said, while you are answering.

Put your questions.

Say, then, is not pleasure opposed to pain?

True.

And there is a neutral state which is neither pleasure nor pain?

There is.

A state which is intermediate, and a sort of repose of the soul about either—that is what you mean?

Yes.

You remember what people say when they are sick?

What do they say?

That after all nothing is pleasanter than health. But then they never knew this to be the greatest of pleasures until they were ill.

Yes, I know, he said.

And when persons are suffering from acute pain you must have heard them say that there is nothing pleasanter than to get rid of their pain?

I have.

And there are many other cases of suffering in which the mere rest and cessation of pain, and not any positive enjoyment, is extolled by them as the greatest pleasure?

Yes, he said, at the time rest is pleasant and delightful to them.

Again, when pleasure ceases, that sort of rest will not be pleasant but painful?

Doubtless, he said.

Then the intermediate state of rest will be pleasure and will also be pain?

So it would seem.

But can that which is neither become both?

I should say not.

And both pleasure and pain are motions in the soul, are they not?

Yes.

But that which is neither was just now shown to be rest and 584 not motion, and in a mean between them?

Yes.

How, then, can we be right in saying that the absence of pain is pleasure, or that the absence of pleasure is pain?

Impossible.

Then this is an appearance only and not a reality; that is to say, the rest is pleasure at the moment and in comparison of what is painful, and painful in comparison of what is pleasant; but all these representations, when tried by the test of true pleasure, are unsound and a species of imposition?

That is the inference.

Look at the other class of pleasures which have no antecedent pains and you will no longer suppose, as you perhaps may at present, that pleasure is only the cessation of pain, or pain of pleasure.

What are they, he said, and where shall I find them?

There are many of them: take as an example the pleasures

of smell, which are very great and have no antecedent pains; they come in a moment, and when they depart leave no pain behind them.

Most true, he said.

Let us not, then, be induced to believe that pure pleasure is the cessation of pain, or pain of pleasure.

No.

Still, the more numerous and violent pleasures which reach the soul through the body are generally of this sort—they are reliefs of pain.

That is true.

And the same is true of the anticipations of pleasure and pain which precede them and are followed by them?

Yes.

Shall I give you an illustration of them?

Let me hear.

You would allow, I said, that there is in nature an upper and lower and middle region?

I should.

And if a person were to go from the lower to the middle region, would he not imagine that he is going up; and he who is standing in the middle and sees whence he has come, would imagine that he is already in the upper region, if he has never seen the true upper world?

To be sure, he said; how can he think otherwise?

But if he were taken back again he would imagine, and truly imagine, that he was descending?

No doubt.

All that would arise out of his ignorance of the true upper and middle and lower regions?

Yes.

Then can you wonder that persons who are inexperienced in the truth, as they have wrong ideas about many other things, should have wrong ideas about pleasure and pain and the intermediate; so that when drawn towards the painful they are 585 really pained and know the truth, but when drawn away from pain to the neutral or intermediate state, they firmly believe that they have reached the goal of satiety and pleasure; they, not knowing pleasure, err in comparing pain with the absence

of pain, which is like comparing black with grey instead of white—can you wonder, I say, at this?

No, indeed; I should be much more disposed to wonder at the opposite. .

Look at the matter thus:—Hunger, thirst, and the like, are inanitions of the bodily state?

Yes.

And ignorance and folly are inanitions of the soul?

True.

And food and wisdom are the corresponding satisfactions of either?

Certainly.

And is the satisfaction truer of that which has less, or of that which has more existence?

Clearly, of that which has more.

Which classes of things have a greater share of pure existence in your judgment—those of which food and drink and condiments and all kinds of sustenance are examples, or the class which contains true opinion and mind and, in general, all virtue? Put the question in this way:—Which has a more pure being—that which is concerned with the invariable, the immortal, and the true, and is found in the invariable, immortal, true; or that which is concerned with the variable and mortal, and is found in the variable and mortal?

Far purer, he replied, is the being of that which is concerned with the invariable.

And does the essence of the invariable partake of knowledge in the same degree as of essence?

Yes, of knowledge in the same degree.

And of truth in the same degree?

Yes.

And, conversely, that which has less of truth will also have less of essence?

Necessarily.

Then, in general, those kinds of things which are in the service of the body have less of truth and essence than those which are in the service of the soul?

Far less.

And has not the body itself less of truth and essence than the soul?

Yes.

What is filled with more real existence, and actually has a more real existence, is more really filled than that which is filled with less real existence and is less real?

Of course.

And if there be a pleasure in being filled with that which is according to nature, that which is more really filled with more real being will have more real and true joy and pleasure; whereas that which participates in less real being will be less truly and surely satisfied, and will participate in a less true and real pleasure?

Unquestionably.

586 Those then who know not wisdom and virtue, and are always busy with gluttony and sensuality, go down and up again as far as the mean; and in this region they move at random throughout life, but they never pass into the true upper world; thither they neither look, nor do they ever find their way, neither are they truly filled with true being, nor do they taste of true and abiding pleasure. Like cattle, with their eyes always looking down and their heads stooping, not indeed to the earth, but to the dining table, they fatten and feed and breed, and, in their excessive love of these delights, they kick and butt at one another with horns and hoofs which are made of iron; and they kill one another by reason of their insatiable lust. For they fill themselves with that which is not substantial, and the part of themselves which they fill is also unsubstantial and incontinent.

Verily, Socrates, said Glaucon, you describe the life of the many like an oracle.

Their pleasures are mixed with pains. How can they be otherwise? For they are mere images and pictures of the true, and are coloured by contrast, which exaggerates both light and shade, and so they implant in the minds of fools insane desires of themselves; and they are fought about as Stesichorus says that the Greeks fought about the shadow of Helen at Troy in ignorance of the truth.

Something of that sort must inevitably happen.

And must not the like happen with the spirited or passionate element of the soul? Will not the passionate man who carries his passion into action, be in the like case, whether he is envious

and ambitious, or violent and contentious, or angry and discontented, if he be seeking to attain honour and victory and the satisfaction of his anger without reason or sense?

Yes, he said, the same will happen with the spirited element also.

Then may we not confidently assert that the lovers of money and honour, when they seek their pleasures under the guidance and in the company of reason, and pursue after and win the pleasures which wisdom shows them, will also have the truest pleasures in the highest degree which is attainable to them, inasmuch as they follow truth; and they will also have those which are natural to them, if that which is best for each one is also most natural to him?

Yes, certainly; the best is the most natural.

And when the whole soul follows the philosophical principle, and there is no division, the several parts are just, and do each of them their own business, and enjoy severally the best and truest pleasures of which they are capable? 587

Exactly.

But when either of the two other principles prevails, it fails in attaining its own pleasure, and compels the rest to pursue after a shadow of a pleasure which is not their own?

True.

And the greater the interval which separates them from philosophy and reason, the more strange and illusive will be the pleasure?

Yes.

And is not that farthest from reason which is at the greatest distance from law and order?

Clearly.

And the lustful and tyrannical desires are at the greatest distance?

Yes.

And the royal and orderly desires are nearest?

Yes.

Then the tyrant will live at the greatest distance from true or natural pleasure, and the king at the least?

Certainly.

But if so, the tyrant will live most unpleasantly, and the king most pleasantly?

Of course.

Would you know the measure of the interval which separates them?

Will you tell me?

There appear to be three pleasures, one genuine and two spurious: now the transgression of the tyrant reaches a point beyond the spurious; he has run away from the region of law and reason, and taken up his abode with certain slave pleasures which are his satellites, and the measure of his inferiority can only be expressed in a figure.

How do you mean?

I assume, I said, that the tyrant is in the third place from the oligarch; and the democrat was in the middle?

Yes.

And if there is truth in what has preceded, he will be wedded to an image of pleasure which is thrice removed as to truth from the pleasure of the oligarch.

He will.

And the oligarch is third from the royal; since we count as one royal and aristocratical?

Yes, he is third.

Then the tyrant is removed from true pleasure by the space of a number which is three times three [$3 \times 3 = 9$]?

Manifestly.

The shadow then¹ [or unreality] of tyrannical pleasure, when determined by the number of length [that is, when calculated in simple numbers] will be a superficial figure [a square of three.]

Exactly.

And if you go on squaring and cubing the number of the figure there is no difficulty in seeing how vast the interval becomes.

Yes; the arithmetician will easily do the sum.

And if a person, instead of going from the tyrant to the king, inverts the order, and tells the measure of the interval which separates the king from the tyrant in truth of pleasure, he will find him, when the multiplication is completed, living 729 times more pleasantly, and the tyrant more painfully by this same interval.

¹ The square number suggests a square figure which is called a shadow.

What a wonderful calculation! And how enormous is the distance which separates the just from the unjust in regard to 588 pleasure and pain!

Yet a true calculation, I said, and a number which nearly concerns human life, if human life is concerned with days and nights and months and years¹.

Yes, he said, human life is certainly concerned with them.

Then if the good and just man be thus superior in pleasure to the evil and unjust, his superiority will be infinitely greater in propriety of life and in beauty and virtue?

Immeasurably greater.

Well, I said, and now having arrived at this stage of the argument, we may return and consider how we came hither: Was not some one saying that injustice was a gain to the perfectly unjust who was reputed to be just?

Yes, that was said.

Now then, having determined the power and quality of justice and injustice, let us have a word with him.

What shall we say to him?

Let us make an image of the soul, that he may have his own words presented before his eyes.

Of what sort?

An ideal image of the soul, like the creations of ancient mythology, such as the Chimera or Scylla or Cerberus, or any other in which two or more different natures are said to grow into one.

There are said to have been such unions.

Then do you now model the form of a multitudinous, polycephalous beast, having a ring of heads of all manner of beasts, tame and wild, which he is able to generate and metamorphose at will.

You suppose marvellous powers in the artist; but, as language is more pliable than wax or any similar substance, let there be such a model as you propose.

Suppose now that you make a second form as of a lion, and a third of a man, the second smaller than the first, and the third smaller than the second.

That, he said, is an easier task; and I have made them as you say.

¹ 729 *nearly* equals the number of days and nights in the year.

Then now join them, and let the three grow into one.

That has been accomplished.

Now fashion the outside into a single image. as of a man, so that he who is not able to look within, and sees only the outer hull, may believe the beast to be a single human creature.

I have done so, he said.

And now, to him who maintains that it is profitable for the human creature to be unjust, and unprofitable to be just, let us reply that, if he be right, it is profitable for this creature to feast the multitudinous monster and strengthen the lion and the lion-like qualities, but to starve and weaken the man; who is consequently at the mercy of either of the other two, and he is not to attempt to familiarize or harmonize them with one another—he ought rather to suffer them to fight and bite and devour one another.

Certainly, he said; that is what the approver of injustice says.

To him the supporter of justice makes answer that he ought rather to aim in all he says and does at strengthening the man within him, in order that he may be able to govern the many-headed monster. Like a good husbandman he should be watching and tending the gentle shoots, and preventing the wild ones from growing; he should be making a treaty with the lion-heart, and in common care of them all uniting the several parts with one another and with himself.

Yes, he said, that is quite what the maintainer of justice will say.

And from every point of view, whether of pleasure, honour, or advantage, the approver of justice is right and speaks the truth, and the disapprover is wrong and false and ignorant?

Yes, from every point of view.

Come, now, and let us reason with the unjust, who is not intentionally in error. 'Sweet Sir,' we will say to him, 'what think you of things esteemed noble and ignoble? Is not the noble that which subjects the beast to the man, or rather to the god in man; and the ignoble that which subjects the man to the beast?' He can hardly avoid saying Yes—can he now?

Not if he has any regard for my opinion.

But, if he admit this, we may ask him another question: How would a man profit if he received gold and silver on the

condition that he was to enslave the noblest part of him to the worst? Who can imagine that a man who sold his son or daughter into slavery for money, especially if he sold them into the hands of fierce and evil men, would be the gainer, however large might be the sum which he received? And will any one say that he is not a miserable caitiff who sells his own divine 590 being to that which is most atheistical and detestable, and has no pity? Eriphyle took the necklace as the price of her husband's life, but he is taking a bribe in order to compass a worse ruin.

Yes, said Glaucon, far worse—I will answer for him.

Has not the intemperate been censured of old, because in him the huge multiform monster is allowed to be too much at large?

Clearly.

And men are blamed for pride and sullenness when the growth and increase of the lion and serpent are out of proportion?

Yes.

And luxury and softness are blamed, because they relax and weaken this same creature, and make a coward of him?

Very true.

And is not a man reproached for flattery and meanness who subordinates the spirited animal to the unruly monster, and, for the sake of money, of which he can never have enough, habituates him in the days of his youth to be trampled in the mud, and from being a lion to become a monkey?

True, he said.

And why are mean employments and handicraft arts a reproach? Only because they imply a natural weakness of the higher principle; the individual is unable to control the creatures within him, but has to court them, and his only study is how to flatter them?

Such appears to be the reason.

And therefore, that he may be under the same rule as the best, we say that he ought to be the servant of the best, in whom the Divine rules; not, as Thrasymachus supposed, to the injury of the servant, but because every one had better be ruled by divine wisdom dwelling within him; or, if that be impossible,

then by an external authority, in order that we may be all, as far as possible, under the same government, friends and equals?

True, he said.

And this is clearly seen to be the intention of the law, which is the ally of the whole city; and is seen also in the authority which is exerted over children, and the refusal to allow them to be free until the time when, as in a State, we have given them
591 a constitution, and by cultivation of the higher element have established in their hearts a guardian and ruler like our own, and when this is done they may go their ways.

Yes, he said, that is a further proof.

From what point of view, then, and on what ground shall a man be profited by injustice or intemperance or other baseness, even though he acquire money or power?

From no point of view at all.

What shall he profit, if his injustice be undetected? for he who is undetected only gets worse, whereas he who is detected and punished has the brutal part of his nature silenced and humanized; the gentler element in him is liberated, and his whole soul is perfected and ennobled by the acquirement of justice and temperance and wisdom, more than the body ever is by receiving gifts of beauty, strength and health, in proportion as the soul is more honourable than the body.

Certainly, he said.

On this higher end then the man of understanding will concentrate the energies of his life. And in the first place, he will honour studies which impress these qualities on his soul, and will disregard others?

Clearly, he said.

In the next place, he will regulate his bodily habit, and so far will he be from yielding to brutal and irrational pleasures, that he will regard even health as quite a secondary matter; his first object will be not that he may be fair or strong or well, unless he is likely thereby to gain temperance, but he will be always desirous of preserving the harmony of the body for the sake of the concord of the soul?

Certainly he will, he replied, if he has true music in him.

And there is a principle of order and harmony in the acquisition of wealth; this also he will observe, and will not allow

himself to be dazzled by the opinion of the world, and heap up riches to his own infinite harm?

I should think not, he said.

He will look at the city which is within him, and take care to avoid any change of his own institutions, such as might arise either from superfluity or from want; and with a view to this only he will gain or spend in so far as he is able?

Very true.

And, for the same reason, he will accept such honours as he deems likely to make him a better man; but those which are 59² likely to disorder his constitution, whether private or public, he will avoid?

Then, if that is his motive, he will not be a politician?

By the dog of Egypt, he will! in the city which is his own, though in the land of his birth perhaps not, unless by some providential accident.

I understand; you mean in that city of which we are the founders, and which exists in idea only; for I do not believe that there is such an one anywhere on earth?

In heaven, I replied, there is laid up a pattern of it methinks, which he who desires may behold, and beholding, may set his own house in order. But whether such an one exists, or ever will exist in fact is no matter; for he will live after the manner of that city, having nothing to do with any other?

True, he said.

BOOK X.

595 OF the many excellences which I perceive in the order of our State, there is none which upon reflection pleases me better than the rule about poetry.

What rule?

The rule about rejecting imitative poetry, which certainly ought not to be received; as I see far more clearly now that the parts of the soul have been distinguished.

What do you mean?

Speaking in confidence, for I should not like to have my words repeated to the tragedians and the rest of the imitative tribe—but I do not mind saying to you, that all poetical imitations are ruinous to the understanding of the hearers, and that the knowledge of what they are is the only antidote to them.

Explain the purport of your remark.

Well, I will tell you: although I have always from my earliest youth had an awe and love of Homer, which even now makes the words falter on my lips, for he is the great captain and teacher of the whole of that charming tragic company; but a man is not to be reverenced before the truth, and therefore I will speak out.

Very good, he said.

Listen to me then, or rather, answer me.

Put your question.

Can you tell me what imitation is? for I really do not know.

A likely thing, then, that I should know.

596 Why not? for the duller eye may often see a thing sooner than the keener.

Very true, he said; but in your presence I could not muster

courage to say even what I might have to say. Will you enquire yourself?

Well then, shall we begin as usual by assuming that whenever a number of individuals have a common name, they have also a corresponding idea or form :—do you understand me?

I do.

Let us take any instance; there are beds and tables in the world and many of them, are there not?

Yes.

But there are only two ideas or forms of them—one the idea of a bed, the other of a table.

True.

And the maker of either of them makes a bed or he makes a table for our use, in accordance with the idea—that is our way of speaking in this and similar instances—but no artificer makes the ideas themselves.

Certainly not.

And there is another artist,—I should like to know what you would say of him.

Who is he?

One who is the maker of all the works of all other workmen.

What an extraordinary man!

Wait a little, and there will be more reason for your saying so. For this is he who makes not only vessels of every kind, but plants and animals, himself and all other things—the earth and heaven, and the things which are in heaven or under the earth; he makes the gods also.

He must be a rare master of his art.

Oh! you are unbelieving, are you? Do you mean that there is no such maker or creator, or that in one sense there might be a maker of all these things but not in another? Do you not see that there is a way in which you could make them yourself?

What way?

An easy way enough; or rather, there are many ways in which the feat might be accomplished, none quicker than that of turning a mirror round and round—you would soon make the sun and the heavens, and the earth and yourself, and other animals and plants, and all the other creations of art as well as nature in the mirror.

Yes, he said ; but that is an appearance only.

Very good, I said, you are coming to the point now ; and the painter, as I conceive, is just a creator of this sort, is he not ?

Of course.

But then I suppose you will say that what he creates is untrue. And yet there is a sense in which the painter also creates a bed ?

Yes, he said, but not a real bed.

597 And what of the maker of the bed ? did you not say that he does not make the idea which, according to our view, is the essence of the bed, but only a particular bed ?

Yes, I did.

Then if he does not make that which exists he cannot make true existence, but only some semblance of existence ; and if any one were to say that the work of the maker of the bed, or of any other workman, has real existence, he could hardly be supposed to be speaking the truth.

At any rate, he replied, philosophers would say that he was not speaking the truth.

No wonder, then, that his work too is an indistinct expression of truth.

No wonder.

Suppose that we enquire into the character of this imitator as illustrated by what has now been said ?

If you please.

Well then, here are three beds ; one existing in nature, which, as I think that we may say, is made by God,—no one else can be the maker ?

No.

There is another which is the work of the carpenter ?

Yes.

And the work of the painter is a third ?

Yes.

Beds, then, are of three kinds, and there are three artists who superintend them : God, the maker of the bed, and the painter ?

Yes, there are three of them.

God, whether from choice or from necessity, made one bed

in nature and one only; two or more such ideal beds neither ever have been or ever will be made by God.

Why is that?

Because even if he had made but two, a third would still appear behind them which both of them would have for their idea, and that would be the ideal bed and not the two others.

Very true, he said.

God knew this, and He desired to be the real maker of a real bed, not a particular maker of a particular bed, and therefore He created a bed which by nature is one only.

So we believe.

Shall we, then, speak of Him as the natural author or maker of the bed?

Yes, he replied; inasmuch as by the natural process of creation He is the author of this and of all other things.

And what shall we say of the carpenter—is not he also the maker of the bed?

Yes.

But would you call the painter a creator and maker?

Certainly not.

Yet if he is not the maker what is he in relation to the bed?

I think, he said, that we may fairly designate him as the imitator of that which the others make.

Good, I said; then you call him who is third in the descent from nature an imitator?

Certainly, he said.

And the tragic poet is an imitator, and therefore, like all other imitators, he is thrice removed from the king and from the truth?

That appears to be the case.

Then about the imitator we are agreed. And now about the painter, I would like to know whether he imitates that which 598 originally exists in nature, or only the creations of artists?

The latter.

As they are or as they appear? you have still to determine this.

What do you mean?

I mean, that you may look at a bed from different points of view, obliquely or directly or from any other point of view, and

the bed will appear different, but there is no difference in reality. And the same of all things.

Yes, he said, the difference is only apparent.

Now let me ask you another question: Which is the art of painting—an imitation of things as they are, or as they appear—of appearance or of reality?

Of appearance.

Then the imitator, I said, is a long way off the truth, and can do all things because he lightly touches on a small part of them, and that part an image. For example: a painter will paint a cobbler, carpenter, or any other artist, though he knows nothing of their arts; and, if he is a good artist, he may deceive children or simple persons, when he shows them his picture of a carpenter from a distance, and they will fancy that they are looking at a real carpenter.

Certainly.

And whenever any one informs us that he has found a man who knows all the arts, and all things else that everybody knows, and every single thing, with a higher degree of accuracy than any other man—whoever tells us this, I think that we can only imagine him to be a simple creature who is likely to have been deceived by some wizard or actor whom he met, and whom he thought all-knowing, because he himself was unable to analyse the nature of knowledge and ignorance and imitation.

Most true.

And so, when we hear persons saying that the tragedians, and Homer, who is at their head, know all the arts and all things human, virtue as well as vice, and divine things too, for that the good poet must know what he is talking about, and that he who has not this knowledge can never be a poet, we ought to consider whether here also there is not a similar illusion. Perhaps they may have been deceived by imitators, and may never have remembered when they saw their works
599 that these were but imitations thrice removed from the truth, and could easily be made without any knowledge of the truth, because they are appearances only and not real substances? Or, after all, they may be in the right, and poets do really know the things about which they seem to the many to speak well?

Yes, he said, by all means let the question be considered.

Now do you suppose that if a person were able to make the original as well as the image, he would devote himself to the image-making branch? Would he allow imitation to be the ruling principle of his life, as though he could do nothing better?

I should say not.

The real artist, who knew what he was imitating, would be interested in realities and not in imitations; and would desire to leave as memorials of himself works many and fair; and, instead of being the author of encomiums, he would prefer to be the theme of them.

Yes, he said, that would bring him much greater honour and profit.

Then I think that we must put a question to Homer; not about medicine, or any of the arts to which his poems only incidentally refer: we are not going to ask him, or any other poet, whether he has cured patients like Asclepius, or left behind him a school of medicine such as the Asclepiads were, or whether he only talks about medicine and other arts at second-hand; but we have a right to know respecting military tactics, politics, education, which are the chiefest and noblest subjects of his poems, and we may fairly ask him about them. 'Friend Homer,' then we say, 'if you are only in the second remove from truth in what you say of virtue, and not in the third—not an image maker or imitator—and if you are able to discern what pursuits make men better or worse in private or public life, tell us what State was ever better governed by your help? The good order of Lacedaemon is due to Lycurgus, and many other cities great and small have been similarly benefited by others; but who says that you have been a good legislator to them and have done them any good? Italy and Sicily can tell of Charondas, and there is Solon who is renowned among us; but what city has anything to say about you?' Is there any city which he might name?

I think not, said Glaucon; not even the Homeridae themselves pretend that he was a legislator.

Well, but is there any war on record which was carried on ⁶⁰⁰ successfully by him, or aided by his counsels, when he was alive?

There is not.

Or is there any invention¹ of his applicable to the arts, or to human life, such as Thales the Milesian or Anacharsis the Scythian, and other ingenious men have made, which is attributed to him?

There is nothing at all of the kind.

But, if Homer never did any public service, was he privately a guide or teacher of any? Had he in his lifetime friends and associates who loved him, and handed down to posterity an Homeric way of life, as Pythagoras was beloved, and his successors, who at this day call their way of life by his name, do appear to have a certain distinction above other men?

Nothing of the kind is recorded of him. For surely, Socrates, Creophylus, the companion of Homer, that child of flesh, whose name always makes us laugh, might be more justly ridiculed for his want of education, if, as is said, Homer was greatly neglected by him and others in his own day when he was alive?

Yes, I replied, that is the tradition. But can you imagine, Glaucon, that if Homer had really been able to educate and improve mankind, if he had possessed knowledge and not been a mere imitator—can you imagine, I say, that he would not have had many followers, and been honoured and loved by them? Protagoras of Abdera, and Prodicus of Ceos, and a host of others, have only to suggest to their contemporaries that they will never be able to manage either their own house or their State unless they are made by them presidents of education; and for this wisdom of theirs they are so much beloved that their companions all but carry them about on their heads. And are we to believe that the contemporaries of Homer, or again of Hesiod, would have allowed either of them to beg their way as rhapsodists, if they had really been able to improve mankind? Would they not have been as unwilling to part with them as with gold, and have compelled them to stay at home with them? Or, if the master would not stay, then the disciples would have followed him about everywhere, until they had got education enough?

Yes, Socrates, that, I think, is quite true.

Then must we not infer that all the poets, beginning with

² Omitting *εἰς*.

Homer, are only imitators; they copy images of virtue and the like, but the truth they never reach? The poet is like a painter who, as has already been observed, will make a likeness of a cobbler though he understands nothing of cobbling; and his picture is good enough for those who know no more than he does, and judge only by colours and figures. And so the poet lays over his words and expressions certain colours taken from the several arts, himself understanding their nature only enough to imitate them; and other people, who are as ignorant as he is, and judge only from his words, imagine that if he speaks of cobbling, or of military tactics, or of anything else in metre and harmony and rhythm, he speaks very well—such is the sweet influence which melody and rhythm by nature have. And I think that you must know, for you have often seen what a poor appearance the tales of poets make when stripped of the colours which music puts upon them, and recited in prose?

Yes, he said.

They are like faces which were never really beautiful, but only blooming; and now the bloom of youth has passed away from them?

Exactly.

Here is another point: The imitator or maker of the image knows nothing of true existence; he knows appearances only. Am I not right?

Yes.

Then let us have a clear understanding, and not be satisfied with half an explanation.

Proceed.

Of the painter we say that he will paint reins, and he will paint a bridle?

Yes.

And the worker in leather and brass will make them?

Certainly.

But does the painter know the right form of the bridle and reins? Nay, hardly even the maker; only the horseman who knows how to use them—he knows their right form.

Most true.

And may we not say the same of all things?

What?

That there are three arts which are concerned with all things : one which uses, another which makes, a third which imitates them?

Yes.

And the excellence or beauty or truth of every structure, animate or inanimate, and of every action of man, is relative to the use for which nature or the artist has intended them.

True.

Then the user of them must have the greatest experience of them, and he must indicate to the maker the good or bad qualities which develop themselves in use ; for example, the flute-player will tell the flute-maker which of his flutes answer in playing ; he will tell him how he ought to make them, and the other will attend to him?

Of course.

The one knows and therefore speaks about the goodness and badness of flutes, and the other believes and obeys him?

True.

The instrument is the same, but about the excellence or badness of it the maker will only attain belief ; and this he will gain from him who knows, by talking to him and being
602 compelled to hear what he has to say, whereas the user will have knowledge?

True.

But will the imitator have either? Will he know from use whether or no his drawing is correct or beautiful? or will he have right opinion from being compelled to associate with another who knows and gives him instructions?

Neither.

Then he will no more have true opinion than he will have knowledge about the goodness or badness of his imitations?

I suppose not.

The imitative artist will be in a brilliant state of intelligence about his own creations?

Nay, rather the reverse.

And yet he will go on imitating without knowing what makes a thing good or bad, but he will imitate that which appears to be good to the ignorant and to the vulgar?

Just so.

VOL. III.

K K

Thus far then we are pretty well agreed that the imitator has no knowledge worth mentioning. Imitation is only a kind of play or sport, and the tragic and epic poets are imitators in the highest degree?

Very true.

And now tell me, I beseech you, has not imitation been shown by us to be concerned with that which is thrice removed from the truth?

Certainly.

And what is the faculty in man to which imitation is addressed?

What do you mean?

I will explain: The body which is large when seen near, appears small when seen at a distance?

True.

And the same objects appear straight when looked at out of the water, and crooked when in the water; and the concave becomes convex, owing to the illusion about colours to which the sight is liable. An utter confusion thus arises in the mind; and there is a similar deception about painting in light and shade, and juggling, and other ingenious devices, which impose upon our weakness with all the arts of magic.

True.

And the arts of measuring and numbering and weighing come to the rescue of the human understanding—there is the beauty of them—and the apparent greater or less, or more or heavier, no longer reign in us, but give way before calculation and measure and weight?

Most true.

And this, surely, must be the work of the calculating and rational principle in the soul?

To be sure.

And when this principle measures and certifies that some things are equal, or that some are greater or less than others, there occurs an apparent contradiction?

True.

But were we not saying that such a contradiction is impossible—the same cannot have contrary opinions at the same 603 time about the same?

Very true.

Then that part of the soul which has an opinion contrary to measure is not the same with that which has an opinion in accordance with measure?

True.

But the best part of the soul is that which trusts to measure and calculation?

Certainly.

And that which is opposed to them is one of the inferior principles of the soul?

No doubt.

That was the conclusion at which I wanted to arrive when I said that painting or drawing and imitation in general are engaged in a work which is remote from truth, and the companion and friend and associate of a principle which is remote from reason, and has no true or healthy aim.

Exactly.

The imitative art is an inferior who marries an inferior, and has inferior offspring.

Very true.

And is this confined to the sight only, or applicable to the hearing also, in reference to what is termed poetry?

Probably the same holds of poetry.

Do not rely, I said, on the analogy of painting; but let us examine further and see whether the faculty with which poetical imitation is concerned is good or bad.

By all means.

Let us state the question:—Imitation imitates the actions of men, whether voluntary or involuntary, on which a good or bad event has ensued, and they rejoice or sorrow accordingly. Is there anything more?

No, there is nothing else.

But in all this variety of circumstances is the man at unity with himself—or rather, as in the instance of sight there was confusion and opposition, so here also is there not strife and inconsistency in his life? Though I need hardly raise the question again, for, if I remember rightly, all this has been already admitted; and the soul has been acknowledged by us to

be full of these and ten thousand similar oppositions occurring at the same moment ?

And we were right, he said.

Yes, I said, thus far we were right ; but there was an omission which must now be supplied.

What was the omission ?

Were we not saying that a good man, when he loses his son or anything else which is most dear to him, will bear the loss with more equanimity than another ?

Yes.

But will he have no sorrow, or shall we say that although he cannot help sorrowing, he will moderate his sorrow ?

Yes, he said, the latter is the truer statement.

Tell me : will he be more likely to struggle and hold out against his sorrow when he is seen by his equals, or when he is by himself alone ? 604

He will be more likely to hold out when he is in company.

But when he is left alone he will not mind saying or doing many things which he would be ashamed of any one hearing or seeing ?

True.

There is a principle of law and reason in him which bids him resist, while passion is urging him to indulge his sorrow ?

True.

But when a man is drawn in two opposite directions, to and from the same object, this, as we affirm, necessarily implies two distinct principles in him ?

Certainly.

One of them is obedient to the law ?

How do you mean ?

The law would say that to be patient under suffering is best, and that we should not give way to impatience, as there is no knowing whether such things are good or evil ; and nothing is gained by impatience ; also, because no human thing is of serious importance, and grief stands in the way of that which at the moment is most required.

What is most required ? he asked.

That we should take counsel about the past, and when the

dice have been thrown order our affairs accordingly by the advice of reason ; not, like children who have had a fall, keeping hold of the part struck and wasting time in setting up a howl, but accustoming the soul forthwith to apply a remedy, raising up that which is sickly and fallen, banishing the cry of sorrow by a real cure.

Yes, he said, there is no better way of meeting the attacks of fortune.

Yes, I said ; and the higher principle is ready to follow this suggestion of reason ?

Clearly.

And the other principle which inclines us to recollection of our troubles and to lamentation, and can never have enough of them, we may call irrational, indolent, and cowardly ?

Indeed, we may.

And does not the latter—I mean the rebellious principle—furnish a great variety of materials for imitation ? Whereas the wise and calm temperament, being always nearly equable, is not easy to imitate or to appreciate when imitated, especially at a theatre in which all sorts of men are gathered together. For the feeling represented is one to which they are strangers.

Certainly.

605 Then the imitative poet is not by nature made, nor his art intended, to affect or please the rational principle in the soul, that is if he aims at being popular ; but he will prefer the passionate and fitful temper, which is easily imitated ?

Clearly.

And now we may fairly take him and set him by the side of the painter, for he is like him in two ways : first, inasmuch as his creations have an inferior degree of truth—in this, I say, he is like him ; and he is also like him in being concerned with an inferior part of the soul ; and therefore we shall be right in not receiving him in a well-ordered State, because he awakens and nourishes and strengthens the feelings and impairs the reason. As in a city we cannot allow the evil to have authority and the good to be put out of the way, even so in the city which is within us we refuse to allow the imitative poet to create an evil constitution indulging the irrational nature which has no discernment of greater and less, and thinks the same thing at one time great

and at another small; and is a manufacturer of images very far removed from the truth¹.

Very true.

But we have not yet brought forward the heaviest count in our accusation:—the power which poetry has of harming even the good (and there are very few who are not harmed), is surely an awful thing?

Yes, certainly, if the effect is what you say.

Hear and judge: The best of us, as I conceive, when we listen to a passage of Homer, or one of the tragedians in which he represents some pitiful hero who is drawling out his sorrows in a long oration, or possibly singing, and smiting his breast—the best of us, you know, delight in giving way to sympathy, and are in raptures at the excellence of the poet who stirs our feelings most.

Yes, of course I know.

But when any sorrow happens to ourselves, then you may observe that we pride ourselves on the opposite quality of quietness and endurance; this is the manly part, and that which delighted us when recited is now deemed to be the part of a woman.

I know, he said.

Now can we be right in praising that in another which a man would abominate and be ashamed of in his own person?

No, he said, that is certainly not reasonable.

Nay, I said, quite reasonable from one point of view.

606

What point of view?

If you consider, I said, that when we are in misfortune there is in us a natural hunger after sorrow and weeping, and that this feeling which is tamed and kept under control in our own calamities, is satisfied and delighted by the poets;—the better nature in each of us, not having been sufficiently trained by reason or habit, is then taken unawares because the sorrow is another's; and the spectator fancies that there can be no disgrace to himself in praising and pitying any one who comes telling him what a good man he is, and making unseasonable lamentations; he thinks that the pleasure is a gain, and why should he be supercilious and lose this and the poem too? For

¹ Reading ἀφειστῶτι.

the reflection is not often made that from the evil of others the fruit of evil is reaped by ourselves, or that the feeling of pity which has gathered strength at the sight of the misfortunes of others, will not be repressed in our own misfortunes.

A very just remark.

And does not the same hold also of the ridiculous? There are jests which you would be ashamed to make yourself, and yet on the comic stage, or again in private, when you hear them, you are greatly amused by them, instead of being disgusted at their unseemliness;—the case of compassion recurs;—there is a principle within which is disposed to raise a laugh, and this was once kept in order by you because you were afraid of being thought a buffoon, but is now let out again and inspired by the theatre, and you are apt to be betrayed unconsciously to yourself into playing the comic poet in your own person.

Quite true, he said.

And the same may be said of lust and anger and all the other affections, of desire and pain and pleasure which are held to be inseparable from every action—in all of them poetry feeds and waters the passions instead of drying them up; she lets them rule instead of ruling them as they ought to be ruled, with a view to the happiness and virtue of mankind.

I cannot deny it.

Therefore, Glaucon, I said, whenever you meet with any of the eulogists of Homer declaring that he has been the educator of Hellas, and that he is profitable for the management and administration of human things, and that you should take him
607 up and get to know him and regulate your whole life according to him, we may love and honour the intentions of these excellent people, as far as their lights extend; and we are ready to acknowledge that Homer is the greatest of poets and first of tragedy writers; but we must remain firm in our conviction that hymns to the gods and praises of famous men are the only poetry which ought to be admitted into our State. For if you go beyond this and allow the honeyed muse to enter, either in epic or lyric verse, not law and the reason of mankind, which by common consent has ever been deemed best, but pleasure and pain will be the rulers in our State.

That is most true, he said.

Let this then be our excuse for expelling poetry, that the argument constrained us; but let us also make an apology to her, lest she impute to us any harshness or want of politeness. We will tell her that there is an ancient quarrel between philosophy and poetry; of which there are many proofs, such as the saying of 'the yelping hound howling at her lord,' or of one 'mighty in the vain talk of fools,' and 'the mob of sages circumventing Zeus,' and the 'subtle thinkers who are beggars after all'; and there are ten thousand other signs of ancient enmity between them. Notwithstanding this, let us assure our sweet friend and the sister arts of imitation, that if she will only prove her title to existence in a well-ordered State we shall be delighted to receive her, knowing that we ourselves are very susceptible of her charms; but we may not on that account betray the truth. I dare say, Glaucon, that you are as much charmed by her as I am, especially when you see her in the garb of Homer?

Yes, indeed, I am greatly charmed.

Shall I propose, then, that she be allowed to return from exile, on this condition—that she is to make a defence of herself in lyrical or some other metre?

Certainly.

And to those of her defenders who are lovers of poetry and yet not poets, I think that we may grant a further privilege—they shall be allowed to speak in prose on her behalf: let them show not only that she is pleasant but also useful to States and to human life and we will gladly listen, for if this can be proved we shall surely be the gainers, I mean, if there is a use in poetry as well as a delight?

Certainly, he said, we shall be the gainers.

If her defence fails, then, my dear friend, though much against our will we must give her up, after the manner of lovers who abstain when they think that their love is not good for them; for we too are inspired by that love of poetry which the education of noble States has implanted in us, and therefore we would have her appear at her best and truest; but so long as she is unable to make good her defence, even though our ears may listen, this argument of ours will be like a charm to us, and into the childish love which the many have of her we shall take care not to fall again, for we see that poetry being such as she is,

is not to be pursued in earnest or regarded seriously as attaining to the truth; and he who listens to her will be on his guard against her seductions, fearing for the safety of the city which is within him, and he will take heed to our words.

Yes, he said, I quite agree with you.

Yes, I said, my dear Glaucon, for great is the issue at stake, greater than appears, whether a man is to be good or bad. And what will any one be profited if under the influence of honour or money or power, aye, or under the excitement of poetry, he neglect justice and virtue?

Yes, he said; I have been convinced by the argument, as I believe that any one else would have been.

And yet no mention has been made of the greatest prizes and rewards of virtue.

What, are there any greater still? if there are, they must be of an inconceivable greatness.

Why, I said, what was ever great in a short time? The whole period of three score years and ten is surely but a little thing in comparison with eternity?

Say rather 'nothing,' he replied.

And should an immortal being seriously think of this little space rather than of the whole?

Of the whole certainly. But why do you ask?

Are you not aware, I said, that the soul of man is immortal and imperishable?

He looked at me in astonishment, and said: No, by heaven; surely you are not prepared to affirm that?

Yes, I said, I ought to be, and you too, for there is no difficulty.

I see a great difficulty; but I should like to hear you state this argument of which you make so light.

Listen then.

I am attending.

You speak of good and of evil?

Yes, he replied.

Would you agree with me in thinking that the corrupting and destroying element is the evil, and the saving and improving element the good?

609 Yes.

And you admit that everything has a good and also an evil ; as ophthalmia is the evil of the eyes and disease of the whole body ; as mildew is of corn, and rot of timber, or rust of iron and steel : in everything, or in almost everything, there is an inherent evil and disease ?

Yes, he said.

And anything which is infected by any of these evils is made evil, and at last wholly dissolves and dies ?

True.

The vice and evil which is inherent in each is the destruction of each ; and if this does not destroy them there is nothing else that will, for good certainly will not destroy them, nor again, that which is neither good nor evil.

Certainly not.

If, then, we find any nature which having this inherent corruption cannot be dissolved or destroyed, we may be certain that of such a nature there is no destruction ?

That may be assumed.

Well, I said, and is there no evil which corrupts the soul ?

Yes, he said, there are all the evils of which we were speaking : unrighteousness, intemperance, cowardice, ignorance.

But does any of these dissolve or destroy her ?—and here do not let us fall into the error of supposing that the unjust and foolish, when they are detected, perish through their injustice, which is an evil of the soul. Take the analogy of the body : The evil of the body is a disease which wastes and reduces and annihilates the body ; and all the things of which we were just now speaking come to annihilation through their own inherent evil clinging to them and destroying them. Is not this true ?

Yes, he said.

Now consider the soul in the same way. Does the injustice and other evil of the soul waste and consume the soul ? do they by inhering in her and clinging to her at last bring her to death, and separate her from the body ?

Certainly not.

And yet, I said, it is unreasonable to suppose that anything can perish from without through external affection of evil, which could not be destroyed from within by an internal corruption ?

It is, he replied.

Consider, I said, Glaucon, that even the badness of food, whether staleness, decomposition, or any other kind of badness, when confined to the actual food, is not supposed to destroy the body; although, if the corruption of food communicates corruption to the body, then the body also suffers from internal
 610 corruption or disease and perishes; but that the body, being one thing, can be destroyed by the badness of food, which is another, without any internal infection—that will never be admitted by us?

Very true.

And, on the same principle, unless some bodily evil can produce an evil of the soul, we must not suppose that the soul, which is one thing, can be dissolved by any external evil which belongs to another?

Yes, he said, there is reason in that.

Either, then, let us refute this argument, or, while this argument of ours remains unrefuted, let us never say that fever, or any other disease, or the knife put to the throat, or even the cutting up of the whole body into the minutest pieces, can destroy the soul, until the soul also is proved to become more unholy or unrighteous in consequence of these things being done to the body; but that the soul, or anything else which is not destroyed by an internal evil, can be destroyed by an external one, is not to be supposed.

No one, he replied, will ever show that the souls of men become more unjust in consequence of death.

And if some one who would rather not admit the immortality of the soul boldly denies this, and says that the dying do really become more evil and unrighteous, then, if the speaker is right, I suppose that injustice, like disease, must be assumed to be fatal to the unjust, and that those who take this disorder die by the natural inherent power of destruction which evil has, and which kills them sooner or later in quite another way from that in which, at present, the wicked receive death at the hands of others as the penalty of their deeds?

Nay, he said, in that case injustice, if fatal to the unjust, will not be so very terrible to him, for he will be delivered from evil. But I rather suspect the opposite to be the truth, and that injustice which murders others keeps the murderer alive—aye, and

unsleeping too ; so far removed is her dwelling-place from being a house of death.

True, I said ; if the inherent natural vice or evil of the soul is unable to kill or destroy her, hardly will that which is appointed to be the destruction of the body, destroy a soul or anything which is not a body.

Yes, that can hardly be.

But the soul which cannot be destroyed by evil, whether inherent or external, must exist for ever, and if existing for ever, 611 must be immortal ?

Certainly.

That is the conclusion, I said ; and, if a true conclusion, then the souls must always be the same, for if none be destroyed they will not diminish in number. Neither will they increase, for the increase of the immortal natures must come from something mortal, and all things would thus end in immortality.

Very true.

But the argument will not allow us to believe this, nor yet to believe that the soul, in her true nature, is full of variety and difference and dissimilarity.

What do you mean ? he said.

The soul, I said, as is now proven, being immortal, must be the fairest of compositions and cannot be compounded of many elements ?

Certainly not.

Her immortality may be proven by the previous argument and by many other arguments ; but to see her as she really is, not as we now behold her, marred by communion with the body and other miseries, you should look upon her with the eye of reason, in her original purity ; and then her beauty would be discovered, and in her image justice would be more clearly seen, and injustice, and all the things which we have described. Thus far, we have spoken the truth concerning her as she appears at present, but we must remember also that we have seen her only in a condition which may be compared to that of the sea-god Glaucus, whose original image can hardly be discerned because his natural members are broken off and crushed and in many ways damaged by the waves, and incrustations have grown over them of seaweed and shells and stones, so that he is liker to

some sea-monster than to his natural form. And the soul is in a similar condition, disfigured by ten thousand ills. But not there, Glaucon, not there must we look.

Where then?

At her love of wisdom. Let us see whom she affects, and what converse she seeks in virtue of her near kindred with the immortal and eternal and divine; also how different she would become if wholly following this superior principle, and borne by a divine impulse out of the ocean in which she now is, and disengaged from the stones and shells and things of earth and rock which in wild variety grow around her because she feeds
612 upon earth, and is crusted over by the good things of this life as they are termed: then you would see her as she is, and know whether she have one form only or many, or what her nature is. Of her character and affections in this present life I have said enough.

True, he said.

Thus, I said, we have fulfilled our obligations to the argument,¹ putting aside the rewards and glories of justice, such as you were saying that Homer and Hesiod introduced; and justice in her own nature has been shown to be best for the soul in her nature: let her do what is just, whether she have the ring of Gyges or not, and besides the ring of Gyges, the helmet of Hades.

Very true.

And now, Glaucon, there will be no harm in further enumerating how many and how great are the rewards which justice and the other virtues procure to the soul from gods and men, both in life and after death?

Certainly not, he said.

Will you repay me, then, what you borrowed in the argument? What did I borrow?

The assumption that the just man should appear unjust and the unjust just: for you were of opinion that even if the true state of the case could not possibly escape the eyes of gods and men, still this admission ought to be made for the sake of the argument, in order that pure justice might be weighed against pure injustice. Do you remember?

¹ Reading ἀπελυσάμεθα.

You would have reason to complain of me if I had forgotten.

Then, as the cause is decided, I demand on behalf of justice that the glory which she receives from gods and men be also allowed to her by you ; having been shown to have reality, and not to deceive those who truly possess her, she may now have appearance restored to her, and thus obtain the other crown of victory which is her's also.

The demand, he said, is just.

In the first place, I said—and this is the first point which you will have to give up—the nature both of just and unjust is truly known to the gods?

Granted.

And if they are both known to them, one must be the friend and the other the enemy of the gods, as we admitted at first?

True.

And the friend of the gods may be supposed to receive from ⁶¹³ them every good, excepting only such evil as is the necessary consequence of former sins?

Certainly.

Then this must be our notion of the just man, that even when he is in poverty or sickness, or any other seeming misfortune, all things will in the end work together for good to him in life and death : for the gods have a care of any one whose desire is to become just and to be like God, as far as man can attain the divine likeness, by the pursuit of virtue?

Yes, he said ; if he is like God he will surely not be neglected by him.

And of the unjust may not the opposite be assumed ?

Certainly.

Such, then, is the prize of victory which the gods give the just ?
Such is my conviction.

And what do they receive of men ? Look at things as they really are, and you will see that the clever unjust are in the case of runners, who run well from the starting-place to the goal but not back again from the goal : they go off at a great pace, but in the end only look foolish, slinking away with their ears down on their shoulders, and without a crown ; but the true runner comes to the finish and receives the prize and is crowned. And this is the way with the just ; he who endures to the end of

every action and occasion of his entire life has a good report and carries off the prize which men bestow.

True.

And now you must allow me to repeat the blessings which you attributed to the fortunate unjust. I shall say of the just as you were saying of them, that as they grow older, they become rulers in their own city if they care to be; they marry whom they like and give in marriage to whomsoever they like; all that you said of the others I now say of these. And, on the other hand, I say of the unjust that the greater number, even though they escape in their youth, are found out at last and look foolish at the end of their course, and when they come to be old and miserable are flouted alike by stranger and citizen; they are beaten and then come those things unfit for ears polite, as you truly term them; they will be racked and burned, as you were saying—but I shall ask you to imagine that I have repeated your tale of horrors. Will you let me assume all this?

Certainly, he said, what you say is true.

614 These, then, are the prizes and rewards and gifts which are bestowed upon the just by gods and men in this present life, in addition to other good things which justice of herself provides.

Yes, he said; and they are fair and lasting.

And yet, I said, all these things are as nothing either in number or greatness in comparison with those other recompenses which await both just and unjust after death. And you ought to hear them, and then they will both have received from our lips a full payment of the debt which the argument owes to them.

Speak, he said; there are few things which I would more gladly hear.

Well, I said, I will tell you a tale; not one of the tales which Odysseus tells to the hero Alcinous, yet this too is a tale of a brave man, Er the son of Armenius, a Pamphylian by birth. He was slain in battle, and ten days afterwards, when the bodies of the dead were taken up already in a state of corruption his body was found unaffected by decay, and carried home to be buried. And on the twelfth day, as he was lying on the funeral

pile, he returned to life and told them what he had seen in the other world. He said that when he left the body his soul went on a journey with a great company, and that they came to a mysterious place at which there were two chasms in the earth; they were near together and over against them were two other chasms in the heaven above. In the intermediate space there were judges seated, who bade the just, after they had judged them, ascend by the heavenly way on the right hand, having the signs of the judgment bound on their foreheads; and in like manner the unjust were commanded by them to descend by the lower way on the left hand; these also had the symbols of their deeds fastened on their backs. He drew near, and they told him that he was to be the messenger who would carry the report of the other world to men, and they bade him hear and see all that was to be heard and seen in that place. Then he beheld and saw on one side the souls departing at either chasm of heaven and earth when sentence had been given on them; and at the two other openings other souls, some ascending out of the earth dusty and worn with travel, some descending out of heaven clean and bright. And always on their arrival they seemed as if they had come from a long journey, and they went out into the meadow with joy, and encamped as at a festival; and those who knew one another embraced and conversed, the souls which came from earth curiously enquiring about the things above, and the souls which came from heaven about the things beneath. And they told one another of what had happened by the way, those from below weeping and sorrowing at the remembrance of the things 615 which they had endured and seen in their journey under the earth (now the journey lasted a thousand years), while those from above were describing heavenly delights and visions of inconceivable beauty. There is not time, Glaucon, to tell all; but the sum was this:—He said that for every wrong which they had done to any one they suffered tenfold; that is to say once in every hundred years—the thousand years answering to the hundred years which are reckoned as the life of man. If for example, there were any who had been the cause of many deaths, or had betrayed or enslaved cities or armies, or been guilty of any other evil behaviour, for each and all of these

they received punishment ten times over, and the rewards of beneficence and justice and holiness were in the same proportion. I need hardly repeat what he said concerning young children dying almost as soon as they were born. Of piety and impiety to gods and parents, and of murderers¹, there were retributions other and greater far which he described. He mentioned that he was present when one of the spirits asked another, 'Where is Ardiaeus the Great?' (Now this Ardiaeus lived a thousand years before the time of Er: he had been the tyrant of some city of Pamphylia, and had murdered his aged father and his elder brother, and was said to have committed many other abominable crimes.) The answer was: 'He comes not hither and will never come. For,' said he, 'this was one of the dreadful sights which was witnessed by us. We were approaching the mouth of the cave, and, having seen all, were about to reascend, when of a sudden Ardiaeus appeared and several others, most of whom were tyrants; and there were also besides the tyrants private individuals who had been great criminals: they were just at the mouth, being, as they fancied, about to return into the upper world, but the opening, instead of receiving them, gave forth a sound, when any of these incurable or unpunished sinners tried to ascend; and then wild men of fiery aspect, who were standing by and knew
616 what that meant, seized and carried off several of them, and Ardiaeus and others they bound head and foot and hand, and threw them down and flayed them with scourges, and dragged them along the road at the side, carding them on thorns like wool, and declaring to the passers by what were their crimes, and that² they were being taken away to be cast into hell.' And of all the many terrors which they had endured, he said that there was none like the terror which each of them felt at that moment, lest they should hear the voice; and when there was silence, one by one they ascended with joy. These, said Er, were the penalties and retributions, and there were blessings as great.

Now when the spirits which were in the meadow had tarried seven days, on the eighth they were obliged to proceed on their journey, and on the fourth day after he said that they came to

¹ Reading *ἀνθρώπιτος*.

² Reading *καὶ ὄτι*.

a place where they could see a line of light, like a column let down from above, extending right through the whole heaven and through the earth, in colour resembling the rainbow, only brighter and purer; another day's journey brought them to the place, and there, in the midst of the light, they saw reaching from heaven the ends by which it is fastened: for this light is the belt of heaven, and holds together the circle of the universe, like the undergirders of a trireme. From these ends is extended the spindle of Necessity, on which all the revolutions turn. The shaft and hook of this spindle are made of steel, and the whorl is made partly of steel and also partly of other materials. Now the whorl is in form like the whorl used on earth; and you are to suppose, as he described, that there is one large hollow whorl which is quite scooped out, and into this is fitted another lesser one, and another, and another, and four others, making eight in all, like boxes which fit into one another; the whorls show their edges on the upper side, and all together form one continuous whorl. This is pierced by the spindle, which is driven home through the centre of the eighth. The first and outermost whorl has the rim broadest, and the seven inner whorls are narrower, in the following proportions—the sixth is next to the first in size, the fourth next to the sixth; then comes the eighth; the seventh is fifth, the fifth is sixth, the third is seventh, last and eighth comes the second. The largest [or fixed stars] is spangled, and the seventh [or sun] is brightest; the eighth [or moon] coloured by the reflected light of the seventh; the second and fifth ⁶¹⁷ [Saturn and Mercury] are in colours like one another, and yellower than the preceding; the sixth [Venus] has the whitest light; the fourth [Mars] is reddish; the third [Jupiter] is in whiteness second. Now the whole spindle has the same motion; but, as the whole revolves in one direction, the seven inner circles move slowly in the other, and of these the swiftest is the eighth; next in swiftness are the seventh, sixth, and fifth, which move together; third in swiftness appeared to move according to the law of this reversed motion the fourth; the third appeared fourth and the second fifth. The spindle turns on the knees of Necessity; and on the upper surface of each circle is a siren, who goes round with them, hymning a single

sound and note. The eight together form one harmony; and round about, at equal intervals, there is another band, three in number, each sitting upon her throne: these are the Fates, daughters of Necessity, who are clothed in white raiment and have crowns of wool upon their heads, Lachesis and Clotho and Atropos, who accompany with their voices the harmony of the sirens—Lachesis singing of the past, Clotho of the present, Atropos of the future; Clotho now and then assisting with a touch of her right hand the motion of the outer circle or whorl of the spindle, and Atropos with her left hand touching and guiding the inner ones, and Lachesis laying hold of either in turn, first with one hand and then with the other.

When Er and the spirits arrived, their duty was to go at once to Lachesis; but first of all there came a prophet who arranged them in order; then he took from the knees of Lachesis lots and samples of life, and going up to a high place, spoke as follows: 'Hear the word of Lachesis, the daughter of Necessity. Mortal souls, behold a new cycle of mortal life. Your genius will not choose you, but you will choose your genius; and let him who draws the first lot first choose a life, which shall be his destiny. Virtue is free, and as a man honours or dishonours her he will have more or less of her; the chooser is answerable—God is justified.' When the Interpreter had thus spoken he scattered lots among them, and each one took up the lot which
618 fell near him, all but Er himself (he was not allowed), and each as he took his lot perceived the number which he had obtained. Then the Interpreter placed on the ground before them the samples of lives; and there were many more lives than the souls present, and there were all sorts of lives—of every animal and of man in every condition. And there were tyrannies among them, some continuing while the tyrant lived, others which broke off in the middle and came to an end in poverty and exile and beggary; and there were lives of famous men, some who were famous for their form and beauty as well as for their strength and success in games, or, again, for their birth and the qualities of their ancestors; and some who were the reverse of famous for the opposite qualities. And of women likewise; there was not, however, any definite character in them, because the soul must of necessity be changed according

to the life chosen. But there was every other quality, and they all mingled with one another, and also with elements of wealth and poverty, and disease and health. And there were mean states also. And here, my dear Glaucon, is the supreme peril of our human state; and therefore the utmost care should be taken. Let each one of us leave every other kind of knowledge and seek and follow one thing only, if peradventure he may be able to learn and may find some one who will make him able to learn and discern between good and evil, and so to choose always and everywhere the better life as he has opportunity. He should consider the bearing of all these things which have been mentioned severally and collectively upon virtue; he should know what the effect of beauty is when combined with poverty or wealth in a particular soul, and what are the good and evil consequences of noble and humble birth, of private and public station, of strength and weakness, of cleverness and dullness, and of all the natural and acquired gifts of the soul, and the operation of them when conjoined; he will then look at the nature of the soul, and from the consideration of all he will be able to determine which is the better and which is the worse; and so he will choose, giving the name of evil to the life which will make his soul more unjust, and good to the life which will make his soul more just; all else he will disregard. For we have seen and know that this is the best choice both in life and after death. A man must take with 619 him into the world below an adamantine faith in truth and right, that there too he may be undazzled by the desire of wealth or the other allurements of evil, lest, coming upon tyrannies and similar villanies, he do irremediable wrongs to others and suffer yet worse himself; but let him know how to choose the mean and avoid the extremes on either side, as far as possible, not only in this life but in all that which is to come. For this is the way of happiness.

And according to the report of the messenger this was exactly what the prophet said at the time: 'Even for the last comer, if he chooses wisely and will live diligently, there is appointed a happy and not undesirable existence. Let not him who chooses first be careless, and let not the last despair.' And while he was speaking he who had the first choice came for-

ward and in a moment chose the greatest tyranny; his mind having been darkened by folly and sensuality, he had not thought out the whole matter, and did not see at first that he was fated, among other evils, to devour his own children. But when he had time to reflect, and saw what was in the lot, he began to beat his breast and lament over his choice, not abiding by the proclamation of the prophet; for, instead of throwing the blame of his misfortune on himself, he accused chance and the gods, and everything rather than himself. Now he was one of those who came from heaven, and in a former life had dwelt in a well-ordered State, but his virtue was a matter of habit only, and he had no philosophy. And one might say of others who were similarly overtaken, that the greater number of them came from heaven; and therefore they had never known trouble, whereas the pilgrims who came from earth having themselves suffered and seen others suffer were not in a hurry to choose. And owing to this inexperience of theirs, and also because the lot was a chance, many of the souls exchanged a good destiny for an evil or an evil for a good. For if a man had always on his arrival in this world dedicated himself from the first to sound philosophy, and had been moderately fortunate in the number of the lot, he might, as the messenger reported, be happy here, and also his journey to another life and return to this, instead of being rough and underground, would be smooth and heavenly. Most curious, he said, was the spectacle of the election—sad and laughable and strange; the souls generally
 620 choosing with a reference to their experience of a previous life. There he saw the soul which had once been Orpheus choosing the life of a swan out of enmity to the race of women, hating to be born of a woman because they had been his murderers; he saw also the soul of Thamyras choosing the life of a nightingale; birds, on the other hand, like the swan and other musicians, choosing to be men. The soul which obtained the twentieth¹ lot chose the life of a lion, and this was the soul of Ajax the son of Telamon, who would not be a man, remembering the injustice which was done him in the judgment of the arms. The next was Agamemnon, who took the life

¹ Reading *εἰκοστήν*.

of an eagle, because, like Ajax, he hated human nature on account of his sufferings. About the middle was the lot of Atalanta; she, seeing the great fame of an athlete, was unable to resist the temptation: and after her there came the soul of Epeus the son of Panopeus passing into the nature of a woman cunning in the arts; and far away among the last who chose, the soul of the jester Thersites was putting on the form of a monkey. There came also the soul of Odysseus having yet to make a choice, and his lot happened to be the last of them all. Now the recollection of former toils had disenchanted him of ambition, and he went about for a considerable time in search of the life of a private man who had no cares; he had some difficulty in finding this, which was lying about and had been neglected by everybody else; and when he saw it, he said that he would have done the same had he been first instead of last, and that he was delighted at his choice. And not only did men pass into animals, but I must also mention that there were animals tame and wild who changed into one another and into corresponding human natures—the good into the gentle and the evil into the savage, in all sorts of combinations. All the souls had now chosen their lives, and they went in the order of their choice to Lachesis, who sent with them the genius whom they had severally chosen, to be the guardian of their lives and the fulfiller of the choice: this genius led the soul first to Clotho, and drew them within the revolution of the spindle impelled by her hand, thus ratifying the destiny of each; and then, when they were fastened to this, carried them to Atropos, who spun the threads and made them irreversible, whence without turning round they passed beneath the throne 621 of Necessity; and when they had all passed, they marched on in a scorching heat to the plain of Forgetfulness, which was a barren waste destitute of trees and verdure; and then towards evening they encamped by the river of Unmindfulness, the water of which no vessel can hold; of this they were all obliged to drink a certain quantity, and those who were not saved by wisdom drank more than was necessary; and each one as he drank forgot all things. Now after they had gone to rest, about the middle of the night there was a thunderstorm and earthquake, and then in an instant they were driven all manner

of ways like stars shooting upwards to their birth. He himself was hindered from drinking the water. But in what manner or by what means he returned to the body he could not say; only, in the morning, awaking suddenly, he saw himself lying on the pyre.

And thus, Glaucon, the tale has been saved and has not perished, and will save us if we are obedient to the word spoken; and we shall pass safely over the river of Forgetfulness and our soul will not be defiled. Wherefore my counsel is, that we hold fast to the heavenly way and follow after justice and virtue always, considering that the soul is immortal and able to endure every sort of good and every sort of evil. Thus shall we live dear to one another and to the gods, both while remaining here and when, like conquerors in the games who go round to gather gifts, we receive our reward. And it shall be well with us both in this life and in the pilgrimage of a thousand years which we have been reciting.

T I M A E U S.

INTRODUCTION.

OF all the writings of Plato the *Timaeus* is the most obscure and repulsive to the modern reader, and has nevertheless had the greatest influence over the ancient and mediaeval world. The obscurity arises in the infancy of physical science, out of the confusion of theological, mathematical, and physiological notions, out of the desire to conceive the whole of nature without any adequate knowledge of the parts, and from a greater perception of similarities which lie on the surface than of differences which are hidden from view. To bring sense under the control of reason; to find some way through the labyrinth or chaos of appearances, either the high way of mathematics, or more devious paths suggested by the analogy of man with the world, and of the world with man; to see that all things have a cause and are tending towards an end—this is the spirit of the ancient physical philosopher. But we neither appreciate the conditions of knowledge to which he was subjected, nor have the ideas which fastened upon his imagination the same hold upon us. For he is hovering between matter and mind; he is under the dominion of abstractions; his impressions are taken almost at random from the outside of nature; he sees the light, but not the objects which are revealed by the light; and he brings into juxtaposition things which to us appear wide as the poles asunder, because he finds nothing between them. He passes abruptly from persons to ideas and numbers, and from ideas and numbers to persons; he confuses subject and object, first and final causes, and is dreaming of geometrical figures lost in a flux of sense. And an effort of mind is required on our parts in order to understand his double language, or to apprehend the twilight character of this knowledge, and the genius

of ancient philosophers, which under such conditions seems by a divine power in many instances to have anticipated the truth.

The influence which the *Timaeus* has exercised upon posterity is partly due to a misunderstanding. In the supposed depths of this dialogue the Neo-Platonists found hidden meanings and connections with the Jewish and Christian Scriptures, and out of them they elicited doctrines quite at variance with the spirit of Plato. Believing that he was inspired by the Holy Ghost, or had received his wisdom from Moses, they seemed to find in his writings the Christian Trinity, the Word, the Church, the creation of the world in a Jewish sense, as they really found the personality of God or mind, and the immortality of the soul. All religions and philosophies met and mingled in the schools of Alexandria, and the Neo-Platonists had a method of interpretation which could elicit any meaning out of any words. They were really incapable of distinguishing between the opinions of one philosopher and another, or between the serious thoughts of Plato and his passing fancies. They were absorbed in his theology, and under the dominion of his name, while that which was truly great and truly characteristic of him, his effort to realize and connect abstractions, was not understood by them at all. And yet the genius of Plato and Greek philosophy reacted upon the East, and a Greek element of thought and language overlaid the deeper and more pervading spirit of Orientalism.

There is no danger of the modern commentators on the *Timaeus* falling into the absurdities of the Neo-Platonists. In the present day we are well aware that an ancient philosopher is to be interpreted from himself, and by the contemporary history of thought. We know that mysticism is not criticism. The fancies of the Neo-Platonists are only interesting to us because they exhibit a phase of the human mind which prevailed widely in the first centuries of the Christian era, and is not wholly extinct in our own day. But they have nothing to do with the interpretation of Plato, and in spirit they are opposed to him. They are the feeble expression of an age which has lost the power not only of creating great works, but even of understanding them. They are the spurious birth of a marriage between philosophy and tradition, between Hellas and the East—*εἰκὸς γεννᾶν νόθα καὶ φαῦλα* (*Rep.* vi. 496 A). Whereas the so-called mysticism of Plato is purely Greek, arising out of his imperfect knowledge and high aspirations,

and is the growth of an age in which philosophy is not wholly separated from poetry and mythology.

A greater danger with modern interpreters of Plato is the tendency to regard the *Timaeus* as the centre of his system. We do not know how Plato would have arranged his own dialogues, or whether the thought of arranging any of them, besides the two 'Trilogies' which he has expressly connected, was ever present to his mind. But, if he had arranged them, there are many indications that this is not the place which he would have assigned to the *Timaeus*. We observe, first of all, that the dialogue is put into the mouth of a Pythagorean philosopher, and not of Socrates. And this is required by dramatic propriety; for the investigation of nature was expressly renounced by Socrates in the *Phaedo*. Nor does Plato himself attribute any importance to his guesses at science. He is not at all absorbed by them, as he is by the *idea* of good. He is modest and hesitating, and confesses that his words partake of the uncertainty of the subject. Again, the dialogue is primarily concerned with the animal creation, including under this term the heavenly bodies, and with man only as one among the animals. But we can hardly suppose that Plato would have preferred the study of nature to man, or that he would have deemed the formation of the world and the human frame to have the same interest which he ascribes to the mystery of being and not being, or to the great political problems which he discusses in the *Republic* and the *Laws*. There are no speculations on physics in the other dialogues of Plato, and he himself regards the consideration of them as a rational pastime only. He is beginning to feel the need of further divisions of knowledge; and is becoming aware that besides dialectic, mathematics, and the arts, there is another field which has been hitherto unexplored by him. But he has not as yet defined this intermediate territory which lies somewhere between medicine and mathematics, and he would have felt that there was as great an impiety in ranking theories of physics first in the order of knowledge, as in placing the body before the soul.

Thus we are led by Plato himself to regard the *Timaeus*, not as the centre or inmost shrine of the edifice, but as a detached building in a different style, framed, not after the Socratic, but after some Pythagorean model. As in the *Cratylus* and *Parmenides*, we are uncertain whether Plato is expressing his own opinions, or appropriating and perhaps

improving the philosophical speculations of others. In all three dialogues he is exerting his dramatic and imitative power; in the *Cratylus* mingling a satirical and humorous purpose with true principles of language; in the *Parmenides* overthrowing Megarianism by a sort of ultra-Megarianism, which discovers contradictions in the one as great as those which have been previously shown to exist in the ideas. There is a similar uncertainty about the *Timaeus*; while in the first part of the dialogue Plato is filled with a Pythagorean contemplation of the heavens, in the latter part he treats in a bald and superficial manner of the functions and diseases of the human frame, which he vainly attempts to connect with his astronomical theories.

If we allow for the difference of subject, and for some growth in Plato's own mind, the discrepancy between this and the other dialogues will not appear to be great. The relation of the ideas to God or of God to the world was differently conceived by him at different times of his life. In all his later dialogues we observe a tendency in him to personify mind or God, and he therefore naturally inclines to view creation as the work of design. The creator is like a human artist who frames in his mind a plan which he executes by the help of his servants. Thus the language of philosophy which speaks of first and second causes is crossed by another sort of phraseology: 'God made the world because he was good, and the demons ministered to him.' The *Timaeus* is cast in a more theological and less philosophical mould than the other dialogues, but the same general spirit is apparent; there is the same dualism or opposition between the ideal and actual—the soul is prior to the body, the intelligible and unseen to the visible and corporeal. There is the same distinction between knowledge and opinion which occurs in the *Theaetetus* and *Republic*, the same enmity to the poets, the same combination of music and gymnastics. The doctrine of transmigration is still held by him as in the *Phaedrus*; and the soul has a view of the heavens in a prior state of being. The ideas also remain, but they have become types in nature, forms of men, animals, birds, fishes. And the attribution of evil to physical causes accords with the doctrine which he maintains in the *Laws* respecting the involuntariness of vice.

The style and plan of the *Timaeus* differ greatly from that of any other of the Platonic dialogues. The language is weighty, abrupt, and in some passages sublime. But Plato has not the same mastery over his instrument which he exhibits in the *Phaedrus* or *Symposium*. Nothing

can exceed the beauty or art of the introduction, in which he is using words after his accustomed manner. But in the rest of the dialogue the power of language seems to fail him. He could write in one style, but not in another, and the Greek language had not as yet been fashioned by any poet or philosopher to describe physical phenomena. The early physiologists had generally written in verse; Democritus and Anaxagoras never attained to a connected or periodic style. And hence we find the same sort of clumsiness in the *Timaeus* of Plato which characterizes the philosophical poem of Lucretius. There is a want of flow and often a defect of rhythm; the connection is frequently obscure, and there is a greater use of apposition and more of repetition than occurs elsewhere in Plato. His employment of the particles is sometimes unmeaning; and he places sentences side by side, leaving the relation between them to be inferred. The narrative portion of the *Timaeus* retains several characteristics of the first Greek prose composition; for the great master of language was speaking on a theme with which he was imperfectly acquainted, and had no words to express his meaning. The rugged grandeur of the opening passage of the speech of *Timaeus* (*Tim.* 28-31) may be compared with the more harmonious beauty of a similar passage in the *Phaedrus* (245).

To the same cause we may attribute the want of plan. Plato had not the command of his materials which would have enabled him to produce a perfect work of art. And he warns his reader, that as is the nature of the subject so will the style be—as his knowledge is fragmentary and unconnected, his style partakes of the same character (*Tim.* 29 B). His speculations about the Eternal, his theories of creation, his mathematical anticipations, are supplemented by desultory remarks on the one immortal and the two mortal souls of man, on the functions of the bodily organs in health and disease, on sight, hearing, smell, taste, and touch. He soars into the heavens, and then, as if his wings were suddenly clipped, he walks ungracefully and with difficulty upon the earth. The greatest things in the world, and the least things in man, are brought within the compass of a short treatise. But the intermediate links are missing, and we cannot be surprised that there should be a want of unity in a work which embraces astronomy, theology, physiology, and natural philosophy in a few pages.

It is not easy to determine how Plato's cosmos may be presented to the reader in a clearer and shorter form; or how we may supply a

thread of connection to his ideas without giving greater consistency to them than they possessed in his mind, or adding on consequences to which he would have been a stranger. For he has glimpses of the truth, but no comprehensive or perfect vision. There are isolated expressions which have a wonderful depth and power; but we are not justified in assuming that they are the keynotes of the whole, or had any greater significance to his mind than remarks which to us appear trivial; they were, perhaps, truer than he knew. With a view to the illustration of the *Timaeus* I propose to divide this Introduction into sections, of which the first will contain an outline of the dialogue: (2) I shall consider the aspects of nature which presented themselves to Plato and his age: (3) the theology and physics of the *Timaeus*, including the soul of the world, the conception of time and space, and the composition of the elements: (4) in the fourth section I shall consider the Platonic astronomy, and the position of the earth. There will remain, (5) the psychology, (6) the physiology of Plato, and (7) his analysis of the senses to be briefly commented upon: (8) lastly, we may examine in what points Plato approaches or anticipates the discoveries of modern science.

§ I.

Socrates begins the *Timaeus* with a summary of the *Republic*. He touches on the composition of the State, and the double nature of the guardians, on the community of property and of women and children. But he makes no mention of the second education, or of the government of philosophers.

And now he desires that the ideal State should be realized in life and action; he would like to see how she behaved in some great struggle. But he is unable to invent such a narrative himself; and he is afraid that the poets are equally incapable; for, although he has nothing to say against them, he remarks that they are a tribe of imitators, who can only describe what they have seen. And he fears that the Sophists, who are plentifully supplied with graces of speech, in their erratic way of life having never had a city or house of their own, may err in their ideas of philosophy and statesmanship. And therefore to you I turn, *Timaeus*, citizen of *Locris*, who are at once a philosopher and a statesman, and to you, *Critias*, whom all Athenians know to be similarly accomplished, and to *Hermocrates*, who is also fitted by nature and education to share in our discourse. *Hcr.* 'We

will do our best, and have been already preparing; for on our way home, Critias told us of an ancient tradition, which I wish, Critias, that you would repeat to Socrates.' 'I will, if Timaeus approves.' 'I approve.' Listen then, Socrates, to a tale of Solon's, who, being the friend of Dropidas my great grandfather, told it to my grandfather Critias, and he told me. The narrative related to ancient famous actions of the Athenian people, and one special one, which I will rehearse in honour of you and of the goddess. Critias when he told this tale of the olden time, was ninety years old, I being not more than ten. The occasion was the festival of the Apaturia or registration of youth, at which our parents gave prizes for recitation. Some poems of Solon were recited by the boys. They had not at that time gone out of fashion, and the recital of them led some one to say, perhaps in compliment to Critias, that Solon was not only the wisest of men but also the best of poets. The old man brightened up at hearing this, and said: Had Solon only had the leisure which was required to complete the great poem which he brought with him from Egypt he would have been as distinguished as Homer and Hesiod. 'And what was the subject of the poem?' said the person who addressed him. The subject was a very noble one; he described the most famous action in which the Athenian people were ever engaged. But the memory of their exploits has passed away owing to the lapse of time and the extinction of the actors. 'Tell us,' said the other, 'the whole story, and where Solon heard the story.' He replied—There is at the head of the Egyptian Delta, where the river Nile divides, a city and district called Sais; the city was the birthplace of King Amasis, and is under the protection of the goddess Neith or Athene. The citizens have a friendly feeling towards the Athenians, believing themselves to be related to them. Hither came Solon, and was received with honour; and here he first learnt, by conversing with the Egyptian priests, how ignorant he and his countrymen were of antiquity. Perceiving this, and with the view of eliciting information from them, he told them the tales of Phoroneus and Niobe, and also of Deucalion and Pyrrha, and he endeavoured to count the generations which had since passed. Thereupon an aged priest said to him, 'O Solon, Solon, you Hellenes are ever young, and there is no old man who is a Hellene.' 'What do you mean?' he asked. 'In mind,' replied the priest, 'I mean to say that you are children; there is no opinion or tradition of knowledge among you which is white with age; and I will tell you

why. Like the rest of mankind you have suffered from convulsions of nature, which are chiefly brought about by the two great agencies of fire and water. The latter is symbolized in the Hellenic tale of young Phaëthon who drove his father's horses the wrong way, and having burnt up the earth was himself burnt up by a thunderbolt. For there occurs at long intervals a derangement of the heavenly bodies, and then the earth is destroyed by fire. At such times, and when fire is the agent, those who dwell by rivers or on the seashore are safer than those who dwell upon high and dry places, who in their turn are safer when the danger is from water. Now the Nile is our saviour from fire, and rising only from below never does any harm to us by water; whereas, when a deluge comes, the inhabitants of other cities and countries are swept by the rivers into the sea. The memorials which your own and other nations have once had of the famous actions of mankind perish in the waters at certain periods; and the rude survivors in the mountains begin again, knowing nothing of the world before the flood. But in Egypt the traditions of our own and other lands are by us registered for ever in our temples. The genealogies which you have recited to us out of your own annals, Solon, are a mere children's story. For in the first place, you remember one deluge only, and there were many of them, and you know nothing of that fairest and noblest race of which you are a seed or remnant. The memory of them was lost, because there was no written voice among you; for in the times before the great flood Athens was the greatest and best of cities and did the noblest deeds and had the best constitution of any under the face of heaven.' Solon marvelled, and desired to be informed of the particulars. 'You are welcome to hear them,' said the priest, 'both for your own sake and for that of the city, and above all for the sake of the goddess who is the common foundress of both our cities. Nine thousand years have elapsed since she founded yours, and eight thousand since she founded ours, as our annals record. Many laws exist among us which are the counterpart of yours as they were in the olden time. I will briefly describe them to you, and you shall read the account of them at your leisure in the sacred registers. In the first place, there was a caste of priests among the ancient Athenians, and another of artisans; also castes of shepherds, hunters, and husbandmen, and lastly of warriors, who, like the warriors of Egypt, were separated from the rest, and carried shields and spears, a custom which the goddess first taught you, and

then the Asiatics, and we among Asiatics first received from her. Observe again, what care the law took in the pursuit of wisdom, searching out the deep things of the world, and applying them to the use of man. The spot of earth which the goddess chose had the best of climates, and produced the wisest men; in no other was she herself, the philosopher and warrior goddess, so likely to have votaries. And there you dwelt as became the children of the gods, excelling all men in virtue, and many famous actions are recorded of you. The most famous of them all was the overthrow of the island of Atlantis. This was a continent lying over against the Pillars of Heracles, in extent greater than Libya and Asia put together, and was the passage to other islands and to a great ocean of which the Mediterranean sea was only the harbour; and within the Pillars the empire of Atlantis reached in Europe to Tyrrhenia and in Libya to Egypt. This mighty power was arrayed against Egypt and Hellas and all the countries bordering on the Mediterranean. Then did your city bravely, and won renown over the whole earth. For at the peril of her own existence, and when the other Hellenes had deserted her, she repelled the invader, and of her own accord gave liberty to all the nations within the Pillars. A little while afterwards there was a great earthquake and your warrior race all sank into the earth; and the great island of Atlantis also disappeared in the sea. This is the explanation of the shallows which are found in that part of the Atlantic ocean.'

Such was the tale, Socrates, which Critias heard from Solon; and I noticed when listening to you yesterday, how close the resemblance was between your city and citizens and the ancient Athenian State. But I would not speak at the time, because I wanted to refresh my memory. I had heard the old man when I was a child, and though I could not remember the whole of our yesterday's discourse, I was able to recall every word of this, which is branded into my mind; and I am prepared, Socrates, to rehearse to you the entire narrative. The imaginary State which you were describing may be identified with the reality of Solon, and our antediluvian ancestors may be your citizens. 'That is excellent, Critias, and very appropriate to a Panathenaic festival; the truth of the story is a great advantage.' Then now let me explain to you the order of our entertainment; first, Timaeus, who is a natural philosopher, will speak of the origin of the world, going down to the creation of man, and then I shall

receive the men whom he has created, and some of whom will have been educated by you, and introduce them to you as the lost Athenian citizens of whom the Egyptian record spoke. As the law of Solon prescribes, we will bring them into court and judge them ourselves. I see, replied Socrates, that I shall be well entertained; and do you, Timaeus, offer up a prayer and begin:

Tim. All men who have any right feeling at the beginning of any enterprise call upon the Gods; and he who is about to speak of the origin of the universe has a special need of their aid. May my words be acceptable to them, and may I speak in the manner which will be most intelligible to you and will best express my meaning!

First, I must distinguish between endless being which has no becoming and is apprehended by reason and reflection, and endless becoming which has no being and is conceived by opinion with the help of sense. All that becomes and is created is the work of a cause, and that is fair which the artificer makes after an eternal pattern, but whatever is fashioned after a created pattern is not fair. Is the world then created or uncreated? that is the first question. Created, I reply, being visible and tangible and having a body, and therefore sensible; and if sensible, then created; and if created, made by a cause, and the cause is the ineffable father of all, who had in view an eternal archetype. For to imagine that the archetype was created would be blasphemy, seeing that the world is the noblest of creations, and God is the best of causes. And the world being thus created according to the eternal pattern is the copy of something; and we may assume that words and ideas are akin to the matter of which they speak. The unchanging or intelligible has permanent forms of expression, the created image likely or probable ones; being is to becoming what truth is to belief. And in the variety of opinions which have arisen about God and the nature of the world we must be content to take probability for our guide, considering that I who am the speaker, and you who are the judges are only men, and to probability we may attain but no further.

Soc. Excellent, Timaeus, I like your manner of approaching the subject—proceed.

Tim. Why did the Creator make the world? He was good, and therefore not jealous, and being free from jealousy he desired that all things should be like himself. Wherefore he set in order the visible

world, which he found in disorder. Now he who is the best could only create the fairest, and reflecting that of visible things the intelligent is superior to the unintelligent, he put intelligence in soul and soul in body, and framed the universe to be the best and fairest work in the order of nature, and the world became a living soul through the providence of God.

In the likeness of what animal was the world made? That is the third question. The form of the animal was a whole, and contained all intelligible beings, and the visible animal, made after the pattern of this, included all visible creatures.

Were there many heavens or one only? That is the fourth question. One only, having no other. For if there had been more than one they would have been the parts of a third which would have been the true pattern of the world, and therefore there is, and will ever be, one only-begotten and created heaven. Now that which is created is of necessity corporeal and visible and tangible, visible and therefore lighted by fire, tangible and therefore solid and made of earth. But two terms must be united by a third, which is a mean between them, and had the earth been a surface only, three would have sufficed, but four terms are required in the construction of a solid. And as the world was to be solid, between the elements of fire and earth God placed two other elements of air and water, and arranged them in a continuous proportion,

fire : air :: air : water, and as air : water :: water : earth,

and so put together a visible heaven, which was perceptible to sight and touch, having harmony and friendship in the union of the four elements, and being at unity with itself was indissoluble except by the hand of the framer. Each of the elements was taken into the universe whole and entire; for he considered that the animal should be perfect, and one, leaving no remnants out of which another animal could be created, and should also be free from old age and disease, which are produced by external forces. And as he was to contain all, he was himself made in the all-containing form of a sphere, round as from a lathe and every way equidistant from the centre, as was natural and suitable to him. He was finished and smooth, having neither eyes, ears, nor hands; for there was nothing without him which he could see or hear, and he had no need to carry food to his mouth,

or breathe the outer air, and he did not require hands, for there was nothing without him of which he could take hold. All that he did was done rationally in and by himself; and he moved in a circle turning within himself; which is the most intellectual of motions, but the other six motions were wanting to him; wherefore the universe had no feet or legs.

And so the thought of God made a God in the image of a perfect body, having intercourse with himself and needing no other, but in every part harmonious and self-contained and truly blessed. The soul was first made by him—the elder to rule the younger; not in the order in which our wayward fancy has led us to describe them, but the soul first and afterwards the body. God took of the unchangeable and indivisible essence and also of the divisible and corporeal, and out of the two he made a third nature, which was in a mean between them, and partook of the same and the other, the intractable nature of the other being compressed into the same. He then began to divide into portions the mass which he had compounded, in the ratios of 1, 2, 3, 4, 9, 8, 27, and proceeded to fill up the double and triple intervals

$$\left[\bar{1}, \frac{4}{3}, \frac{3}{2}, \bar{2}, \frac{8}{3}, 3, \bar{4}, \frac{16}{3}, 6, \bar{8} \right]$$

$$\left[\bar{1}, \frac{3}{2}, 2, \bar{3}, \frac{9}{2}, 6, \bar{9}, \frac{27}{2}, 18, \bar{27} \right]$$

in which double series of numbers are two kinds of means; the one exceeds and is exceeded by equal parts of the extremes, e. g. $1 \frac{4}{3} 2$; the other kind of mean is one which is equidistant from the extremes—2, 4, 6. Between the former intervals he introduced ratios of thirds, 3 : 2; of fourths, 4 : 3; of ninths, 9 : 8; and the interval of a fourth he filled up with a ninth, leaving a remnant which is in the ratio of 256 : 243. The entire compound was divided by him lengthways into two parts, which he united at the centre like the letter X, and bent them into an inner and outer circle or sphere, cutting one another again at a point over against the point at which they cross. The outer circle or sphere was named the sphere of the same—the inner the sphere of the other or diverse, and the one revolved horizontally to the right, the other diagonally to the left. To the sphere of the same which was undivided he gave dominion, but the sphere of the other or manifold was distributed into seven unequal orbits, having intervals in ratios

of twos and threes, three of either sort, and he bade them move in opposite directions to one another—three of them, the Sun, Mercury, Venus, with equal swiftness, and the remaining four—the Moon, Saturn, Mars, Jupiter, with unequal swiftness to the three and to one another, but all in due course.

