The one then, regarded as a whole, is in another, but regarded as being all its parts, is in itself; and therefore the one must be itself in itself and also in another.

Certainly.

The one then, being of this nature, is, of necessity, both at rest and in motion?

How is that?

The one is at rest since it is in itself, for being in one, and not passing out of this, it is in the same, which is itself.

146

True.

And that which is ever in the same, must be ever at rest?

Certainly.

Well, and must not that, on the contrary, which is ever in other, never be in the same place; and if never in the same place, never at rest, and if not at rest, in motion?

True.

Then the one being always itself in itself and other, must always be both at rest and in motion?

Clearly.

And must be the same with itself, and other of itself; and

also the same with the other, and other of the other; this follows from its previous affections.

How so?

Everything in relation to every other thing, is either the same or other; or if neither the same nor other, then in the relation of a part to a whole, or of a whole to a part.

That is clear.

And is the one a part of itself?

Certainly not.

Then it cannot be a whole in relation to itself regarded as a part of itself?

Impossible.

But is the one other of one?

No.

And therefore not other of itself?

Certainly not.

If then it be neither other, nor a whole, nor a part in relation to itself, must it not be the same with itself?

Certainly.

But then, again, that which is in another place from itself remaining in the same place with itself, must be other of itself, if it is to be in another place?

True.

Then the one has been shown to be at once in itself and in another?

Yes.

Thus, then, as appears, the one will be other of itself?

True.

Well, then, if anything be other of anything, will it not be other of other?

Certainly.

And will not all things that are not one, be other of the one, and the one other of the not one?

Of course.

Then the one will be other of all others?

True.

But, consider:—Are not the absolute same, and the absolute other, opposites to one another?

Of course.

Then will the same ever be in the other, or the other in the same?

They will not.

If then the other is never in the same, there is nothing in which the other is during any space of time; for during that space of time, however small, the other would be in the same. Is not that true?

Yes.

And since the other is never in the same, it can never be in anything that is.

True.

Then the other will never be either in the not one, or in the one?

Certainly not.

Then not by reason of the other is the one other than the not one, or the not one other than the one.

No.

Nor by reason of themselves will they be other than one another, if not partaking of the other.

147

How can they be?

But if they are not other, either by reason of themselves or of the other, there will be no possibility of their being other of one another at all.

There will not.

Again, the not-one cannot partake of the one; otherwise it would not have been not-one, but would have been one.

True.

Nor can the not-one be number; for having number, it would not have been not-one at all.

It would not.

Again, is the not-one part of the one; or rather, would it not in that case partake of the one?

It would.

If then, in every point of view, the one and the not-one are distinct, then neither is the one part or whole of the not-one, nor is the not-one part or whole of the one?

No.

But we said that things which are neither parts nor wholes

of one another, nor other than one another, will be the same with one another:—that was what we said?

Yes.

Then shall we say that the one, being in this relation to the not-one, is the same with it?

Let us say so.

Then it is the same with itself and the others, and also other of itself and the others.

That appears to be the inference.

And it will also be like and unlike itself and the others?

Perhaps.

Since the one was shown to be other of the others, the others will also be other of one.

Yes.

Other of the one in the same degree that the one is other of the others, and neither more nor less?

True.

And if neither more nor less, then in a like degree?

Yes.

In so far then as its condition is to be other of others, and theirs in like manner to be other of it, the condition of the one is the same as that of the others, and that of the others the same as that of the one.

How do you mean?

I may take as an illustration the case of names: You give a name to a thing?

Yes.

And you may say the name once or oftener?

Yes.

And when you say it once, you mention that of which it is the name? and when more than once, is it something else which you mention? or must it always be the same thing of which you speak, whether you utter the name once or more than once?

Of course it is the same.

And is not 'other' a name given to a thing?

Certainly.

Whenever, then, you use the word 'other,' whether once or

oftener, you name that of which it is the name, and to no other do you give the name?

True.

Then when we say that the others are other of the one, and the one other of the others, in repeating the word 'other' we speak of that nature to which the name is applied, and of no other?

Quite true.

Then the one which is other of others, and the other which is other of the one, in that the word 'other' is applied to both, 148 will be in the same condition; and that which is in the same condition is like?

Yes.