When the Creator had made the soul he made the body within her, and the soul interfused everywhere from the centre to the circumference of heaven, herself turning in herself, began a divine life of rational and everlasting motion. The body of heaven is visible, but the soul is invisible, and partakes of reason and harmony, and is the best of creations, being the work of the best. And being composed of the same, the other, and the essence, these three, and also divided and bound in harmonical proportion, and revolving backwards and forwards in herself—the soul when touching anything which has essence, whether divided or undivided, is stirred to utter the sameness or diversity of one thing with another, and to tell how and when and where individuals are affected or related, whether in the world of change or of essence. When reason is in the neighbourhood of sense, and the circle of the other or manifold is also moving truly, then arise true opinions and beliefs; when reason is in the sphere of thought, and the circle of the same runs smoothly, then intelligence is perfected.

When the Father who begat the world saw the image which he had made of the Eternal Gods moving and living, he rejoiced; and in his joy resolved, since the archetype was eternal, to make the creature eternal as far as this was possible. Wherefore he made an image of eternity which is time, having an uniform motion according to number, parted into months and days and years, and also having greater divisions of past, present, and future. These all apply to becoming in time, and have no meaning in relation to the eternal nature, which ever is and never will be, for the unchangeable is never older or younger, and when we say that he was or will be, we are mistaken, for we are speaking of becoming, and not of true being; and equally wrong are we in saying that what has become has become and that what is becoming is becoming, and that what is not is not. These are the forms of time which imitate eternity and move in a circle measured by number.

Thus was time made in the image of the eternal nature and together with the heavens, in order that if they were dissolved time might perish

with them. And God made the sun and moon and five other wanderers, as they are called, seven in all, and to each of them he gave a body moving in an orbit, being one of the seven orbits into which the circle of the other was divided. He put the moon in the orbit which was nearest to the earth, the sun in that next, the morning star and Mercury in the orbits which move opposite to the sun, but with equal swiftness, and this is the reason why they overtake and are overtaken by one another. All these bodies became living creatures, and learnt their appointed tasks, and began to move, the nearer more swiftly, the remoter more slowly, according to the diagonal movement of the other, which was controlled by the movement of the same. And by reason of the control of the same, as the movement of the other was in an opposite direction, that appeared fastest which was slowest, and that which overtook others appeared to be overtaken by them. And God lighted a fire in the second orbit which is called the sun, to give light over the whole heaven, and to teach intelligent beings that knowledge of number which is derived from the revolution of the same. Thus arose day and night, which are the periods of the most intelligent nature; a month was created by the revolution of the moon, a year by that of the sun. Other periods of wonderful length and complexity are not observed by men in general, although there is a cycle or perfect year at the completion of which they all meet and coincide. To this end the stars came into being, that the created heaven might imitate the eternal nature.

Thus far the universal animal was made in the divine image, but the other animals were not as yet included in him. And God created them according to the patterns or species of them which existed in the divine image. There are four of them, one of gods, another of birds, a third of fishes, and a fourth of animals. The gods were made in the form of a circle, which is the most perfect figure and the figure of the universe. They were created chiefly of fire, that they might be bright, and were made to know and follow the best, and to be scattered over the heavens, whose glory they were to be. Two kinds of motion were assigned to them—first, the revolution in the same and around the same, in peaceful unchanging thought of the same; and to this was added a forward motion which was under the control of the same. Thus then the fixed stars were created, being divine and eternal animals, revolving on the same spot, and the wandering

stars, in their courses, were created after their likeness. The earth, which is our nurse, clinging around the pole extended through the universe, he made to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven. Vain would be the labour of telling about all the figures of them, moving as in dance, and their conjunctions and oppositions, and when and where and behind what other stars they appear or disappear and give signs of the future terrible to man—to tell of all this without looking at the plan of them would be labour in vain.

The knowledge of the other gods is beyond us, and we can only accept the traditions of the ancients, who were the children of the gods, as they said, and surely they must have known their own ancestors. Although they give no proof of their words they seem to be speaking of matters familiar to them, and we must believe them as the law requires. They tell us that Oceanus and Tethys were the children of Earth and Heaven; Phorcys, Cronos, and Rhea are in the next generation, and are followed by Zeus and Herè, whose brothers and children are known to everybody.

When all of them, both those who show themselves in the sky, and those who retire from view, had come into being, the Creator addressed them thus:—‘Gods, and sons of gods, my works, if I will, are indissoluble. That which is bound may be dissolved, but only an evil being would dissolve that which is harmonious and happy. And although you are not immortal you shall not die, for I will hold you together. Hear me, then:—Three tribes of mortal beings have still to be created, and if created by me they might become like gods. Do ye therefore make them, as I have made you; I will implant in them the seed of immortality, and you shall weave together the mortal and immortal, and provide food for them, and receive them again in death.’ Thus he spake, and poured the remains of the elements into the cup in which he had mingled the soul of the universe. They were no longer pure as before, but diluted; and out of the mixture which he had made he distributed souls equal in number to the stars, and assigned each to a star—then having mounted them, as in a chariot, he showed them the nature of the universe, and told them of their future birth and human lot. They were to be sown in the planets which are the vessels of time, and out of them was to come forth the most religious of animals, which, as human nature was of two kinds, would hereafter be called

man. The souls were implanted in bodies, which were in a perpetual flux, whence, he said, arose, first, sensation; secondly, love, which is a mixture of pleasure and pain; thirdly, fear and anger, and the opposite affections: and if they conquered these, they would live righteously, but if they were conquered by them, unrighteously. He who lived well would return to the habitation of his star, and would there have a blessed existence; but, if he lived ill, he would pass into the nature of a woman, and if he did not then alter his evil ways, into the likeness of some animal, until he returned to the courses of the like and the same, and the reason which was in him reasserted her sway over the elements of fire, air, earth, water, which had engrossed her, and he regained his first and better nature. Having given this law to his creatures, that so he might be guiltless of their future evil, he sowed them, some in the earth, some in the moon, and some in the other vessels of time; and he ordered the younger gods to frame human bodies for them and to make the necessary additions to them, and to avert from them all but self-inflicted evil.

Meanwhile he remained in his own nature, and his children fulfilled his commands. Receiving from him the immortal principle, they borrowed portions of earth, air, fire, water, hereafter to be returned, which they fastened together, not with the adamantine bonds which bound themselves, but by little invisible pegs, making the body one, subject to influx and efflux, and containing the courses of the soul. These swelling and surging as in a river moved irregularly and irrationally in all the six possible ways, forwards, backwards, right, left, up and down. But violent as were the internal and alimentary fluids, the tide became still more violent when the body came into contact with the flaming fire, or the solid earth, or the gliding waters, or the stormy wind; the motions produced by these impulses pass through the body to the soul and have the name of sensations. They accompany the ever-flowing current, and shake the courses of the soul, binding fast the principle of the same and twisting in all sorts of ways the nature of the other, and the harmonical ratios of twos and threes and the mean terms which connect them, until the circles are bent and disordered and their motion becomes irregular—these are greatly affected by them, though they cannot be wholly dissolved except by the creator. You may imagine a motion of the body in which the head is knocking against the ground, and the legs striking out in the air, and the top is bottom

and the left right. This is what happens when the motions of the soul come into contact with any external thing; they say the same or the other in a manner which is the very opposite of the truth, and they become false and foolish, and have no guiding principle in them. And when external impressions enter into them, they are really conquered, though they seem to conquer.

By reason of these affections the soul is at first without sense, but as time goes on the stream of nutriment abates, and the circles return to their natural figure and the courses of the soul have a regular motion, which apprehends the same and the other and gives the use of reason. The soul of him who has education is whole and perfect and escapes the worst disease, but, if education be neglected, he walks lamely through life and returns good for nothing to the world below. This, however, is an after-stage—at present, we are only concerned with the creation of the body and soul.

The two divine courses were encased by the gods in a sphere which is called the head, and is the god and lord of us. And to this they gave the body to be a vehicle, and the members to be instruments, having the power of flexion and extension. Such was the origin of legs and arms. In the next place, the gods gave a forward motion to the human body, because the front part of man was the more honourable and had authority. And they put in a face in which they inserted organs to minister in all things to the providence of the soul. They first contrived the eyes, into which they conveyed the gentle light of everyday life, making the fire which is within us to flow pure through the pupil of the eye and meet the light of day. When the light of the eye is surrounded by the light of day then like falls upon like, and there is a union of them formed in any direction in which the visual ray strikes upon the light coming from an object. And as like is affected by like, whatever touches or is touched by this stream of vision is diffused over the whole body and finds a way into the soul. But when the visual ray goes forth into the darkness, then like falls upon unlike—the eye no longer sees, and we go to sleep. The fire, or light which is kept in by the eyelids, equalizes the inward motions, and there is rest accompanied by few dreams; only when the greater motions remain they engender in us corresponding visions of the night. And now we shall be able to understand the nature of reflections in mirrors. The fires from within and from without meet about the smooth and bright surface of the

mirror; and when they meet in a manner contrary to the usual mode of meeting, the objects seen in them are inverted in various ways, according to the form and position of the mirrors.

These are the second causes which God used as his ministers in fashioning the world. They are thought by many to be the prime causes, but they are not so; for they are destitute of mind and reason, and the lover of mind will not allow that there are any prime causes other than the rational and invisible ones—these he investigates first, and afterwards those which are visible and are moved by others, and work by chance and without order. Of the second or concurrent causes of sight I have already spoken, and I will now speak of the higher purpose of God in giving us eyes. Sight is the source of the greatest benefits to us; for if our eyes had never seen the sun, stars, and heavens, the very words which we are using would not have been uttered. The sight of them and their revolutions has given us the knowledge of number and time, and the power of enquiry, and we have derived philosophy from them, which is the great blessing of human life; not to speak of the lesser benefits which even the vulgar can appreciate. God gave us the faculty of sight that we might behold the order of the heavens and create a corresponding order in our own erring minds. To the like end the gifts of speech and hearing were bestowed upon us; not for the sake of irrational pleasure, but in order that we might harmonize the courses of the soul by sympathy with the harmony of sound, and reconcile man to himself, and cure him of his irregular and graceless ways.

Thus far we have spoken of the works of mind; and there are other works done from necessity, which we must now place beside them; for the creation is made up of both, mind persuading necessity as far as possible to work out good. Before the heavens there existed fire, air, water, earth, which we suppose men to know, though no one has explained their nature, and we erroneously maintain them to be the letters or elements of the whole, although they cannot reasonably be compared even to the syllables or first compounds. I am not now speaking of the first principles of things, because I cannot discover them by our present mode of enquiry. But as I observed the rule of probability at first, I will begin anew, seeking by the grace of God still to observe the same rule.

In our former discussion I made two kinds of being—the un-

changing or invisible, and the visible or changing. These were sufficient for my purpose at the time, but now a third kind is required, which I shall call the receptacle or nurse of generation. There is a difficulty in arriving at an exact notion of this third kind, because the four elements themselves are of inexact natures and easily pass into one another, and are too transient to be detained by any one name; wherefore we are compelled to speak, not of water or fire, but of natures such as water or fire. They may be compared to images made of gold, having many forms. Somebody asks what they are?—if you do not know, the safest answer is to reply that they are gold. In like manner there is a universal nature out of which all things are made, and which is like none of them; but they enter into and pass out of her, and are made after patterns of the true in a wonderful and inexplicable manner. The containing principle may be likened to a mother, the source or spring to a father, the intermediate nature to a child; and we may also remark that the matter which receives every variety of form must originally be formless, like the inodorous liquids which are prepared to receive scents, or the smooth and soft materials on which figures are impressed. In the same way the original or material substance is neither earth nor fire nor air nor water, but is an invisible and formless being which receives all things, and in an incomprehensible manner attains to a portion of the intelligible. But we may say, speaking generally, that fire is that part of this nature which burns, water that which is moist, and the like.

Let me ask a question in which a great principle is involved: Is there an essence of fire and the other elements, or are there only fires visible to sense, and is the rest a mere name? I answer in a word: If mind is one thing and true opinion another, then there are self-existent essences; but if mind is the same as opinion, then the visible and corporeal is the reality. But they are not the same, and they have a different origin and nature. The one comes to us by instruction, the other by persuasion; the one is rational, the other is irrational; the one is movable by persuasion, the other immovable; the one is possessed by every man, the other by the gods and by very few men. And we must acknowledge that as there are two kinds of knowledge, so there are two kinds of being corresponding to them; the one uncreated, indestructible, immovable, which is seen by intelligence only; the other created, which is always becoming in place and vanishing out of place,

and is apprehended by opinion and sense. There is also a third nature—that of space, which is indestructible, and is perceived by a kind of spurious reason without the help of sense. This is presented to us in a dreamy manner, and yet has a kind of necessity, for we say that all things must be somewhere in space. But these, although they are the waking realities of nature, are seen by us in a dream only, and therefore we are unable to describe them. For they are the images of other things and exist in others, and true reason assures us that while two things are different they cannot inhere in one another, so as to be one and two at the same time.

To sum up, being and generation and space, these three, existed before the heavens, and the nurse or vessel of generation, moistened by water and inflamed by fire, and taking the forms of air and earth, assumed all their qualities. When the vessel was shaken, the elements were divided, like grain winnowed by fans, the close and heavy particles settling in one place, the light and airy ones in another. At first all things were without reason or measure, until God by the help of figure and number fashioned the four elements, which in their original state had only certain faint traces of themselves, and the world began to get into order. In this, as in every other part of creation, I suppose God to have made things, as far as was possible, fair and good, out of other things which were not fair and good.

And now I will explain to you the generation of the world by a method with which your scientific training will have made you familiar. Fire, air, earth, and water are bodies and therefore solids, and solids are contained in planes, and the plane rectilinear figure is made up of rectangular triangles. They are originally of two kinds, one kind having the opposite sides equal (isosceles), the other unequal (scalene). These we may fairly assume to be the original elements of fire and the other bodies; what principles are prior to these God only knows, and he of men whom God loves. Next, we must determine what are the four most beautiful figures which are unlike one another and yet sometimes capable of resolution into one another. Of the two kinds of triangles the equal-sided has but one form, the unequal-sided has an infinite variety of forms; and there is none more beautiful than that which forms the half of an equilateral triangle. Let us then choose two triangles; one, the triangle which has equal sides, the other having a longer side of which the square is three times as great as the square of the lesser

side; and affirm that, out of these, fire and the other elements have been constructed.

I was wrong in imagining that all the four elements were generated from one another. For they are really generated, three of them from the triangle which has the sides unequal, the fourth from the triangle which has equal sides; and the three can be resolved into one another, but not the fourth. So much for their passage into one another: I must now speak of their combinations. From the triangle of which the hypotenuse is twice the lesser side the three first regular solids are formed—first, the equilateral pyramid or tetrahedron; secondly, the octahedron; thirdly, the icosahedron; and from the isosceles triangle is formed the cube; and there is a fifth figure which is made out of twelve pentagons, the dodecahedron—this God also employed in the construction of the universe.

Let us now assign the geometrical forms to their respective elements. The cube is the most stable of them because resting on a quadrangular plane surface, and the isosceles triangle is more stable than the scalene. To the earth then, which is the most stable of bodies and the most easily modelled of them, may be assigned the form of a cube; to fire the form of a pyramid, and the remaining forms to the other elements; to air the octahedron, and to water the icosahedron, according to their degrees of lightness or heaviness or power, or want of power, of penetration. The single particles of any of the elements are not seen by reason of their smallness; they only become visible when collected. The ratios of their motions, numbers, and other properties, are ordered by the God, who harmonized them as far as necessity permitted.

The probable result is as follows:—Earth, when dissolved by the more penetrating element of fire, whether acting immediately or through the medium of air and water, is dispersed but not changed. Water, when divided by fire or air, becomes one part fire, and two parts air. The volume of air divided becomes a double volume of fire. On the other hand, when condensed, two volumes of fire make a volume of air; and two and a half parts of air condense into one of water. Any element which is fastened upon by fire is cut by the sharpness of the triangles, and at length, coalescing with the fire, is at rest; for similars are not affected by similars, but inferiors are conquered by their superiors, and only cease from their tendency to extinction when they combine with them. When two kinds of bodies quarrel with one

another, then the tendency to decomposition continues until the smaller either escape to their kindred element or become one with their conquerors. And this tendency in bodies to condense or escape is the source of motion. For where there is motion there must be a mover, and where there is a mover there must be something to move. These cannot be in equipoise, and therefore motion is the want of equipoise. But then why, when things are divided after their kinds, do they not cease from motion? The answer is, that the circular motion of all things compresses them, and as 'nature abhors a vacuum,' the finer and more subtle particles of the lighter elements, such as fire and air are thrust into the larger interstices of the heavier, each of them penetrating according to their rarity, and thus all the elements are on their way up and down everywhere into their own places. Hence there is a principle of inequality, and therefore of motion, pervading all nature.

In the next place, we may observe that there are different kinds of fire—(1) flame, (2) light that burns not, (3) the red heat of the embers of fire. And there are varieties of air, as for example, the pure aether, the opaque mist, and other nameless forms which are caused by the inequalities of the triangles. Water, again, is of two kinds, liquid and fusile. The liquid is composed of small and unequal particles, the fusile is composed of larger and more equal particles and is more solid, but nevertheless melts at the approach of fire, and then spreads upon the earth. When the substance cools, the fire passes into the air, which is displaced, and forces together the liquid mass into the place quitted by the fire. This process is called cooling and congelment. Of the fusile kinds the fairest and heaviest is gold; this is hardened by filtration through rock, and is of a bright yellow colour. A shoot of gold which is darker and denser than the rest is called adamant. There is another kind called copper, which is harder and yet lighter because the interstices are larger than gold. This is mingled with a fine and small portion of earth which comes out in the form of rust. These are a few of the conjectures which philosophy forms, when, leaving the eternal nature, she turns for innocent recreation to consider the truths of generation only.

The water which is mingled with fire is called liquid because it rolls upon the earth, and soft, because its bases give way. This becomes more equable when separated from fire and air, and is compressed into hail or ice, or the looser forms of hoar frost or snow. There are other

waters which are called juices and are distilled through plants, first, wine, which warms the soul as well as the body; secondly, the oily substance, as for example, oil or pitch, which glistens; thirdly, honey, which diffuses sweetness and spreads to the passages of the mouth; fourthly, there is vegetable acid, which is frothy and has a burning quality and dissolves the flesh. Of the kinds of earth, that which is filtered through water passes into stone; the water which is broken up by the earth rises into the air—this in turn presses upon the mass of earth, and the earth, compressed into an indissoluble union with the remaining water, becomes rock. The rock which is made up of equal particles is fair and transparent, but the reverse when of unequal. Earth is converted into pottery when the watery part is suddenly drawn away; or if the moisture remains, the earth which has been fused by fire, when cooled, turns into a stone of a black colour. When the earth is finer and of a briny nature then a half-solid body is formed, soluble in water,—either nitre or salt. The strong compounds of earth and water are not soluble by water, but only by fire. Earth, when not consolidated, is dissolved by water; when consolidated, by fire only. The cohesion of water, when strong, is dissolved by fire only; when weak, either by air or fire, the former entering the interstices, the latter penetrating even to the triangles. Air when strongly condensed is indissoluble by any power which does not penetrate to the triangles, and even when not strongly condensed is only resolved by fire. Dense substances which are compounded of earth and water are unaffected by water while the water occupies the interstices, but begin to liquefy when fire enters into the interstices of the water. They are of two kinds, some of them, like glass, having more earth, others, like wax, having more water in them.

Having considered the classes of bodies, we have now to consider how we are affected by them. For they are objects of sense; and we cannot explain sense without explaining the nature of flesh and of the mortal soul. But as we cannot explain both of them together, in order that we may proceed at once to the sensations we must assume the existence of body and soul.

What makes fire burn? The fineness of the sides, the sharpness of the angles, the smallness of the particles, the quickness of the motion. Moreover, the pyramid is the original figure of fire, and is more cutting than any other figure. The feeling of cold is produced by the larger particles of moisture in the body trying to eject the smaller ones which

they only compress, and so coagulate. Shivering is caused by the conflict of things naturally at war which are brought together. That is hard to which the flesh yields, and soft which yields to the flesh, and these two terms are relative to one another. The yielding matter is that which has the slenderest base, whereas that which has a rectangular base is the most compact and repellent. Light and heavy are wrongly explained with reference to a lower and higher in place. For in the universe, which is a sphere, there is no opposition of above or below, and that which is to us above would be below to a man standing at the antipodes. The effort to detach any element from its like is the real cause of heaviness or of lightness. If you draw the earth into the dissimilar air, the particles of earth cling to their native element, and you more easily detach a small portion than a large. There would be the same difficulty in drawing down any of the upper elements to the lower. The smooth and the rough are severally explained by the union of evenness with compactness, and of hardness with inequality.

The cause of pleasure and pain is the most important enquiry which remains. According to our general doctrine of sensation the body which is easily moved communicates motion, and this is widely diffused and at last reaches the mind, but a body which is not easily moved and does not diffuse motion has no effect upon the patient. The first is true of the bones and hair, the second of sight and hearing. The ordinary affection is not accompanied by pleasure or pain, but a violent impression, if contrary to nature, causes pain, or if congenial to nature, pleasure. The impressions of sight are an example of the ordinary affections which are unattended either with pleasure or pain, because they are not violent or sudden. The replenishments of the body, on the other hand, cause pleasure, and cuttings and burnings have the opposite effect.

These are the general affections of the body: I will now proceed to the particular ones. The affections of the tongue appear to be caused, like most others, by composition and division, but they have more of roughness or smoothness than is found in others. Earthy particles, entering into the small veins about the tongue and reaching to the heart, when they melt into and dry up the little veins are astringent if they are rough, or if not so rough, like potash and soda, they are only harsh and abstergent, and are termed bitter. Purgatives of a weaker sort are called salt and, having no bitterness, are rather agreeable.

Light and inflammatory bodies, which are soluble in the mouth and get up into the head, cutting all that comes in their way, are termed pungent. But when these are refined by putrefaction and enter the narrow veins, and meet the earthy or airy elements, two kinds of globules are formed—one of earthy and impure liquid, which boils and ferments, the other of pure and transparent water, which are called bubbles; of all these affections the cause is termed acid. When, on the other hand, the composition of the deliquescent particles is congenial to the tongue, and disposes the parts according to their nature, this remedial power in them is called sweet.

Smells are not divided into kinds; all of them are transitional, and arise out of the decomposition of one element into another, for the simple air or water is without smell. They are mists or smoke, thinner than water and thicker than air: and hence in drawing in the breath, when there is an obstruction, the air passes, but there is no smell. They have no names, but are distinguished as pleasant and unpleasant, and their influence extends over the whole region from the head to the navel.

Hearing is the effect of a stroke which is transmitted through the ears by means of the air, brains, and blood to the soul, beginning at the head and extending to the liver. The sound which moves swiftly is acute; that which moves slowly is grave; that which is uniform is smooth, and the opposite is harsh. Loudness depends on the quantity of the sound. Of the harmony of sounds I will hereafter speak.

Colours are a flame which emanates from all bodies, having particles corresponding to the sense of sight. Some of the particles are less and some larger, and some are equal to the parts of the sight. The equal particles are transparent, the larger contract, and the lesser dilate the sight; white is produced by the dilatation, black by the contraction, of the particles of sight. There is also a swifter motion of another sort of fire which forces a way through the passages of the eyes, and elicits from them a union of fire and water which we call tears. The inner fire flashes forth, and the outer finds a way in and is extinguished in the tear-drop, and all sorts of colours are generated by the mixture. This affection is termed by us dazzling, and the object which produces it is called flashing. There is yet another sort of fire which mingles with the moisture of the eye without flashing, and produces a colour like blood—to this we give the name of red. A bright element mingling

with the red and white produces a colour which we call auburn. The law of proportion, however, in which the several colours are formed, cannot be determined scientifically or even probably. Red, when mingled with black and white, gives a purple hue, which becomes umber when the colours are burnt and the black is more thoroughly mixed with them. Flame-colour is a mixture of auburn and dun; dun of white and black; yellow of white and auburn. White and bright meeting, and falling upon a full black, become dark blue; dark blue mingling with white becomes a light blue; the union of flame-colour and black makes leek-green. There is no difficulty in seeing how other colours are probably composed. But he who should attempt to test the truth of this by experiment, would forget the difference of the human and divine nature. God only is able to compound and resolve substances; such experiments are impossible to man.

These are the elements of necessity which the Creator received in the world of generation when he made the all-sufficient and perfect creature, using the secondary causes as his ministers, but himself fashioning the good in all things. For there are two sorts of causes, the one divine, the other necessary; and we should seek to discover the divine first, and afterwards the necessary, because without them the higher cannot be attained by us.

Having now before us the causes out of which the rest of our discourse is to be framed, let us go back to the point at which we began, and add a fair ending to our tale. As I said at first, all things were originally a chaos in which there was no order, and nothing had any kind or name. The elements of this chaos were arranged by the Creator, and out of them he made the world. Of the divine he himself was the author, but he committed to his offspring the creation of the mortal. They in imitation of him received from him the immortal soul, and made the body to be a vehicle of the soul, and constructed within another soul which was mortal, and subject to terrible affections—pleasure, the inciter of evil; pain, which deters from good; rashness and fear, foolish counsellors; anger hard to be appeased; hope deceived by sense, and by all-daring love. These they mingled according to necessary laws and framed man. But, fearing to pollute the divine element, they gave the mortal soul a separate habitation in the breast, parted off from the head by a narrow isthmus. And as in a house the women are divided from the men, the cavity of the thorax or

breast-plate was further divided into two parts, a higher and a lower. The higher of the two, which is the seat of courage and anger, is in the neighbourhood of the head between the midriff and the neck, and assists the reason in restraining the desires. The heart is the house of guard in which all the veins meet, and through them reason sends her commands to the extremity of her kingdom. When the passions are in revolt, or danger approaches from without, then the heart beats and swells; and the creating powers, knowing this, implanted in the body the soft and bloodless substance of the lung, having a porous and springy nature like a sponge, and receiving and cooling the heated streams, and they cut the passages which lead from the trachea to the lung.

The desire of the soul for meat and drink was placed by them between the midriff and the navel—there to dwell like a wild animal feeding in a manger, out of the way of the council chamber, and leaving the better principle to advise quietly for the good of the whole. For the Creator knew that the belly would not listen to reason, and was under the power of idols and fancies. Wherefore God framed the liver to connect with the lower nature, contriving that it should be compact, and bright, and sweet, and also bitter, and smooth, in order that the power of thought which originates in the mind might there be reflected, terrifying the belly with the elements of bitterness and gall, and the suffusion of bilious colours when the liver is contracted, and causing pain and misery by twisting out of their place the lobe and other vessels. And the converse happens when some gentle inspiration coming from intelligence mirrors the opposite fancies, giving rest and sweetness and freedom, and at night, moderation and peace accompanied with prophetic insight, when reason and sense are asleep. For the authors of our being, in obedience to their Father's will and in order to make men as good as they could, gave them prophecy, which never acts when men are awake or in health; but when they are under the influence of some disorder or enthusiasm then their livers supply intimations which are interpreted by others who are called prophets, but should rather be called interpreters of prophecy; these intimations after death become unintelligible. The spleen which is situated in the neighbourhood, on the left side, keeps the liver bright and clear as a napkin does a mirror, and the evacuations of the liver are received into the spleen, which for a time waxes with impurity, and after the body is purged returns to a natural size.

The truth concerning the soul can only be established by the word

of God. Still, we may venture to assert what is probable both concerning soul and body.

The creative powers were aware of our tendency to excess. And so when they made the belly to be a receptacle for food, in order that men might not perish by disease, they formed the convolutions of the intestines, in this way retarding the passage of food through the body, lest mankind should be absorbed in eating and drinking, and the whole race become impervious to divine philosophy.

The creation of bones and flesh was on this wise. The root of mortal life is the marrow which binds together body and soul, and the marrow is made out of the triangles of the first formation specially adapted to produce all the four elements. These God took and mingled them in due proportion, making as many kinds of marrow as there were hereafter to be kinds of souls. The receptacle of the divine seed he made round, and called that portion of the marrow brain, intending that the vessel containing this substance should be the head. The remaining part he divided into long and round figures, and from these as from anchors, casting the bonds of the whole soul, he proceeded to make the rest of the body, first forming for them a covering of bone. The bone was formed by sifting pure smooth earth and wetting it with marrow. It was then thrust alternately into fire and water, and thus rendered insoluble by either. Of bone he made a globe which he placed around the brain, leaving a narrow opening, and around the marrow of the neck and spine he formed the vertebrae like hinges which extended from the head through the whole of the trunk. And as the bone was brittle and liable to mortify and destroy the marrow by too great rigidity and susceptibility to heat and cold, he contrived sinews and flesh—the first to give united motion and flexibility, the second to guard against heat and cold, and to be a protection against falls, containing a moisture which in summer exudes in the form of dew, and in winter is a defence against cold. Having this in view, the Creator mingled earth with fire and water and put them together, making a ferment of acid and salt which he mingled with them, so as to form a pulpy flesh. But the sinews he made of an unfermented mixture of bone and flesh, giving them a mean nature between the two, and a yellow colour. Hence they were more glutinous than flesh, but softer than bone. The bones which have most of the living soul within them he covered with the thinnest film of flesh, those which have least he

lodged deeper. At the joints he diminished the flesh in order not to impede the flexure of the limbs, and also to avoid their clogging the perceptions of the mind. About the thighs and arms, which have no sense because the soul of the marrow does not reach them, and about the inner bones for the same reason, he laid the flesh thicker. For where the flesh is thicker there is less feeling, except in certain parts which the Creator has made solely of flesh, as for example, the tongue. Had the combination of solid bone and thick flesh been consistent with acute perceptions, the Creator would have given man a sinewy and fleshy head, and then he would have lived twice as long. But our creators were of opinion that a shorter life which was better was preferable to a longer which was worse, and therefore they covered the head with thin bone, and placed the sinews at the extremities of the neck, and fastened the cheeks to them below the face. And they framed the mouth, having teeth and tongue and lips, with a view to the necessary and the good, for food is a necessity, and the river of speech is the best of rivers. Still, the head could not be left a bare globe of bones on account of the extremes of heat and cold, nor be allowed to become dull and senseless by the overgrowth of flesh. Wherefore it was covered by a peel or skin which met and grew by the help of the cerebral humour. The sutures of the head were watered and closed up by the moisture, which sprang up within, and the diversity of them was caused by the struggle of the food against the courses of the soul. The skin was pierced by fire, and out of the punctures came forth a moisture, part liquid and part of a skinny nature, which was hardened by the pressure of the external cold and became hair. And God gave the head of man hair to be a shade in summer and shelter in winter, but not to interfere with his perceptions. The union of sinews, skin, and bone in the structure of the finger, and the nails which are found in many creatures, were formed by the creators with a view to the future when, as they knew, women and other animals would be framed out of us.

The gods also mingled natures akin to that of man with other forms and perceptions. These are the trees and plants, which were originally wild and have been adapted by cultivation to our use. They partake of that third kind of life which is seated between the midriff and the navel, and is altogether passive and incapable of reflection.

When the creators had furnished all these natures for our sustenance, they cut channels through our bodies as in a garden, watering them with

a perennial stream. Two were cut down the back, along the back bone, where the skin and flesh meet, one on the right and the other on the left, and between them flowed the marrow of generation. In the next place, they divided the veins about the head and interlaced them with each other in order that they might form an additional link between the head and the body, and that the sensations from both sides might be diffused throughout the body. In the third place, they contrived the passage of liquids, which may be explained in this way:—Finer bodies contain coarser, but not the coarser the finer, and the belly is capable of containing food, but not fire and air. God therefore formed a network of fire and air to irrigate the veins, having two passages or openings, one of which he made with two heads, and stretched cords reaching from both the openings to the extremity of the network. The inner parts of the net were made by him of fire, the openings and the hollow of air. One of the openings he made to pass into the mouth; this he divided into two, one part descending by the air-pipes into the lungs, the other by the side of the air-pipes into the belly. The first opening he divided into two parts, and both of these he made to communicate with the channels of the nose, that the mouth when closed might still be fed with air. The other hollow of the network he caused to flow around the hollows of the body, making the entire receptacle which was composed of air to flow into and out of the passages of the network, the tissue of the lung finding a way into and out of the pores of the body, and the rays of fire following them. These, as we affirm, are the phenomena of respiration. And all this process took place in order that the body might be watered and cooled and nourished, and the meat and drink digested and liquefied and carried into the veins.

The causes of respiration have now to be considered. The exhalation of the breath displaces the external air, and at the same time leaves a vacuum into which through the pores the air which is displaced enters like a wheel going round and round. The explanation may be supposed to be as follows: Every animal has within him a fountain of fire, which has been compared by us to a net of fire extended through the centre of the body, and having an outer envelopment of air. The fire seeks the place of fire, and in doing so finds a way in through the body or out at the nostrils, accordingly as the body is either hot or cold. When the body is hotter the particles of fire find their way out, when cooler the

hot element finds a way in, and thus by action and reaction, inspiration and expiration are produced.

The phenomena of medical cupping-glasses and of swallowing, and the hurling of bodies, are to be explained on a similar principle; as also sounds, which are sometimes discordant on account of the inequality of them, and again, harmonious by reason of equality. The slower sounds reaching the swifter, when they begin to pause, by degrees assimilate with them: whence arises a pleasure which even the unwise feel, and which to the wise becomes a higher sense of delight, being an imitation of divine harmony in mortal motions. Streams flow, lightnings play, amber and the magnet attract, not by reason of attraction, but because 'nature abhors a vacuum.'

I will now return to the phenomena of respiration. The fire minces the food and in the process of respiration fills the veins out of the belly by drawing from thence the divided portions of food, and thus the streams of food are diffused through the body. The fruits or grass which are our daily food are of different colours when newly cut, but the colour of red or fire predominates in them, and hence the liquid which we call blood is red, being the nurturing principle of the body whence all parts are watered and the empty places filled.

The process of repletion and depletion is produced by the attraction of like to like, after the manner of the universal motion. The external elements are always entering into the body which is akin to them, and causing us to consume away: the particles of blood, too, to which the body is a sort of world, are attracted towards their kindred nature. When more is taken away than flows in, then we decay; and when less, we grow and increase.

The young of every animal has the triangles new and closely locked together, and yet the entire frame is soft and delicate, as if made of marrow and nurtured on milk. These triangles are sharper than those which enter the body from without in the shape of food, and therefore they cut them up. But as life advances, the triangles which enclose the marrow wear out and are no longer able to assimilate their food; and at length getting unfixed they unloose the bonds of the soul, which is released and in the order of nature joyfully flies away. For the death which is natural is pleasant, but that which is caused by wounds or violence is painful. And so without pain, and even with pleasure, man passes away.

Every one may understand the origin of diseases. They are occasioned by the disarrangement of the elements out of which the body is framed; and they arise in a variety of ways. The dry may become moist, the light heavy, the hot cold, and any addition or subtraction or undue proportion may produce an estrangement and perturbation of nature. This is the origin of many of them, but the worst of all owe their severity to the following causes: There is a natural order in the human frame according to which the flesh and sinews are made of blood, the sinews out of the fibres which are akin to them, and the flesh out of the congealed substance which is formed by separation from the fibres. The glutinous matter which comes away from the sinews and the flesh, not only binds the flesh to the bones, but nourishes the bones and waters the marrow, being composed of the smoothest and oiliest of the triangles which alone find their way through the solid bone; and when these processes take place in regular order the body is in health. But when the flesh wastes and returns into the veins there is discoloured blood as well as air in the veins, having acid and salt qualities from which are generated all sorts of phlegm and bile. All things go the wrong way and cease to give nourishment to the body, no longer preserving the natural order of the courses, but at war with themselves and destructive of the constitution of the body. The oldest part of the flesh which refuses to assimilate blackens from long burning, and from being corroded grows bitter, and as the bitter element refines away, becomes acid; and when tinged with blood the bitter substance has a red colour, or when mixed with black the hue of grass; or again, has an auburn colour, when the new flesh is decomposed by the internal flame. To all which phenomena some physician or philosopher who was able to see the one in many has given the name of bile. Now there are various kinds of bile which have names answering to their colours. Lymph is of two kinds: first, the whey of blood, which is gentle; secondly, that which is of a fiercer nature and is produced by dark and bitter bile mingled under the influence of heat with any salt substance; thirdly, there is the white phlegm, which is a decomposition of young and tender flesh when accompanied by air encased in moisture, which emits little invisible bubbles. The water of tears and perspiration and other similar bodies is also the watery part of fresh phlegm. All these humours arise when the blood is replenished in irregular ways and not by food or drink, and they are

the sources of disease. The danger, however, is not so great when the foundation remains, for then there is a possibility of recovery. But when the bond which unites the flesh and bones is diseased, and the blood which is made out of the fibres and sinews separates from them, and from being oily and smooth and glutinous becomes rough and salt and dry, then the substance which is detached crumbles away under the flesh and sinews, and the fleshy part leaves the sinews bare and full of brine, and the flesh gets back again into the circulation of the blood, and makes the previously mentioned disorders worse. There are other and worse diseases which precede this; as when the bone through the density of the flesh does not receive sufficient air, and becomes stagnant and gangrened, and the bone crumbling passes into the food, and the food into the flesh, and the flesh returns again into the blood. Worst of all and most fatal is the disease of the marrow, by which the whole course of the body is reversed. There is a third class of diseases which are produced, some by wind and some by phlegm and some by bile. When the lung, which is the steward of the air, is obstructed by rheums, and in one part no air, and in another too much, enters in, then the parts which are unrefreshed by the air corrode, and other parts are distorted by the excess of air; and in this manner painful diseases are produced. The most painful are generated when the wind gets about the sinews, and especially when the pressure is upon the great sinews of the shoulder—these are termed tetanus. The cure of them is difficult, and they generally end in fevers. The white phlegm—though dangerous if kept in, by reason of the air bubbles—is not equally dangerous, because capable of relief, although it variegates the body, generating divers kinds of leprosy. When phlegm mingling with black bile only disturbs the courses of the head in sleep, there is not so much danger, but when assailing those who are awake, then the attack is far more dangerous, and is called epilepsy or the sacred disease. An acid and salt phlegm is the source of catarrh, and is called by various names, according to the places into which the phlegm finds a way.

Inflammations originate in bile, which is sometimes relieved and finds an exit in boils and swellings, but when detained, and above all when mingled with pure blood, generates many inflammatory disorders, disturbing the order of the fibres which are scattered about in the blood in order to maintain the balance of rare and dense which is necessary to its regular circulation. The just temperament of these things is preserved

by the fibres, which after death are left to themselves and congeal. They are the cause of bile, which is only stale blood, and from being flesh is liquefied again, and coming in little by little, warm and moist, if forcibly congealed by the power of the fibres produces internal cold and shuddering. But when it enters with more of a flood it overcomes the fibres by heat and reaches the spinal marrow, and then the cables of the ship are cut and the soul is set free from the body. When on the other hand the body, though wasted, still holds out, then the bile is expelled, like an exile from an insurgent state, causing diarrhoeas and dysenteries and similar disorders. The body which is diseased from the effects of fire is in a continual fever; when air is the agent, the fever is quotidian; when water, the fever intermits a day; when earth, which is the most sluggish of agents, the fever intermits three days and is with difficulty shaken off.

Of mental disorders there are two sorts, one madness, the other ignorance, and they may be justly attributed to disease. Excessive pleasures or pains are one of the greatest diseases, and literally take away the power of sense. When the seed about the spinal marrow is too fruitful or productive, the body has too great pleasures and pains; and during a great part of his life a man is more or less mad. He is often thought bad, but this is a mistake; for the truth is that the intemperance of lust is produced by the flux of a single element in the moist and relaxed state of the bones. And this is true of vice in general, which is commonly regarded as disgraceful, whereas all vice is really involuntary and arises from a bad habit of the body and evil education. In like manner the soul is often made vicious by the influence of pain; the briny phlegm and other bitter and bilious humours wander over the body and find no exit, but are compressed within, and blend with the motions of the soul, and are carried to the three places of the soul, creating infinite varieties of trouble and melancholy, of tempers rash and cowardly, and also of forgetfulness and stupidity. When men are in this evil plight of body, and evil forms of government and evil discourses are superadded, and there is no education to save them, all men turn to evil, through these two causes; but of neither of them are they really the authors. For the planters are to blame rather than the plants, the educators and not the educated. Still, we should endeavour to attain virtue and avoid vice; but this is a part of another subject.

Enough of disease—I have now to speak of the means by which the mind and body are to be preserved, a higher theme than the other. The good is the beautiful, and the beautiful is the symmetrical, and there is no greater or fairer symmetry than that of body and soul, as the contrary is the greatest of deformities. A leg or an arm too long or too short is at once ugly and unserviceable, and the same disproportion is discernible in the relation of soul and body. For the soul may ‘fret the pigmy body to decay,’ and so produce diseases and convulsions. The violence of controversy, or the earnestness of enquiry, will often generate inflammations and rheums which are not understood, or assigned to their true cause by the professors of medicine. And in like manner the body may be too much for the soul, obscuring the rational, and quickening the animal desires. The only security is to preserve the balance of the two, and to this end the mathematician or philosopher must practise gymnastics, and the gymnast must practise music, and allow the movements of the soul to inform the body. And as the whole body should be treated in relation to the whole soul, so are the parts of the body to be treated in relation to each other. For the body is liable to be heated and cooled by the elements which enter in, and again is dried up and moistened by external things, and is therefore injured, if given up to motion when at rest. But on the other hand, the use of exercise, as in the world, so also in the human body, restores harmony and divides the hostile powers from one another. The best exercise is the spontaneous motion of the body, as in gymnastics, because most akin to the motion of the mind; not so good is the motion of which the source is in another, as in sailing or riding; least good when the body is at rest and the motion is in the parts only, which is a species of motion produced by physic. This should only be resorted to by men of sense in extreme cases; lesser diseases are not to be educated by medicine. For every disease is akin to the living being and has an appointed term, just as life has, which depends on the form of the triangles, and cannot be protracted when the triangles are worn out. And he who, instead of accepting his destiny, endeavours to prolong his life by medicine is likely to multiply and magnify his diseases. Regimen and not medicine is the true cure, when a man has time at his disposal.

Enough of the nature of man and of the body, and of rational education, and of self education. The subject is a great one and

cannot be adequately treated as an appendage to any other. To sum up all in a word: there are three kinds of souls located within us, and any one of them, if remaining inactive, becomes very weak; if exercised, very strong. Wherefore we should train and exercise the three parts of the soul.

But there is also a divinity within us whom God has lodged in our heads, to raise us, like plants which are not of earthly origin, from earth to our kindred which is in heaven; for the head is the root in which the generation of the soul began, and on which the whole body hangs. He who is intent upon the gratification of his desires, has all his ideas mortal, and is himself mortal in the truest sense. But he who seeks after knowledge and exercises the divine part of himself in godly and immortal thoughts, attains to truth and immortality, as far as is possible to man, and also to happiness, while he is training up within him the divine principle and indwelling power of order. There is only one way in which one person can benefit another; and that is by assigning to him his proper nurture and motion. To the motions of the soul answer the motions of the universe, and by the study of these the individual is restored to his original nature.

Thus we have finished the discussion of the universe, which, according to our original intention, has now been brought down to the creation of man. Completeness seems to require that something should be briefly said about other animals: first of women, who are probably degenerate or effeminate men. And when they degenerated, the gods implanted in men the desire of union with them, distributing in the two sexes the living being in the following manner:—The passage for liquid they connected with the living principle of the spinal marrow, which the man has the desire to emit into the fruitful womb of the woman; this is like a fertile field in which the seed is quickened and matured, and at last brought to light. When this desire is unsatisfied the man is overmastered by the power of the generative organs, and the woman is subjected to disorders from the obstruction of the passages of the breath, until the two meet and pluck the fruit of the tree.

The race of birds was created out of innocent, light-minded men, who thought to pursue the study of the heavens by sight; these were transformed into birds, and grew feathers instead of hair. The race of wild animals were men who had no philosophy, and never looked up to heaven or used the courses of the head, but followed only the in-

fluences of the heart. Naturally they turned to their kindred earth, and put their forelegs to the ground, and had their heads crushed into strange oblong forms. Some of them have four feet, and some of them more than four; the latter, who are the more senseless, drawing closer to their native element; the most senseless of all have no limbs and trail their whole body on the ground. The fourth kind are the inhabitants of the waters; these are made out of the most senseless and ignorant and impure of men, whom God placed in the uttermost parts of the world in return for their utter ignorance, and caused them to respire water instead of the purer element of air. These are the laws by which animals pass into one another, according to their degrees of knowledge and ignorance.

And so the world received animals, mortal and immortal, and was fulfilled with them, and became a visible God, comprehending the visible, made in the image of the Creator, being the one perfect only-begotten heaven.

§ 2.

Nature in the aspect which she presented to a Greek philosopher of the fourth century before Christ is not easily reproduced to modern eyes. The associations of mythology and poetry have to be added, and the unconscious influence of science has to be subtracted, before we can behold the heavens or the earth as they appeared to the Greek. The philosopher himself was a child and also a man—a child in the range of his attainments, but also a great intelligence having an insight into nature, and often anticipations of the truth. He was full of original thoughts, and yet liable to be imposed upon by the most obvious fallacies. He occasionally confused numbers with ideas, and atoms with numbers; his *a priori* notions were out of all proportion to his experience. He was ready to explain the phenomena of the heavens by the most trivial analogies of earth. The experiments which nature worked for him he sometimes accepted, but he never tried experiments for himself which would either prove or disprove his theories. His knowledge was unequal; while in some branches, such as medicine and astronomy, he had made considerable proficiency, there were others, such as chemistry, of which the very names were unknown to him. He was the natural enemy of mythology, and yet mythological ideas still retained their hold over him. He was endeavouring to form a conception of principles, but these principles or ideas were regarded by

him as real powers or entities, to which the world had been subjected. He was always tending to argue from what was near to what was remote, from what was known to what was unknown, from man to the universe, and back again from the universe to man. While he was arranging the world, he was arranging the forms of thought in his own mind; and the light from within and the light from without often helped to cross and confuse one another. He might be compared to a builder engaged in some great design, who was obliged to dig with his hands because he was unprovided with the commonest tools.

The Hesiodic and Orphic cosmogonies were a phase of thought intermediate between mythology and philosophy and had a great influence on the beginnings of physical science. They made men think of the world as a whole; they carried the mind back into the infinity of past time; they suggested the first observation of the effects of fire and water on the earth's surface. To the ancient physics they stood much in the same relation which geology does to modern science. The mind of the Greek was not confined to a period of four or six thousand years; he was able to speculate freely on the effects of infinite ages in the production of physical phenomena. He could imagine cities which had existed time out of mind, laws or forms of art and music which had lasted, 'not in word only but in very truth, for ten thousand years;' he was aware that natural phenomena like the Delta of the Nile might have slowly accumulated in myriads of years. But he seems to have supposed that the course of events was recurring rather than progressive. To this he was probably led by the lateness of Greek history, when compared with the primeval antiquity of Egypt.

The ancient philosophers found in mythology many ideas which, whether originally derived from nature or not, were easily transferred to her—such, for example, as love or hate, corresponding to attraction or repulsion; or the conception of necessity allied both to the regularity and irregularity of nature; or of justice, symbolizing the law of compensation; or of the Fates and Furies, typifying the fixed order or the extraordinary convulsions of nature. Their own interpretations of Homer and the poets were supposed by them to be the original meaning. Musing in themselves, they were relieved at being able to utter the thoughts of their hearts in figures of speech which to them were not figures, and were already consecrated by tradition. Hesiod and the

Orphic poets moved in a region of half-personification in which the meaning or principle appeared through the person. In their vaster conceptions of Chaos, Erebus, Aether, Night, and the like, the first rude attempts at generalization are dimly seen.

Under the influence of such ideas, perhaps also deriving from the traditions of their own or of other nations scraps of medicine and astronomy, men came to the observation of nature. The Greek looked upon the blue circle of the heavens and conceived that all things were one; the tumult of sense abated, and the mind found repose in the thought which former generations had been striving to realize. The first expression of this was some element, rarefied by degrees into a pure abstraction, and purged from any tincture of sense. Soon an inner world of ideas began to be created, more absorbing, more overpowering, more abiding than the brightest of visible objects, which to the eye of the philosopher looking inward, seemed to pale before them, retaining only a faint and precarious existence. At the same time, the minds of men parted into the two great divisions of those who saw only a principle of motion, and of those who saw only a principle of rest, in nature and in themselves; there were born Heracliteans or Eleatics, as there have been in later ages born Aristotelians or Platonists. Like some philosophers in modern times, who are accused of making a theory first and finding their facts afterwards, the advocates of either opinion never thought of applying either to themselves or to their adversaries the criterion of fact. They were mastered by their ideas and not masters of them. Like the Heraclitean fanatics whom Plato has described in the *Theaetetus*, they were incapable of giving a reason of the faith that was in them, and had all the animosities of a religious sect. Yet, doubtless, there was some first impression derived from external nature, which, as in mythology, so also in philosophy, worked upon the minds of the first thinkers. Though incapable of induction or generalization in the modern sense, they caught an inspiration from the external world. The most general facts or appearances of nature, the circle of the universe, the nutritive power of water, the air which is the breath of life, the destructive force of fire, the seeming regularity of the greater part of nature and the irregularity of a remnant, the solid earth and the impalpable aether, were always present to them.

The great source of error and also the beginning of truth to them

was reasoning from analogy; they could see resemblances, but not differences; and they were incapable of distinguishing illustration from argument. Analogy in modern times only points the way, and is immediately verified by experiment. The dreams and visions, which pass through the philosopher's mind, of resemblances between different classes of substances, or between the animal and vegetable world, are put into the refiner's fire, and the dross and other elements which adhere to them are purged away. But the contemporary of Plato and Socrates was incapable of resisting the power of any analogy which occurred to him, and was drawn into any consequences which seemed to follow. He had no methods of difference or of concomitant variations, by the use of which he could distinguish the accidental from the essential. He could not isolate phenomena, and he was helpless against the influence of any word which had an equivocal or double sense.

Yet without this crude use of analogy the ancient physical philosopher would have stood still; he could not have made even 'one guess among many' without comparison. The course of natural phenomena would have passed unheeded before his eyes, like fair sights or musical sounds before the eyes and ears of an animal. Even the fetichism of the savage is the beginning of reasoning; the assumption of the most fanciful of causes indicates a higher mental state than the absence of all enquiry about them. The tendency to argue from the higher to the lower, from man to the world, has led to many errors, but has also had an elevating influence on philosophy. The conception of the world as a whole, a person, an animal, has been the source of hasty generalizations; yet this general grasp of nature led also to a spirit of comprehensiveness in early philosophy, which has not increased, but rather diminished, as the fields of knowledge have become more divided. The modern physicist confines himself to one or perhaps two branches of science. But he comparatively seldom rises above his own department, and often falls under the narrowing influence which any single branch, when pursued to the exclusion of every other, has over the mind. Language, too, exercised a spell over the beginnings of physical philosophy, leading to error and sometimes to truth; for many thoughts were suggested by the double meanings of words, and the accidental distinctions of words often caused the ancients to make corresponding differences in things. 'If they are the same, why have they different names; or if they are different, why have they the same name?'—is an

argument not easily answered in the infancy of knowledge. The modern philosopher has always been taught the lesson which he still imperfectly learns, that he must disengage himself from the influence of words. Nor are there wanting in Plato, who was himself too often the victim of them, many admonitions that we should regard not words but things. But upon the whole, the ancients, though not entirely dominated by them, were much more subject to the influence of words than the moderns. They had no clear divisions of colours or substances; even the four elements were undefined; the fields of knowledge were not as yet parted off. They were bringing order out of disorder, having a small grain of experience mingled in a confused heap of *a priori* notions. And yet, probably, their first impressions, the illusions and mirages of their fancy, created a greater intellectual activity and made a nearer approach to the truth than any patient investigation of isolated facts, for which the time had not yet come.

There was one more illusion to which the ancient philosophers were subject, and against which Plato in his later dialogues seems to be struggling—the tendency to mere abstractions; not perceiving that pure abstraction is only negation, they thought that the greater the abstraction the greater the truth. Behind any pair of ideas a new idea which comprehended them began at once to appear. Two are truer than three, one than two. The words ‘being,’ or ‘unity,’ or ‘essence,’ or ‘good,’ became sacred to them. They did not see that they had a word only, and in one sense the most unmeaning of words. They did not understand that the content of notions is in inverse proportion to their universality—the element which is the most widely diffused is also the thinnest; or, in the language of the common logic, the greater the extension the less the comprehension. But this vacant idea of a whole without parts, of a subject without predicates, a rest without motion, has been also the most fruitful of all ideas. It is the beginning of *a priori* thought, and indeed of thinking at all. Men were led to conceive it, not by a love of hasty generalization, but by a divine instinct, a dialectical enthusiasm, in which the human faculties seemed to yearn for enlargement. We know that ‘being’ is the verb of existence, the copula, the most general symbol of relation, the first and most meagre of abstractions; but, to some of the ancient philosophers, this little word appeared to attain divine proportions and to comprehend all truth. Being or essence, and similar words, represented

to them a supreme or divine being, in which they thought that they found the containing principle of the universe. In a few years the human mind was peopled with abstractions; a new world was called into existence to give law and order to the old. But between them there was still a gulph, and no one could pass from one to the other.

Number and figure were the greatest instruments of thought which were possessed by the Greek philosopher; having the same power over the mind which was exerted by abstract ideas, they were also capable of practical application. Many curious and, to the early thinker, mysterious properties of them came to light when they were compared with one another. They admitted of infinite multiplication and construction; in Pythagorean triangles or in proportions of $1 : 2 : 4 : 8$ and $1 : 3 : 9 : 27$, or compounds of them, the laws of the world seemed to be more than half revealed. They were not like being or essence, mere vacant abstractions, but admitted of progress and growth, while at the same time they confirmed a higher sentiment of the mind, that there was order in the universe. Now, there was a real sympathy between the world within and the world without. The numbers and figures which were present to the mind's eye became visible to the eye of sense; the truth of nature was mathematics; the other properties of objects seemed to reappear only in the light of number. An instrument of such power and elasticity could not fail to be 'a most gracious assistance' to the first feeble efforts of human intelligence.

There was another reason why numbers had so great an influence over the minds of early thinkers—they were verified by experience. Every use of them, even the most trivial, assured men of their truth; they were everywhere to be found, in the least things and the greatest alike. One, two, three, counted on the fingers was a 'trivial matter,' a little instrument out of which to create a world; but from these and by the help of these all our knowledge of nature has been developed. They were the measure of all things, and seemed to give law to all things; nature was rescued from chaos and confusion by their power; the notes of music, the motions of the stars, the forms of atoms, the recurrence and evolutions of days, months, years, the military divisions of an army, the civil divisions of a state, seemed to afford a 'present witness' of them: what would have become of man or of the world if deprived of number? The mystery of number and the mystery of music were akin. There was a music of rhythm and of harmonious motion

everywhere; and to the real connection which existed between music and number, a fanciful or imaginary relation was superadded.

Two other points strike us in the use which the ancient philosophers made of number. First, they applied to external nature the relations of them which they found in their own minds; and where nature seemed to be at variance with number, as for example in the case of fractions, they protested against her (Rep. vii. 525, Arist. Metaph. i. 6). Having long meditated on the properties of $1 : 2 : 4 : 8$, or $1 : 3 : 9 : 27$, or of 3, 4, 5, they were disposed to find in them the secret of the universe. Secondly, they applied number and figure equally to those parts of physics, such as astronomy or mechanics, in which the modern philosopher expects to find them, and to those in which he would never think of looking for them, as for example, physiology. For the sciences were not yet divided, and there was nothing really irrational in arguing that the same laws which regulated the heavenly bodies were partially applied to the erring limbs or brain of man. Astrology was the form which the lively fancy of ancient thinkers almost necessarily gave to astronomy. The observation that the lower principle, e. g. mechanics, is always seen in the higher, e. g. in the phenomena of life, further tended to perplex them. Plato's doctrine of the same and the other ruling the courses of the heavens and of the human body is not a mere vagary, but is a natural result of the state of knowledge and thought at which he had arrived.

When in modern times we look up at the heavens, a certain amount of scientific truth imperceptibly blends, even with the cursory glance of an unscientific person. He knows that the earth is revolving round the sun, and not the sun around the earth. He does not imagine the earth to be the centre of the universe, and he has some conception of chemistry and the cognate sciences. A very different aspect of nature would have been present to the mind of the early Greek philosopher. He would have beheld the earth a surface only, not mirrored, however faintly, in the glass of science, but indissolubly connected with some theory of one, two, or more elements. He would see the world pervaded by number and figure, animated by a principle of motion, immanent in a principle of rest. He would try to construct the world on a quantitative principle, seeming to find in endless combinations of geometrical figures a sufficient account of the variety of phenomena. To these *a priori* speculations he would add a rude conception of matter and his own immediate experience of the supposed causes of

health and disease. His cosmos would necessarily be imperfect and unequal, being the first attempt to impress form and order on the primaeval chaos of human knowledge.

The ancient physical philosophers have been charged by Dr. Whewell and others with wasting their fine intelligences in wrong methods of enquiry; and their progress in moral and political philosophy has been sometimes contrasted with their supposed failure in physical investigations. 'They had plenty of ideas,' says Dr. Whewell, 'and plenty of facts; but their ideas did not accurately represent the facts with which they were acquainted.' No doubt they often fell into strange and fanciful errors: the time had not yet arrived for the slower and surer path of the modern inductive philosophy. But it remains to be shown that they could have done more in their age and country; or that the contributions which they made to the sciences with which they were acquainted are not as great upon the whole as those made by their successors. There is no single step in astronomy as great as that of the nameless Pythagorean who first conceived the world to be a body moving round the sun in space: there is no truer or more comprehensive principle than the application of mathematics alike to the heavenly bodies, and to the particles of matter. The ancients had not the instruments which would have enabled them to correct or verify their anticipations, and their opportunities of observation were limited. Plato probably did more for physical science by asserting the supremacy of mathematics than Aristotle by his collection of facts. When the thinkers of modern times, following Bacon, undervalue or disparage the speculations of ancient philosophers, they seem wholly to forget the conditions of the world and of the human mind, under which they carried on their investigations. When we accuse them of being under the influence of words, do we suppose that we are altogether free from this illusion? When we remark that Greek physics soon became stationary or extinct, may we not observe also that there have been and may be again periods in the history of modern philosophy which have been barren and unproductive? We might as well maintain that Greek art was not real or great, because it had *nihil simile aut secundum*, as say that Greek physics were a failure because they made no subsequent progress.

The charge of premature generalization which is often urged against ancient philosophers is really an anachronism. For they can hardly

be said to have generalized at all. They rather cleared up and defined by the help of experience ideas which they already possessed. The beginnings of thought about nature must always have this character. A true method is the result of many ages of experiment and observation. At first men personify nature, then they form impressions of nature, at last they conceive the laws of nature. They pass out of mythology into philosophy. Early science is not a process of discovery in the modern sense; but rather a process of correcting by observation, and to a certain extent only, the first impressions of nature, which mankind, when they began to think, had received from poetry or language. Of all scientific truths the greatest and simplest is the uniformity of nature; of this, amid many appearances to the contrary, the ancient physical philosophers had always an unshaken conviction.

§ 3.

Plato's account of the soul is partly mythical or figurative, and partly literal. Not that either he or we can draw a line between them, or say, 'This is poetry, this is philosophy'; for the transition from the one to the other is imperceptible. There is a further difficulty in explaining this part of the *Timaeus*—the natural order of thought is inverted. We begin with the most abstract, and proceed from the abstract to the concrete, although at p. 34 (cp. 53 D) Plato acknowledges that this order cannot always be maintained. But the abstract is unmeaning to us until brought into relation with man and nature. That which is spoken of first is really last, and is on the uttermost verge of human knowledge. And yet the priority of this abstract God, and the world which he is imagined to have created, gives a kind of awe to them. As in other systems of theology and philosophy, that of which we know least has the greatest interest to us.

There is no use in attempting to define or explain the first God in the Platonic system, who has sometimes been thought to answer to God the Father; or the first world or eternal soul, in whom the Fathers of the Church seemed to recognize 'the firstborn of every creature.' Nor need we discuss at length how far Plato agrees in the later Jewish conception of creation, according to which God made the world out of nothing. For the original conception of matter having no qualities is really a negation, and might as well be represented by nothing. According to Plato in the *Timaeus*, God took of the same and the

other, of the divided and undivided, of the finite and infinite, and made the world, according to certain mathematical ratios. As far as any meaning can be attached to these words, they only imply that God imparted determinations of thought, or, as we might say, gave order and variety to the material universe. The elements are moving in a disorderly manner before the work of creation begins (30 A); and there is an eternal pattern of the world which like the 'idea of good' is not the Creator himself, nor yet separable from him. The pattern too though eternal is a creation, a world of thought prior to the world of sense, which may be compared also to the wisdom of God in the book of Ecclesiasticus, or to the 'God in the form of a globe' of the old Eleatic philosophers. The visible which already exists, is fashioned in the likeness of this eternal pattern. On the other hand, there is no truth of which Plato is more firmly convinced than of the priority of the soul to the body, both in the universe and in man. So inconsistent are the forms in which he describes the works which no tongue can utter—his language, as he himself says, partaking of his own uncertainty about the things of which he is speaking.

We may remark in passing, that the Platonic compared with the Jewish description of the process of creation has less of freedom or spontaneity. The Creator in Plato is still subject to a remnant of necessity which he cannot wholly overcome. When his work is accomplished he remains in his own nature. Plato is more sensible than the Hebrew prophet of the existence of evil, which he seeks as far as possible to put away from God. And he can only suppose this to be accomplished by leaving man to himself and by committing the lesser works of creation to inferior powers. (Compare, however, Laws x. 903 for another solution of the difficulty.)

Nor can we attach any intelligible meaning to his words when he speaks of the visible being in the image of the invisible. For how can that which is divided be like that which is undivided? or that which is changing be the copy of that which is unchanging? All the old difficulties about the ideas come back upon us in a slightly altered form. We can imagine two worlds, one of which is the mere double of the other, or one of which is the vanishing ideal of the other; but we cannot imagine an intellectual world which has no qualities—'a thing in itself'—a point which has no parts or magnitude, which is nowhere, and nothing. This cannot be the archetype according to which God made the world,

and is in reality, whether in Plato or Kant, a mere negative residuum of human thought.

There is another aspect of the same difficulty which appears to have no satisfactory solution. In what relation does the archetype stand to the Creator himself? For the idea or pattern of the world is not the thought of God, but a separate, self-existent nature, of which creation is the copy. We can only reply, (1) that to the mind of Plato the distinction between the subject and the object as yet hardly existed; (2) that he supposes the process of creation to take place in accordance with his own theory of ideas; and as we cannot give an intelligible account of the one, neither can we of the other. He means (3) to say that the creation of the world is not a material process of working with legs and arms, but ideal and intellectual; according to his own fine expression, 'the thought of God made God.' He means (4) to draw an absolute distinction between the invisible and unchangeable which is the place of mind or being, and the world of sense or becoming which is visible and changing. He means (5) that the idea of the world is prior to the world, just as the other ideas are prior to sensible objects; and like them may be regarded as eternal and self-existent, and also like the *idea* of good, may be viewed apart from the divine mind.

There are several other questions which we might ask and which can receive no answer, or at least only an answer of the same kind as the preceding. How can matter be conceived to exist without form? Or, how can the essences or forms of things be distinguished from the eternal ideas? Or, how could there have been motion in the chaos when as yet time was not? Or, how did chaos come into existence, if not by the will of the Creator? Or, how could there have been a time when the world was not, if time was not? Or, how could the Creator have taken portions of an indivisible same? Or, how could space or anything else have been eternal when time is only created? Or, how could the surfaces of geometrical figures have formed solids? We must reply again that we cannot follow Plato in all his inconsistencies, but that the gaps of thought are probably more apparent to us than to him. He would, perhaps, have said that 'the first things are known only to God and to him of men whom God loves.' And we may say that only by an effort of metaphysical imagination can we hope to understand Plato from his own point of view; we must not ask for consistency. Everywhere we find traces of the Platonic theory of knowledge expressed

in an objective form, which by us has to be rendered back into the subjective, before we can attach any meaning to it. And this theory is exhibited in so many different points of view, that we cannot with any certainty interpret the statements of one dialogue by those of another; e.g. the *Timaeus* by the *Parmenides* or *Philebus*.

The soul of the world may be conceived as the personification of the numbers and figures in which the heavenly bodies move. Imagine these as in a Pythagorean dream, stripped of qualitative difference and reduced to mathematical abstractions. They are what Plato calls the principle of the same, and may be compared with the modern conception of laws of nature. They are in space, but not in time, and they are the makers of time. They are represented as constantly thinking of the same; for thought in the view of Plato is equivalent to truth or law, and is not inseparably bound up with a human consciousness. To this principle of the same is opposed the principle of the other—the principle of irregularity and disorder, of necessity and chance, which is only partially impressed by mathematical laws and figures. (We may observe by the way, that the principle of the other, which is the principle of plurality and variation in the *Timaeus*, has nothing in common with the ‘other’ of the *Sophist*, which is the principle of determination.) The element of the same dominates to a certain extent over the other—the fixed stars keep the ‘wanderers’ of the inner circle in their courses, and a similar principle of fixedness or order appears to regulate the bodily constitution of man. But there still remains a rebellious seed of evil derived from the original chaos, which is the source of disorder in the world, and of vice and disease in man.

Before they are immersed in matter the same and the other are blended in a third nature which Plato terms the essence. By essence he seems to mean existence with which the Creator first filled up the interval between the same and the other; and out of all the three natures formed a new essence or soul of the world. This which is framed on the analogy of the soul of man is twice mixed, first with a portion of the same and other, and the mixture with the remainder of them. These are the modes or connecting links by which the soul partaking both of order and of variety is impressed on matter. The entire compound was divided by the Creator into certain proportions which he comprehended in a uniform motion around a centre in two circles, of which the outer contained the fixed, the inner the wandering stars.

Thus the essence or soul of the world was diffused everywhere from the centre to the circumference. To this God gave a body, consisting at first of fire and earth, and afterwards receiving an addition of air and water; because solid bodies, like the world, are always connected by two middle terms and not by one. The world was made in the form of a globe, and all the elements, both material and immaterial, were exhausted in the work of creation.

The proportions in which the soul is divided answer to a series of numbers 1, 2, 3, 4, 9, 8, 27, composed of the two Pythagorean progressions 1, 2, 4, 8 and 1, 3, 9, 27. This series, of which the intervals are afterwards filled up, probably represents (1) the diatonic scale according to Plato; (2) the order and distances of the heavenly bodies; and (3) may possibly contain an allusion to the music of the spheres, which has been already referred to in the myth at the end of the Republic. The meaning of the words that 'solid bodies are always connected by two middle terms' has been much disputed. The most received explanation is that of Martin, who supposes that Plato is only speaking of surfaces and solids made up of prime numbers (i.e. of numbers not made up of two factors, or only measurable by unity). The product of two such numbers represents a surface, of three a solid. The squares of numbers which are primes (e.g. 2^2 , $3^2=4$, 9), have always a single mean proportional (e.g. 4 and 9 have the single mean 6), whereas cubes which are primes (e.g. 3^3 and 5^3) have always two mean proportionals, e.g. $27 : 45 : 75 : 125$. But to this explanation of Martin's we may object, (1) that Plato nowhere says that his proportion is to be limited to prime numbers; (2) that the limitation of surfaces to squares is also wanting; (3) that the figures and the ratios afterwards assigned to the elements do not correspond to the proportions between solid numbers which are thus obtained; (4) that Plato's doctrine of a mean is supposed by him to apply to any powers whatever (*εἴτε δυνάμεων ὀντινωνούν, 32 A*); and he must have known, if Martin's explanation be correct, that there was no single mean between two cubes. What Plato chiefly intends to express is that a solid requires a stronger bond than a surface; and that the double bond which is given by a proportion of four terms is stronger than the single bond of three terms. The proportion $2 : 4 :: 4 : 8$ and the like, of which he delights to remark that the three terms admit of transposition, is the symbol of a surface; the proportion $2 : 4 :: 8 : 16$, &c., is the symbol

of a solid; and the four terms answer to the four elements, which are capable of being multiplied into one another in the same manner as the terms. The vagueness of his language does not allow us to determine whether anything more than this was intended by him.

Leaving the further explanation of details, which the reader will find discussed at length in Boeckh and Martin, we may now return to the main argument: Why did God make the world? Like man, He must have a purpose; and his purpose is the diffusion of that goodness or good which He himself is. The term 'goodness' is not to be understood in this passage as meaning benevolence or love, in the Christian sense of the term, but rather law, order, harmony, like the idea of good in the Republic. The ancient mythologers, and even the Hebrew prophets, had spoken of the jealousy of God; and the Greek had imagined that there was a Nemesis attending always the prosperity of mortals. But Plato delights to think of God as the author of order in his works, who, like a father, lives over again in his children, and can never have too much of good or friendship among his creatures. Only, as there is a certain remnant of evil inherent in matter which he cannot get rid of, he detaches himself from them and leaves them to themselves, that he may be guiltless of their faults and sufferings.

Between the ideal and the sensible Plato interposes the two natures of time and space. Time is conceived by him to be only the shadow or image of eternity, which ever is and never has been or will be, but is described in a figure only as past or future. This is one of the great thoughts of early philosophy, which are still as difficult to our minds as they were to the early thinkers; or perhaps more difficult, because we more distinctly see the consequences which are involved in such an hypothesis. All the objections which may be urged against Kant's doctrine of the ideality of space and time at once press upon us. If time is unreal, then all which is contained in time is unreal—the succession of human thoughts as well as the flux of sensations; there is no connecting link between *φαινόμενα* and *ὄντα*. Yet, on the other hand, we are conscious that knowledge is independent of time, that truth is not a thing of yesterday or to-morrow, but an 'eternal now.' To the 'spectator of all time and all existence' the universe remains at rest. The truths of geometry and arithmetic in all their combinations are always the same. The generations of men, like the leaves of the forest,

come and go, but the mathematical laws by which the world is governed remain, and seem as if they could never change. The ever-present image of space is transferred to time—succession is conceived as extension. (We may remark that Plato has done away with the above and below in space, as he has done away with the past and future in time.) The course of time, unless regularly marked by divisions of number, partakes of the indefiniteness of the Heraclitean flux. By such reflections we may conceive the Greek to have attained the metaphysical conception of eternity, which to the Hebrew was gained by meditation on the Divine Being. No one saw that this objective was really a subjective, and involved the subjectivity of all knowledge. 'Non in tempore sed cum tempore finxit Deus mundum,' says St. Augustine, repeating a thought derived from the *Timaeus*, but apparently unconscious of the results to which his doctrine would have led.

The conception of space is scarcely distinguishable from what Plato terms the 'containing vessel or nurse of generation.' Reflecting on the simplest kinds of external objects, which to the ancients were the four elements, Plato was led to a more general notion of a kind out of which they were all fashioned. He would not have them too precisely distinguished. Thus seems to have arisen the first dim perception of *ἄληθ* or matter, which has played so great a part in the metaphysical philosophy of Aristotle and his followers. Akin to this, for we can hardly distinguish between such extreme abstractions, is space, which Plato affirms to be eternal. He seems more willing to admit of the unreality of time than of the unreality of space; because, as he says, all things must necessarily exist in space. We, on the other hand, are disposed to fancy that even if space were annihilated time might still survive. He admits indeed that our knowledge of space is of a dreamy kind, and is given by a spurious reason without the help of sense. (Cp. the hypotheses and images of *Rep.* vi. 511.) It does not attain to the clearness of ideas. But like them it seems to remain, even if all the objects contained in it are supposed to have vanished away. Hence it was natural for Plato to conceive of it as eternal. We must remember further that in his attempt to conceive of either space or matter the two abstract ideas of weight and extension, which are familiar to us, had never passed before his mind.

Thus far God, working according to an eternal pattern, out of his

goodness has created the same, the other, and the essence (compare the three principles of the Philebus—the finite, the infinite, and the union of the two), and out of them has formed the outer circle of the fixed stars and the inner circle of the planets, divided according to certain musical intervals; he has also created time, the moving image of eternity, and space, existing by a sort of necessity and hardly distinguishable from matter. The matter out of which the world is formed is not absolutely void, but retains in the chaos certain germs or traces of the elements. These Plato, like Empedocles, supposed to be four in number—fire, air, earth, and water. They were at first mixed together, and in the process of creation parted company from each other, the more volatile elements of fire and air propelling water and earth. They are called elements, but they are so far from being elements or letters in the higher sense that they are not even syllables or first compounds. The real elements are the simplest forms of triangles; for all solids are terminated by surfaces, and all surfaces are resolvable into triangles. These are of two kinds: the rectangular scalene, which is the half of an equilateral triangle and has the hypotenuse double the lesser side—this from the greater regularity of its proportions is conceived by Plato to be the most beautiful of scalene triangles, and is therefore chiefly employed in the creation of the world, having, moreover, an infinite variety of forms. There is also the rectangular isosceles triangle, which has one form only, and is less adapted for construction.

Out of these triangles Plato proceeds to generate the four first of the five regular solids, perhaps forgetting that he is only constructing surfaces which have no solidity. The first solid is a regular pyramid, of which the base and sides are formed by four equilateral or twenty-four scalene triangles. Each of the four solid angles in this figure is a little larger than the largest of obtuse angles. The second solid is composed of the same triangles, which unite as eight equilateral triangles, and make one solid angle out of four plane angles—six of these angles form a regular octahedron. The third solid is a regular icosahedron, having twenty triangular equilateral bases, and therefore 120 rectangular scalene triangles. The fourth regular solid, or cube, is formed by the combination of four isosceles triangles into one square and of six squares into a cube. The fifth regular solid, or dodecahedron, cannot be formed by a combination of either kind of triangle, but each of its

faces may be regarded as composed of thirty triangles of another kind. Probably Plato notices this as the only remaining regular polyhedron, which from its approximation to a globe, and possibly because, as Plutarch remarks, it is composed of $12 \times 30 = 360$ scalene triangles (Platon. Quaest. 5), representing thus the signs and degrees of the Zodiac, as well as the months and days of the year, God may be said to have 'used in the delineation of the universe.' According to Plato the earth was composed of cubes, the air of regular octahedrons, the water of regular icosahedrons, the fire of regular pyramids. The stability of the three last increases with the number of figures.

The elements are supposed to pass into one another. We must remember that these transformations are not the transformations of real solids, but of imaginary geometrical figures; in other words, we are composing and decomposing the faces and not the substances of the triangles. Yet perhaps Plato may regard them as only the forms which are impressed on pre-existent matter. It is remarkable that he should speak of each of these solids as a possible world in itself, though upon the whole he inclines to the opinion that they are one. To suppose that these forms are infinite, as Democritus had said, would be, as he satirically observes, 'the mark of a very indefinite mind.'

The twenty triangular faces of an icosahedron form the faces or sides of two regular octahedrons and of a regular pyramid ($20 = 8 \times 2 + 4$); and therefore, according to Plato, a particle of water when decomposed is supposed to give two particles of air and one of fire. So because an octahedron gives the sides of two pyramids ($8 = 4 \times 2$), a particle of air is resolved into two particles of fire.

The transformation is effected by the superior power or number of the conquering elements. The manner of the change is (1) a separation of portions of the elements from the mass in which they are collected; (2) a resolution of them into their own original triangles; and (3) a reunion of them in new forms. The finer natures are those which have the fewest bases, and being the most cutting have the advantage in any disturbances of matter; they force their way in, but are sometimes crushed by the weight or hardness of the surrounding element. Plato himself proposes the question, why does motion continue at all when the elements are settled in their places? The answer is, that although the world has been reduced to order by the Creator,

the circular motion still retains a condensing power, and thrusts three of the elements into each other and into the fourth. Changes can only be effected by the greater number or power of dissimilars ; when there is assimilation there is rest. Fire, air, water have a decomposing effect on all the four, but earth has no similar power over them. No single particle of the elements is visible, but only the aggregates of them are seen. The different subordinate species which are formed out of them depend upon the sizes of the original triangles. The obvious physical phenomena from which Plato has gathered his views of the relations of the elements seem to be the effect of fire upon air, water, and earth, and the effect of water upon earth. The particles are supposed by him to be in a perpetual process of circulation caused by inequality. This process of circulation does not admit of a vacuum. Yet he appears to be inconsistent with himself. For in some of his remarks, e. g. in his strange account of the phenomena of respiration, he supposes air to be incompressible, as water really is, while in other places he supposes air to be condensed. And even the most penetrating element, fire, like all the rest, is composed of angles, and therefore cannot find a way into other geometrical figures without leaving a void, however small.

Of the phenomena of light and heavy he speaks afterwards, when treating of sensation, but they may be more conveniently considered by us in this place. They are not, he says, to be explained by 'above' and 'below,' which in the universal globe have no existence, but by the attraction of similars towards the great masses of similar substances ; fire to fire, air to air, earth to earth. Plato's doctrine of attraction implies not only (1) the attraction of smaller bodies to larger ones, but (2) of similar elements to one another. Had he stopped at the first he would have arrived, though, perhaps, without any further result or any sense of the greatness of the discovery, at the modern doctrine of gravitation. He does not observe that water has an equal tendency towards both water and earth. So easily did the most obvious facts which were inconsistent with his theories escape him.

The general physical doctrines of the *Timaeus* may be summed up as follows: (1) Plato supposes the greater masses of the elements to have been settled in their places at the creation: (2) they are four in number, and are formed of rectangular triangles variously combined into regular solid figures: (3) three of them, fire, air, and water, admit of transformation into one another; the fourth, earth, cannot be similarly

transformed: (4) different sizes of the same triangles form the lesser species of each element: (5) there is an attraction of the lesser to the greater, and of like to like: (6) there is no void, but the particles of matter are ever pushing one another round and round in a circle. Like the atomists, Plato attributes the differences of substances to differences in the forms of atoms. But he does not explain the process by which geometrical surfaces become solids; and he characteristically ridicules Democritus for not seeing that the good and the true 'are of the nature of the finite.'

§ 4.

The astronomy of Plato is based on the two principles of the same and the other, which God combined in the creation of the world. The soul, which is compounded of the same, the other, and the essence, is diffused from the centre to the circumference of the heavens. We speak of a soul of the universe; but more truly regarded, the universe of the *Timæus* is a soul, governed by mind, and holding in solution a residuum of matter or evil, which the author of the world is unable to expel, and of which Plato cannot tell us the origin. The creation, in Plato's sense, is really the creation of order in the world; and the first step in giving order is the division of the heavens into an inner and outer circle of the same and the other, of the indivisible and the divisible, answering to the spheres of the fixed stars and of the planets, all together moving around the earth, which is their centre. To us there is a difficulty in apprehending how that which is indivisible can be divided by the courses of the fixed stars, or how that which is at rest can also be in motion. But the whole description is so ideal and imaginative, that we can hardly venture to attribute to many of Plato's words in the *Timæus* any more meaning than to his mythical account of the heavens in the *Republic* and in the *Phædrus*. The stars are also gods, and the original habitations of the souls of men, from which they come and to which they will hereafter return. In attributing to the fixed stars only the most perfect motion—that which is on the same spot or circling around the same—he might perhaps have said that to 'the spectator of all time and all existence,' to borrow once more his own grand expression, or viewed, in the language of Spinoza, 'sub specie æternitatis,' they were still at rest, but appeared to move in order to teach men the periods of time. Although absolutely in motion, they

are relatively at rest; or we may conceive of them as resting, while the space in which they are contained, or the whole *anima mundi*, revolves.

The universe revolves around a centre once in twenty-four hours, but the orbits of the fixed stars take a different direction from those of the planets. The inner and the outer sphere cross one another and meet again at a point opposite to that of their first contact; the first moving in a circle from left to right along the side of a parallelogram which is supposed to be inscribed in it, the second also moving in a circle along the diagonal of the same parallelogram from right to left; or, in other words, the first describing the path of the equator, the second, the path of the ecliptic. The motion of the second is controlled by the first, and hence the oblique line in which the planets are supposed to move becomes a spiral. The motion of the same is said to be undivided, whereas the inner motion is split into six portions or intervals containing seven unequal orbits—three in ratios of two, and three in ratios of three:—the Sun, moving in the opposite direction to Mercury and Venus, but with equal swiftness; the remaining four, Moon, Saturn, Mars, Jupiter, with unequal swiftness to the former three and to one another. Thus arises the following progression:—Moon 1, Sun 2, Venus 3, Mercury 4, Mars 8, Jupiter 9, Saturn 27. This series of numbers is the compound of the two Pythagorean ratios, having the same intervals, though not in the same order, as the mixture which was originally divided in forming the soul of the world.

Plato was struck by the phenomenon of Mercury, Venus, and the Sun appearing to overtake and be overtaken by one another. The true reason of this, namely, that they lie within the circle of the earth's orbit, was unknown to him, and the reason which he gives—that they move in opposite directions to the four other planets—is far from explaining the appearance of them in the heavens. All the planets, including the sun, revolve upon their axis; they are also carried round in the daily motion of the circle of the fixed stars, and they have a third or oblique motion which gives the explanation of the different lengths of the sun's course in different parts of the world. The fixed stars have only two movements—a movement on the same spot around an axis, which Plato calls the movement of thought about the same; and the forward movement in their orbit which is common to the whole circle. In this respect they are more perfect than the

wandering stars, as Plato himself terms them, although in the *Laws* (vii. 821 C) he condemns the appellation as blasphemous.

The revolution of the world around the earth, which is accomplished in a single day and night, is described as being the most perfect. Yet Plato also speaks of an 'annus magnus' or cyclical year, in which periods wonderful for their complexity are found to coincide in a perfect number, i. e. a number which equals the sum of its factors. This, although not literally contradictory, is in spirit irreconcilable with the perfect revolution of twenty-four hours. The same remark may be applied to the complexity of the appearances and occultations of the planets, which, if the fixed stars are supposed to be moving around the centre once in twenty-four hours, must be confined to the effects produced by the seven planets. The truth is that Plato seems to confuse the actual observation of the heavens with his desire to find in them mathematical perfection. The same spirit is carried yet further by him in the *Laws*, in which, after refusing to allow the planets or wandering stars to be called by this name, he affirms their wanderings to be an appearance only, which a little knowledge of mathematics would enable men to correct.

We have now to consider the much discussed question of the rotation or immobility of the earth. Plato's doctrine on this subject is contained in the following words:—'The earth which is our nurse clinging (*or* circling) around the pole which is extended through the universe, he made to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven.' There is an unfortunate doubt (1) in this passage about the meaning of the Greek word which is translated 'clinging' or 'circling,' and is equally capable of either sense. A doubt (2) may also be raised as to whether the words 'artificer of day and night' are consistent with the mere passive causation of them, produced by the immobility of the earth in the midst of the circling universe. We must admit, further, (3) that Aristotle attributed to Plato the doctrine of the rotation of the earth. Yet the reasons which may be urged on the opposite side of the argument are far stronger. For, in the first place, if the earth goes round with the outer heaven and the planets, including among them the sun, in twenty-four hours, there is no possibility of accounting for the alternation of day and night, or for any movement of the heavens; since the equal motion of the earth and heavens would have

the effect of absolute immobility. Nor, secondly, can we suppose with Mr. Grote, that Plato has fallen unawares into this enormous contradiction; for though he was ignorant of many things which are familiar to us, and often confused in his ideas where we have become clear, we have no right to attribute to him a childish want of reasoning about very simple facts, or an inability to understand the necessary deductions from geometrical figures or movements. Of the causes of day and night the pre-Socratic philosophers, and especially the Pythagoreans, gave various accounts, and therefore the question can hardly be imagined to have escaped him. Thirdly, Mr. Grote supposes, not that *ἰλλομένην* means 'circling,' or that this is the sense in which Aristotle understood the word, but that the rotation of the earth is necessarily implied in its adherence to the cosmical axis. But (a) if, as Mr. Grote assumes, Plato did not see that the rotation of the earth on its axis and of the heavens around the earth in equal times was inconsistent with the alternation of day and night, neither need we suppose that he would have seen the immobility of the earth to be inconsistent with the rotation of the axis. And (β) what proof is there that the axis of the world revolves at all? (γ) The comparison of the two passages quoted by Mr. Grote (see p. 19 of his pamphlet on 'The Rotation of the Earth') from Aristotle *De Coelo* (c. 13, *ἔνιοι—γέγραπται*, and c. 14, *ἡμεῖς—μέσον*) clearly shows, although this is a matter of minor importance, that Aristotle, as Proclus and Simplicius supposed, understood *ἰλλεσθαι* in the *Timaeus* to mean circling or revolving. For the second passage, in which motion on an axis is expressly mentioned, refers to the first, but this would be unmeaning unless *ἰλλεσθαι* in the first passage meant rotation on an axis. (4) The immobility of the earth is more in accordance with Plato's other writings than the opposite hypothesis. For in the *Phaedo* the earth is described as the centre of the world, and is not said to be in motion. In the *Republic* the pilgrims appear to be looking out from the earth upon the motions of the heavenly bodies; in the *Phaedrus*, Hestia, who remains immovable in the house of Zeus while the other gods go in procession, is called the first and eldest of the gods, and is probably the symbol of the earth. The silence of Plato in these and in some other passages (cp. *Laws* x. 893 C) in which he might be expected to speak of the rotation of the earth, is more favourable to the doctrine of its immobility than to the opposite. If

he had meant to say that the earth revolves on her axis, he would probably have expressed this in distinct words, and have explained the relation of her movements to those of the other heavenly bodies. (5) The meaning of the words 'artificer of day and night' is literally true according to Plato's view. For the alternation of day and night is not produced by the motion of the heavens alone, or by the immobility of the earth alone, but by both together; and that which has the inherent force or energy to remain at rest when all other bodies are moving, may be truly said to act, equally with them. (6) We should not lay too much stress on Aristotle having adopted the other interpretation of the words, although Alexander of Aphrodisias thinks that he could not have been ignorant either of the doctrine of Plato or of the sense which he intended to give to the word *ἄλλομένην*. For the citations of Plato in Aristotle are frequently misinterpreted by him; and he seems hardly ever to have had in his mind the connection in which they occur. In this instance the allusion is very slight, and there is no reason to suppose that the diurnal revolution of the heavens was present to his mind. Hence we need not attribute to him the error from which we are defending Plato.

§ 5.

The soul of the world is framed on the analogy of the soul of man, and many traces of anthropomorphism blend with Plato's highest flights of idealism. The heavenly bodies are endowed with thought, the principle of the same is the true law of the human mind as well as of the fixed stars. The soul of man is made out of the remains of the cup which contained the same, the other, and the essence; these remains, however, are diluted to the third degree; or, speaking still in a figure, there are dregs of necessity which are mingled with them. The human soul, like the cosmical, is framed before the body, as the mind is before the soul of either—this is the order of the divine work—and the finer parts of the body, which are more akin to the soul, such as the spinal marrow, are prior to the bones and flesh. The brain, which is the vessel of the soul, is (nearly) in the form of a globe, which is the image of the gods and the figure of the fixed stars and of the universe.

There is, however, an inconsistency in Plato's manner of conceiving

the soul of man ; he cannot get rid of the element of necessity which is allowed to enter. He does not, like Kant, attempt to vindicate for men a freedom out of space and time ; but he acknowledges him to be subject to the influence of external causes, and leaves hardly any place for freedom of the will. The lusts of men are caused by their bodily constitution, though they may be increased by bad education and bad laws, which implies that they may be decreased by good education and good laws. He appears to have an inkling of the truth that to the higher nature of man evil is involuntary. Still, in the *Timaeus*, as well as in the *Laws*, he regards vices and crimes as simply involuntary ; they are diseases analogous to the diseases of the body, and arising out of the same causes. If we draw together the opposite poles of Plato's system, we find that, like Spinoza, he combines idealism with fatalism (see *infra*, p. 595).

The soul of man is divided by him into three parts, answering roughly to the charioteer and steeds of the *Phaedrus*, and to the *λόγος*, *θυμός*, and *ἐπιθυμία* of the *Republic* and *Nicomachean Ethics*. First, there is the immortal part which is seated in the brain, and is alone divine, and akin to the soul of the universe. This alone thinks and knows and is the ruler of the whole. Secondly, there is the higher mortal soul which, though liable to perturbations of her own, takes the side of reason against the lower appetites. The seat of this is the heart, in which courage, anger, and all the nobler affections are supposed to reside. There the veins all meet ; it is their centre or house of guard whence they carry the orders of the thinking being to the extremities of his kingdom. There is also a third or appetitive soul, which receives the commands of the immortal part, not immediately but mediately, through the higher mortal nature, which reflects in the liver the admonitions and threats of the reason.

The liver is imagined by Plato to be a smooth and bright substance, having a store of sweetness and also of bitterness, which reason freely uses in the execution of her mandates. Thither as to a second centre the courses of the blood return. In this region, as ancient superstition told, were to be found intimations of the future. But Plato is careful to observe that such knowledge is only given to the inferior parts of man, and then requires to be interpreted by the superior. Reason, and not enthusiasm, is the true guide of man ; he is only inspired when he is demented by some distemper or possession. The ancient

saying, 'that only a man in his senses can judge of his own actions,' is approved by modern philosophy too. The same irony which appears in Plato's remark, 'that the men of old time must surely have known the gods who were their ancestors, and we must believe them as the law requires,' is also manifest in his account of divination.

The appetitive soul is seated in the belly, and there imprisoned like a wild beast, far away from the council chamber, as Plato graphically calls the head, in order that the animal passions may not interfere with the deliberations of reason. Though the soul is independent of the body, yet we cannot help seeing that Plato has really modelled the soul on the body—this threefold division in fact springing from the head and heart and belly. The human soul differs from the soul of the world in this respect, that she is enveloped and finds her expression in matter, whereas the soul of the world is the element in which matter moves. The breath of man is within him, but the air or aether of heaven is the element which surrounds him and all things.

Pleasure and pain are attributed in the *Timæus* to the suddenness of our sensations—the first being a sudden restoration, the second a sudden violation, of nature (cp. *Philebus*). The sensations become conscious to us when they are exceptional. Sight is not attended either by pleasure or pain, but hunger and the appeasing of hunger are pleasant and painful because they are extraordinary.

§ 6.

I shall not attempt to connect the physiological speculations of Plato either with ancient or modern medicine. What light I can throw upon them will be derived from the comparison of them with his general system.

There is no principle so apparent in the physics of the *Timæus*, or in ancient physics generally, as that of continuity. The world is conceived of as a whole, and the elements are formed into and out of one another; the variety of substances and processes are hardly known or noticed. And in a similar manner the human body is conceived of as a whole, and the different substances of which, to a superficial observer, it appears to be composed—the blood, flesh, sinews, and bone—like the elements out of which they are formed, are supposed to pass into one another in regular order, while the infinite complexity of the human frame remains unobserved. And diseases arise from the opposite process—

when the natural proportions of the four elements are disturbed, and the secondary substances which are formed out of them, namely, blood, flesh, sinews, bone, are generated in an inverse order.

Plato found heat and air within the human frame, and the blood circulating in every part. He assumes, in language almost unintelligible to us, that an inner network of fire, having openings and an exterior envelopment of air, commencing at the passages of the throat encased a great part of the human frame. This case, or network, of fire is a figure or fancy, under which Plato describes the internal heat of the body, and which he made the containing vessel of some of the organs, because fire was composed of the finest particles, and was therefore impenetrable by the other elements. The entire net has two lesser nets or openings, one leading to the stomach, the other to the lungs; and the latter is forked or divided at the upper end into the passages which lead to the nostrils and to the mouth.

Of the anatomy and functions of the body he was almost entirely ignorant; he knew nothing of the uses of the nerves in conveying motion and sensation, which he attributes to the veins; he was also ignorant of the distinction between veins and arteries;—the latter term he applies to the vessels which conduct air from the mouth to the lungs;—he supposes the lung to be empty and bloodless; the spinal marrow he conceives to be the seed of generation; he has absolutely no idea of the phenomena of respiration, which he attributes to a law of equalization in nature, the air which is breathed out displacing other air which finds a way in through the pores; he is wholly unacquainted with the process of digestion. Except the general divisions into the spleen, the liver, the belly, and the lungs, and the obvious distinctions of flesh, bones, and the limbs of the body, we find nothing that reminds us of anatomical facts. But we find much which is derived from his theory of the universe, and transferred to man, as there is much also in his theory of the universe which is suggested by man. The microcosm of the human body is the lesser image of the macrocosm. The courses of the same and the other affect both; they are made in the same proportions; both of them have an equator and an ecliptic, though in the human body displaced and distorted by the flux and reflux of particles of matter. Both are intelligent natures endued with the power of self-motion, and the same equipoise is maintained in both. The animal is a sort of 'world' to the particles of the blood which circulate

in it. All the four elements entered into the original composition of the human frame; the bone was formed out of smooth earth; liquids of various kinds pass to and fro; an inner network of fire and an outer network of air irrigates the veins. Childhood is the chaos or first turbid flux of sense prior to the establishment of order; the intervals of time which may be observed in some intermittent fevers correspond to the intervals of the elements. The spinal marrow, including the brain, is formed out of the finest sorts of triangles, and is the connecting link between body and mind. Health is only to be preserved by imitating the motions of the world in space, which is the mother and nurse of generation. The process of digestion is carried on by the superior sharpness of the triangles of the substances of the human body to the substances which are introduced into it in the shape of food. The freshest and acutest forms of triangles are those that are found in children, but they become more obtuse with advancing years; and when they finally wear out and fall to pieces, old age and death supervene.

As in the Republic, Plato is still the enemy of the purgative treatment of physicians, which, except in extreme cases, no man of sense will ever adopt. For, as he adds, perhaps with an insight into the truth, 'every disease is akin to the nature of the living being and is only irritated by stimulants.' He is of opinion that nature should be left to herself, and is inclined to think that physicians are in vain. As in the Charmides he tells us that the body cannot be cured without the soul, so in the Timaeus he strongly asserts the sympathy of soul and body; any defect of either is the occasion of the greatest discord and disproportion in the other. We cannot deny that his conception of the human body falls under the condemnation which Hippocrates, or some one writing in his spirit ('On Ancient Medicine'), has passed upon hypothetical medicine; and yet, amid all his extravagance, he is not deserted by a true tact.

§ 7.

In Plato's explanation of sensation we are struck by the fact that he has not the same distinct conception of organs of sense which is familiar to ourselves. The senses are not instruments, but rather passages, through which external objects strike upon the mind. The eye is the aperture through which the stream of vision passes, the ear is

the aperture through which the vibrations of sound pass. But that the complex structure of the eye or the ear is in any sense the cause of sight and hearing he seems hardly to be aware.

The process of sight is the most complicated (cp. Rep. vi. 507, 508), and consists of three elements—the light which is supposed to reside within the eye, the light of the sun, and the light emitted from external objects. When the light of the eye meets the light of the sun, and both together meet the light issuing from an external object, this is the simple act of sight. When the particles of light which proceed from the object are exactly equal to the particles of the visual ray which meet them from within, then the body is transparent. If they are larger and dilate the visual ray which mingles with them, a white colour is produced by them; if they are smaller, a black. Other phenomena are produced by the variety and motion of light. A sudden flash of fire at once elicits light and moisture from the eye. A more subdued light of fire, which touches the surface and mingles with the moisture of the eye, produces a red colour. Out of these elements all other colours are supposed to be derived. All of them are combinations of light and fire with white and black. Plato himself tells us that he does not know in what proportions they combine, and he is of opinion that such knowledge is granted to the gods only. To have seen the affinity of them to each other and their connection with light, is not a bad basis for a theory of colours. We must remember that they were not distinctly defined to his, as they are to our eyes; he saw them, not as they are divided in the prism, or artificially manufactured for the painter's use, but as they exist in nature, blended and confused with one another.

We can hardly agree with him when he tells us that smells do not admit of kinds. He seems to think that no definite qualities can attach to bodies which are in a state of transition or evaporation; he also makes the subtle observation that smells must be denser than air, though thinner than water. The proof of this is that air can percolate without any accompanying smell.

The affections peculiar to the tongue are of various kinds, and, like many other affections, arise out of composition and division. Some of them are produced by astringent, others by abstergent substances, stronger or weaker,—these act upon the testing instruments of the tongue, and produce a more or less disagreeable sensation, while other

particles congenial to the tongue soften and harmonize them. The instruments of taste reach from the tongue to the heart. Plato has a lively sense of the manner in which sensation and motion are communicated from one part of the body to the other, though he confuses the affections with the organs. Hearing is a blow which passes through the ear and ends in the region of the liver, being transmitted by means of the air, the brains, and the blood to the soul. The swifter sound is acute, the sound which moves slowly is grave. A great body of sound is loud, the opposite is low. Discord is produced by the swifter and slower motions of two sounds, and is converted into harmony when the swifter motions begin to pause and are overtaken by the slower.

The general phenomena of sensation are partly internal, but the more violent are caused by conflict with external objects. Proceeding by a method of superficial observation, Plato remarks that the more sensitive parts of the human frame are those which are least covered by flesh, as is the case with the head and the elbows. Man, if his head had been covered with a thicker pulp of flesh, might have been a longer lived animal than he is, but could not have had as quick perceptions. On the other hand, the tongue is one of the most sensitive of organs; but then this is made, not to be a covering to the bones which contain the marrow or source of life, but with an express purpose, and in a separate mass.

§ 8.

We have now to consider how far in any of these speculations Plato approximated to the discoveries of modern science. The modern physical philosopher is apt to dwell exclusively on the absurdities of ancient physical science, on the hap-hazard fancies and *a priori* assumptions of the ancient physical teacher, on his ignorance and regardlessness of facts. He measures him not by what preceded him, but by what followed him. He hardly allows to his notions the merit of being 'the dead men's bones' out of which he has himself risen to a higher knowledge. He never reflects, how great a thing it was to have formed a conception, however imperfect, either of the human frame as a whole, or of the world as a whole. According to the view taken in these volumes the errors of ancient physicists were hardly separable from the intellectual conditions under which they lived; their genius

was their own. They were not the rash and hasty generalizers which, since the days of Bacon, we have been apt to suppose them. But general notions were necessary to the discovery of the particular facts, the metaphysical to the physical. Before men could observe the world, they must be able to conceive the world.

To do justice to the subject, we should consider the physical philosophy of the ancients as a whole; we should remember, (1) that the nebular theory was the received belief of the early physicists; (2) that the development of animals out of frogs who came to land, and of man out of the animals, was held by Anaximenes in the sixth century before Christ; (3) that even by Philolaus and the early Pythagoreans, the earth was held to be a body like the other stars revolving in space around the sun or a central fire; (4) that the beginnings of chemistry are discernible in the 'similar particles' of Anaxagoras. Also they knew or thought (5) that there was a sex in plants as well as in animals; (6) they were aware that musical notes depended on the relative length or tension of the strings from which they were emitted, and were measured by ratios of number; (7) that mathematical laws pervaded the world; and even qualitative differences were supposed to have their origin in number; (8) the annihilation of matter was denied by several of them, and held to be a transformation only. For, although one of these discoveries might have been supposed to be a happy guess, we can hardly attribute them all to mere coincidences.

Such reflections, although this is not the place in which to dwell upon them at length, lead us to take a favourable view of the speculations of the Timaeus. We should consider not how much Plato actually knew, but how far he has contributed to the general ideas of physics, or supplied the notions, which, whether true or false, have stimulated the minds of thoughtful men in the path of discovery. Some of them may seem old-fashioned, and may nevertheless have had a great influence in promoting system and assisting enquiry, while in others of them we hear the latest word of physical or metaphysical philosophy. There is also a third class, in which Plato falls short of the truths of modern science, though he can hardly be said to be wholly unacquainted with them. (1) To the first class belongs the teleological theory of creation. Whether all things in the world can be explained as the result of natural laws, or whether we must not admit of tendencies and marks of design also, has been a question much disputed of late years. And even if

all phenomena are the result of natural forces, we must admit that there are many things in heaven and earth which are as well expressed under the image of mind or design as under any other. At any rate, the language of Plato has been the language of natural theology down to our own time, nor can any description of the world wholly dispense with it. The notion of first and second or co-operative causes, which originally appears in the *Timaeus*, has likewise survived to our own day, and has been a great peace-maker between theology and science. Plato also approaches very near to our doctrine of the primary and secondary qualities of matter, p. 22. (2) Another popular notion which is found in the *Timaeus*, is the feebleness of the human intellect—'God knows the original qualities of things; man can only hope to attain to probability.' We speak in almost the same words of human intelligence, but not in the same manner of the uncertainty of our knowledge of nature. The reason is that this is assured to us by experiment, and is not contrasted with the certainty of ideal or mathematical knowledge. But the ancient philosopher never experimented: in the *Timaeus* Plato seems to have thought that there would be impiety in making the attempt; he, for example, who tried experiments in colours would 'forget the difference of the human and divine natures' (68 D). Their indefiniteness is probably the reason why he singles them out, as especially incapable of being tested by experiment.

The greatest 'divination' of the ancients was the supremacy which they assigned to mathematics in all the realms of nature. For in all of them there is a foundation of mechanics; even physiology partakes of figure and number; and Plato is not wrong in attributing them to the human frame, but in the omission to observe how little could be explained by them. Thus we may remark in passing that the most fanciful of ancient philosophies is also the most nearly verified in fact. The fortunate guess that the world is a sum of numbers and figures has been the most fruitful of anticipations. The 'diatonic' scale of the Pythagoreans and Plato suggested to Kepler that the secret of the distances of the planets from one another was to be found in mathematical proportions. The doctrine that the heavenly bodies all move in a circle is known by us to be erroneous; but without such an error how could the human mind have comprehended the heavens? Astronomy, even in modern times, has made far greater progress by the high *a priori* road than could have been attained by any other.

Yet, strictly speaking (and the remark applies to ancient physics generally), this high *a priori* road was based upon *a posteriori* grounds. For there were no facts of which the ancients were so well assured by experience as facts of number. Having observed that they held good in a few instances, they applied them everywhere; and in the complexity, of which they were capable, found the explanation of the equally complex phenomena of the universe. They seemed to see them in the least things as well as in the greatest; in atoms, as well as in suns and stars, in the human body as well as in external nature. And now a favourite speculation of modern chemistry is the explanation of qualitative difference by quantitative, which is at present verified to a certain extent and may hereafter be of far more universal application. What is this but the atoms of Democritus and the triangles of Plato? The ancients should not be wholly deprived of the credit of their guesses because they were unable to prove them. May they not have had, like the animals, an instinct of something more than they knew?

Besides general notions we seem to find in the Timaeus some more precise approximations to the discoveries of modern physical science. First, the doctrine of equipoise. Plato affirms, almost in so many words, that nature abhors a vacuum. Wherever there is a void the elements are pushing and thrusting one another until equality is restored. We must remember that these ideas were not derived from any definite experiment, but were the original reflections of man, fresh from the first observation of nature. The latest word of modern philosophy is continuity and development, but to Plato this is the beginning and foundation of science; there is nothing that he is so strongly persuaded of as that the world is one, and that all the various existences which are contained in it are only the transformations of the same soul of the world acting on the same matter. He would have readily admitted that out of the protoplasm all things were formed by the gradual process of creation; but he would have insisted that mind and intelligence—not meaning by this, however, a conscious mind or person—was prior to them, and could alone have created them.

Lastly, there remain two points in which he seems to touch great discoveries of modern times—the law of gravitation, and the circulation of the blood. (1) The law of gravitation, according to Plato, is a law, not only of the attraction of lesser bodies to larger ones, but of similar

bodies to similar, having a magnetic power as well as a principle of gravitation. He observed that the earth, the water, and the air, had settled down to their places, and he imagined the fire or exterior aether to have a place beyond the air. When air seemed to go upwards and fire to pierce through air—when water and earth fell to the ground, they were seeking their native elements. He did not remark that his own explanation did not suit all phenomena; and the simpler explanation, which assigns to bodies degrees of heaviness and lightness proportioned to the mass and distance of the bodies which attract them, never occurred to him. Yet the affinities of similar substances have some effect upon the composition of the world, and of this Plato may be thought to have had an anticipation. He may be described as confusing the attraction of gravitation with the attraction of cohesion. The influence of such affinities and the chemical action of one body upon another in long periods of time has become a recognized principle of geology. Whether in the doctrine of Plato, that the motion of the planets is controlled by the motion of the fixed stars, there is any further trace of the true theory of gravitation is uncertain; the reverse is more probable. When he speaks of the sphere of the same controlling the sphere of the other he seems to be expressing the more general truth of the reign of law amid the diversity of phenomena. (2) Plato is perfectly aware—and he could hardly be ignorant—that blood is a fluid in constant motion. He also knew that blood is partly a solid substance consisting of several elements, which, as he might have observed in the use of ‘cupping-glasses’ (79 E), decompose and die, when no longer in motion. But the specific discovery that the blood flows out on one side of the heart through the arteries and returns through the veins on the other, which is commonly called the circulation of the blood, was absolutely unknown to him.

A further study of the *Timaeus* suggests some after-thoughts which may be conveniently brought together in this place. The topics which I propose briefly to reconsider are (*a*) the relation of the *Timaeus* to the other dialogues of Plato and to the previous philosophy: (*b*) the nature of God and of creation: (*c*) the morality of the *Timaeus*:—

(*a*) The *Timaeus* is more imaginative and less scientific than any

other of the Platonic dialogues. It is conjectural astronomy, conjectural natural philosophy, conjectural medicine. The writer himself is constantly repeating that he is speaking what is probable only. The dialogue is put into the mouth of Timaeus, a Pythagorean philosopher, and therefore here, as in the *Parmenides*, we are in doubt how far Plato is expressing his own sentiments. Hence the connection with the other dialogues is comparatively slight. We may fill up the lacunae of the *Timaeus* by the help of the *Republic* or *Phaedrus*: we may identify the same and other with the *πέραις* and *ἄπειρον* of the *Philebus*. We may find in the *Laws* or in the *Politicus* parallels with the account of creation and of the first origin of man. There would be no difficulty in constructing a scheme in which all these various elements might have a place. But such a mode of proceeding would be unsatisfactory, because we have no reason to suppose that Plato intended his scattered thoughts to be collected in a system. There is a common spirit in his writings, and there are certain general principles, such as the opposition of the sensible and intellectual, and the priority of mind, which run through all of them; but he has no single form of words in which he consistently expresses himself. While the determinations of human thought are in process of creation he is necessarily tentative and uncertain. And there is least of definiteness, whenever either in describing the beginning or the end of the world, he has recourse to myths. These are not the fixed modes in which spiritual truths are revealed to him, but the efforts of imagination, by which at different times and in various manners he seeks to embody his conceptions. The clouds of mythology are still resting upon him, and he has not yet pierced 'to the heaven of the fixed stars' which is beyond them. It is safer then to admit the inconsistencies of the *Timaeus*, or to endeavour to fill up what is wanting from our own imagination, inspired by a study of the dialogue, than to refer to other Platonic writings, (and still less should we refer to the successors of Plato,) for the elucidation of it.

More light is thrown upon the *Timaeus* by a comparison of the previous philosophies. For the physical science of the ancients was traditional, descending through many generations of Ionian and Pythagorean philosophers. Plato does not look out upon the heavens and describe what he sees in them, but he builds upon the foundations of others, adding something out of the 'depths of his own self-consciousness.' Socrates had already spoken of God the creator, who made all things

for the best. While he ridiculed the superficial explanations of phenomena which were current in his age, he recognised the marks both of benevolence and of design in the frame of man and in the world. The apparatus of winds and waters is contemptuously rejected by him in the *Phaedo*, but he thinks that there is a power greater than that of any Atlas in the 'Best.' Plato too, following in the footsteps of his master, affirms this principle of the best, but he acknowledges that the best is limited by the conditions of matter. In the generation before Socrates, Anaxagoras had brought together 'Chaos' and 'Mind'; and these are connected by Plato in the *Timæus*, but in accordance with his own mode of thinking he has interposed between them the idea or pattern according to which mind worked. The circular impulse (*περίωσις*) of the one philosopher answers to the circular movement (*περιχώρησις*) of the other. But unlike Anaxagoras, Plato made the sun and stars living beings and not masses of earth or metal. The Pythagoreans again had framed a world out of numbers, which they first constructed into figures. Plato adopted their speculations and improved upon them by a more exact knowledge of geometry. The Atomists too made the world, if not out of geometrical figures, at least out of different forms of atoms, and these atoms resembled the triangles of Plato in being too small to be visible. But though the physiology of the *Timæus* is partly borrowed from them, they are either ignored by Plato or referred to with a secret contempt and dislike. The Pythagorean intervals of number applied to the distances of the planets reappear in the *Timæus*, but in the fragments of Philolaus the heavenly bodies are revolving around the central fire and not around the earth. It is probable however that Plato was not the first who taught that the stars moved round the earth, but that among the Pythagoreans living in the fourth century B.C., there were already some who made the earth their centre. Whether he obtained his circles of the same and other from any previous thinker is uncertain; there is a faint reflection of them in the *πέρας* and *ἄπειρον* of Philolaus, in whose metaphorical language we find a confusion like that of the *Timæus* between the human frame and the Universe. The four elements are taken from Empedocles, but the geometrical figures out of which they are constructed are also found in Philolaus. The passage of one into another is common to Heraclitus and several of the Ionian philosophers. So much of a syncretist is Plato, though not after the manner of the Neoplatonists. For the

elements which he borrows from others are fused and transformed by his own genius. On the other hand we find fewer traces in Plato of early Ionic or Eleatic speculation. He does not imagine the world of sense to be made up of opposites or to be in a perpetual flux, but to vary within certain limits which are controlled by what he calls the principle of the same. Unlike the Eleatics, who relegated the world to the sphere of not being, he admits creation to have an existence which is real and even eternal, although dependent on the will of the creator. Instead of maintaining the doctrine that the void has a necessary place in the existence of the world, he rather affirms the modern thesis that nature abhors a vacuum, as in the Sophist he also denies the reality of not being. But though in these respects he differs from them, he is deeply penetrated by the spirit of their philosophy; he differs from them with reluctance, and gladly recognises the 'generous depth' of Parmenides.

That there is a degree of confusion and indistinctness in Plato's account both of man and of the Universe has been already acknowledged. We cannot tell (nor could Plato himself have told) where the figure or myth ends and the philosophical truth begins; we cannot explain (nor could Plato himself have explained to us) the relation of the ideas to appearance, which mutually imply each other, and yet of all things in the world are the most opposed. This opposition is presented to us in many forms, as the antithesis of the one and many, of the finite and infinite, of the intelligible and sensible, of the unchangable and the changing, of the indivisible and the divisible, of the fixed stars and the planets, of the creative mind and the primeval chaos. These pairs of opposites are so many aspects of the great opposition between ideas and phenomena—they easily pass into one another; and sometimes the two members of the relation differ in kind, sometimes only in degree. As in Aristotle's matter and form the connexion between them is really inseparable; for if we attempt to separate them they become devoid of content and therefore indistinguishable; there is no difference between the idea of which nothing can be predicated, and the chaos which has no perceptible qualities—between Being in the abstract and Nothing. Yet we are frequently told that the one class of them is the reality and the other appearance; and one is often spoken of as the double or reflection of the other. For Plato never clearly saw that both elements had an equal place in mind and in nature; and

hence, especially when we argue from isolated passages in his writings, or attempt to draw what appear to us to be the natural inferences from them, we are full of perplexity. There is a similar confusion about necessity and free will, and about the state of the soul after death. These contradictions may be softened or concealed by a judicious use of language, but they cannot be wholly got rid of. That an age of intellectual transition must also be one of inconsistency; that the creative is opposed to the critical or defining habit of mind or time, has been often repeated by us. But, as Plato remarks, 'there is no harm in repeating twice or thrice' what is important for the understanding of a great author.

It has not, however, been observed, that the confusion partly arises out of the elements of opposing philosophies which are preserved in him. He holds these in solution, he brings them into relation with one another, but he does not perfectly harmonize them. They are part of his own mind, and he is incapable of placing himself outside of them and criticising them. They grow as he grows. In early life he fancies that he has mastered them: but he is also mastered by them; and in language (cp. *Sophist*) which may be compared with the hesitating tone of the *Timaeus*, he confesses in his later years that they are full of obscurity to him. He attributes new meanings to the words of Parmenides and Heracleitus; but at times the old Eleatic philosophy appears to go beyond him; then the world of phenomena disappears, but the doctrine of ideas is also reduced to nothingness. The finite and infinite of *Philolaus* have become logical determinations in the *Philebus*; they are there used by Plato in a new sense, and yet they remain at variance with the earlier representations of the ideas and phenomena. He has never reconciled the first causes of the pre-Socratic philosophers with the final causes of Socrates himself. There is no intelligible account of the relation of numbers to the universal ideas, or of universals to the idea of good. The fact was that he found them all three, in the Pythagorean philosophy and in the teaching of Socrates and of the Megarians respectively; and, because they all furnished modes of explaining and arranging phenomena, he is unwilling to give up any of them, though he is unable to unite them in a consistent whole.

Lastly, Plato, though an idealist philosopher, is Greek and not Oriental in spirit and feeling. He is no mystic or ascetic seeking absorption in the divine nature, or in the Soul of the Universe. And therefore we are

not surprised to find that his philosophy in the *Timaeus* returns at last to a worship of the heavens, and that to him, as to other Greeks, nature, though containing a remnant of evil, is still glorious and divine. He takes away or drops the veil of mythology, and presents her to us in what appears to him to be the form—fairer and truer far—of mathematical figures. It is this element in the *Timaeus*, no less than its affinity to certain Pythagorean speculations, which gives it a character not wholly in accordance with the other dialogues of Plato.

(*b*) The *Timaeus* contains an assertion more distinct than is found in any other dialogue of the goodness of God; and the attributes of a person are more clearly assigned to him. 'He was good himself, and he fashioned the good everywhere.' He was not a jealous God, and therefore he desired that all other things should be equally good. He is the *idea* of good who has now become a person, and speaks and is spoken of as God. Yet his personality seems to appear only in the act of creation. In so far as he works with his eye fixed upon an eternal pattern he is like the human artificer in the *Republic*. Here the theory of Platonic ideas intrudes upon us. God, like man, is supposed to have an ideal of which Plato is unable to tell us the origin. He may be said, in the language of modern philosophy, to resolve the divine mind into subject and object. The first work of creation is perfected, and the second begins under the direction of inferior ministers. The supreme God is then withdrawn from the world and returns to his own nature. As in the *Politicus*, he retires to his place of view. So early did the Epicurean doctrine take possession of the Greek mind, and so natural is it to the heart of man, when he has once passed out of the stage of mythology into that of rational religion. For he sees the marks of design in the world; but he no longer sees or fancies that he sees God walking in the garden or haunting stream or mountain. He feels also that he must put God as far as possible out of the way of evil, and therefore he banishes him from an evil world. Plato is sensible of the difficulty; and he often shows that he is desirous of justifying the ways of God to man. Yet on the other hand, in the Tenth Book of the *Laws*, he passes a censure on those who say that the Gods have no care of human things.

The creation of the world is the impression of order on a previously existing chaos. The formula of Anaxagoras—'all things were in a chaos or mixture, and then mind came and disposed them' is a summary

of the first part of the *Timaeus*. It is true that of a chaos without differences no idea could be formed. All was not mixed but one; and therefore it was not difficult for the later Platonists to draw inferences by which they were enabled to reconcile the narrative of the *Timaeus* with the Mosaic account of the creation. Neither when we speak of mind or intelligence, do we seem to get much further in our conception than circular motion, which was deemed to be the most perfect. Plato, like Anaxagoras, while commencing his theory of the universe with ideas of mind and of the best, is compelled in the execution of his design to condescend to the crudest physics.

(c) The morality of the *Timaeus* is singular, and it is difficult to adjust the balance between the two elements of it. The difficulty which Plato feels, is that which all of us feel, how the responsibility of man is to be reconciled with his dependence on natural causes, and sometimes, like other men, he seems to feel more strongly one aspect of human life, sometimes the other. In the *Republic* he represents man as freely choosing his own lot in a state prior to birth—a conception which, if taken literally, would still leave him subject to the dominion of necessity in his after life; in the *Politicus* he supposes the human race to be preserved in the world only by a divine interposition; while in the *Timaeus* the supreme God commissions the inferior deities to avert from him all but self-inflicted evils—words which imply that all the evils of men are really self-inflicted. And here, like Plato (54 B;—the insertion of a note in the text of an ancient writer is a literary curiosity worthy of remark), we may take occasion to correct an error which occurred at p. 582. For there we too hastily said that Plato in the *Timaeus* regarded all ‘vices and crimes as involuntary.’ But the fact is that he is inconsistent with himself; for in another passage he seems to attribute sensuality wholly to the relaxation of the bodily constitution—vice is but a kind of disease which is natural to man, and for which he is not to be held responsible. The evil is said to be increased by bad laws and bad institutions; yet here is a further inconsistency: for that which is increased by bad laws, may clearly be diminished by good ones. All punishment and all education, and therefore all writers who treat of them, imply that the human will and character are in some sense free and capable of being formed by them. Plato in one part of his writings is taking one view of the subject, while in another he takes another, or rather in the same passage (87 B) may be said to unite both. He

had learned from Socrates that vice is ignorance, and suddenly the doctrine seems to him to be confirmed by observing how much of the good and bad in human characters depends on their bodily constitution. So in modern times the speculative doctrine of necessity has often been supported by physical facts.

The *Timaeus* also contains an anticipation of the stoical life according to nature. Man contemplating the heavens is to order his erring life according to them. He is to partake of the rest of nature, to bring the variable principle in himself into harmony with the principle of the same. The ethics of the *Timaeus* may be summed up in the single idea of 'law.' To feel habitually that he is part of the order of the universe, is one of the highest ethical motives of which man is capable. Something like this is what Plato means when he speaks of the soul 'moving about the same in unchanging thought of the same.' He does not explain how man is acted upon by the lesser influences of custom or of opinion; or how the commands of the soul watching in the citadel are conveyed to the bodily organs. But this perhaps, as he himself remarks, 'is part of another subject.'

There is no difficulty, by the help of Aristotle and later writers, in criticising the *Timaeus* of Plato, in pointing out the inconsistencies of the work, in dwelling on the ignorance of anatomy shown by the author, in showing fancifulness or unmeaningness of some of his reasons. But the *Timaeus* still remains the greatest effort of the human mind to conceive the world as a whole which the genius of antiquity has bequeathed to us.

NOTE.

The *Timaeus* of Plato, like the *Protagoras* and several portions of the *Phaedrus* and of the *Republic*, was translated by Cicero into Latin. About a fourth, comprehending with lacunae the first portion of the dialogue, is preserved in several MSS. These generally agree, and therefore may be supposed to be derived from a single original. The version is very faithful, and is a remarkable monument of Cicero's skill in managing the difficult and untractable Greek. In his treatise *De Naturâ Deorum*, i. 8. 12, ii. 12, he also refers to the *Timaeus*, which, speaking in the person of Velleius the Epicurean, he severely criticises.

TIMAEUS.

PERSONS OF THE DIALOGUE.

SOCRATES.

CRITIAS.

TIMAEUS.

HERMOCRATES.

Steph.

17 *Socrates.* ONE, two, three; and where, my dear Timaeus, is the fourth of those who were yesterday our guests and are to be our entertainers to-day?

Timaeus. He has been taken ill, Socrates, or he certainly would not have been absent at such a meeting as this.

Soc. Then, if he is not coming, you and the two others must supply his place.

Tim. Assuredly we will do all that we can; having been handsomely entertained by you yesterday, we or those of us who remain ought gladly to entertain you in return.

Soc. Do you remember all the points of which I required you to speak?

Tim. We remember some of them, and you will be able to remind us of what we may have forgotten: or rather, if we are not troubling you, will you briefly recapitulate the whole, and then we shall be more certain?

Soc. To be sure I will; the chief theme of our discourse was the State—how and of what citizens it would be best composed.

Tim. Yes, Socrates; and I am sure that what you said of it was very much to our mind.

Soc. Do you remember the part about the husbandmen and the artisans; and how we began by separating them from the class of defenders of the State?

Tim. Yes.

Soc. And when we had given to each one that single employment and particular art which were suited to his nature, we spoke of those who were intended to be our warriors, and said that they were to be guardians of the city against the attacks of enemies internal as well as external, and to have no other employment; they were to be merciful in judging their subjects, 18 of whom they were by nature friends, but when they came in the way of their enemies in battle they were to be fierce with them.

Tim. Exactly.

Soc. We said, if I am not mistaken, that the guardians should be doubly gifted, with a passionate and also with a philosophical temper; and that then they would be as they ought to be, gentle to their friends and fierce with their enemies.

Tim. Certainly.

Soc. And what did we say of their education? Were they not to be trained in gymnastic, and music, and all other sorts of knowledge which were proper for them?

Tim. Very true.

Soc. And being thus trained they were not to think of gold and silver, or any other possession as their own private property; they were to be hired troops, receiving pay for keeping guard from those who were protected by them—the pay was to be no more than would suffice for men of simple life; and they were to spend in common, and to live together in the continual practice of virtue, which was to be their sole pursuit.

Tim. So it was declared.

Soc. Neither did we forget the women, of whom we said, that their natures should be made as nearly as possible like those of men, and that they should share with them in their military pursuits and in their general way of life.

Tim. That, again, was as you describe.

Soc. And what about the procreation of children? The proposal was too singular to be forgotten, for all wives and children were to be in common; and we devised means that no one should ever know his own child; they were to imagine that they were one family, and to regard those who were within a certain limit of age as brothers and sisters; and again those who were of an elder generation as parents and grandparents,

and those who were of a younger generation as children and grandchildren.

Tim. Yes, indeed, such a proposal is not easily forgotten.

Soc. And do you also remember how, with a view of having as far as we could the best breed, we said that the chief magistrates, male and female, should contrive secretly, by the use of certain lots, so to arrange the nuptial meeting, that the bad of either sex and the good of either sex might pair with their like, and there was to be no quarrelling on this account, for they were to imagine that the union was a mere chance, and was to be attributed to the lot?

Tim. I remember.

Soc. And you remember how we said that the children of the
19 good parents were to be educated, and the children of bad parents secretly dispersed among the inferior citizens; when they grew to manhood the rulers were to be on the look out, and to bring up from below in their turn those who were worthy, and those among themselves who were unworthy were to take the places of those who came up?

Tim. True.

Soc. Then have I now given you all the heads of our yesterday's discussion? Or was there anything else, dear Timaeus, which has been omitted?

Tim. Nothing, Socrates; it was just as you have said.

Soc. I should like before proceeding further, to tell you how I feel about the State which we have described. I might compare myself to a person who, on beholding beautiful animals either created by the painter's art or really alive, but at rest, is seized with a desire of beholding them in motion or engaged in some struggle or conflict to which their forms appear suited; this is my feeling about the State which we have been describing. There are conflicts which all cities undergo, and I should like to hear some one tell of our own city carrying on a struggle against her neighbours, and how she went out to war in a fitting manner, and when at war showed a result answerable to her training and education, and how her modes of action and fashions of speech in dealing with other cities were alike worthy of herself. Now I, Critias and Hermocrates, am conscious that I myself should never be able to set forth the city and her citizens

in proper terms of praise, and I am not surprised at my own incapacity ; to me the wonder is rather that the poets present as well as past are no better—not that I mean to depreciate them, but every one can see that they are a tribe of imitators, and will imitate best and most easily the ways of life amid which they have been brought up ; whereas that which is beyond the range of a man's education can hardly be imitated by him in action, and with still more difficulty in speech. I am aware that the Sophists have plenty of brave words and fair devices, but I am afraid that being only wanderers from one city to another, and having never had homes of their own to manage, they may err in their ideas of philosophers and statesmen, and may not know how they behave in their dealings with mankind, and what they say and do in going to war and in making peace. And thus people of your class are the only ones remaining who are fitted by nature and education to take part at once in politics and philosophy. Here is Timaeus, of Locris in Italy, a city which has admirable laws, and who is himself ²⁰ in wealth and rank the equal of any of his fellow-citizens ; he has held the most important and honourable offices in his own State, and, as I believe, has scaled the heights of philosophy ; and here is Critias, whom every Athenian knows to be no novice in the matters of which we are speaking ; and as to Hermocrates, I am assured by many witnesses that his talents and education are adequate to any speculation. And therefore yesterday when I saw that you wanted me to discuss the formation of the State I readily complied, being very well aware, that, if you only would, none were better qualified to carry the discussion further, and that when you had engaged our city in a suitable war, you of all men living could best exhibit her playing her part in that situation. Having now completed my task, I in return impose this other task upon you. There was an agreement that you were to entertain me as I have entertained you. Here am I in festive array, and no man can be more ready for the promised banquet.

Her. And we too, Socrates, as Timaeus says, will do all that we can ; what excuse have we for not complying with your request ? As soon as we arrived yesterday at the guest-chamber of Critias, with whom we are staying, or rather on our

way thither, we talked the matter over, and he told us an ancient tradition, which I wish, Critias, that you would repeat to Socrates, and then he will be able to judge whether his requirements are likely to be fulfilled.

Crit. That I will, if Timaeus, who is our partner, approves.

Tim. I approve.

Crit. Then listen, Socrates, to a strange tale which is, however, certainly true, as Solon, who was the wisest of the seven sages, declared. He was a relative and a great friend of my great-grandfather, Dropidas, as he himself says repeatedly in his poems; and Dropidas told Critias, my grandfather, who remembered and told us:—That there were of old great and marvellous actions of the Athenians, which have passed into oblivion
21 through time and the destruction of the inhabitants, and one in particular, greater than all the rest, which we now call to mind and will recite as a suitable testimony of our gratitude to you, and also as a hymn of praise true and worthy of the goddess, which we sing at her festival.

Soc. Very good. And what is this ancient famous action of which Critias spoke not as a mere legend, but as a veritable action of the Athenian state, which Solon recounted?

Crit. I will tell an old-world story which I heard from an aged man; for Critias was, as he said, at that time nearly ninety years of age, and I was about ten. Now the day was that day of the Apaturia which is called the registration of youth, at which, according to custom, our parents gave prizes for recitations, and the poems of several poets were recited by us boys, and many of us sang the poems of Solon, which at that time had not gone out of fashion. One of our tribe, either because he thought so or to please Critias, said that in his judgment Solon was not only the wisest of men, but also the noblest of poets. The old man, as I very well remember, brightened up at hearing this and said, smiling: Yes, Amynander, if Solon had only, like other poets, made poetry the business of his life, and had completed the tale which he brought with him from Egypt, and had not been compelled, by reasons of the factions and troubles which he found stirring in his own country when he came home, to attend to other matters, in my opinion he would have been as famous as Homer or Hesiod, or any poet.

And what was the poem about, Critias? said the person who addressed him.

About the greatest action which the Athenians ever did, and which ought to have been the most famous, but which, through the lapse of time and the destruction of the actors, has not come down to us.

Tell us, said the other, the whole story, and how and from whom Solon heard this veritable tradition.

He replied:—At the head of the Egyptian Delta, where the river Nile divides, there is a certain district which is called the district of Sais, and the great city of the district is also called Sais, and is the city from which Amasis the king was sprung. The citizens have a deity who is their foundress; she is called in the Egyptian tongue Neith, and is asserted by them to be the same whom the Hellenes called Athene; they are great lovers of the Athenians, and say that they are in some way related to them. To this city came Solon, who was received there with great honour; and he asked the priests who were ²² most skilful in such matters, about antiquity, and made the discovery that neither he nor any other Hellene knew anything worth mentioning about the times of old. On one occasion, when he was drawing them on to speak of antiquity, he began to tell about the most ancient things in our part of the world—about Phoroneus, who is called ‘the first,’ and about Niobe; and after the Deluge, to tell of the lives of Deucalion and Pyrrha; and he traced the genealogy of their descendants, and attempted to reckon how many years old were the events of which he was speaking, and to give the dates. Thereupon, one of the priests, who was of a very great age said: O Solon, Solon, you Hellenes are but children, and there is never an old man who is a Hellene. Solon in return asked him what he meant. I mean to say, he replied, that in mind you are all young; there is no old opinion handed down among you by ancient tradition; nor any science which is hoary with age. And I will tell you why. There have been, and will be again, many destructions of mankind arising out of many causes; the greatest have been brought about by the agencies of fire and water, and other lesser ones by innumerable other causes. There is a story, which even you have preserved, that once upon a time

Phaëthon, the son of Helios, having yoked the steeds in his father's chariot, because he was not able to drive them in the path of his father, burnt up all that was upon the earth, and was himself destroyed by a thunderbolt. Now, this has the form of a myth, but really signifies a declination of the bodies moving in the heavens around the earth, and a great conflagration of things upon the earth recurring after long intervals; at such times those who live upon the mountains and in dry and lofty places are more liable to destructions than those who dwell by rivers or on the seashore. And from this calamity the Nile, who is our never-failing saviour, saves and delivers us. When, on the other hand, the gods purge the earth with a deluge of water, among you the survivors are herdsmen and shepherds who dwell on the mountains, whereas those who, like you, live in cities are carried by the rivers into the sea. But in this country, neither then nor at any other time, does the water come down from above on the fields, having always a tendency to come up from below, for which reason the things preserved here are said to be the oldest. The fact is, that wherever the extremity of winter frost or of summer sun does not prevent, the human race is always tending to increase, though at times also diminishing in
23 numbers. And whatever happened either in your country or in ours, or in any other region of which we are informed—any action which is noble or great or in any other way remarkable has all been written down by us of old, and is preserved in our temples; whereas you and other nations are just beginning to be provided with letters and the other requisites of civilized life when at the usual period, the stream from heaven descends like a pestilence, and leaves only those of you who are destitute of letters and education; and thus you have to begin all over again as children, and know nothing of what happened in ancient times, either among us or among yourselves. As for those genealogies of yours which you have recounted to us, Solon, they are no better than the tales of children; for in the first place you remember one deluge only, and there were many of them; in the next place, you do not know that there formerly dwelt in your land the fairest and noblest race of men which ever lived, of whom you and your whole city are but a seed or remnant. And this was unknown to you, because for

many generations the survivors of that destruction died and made no sign. For there was a time, Solon, before the great deluge of all, when the city which now is Athens, was first in war and in every way the best governed of all cities, and is said to have performed the noblest deeds and to have had the fairest constitution of any of which tradition tells, under the face of heaven. Solon marvelled at his words, and earnestly requested the priest to inform him exactly and in order about these former citizens. You are welcome to hear about them, Solon, said the priest, both for your own sake and for that of your city, and above all, for the sake of the goddess who is the common patron and parent and educator of both our cities. She founded your city a thousand years before ours, receiving from the Earth and Hephaestus the seed of your race, and then she founded ours, of which the constitution is recorded in our sacred registers to be 8000 years old. As touching your citizens of 9000 years ago, I will briefly inform you of their laws and of the noblest of their actions; and the exact particulars of the ²⁴ whole we will hereafter go through at our leisure in the sacred registers themselves. If you compare these very laws with your own you will find that many of ours are the counterpart of yours as they were in the olden time. In the first place, there is the caste of priest, which is separated from all the others; next there are the artificers, who exercise their several crafts by themselves and without admixture of any other; and also there is the class of shepherds and that of hunters¹, as well as that of husbandmen; and you will observe, too, that the warriors in Egypt are separated from all the other classes, and are commanded by the law only to engage in war; moreover, the weapons with which they are equipped are shields and spears, and this the goddess taught first among you, and then in Asiatic countries, and we among the Asiatics first adopted. Then as to wisdom, do you observe what care the law took from the very first, searching out and comprehending the whole order of things including prophecy and medicine (the latter with a view to health; and out of the divine elements of these drawing what was needful for human life, and adding every sort of

¹ Reading τὸ τῶν θηρευτῶν.

knowledge which was connected with them. All this order and arrangement the goddess first imparted to you when establishing your city; and she chose the spot of earth in which you were born, because she saw that the happy temperament of the seasons in that land would produce the wisest of men. Wherefore the goddess, who was a lover both of war and of wisdom, selected and first of all settled that spot which was the most likely to produce men likest herself. And there you dwelt, having such laws as these and still better ones, and excelled all mankind in all virtue as became the children and disciples of the gods.

Many great and wonderful deeds are recorded of your State in our histories. But one of them exceeds all the rest in greatness and valour. For these histories tell of a mighty power which was aggressing wantonly against the whole of Europe and Asia, and to which your city put an end. This power came forth out of the Atlantic Ocean, for in those days the Atlantic was navigable; and there was an island situated in front of the straits which you call the pillars of Heracles; the island was larger than Libya and Asia put together, and
 25 was the way to other islands, and from the islands you might pass to the whole of the opposite continent which surrounded the true ocean; for this sea which is within the Straits of Heracles is only a harbour, having a narrow entrance, but that other is a real sea, and the surrounding land may be most truly called a continent. Now in this island of Atlantis there was a great and wonderful empire which had rule over the whole island and several others, as well as over parts of the continent, and, besides these, they subjected the parts of Libya within the columns of Heracles as far as Egypt, and of Europe as far as Tyrrhenia. The vast power which was thus gathered into one endeavoured to subdue at a blow our country and yours and the whole of the land which is within the straits; and then, Solon, your country shone forth, in the excellence of her virtue and strength, among all mankind; for she was first in courage and military skill, and was the leader of the Hellenes. And when the rest fell off from her, being compelled to stand alone, after having undergone the very extremity of danger, she defeated and triumphed over the invaders, and

preserved from slavery those who were not yet subjected, and freely liberated all the others who dwelt within the limits of Heracles. But afterwards there occurred violent earthquakes and floods; and in a single day and night of misfortune all your warlike men in a body sank into the earth, and the island of Atlantis in like manner disappeared, and was sunk beneath the sea. And that is the reason why the sea in those parts is impassable and impenetrable, because there is such a quantity of shallow mud in the way; and this was caused by the subsidence of the island.

I have told you shortly, Socrates, the tradition which the aged Critias heard from Solon. And when you were speaking yesterday about your city and citizens, the tale which I am repeating to you came into my mind, and I could not help remarking how, by some coincidence not to be explained, you agreed in almost every particular with the account of Solon; but I did not like to speak at the moment. For as a long time had elapsed, I had forgotten too much, and I thought ²⁶ that I must first of all run over the narrative in my own mind, and then I would speak. And for this reason I readily assented to your request yesterday, considering that I was pretty well furnished with a theme such as the audience would approve, and to find this is generally the difficulty.

And therefore, as Hermocrates has told you, on my way home yesterday I at once communicated the tale to my companions in order to refresh my memory; and afterwards during the night by trying to recollect I recovered nearly the whole of it. Truly, as is often said, the lessons which we have learned as children make a wonderful impression on our memories; for I am not sure that I could remember all the discourse of yesterday, but I should be much surprised if I forgot any of these things which I have heard very long ago. When a child, I listened with great interest to the old man's narrative at the time; he was very ready to teach me, and I asked him again and again to repeat his words, so that they were branded into my mind in ineffaceable letters. As soon as the day broke I rehearsed them as he spoke them to my companions, that they as well as myself might have a material of discourse. And now, Socrates, I am ready to tell you the whole tale of which

this is the introduction. I will give you not only the general heads, but the minute details. And as to the city and citizens, which you yesterday described to us in fiction, let us transfer them to the world of reality; this shall be the ancient city of Athens, and we will suppose that the citizens whom you imagined, were our veritable ancestors—the same of whom the priest was telling; they will perfectly agree, and there will be no inconsistency in saying that the citizens of your republic are these ancient Athenians. Let us distribute the discussion amongst us, and all endeavour as far as we can to comply with your requirements. Consider then, Socrates, if this narrative is suited to the purpose, or whether we should seek for some other instead.

Soc. And what other, Critias, can we find that will be better than this, which is natural and suitable to the festival of the goddess, and has the very great advantage of being a fact and not a fiction? How or where shall we find others if we abandon this? There are none to be had, and therefore you must tell
27 the tale, and good luck to you; and I in return for my yesterday's discourse will now rest and be a listener.

Crit. Let me proceed to explain to you, Socrates, the order in which we have arranged our entertainment. Our intention is, that Timaeus, who is the most of an astronomer amongst us, and has made a special study of the nature of the universe, should speak first, beginning with the generation of the world and going down to the creation of man; next, I am to receive the citizens of whom he is the imaginary parent, and some of whom will have profited by the excellent education which you have given them; and then, in conformity with the law of Solon, we will bring the heroes of his tale into court and judge them ourselves, as if they were those very Athenians whom the sacred Egyptian record has recovered from oblivion, and we shall thenceforward be entitled to speak of them as Athenians and fellow-citizens.

Soc. I see that I shall receive in my turn a perfect and splendid feast of reason. And now, Timaeus, you, I suppose, are to follow, first offering up a prayer to the gods according to custom.

Tim. All men, Socrates, who have any degree of right feeling,

at the beginning of every enterprise whether small or great always call upon God. And we, too, who are going to discourse of the nature of the universe, how created or how existing without creation, if we be not altogether out of our wits, must invoke and pray the gods and goddesses that we may say all things in a manner pleasing to them above all and likewise consistent with ourselves. Let this, then, be our invocation of the gods, to which I add an exhortation of myself that I may set forth this high argument in the manner which will be most intelligible to you, and will most accord with my own intent.

First, if I am not mistaken, we must determine, What is that which always is and has no becoming; and what is that which is always becoming and never is. That which is apprehended by intelligence and reason always is, and is the same; but that which is conceived by opinion with the help of sensation²⁸ and without reason, is always in a process of becoming and perishing and never really is. Now everything that becomes or is created must of necessity be created by some cause, for nothing can be created without a cause. The work of the artificer who looks always to the abiding and the unchangeable, and who designs and fashions his work after an unchangeable pattern, must of necessity be made fair and perfect; but that of an artificer who looks to the created only, and fashions his work after a created pattern, is not fair or perfect. Was the heaven then or the world, whether called by this or any other more acceptable name—assuming the name, I am asking a question which has to be asked at the beginning of every enquiry—was the world, I say, always in existence and without beginning? or created and having a beginning? Created, I reply, being visible and tangible and having a body, and therefore sensible; and all sensible things which are apprehended by opinion and sense are in a process of creation and created. Now that which is created must of necessity be created by a cause. But how can we find out the father and maker of all this universe? And when we have found him to speak of his nature to all men is impossible. Yet one more question has to be asked about him, Which of the patterns had the artificer in view when he made the world, the pattern which

29 is unchangeable, or that which is created? If the world be indeed fair and the artificer good, then, as is plain, he must have looked to that which is eternal. But if what cannot be said without blasphemy is true, then he looked to the created pattern. Every one will see that he must have looked to the eternal, for the world is the fairest of creations and He is the best of causes. And having been created in this way the world has been framed with a view to that which is apprehended by reason and mind and is unchangeable, and must if this be admitted of necessity be the copy of something. Now that the beginning of everything should be according to nature is a great matter. And in speaking of the copy and original we may assume that words are akin to the matter which they describe; when they relate to the lasting and permanent and intelligible, they ought to be lasting and unailing, and as far as in their nature is irrefutable and immovable—nothing less. But when they express only the copy or image and not the eternal, things themselves they need only be probable and analogous to the real words. As being is to becoming, so is truth to belief. If then, Socrates, amid the many opinions about the gods and the generation of the universe, we are not able to give notions which are in every way exact and consistent with one another, do not be surprised. Enough, if we adduce probabilities as likely as any others, for we must remember that I who am the speaker, and you who are the judges, are only mortal men, and we ought to accept the tale which is probable and not enquire further.

Soc. Excellent, Timæus; and you may be assured that we will: The prelude is charming, and is already accepted—may we beg of you to proceed to the strain?

Tim. Let me tell you then why the creator created and made the universe. He was good, and no goodness can ever have any jealousy of anything. And being free from jealousy, he desired that all things should be as like himself as possible.

30 This is the true beginning of creation and of the world, as we shall do well in believing on the testimony of wise men: God desired that all things should be good and nothing bad in so far as this could be accomplished. Wherefore also finding the whole visible sphere not at rest, but moving in an irregular

and disorderly manner, out of disorder he brought order, considering that this was far better than the other. Now the deeds of him who is the best can never be or have been other than the fairest; and the creator reflecting upon the visible work of nature, found that no unintelligent creature taken as a whole was fairer than the intelligent taken as a whole; and that intelligence could not exist in anything which was devoid of soul. For these reasons he put intelligence in soul, and soul in body, and framed the universe to be the best and fairest work in the order of nature. And therefore using the language of probability, we may say that the world became a living soul and truly rational through the providence of God.

This being supposed, let us proceed to consider the further question, in the likeness of what animal did the Creator make the world? Certainly we cannot suppose that the form was like that of any being which exists in parts only; for nothing can be beautiful which is like any imperfect thing; but we may regard the world as the very likeness of that whole of which all other animals both individually and in their tribes are portions. For the original of the universe contains in itself all intelligible beings, just as this world comprehends us and all other visible creatures. For the Deity intending to make this world like the fairest and most perfect of intelligible beings, framed one visible animal comprehending all other animals of a kindred nature. Are we right in saying that there is one heaven, or ³¹ shall we rather say that there are many and infinite? There is one, if the created heaven accords with the original. For that which includes all other intelligible creatures cannot have a second or companion; in that case there would be need of another living being which would include those two, and of which they would be parts, and the likeness would be more truly said to resemble not those two, but that other which included them. In order then that the world might be like the perfect animal in unity, he who made the worlds made them not two or infinite in number; but there is and ever will be one only-begotten and created heaven.

Now that which is created is of necessity corporeal, and also visible and tangible. And nothing is visible where there is no fire, or tangible which is not solid, and nothing is solid

without earth. Wherefore also, God in the beginning of creation made the body of the universe to consist of fire and earth. But two things cannot be held together without a third; they must have some bond of union. And the fairest bond is that which most completely fuses and is fused into the things which are bound; and proportion is best adapted to effect such a fusion. For whenever in three numbers, or magnitudes or powers of any kind, there is a mean, and the mean is to the last term what the first term is to the mean; and again, when the mean is to the first term as the last term is to the mean, then the mean becoming first and last, and the first and last both becoming means, all things will of necessity come to be the same, and being the same with one another will all be one. If the universal frame had been created a surface only and having no depth, one mean would have sufficed to bind together itself and the other terms; but now, as the world must be solid, and solid bodies are always compacted not by one mean but by two, God placed water and air in the mean between fire and earth, and made them to have the same proportion so far as was possible (as fire is to air so is air to water, and as air is to water so is water to earth), and thus he bound and put together a visible and palpable heaven. And for these reasons, and out of such elements which are in number four, the body of the world was created in harmony and proportion, and therefore having the spirit of friendship; and being at unity with itself, was indissoluble by the hand of any other than the framer.

Now the creation took up the whole of each of the four elements; for the Creator compounded the world out of all the fire and all the water and all the air and all the earth, leaving no part of any of them nor any power of them outside. He intended, in the first place, that the animal should be as far as possible a perfect whole and of perfect parts, and should be one, leaving no remnants out of which another such world might be created: and also that he should be free from old age and unaffected by disease. Considering that hot and cold and other powerful forces which unite bodies are apt to surround and attack them from without when they are unprepared, and by bringing diseases and old age upon them, make them to

dissolve and die—for this cause and on these grounds he fabricated the world whole and of all the elements entire, and therefore perfect and not liable to old age and disease. And he gave to the world the figure which was suitable and also natural. Now to the animal which was to comprehend all animals, that figure was suitable which comprehends within itself all other figures. Wherefore he made the world in the form of a globe, round as from a lathe, in every direction equally distant from the centre to the extremes, the most perfect and the most like itself of all figures; for he considered that the like is infinitely fairer than the unlike. This he finished all round, and made the outside quite smooth for many reasons; in the first place, because eyes would have been of no use to the living being when there was nothing remaining without him, or which could be seen; and there would have been no use in ears when there was nothing to be heard; nor was there any surrounding atmosphere to be breathed; nor would there have been any use of implements by the help of which he might receive his food or get rid of what he had already digested; for there was nothing which went from him or came to him, since there was nothing at all beside him. Nourishment was provided by him to himself through his own waste, and all that he did or suffered was done in himself and by himself, according to art. For the Creator conceived that a being which was self-sufficient would be far more excellent than one which lacked anything; and, as he had no need to take anything or defend himself against any one, he had no need of hands, and the Creator did not think necessary to furnish him with them when he did not want them: nor had he any need of feet, nor of the whole apparatus of walking; but he assigned 34 to him the motion appropriate to his spherical form, being of all the seven that which is most appropriate to mind and intelligence; and so he made him move in the same manner and on the same spot, within his own limits revolving in a circle. All the other six motions he took away from him, and made him not liable to be affected by them. And as this circular movement required no feet, he made the universe without feet or legs.

Such was the whole scheme of the eternal God about the

god that was to be, to whom he for all these reasons gave a body, smooth, even, and in every direction equi-distant from a centre, entire and perfect, and formed out of perfect bodies. And in the centre he put the soul, which he diffused through the whole, and also spread over all the body round about; and he made one solitary and only heaven, a circle moving in a circle, having such excellence as to be able to hold converse with itself, and needing no other friendship or acquaintance. Having these purposes in view he created the world a blessed god.

Now God did not make the soul after the body, although we have spoken of them in this order; for when he put them together he would never have allowed that the elder should serve the younger, but this is a random manner of speaking which we have, because we ourselves too are very largely affected by chance. Whereas he made the soul in origin and excellence prior to and older than the body, to be the ruler and mistress, of whom the body was to be the subject. And he made her
35 out of the following elements and on this manner: of the unchangeable and indivisible, and also of the divisible and corporeal, he made a third sort of intermediate essence, partaking of the same and of the other or diverse, and this compound in like manner he placed in a mean between the indivisible and the divisible or corporeal. He took the three elements of the same, the other, and the essence, and mingled them all together, compressing the reluctant and unsociable nature of the other into the same. And when he had mixed them and out of all the three made one, he again divided this whole into as many portions as was fitting, each of them containing an admixture of all three. And he began to divide on this wise:—first of all, he took away one part of the whole, and then he separated

[1, 2, 3, 4, 9, 8, 27,]

a second part which was double the first, and then he took away a third part which was half as much again as the second and three times as much again as the first, and then he took a fourth part which was twice as much as the second, and a fifth part which was three times as much as the third, and a sixth

part which was eight times as much as the first, and a seventh part which was twenty-seven times as much as the first. After this he filled up the double and triple intervals [i. e. 1, 2, 4, 8, 3⁶ and 1, 3, 9, 27], cutting off portions from the whole and placing them between the intervals, so that in each interval there were two kinds of means—

$$\begin{aligned} & [\overline{1}, \frac{4}{3}, \frac{3}{2}, \overline{2}, \frac{8}{3}, 3, \overline{4}, \frac{16}{3}, 6, \overline{8},] \\ & [\overline{1}, \frac{3}{2}, 2, \overline{3}, \frac{9}{2}, 6, \overline{9}, \frac{27}{2}, 18, \overline{27},] \end{aligned}$$

the one exceeding and exceeded by equal parts of the respective extremes [as for example 1, $\frac{4}{3}$, 2, in which the mean $\frac{4}{3}$ is one-third of 1 more than 1 and one-third of 2 less than 2], the other being that kind of mean which exceeds and is exceeded by an equal number. Where there are intervals of $\frac{3}{2}$ and of $\frac{4}{3}$ and of $\frac{9}{8}$, made by the connecting terms in the former intervals, he filled up all the intervals of $\frac{4}{3}$ with the intervals of $\frac{9}{8}$, leaving of each a part whose interval was in the ratio of 256 to 243¹. And thus the whole mixture out of which he cut these portions was all exhausted by him. This entire compound he divided lengthways into two parts, which he joined to one another at the centre like the figure of a X, and bent them into a circular form, connecting them with themselves and each other at the point opposite to their original meeting point; and, comprehending them in an uniform motion on the same spot around a centre, he made the one the outer and the other the inner circle. Now the motion of the outer circle he called the motion of the same, and the motion of the inner circle the motion of the other or diverse. The motion of the same he carried round by the side to the right, and the motion of the diverse diagonally to the left. And he gave dominion to the motion of the same and the like, for that he left single and undivided; but the inner motion he split into six portions and made seven unequal orbits having their intervals in ratios of two and three, three of each, and bade the orbits proceed in a direction opposite to one another; and three [Sun, Mercury, Venus] he made to move

¹ E.g. 243 : 256 :: $\frac{81}{64} : \frac{4}{3} :: \frac{243}{128} : 2 :: \frac{81}{32} : \frac{8}{3} :: \frac{243}{64} : 4 :: \frac{81}{16} : \frac{16}{3} ::$

²⁴²₃₂ : 8. (MARTIN.)

with equal swiftness, and the remaining four [Moon, Saturn, Mars, Jupiter] to move with unequal swiftness to the three and to one another, but all in order and reason.

Now when the Creator had framed the soul according to his will, he formed within her the corporeal universe, and brought them together, and united them centre to centre. The soul, interfused everywhere from the centre to the circumference of heaven, of which she is the external envelopment, herself turning in herself, began a divine beginning of never-ceasing and rational life enduring throughout all time. The body of
 37 heaven is visible, but the soul is invisible, and partakes of reason and harmony, and being made by the best of intellectual and everlasting natures, is the best of things created. And because she is composed of the same and of the other and of the essence, these three, and divided and bound together in proportion, and is revolving backwards and forwards in herself, the soul, when touching anything which has essence, whether dispersed in parts or undivided, is stirred through all her powers, to declare the sameness or difference of that and some other thing; and in relation to what and in what way and how and when individuals are connected or affected, both in the world of generation and in the world of immutable being. And when reason, which works with equal truth both in the circle of the diverse and of the same,—in the sphere of the self-moved in voiceless silence moving,—when reason, I say, is hovering around the sensible world and the circle of the diverse also moving truly¹ imparts the intimations of sense to the whole soul, then arise fixed and true opinions and beliefs. But when reason is dwelling in the rational, and the circle of the same moving smoothly indicates this, then intelligence and knowledge are of necessity perfected. And if any one affirms that in which these are found to be other than the soul, he will say the very opposite of the truth.

When the father and creator saw the creature which he had made moving and living, the created glory of the eternal gods, he was delighted, and in his joy determined to conform his work to the original still more, and as this was eternal, he sought

¹ Reading αὐτό.

to make the universe eternal, as far as might be. Now the nature of the intelligible being is eternal, but to attach eternity to the creature was impossible. Wherefore he resolved to have an image of eternity, which he made when he set in order the heaven moving according to number, while eternity rested in unity; and this image we call time. For there were no days and nights and months and years before the heaven was created, but when he created the heaven he created them also. They are all parts of time, and the past and future are created species of time, which we unconsciously but wrongly transfer to the eternal essence; for we say indeed that he was, he is, he will be, but the truth is that 'he is' alone truly expresses him, and that ³⁸ 'was' and 'will be' are only to be spoken of becoming in time, for they are motions, but that which is immovably the same cannot become older or younger by time, nor ever did or has become, or hereafter will be, older, nor is subject at all to any of those states of generation which affect the movements of sensible things. These are the forms of time when imitating eternity and moving in a circle measured by number. Moreover, when we say that what has become has become, and what is becoming is becoming, and that what will become will become, and that what is not is not,—all these are inaccurate modes of expression. But perhaps this is not the place in which we should discuss minutely such matters.

Time, then, was created with the heaven, in order that being produced together they might be dissolved together, if ever there was to be any dissolution of them; and was framed after the pattern of the eternal nature, that it might, as far as possible, resemble it, for that pattern exists throughout all ages, and the created heaven has been, and is, and will be in all time. Such was the mind and thought of God in the creation of time: He made the sun and moon and five other stars, which are called the planets, in order to distinguish and preserve the numbers of time, and when he made them he assigned to them the orbits in which the circle of the other revolved (cp. 36 D). There were seven orbits, as the stars were seven; first, there was the moon which is the planet nearest the earth, and then the sun next nearest beyond the earth, and the morning star and the star sacred to Hermes, moving in their orbits as swiftly as the sun,

but with an opposite motion; and this is the reason why the sun and Hermes and Lucifer meet or overtake and are met or overtaken by each other. To enumerate the places which he assigned to the other stars, and the reasons of them, if they were all to be gone through, although secondary matters, would give more trouble than the primary. These things at some future time, when we are at leisure, may have the consideration which they deserve, but not at present.

Now, when all the stars which were needed to make time had attained a motion suitable to them, and their bodies fastened by vital chains, had become living creatures and learnt their appointed task according to the motions of the diverse, which is
39 diagonal, and passes through and is overruled by the motions of the same, they revolved, some in a larger and some in a lesser orbit,—those which had the lesser orbit revolving faster, and those which had the larger moving more slowly. Now by reason of the motion of the same, those which revolved fastest appeared to be overtaken by those which moved slower although they really overtook them; for the motion of the same made them turn in a spiral, and, because some went one way, and some another, that which receded most slowly from the sphere of the same, which was the swiftest, appeared to follow it most nearly. That there might be some visible measure of their relative swiftness and slowness as they proceeded in their eight courses, God lighted a fire, which we now call the sun, in the second from the earth of these orbits, that it might give light to the whole of heaven, and that the animals whom nature intended might participate in number, and learn arithmetic from the revolutions of the same and the like. Thus, then, and for this reason the night and the day were created, being the period of the one most intelligent revolution. And the month is accomplished when the moon has completed her orbit and overtaken the sun, and the year when the sun has completed his own orbit. The periods of the other stars have not been understood by men in general, but only a few, and they have no name for them, and do not estimate their comparative length by the aid of number, and hence they are hardly aware that their wanderings, being infinite in number and admirable for their variety, make up time. And yet there is no

difficulty in seeing that the perfect number of time completes the perfect year when all the eight revolutions, having their relative degrees of swiftness, are accomplished together, governed by the circle of the same moving equally, and begin again at their original points of departure. After this manner, and to this end, came into being such of the stars as in their heavenly progress had times of change, in order that the created heaven might be as like as possible to the perfect and intelligible animal, and imitate the eternal nature.

Thus far and until the birth of time the created universe was made in the likeness of the original, but inasmuch as all animals were not yet included in it, there was a difference. What remained, the creator then proceeded to fashion after the nature of the pattern. Now as in the ideal animal the mind perceives ideas or species of a certain nature and number, so he thought that this created animal ought to have species of a like nature and number making the copy complete. There are four such; one of them is the heavenly race of the gods; another, the race of birds moving in the air; the third, the watery species; and the fourth, the pedestrian and land creatures. Of the divine, he made the greater part out of fire, that they might be the brightest of all things and fairest to the sight, and he made them after the likeness of the universe in the form of a circle, and gave them to know and follow the best, distributing them over the whole circumference of the heaven, which was to be a true cosmos or glory spangled with them. And he bestowed on each of them two motions; first, the motion in the same, because they ever continue thinking consistently the same thoughts about the same things, and also a forward motion, in that they are controlled by the revolution of the same and the like; but by the other five motions they were unaffected (cp. 43 B), in order that each of them might be the best possible. And for this reason the fixed stars were created as they are, being divine and eternal animals, ever-abiding and revolving after the same manner and on the same spot; and the other stars which change their motions and wander, were created in the manner already described after their image. The earth, which is our nurse, clinging¹ around the pole which is extended through the

¹ Or 'circling.'

universe, he made to be the guardian and artificer of night and day, first and eldest of gods that are in the interior of heaven. Vain would be the labour of telling about all the figures of them moving as in dance, and their meetings with one another, and the return of them in their revolutions towards each other, and their approximations, and to say which of them in their conjunctions meet, and which of them are in opposition, and in what order, and when, they get behind and before one another, and are severally eclipsed to our sight and again reappear, sending terrors and intimations of things about to happen to those who can calculate them—to attempt to tell of all this without looking at the models of them would be labour in vain. Let what we have said about the nature of the created and visible gods be deemed sufficient and have an end.

To tell of other divinities, and to know their origin, is beyond us, and we must accept the traditions of the men of old time who affirm themselves to be the offspring of the gods, and they must surely have known the truth about their own ancestors. How can we doubt the word of the children of the gods? although they give no probable or certain proofs, still, as they declare that they are speaking of what took place in the family, we must believe them in obedience to the law. In this manner, then, according to them, the genealogy of these gods is to be received and narrated :—

Oceanus and Tethys were the children of Earth and Heaven, and from these sprang Phorcys and Cronos and Rhea, and many more with them ; and from Cronos and Rhea sprang Zeus and
 41 Herè, and all those whom we know as their brethren, and others who were their children.

Now, when all of them, both those who visibly appear in their revolutions as well as those other gods who are of a more retiring nature, had come into being, the creator of the universe spoke to them as follows : ‘ Gods and sons of gods who are my works, and of whom I am the artificer and father, my creations are indissoluble, if so I will. All that is bound may be dissolved, but only an evil being would wish to dissolve that which is harmonious and happy. And although being created, ye are not altogether immortal and indissoluble, ye shall certainly not be dissolved, nor be liable to the fate of death ;

having in my will a greater and mightier bond than those which bound you at the time of creation. And now listen to my instructions :—Three tribes of mortal beings remain to be created,—without them the universe will be incomplete, for it will not contain every kind of animal which a perfect world ought to contain. On the other hand, if they were created and received life from me, they would be on an equality with the gods. In order then that there may be mortals, and that this universe may be truly universal, do ye, according to your natures, betake yourselves to the formation of animals, imitating the power which I showed in creating you. The divine and immortal part of them, which is the guiding principle of those who are willing to follow justice and the gods—of that divine part I will myself give you the seed and beginning. And do you then weave together the mortal and immortal, and make and beget living creatures, and give them food, and make them to grow, and receive them again in death.

Thus he spake, and once more and in the same manner poured the remains of the elements into the cup in which he had previously mingled the soul of the universe, no longer, however, pure as before, but diluted to the second and third degree. And having made it he divided the whole mixture into souls equal in number to the stars, and assigned each soul to a star ; and having there placed them as in a chariot, he showed them the nature of the universe, and the appointment of destiny, telling them that their first birth would be one and the same for all, and that no one should suffer at his hands ; and that when they were sown in the vessels of time severally adapted to them, from them would come forth the most religious of animals ; and as human nature was of two kinds, the superior ⁴² race would hereafter be called man. Now, as they were implanted in bodies by necessity, and were always gaining or losing some part of their bodily substance, in the first place there was a necessity that they should have sensation and be all affected in the same manner by external force ; in the second place, they must have love, which is a mixture of pleasure and pain ; also fear and anger, and the feelings which are akin or opposite to them ; if they conquered these they would live righteously, and if they were conquered by them, unrighteously.

He who lived well during his appointed time was to return to the star which was his habitation and there he would have a blessed and suitable existence. But if he failed in attaining this, in the second generation he would pass into a woman, and should he not desist from evil in that condition, he would be changed into some brute who resembled him in his evil ways, and would not cease from his toils and transformations until he followed the original principle of sameness and likeness within him, and overcame by the help of reason the later accretions of turbulent and irrational elements composed of fire and air and water and earth, and returned to the form of his first and better nature. Having given all these laws to his creatures, that he might be guiltless of their future evil, the creator sowed some of them in the earth, and some in the moon, and some in the other stars which are the vessels of time; and when he had sown them he committed to the younger gods the fashioning of their mortal bodies, and desired them to furnish what was still lacking to the human soul, and make all the suitable additions, and rule and pilot the mortal animal in the best and wisest manner which they could, and avert from him all but self-inflicted evils.

When the creator had given all these commands he remained as befitted him in his own nature, and his children heard and were obedient to their father's word, and receiving from him the immortal principle of a mortal creature, in imitation of their
 43 own creator they borrowed portions of fire, and earth, and water, and air from the world, which were hereafter to be returned—these they took and welded them together, not with the indissoluble chains by which they were bound themselves, but with numerous little invisible pegs, making up out of all the four elements each separate body, subject to influx and efflux, and fastened the courses of the immortal soul in the body. Now these courses, detained as in a vast river, neither overcame nor were overcome; but bore and were borne along violently, so that the whole animal was moved and progressed, irregularly however and irrationally, and in any direction, wandering and coursing according to the six kinds of motion backwards and forwards, and right and left, and up and down, and in all the six divisions of place. For great as was the advancing and retreating flood which provided nourishment, the affections produced

by external contact caused still greater tumult—when the body of any one met and came into collision with external fire, or with the solid earth or the gliding waters, or was caught in the whirlwind hurried along by the air; and the motions produced by any of these impulses were carried through the body to the soul. All such motions have consequently received the general name of ‘sensations,’ which they still retain. And these at the moment occasion a very great and mighty movement; they accompany the ever-flowing current, and stir and shake the courses of the soul, and altogether bind fast the courses of the same with their opposing flux and hinder them from ruling and moving onward; and the nature of the other or diverse they so disturb, that the three intervals which formed a progression of doubles (1, 2, 4, 8), and also of triples (1, 3, 9, 27), together with the mean terms and connecting links which are formed by the ratios of 3:2, and 4:3, and of 9:8,—these although they cannot be wholly dissolved except by him who tied them together, they twist in all sorts of ways, and bend and disorder the circles as far as they can, so that they are tumbling to pieces, and when they move, move irrationally, at one time straightforward, and then again obliquely, and then upside down, as you might imagine a person who is upside down and has his head leaning upon the ground and his feet up against something in the air; and when he is in such a condition, both he and the spectator fancy that the right of either is his left, and the left right. This and the like of this is what violently moves the courses when they meet with some external thing, either of 44 the class of the same or of the other; and they speak of it as the same with something, or the other of something, in a manner which is the very opposite of the truth; and they become false and foolish, and there is no course or revolution in them which has a guiding or directing power; and if again any sensations enter in violently from without and drag after them the whole vessel of the soul, then though they seem to conquer they are really conquered.

And by reason of all these affections, the soul when enclosed in a mortal body is at first without intelligence; but when the stream of growth and nutriment flows in with diminished speed, and the courses of the soul attaining a calm go their

own way and become steadier as time advances, then the revolutions of the several circles return to their natural figure, and call the same and the other by their right names, and make the possessor of them a rational being. And if these combine in him with any true nurture or education, he attains the fulness and health of the perfect man, and escapes the worst disease of all; but if he neglects education he walks lame while alive to the end of his journey, and returns imperfect and good for nothing to the world below. This, however, is a later stage; at present we must treat more exactly the subject before us, which involves a preliminary enquiry into the generation of the body and its members, and as to how the soul was created, and from what causes and by what foreknowledge of the gods, and still holding fast to probability, pursue our way.

First, then, the gods, imitating the spherical shape of the universe, enclosed the two divine courses in a spherical body, that, namely, which we now term the head, being the most divine part of us and the lord of all that is in us: to this the gods who put together the body gave all the other members to be servants, contriving that it should partake of every sort of motion; in order then that it might not tumble about among the deep and high places of the earth, but might be able to get out of the one and over the other, they provided the body to be its vehicle and means of locomotion; which consequently had length and was furnished with four limbs extended and jointed; these the gods contrived as instruments of locomotion with which it might take hold and find support, and
 45 so be able to pass through all places, carrying on high the dwelling-place of the most sacred and divine part of us. Such was the origin of legs and arms, which were therefore attached to every man; and the gods, esteeming the front part of man as more honourable and having more authority than the hinder part, they gave men mostly a forward motion. Now it was necessary that man should have his front part distinguished and unlike the rest of his body. Wherefore also about the vessel of the head, they first of all put in a face in which they inserted organs to minister in all things to the providence of the soul, and to this anterior part they assigned a share

of authority. And of the organs they first contrived the eyes to give light, inserting them by a cause in the following manner: they contrived that as much of fire as would not have the power of burning, but would only give a gentle light, the light of every-day life, should be formed into a body; and the pure fire which is within us and akin thereto they made to flow through the eyes in a smooth uninterrupted and undivided stream, especially at the centre of the eye, which was hardened and therefore allowed nothing to pass of a coarser nature but only this pure element. When the light of day surrounds the stream of vision, then like falls upon like, and there is a union, and one body is formed by natural affinity in the line of vision, wherever the light that falls from within meets that which comes from an external object. And all things being affected by likeness, whenever they are touching or touched by the stream of vision, their motions are diffused over the whole body, and reach the soul, producing that perception which we call sight. But when the external and kindred fire passes away in night, then the stream of vision is cut off; for going forth to the unlike element it is changed and extinguished, being no longer of one nature with the surrounding atmosphere which is now deprived of fire: and so the eye no longer sees, and we go to sleep. When the eyelids are closed, which the gods invented for the preservation of sight, they keep in the internal fire; and the power of the fire diffuses and equalizes the inward motions; and when they are equalized there is rest, and when the rest is profound, sleep comes undisturbed by dreams; but where the greater motions still remain, whatever may be their nature and situations, they engender corresponding visions within us, which are remembered by us when we are awake and in the external world. And now there is no longer any difficulty in understanding the creation of images in mirrors and in all smooth and bright surfaces. The fires from within and from without communicate about the smooth surface, and form one image which is variously refracted. All which phenomena necessarily arise by reason of the fire or light about the eye combining with the fire or ray of light about the smooth and bright surfaces. And when the parts of the light within and the light without meet and touch in a manner contrary to the usual mode

of meeting, then the right appears to be left and the left right ; but the right again appears right, and the left left, when the position of one of the two concurring lights is inverted ; and this happens when the smooth surface of the mirror, which is concave, repels the right stream of vision to the left side, and the left to the right¹. Or if the mirror be turned vertically, then the face appears upside down, and the upper part of the rays are driven downwards, and the lower upwards.

These are the works of the second and co-operative causes which God, carrying into execution the idea of the best as far as possible, uses as his ministers. They are thought by most men not to be the second, but the prime causes of all things, because they freeze and heat, and contract and dilate, and the like. But they are not so, for they are incapable of reason or intellect ; the only being which can properly have mind is the invisible soul, whereas fire and water, and earth and air, are all of them visible bodies. The lover of intellect and knowledge ought to explore causes of intelligent nature first of all, and, secondly, of those things which are moved by others and of necessity move others. And this we too must now do. Both kinds of causes should be considered by us, but a distinction should be made between those which are endowed with mind and are the workers of things fair and good, and those which are deprived of intelligence and accomplish their several works by chance and without order. Of the second or concurrent causes of sight, which give to the eyes the power which they now possess, enough has been said. I will therefore now proceed to speak of the higher use and purpose for which
 47 God has given them to us. The sight in my opinion is the source of the greatest benefit to us, for had the eyes never seen the stars, and the sun, and the heaven, none of the words which we have spoken about the universe would ever have been uttered. But now the sight of day and night, and the revolution of the months and years, have given us the invention of number, and a conception of time, and the power of enquiring about the nature of the whole ; and from this source we have

¹ He is speaking of two kinds of mirrors, first the plane, secondly the concave ; and the latter is supposed to be placed, first horizontally, and then vertically.

derived philosophy, than which no greater good ever was or will be given by the gods to mortal man. This is the greatest boon of sight: and of the lesser benefits why should I speak? even the ordinary man if he were blind would in vain bewail the loss of them. Thus much let me say however: God invented and gave us sight to the end that we might behold the courses of intelligence in the heaven, and apply them to the courses of our own intelligence which are akin to them, the unperturbed to the perturbed; and that we, learning them and being partakers of the true computations of nature, might imitate the absolutely unerring courses of God and regulate our own vagaries. The same may be affirmed of speech and hearing; they have been given by the gods to the same end and for a like reason. For this is the principal end of speech, and there is a similar use of musical sound, which is given to the hearing for the sake of harmony. And harmony, which has motions akin to the revolutions of our souls, is not regarded by him who intelligently uses the Muses as given by them with a view to irrational pleasure, which is the prevailing opinion in our day, but with a view to the inharmonic course of the soul, and to be our ally in reducing this into harmony and agreement with itself; and rhythm was given by them for the same reason, on account of the irregular and graceless ways which prevail among mankind generally, and to help us against them.