In so far then as the one is other of the other, every thing will be like every thing, for every thing is the other of every thing.

True.

Again, the like is opposed to the unlike?

Yes.

And the other to the same?

True again.

And the one was also shown to be the same with the others?

Yes.

And to be the same with the others is the opposite of being other of the others?

Certainly.

And in that it was other it was shown to be like?

Yes.

But in that it was the same it will be unlike by virtue of the opposite affection to that which made it like; and this was the affection of the other.

Yes.

The same then will make it unlike; otherwise it will not be the opposite of the other.

True.

Then the one will be both like and unlike the others; like in so far as it is other, and unlike in so far as it is same.

Yes, that argument may be used.

And there is another argument.

What? *Univ Calif - Digitized by Microsoft* ®

In so far as it is affected by the same it is not affected otherwise, and not being affected otherwise is not unlike, and not being unlike, is like; but in so far as it is affected by other it is otherwise, and being otherwise affected is unlike.

True.

Then because the one is the same with the others and other than the others, on either of these two grounds, or on both of them, it will be both like and unlike the others?

Certainly.

And in the same way as being other than itself and the same with itself, on either of these two grounds and on both of them, it will be like and unlike?

Of course.

Again, how far can the one touch or not touch itself and others?—consider.

I am considering.

The one was shown to be in itself as a whole?

True.

And also in other things?

Yes.

In so far as it is in other things it would touch other things, and in so far as it is in itself it would be debarred from touching other things, and would touch itself only.

Clearly.

Then the inference is that it would touch both?

It would.

But what do you say to a new point of view? Must not that which is to touch another be next in place or position to that which it touches?

True.

Then the one if it is to touch itself ought to be situated next to itself, and have the place next to the place in which itself is?

It ought.

And that would require that the one should be two, and be
149 in two places at once, and this, while it is one, it will not be.

No.

Then the one cannot touch itself any more than it can be two? *Univ Calif - Digitized by Microsoft* ®

It cannot.

Neither can it touch others.

Why not?

The reason is, that whatever touches another is in separation from, and must be next to, that which it is to touch, and have no third or intermediate.

True.

Two things, then, at the least are necessary to make contact possible?

They are.

And if to the two a third be added, the number of terms will be three, and the contacts two?

Yes.

And every additional term makes one additional contact, whence it follows that the contacts are one less in number than the terms; the first two terms exceeded the number of contacts by one, and the whole number of terms exceeds the whole number of contacts in like ratio; and for every one which is afterwards added to the number of terms, one contact is added to the contacts.

True.

Whatever is the whole number of things, the contacts will be always one less.

True.

But if there be only one, and not two, there will be no contact?

Clearly not.

And do we not say that the others being other of the one are not one and have no part in the one?

True.

Then they have no number, if they have no one in them?

Of course not.

Then the others are neither one nor two, nor are they called by any number?

No.

One, then, alone is one, and there are not two?

Clearly not.

And if there are not two, there is no contact?

No. *Univ Calif - Digitized by Microsoft* ®

Then neither does the one touch the others, nor the others the one, if there is no contact?

Certainly not.

For all which reasons the one touches and does not touch itself and the others?

True.

Further—is the one equal and unequal to itself and others?

How do you mean?

If the one were greater or less than the others, or the others greater or less than the one, they would not be greater or less than each other in virtue of their being the one and the others, but, if in addition to their being what they are they had equality, they would be equal to one another, or if the one had smallness and the others greatness, or the one had greatness and the others smallness—whichever kind had greatness would be greater, and whichever had smallness would be smaller?

Certainly.

Then greatness and smallness too have a being of their own; for if they had not they could not be opposed to each other and be present in that which is.

They could not.

150 If, then, smallness is present in the one it will be present either in the whole or in a part of the whole?

Certainly.

Suppose the first; it will be either coequal and coextensive with the whole one, or will contain the one?

Clearly.

If it be coextensive with the one it will be equal with the one, or if containing the one it will be greater than the one?

Of course.

But can smallness be equal to anything or greater than anything, and have the functions of greatness and equality and not its own functions?

Impossible.

Then smallness cannot be in the whole of one, but, if at all, in a part only?

Yes.

And surely not in all of a part, for then the difficulty of the

whole will recur ; it will be equal to or greater than any part in which it is ?