Thus far in what we have been saying, with small exceptions, the works of intelligence have been set forth; and now we must place by the side of them the things done from necessity—for the creation is mixed, being made up of necessity and mind. 48 Mind, the ruling power, persuaded necessity to bring the greater part of created things to perfection, and thus in the beginning, when the influence of reason got the better of necessity, the universe was created. But if a person will truly tell of the way in which the work was accomplished, he must include the other influence of the variable cause as well. Wherefore, we must return again and find another suitable beginning, as about the former matters, so also about these. To which end we must consider the nature of fire, and water, and air, and earth, which were prior to the creation of the heavens, and what happened

before there were elements; for no one has as yet explained them, but we speak of fire and the rest of them, whatever they mean, as though men knew their natures, and we maintain them to be the letters or elements of the whole, when they cannot reasonably be compared by a man of any sense even to the syllables or first compounds. And let me say thus much: I will not speak of the first principle or principles of all things, or by whatever name they are to be called, for this reason,—because it is difficult to set forth my opinion according to the mode of discussion which we are at present employing. Do not imagine, any more than I can bring myself to imagine, that I should be right in undertaking so difficult a task. I will observe the rule of probability with which I began, not less but more than others, and especially when I speak of the beginning of each and all¹. Once more, then, I call upon God, at the beginning of my discourse, and beg him to be our saviour out of a strange and unwonted enquiry, and to bring us to probability. So now let us begin again.

This new beginning of our discussion of the universe requires a fuller division than the former; for then we made two classes, now a third must be added. The two sufficed for the former discussion: one assumed by us to be a pattern intelligible and always the same; and there was a second, which was only
49 the imitation of the pattern, generated and visible; the third kind we did not distinguish at the time, conceiving that the two would be enough. But now the argument seems to require that we should show forth another kind, which is difficult of explanation and dimly seen. What natural power are we to attribute to this new kind of being? We reply, that it is the receptacle, and in a manner the nurse, of all generation. I have said the truth; but I must give a clearer explanation, and this will be an arduous task for many reasons, and in particular because I must first raise questions concerning fire and the other elements, and say what each of them is; for example, which of them is properly called water as distinct from fire, and by what name any element is called as dis-

¹ Putting the comma after *μᾶλλον δὲ*; but *καὶ ἔμπροσθεν* (?): Or, laying the stress on *ἀπ' ἀρχῆς*, 'but above all, I will begin at the beginning of each and all.'

tinguished from any other or from all of them ; and to give a certain or satisfactory proof of this is not easy. How, then, and in what way can we reason, and at what probable conclusion can we arrive ?

In the first place, that which we are now calling water, when congealed becomes stone and earth, as our sight seems to show us ; and this same element, when melted and dispersed, passes into vapour and air. Air, again, when burnt up, becomes fire ; and again fire, when condensed and extinguished, passes once more into the form of air ; and once more, air, when collected and condensed, produces cloud and vapour ; and from these, when still more compressed, comes flowing water, and from water comes earth and stones once more ; and thus generation appears to be transmitted from one to the other in a circle. Thus, then, as the elements never appear the same, how can any one have the assurance to maintain strongly that any of them is one thing rather than another ? No one can. But much the safest plan is to speak of them as follows:—Let us not call that which we see to be continually changing ‘fire,’ but rather say, ‘that some such nature is fire;’ and let us not speak of that other thing as water, but rather say that some such nature is water ; and let us not speak of objects at all as having stability, or erroneously imagine ourselves to indicate any of them by the term ‘this’ or ‘that,’ for they are too volatile to be detained in any such expressions as ‘this,’ or ‘the nature of this,’ or ‘the nature belonging to this,’ or any other form of language which implies their permanence. We must not speak of them as individual things, but rather say, of each and all of them, ‘such ;’ which word expresses the similar principle circulating in all of them ; for example, of fire we should say that the general principle is of such a nature always, and so of everything that has generation. That in which these principles severally grow up, and appear, and decay, is alone to be called by the name ‘this’ or ‘that;’ but that which is of a certain nature, 50 hot or white, or their opposites, and all that proceeds from them, ought not to be so denominated. Let me make one more attempt to explain my meaning more clearly. Suppose a person to make all kinds of figures of gold and never to cease transforming them out of one form into all the others ;—somebody

points to one of them and asks, What is that? By far the safest and truest answer is, That is gold; and not to speak of the triangle or of any other figures which are formed in the gold as having real existence, inasmuch as they are in process of change while he is making the assertion; but if he be willing to take the safe and general answer, we should be satisfied. And the same may be said of the universal nature which receives all bodies—that must be always called the same; for, while receiving all things, she never departs at all from her own nature, and never in any way, or at any time, assumes a form like that of the things which enter into her, being in fact the natural recipient of all impressions, moved and fashioned by them, and varying in appearance from time to time because of them. The bodies which enter into and go out of her are the images of realities modelled after their patterns in a wonderful and inexplicable manner, which shall be hereafter investigated by us. But for the present we have only to conceive of three natures: first, that which is in process of generation; secondly, that in which the generation takes place; and thirdly, that of which the thing generated is the natural resemblance. Moreover, we may liken the receiving principle to a mother, and the source or spring to a father, and the intermediate nature to a child; and may remark further, that if the model is to take every variety of form, then the matter in which the model is fashioned, when duly prepared, must be formless, and the forms must come from without. For if the matter were like any of the supervening forms, then when any opposite or entirely different nature was impressed the representation would be a bad one, because the matter would shine through. Wherefore, that which is to receive all forms should have no form; as in making perfumes they first contrive that the liquid substance which is to receive the scent shall be as inodorous as possible; or as those who wish to impress figures on soft substances do not allow any previous impression
 51 to remain, but make the surface as even and smooth as possible. In the same way that which is to receive perpetually and through its whole extent the resemblances of eternal beings ought to be destitute of any particular form. Wherefore, the mother and receptacle of all created and visible and in any

way sensible things, is not to be termed earth, or air, or fire, or water, or any of their compounds, or any of the elements out of which they are composed, but is an invisible and formless being which receives all things and attains in a mysterious way a portion of the intelligible, and is most incomprehensible. In saying this we shall not be far wrong; as far, however, as we can attain to a knowledge of her from the previous considerations, we may truly say that fire is that part of her nature which is inflamed, and water that which is moist, earth and air being also parts, in so far as the mother substance receives the impressions of them.

Let us consider this question more precisely. Is there any self-existent fire? and are all those things of which we speak self-existent? or are only those things which we see, or in some way perceive through the bodily organs, truly existent, and no others besides them? And is all that which we call an intelligible essence nothing at all, and only a word? Here is a question which we must not leave unexamined or undetermined, or affirm too confidently that there can be no decision; neither must we interpolate in our present long discourse a digression as long, but if there be a way in which a great principle may be set forth in a few words, that will be what we want.

Thus I state my view:—If mind and true opinion are two distinct classes, then I say that there certainly are these self-existent ideas unperceived by sense, and apprehended only by the mind; if, however, as some say, true opinion differs in no respect from mind, then everything that we perceive through the body is to be considered as most real and certain. But we must affirm them to be distinct, for they have a distinct origin and are of a different nature; and the one is implanted in us by instruction, and the other by persuasion, and the one is always accompanied by true reason, and the other is without reason: the one is not to be moved by persuasion, but the other may be moved; and lastly, every man may be said to share in true opinion, but mind is the attribute of the gods only and of very few men. Wherefore, also, we must acknowledge that there is one kind of being which is always the same, uncreated and indestructible, never receiving anything into itself ⁵² from without, nor itself going out to any other, but invisible

and imperceptible by any sense, and of which the sight is granted to intelligence only. And there is another nature of the same name with it, and like to it, perceived by sense, created, always in motion, becoming in place and again vanishing out of place, which is apprehended by opinion and sense. And there is a third nature, which is space, and is eternal, and admits not of destruction, and provides a home for all created things, and is perceived without the help of sense, by a kind of spurious reason, and is hardly matter of belief ; which we beholding as in a dream, say of all existence that it must of necessity be in some place and occupy a space, but that what is neither in heaven nor in earth has no existence. These and other things of the same kind, relating to the true and waking reality of nature, we, having only such a dreamlike sense of them, are unable to arouse ourselves truly to describe or to determine. For an image, not possessing that of which the image is, and existing ever as the changing shadow of some other, must be inferred to be in another [i. e. in space], and in some way or other take hold of essence, or not be at all. But true and exact reason vindicating the nature of true being, maintains that while two things (i. e. the idea and the image) are different they cannot exist one of them in the other so as to become one and also two at the same time.

Thus have I concisely given the result of my thoughts ; and my opinion is that being and space and generation, these three, in their three manners existed before the heaven ; and that the nurse of generation, moistened by water and inflamed by fire, and receiving the various forms of earth and air, and experiencing all the other accidents that attach to them, took a variety of shapes ; and being full of powers which were neither similar nor equally balanced, was never in any part in a state of equipoise, but swaying unevenly to and fro, was shaken by them, and by its motion again shook them ; and the elements when moved were divided like the grain shaken and winnowed by fans and other instruments used in the threshing of corn,
 53 when the close and heavy particles are borne away and settle in one direction, and the loose and light particles in another. In this manner the four kinds or elements were then shaken by the recipient vessel, which, moving like a winnowing machine,

scattered far away from one another the elements most unlike, and forced the most similar elements into the closest contact. Wherefore also the elements had different places before the universe that was arranged out of them came into being. And at first all things were without reason and measure. But when the world began to get into order, first fire and water and earth and air, having only certain faint traces of themselves, and being altogether such as everything may be expected to be in the absence of God—this, I say, being their nature, God fashioned them by form and number. Let us always, and in all that we say, hold that God made them as far as possible the fairest and best, out of things which were not fair and good. And now I will endeavour to show you the disposition and generation of them by an unaccustomed argument, which I am compelled to use; but I believe that you will be able to follow me, for your education has made you familiar with the methods of science.

In the first place, then, as is evident to all, fire and earth and water and air are bodies. And every sort of body possesses solidity, and every solid must necessarily be contained in planes; and the plane rectilinear figure is composed of triangles; and all triangles are originally of two kinds, both of which are made up of one right and two acute angles; one of them has at either end of the base the half of a right angle which is divided by equal sides (of the triangle), while in the other unequal parts of a right angle are divided by unequal sides. These, then, proceeding by a combination of probability with demonstration, we assume to be the original elements of fire and the other bodies; but the principles which are prior to these God only knows, and he of men whom God loves. And next we have to determine what are the four most beautiful bodies which are unlike one another, and of which some are capable of resolution into one another; and having discovered thus much, we shall know the true origin of earth and fire and the proportionate and intermediate elements. And then we shall not be willing to allow that there are any distinct kinds of visible bodies fairer than these. Wherefore we must endeavour to construct the four forms of bodies which excel in beauty, and then we shall be able to say that we have sufficiently apprehended their

54 nature. Of the two triangles, the isosceles has one form only; the scalene or unequal-sided has an infinite number. Of the infinite forms we must select the most beautiful, if we are to proceed in due order, and any one who can point out a more beautiful form than ours for the construction of these bodies, shall carry off the palm, not as an enemy, but as a friend. Now, the one which we maintain to be the most beautiful of all the many figures of triangles (and we need not speak of the others) is that of which the double forms an equilateral triangle; the reason of this would be long to tell; he who disproves what we are saying, and proves that we are mistaken, may claim a friendly victory. Then let us choose two triangles, out of which fire and other bodies have been constructed, the one isosceles, the other having a longer side of which the square is three times as great as the square of the lesser side.

Now is the time to explain what was before obscurely said: there was an error in imagining that all the four elements might be generated by and into one another; this, I say, was wrong, for there are generated from the triangles which we have taken four kinds—three from the one which has the sides unequal; the fourth alone is framed out of the isosceles triangle. Hence they cannot all be resolved into one another, or compounded into larger out of smaller bodies, or the reverse. But three of them can be thus resolved and compounded, for they all spring from one, and when the greater bodies are dissolved, many small bodies will spring up out of them and take their own proper figures; or, again, when many small bodies are distributed in triangles, a single number will unite them into one large mass of another kind. So much for their passage into one another. I have now to speak of their several kinds, and show out of what combinations of numbers each of them was formed. The first will be the simplest and smallest compound, and its element is that triangle which has its hypotenuse twice the lesser side. When two such triangles are joined at the diagonal, and this is repeated three times, and the triangles rest their diagonals and shorter sides on the same point as a centre, a single equilateral triangle is formed out of six triangles; and four equilateral triangles, if put together, make out of every three plane angles one solid angle [=two right angles], which is

nearest to the most obtuse of plane angles ; and out of the 55 combination of these four angles arises the first solid form which distributes into equal and similar parts the entire sphere. The second species of solid is formed out of the same triangles, which unite as eight equilateral triangles and form one solid angle out of four plane angles, and out of six such angles the second body is completed. And the third body is made up of 120 triangular elements, forming twelve solid angles, each of them included in five plane equilateral triangles, having altogether twenty bases, each of which is an equilateral triangle. The one element [that is, the triangle with unequal sides] having generated these figures, generates no more ; but the triangle which has equal sides produces the fourth elementary figure, which is compounded of four such triangles, joining their right angles in a centre, and forming one equilateral quadrangle. Six of these united form eight solid angles, each of which is made by the combination of three plane right angles ; the figure of the body thus composed is a cube, having six plane quadrangular equilateral bases. There was yet a fifth combination which God used in the delineation of the universe.

Now, he who, duly reflecting on all this, enquires whether the worlds are to be regarded as infinite or finite, will be of opinion that the notion of their infinity is characteristic of a very indefinite and ignorant mind. There is, however, more reason in doubting whether they are to be truly regarded as one or five. Arguing from probabilities, I am of opinion that they are one ; another, regarding the question from another point of view, may be of another mind. But, leaving this enquiry, let us proceed to distribute the elementary forms, which have now been created in idea, among the four elements.

To earth, then, let us assign the cubical form ; for earth is the most immoveable of the four and the most easily modelled of all bodies, and that which has the most stable bases must of necessity be of such a nature. Now, of the triangles which we mentioned at first, that which has two equal sides is by nature more firmly based than that which has unequal sides ; and of the compound figures which are formed out of either, the plane equilateral quadrangle has necessarily a more stable basis than the equilateral triangle, both in the whole and in the parts. Where-

56 fore, in assigning this figure to earth, we adhere to probability ; and to water we assign that one of the remaining forms which is the most immoveable ; and the most moveable of them to fire ; and to air that which is intermediate between them. Also we assign the smallest body to fire, and the greatest to water, and the intermediate body to air ; and, again, the acutest body to fire, and the next in acuteness to air, and the third to water. Of all these elements, that which has the fewest bases must necessarily be the most moveable and the acutest and most penetrating in every direction ; and must also be the lightest as being composed of the smallest number of similar particles : and the second body has similar properties in a second degree, and the third body in the third degree. Let it be agreed, then, both according to strict reason and according to probability, that the pyramid is the solid which is the original element and seed of fire ; and let us assign the element which was next in the order of generation to air, and the third to water. We must imagine all these to be so small that no single particle of any of the four kinds is seen by us on account of their smallness : but when many of them are collected together the aggregate is seen. And the ratios of their numbers, motions, and other properties, everywhere the God, as far as necessity consented and allowed, has exactly perfected, and harmonized them all in due proportion.

From all that we have just been saying, the most probable conclusion is as follows :—earth, meeting with fire and dissolved by its sharpness, is borne hither and thither, either by dissolution in the fire itself or in the air or in the water, until its parts, meeting together and mutually harmonizing, again become earth, for they can never take any other form. But water, when divided by fire or by air, on reuniting, becomes one part fire and two parts air ; and a single volume of air divided becomes two of fire. Again, when a small body of fire is contained in a larger body of air or water or earth, and both are moving, and the fire struggling is overcome and decomposed, then two volumes of fire form one volume of air ; and when air is overcome and cut up into small pieces, two and a half parts of air are condensed into one part of water. Let us consider the matter in another way. When one of the other elements is

fastened upon by the fire, and is cut by the sharpness of its 57 angles and sides, it coalesces with the fire, and then ceases to be cut by them any longer. For among bodies which are similar and uniform, none can change or be changed by another of the same class and in the same state. But in the process of transition, and during the conflict of the weaker with the stronger, the dissolution continues. Again, smaller bodies detained in larger ones, the few encompassed by the many, are in process of decomposition and extinction, and only cease from their tendency to extinction when they consent to pass into the conquering nature, and fire becomes air and air water. But if bodies of one kind go and do battle against bodies of another kind, the process of dissolution continues until they are completely ejected and dissolved, and make their escape to their own kindred, or else, being overcome and assimilated to the conquering power, they remain and dwell with their victors, and from being many become one. And owing to these affections, all things are changing their place, for the motion of the receiving vessel distributes the multitude of classes into their natural places; but those things which become unlike themselves and like other things are hurried by the shaking into the place of the things which they resemble.

Now all unmixed and primary bodies are produced by these causes. As to the subordinate species which are included in the greater kinds, they are to be attributed to the various constitutions of the two original triangles. For these differ in magnitude, and are larger and smaller and have as many sizes as there are differences of species. Hence when mingled with themselves and with one another they are infinite in their diversity, which those who would arrive by reasoning at the probable truth of nature ought duly to study.

Unless a person comes to an understanding about the nature and conditions of rest and motion, he will meet with many difficulties in the discussion which follows. Something has been said of this matter already, and something more remains to be said, which is, that motion never exists in equipoise. For to conceive that anything can be moved without a mover is hard or indeed impossible, and equally impossible to conceive that there can be a mover unless there be something which can be moved ;—

58 motion cannot exist where either of these are wanting, and for these to be in equipoise is impossible; wherefore we must assign rest to equipoise and motion to the want of equipoise. Now inequality is the cause of the nature which is wanting in equipoise; and of this we have already described the origin. But there still remains the further question—why things when divided after their kinds do not cease from motion and transition into one another—which we will now proceed to explain. In the revolution of the universe are comprehended all natures, and this being circular and having a tendency to unite with itself, compresses all things and will not allow any place to be left void. Wherefore, also, fire above all things penetrates everywhere, and air next, as being next in rarity of the elements; and the two other elements in like manner penetrate according to their degrees of rarity. For those things which are composed of the largest particles have the largest void left in their compositions, and those which are composed of the smallest particles have the least. And the tendency towards condensation thrusts the smaller particles into the interstices of the larger. And thus, when the small parts are placed side by side with the larger, and the lesser divide the greater and the greater unite the lesser, all the elements are borne up and down and every way towards their own places; for the change in the size of each changes their position in space. And these causes generate an inequality which is always maintained, and is continually creating a perpetual motion of the elements in all time.

In the next place we have to consider that there are divers kinds of fire. There are, for example, first, flame; and secondly, those emanations of flame which do not burn but only give light to the eyes; thirdly, the remains of fire, which are seen in things red-hot after the flame has been extinguished. There are similar differences in the air; of which the brightest part is called the aether, as the most turbid sort of air is called mist and darkness; and there are various other nameless kinds which are formed by the inequality of the triangles. Water, again, admits in the first place of a division into two kinds; the one liquid and the other fusile. The liquid kind is composed of the small and unequal particles of water; and moves itself and is moved by other bodies because of the inequality of the particles

and the shape of the figure; whereas the fusile kind being formed of large and equal particles is more stable than the other, and is solid and compact by reason of its equability. But when fire gets in and dissolves and destroys the equability, it becomes more movable, and when capable of motion is thrust forth by the neighbouring air and spreads upon the earth; and this dissolution of the solid masses is called melting, and the spreading out upon the earth is called flowing. When the 59 fire goes out again it does not pass into a vacuum, but into the neighbouring air; and the air which is displaced forces together the liquid and still moveable mass into the place which was occupied by the fire, and mingles it with itself. Thus compressed the mass resumes its equability, and is again at unity with itself, because the fire which was the author of the inequality has retreated; and this departure of the fire is called cooling, and the coming together which follows upon it is termed congelment. Of all the kinds termed fusile, that which is the densest and is formed out of the finest and most equable parts is that most precious possession which is called gold, and is hardened by filtration through rock; this is unique in kind, and has a bright and yellow colour. A shoot of gold, which is so dense as to be very hard, and is blackened, is termed adamant. There is also another kind which has parts nearly like gold, and of which there are several species; it is denser than gold, and contains but a small and fine portion of earth, and is therefore harder, yet also lighter because of the great interstices within, and this substance, which is bright and also fusile, when solidified is called copper. There is an alloy of earth mingled with it, which, when the two parts grow old and are disunited, comes out in the form of rust. The remaining phenomena of the same kind there will be no difficulty in reasoning out by the method of probabilities. A man may sometimes set aside the arguments about eternal things, and for recreation turn to consider the truths of generation which are probable only; thus he attains a pleasure not to be repented of, and makes for himself during his life a wise and moderate pastime. Let us grant ourselves this indulgence, and go through the series of probabilities which follows next in order.

The water which is mingled with fire being of that sort

which is fine and liquid, is called liquid, because of its motion and the way in which it rolls upon the earth; and soft, because its bases give way and are less stable than those of earth. This, when separated from fire and air and isolated, becomes more equable, and by their retirement is compressed into itself; and when thus compressed above the earth is called hail, and when on the earth, ice; and that which is congealed in a less degree and is only half solid, when above the earth is called snow, and when upon the earth, and condensed from dew, hoar-frost. Then, again, there are the numerous kinds of water which have been mingled with one another, and are distilled through plants which grow in the earth; and this class is called by the general
 60 name of juices or saps. The unequal admixture of these fluids creates a variety of species; most of which are nameless, but four which are of a fiery nature are clearly distinguished and have names. First, there is wine, which warms the soul as well as the body;—secondly, there is the oily nature, which is smooth and divides the light of vision, and for this reason is bright and shining and of a glistening appearance, including pitch, the juice of the castor berry, oil itself, and other things of a like nature; also, thirdly, there is the diffusive class, which spreading to the combinations of food in the mouth produce sweetness;—these are included under the general name of honey: and, lastly, there is a vegetable acid (*ὄπρος?*), which differs from all other juices, and is a frothy liquid having a burning quality which dissolves the flesh.

As to the kinds of earth, that which is filtered through water passes into stone in the following manner:—the water which mixes with the earth and is broken up in the process passes into air, and taking this form mounts into its own place. And as there is no vacuum the neighbouring air is thrust out, and this being heavy and when thrust forth diffused and coagulated around the mass of earth, violently compresses it and drives it into the vacant space from whence the new air had come up; and the earth when compressed by the air into an indissoluble union with water becomes rock. The fairer sort is that which is made up of equal and similar parts and is transparent; that which has the opposite qualities is inferior. But when all the watery part is suddenly drawn out by fire, a more brittle

substance is formed, to which we give the name of pottery. Sometimes also the moisture may remain, and the earth which has been fused by fire becomes, when cool, a stone of a black colour. A like separation of the water may occur in substances composed of finer particles of earth, and of a briny nature, and then a half-solid body is formed, soluble in water—either nitre which is used for purging away oil and earth, or else salt, which harmonizes so well in combinations pleasing to the palate, and is, as the law testifies, a substance dear to the gods. The compounds of earth and water are not soluble by water, but by fire only, and for this reason:—neither fire nor air melt masses of earth, owing to the smallness of their particles, which enables them easily to penetrate the larger interstices of earth without violence; and they leave the earth unmelted and undissolved, but the particles of water, being larger, force a passage and dissolve and melt the earth. Wherefore earth 61 when not consolidated by force is dissolved by water only; when consolidated, by nothing but fire; this is the only body which can find an entrance. The cohesion of water again when very strong is dissolved by fire only—when weaker, then either by air or fire—the former entering the interstices, and the latter penetrating even to the triangles. But nothing can dissolve air when strongly condensed, which does not reach the elements or triangles; or if not strongly condensed, then only fire can dissolve it. As to bodies composed of earth and water, while the water occupies the vacant interstices of the earth and holds them compacted together, the circumfluent particles of water finding no entrance leave the entire mass unaffected; but the particles of fire entering into the interstices of the water, do to the air as the water does to the earth, and are the sole causes of the compound body of earth and water liquefying and becoming fluid. Now these bodies are of two kinds; some of them, such as glass and the fusible sort of stones, have less water than they have earth; on the other hand, substances of the nature of wax and incense have more of water entering into their composition.

I have thus set forth the various forms and classes of bodies as they are diversified by their combinations and changes into one another, and now I must endeavour to show what are the

causes of the affections which proceed from them. In the first place, the bodies which I have been describing are necessarily objects of sense. But we have not yet considered the origin of flesh, or what belongs to flesh, or of that part of the soul which is mortal. And these things cannot be explained without also explaining the affections which are concerned with sensation; nor the latter without the former: and yet to explain them together is hardly possible, for which reason we must assume first one or the other and go back to that which is assumed. In order, then, that the affections may come next in order to the elements, let us presuppose the existence of body and soul.

First, let us enquire why we say that fire is hot; and about this we may reason from the dividing or cutting power which it exercises on our bodies. We all of us feel that fire is sharp; and we may further consider the fineness of the sides, and the sharpness of the angles, and the smallness of the particles, and the swiftness of the motion; all this makes the action of fire violent and sharp, and enables it to cut whatever it meets.

62 And we must not forget that the original figure of fire [i. e. the pyramid], more than any other form, has a dividing power which cuts (*κερματίζει*) our bodies into small pieces, and thus naturally produces that affection which we call heat, whence also the origin of the name (*θερμὸς, θερρίζω*). Now, the opposite of this is sufficiently manifest, yet for the sake of completeness may here be added. For in the case of moist natures which have to do with the body, the larger particles entering in and driving out the lesser, but not being able to take their places, compress the moist principle in us, which, from being unequal and disturbed, is forced by them into a state of rest and equability, and made to coagulate by pressure. Whereas things brought together contrary to nature are naturally at war, and repel one another; and to this war and convulsion the name of shivering and trembling is given; and the whole affection and the cause of the affection are both termed cold. That is called hard to which our flesh yields, and soft which yields to our flesh; and things are also termed hard and soft relatively to one another. That which yields has a small base; but that which rests on quadrangular bases is firmly posed and

offers the greatest resistance, and is also that which is the most compact and therefore repellent. The nature of the light and the heavy will be best understood when examined in connection with our notions of above and below; for it is quite wrong to suppose that the universe is parted into two regions, separate from and opposite to each other, the one a lower to which all things tend which have any bulk, and an upper to which things only ascend against their will. For as the universe is a globe, all the extremities being equidistant from the centre are equally extremities, and the centre which is equidistant from them is equally to be regarded as the opposite of them all. Such being the nature of the world, when a person says that anything is above and below, may he not be justly charged with using an improper expression? For the centre of the world cannot be rightly called either above or below, but is the centre and nothing else; and the circumference is not the centre, and has in no one part a greater tendency to the centre than in any of the opposite parts. Indeed, when the parts are in every direction similar, how can one rightly give them names which imply opposition? For if there were any solid body in equipoise at the centre of the 63 universe, there would be nothing to draw it to this extreme rather than that on account of their perfect similarity; and if a person were to go round it in a circle, he would often, when standing at the antipodes of his former position, speak of the same as above and below; for, as I was saying just now, to speak of the whole which is in the form of a globe as having one part above and another below is not like a sensible man. The reason why these terms are used, and the cases in which they are ordinarily applied by us to the division of the heavens, may be elucidated by the following supposition:— If a person were to stand in that part of the universe which is the appointed place of fire, and where there is the great mass of fire to which fiery bodies gather—if, I say, he were to ascend thither, and, having the power to do this, were to abstract particles of fire and put them in scales and weigh them, and then, raising the balance, were to draw the fire by force towards the uncongenial element of the air, it would be very evident that the smaller mass would yield more readily

than the larger; for when two things are simultaneously raised by one and the same power, the smaller body must necessarily yield to the superior power with less reluctance than the larger; and the larger body is called heavy and said to tend downwards, and the smaller body is called light and said to tend upwards. And we may detect ourselves who are upon the earth doing precisely the same thing. For we often separate earthy natures, and sometimes we draw the earth itself into the uncongenial element of air by force and contrary to nature, both clinging to their native element. But that which is smaller yields to the impulse given by us towards the dissimilar elements more easily than the larger; and the former we call light, and the place towards which it is impelled we call above, and the contrary state and place we call heavy and below respectively. These must necessarily differ from one another, because the principal masses of the different elements hold opposite positions; for that which is light in the one place is opposed to that which is light in the other, and the heavy to the heavy, and that which is below to that which is below, and that which is above to that which is above; and in their various states of being and becoming they will all be found to be contrary and transverse and in every way diverse in relation to one another. And about all of them this has to be considered:—that the tendency of each towards the kindred elements makes the body which is moved heavy, and the place towards which the motion tends below, but of things which are in a contrary position the contrary is true. Such are the causes which we assign to these phenomena. As to the soft and the rough, any one who sees them can explain the reason of them. For roughness is hardness mingled with inequality, 64 and smoothness is produced by the joint effect of equality and density.

The most important of the affections which concern the whole body remains to be considered. This is the cause of pleasure and pain in the things which we have mentioned, and in all other things which are perceived by sense through the parts of the body, and have pleasures and pains consequent upon them. Let us imagine the causes of every affection, whether of sense or not, to be of the following nature, remembering

that we have already distinguished between the nature which moves and that which is immoveable; for this is the direction in which we must hunt the prey which we mean to take. A body which is easily moved on receiving any slight impression communicates this to the parts affected, and these to other parts in an ever widening circle, until at last reaching the principle of mind they announce the power of the producing cause. But a body of the opposite kind, being at rest, and having no circular motion, is alone affected, and does not move any of the neighbouring parts; and thus the parts not distributing their first impression to other parts, having no effect of motion on the whole animal, produce no effect on the patient. This is true of the bones and hair and other more earthly parts of the human body; whereas what was said above relates mainly to sight and hearing, because they have in them the greatest force of fire and air. Now, we must conceive of pleasure and pain in this way. An impression produced in us contrary to nature and violent, if sudden, is painful; and, again, the sudden return to nature is pleasant, and that which is gentle and gradual is imperceptible and *vice versa*. But the impression which is most easily produced is most readily felt, and is not accompanied by pleasure or pain; such, for example, are the affections of the sight itself, which has been already said to be a kindred body communicating with us in the day-time (45); for cuttings and burnings and other affections which happen to the sight do not give pain, nor is there pleasure when the sight returns to its natural state; but the impressions are clearest and strongest according to the manner of the affection and the number of the objects perceived; for there is no violence either in the contraction or dilation of the eye. But bodies which are formed of larger particles yield to the agent only with a struggle; and then they impart their motions to the whole and cause pleasure and pain—pain when alienated from their natural conditions, and pleasure when restored to them. Things which experience gradual withdrawals and emptyings ⁶⁵ of their nature, and great and sudden replenishments, fail to perceive the emptying, and do perceive the replenishment; these occasion no pain, but the greatest pleasure to the mortal part of the human soul, as is manifest in the case of perfumes.

But things which are changed all of a sudden, and only gradually and with difficulty return to their own nature, have all the opposite effects, as is evident in the case of burnings and cuttings of the body.

Thus have we discussed the general affections of the whole body, and the names of the agents which produce them. And now I will endeavour to speak of the affections of particular parts, and the causes and agents of them, as far as I am able. In the first place let us add what was omitted when we were speaking of juices, concerning the affections peculiar to the tongue. These, like most of the other affections, appear to be caused by certain contractions and dilations, but they have also more of roughness and smoothness than is found in other affections; for whenever earthy particles enter into the small veins which are the testing instruments of the tongue, reaching to the heart, and fall upon the moist, delicate portions of flesh—when by the process of melting they contract and dry up the little veins, they are astringent if they are rougher, but if not so rough then only harsh. Those of them which are of an abstergent nature, and wash the parts about the tongue, if they do so in excess, and take up into themselves and consume away a part of its nature, like potash and soda, are all termed bitter. Those, again, which are of a weaker sort, and which purge only moderately, are called salt, and having no bitterness or roughness, are regarded as rather agreeable than otherwise. Bodies which share in and are softened by the heat of the mouth, and which are inflamed, and again in turn inflame that which heats them, and whose lightness is such that they are carried upwards to the sensations of the head, and cut all that comes in their
66 way, by reason of these qualities in them, are all termed pungent. But when these same particles, refined away by putrefaction, enter into the narrow veins, and there meet the earthy and airy particles, and set them whirling, and while they are in a whirl cause them to interpenetrate with one another and form new hollows exterior to the particles which enter—as happens with the hollow drop surrounding the air—forming hollow watery vessels of air of a circular shape, which are sometimes mixed with earth and sometimes pure, in the latter case pure and transparent, which are called bubbles, while

those composed of the earthy liquid which is in a state of general agitation and rising, are called boiling or fermentation ; —of all these affections the cause is termed acid. And there is the opposite affection arising from an opposite cause, when the composition of the particles which enter dissolved in liquid is congenial to the tongue, and smoothes and oils over the roughness, and relaxes the parts which are unnaturally contracted, and contracts the parts which are relaxed, and disposes them all according to their nature ; that sort of remedy of violent affections is pleasant and agreeable to every man, and has the name sweet. Enough of this.

The faculty of smell does not admit of differences of kind ; for all smells are but half-formed substances, and no element is so proportioned as to have any smell. The veins about the nose are too narrow to admit the various kinds of earth and water, and too wide to detain those of fire and air ; and for this reason no one ever smells any of them, but smells always proceed from bodies that are damp, or putrefying, or liquefying, or smoking, and are perceptible only in the intermediate state, when water is changing into air and air into water, and all of them are either smoke or mist. That which is passing out of air into water is mist, and that which is passing from water into air is smoke ; and hence all smells are thinner than water and thicker than air. The proof of this is, that when there is any obstruction to the respiration, and a man draws in his breath by force, then no smell filters through, but the air only by itself and without the smell penetrates ; and hence there are only two varieties of smell, because they are not composed ⁶⁷ of many or of simple elements, and they have no name, but are distinguished as painful and pleasant, the one irritating and disturbing the whole cavity which is situated between the head and the navel, the other having a soothing influence, and restoring this same region to an agreeable and natural condition.

And now we have to speak of hearing, which is a third kind of sense, and of the causes in which this affection originates. We may assume speech to be a blow which passes through the ears, and is transmitted by means of the air, the brain, and the blood, to the soul, and that hearing is the

vibration of this blow, which begins in the head and ends in the region of the liver. The sound which moves swiftly is acute, and the sound which moves slowly is grave, and that which is uniform is equable and smooth, and the reverse is harsh. A great body of sound is loud, and the opposite is low. Respecting the harmony of sounds I must hereafter speak.

There is a fourth class of sensible things, having many varieties, which have now to be distinguished. They are called by the general name of colours, and are a flame which emanates from all bodies, and has particles corresponding to the sense of sight. I have spoken already, in what has preceded, of the generation of sight, and this will be a natural and suitable place in which to give some account of colours.

Of the particles coming from other bodies which fall upon the sight, some are less and some are larger, and some are equal to the parts of the sight itself. Those which are equal are imperceptible, or transparent, as they are called by us; whereas the larger produce contraction, the smaller dilation, in the sight by the exercise of a power akin to that of hot and cold bodies on the flesh, or of astringent bodies on the tongue, or of those heating bodies which are termed pungent by us. White and black, although they are found in another class of objects, and for this reason are imagined to be different, are affections of the same kind. Wherefore, we ought to term white that which dilates the visual ray, and the opposite of this black. There is also a swifter motion and impact of another sort of fire which dilates the ray of sight and reaches the eyes, forcing a way
 68 through their passages and melting them, and eliciting from them a union of fire and water which we call tears, being itself an opposite fire which comes to them from without—the inner fire flashes forth like lightning, and the outer finds a way in and is extinguished in the tear-drop, and all sorts of colours are generated by the mixture. This affection is termed dazzling, and the object which produces it is called bright and flashing. There is another sort of fire which is intermediate, and which reaches and mingles with the moisture of the eye without flashing; and in this, the fire mingling with the ray of the tear-drop produces a colour like blood, to which we give the

name of red. A bright hue mingled with red and white gives the colour called auburn (*ξανθόν*). The law of proportion, however, according to which the several colours are formed, even if a man knew he would be foolish if he attempted to tell, as he could not give any necessary reason, nor even any tolerable or probable account of them. Again, red, when mingled with black and white, gives a purple hue, which becomes umber (*ὄρφνυρον*) when the colours are burnt as well as mingled and the black is more thoroughly mixed with them. Flame colour (*πυρρόν*) is produced by a union of auburn and dun (*φαιόν*), and dun by an admixture of black and white; yellow (*ὠχρόν*) by an admixture of white and auburn. White and bright meeting, and falling upon a full black, become dark blue (*κυανοῦν*), and when dark blue mingles with white, a light blue (*γλαυκόν*) colour is formed, as leek green (*πράσιον*) is formed also out of the union of flame colour and black. There will be no difficulty in seeing how the colours derived from these are mingled and assimilated in accordance with probability. He, however, who should attempt to verify all this by experiment, would forget the difference of the human and divine nature. For God only has the knowledge and also the power which are able to combine many things into one and again dissolve the one into many. But no man either is or ever will be able to accomplish either the one or the other operation.

These are the elements, thus of necessity then subsisting, which the creator of the fairest and best received in the world of generation, when he made the self-sufficing and most perfect God, using the secondary causes as his ministers in the accomplishment of his work, but himself fashioning the good in all his creations. Wherefore we may distinguish two sorts of causes, the one divine and the other necessary, and may seek for the divine in all things, as far as our nature admits, with a view to the blessed life; but the necessary kind only for the sake of the 69 divine, considering that without them and when isolated from them, these higher things for which we look cannot be apprehended or received or in any way attained by us.

Seeing, then, that we have now before us the various classes of causes which are the material out of which the remainder of our discourse is to be framed, just as wood is the material of the

carpenter, let us recur for a moment to the point at which we began, and then endeavour to add on a suitable ending to the beginning of our tale.

As I said at first, when all things were in disorder God created in each thing, both internally in relation to itself and externally in relation to other things, certain harmonies in which were included all possible harmonies and proportions. For in those days nothing had any order except by accident; nor did any of the things which now have names deserve to be named at all—as, for example, fire, water, and the rest of the elements. All these the creator first arranged, and out of them he constructed the universe, which was a single animal comprehending all other animals, mortal and immortal, in itself. Now of the divine, he himself was the creator, but the creation of the mortal he committed to his offspring. And they, imitating him, received from him the immortal principle of the soul; and around this they fashioned a mortal body, and made the whole body to be a vehicle of the soul, and constructed within a soul of another nature which was mortal, subject to terrible and irresistible affections,—first of all, pleasure, the greatest incitement of evil; then, pain, which deters from good; also rashness and fear, two foolish counsellors, anger hard to be appeased, and hope easily deceived by sense without reason and by all-daring love;—these they mingled together according to necessary laws, and framed man. Wherefore, fearing to pollute the divine any more than is necessary, they separated the mortal nature and to that gave a habitation in another part of the body, placing the neck between them to be the isthmus and boundary, which they constructed between the head and breast, in order that they might be kept distinct. And in the breast, and in what is termed the thorax, they encased the mortal soul, and as one part of this was superior and the other inferior they divided the
70 cavity of the thorax into two parts, as the women's and men's apartments are divided in houses; and placed the midriff to be a wall of partition between them. That part of the inferior soul which is endowed with courage and passion and loves contention they settled nearer the head, in the interval between the midriff and the neck, in order that it might be under the rule of reason and might join with it in controlling and restraining

the desires when they are no longer willing of their own accord to obey the word of command issuing from the citadel.

The heart, which is the knot¹ of the veins and the fountain of the blood flowing rapidly through all the limbs, was set in the place of guard, that when passion was roused by reason making proclamation of any wrong assailing them from without or being perpetrated by the desires within, quickly the whole power of feeling in the body, perceiving these commands and threats, might obey and follow through every turn and alley, and thus allow the principle of the best to have the command in all of them. But as the gods foreknew that the palpitation of the heart in the expectation of danger and the swelling and excitement of passion was caused by fire, they formed and implanted as a supporter to the heart, the lung, which was, in the first place, soft and bloodless, and also had within hollows like the pores of a sponge, in order that, receiving the breath and the drink and cooling them, it might give the power of respiration and alleviate the heat. For which reason they cut the arteries or air vessels as passages to the lung, and placed the lung about the heart as a soft spring, that, when passion was rife within, the heart, beating against the yielding body, might be refreshed and suffer less, and might thus become more ready to enlist passion in the service of reason.

The part of the soul which desires meats and drinks and such things as the bodily frame needs, they placed between the midriff and the navel, contriving in all this region a sort of manger for the food of the body; and there they bound the desires down as a wild animal which was chained up with man, and must be nourished if man was to exist. They appointed this lower creation his place here in order that he might be always feeding at the manger, and have his dwelling as far as possible from the council chamber, making as little noise and disturbance as possible, and permitting the best part to advise quietly for the 71 good of the whole. And knowing and considering that this lower principle in man would not listen to reason, and even if attaining to some degree of perception would never naturally care for any arguments, and was liable to be led away by phantoms and

¹ Reading ἄμμα.

visions of the night and also by day, God framed the liver, to dwell in the same house with the lower nature, contriving that it should be solid and smooth, and bright and sweet, and also bitter, in order that the power of thought, which originates in the mind, might be reflected as in a mirror which receives figures and gives back images of them to the sight. And this power, making use of the bitter part of the liver, to which it is akin, inspires terror, and comes threatening and invading, and suddenly mingling with the entire liver produces colours like bile, and contracts every part and makes it wrinkled and rough; or, on the other hand, twisting out of their right place and contracting the lobe and receptacles and gates, or again, closing and shutting them up—in these and other ways creates pain and disgust. And the converse happens when some gentle inspiration of the understanding pictures images of an opposite character, and allays the bile and bitterness by not stirring them, and refuses to touch the nature opposed to itself, but by making use of the natural sweetness of the liver, corrects all things and makes them to be right and smooth and free, and makes the portion of the soul which resides about the liver happy and joyful, having in the night a time of peace and moderation, and the power of divination in dreams, inasmuch as it does not share in mind and reason. For the authors of our being, remembering the command of their father when he bade them make the human race as good as they could, thus ordered our inferior parts in order that they too might obtain a measure of truth, and in the liver placed their oracle. And herein is a proof that God has given the art of divination not to the wisdom, but to the foolishness of man; for no man, when in his wits, attains prophetic truth and inspiration; but when he receives the inspired word, either his intelligence is enthralled by sleep, or he is demented by some distemper or possession. And he who would understand what

72 he remembers to have been said, whether in a dream or when he was awake, by the prophetic and enthusiastic nature, or what he has seen, must first recover his wits; and then he will be able to explain rationally what all such words and apparitions mean, and what indications they afford to this man or that, of past present or future good and evil. But, while he continues demented, he cannot judge of the visions which he sees or the

words which he utters ; the ancient saying is very true that ‘only a man who has his wits can act or judge about himself and his own affairs.’ And for this reason it is customary to appoint diviners or interpreters to be judges of the true inspiration. Some persons call them prophets ; they do not know that they are only repeaters of dark sayings and visions, and are not to be called prophets at all, but only interpreters of prophecy.

Such is the nature and position of the liver, which is intended to give prophetic intimations. During the life of each individual these intimations are plainer, but after his death the liver becomes blind, and delivers oracles too obscure to be intelligible. The neighbouring bowel (the spleen) is situated on the left-hand side, and is constructed with a view of keeping the liver bright and pure, like a napkin, always ready prepared and at hand to clean the mirror. And hence, when any impurities arise by reason of disorders of the body affecting the liver, the loose nature of the spleen, which is composed of a hollow and bloodless tissue, receives them all and purges them away, and when filled with the unclean matter, becomes enlarged and diseased, but, again, when the body is purged, settles down into the same place as before, and is humble.

Concerning the soul, as to which part is mortal and which divine, and where they exist, and what are their conditions, and why they are separated, the truth can only be established, as we have acknowledged, by the word of God ; still, we may venture to assert that what has been said by us is probable, and will be rendered more probable by investigation. Let us assume thus much.

The creation of the body followed next in order, and this we may investigate in a similar manner. And it appears to be very meet that the body should be framed on the following principles :—

The authors of our race were aware that we should be intemperate in eating and drinking, and take a good deal more than was necessary or proper, by reason of gluttony. In order then that disease might not quickly destroy us, and lest our mortal race should perish and fail of fulfilling its end—intending to 73 provide against this, the gods made a receptacle for the superfluous meat and drink, which is called the lower belly, and formed the convolution of the bowels, so that the food might be pre-

vented from passing quickly through and compelling the body to require more food, thus producing insatiable gluttony, and making the whole race an enemy to philosophy and music, and rebellious against the divinest element within us.

The bones and flesh, and other similar parts of us, were made as follows. The first principle of all of them was the generation of the marrow. For the bonds of life which unite the soul with the body are made fast there, and they are the root and foundation of the human race. The marrow itself is created out of other elements: God took such of the triangles as were of the first formation, straight and smooth, and specially adapted by their perfection to produce fire and water, and air and earth—these, I say, he separated from their kinds, and mingling them in due proportions with one another, made the marrow out of them to be a universal seed of the whole race of mankind; and in this seed he then planted and enclosed the souls, and in the original distribution gave the marrow as many and various forms as there were hereafter to be kinds of souls. That which, like a field, was to receive the divine seed, he made round every way, and called that portion of the marrow, brain, intending that, when an animal was perfected, the vessel containing this substance should be the head; but the vessels which were intended to contain the remaining and mortal part of the soul he divided into round and long figures, and he called them all by the name ‘marrow’; and to these, as to anchors, fastening the bonds of the whole soul, he proceeded to fashion around them the entire framework of our body, constructing for the marrow, first of all, a complete covering of bone.

The bone was composed by him in the following manner. Having sifted pure and smooth earth he kneaded it and wetted it with marrow, and after that he put it into the fire and then into the water, and once more into the fire and again into the water—in this way by frequent transfers from one to the other he made it insoluble by either. With this bone he fashioned, as in
74 a lathe, a globe made of bone, which he placed around the brain, and in the globe he left a narrow opening; and around the marrow of the neck and back he formed the vertebrae like hinges, beginning at the head and extending through the whole of the trunk. Thus he preserved the entire seed, which he enclosed

in a case like stone, inserting joints, and using in the formation of them the power of the diverse as an intermediate nature, in order to obtain motion and flexion. Then again, considering that the bone would be too brittle and inflexible, and when heated and again cooled would soon mortify and destroy the seed within—having this in view, he contrived the sinews and the flesh, that so binding all the members together by the sinews, which admitted of being stretched and relaxed about the vertebrae, he might thus make the body capable of flexion and extension, while the flesh would serve as a protection against the summer heat and against the winter cold, and also against falls, like articles made of felt, softly and easily yielding to external bodies, and containing in itself a warm moisture which in summer exudes in the form of dew, and imparts to the body a natural coolness; and again in winter by the help of its own fire would form a very tolerable defence against external and surrounding cold. The great moulder and creator considering this, mingled earth with fire and water and put them together, making a ferment of acid and salt which he mingled with them and formed a soft and pulpy flesh; and as for the sinews, he made them of an unfermented mixture of bone and flesh, attempered so as to be in a mean, and gave them a yellow colour, and hence the sinews have a firmer and more glutinous nature than flesh, but a softer and moister nature than the bones. With these God covered the bones and marrow, which he bound together with sinews, and then enshrouded them all in an upper covering of flesh. The more living and sensitive of the bones he enclosed in the smallest film of flesh, and those which had the least life within them he enclosed in the most solid flesh. So again on the joints of the bones, where reason indicated that no more was required, he placed only a small quantity of flesh, that it might not interfere with the flexion of our bodies and make them uneasy because difficult to move; and also that they might not by being crowded and pressed and matted in one another, lose the power of sensation by reason of their hardness, and make the parts which have to do with the mind dull of remembering and hearing. Wherefore also the thighs and the legs 75 and the loins, and the bones of the arms and the forearms and other parts which have no joints, and the inner bones, which on

account of the rarity of the soul in the marrow are destitute of reason—all these are filled up with flesh ; but such as have mind in them are in general less fleshy, except where the creator has made some part solely of flesh in order to give sensation ; as, for example, the tongue. But commonly this is not the case. For the composite nature, developing by a law of necessity, does not admit of the combination of solid bone and much flesh with acute perceptions. More than any other part the framework of the head would have had them, if they could have co-existed, and the human race, having a strong and fleshy and sinewy head, would have had a life twice and many times as long, and also more healthy and free from pain. But our creators, considering whether they should make a long-lived race which was worse, or a short-lived race which was better, came to the conclusion that every one ought to prefer a shorter span of life which was better, to a longer one which was worse ; and therefore they covered the head, which has no joints, with thin bone, but not with flesh and sinews ; and thus the head was added, having more wisdom and sensation than the rest of the body, but also being in every man far weaker. And for a like reason God placed the sinews at the extremity of the head, in a circle round the neck, and glued them together and fastened the extremities of the cheeks to them at the lower part of the face, and other sinews he dispersed throughout the body, fastening limb to limb. The framers of us framed the mouth, as now arranged, having teeth and tongue and lips, with a view to the necessary and the good, contriving the way in for necessary purposes, the way out for the best purposes ; for that is necessary which enters in and gives food to the body ; but the river of speech which goes out of a man and ministers to the intelligence is the fairest and noblest of all streams. Still the head could neither be left a bare frame of bones, on account of the extremes of heat and cold in the different seasons, nor be allowed to be wholly covered, and so become dull and senseless by an overgrowth of flesh. The fleshy nature was not
 76 therefore wholly dried up, but a large sort of peel was parted off and remained over, which is now called the skin. This met and grew by the help of the cerebral moisture, and became the circular envelopment of the head. And the moisture beneath the sutures rising up watered and closed them upon the

crowns, forming a sort of knot; the diversity of the sutures was caused by the power of the courses of the soul and of the food, and the more these struggled against one another the greater the diversity became, and was less if the struggle were less violent. This skin the divine power pierced all round with fire, and out of the punctures which were thus made the moisture issued forth, part liquid and hot which came away pure, and a mixed part which was composed of the same material as the skin, and, having a fineness equal to the punctures, shot up and extended to a great length, but being too slow to escape wholly, was thrust back and condensed by the external air, and took root underneath the skin. And so the hair sprang up in the skin, being of a skinny and stringy nature, but rendered harder and closer through the pressure of the cold, by which each hair separated from the skin is compressed and cooled. In this manner the creator formed our head all hairy, making use of the causes which I have mentioned, and reflecting also that instead of flesh the part about the brain needed the hair to be a light covering or guard, which would give shade in summer and shelter in winter, and at the same time would not impede our quickness of perception. From the combination of sinew, skin, and bone, in the structure of the finger, there arises a triple compound which, when dried up, takes the form of one hard skin partaking of all three natures, and was fabricated by these second causes, but designed by the principal mind or cause with an eye to the future. For our creators well knew that women and other animals would some day be framed out of men, and they further knew that many animals would require the use of nails for many purposes; wherefore also they stamped in men at their first creation the form of nails. From this cause and for these reasons they fashioned skin, hair, and nails at the extremities of the limbs.

And now that all the parts and members of the mortal animal had come together, and their life of necessity consisted of fire 77 and spirit, and was liable therefore to melt away and perish from exhaustion, the gods contrived the following remedy for this: they mingled a nature akin to that of man with other forms and perceptions, and thus created another kind of living being. These are the trees and plants and seeds, which cultivation has educated and domesticated; anciently there were

only the wild kinds, which are older than the cultivated. For everything that partakes of life may be truly called a living being, and this animal of which we are now speaking partakes of the third nature of the soul, which is said to be seated between the midriff and the navel, having no part in opinion or reason or mind, but only in the feelings of pleasure and pain and the desires which accompany them. For this nature is always in a passive state, revolving in and about itself, repelling the motion from without and using its own, and accordingly is not endowed with the power of seeing or reflecting on its own concerns. Wherefore it lives and is a living being, but is fixed and rooted in the same spot, and has no power of self-motion.

Now, after the superior powers had created all these natures to be food for us who are of the inferior nature, they cut various channels through our bodies, as in a garden, watering them with a perennial stream. In the first place, they cut two secret channels or veins down the back where the skin and the flesh join, corresponding severally to the right and left side of the body. These they let down along the backbone, and placed the marrow of generation between them, where it was most likely to flourish, and in order that the stream coming down from above, might flow freely to the other parts, and equalize the irrigation. In the next place, they divided the veins about the head, and, interlacing them, they sent them in opposite directions; those coming from the right side they sent to the left of the body, and those from the left they turned towards the right, that they and the skin might bind the head to the body, since the head was not enclosed at the top by the sinews, and also that the sensations from both sides might be distributed over the whole body. And next, they ordered the course of liquids in a manner which I will describe, and which we shall more readily
78 understand if we begin by admitting that all things which have lesser parts retain the greater, but those which have greater cannot retain the lesser. Now, of all natures fire has the smallest parts, and therefore penetrates through earth and water and air and their compounds, nor can anything hold it; and a similar principle applies to the belly; for that is able to retain meats and drinks which have passed into it, but is not able to retain

air and fire, because they consist of smaller particles than those of which it is composed.

These elements, therefore, God employed for the sake of distributing moisture from the belly into the veins, weaving together a network of fire and air like basket nets, at the entrance of which he made two lesser nets or openings, the one of which he further formed with two branches, and from the openings he extended a sort of cord reaching all round to the extremity of the network. All the inner parts of the network he made of fire, but the openings and the cavity he made of air. The network he took and spread over the newly-formed animal in the following manner:—he let one of the openings pass into the mouth; and of this opening he let one part descend by the air-pipes into the lungs, the other by the side of the air-pipes into the belly. The second opening he divided into two branches, both of which he made to communicate with the channels of the nose, so that when there was no way through the mouth the streams of the mouth were replenished from the nostril. But the remainder of the network he placed around the hollow parts of the body, and the entire receptacle he made to flow into the openings of the net, quite gently, for they are composed of air; and they then flowed back again and the net found a way in and out of the pores of the body, and the rays of fire which were interlaced followed the passage of the air either way, never at any time ceasing so long as the mortal being holds together. These, as we affirm, are the phenomena which the imposer of names called respiration and expiration. And all this process of cause and effect took place in order that the body might be watered and cooled, and thus have nourishment and life; for when the respiration is going in and out, and the fire, which follows it, is moving to and fro, and, entering through the belly, reaches the meat and drink, ⁷⁹ it liquefies them, and, dividing them into small portions and guiding them through the passages where it goes, draws them as from a fountain into the channels or veins, and makes the stream of the veins flow through the body as through a conduit.

Let us further consider the phenomena of respiration, and enquire what are the real causes of it. They are as follows:—

Seeing that there is no such thing as a vacuum into which any of those things which are moved can enter, and the breath is carried from us into the external air, the next point is, as will be clear to every one, that it does not go into a vacant space, but pushes its neighbour out of its place, and that which is thrust out again thrusts out its neighbour; and in this way everything of necessity at last comes round to that place from whence the breath came forth, and enters in there, and follows with the breath, and fills up the place; and this goes on like the circular motion of a wheel, because there can be no such thing as a vacuum. Wherefore also the breast and the lungs, which emit the breath, are again filled up by the air which surrounds the body and which enters in through the pores of the flesh and comes round in a circle; and, again, the air which is sent away and passes out through the body forces the breath within to find a way round through the passage of the mouth and the nostrils. Now, the origin of this may be supposed to be as follows. Every animal has his inward parts about the blood and the veins as warm as possible; he has within him a fountain of fire, which we compare to the texture of a net of fire extended through the centre of the body, while the outer parts are composed of air. Now, we must admit that heat naturally proceeds outward to its own place and to its kindred element; and as there are two exits for the heat, the one through the body outwards, and the other through the mouth and nostrils, when it moves towards the one, it drives round the other air, and that which is driven round falls into the fire and is warmed, and that which goes forth is cooled. But when the condition of the heat changes, and the particles at the other exit grow warmer, the hotter air inclining in that direction and carried towards its native element, fire, pushes round the other; and thus, by action and reaction, there being this circular agitation and alternation produced by the two—by this double cause, I say, inspiration and expiration are produced.

The phenomena of medical cupping-glasses and of the swallowing of drink and of the hurling of bodies, whether discharged in the air or moving along the ground, are to be investigated on a similar principle; as also the nature of sounds, whether

swift or slow, sharp or flat, which are sometimes discordant on account of the inequality, and then again harmonical on account of the equality of the motion which they excite in us ; for when the motions of the antecedent swifter sounds begin to pause and the two are equalized, the slower sounds first come up with them and then overtake and propel them. When they overtake them they do not introduce another or discordant motion, but they make the slower motion by degrees correspond with the swifter ; and when the latter ceases, they assimilate the swifter sounds and cause a single mixed expression to be produced from sharp and flat, whence arises a pleasure which even the unwise feel, and which to the wise becomes a higher sort of delight, being an imitation of divine harmony in mortal motions. Moreover, as to the flowing of water, the fall of the thunderbolt, and the marvels that are observed about the attraction of amber and the Heracleian stones,—in none of these cases is there any attraction ; but he who investigates truly, will find that such wonderful phenomena are attributable to the non-existence of a vacuum, taken in combination with the fact that these substances are forced round and round and are changed and pass severally into their own place by composition and division.

Such too is the nature and such are the causes of respiration, the subject in which our discourse originated. As I before said, the fire cuts the food and following the breath rises up within, fire and breath rising together and filling the veins by drawing out of the belly the cut portions of the food ; and so the streams of food are diffused through the whole body in all animals. And fresh cuttings from kindred substances, whether the fruits of the earth or herb of the field which God planted to be our daily food, acquire all sorts of colours when mixed ; but for the most part the red prevails, being made by the fire dividing and leaving its mark upon the moisture ; and hence the liquid which circulates in the body has a colour such as we have described, which we call blood, being the nurturing principle of the flesh and of the whole body, whence all parts are watered ⁸¹ and the empty places filled.

Now the process of repletion and depletion is effected after the manner of the universal motion of all things, which is due to the tendency of kindred natures towards one another. For

the external elements which surround us are always causing us to consume away, and distributing and sending away like to like; the particles of blood, too, which are divided and contained within the frame of the animal, which is a sort of heaven to them, are compelled to imitate the motion of the universe. Each, therefore, of the divided parts within us, being carried to its kindred nature, replenishes the void. When more is taken away than flows in, then we decay, and when less, we grow and increase.

The frame of every animal when young has the triangles new, and may be compared to the keel of a vessel which is just off the stocks; they are locked closely together and yet the whole is soft and delicate, being freshly formed of marrow and nurtured on milk. Other triangles out of which meats and drinks are composed, come in from without and are taken up into the body; but these being older and weaker than the triangles already there, the frame of the body gets the better of them and they are cut up by the new triangles, and so the animal grows and is nourished by the assimilation of particles. But when the roots of the triangles are loosed by having undergone many conflicts with many things in the course of time, they are no longer able to cut or assimilate the food which enters into them, but are easily separated by the new bodies which come in from without. In this way the whole animal is overcome and decays, and this affection is called old age. And at last, when the bonds of the triangles which enclose the marrow no longer hold, and get unfixed by the toil of which I spoke, they unfix also the bonds of the soul, and she, being released, in the order of nature joyfully flies away. For that which is not in the order of nature is painful, but that which takes place according to nature is pleasant. And thus, too, death, if caused by disease or produced by wounds, is painful and violent; but that sort of death which comes after old age and fulfils the debt of nature is the easiest of deaths, and is accompanied with pleasure rather than with sorrow.

Now, every one can see whence diseases arise. There are 82 four natures out of which the body is compacted, earth and fire and water and air, and the unnatural excess and defect of

these, or the change of any one of them from their own natural place into another, (for there are more kinds than one,) and the assumption of that which does not belong to them, or any similar irregularity, produces diseases and disorders; for each being produced or changed in a manner contrary to nature, the elements which were previously cool grow warm, and those which were dry become moist, and the light become heavy, and the heavy light; all sorts of changes occur. For we affirm that only the same, in the same and like manner and proportion added or subtracted to or from the same, will allow the body to remain in the same state, whole and sound, and that, whatever comes or goes away in violation of these rules causes all manner of changes and infinite diseases and disorders. But as there are secondary compositions which are also natural, he who will understand diseases may also have another or second notion of them. For whereas marrow and bone and flesh and sinews are composed of the four elements, as the blood, though after another manner, likewise springs from them, most diseases are caused as I have already described; but the worst of all owe their severity to the following causes. When the generation of the elements of the body proceeds in an order contrary to nature, they are destroyed. For the natural order is that the flesh and sinews are made of blood, the sinews out of the fibres to which they are akin, and the flesh out of the congealed substance which is formed by separation from the fibres. And the glutinous and rich matter which comes away from the sinews and the flesh, not only binds the flesh to the bones, but nourishes and imparts growth to the bone itself which surrounds the marrow, and by reason of the solidity of the bones, that which is filtered through consists of the purest and smoothest and oiliest sort of triangles, dropping like dew from the bones and watering the marrow. And when these are the conditions, health usually ensues; when the conditions are of an opposite nature, disease. For when the flesh becomes decomposed and sends back the wasting substance into the veins, then there is a great deal of blood of different kinds as well as of air in the veins, having various degrees of colour and bitterness: and also from its acid and salt qualities it generates all sorts of bile and serum and phlegm.

83 For all things go the wrong way and are corrupted, and first of all destroy the blood, and then ceasing to give nourishment to the body are carried along the veins in all directions, no longer preserving the order of their natural courses, but at war with themselves, because they receive no good from themselves, and are hostile to the abiding constitution of the body, which they destroy and waste. The oldest part of the flesh which wastes away, refuses to be assimilated, and from long burning grows black, and from being corroded in every direction becomes bitter, and is injurious to every part of the body which is not yet corrupted. And then instead of bitterness the black part assumes an acidity from the bitter element refining away; or, again, the bitter substance being tinged with blood has a redder colour; or, when mixed with black, has the¹ hue of grass; and once again, an auburn colour is mingled with the bitter matter when the new flesh is decomposed by the fire which surrounds the internal flame;—to all which some physician, or some philosopher, who had the power of seeing many dissimilar things and recognising in them one nature common to them all and deserving of a name, has assigned the common name of bile. But the kinds of bile have also their peculiar names corresponding to their several colours. As for serum, that sort which is the watery part of blood is gentle, but that which is produced by black and bitter bile is of a fierce nature when mingled by the power of heat with any salt substance, and is then called acid phlegm. Again, the substance which is formed by the decomposition of new and tender flesh when air is present and that which is decomposed is inflated and encased in liquid producing bubbles which separately are invisible owing to their small size, but collected together are of a bulk which is visible, and have a white colour arising out of the generation of foam—all this decomposition of tender flesh when intermingled with air is termed by us white phlegm. And the whey or sediment of phlegm when just formed is sweat and tears, and includes the various secretions which arise daily out of the purgation of the body. Now all these become the instruments of disease when the blood is not replenished

¹ Reading *χλωδδες*.

according to nature by meats and drinks but gains bulk from contraries in violation of the laws of nature. When the several parts of the flesh are separated by disease, if the foundation remains, the trouble is only half as great, and recovery is still ⁸⁴ possible; but when that which binds the flesh to the bones is diseased, and the blood, which is made out of the fibres and sinews, separates from them, and no longer gives nourishment to the bone, or unites flesh and bone, and from being oily and smooth and glutinous becomes rough and salt and dry, owing to bad regimen, then the substance which is detached crumbles away under the flesh and the sinews, and separates from the bone, and the fleshy parts fall away from their foundation and leave the sinews bare and full of brine, and the flesh again gets into the circulation of the blood and makes the previously-mentioned disorders still greater. And if these bodily affections be severe, still worse are the prior disorders; as when the bone itself, by reason of the density of the flesh, does not receive sufficient air, but becomes stagnant and hot and gangrened and receives no nutriment, and the natural process is inverted, and the bone crumbling passes into the food, and the food into the flesh, and the flesh again falling into the blood causes maladies yet more violent than those already mentioned. But the worst of all is when the marrow is diseased, either from excess or defect; and this is the cause of the very greatest and most fatal disorders, in which the whole course of the body is reversed. There is a third class of diseases which may be conceived of as arising in three ways; for they are produced sometimes by wind, and sometimes by phlegm, and sometimes by bile. When the lung, which dispenses the air to the body, is obstructed by rheums and has the passages stopped up, having no egress in one part, while in another part too much air enters, then the parts which are unrefreshed by the air corrode, while in other parts the excess of air forcing its way through the veins distorts them and decomposing the interior of the body is there shut in and occupies the midriff; thus numberless painful diseases are produced, accompanied by copious sweats. And oftentimes when the flesh is dissolved in the body, wind, generated within and unable to get out, is the source of quite as much pain as the air coming in from

without; but the greatest pain is when the wind gets about the sinews and the veins connected with them, and swells them up, especially when it presses upon the great sinews of the shoulder and twists back the ligaments that fasten them. These are called tetanus and opisthotonus by reason of the tension which accompanies them. The cure of them is difficult, 85 and they generally end in fevers. The white phlegm, though dangerous when detained within by reason of the air-bubbles, yet being capable of relief by expiration, is less severe, and only discolours the body, generating leprous eruptions and similar diseases. When the phlegm is mingled with black bile and dispersed about the courses of the head, which are the divinest element in us, and disturbs them in sleep, the attack is not so severe; but when assailing those who are awake it is hard to be got rid of, and, being an affection of a sacred part, is most justly called sacred. An acid and salt phlegm, again, is the source of all those diseases which are of a catarrhal nature, but they have many names because the places into which they flow are manifold.

Inflammations of the body come from burnings and inflamings, and all of them originate in bile. When bile finds a means of discharge, it boils up and sends forth all sorts of tumours; but when kept down within, it generates many inflammatory diseases, above all when mingled with pure blood; as it then disturbs the order of the fibres which are scattered about in the blood and are designed to maintain the balance of rare and dense, in order that the blood may not by reason of heat perspire through the pores of the body, nor again become too dense and thus find a difficulty in circulating through the veins. The fibres are so constituted as to maintain this balance; and if any one collects them together when the blood is dead and congealed, then the blood that remains in them flows out, and thus left to themselves they also soon congeal with the surrounding cold. Such power have the fibres of acting upon the blood. From them arises bile, which is only stale blood, and from being flesh is liquefied again, and at the first influx coming in little by little warm and moist is congealed by the power of the fibres; but if violently extinguished in the process, produces internal cold and shuddering. When it enters

with more of a flood and overcomes the fibres by its heat, and makes them boil and bubble in a disorderly manner, if it have power enough completely to get the better, it passes into the marrow and burns up and unmoors what may be termed the cables of the ship, and frees the soul; but when there is not so much of it, and the body though wasted still holds out, it is either mastered and utterly banished, or is thrust through the veins into the lower or upper belly, and is driven out of the body like an exile out of an insurgent state; and hence arise 86 diarrhoeas and dysenteries, and all sorts of similar disorders. When the constitution is disordered by excess of fire, then the heat and fever are continued; when air is the cause, then the fever is quotidian; when water, which is a more sluggish element than either fire or air, then the fever is a tertian; when earth is the cause, which is the most sluggish of the four, and is only purged away in a four-fold period, the result is a quartan fever, which can with difficulty be shaken off.

Such is the course of the diseases of the body; the disorders of the soul which originate in the body are as follows. We must acknowledge disease of the mind to be a want of intelligence; and of this there are two kinds; to wit, madness and ignorance; and whatever affection gives rise to either of them may be called disease. Excessive pains and pleasures are justly to be regarded as the greatest diseases of the soul, for a man who is in great joy or in great pain, in his irrational eagerness to attain the one and to avoid the other, is not truly able to see or to hear anything; but he is mad, and is at the time quite incapable of any participation in reason. He who has the seed about the spinal marrow too plentiful and overflowing, like a tree overladen with fruit, has many throes, and also obtains many pleasures in his desires and their gratifications, and is for the most part of his life mad, because his pleasures and pains are so very great; his soul is rendered foolish and disordered by his body; and he is regarded not as one diseased, but as one who is voluntarily bad, which is a bad mistake. For the truth is that the intemperance of love for the most part grows into a disease of the soul owing to the moisture and fluidity which is produced in one of the elements by the loose consistency of the bones. And in general, all that which is termed the intem-

perance of pleasure is unjustly charged upon those who do wrong, as if they did wrong voluntarily. For no man is voluntarily bad ; but the bad become bad by reason of an ill disposition of the body and bad education, things which to every man are an involuntary evil ; and in like manner the soul is often hurt by bodily pain. For where the sharp and briny phlegm and other bitter and bilious humours wander over the body, and find no exit or escape, but are compressed within and mingle their own vapours with the motions of the soul, and are blended
87 with them, they produce an infinite variety of diseases in all sorts of degrees, and being carried to the three places of the soul on which any of them may severally chance to alight, they create infinite varieties of trouble and melancholy, of tempers rash and cowardly, and also of forgetfulness and stupidity. Further, when to this evil constitution of body evil forms of government are added and evil discourses are uttered in private as well as in public, and no sort of instruction is given in youth which may heal these ills, here is another source of evil ; and so the bad become bad, through two things which are wholly out of their power. In such cases the planters are to blame rather than the plants, the educators rather than the educated. Still we should endeavour as far as we can by education, and studies, and learning, to avoid vice and attain virtue ; this, however, is part of another subject.

There is a corresponding enquiry concerning the mode of treatment by which the mind and the body are to be preserved, on which I may and ought to enter ; for it is more our duty to speak of the good than of the evil. Everything that is good is fair, and the fair is not without measure, and the animal who is fair may be supposed to have measure. Now we perceive lesser symmetries and comprehend them, but about the highest and greatest we have no understanding ; for there is no symmetry or want of symmetry greater than that of the soul to the body, or more productive of health and disease, and virtue and vice. This however we do not perceive, nor do we allow ourselves to reflect that when a weaker or lesser frame is the vehicle of a great and mighty soul, or conversely, when a little soul is encased in a large body, then the whole animal is not fair, for it is defective in the most important of all symmetries ; but the

fair mind in the fair body will be the fairest and loveliest of all sights to him who has the seeing eye. Just as a body which has a leg too long, or some other disproportion, is an unpleasant sight, and also, when undergoing toil, has many sufferings, and makes violent efforts, and often stumbles through awkwardness, and is the cause of infinite evil to its own self—in like manner we should conceive of the double nature which we call the living being; and when in this compound there is an impassioned soul more powerful than the body, that soul, I say, convulses and disorders the whole inner nature of man; and when too eager in the pursuit of knowledge, causes wasting; or again, when teaching or disputing in private or in public, and strifes and controversies arise, inflames and dissolves the composite frame of man and introduces rheums; and the nature of this phenomenon is not understood by most professors of medicine, who ascribe it to the opposite of the real cause. And once more, when a body large and too strong for the soul is united to a small and weak intelligence, then inasmuch as there are two desires natural to man,—one of food for the sake of the body, and one of wisdom for the sake of the diviner part of us—then, I say, the motions of the stronger, getting the better and increasing their own power, but making the soul dull, and stupid, and forgetful, engender ignorance, which is the greatest of diseases. There is one protection against both kinds of disproportion:—that we should not move the body without the soul or the soul without the body, and thus they will aid one another, and be healthy and well balanced. And therefore the mathematician or any one else who devotes himself to some intellectual pursuit, must allow his body to have motion also, and practise gymnastic; and he who would train the limbs of the body, should impart to them the motions of the soul, and should practise music and all philosophy, if he would be called truly fair and truly good. And in like manner should the parts be treated, and the principle of the whole similarly applied to them; for as the body is heated and also cooled within by the elements which enter in, and is again dried up and moistened by external things, and experiences these and the like affections from both kinds of motions, the result is that the body if given up to motion when in a state of quiescence is overmastered and destroyed; but if

88

any one, in imitation of that which we call the foster-mother and nurse of the universe, will not allow the body to be at rest, but is always producing motions which counteract the natural motions both within and without, and by shaking moderately the various affections and wandering particles of the body, brings them into order and affinity with one another according to the theory of the universe which we were maintaining—he will not allow enemy placed by the side of enemy to create wars and disorders of the body, but he will place friend by the side of friend, producing health. Now of all motions that is the best which
 89 is produced in a thing by itself, for it is most akin to the motion of the intelligent and to the motion of the universe; but that motion which is caused by others is not so good, and worst of all is that which moves the body, when at rest, in parts only and by external means. Wherefore also the best of the purifications and adjustments of the body is that which is effected by gymnastic; next is that which is effected by carrying the body, as in sailing or any other mode of conveyance which is not fatiguing; the third sort of motion may be of use in a case of extreme necessity, but in any other will be adopted by no man of sense: I mean the purgative treatment of physicians; for diseases unless they are very dangerous should not be irritated by medicines, since every form of disease is in a manner akin to the living being, whose complex frame has an appointed term of life. For not the whole race only, but each individual comes into the world, having an appointed time when not interrupted by violence, and the triangles are originally framed with power to last for a certain time, beyond which no man can prolong his life. And this holds also of diseases, and if any one regardless of the intention of nature would get the better of their complications by medicine, he only increases and multiplies them. Wherefore we ought always to manage them by regimen, as far as a man can spare the time, and not provoke a disagreeable enemy by medical treatment. Let thus much be said of the general nature of man, and of the body which is a part of him, and of the manner in which a man may govern himself and be governed best, and live most according to reason: and we must begin by providing that the governing principle shall be the fairest and best possible for the purpose of government. But to discuss

such a subject accurately would be a sufficiently long business of itself. I may supplement my observations by a short recapitulation.

Having often said that there are three kinds of soul located within us, each of them having their own proper motions, I must now say in the fewest words possible, that the one part, if remaining inactive and ceasing from the natural motion, must necessarily become very weak, but when trained and exercised, then very strong. Wherefore we should take care that the movements of the different parts of the soul should be in 90 due proportion.

Now we should consider that God gave the sovereign part of the human soul to be the divinity of each one, being that part which dwells, as we say, at the extremity of the body, and inasmuch as we are a plant not of an earthly but of a heavenly growth, raises us from earth to our kindred which is in heaven. And this is most true; for the divine power suspended the head and root of us from that place where the generation of the soul first began, and thus made erect the whole body. He, therefore, who is always occupied with the cravings of desire and ambition, and is eagerly striving after them, must have all his opinions mortal, and, as far as man can be, must be all of him mortal, because he has cherished his mortal part. But he who has been earnest in the love of knowledge and true wisdom, and has been trained to think that these are the immortal and divine things of a man, if he attain truth, must of necessity, as far as human nature is capable of attaining immortality, be all immortal, for he is ever attending on the divine power, and having the divinity within him in perfect order, he has a life perfect and divine. Now there is only one way in which one being can attend on another, and this is by giving him his natural food and motion. And the motions which are naturally akin to the divine principle within us are the thoughts and revolutions of the universe. These each man should follow, and correct those corrupted courses of the head which have to do with generation, and by learning the harmonies and revolutions of the whole, should assimilate the perceiver to the thing perceived, according to his original nature, and by thus assimilating them, attain that final perfection of life, which the gods set before mankind as best, both for the present and the future.

Thus the discussion of the universe which, according to our original proposition, was to reach to the origin of man, seems to have an end. A brief mention may be made of the generation of other animals, but there is no need to dwell upon them at length; in this manner our argument will best attain a due proportion. On the subject of animals, then, the following remarks may be offered. Of the men who came into the world, those who were cowards or led unjust lives may be fairly supposed to change into the nature of women in the second generation. Where-
 91 fore also in the beginning the gods created in us the desire of generation, contriving in man one animated substance, and in woman another, which they formed respectively in the following manner. The passage for the drink by which liquids pass through the lung under the kidneys and into the bladder, and which receives and emits them by the pressure of the breath, was so fashioned as to penetrate also into the body of the marrow, which passes from the head along the neck and through the back, and which in our previous discussion we have named the seed. And the seed having life, and becoming endowed with respiration, produces, in that part in which it respire, a lively desire of emission, and thus creates in us the love of procreation. Wherefore also in men the organ of generation becoming rebellious and masterful, like an animal disobedient to reason, seeks, by the raging of the appetites, to gain absolute sway; and the same is the case with the so-called womb or matrix of women; the animal within them is desirous of procreating children, and remaining unfruitful long beyond its proper time, gets discontented and angry, and wandering in every direction through the body, closes up the passages of the breath, and, by obstructing respiration, drives them to extremity, causing all varieties of disease, until at length the desire and love of the man and the woman, as it were producing and plucking the fruit from the tree, cause the emission of seed into the womb, as into a field, in which they sow animals unseen by reason of their smallness and without form; these they again separate and mature them within, and after that, bring them out into the light, and thus perfect the generation of animals.

Thus were created women and the female sex in general. But the race of birds was created out of innocent light-minded

men who, although their minds were directed toward heaven, imagined, in their simplicity, that the clearest demonstration of the things above was to be obtained by sight; these were transformed into birds, and they grew feathers instead of hair. The race of wild pedestrian animals, again, came from those who had no philosophy in any of their thoughts, and never considered at all about the nature of the heavens, because they had ceased to use the courses of the head, and followed the guidance of those parts of the soul which surround the breast. In consequence of these habits of theirs they had their forelegs and heads trailing upon the earth to which they were akin; and they had also the crowns of their heads oblong, and in all sorts of curious shapes, into which the courses of the soul were compressed by reason of disuse. And this was the reason why quadrupeds and polypods ⁹² were created: God gave the more senseless of them the more support that they might be more attracted to the earth. And the most foolish of them, who trail their bodies entirely upon the ground and have no longer any need of feet, he made without feet to crawl upon the earth. The fourth class were the inhabitants of the water: these were made out of the most entirely ignorant and senseless beings, whom the transformers did not think any longer worthy of pure respiration, because they possessed a soul which was made impure by all sorts of transgression; and instead of allowing them to respire the subtle and pure element of air, they thrust them into the water and gave them a deep and muddy medium of respiration; and hence arose the race of fishes and oysters, and other aquatic animals, which have received the most remote habitations as a punishment of their outlandish ignorance. These are the laws by which animals pass into one another, both now and ever changing as they lose or gain wisdom and folly.

And so we may say that our discourse about the nature of the universe has come to an end. The world has received animals, mortal and immortal, and is fulfilled with them, and has become a visible animal containing the visible—the sensible God who is the image of the intellectual, greatest, best, fairest, and most perfect—the one only-begotten universe.

CRITIAS.

INTRODUCTION.

THE Critias is a fragment which breaks off in the middle of a sentence. It was designed to be the second part of a trilogy, which, like the other great Platonic trilogy of the Sophist, Statesman, Philosopher, was never completed. Timaeus had brought down the origin of the world to the creation of man, and the dawn of history was now to succeed the philosophy of nature. The Critias is also connected with the Republic. Plato, as he has already told us, intended to represent the ideal state engaged in a patriotic conflict. This mythical conflict is prophetic or symbolical of the struggle of Athens and Persia, perhaps in some degree also of the wars of the Greeks and Carthaginians, in the same way that the Persian is prefigured by the Trojan war to the mind of Herodotus; or as the narrative of the first part of the Aeneid foreshadows the wars of Carthage and Rome. The small number of the primitive Athenian citizens (20,000), 'which is about their present number,' is evidently designed to contrast with the myriads and barbaric array of the Atlantic hosts. The passing remark in the Timaeus (25 C) that Athens was left alone in the struggle, in which she conquered and became the liberator of Greece, is also an allusion to the later history. Hence we may safely conclude that the entire narrative is due to the imagination of Plato, who could easily invent 'Egyptians or anything else' (Phaedr. 275 B), and who has used the name of Solon (of whose poem there is no trace in antiquity) and the tradition of the Egyptian priests to give verisimilitude to his story. To the Greek such a tale, like that of the earth-born men, would have seemed perfectly accordant with the character of his mythology, and not more marvellous than the wonders of the East narrated by Herodotus and others. The fiction has exercised a great influence over the imagination of later ages. As many attempts have been made to find the great island, as to discover the country of the lost tribes. Without regard to the description of Plato,

and without a suspicion that the whole narrative is a fabrication, interpreters have looked for the spot in every part of the globe, America, Palestine, Arabia Felix, Ceylon, Sardinia, Sweden. The story had also an effect on the early navigators of the sixteenth century.

Timaeus concludes with a prayer that his words may be acceptable to the God whom he has revealed, and Critias, whose turn follows, begs that a larger measure of indulgence may be conceded to him, because he has to speak of the men whom we know and not of the gods whom we do not know. Socrates readily grants this indulgence to him, and anticipating that Hermocrates will make a similar request, is ready to grant a like indulgence to him.

Critias returns to his story, professing only to repeat what Solon was told by the priests. The war of which he was about to speak had occurred 9000 years ago. (This is slightly inconsistent with the Timaeus, which gives the same date for the foundation of the city—Tim. 23 E.; the mistake may indicate that the Critias was not written until some time afterwards.) One of the combatants was the city of Athens, the other was the great island of Atlantis. Critias proposes (after the manner of Herodotus and others) to give an account of the various tribes of Greeks and barbarians who took part in the war, as they successively appear on the scene. But first of all he will speak of the antediluvian Athens, and then of the island of Atlantis.

In the beginning the gods agreed to divide the earth by lot in a friendly manner, and when they had made the allotment (cp. Polit. 271 foll.) they settled their several countries, and were the shepherds or rather the pilots of mankind, whom they guided by persuasion, and not by force. Hephaestus and Athena, brother and sister deities, in mind and art united, obtained as their lot the land of Athens, a land suited to the growth of virtue and wisdom; and there they settled a brave race of children of the soil, in whom they implanted a spirit of law and order. The names of some of them remain, although the memory of their deeds has passed away, for there have since been many deluges, and the remnant who survived in the mountains lost the art of writing, and during many generations were wholly devoted to acquiring the means of life.

But the Egyptian priests had preserved the actions as well as the names of the kings before Theseus, such as Erechtheus and Erichthonius,

and of women in like manner. And the armed image of the goddess which was dedicated by the ancient Athenians is an evidence to other ages that men and women had in those days, as they ought always to have, common virtues and pursuits. There were various classes of citizens, including handicraftsmen and husbandmen and a superior class of warriors who dwelt alone, and were educated, and had all things in common like your guardians. The country in those days extended southwards to the Isthmus, and inland as far as the heights of Parnes and Cithaeron, but a single night of excessive rain washed away the earth and left the rock of the Acropolis bare; and at the same time there were earthquakes and a flood. The traces of this catastrophe are still discernible in the form of the shore, which is a lofty cliff, and goes down sheer into the deep sea. The soil was then and still is in some places the most fertile in the world, and abounded in rich plains and pastures. And the inhabitants of this fair land were endowed with intelligence and love of beauty.