Certainly.

Then smallness will not be in anything, whether in a whole or in a part ; nor will there be anything small but actual smallness.

True.

Neither will greatness be in the one, for if greatness be in anything there will be something greater, other and besides greatness itself, namely, that in which greatness is ; and this too when the small itself is not there, which it, if it is great, must exceed ; this, however, is impossible, seeing that smallness is wholly absent.

True.

But greatness is only greater than absolute smallness, and smallness is only smaller than absolute greatness.

Very true.

Then other things are not greater or less than the one, for they have neither greatness nor smallness ; nor have greatness or smallness any power of exceeding or being exceeded in relation to the one, but only in relation to one another ; nor will the one be greater or less than them or others, because having neither greatness nor smallness.

Clearly not.

Then if the one is neither greater nor less than the others, it cannot either exceed or be exceeded by them ?

Certainly not.

And that which neither exceeds nor is exceeded, must be on an equality ; and being on an equality, must be equal.

Of course.

And this will be true also of the relation of the one to itself ; having neither greatness nor smallness in itself, it will neither exceed nor be exceeded by itself, but will be on an equality and equal to itself.

Certainly.

Then the one will be equal both to itself and the others ?

That is evident.

And yet the one, being itself in itself, will also surround and be without itself ; and, as containing itself, will be greater than

151 itself; and, as contained in itself, will be less; and will thus be greater and less than itself.

It will.

Now there cannot possibly be anything which is not included in the one and the others?

Of course not.

But, surely, that which is must always be somewhere?

Yes.

But that which is in anything will be less, and that in which it is will be greater; in no other way can one thing be in another.

True.

And since there is nothing other of, or separated from, the one and the other, and they must be in something, must they not be in one another, the one in the others and the others in the one, if they are to be anywhere?

That is clear.

But inasmuch as the one is in the others, the others will be greater than the one, and contain the one, which will be less than the others, and will be contained in them; and inasmuch as the others are in the one, the one on the same principle will be greater than the others, and the others less than the one.

True.

The one, then, will be equal to and greater and less than itself and the others?

Clearly.

And if it be greater and less and equal, it will be of equal and more and less measures than itself and the others, and if of measures also of parts?

Of course.

And if of equal and more and less measures, it will be in number more or less than itself and the others, and likewise equal in number to itself and to the others.

How is that?

It will be of more measures than those things which it exceeds, and of as many measures as parts; and so with that to which it is equal, and that than which it is less.

True.

And being greater and less than itself, and equal to itself,

it will be of equal measures with itself and of more and fewer measures than itself; and if of measures then also of parts?

Certainly.

And being of equal parts with itself, it will be numerically equal to itself; and being of more parts, more, and being of less, less than itself.

Certainly.

And the same will hold of its relation to other things; inasmuch as it is greater than them, it will be more in number than them; and inasmuch as it is smaller, it will be less in number; and inasmuch as it is equal to other things, it will be equal to them in number.

Certainly.

Once more, then, as would appear, the one will be in number both equal to and more and less than both itself and all other things.

It will.

Does the one also partake of time? And is it and does it become older and younger than itself and others, and again neither younger nor older than itself and others by virtue of participation in time?

How do you mean?

If one is, being must be predicated of it?

Yes.

But to be (*εἶναι*) is only participation of being in company with present time, and to have been is the participation of being in company with past time, and to be about to be is the participation of being in company with future time? 152

Very true.

Then the one if it partakes of being partakes of time?

Certainly.

And is not time always moving forward?

Yes.

Then the one is always becoming older than itself, if it moves forward in time?

Certainly.

And do we remember that the older becomes older than that which becomes younger?

Yes, we remember that.

Then since the one becomes older than itself, it is becoming older while itself is becoming younger?

Certainly.

Thus, then, the one becomes older as well as younger than itself?

Yes.

And it is older (is it not?) when in becoming, it gets to the point of time between 'was' and 'will be,' which is 'now': for surely in going from the past to the future, it cannot pass over the present?

No.

And when it arrives at the present it stops from becoming older, and no longer becomes, but is older, for if it went on it would never be reached by the present, for it is the nature of that which goes on, to touch both the present and the future, letting go the present and seizing the future, while in process of becoming between them.

True.

But that which is becoming cannot pass the present; when it reaches the present it ceases to become, and is then whatever it may happen to become.

That is clear.

And so the one, when in becoming older it reaches the present, ceases to become, and then is older.

Certainly.

And it is older than that which it was becoming older than, and it was becoming older than itself.

Yes.

And that which is older is older than that which is younger?

True.

Then the one is younger than itself, when in becoming older it reaches the present?

Certainly.

But the present is always present with the one during all its being; for whenever it is it is always now.

Certainly.

Then the one always both is and becomes older or younger than itself?

Truly.

And is it or does it become a longer time than itself or an equal time with itself?

An equal time.

But that which becomes or is for an equal time is of the same age?

Of course.

And that which is of the same age, is neither older nor younger?

No.

The one, then, becoming and being the same time with itself, neither is nor becomes older or younger than itself? 153

I should say not.

And what are its relations to other things? Is it older or younger than they are?

I cannot tell you.

You can at least tell me that the others are more than the one—other would have been one, but the others have multitude, and are more than one?

True.

A multitude implies a number larger than one?

Of course.

And shall we say that the lesser or the greater is the first to come or to have come into existence?

The lesser.

Then the least is the first? And that is the one?

Yes.

Then the one of all things that have number is the first to come into being; but all other things have also number, being plural and not singular.

They have.

And that which came into being first must be supposed to have come into being prior to the others, and the others later; and the things which came into being later, are younger than that which preceded them? And so the other things will be younger than the one, and the one older than other things?

True.

What would you say of another question? Can the one have

come into being contrary to its own nature, or is that impossible?

Impossible.

And yet, surely, the one was shown to have parts; and if parts, then a beginning, middle and end?

Yes.

And a beginning is the first of everything to come into being, both of the one itself and of all other things; and after the beginning, the others follow, until you reach the end?

Certainly.

And all these others we shall affirm to be parts of the whole and the one, which, as soon as the end is reached, has become whole and one?

Yes; that is what we shall say.

But the end comes last, and the one is by nature so constituted as to come into being with the end; so that if the one cannot come into being except in accordance with its own nature, its nature will require that it should come into being after the others, simultaneously with the end.

Clearly.

Then the one is younger than the others and the others older than the one.

That also is clear in my judgment.

Well, and must not a beginning or any other part of the one or of anything, if it be a part and not parts, being a part, be also of necessity one?

Certainly.

And will not the one come into being together with each part—together with the first part as it comes into being, and together with the second part and with all the rest, and will not be wanting to any part which is added until it has reached the last and become one whole; it will be wanting neither to the middle, nor to the first, nor to the last, nor to any of them, while the process of becoming is going on?

True.

Then the one is of the same age with all the others, so that if the one is to come into being in a manner not contrary to its nature, it will be neither prior nor posterior to the others, but simultaneous; and according to this argument the one will be

neither older nor younger than the others, nor the others than the one, but according to the previous argument the one will be older and younger than the others and the others than the one.

Certainly.

After this manner then the one is and has become. But as to its becoming older and younger than the others, and the others than the one, and neither older nor younger, what shall we say? Shall we say as of being so also of becoming, or otherwise?

I cannot answer.

But I can venture to say, that even if the one is older or younger than another, it will not become older or younger in a greater degree than it was at first; for equals added to unequals, whether to time or to anything else, leave the difference between them the same as at first.

Of course.

Then that which is, cannot become older or younger than that which is, if the difference of age is always the same; the one is and has come to be older and the other younger; but they do not become so.

True.

And the one which is does not therefore become either older or younger than the others which are.

No.

But consider whether they may not become older and younger in this way.

In what way?

Inasmuch as the one was proven to be older than the others and the others than the one.

And what of that?

If the one is older than the others, it has come into being a longer time than the others.

Yes.

But consider again; if we add equal time to a greater and a less time, will the greater differ from the less time by an equal or by a smaller portion?

By a smaller portion.

Then the difference between the age of the one and the age of the others will not be afterwards so great as at first, but if

an equal time be added to both of them they will differ less and less in age?

Yes.

And that which differs in age from some other less than formerly, from being older will become younger in relation to that other?

Yes, younger.

And if the one becomes younger the others will become older than they were before in relation to the one.