The Acropolis of the ancient Athens extended to the Ilissus and Eridanus, and included the Pnyx and the Lycabettus on the opposite side to the Pnyx having a level surface and deep soil. The side of the hill was inhabited by the craftsmen and husbandmen; and the warriors dwelt by themselves on the summit, around the temples of Hephaestus and Athene, in an enclosure which was like the garden of a single house. In winter they retired into houses on the north of the hill, in which they held their *syssitia*. These were modest dwellings, which they bequeathed to their children and grandchildren. The south side was inhabited by them in summer time, and then they left their gardens and gymnasia; and in the midst of the Acropolis was a fountain, which gave an abundant supply of cool water in summer as well as in winter; of this there are still some traces. They were careful to preserve the number of fighting men and women at 20,000, which is about the present number, and so they passed their lives as guardians of the citizens and leaders of the Hellenes. They were a just and famous race, celebrated for their beauty and virtue all over Europe and Asia.

And now I will speak to you of their adversaries, but first I ought to explain that the Greek names were translated by Solon from the Egyptian record; he wrote them down and left them with my grandfather in a writing which I still possess. In the division of the earth Poseidon obtained as his portion the island of Atlantis, and there he begat

children whose mother was a mortal. On the side towards the sea and in the centre of the island there was a very fair and fertile plain, and near the centre, about fifty stadia from the plain, there was a low mountain in which dwelt a man named Evenor and his wife Leucippe and their daughter Cleito, of whom Poseidon became enamoured. He to secure his love enclosed the mountain with rings or zones at equal distances, two of land and three of sea, which his divine power readily enabled him to excavate and fashion, and, as there was no shipping in those days, no man could get into the place. To the interior island he conveyed under the earth springs of water hot and cold, and supplied the land with all things needed for the life of man. Here he begat a race with five pairs of twins, of whom the eldest was Atlas, and him he made king of the centre island, while to his twin brother, Eumelus, or Gadeirus as he was called in the national language, he assigned that part of the country which was nearest the Straits. The other brothers he made chiefs of the adjacent islands. And their kingdom extended as far as Egypt and Tyrrhenia. Now Atlas had a fair posterity, and abundance of treasures, derived from mines of gold and silver and orichalcum, and there was abundance of wood, and herds of elephants, and pastures for animals of all kinds, and fragrant herbs, and grasses, and trees bearing fruit. These they used, and employed themselves in constructing their temples, and palaces, and harbours, and docks, in the following manner:—First, they bridged over the zones of sea, and made a way to the royal palace which they built in the sacred island. This ancient palace was ornamented by successive generations; and they dug a canal which passed through the zones of land from the island to the sea. The zones of earth were surrounded by stone walls of divers colours, black and white and red, which they sometimes intermingled for the sake of ornament; the outermost wall was coated with brass, the second with tin, and the third, which was the wall of the citadel, flashed with the red light of orichalcum, and as they quarried they hollowed out double docks having roofs of rock. In the interior of the citadel was a holy temple, dedicated to Cleito and Poseidon, and surrounded by an enclosure of gold, and there was Poseidon's own temple, which was covered with silver, and the pinnacles with gold. The roof was of ivory, adorned with gold and silver and orichalcum, and the rest of the interior lined with orichalcum. In the centre was the god standing in a chariot drawn by six winged horses, and touching the roof with his head; around him were the

hundred Nereids, riding on dolphins. Outside the temple were placed golden statues of all the ten kings and their wives, and other offerings; there was an altar too, and there were palaces, corresponding to the greatness and glory both of the kingdom and of the temple.

Also there were fountains of hot and cold water, and suitable buildings surrounding them, and trees, and there were baths both of the king and of private individuals, and separate baths for women, and also for cattle. The water from the baths was carried to the grove of Poseidon, and from thence by aqueducts over the bridges to the outer circle. And there were temples in the zones, and in the larger of the two there was a racecourse for horses, which ran all round the island. The guards were distributed in the zones according to the trust reposed in them; the most trusted of them were stationed in the citadel. The docks were full of triremes and naval stores. The citadel was surrounded by a wall, and was densely crowded with dwellings, and the canal resounded with the din of human voices.

The plain around the city was highly cultivated and sheltered from the north by mountains; it was encompassed by a foss of a hundred feet in depth and a stadium in breadth, and ten thousand stadia in length. The foss received the streams which came down from the mountains, as well as the canals of the interior, and found a way to the sea. The entire country was divided into sixty-thousand lots, each of which was a square of ten stadia; and the owner of a lot was bound to furnish the sixth part of a war-chariot, so as to make up ten thousand chariots, two horses and riders upon them, a light chariot without a seat, and an attendant and charioteer, two hoplites, two archers, two slingers, three stone-shooters, three javelin-men, and four sailors, to make up the complement of twelve hundred ships.

Each of the ten kings was absolute in his own city and island. The relations of the different governments to one another were determined by the injunctions of Poseidon, which had been inscribed by the first men on a column of orichalcum in the temple of Poseidon, at which the people were gathered together and held a festival every fifth and every sixth year. Around the temple ranged the bulls of Poseidon, whom the ten kings offered in sacrifice, shedding the blood of the victim over the inscription, and vowing not to transgress the laws of their father Poseidon. When night came, they put on azure robes and gave judgment against offenders. The most important of their laws related to their dealings

with one another. They were not to take up arms against one another, and were to come to the rescue if any of their brethren were attacked. They were to deliberate in common, and the king was not to have the power of life and death over his kinsmen, unless he had the assent of the majority.

For many generations, as tradition tells, the people of Atlantis were obedient to the laws and to the gods, and practised gentleness and wisdom in their intercourse with one another. They knew that they could only have the true use of riches by not caring about them. But gradually the divine portion of their souls became diluted with too much of the mortal admixture, and they began to degenerate, though to the outward eye they appeared glorious as ever at the very time when they were filled with all iniquity. The all-seeing Zeus, wanting to punish them, held a council of the gods, and when he had called them together, he spoke as follows:—

No one knew better than Plato how to invent 'a noble lie.' Observe (1) the innocent declaration of Socrates, that the truth of the story is a great advantage: (2) the manner in which traditional names and indications of geography are intermingled ('Why, here be truths!'): (3) the extreme minuteness with which the numbers are given, as in the Old Epic poetry: (4) the ingenious reason assigned for the Greek names occurring in the Egyptian tale: (5) the remark that the armed statue of Athena indicated the common warrior life of men and women: (6) the particularity with which the last deluge before that of Deucalion is affirmed to have been the great destruction: (7) the happy guess that great geological changes had been effected by water: (8) the indulgence of the prejudice against sailing beyond the Columns, and the popular belief of the shallowness of the ocean in that part: (9) the confession that the depth of the ditch in the Island of Atlantis, made by the hand of man, was not to be believed, and 'yet he could only repeat what he had heard'; while the triple zones of water in the midst of the country are attributed with greater appearance of probability to the supernatural power of the god: (10) the mention of the old rivalry of Poseidon and Athene, and the creation of the first inhabitants out of the soil. Plato here, as elsewhere, ingeniously gives the impression that he is telling the truth which mythology had corrupted.

The world, like a child, has readily, and for the most part unhesi-

tatingly, accepted the tale of the Island of Atlantis. In modern times we hardly seek for traces of the submerged continent; but even Mr. Grote (Plato, vol. iii. p. 295, note) is inclined to believe in the Egyptian poem of Solon of which there is no evidence in antiquity; while others, like Martin, discuss the Egyptian origin of the legend, or like M. de Humboldt, whom he quotes, are disposed to find in it a vestige of a widely-spread tradition. Others, adopting a different vein of reflection, regard the Island of Atlantis as the anticipation of a still greater island—the Continent of America. ‘The tale,’ says M. Martin, ‘rests upon the authority of the Egyptian priests; and the Egyptian priests took a pleasure in deceiving the Greeks.’ He never appears to suspect that there is a greater deceiver or magician than the Egyptian priests, that is to say, Plato himself, from the dominion of whose genius the critic and natural philosopher of modern times are not wholly emancipated. Although worthless in respect of any result which can be attained by them, discussions like those of M. Martin (*Timeè*, vol. i. 257–332) have an interest of their own, and may be compared to the similar discussions regarding the Lost Tribes (2 Esdras xiii. 40), as showing how the chance word of some poet or philosopher has given birth to endless religious or historical enquiries.

In contrasting the small Greek state numbering about twenty thousand inhabitants with the barbaric greatness of the island of Atlantis, Plato had evidently intended to show that such a state, though ‘consisting of only a thousand citizens,’ was invincible when matched with the hosts of Xerxes. Even in a great empire there might be a degree of virtue and justice, such as the Greeks believed to have existed under the sway of the first Persian kings. But all such empires were liable to degenerate, and soon incurred the anger of the gods. Their Oriental wealth, and splendour of gold and silver, and variety of colours, seemed also to be at variance with the simplicity of Greek notions. In the island of Atlantis, Plato is describing a sort of Babylonian or Egyptian city, to which he opposes the frugal life of the true Hellenic citizen. It is remarkable that in his brief sketch of them, he idealizes the husbandmen ‘who are lovers of honour and true husbandmen,’ as well as the warriors, who are his sole concern in the Republic; and that though he speaks of the common pursuits of men and women, he says nothing of the community of wives and children.

It is singular that Plato should have prefixed the most detested of

Athenian names to this dialogue, and even more singular that he should have put into the mouth of Socrates a panegyric on him. Yet we know that his character was accounted infamous by Xenophon, and that the mere acquaintance with him was made a subject of accusation against Socrates. We can only infer that in this, and perhaps in some other cases, Plato's characters have no reference to the actual facts. The desire to do honour to his own family, and the connection with Solon, may have suggested the introduction of his name. Why the Critias was never completed, whether from accident, or from advancing age, or from a sense of the artistic difficulty of the design, cannot be determined.

CRITIAS.

PERSONS OF THE DIALOGUE.

CRITIAS.
HERMOCRATES.

TIMAEUS.
SOCRATES.

Timaeus. How thankful I am, Socrates, that I have arrived at last, and, like a weary traveller after a long journey, may be at rest! And I pray the being who always was of old, and has now been by me declared, to grant that my words may endure in so far as they have been spoken truly and acceptably to him; but if unintentionally I have said anything wrong, I pray that he will impose upon me a just retribution, and the just retribution of him who errs is that he should be set right. Wishing, then, to speak truly in future concerning the generation of the gods, I pray them to give me knowledge, which of all medicines is the most perfect and best. And now having offered my prayer I deliver the argument into the hands of Critias, according to our agreement.

Critias. And I, Timaeus, accept the trust, and as you at first said that you were going to speak of high matters, and begged
Steph. that some allowance might be extended to you, I ask the
107 same or greater allowance for what I am about to say. And although I very well know that my request may appear to be somewhat ambitious and impertinent, I must make it nevertheless. For will any man of sense deny that you have spoken well? I can only attempt to show that I ought to have more indulgence than you, because my theme is more difficult; and I shall argue that to seem to speak well of the gods to men is far easier than to speak well of mortals to one another: for the

inexperience and utter ignorance of his hearers about divine matters is a great assistance to him who has to speak of them, and we know how ignorant we are concerning the gods. But I should like to make my meaning clearer, if you will follow me. All that is said by any of us can only be imitation and comparison. For if we consider how the works of the painter represent bodies divine and heavenly, and the different degrees of gratification with which the eye of the spectator receives them, we shall see that we are satisfied with the artist who is able in any degree to imitate the earth and its mountains, and the rivers, and the woods, and the universe, and the things that are and move therein, and further, that knowing nothing precise about such matters, we do not examine or analyse the painting; all that is required is a sort of indistinct and deceptive mode of shadowing them forth. But when a person endeavours to paint the human form we are quick at finding out defects, and our familiar knowledge makes us severe judges of any one who does not render every point of similarity; and we may observe the same thing to happen in discourse; we are satisfied with a picture of divine and heavenly things which has very little likeness to them; but we are more precise in our criticism of mortal and human things. Wherefore if at the moment of speaking we cannot suitably express what we mean, you must excuse us, considering that to form approved likenesses of human things is the reverse of easy. This is what I want to suggest to you, and at the same time to beg, Socrates, that I may have not less, but more indulgence conceded to me in what I am about to say. Which favour, if I am right in asking, I hope that you will be ready to grant. 108

Socrates. Certainly, Critias, we will grant your request, and we will grant the same by anticipation to Hermocrates, as well as of Timaeus; for I have no doubt that when his turn comes a little while hence, he will make the same request which you have made. In order, then, that he may provide himself with a fresh beginning, and not be compelled to say the same things over again, let him understand that the indulgence is already extended by anticipation to him. And now, friend Critias, I will announce to you the judgment of the theatre. They are of opinion that the last performer was wonderfully

successful, and that you will need a great deal of indulgence if you are to rival him.

Hermocrates. The warning, Socrates, which you have addressed to him, I must also take to myself. But remember, Critias, that faint heart never yet raised a trophy; and therefore you must go and attack the argument like a man. First invoke Apollo and the Muses, and then let us hear you sing the praises of your ancient citizens.

Crit. Friend Hermocrates, you who are stationed last and have another in front of you, have not lost heart as yet; the gravity of the situation will soon be revealed to you; meanwhile I accept your exhortations and encouragements. But besides the gods and goddesses whom you have mentioned, I would specially invoke Mnemosyne; for all the important part of my discourse is dependent on her favour, and if I can recollect and recite enough of what was said by the priests and brought hither by Solon, I doubt not that I shall satisfy the requirements of this theatre. And now, making no more excuses, I will proceed.

Let me begin by observing first of all, that nine thousand was the sum of years which had elapsed since the war which was said to have taken place between all those who dwelt outside the pillars of Heracles and those who dwelt within them; this war I am going to describe. Of the combatants on the one side, the city of Athens was reported to have been the ruler and leader throughout the war; the combatants on the other side were led by the kings of the island of Atlantis, which, as I was saying, once had an extent greater than Libya and Asia; and when afterwards sunk by an earthquake, became an impassable barrier of mud to voyagers sailing from hence to the ocean.

109 The progress of the history will unfold the various tribes of barbarians and Hellenes which then existed, as they successively appear on the scene; but I must describe first of all the Athenians of that day, and their enemies who fought with them; and then proceed to speak of the respective powers and governments of the two kingdoms. Let us give the precedence to Athens:

In the days of old, the gods had the whole earth distributed among them by allotment; there was no quarrelling; and you

cannot suppose that the gods did not know what was proper for each of them to have ; or, knowing this, that they would seek to procure for themselves by contention that which more properly belonged to others. Each of them by just apportionment obtained what they wanted, and peopled their own districts ; and when they had peopled them they tended us human beings who belonged to them as shepherds tend their flocks, excepting only that they did not use blows or bodily force, as shepherds do, but governed us like pilots from the stern of the vessel, which is an easy way of guiding animals, holding our souls by the rudder of persuasion according to their own pleasure ;—thus did they guide all mortal creatures. Now different gods had their inheritance in different places which they set in order. Hephaestus and Athene, who were brother and sister, and sprang from the same father, having a common nature, and being united also in the love of philosophy and art, both obtained as their allotted region this land, which was naturally adapted for wisdom and virtue ; and there they implanted brave children of the soil, and put into their minds the order of government ; their names are preserved, but their actions have disappeared by reason of the destruction of those who had the tradition, and the lapse of ages. For when there were any survivors, as I have already said, they were men who dwelt in the mountains ; and they were ignorant of the art of writing, and had heard only the names of the chiefs of the land, but very little about their actions. The names they were willing enough to give to their children ; but of the virtues of those who preceded them and of their laws, they knew only by obscure traditions ; and as they themselves and their children were for many generations in want of the necessaries of life, they directed their attention to the supply of their wants, and of them they conversed, to the neglect of events that had happened in times long passed ; for mythology and the enquiry into antiquity are introduced into cities when they have leisure, and when they see that the necessaries of life have already been provided, but not before. And this is the reason why the names of the ancients have been preserved to us without their deeds. This I infer because Solon said that the priests in their narrative of that war mentioned most of the names which are recorded prior to the time of Theseus, such as

Cecrops, and Erechtheus, and Erichthonius, and Erysichthon, and the names of the women in like manner. Moreover, the figure and image of the goddess show that military pursuits were then common to men and women, and that they consecrated the armed image of the goddess in accordance with the custom of the time and as a testimony that all animals which associate together may, if they please, practise in common the virtue which belongs to them without distinction of sex.

Now the country was inhabited in those days by various classes of citizens;—there were artisans, and there were husbandmen, and there was also a warrior class originally set apart by divine men; these dwelt by themselves, and had all things suitable for nurture and education; neither had any of them anything of their own, but they regarded all things as common property; nor did they require to receive of the other citizens anything more than their necessary food. And they practised all the pursuits which we yesterday described as those of our imaginary guardians. Concerning the country the Egyptian priests said what is not only probable but manifestly true, that the boundaries were fixed by the Isthmus, and that in the other direction they extended as far as the heights of Cithaeron and Parnes; the boundary line came down towards the plain, having the district of Oropus on the right, and the river Asopus on the left, as the limit towards the sea. The land was the best in the world, and was therefore able in those days to support a vast army, raised from the surrounding people. Even the remnant of Attica which now exists may compare
 111 its fruits and the suitability of its pastures to every sort of animal, and here is an evidence of what I am saying; but in those days the country was as fair as now and yielded far more abundant produce. How shall I prove my words? and what is the remnant? I would have you observe the present aspect of the country, which is only a promontory extending far into the sea away from the rest of the continent, while the surrounding basin of the sea is everywhere deep in the neighbourhood of the shore. Many great deluges have taken place during the nine thousand years, for that is the number of years which have elapsed since the time of which I am speaking: and in all the ages and

changes of things, there has never been any considerable accumulation of the soil coming down from the mountains, as in other places, but the earth has fallen away all round and sunk out of sight. The consequence is, that in comparison of what then was, there are remaining only the bones of the wasted body, as they may be called, discernible in small islands; all the richer and softer parts of the soil having fallen away, and the mere skeleton of the land being left. But in former days, and in the primitive state of the country, what are now mountains were only regarded as high hills; and the plains, as they are termed by us, of Phelleus were full of rich earth, and there was abundance of wood in the mountains. Of this last the traces still remain, for although some of the mountains now only afford sustenance to bees, not so very long ago there were to be seen roofs of timber cut from trees growing there, which were of a size sufficient to cover the largest houses; and there were many other high trees, bearing fruit and abundance of food for cattle. Moreover, the land enjoyed rain from heaven year by year, not as now losing the water which flows off the bare earth into the sea, but, having an abundance in all places, and receiving and treasuring up in the close clay soil the streams which descended from the heights, it let them off into the hollows, providing everywhere abundant fountains and rivers, of which there may still be observed indications in ancient sacred places, where fountains once existed; and this proves the truth of what I am saying.

Such was the natural state of the country, which was cultivated, as we may well believe, by true husbandmen, who did the work of husbandmen, and were lovers of honour, and of a noble nature, and had a soil the best in the world, and abundance of water, and in the heaven above an excellently tempered climate. Now the city in those days was arranged on this wise. In the first place the Acropolis was not as now. For the fact is that 112 a single night of excessive rain washed away the earth and laid bare the rock; at the same time there were earthquakes, and then occurred the third extraordinary inundation, which immediately preceded the great destruction of Deucalion. But in primitive times the hill of the Acropolis extended to the Eridanus and Ilissus, and included the Pnyx on one side, and

the Lycabettus as a boundary on the opposite side to the Pnyx, and was all well covered with soil, and level at the top, except in one or two places. Outside the Acropolis and on the sides of the hill there dwelt artisans, and such of the husbandmen as were tilling the ground near; at the summit the warrior class dwelt by themselves around the temples of Athene and Hephaestus, in one enclosure which was like the garden of a single house. On the north side they had dwellings in common and had erected halls for dining in winter, and had all the buildings which they needed for the public use, besides temples, but there was no adorning of them with gold and silver, for they made no use of these for any purpose; they took a middle course between meanness and extravagance, and built moderate houses in which they and their children's children grew old, and handed them down to others who were like themselves, always the same. But in summer-time they left their gardens and gymnasia and dining halls, and then the southern side of the hill was made use of by them in like manner. Where the Acropolis now is there was a single fountain, which was extinguished by the earthquake, and has left only a few small streams which still exist, but in those days the fountain gave an abundant supply of water, which was of equal temperature in summer and winter. In such fashion they lived, being the guardians of their own citizens and the leaders of the Hellenes, who were their willing followers. And they took care to preserve the same number of men and women for military service, which was to continue through all time, and is still preserved,—that is to say, about twenty thousand. Such were the ancient Athenians, and after this manner they righteously administered their own land and the rest of Hellas; they were renowned all over Europe and Asia for the beauty of their persons and for the many virtues of their souls, and were more famous than any of their contemporaries. And next, if I have not forgotten what I heard when I was a child, I will impart to you the character and origin of their adversaries. For friends should not keep their stories to themselves, but have them in common.

113 Yet, before proceeding further in the narrative, I ought to warn you, that you must not be surprised if you should hear Hellenic names given to foreigners. I will tell you the reason

of this : Solon, who was intending to use the tale for his poem, made an investigation into the meaning of the names, and found that the early Egyptians in writing them down had translated them into their own language, and he recovered the meaning of the several names and re-translated them, and copied them out again in our language. My great grandfather, Dropidas, had the original writing, which is still in my possession, and was carefully studied by me when I was a child. Therefore if you hear names such as are used in this country, you must not be surprised, for I have told how they came to be introduced. The tale, which was of great length, began as follows :—

I have before remarked in speaking of the allotments of the gods, that they distributed the whole into portions differing in extent, and made themselves temples and sacrifices. And Poseidon, receiving for his lot the island of Atlantis, begat children by a mortal woman, and settled them in a part of the island, which I will proceed to describe. On the side towards the sea and in the centre of the whole island, there was a plain which is said to have been the fairest of all plains and very fertile. Near the plain again, and also in the centre of the island at a distance of about fifty stadia, there was a mountain not very high on any side. In this mountain there dwelt one of the earth-born primeval men of that country, whose name was Evenor, and he had a wife named Leucippe, and they had an only daughter who was called Cleito. The maiden was growing up to womanhood, when her father and mother died ; Poseidon fell in love with her and had intercourse with her, and breaking the ground, inclosed the hill in which she dwelt all round, making alternate zones of sea and land larger and smaller, encircling one another ; there were two of land and three of water, which he turned as with a lathe, out of the centre of the island, equidistant every way, so that no man could get to the island, for ships and voyages were not as yet heard of. He himself, as he was a god, found no difficulty in making special arrangements for the centre island, bringing two streams of water under the earth, which he caused to ascend as springs, one of warm water and the other of cold, and making every variety of food to spring up abundantly in the earth. He also begat and brought up five pairs of twin male children ; and

114 dividing the island of Atlantis into ten portions, he gave to the first-born of the eldest pair his mother's dwelling and the surrounding allotment, which was the largest and best, and made him king over the rest; the others he made princes, and gave them rule over many men, and a large territory. And he named them all; the eldest, who was the king, he named Atlas, and from him the whole island and the ocean received the name of Atlantic. To his twin brother, who was born after him, and obtained as his lot the extremity of the island towards the pillars of Heracles, as far as the country which is still called the region of Gades in that part of the world, he gave the name which in the Hellenic language is Eumelus, in the language of the country which is named after him, Gadeirus. Of the second pair of twins he called one Ampheres, and the other Evaemon. To the elder of the third pair of twins he gave the name Mneseus, and Autochthon to the one who followed him. Of the fourth pair of twins he called the elder Elasippus, and the younger Mestor. And of the fifth pair he gave to the elder the name of Azaes, and to the younger that of Diaprepes. All these and their descendants were the inhabitants and rulers of divers islands in the open sea; and also, as has been already said, they held sway in the other direction over the country within the pillars as far as Egypt and Tyrrhenia. Now Atlas had a numerous and honourable family, and his eldest branch always retained the kingdom, which the eldest son handed on to his eldest for many generations; and they had such an amount of wealth as was never before possessed by kings and potentates, and is not likely ever to be again, and they were furnished with everything which they could have, both in the city and country. For because of the greatness of their empire many things were brought to them from foreign countries, and the island itself provided much of what was required by them for the uses of life. In the first place, they dug out of the earth whatever was to be found there, mineral as well as metal, and that which is now only a name and was then something more than a name, orichalcum, was dug out of the earth in many parts of the island, and with the exception of gold was esteemed the most precious of metals among the men of those days. There was an abundance of wood for carpenter's work, and sufficient

maintenance for tame and wild animals. Moreover, there were a great number of elephants in the island, and there was provision for animals of every kind, both for those which live in lakes and marshes and rivers, and also for those which live in mountains and on plains, and therefore for the animal which is the largest and most voracious of them. Also whatever fragrant things there are in the earth, whether roots, or herbage, or woods, or essences which distil from fruit and flower, grew and thrived in that land; and again, the cultivated fruit of the earth, both the dry edible fruit and other species of food, which we call by the general name of legumes, and the fruits having a hard rind, affording drinks and meats and ointments, and good store of chestnuts and the like, which may be used to play with, and are fruits which spoil with keeping, and the pleasant kinds of dessert, with which we amuse ourselves after dinner, when we are tired of eating — all these that sacred island which then beheld the light of the sun, brought forth fair and wondrous and in infinite abundance. All these things they received from the earth, and they employed themselves in constructing their temples and palaces and harbours and docks; and they arranged the whole country in the following manner:—

First of all they bridged over the zones of sea which surrounded the ancient metropolis, and made a road into and out of the royal palace. At the same time they built the palace in the habitation of the god and of their ancestors, which they continued to ornament in successive generations, every king surpassing the one who came before him to the utmost of his power, until they made the building a marvel to behold for size and for beauty. And beginning from the sea they bored a canal of three hundred feet in width and one hundred feet in depth, and fifty stadia in length, which they carried through to the outermost zone, making a passage from the sea up to this, which became a harbour, and leaving an opening sufficient to enable the largest vessels to find ingress. Moreover, they divided the zones of land which parted the zones of sea, leaving room for a single trireme to pass out of one zone into another, and constructing bridges; the bridges were covered, and there was a way underneath for the ships; for the banks were raised considerably above the water. Now the largest of the zones into which a

passage was cut from the sea was three stadia in breadth, and the zone of land which came next of equal breadth ; but the next two zones, the one of water, the other of land, were two stadia, and the one which surrounded the central island was
 116 a stadium only in width. The island in which the palace was situated had a diameter of five stadia. All this including the zones and the bridge, which was the sixth part of a stadium in width, they surrounded by a stone wall on all sides, placing towers and gates on the bridges where the sea passed in. The stone which was used in the work they quarried from underneath the centre island, and from underneath the zones, on the outer as well as the inner side. One kind of stone was white, another black, and a third red, and as they quarried, they at the same time hollowed out double docks, having roofs formed out of the native rock. Some of their buildings were simple, but in others they put together different stones, varying the pattern to please the eye, and to be a natural source of delight. The entire circuit of the wall, which went round the outermost zone, they covered with a coating of brass, and the circuit of the next wall they coated with tin, and the third, which encompassed the citadel, flashed with the red light of orichalcum. The palaces in the interior of the citadel were constructed on this wise:—In the centre was a holy temple dedicated to Cleito and Poseidon, which remained inaccessible, and was surrounded by an enclosure of gold ; this was the spot where the family of the ten princes first saw the light, and thither the people annually brought the fruits of the earth in their season from all the ten portions, and performed sacrifices to each of the ten. Here, too, was Poseidon's own temple which was a stadium in length, and half a stadium in width, and of a proportionate height, having a strange Asiatic look. All the outside of the temple, with the exception of the pinnacles, they covered with silver, and the pinnacles with gold. In the interior of the temple the roof was of ivory, adorned everywhere with gold and silver and orichalcum ; and all the other parts of the walls and pillars and floor they lined with orichalcum. In the temple they placed statues of gold : there was the god himself standing in a chariot—the charioteer of six winged horses—and of such a size that he touched the roof of the buildings with his head ; around him there were a hundred Nereids riding on dolphins, for

such was thought to be the number of them in that day. There were also in the interior of the temple other images which had been dedicated by private individuals. And around the temple on the outside were placed statues of gold of all the ten kings and of their wives, and there were many other great offerings of kings and of private individuals, coming both from the city itself and from the foreign cities over which they held sway. There was an altar too, which in size and workmanship corresponded to the rest of the work, and there were palaces, in like 117 manner, which answered to the greatness of the kingdom and the glory of the temple.

In the next place, they had fountains both of cold and hot springs; these were very abundant, and both kinds¹ wonderfully adapted to use by reason of the sweetness and excellence of their waters. They constructed buildings about them and planted suitable trees; also cisterns, some open to the heaven, others roofed over, to be used in winter as warm baths; there were the king's baths, and the baths of private persons, which were kept apart; also separate baths for women, and others again for horses and cattle, and to each of them they gave as much adornment as was suitable for them. The water which ran off they carried, some to the grove of Poseidon, where were growing all manner of trees of wonderful height and beauty, owing to the excellence of the soil; the remainder was conveyed by aqueducts which passed over the bridges to the outer circles; and there were many temples built and dedicated to many gods; also gardens and places of exercise, some for men, and some set apart for horses in both of the two islands formed by the zones; and in the centre of the larger of the two there was a race-course of a stadium in width, and in length allowed to extend all round the island, for horses to race in. Also there were guard-houses at intervals for the body-guard, the more trusted of whom had their duties appointed to them in the lesser zone, which was nearer the Acropolis; while the most trusted of all had houses given them within the citadel, and were about the persons of the kings. The docks were full of triremes and naval stores, and all things were quite ready for use. Enough of the plan of the royal palace.

¹ Reading *ἐκατέρου πρὸς τὴν χρῆσιν.*

Leaving the palace and crossing the three harbours outside, you came to a wall which began at the sea and went all round: this was everywhere distant fifty stadia from the largest zone or harbour, and enclosed the whole, the ends meeting at the mouth of the channel towards the sea. The entire area was densely crowded with habitations; and the canal and the largest of the harbours were full of vessels and merchants coming from all parts, who, from their numbers, kept up a multitudinous sound of human voices, and din of all sorts night and day.

I have described the city and the parts about the ancient palace nearly in the words of Solon, and now I must endeavour
118 to describe the nature and arrangement of the rest of the country. The whole country was said by him to be very lofty and precipitous on the side of the sea, but the country immediately about and surrounding the city was a level plain, itself surrounded by mountains which descended towards the sea; it was smooth and even, and of an oblong shape, extending in one direction three thousand stadia, but when measured through the centre island, two thousand stadia; the whole region of the island was situated towards the south, and sheltered from the north. He celebrated the surrounding mountains for their number and size and beauty, in which they exceeded all that are now to be seen anywhere; having in them also many wealthy inhabited villages, and rivers, and lakes, and meadows supplying food enough for every animal, wild or tame, and wood of various sorts, abundant for every kind of work.

I will now describe the plain, which had been cultivated during many ages by many generations of kings. It was for the most part rectangular and oblong, and where falling out of the straight line followed the circular ditch. The depth, and width, and length of this ditch were incredible, and gave the impression that such a work, in addition to so many others, could hardly have been wrought by the hand of man. Nevertheless I must say what I was told. It was excavated to the depth of a hundred feet, and its breadth was a stadium everywhere; it was carried round the whole of the plain, and was ten thousand stadia in length. It received the streams which

came down from the mountains, and winding round the plain and at various points touching the city, was there let off into the sea. Above, likewise, straight canals of a hundred feet in width were cut from it through the plain, and again let off into the ditch towards the sea: these canals were at intervals of an hundred stadia, and by them they brought down the wood from the mountains to the city, and conveyed the fruits of the earth in ships, cutting transverse passages from one canal into another, and to the city. Twice in the year they gathered the fruits of the earth—in winter having the benefit of the rains, and in summer introducing the water of the canals.

As to the population, each of the lots in the plain had an appointed chief over the men who were fit for military service, and the size of the lot was a square of ten stadia each way, 119 and the total number of all the lots was sixty thousand. And of the inhabitants of the mountains and of the rest of the country there was also a vast multitude having leaders, to whom they were assigned according to their dwellings and villages. The leader was required to furnish for the war the sixth portion of a war-chariot, so as to make up a total of ten thousand chariots; also two horses and riders for them, and a light chariot without a seat, accompanied by a fighting man on foot carrying a small shield, and having a charioteer mounted to guide the horses; also, he was bound to furnish two heavy armed soldiers, two archers, two slingers, three stone-shooters, and three javelin-men, who were skirmishers, and four sailors to make up the complement of twelve hundred ships. Such was the military order of the royal city—the order of the other nine governments was different in each of them, and would be wearisome to recount.

As to offices and honours, the following was the arrangement from the first. Each of the ten kings in his own division and in his own city had the absolute control of the citizens, and, in many cases, of the laws, punishing and slaying whomsoever he would. Now the relations of their governments to one another were regulated by the injunctions of Poseidon which the law had handed down. These were inscribed by the first men on a column of orichalcum, which was situated in the middle of the island, at the temple of Poseidon, whither the

people were gathered together every fifth and every sixth year alternately, thus giving equal honour to the odd and to the even number. And when they were gathered together they consulted about public affairs, and enquired if any one had transgressed in anything, and passed judgment on him accordingly, and before they passed judgment they gave their pledges to one another on this wise:—There were bulls who had the range of the temple of Poseidon; and the ten kings, who were left alone in the temple, after they had offered prayers to the gods that they might take the sacrifices which were acceptable to them, hunted the bulls, without weapons, but with staves and nooses; and the bull which they caught they led up to the column; the victim was then laid on the top of it and his blood shed over the sacred inscription. Now on the column, besides the law, there was inscribed an oath invoking mighty curses on the disobedient. When therefore, after offering sacrifice according to their customs, they had
 120 burnt the limbs of the bull, they filled a bowl of wine and cast in a clot of blood for each of them; the rest of the victim they put in the fire, after having made a purification of the column all round. Then they drew from the bowl in golden cups, and pouring a libation on the fire, they swore that they would judge according to the laws on the column, and would punish any one who had previously transgressed, and that for the future they would not, if they could help, transgress any of the inscriptions, and would neither command others nor obey any ruler who commanded them, to act otherwise than according to the laws of their father Poseidon. This was the prayer which each of them offered up for himself and for his family, at the same time drinking and dedicating the cup of which he drank in the temple of the god; and after spending some necessary time at supper, when darkness came on, and the fire about the sacrifice was cool, all of them put on most beautiful azure robes, and, sitting on the ground, at night, near the embers of the sacrifices over which they had sworn, and extinguishing all the fire about the temple, they received and gave judgment, if any of them had any accusation to bring against any one; and when they had given judgment, at day-break they wrote down their sentences on a golden tablet,

and deposited them together with their robes that they might be a testimony.

There were many special laws which the several kings had inscribed about their temples, but the most important was the following: That they were not to take up arms against one another, and that they were all to come to the rescue if any one in any city attempted to overthrow the royal house; like their ancestors, they were to deliberate in common about war and other matters, giving the supremacy to the family of Atlas. And the king was not to have the power of life and death over any of his kinsmen unless he had the assent of the majority of the ten kings.

Such was the vast power which the god settled in the lost island of Atlantis; and this he afterwards directed against our land for the following reasons, as tradition tells: For many generations, as long as the divine nature lasted in them, they were obedient to the laws, and well-affectioned towards the gods, whose seed they were; for they possessed true and in every way great spirits, practising gentleness and wisdom in the various chances of life, and in their intercourse with one another. They despised everything but virtue, caring little for their present state of life, and thinking lightly of the possession of gold and other property, which seemed only a burden to them; neither were they intoxicated by luxury; nor did wealth deprive them of their self-control; but they were sober, and saw clearly that all these goods are increased by virtue and friendship with one another, whereas by too great regard and respect for them, they are lost and friendship with them. By such reflections and by the continuance in them of a divine nature, all that which we have described waxed and increased in them; but when this divine portion began to fade away, and became diluted too often and with too much of the mortal admixture, and the human nature got the upper hand, they then, being unable to bear their fortune, became changed, and to him who had an eye to see, began to appear base, having lost the fairest of their precious gifts; but to those who had no eye to see the true happiness, they still appeared glorious and blessed at the very time when they were filled with love of gain and unrighteous power. Zeus, the god of gods, who

rules with law, and is able to see into such things, perceiving that an honourable race was in a woeful plight, and wanting to inflict punishment on them, that they might be chastened and improve, collected all the gods into his most holy habitation, which, being placed in the centre of the world, beholds all created things. And when he had called them together, he spake as follows :—

PHILEBUS.

INTRODUCTION.

THE Philebus appears to be one of the later writings of Plato, in which the style begins to alter, and the dramatic and poetical element has become subordinate to the speculative and philosophical. In the development of abstract thought great advances have been made on the Protagoras or the Phaedrus, and even on the Republic. But there is a corresponding diminution of artistic skill, a want of character in the persons, a laboured march in the dialogue, and a degree of confusion and incompleteness in the general design. As in the speeches of Thucydides, the multiplication of ideas seems to interfere with the power of expression. Instead of the equally diffused grace and ease of the earlier dialogues there occur two or three highly-wrought passages (pp. 15, 16, 63); instead of the ever-flowing play of humour, now appearing, now concealed, but always present, are inserted a good many bad jests, as we may venture to term them (17 E, 23 A, 24 B, 29 B, 30 E, 34 D, 43 A, 36 C, 46 B). We may observe also an attempt at artificial ornament (43 E, 53 D, E), and far-fetched modes of statement (48 D), as well as other defects of style, which remind us of the Laws. The connexion is often abrupt and inharmonious (24 C, etc.), and at 42 D, E, 43 A, 48 A, B, 49, 50, far from clear. Many points require further explanation; e. g. the reference of pleasure to the indefinite class (31 A), compared with the assertion which almost immediately follows, that pleasure and pain naturally have their seat in the third or mixed class: these two statements are unreconciled. In like manner, the table of goods does not clearly distinguish between the two heads of measure and symmetry; and though a hint is given that the divine mind has the first place (22 C), nothing is said of this in the final summing up¹. The relation of the goods to the sciences does not appear; though dialectic may be thought to correspond to the highest good, the sciences

¹ See however p. 11 a.

and arts and true opinions are enumerated in the fourth class. At p. 50 D, 67 B, we seem to have an intimation of a further discussion, in which some topics lightly passed over were to receive further consideration. The various uses of the word 'mixed,' for the mixed life, the mixed class of elements, the mixture of pleasures, or of pleasure and pain, are a further source of perplexity. Our ignorance of the opinions which Plato is attacking, is also an element of obscurity. Many things in a controversy might seem relevant, if we knew to what they were intended to refer. But no conjecture will enable us to supply what Plato has not told us; or to explain, from our fragmentary knowledge of them, the relation in which his doctrine stood to the Eleatic Being or the Megarian good, or to the theories of Aristippus or Antisthenes respecting pleasure. Nor are we able to say how far Plato in the *Philebus* conceives the finite and infinite (which occur both in the fragments of Philolaus (?) and in the Pythagorean table of opposites) in the same manner as contemporary Pythagoreans.

There is little in the characters which is worthy of remark. The Socrates of the *Philebus* is devoid of any touch of Socratic irony, though here, as in the *Phaedrus* (235 C), he twice attributes the flow of his ideas to a sudden inspiration (20 B, 25 B, C). The interlocutor Protarchus, the son of Callias, who has been a hearer of Gorgias (58 A), is supposed to begin as a disciple of the partisans of pleasure, but is soon drawn over to the opposite side by the arguments of Socrates. The instincts of youth are easily induced to take the better part. *Philebus*, who has withdrawn from the argument, is several times brought back again (pp. 18, 19, 22, 28), that he may support pleasure, of which he remains to the end the uncompromising advocate. On the other hand, the youthful group of listeners by whom he is surrounded, '*Philebus*' boys' as they are termed, whose presence is several times intimated (16 A, B, 19 D, 67 B), are described as all of them at last convinced by the arguments of Socrates. They bear a very faded resemblance to the interested audiences of the *Charmides*, *Lysis*, or *Protagoras*. Other signs of relation to external life in the dialogue, or mention of contemporary things and persons, with the single exception of the allusion to the anonymous enemies of pleasure (44 B, C), and the teachers of the flux (43 A), there are none.

The omission of the doctrine of recollection, derived from a previous state of existence, is a note of progress in the philosophy of Plato. The

transcendental theory of pre-existent ideas, which is chiefly discussed by him in the *Meno*, the *Phaedo*, and the *Phaedrus*, has given way to a psychological one. The omission is rendered more significant by his having occasion to speak of memory as the basis of desire. Of the ideas at all, he treats in the same sceptical spirit (15 A, B) which appears in his criticism of them in the *Parmenides* (131 ff.) He touches on the same difficulties and he gives no answer to them. His mode of speaking of the analytical and synthetical processes may be compared with his manner of discussing the same subject in the *Phaedrus*; here he dwells on the importance of dividing the genera into all the species, while in the *Phaedrus* he conveys the same truth in a figure, when he speaks of carving the whole, which is described under the image of a victim, into parts or members, 'according to their natural articulation, without breaking any of them.' There is also a difference, which may be noted, between the two dialogues. For whereas in the *Phaedrus*, and also in the *Symposium*, the dialectician is described as a sort of enthusiast or lover, in the *Philebus*, as in all the later writings of Plato, the element of love is wanting; the topic is only introduced, as in the *Republic*, by way of illustration (cp. 53 D, *Rep.* v. 474 D, E). On other subjects of which they treat in common, such as the nature and kinds of pleasure, true and false opinion, the nature of the good, the order and relation of the sciences, the *Republic* is less advanced than the *Philebus*, which contains, perhaps, more metaphysical truth more obscurely expressed than any other Platonic dialogue. Here, as he expressly tells us, Plato is 'forging weapons of another make,' i. e. new categories and modes of conception, though 'some of the old ones might do again.'

But if superior in thought and dialectical power, the *Philebus* falls very far short of the *Republic* in fancy and feeling. The development of the reason undisturbed by the emotions seems to be the ideal at which Plato aims in his later dialogues. There is no mystic enthusiasm or rapturous contemplation of ideas. Whether we attribute this change to the greater feebleness of age, or to the development of the quarrel between philosophy and poetry in Plato's own mind; or perhaps, in some degree, to a carelessness about artistic effect, when he was absorbed in abstract ideas, we can hardly be wrong in assuming, amid such a variety of indications, derived from style as well as subject, that the *Philebus* belongs to the later period of his life and authorship. But in this, as in all the later

writings of Plato, there are not wanting thoughts and expressions in which he rises to his highest level (15, 17, 63, 67).

The plan is complicated, or rather, perhaps, the want of plan renders the progress of the dialogue difficult to follow. A few leading ideas seem to emerge: the relation of the one and many, the four original elements, the kinds of pleasure, the kinds of knowledge, the scale of good. These are only partially connected with one another. The dialogue is not rightly entitled 'concerning pleasure' or 'concerning good,' but should rather be described as treating of the relations of pleasure or knowledge, after they have been duly analysed, to the good. (1) The question is asked: Whether pleasure or wisdom is the chief good, or some nature higher than either? and if the latter, how are pleasure and wisdom related to this higher good? (2) Before we can reply with exactness, we must know the kinds of pleasure and the kinds of knowledge: (3) But still we may affirm generally, that the combined life of pleasure and wisdom or knowledge has more of the character of the good than either of them when isolated: (4) To determine which of them partakes most of the higher nature, we must know under which of the four unities or elements they respectively fall. These are, first, the infinite; secondly, the finite; thirdly, the union of the two; fourthly, the cause of the union. Pleasure is of the first, wisdom or knowledge of the third class, while reason or mind is akin to the fourth or highest.

(5) Pleasures are of two kinds, the mixed and unmixed. Of mixed pleasures there are three classes—(a) those in which both the pleasures and pains are corporeal, as in eating and hunger; (β) those in which there is a remembered opposite of the actual bodily affection, as when you are hungry and remember some former repast; (γ) those in which the pleasure and pain are both mental. Of unmixed pleasures there are also three classes: (α) those of sight and hearing; (β) those of smell; (γ) those of mathematics.

(6) The sciences are likewise divided into two classes, of mixed and unmixed, creative and theoretical; and in each of them there is an architectonic element. This in the creative arts is arithmetic and mensuration; and arts like carpentering, which have an exact measure, are to be regarded as higher than music, which for the most part is mere guess-work and imitation. But there is also a higher arithmetic, and a higher mensuration, which is exclusively theoretical; and a dialectical science, which is higher still and the truest and purest knowledge.

(7) We are now able to determine the composition of the perfect life. First, we admit the pure pleasures and the pure sciences. Secondly, the impure sciences, but not the impure pleasures. We have next to discover what element of goodness is contained in this mixture. There are three criteria of goodness—beauty, symmetry, truth. These are clearly more akin to reason than to pleasure, and will enable us to fix the places of both of them in the scale of good. First in the scale is measure; the second place is assigned to symmetry; the third, to reason and wisdom; the fourth, to knowledge and true opinion; the fifth, to pure pleasures; and here the Muse says ‘Enough.’

‘Bidding farewell to Philebus and Socrates,’ we may now proceed to consider the metaphysical conceptions which are presented to us. These are, (I) the paradox of unity and plurality; (II) the table of categories or elements; (III) the kinds of pleasure; (IV) the kinds of knowledge; (V) the conception of the good; (VI) we may examine the relation of the Philebus to the Republic, and to other dialogues.

I. The paradox of the one and many originated in the restless dialectic of Zeno, who sought to prove the absolute existence of the one by showing the contradictions that are involved in admitting the existence of the many (cp. Parm. 128 ff.) Zeno illustrated the contradiction by well-known examples taken from outward objects. But Socrates seems to intimate that the time had arrived for discarding these hackneyed illustrations; such difficulties had long been solved by common sense (*solvitur ambulando*), as the mere familiarity with the fact was a sufficient answer to them. He will leave them to Cynics and Eristics; the youth of Athens may discourse of them to their parents. To no rational man could the circumstance that the body is one, but has many members, be any longer a stumbling-block.

Plato’s difficulty seems to begin in the region of ideas. He cannot understand how an absolute unity, such as the Eleatic being, can be broken up into a number of individuals, or be in and out of them at once. Philosophy had so deepened or intensified the nature of one or being, by the thoughts of successive generations, that the mind could no longer imagine ‘being’ as in a state of change or division. To say that the verb of existence is the copula, or that unity is a mere unit, is to us easy; but to the Greek such an analysis involved the same kind of difficulty as the conception of God existing both in and out of the world

would to ourselves. Nor was he assisted by the analogy of sensible objects. The sphere of mind was dark and mysterious to him; but instead of being illustrated by sense, the greatest light appeared to be thrown on the nature of ideas when they were contrasted with sense.

Both here and in the *Parmenides* (129 ff.), where similar difficulties are raised, Plato seems prepared to desert his ancient ground. He cannot tell the relation in which abstract ideas stand to one another, and therefore he transfers the one and many out of his transcendental world, and proceeds to lay down practical rules for their application to different branches of knowledge. As in the *Republic*, he supposes the philosopher to proceed by regular steps, until he arrives at the idea of good; as in the *Sophist* and *Politicus*, he insists that in dividing the whole into its parts we should bisect in the middle in the hope of finding species; as in the *Phaedrus* (see above), he would have 'no limb broken' of the organism of knowledge;—so in the *Philebus*, he urges the necessity of filling up all the intermediate links which occur (compare Bacon's *media axiomata*) in the passage from unity to infinity. With him the idea of science may be said to anticipate science; at a time when the sciences were not yet divided, he wants to impress upon us the importance of classification; neither neglecting the many individuals, nor attempting to count them all, but finding the genera and species under which they naturally fall. Here, then, and in the parallel passages of the *Phaedrus* and of the *Sophist*, is found the germ of the most fruitful notion of modern science.

At p. 15 Plato describes with ludicrous exaggeration the influence exerted by the one and many on the minds of young men in their first fervour of metaphysical enthusiasm (cp. *Rep.* 539). But they are none the less an everlasting quality of reason or reasoning which never grows old in us. At first we have but a confused conception of them, analogous to the eyes blinking at the light in the *Republic*. To this Plato opposes the revelation from Heaven of the real relations of them, which some Prometheus, who gave the true fire from heaven, is supposed to have imparted to us. Plato is speaking at pp. 15, 16 of two things—(1) the crude notion of the one and many, which powerfully affects the ordinary mind when first beginning to think; (2) the same notion when cleared up by the help of dialectic (16 C—E).

To us the problem of the one and many has lost its chief interest and perplexity. We readily acknowledge that a whole has many parts, that

the continuous is also the divisible, that in all objects of sense there is a one and many, and that a like principle may be applied by analogy to purely intellectual conceptions. If we attend to the meaning of the words, we are compelled to admit that two contradictory statements are true. But the antinomy is so familiar as to be scarcely observed by us. Our sense of the contradiction, like Plato's, only begins in a higher sphere, when we speak of necessity and free-will, of mind and body, of Three Persons and One Substance, and the like. The world of knowledge is always dividing more and more; every truth is at first the enemy of every other truth. Yet without this division there can be no truth; nor any complete truth without the reunion of the parts into a whole. And hence the coexistence of opposites in the unity of the idea is regarded by Hegel as the supreme principle of philosophy; and the law of contradiction, which is affirmed by logicians to be an ultimate principle of the human mind, is displaced by another law, which asserts the coexistence of contradictories as imperfect and divided elements of the truth. Without entering further into the depths of Hegelianism, we may remark that this and all similar attempts to reconcile antinomies have their origin in the old Platonic problem of the 'One and Many.'

II. 1. The first of Plato's categories or elements is the infinite. This is the negative of measure or limit; the unthinkable, the unknowable; of which nothing can be affirmed; the mixture or chaos which preceded distinct kinds in the creation of the world; the first vague impression of sense; the more or less which refuses to be reduced to rule, having certain affinities with evil, with pleasure, with ignorance, and which in the scale of being is farthest removed from the beautiful and good. To a Greek of the age of Plato, the idea of an infinite mind would have been an absurdity. He would have insisted that 'the good was of the nature of the finite,' and that the infinite is a mere negative, which is on the level of sensation, and not of thought. He was aware that there was a distinction between the infinitely great and the infinitely small, but he would have equally denied the claim of either to true existence. Of that positive infinity, or infinite reality, which we attribute to God, he had no conception.

The Greek conception of the infinite would be more truly described, in our way of speaking, as the indefinite. To us, the notion of infinity is subsequent rather than prior to the finite, expressing not absolute vacancy or negation, but only the removal of limit or restraint, which we suppose to exist not before, but after we have already set bounds

to thought and matter, and divided them after their kinds. From different points of view, either the finite or infinite may be looked upon respectively both as positive and negative (cp. *Omnis determinatio est negatio*); and the conception of the one determines that of the other. The Greeks and the moderns seem to be nearly at the opposite poles in their manner of regarding them. And both are surprised when they make the discovery, as Plato has done in the *Sophist*, how large an element negation forms in the framework of their thoughts.

2. 3. The finite element which mingles with and regulates the infinite is best expressed to us by the word 'law.' It is that which measures all things and assigns to them their limit; which preserves them in their natural state, and brings them within the sphere of human cognition. This is described by the terms harmony, health, order, perfection, and the like. All things, in as far as they are good, even pleasures, which are for the most part indefinite, partake of this element. We should be wrong in attributing to Plato the conception of laws of nature derived from observation and experiment. And yet he has as intense a conviction as any modern philosopher that nature does not proceed by chance. But observing that the wonderful construction of number and figure which he had within himself, and which seemed to be prior to himself, explained a part of the phenomena of the external world, he extended their principles to the whole, finding in them the true type both of human life and of the order of nature.

Two other points may be noticed respecting the third class. First, that Plato seems to be unconscious of any interval or chasm which separates the finite from the infinite. The one is in various ways and degrees working in the other. Hence he has implicitly answered the difficulty with which he started, of how the one could remain one and yet be divided among many individuals, or 'how ideas could be in and out of themselves,' and the like. Secondly, that in this mixed class we find the idea of beauty. Good, when exhibited under the aspect of measure or symmetry, becomes beauty (64 E). And if we translate his language into corresponding modern terms, we shall not be far wrong in saying that here, as well as in the *Republic*, Plato conceives beauty under the idea of proportion.

4. Last and highest in the list of principles or elements, is the cause of the union of the finite and infinite, to which Plato ascribes the order of the world. Reasoning from man to the universe, he argues that as there

is a mind in one, there must be a mind in the other, which he identifies with the royal mind of Zeus. This is the first cause of whom 'our ancestors spoke,' as he says, appealing to tradition, in the Philebus as well as in the Timaeus. The 'one and many' is also supposed to have been revealed by tradition. For the mythical element has not altogether disappeared.

Some characteristic differences may here be noted, which distinguish the ancient from the modern mode of conceiving God.

a. To Plato, the idea of God or mind is both personal and impersonal. Nor in ascribing, as appears to us, both these attributes to him, and in speaking of God both in the masculine and neuter gender, did he seem to himself inconsistent. For the difference between the personal and impersonal was not marked to him as to ourselves. We make a fundamental distinction between a thing and a person, while to Plato, by the help of various intermediate abstractions, such as end, good, cause, they appear almost to meet in one, or to be two aspects of the same. Hence, without any reconciliation or even remark, in the Republic he speaks at one time of God or Gods, and at another time of the good. So in the Phaedrus he seems to pass unconsciously from the concrete to the abstract conception of the ideas in the same dialogue. Nor in the Philebus is he careful to show in what relation the idea of the divine mind stands to the supreme principle of measure.

β. Again, to us there is a strongly-marked distinction between a first cause and a final cause. And we should commonly identify a first cause with God, and the final cause with the world, which is His work. But Plato, though far from being a Pantheist, or confounding God with the world, tends to identify the first with the final cause. The cause of the union of the finite and infinite might be described as a higher law; the final measure which is the highest expression of the good may also be described as the supreme law. Both these conceptions are realized chiefly by the help of the material world; and therefore when we pass into the sphere of ideas can hardly be distinguished.

The four principles are required for the determination of the relative places of pleasure and wisdom. Plato has been saying that we should proceed by regular steps from the one to the many. Accordingly, before assigning the precedence either to good or pleasure, he must first find out and arrange in order the general principles of things. Mind is ascertained to be akin to the nature of the cause, while pleasure is

found in the infinite or indefinite class. We may now proceed to divide pleasure and knowledge after their kinds:

III. 1. Plato speaks of pleasure as indefinite, as relative, as a generation, and in all these points of view in a category distinct from good. For again we must repeat, that to the Greek 'the good is of the nature of the finite,' and, like virtue, either is, or is nearly allied to, knowledge. The modern philosopher would remark that the indefinite is equally real with the definite. Health and mental qualities are in the concrete undefined; they are nevertheless real goods, and Plato rightly regards them as falling under the finite class. Again, we are able to define objects or ideas, not in so far as they are in the mind, but in so far as they are manifested externally, and can therefore be reduced to rule and measure. And if we adopt the test of definiteness, the pleasures of the body are more capable of being defined than any other pleasures. As in art and knowledge generally, we proceed from without inwards, beginning with facts of sense, and passing to the more ideal conceptions of mental pleasure, happiness and the like.

2. Pleasure is depreciated as relative, while good is exalted as absolute. But this distinction seems to arise from an unfair mode of regarding them; the abstract idea of the one is compared with the concrete experience of the other. For all pleasure and all knowledge may be viewed either abstracted from the mind, or in relation to the mind (cp. Arist. Nic. Ethics, x. 3, 4). The first is an idea only, which may be conceived as absolute and unchangeable, and then the abstract idea of pleasure will be equally unchangeable with that of knowledge. But when we come to view either as phenomena of consciousness, the same defects are for the most part incident to both of them. Our hold upon them is equally transient and uncertain; the mind cannot be always in a state of intellectual tension, any more than capable of feeling pleasure always. The knowledge which is at one time clear and distinct, at another seems to fade away, just as the pleasure of health after sickness, or of eating after hunger, soon passes into a neutral state of unconsciousness and indifference. Change and alternation are necessary for the mind as well as for the body; and in this, not any element of evil, but a law of nature, is rather to be acknowledged. The chief difference between the subjective pleasure and subjective knowledge in respect of permanence is that the latter, when our feeble faculties are able to grasp it, still conveys to us an idea of unchangeableness which cannot be got rid of.

3. In the language of ancient philosophy, the relative character of pleasure is described as becoming or generation. This is relative to being or essence, and from one point of view may be regarded as the Heracleitean flux in contrast with the Eleatic being; from another, as the transient enjoyment of eating and drinking compared with the supposed permanence of intellectual pleasures. But to us the distinction is unmeaning, and belongs to a stage of philosophy which has passed away. Plato himself seems to have suspected that the continuance or life of things is quite as much to be attributed to a principle of rest as of motion (cp. *Charm.* 159, 160; *Cratyl.* 437). A later view of pleasure is found in Aristotle, who agrees with Plato in many points; e. g. in his view of pleasure as a restoration to nature, in his distinction between bodily and mental, between necessary and non-necessary pleasures: but is also in advance of him. For he affirms that pleasure is not in the body at all; hence even the bodily pleasures are not to be spoken of as generations, but as accompanied with generation. (*Nic. Eth.* x. 3, 6.)

4. Plato attempts to identify vicious pleasures with some form of error, and insists that the term false may be applied to them: in this he appears to be carrying out in a confused manner the Socratic doctrine, that virtue is knowledge, vice ignorance. He will allow of no distinction between the pleasures and the erroneous opinions, whether arising out of the illusion of distance or not, on which they are founded. But to this we naturally reply with Protarchus, that the pleasure is what it is, although the calculation may be false, or the after effects painful. It is difficult to acquit Plato, in his own language, of being a tyro in dialectics, when he overlooks such a distinction. Yet, on the other hand, we are hardly fair judges of confusions of thought in those who view things differently from ourselves.

5. There appears also to be an incorrectness in the notion which occurs both here and in the *Gorgias*, of the simultaneousness of merely bodily pleasures and pains. We may, perhaps, admit, though even this is not free from doubt, that the feeling of pleasurable hope or recollection is, or rather may be, simultaneous with acute bodily suffering. But there is no such coexistence of the pain of thirst with the pleasures of drinking; they are not really simultaneous, for the one expels the other. Nor does Plato seem to have considered that the bodily pleasures, except in certain extreme cases, are unattended with pain. Few philosophers will deny that a degree of pleasure attends eating and drinking; and yet

surely we might as well speak of the pains of digestion which follow, as of the pains of hunger and thirst which precede them. Plato's conception is derived partly from the extreme case of a man suffering pain from hunger or thirst; partly from the image of a full and empty vessel. But the truth is rather, that while the gratification of our bodily desires constantly affords some degree of pleasure, the antecedent pains are scarcely perceived by us, being almost done away with by use and regularity.

6. The desire to classify pleasures as accompanied or not accompanied by antecedent pains, has led Plato to place under one head the pleasures of smell and sight, as well as those derived from simple sounds of music and from mathematical figures. He would have done better to connect the pleasures of smell through the medium of taste with the bodily appetites to which they seem to minister. The pleasures of sight and sound might then have been regarded as being the expression of ideas. But this higher and truer point of view never appears to have occurred to Plato. He has no distinction between the fine arts and the mechanical; and neither here nor anywhere has he an adequate conception of the beautiful in external things.

7. Plato agrees partially with certain 'surly or fastidious' philosophers, as he terms them, who defined pleasure to be the absence of pain. They are also described as eminent in physics. There is unfortunately no school of Greek philosophy known to us which combined these two characteristics. Antisthenes, who was an enemy of pleasure, was not a physical philosopher; the atomists, who were physical philosophers, were not enemies of pleasure. Yet such a combination of opinions is far from being impossible. Plato's omission to mention them distinctly has created the same uncertainty respecting them which also occurs respecting the friends of the ideas and the materialists in the Sophist.

On the whole, this discussion is one of the least satisfactory in the dialogues of Plato. While the ethical nature of pleasure is scarcely considered, and the merely physical phenomenon imperfectly analysed, too much weight is given to ideas of measure and number as the sole principle of good. The comparison of pleasure and knowledge is really a comparison of two elements, which have no common measure, and which cannot be excluded from each other. Feeling is not opposed to knowledge, and in all consciousness there is an element of both. The most abstract kinds of knowledge are inseparable from some pleasure

or pain which accompanies the acquisition or possession of them: the student is liable to grow weary of them, and soon discovers that continuous mental energy is not granted to men. The most sensual pleasure, on the other hand, is inseparable from the consciousness of pleasure; no man can be happy who, to borrow Plato's illustration, is leading the life of an oyster. Hence (by his own confession) the main thesis is not worth determining; the real interest lies in the incidental discussion. We can no more separate pleasure from knowledge in the *Philebus* than we can separate justice from happiness in the *Republic*.

IV. An interesting account is given in the *Philebus* of the rank and order of the sciences or arts, which agrees generally with the scheme of knowledge in the sixth Book of the *Republic*. The chief difference is, that the position of the arts is more exactly defined. They are divided into an empirical part and a scientific part, of which the first is mere guess-work, the second is determined by rule and measure. Of the more empirical arts, music is given as an example; this, although affirmed to be necessary to human life, is depreciated; and no attempt is made, as in the *Republic*, to base harmony on scientific principles, but a preference is expressed for simple melodies, and flute music is especially condemned. According to the standard of accuracy which is here adopted, music is rightly placed lower in the scale than carpentering, because the latter is more capable of being reduced to measure.

The theoretical element of the arts may also become a purely abstract science, when separated from matter, and is then said to be pure and unmixed. The distinction which Plato here makes seems to be the same as that between pure and applied mathematics, and may be expressed in the modern formula—science is art theoretical, art is science practical. In the reason which he gives for the superiority of the pure science of number over the mixed or applied, we can only agree with him in part. He says that the numbers which the philosopher employs are always the same, whereas the numbers which are used in practice represent different sizes or quantities. He does not see that this power of expressing different quantities by the same symbol is the characteristic and not the defect of numbers, and is due to their abstract nature;—although we admit of course what Plato seems to feel in his distinctions between pure and impure knowledge, that the imperfection of matter enters into the applications of them.

Above the other sciences, as in the *Republic*, towers dialectic, which is

the science of eternal being, and has the purest mind and reason. The lower sciences, including the mathematical, are akin to opinion rather than to reason, and are placed together in the fourth class of goods. The relation in which they stand to dialectic is obscure in the Republic, and is not cleared up in the Philebus.

V. Thus far we have only attained to the vestibule or ante-chamber of the good; for there is a good exceeding knowledge, exceeding essence, which, like Glaucon in the Republic (p. 509), we find a difficulty in apprehending. This good is now to be exhibited to us under various aspects and gradations. The relative dignity of pleasure and knowledge has been determined; but they have not yet received their exact position in the scale of goods. Some difficulties occur to us in the enumeration: First, how are we to distinguish the first from the second class of goods; or the second from the third. Secondly, why is there no mention of the supreme mind? Thirdly, the nature of the fourth class. Fourthly, the seeming allusion to a sixth class, which is not further investigated.

Plato seems to proceed in his table of goods, from the more abstract to the less abstract; from the objective to the subjective; until at the lower end of the scale we fairly descend into the region of human action and feeling. To him, the greater the abstraction the greater the truth, and he is always tending to see abstraction within abstraction; like the ideas in the Parmenides, which are always appearing one behind another. Hence we find a difficulty in following him into the sphere of thought which he is seeking to attain. First in his scale of goods he places measure, in which he finds the eternal nature: this would be more naturally expressed in modern language as eternal law, and seems to be akin both to the finite and to the mind or cause, which were two of the elements in the former table. Like the supreme nature in the Timaeus, like the ideal beauty in the Symposium or the Phaedrus, or like the ideal good in the Republic, this is the absolute and unapproachable being. But (2) this being is manifested in symmetry and beauty everywhere, in the order of nature and of mind, in the relations of men to one another. For the word 'measure' he now substitutes the word 'symmetry,' as if intending to express measure conceived as relation. (3) He proceeds to regard the good no longer in an objective form, but as the human reason seeking to attain truth by the aid of dialectics; such at least we naturally infer to be his meaning, when we consider that both here and in the Republic, the sphere of *νοῦς* or mind is assigned

to dialectic. It is remarkable (see above) that this personal conception of mind is confined to the human mind, and not, as at p. 22 C, extended to the divine. (4) If we may be allowed to interpret one dialogue of Plato by another, the sciences of figure and number are probably classed with the arts and true opinions, because they proceed from hypotheses; cp. Rep. 511. (5) The mention of a sixth class is merely due to the quotation from Orpheus; that Plato had no intention of filling up this class either with the necessary pleasures or any other, is evident from the brief recapitulation which follows (67 A), in which he speaks of pleasure as holding the fifth rank.

VI. We may now endeavour to ascertain the relation of the *Philebus* to the other dialogues. Here appears the same polemic against the ideas which is carried farther in the *Parmenides* and the *Sophist*. The principle of the one and many of which he here speaks, is illustrated by examples in the *Sophist* and *Politicus*. Notwithstanding the differences of style, many resemblances may be noticed between the *Philebus* and *Gorgias*. The theory of the simultaneousness of pleasure and pain is common to both of them; there is also a common tendency in them to take up arms against pleasure, although the view of the *Philebus*, which is probably the later of the two dialogues, is the more moderate. At p. 46 A, B, there seems to be an allusion to the passage in the *Gorgias* (494), in which Socrates dilates on the pleasures of itching and scratching. Nor is there any real discrepancy in the manner in which *Gorgias* and his art are spoken of in the two dialogues. For Socrates, at p. 58, is far from implying that the art of rhetoric has a real sphere of practical usefulness: he only means that the refutation of the claims of *Gorgias* is not necessary for his present purpose. He is saying in effect: 'Admit, if you please, that rhetoric is the greatest and usefulest of sciences:—this does not prove that dialectic is not the purest and most exact.' From the *Sophist* and *Politicus* we know that his hostility towards the sophists and rhetoricians was not mitigated in later life; and yet both in the *Politicus* and *Laws* he admits of a higher use of rhetoric.

Reasons have been already given for assigning a late date to the *Philebus*. That the date is probably later than that of the *Republic*, may be further argued on the following grounds: 1. The general resemblance to the later dialogues and to the *Laws*. 2. The more complete account of the nature of good and pleasure. 3. The distinction between

perception, memory, recollection, and opinion (pp. 34, 38) indicates a great progress in psychology; also between understanding and imagination, described under the figure of the scribe and the painter (p. 39). A superficial notion may arise that Plato probably wrote shorter dialogues, such as the *Philebus*, the *Sophist*, and the *Politicus*, as studies or preparations for longer ones. This view may be natural, but on further reflection is seen to be fallacious; because these three dialogues are found to make an advance upon the metaphysical conceptions of the *Republic*. And we can more easily suppose that Plato composed shorter writings after longer ones, than suppose that he lost hold of further points of view which he had once attained.

It is more easy to find traces of the Pythagoreans, Eleatics, Megarians, Cynics, and of the ideas of Anaxagoras, in the *Philebus*, than to say how much is to be ascribed to each of them. Had we fuller records of those old philosophers, we should probably find Plato in the midst of the fray attempting to combine Eleatic and Pythagorean doctrines, and seeking to find a truth beyond either being or number; setting up his own concrete conception of good against the abstract practical good of the Cynics, or the abstract intellectual good of the Megarians; and his own idea of classification against the denial of plurality in unity which is also attributed to them: warring against the Eristics as destructive of truth, as he had formerly fought against the Sophists, taking up a middle position between the Cynics and Cyrenaics in his doctrine of pleasure, asserting with more consistency than Anaxagoras the existence of an intelligent mind and cause. Of the Heracliteans, whom he is said by Aristotle to have cultivated in his youth, he speaks in the *Philebus*, as in the *Theaetetus* and *Cratylus*, with irony and contempt. But we have not the knowledge which would enable us to pursue further the line of reflection here indicated; nor can we expect to find perfect clearness or order in the first efforts of mankind to understand the working of their own minds. The ideas which they are attempting to analyse, they are also in process of creating; the abstract universals of which they are seeking to adjust the relations have been already excluded by them from the category of relation.

The *Philebus*, like the *Cratylus*, is supposed to be the continuation of a previous discussion. An argument respecting the comparative claims of pleasure and wisdom to rank as the chief good has been already

carried on between Philebus and Socrates. The argument is now transferred to Protarchus, the son of Callias (19 B), a noble Athenian youth, sprung from a family which had spent more on the Sophists than all the rest of the world (cp. *Apol.* 20 A, B; *Cratylus*, 391 C). Philebus, who appears to be the teacher (16 B, 36 D), or elder friend, and perhaps the lover (53 D), of Protarchus, takes no further part in the discussion beyond asserting in the strongest manner his adherence, under all circumstances, to the cause of pleasure.

Socrates suggests that they shall have a first and second palm of victory. For there may be a good higher than either pleasure or wisdom, and then neither of them will gain the first prize, but whichever of the two is more akin to this higher good will have a right to the second. They agree, and Socrates opens the game by enlarging on the diverse and multiform nature of pleasure. For there are pleasures of all kinds, good and bad, wise and foolish—pleasures of the temperate as well as of the intemperate. Nay, replies Protarchus, pleasure is pleasure, and therefore in some sense one. Yes, retorts Socrates, pleasure is one, and also many, just as figure is one, and colour is one, and yet there are many colours and many figures. Protarchus is unable to understand him, and insists that, at any rate, all pleasures are good. But how, retorts Socrates, can Protarchus have a right to attribute to them a new predicate, when he cannot deny that they are different? What common property in all of them does he mean to indicate by the term 'good'? If he continues to assert that there is some trivial sense in which pleasure is one, Socrates may retort by saying that knowledge is one, but the result will be that such merely verbal and trivial conceptions, whether of knowledge or pleasure, will spoil the discussion, and will prove the incapacity of the two disputants. In order to avoid this danger, he proposes that they shall beat a retreat, and, before they proceed, come to an understanding about the 'high argument' of the one and the many.

Protarchus agrees to the proposal, but he is under the impression that Socrates means to discuss the common question—how an individual can be one, and yet have opposite attributes, such as great and small, light and heavy, or how there can be many members in one body? and the like wonders. Socrates has long ceased to see any wonder in these phenomena; his difficulty begins with the application of number to abstract ideas, e.g. when we say that man is one, or that good is one.

For have these unities of idea any real existence? Are they always the same? And if the same, how can they be dispersed in others? Or do they remain entire? or both? These difficulties are but imperfectly answered by Socrates in what follows.

We speak of a one and many, which is ever flowing in and about all things, concerning which a young man often runs wild in his first metaphysical enthusiasm, talking about analysis and synthesis to his father and mother and the neighbours, hardly sparing even his dog. This 'one in many' is a revelation of the order of the world, which some Prometheus first made known to our ancestors; and they, who were better men and nearer the gods than we are, have handed down to us. To know how to proceed by regular steps from one to many, and from many to one, is just what makes the difference between eristic and dialectic. And the right way of proceeding is to look for one idea or class in all things, and when you have found one to look for more than one, and all that there are, and when you have found them all and regularly divided a particular field of knowledge into classes, you may leave the further consideration of individuals. But you must not pass at once either from unity to infinity, or from infinity to unity. In music, for example, you may begin with the most general notion, but this alone will not make you a musician: you must know also the number and nature of the intervals, and the systems which are framed out of them, and the rhythms of the dance which correspond to them. And when you have a similar knowledge of any other subject, you may be said to know that subject. In language again there are infinite varieties of sound, and some one who was a wise man, or more than man, comprehended them all in the classes of mutes, vowels, and semivowels, and gave to each of them a name, and assigned them to the art of grammar.

'But whither, Socrates, are you going? And what has this to do with the comparative eligibility of pleasure and wisdom?' Socrates replies, that before we can adjust their respective claims, we want to know the number and kinds of both of them. What are they? He is requested to answer that question himself. That he will, if he may be allowed to make one or two preliminary remarks. In the first place he has a dreamy recollection of hearing that neither pleasure nor knowledge is the highest good, for the good should be perfect and sufficient. But is the life of pleasure perfect and sufficient, when deprived of memory, consciousness, anticipation? Would not that be the life of an oyster? Or is the life

of mind sufficient, if devoid of any particle of pleasure? Must not the union of the two be higher and more eligible than either separately? And is not the element which makes this mixed life eligible more akin to mind than to pleasure? Thus pleasure is rejected and mind is rejected. And yet there may be a life of mind, not human but divine, which conquers still.

But, if we are to pursue this argument further we shall require some new weapons; and by this, I mean a new classification of existence. (1) There is a finite element of existence, and (2) an infinite, and (3) the union of the two, and (4) the cause of the union. More may be added if they are wanted, but at present we can do without them. And first of the infinite or indefinite:—That is the class which is denoted by the terms more or less, and is always in a state of comparison. All words or ideas to which the words ‘gently,’ ‘extremely,’ and other comparative expressions are applied, fall under this class. The infinite would be no longer infinite, if limited or reduced to measure by number and quantity. The opposite class is the limited or finite, and includes all things which have number and quantity. And there is a third class of generation into essence by the union of the finite and infinite, in which the finite gives law to the infinite;—under this are comprehended health, strength, temperate seasons, harmony, beauty, and the like. The goddess of beauty saw the universal wantonness of all things, and gave law and order to be the salvation of the soul. But no effect can be generated without a cause, and therefore there must be a fourth class, which is the cause of generation; for the cause or agent is not the same as the patient or effect.

And now, having obtained our classes, we may determine in which our conqueror life is to be placed: Clearly in the third or mixed class, in which the finite gives law to the infinite. And in which is pleasure to find a place? As clearly in the infinite or indefinite, which alone, as Protarchus thinks (who seems to confuse the infinite with the superlative), gives to pleasure the character of the absolute good. Yes, retorts Socrates, and also to pain the character of absolute evil. And therefore the infinite cannot be that which imparts to pleasure the nature of the good. But where shall we place mind? That is a very serious and awful question, which may be prefaced by another. Is mind or chance the lord of the universe? All philosophers will say the first, and yet, perhaps, they may be only magnifying themselves. And for this reason

I should like to consider the matter a little more deeply, even though some lovers of disorder in the world should ridicule my attempt.

Now the elements earth, air, fire, water, exist in us, and they exist in the cosmos; but they are purer and fairer in the cosmos than they are in us, and they come to us from thence. And as we have a soul as well as a body, in like manner the elements of the finite, the infinite, the union of the two, and the cause, are found to exist in us. And if they, like the elements, exist in us, and the three first exist in the world, must not the fourth or cause which is the noblest of them, exist in the world? And this cause is wisdom or mind, the royal mind of Zeus, who is the king of all, as there are other Gods who have other noble attributes. Observe how well this agrees with the testimony of men of old, who affirmed mind to be the ruler of the universe. And remember that mind belongs to the class which we term the cause, and pleasure to the infinite or indefinite class. We will examine the place and origin of both.

What is the origin of pleasure? Her natural seat is the mixed class, in which health and harmony were placed. Pain is the violation, and pleasure the restoration of limit. There is a natural union of finite and infinite, which in hunger, thirst, heat, cold, is impaired—this is painful, and the return to nature, in which the elements are restored to their normal proportions, is pleasant. Here is our first class of pleasures. And another class of pleasures and pains are hopes and fears; these are in the mind only. And inasmuch as both these classes are free from any actual admixture of pain, the examination of them may show us whether all pleasure is to be desired, or whether this entire desirableness is not rather the attribute of another class. But if pleasures and pains consist in the violation and restoration of limit, may there not be a neutral state, in which there is neither dissolution nor restoration? That is a further question, and admitting, as we must, the possibility of such a state, there seems to be no reason why the life of wisdom should not exist in this neutral state, which is, moreover, the state of the gods, who cannot, without indecency, be supposed to feel either joy or sorrow.

The second class of pleasures involves memory. There are pleasures which are extinguished before they reach the soul, and of these there is no consciousness, and therefore no memory. And there are pleasures which the body and soul feel together, and this feeling is termed consciousness. And memory is the preservation of consciousness, and reminiscence is the recovery of consciousness. Now the memory of

pleasure is the memory of a state opposite to that which the person who has the desire actually feels, and is therefore in the mind. And there may be also an intermediate state, in which the person desiring is balanced between pleasure and pain, or has two pains, when he is in pain of body as well as in despair of being satisfied. But also he may be quite sure that he will be satisfied, and then he has an actual pain, but a hope and recollection of pleasure. Here arises another question: May not pleasures, like opinions, be true and false? In the sense of being real, both must be admitted to be true: nor can we deny that to both of them qualities may be attributed; for pleasures as well as opinions may be described as good or bad. And though we do not all of us allow that there are true and false pleasures, we all acknowledge that there are some pleasures associated with right opinion, and others with falsehood and ignorance. Let us endeavour to analyse the nature of this association.

Opinion is based on perception, which may be correct or mistaken. You may see a figure at a distance, and say first of all, 'This is a man,' and then say, 'No, this is an image made by the shepherds.' And you may affirm this in a proposition to your companion, or make the remark mentally to yourself. Whether the words are actually spoken or not, on such occasions there is a scribe within who registers them, and a painter who paints the images of them, which he abstracts from sense, in the soul,—at least that is my own notion of the process; and the words and images which are inscribed by them may be either true or false; and they may represent either past, present, or future. And, representing the future, they must also represent the pleasures and pains of anticipation—the visions of gold and other fancies which are never wanting in the mind of man. Now these hopes, as they are termed, are propositions, which are sometimes true, and sometimes false; for the good, who are the friends of the gods, see true pictures of the future, and the bad false ones. And as there may be opinion about things which are not, were not, and will not be, which is opinion still, so there may be pleasure about things which are not, were not, and will not be, which is pleasure still,—that is to say, false pleasure; and only when false can pleasure, like opinion, be vicious. Against this conclusion Protarchus reclaims.

Leaving his denial for the present, Socrates proceeds to show that some pleasures are false from another point of view. In desire, as we admitted, the body is divided from the soul, and hence pleasures and

pains are often simultaneous. And we further admitted that both of them belonged to the infinite class. How, then, can we compare them? Are we not liable, or rather certain, as in the case of sight, to be deceived by distance? Observe, that in this case not only are the pleasures and pains based upon false opinion, but they are themselves false. And there is another illusion: pain has often been said by us to arise out of the derangement—pleasure out of the restoration—of our nature. But in passing from one to the other, do we not experience neutral states, which although they appear pleasurable or painful are really neither? For even if we admit, with the wise man whom Protarchus loves (and only a wise man could have ever entertained such a notion), that all things are in a perpetual flux, still these changes are often unconscious, and devoid either of pleasure or pain. We assume, then, that there are three states—pleasurable, painful, neutral, which we may embellish a little by calling them gold, silver, and that which is neither.

But there are other philosophers who regard these three states as two only. Their instinctive dislike to pleasure leads them to affirm that pleasure is only the absence of pain. They are noble fellows, and, although we do not agree with them, we may use them as diviners who will indicate to us the right track. They will say, that the nature of anything is best known from the examination of extreme cases, e. g. the nature of hardness from the examination of the hardest things; and that the nature of pleasure will be best understood from an examination of the most intense pleasures. Now these are the pleasures of the body, not of the mind; the pleasures of disease and not of health, the pleasures of the intemperate and not of the temperate. I am speaking, not of the frequency or continuance, but only of the intensity of such pleasures, and this is given them by contrast with the pain or sickness of body which precedes them. Their morbid nature is illustrated by the lesser instances of itching and scratching, respecting which I swear that I cannot tell whether they are a pleasure or a pain. (1) Some of these arise out of a transition from cold to hot, from bitter to sweet, and the like; (2) others are partly pains, and are caused by the contrast of different bodily feelings, in which pain predominates, as in scratching or tickling when the pleasure on the surface contrasts with some internal pain; (3) others again are produced by other kinds of violent excitement;—both these and the last are accompanied by all sorts of unutterable feelings—there is a death of delights in them. But there are also mixed pleasures

which are in the mind only. For are not love and sorrow as well as anger, sweeter than honey, and also full of pain? Is there not a mixture of feelings in the spectator of tragedy? and of comedy also? 'I do not understand that last.' Well, then, with the view of lighting up the obscurity of these mixed feelings, let me ask whether envy is painful? 'Yes.' And yet the envious man finds something pleasing in the misfortunes of others? 'True.' And ignorance is a misfortune? 'Certainly.' And the ignorant is entirely devoid of self-knowledge—he may fancy himself richer, fairer, better, wiser than he is? 'Yes.' And he may be strong or weak in his ignorant superiority? 'He may.' And if he is strong we fear him, and if he is weak we laugh at him, and yet we envy him, and like to see him suffer? These mixed feelings are the rationale of tragedy and comedy, and equally the rationale of the greater drama of human life¹. Having explained sorrow, fear, anger, envy, I will reserve the analysis of the remainder for another occasion.

Next follow the unmixed pleasures; which, unlike the philosophers of whom I was speaking, I believe to be real. These unmixed pleasures are: (1) The pleasures derived from beauty of form, colour, sound, smell, which are absolutely pure; and in general those which are unalloyed with pain: (2) The pleasures derived from the acquisition of knowledge, which in themselves are pure, but may be attended by an accidental pain of forgetting; this, however, arises from a subsequent act of reflection, which is not to be included in them. At the same time, we admit that the latter pleasures are the property of a very few. To these pure and unmixed pleasures we ascribe measure, whereas all others belong to the class of the infinite, and are liable to every species of excess. And here several questions arise for consideration:—What is the meaning of pure and impure; of moderate and immoderate? We may answer the question by an illustration: Purity of white paint consists in the clearness or quality of the white, and this is distinct from the quantity or

¹ There appears to be some confusion in this passage. There is no difficulty in seeing that in comedy, as in tragedy, the spectator may view the performance with mixed feelings of pain as well as of pleasure; nor is there any difficulty in understanding that envy is a mixed feeling, which rejoices not without pain at the misfortunes of others, and laughs at their ignorance of themselves. But Plato seems to think further that he has explained the feeling of the spectator in comedy sufficiently by a theory which only applies to comedy in so far as in comedy we laugh at the conceit or weakness of others. He has certainly given a very partial explanation of the ridiculous.

amount of white paint; a little pure white is fairer than a great deal which is impure. But there is another question:—Pleasure is affirmed by ingenious philosophers to be a generation; they say that there are two natures—one self-existent, the other dependent; the one noble and majestic, the other failing in both these qualities.—‘I do not understand.’ There are lovers and there are loves. ‘Yes, I know, but what is the application?’ The argument is in play, and desires to intimate that there are relatives and there are absolutes, and that the relative is for the sake of the absolute; and generation is for the sake of essence. Under relatives I class all things done with a view to generation; and essence is of the class of good. But if essence is of the class of good, generation must be of some other class; and our friends, who affirm that pleasure is a generation, would laugh at the notion that pleasure is a good; and at that other notion, that pleasure is satisfied in generation, which is only the alternative of destruction. Who would prefer such an alternation to the equable life of pure thought? Here is one absurdity, and not the only one, to which the friends of pleasure are reduced. For is there not also an absurdity in affirming that good is of the soul only, and at the same time declaring that the best of men, if he be in pain, is bad?

And now, from the consideration of pleasure, we pass to that of knowledge. Let us reflect that there are two kinds of knowledge—the one creative or productive, and the other educational and philosophical. Of the creative arts, there is one part purer or more akin to knowledge than the other. There is an element of guess-work and an element of number and measure in them. In music, for example, especially in flute-playing, the conjectural element prevails; while in carpentering there is more application of rule and measure. Of the creative arts, then, we may make two classes—the less exact and the more exact. And the exacter part of all of them is really arithmetic and mensuration. But arithmetic and mensuration again may be subdivided with reference either to their use in the concrete, or to their nature in the abstract—as they are applied popularly to various magnitudes, or by philosophers to one only. And, borrowing the analogy of pleasure, we may say that the philosophical use of them is purer than the other. Thus we have two arts of arithmetic, and two of mensuration. And truest of all in the estimation of every rational man is dialectic, or the science of being, which will forget and disown us, if we forget and disown her.