Certainly.

Then that which has become younger becomes older relatively to that which previously was and has become older, but never is older, for the one is always growing on the side of youth and the other on the side of age. And in like manner the older is always in process of becoming younger than the younger; for as they are always going in opposite directions they become the opposite of one another, the younger older than the older, and the older younger than the younger. They cannot, however, have become; for if they had already become they would be and not merely become. But that is impossible; for they are always becoming both older and younger than one another: the one becomes younger than the others because it was seen to be older and prior, and the others become older than the one because they came into being later; and in the same way the others are in the same relation to the one, because they were seen to be older and prior to the one.

That is clear.

Inasmuch then, as one thing does not become older or younger than another, in that they differ from each other by an equal number, the one cannot become older or younger than the others, nor the others than the one; but inasmuch as that which came into being earlier and that which came into being later must continually differ from each other by a different portion—in this point of view the others must become older and younger than the one, and the one than the others.

Certainly.

For all these reasons, then, the one is and becomes older and younger than itself and the others, and neither is nor becomes older or younger than itself or the others.

Certainly.

But since the one partakes of time, and partakes of becoming older and younger, must it not also partake of the past, the present, and the future?

Of course.

Then the one was and is and will be, and was becoming and is becoming and will become?

Certainly.

And there is and was and will be something which is in relation to it and belongs to it?

True.

And if we at this moment have opinion and knowledge and perception of the one, then there is opinion and knowledge and perception of it?

Quite right.

Then it has name and definition, and is named and described, and everything of this kind which appertains to other things appertains to the one.

Certainly, that is true.

Yet once more and for the third time, let us consider: If the one is both one and many, as we have described, and is neither one nor many, and participant of time, must it not, in as far as it is one, at times partake of being, and in as far as it is not one, at times not partake of being?

Certainly.

But can it partake of being when not partaking of being, or not partake of being when partaking of being?

Impossible.

Then the one partakes and does not partake of being at different times, for that is the only way in which it can partake and not partake of the same.

True.

And is there not also a time at which it assumes being and 156 relinquishes being—for how can it have and not have the same thing unless it receives and also gives it up at some time?

Impossible.

And the assuming of being is what you would call becoming?

I should.

And the relinquishing of being you would call destruction?
I should.

The one then, as would appear, becomes and is destroyed by taking and giving up being.

Certainly.

And being one and many and in process of becoming and being destroyed, when it becomes one the being of the many is destroyed, and when many, the being of the one is destroyed?

Certainly.

And as it becomes one and many, must it not inevitably experience separation and aggregation?

Inevitably.

And whenever it becomes like and unlike it must be assimilated and dissimilated?

Yes.

And when it becomes greater or less or equal it must grow or diminish or be equalised?

True.

And when being in motion it rests, and when being at rest it changes to motion, it can surely be in no time at all?

How can it?

But that a thing which is previously at rest should be afterwards in motion, or previously in motion and afterwards at rest, without experiencing change, is impossible.

Impossible.

And surely there cannot be a time in which a thing can be at once neither in motion nor at rest?

There cannot.

But neither can it change without changing.

True.

When then does it change; for it cannot change either when at rest, or when in motion, or when in time?

It cannot.

And perhaps this strange thing in which it is at the time of changing is—

Is what?

The moment. For the moment seems to imply a something out of which change takes place into either of two states; for the change is not from the state of rest as such,

nor from the state of motion as such; but there is this curious nature which we call the moment lying between rest and motion, not being in any time; and into this and out of this what is in motion changes into rest, and what is at rest into motion.

So it appears.

And the one then, if it is in rest and also in motion, will change to either, for only in this way can it be both. And in changing it changes in a moment, and when it is changing it will be in no time, and will not then be either in motion or at rest.

True.

And it will be in the same case in relation to the other 157 changes, when it passes from being into destruction, or from not being into becoming—then it passes between certain states of motion and rest, and neither is nor is not, nor becomes nor is destroyed.

Very true.

And on the same principle, in the passage from one to many and from many to one, the one is neither one nor many, neither separated nor aggregated; and in the passage from like to unlike, and from unlike to like, it is neither like nor unlike, neither in a state of assimilation nor of dissimilation; and in the passage from small to great and equal and back again, it will be neither small nor great, nor equal, nor in a state of increase, or diminution, or equalisation.

True.

All these, then, are the affections of the one, if the one is. Of course.

i. aa. But if one is, what will happen to the others—is not that to be considered?

Yes.

Let us show then, if one is, what will be the affections of that which is other than the one.

Let us do so.

Inasmuch as there are things other than the one, the others are not the one; for if they were they could not be other than the one.

Very true.

Nor are the others altogether without the one, but in a certain way they participate in the one.

How so?

Because the others are other than the one inasmuch as they have parts; for if they had no parts they would be simply one.

Right.

And parts, as we affirm, have relation to a whole?

That is what we say.

And a whole must necessarily be one made up of many; and the parts will be parts of the one, for each of the parts is not a part of many, but of a whole.

How do you mean?

If anything were a part of many, being itself one among many, it will surely be a part of itself, which is impossible, and it will be a part of each one of the other parts, if of all; for if not a part of some one, it will be a part of all the others but this one, and thus will not be a part of each one; and if not a part of each one, it will not be a part of any one of the many; and not being a part of any one, it cannot be a part or anything else of all those things of none of which is it anything.

That is clear.

Then the part is not a part of the many, nor of all, but is of a certain single form, which we call a whole, being one perfect unity framed out of all—of this the part will be a part.

Certainly.

If, then, the others have parts, they will participate in the whole and the one.

True.

Then the others of the one must be one perfect whole, having parts.

Certainly.

And the same argument holds of each part, for the part 158 must participate in the one; for if each of the parts is a part, this means, I suppose, that it is one separate from the rest and self related; otherwise it is not each.

True. *Univ Calif - Digitized by Microsoft®*

But when we speak of the part participating in the one, it must clearly be other than one; for if not, it would not merely have participated, but would have been one; whereas only the one itself can be one.

Very true.

Both the whole and the part must participate in the one; for the whole will be one whole, of which the parts will be parts; and the part in each case will be one part of the whole which is the whole of the part.

True.

And will not the things which participate in the one, be other than it?

Of course.

And the things which are other of the one will be many; for if the things which are other of the one were neither one nor more than one, they would be nothing.

True.

But, seeing that the things which participate in the one as a part, and in the one as a whole, are more than one, must not those very things which participate in the one be infinite in number?

How is that?

Let us look at the matter thus:—Is it not a fact that in partaking of the one they are not one, and do not participate in the one at the very time when they are partaking of it?

Clearly.

They do so then as multitudes in which the one is not present?

Very true.

And if we were to abstract from them in idea the very smallest fraction, must not that least fraction, if it does not partake of the one, be a multitude and not one?

Certainly.

And if we continue to look at the others, regarded simply, and in themselves, will not they, as far as we see them, be unlimited in number?

Certainly.

And yet, when each several part becomes a part, then the

parts have a limit in relation to the whole and to each other, and the whole in relation to the parts.

No doubt.

The result to the others than the one is that the union of themselves and the one appears to create a new element in them which gives limitation in relation to one another; whereas in their own nature they have no limit.

That is clear.

Then the others of the one, both as whole and parts, are infinite, and also partake of limit.

Certainly.

Then they are both like and unlike one another and themselves.

How is that?

Inasmuch as they are unlimited in their own nature, they are all affected in the same way.

True.

And inasmuch as they all partake of limit, they are all affected in the same way.

Of course.

But inasmuch as their state is both limited and unlimited, they are affected in opposite ways.

Yes.

159 And opposites are the most unlike of things.

Certainly.

Considered, then, in regard to either one of their affections, they will be like themselves and one another; considered in reference to both of them together, most opposed and most unlike.

That appears to be true.

Then the others are both like and unlike themselves and one another?

True.

And they are the same and also different from one another, and in motion and at rest, and experience every sort of opposite affection, as may be proved without difficulty of them, and as, in the case of the affections aforesaid, has been already proved?

True. *Univ Calif - Digitized by Microsoft* ®

i. bb. Suppose, now, that we leave the further discussion of these matters as evident, and consider again upon the hypothesis that the one is, whether the opposite of all this is or is not equally true of the others.

By all means.

Then let us begin again, and ask, If one is, what must be the affections of the others?

Let us ask that question.