‘But, Socrates, I have heard Gorgias say that rhetoric is the greatest and usefulest of arts; and I should not like to quarrel either with him or you.’ Neither is there any inconsistency, Protarchus, with his statement in what I am now saying; for I am not maintaining that dialectic is the greatest or usefulest, but only the truest of arts; my remark is not quantitative but qualitative, and has reference not to advantage or reputation, but to the love of knowledge and truth, in which Gorgias will not care to compete; these are what we affirm to be possessed in the highest degree by dialectic. And do not let us appeal to Gorgias or Philebus or Socrates, but ask, on behalf of the argument, what are the highest truths which the soul has the power of attaining. And is not this the science which has a firmer grasp of them than any other? For the arts generally are only occupied with matters of opinion, and with the production and action and passion of this sensible world. But the highest truth is that which is eternal and unchangeable. And reason and wisdom are concerned with this; and they are the very claimants, if not for the first, at least for the second place, whom I propose as rivals to pleasure.

And now, having the materials, we may proceed to mix them—first recapitulating the question at issue.

Philebus affirmed pleasure to be the good, and assumed them to be one nature; I affirmed that they were two natures, and declared that knowledge was more akin to the good than pleasure. I said that the two together were more eligible than either taken singly; and to this we adhere. Reason intimates, as at first, that we should seek the good not in the unmixed life, but in the mixed.

The cup is ready, waiting to be mingled, and there are two fountains, one of honey, the other of pure water, out of which we make the fairest possible mixture. There were pure and impure pleasures—pure and impure sciences. And first, let us take the pure pleasures, and pour them in, not allowing the impure to enter, for that would be dangerous. Next, let us take the pure sciences; but shall we mingle the impure—the art which uses the false rule and the false measure? That we must, if we are any of us to find our way home; man cannot live upon pure mathematics alone. And must I include music, which is admitted to be guess-work? ‘Yes, you must, if human life is to have any humanity.’ Well, then, I will open the door and let them all in; they shall mingle in an Homeric meeting of the waters. And now we turn to the pleasures;

shall I admit them? 'Admit first of all the pure pleasures; secondly, the necessary.' And what shall we say about the rest? First, ask the pleasures—they will be too happy to dwell with wisdom. Secondly, ask the arts and sciences—they reply that the excesses of intemperance are the ruin of them; and that they would rather only have the pleasures of health and temperance, which are the handmaidens of virtue. But still we want truth? That is now added; and so the argument is complete, and may be compared to an incorporeal law, holding fair rule over a living body. And now we are at the vestibule of the good, in which there are three chief elements—truth, symmetry, and beauty. These will be the criterion of the comparative claims of pleasures and wisdom.

Which has the greater share of truth? Surely wisdom; for pleasure is the veriest impostor in the world, and the perjuries of lovers have passed into a proverb.

Which of symmetry? Wisdom again; for nothing is more immoderate than pleasure.

Which of beauty? Once more, wisdom; for pleasure is often unseemly, and the greatest pleasures are put out of sight.

Not pleasure, then, ranks first in the scale of good; but measure, and eternal harmony.

Secondly: The symmetrical and beautiful and perfect.

Thirdly: Mind and wisdom.

Fourthly: Sciences and arts and true opinions.

Fifthly: Painless pleasures.

Of a sixth class, I have nothing to say. Thus, pleasure and mind may both renounce the claim to the first place. But mind is ten thousand times nearer to the chief good than pleasure. Pleasure ranks fifth and not first, even though all the animals in the world assert the contrary.

From the days of Aristippus and Epicurus to our own times the nature of pleasure has occupied the attention of philosophers. 'Is pleasure an evil? a good? the only good?' are the simple forms which the enquiry assumed among the Socratic schools. But at an early stage of the controversy another question was asked: 'Do pleasures differ in kind? and are some bad, some good, and some neither bad nor good?' There are bodily and there are mental pleasures, which were

at first confused but afterwards distinguished. A distinction was also made between necessary and unnecessary pleasures; and again between pleasures which had or had not corresponding pains. The ancient philosophers were fond of asking, in the language of their age, Was pleasure a 'becoming' only, and therefore transient and relative, or did some pleasures partake of truth and being? To these ancient speculations the moderns have added a further question:— 'Whose pleasure?' 'The pleasure of yourself, or of your neighbour, of the individual, or of the world?' This little addition has changed the whole aspect of the discussion: the same word is now supposed to include two principles as widely different as benevolence and self-love. Some modern writers have also distinguished between pleasure the test, and pleasure the motive of actions. For the universal test of the rightness of actions (how I know them) may not always be the highest or best motive of them (why I do them).

Socrates, as we learn from the Memorabilia of Xenophon, first drew attention to the consequences of actions. Mankind were said by him to act rightly when they knew what they were doing, or, in the language of the Gorgias, did what they would. He seems to have been the first who maintained that the good was the useful (Mem. iv. 6, 8). In his eagerness for generalization, seeking, as Aristotle says, for the universal in Ethics (Metaph. i. 6), he took the most obvious intellectual aspect of human action which occurred to him. He meant to emphasize not pleasure but the calculation of pleasure; neither is he arguing that pleasure is the chief good, but that we should have a principle of choice. He did not intend to oppose 'the useful' to some higher conception, such as the Platonic ideal, but to chance and caprice. The Platonic Socrates pursues the same vein of thought in the Protagoras (351 foll.), where he argues against the so-called sophist that pleasure and pain are the final standards and motives of good and evil, and that the salvation of human life depends upon a right estimate of pleasures greater or less when seen near and at a distance. The testimony of Xenophon is thus confirmed by that of Plato, and we are therefore justified in calling Socrates the first utilitarian; as indeed there is no side or aspect of philosophy which may not with reason be ascribed to him—he is Cynic and Cyrenaic, Platonist and Aristotelian in one. But in the Phædo the Socratic has already passed into a more ideal point of view (pp. 68, 69); and he, or rather Plato speaking in his person expressly repudiates the notion that the

exchange of a less pleasure for a greater can be the exchange of virtue. Such virtue is the virtue of ordinary men who live in the world of appearance; they are temperate only that they may enjoy the pleasures of intemperance, and courageous from fear of danger. Whereas the philosopher is seeking after wisdom and not after pleasure, whether near or distant: he is the mystic, the initiated, who has learnt to despise the body and is yearning all his life long for a truth which will hereafter be revealed to him. In the Republic (ix. 582) the pleasures of knowledge are affirmed to be superior to other pleasures, because the philosopher so estimates them; and he alone has had experience of both kinds. (Compare a similar argument urged by one of the latest defenders of Utilitarianism, Mill on Utility, p. 12.) In the Philebus, Plato, although he regards the enemies of pleasure with complacency, still further modifies the transcendentalism of the Phaedo. For he is compelled to confess, rather reluctantly, perhaps, that some pleasures, i. e. those which have no antecedent pains, claim a place in the scale of goods.

There have been many reasons why not only Plato but mankind in general have been unwilling to acknowledge that 'pleasure is the chief good.' Either they have heard a voice calling to them out of another world; or the life and example of some great teacher has cast their thoughts of right and wrong in another mould; or the word 'pleasure' has been associated in their mind with merely animal enjoyment. They could not believe that what they were always striving to overcome, and the power or principle in them which overcame, were of the same nature. The pleasure of doing good to others and of bodily self-indulgence; the pleasures of intellect and the pleasures of sense, are so different:—Why then should they be called by a common name? Or, if the equivocal or metaphorical use of the word is justified by custom (like the use of other words which at first referred only to the body, and then by a figure have been transferred to the mind) still, why should we make an ambiguous word the corner-stone of moral philosophy? To many the Utilitarian or hedonistic mode of speaking has appeared to be at variance with religion and with any higher conception both of politics and of morals. It has not satisfied their imagination; it has offended their taste. To elevate pleasure the most fleeting of all things into a general idea seems to them a contradiction. They do not desire to bring down their theory to the level of their practice. The simplicity

of the 'greatest happiness' principle has been acceptable to philosophers, but the world in general has been slow to receive it.

Before proceeding, we may make a few admissions which will narrow the field of dispute; and we may as well leave behind a few prejudices, which intelligent opponents of Utilitarianism have by this time 'agreed to discard.' We admit then that Utility is co-extensive with right, and that no action can be right which does not tend to the happiness of mankind; we acknowledge that a large class of actions are made right or wrong by their consequences only; we say further that mankind are not too mindful, but that they are far too regardless of consequences, and that they need to have the doctrine of utility habitually inculcated on them. We recognize the simplicity of the principle which supplies a connecting link between Ethics and Politics, and under which all human actions are or may be included. The desire to promote happiness is no mean preference of expediency to right, but one of the highest and noblest motives by which human nature can be animated. Neither in referring actions to the test of utility have we to make a laborious calculation, any more than in trying them by other standards of morals. For long ago they have been classified sufficiently for all practical purposes by the thinker, by the legislator, by the opinion of the world. Whatever may be the hypothesis on which they are explained, or which in doubtful cases may be applied to the regulation of them, we are very rarely, if ever, called upon at the moment of action to determine their effect upon the happiness of mankind.

There is a theory which has been contrasted with Utility by Paley and others—the theory of a moral sense: Are our ideas of right and wrong innate or derived from experience? This, perhaps, is another of those speculations which intelligent men might 'agree to discard.' For it has been worn threadbare; and either alternative is equally consistent with a transcendental or with an eudaemonistic system of ethics, with a greatest happiness principle or with Kant's law of duty. Yet to avoid misconception, what appears to be the truth about the origin of our moral ideas may be shortly summed up as follows:—To each of us individually our moral ideas come first of all in childhood through the medium of education, from parents and teachers, assisted by the unconscious influence of language; they are impressed upon a mind which at first is like a waxen tablet, adapted to receive them; but they soon become fixed or set, and in after life are strengthened, or perhaps weakened by the force of

public opinion. They may be corrected and enlarged by experience, they may be reasoned about, they may be brought home to us by the circumstances of our lives, they may be intensified by imagination, by reflection, by a course of action likely to confirm them. Under the influence of religious feeling or by an effort of thought, any one beginning with the ordinary rules of morality may create out of them for himself ideals of holiness and virtue. They slumber in the minds of most men, yet in all of us there remains some tincture of affection, some desire of good, some fear of the law. Something like this is the state or process which each individual is conscious of in himself, and if he compares his own experience with that of others he will find to be the same in them. All of us have entered into an inheritance which we have the power of appropriating and making our own. No great effort of mind is required on our part; we learn morals, as we learn to talk, instinctively, from conversing with others, in an enlightened age, in a civilized country, in a good home. A well-educated child of ten years old already knows the essentials of morals: 'Thou shalt not steal,' 'thou shalt speak the truth,' 'thou shalt love thy parents,' 'thou shalt fear God.' What more does he want?

But whence comes this common inheritance or stock of moral ideas? Their beginning, like all other beginnings of human things, is obscure, and is the least important part of them. Imagine, if you will, that Society originated in the herding of brutes, in their parental instincts, in their rude attempts at self-preservation:—Man is not man in that he resembles, but in that he differs from them. We have passed into another cycle of existence, before we can discover in him by any evidence accessible to us even the germs of our moral ideas. In the history of the world, which viewed from within is the history of the human mind, they have been slowly created by religion, by poetry, by law, having their foundation in the natural affections and in the necessity of some degree of truth and justice in a social state; they have been deepened and enlarged by the efforts of great thinkers who have idealized and connected them—by the lives of saints and prophets who have taught and exemplified them. The schools of ancient philosophy which seem so far from us—Socrates, Plato, Aristotle, the Stoics, the Epicureans, a few modern teachers such as Kant and Bentham have each of them supplied 'moments' of thought to the world. The life of Christ has embodied a divine love, wisdom, patience, reasonableness.

From his image, however imperfectly handed down to us, the modern world has received a standard more perfect in idea than the societies of ancient times, but also further removed from practice. For there is certainly a greater interval between the theory and practice of Christians than between the theory and practice of the Greeks and Romans; the ideal is more above us, and the aspiration after good has often lent a strange power to evil. And sometimes, as at the Reformation, or French Revolution, when the upper classes of a so-called Christian country have become corrupted by priestcraft, by casuistry, by licentiousness, by despotism, the lower have risen up and re-asserted the natural sense of religion and right.

We may further remark that our moral ideas, as the world grows older, perhaps as we grow older ourselves, unless they have been undermined in us by false philosophy or the practice of mental analysis, or infected by the corruption of society, or by some moral disorder in the individual, are constantly assuming a more natural and necessary character. The habit of the mind, the opinion of the world, familiarizes them to us; and they take more and more the form of immediate intuition. The moral sense comes last and not first in the order of their development, and is the instinct which we have inherited or acquired, not the nobler effort of reflection which created and which keeps them alive. We do not stop to reason about common honesty. Whenever we are not blinded by self-deceit, as for example in judging the actions of others, we have no hesitation in determining what is right and wrong. The principles of morality, when not at variance with some desire or worldly interest of our own, or with the opinion of the public, are hardly perceived by us; but in the conflict of reason and passion they assert their authority and are not overcome without remorse.

Such is a brief outline of the history of our moral ideas. We have to distinguish, first of all, the manner in which they have grown up in the world from the manner in which they have been communicated to each of us. We may represent them to ourselves as flowing out of the boundless ocean of language and thought, in little rills which convey them to the heart and brain of each individual. But neither must we confound the theories or aspects of morality with the origin of our moral ideas. These are not the roots or 'origines' of morals, but the latest efforts of reflection, the lights in which the whole moral world has been regarded by different thinkers and successive generations of men. If we

ask Which of these many theories is the true one? we may answer All of them—moral sense, innate ideas, *a priori*, *a posteriori* notions, the philosophy of experience, the philosophy of intuition—all of them have added something to our conception of Ethics; no one of them is the whole truth. But to decide how far our ideas of morality are derived from one source or another; to determine what history, what philosophy has contributed to them; to distinguish the original, simple elements from the manifold and complex applications of them, would be a long enquiry too far removed from the question which we are now pursuing.

Bearing in mind the distinction which we have been seeking to establish between our earliest and our most mature ideas of morality, we may now proceed to state the theory of Utility, not exactly in the words, but in the spirit of one of its ablest and most moderate supporters¹:—‘That which alone makes actions either right or desirable is their utility, or tendency to promote the happiness of mankind, or, in other words, to increase the sum of pleasure in the world. But all pleasures are not the same: they differ in quality as well as in quantity, and the pleasure which is superior in quality is incommensurable with the inferior. Neither is the pleasure or happiness which we seek, our own pleasure, but that of others,—of our family, of our country, of mankind. The desire of this, and even the sacrifice of our own interest to that of other men, may become a passion to a rightly educated nature. The Utilitarian finds a place in his system for this virtue and for every other.’

Good or happiness or pleasure is thus regarded as the true and only end of human life. To this all our desires will be found to tend, and in accordance with this all the virtues, including justice, may be explained. Admitting that men rest for a time in inferior ends, and do not cast their eyes beyond them, these ends are really dependent on the greater end of happiness, and would not be pursued, unless in general they had been found to lead to it. The existence of such an end is proved, as in Aristotle’s time, so in our own, by the universal fact that men desire it. The obligation to promote it is based upon the social nature of man, a feeling which is shared by all of us in some degree, and is capable of being greatly fostered and strengthened. So far from being inconsistent with religion, the greatest happiness principle is in the highest degree

¹ Mill on Utility.

agreeable to it. For what can be more reasonable than that God should will the happiness of all his creatures? and in working out their happiness we may be said to be 'working together with him.' Nor is it inconceivable that a new enthusiasm of the future, far stronger than any old religion, may be based upon such a conception.

But then for the familiar phrase of the 'greatest happiness principle,' it seems as if we ought now to read 'the noblest happiness principle,' 'the happiness of others principle'—the principle not of the greatest, but of the highest pleasure, pursued with no more regard to our own immediate interest than is required by the law of self-preservation. Transfer the thought of happiness to another life, dropping the external circumstances which form so large a part of our idea of happiness in this, and the meaning of the word becomes indistinguishable from holiness, harmony, wisdom, love. By the slight addition 'of others,' all the associations of the word are altered; we seem to have passed over from one theory of morals to the opposite. For allowing that the happiness of others is reflected on ourselves, and also that every man must live before he can do good to others, still the last limitation is a very trifling exception, and the happiness of another is very far from compensating for the loss of our own. According to Mr. Mill, he would best carry out the principle of utility who sacrificed his own pleasure most to that of his fellow men. But if so, Hobbes and Butler, Shaftesbury and Hume, are not so far apart as they and their followers imagine. The thought of self and the thought of others are alike superseded in the more general notion of the happiness of mankind at large. But in this composite good, until society becomes perfected, the friend of man himself has generally the least share, and may be a great sufferer.

And now what objection have we to urge against a system of moral philosophy so beneficent, so enlightened, so ideal, and at the same time so practical,—so Christian, as without exaggeration we may say,—and which has the further advantage of resting morality on a principle intelligible to all capacities? Have we not found that which Socrates and Plato grew old in seeking for? Are we not desirous of happiness, at any rate for ourselves and our friends, if not for all mankind? If, as is natural, we begin by thinking of ourselves first, we are easily led on to think of others; for we cannot help acknowledging that what is right for us is the right and inheritance of others. We feel the advantage of an abstract principle wide enough and strong enough to override

all the particularisms of mankind; which acknowledges a universal good, truth, right, which is capable of inspiring men like a passion, and is the symbol of a cause for which they are ready to contend to their life's end.

And if we test this principle by the lives of its professors, it would certainly appear inferior to none as a rule of action. From the days of Eudoxus (Arist. Ethics, x. 2) and Epicurus to our own, the votaries of pleasure have gained belief for their principles by their practice. Two of the noblest and most disinterested men who have lived in this century, Bentham and J. S. Mill, have been the most conspicuous advocates of the doctrine. Their lives were a long devotion to the service of their fellow-men; while among their contemporaries, some who were of a more mystical turn of mind, have ended rather in aspiration than in action, and have been found unequal to the duties of life. Looking back on them now that they are removed from the scene, we feel that mankind has been the better for them. The world was against them while they lived; but this is rather a reason for admiring than for depreciating them. Nor can any one doubt that the influence of their philosophy on politics, especially on foreign politics, on law, on social life, has been upon the whole beneficial. Nevertheless, they will never have justice done to them, for they do not agree either with the better feeling of the multitude or with the idealism of more refined thinkers. Without Bentham, a great word in the history of philosophy would have remained unspoken. Yet to this day it is rare to hear his name received with any mark of respect such as would be freely granted to the ambiguous memory of some father of the Church. The odium which attached to him when alive has not been removed by his death. For he shocked the prejudices of mankind, perhaps from a certain egotism and want of taste; and this generation which has reaped the benefit of his labours has inherited the feeling of the last.

While acknowledging the benefits which the greatest happiness principle has conferred upon mankind, the time appears to have arrived, not for denying its claims, but for criticizing them and comparing them with other principles which equally claim to lie at the foundation of ethics. Any one who adds a general principle to knowledge has been a benefactor to the world. But there is a danger that, in his first enthusiasm, he may not recognize the proportions or limitations to which his truth is subjected; he does not see how far he has given birth to a truism, or how

far that which is a truth to him is a truism to the rest of the world, or may become so to the next generation. He believes that to be the whole which is only a part,—to be the necessary foundation which is really only a valuable aspect of the truth. The systems of all philosophers require the criticism of ‘the morrow,’ when the heat of imagination which forged them has cooled, and they are seen in the temperate light of day. All of them have contributed to the thoughts of the civilized world; none of them occupy that supreme or exclusive place which their authors would have assigned to them.

We may preface the criticism with a few preliminary remarks:—

Mr. Mill, Mr. Austin, and others, in their eagerness to maintain the doctrine of utility, are fond of repeating that we are in a lamentable state of uncertainty about morals. While other branches of knowledge have made extraordinary progress, in moral philosophy we are supposed by them to be no better than children, and with few exceptions—that is to say, Bentham and his admirers—to be no further advanced than men were in the age of Socrates and Plato, who, in their turn, are deemed to be as backward in ethics as they necessarily were in physics. But this, though often asserted, is recanted almost in a breath by the same writers who speak thus depreciatingly of our modern ethical philosophy. For they are the first to acknowledge that we have not now to begin classifying actions under the head of utility; they would not deny that about the general conceptions of morals there is a practical agreement. There is no more doubt that falsehood is wrong than that a stone falls to the ground, although the first does not admit of the same ocular proof as the second. There is no greater uncertainty about the duty of obedience to parents and to the law of the land than about the properties of triangles. Unless we are looking for a new moral world which has no marrying and giving in marriage, there is no greater disagreement in theory about the right relations of the sexes than about the composition of water. These and a few other simple principles, as they have endless applications in practice, so also may be developed in theory into counsels of perfection.

To what then is to be attributed this opinion which has been often entertained about the uncertainty of morals? Chiefly to this,—that philosophers have not always distinguished the theoretical and the casuistical uncertainty of morals from the practical certainty. There is an uncertainty about details,—whether, for example, under given circumstances

such and such a moral principle is to be enforced, or whether in some cases there may not be a conflict of principles: these are the exceptions to the ordinary rules of morality, important, indeed, but not extending to the one thousandth or one ten-thousandth part of human actions. This is the domain of casuistry. Secondly, the aspects under which the most general principles of morals may be presented to us are many and various. The mind of man has been more than usually active in thinking about man. The conceptions of harmony, happiness, right, freedom, benevolence, self-love, have all of them seemed to some philosopher or other the truest and most comprehensive expression of morality. There is no difference, or at any rate no great difference, of opinion about the right and wrong of actions, but only about the general notion which furnishes the best explanation or gives the most comprehensive view of them. This, in the language of Kant, is the sphere of the metaphysic of ethics. But these two uncertainties at either end, *ἐν τοῖς μάλιστα καθόλου* and *ἐν τοῖς καθ' ἕκαστα*, leave space enough for an intermediate principle which is practically certain.

The rule of human life is not dependent on the theories of philosophers: we know what our duties are for the most part before we speculate about them. And the use of speculation is not to teach us what we already know, but to inspire in our minds an interest about morals in general, to strengthen our conception of the virtues by showing that they confirm one another, to prove to us, as Socrates would have said, that they are not many, but one. There is the same kind of pleasure and use in reducing morals, as in reducing physics, to a few very simple truths. And not unfrequently the more general principle may correct prejudices and misconceptions, and enable us to regard our fellow men in a larger and more generous spirit.

The two qualities which seem to be most required in first principles of ethics are, (1) that they should afford a real explanation of the facts, (2) that they should inspire the mind,—should harmonize, strengthen, settle us. We can hardly estimate the influence which a simple principle such as 'act so as to promote the happiness of mankind,' or 'act so that the rule on which thou actest may be adopted as a law by all rational beings,' may exercise on the mind of an individual. They will often seem to open a new world to him, like the religious conceptions of faith or the spirit of God. The difficulties of ethics disappear when we do not suffer ourselves to be distracted between different points of view.

But to maintain their hold on us, the general principles must also be psychologically true—they must agree with our experience, they must accord with the habits of our minds.

When we are told that actions are right or wrong only in so far as they tend towards happiness, we naturally ask what is meant by 'happiness.' For the term in the common use of language is only to a certain extent commensurate with moral good and evil. We should hardly say that a good man could be utterly miserable (Arist. Ethics, i. 11), or place a bad man in the first rank of happiness. But yet, from various circumstances, the measure of a man's happiness may be out of all proportion to his desert. And if we insist on calling the good man alone happy, we shall be using the term in some new and transcendental sense, as synonymous with well-being. We have already seen that happiness includes the happiness of others as well as our own; we must now comprehend unconscious as well as conscious happiness under the same word. There is no harm in this extension of the meaning, but a word which admits of such an extension can hardly be made the basis of a philosophical system. The exactness which is required in philosophy will not allow us to comprehend under the same term two ideas so different as the subjective feeling of pleasure or happiness and the objective reality of a state which receives our moral approval.

Like Protarchus in the *Philebus*, we can give no answer to the question, 'What is that common quality which in all states of human life we call happiness?' which includes the lower and the higher kind of happiness, and is the aim of the noblest, as well as of the meanest of mankind. If we say Not pleasure, not virtue, not wisdom, nor yet any quality which we can abstract from these—what then? After seeming to hover for a time on the verge of a great truth, we have gained only a truism.

Let us ask the question in another form. What is that which constitutes happiness, over and above the several ingredients of health, wealth, pleasure, virtue, knowledge, which are included under it? Perhaps we answer, 'the subjective feeling of them.' But this is very far from being coextensive with right. Or we may reply that happiness is the whole of which the above-mentioned are the parts. Still the question recurs, 'In what does the whole differ from all the parts?' And if we are unable to distinguish them, happiness will be the mere aggregate of the goods of life.

Again, while admitting that in all right actions there is an element

of happiness, we cannot help seeing that the utilitarian theory supplies a much easier explanation of some virtues than of others. Of many patriotic or benevolent actions we can give a straightforward account by their tendency to promote happiness. For the explanation of justice, on the other hand, we have to go a long way round. No man is indignant with a thief because he has not promoted the greatest happiness of the greatest number, but because he has done him a wrong. There is an immeasurable interval between a crime against property or life, and the omission of an act of charity or benevolence. Yet of this interval the utilitarian theory takes no cognizance. The greatest happiness principle strengthens our sense of positive duties towards others, but weakens our recognition of their rights. To promote in every way possible the happiness of others may be a counsel of perfection, but hardly seems to offer any ground for a theory of obligation. For admitting that our ideas of obligation are partly derived from religion and custom, yet they seem also to contain other essential elements which cannot be explained by the tendency of actions to promote happiness. Whence comes the necessity of them? Why are some actions rather than others which equally tend to the happiness of mankind imposed upon us with the authority of law? 'You ought' and 'you had better' are fundamental distinctions in human thought; and having such distinctions, why should we seek to efface and unsettle them?

Bentham and Mr. Mill are earnest in maintaining that happiness includes the happiness of others as well as of ourselves. But what two notions can be more opposed in many cases than these? Granting that in a perfect state of the world my own happiness and that of all other men would coincide, in the imperfect state they often diverge, and I cannot truly bridge over the difficulty by saying that men will always find pleasure in sacrificing themselves or in suffering for others. Upon the greatest happiness principle it is admitted that I am to have a share, and in consistency I should pursue my own happiness as impartially as that of my neighbour. But who can decide what proportion should be mine and what his, except on the principle that I am most likely to be deceived in my own favour, and had therefore better give the larger share, if not all, to him?

Further, it is admitted that utility and right coincide, not in particular instances, but in classes of actions. But is it not distracting to the conscience of a man to be told that in the particular case they are

opposed? Happiness is said to be the ground of moral obligation, yet he must not do what clearly conduces to his own happiness if it is at variance with the good of the whole. Nay, further, he will be taught that when utility and right are in partial conflict any amount of utility short of the greatest (for then the useful would be the good) does not alter a hair's-breadth the morality of the action; and that the non-detection of an immoral act, say of telling a lie, which may often make the greatest difference in the consequences, not only to himself, but to all the world, makes none whatever in the act itself.

Again, if we are concerned not with particular actions but with classes of actions, is the tendency of actions to happiness a principle upon which we can classify them? There is a universal law which declares the same acts to be right or wrong in all men:—can there be any universality in the law which measures actions by their tendencies towards happiness? For an act which is the cause of happiness to one person may be the cause of unhappiness to another; or an act which if performed by one person may increase the happiness of mankind may have the opposite effect, if performed by another. Right can never be wrong, or wrong right, but there are no actions which tend to the happiness of mankind which may not under other circumstances tend to their unhappiness. Unless we say not only that all right actions tend to happiness, but that they tend to happiness in the same degree in which they are right (and in that case the word 'right' is plainer), we weaken the absoluteness of our moral standard; we reduce differences in kind to differences in degree; we obliterate the stamp which the authority of ages has set upon human actions.

Once more: turning from theory to practice we feel the importance of retaining the received distinctions of morality. Words such as truth, justice, honesty, virtue, love, have a simple meaning; they have become sacred to us,—'the word of God' written on the human heart: to no other words can the same associations be attached. We cannot explain them adequately on principles of utility; in attempting to do so we rob them of their true character. We give them a meaning often paradoxical and distorted, and generally weaker than their signification in common language. And as words influence men's thoughts, we fear that the hold of morality may also be weakened, and the sense of duty impaired, if virtue and vice are explained only as the qualities which do or do not contribute to the pleasure of the world. In that very expression

we seem to detect a false ring, for pleasure is individual not universal; we speak of eternal and immutable justice, but not of eternal and immutable pleasure; nor by any refinement can we avoid some taint of bodily sense adhering to the meaning of the word.

Again: the higher the view which men take of life, the more they lose sight of their own pleasure or interest. True religion is not working for a reward only, but is ready to work equally without a reward. It is not 'doing the will of God for the sake of eternal happiness,' but doing the will of God because it is best, whether rewarded or unrewarded. And this applies to others as well as to ourselves. For he who sacrifices himself for the good of others, does not sacrifice himself that they may be saved from the persecution which he endures for their sakes, but rather that they in their turn may be able to undergo similar sufferings, and like him stand fast in the truth. To promote their happiness is not his first object, but to elevate their moral nature. Both in his own case and that of others there may be happiness in the distance, but if there were no happiness he would equally act as he does. We are speaking of the highest and noblest natures: and once more the question arises 'Whether that can be the first principle of morals which has been hardly thought of by the greatest benefactors of mankind?'

The admissions that pleasures differ in kind, and that actions are already classified; the acknowledgment that happiness includes the happiness of others, as well as of ourselves; the confusion (not made by Aristotle) between conscious and unconscious happiness, or between happiness the energy and happiness the result of the energy, introduce uncertainty and inconsistency into the whole enquiry. We reason readily and cheerfully from a greatest happiness principle. But the partisans of utility are disagreed among themselves when we ask the meaning of the word. Still less can they impart to others a common conception or conviction of the nature of happiness. The meaning of the word is always insensibly slipping away from us, into pleasure, out of pleasure, now appearing as the motive, now as the test of actions, and sometimes varying in successive sentences. And as in a mathematical demonstration an error in the original number disturbs the whole calculation which follows, this fundamental uncertainty about the word vitiates all the applications of it. Must we not admit that a notion so uncertain in meaning, so void of content, so at variance with common language and opinion, does not comply adequately with either of our two requirements? It can neither

strike the imaginative faculty, nor give an explanation of phenomena which is in accordance with our individual experience. It supplies only a partial account of human actions: it is one among many theories of philosophers. It may be compared with other notions, such as the chief good of Plato, which may be best expressed to us under the form of a harmony; or with Kant's obedience to law, which may be summed up under the word 'duty'; or with the Stoical 'Follow nature,' and seems to have no advantage over them. All of these present a certain aspect of moral truth. None of them are, or indeed profess to be, the only principle of morals.

And this brings us to speak of the most serious objection to the utilitarian system—its exclusiveness. There is no place for Kant or Hegel, for Plato and Aristotle alongside of it. They do not reject the greatest happiness principle, but it rejects them. Now the phenomena of moral action differ, and some are best explained upon one principle and some upon another: the virtue of justice seems to be naturally connected with one theory of morals, the virtues of temperance and benevolence with another. The characters of men also differ; and some are more attracted by one aspect of the truth, some by another. The firm stoical nature will conceive virtue under the conception of law, the philanthropist under that of doing good, the quietist under that of resignation, the enthusiast under that of faith or love. The upright man of the world will desire above all things that morality should be plain and fixed, and should use words in their ordinary sense. Persons of an imaginative temperament will generally be dissatisfied with the words 'utility' or 'pleasure': their principle of right is of a far higher character, what or where to be found they cannot always distinctly tell;—deduced from the laws of human nature, says one; resting on the will of God, says another; based upon some transcendental idea which animates more worlds than one, says a third;

*Ὅν νόμοι προκείνται ὑψίποδες, οὐρανίαν
δι' αἰθέρα τεκνωθέντες.*

To satisfy an imaginative nature in any degree, the doctrine of utility must be so transfigured that it becomes altogether different and loses all simplicity.

But why, since there are different characters among men, should we not allow them to envisage morality accordingly, and be thankful to the

great men who have provided for all of us modes and instruments of thought? Would the world have been better if there had been no Stoics or Kantists, no Platonists or Cartesians? No more than if the other pole of moral philosophy had been excluded. If we regard, not their actions but what they think right, all men are agreed about the essentials of morals. In asserting liberty of speculation we are not encouraging individuals to make right or wrong for themselves, but only conceding to them that they may choose the form or aspect under which they prefer to contemplate them. Nor do we say that one of these aspects is as true and good as another; but that they all of them, if they are not mere sophisms and illusion, define and bring into relief some part of the truth which would have been obscure without their light. Why should we endeavour to bind all men within the limits of a single metaphysical conception? The necessary imperfection of language seems to require that we should view the same truth under more than one aspect.

We are living in the second age of utilitarianism, when the charm of novelty and the fervour of the first disciples has passed away. The doctrine is no longer stated in the forcible paradoxical manner of Bentham, but has to be adapted to meet objections; its corners are rubbed off, and the meaning of its most characteristic expressions is softened. The array of the enemy melts away when we approach him. The greatest happiness of the greatest number was a great original idea when enunciated by Bentham, which leavened a generation and has left its mark on thought and civilization in all succeeding times. His grasp of it had the intensity of genius. In the spirit of an ancient philosopher he would have denied that pleasures differed in kind, or that by happiness he meant anything but pleasure. He would perhaps have revolted us by his thoroughness. The 'guardianship of his doctrine' has passed into other hands; and now we seem to see its weak points, its ambiguities, its want of exactness while assuming the highest exactness, its one-sidedness, its paradoxical explanation of several of the virtues. No philosophy has ever stood this criticism of the next generation, though the founders of all of them have imagined that they were built upon a rock. And the utilitarian system, like others, has yielded to the inevitable analysis. Even in the opinion of its supporters it 'has had a terrible downfall,' and is no longer the only moral philosophy, but one among many which have contributed in various degrees to the intellectual progress of mankind.

But because the utilitarian philosophy can no longer claim 'the prize,' we must not refuse to acknowledge the great benefits conferred by it on the world. All philosophies are refuted in their turn, says the sceptic, and he looks forward to all future systems sharing the fate of the past. All philosophies remain, says the thinker; they have done a great work in their own day, and they supply posterity with aspects of the truth and with instruments of thought. Though they may be shorn of their glory, they retain their place in the organism of knowledge.

And still there remain many rules of morals which are better explained and more forcibly inculcated on the principle of utility than on any other. The question Will such and such an action promote the happiness of myself, my family, my country, the world? may check the rising feeling of pride or honour which would cause a quarrel, an estrangement, a war. 'How can I contribute to the greatest happiness of others?' is another form of the question which will be more attractive to the minds of many than a deduction of the duty of benevolence from *a priori* principles. In politics especially hardly any other argument can be allowed to have weight except the happiness of a people. All parties alike profess to aim at this, which though often used only as the disguise of self-interest has a great and real influence on the minds of statesmen. In religion, again, nothing can more tend to mitigate superstition than the belief that the good of man is also the will of God. This is an easy test to which the prejudices and superstitions of men may be brought:—whatever does not tend to the good of men is not of God. The picture of the greatest happiness of mankind, especially if believed to be the will of God, when compared with the actual fact, will be one of the strongest motives to do good to others.

On the other hand, when the temptation is to speak falsely, to be dishonest or unjust, or in any way to interfere with the rights of others, the argument that these actions regarded as a class will not conduce to the happiness of mankind, though true enough, seems to have less force than the feeling which is already implanted in the mind by conscience and authority. To resolve this feeling into the greatest happiness principle takes away from its sacred and authoritative character. The martyr will not go to the stake in order that he may promote the happiness of mankind, but for the sake of the truth: neither will the soldier advance to the cannon's mouth merely because he believes military discipline to be for the good of mankind. It is better and

safer for him to know that he will be shot, that he will be disgraced, if he runs away—he has no need to look beyond military honour, patriotism, ‘England expects every man to do his duty.’ These are to his mind far more definite motives than the greatest happiness of the greatest number. For in human actions men do not always require broad principles: they come home to them with more force when they are limited and defined, and sanctioned by custom and public opinion.

Lastly, if we turn to the history of ethics, we shall find that our moral ideas have originated not in utility but in religion, in law, in conceptions of nature, of an ideal good, and the like. And many may be inclined to think that this conclusively disproves the claim of utility to be the basis of morals. But the utilitarian will fairly reply (see above) that we must distinguish the origin of ethics from the principles of them—the historical germ from the later growth of reflection. And he may also truly add that for two thousand years and more, utility, if not the originating, has been the great corrective principle in law, in politics, in religion, leading men to ask how evil may be diminished and good increased—by what course of policy the public interest may be promoted, and to understand that God wills the happiness, not of some of his creatures and in this world only, but of all of them and in every stage of their existence.

‘What is the place of happiness or utility in a system of moral philosophy?’ is analogous to the question asked in the *Philebus*, ‘What rank does pleasure hold in the scale of goods?’ Admitting the greatest happiness principle to be true and valuable, and the necessary foundation of that part of morals which relates to the consequences of actions, we still have to consider whether this or some other general notion is the highest principle of human life. We may try them in this comparison by three tests—definiteness, comprehensiveness, and motive power.

There are three subjective principles of morals,—sympathy, benevolence, self-love. But sympathy seems to rest morality on feelings which differ widely even in good men; benevolence and self-love torture one half of our virtuous actions into the likeness of the other. The greatest happiness principle, which includes both, has the advantage over all these in comprehensiveness, but the advantage is purchased at the expense of definiteness.

Again, there are the legal and political principles of morals—freedom, equality, rights of persons; ‘Every man to count for one and no man for more than one,’ ‘Every man equal in the eye of the law and of the

legislator.' There is also the other sort of political morality, which if not beginning with 'might is right,' at any rate seeks to deduce our ideas of justice from the necessities of the state and of society. According to this view the greatest good of men is obedience to law: the best human government is a rational despotism, and the best idea which we can form of a divine being is that of a despot acting not wholly without regard to law and order. To such a view the present mixed state of the world, not wholly evil or wholly good, is supposed to be a witness. More we might desire to have, but are not permitted. Though a human tyrant would be intolerable, a divine tyrant is a very tolerable governor of the universe. This is the doctrine of Thrasymachus adapted to the public opinion of modern times.

There is yet a third view which combines the two:—freedom is obedience to the law, and the greatest order is also the greatest freedom; 'Act so that thy action may be the law of every intelligent being.' This view is noble and elevating; but it seems to err, like other transcendental principles of ethics, in being too abstract. For there is the same difficulty in connecting the idea of duty with particular duties as in bridging the gulf between *φαινόμενα* and *ὄντα*; and when, as in the system of Kant, this universal idea or law is held to be independent of space and time, such a *μάταιον εἶδος* becomes almost unmeaning.

Once more there are the religious principles of morals:—the will of God revealed in Scripture and in nature. No philosophy has supplied a sanction equal in authority to this, or a motive equal in strength to the belief in another life. Yet about these too we must ask What will of God? How revealed to us, and by what proofs? Religion, like happiness, is a word which has great influence apart from any consideration of its content: it may be for great good or for great evil. But true religion is the synthesis of religion and morality, beginning with divine perfection in which all human perfection is embodied. It moves among ideas of holiness, justice, love, wisdom, truth; these are to God, in whom they are personified, what the Platonic ideas are to the idea of good. It is the consciousness of the will of God that all men should be as he is. It lives in this world and is known to us only through the phenomena of this world, but it extends to worlds beyond. Ordinary religion which is alloyed with motives of this world may easily be in excess, may be fanatical, may be interested, may be the mask of ambition, may be perverted in a thousand ways. But of that religion which combines

the will of God with our highest ideas of truth and right there can never be too much. This impossibility of excess is the note of divine moderation.

So then, having briefly passed in review the various principles of moral philosophy, we may now arrange our goods in order, though, like the reader of the *Philebus*, we have a difficulty in distinguishing the different aspects of them from one another, or defining the point at which the human passes into the divine.

First, the eternal will of God in this world and in another,—justice, holiness, wisdom, love, without succession of acts (*οὐχ ἢ γένησιν πρόσεστιν*), which is known to us in part only, and revered by us as divine perfection.

Secondly, human perfection, or the fulfilment of the will of God in this world, and co-operation with his laws revealed to us by reason and experience, in nature, history, and in our own minds.

Thirdly, the elements of human perfection,—virtue, knowledge, and right opinion.

Fourthly, the external conditions of perfection,—health and the goods of life.

Fifthly, beauty and happiness; the inward enjoyment of that which is best and fairest in this world and in the human soul.

PHILEBUS.

PERSONS OF THE DIALOGUE.

SOCRATES.

PROTARCHUS.

PHILEBUS.

Steph. *Socrates.* OBSERVE, Protarchus, the nature of the position
11 which you are now going to take from Philebus, and what the
other position is which I maintain, and which, if you do not
approve of my argument, is to be controverted by you. Shall
you and I sum up the two sides?

Protarchus. By all means.

Soc. Philebus was saying that enjoyment and pleasure and
delight, and the class of feelings akin to them, are a good to
every living being, whereas I contend, that not these, but
wisdom and knowledge and memory, and their kindred, right
opinion and true reasonings, are better and more desirable
than pleasure for all who are able to partake of them, and
that to all such who are or ever will be they are the most
advantageous of all things. Have I not given, Philebus, a fair
statement of the two sides of the argument?

Philebus. Nothing can be fairer, Socrates.

Soc. And do you, Protarchus, accept the position which is
assigned to you?

Pro. I cannot do otherwise, since our excellent Philebus
has left the field.

Soc. Certainly the truth about these matters ought, by all
means, to be ascertained.

Pro. To be sure.

Soc. Shall we further agree——

Pro. To what?

Soc. That the good which both you and I affirm to have the property of making all men happy is some state and disposition of the soul.

Pro. Yes, by all means.

Soc. And you say that pleasure, and I say that wisdom, is such a state?

Pro. True.

Soc. And what if there be a third state, which is better than either? Then both of us are vanquished—are we not? But if this higher and more lasting state turn out to be more akin to pleasure than to wisdom, the life of pleasure may still have the advantage over the life of wisdom.

12

Pro. True.

Soc. Or suppose that the better life is more nearly allied to wisdom, then wisdom conquers, and pleasure is defeated;—do you agree?

Pro. Certainly, I should say as you do.

Soc. And what does Philebus say? for he ought to be consulted.

Phi. I say, and shall always say, that pleasure is the conqueror; but you must decide for yourself, Protarchus.

Pro. You, Philebus, having handed over the argument to me, have no longer a voice in the matter?

Phi. True enough. Nevertheless I would clear myself and deliver my soul of you, as I hereby call the goddess herself to witness that I now do.

Pro. You may appeal to us, as far as that goes, to be witnesses of your words. And now, Socrates, never mind whether Philebus approves or not, we will regularly finish the argument.

Soc. Then let us begin with the goddess herself, of whom Philebus says that she is called Aphrodite, but that her true name is Pleasure.

Pro. Very good.

Soc. The awe which I always feel, Protarchus, about the names of the gods is more than human, and now I would not sin against Aphrodite by naming her amiss; of her, then, I say nothing. But I will begin with Pleasure which I know to be diverse, and will consider and ask what her nature is. She has one name, and therefore you would imagine that she is one, and

yet surely she takes the most various and even unlike forms. For do we not say that the intemperate has pleasure, and that the temperate has pleasure in his very temperance, and that the fool is pleased when he is full of foolish fancies and hopes, and that the wise man has pleasure in his wisdom; and how foolish would any one be who affirmed that all these opposite pleasures are severally alike.

Pro. Why, Socrates, they are opposed in so far as they spring from opposite causes, but they are not in themselves opposite, for must not pleasure be of all things most absolutely like pleasure,—that is, like itself?

Soc. Yes, my good friend, just as colour is like colour;—in so far as they are colours, there is no difference between them; and yet we all know that black is not only unlike, but even absolutely opposed to white: or again, as figure is like figure, for they are all comprehended under one class; and yet some figures are absolutely opposed to one another, and
13 there is an infinite diversity of them. And we might find similar examples in many other things; therefore do not rely upon this argument, which would go to prove the unity of the most extreme opposites. And I suspect that we shall find a similar opposition among pleasures.

Pro. Very likely; but how will this invalidate the argument?

Soc. Why, I shall reply, that dissimilar as they are, you apply to them a new predicate, for you say that all pleasant things are good; now although no one can argue that pleasure is not pleasure, he may argue, as we are doing, that pleasures are oftener bad than good; but you call them all good (he would say), and at the same time are compelled, if you are pressed, to acknowledge that they are unlike. And he will want to know what is that identical quality existing alike in good and bad pleasures, which makes you designate all of them as good.

Pro. What do you mean, Socrates? Do you think that any one who asserts pleasure to be the good, will tolerate the notion that some pleasures are good and some bad?

Soc. And yet you will acknowledge that they are different from one another, and even opposite to one another?

Pro. Not in so far as they are pleasures.

Soc. That is a return to the old position, Protarchus, and so we are to say (are we?) that there is no difference in pleasures, but that they are all alike; and the examples which have just been cited do not pierce our dull minds, but we go on arguing all the same, like the weakest and most inexperienced reasoners?¹

Pro. What do you mean?

Soc. Why, I mean to say, that in self-defence I may, if I like, follow your example, and assert boldly that the two things most unlike are most absolutely alike; and the result will be that you and I will prove ourselves to be very tyros in the art of disputing; and the argument will be blown away and lost. Suppose that we put back, and return to the old position; then perhaps we may come to an understanding with one another.

Pro. How do you mean?

Soc. Shall I, Protarchus, have my own question asked of me by you?

Pro. What question?

Soc. Ask me whether wisdom and the sciences and mind, and those other qualities which I, when asked by you at first what is the nature of the good, affirmed to be good, are not in the same case with the pleasures of which you spoke.

Pro. How so?

Soc. The sciences are a numerous class, and will be found to present great differences. But even admitting that, like the pleasures, they are opposite as well as different, should I be 14 worthy of the name of dialectician if, in order to avoid this difficulty, I were to say (as you are saying of pleasure), that there is no difference between one science and another;—would not the argument founder and disappear like an idle tale, although we might escape drowning by clinging to a fallacy?

Pro. I agree that we should save ourselves, but not in that way. And I like the even-handed justice which is applied to both our arguments. Let us assume, then, that there are many and diverse pleasures, and many and different sciences.

Soc. And let us have no concealment, Protarchus, of the differences between my good and yours; but let us bring them

¹ Probably corrupt.

to the light in the hope that, in the process of testing them, they may show whether pleasure is to be called the good, or wisdom, or some third quality; for surely we are not now simply contending in order that my view or that yours may prevail, but I presume that we ought both of us to be fighting for the truth.

Pro. Certainly we ought.

Soc. Then let us establish this principle of differences by a more definite agreement.

Pro. What principle?

Soc. A principle about which all men are always in a difficulty, and some men sometimes against their will.

Pro. Speak plainer.

Soc. The principle which has just turned up, which is a marvel of nature; for that one should be many or many one, are wonderful propositions; and he who affirms either is very open to attack.

Pro. Do you mean, when a person says that I, Protarchus, am by nature one and also many, dividing the single 'me' into many 'me's,' which he distinguishes and opposes as great and small, light and heavy, and in ten thousand other ways?

Soc. Those, Protarchus, are the common and acknowledged paradoxes about the one and many, which I may say that everybody has by this time agreed to dismiss as childish and obvious and detrimental to the true course of thought; and no more favour is shown to that other puzzle, in which a person proves the members and parts of anything to be divided, and then confessing that they are all one, says laughingly in disproof of his own words: Why, here is a miracle, the one is many and infinite, and the many are only one.

Pro. But what, Socrates, are those other marvels which, as you imply, have not yet become common and acknowledged,
15 relating to the same principle?

Soc. When, my boy, the one does not belong to the class of things that are born and perish, as in the instances which we were giving, for in those cases, and when unity is of this concrete nature, there is, as I was saying, a universal consent that no refutation is needed; but when the assertion is made that man is one, or ox is one, or beauty one, or the good one,

then the interest which attaches to these and similar unities and the attempt which is made to divide them gives birth to a controversy.

Pro. Of what nature?

Soc. In the first place, as to whether these unities have a real existence; and then how each individual unity, being always the same, and incapable either of generation or of destruction, but retaining a permanent individuality, can be conceived either as dispersed and multiplied in the infinity of the world of generation, or as still entire and yet derived from itself, which latter would seem to be the greatest impossibility of all, for how can one and the same thing be at the same time in one and in many things? These, Protarchus, are the real difficulties, and this is the one and many to which they relate; they are the source of great perplexity if ill decided, and the right determination of them is very helpful.

Pro. Then, Socrates, let us begin by clearing up these questions.

Soc. That is what I should wish.

Pro. And I am sure that all my other friends will be glad to hear them discussed; Philebus is peaceful and we had better not stir him up with questions.

Soc. Good; and where shall we begin this great and comprehensive battle, in which such various points are at issue? Shall we begin thus?

Pro. How?

Soc. We say that the one and many are identified by reasoning, and that they run about everywhere together, in and out of every word which is uttered, as they have done in all time past as well as present, and that this union of them will never cease, and is not now beginning, but is, as I believe, an everlasting quality of thought itself, which never grows old in us. Any young man, when he first tastes these subtleties, is delighted, and fancies that he has found a treasure of wisdom; in the first enthusiasm of his joy he leaves no stone, or rather no thought unturned, now converting the many into the one, and kneading them together, now unfolding and dividing them; he puzzles himself first and above all, and then he proceeds to puzzle his neighbours, whether they are older or younger,

16 or of his own age—that makes no difference; neither father nor mother does he spare; no human being who has ears is safe from him, hardly even his dog, and a barbarian would have no chance of escaping him, if an interpreter could only be found.

Pro. Considering, Socrates, how many we are, and that all of us are young men, is there not a danger that we and Philebus may conspire and attack you, if you speak evil of us? But we understand what you mean; and if there is any better way or manner of quietly escaping out of all this turmoil and perplexity, and arriving at the truth, we hope that you will guide us into that way, and we will do our best to follow, for the enquiry in which we are engaged, Socrates, is not a small one.

Soc. Certainly not a small one, my boys, as Philebus calls you, and there neither is nor ever will be a better than my own favourite way, which has nevertheless already often deserted me in the hour of need.

Pro. Tell us what that is?

Soc. One which may be easily explained, but is by no means easy of application; and which is the parent of all the discoveries in the arts.

Pro. Say only what.

Soc. A gift of heaven, which, as I conceive, the gods tossed among men by the hands of a new Prometheus, and therewith a blaze of light; and the ancients, who were our betters and nearer the gods than we, handed down the tradition, that all things of which we say 'they are' draw their existence from the one and many, and have the finite and infinite implanted in them: seeing, then, that such is the order of the world, we too ought in every enquiry to begin by laying down one idea of that which is the subject of enquiry; this unity we shall find in everything, and having found, we may next proceed to look for two, if there be two, or, if not, then for three or some other number, subdividing each of these units, until at last the unity with which we began is seen not only as one and many and infinite, but also as a definite number; the infinite must not be suffered to approach the many until the entire number of the species intermediate between unity and infinity

has been found out,—then, and not till then, we may rest from division, and without further troubling ourselves about the endless individuals may allow them to drop into infinity. This, as I was saying, is the way of considering and learning and teaching one another, which the gods have handed down to us. But the wise men of our time are either too quick or 17 too slow in conceiving plurality in unity. Having no method, they make their one and many anyhow, and from unity pass at once to infinity, without thinking of the intermediate steps. And this, I repeat, is what makes the difference between the mere art of disputation and true dialectic.

Pro. I think that I partly understand you, Socrates, but I should like to have a clearer notion.

Soc. I may illustrate my meaning by the letters of the alphabet, Protarchus, which you were made to learn as a child.

Pro. How do they afford an illustration?

Soc. The sound which passes through the lips whether of an individual or of all men is one and yet infinite.

Pro. Very true.

Soc. And yet not by knowing either that sound is one or that sound is infinite, are we perfect in the art, but the knowledge of the number and nature of sounds is what makes a man a grammarian.

Pro. Very true.

Soc. And the knowledge which makes a man a musician is of the same kind.

Pro. How is that?

Soc. Sound is one in music as well as in grammar?

Pro. Certainly.

Soc. And there is a flat and sharp tone, and a third tone which is natural :—may we affirm so much?

Pro. Yes.

Soc. But you would not be a real musician if this was all that you knew; though if you did not know this you would know almost nothing of music.

Pro. Nothing.

Soc. But when you have learned what sounds are flat and what sharp, and the number and nature of the intervals and

their differences, and the systems compounded out of them, which our fathers discovered, and have handed down to us who are their descendants under the name of harmonies; and the corresponding principles in the movements of the human body, which when measured by numbers ought, as they say, to be called rhythms and measures; and they tell us that there is a similar principle in every one and many;—when, I say, you have learned all this, then, my dear friend, you are perfect; and you may be said to understand any other subject, when you have a similar grasp of it. But the infinity of kinds and the infinity of individuals which there is in each of them, when not classified, makes in each individual a state of infinite ignorance; and he who never looks for number in anything, will not himself be looked for in the number of famous men.

18 *Pro.* I think that what Socrates is now saying is excellent, Philebus.

Phi. I think so too, but I wish that I could see how his words bear upon us and upon the argument.

Soc. Philebus is right in asking that question of us, Protarchus.

Pro. Indeed he is, and you must answer him.

Soc. I will; but you must let me make one little remark first; I was saying, that he who begins with any individual unity, should proceed from that, not to infinity, but to a definite number, and now I say conversely, that he who begins with infinity should not jump to unity, but he should look about for some number representing a certain quantity, and thus out of all end in one. And now let us return for an illustration of our principle to the case of letters.

Pro. What do you mean?

Soc. Some god or sage, who in the Egyptian legend is said to have been Theuth, observing that sound was infinite, first distinguished in the infinity of sound a certain number of vowels, and then other letters which had a measure of vocal sound, but were not pure vowels (i. e. the semivowels) also having a definite number; and lastly, he distinguished a third class of letters which we now call mutes, and he divided these mutes, and likewise the two other classes of vowels and semivowels, into the individual sounds, and told the number of them, and gave to each and all of them the name of letters; and observing

that none of us could learn any one of them and not learn them all, and in consideration of this common bond which in a manner united them, he assigned to them all a single art, and this he called the art of grammar or letters.

Phi. The illustration, Protarchus, has assisted me in understanding the original statement, but I still feel the deficiency of which I just now complained.

Soc. Are you going to ask, Philebus, what this has to do with the argument?

Phi. Yes, that is a question which Protarchus and I have been long asking.

Soc. Then assuredly you are very near the answer to the question which you have been long asking?

Phi. How so?

Soc. Did we not begin by enquiring into the comparative eligibility of pleasure and wisdom?

Phi. Certainly.

Soc. And we maintain that they are each of them one?

Phi. True.

Soc. And the precise question to which the previous discussion desires an answer is, how they are one and also many, and not at once infinite [i. e. how they have one genus and many species], and what number of species is to be assigned to either of them before we allow them to drop into infinity.

Pro. That is a very serious question, Philebus, to which 19 Socrates has ingeniously brought us round, and please to consider which of us shall answer him; there may be something ridiculous in my being unable to answer, and therefore imposing the task upon you, when I have undertaken the whole charge of the argument, but if neither of us were able to answer, that methinks would be still more ridiculous. Let us consider, then, what we are to do:—Socrates, if I understood him rightly, is asking whether there are not kinds of pleasure, and what is the number and nature of them, and the same of wisdom.

Soc. Most true, O son of Callias; and the previous argument * showed that if we are not able to tell the kinds of everything that has unity, likeness, sameness, or diversity and unlikeness, none of us will be of the smallest use in any enquiry.

Pro. That seems to be very near the truth, Socrates, and

happy would the wise man be if he knew all things, and the next best thing for him would be that he should not be ignorant of himself. Why do I say so at this moment? I will tell you why. You, Socrates, have granted us this opportunity of conversing with you, and are ready to assist us in determining what is the best of human goods. For when Philebus said that pleasure and delight and enjoyment and the like was the chief good, you answered—No, not that, but another class of goods; and we are constantly reminding ourselves of what you said, and very properly, in order that we may not forget to examine and compare the two. And these goods, which in your opinion are to be designated as superior to pleasure, and are the true objects of pursuit, are mind and knowledge and understanding and art, and the like. There was a dispute about which were the best, and we playfully threatened that you should not be allowed to go home until the question was settled, and you agreed, and granted our request. And now, as children say, what has been fairly given cannot be taken back; cease then to fight against us in this way.

Soc. In what way?

20 *Phi.* Do not perplex us, and keep asking questions of us to which at the moment we have no sufficient answer to offer; let us not imagine that a general puzzling of us all is to be the end of our discussion, but if we are unable to answer, do you answer, as you have promised. Consider, then, whether you will yourself determine the question which you have asked about the kinds of pleasure and knowledge, or whether you can and will find some other mode of clearing up our controversy.

Soc. If you say that, I have nothing to fear, for the words 'can and will' dispel fear; and, moreover, some god appears to have recalled something to my mind.

Phi. What is that?

Soc. I remember to have heard certain discussions about pleasure and wisdom, whether awake or in a dream I cannot tell; they were to the effect that neither the one nor the other of them was the good, but some third thing, which was different from them, and better than either. If this be clearly

established, then pleasure will lose the victory, for the good will cease to be identified with her:—Am I not right?

Pro. Yes.

Soc. And there will cease to be any need of distinguishing the kinds of pleasures, as I am inclined to think, but the truth will appear more clearly as we proceed.

Pro. Capital, Socrates; pray go on as you propose.

Soc. But, let us just agree on some little points.

Pro. What are they?

Soc. Is the good perfect or imperfect?

Pro. The most perfect, Socrates, of all things.

Soc. And is the good sufficient?

Pro. Yes, certainly, and in a degree surpassing all other things.

Soc. And no one can deny that all percipient beings desire and hunt after good, and are eager to catch and have the good about them, and care not for the attainment of anything of which good is not a part.

Pro. That is undeniable.

Soc. Now let us part off the life of pleasure from the life of wisdom, and pass them separately in review.

Pro. How do you mean?

Soc. Let there be no wisdom in the life of pleasure, nor any pleasure in the life of wisdom, for if either of them is the chief good, it cannot be supposed to want anything, but if either is shown to want anything, then it cannot really be the chief good.

Pro. Impossible.

Soc. Shall we administer the question to them through you?

Pro. Very good.

Soc. Then answer.

Pro. Ask.

Soc. Would you choose, Protarchus, to live all your life long in the enjoyment of the greatest pleasures?

Pro. Certainly I should.

Soc. Would you consider that there was still anything wanting to you if you had perfect pleasure?

Pro. Certainly not.

Soc. Reflect; would you not want wisdom and intelligence

and forethought, and the like? would you not at any rate want sight?

Pro. Why should I? Having pleasure I should have all things.

Soc. Living thus always, and all your life, you would have the greatest pleasures?

Pro. I should.

Soc. But if you had neither mind, nor memory, nor knowledge, nor true opinion, you would in the first place be utterly ignorant of whether you were pleased or not, because you would be entirely devoid of sense.

Pro. Certainly.

Soc. And similarly, if you had no memory you would not recollect that you had ever been pleased, nor would the slightest recollection of the pleasure which you feel at any moment remain with you; and if you had no true opinion you would not think that you were pleased when you were; and if you had no power of calculation you would not be able to calculate on future pleasure, and your life would be the life, not of a man, but of an oyster or 'pulmo marinus.' Can this be imagined otherwise?

Pro. No.

Soc. But is such a life eligible?

Pro. I cannot answer you, Socrates; the argument has taken from me the power of speech.

Soc. Well, but you should not faint;—and now let us examine in turn the life of mind.

Pro. And what is this life of mind?

Soc. I want to know whether any one of us would consent to live, having wisdom and mind and knowledge and memory of all things, but having no fraction of a sense of pleasure or pain, and wholly unaffected by these and the like feelings?

Pro. Neither life, Socrates, appears eligible to me, nor is likely, as I should imagine, to be chosen by any one else.

22 *Soc.* What would you say, Protarchus, to both of these in one, or to one that was made out of the union of the two?

Pro. Out of the union, that is, of pleasure with mind and wisdom?

Soc. Yes.

Pro. There can be no difference of opinion about that; not some but all would surely choose this third rather than either of the other two, and in addition to them.

Soc. But do you see the consequence?

Pro. To be sure I do. The consequence is, that two out of the three lives which have been proposed are neither sufficient nor eligible for man nor for animal.

Soc. Then now there can be no doubt that neither of them has the good, for the one which had would certainly have been sufficient and perfect and eligible for every living creature or thing that was able thus to live; and if any of us had chosen any other, he would have chosen contrary to the nature of the truly eligible, and not of his own free will, but either through ignorance or from some unhappy necessity.

Pro. Certainly that seems to be true.

Soc. And now have I not sufficiently shown that Philebus' goddess is not to be regarded as identical with the good?

Phi. Neither is your 'mind' the good, Socrates, for that will be open to the same objections.

Soc. Perhaps, Philebus, you may be right in saying so of my 'mind'; but of the true, which is also the divine mind, far otherwise. However, I will not at present claim the first place for mind as against the mixed life; but we must come to some understanding about the second place. For you might affirm pleasure and I mind to be the cause of the mixed life; and in that case although neither of them would be the good, one of them might be imagined to be the cause of the good. And I might proceed further to argue in opposition to Philebus, that the element which makes this mixed life eligible and good, is more akin and more similar to mind than to pleasure. And if this is true, pleasure cannot be truly said to share either in the first or second place, and does not, if I may trust my own mind, attain even to the third.

Pro. Truly, Socrates, pleasure appears to me to have had a blow; after having fought for the palm, she has been smitten 23 by the argument, and is fallen. I must say that mind would have fallen too, and may therefore be thought wise in not making a similar claim. And certainly pleasure having been deprived not only of the first but of the second place will be

terribly damaged in the eyes of her admirers, for not even to them can she still appear as fair as before.

Soc. Well, but had we not better leave her now, and not pain her by applying the crucial test, and finally detecting her?

Pro. Nonsense, Socrates.

Soc. Why? because I said that we had better not pain pleasure, which is an impossibility?

Pro. Yes, and more than that, because you do not seem to be aware that none of us will let you go home until you have finished the argument.

Soc. Heavens! Protarchus, that will be a long business, and not a very easy one. For in going to war for mind, who is aspiring to the second prize, I ought to have weapons of another make from those which I used before; some, however, of the old ones may do again. And must I then finish the argument?

Pro. Of course you must.

Soc. Let us be very careful in laying the foundation.

Pro. What do you mean?

Soc. Let us divide all existing things into two, or rather, if you do not object, into three classes.

Pro. Upon what principle would you make the division?

Soc. Let us take some of our newly-found notions.

Pro. Which of them?

Soc. Were we not saying that God revealed a finite element of existence, and also an infinite?

Pro. Certainly.

Soc. Let us assume these two principles, and also a third, which is compounded out of them; but I fear that I am very clumsy at these processes of division and enumeration.

Pro. What do you mean my good friend?

Soc. I say still that a fourth class is wanted.

Pro. What will that be?

Soc. Find the cause of the third or compound, and add this as a fourth class to the three others.

Pro. And would you like to have a fifth class or cause of resolution as well as a cause of composition?

Soc. Not, I think, at present; but if I want a fifth at some future time you shall allow me to have one.

Pro. Certainly.

Soc. Let us begin with the three first; and as we find two out of the three greatly divided and dispersed, let us endeavour to reunite them, and see how in each of them there is a one and many.

Pro. If you would explain to me a little more about them, 24 perhaps I might be able to follow you.

Soc. Well, the two classes are the same, which I mentioned before, one the finite, and the other the infinite; I will first show that the infinite is in a certain sense many, and the finite may be hereafter discussed.

Pro. I agree.

Soc. And now consider well; for the question to which I invite your attention is difficult and controverted. When you speak of hotter and colder, can you conceive any limit in those qualities? Does not the more and less, which dwells in their very nature, prevent their having any end? for if they had an end, the more and less would themselves have an end.

Pro. That is most true.

Soc. Ever, as we say, into the hotter and the colder there enters a more and a less.

Pro. True.

Soc. Then, says the argument, they have never any end, and being endless must also be infinite.

Pro. Yes, Socrates, that is exceedingly true.

Soc. Yes, my dear Protarchus, and the word which you have just uttered suggests to me that such expressions as 'exceedingly,' and also the term 'mildly,' mean the same as more or less; for whenever they occur they do not allow of the existence of quantity—they are always introducing degrees into actions, instituting a comparison of the more or less violent or more or less mild, and at each creation of more or less, quantity disappears. For, as I was just now saying, if quantity and measure did not disappear, but were allowed to intrude in the sphere of more and less and the other comparatives, these last would themselves be driven out of their own domain. When definite quantity is once admitted, there can be no longer a 'hotter' or a 'colder' (for these are always progressing, and are never in one stay); but definite quantity is at rest, and

progresses not. Which proves that comparatives, such as the hotter and the colder, are to be ranked in the class of the infinite.

Pro. Your remark certainly has the look of truth, Socrates; but these subjects, as you were saying, are difficult to follow at first. I think, however, that if I could hear the argument repeated by you once or twice, there would be a substantial agreement between us.

Soc. Yes, and I will try to meet your wish; but, as I would rather not waste time in tedious particulars, let me know whether I may not assume as a note of the infinite——

25 *Pro.* What?

Soc. I want to know whether such things as appear to us to admit of more or less, or are denoted by the words 'exceedingly,' 'mildly,' 'extremely,' and the like, may not be referred to the class of the infinite, which is their unity, for, as was asserted in the previous argument, all things that were divided and dispersed should be brought together, and have the mark or seal of some one nature, if possible, set upon them; do you remember?

Pro. Yes.

Soc. And all things which do not admit of more or less, but admit their opposites, that is to say, first of all, equality, and the equal, or again, the double, or any other ratio of number and measure—all these may, I think, be rightly reckoned in the class of the limited or finite; what do you say?

Pro. Excellent, Socrates.

Soc. And now what shall we say of the third or compound kind?

Pro. That you will also have to tell me, I think.

Soc. Rather God will tell you, if there be any God who will listen to my prayers.

Pro. Offer up a prayer, then, and think.

Soc. I have thought, Protarchus, and I believe that there is a God who has answered my prayer.

Pro. What do you mean, and what proof have you to offer of what you are saying?

Soc. I will tell you, and do you listen to my words.

Pro. Proceed.

Soc. Were we not speaking just now of hotter and colder?

Pro. True.

Soc. Add to them drier, wetter, more, less, swifter, slower, greater, smaller, and all which in the preceding argument we placed under the unity of more and less.

Pro. In the class of the infinite, that is?

Soc. Yes; and now mingle that with the other.

Pro. What is the other?

Soc. The class of the finite which we ought to have brought together as we did the infinite; but, perhaps, it will come to the same thing if we do so now;—when the two are combined, a third will appear.

Pro. Of what class are you speaking, and what do you mean?

Soc. The class of the equal and the double, and any class which puts an end to difference and opposition, and by bringing the different elements into harmony and proportion creates number.

Pro. I understand; you seem to me to mean that the various opposites, when you mingle these ratios with them, take certain forms.

Soc. Yes, that is my meaning.

Pro. Proceed.

Soc. Does not the right participation in these ratios give health—in disease, for instance?

Pro. Certainly.

Soc. And whereas the sharp and flat, the swift and the slow 26 are infinite or unlimited, does not the addition of them introduce a limit, and perfect the whole frame of music?

Pro. Yes, certainly.

Soc. Or, again, when cold and heat prevail, does not the introduction of them take away excess and indefiniteness, and infuse moderation and harmony?

Pro. Certainly.

Soc. And from a like admixture of the finite and infinite come the seasons, and all the delights of life?

Pro. Most true.

Soc. I omit to speak of ten thousand other things, such as beauty and health and strength, and of the many beauties and high perfections of the soul: methinks, O my fair Philebus, that

the goddess saw the universal wantonness and wickedness of all things, having no limit of pleasure or satiety, and she devised the limit of law and order, tormenting, as you say, Philebus, or, as I affirm, saving the soul.—But what think you, Protarchus?

Pro. I am quite of your mind, Socrates.

Soc. And you will observe that I have spoken of three classes?

Pro. Yes, I think that I understand you: you mean to say that the infinite is one class, and that the finite is a second class of existences; but what you would make the third I am not so certain.

Soc. That is because the amazing variety of the third class is too much for you, my dear friend; but there was not this difficulty with the infinite, which also comprehended many classes, for all of them were sealed with the note of more and less, and therefore appeared one.

Pro. True.

Soc. And the finite or limit had no divisions, and was readily acknowledged to be by nature one?

Pro. Yes.

Soc. Yes, indeed; and when I speak of the third class, understand me to mean any offspring of the union of these two which is a generation into true being, and is effected by the measure which the limit introduces.

Pro. I understand.

Soc. Still there was, as we said, a fourth class to be investigated, and you must assist in the investigation; for does not everything which comes into being of necessity come into being through a cause?

Pro. Yes, certainly; for how can there be anything which has no cause?

Soc. And is not the agent the same as the cause in all except name; the agent and the cause may be truly called one?

27 *Pro.* Very true.

Soc. And the same may be said of the patient, or effect; we shall find that they too differ, as I was saying, only in name—shall we not?

Pro. We shall.

Soc. The agent or cause always naturally leads, and the patient or effect naturally follows it?

Pro. Certainly.

Soc. Then the cause and that which obeys the cause in generation are not the same?

Pro. Certainly not.

Soc. Did not the things which were generated, and the things out of which they were generated, furnish all the three classes?

Pro. Yes.

Soc. And the creator or cause of them has been satisfactorily proven to be distinct from them,—and may we not call that a fourth principle?

Pro. Surely we may.

Soc. And now, having distinguished the four, I think that we had better refresh our memories by recapitulating each of them in order.

Pro. By all means.

Soc. Then the first I will call the infinite or unlimited, and the second the finite or limited, the third a mixed element generated out of them; and I do not think that I shall be far wrong in speaking of the cause of mixture and generation as the fourth.

Pro. Certainly not.

Soc. And now what was the question, and how came we hither? Were we not enquiring whether the second place belonged to pleasure or wisdom?

Pro. We were.

Soc. And having determined these points, shall we not be better able to decide about the first and second place, which was the original subject of dispute?

Pro. I dare say.

Soc. We said, if you remember, that the mixed life of pleasure and wisdom was the conqueror—did we not?

Pro. True.

Soc. And we see to what class this life is to be assigned?

Pro. Beyond a doubt.

Soc. This is evidently comprehended in the third or mixed class; which is not composed of any two particular ingredients, but of all the elements of infinity, bound down by the finite, and may therefore be truly said to comprehend the conqueror life.

Pro. Most true.

Soc. And what shall we say, Philebus, of your life which is all sweetness; and in which of the aforesaid classes is that to be placed? Perhaps you will allow me to ask you a question before you answer?

Phi. Let me hear.

Soc. Have pleasure and pain a limit, or do they belong to the class which admits of more and less?

Phi. They belong to the class which admits of more, Socrates; for pleasure would not be the absolute good if she were not
28 infinite in quantity and degree.

Soc. Nor would pain, Philebus, be the absolute evil. And therefore the infinite cannot be that element which imparts to pleasure anything of good. But now—admitting, if you like, that pleasure is of the nature of the infinite—in which of the aforesaid classes, O Protarchus and Philebus, may we reverently place wisdom and knowledge and mind? And let us be careful, for I think that the danger will be very serious if we err on this point.

Phi. You magnify, Socrates, the importance of your favourite god.

Soc. And you, my friend, are also magnifying your goddess; but still I must beg you to answer the question.

Pro. Socrates is quite right, Philebus, and we must obey him.

Phi. And did you not, Protarchus, propose to answer in my place?

Pro. Certainly I did; but I am now in a great strait, and I must entreat you, Socrates, to be our teacher, and then we shall not say anything wrong or disrespectful of your favourite.

Soc. I must obey you, Protarchus; nor is the task which you impose a difficult one; but have I really, as Philebus implies, disconcerted you with my playful solemnity, when I asked the question to what class mind and knowledge belong?

Pro. You have, indeed, Socrates.

Soc. Yet the answer is easy, since all philosophers are agreed that mind is the king of heaven and earth; in this way truly they magnify themselves. And perhaps they are right. But still I should like to consider the class of mind, if you do not object, a little more fully.

Phi. Take your own course, Socrates, and do not abridge the length; for we shall be glad to hear you at any length.

Soc. Very good; let us begin then, Protarchus, by asking whether all this which they call the universe is left to the guidance of unreason and chance medley, or, on the contrary, as our fathers have declared, ordered and governed by a marvellous intelligence and wisdom.

Pro. Wide asunder are the two assertions, illustrious Socrates, for that which you were just now saying is blasphemy; but the other assertion, that mind orders all things, is worthy of the aspect of the world, and of the sun, and of the moon, and of the whole circle of the heavens; and never will I say or think otherwise.

Soc. Shall we, then, agree with them of old time in maintaining this doctrine,—nor merely reasserting the notions of others, ²⁹ without risk to ourselves,—but shall we venture also to share in the risk, and bear the reproaches which will await us, when an ingenious individual declares that all is disorder?

Pro. That would certainly be my wish.

Soc. Then now please to consider the next stage of the argument.

Pro. Let me hear.

Soc. We see the elements which enter into the nature of the bodies of all animals, fire, water, air, and, as the storm-tossed sailor cries, 'land ahead,' in the constitution of the world.

Pro. The proverb may be applied to us; for truly the storm gathers over us, and we are at our wit's end.

Soc. Consider now that each of these elements, as they exist in us, is but a small fraction of any one of them, and of a mean sort, and not in any way pure, or having any power worthy of its nature. One instance will prove this of all of them; there is a fire within us, and in the universe.

Pro. True.

Soc. And is not our fire small and weak and mean, but the fire in the universe is wonderful in quantity and beauty, and in every power that fire has?

Pro. Most true.

Soc. And is that universal element nourished, and generated

and ruled by our fire, or is the fire in you and me, and in other animals, dependent on the universal fire?

Pro. That is a question which does not deserve an answer.

Soc. Right; and you would say the same, if I am not mistaken, of the earth which is in animals and the earth which is in the universe, and you would give a similar reply about all the other elements?

Pro. Why, how could any man who gave any other be deemed in his senses?

Soc. I do not think that he could—but now go a step further; when we see those elements of which we have been speaking gathered up in one, do we not call them a body?

Pro. Very true.

Soc. And the same may be said of the cosmos, which for the same reason may be considered as a body, because made up of the same elements.

Pro. Very true.

Soc. But is our body nourished wholly by this body, or is this body nourished by our body, thence deriving and having the qualities of which we were just now speaking?

Pro. That again, Socrates, is a question which does not deserve to be asked.

30 *Soc.* Well, will you deign to give me an answer to another question?

Pro. What is that?

Soc. May our body be said to have a soul?

Pro. Clearly.

Soc. And whence comes that soul, my dear Protarchus, unless the body of the universe, which contains elements similar to our bodies but fairer, had also a soul? Can there be another source?

Pro. Clearly, Socrates, that is the only source.

Soc. Why, yes, Protarchus; for surely we cannot imagine that of the four classes, the finite, the infinite, the composition of the two, and the cause or fourth class, which enters into all things, giving to our bodies souls, and the art of self-management, and of healing disease, and operating in other ways to heal and organize;—we cannot, I say, imagine that this last should have all the attributes of wisdom, and that whereas the elements exist, both in the entire heaven and in great provinces of the heaven,

only fairer and purer, this should not also in that higher sphere have designed the noblest and fairest of natures?

Pro. The supposition is quite unreasonable.

Soc. Then if that is denied, should we not be wise in adopting the other view and maintaining that there is in the universe a mighty infinite and an adequate limit, of which we have often spoken, as well as a cause of no mean power, which orders and arranges years and seasons and months, and may be justly called wisdom and mind?

Pro. Most justly.

Soc. And wisdom and mind cannot exist without soul?

Pro. Certainly not.

Soc. And in the divine nature of Zeus would you not say that there is the soul and mind of a king, because there is in him the power of the cause? And other gods have other noble attributes, whereby they love severally to be called.

Pro. Very true.

Soc. Do not then suppose that these words are rashly spoken by us, O Protarchus, for they are in harmony with the testimony of those who said of old time that mind rules the universe.

Pro. True.

Soc. And they furnish an answer to my enquiry (cp. 28 A); for they imply that mind¹ belongs to that class of the four which is the cause of all,—and now I think that you have my answer.

Pro. I have indeed, and yet I did not know that you had answered.

Soc. You are merry, Protarchus, and a jest may sometimes pleasantly interrupt earnest.

Pro. Very true.

31

Soc. I think, friend, that we have now pretty clearly set forth the class to which mind belongs and what is the power of mind?

Pro. True.

Soc. And the class to which pleasure belongs has also been set forth?

Pro. Yes.

Soc. And let us remember, too, of both of them, that (1) mind

¹ Reading γένους τοῦ πάντων.

was akin to the cause and of this family ; (2) and that pleasure is infinite and belongs to the class which neither has, nor ever will have, a beginning, middle, or end of its own.

Pro. I shall be sure to remember.

Soc. And next we must examine when and how they are generated, beginning with pleasure, as her class came first in the enquiry ; and yet pleasure cannot be adequately examined when separated from pain.

Pro. If this is the road, let us take it.

Soc. I wonder whether you would agree with me about the origin of pleasures.

Pro. What do you mean ?

Soc. I mean to say that their natural seat is in the mixed class.

Pro. And would you tell me once more, sweet Socrates, which of the aforesaid classes is the mixed one ?

Soc. I will, my fine fellow, to the best of my ability.

Pro. Very good.

Soc. Let us then understand the mixed class to be that which is third in the list of four.

Pro. That which followed the infinite and the finite ; and in which you ranked health, and, if I am not mistaken, harmony.

Soc. Capital ; and now will you please to give me your best attention ?

Pro. Proceed ; I am attending.

Soc. I say that when the harmony in animals is dissolved, there is also a dissolution of nature and a generation of pain.

Pro. That is very probable.

Soc. And the restoration of harmony and return to nature is the source of pleasure, if I may be allowed to speak in the fewest and shortest words about matters of the greatest moment.

Pro. I believe that you are right, Socrates ; but will you try to be a little plainer ?

Soc. I think that every-day phenomena will furnish the readiest illustration.

Pro. What phenomena do you mean ?

Soc. I should take the case of hunger, which is a dissolution and a pain.

Pro. True.

Soc. Whereas eating is a replenishment and a pleasure?

Pro. Yes.

32

Soc. Thirst again is a destruction and a pain [and a dissolution,] but the effect of moisture replenishing the dry place is a pleasure; again, the unnatural separation and dissolution caused by heat is painful, and the natural restoration and refrigeration is pleasant.

Pro. Very true.

Soc. And the unnatural freezing of the moisture in the animal is pain, and the natural process of resolution and return of the elements to their original state is pleasure. And would not the general proposition seem to you to hold, that the destroying of the natural union of the finite and infinite, which, as I was observing before, make up the class of living beings, is pain, and that the process and return of all things to their own nature is pleasure?

Pro. Granted; I see in a general way what you mean.

Soc. Here then is one kind of pleasures and pains originating severally in the two processes which we have described?

Pro. Good.

Soc. Let us next assume that in the soul herself there is an antecedent hope of pleasure which is sweet and consoling, and an expectation of pain, fearful and anxious.

Pro. Yes; this is another class of pleasures and pains, which is of the soul only, and is produced by expectation without the body.

Soc. Right; and I think that the examination of these two kinds, unalloyed as I suppose them to be, and not compounds of pleasure and pain, will most clearly show whether the whole class of pleasure is to be desired, or whether this quality of entire desirableness is not rather to be attributed to another of the classes which have been mentioned; and whether pleasure and pain, like heat and cold, and other things of the same kind, are not sometimes to be desired and sometimes not to be desired, as being not in themselves good, but sometimes and in some instances admitting of the nature of good.

Pro. You say most truly that this is the track which the investigation should follow.

Soc. Well, then, assuming that pain ensues on the dissolution,

and pleasure on the restoration of the harmony, let us now ask what will be the condition of animated beings who are neither in process of restoration nor of dissolution. And mind what you are going to say: I ask whether any animal who is in that condition can possibly have any feeling of pleasure or pain, great or small?

Pro. Certainly not.

33 *Soc.* Then here we have a third state, over and above that of pleasure and of pain?

Pro. Very true.

Soc. And do not forget that there is such a state, of which the recognition will very considerably affect our judgment of pleasure, and I should like to say a word or two about it.

Pro. What have you to say?

Soc. Why, you know that if a man chooses the life of wisdom, there is no reason why he should not live in this neutral state.

Pro. You mean that he may live neither rejoicing nor sorrowing?

Soc. Yes; and if I remember rightly, when the lives were compared, no degree of pleasure, whether great or small, was thought to be necessary to him who chose the life of thought and wisdom.

Pro. Yes, certainly, that was said.

Soc. Then he may live without pleasure; and who knows whether this may not be the most divine of all lives?

Pro. At any rate, the gods cannot be supposed to have either joy or sorrow.

Soc. Certainly not—there would be great impropriety in their having either of them: the indifference, however, of the gods to pleasures, may be considered hereafter if necessary, and may be reckoned to the advantage of mind who will fight for the second place, if she must resign the first.

Pro. Just so.

Soc. The other class of pleasures, which as we were saying, is purely mental, is entirely derived from memory.

Pro. What do you mean?

Soc. I must first of all analyse memory, or rather perception which is prior to memory, if the nature of these mental states is ever to be properly cleared up.

Pro. How will you proceed?

Soc. Let us imagine affections of the body which are extinguished before they reach the soul, which remains unaffected by them; and again, other affections which vibrate through both soul and body, and impart a shock to both of them.

Pro. Granted.

Soc. And the soul may be said to be oblivious of the first but not of the second?

Pro. Quite true.

Soc. When I say oblivious, do not suppose that I mean forgetfulness in a literal sense; for forgetfulness is the exit of memory, which in this case has not yet entered; and to speak of the loss of that which is not yet in existence, and never has been, is a contradiction; do you see?

Pro. Yes.

Soc. Then just be so good as change the terms.

Pro. To what shall I change them?

Soc. Instead of the oblivion of the soul, when you are describing the state in which she is unaffected by the shocks of the body, say unconsciousness.

Pro. I see.

Soc. And the union or communion of soul and body in one feeling and motion, may be truly called consciousness?

Pro. Most truly.

Soc. Then now we know the meaning of the word?

Pro. Very true.

Soc. And memory may, I think, be rightly described as the preservation of consciousness?

Pro. Right.

Soc. But do we not distinguish memory from recollection?

Pro. I think so.

Soc. And do we not mean by recollection the power which the soul has of recovering, when by herself, some feeling which she experienced when in company with the body?

Pro. Certainly.

Soc. And when she recovers of herself the lost recollection of some consciousness or knowledge, the recovery is termed recollection and reminiscence?

Pro. Very true.

Soc. Why do I say all this?

Pro. Why?

Soc. Because I want to attain the plainest possible notion of pleasure and desire, as they exist in the mind only, apart from the body; and in these states of the mind they seem to be most clearly displayed.

Pro. Then now, Socrates, let us proceed to the next point.

Soc. There are certainly many things relating to the generation and whole complexion of pleasure, which require to be considered; and first, as to the nature and seat of desire.

Pro. Ay; let us enquire into that, for we will lose nothing.

Soc. Nay, Protarchus, we shall surely lose the puzzle if we find the answer.