Must not the one be distinct from the others, and the others from the one?

Why so?

Why, because there is nothing else beside them which is distinct from both of them; for the expression 'one and the others' includes all things.

Yes, all things.

Then we cannot suppose that there is anything different from them in which the one and the others might exist?

There is nothing.

Then the one and the others are never in the same?

True.

Then they are separated from each other?

Yes.

And we surely cannot say that what is truly one has parts? Impossible.

Then the one will not be in the others as a whole, nor the parts of the one, if it be separated from the others, and has no parts?

Impossible.

Then there is no way in which the many can partake of the one, if they do not partake either in whole or in part?

It would seem not.

Then there is no way in which the others are one, or have in themselves any unity?

No.

Nor are the others many; for if they were many, each part of them would be a part of the whole; but now the others, not partaking in any way of the one, are neither one nor many, nor whole, nor part.

True. *Univ Calif - Digitized by Microsoft* ®

Then the others neither are nor contain two or three, if entirely deprived of the one?

True.

Then the others are neither like nor unlike the one, nor is likeness and unlikeness in them; for if they were like and unlike, or had in them likeness and unlikeness, they would have two natures in them opposite to one another.

That is clear.

But for that which partakes of nothing to partake of two things was held by us to be impossible?

Impossible.

160 Then the others are neither like nor unlike nor both, for if they were like or unlike they would partake of one of those two natures, which would be one thing, and if they were both they would partake of the opposites which would be two things, and this has been shown to be impossible.

True.

Therefore they are neither the same, nor other, nor in motion, nor at rest, nor in a state of becoming, nor of being destroyed, nor greater, nor less, nor equal, nor have they experienced anything else of the sort; for, if they are capable of experiencing any such affection, they will participate in one and two and three, and odd and even, and in these, as has been proved, they do not participate, seeing that they are altogether and in every way devoid of the one.

Very true.

Therefore if one is, the one is all things, and also nothing, both in relation to itself and to other things.

Certainly.

ii. a. Well, and ought we not to consider next what will be the consequence if the one is not?

Yes; we ought.

What is the meaning of the hypothesis—If the one is not; is there any difference between this and the hypothesis—If the not one is not?

There is a difference, certainly.

Is there a difference only, or rather are not the two expressions—if the one is not, and if the not one is not, entirely opposed?

They are entirely opposed.

And suppose a person to say:—If greatness is not, if smallness is not, or anything of that sort, does he not mean by using this expression that ‘not being’ is other than other things?

To be sure.

And so when he says ‘If one is not’ he clearly means, by what is not, what is other of all others; we know what he means—do we not?

Yes, we do.

When then he says one, he says firstly something which is known, and secondly something which is other of all other things; it makes no difference whether he predicate of it being or not-being, for that which is said ‘not to be’ is known all the same, and is distinguished from all other things.

Certainly.

Then I will begin again, and ask: If one is not, what are the consequences? In the first place, as would appear, there is a knowledge of it, or the very meaning of the words, ‘if one is not,’ would not be known.

True.

Secondly, the others differ from it, or it could not be described as different from the others?

Certainly.

Difference, then, belongs to it as well as knowledge; for in speaking of the one as different from the others, we do not speak of a difference in the others, but in the one.

That is clear.

Moreover, the one that is not partakes of ‘that,’ and ‘some,’ and ‘this,’ and ‘relation to this,’ and ‘these,’ and the like; for the one, or the others of the one, could not have been spoken of, nor could any attribute or relative of the one be or be spoken of, if the one did not partake of ‘some,’ or of the other attributes just now mentioned.

True.

Being, then, cannot be ascribed to the one, if the one is not; but the one that is not may or rather must participate in many, 161 if the one only and nothing else is not; if, however, neither the one nor anything else is not, and we are speaking of some-

thing else, we can predicate nothing of it¹. But supposing that one and nothing else is not, then it must participate in the predicate 'that,' and in much besides.

Certainly.

And it will have unlikeness in relation to the others, for the others being different from the one will be of a different kind.

Certainly.

And are not things of a different kind also other in kind?

Of course.

And are not things other in kind unlike?

They are unlike.

And if they are unlike the one, they will be clearly unlike that which is unlike?

That is clear.