Pro. A fair retort; but let us proceed.

Soc. Do we not speak of hunger, thirst, and the like, as desires?

Pro. Certainly.

Soc. And yet they are very different; what common nature have we then in view when we call them by a single name?

Pro. By heavens, Socrates, that is a question which is not easily answered; but it must be answered.

Soc. Then let us go back to our old illustrations.

Pro. Where shall we begin?

Soc. Do we mean anything when we say he 'thirsts'?

Pro. Yes.

Soc. We mean to say that he is empty?

Pro. Of course.

Soc. And is not thirst desire?

Pro. Yes, of drink.

35 *Soc.* Would you say of drink, or of replenishment with drink?

Pro. I should say, of replenishment with drink.

Soc. Then he who is empty desires, as would appear, the opposite of what he experiences; for he is empty and desires to be full?

Pro. That is quite clear.

Soc. But how can he who is empty for the first time, attain either by perception or memory any apprehension of replenishment, which he has never yet experienced, either now or at any former time?

Pro. Impossible.

Soc. And yet he who desires, surely desires something?

Pro. Of course.

Soc. Then he does not desire that which he experiences, for he is thirsty, and thirst is emptiness, but he desires replenishment?

Pro. True.

Soc. There must be something in the thirsty man which in some way apprehends replenishment?

Pro. There must.

Soc. And that cannot be the body, for the body is supposed to be emptied?

Pro. Yes.

Soc. The only remaining alternative is that the soul apprehends the replenishment by the help of memory; as is obvious, for what other way can there be?

Pro. I cannot imagine any other.

Soc. But do you see the consequence?

Pro. What is the consequence?

Soc. That there is no such thing as desire of the body.

Pro. Why so?

Soc. Why, because the argument shows that the endeavour of every animal is to the reverse of his bodily state.

Pro. Yes.

Soc. And the impulse which leads him to the opposite of his experience proves that he has a memory of the opposite state.

Pro. True.

Soc. And the argument which proves that memory attracts us towards the objects of desire, proves also that the impulses and the desires and the moving principle in every living being have their origin in the soul.

Pro. Most true.

Soc. The argument will not allow that our body either hungers or thirsts or has any similar experience.

Pro. Quite right.

Soc. Let me make a further observation; the argument appears to me to imply that there is a kind of life which consists in these affections.

Pro. Of what affections, and of what kind of life, are you speaking?

Soc. I am speaking of emptiness and replenishment, and all that relates to the preservation and destruction of living beings, and of the alternations of pain and joy which accompany them in their transitions.

Pro. True.

Soc. And what would you say of the kind of life which is intermediate between them?

Pro. What do you mean by 'intermediate'?

Soc. I mean when a person is in actual suffering and yet remembers the pleasures which, if they would only come, would relieve him; but as yet he has them not. May we not say of
36 him, that he is in an intermediate state?

Pro. Certainly.

Soc. Would you say that he was in pain or in pleasure?

Pro. Nay, I should say that he has two pains; in his body there is the actual experience of pain, and in his soul longing and expectation.

Soc. What do you mean, Protarchus, by the two pains? May not a man who is empty have at one time a sure hope of being filled, and at other times be quite in despair?

Pro. Very true.

Soc. And has he not the pleasure of memory when he is hoping to be filled, and yet in that he is empty is he not at the same time in pain?

Pro. Certainly.

Soc. Then man and the other animals have at one time both pleasure and pain?

Pro. I suppose so.

Soc. But when a man is empty and has no hope of being filled, there will be the double experience of pain, and you observing this were led to suppose that the doubling was the single case possible.¹

Pro. Quite true, Socrates.

Soc. Shall we make the enquiry into these feelings the occasion of raising a question?

¹ ἀπλῶς διπλοῦν is an almost untranslatable play of words.

Pro. What question?

Soc. Whether we ought to say that the pleasures and pains of which we are speaking are true or false? or partly true and partly false?

Pro. But how, Socrates, can there be false pleasures and pains?

Soc. And how, Protarchus, can there be true and false fears, or true and false expectations, or true and false opinions?

Pro. I grant that opinions may be true or false, but not pleasures.

Soc. What do you mean? I am afraid that we are raising a very serious enquiry.

Pro. There I agree.

Soc. And yet, my boy, for you are one of Philebus' boys (cp. 16 A), the point to be considered, is, whether the enquiry is relevant to the argument.

Pro. Surely.

Soc. No tedious and irrelevant discussion can be allowed; what is said should be pertinent.

Pro. Right.

Soc. I am always wondering at the question which has now been raised.

Pro. How so?

Soc. Do you deny that some pleasures are false, and others true?

Pro. To be sure I do.

Soc. Would you say that no one ever seemed to rejoice and yet did not rejoice, or seemed to feel pain and yet did not feel pain, sleeping or waking, mad or moonstruck?

Pro. That is what we have always held, Socrates.

Soc. But were you right? Shall we enquire into the truth 37 of your opinion?

Pro. I think that we should.

Soc. Let us then put into more precise terms the question which has arisen about pleasure and opinion. Is there such a thing as opinion?

Pro. Yes.

Soc. And such a thing as pleasure?

Pro. Yes.

Soc. And there must be something about which a man has an opinion?

Pro. True.

Soc. And something which gives pleasure?

Pro. Quite correct.

Soc. And whether his opinion is right or wrong, makes no difference; he will still always have an opinion?

Pro. Certainly.

Soc. And he who is pleased, whether he is rightly pleased or not, will always have a real feeling of pleasure?

Pro. Yes; that is also quite true.

Soc. Then, how can opinion be true and false, and pleasure only true; and yet the state of being pleased, or holding an opinion, may be both real?

Pro. Yes; that is the question.

Soc. You mean that opinion has the attributes of true and false, and hence becomes not merely opinion, but opinion of a certain quality; and this is what you think should be examined?

Pro. Yes.

Soc. And further, we must consider, whether admitting the existence of qualities in some objects, pleasure and pain may not be simple and devoid of quality?

Pro. Clearly.

Soc. But there is no difficulty in seeing that pleasure and pain as well as opinion have qualities, for they are great or small, and have various degrees of intensity; as was indeed said long ago by us.

Pro. Quite true.

Soc. And if there is badness in any of them, Protarchus, then we should speak of a bad opinion or of a bad pleasure?

Pro. Quite true, Socrates.

Soc. And if there is rightness in any of them, should we not speak of a right opinion or right pleasure; and in like manner of the reverse of rightness?

Pro. Certainly.

Soc. And if the thing opined be erroneous, might we not say that the opinion is erroneous, and not rightly opined?

Pro. Certainly.

Soc. And if we see a pleasure or pain which errs in respect of the object of pleasure or pain, shall we call that right or good, or by any honourable name?

Pro. Not if the pleasure is mistaken; we could not.

Soc. And surely pleasure often appears to accompany an opinion which is not true, but false?

Pro. That is quite correct; and in that case, Socrates, we ³⁸ call the opinion false, but no one could call the actual pleasure false.

Soc. How eagerly, Protarchus, do you rush to the defence of pleasure!

Pro. Nay, Socrates, I only say what I hear.

Soc. And is there no difference, my friend, between that pleasure which is associated with right opinion and knowledge, and that which is often found in us associated with falsehood and ignorance?

Pro. There must be a very great difference between them.

Soc. Then, now let us proceed to contemplate this difference.

Pro. Lead, and I will follow.

Soc. Well, then, my view is—

Pro. What?

Soc. I ask first of all, whether you would not acknowledge that there is such a thing as false, and that there is such a thing as true opinion?

Pro. There is.

Soc. And pleasure and pain, as I was saying, are often consequent upon them,—upon true and false opinion, I mean.

Pro. Very true.

Soc. And do not opinion and the endeavour to form an opinion always spring from memory and perception?

Pro. Certainly.

Soc. Might we imagine the process to be something of this sort? An object, let us say, is seen at a distance not very clearly, and the seer wants to determine what it is which he sees.

Pro. Very likely.

Soc. He asks, first of all—‘what is the image which is standing by a rock under a tree?’ That is the question which he may be supposed to put to himself when he sees such an image.

Pro. True.

Soc. To which he guesses the right answer, and says as if in a whisper to himself—‘this is a man.’

Pro. Very good.

Soc. Or again, he is misled, and then he says—‘No, it is a figure made by the shepherds.’

Pro. Yes.

Soc. And if he has a companion, he repeats his thought to him in articulate sounds, and what was before an opinion, has now become a proposition.

Pro. Certainly.

Soc. But if he be alone he keeps the thought in his mind, not unfrequently for a considerable time, as he is walking along.

Pro. Very true.

Soc. Well, now, I wonder whether you would agree in my explanation of this phenomenon?

Pro. What is your explanation?

Soc. I think that the soul at such times is like a book.

Pro. How so?

39 *Soc.* Memory and perception meet, and they and their attendant feelings seem to me almost to write down words in the soul, and when the inscribing feeling writes truly, then true opinion and true propositions grow in our souls—but when the scribe within us writes falsely the result is false.

Pro. I quite assent and agree to your statement.

Soc. I must bespeak your favour also for another artist, who is busy at the same time in the chambers of the soul.

Pro. Who is that?

Soc. The painter, who paints the images of the words which the scribe or registrar has already written down.

Pro. But when and how does he do this?

Soc. When abstracting from sight, or some other sense, the opinions which he then received or the words which he heard, he retains the image of them in his mind;—that is a very common mental phenomenon.

Pro. Certainly.

Soc. And the images of true opinions and words are true, and of false opinions and words false; are they not?

Pro. They are.

Soc. If we are right so far, there arises a further question.

Pro. What is that?

Soc. Whether we experience the feeling of which I am speaking only in relation to the present and the past, or in relation to the future also?

Pro. I should say in relation to all times alike.

Soc. Have not purely mental pleasures and pains been described already as in some cases anticipations of the bodily ones; from which we may infer that there is an anticipatory pleasure and pain having to do with the future?

Pro. Most true.

Soc. And do all those writings and paintings which a little while ago we were supposing to exist in our minds relate to the past and present only, and not to the future?

Pro. To the future, very much.

Soc. When you say 'very much,' you mean to imply that all these anticipations are hopes, and that mankind are filled with hopes in every stage of existence?

Pro. Exactly.

Soc. Answer me another question.

Pro. What question?

Soc. A just and pious and good man is the friend of the gods; is he not?

Pro. Certainly he is.

Soc. And the unjust and the bad man is the reverse?

Pro. True.

Soc. And all men, as we were saying just now, are always filled with hopes?

Pro. Certainly.

Soc. And these hopes, as they are termed, are propositions which exist in the minds of each of us?

Pro. Yes.

Soc. And the fancies of hope are also pictured in us; a man may often have a vision of a heap of gold, and pleasures ensuing, and in the picture there may be a likeness of himself mightily rejoicing over his good fortune.

Pro. True.

Soc. And may we not say that the good, being friends of the gods, have generally true pictures presented to them, and the bad false pictures?

Pro. Certainly.

Soc. And yet the bad have pleasures painted in their fancy as well as the good ; but I presume that they are false pleasures ?

Pro. They are.

Soc. The bad then commonly delight in false pleasures, and the good in true pleasures ?

Pro. That is most certain.

Soc. Then upon this view there are false pleasures in the souls of men which are a ludicrous imitation of the true, and there are pains also ?

Pro. There are.

Soc. And did we not allow that a man who had an opinion at all had a real opinion, but often about things which had no existence either in the past, present, or future ?

Pro. Quite true.

Soc. And this was the source of false opinion and opinings ; am I not right ?

Pro. Yes.

Soc. And must we not attribute to pleasure and pain a similar real but illusory condition ?

Pro. How do you mean ?

Soc. I mean to say that a man must be admitted to have real pleasure who is pleased with anything or anyhow ; and he may be pleased about things which neither have nor ever had any real existence, and, more often than not, are never likely to exist.

Pro. Yes, Socrates, that is undeniable.

Soc. And may not the same be said about fear and anger and the like ; are they not often false ?

Pro. Quite true.

Soc. And can opinions be good or bad except in as far as they are true or false ?

Pro. In no other way.

41 *Soc.* Nor can pleasures be conceived to be bad except in so far as they are false ?

Pro. Nay, Socrates, that is the very opposite of the truth ; for no one would call pleasures and pains bad because they are false, but by reason of some other corruption to which they are liable.

Soc. Well, of pleasures which are corrupt and caused by

corruption we will hereafter speak, if we care to continue the enquiry; for the present I would rather show by another argument that there are many false pleasures existing or coming into existence in us, because this may assist our final decision.

Pro. Very true; that is to say, if there are such pleasures.

Soc. I think that there are, Protarchus; but this is an opinion which should be put to the proof, and not left unsettled by us.

Pro. Very good.

Soc. Then now, like wrestlers, let us approach and grasp this new argument.

Pro. Proceed.

Soc. We were maintaining a little while since, that when desires, as they are termed, exist in us, then the body has separate feelings apart from the soul—do you remember?

Pro. Yes, I remember that you said so.

Soc. And the soul was supposed to desire the opposite of the bodily state, while the body was the source of any pleasure or pain which was experienced.

Pro. True.

Soc. Then now you may infer what happens in such cases.

Pro. What am I to infer?

Soc. That in such cases pleasures and pains come simultaneously, and opposite feelings of pleasure and pain are experienced together, as has been already shown.

Pro. Clearly.

Soc. And have we not further agreed that pleasure and pain both admit of more and less, and that they are of the class of infinites?

Pro. Certainly, that was said.

Soc. But how can we rightly judge of them?

Pro. How can we?

Soc. Is our intention to judge of their comparative quality or intensity, and to measure pleasure against pain, or pain against pain, or pleasure against pleasure?

Pro. Yes that was certainly our intention and mode of judging of them.

Soc. Well, to return to the case of sight. Does not the near-⁴²ness or distance of magnitudes darken their true proportion, and

make us opine falsely; and do we not find the same illusion happening in the case of pleasures and pains?

Pro. Yes, Socrates, and in a degree far greater.

Soc. Then what we are now saying is the opposite of what we were saying before.

Pro. What was that?

Soc. Then the opinions were true and false, and infected the pleasures and pains with their own falsehood.

Pro. Very true.

Soc. But now the pleasures are said to be true or false because they are seen at various distances, and subjected to comparison; the pleasures appear to be greater and more vehement when compared with the pains, and the pains when compared with the pleasures.

Pro. Certainly, and for the reason which you mention.

Soc. And when you subtract the greater and less amount, which is apparent and not real, you will acknowledge that the appearance is illusory, and you will never say that the corresponding excess or defect of pleasure or pain is real or true.

Pro. Certainly not.

Soc. Next let us see whether in another direction we may not find pleasures and pains existing and appearing in living beings, which are still more false than these.

Pro. What are they, and how shall we find them?

Soc. If I am not mistaken, I have often repeated that pains and afflictions, and aches and uneasiness of all sorts arise out of a corruption of nature caused by coagulations, and dissolutions, and repletions, and evacuations, and also by growth and decay?

Pro. Yes, that has been often said.

Soc. And we have also agreed that the restoration of the natural state is pleasure?

Pro. Right.

Soc. But now let us suppose an interval of time at which the body experiences none of these changes.

Pro. When, Socrates?

Soc. That, Protarchus, does not help the argument.

Pro. Why not, Socrates?

Soc. Because your question does not prevent me from repeating mine. *Univ Calif - Digitized by Microsoft®*

Pro. Which question of yours ?

Soc. Why, Protarchus, admitting that there is no such interval, I may ask what would be the necessary result if there were ?

Pro. You mean, what would happen if the body were not changed either for good or bad ?

Soc. Yes.

Pro. Why then, Socrates, I should suppose that there would be neither pleasure nor pain.

Soc. Very good ; but still, if I am not mistaken, you do assert 43 that we must always be experiencing one of them ; that is what the wise tell us ; for, say they, all things are ever flowing up and down.

Pro. Yes, and their words are of no mean authority.

Soc. Of course, for they are no mean authorities themselves ; and I should like to avoid the brunt of their argument. Shall I tell you how I mean to escape from them ? And I hope that you will run away with me.

Pro. How ?

Soc. To them we will say : ‘ Good ; but are we, or living things in general, always conscious of what happens to us—for example, of our growth, or the like ? Are we not on the contrary, almost wholly unconscious of this and similar phenomena ? ’ You must answer for them.

Pro. The latter, certainly.

Soc. Then we were not right in saying, just now, that these upward and downward changes cause pleasures and pains ?

Pro. True.

Soc. A better and more unexceptionable way of speaking will be—

Pro. What ?

Soc. If we say that the great changes produce pleasures and pains, but that the moderate and lesser ones do neither.

Pro. That, Socrates, is the better and safer mode of statement.

Soc. But if this be true, the life of which I was just now speaking again appears.

Pro. What life ?

Soc. The life which I said was devoid either of pain or of joy.

Pro. Very true.

Soc. We may assume then that there are three lives, one pleasant, one painful, and the third which is neither; or how would you describe them?

Pro. I should say as you do that there are three of them.

Soc. But if so, the negation of pain will not be the same as pleasure.

Pro. Certainly not.

Soc. Then when you hear a person saying, that always to live without pain is the pleasantest of all things, what would you understand him to mean by that statement?

Pro. I think that by pleasure he must mean the negative of pain.

Soc. Let us take any three things; or suppose that we embellish a little and call the first gold, the second silver, and there shall be a third which is neither.

Pro. Very good.

Soc. Now, can that which is neither be either gold or silver?

Pro. Impossible.

Soc. No more can that neutral or middle life be rightly or reasonably regarded or spoken of as pleasant or painful.

Pro. Certainly not.

44 *Soc.* And yet, my friend, there are, as we know, persons who say and think thus.

Pro. Certainly.

Soc. And do they think that they have pleasure when they are free from pain?

Pro. They say so.

Soc. And they must think or they would not say that they have pleasure.

Pro. I suppose not.

Soc. And yet if pleasure and the negation of pain are of distinct natures, they are wrong.

Pro. But they are undoubtedly of distinct natures.

Soc. Then shall we take the view that they are three, as we were just now saying, or two only—the one being a state of pain, which is an evil, and the other a cessation of pain, which is of itself a good, and is designated pleasure?

Pro. But why, Socrates, do we ask the question at all? I do not see the reason why.

Soc. You, Protarchus, have clearly never heard of certain enemies of our friend Philebus.

Pro. And who may they be?

Soc. Certain who are reputed to be masters in natural philosophy, and who deny the very existence of pleasure.

Pro. Indeed!

Soc. They say that what the school of Philebus calls pleasures are all of them only avoidances of pain.

Pro. And would you, Socrates, have us agree with them?

Soc. Why, no, I would rather use them as a sort of diviners, who are enabled to divine the truth, not by any rules of art, but by an instinctive repugnance and extreme detestation which a noble nature has of the power of pleasure, in which they think that there is nothing sound, and whose seductive influence is declared by them to be witchcraft, and not pleasure. This is the use which you may make of them; you shall consider the various grounds of their dislike, and then you shall hear from me what I deem to be true pleasures; and when the nature of pleasures has been examined from both points of view, we will bring her up for judgment.

Pro. True.

Soc. Then let us enter into an alliance with these philosophers and follow in the track of their dislike. I imagine that they would say something of this sort; they would begin at the foundation, and ask whether, if we wanted to know the nature and qualities of any class, we should be more likely to discover the quality, shall I say of hardness, by looking at the hardest things, or at the least hard? You, Protarchus, shall answer these severe gentlemen who address you through me.

Pro. By all means, and I reply to them, that you should look at the greatest instances.

Soc. Then if we want to see the true nature of pleasures as a class, we should not look at the most diluted pleasures, but at the most extreme and most vehement? 45

Pro. In that every one will be ready to agree.

Soc. And the most obvious instances of the greatest pleasures as we have often said are pleasures of the body?

Pro. Certainly.

Soc. And are they felt by us to be or become greater, when

we are sick or when we are in health? And here we must be careful in our answer, and not make a mistake.

Pro. How are we likely to mistake?

Soc. Why, because we might be tempted to answer rashly, 'when we are in health.'

Pro. Yes, that is the natural answer.

Soc. Well, but are not those pleasures the greatest of which mankind have the greatest desires?

Pro. True.

Soc. And do not people who are in a fever, or any similar illness, feel cold or thirst or other bodily affection more intensely? Am I not right in saying that they have a deeper want and greater pleasure in the satisfaction of their want?

Pro. That is clear when you say so.

Soc. Well, then, shall we not be right in saying, that if a person would wish to see the greatest pleasures he ought to go and look, not at health, but at disease? And here you must distinguish:—do not imagine that I am asking whether those who are very ill have more pleasure than those who are well, but understand that I am speaking of the intensity of pleasure; I want to know where pleasures are found to be most in excess. For, as I say, we have to discover what is pleasure, and what nature they attribute to her who deny her very existence.

Pro. I believe that I follow you.

Soc. We shall soon see whether you do or not, Protarchus, for you shall answer me; tell me then whether you see I will not say more but more intense and excessive pleasures in wantonness than in temperance? and please to think before you speak.

Pro. I understand you, and see that there is a great difference between them; the temperate are restrained by the wise man's aphorisms of 'never too much,' which is their rule, but excess of pleasure possessing the minds of fools and wantons quite maddens and infuriates them.

Soc. Very good, and if this be true, then the greatest pleasures and pains will clearly be found in some vicious state of soul and body, and not in the right state.

Pro. Certainly.

Soc. And ought we not to select some of these for examination, and see what makes them the greatest? 46

Pro. We ought.

Soc. Take the case of the pleasures which arise out of certain disorders.

Pro. What disorders?

Soc. The pleasures of unseemly disorders, which our severe friends utterly detest.

Pro. What pleasures?

Soc. Such, for example, as the relief of itching and other ailments by scratching, which is the only remedy required. For what in Heaven's name is the feeling to be called which is thus produced in us?—Pleasure or pain?

Pro. A villainous mixture of some kind, Socrates, I should say.

Soc. I did not introduce the argument, O Protarchus, with any personal reference to Philebus, but because, without the consideration of these and similar pleasures, we shall not be able to determine the point at issue.

Pro. Then we had better proceed to analyse this family of pleasures.

Soc. You mean the pleasures which have a common mixed nature?

Pro. Exactly.

Soc. There are some mixtures which are of the body, and only in the body, and others which are of the soul, and only in the soul; while there are other mixtures of pleasures with pains, common both to soul and body, which in their composite state are called sometimes pleasures and sometimes pains.

Pro. How is that?

Soc. Whenever, in the restoration or in the derangement of nature, a man experiences two opposite feelings; for example, when he is cold and is growing warm, or again, when he is hot and is being cooled, and he wants to have the one and be free from the other;—the sweet has a bitter, as they say, and both together fasten upon him and create irritation and in time drive him to distraction.

Pro. That description is very true to nature.

Soc. And in these sorts of mixtures the pleasures and pains

are sometimes equal, and sometimes one or other of them predominates?

Pro. True.

Soc. Of the greater pain an example is afforded by scratching and tickling, of which we were just now speaking, when the fiery and boiling element is within, and the rubbing and motion¹ only relieves the surface, and does not reach the parts affected; then if you put them to the fire, or in the last resort apply cold to them, you may often give the most intense pleasure; or a contrast of pleasures and pains within and on the surface may be produced, which ever of the two prevail, and this is
47 due to the forcible separation of what is united, and the union of what is separated, causing a juxtaposition of pleasure and pain.

Pro. Quite so.

Soc. Sometimes the element of pleasure prevails in a man, and the slight underfeeling of pain just tickles him, and causes a gentle irritation; or again, the excessive infusion of pleasure creates an excitement in him, and he will even leap for joy, and display all sorts of colours, attitudes, pantings, and be quite amazed, and utter the most irrational exclamations.

Pro. Yes, indeed.

Soc. He will say of himself, and others will say of him, that he is dying with these delights; and the more dissipated and good-for-nothing he is, the more vehemently he pursues them in every way; of all pleasures he declares them to be the greatest; and he reckons him who lives in the most constant enjoyment of them to be the happiest of mankind.

Pro. That, Socrates, is a very true description of the opinions of the majority about pleasures.

Soc. Yes, Protarchus, quite true of the mixed pleasures, which arise out of the communion of external and internal sensations in the body only; but where feelings of the mind mingle with the body² the combination takes place in another way—there is a contrast of pleasure and pain, which ends in a coalition between them. I have already remarked, that when a man is

¹ Reading with the MSS. κινήσει.

² Reading περί δὲ τῶν ἐν ψυχῇ σώματι, τὰ πάντα ἐνυβάλλεται.

empty he desires to be full, and has pleasure in hope and pain in vacuity. But now I must further add what I omitted before, that in all these and similar emotions in which body and mind are opposed (and they are innumerable), pleasure and pain coalesce in one.

Pro. I believe that to be quite true.

Soc. There still remains one other sort of admixture of pleasures and pains.

Pro. What is that?

Soc. The union which, as we were saying, the mind often experiences of purely mental feelings.

Pro. What do you mean?

Soc. Why, do we not speak of anger, fear, desire, sorrow, love, emulation, envy, and the like, as pains which belong to the soul only?

Pro. Yes.

Soc. And shall we not find them also full of the most wonderful pleasures? need I remind you of the anger

‘Which stirs even a wise man to violence,
And is sweeter than honey and the honeycomb?’

And you remember how pleasures mingle with pains in lamentation and bereavement? 48

Pro. Yes, there is a natural connexion between them.

Soc. And you remember also how at the sight of tragedies the spectators smile through their tears?

Pro. Certainly I do.

Soc. And are you aware that even at a comedy the soul experiences a mixed feeling of pain and pleasure?

Pro. I do not understand you.

Soc. I admit, Protarchus, that there is some difficulty in recognizing this mixture of feelings at a comedy.

Pro. There is, I think.

Soc. And the greater the difficulty the more desirable is the examination of the case, because the difficulty of examining other cases of mixed pleasures and pains will be less.

Pro. Proceed.

Soc. I have just mentioned envy; would you not call that a pain of the soul?

Pro. Yes.

Soc. And yet the envious man finds something in the misfortunes of his neighbours at which he is pleased?

Pro. Certainly.

Soc. And ignorance, and what is termed clownishness, are surely an evil?

Pro. To be sure.

Soc. From these considerations learn to know the nature of the ridiculous.

Pro. Explain.

Soc. The ridiculous may be described generally as the name of a state; and is that part of vice in general which is the opposite to the state of which the inscription at Delphi speaks.

Pro. You mean, Socrates, 'Know thyself.'

Soc. I do, and the opposite would be, 'Know not thyself.'

Pro. Certainly.

Soc. And now, O Protarchus, try to divide this into three.

Pro. Indeed I am afraid that I cannot.

Soc. Do you mean to say that I must make the division for you?

Pro. Yes, and what is more, I beg that you will.

Soc. Are there not three ways in which ignorance of self may be shown?

Pro. What are they?

Soc. In the first place, about money; the ignorant may fancy himself richer than he is.

Pro. Yes, that is a very common error.

Soc. And still more often he will fancy that he is taller or fairer than he is, or that he has some other advantage of person which he has not really.

Pro. Of course.

Soc. And yet surely by far the greatest number err about the goods of the mind; they imagine that they are a great deal better than they are.

Pro. Yes, that is by far the commonest delusion.

49 *Soc.* And of all the virtues, is not wisdom the one which the mass of mankind are always claiming, and which most arouses in them a spirit of contention and lying conceit of wisdom?

Pro. Certainly.

Soc. And may not all this be truly called an evil condition?

Pro. Very evil.

Soc. But we must pursue the division a step further, Pro-tarchus, if we would find the singular mixture of pleasure and pain;—pain is envy of the playful sort.

Pro. How can we make the further division which you suggest?

Soc. All who are silly enough to entertain this lying conceit of themselves may be divided, like the rest of mankind, into two classes—one having power and might; and the other the reverse.

Pro. Certainly.

Soc. Let this, then, be the principle of division; those of them who are weak and unable to revenge themselves, when they are laughed at, may be truly called ridiculous, but those who can defend themselves may be more truly described as strong and formidable, for ignorance in the powerful is hateful and horrible, because hurtful to others both in reality and in fiction, but powerless ignorance may be reckoned, and in truth is, ridiculous.

Pro. That is very true, but I do not as yet see where is the admixture of pleasures and pains.

Soc. Well then, let us examine the nature of envy.

Pro. Proceed.

Soc. Is not envy an unrighteous pleasure, and also a pain?

Pro. Most true.

Soc. There is nothing envious or wrong in rejoicing at the misfortunes of enemies?

Pro. Certainly not.

Soc. But to feel joy instead of sorrow at the sight of our friends' misfortunes—is not that envy?

Pro. Undoubtedly.

Soc. Did we not say that ignorance was always an evil?

Pro. True.

Soc. And the vain conceits of our friends about their beauty, wisdom, wealth, of which we made three divisions, are ridiculous if they are weak, and detestable when they are powerful: May we not say, as I was saying before, that our friends who are in this state of mind, when harmless to others, are simply ridiculous?

Pro. They are ridiculous.

Soc. And do we not acknowledge this ignorance of theirs to be a misfortune?

Pro. Certainly.

Soc. And do we feel pain or pleasure in laughing at it?

Pro. Clearly we feel pleasure.

50 *Soc.* And was not envy the source of this pleasure which we feel at the misfortunes of friends?

Pro. Certainly.

Soc. Then the argument shows that when we laugh at the folly of our friends, pleasure, in mingling with envy, mingles with pain, for envy has been acknowledged by us to be mental pain, and laughter is pleasant, and we envy and laugh at the same instant.

Pro. True.

Soc. And the argument implies that there are combinations of pleasure and pain in lamentations, and in tragedy and comedy, not only on the stage, but on the greater stage of human life, and in ten thousand ways.

Pro. I do not see how any one can deny what you say, Socrates, however eager he may be to assert the opposite opinion.

Soc. I have laid before you the examples of anger, desire, sorrow, fear, love, emulation, envy, and similar emotions, in which, as I was saying, there is a mixture of the two elements so often named; have I not?

Pro. Yes.

Soc. Note, however, that our conclusions hitherto have had reference only to sorrow and envy and anger.

Pro. I perceive.

Soc. But are these all, or are there a great many others remaining?

Pro. Certainly there are many others.

Soc. And why do you suppose that I showed you the admixture which takes place in comedy? In order that I might by an easy example prove to you the mixed nature of these affections of fear and love and the like; and I thought that when I had given you the illustration, you would have let me off, and acknowledged at once that the body without the soul,

and the soul without the body, as well as the two united, are susceptible of all sorts of admixtures of pleasures and pains, and that further discussion would thus become unnecessary. And now I want to know whether you will let me off: Or must I stay here until midnight? I fancy that I may obtain my release without many words;—if I promise that to-morrow I will give you an account of all of them. But at present I would rather sail in another direction, and go to other matters which remain to be settled, preliminary to the judgment which Philebus demands.

Pro. Very good, Socrates; in what remains take your own course.

Soc. Then after the mixed pleasures the unmixed should have their turn; this is the natural and necessary order.

Pro. Excellent.

51

Soc. These, in turn, then, I will now endeavour to explain; for with the opinion that all pleasures are a cessation of pain, I do not agree, but, as I was saying, use the maintainers of this opinion as witnesses, that there are pleasures which seem only and are not, and others again which have great power and appear in many forms, yet are intermingled with pains, and are partly alleviations of agonies and distresses, both of body and mind.

Pro. Then which are the true pleasures, Socrates, and what is the right conception of them?

Soc. True pleasures are those which are given by beauty of colour and form, and most of those which arise from smells; those of sound, again, and in general those of which the want is painless and unconscious, and the gratification afforded by them palpable to sense and pleasant and unalloyed with pain.

Pro. Once more, Socrates, I must ask what you mean.

Soc. My meaning is certainly not obvious, and I will endeavour to be plainer. I do not mean by the beauty of form such beauty as that of animals or pictures, which the many would suppose to be my meaning; but, says the argument, understand me to mean straight lines and circles, and the plane or solid figures which are formed out of them by turning-lathes and rulers and measurers of angles; for these I affirm to be not only relatively beautiful, like other things, but they are eternally

and absolutely beautiful, and they have peculiar pleasures, quite unlike the pleasures of scratching. And there are colours which are of the same character, and have similar pleasures; now do you understand my meaning?

Pro. I am trying to understand, Socrates, and I hope that you will try to make the meaning clearer.

Soc. When sounds are smooth and clear, and utter a single pure tone, then I mean to say that they are not relatively but absolutely beautiful, and have a natural pleasure associated with them.

Pro. Yes, there is such a class.

Soc. The pleasures of smell are of a less ethereal sort, but inasmuch as they have no admixture of necessary pain, I regard this freedom from pain, wherever and in whatever experienced, as the mark of an analogous class. Here then are two kinds of pleasures.

Pro. I understand.

52 *Soc.* To these may be added the pleasures of knowledge, if they appear to us to have no hunger of knowledge, and no pain of hunger attaching to them.

Pro. And they have not. } *not true -*

Soc. Well, but are there not pains of forgetfulness, if a man is full of knowledge and his knowledge is lost?

Pro. They are not natural or necessary, but there may be times of reflection, when he feels grief at the loss of his knowledge.

Soc. Yes, my friend, but at present we are enumerating only the natural perceptions, and have nothing to do with reflection.

Pro. In that case you are right in saying that the loss of knowledge is not attended with pain.

Soc. These pleasures of knowledge, then, are unmixed with pain; and they are not the pleasures of the many but of a very few.

Pro. Quite true.

Soc. And now, having fairly separated the pure pleasures and those which may be rightly termed impure, let us further add to our description of them, that the pleasures which are in excess have no measure, but that those which are not in excess have a measure; the great, the excessive, the more or less frequent, and

all which are denoted by such terms, we shall be right in referring to the class of the infinite, which is always pouring, with more or less force, through body and soul alike ; and the others we shall refer to the class which has measure.

Pro. That is most true, Socrates.

Soc. Still there is something more to be considered about pleasures.

Pro. What is that ?

Soc. When you speak of pure and clear, or of excessive and much, or of great and enough, how do they stand in reference to the truth ?

Pro. Why do you ask, Socrates ?

Soc. Because, Protarchus, I should wish to test pleasure and knowledge in every possible way, in order that if there be a pure and impure element in either of them, I may present the pure element for judgment, and then they will be more easily judged of by you and me and all of us.

Pro. Most true.

Soc. Let us consider all the pure kinds ; and for the better consideration of them, let us select a single instance.

Pro. What instance shall we select ?

Soc. Suppose that we take whiteness.

53

Pro. Very good.

Soc. How can there be purity in whiteness, and what purity ? Is it that which is greatest or most in quantity, or that which is most unadulterated and freest from any admixture of other colours ?

Pro. Clearly that which is most unadulterated.

Soc. True, Protarchus ; the purest and not the greatest or largest quantity of white, is to be deemed the truest and most beautiful white ?

Pro. Right.

Soc. And we shall be quite right in saying that a little pure white is whiter and fairer and truer than a great deal that is mixed.

Pro. Perfectly right.

Soc. There is no need of adducing many similar examples in illustration of the argument about pleasure ; one such is sufficient to prove to us that a small pleasure, if pure or unalloyed with

pain, is always pleasanter and truer and fairer than a great or often-repeated one of another kind.

Pro. Assuredly ; and the instance you have given is quite sufficient.

Soc. But what do you say of another question :—have we not heard that pleasure is always a generation, and has no true being? Do not certain ingenious philosophers affirm this, and ought not we to be grateful to them?

Pro. What do they mean?

Soc. Dear Protarchus, I will explain to you what they mean by putting a question.

Pro. Ask, and I will answer.

Soc. I assume that there are two natures, one self-existent, and the other ever in want of something?

Pro. What manner of natures are they?

Soc. The one eternal and majestic, the other inferior.

Pro. You speak riddles.

Soc. You have seen loves good and gentle, and also brave lovers of them.

Pro. I should think so.

Soc. Find two terms in all correlations which are like these two.

Pro. I wish that you would be a little more intelligible.

Soc. There is no difficulty, Protarchus ; the argument is only in play, and insinuates that some things are for the sake of something else (relatives), and that other things are the ends to which something else subserves (absolutes).

Pro. After many repetitions, at last I understand.

54 *Soc.* As the argument proceeds, my boy, I dare say that the meaning will become clearer.

Pro. Very likely.

Soc. Here are two new principles.

Pro. What are they?

Soc. One is the generation of all things, and another is essence.

Pro. I readily accept both generation and essence at your hands.

Soc. Very right ; and would you say that generation is for the sake of essence, or essence for the sake of generation?

Pro. You want to know whether that which is called essence is, properly speaking, for the sake of generation?

Soc. Yes.

Pro. By the gods, I wish that you would repeat your question.

Soc. I mean, O my Protarchus, to ask whether you would tell me that ship-building is for the sake of ships, or are ships for the sake of ship-building? and in all similar cases I should ask the same question.

Pro. Why do you not answer yourself, Socrates?

Soc. I have no objection, but you must take your part.

Pro. Certainly.

Soc. My answer is, that all things instrumental, remedial, material, are always used with a view to generation, and that each generation is relative to, or for the sake of, some being or essence, and that the whole of generation is relative to the whole of essence.

Pro. Assuredly.

Soc. Then pleasure, being a generation, will surely be for the sake of some essence?

Pro. True.

Soc. And that for the sake of which something is done must be placed in the class of good, and that which is done for the sake of another thing, in some other class, my good friend.

Pro. Most certainly.

Soc. Then pleasure, being a generation, will be rightly placed in some other class than that of good?

Pro. Quite right.

Soc. Then, as I said at first, we ought to be very grateful to him who first pointed out that pleasure was a generation only, and had no true being; for he is clearly one who laughs at the notion of pleasure being a good.

Pro. Assuredly.

Soc. And he would surely laugh also at those who make generation their highest end.

Pro. Of whom are you speaking, and what do they mean?

Soc. I am speaking of those who when they cure hunger or thirst or any other defect by some process of generation are as much delighted as if the generation were itself pleasure; and they say that they would not wish to live without these and the like feelings.

Pro. That is certainly what they appear to think.

Soc. And is not destruction universally admitted to be the opposite of generation ?

Pro. Certainly.

Soc. Then he who chooses thus, would choose generation and destruction rather than that third sort of life, in which, as we were saying, was neither pleasure nor pain, but only the purest possible thought.

Pro. He who would make us believe pleasure to be a good, is involved in great absurdity, Socrates.

Soc. Great, indeed ; and there is yet another of them.

Pro. What is that ?

Soc. Is there not an absurdity in arguing that there is nothing good or noble in the body, or in anything else, but that good is in the soul only, and that the only good of the soul is pleasure ; and that courage or temperance or understanding, or any other good of the soul, is not really a good ?—and is there not a further absurdity in our being compelled to say that he who has the feeling of pain and not of pleasure is bad at the time when he is suffering pain, even though he be the best of men ; and again, that he who has the feeling of pleasure, at the time when he is pleased, and in as far as he is pleased, excels in virtue ?

Pro. Nothing, Socrates, can be more irrational than all this.

Soc. And now, having subjected pleasure to every sort of test, let us not appear to spare mind and knowledge : let us ring their metal bravely, and see if there be unsoundness in any part, until we have found out what in them is of the purest nature ; and then the truest elements both of pleasure and knowledge may be brought up for judgment.

Pro. Right.

Soc. Knowledge has two parts ; the one productive, and the other educational ?

Pro. True.

Soc. And in the productive or handicraft arts, is not one part more akin to knowledge, and the other less ; and may not the one part be regarded as the pure, and the other as the impure ?

Pro. Certainly.

Soc. Let us separate the superior or dominant elements in each of them.

Pro. What are they and how do you separate them ?

Soc. I mean to say, that if arithmetic, mensuration, and weighing be taken away from any art, that which remains will not be much.

Pro. Not much, certainly.

Soc. The rest will be only conjecture, and the better use of the senses which is given by experience and exercise, in addition to a certain power of guessing, which is commonly called art, and is perfected by attention and practice.

56

Pro. Nothing more, assuredly.

Soc. Music, for instance, is full of this empiricism ; as is seen in the harmonising of sounds, not by rule, but by conjecture ; the music of the flute is always trying to guess the pitch of each vibrating note, and is therefore mixed up with much that is doubtful and has very little certainty.

Pro. Most true.

Soc. And the same will be found to hold good of medicine and husbandry and piloting and generalship.

Pro. Very true.

Soc. The art of the builder, on the other hand, which has a number of measures and instruments, attains from them a greater degree of accuracy than the other arts.

Pro. How is that ?

Soc. In ship-building and house-building, and in other branches of the art of carpentering, the builder has his rule, lathe, plummet, level, and a most ingenious machine for straightening wood.

Pro. Very true, Socrates.

Soc. Then now let us divide the arts of which we were speaking into two kinds ; the arts which, like music, are less exact in their results, and those which, like carpentering, are more exact.

Pro. Let us make that division.

Soc. Of the latter class, the most exact of all are those which I mentioned at first.

Pro. I see that you mean arithmetic, and the kindred arts of weighing and measuring.

Soc. Certainly, Protarchus ; but are not these also distinguishable into two kinds ?

Pro. What are the two kinds ?

Soc. In the first place, arithmetic is of two kinds ; one of which is popular, and the other philosophical.

Pro. How would you distinguish them?

Soc. There is a wide distinction between them, Protarchus; some arithmeticians reckon unequal units; as for example, two armies, two oxen; the one a very large and the other a very small two. The party who are opposed to them insists that every unit in ten thousand must be the same as every other unit.

Pro. Undoubtedly there is, as you say, a great difference among the votaries of the science; and there may be reasonably supposed to be two sorts of arithmetic.

Soc. And what of the arts of computation and mensuration
57 which are used in building and trading,—when we compare them with philosophical geometry and exact calculation, shall we say that they are one or two?

Pro. On the analogy of what has preceded, I should be of opinion that they were two.

Soc. Right; but do you understand why I have discussed the subject?

Pro. I think so, but I should like to be told by you.

Soc. The argument has all along been seeking a parallel to pleasure, and true to that original design, has gone on to ask whether one sort of knowledge is purer than another, as one pleasure is purer than another.

Pro. Clearly; that was the intention.

Soc. And has not the argument in what has preceded, already shown that the arts have different provinces, and vary in their degree of certainty?

Pro. Very true.

Soc. And just now did not the argument first designate a particular art by a common term, thus making us believe in the unity of art; and then again, as if speaking of two different things, proceed to enquire whether the art as pursued by philosophers, or as pursued by non-philosophers, has more of certainty and purity?

Pro. That is the question which the argument is at this moment asking.

Soc. And how, Protarchus, shall we answer the enquirer?

Pro. O Socrates, we have reached a point at which the difference of clearness in different kinds of knowledge is enormous.

Soc. Then the answer will be the easier.

Pro. Certainly ; and let us say in reply, that those arts into which arithmetic and mensuration enter, far surpass all others ; and that of these the arts or sciences which are animated by the pure philosophic impulse are infinitely superior in accuracy and truth about measures and numbers.

Soc. Then this is your judgment ; and this is the answer which, upon your authority, we will give to all masters of the art of misinterpretation ?

Pro. What answer ?

Soc. That there are two arts of arithmetic, and two of mensuration ; and also several other arts which in like manner have this double nature, and yet only one name.

Pro. Let us boldly return this answer to the masters of whom you speak, Socrates, and hope for good luck.

Soc. We have explained what we term the most exact arts or sciences ?

Pro. Very good.

Soc. And yet, Protarchus, dialectic will refuse to acknowledge us, if we do not acknowledge her to have the first place.

Pro. And what is dialectic ?

58

Soc. Clearly the science which knows all that knowledge of which we are now speaking ; for I am sure that all men who have a grain of intelligence will admit that the knowledge which has to do with being and reality, and sameness and unchangeableness, is by far the truest of all. And would you, Protarchus, say or decide otherwise ?

Pro. I have often heard Gorgias maintain, Socrates, that the art of persuasion far surpassed every other ; this, as he says, is by far the best of them all, for to it all things submit, not by compulsion, but of their own free will. Now, I should not like to quarrel either with you or with him.

Soc. You mean to say that you would like to desert, if you were not ashamed ?

Pro. As you please.

Soc. May I not have led you into a misapprehension ?

Pro. How ?

Soc. Dear Protarchus, I never asked which was the greatest or best or usefullest of arts or sciences, but which had clearness and

accuracy, and the greatest degree of truth, however humble and little useful an art. And as for Gorgias, if you do not deny that his art has the advantage in usefulness to mankind, he will not quarrel with you for saying that the study of which I am speaking is superior in this particular of absolute truth; as in the comparison of white colour, a little whiteness, if that little be only pure, was shown to be superior to a great mass which is impure. And now let us give our best attention and consider well, not the comparative use or estimation of the sciences, but the power or faculty, if there be such, which the soul has of loving the truth, and of doing all things for the sake of the truth; let us search into the pure element of mind and intelligence, and then we shall be able to say whether the science of which I have been speaking is most likely to possess the faculty, or whether there be some other which has higher claims.

Pro. Well, I have been considering, and I can hardly think that any other science or art has a firmer grasp of the truth than this.

59 *Soc.* You mean to say that the arts in general and similar pursuits make use of opinion, and are laboriously engaged in the investigation of matters of opinion. Even he who supposes himself to be occupied with nature is really occupied with the things of this world, how created, how acting or acted upon. Is not this the sort of enquiry in which his life is spent?

Pro. True.

Soc. He is labouring, not after eternal being, but about things which are changing, or will change, or have changed?

Pro. Very true.

Soc. And can we say that any of these things which neither are nor have been nor will be unchangeable, when judged by the strict rule of truth ever become certain?

Pro. Impossible.

Soc. How can there be any certainty about that which has no fixedness?

Pro. How indeed?

Soc. Then mind and science when employed about these changing things do not attain the highest truth?

Pro. I should imagine not.

Soc. And now let us bid farewell, a long farewell, to you or

me or Philebus or Gorgias, and urge on behalf of the argument a single point.

Pro. What point?

Soc. Let us say that the stable and pure and true and unalloyed, has to do with the things which are eternal and unchangeable and unmixed, or if not, at any rate with that which is most akin to them; and that all other things are to be placed in a second or inferior class.

Pro. Very true.

Soc. And of the names expressing cognition, ought not the fairest to be given to the fairest things?

Pro. That is natural.

Soc. And are not mind and wisdom the names which are to be honoured most?

Pro. Yes.

Soc. And these names may be said to have their truest and most exact application when the mind is engaged in the contemplation of true being?

Pro. Certainly.

Soc. And these were the names which I adduced as rivals of pleasure?

Pro. Very true.

Soc. In the next place, as to the task of mixing pleasure and wisdom, here are the ingredients or materials, and we may be compared to artists who have them ready to their hands?

Pro. Yes.

Soc. And now we must begin to mix them?

Pro. By all means.

Soc. But had we not better have a recapitulation and rehearsal first?

Pro. Of what?

Soc. Of that which I have already mentioned. Well says the proverb, that we ought to repeat not twice but thrice that which is good.

Pro. Certainly.

Soc. Well, then, by Zeus, let us proceed, and I will make what I believe to be a fair summary of the argument.

Pro. Let me hear.

Soc. Philebus says that pleasure is the true end of all living

beings, at which all ought to aim, and moreover that it is the chief good of all, and that the two names 'good' and 'pleasant' are correctly given to one thing and one nature; Socrates, on the other hand, begins by denying this, and further says, that in nature as in name they are two, and that wisdom partakes more than pleasure of the good. Is not and was not that what we were saying, Protarchus?

Pro. Certainly.

Soc. And is not and was not this a further point which was conceded between us—

Pro. What was the point?

Soc. That the good differs from all other things?

Pro. In what way?

Soc. In that the being who possesses good always everywhere and in all things, has the most perfect sufficiency, and is never in need of anything else.

Pro. Exactly.

Soc. And did we not endeavour to make an ideal division of them into two distinct lives, so that pleasure was wholly excluded from wisdom, and wisdom in like manner had no part whatever in pleasure?

Pro. We did.

Soc. And did we think that either of them alone would be sufficient?

Pro. Certainly not.

Soc. And if we erred in any point, then let any one who will, take up the enquiry again; and assuming memory and wisdom and knowledge and true opinion to belong to the same class, let him consider whether he would desire to possess or acquire, —I will not say pleasure, however abundant or intense, if he has no real perception that he is pleased, nor any consciousness of what he feels, nor any recollection, however momentary, of the feeling,—but would he desire to have anything at all, if these were wanting to him? And about wisdom I ask the same question; can you conceive that any one would choose to have all wisdom absolutely devoid of pleasure, rather than having a certain degree of pleasure, or all pleasure devoid of wisdom, rather than having a certain degree of wisdom?

Pro. Certainly not, Socrates ; but why repeat such questions any more ?

Soc. Then the perfect and universally eligible and entirely good cannot possibly be either of them ?

Pro. Impossible.

Soc. Then now we must ascertain the nature of the good more or less accurately, in order, as we were saying, that the second place may be duly assigned ?

Pro. Right.

Soc. Have we not found a road which leads towards the good ?

Pro. What road ?

Soc. Supposing that a man had to be found, and you could discover in what house he lived, would not that be a great step towards the discovery of the man himself ?

Pro. Certainly.

Soc. And now reason intimates to us, as at our first beginning that we should seek the good, not in the unmixed life but in the mixed ?

Pro. True.

Soc. There is greater hope of finding that which we are seeking in the life which is well mixed than in that which is not ?

Pro. Far greater.

Soc. Then now let us mingle, Protarchus, at the same time offering up a prayer to Dionysus or Hephaestus, or whoever is the god who presides over the ceremony of mixing.

Pro. By all means.

Soc. Are not we the cup-bearers ? and here are two fountains which are flowing at our side : one, which is pleasure, may be likened to a fountain of honey ; the other, which is a sober draught in which no wine mingles, is of water temperate and healthful ; out of these we must seek to make the fairest of all possible mixtures.

Pro. Certainly.

Soc. Tell me first ;—should we be most likely to succeed if we mingled every sort of pleasure with every sort of wisdom ?

Pro. Perhaps we might.

Soc. But I should be afraid of the risk, and I think that I can show a safer plan.

Pro. What is your plan?

Soc. One pleasure was supposed by us to be truer than another, and one art to be more certain than another.

Pro. Exactly.

Soc. There was also supposed to be a difference in sciences; one science regarding only the transient and perishing, and the other the permanent and imperishable and everlasting and immutable; and when judged by the standard of truth, the latter, as we thought, was truer than the former.

Pro. Very good and right.

Soc. If, then, we consider the sections of each which have the most of truth, and begin by mingling them, will not the union suffice to give us the loveliest of lives, or shall we still want some elements of another kind?

62 *Pro.* I think that you should do as you say.

Soc. Let us suppose a man who understands justice, and has reason as well as understanding about the true nature of this and of all other things.

Pro. Let that be supposed.

Soc. Will such an one have enough of knowledge if he is acquainted only with the divine circle and sphere, and knows nothing of our human spheres and circles, and with a like ignorance uses these or any other figures or rules in the building of a house? ¹

Pro. The knowledge which is only superhuman, Socrates, is ridiculous in man.

Soc. What do you mean? Do you mean that you are to throw into the cup and mingle the impure and uncertain art which uses the false rule and the false circle?

Pro. Yes, that must be done, if any of us is ever to find his way home.

Soc. And must I include music, which, as I was saying just now, is full of guesswork and imitation, and is wanting in purity?

Pro. Yes, I think that you must, if human life is to be a life at all.

Soc. Well, then, suppose that I give way, and, like a doorkeeper

¹ Or, supplying *θεϊοῖς*, but uses only these, and other divine rules, &c.

who is pushed and overborne by the mob, I open the door wide, and let knowledge of every sort stream in, and the pure and impure mingle?

Pro. I do not know, Socrates, that any great harm would come of having them all, if only you have the first sort.

Soc. Well, then, shall I let them all flow, into what Homer poetically terms 'a meeting of the waters?'

Pro. By all means.

Soc. There—I have let them in, and now I must return to the fountain of pleasure. For we were not permitted to mingle first of 'all the portions which had truth in them according to our original intention; but the love of all knowledge constrained us to let all the sciences flow out together before the pleasures.

Pro. Quite true.

Soc. And now the time has come for us to consider about the pleasures also, whether we shall in like manner let them out all at once, or at first only the true ones.

Pro. Let out the true ones first; that will be far the safer course.

Soc. Let them out, then; and now, if there are any necessary pleasures, as there were arts and sciences necessary, must we not mingle them?

Pro. Yes; the necessary pleasures should certainly be allowed to mingle.

Soc. And as the knowledge of the arts has been admitted to be 63 innocent and useful always, may I say the same of the pleasures—if they are all of them always good and innocent for all of us, must not all of them mingle?

Pro. What shall we say and do about them?

Soc. Do not ask me, Protarchus; but ask the daughters of pleasure and wisdom themselves, and let them answer about one another.

Pro. How?

Soc. Tell us, O beloved—shall we call you pleasures or by some other name?—would you rather live with or without wisdom? I am of opinion that they would certainly answer as follows:

Pro. How?

Soc. They would answer, as we said before, that for any class to be alone and in perfect solitude is not good, nor altogether

possible; and that if we are to make comparisons of one class with another and choose, there is no better companion than knowledge of things in general, and likewise the perfect knowledge, if that may be, of ourselves.

Pro. And our answer will be;—In that ye have spoken well.

Soc. Very true. And now let us go back and interrogate wisdom and mind;—would you like to have any pleasures in the mixture? And they will reply:—What pleasures do you mean?

Pro. Likely enough.

Soc. And we shall take up our parable and say: Do you wish to have the greatest and most vehement pleasures for your companions in addition to the true ones? Why, Socrates, they will say, how can we? seeing that they are the source of ten thousand hindrances to us; they trouble the souls of men, which are our habitation, with their madness; they prevent us from coming to the birth, and are commonly the ruin of our children when they do come to the birth, causing them to be forgotten and unheeded; but the other true and pure pleasures, of which you spoke, know to be of our kindred, and the pleasures which accompany health and temperance, and are in a manner the handmaidens and inseparable attendants of virtue as of a god,—mingle these and not the others; there would be great want of sense
64 in any one who desires to see the fair and untroubled stream, and to find in the admixture what is the highest good in man and in the universe, and to divine what is the true form of good—there would be great want of sense in his allowing the pleasures, which are always in the company of folly and vice, to mingle with mind in the cup: Is not this a very rational and suitable reply, which mind has made, both on her own behalf, as well as on that of memory and true opinion, to the question which has been asked of us?

Pro. Most certainly.

Soc. And still there must be something more added, which is a necessary ingredient in every mixture.

Pro. What is that?

Soc. Unless truth enter into the composition, nothing can truly be created or subsist.

Pro. Certainly not.

Soc. Certainly not; and now you and Philebus must tell me

whether anything is still wanting in the mixture, for to my way of thinking the argument is now completed, and may be compared to an incorporeal law, which is going to hold fair rule over a living body.

Pro. I agree with you, Socrates.

Soc. And may we not say truly that we are now at the vestibule of the good, and of the habitation of the good?

Pro. I think that we are.

Soc. What, then, is there in the mixture which is most precious, and which is the principal cause why such a state is universally beloved by all? When we have discovered, we will proceed to ask whether in the order of the universe this highest nature is more akin to pleasure or to mind?

Pro. Quite right; in that way we shall be better able to judge.

Soc. And there is no difficulty in seeing the cause which renders any mixture either of the highest value or of none at all.

Pro. What do you mean?

Soc. Every man knows.

Pro. What?

Soc. He knows that any want of measure and symmetry in any mixture must always of necessity be fatal, both to the elements and to the mixture, which is then not a mixture, but only a disorderly jumble disordering the possessor of it.

Pro. Most true.

Soc. And now the power of the good has retired into the region of the beautiful; for measure and symmetry everywhere pass into beauty and virtue.

Pro. True.

Soc. Also we said that truth was to form an element in the mixture.

Pro. Certainly.

Soc. Then, if we are not able to hunt the good with one idea only, with three we may take our prey; Beauty, Symmetry, Truth are the three, and these when united we may regard as the cause of the mixture, and the mixture as being good by reason of the admixture of them.

Pro. Quite right.

Soc. And now, Protarchus, every one may judge well enough

whether pleasure or wisdom is more akin to the highest good, and more honourable among gods and men.

Pro. There is no doubt, and yet perhaps the argument had better be pursued to the end.

Soc. We must take each of them separately in their relation to pleasure and mind, and pronounce upon them; for we ought to see to which of the two they are severally most akin.

Pro. You are speaking of beauty, truth, and measure?

Soc. Yes, Protarchus, take truth first, and, after a consideration of all three, mind, truth, pleasure, pause awhile and make answer to yourself,—as to whether pleasure or mind is more akin to truth.

Pro. There is no need to pause, for the difference between them is palpable; pleasure is the veriest impostor in the world; and the proverb says that in the pleasures of love, which appear to be the greatest, perjury is excused by the gods; the pleasures are children, who have not yet attained any degree of reason; whereas mind is either the same as truth, or the most like truth, and the truest.

Soc. Shall we next consider measure, in like manner, and ask whether pleasure has more of this than wisdom, or wisdom than pleasure?

Pro. Here is another question which may be easily answered; for I imagine that nothing can ever be more immoderate than the transports of pleasure, or more in conformity with measure than mind and knowledge.

Soc. Very good; but there still remains the third test: has mind a greater share of beauty than pleasure, and is mind or pleasure the fairer of the two?

Pro. Never, Socrates, were mind or wisdom seen or known to be in aught unseemly, waking or sleeping, at any time, past, present, or future.

Soc. Right.

Pro. But pleasures, and the greatest pleasures, when some
66 ridiculous or foul effect accompanies them, make us ashamed of the sight of them, and we put them out of sight, and consign them to darkness, under the idea that they ought not to meet the eye of day.

Soc. Then, Protarchus, you will proclaim everywhere by word

of mouth to this company, and will send messengers of the tidings far and wide, that pleasure is not the first of possessions, nor yet the second, but that in measure, and the measured, and the suitable, and the like, the eternal nature has been found.

Pro. Yes, that seems to be the result of what has been now said.

Soc. In the second class is the symmetrical and beautiful and perfect or sufficient, and all which are of that family.

Pro. True.

Soc. And if you reckon in the third class mind and wisdom, you will not be far wrong, if I divine aright.

Pro. I dare say.

Soc. And would you not put in the fourth class the goods which we were affirming to appertain specially to the soul—sciences and arts and true opinions as we called them; these come after the third class, and form the fourth, as they are certainly more akin to good than to pleasure.

Pro. Surely.

Soc. The fifth class are those which are defined by us painless pleasures, being the pure pleasures of the soul herself, as we termed them, which accompany, some the sciences, and some the senses¹.

Pro. Perhaps.

Soc. And in the sixth generation, as Orpheus says,

‘Cease the glory of my song.’

Here, at the sixth award, let us make an end; all that remains is to put the top on our discourse.

Pro. True.

Soc. Then, by way of a third libation to the saviour Zeus, let us sum up and reassert what has been said.

Pro. How?

Soc. Philebus affirmed that pleasure was always and absolutely the good.

Pro. I understand; this third libation, Socrates, of which you spoke, meant another recapitulation.

Soc. Yes, but listen to the sequel; convinced of what I have just been saying, and feeling indignant at the argument, which is

¹ Reading ἐπιστήμαις, τὰς δὲ according to Professor Campbell's emendation.

maintained, not by Philebus only, but by thousands of others, I affirmed that mind was far better and far more excellent, as an element of human life, than pleasure.

Pro. True.

Soc. But, suspecting that there were other things which were better still, I said also, that if there was anything better than either, then I would claim the second place for mind over pleasure, and pleasure would lose the second place as well as the first.

Pro. You did.

67 *Soc.* Nothing could be more satisfactorily shown than the insufficiency of both of them.

Pro. Very true.

Soc. The claims both of pleasure and mind to be the absolute good have been entirely disproven in this argument, because they are both wanting in sufficiency and also in adequacy and perfection.

Pro. Most true.

Soc. But, though they must both resign in favour of another, mind is ten thousand times nearer and more akin to the nature of the conqueror than pleasure.

Pro. Certainly.

Soc. And, according to the judgment which has now been given, pleasure will rank fifth.

Pro. True.

Soc. But not first ; no, not even if all the oxen and horses and animals in the world in their pursuit of enjoyment affirm this ; and the many trusting in them, as diviners trust in birds, determine that pleasures make up the good of life, and deem the lusts of animals to be better witnesses than the inspirations of divine philosophy.

Pro. And now, Socrates, we tell you that the truth of what you have been saying is approved by the judgment of all of us.

Soc. And will you let me go ?

Pro. There is a little which yet remains, and I will remind you of it, for I am sure that you will not be the first to weary¹ of an argument.

PARMENIDES.

INTRODUCTION.

THE awe with which Plato regarded the character of Parmenides has extended to the dialogue which he calls by his name. There is none of the writings of Plato which has been more copiously illustrated, both in ancient and modern times, and in none of them have the interpreters been more at variance with one another. Nor is this surprising. For the Parmenides is more fragmentary and isolated than any other dialogue, and the design of the writer is not expressly stated. The date is uncertain; the relation to the other writings of Plato is also uncertain; the connection between the two parts is at first sight extremely obscure; and in the latter of the two we are left in doubt as to whether Plato is speaking his own sentiments by the lips of Parmenides, and overthrowing him out of his own mouth, or whether he is propounding consequences which would have been admitted by Zeno and Parmenides themselves. The contradictions which follow from the hypotheses of the one and many have been regarded by some as transcendental mysteries; by others as a mere illustration, taken at random, of a new method. The criticism on his own doctrine of ideas has also been considered, not as a real criticism, but as an exuberance of the metaphysical imagination which enabled Plato to go beyond himself. To the latter part of the dialogue we may certainly apply the words in which he himself describes the earlier philosophers in the Sophist (243 A), 'that they went on their way rather regardless of whether we understood them or not.'

The Parmenides in point of style is one of the best of the Platonic writings; the first portion of the dialogue is in no way defective in ease and grace and dramatic interest; nor in the second part, where there was no room for such qualities, is there any want of clearness or precision. Like the Protagoras, Phaedo, and others, it is a narrated dialogue, combining with the mere recital of the words spoken, the observations of the

reciter on the effect produced by them. Thus we are informed by him that Zeno and Parmenides were not altogether pleased at the request of Socrates that they would examine into the nature of the one and many in the sphere of ideas, although they received his suggestion with approving smiles. And we are glad to be told that Parmenides was 'aged but well-favoured,' and that Zeno was 'very good-looking'; also that Parmenides affected to decline the great argument, on which, as Zeno knew from experience, he was very willing to enter. The character of Antiphon, the half-brother of Plato, who had once been inclined to philosophy, but has now shown the hereditary disposition for horses, is very naturally described. He is the sole depositary of the famous dialogue; but, although he receives the strangers like a courteous gentleman, he is impatient of the trouble of reciting it. As they enter, he has been giving orders to a bridle-maker; by this slight touch Plato verifies the description of him. After a little persuasion he is induced to favour the Clazomenians, who come from a distance, with a rehearsal. Respecting the visit of Zeno and Parmenides to Athens, we may observe—first, that such a visit is consistent with dates, and may possibly have occurred; secondly, that Plato is very likely to have invented the meeting ('You, Socrates, can easily invent Egyptian tales or anything else'); thirdly, that no reliance can be placed on the circumstance as determining the date of Parmenides and Zeno.

Many interpreters have regarded the Parmenides as a 'reductio ad absurdum' of the Eleatic philosophy. But would Plato have been likely to place this in the mouth of the great Parmenides himself, who appeared to him, in Homeric language, to be 'venerable and awful,' and to have a 'most generous depth of mind'? It may be admitted that he has ascribed to an Eleatic stranger in the Sophist opinions which went beyond the doctrines of the Eleatics. But the Eleatic stranger expressly criticises the doctrines in which he had been brought up; he admits that he is going to 'lay hands on his father Parmenides.' Nothing of this kind is said of Zeno and Parmenides. How then, without a word of explanation, could Plato assign to them the refutation of their own tenets?

The conclusion at which we must arrive is that the Parmenides is not a refutation of the Eleatic philosophy. Nor would such an explanation afford any satisfactory connection of the first and second parts of the dialogue. And it is quite inconsistent with Plato's own relation to the Eleatics. For of all the pre-Socratic philosophers, he speaks of them

with the greatest respect. But he could hardly have passed upon them a more unmeaning slight than to ascribe to their great master tenets the reverse of those which he actually held.

Two preliminary remarks may be made. First, that whatever latitude we may allow to Plato in bringing together by a 'tour de force,' as in the *Phaedrus*, dissimilar themes, yet he always in some way seeks to find a connection for them. Many threads join together in one the love and dialectic of the *Phaedrus*. We cannot conceive that the great artist would place in juxtaposition two absolutely divided and incoherent subjects. And hence we are led to make a second remark: viz. that no explanation of the *Parmenides* can be satisfactory which does not indicate the connection of the first and second parts. To suppose that Plato would first go out of his way to make *Parmenides* attack the Platonic ideas, and then proceed to a similar but more fatal assault on his own doctrine of Being, appears to be the height of absurdity.

Perhaps there is no passage in Plato showing greater metaphysical power than that in which he assails his own theory of ideas. The arguments are nearly, if not quite, those of Aristotle; they are the objections which naturally occur to a modern student of philosophy. Many persons will be surprised to find Plato criticising the very conceptions which have been supposed in after ages to be peculiarly characteristic of him. How can he have placed himself so completely without them? How can he have ever persisted in them after seeing the fatal objections which might be urged against them? The consideration of this difficulty has led a recent critic (*Ueberweg*), who in general accepts the authorised canon of the Platonic writings, to condemn the *Parmenides* as spurious. The accidental want of external evidence, at first sight, seems to favour this opinion.

In answer, it might be sufficient to say, that no ancient writing of equal length and excellence is known to be spurious. Nor is the silence of Aristotle to be hastily assumed; there is at least a doubt whether his use of the same arguments does not involve the inference that he knew the work. And, if the *Parmenides* is spurious, like *Ueberweg* we are led on further than we originally intended, to pass a similar condemnation on the *Theaetetus* and *Sophist*, and therefore on the *Politicus* (cp. *Theaet.* 183 E, *Soph.* 217). But the objection is in reality fanciful, and rests on the assumption that the doctrine of the ideas was held by Plato throughout his life in the same form. For the truth is, that the Platonic ideas were in constant process of growth and trans-

mutation; sometimes veiled in poetry and mythology, then again emerging as abstract ideas, in some passages regarded as absolute and eternal, and in others as relative to the human mind, existing in and derived from external objects as well as transcending them. The *anamnesis* of the ideas is chiefly insisted upon in the mythical portions of the dialogues, and really occupies a very small space in the entire works of Plato. Their transcendental existence is not asserted, and is therefore implicitly denied in the Republic and Philebus; and they are mentioned in the Theaetetus, the Sophist, the Politicus, and the Laws, much as Universals would be spoken of in modern books. Indeed, there are very faint traces of the transcendental doctrine of ideas, that is, of their existence apart from the mind, in any of Plato's writings, with the exception of the Meno, the Phaedrus, and the Phaedo. The stereotyped form which Aristotle has given to them is not found in Plato.

The full discussion of this subject involves a comprehensive survey of the philosophy of Plato, which would be out of place here. But, without digressing further from the immediate subject of the Parmenides, we may remark that Plato is quite serious in his objections to his own doctrines; this is proved by the circumstance that they are not answered by Socrates. The perplexities which surround the one and many in the sphere of the ideas are also alluded to in the Philebus, and no answer is given to them. Nor have they ever been answered, nor can they be answered by any one else who separates the phenomenal from the real. To suppose that Plato, at a later period of his life, reached a point of view from which he was able to answer them, is a mere groundless assumption. The real progress of Plato's own mind has been partly concealed from us by the dogmatic statements of Aristotle, and also by the degeneracy of his own followers, with whom a doctrine of numbers quickly superseded ideas.

As a preparation for answering some of the difficulties which have been suggested, we may begin by sketching the first portion of the dialogue:—

Cephalus, of Clazomenae in Ionia, the birthplace of Anaxagoras, a citizen of no mean city in the history of philosophy, who is the narrator of the dialogue, describes himself as meeting Adeimantus and Glaucon in the Agora at Athens. 'Welcome, Cephalus: can we do anything for you in Athens?' 'Why, yes: I came to ask a favour of you. First, tell me your half-brother's name, which I have forgotten—he was a mere child when I was last here; I know his father's, which is Pyrilampes.' 'Yes,

and the name of our brother, Antiphon. But why do you ask?' 'On behalf of some countrymen of mine, who are lovers of philosophy; they have heard that Antiphon remembers a conversation of Socrates with Parmenides and Zeno, of which the report came to him from Pythodorus, Zeno's friend.' 'That is quite true.' 'And can we hear the dialogue?' 'Nothing easier; in the days of his youth he made a careful study of the piece; at present, his thoughts have another direction: he takes after his grandfather, and has given up philosophy for horses.'

'We went to look for him, and found him giving instructions to a worker in brass about a bridle. When he had done with him, and had learned from his brother the purpose of our visit, he saluted me as an acquaintance whom he remembered of old, and we asked him to repeat the dialogue. At first, he complained of the trouble, but he soon consented. He told us that Pythodorus described to him the appearance of Parmenides and Zeno; they had come to Athens at the great Panathenaea, the former being at the time about sixty-five years old, aged but well-favoured—Zeno, who was said to have been beloved of Parmenides in the days of his youth, about forty, and very good-looking:—that they lodged with Pythodorus at the Ceramicus outside the wall, whither Socrates, who was at that time a very young man, came to see them: Zeno was reading one of his theses, which he had nearly finished, when Pythodorus entered with Parmenides and Aristoteles, who was afterwards one of the Thirty—(Pythodorus himself had heard them before)—and Socrates was requesting that the first thesis of the treatise might be read again.'

'You mean, Zeno,' said Socrates, 'to argue that the many, if they exist, must be both like and unlike, which is a contradiction; and each division of your argument is intended to elicit a similar absurdity, which may be supposed to follow from the assumption of the existence of the many.' 'That is my meaning.' 'I see,' said Socrates, turning to Parmenides, 'that Zeno is your second self in his writings too; you prove admirably that the all is one: he gives proofs no less convincing that the many are nought. To deceive the world by saying the same thing in entirely different forms, is a strain of art beyond most of us.' 'Yes, Socrates,' said Zeno; 'but though you are as keen as a Spartan hound, you do not quite catch the motive of the piece, which was only intended to protect Parmenides against ridicule by showing that the hypothesis of the existence of the many involved greater absurdities than the hypothesis

of the one. The book was a youthful composition of mine, which was stolen from me, and therefore I had no choice about the publication.' 'I quite believe you,' said Socrates; 'but will you answer me a question? I should like to know, whether you would assume an idea of likeness in the abstract, which is the contradictory of unlikeness in the abstract, by participation in either or both of which, things are like or unlike or partly both. For the same things may very well partake of like and unlike in the concrete, though like and unlike in the abstract are irreconcilable. Nor does there appear to me to be any absurdity in maintaining that the same things may partake of the one and many, though I should be indeed surprised to hear that the absolute one is also many. For example, I, being many, that is to say, having many parts or members, am yet also one, and partake of the one, being one of seven who are here present. (Cp. *Philebus* 14, 15.) This is not an absurdity, but a truism. But I should be amazed if there were a similar entanglement in the nature of the ideas themselves, nor can I believe that one and many, like and unlike, rest and motion, in the abstract, are capable either of admixture or of separation.

Pythodorus said that in his opinion Parmenides and Zeno were not very well pleased at the questions which were raised; nevertheless, they looked at one another and smiled in seeming delight and admiration of Socrates. 'Tell me,' said Parmenides, 'was this your own distinction between the abstract ideas of likeness, unity, and the rest, and the individuals which partake of the ideas?' 'I think that there are such ideas.' 'And would you make abstract ideas of the just, the beautiful, the good?' 'Yes,' he said. 'And of human beings like ourselves, of water, fire, and the like?' 'I am not certain.' 'And would you be undecided also about ideas of which the mention will, perhaps, appear laughable: of hair, mud, filth, and other things which are base and vile?' 'No, Parmenides; visible things like these are, as I believe, only what they appear to be: though I am sometimes disposed to imagine that there is nothing without an idea; but I repress any such notion, from a fear of falling into an abyss of nonsense.' 'You are young, Socrates, and therefore naturally regard the opinions of men; the time will come when philosophy will have a firmer hold of you, and you will not despise even the meanest things. But tell me, is your meaning that things become like by partaking of likeness, great by partaking of greatness, just and beautiful by partaking of justice and beauty, and so

of other ideas?' 'Yes, that is my meaning.' 'And do you suppose the individual to partake of the whole, or of the part?' 'Why not in the whole?' said Socrates. 'Because,' said Parmenides, 'in that case the whole, which is one, will become many.' 'Nay,' said Socrates, 'the whole may be like the day, which is one and in many places: in this way the ideas may be one and also many.' 'In the same sort of way,' said Parmenides, 'as a sail, which is one, may be a cover to many—that is your meaning?' 'Yes.' 'And would you say that each man is covered by the whole sail, or by a part only?' 'By a part.' 'Then the ideas have parts, and the objects partake of a part of them only?' 'That seems to follow.' 'And would you like to say that the ideas are really divisible and yet remain one?' 'Certainly not.' 'Would you venture to affirm that great objects have a portion of greatness transferred to them; or that small or equal objects become small or equal by the addition of a portion of smallness or equality which is greater than the portion which they originally have?' 'Impossible.' 'But in what other way can individuals participate in ideas, except those mentioned?' 'That is not an easy question to answer.' 'Is not the way in which you are led to conceive ideas as follows: you see great objects pervaded by a common form or idea of greatness, which you abstract?' 'That is quite true.' 'And supposing you add the idea of greatness thus gained to the class of great objects, a further idea of greatness arises, which makes both great; and this may go on to infinity.' Socrates replies that the ideas may be thoughts in the mind only; in this case, the consequence would no longer follow. But must not the thought be of something which is the same in all and is the idea? 'But if the world partakes in the ideas, and the ideas are thoughts, must not all things think? Or can thought be without thought?' 'I acknowledge the unmeaningness of this,' says Socrates, 'and would rather have recourse to the explanation that the ideas are types in nature, and that other things partake of them by becoming like them.' 'But to become like them is to be comprehended in the same idea; and the likeness of the idea and the individuals implies another idea of likeness, and another without end.' 'Quite true.' 'The theory, then, of participation by likeness has to be given up. You have hardly yet, Socrates, found out the real difficulty of maintaining abstract ideas.' 'What difficulty?' 'The greatest of all perhaps is this: an opponent will argue that the ideas are not within the range of human knowledge and you cannot disprove the assertion without a long and

laborious demonstration, which he may be unable or unwilling to follow. In the first place, neither you nor any one who maintains the existence of absolute ideas will affirm that they are subjective.' 'That would be a contradiction.' 'True; and therefore any relation in these ideas is a relation which concerns themselves only; and the objects which are named after them, are relative to one another only, and have nothing to do with the ideas themselves.' 'How do you mean?' said Socrates. 'I may illustrate my meaning in this way: one of us has a slave; and the idea of a slave in the abstract is relative to the idea of a master in the abstract; this correspondence of ideas, however, has nothing to do with the particular relation of our slave to us.—Do you see my meaning?' 'Perfectly.' 'And absolute knowledge in the same way corresponds to absolute truth and being, and particular knowledge to particular truth and being.' 'Clearly.' 'And there is a subjective knowledge which is of subjective truth, having many kinds, general and particular. But the ideas themselves are not subjective, and therefore are not within our ken.' 'They are not.' 'Then the beautiful and the good in their own nature are unknown to us?' 'It would seem so.' 'There is a worse consequence yet.' 'What is that?' 'I think we must admit that absolute knowledge is the most exact knowledge, which we must therefore attribute to God. But then see what follows: God, having this exact knowledge, can have no knowledge of human things, as we have divided the two spheres, and forbidden any passing from one to the other:—the gods have knowledge and authority in their world only, as we have in ours. Yet, surely, to deprive God of knowledge is monstrous.—These are some of the difficulties which are involved in the assumption of absolute ideas; the learner will find them nearly impossible to understand, and the teacher who has to impart them will require superhuman ability; there will always be a suspicion, either that they have no existence, or are beyond human knowledge.' 'I agree in that,' said Socrates. 'Yet if these difficulties induce you to give up universal ideas, what becomes of the mind? and where are the reasoning and reflecting powers? philosophy is at an end.' 'I certainly do not see my way.' 'I think,' said Parmenides, 'that this arises out of your attempting to define abstractions, such as the good and the beautiful and the just, before you have had sufficient previous training; I noticed your deficiency when you were talking with Aristoteles, the day before yesterday. Your enthusiasm is a wonderful gift; but I fear that unless you discipline

enthusiasm is a wonderful gift; but I fear that unless you discipline yourself by dialectic while you are young, truth will elude your grasp.' 'And what kind of discipline would you recommend?' 'The training which you heard Zeno practising; at the same time, I admire your saying to him that you did not care to consider the difficulty in reference to visible objects, but only in relation to ideas.' 'Yes; because I think that in visible objects you may easily show any number of inconsistent consequences.' 'Yes; and you should consider, not only the consequences which follow from a given hypothesis, but the consequences also which follow from the denial of the hypothesis. For example, what follows from the assumption of the existence of the many, and the counter-argument of what follows from the denial of the existence of the many: and similarly of likeness and unlikeness, motion, rest, generation, corruption, being and not being. And the consequences must include consequences to the things supposed and to other things, in themselves and in relation to one another, to individuals whom you select, to the many, and to the all; these must be drawn out both on the affirmative and on the negative hypothesis,—that is, if you are to train yourself perfectly to the intelligence of the truth.' 'What you are suggesting seems to be a tremendous process, and one of which I do not quite understand the nature,' said Socrates; 'will you give me an example?' 'You must not impose such a task on a man of my years,' said Parmenides. 'Then will you, Zeno?' 'Let us rather,' said Zeno, with a smile, 'ask Parmenides, for the undertaking is a serious one, as he truly says; nor could I urge him to make the attempt, except in a select audience, who will understand him.' The whole party joined in the request.

Here we have, first of all, an unmistakable attack made by the youthful Socrates on the paradoxes of Zeno. He perfectly understands their drift, and Zeno himself is supposed to admit this. But they appear to him, as he says in the *Philebus* also, to be rather truisms than paradoxes. For every one must acknowledge the obvious fact, that the body being one has many members, and that, in a thousand ways, the like partakes of the unlike, the many of the one. The real difficulty begins with the relations of ideas in themselves, whether of the one and many, or of any other ideas, to one another and to the mind. But this was a problem which the Eleatic philosophers had never considered; their thoughts had not gone beyond the contradictions of matter, motion, space, and the like.

It was no wonder that Parmenides and Zeno should hear the novel speculations of Socrates with mixed feelings of admiration and displeasure. He was going out of the received circle of disputation into a region in which they could hardly follow him. From the rude idea of being in the abstract, he was about to proceed to universals or general notions. There is no contradiction in material things partaking of the ideas of one and many; neither is there any contradiction in the ideas of one and many, like and unlike, in themselves. But the contradiction arises when we attempt to conceive ideas in their connection, or to ascertain their relation to phenomena. Still he affirms the existence of such ideas; and this is the position which is now in turn submitted to the criticisms of Parmenides.

To appreciate truly the character of these criticisms, we must remember the place held by Parmenides in the history of Greek philosophy. He is the founder of idealism, and also of dialectic, or, in modern phraseology, of metaphysics and logic. Like Plato, he is struggling after something wider and deeper than satisfied the contemporary Pythagoreans. And Plato with a true instinct recognises him as his spiritual father, whom he 'revered and honoured more than all other philosophers together.' He may be supposed to have thought more than he said, or was able to express. And, although he could not, as a matter of fact, have criticised the ideas of Plato without an anachronism, the criticism is appropriately placed in the mouth of the founder of the ideal philosophy.

There was probably a time in the life of Plato when the ethical teaching of Socrates came into conflict with the metaphysical theories of the earlier philosophers, and he sought to supplement the one by the other. The older philosophers were great and awful; and they had the charm of antiquity. Something which found a response in his own mind seemed to have been lost as well as gained in the Socratic dialectic. He felt no incongruity in the veteran Parmenides correcting the youthful Socrates. Two points in his criticism are especially deserving of notice. First of all, Parmenides tries him by the test of consistency. Socrates is willing to assume ideas or principles of the just, the beautiful, the good, and to extend them to man (cp. *Phaedo* 98); but he is reluctant to admit that there are general ideas of hair, mud, filth, etc. There is an ethical universal or idea, but is there also a universal of physics? of the meanest

things in the world as well as of the greatest? Parmenides rebukes this want of consistency in Socrates, which he attributes to his youth. As he grows older, philosophy will take a firmer hold of him, and then he will despise neither great things nor small, and he will think less of the opinions of mankind. (Cp. *Soph.* 227 A.) Here is lightly touched one of the most familiar principles of modern philosophy, that in the meanest operations of nature, as well as in the noblest, in mud and filth, as well as in the sun and stars, great truths are contained. At the same time, we may note also the transition in the mind of Plato, to which Aristotle alludes (*Met.* 1. 6, 2), when, as he says, he transferred the Socratic universal of ethics to the whole of nature.

The other criticism of Parmenides on Socrates attributes to him a want of practice in dialectic. He has observed this deficiency in him when talking to Aristoteles on a previous occasion. Plato seems to imply that there was something more in the dialectic of Zeno than in the mere interrogation of Socrates. Here, again, he may perhaps be describing the process which his own mind went through when he first became more intimately acquainted, whether at Megara or elsewhere, with the Eleatic and Megarian philosophers. Still, Parmenides does not deny to Socrates the credit of having gone beyond them in seeking to apply the paradoxes of Zeno to ideas; and this is the application which he himself makes of them in the latter part of the dialogue. He then proceeds to explain to him the sort of mental gymnastic which he should practise. He should consider not only what would follow from a given hypothesis, but what would follow from the denial of it, to that which is the subject of the hypothesis, and to all other things. There is no trace in the *Memorabilia* of Xenophon of any such method being attributed to Socrates; nor is the dialectic here spoken of that 'favourite method' of proceeding by regular divisions, which is described in the *Phaedrus* and *Philebus*, and of which examples are given in the *Politicus* and in the *Sophist*. It is expressly spoken of (p. 135 E) as the method which Socrates had heard Zeno practise in the days of his youth. (Cp. *Soph.* 217 C.)

The discussion of Socrates with Parmenides is one of the most remarkable passages in Plato. Few writers have ever been able to anticipate 'the criticism of the morrow' on their own favourite notions. But Plato may here be said to anticipate the judgment not only of the morrow, but of all after ages on the Platonic ideas. For in some

points he touches questions which have not yet received their solution in modern philosophy.

The first difficulty which Parmenides raises respecting the Platonic ideas relates to the manner in which individuals are connected with them. Do they participate in the ideas, or do they merely resemble them? Parmenides shows that objections may be urged against either of these modes of conceiving the connection. Things are little by partaking of littleness, great by partaking of greatness, and the like. But they cannot partake of a part of greatness, for that will not make them great, &c.; nor can each object monopolise the whole. The only answer to this is, that 'partaking' is a figure of speech, really corresponding to the processes which a later logic designates by the terms 'abstraction' and 'generalization.' When we have described accurately the methods or forms which the mind employs, we cannot further criticise them; at least we can only criticise them with reference to their fitness as instruments of thought to express facts.

Socrates attempts to support his view of the ideas by the parallel of the day, which is one and in many places; but he is easily driven from this by a counter illustration of Parmenides, who compares the idea of greatness to a sail. He truly explains to Socrates that he has attained the conception of ideas by a process of generalization. At the same time, he points out a difficulty, which appears to be involved—viz. that the process of generalization will go on to infinity. Socrates meets the supposed difficulty by a flash of light, which is indeed the true answer 'that the ideas are in our minds only.' Neither realism is the truth, nor nominalism is the truth, but conceptualism; and conceptualism or any other psychological theory falls very far short of the infinite subtlety of language and thought.

But the realism of ancient philosophy will not admit of this answer, which is vigorously repelled by Parmenides with another half truth of later philosophy, 'Every subject or subjective must have an object.' Here is the great though unconscious truth (shall we say?) or error, which underlay the early Greek philosophy. 'Ideas must have a real existence;' they are not mere forms or opinions, which may be changed arbitrarily by individuals. But the early Greek philosopher never clearly saw that true ideas were only universal facts, and that there might be error in universals as well as in particulars.

Socrates makes one more attempt to defend the Platonic ideas by

representing them as paradigms; this is again answered by the 'argumentum ad infinitum.' We may remark, in passing, that the process which is thus described has no real existence. The mind, after having obtained a general idea, does not really go on to form another which includes that, and all the individuals contained under it, and another and another without end. The difficulty belongs in fact to the Megarian age of philosophy, and is due to their illogical logic, and to the general ignorance of the ancients respecting the part played by language in the process of thought. No such perplexity could ever trouble a modern metaphysician, any more than the fallacy of 'calvus' or 'acervus,' or of 'Achilles and the tortoise.' These 'surds' of metaphysics ought to occasion no more difficulty in speculation than a perpetually recurring fraction in arithmetic.

It is otherwise with the objection which follows: How are we to bridge the chasm between phenomena and ontia, between gods and men? This is the difficulty of philosophy in all ages: How can we get beyond the circle of our own ideas, or how, remaining within them, can we have any criterion of a truth beyond and independent of them? Parmenides draws out this difficulty with great clearness. According to him, there are not only one but two chasms: the first, between individuals and the ideas which have a common name; the second, between the ideas in us and the ideas absolute. The first of these two difficulties mankind, as we may say, a little parodying the language of the Philebus, have long agreed to treat as obsolete; the second remains a difficulty for us as well as for the Greeks of the fourth century before Christ, and is the stumblingblock of Kant's critic, and of the Hamiltonian adaptation of Kant, as well as of the Platonic ideas. It has been said that 'you cannot criticise Revelation.' 'Then how do you know what is Revelation, or that there is one at all,' is the immediate rejoinder,—'You know nothing of things in themselves.' 'Then how do you know that there are things in themselves?' In some respects, the difficulty pressed harder upon the Greek than upon ourselves. For conceiving of God more under the attribute of knowledge than we do, he was more under the necessity of separating the divine from the human, as two spheres which had no communication with one another.

It is remarkable that Plato, speaking by the mouth of Parmenides, does not treat even this second class of difficulties as hopeless or

insoluble. He says only that they cannot be explained without a long and laborious demonstration: 'the teacher will require superhuman ability, and the learner will be hard of understanding.' But an attempt must be made to find an answer to them; for, as Socrates and Parmenides both admit, the denial of abstract ideas is the destruction of the mind. We can easily imagine that among the Greek schools of philosophy in the fourth century before Christ a panic might arise from the denial of universals, similar to that which arose in the last century from Hume's denial of our ideas of cause and effect. Men do not at first recognise that thought, like digestion, will go on much the same, notwithstanding any theories which may be entertained respecting the nature of the process. Parmenides attributes the difficulties in which Socrates is involved to a want of comprehensiveness in his mode of reasoning; he should consider every question on the negative as well as the positive hypothesis, with reference to the consequences which flow from the denial as well as from the assertion of a given statement.

The argument which follows is one of the most singular in Plato. It appears to be an imitation, or parody, of the Zenonian dialectic, just as the speeches in the Phaedrus are an imitation of the style of Lysias, or as the derivations in the Cratylus, or the fallacies of the Euthydemus are a parody of some contemporary Sophist. The interlocutor is not supposed, as in most of the other Platonic dialogues, to take a living part in the argument; he is only required to say 'Yes' and 'No' in the right places. A hint has been already given that the paradoxes of Zeno admitted of a higher application (p. 129, 135 E). This hint is the thread by which Plato connects the two parts of the dialogue.

The paradoxes of Parmenides seem trivial to us, because the words to which they relate have become trivial; their true nature as abstract terms is perfectly understood by us, and we are inclined to regard the treatment of them in Plato as a mere straw-splitting, or legerdemain of words. Yet there was a power in them which fascinated the Neoplatonists for centuries afterwards. Something that they found in them, or brought to them—some echo or anticipation of a great truth or error, exercised a wonderful influence over their minds. To do the Parmenides justice, we should imagine similar ἀπορία raised on themes as sacred to us, as the notions of one or being were to

an ancient Eleatic. 'If God is, what follows? if God is not, what follows?' Or again: If God is or is not the world; or if God is or is not many, or has or has not parts, or is or is not in the world, or in time; or is or is not finite or infinite. Or if the world is or is not; or has or has not a beginning or end; or is or is not infinite, or infinitely divisible. Or again: if God is or is not identical with his laws; or if man is or is not identical with the laws of nature. We can easily see that here are many subjects for thought, and that from these and similar hypotheses questions of great interest might arise. And we also remark, that the conclusions derived from either of the two alternative propositions might be equally impossible and contradictory.

When we ask what is the object of these paradoxes, some have answered that they are a mere logical puzzle, while others have seen in them an Hegelian propaedeutic of the doctrine of ideas. The first of these views derives support from the manner in which Parmenides speaks of a similar method being applied to all ideas. Yet it is hard to suppose that Plato would have furnished so elaborate an example, not of his own but of the Eleatic dialectic, had he intended only to give an illustration of method. The second view has been often overstated by those who, like Hegel himself, have tended to confuse ancient with modern philosophy. We need not deny that Plato, trained in the school of Cratylus and Heracleitus, may have seen that a contradiction in terms is sometimes the best expression of a truth higher than either (Soph. 255 ff). But his ideal theory is not based on antinomies. The correlation of ideas was the metaphysical difficulty of the age in which he lived; and the Megarian and Cynic philosophy was a 'reductio ad absurdum' of their isolation. To restore them to their natural connection, and to detect the negative element in them is the aim of Plato in the Sophist. But his view of their connection falls very far short of the Hegelian identity of Being and Not-being. The Being and Not-being of Plato never merge in each other, though he is aware that 'determination is only negation.'

After criticising the hypotheses of others, it may appear presumptuous to add another guess to the many which have been already offered. May we say, in Platonic language, that we still seem to see vestiges of a track which has not yet been taken? It is quite possible that the obscurity of the Parmenides would not have existed to a contemporary

student of philosophy, and, like the similar difficulty in the *Philebus*, is really due to our ignorance of the philosophy of the age. There is an obscure Megarian influence on Plato which cannot wholly be cleared up, and is not much illustrated by the doubtful tradition of his retirement to Megara after the death of Socrates. For Megara was within a walk of Athens (*Phaedr.* 227 E), and Plato might have learned the Megarian doctrines without settling there.

We may begin by remarking that the theses of Parmenides are expressly said to follow the method of Zeno, and that the complex dilemma, though declared to be capable of universal application, is applied in this instance to Zeno's familiar question of the 'one and many.' Here, then, is a double indication of the connection of the Parmenides with the Eristic school. The old Eleatics had asserted the existence of Being, which they at first regarded as finite, then as infinite, then as neither finite nor infinite, to which some of them had given what Aristotle calls 'a form,' others had ascribed a material nature only. The tendency of their philosophy was to deny to Being all predicates. The Megarians, who succeeded them, like the Cynics, affirmed that no predicate could be asserted of any subject; they also converted the idea of Being into that of Good, perhaps with the view of preserving a sort of neutrality or indifference between the mind and things. As if they had said, in the language of modern philosophy: 'Being is not only neither finite nor infinite, neither at rest nor in motion, but neither subjective nor objective.'

This is the track along which Plato is leading us. Zeno had attempted to prove the existence of the one by disproving the existence of the many, and Parmenides seems to aim at proving the existence of the subject by showing the contradictions which follow from the assertion of any predicates. Take the simplest of all notions, 'unity'; you cannot even assert being or time of this without involving a contradiction. But is the contradiction also the final conclusion? Probably no more than of Zeno's denial of the many, or of Parmenides' assault upon the Ideas; no more than of the earlier dialogues 'of search.' To us there seems to be no residuum of this long piece of dialectics. But to the mind of Parmenides and Plato, 'Gott-betrunkene menschen,' there still remained the idea of 'being' or 'good,' which could not be conceived, defined, uttered, but could not be got rid of. Neither of them would have imagined that their disputation ever touched the Divine Being.

(Cp. Phil. 22 C.) The same difficulties about Unity and Being are raised in the Sophist (250 ff); but there only as preliminary to their final solution.

If this view is correct, the real aim of the hypotheses of Parmenides is to criticise the earlier Eleatic philosophy from the point of view of Zeno or the Megarians. It is the same kind of criticism which Plato has extended to his own doctrine of ideas. Nor is there anything inconsistent in attributing to the 'father Parmenides' the last review of the Eleatic doctrines. The latest phases of all philosophies were fathered upon the founder of the school.

Other critics have regarded the final conclusion of the Parmenides either as sceptical or as Heraclitean. In the first case, they assume that Plato means to show the impossibility of any truth. But this is not the spirit of Plato, and could not with propriety be put into the mouth of Parmenides, who, in this very dialogue, is urging Socrates, not to doubt everything, but to discipline his mind with a view to the more precise attainment of truth. The same remark applies to the second of the two theories. Plato everywhere ridicules (perhaps unfairly) his Heraclitean contemporaries: and if he had intended to support an Heraclitean thesis, would hardly have chosen Parmenides, the condemner of the 'undiscerning tribe who say that things both are and are not,' to be the speaker. Nor, thirdly, can we easily persuade ourselves with Zeller that by the 'one' he means the idea; and that he is seeking to prove indirectly the unity of the idea in the multiplicity of phenomena.

We may now endeavour to thread the mazes of the labyrinth which Parmenides knew so well, and trembled at the thought of them.

The argument has two divisions: There is the hypothesis that

i. One is.

ii. One is not.

If one is, it is nothing.

If one is not, it is everything.

But is and is not may be taken in two senses:

Either one is one,

Or, one has being,

from which opposite consequences are deduced,

i. a. If one is one, it is nothing (137 C—142 B).

i. b. If one has being, it is all things (142 B—157 B).

To which are appended two subordinate consequences :

- i. aa. If one has being, all other things are (157 B—159 B).
- i. bb. If one is one, all other things are not (159 B—160 B).

The same distinction is then applied to the negative hypothesis :

- ii. a. If one is not one, it is all things (160 B—163 B).
- ii. b. If one has not being, it is nothing (163 B—164 B).

Involving two parallel consequences respecting the other or remainder :

- ii. aa. If one is not one, other things are all (164 B—165 E).
- ii. bb. If one has not being, other things are not (165 E to the end).

‘I cannot refuse,’ said Parmenides, ‘since, as Zeno remarks, we are alone, though I may say with Ibycus, who in his old age fell in love, I, like the old racehorse, tremble at the prospect of the course which I am to run, and which I know so well. But as I must attempt this laborious game, what shall be the subject? Suppose I take my own hypothesis of the one.’ ‘By all means,’ said Zeno. ‘And who will answer me? Shall I propose the youngest? he will be the most likely to say what he thinks, and his answers will give me time to breathe.’ ‘I am the youngest,’ said Aristoteles, ‘and at your service; proceed with your questions.’—The result may be summed up as follows :

i. a. One is not many, and therefore has no parts, and therefore is not a whole, which is a sum of parts, and therefore has neither beginning, middle, nor end, and is therefore unlimited, and therefore neither round nor straight, because the round has a centre and circumference, and in the straight there is a middle which is between the extremes; and therefore is not in place, whether in another which would encircle and touch the one at many points and in many parts; or in itself, because that which is self-containing is also contained, and therefore not one but two. This being premised, let us consider whether one is capable either of motion or rest. Motion is either change of substance, or motion on an axis, or from one place to another. But the one is incapable of change of substance, which implies change from one to another, or of motion on an axis, because the axis has parts around the axis; and any other motion involves change of place. But existence in place has been already shown to be impossible; and yet more impossible is coming into being, which implies partial existence

in two places at once, or entire existence neither within nor without the same; and how can this be? And more impossible still is the coming into being either as a whole or parts of that which is neither a whole nor parts. The one, then, is incapable of motion. But neither can the one be in anything, and therefore not in the same, whether itself or some other, and is therefore incapable of rest. Neither is one the same with itself or any other, or other of itself or any other. For if other of itself, then other of one, and therefore no longer one; and, if the same with other, it would be other, and other of one. Neither can one while remaining one be other of other; for other, and not one, is the other of other. But if not other by virtue of being one, not by virtue of itself; and if not by virtue of itself, not itself other, and if not itself other, not the other of anything. Neither will one be the same with itself. For the nature of the same is not that of the one, but a thing which becomes the same with anything does not necessarily become one; for example, that which becomes the same with the many becomes many and not one. And therefore if the one is the same with itself, the one is not one with itself; and therefore one and not one. And therefore one is neither other of other, nor the same with itself. Neither will the one be like or unlike itself or other; for likeness is sameness of affections, and the one and the same are different. And one having any affection which is other than the one would be more than one. The one, then, cannot be like, or have the same affection with, itself or other; nor can the one have any other affection, that is, be unlike itself or any other, for that would involve more than one. The one, then, is neither like nor unlike itself or other. This being the case, neither can the one be equal or unequal to itself or other. For equality implies sameness of measure, as inequality implies a greater or less number or size of measures. But the one, not having sameness, cannot have sameness of measure; nor a greater or less number of measures, for that would imply parts and multitude. Once more, can one be older or younger than itself? or of the same age with itself? That would imply likeness and unlikeness, sameness and difference. Therefore one cannot be in time, because that which is in time is ever becoming older and younger than itself, (for older and younger are relative terms, and he who becomes older becomes younger,) and is also of the same age with itself. None of which, or any other expressions of time, whether

past, future, or present, can be affirmed of one. One neither is, has been, nor will be, nor becomes, nor has, nor will become. And, as these are the only modes of being, one is not, and is not one. But to that which is not, there is no attribute or relation, neither name nor word nor idea nor science nor perception nor opinion appertaining. One, then, is neither named, nor uttered, nor known, nor perceived, nor imagined. But can all this be true? 'I think not.'

i. b. Let us, however, commence the inquiry again. Assume that one is, and what new train of consequences will follow? If one is, one partakes of being, which is, and is not the same with one; the words 'being' and 'one' have different meanings. Observe the consequence: In the one of being or the being of one are two parts, being and one, which form one whole. And each of the two parts is also a whole, and involves the other, and may be further subdivided into one and being, and is therefore not one but two; and thus one is never one, and the one being in this way becomes many and infinite. Again, let us conceive of a one which by an effort of abstraction we separate from being: will this abstract one be one or many? You say one only; let us see. In the first place, the being of one is other of one; and one and being, if separate, mutually exclude each other: and the very term 'each other' implies that both partake of the nature of other, which is therefore neither one nor being; and whether we take being and other, or being and one, or one and other, in any case we have two things which separately are called either, and together both. And both are two and either of two is severally one, and if one be added to any of the pairs, the sum is three;—as two they are even, as three they are odd; and being two units they exist twice, and therefore are twice two; and being three units, they exist thrice, and therefore are thrice three, and taken together they are twice three and thrice two: they are even numbers multiplied into even, and odd into even, and even into odd numbers; But if one is, and both odd and even numbers are included in one, must not every number exist? And number is infinite, and therefore existence must be infinite, for every number partakes of being, and every fraction of every number partakes of being; therefore being has the greatest number of parts, and every part, however great or however small, is equally one. But can one be in many places and yet be a whole? If not a whole it must be divided into parts and represented by a number corresponding

to the number of the parts. And if so, we were wrong in saying that being has the greatest number of parts; for being is coequal and coextensive with one, and has no more parts than one; and the one broken up into parts by being is many and infinite. But the parts are parts of a whole, and the whole is a limit, and the one is therefore limited as well as infinite; and that which is a whole has beginning, middle, and end, and a middle is equidistant from the extremes; and one is therefore of a certain round or straight figure, which being a whole includes all the parts which are the whole, and is therefore self-contained. But then, again, the whole is not in the parts, whether all or some. Not in all, because, if in all, also in one; for, if wanting in any one, how in all?—not in some, because the greater would then be contained in the less. But if not in all, nor in any, nor in some, either nowhere or in other. And if nowhere, nothing; therefore in other. The one as a whole, then, is in another, but regarded as a sum of parts is in itself; and is, therefore, both in itself and in another. This being the case, the one is at once both at rest and in motion: at rest, because resting in itself; in motion, because it is ever in other. And if there is truth in what has preceded, one is the same and not the same with itself and all other. For everything in relation to every other thing is either the same with it or other; or if neither the same nor other, then in the relation of part to a whole or whole to a part. But one cannot be a part or whole in relation to one, nor other than one; and is therefore the same with one. Yet this sameness is again contradicted by one being in another place from itself which is in the same place; this follows from one being in itself and in another; one, therefore, is other than itself. But if anything is other of anything, will it not be other of other? And the not one is other of the one, and the one of the not one; therefore one is other of all others. But the same and the other exclude one another, and therefore the other can never be in the same; nor can the other be in anything for ever so short a time, as for that time the other will be in the same. And the other, if never in the same, cannot be either in the one or the not one. And one is not other than not one, either by reason of other or of itself; and therefore they are not other of one another at all. Neither can the not one partake of one, for it would cease to be not one, and therefore it cannot be a part, nor can the not one be number, for that also

involves one. And therefore, not being other or related to other as a whole to parts or parts to a whole, not one is the same as one. Wherefore the one is the same and also not the same with the others and also with itself; and is therefore like and unlike itself and the others, and just as different from the others as they are from the one, neither more nor less. But if neither more nor less, equally different; and therefore the one and the others are in the same relations. This may be illustrated by the case of names: when you repeat the same name twice over, you mean the same thing; and when you say that the other is other of the one, or the one other of the other, this very word other (*ἕτερον*), which is attributed to both, implies sameness. One, then, as being other of others, and other as being other of one, are alike in the relation of other; and likeness is similarity of relations. And everything as being other of everything is also like everything. Again, the like is opposed to the unlike, and the other to the same, and the one has been shown to be the same with the others. Now to be the same with the others is the opposite of being other of the others; and the one, as other of the others, has been shown to be like the others; and therefore, being the same, is unlike. One, then, is both like and unlike the others; like, as being other, unlike, as being the same. Again, one, as having the same relations, has no difference of relation, and is therefore not unlike, and therefore like; or, as having different relations, is different and unlike. Thus, one, as being the same and not the same with itself and others—for both these reasons and for either of them—is also like and unlike itself and the others. Again, how far can one touch itself and the others? As existing in others, it touches the others; and as existing in itself, touches only itself. But in another point of view, that which touches another must be next in order of place; one, therefore, must be next in order of place to itself, and would therefore be two, and in two places. But one cannot be two, and therefore cannot be in contact with itself. Neither can one touch the other; for that which touches another must touch immediately, without any middle or intermediate term. Two objects are required to make one contact; three objects make two contacts; and all the objects in the world have as many contacts as there are objects, less one. But if one only exists, and not two, there is no contact. And the others are other than one, and have no part in one, and therefore none in number, and therefore two has no exist-

ence, and therefore there is no contact. For all which reasons, one has and has not contact with itself and the others.

Once more, Is one equal and unequal to itself and the others? Suppose one and the others to be greater or less than each other or equal to one another, they will not be greater or less or equal in themselves, but by reason of equality or greatness or smallness inhering in them in addition to their own proper nature. Let us begin by assuming smallness to be inherent in one: in this case the inherence is either in the whole or in a part. If the first, smallness is either coextensive with the whole one, or contains the whole, and, if coextensive with the one, is equal to the one, or if containing the one will be greater than the one. But smallness is thus identified with equality or with greatness, which is impossible. Again, if the inherence be in a part, the same contradiction follows: smallness will be equal to the part or greater than the part; therefore smallness will not inhere in anything, and except the idea of smallness there will be nothing small. Neither will greatness; for greatness is relative to smallness. And there will be no great or small in objects, but only greatness or smallness in relation to each other; therefore the others cannot be greater or less than the one, or in any relation of magnitude to the one; also they can neither exceed nor be exceeded by one another, and are therefore equal to one another. And this will be true also of the one in relation to itself: one will be equal to itself and the others (*ἄλλα*). Yet one, being in itself, must also be about itself, containing and contained, and is therefore greater and less than itself. Further, there is nothing beside the one and the others; and as these must be in something, they must therefore be in one another; and as that in which a thing is greater than the thing, the inference is that they are both greater and less than one another, because containing and contained in one another. Therefore the one is equal to and greater and less than itself or other, having also measures or parts or numbers equal to or greater or less than itself or other.

But does one partake of time? This must be acknowledged, if the one partakes of being. For to be is the participation of being, present, past, or future. And as time is ever moving forward, the one becomes older than itself; and in becoming older becomes younger; and is older and also younger when it arrives at the present; and therefore becomes and is not older and younger than itself and all other

things:—for becoming is a progress into the future which cannot leave the past without resting in the present; this is ever the case in all things to which the term ‘is’ or ‘being’ can be applied. Yet ‘one’ being in time is and becomes always in the same time with itself, and is therefore contemporary with itself, and therefore neither older nor younger than itself. And what are the relations of the one to the others? Are they older or younger than one another? At any rate the others are more than one, and one, being the lesser number, must have been prior to the greater, or many. But on the other hand, one must come into being in a manner accordant with its own nature. Now one has parts, and has therefore a beginning, middle, and end, of which the beginning is first and the end last. And the parts come into existence first, and the whole contemporaneously with the end last, and is therefore younger, and the parts older than one. But, again, the one comes into being in each of the parts as much as in the whole, and must be of the same age with them. Therefore one is at once older and younger than the parts, and also contemporaneous with them, for no part can be a part which is not one. Is this true of becoming as well as being? Thus much may be affirmed, that the same things which are older or younger cannot become older or younger by the addition of equal times in a greater degree than they were at first. But, on the other hand, one, if older than other things, has come into being a longer time than they have. And when equal time is added to a longer and shorter, the relative difference between them is diminished. In this way that which was older becomes younger, and that which was younger becomes older, that is to say, younger and older than at first; and they ever become and never have become, for then they would be. Thus the one and others are always in a process of not becoming and becoming younger and also older than one another. And one, partaking of time and also partaking of becoming elder and younger, admits of all time, present, past, and future—was, is, shall be—was becoming, is becoming, will become. And there is a science and opinion and name and definition of the one, as is already implied in the fact of our inquiry.

Yet once more, if one be one and many, and neither one nor many, and also participant of time, must there not be a time at which one as one partakes of being, and a time when one as not being one is deprived of being? But these two contradictory states cannot be experienced by

the one both together; there must be a time of transition. And the transition is a process of generation and destruction, into and from being and not being, the one and the others. For the generation of the one is the destruction of the others, and the generation of the others is the destruction of the one. There is also separation and aggregation, assimilation and dissimilation, increase, diminution, equalization, a passage from motion to rest, and from rest to motion in the one and many. But when do all these changes take place? When does motion become rest, or rest motion? The answer to this question will throw a light upon all the others. Nothing can be in motion and at rest at the same time; and therefore the change takes place 'in a moment'—which is a strange expression, and seems to mean change in no time. Which is true also of all the other changes, which likewise take place in no time.

i. aa. But if one is, what happens to the others, which in the first place are not one, yet may partake of one in a certain way? The others are other of the one because they have parts, for if they had no parts they would be simply one, and parts imply a whole to which they belong; otherwise they would be parts of others, that is, of themselves and of all other parts, which is absurd. For a part, if not a part of one, must be a part of all but this one, and if so not a part of each one; and if not a part of each one, not a part of any one of many, and so not of one; and if of none, how of all? Therefore a part is neither a part of many nor of all, but of an absolute and perfect whole or one. And if the others have parts, they must partake of the whole, and must be the whole of which they are the parts. And each part, as the word 'each' implies, is also an absolute one which is abstracted from the rest. And both the whole and the parts partake of one, for the one is a whole of which the parts are parts, and each one is one part of the whole; and whole and parts as participating in one are other of one, and as being other of one are many and infinite; for however small a fraction you separate from them is many and not one. Yet the fact of their being parts furnishes them with a limit towards other parts and towards the whole; they are finite and also infinite: finite through participation in the one, infinite in their own nature. And as being finite, they are alike; and as being infinite, they are alike; but as being both finite and also infinite, they are in the highest degree unlike. And all other opposites might without difficulty be shown to unite in them.

i. bb. Once more, leaving all this : Is there not also an opposite series of consequences which is equally true of the others, and may be deduced from the existence of one? There is. One is distinct from the others, and the others from one; for one and the others are all things, and there is no third existence besides them. And as they exclude each other, they are not in the relation of whole and parts, nor can the others have any unity, and therefore not plurality, nor duality, nor any other number, nor any opposition or distinction, such as likeness and unlikeness, some and other, generation and corruption, odd and even. For if they had these they would partake either of one opposite, and this would be a participation in one; or of two opposites, and this would be a participation in two. Thus if one exists, one is all things, and likewise nothing, in relation to one and to the others.

ii. a. But, again, assume the opposite hypothesis, that the one is not, and what is the consequence? In the first place, the proposition, that one is not, is clearly opposed to the proposition, that not one is not. In the words 'one is not' there is an assumption of a known difference, which is implied in the word 'one'; for the subject of every proposition is a particular thing, whether the verb of existence is affirmed or denied. If then the one is not, there must be knowledge of the one, or that which is not would be unknown; and the one which is not must be different from other things; moreover, this and that, some and other, may be all attributes of the one which is not, and which though non-existent may and must have many attributes, if the one only is non-existent and not the others; but if all is not-being there is nothing which can be spoken of. Also the one which is not differs, and is different in kind from the others, and therefore unlike them; and they being other than the one, are unlike the one, which is therefore unlike them. But one, being unlike other, must be like itself; for the unlikeness of one to itself is the destruction of the hypothesis of the one; and if like itself, one cannot be equal to the others; for that would suppose being in the one, and the others would be equal to one and like one; both which are impossible, if one does not exist. The one which is not, then, if not equal is unequal to the others, and inequality implies great and small, and equality is in a mean between great and small, and therefore the one which is not partakes of equality. Further, the one which is not has being; for if you deny the being of the non-existent, in that case the not-being of the one would be untruly affirmed; but if truly,

then we must affirm being of the one which is not, for that which is true is. And so the one which is not, if remitting aught of the being of non-existence, would become being. For not being implies the being of not-being, and being the not-being of not being; or more truly being partakes both of the being of being and of the not-being of not-being, and not being of the not being of not-being and of the being of being. And therefore the one which is not has being and also not-being. And the union of being and not being involves change or motion. But how can not-being, which is nowhere, move or change, either from one place to another or in the same place? And whether it is or is not, it would cease to be one if experiencing a change of substance. The one which is not, then, is both in motion and at rest, is changed and unchanged, and created and destroyed, and uncreated and undestroyed.

ii. b. Once more, let us ask the question, If one is not, what happens in regard to one? The expression 'is not' implies negation of being:—do we mean by this to say that a thing, which is not, in a certain sense is? or do we mean absolutely to deny being to one? The latter. Then the one which is not can neither be nor become nor perish nor experience change of substance or place. Neither can rest, or motion, or greatness, or smallness, or equality, or unlikeness, or likeness either to itself or other, or of or to another, or this or that, or any other relation, or now or hereafter or formerly, or knowledge or opinion or perception or name or anything else be attributed to that which is not.

ii aa. Once more, if one is not, what becomes of the others? If we speak of them they must be, and their very name implies difference, and difference implies relation, not to the one, which is not, but to one another. And they are others of each other not as units but as infinities, the least of which is also infinity, and capable of infinitesimal division, as in a dream the single image multiplies, and the least things when you approach them, grow large. And they will have no unity or number, but only a semblance of unity and number; and the least fraction of them will appear large and manifold in comparison with the infinitesimal fractions into which they may be divided. Further, each of them will have the appearance of being equal with the fractions. For in passing from the greater to the less there is an intermediate point, which is equality. Moreover, each particle in relation to itself and to some other is also infinite; there is a beginning before the beginning, and a middle of the middle, and an end beyond the end, because the

infinitesimal division is never arrested by the one. Thus all being is one at a distance, and broken up when near, and like at a distance and unlike when near; and also the particles which compose being seem to be like and unlike, in rest and motion, in generation and corruption, in contact and separation, if one is not.

ii. bb. Once more, let us inquire, If the one is not, and the others of the one are, what follows? In the first place, the others will not be the one, nor the many, for in that case the one would be contained in them; neither will they appear to be one or many; because they have no communion or participation in that which is not, nor semblance of that which is not. If one is not, the others neither are, nor appear to be one or many, like or unlike, in contact or separation. In short, if one is not, nothing is.

The result of all which is, that whether one is or is not, one and the others, in relation to themselves and to one another, are and are not, and appear and appear not, in all manner of ways.

I. On the first hypothesis we may remark: first, That one is one is an identical proposition, from which we might expect that no further consequences could be deduced. The train of consequences which follows, is inferred by altering the predicate into 'not many.' Yet, perhaps, if a strict Eristic had been present, οἷος ἀνὴρ εἰ καὶ νῦν παρῆν, he might have affirmed that the not many presented a different aspect of the conception from the one, and was therefore not identical with it. Such a subtlety would be very much in character with the Zenonian dialectic. Secondly, we may note, that the conclusion is really involved in the beginning. For one is conceived as one, in a sense which excludes all predicates. When the meaning of one has been reduced to a point, there is no use in saying that it has neither parts nor magnitude. Thirdly, The conception of the same is, first of all, identified with the one; and then by a further analysis distinguished from, and even opposed to, the one. Fourthly, We may detect notions, which have reappeared in modern philosophy, e. g. the bare abstraction of undefined unity, answering to the Hegelian 'Seyn,' or the identity of contradictions 'that which is older is also younger,' etc., cp. 152, or the Kantian conception of an *a priori* synthetical proposition 'one is.'

II. In the first series of propositions the word 'is' is the copula; in the second, the verb of existence. As in the first series, the negative consequence followed from one being affirmed to be equivalent to the not many; so here the affirmative consequence is deduced from one being equivalent to the many.

In the former case, nothing could be predicated of the one, but now everything—multitude, relation, place, time, transition. One is regarded in all the aspects of one, and with a reference to all the consequences which flow, either from the combination or the separation of them. The notion of transition involves the singular extra temporal conception of 'suddenness.' This idea of 'suddenness' is a mere fiction, and yet we may observe that similar antinomies have led modern philosophers to deny the reality of time and space. It is not the infinitesimal of time, but the negative of time. By the help of this invention the conception of change, which sorely exercised the minds of early thinkers, seems to be, but is not really at all explained.

The processes by which Parmenides obtains his remarkable results may be summed up as follows: (1) Compound or correlative ideas which involve each other, such as, being and not being, part and whole, one and others, are conceived sometimes in a state of composition, and sometimes of division: (2) The division or distinction is heightened into total opposition, e.g. between one and same: or (3) The idea, which has been already divided, is regarded, like a number, as capable of further infinite subdivision: (4) The idea of being or not-being is identified with existence or non-existence in place or time: (5) The same ideas are regarded sometimes as in process of transition, sometimes as alternatives or opposites: (6) There are no degrees of sameness, likeness, difference, nor any conception of motion or change: (7) One, being, etc., like space in Zeno's puzzle of Achilles and the tortoise, are regarded sometimes as continuous and sometimes as discrete: (8) In some parts of the argument the abstraction is so rarefied as to become not only fallacious, but almost unintelligible, e.g. in the process by which odd numbers are multiplied into even numbers, or even numbers into odd ones (143 E); or in the contradiction which is elicited out of the relative terms older and younger at p. 152: (9) Words are used through long chains of argument, sometimes loosely, sometimes with the precision of numbers or geometrical figures.

In all this we seem to breathe the spirit of the Megarian philosophy.

Plato has gone beyond his Megarian contemporaries; he has split their straws over again, and admitted more than they would have desired. He is indulging the analytical tendencies of his age, which can divide but not combine. And he does not stop to inquire whether the distinctions which he makes are shadowy and fallacious, but 'whither the argument blows' he follows.

III The negative series of propositions contains the first conception of the negation of a negation. Two minus signs in arithmetic or algebra make a plus. Two negatives destroy each other. This subtle notion is the foundation of the Hegelian logic. The mind must not only admit that determination is negation, but must get through negation into affirmation. Whether this process is real, or in any way an assistance to thought, or, like some other logical forms, a mere figure of speech transferred from the sphere of mathematics, may be doubted. That Plato and the most subtle philosopher of the nineteenth century should have lighted upon the same notion, is a singular coincidence of ancient and modern thought.

IV. The one and the many or others are reduced to their strictest arithmetical meaning. That one is three or three one, is a proposition which has, perhaps, given rise to more controversy in the world than any other. But no one has ever meant to say that three and one are to be taken in the same sense. Whereas the one and many of the Parmenides have precisely the same meaning; there is no notion of one personality or substance having many attributes or qualities. The truth seems to be rather the opposite of that which Socrates implies at p. 129: There is no contradiction in the concrete, but in the abstract, and the more abstract the idea, the more palpable will be the contradiction. For just as nothing can persuade us that the number one is the number three, so neither can we be persuaded that any abstract idea is identical with its opposite, although they may both inhere together in some external object, or some more comprehensive conception. Ideas, persons, things may be one in one sense and many in another, and may have various degrees of unity and plurality. But in whatever sense and in whatever degree they are one they cease to be many; and in whatever degree or sense they are many they cease to be one.

Two points remain to be considered: 1st, the connection between the first and second parts of the dialogue; 2ndly, the relation of the Parmenides to the other dialogues.

I. In both divisions of the dialogue the principal speaker is the same, and the method pursued by him is also the same, being a criticism on received opinions: first, on the doctrine of ideas; secondly, of being. From the Platonic ideas we naturally proceed to the Eleatic one or being which is the foundation of them. They are the same philosophy in two forms, and the simpler form is the truer and deeper. For the Platonic ideas are mere numerical differences, and the moment we attempt to distinguish between them, their transcendental character is lost; ideas of justice, temperance, and good, are really distinguishable only with reference to their application in the world. If we once ask how they are related to individuals or to the ideas of the divine mind, they are again merged in the aboriginal notion of being. No one can answer the questions which Parmenides asks of Socrates. And yet these questions are asked with the express acknowledgment that the denial of ideas will be the destruction of the human mind. The true answer to the difficulty here thrown out is the establishment of a rational psychology; and this is a work which is commenced in the Sophist. Plato, in urging the difficulty of his own doctrine of ideas, is far from denying that some doctrine of ideas is necessary, and for this he is paving the way.

In a similar spirit he criticises the Eleatic doctrine of being, not intending to deny ontology, but showing that the old Eleatic notion, and the very name 'being,' is unable to maintain itself against the subtleties of the Megarians. He did not mean to say that Being or Substance had no existence, but he is preparing for the development of his later view, that ideas were capable of relation. The fact that contradictory consequences follow from the existence or non-existence of one or many, does not prove that they have or have not existence, but rather that some different mode of conceiving them is required. Parmenides may still have thought that 'Being was,' just as Kant would have asserted the existence of 'things in themselves,' while denying the transcendental use of the Categories

Several lesser links also connect the first and second parts of the dialogue: (1) The thesis is the same as that which Zeno has been already discussing: (2) Parmenides has intimated in the first part, that the method of Zeno should, as Socrates desired, be extended to ideas: (3) The difficulty of participating in greatness, smallness, equality is urged against the ideas as well as against the one.

II. The Parmenides is not only a criticism of the Eleatic notion of

being, but also of the methods of reasoning then in existence, and in this point of view, as well as in the other, may be regarded as an introduction to the Sophist. Long ago, in the Euthydemus, the vulgar application of the 'both and neither' Eristic had been subjected to a similar criticism, which there takes the form of banter and irony, here of illustration.

The germs of the attack upon the ideas, and the transition to a more rational philosophy, have also been discernible in the Philebus. The perplexity of the one and many has there been confined to the region of ideas, and replaced by a theory of classification; the good arranged in classes is also contrasted with the barren abstraction of the Megarians. The war is carried on against the Eristics in all the later dialogues, sometimes with a playful irony, at other times with a sort of contempt. But there is no lengthened refutation of them. The Parmenides belongs to that stage of the dialogues of Plato, in which he is partially under their influence, using them as a sort of 'critics or diviners' of the truth of his own, and of the Eleatic theories. In the Theaetetus a similar negative dialectic is employed in the attempt to define science, which after every effort remains undefined still. The same question is revived from the objective side in the Sophist: being and not being are no longer exhibited in opposition, but are now reconciled; and the true nature of not being is discovered and made the basis of the correlation of ideas. Some links are probably missing which might have been supplied if we had trustworthy accounts of Plato's oral teaching.

To sum up: the Parmenides of Plato is a critic, first, of the Platonic ideas, and secondly, of the Eleatic doctrine of being. Neither are absolutely denied. But certain difficulties and consequences are shown in the assumption of either, which prove that the Platonic as well as the Eleatic doctrine must be remodelled. The negation and contradiction which are involved in the conception of the one and many are preliminary to their final adjustment. The Platonic ideas are tested by the interrogative method of Socrates; the Eleatic one or being is tried by the severer and perhaps impossible method of hypothetical consequences, negative and affirmative. In the latter we have an example of the Zenonian or Megarian dialectic, which proceeded not 'by assailing premises but conclusions'; this is worked out and improved by Plato. When primary abstractions are used in every conceivable sense, any or every conclusion may be deduced from them. The words 'one,' 'other,'

'being,' 'like,' 'same,' 'whole,' and their opposites, have slightly different meanings, as they are applied to objects of thought or objects of sense—to number, time, place, and to the higher ideas of the reason;—and out of their different meanings this 'feast' of contradictions 'has been provided.'

The *Parmenides* of Plato belongs to a stage of philosophy which has passed away. At first we read it with a purely antiquarian or historical interest; and with difficulty throw ourselves back into a state of the human mind in which Unity and Being occupied the attention of philosophers. We admire the precision of the language, in which, as in some curious puzzle, each word is exactly fitted into every other, and long trains of argument are carried out with a sort of geometrical accuracy. We doubt whether any abstract notion could stand the searching cross-examination of *Parmenides*; and may at last perhaps arrive at the conclusion that Plato has been using an imaginary method to work out an unmeaning conclusion. But the truth is, that he is carrying on a process which is not either useless or unnecessary in any age of philosophy. We fail to understand him, because we do not realize that the questions which he is discussing could have had any value or importance. We suppose them to be like the speculations of some of the schoolmen, which end in nothing. But in truth he is trying to get rid of the stumbling-blocks of thought which beset his contemporaries. Seeing that the Megarians and Cynics were making knowledge impossible, he takes their 'catch-words' and analyses them from every conceivable point of view. He is criticising the simplest and most general of our ideas, in which, as they are the most comprehensive, the danger of error is the most serious; for, if they remain unexamined, as in a mathematical demonstration, all that flows from them is affected, and the error pervades knowledge far and wide. In the beginning of philosophy this correction of human ideas was even more necessary than in our own times, because they were more bound up with words; and words when once presented to the mind exercised a greater power over thought. There is a natural realism which says, 'Can there be a word devoid of meaning, or an idea which is an idea of nothing?' In modern times mankind have often given too great importance to a word or idea. The philosophy of the ancients was still more in slavery to them, because they had not the experience of error, which would have placed them above the illusion.

The method of the Parmenides may be compared with the process of purgation, which Bacon sought to introduce into philosophy. Plato is warning us against two sorts of 'Idols of the Den': first, his own ideas, which he himself having created is unable to connect in any way with the external world; secondly, against two idols in particular, 'Unity' and 'Being,' which had grown up in the pre-Socratic philosophy, and were still standing in the way of all progress and development of thought. He does not say with Bacon, 'Let us make truth by experiment,' or 'from these vague and inexact notions let us turn to facts.' The time has not yet arrived for a purely inductive philosophy. 'The instruments of thought must first be forged, that they may be used hereafter by modern inquirers. How, while mankind were disputing about universals, could they classify phenomena? How could they investigate causes, when they had not as yet learned to distinguish between a cause and an end? How could they make any progress in the sciences without first arranging them? These are the deficiencies which Plato is seeking to supply in an age when knowledge was a shadow of a name only. In the earlier dialogues the Socratic conception of universals is illustrated by his genius; in the Phaedrus the nature of division is explained; in the Republic the law of contradiction and the unity of knowledge are asserted; in the later dialogues he is constantly engaged both with the theory and practice of classification. These were the 'new weapons,' as he terms them in the Philebus, which he was preparing for the use of some who, in after ages, would be found ready enough to disown their obligations to the great master, or rather, perhaps, would be incapable of understanding them.

Numberless fallacies, as we are often truly told, have originated in a confusion of the 'copula,' and the 'verb of existence.' Would not the distinction which Plato makes between 'one is' and 'one has being' have saved us from this and many similar confusions? We see again that a long period in the history of philosophy was a barren tract, not uncultivated, but unfruitful, because there was no inquiry into the relation of language and thought, and the metaphysical imagination was incapable of supplying the missing link between words and things. The famous dispute between nominalists and realists would never have been heard of, if, instead of transferring the Platonic ideas into a crude Latin phraseology, the spirit of Plato had been truly understood and appreciated. Upon the term substance at least two celebrated theological

controversies appear to hinge, which would not have existed, or at least not in their present form, if we had 'interrogated' the word substance, as Plato has the notions of Unity and Being. These weeds of philosophy have struck their roots deep into the soil, and are always tending to reappear, sometimes in new-fangled forms; while similar words, such as development, evolution, law, and the like, are constantly put in the place of facts, even by writers who profess to base truth entirely upon fact. In an unmetaphysical age there is probably more metaphysics in the common sense (i. e. more *a priori* assumption) than in any other, because there is more complete unconsciousness that we are resting on our own ideas, while we please ourselves with the conviction that we are resting on facts. We do not consider how much metaphysics are required to place us above metaphysics, or how difficult it is to prevent the forms of expression which are ready made for our use from outrunning actual observation and experiment.

In the last century the educated world were astonished to find that the whole fabric of their ideas was falling to pieces, because Hume amused himself by analysing the word 'cause' into uniform sequence. Then arose a philosophy which, equally regardless of the history of the mind, sought to save mankind from scepticism by assigning to our notions of 'cause and effect,' 'substance and accident,' 'whole and part,' a necessary place in human thought. Without them we could have no experience, and therefore they were supposed to be prior to experience—to be incrusting on the 'I'; although in the phraseology of Kant there could be no transcendental use of them, or, in other words, they were only applicable within the range of our knowledge. But into the origin of these ideas, which he obtains partly by an analysis of the proposition, partly by development of the 'ego,' he never enquires—they seem to him to have a necessary existence; nor does he attempt to analyse the various senses in which the word 'cause' or 'substance' may be employed.

The philosophy of Berkeley could never have had any meaning, even to himself, if he had first analysed from every point of view the conception of 'matter.' This poor forgotten word (which was 'a very good word' to describe the simplest generalization of external objects) is now superseded in the vocabulary of physical philosophers by 'force,' which seems to be accepted without any rigid examination of its meaning, as if the general idea of 'force' in our minds furnished an explanation of the infinite variety of forces which exist in the universe. A similar ambiguity

occurs in the use of the favourite word 'law,' which is sometimes regarded as a mere abstraction, and then elevated into a real power or entity, almost taking the place of God. Theology, again, is full of undefined terms which have distracted the human mind for ages. Mankind have reasoned from them, but not to them; they have drawn out the conclusions without proving the premises; they have asserted the premises without examining the terms. The passions of religious parties have been roused to the utmost about words of which they could have given no explanation, and which had really no distinct meaning. One sort of them, faith, grace, justification, have been the symbols of one class of disputes; as the words substance, nature, person, of another, revelation, inspiration, and the like, of a third. All of them have been the subject of endless reasonings and inferences; but a spell has hung over the minds of theologians or philosophers which has prevented them from examining the words themselves. Either the effort to rise above and beyond their own first ideas was too great for them, or there might, perhaps, have seemed to be an irreverence in doing so. About the Divine Being himself, in whom all true theological ideas live and move, men have spoken and reasoned much, and have fancied that they instinctively know Him. But they hardly suspect that under the name of God even Christians have included two characters or natures as much opposed as the good and evil principle of the Persians.

To have the true use of words we must place ourselves above them; and in using them we must acknowledge their imperfection. In like manner, after having interrogated our ideas, to many of them we return and acknowledge their value and truth, though not always in the sense which we supposed. And Plato, while he criticises the inconsistency of his own doctrine of universals and draws out the endless consequences which flow from the assertion either that 'Being is' or that 'Being is not,' by no means intends to deny the existence of universals or the unity under which they are comprehended. There is nothing further from his thoughts than scepticism. (Cp. 135 B, C.) But before proceeding he must examine the foundations which he and others have been laying; there is nothing true which is not from some point of view untrue, nothing absolute which is not also relative. (Cp. Rep. vi. 507.)

And so, in modern times, because we are called upon to analyse our ideas and to come to a distinct understanding about the meaning of words; because we know that the powers of language are very unequal

to the subtlety of nature or of mind, we do not therefore renounce the use of them; but we replace them in their old connexion, having first tested their meaning and quality, and having corrected the error which is involved in them; or rather always remembering to make allowance for the adulteration or alloy which they contain. We cannot call a new metaphysical world into existence any more than we can frame a new universal language; in thought, as in speech, we are dependent on the past. We know that the words 'cause' and 'effect' are very far from representing to us the continuity or the complexity of nature or the different modes or degrees in which phenomena are connected. Yet we accept them as the best expression which we have of the correlation of forces or objects. We see that the term 'law' is a mere abstraction, under which laws of matter and of mind, the law of nature and the law of the land are included, and some of these uses of the word are confusing, because they introduce into one sphere of thought associations which belong to another; for example, order or sequence is apt to be confounded with external compulsion and the internal workings of the mind with their material antecedents. Yet none of them can be dispensed with; we can only be on our guard against the error or confusion which arises out of them. So in the use of the word 'substance' we are far from supposing that there is any mysterious substratum apart from the objects which we see, and we acknowledge that the negative notion is very likely to become a positive one. Still we retain the word as a convenient generalization, though not without a double sense, substance, and essence, derived from the two-fold translation of the Greek *οὐσία*.

So the human mind makes the reflection that God is not a person like ourselves—is not a cause like the material causes in nature, nor even an intelligent cause like a human agent—nor an individual, for He is universal, and that every possible conception which we can form of Him is limited by the human faculties. We cannot by any effort of thought or exertion of faith be in and out of our own minds at the same instant. How can we conceive Him under the forms of time and space, who is out of time and space? How can we imagine His relation to the world or to ourselves? Innumerable contradictions follow from either of the two alternatives 'that God is' or 'that He is not.' Yet we are far from saying that we know nothing of Him, because all that we know is subject to the conditions of human thought. To the old belief in Him we return, but with corrections. He is a person, but not like ourselves; a mind, but

not a human mind; a cause, but not a material cause, nor yet a maker or artificer. The words which we use are imperfect expressions of His true nature; but we do not therefore lose faith in what is best and highest in ourselves and in the world.

‘A little philosophy takes us away from God; a great deal brings us back to Him.’ When we begin to reflect, our first thoughts respecting Him and ourselves are apt to be sceptical. For we can analyse our religious as well as our other ideas; we can trace their history; we can criticise their perversion; we see that they are relative to the human mind and to one another. But when we have carried our criticism to the furthest point, they still remain, a necessity of our moral nature, better known and understood by us, and less liable to be shaken, because we are more aware of their necessary imperfection. They come to us with ‘better opinion, better confirmation,’ not merely as the inspirations either of ourselves or of another, but deeply rooted in history and in the human mind.

PARMENIDES.

PERSONS OF THE DIALOGUE.

CEPHALUS.
ADEIMANTUS.
GLAUCON.
ANTIPHON.
PYTHODORUS.

SOCRATES.
ZENO.
PARMENIDES.
ARISTOTELES.

Cephalus rehearses a dialogue which is supposed to have been narrated in his presence by Antiphon, the half-brother of Adeimantus and Glaucon, to certain Clazomenians.

Steph.

126 WE went from our home at Clazomenae to Athens, and met Adeimantus and Glaucon in the Agora. Welcome, Cephalus, said Adeimantus, taking me by the hand; is there anything which we can do for you in Athens?

Why, yes, I said, I am come to ask a favour of you.

What is that? he said.

I want you to tell me the name of your half-brother, which I have forgotten; he was a mere child when I last came hither from Clazomenae, but that was a long time ago; his father's name, if I remember rightly, was Pylilampes?

Yes, he said, and the name of our brother, Antiphon; but why do you ask?

Let me introduce some countrymen of mine, I said; they are lovers of philosophy, and have heard that Antiphon was in the habit of meeting Pythodorus, the friend of Zeno, and remembers certain arguments which Socrates and Zeno and Parmenides had together, and which Pythodorus had often repeated to him.

That is true.

And could we hear them? I asked.

Nothing easier, he replied ; when he was a youth he made a careful study of the pieces ; at present his thoughts run in another direction ; like his grandfather, Antiphon, he is devoted to horses. But, if that is what you want, let us go and look for him ; he dwells at Melita, which is quite near, and he has only just left us to go home.

Accordingly we went to look for him ; he was at home, and in the act of giving a bridle to a smith to be fitted. When he had done with the smith, his brothers told him the purpose of our visit ; and he saluted me as an acquaintance whom he remembered from my former visit, and we asked him to repeat the dialogue. At first he was not very willing, and complained of the trouble, but at length he consented. He told us that Pythodorus had described to him the appearance of Parmenides and Zeno ; they came to Athens, he said, at the great Panathenaea ; the former was, at the time of his visit, about 65 years old, very white with age, but well favoured. Zeno was nearly 40 years of age, of a noble figure and fair aspect ; and in the days of his youth he was reported to have been beloved of Parmenides. He said that they lodged with Pythodorus in the Ceramicus, outside the wall, whither Socrates, then a very young man, and others came to see them ; they wanted to hear some writings of Zeno, which had been brought to Athens by them for the first time. These Zeno himself read to them in the absence of Parmenides, and had nearly finished when Pythodorus entered, and with him Parmenides and Aristoteles who was afterwards one of the Thirty ; there was not much more to hear, and Pythodorus had heard Zeno repeat them before.

When the recitation was completed, Socrates requested that the first thesis of the first argument might be read over again, and this having been done, he said : What is your meaning, Zeno ? Do you maintain that if being is many, it must be both like and unlike, and that this is impossible, for neither can the like be unlike, nor the unlike like ; is that your position ?

Just so, said Zeno.

And if the unlike cannot be like, or the like unlike, then according to you, the many could not be, and their being would

be an impossibility. Is the design of your argument only to disprove the being of the many? and is each part of your discourse intended to furnish a separate proof of this, there being in all as many proofs of the non-being of the many as you have composed arguments? Is that your meaning, or have I misunderstood you?

128 No, said Zeno; you have correctly understood my general purpose.

I see, Parmenides, said Socrates, that Zeno is your second self in his writings too; he puts what you say in another way, and would feign deceive us into believing that he is telling us what is new. For you, in your poems, say All is one, and of this you adduce excellent proofs; and he on the other hand says There is no many; and on behalf of this he offers overwhelming evidence. To deceive the world, as you have done, by saying the same thing in different ways, one of you affirming the one, and the other denying the many, is a strain of art beyond the reach of most of us.

Yes, Socrates, said Zeno. But although you are as keen as a Spartan hound in pursuing the track, you do not quite apprehend the true motive of the composition, which is not really such an ambitious work as you imagine; for what you speak of was an accident; I had no serious intention of deceiving the world. The truth is, that these writings of mine were meant to protect the arguments of Parmenides against those who scoff at him and show the many ridiculous and contradictory results which they suppose to follow from the affirmation of the one. My answer is an address to the partisans of the many, whose attack I return with interest by retorting upon them that their hypothesis of the being of many if carried out appears in a still more ridiculous light than the hypothesis of the being of one. A love of controversy led me to write the book in the days of my youth, and some one stole the copy; and therefore I had no choice whether it should be published or not; the motive, however, of writing, was not the ambition of an old man, but the pugnacity of a young one. This you do not seem to see, Socrates; though in other respects, as I was saying, your notion is a very just one. *Univ Calif - Digitized by Microsoft®*

I understand, said Socrates, and quite accept your account. But tell me, Zeno, do you not further think that there is an idea of likeness in itself, and another idea of unlikeness, which ¹²⁹ is the opposite of likeness, and that in these two, you and I and all other things to which we apply the term many, participate; and that the things which participate in likeness are in that degree and manner like; and that those which participate in unlikeness are in that degree unlike, or both like and unlike in the degree in which they participate in both? And all things may partake of both opposites, and be both like and unlike themselves, by reason of this participation. So far there is nothing wonderful. If a person could prove the absolute like to become unlike, or the absolute unlike to become like, that, in my opinion, would be a real wonder; but what is there extraordinary, Zeno, in showing that the things which partake of likeness and unlikeness experience both? Nor, again, if a person were to show that all is one by partaking of one, and at the same time many by partaking of many, would that be very wonderful. But if he were to show me that the absolute one was many, or the absolute many one, I should be truly amazed. And so of other things: I should be surprised to hear that the natures or ideas themselves had these opposite qualities; but not if a person wanted to prove of me that I was many and also one. When he wanted to show that I was many he would say that I have a right and a left side, and a front and a back, and an upper and a lower half, for I cannot deny that I partake of multitude; when, on the other hand, he wants to prove that I am one, he will say, that we who are here assembled are seven, and that I am one and partake of the one, and in saying both he speaks truly. So again, if a person shows that such things as wood, stones, and the like, being many are also one, we admit that he shows the coexistence of the one and many, but he does not show that the many are one or the one many; he is uttering not a paradox but a truism. If, however, as I just now suggested, taking the simple notions of like, unlike, one, many, rest, motion, and similar ideas, we could show that these in their abstract form admit of admixture and separation, I should be very much astonished. This part of the argument appears to be treated

by you, Zeno, in a very spirited manner; nevertheless, as I was saying, I should be far more amazed if any one found in the
 130 ideas themselves which are apprehended by reason, the same puzzle and entanglement which you have shown to exist in visible objects.

While Socrates was speaking, Pythodorus thought that Parmenides and Zeno were not altogether pleased at the successive steps of the argument; but still they gave the closest attention, and often looked at one another, and smiled as if in admiration of him. When he had finished, Parmenides expressed these feelings in the following words:—

Socrates, he said, I admire the bent of your mind towards philosophy; tell me now, was this your own distinction between ideas in themselves and the things which partake of them? and do you think that there is an idea of likeness apart from the likeness which we possess, and of the one and many, and of the other notions of which Zeno has been speaking?

I think that there are such ideas, said Socrates.

Parmenides proceeded: And would you also make ideas of the just and the beautiful and the good, and of all that class?

Yes, he said, I should.

And would you make an idea of man apart from us and from all other human creatures, or of fire and water?

I am often undecided, Parmenides, as to whether I ought to include them or not.

And would you feel equally undecided, Socrates, about things of which the mention may provoke a smile?—I mean such things as hair, mud, dirt, or anything else that is foul and base; would you suppose that each of these has an idea distinct from the actual objects with which we come into contact, or not?

Certainly not, said Socrates; visible things like these are such as they appear to us, and I am afraid that there would be an absurdity in assuming any idea of them, although I sometimes get disturbed, and begin to think that there is nothing without an idea; but then again, when I have taken up this position, I run away, because I am afraid that I may fall into a bottomless pit of nonsense, and perish; and so I return to the ideas of which I was just now speaking, and occupy myself with them.

Yes, Socrates, said Parmenides; that is because you are still young; the time will come when philosophy will have a firmer grasp of you, if I am not mistaken, and then you will not despise even the meanest things; at your age, you are too much disposed to regard the opinions of men. But I should like to know whether you mean that there are certain ideas of which all other things partake, and from which they are therefore named; that similars, for example, become similar, because they partake of similarity; and great things become great, because they partake of greatness; and that just and beautiful things become just and beautiful, because they partake of justice and beauty? 131

Yes, certainly, said Socrates, that is my meaning.

Then each individual partakes either of the whole of the idea or else of a part of the idea? Is any third way possible?

Impossible, he said.

Then do you think that the whole idea is one, and yet being one, is in each one of the many?

Why not, Parmenides? said Socrates.

Because one and the same whole existing in many separate individuals, will thus be in a state of separation from itself.

Nay, but the idea may be like the day which is one and the same in many places at once, and yet continuous with itself; in this way each idea may be one and the same in all at once.

I like your way, Socrates, of making one in many places at once. You mean to say, that if I were to spread out a sail and cover a number of men, there would be one whole in or on many—is not that your meaning?

I think so.

And would you say that the whole sail is over each man, or a part only?

A part only.

Then, Socrates, the ideas themselves will be divisible, and the individuals will have a part of them only and not the whole idea existing in each of them?

That seems to follow.

Then would you like to say, Socrates, that the one idea is really divisible and yet remains one?

Certainly not, he said.

Suppose that you divide greatness, and that of many great things each one is great by having a portion of greatness less than absolute greatness—is that conceivable?

No.

Or will each equal thing, taking some portion of equality less than absolute equality, be equal to some other thing by virtue of that portion?

Impossible.

Or suppose one of us to have a portion of smallness; this is but a part of the small, and therefore the small is greater; and while the absolute small is greater, that to which the part of the small is added, will be smaller and not greater than before.

Impossible.

Then in that way, Socrates, will all things participate in the ideas, if they are unable to participate in them either as parts or wholes?

Indeed, he said, you have asked a question which is not easily answered.

Well, said Parmenides, and what do you say of another question?

What question?

I imagine that the way in which you are led to assume one
 132 idea of each kind is as follows:—You see a number of great objects, and when you look at them together there seems to you to be one and the same idea (or nature) in them all; hence you conceive of greatness as one.

Very true, said Socrates.

And if you go on and allow your mind in like manner to embrace in one view the idea of greatness and of great things which are not the idea, and to compare them, will not another greatness arise, which will appear to be the source of all these?

That is true.

Then another kind of greatness now comes into view over and above absolute greatness, and the individuals which partake of it; and then another, over and above all these, by virtue of which they will all be great, and so each idea instead of being one will be infinitely subdivided.

But may not the ideas, asked Socrates, be thoughts only, and have no proper existence except in our minds, Parmenides? For in that case each idea may still be one, and not experience this infinite subdivision.

And can there be individual thoughts which are thoughts of nothing?

That is impossible, he said.

The thought must be of something?

Yes.

Of something that is or is not?

Of something that is.

Must it not be of a single something, which the thought recognises as attaching to all, being a single form or nature?

Yes.

And will not the something so apprehended which is always the same in all, be an idea?

From that, again, there is no escape.

Then, said Parmenides, if you say that everything else participates in the ideas, must you not say either that everything is made up of thoughts, and that all things think; or that they are thoughts having no thought?

But that, Parmenides, is no more rational than the other. The more probable view is, that the ideas are, as it were, patterns fixed in nature, and that other things are like them, and resemblances of them; and that what is meant by the participation of other things in the ideas, is really assimilation to them.

But if, said he, the individual is like the idea, must not the idea also be like the individual, in so far as the individual is a resemblance of the idea? That which is like, cannot be conceived of as other than the like of like.

Impossible.

And when two things are alike, must they not partake of the same idea?

They must.

And will not that of which the two partake, and which makes them alike, be the idea itself?

Certainly.

Then the idea cannot be like the individual, or the indi-

vidual like the idea; for if they are alike, some further idea
 133 of likeness will always be coming to light, and if that be like
 anything else, another and another; and new ideas will be
 always arising, if the idea resembles that which partakes of it?

Quite true.

The theory, then, that other things participate in the ideas
 by resemblance, has to be given up, and some other mode of
 participation devised?

That is true.

Do you see then, Socrates, how great is the difficulty of
 affirming the ideas to be absolute?

Yes, indeed.

And, further, let me say that as yet you only understand a
 small part of the difficulty which is involved if you make the
 idea a single entity apart from things.

What difficulty? he said.

There are many, but the greatest of all is this:—If an oppo-
 nent argues that these ideas, being such as we affirm them to be,
 are by their nature unknown, no one can prove to him that he is
 wrong, unless he who is disputing their existence be a man of
 great ability and knowledge, and is willing to follow a long and
 laborious demonstration—he will remain unconvinced, and still
 insist that they cannot be known.

How is that, Parmenides? said Socrates.

In the first place, I think, Socrates, that you, or any one who
 maintains the existence of absolute ideas, will admit that they
 cannot exist in us.

No, said Socrates; for then they would be no longer absolute.

True, he said; and therefore any relation of the absolute ideas
 is a relation which is among themselves only, and has nothing to
 do with the resemblances, or whatever they are to be termed,
 which are in our sphere, and from which we receive this or that
 name when we participate in them. And the objects which are
 within our sphere and have the same names with them, are like-
 wise only relative to one another, and not to the ideas which
 have the same names with them, and belong to themselves, and
 not to them.

What do you mean? said Socrates.

I may illustrate my meaning in this way, said Parmenides:—

A master has a slave; now there is nothing absolute in the relation between them, which is simply a relation of one man to another. But there is also an idea of mastership in the abstract, which is relative to the idea of slavery in the abstract. These natures have nothing to do with us, nor we ¹³⁴ with them; they are concerned with themselves only, and we with ourselves. Do you see my meaning?

Yes, said Socrates, I quite see your meaning.

And will not knowledge—I mean absolute knowledge—answer to absolute truth?

Certainly.

And each kind of absolute knowledge will answer to each kind of absolute being?

Yes.

But the knowledge which we have, will answer to the truth which we have; and again, each kind of knowledge which we have, will be a knowledge of each kind of being which we have?

Certainly.

But the ideas themselves, as you admit, we have not, and cannot have?

No, we cannot.

And the absolute ideas or natures are known by the absolute idea of knowledge?

Yes.

And we have not got the idea of knowledge?

No.

Then none of the ideas are known to us, because we have no share in absolute knowledge?

I suppose not.

Then the beautiful itself, and the good itself, and all other absolute ideas, as we suppose them to be, are unknown to us?

That appears to be true.

I think that there is a stranger consequence still.

What is it?

Would you, or would you not, say, that absolute knowledge, if there is such a thing, must be a far more exact knowledge than our knowledge; and the same of beauty and of all other things? *Univ Calif - Digitized by Microsoft®*

Yes.

And if there be such a thing as participation in absolute knowledge, no one is more likely than God to have this most exact knowledge?

Certainly.

But then, will God, having absolute knowledge, have a knowledge of human things?

Why not?

Because, Socrates, said Parmenides, we have admitted that the ideas are not relative to human things, nor human things to them; the relations of either are in their respective spheres.

Yes, that has been admitted.

And if God has this perfect authority, and perfect knowledge, his authority cannot rule us, nor his knowledge know us, or any human thing; just as our authority does not extend to the gods, nor our knowledge know anything which is divine, so by parity of reason they, being gods, are not our masters, neither do they know the things of men.

Yet, surely, said Socrates, to deprive God of knowledge is monstrous.

135 These, Socrates, said Parmenides, are a few, and only a few, of the difficulties which arise on the hypothesis that there are ideas of things, and that each idea is an absolute and determinate unity; they will lead him who is told of them to doubt the very existence of ideas—he will say that even if they do exist, they must of necessity be unknown to man; and he will seem to have reason on his side, and as we were remarking just now, will be very difficult to convince; a man must be a man of very considerable ability before he can learn that everything has a class and an absolute essence; and still more remarkable will he be who discovers all these things for himself, and can teach another to understand them thoroughly.

I agree with you, Parmenides, said Socrates; and what you say is very much to my mind.

And yet, Socrates, said Parmenides, if a man, fixing his mind on these and the like difficulties, refuses to allow that there are ideas of things, and that every individual thing has its determinate idea which is always one and the same, he will have nothing on which his mind can rest, and so he will utterly

destroy the power of reasoning, as you seem to me to have particularly noted.

Very true, he said.

But, then, what is to become of philosophy? What resource is there, if the ideas are unknown?

I certainly do not see my way at present.

Yes, said Parmenides; and I think that this arises, Socrates, out of your attempting to define the beautiful, the just, the good, and the ideas generally, without sufficient previous training. I noticed your deficiency, when I heard you talking here with your friend Aristoteles, the day before yesterday. The impulse that carries you towards philosophy is assuredly noble and divine; but still there is an art which is called by the vulgar idle talking, and is often imagined to be useless; in that you must train and exercise yourself, now that you are young, or truth will elude your grasp.

And what is the nature of this exercise, Parmenides, which you would recommend?

That which you heard Zeno practising; at the same time, I give you credit for saying to him that you did not care to solve the perplexity in reference to visible objects, or to consider the question in that way; but only in reference to thought, and to what may be called ideas.

Why, yes, he said, there appears to me to be no difficulty in showing that visible things experience likeness or unlikeness or anything else.

Quite true, he said; but I think that you should go a step further, and consider not only the consequences which flow from a given hypothesis, but also the consequences which flow from 136 denying the hypothesis; and that will be still better training for you.

What do you mean? he said.

I mean, for example, that in the case of this very hypothesis of Zeno's about the many, you should inquire not only what will be the consequences to the many in relation to themselves and to the one, and to the one in relation to itself and the many, on the hypothesis of the being of the many, but also what will be the consequences to the one and the many in their relation to themselves and to each other, on the opposite hypothesis. Or,

again, if likeness is or is not, what will be the consequences in either of these cases to the subject of the hypothesis, and to other things, in relation both to themselves and to one another, and so of unlikeness; and the same principle applies to motion and rest, to generation and destruction, and even to being and not-being. In a word, when you suppose anything to be or not to be, or to be in any way affected, you must look at the consequences in relation to the thing itself, and to any other things which you choose,—to each of them singly, to more than one, and to all; and so with the other things, you must look at them in relation to themselves and to anything else which you suppose either to be or not to be, if you would train yourself perfectly and see the real truth.

That, Parmenides, is a tremendous work of which you speak, and I do not quite understand you; will you take some hypothesis and go through the steps, and then I shall apprehend you better?

That, Socrates, is a serious task to impose on a man of my years.

Then will you, Zeno? said Socrates.

Zeno answered, with a smile:—Let us make our petition to Parmenides himself, who is quite right in saying that you are hardly aware of the extent of the task which you are imposing on him, and if there were more of us I should not ask him, for these are not subjects which any one, especially at his age, can well speak of before a large audience; most people are not aware that this roundabout progress through all things is the only way in which the mind can attain truth. And therefore, Parmenides, I join in the request of Socrates, that I may hear the process again which I have not heard for a long time.

When Zeno had thus spoken, Pythodorus, according to Antiphon's report of him, said, that he himself and Aristoteles and the whole company entreated Parmenides to give an example of the process. I cannot refuse, said Parmenides; and yet I
 137 feel rather like Ibycus, who, when in his old age, against his will, he fell in love, compared himself to an old racehorse, who was about to run in a chariot race, shaking with fear at the course he knew so well—this was his simile of himself. And

I also experience a trembling when I remember through what an ocean of words I have to wade at my time of life. But I must indulge you, as Zeno says that I ought, and we are alone. Where shall I begin? And what shall be our first hypothesis, if I am to attempt this laborious pastime? Shall I begin with myself, and take my own hypothesis of the one? and consider the consequences which follow on the supposition either of the being or of the not-being of one?

By all means, said Zeno.

And who will answer me? he said. Shall I propose the youngest? He will not raise difficulties and will be the most likely to say what he thinks; and his answers will give me time to breathe.

I am the one whom you mean, Parmenides, said Aristoteles; for I am the youngest, and at your service. Ask, and I will answer.

Parmenides proceeded: i. a. If one is, he said, the one cannot be many?

Impossible.

Then the one cannot have parts, and cannot be a whole?

How is that?

Why, every part is part of a whole; is it not?

Yes.

And what is a whole? would not that of which no part is wanting be a whole?

Certainly.

Then, in either case, the one would be made up of parts; both as being a whole, and also as having parts?

Certainly.

And in either case, the one would be many, and not one?

True.

But, surely, it ought to be one and not many?

It ought.

Then, if the one is to remain one, it will not be a whole, and will not have parts?

No.

But if it has no parts, it will have neither beginning, middle, nor end; for if it had they would be parts of it?

Right. *Univ Calif - Digitized by Microsoft®*

But then, again, a beginning and an end are the limits of everything?

Certainly.

Then the one, neither having beginning nor end, is unlimited?

Yes, unlimited.

And therefore formless, as not being able to partake either of round or straight.

How is that?

Why, the round is that of which all the extreme points are equidistant from the centre?

Yes.

And the straight is that of which the centre intercepts the view of the extremes?

True.

Then the one would have parts, and would be many, whether
138 it partook of a straight or of a circular form?

Assuredly.

But having no parts, it will be neither straight nor round?

Right.

And, being of such a nature, it cannot be in any place, for it cannot be either in another or in itself.

How is that?

If it were in another, it would be encircled by that in which it was, and would touch it at many points; but that which is one and indivisible, and does not partake of a circular nature, cannot be touched all round in many places.

Certainly not.

But if, on the other hand, one were in itself, it would also contain and be itself; that is to say, if it were really in itself; for nothing can be in anything which does not contain it.

Impossible.

But then, that which contains must be other than that which is contained? for the same whole cannot act and be acted upon at once; and so one will be no longer one, but two?

True.

Then one cannot be anywhere, either in itself or in another?

No.

Further consider, whether that which is of such a nature can have either rest or motion.

Why not?

Why, because the one, if it were moved, would be either moved in place or altered; for these are the only kinds of motion.

Yes.

And the one, when altered and ceasing to be itself cannot be any longer one.

It cannot.

And therefore cannot experience this sort of motion or change?

Clearly not.

Then can the motion of the one be in place?

Perhaps.

But if the one moved in place, must it not either move round and round in the same place, or from one place to another?

Certainly.

And that which moves in a circle must rest upon a centre; and that which goes round upon a centre must have parts which all move round the centre; but that which has no centre and no parts cannot possibly be carried round upon a centre?

Impossible.

But perhaps the motion of the one consists in going from one place to another?

Perhaps so, if it moves at all.

And have we not already shown that it cannot be in anything?

Yes.

Then its coming into being in anything is still more impossible; is it not?

I do not see why.

Why, because anything which comes into being in anything, can neither as yet be in that other thing while still coming into being, nor be altogether out of it, if already coming into being in it.

Certainly not.

And therefore whatever comes into being in another must have parts, and then the one part may be in, and the other part out of that other; but that which has no parts must always be at one and the same time either wholly within or wholly without anything.

True.

And is there not a still greater impossibility in that which has no parts, and is not a whole, coming into being anywhere
139 either as a part or as a whole?

Clearly.

Then, as it does not change by going round in the same place, so neither does it change by going somewhere and coming into being in something; nor again, by change in itself?

True.

The one, then, is incapable of any kind of motion?

Incapable.

But neither can the one be in anything, as we affirm?

Yes, that is affirmed by us.

Then it is never in the same?

Why not?

Because being in the same is being in something which is the same.

Certainly.

But we said that it could not be in itself, and could not be in other?

True.

Then one is never in the same?

It would seem not.

But that which is never in the same is never quiet or at rest?

Never.

One then, as would seem, is neither at rest nor in motion?

Clearly not.

Neither will it be the same with itself or other; nor again, other of itself or other.

How is that?

If other of itself it would be other of one, and would not be one.

True.

And if the same with other, it would be that other, and not itself; so that upon this supposition too, it would not have the nature of one, but would be other than one?

It would.

Then it will not be the same with other, or other of itself?

It will not.

Neither will it be other of other, while it remains one; for not one, but only other, can be other of other, and nothing else.

True.

Then not by virtue of being one will it be other?

Certainly not.

But if not by virtue of being one, not by virtue of itself; and if not by virtue of itself, not itself, and itself not being other at all, will not be other of anything?

Right.

Neither will one be the same with itself.

Why not?

Surely the nature of the one is not the nature of the same.

Why is that?

Because when anything becomes the same with anything, it does not become one.

Why not?

That which becomes the same with the many, necessarily becomes many and not one.

True.

But, if there were no difference between the one and the same, when a thing became the same, it would always become one; and when it became one, the same?

Certainly.

And, therefore, if one be the same with itself, it is not one with itself, and will therefore be one and also not one.

Surely that is impossible.

And therefore the one can neither be other of other, nor the same with itself.

Impossible.

And thus the one can neither be the same, nor other, either in relation to itself or other?

No.

Neither will the one be like or unlike itself or other.

Why not?

Because likeness is sameness of affections.

Yes.

And sameness has been shown to be of a nature distinct from oneness?

That has been shown.

140 But if the one had any other affection than that of being one, it would be affected in such a way as to be more than one; which is impossible.

True.

Then the one can never be so affected as to be the same either with another or with itself?

Clearly not.

Then it cannot be like another, or like itself?

No.

Nor can it be affected so as to be other, for then it would be affected in such a way as to be more than one.

It would.

That which is affected otherwise than itself or another, will be unlike itself or another, if sameness of affections is likeness.

True.

But the one, as appears, never being affected otherwise than itself, is never unlike itself or other?

Never.

Then the one will never be either like or unlike itself or other?

Plainly not.

Again, being of this nature, it can neither be equal or unequal either to itself or to other.

How is that?

Why, because the one if equal must be of the same measure as that to which it is equal.

True.

And if greater or less than things which are commensurable with it, the one will have more measures than that which is less, and fewer than that which is greater?

Yes.

And so of things which are not commensurate with it, the one will have greater measures than that which is less and less than that which is greater.

Certainly.

But how can that which does not partake of sameness, have either the same measures or have anything else the same?

Impossible.

And not having the same measures, the one cannot be equal either with itself or with another?

Clearly not.

But again, whether it have fewer or more measures, it will have as many parts as it has measures; and thus again the one having as many parts as measures will be no longer one.

Right.

And if it were of one measure, it would be equal to that measure; and it has been shown to be incapable of equality.

It has.

Then it will neither partake of one measure, nor of many, nor of few, nor of the same at all, nor be equal to itself or another; nor be greater or less than itself, or other?

Certainly.

Well, and do we suppose that one can be older, or younger than anything, or of the same age with it?

Why not?

Why, because that which is of the same age with itself or other, must partake of equality or likeness of time; and we said that the one did not partake of equality or likeness?

We did say so.

And we also said, that it did not partake of inequality or unlikeness.

Very true.

141

How then can one being of this nature be either older or younger than anything, or have the same age with it?

In no way.

Then one cannot be older or younger, or of the same age, either with itself or with another?

Clearly not.

Then the one, being of this nature, cannot be in time at all; for must not that which is in time, be always growing older than itself?

Certainly.

And that which is older, must be always older than something which is younger?

True.

Then, that which becomes older than itself, also becomes at the same time younger than itself, if it is to have something to become older than.

What do you mean? - Digitized by Microsoft®

I mean this:—A thing does not need to become different from another thing, when the difference already exists; the difference of that which is, is,—of that which has become, has become,—of that which will be, will be; but of that which is becoming, there cannot have been, or be about to be, or be, any difference;—the only difference possible is one that is becoming.

Certainly.

But, surely, the elder is a difference relative to the younger, and to no other.

True.

Then that which becomes older than itself must also, at the same time, become younger than itself?

Yes.

But again, it is true that it cannot become for a longer or for a shorter time than itself, but it must become, and be, and have become, and be about to be, the same time with itself?

Yes, inevitably.

Then things which are in time, and partake of time, must be inferred in every case, I suppose, to be of the same age with themselves; and must also become older and younger than themselves?

That must be inferred.

But the one did not partake of those affections?

Not at all.

Then it does not partake of time, and is not in any time?

That is what the argument proves.

Well, but do not the expressions ‘was,’ and ‘has become,’ and ‘was becoming,’ signify a participation of past time?

Certainly.

And do not ‘will be,’ ‘will become,’ ‘will have become,’ signify a participation of future time?

Yes.

And ‘is,’ or ‘becomes,’ signifies a participation of present time?

Certainly.

And if the one is absolutely without participation in time, it never has become or was becoming, or was at any time, or

has now become or is becoming, or is, or will become, or will have become, or will be, hereafter.

Most true.

But are there any modes of partaking of being other than these?

There are none.

Then the one cannot possibly partake of being?

That is the inference.

Then the one is not at all?

Clearly not.

Then the one has no existence as one, for in that case it would be, and would partake of being; but if the argument is to be believed, the one neither is nor is one?

That appears to be true.

142

But that which is not admits of no attribute or relation?

Surely not.

Then there is no name, nor description, nor sense, nor conception, nor knowledge of it?

Clearly not.

Then it is neither named, nor uttered, nor conceived, nor known, nor does anything that is perceive it.

That is the inference.

But can all this be true about the one?

I think not.

i. b. Suppose, now, that we once more resume the hypothesis, and see whether, on a further review, any new aspect of the question appears.

I shall be very happy to do so.

We say that we have to work out all the consequences that follow, if the one is?

Yes.

Then we will begin at the beginning:—If one is, can one be, and not partake of being?

Impossible.

Then the one will have being, and being will not be the same with the one; for if the same, it would not be the being of the one; nor would the one have participated in being, for the two propositions—that one is, and that one is one—would have been

identical; but our hypothesis is not if one is one, what will follow, but if one is:—am I not right?

Certainly.

And we mean to say, that one has not the same significance as being?

Of course.

And when we put them together, and say 'one is,' that is equivalent to saying, 'partakes of being'?

Quite true.

Once more then let us ask, if one is what will follow? Consider whether this hypothesis does not involve that one is of such a nature as to have parts.

How so?

Why, in this way:—If being is predicated of one which is, and one is predicated of being which is one; and being and one are not the same, but belong to that same one of which we have assumed the being, must not this one which is be a whole, and the one and the being its parts?

Certainly.

And is each of these parts—one and being—to be simply called a part, or must the word 'part' be relative to the word 'whole'?

The latter.

Then that which is one is both a whole and has a part?

Certainly.

Again, of the parts of the one which is—I mean being and one—is either wanting to the other? is the one wanting to being, or being to the one?

Impossible.

Once more, then each of the parts has both one and being, and is at the least made up of two parts; and the same principle goes on for ever, and every part whatever has always these two parts; for being always involves one, and one being; so that two are always appearing, instead of one.

143 Certainly.

And so the one which is must be infinite in multiplicity?

That appears to be true.

Let us take another direction.

What direction?

We say that the one partakes of being because it is?

Yes.

And in this way, the one which is turns out to be many?

True.

But now, let us abstract the one which, as we say, partakes of being, and try to imagine it apart from that of which we say that it partakes—will this abstract one be one or many?

One, I think.

Let us see:—Must not the being of one be other of one, if the one is not being, but, considered as one, only partakes of being?

Certainly.

If being and the one be two different things, it is not because the one is one that it is other of being; nor because being is being that it is other of the one; but they differ from one another by being other and different.

Certainly.

So that the other is not the same—either with the one or with being?

Certainly not.

And therefore whether we take being and the other, or being and the one, or the one and the other, in every such case we take two things, which may be rightly called both.

How is that?

In this way—you may speak of being?

Yes.

And also of one?

Yes.

Then, now we have spoken of either of them?

Yes.

Well, and when I speak of being and one, I speak of them both?

Certainly.

And if I speak of being and the other, or of the one and the other,—in any case do I not speak of both?

Yes.

And must not that which is correctly called both, be also two?

Undoubtedly. *Calif - Digitized by Microsoft®*

And must not either of two be one?

Certainly.

Then, if the individuals of the pair are together two, they must be severally one?

Clearly.

And if each of them is one, then by the addition of any one to any pair, the whole becomes three?

Yes.

And three are odd, and two are even?

Of course.

And if there are two they must also be twice, and if there are three they must be thrice; that is, if twice one makes two, and thrice one three?

Certainly.

There are two, and there is twice, and therefore there is twice two; and there are three, and there is thrice, and therefore there is thrice three?

Of course.

If there are three and there is twice, and there are two and there is thrice, then you have twice three and thrice two?

Undoubtedly.

Here, then, we have even taken even times, and odd taken odd times, and even taken odd times, and odd taken even times.

True.

144 And if this is true, is any number left out or not necessarily included?

Assuredly not.

Then if one is, number must also be?

It must.

But if there is number, there must also be many and infinite multiplicity; for number is infinite in multiplicity and part also of being: am I not right?

Certainly.

And if all number participates in being, every part of number will also participate?

Yes.

Then being is distributed over the multitude of things, and nothing that is, however small or however great, is devoid of

it? And, indeed, the very supposition of this is absurd, for how can that which is, be devoid of being?

In no way.

And it is divided into the greatest and into the smallest, and into all kinds of being, and is broken up more than all things; the divisions of it have no limit.

True.

Then it has the greatest number of parts?

Yes, the greatest number.

Is there any of these which is a part of being, and yet no part?

Impossible.

But if it is at all and so long as it is, it must be one, and cannot be none?

Certainly.

Then the one attaches to every single part of being, and does not fail in any part, whether great or small?

True.

But reflect:—Can one be in many places at the same time, and still be a whole?

No; I see the impossibility of that.

And if not a whole, then it is divided; for it cannot be present with all the parts of being, unless divided.

True.

And that which has parts will be as many as the parts are?

Certainly.

Then we were wrong in saying just now, that being was distributed into a very great number of parts. For it is not distributed into parts more than the one, but into parts equal to the one; the one is never wanting to being, or being to the one, but being two they are co-extensive and co-equal.

Certainly that is true.

The one itself, then, having been broken up into parts by being, is many and infinite?

True.

Then not only the one which has being is many, but the one itself distributed by being, must also be many?

Certainly.

Further, inasmuch as the parts are parts of a whole, the one,

145 as a whole, will be limited; for are not the parts contained by the whole?

Certainly.

And that which contains, is a limit?

Of course.

Then the one which has being is one and many, whole and parts, limited and yet unlimited in number?

Clearly.

And because limited, also having extremes?

Certainly.

And if a whole, having beginning and middle and end. For can anything be a whole without these three? And if any one of them is wanting to anything, will that any longer be a whole?

No.

Then the one, as appears, will have beginning, middle, and end?

It will.

But, again, the middle will be equidistant from the extremes; that is the nature of the middle?

Yes.

Then the one will partake of figure, either rectilinear or round, or a union of the two?

True.

And if this is the case, it will be both in itself and in another too.

How is that?

Every part is in the whole, and none is outside the whole.

True.

And all the parts are contained by the whole?

Yes.

And the one is all its parts, and neither more nor less than all?

No.

Then the one is the whole?

Of course.

But if all the parts are in the whole, and all of them are the one and the whole and they are all contained by the whole, the one will be contained by the one; and thus the one will be in itself.

That is true.

But then, again, the whole is not in the parts — neither in all the parts, nor in some of them. For if it were in all, it would necessarily be also in one; for if there were any one in which it was not, it could not be in all the parts; for the part in which it is wanting is one of all, and if the whole is not in this, how can it be in them all?

It cannot.

Nor can the whole be in some of the parts; for if the whole were in some of the parts, the greater would be in the less, which is impossible.

Yes, impossible.

But if the whole is neither in one, nor in more than one, nor in all of the parts, it must be in something else, or cease to be anywhere at all?

Certainly.

If it were nowhere, it would be nothing; but being a whole, and not being in itself, it must be in another.

Very true.