Then the one will have unlikeness in respect of which the others will be unlike it?

That would seem to be true.

And if unlikeness to other things is attributed to it, it must have likeness to itself.

How is that?

If the one have unlikeness to the one, it cannot be anything of the nature of the one which is spoken of; nor will the hypothesis relate to the one; but it will relate to something other than one?

Quite so.

But that cannot be.

No.

Then the one must have likeness to itself?

True.

Again, it is not equal to the others; for if it were equal, then it would at once be and be like them in virtue of the equality; but if one has no being, then it can neither be nor be equal?

Impossible.

But if it is not equal to the others, neither are the others equal to it?

Certainly not.

And things that are not equal are unequal?

True.

And they are unequal by reason of inequality?

Of course.

Then the one partakes of inequality, and in respect of this the others are unequal to it?

Very true.

And inequality implies greatness and smallness?

Yes.

Then, on this supposition, the one has greatness and smallness?

That appears to be true.

And greatness and smallness always stand apart from one another?

True.

Then there is always something between them?

There is.

And can you think of anything else which is between them other than equality?

No, it is equality.

Then that which has greatness and smallness also has equality, which lies between them?

That is clear.

Then the one, which is not, partakes, as would appear, of greatness and smallness and equality?

Clearly.

Further, it must surely in a sort partake of being?

How so?

It must be as we say, for if not, then we should not say the truth in saying that the one is not. But if we say the truth, we must suppose ourselves to say what is. Am I not right?

Yes.

And since we affirm that we speak truly, we must also be supposed to be saying that which is.

Certainly.

Then, as would appear, the one is not, for if it were not to be not being, but¹ to admit something of being into not being, it would at once become being.

Quite true.

Then not being, if it is to maintain itself, must have the

¹ Or, to admit something of the existence of not-being.

being of not-being as the bond of not-being, just as being must have as a bond the not-being of not-being in order to perfect its own being; for the truest assertion of the being of being and of the not-being of not-being is when being partakes of the being of being, and of the not-being of the being of not-being—that is, the perfection of being; and when not-being as not-being partakes both of the not-being of not-being and of the being of being—that is the perfection of not-being.

Most true.

Since then what is partakes of not-being, and what is not of being, must not the one also partake of being in order not to be?

Certainly.

Then the one, if it is not, clearly has being?

Clearly.

And not-being also, if it is not?

Of course.

But can anything which is in a certain state not be in that state without changing?

Impossible.

Then everything which is and is not in a certain state, implies change?

Certainly.

And change is motion—we may say that?

Yes, motion.

And the one has been proved both to be and not to be?

Yes.

And therefore is and is not in the same state?

Yes.

And thus also the one that is not has been shown to have motion, because it changes from being to not-being?

That appears to be true.

But surely if it is nowhere among what is, as is the fact, since it is not, it cannot change from one place to another?

Impossible.

Then it cannot move by changing place?

No.

Nor can it turn on the same spot, for it nowhere touches the

same, for the same is being, and that which is not cannot be in any being?

It cannot.

Then the one, if it is not, cannot turn in that in which it is not?

No.

Neither can the one, whether it is or is not, be altered into other than itself, for if it altered from itself, then we should not be speaking of the one, but of something else, if it changed from itself?

True.

But if the one is neither altered from itself, nor turns round in the same place, nor changes place, can it still be capable of motion?

Impossible.

Now that which is unmoved must surely be at rest, and that which is at rest must stand?

Certainly.

Then the one that is not, stands, and is also in motion?

That seems to be true.

But if it be in motion it must necessarily undergo alteration, for anything which is moved, in so far as it is moved, is no longer in the same state, but in another? 163

Yes.

Then the one, being moved, is altered?

Yes.

And, further, if not moved in any way, it will not be altered in any way?

No.

Then, in so far as the one that is not is moved, it is altered, but in so far as it is not moved, it is not altered?

Right.

Then the one that is not is altered and is not altered?

That is clear.

And must not that which is altered become other than it previously was, and lose its former state and be destroyed; but that which is not altered can neither come into being nor perish?

Very true.

And the one that is not, being altered, becomes and is destroyed; and not being altered, neither becomes nor is destroyed; and so the one that is not becomes and is destroyed, and neither becomes nor is destroyed?

True.

ii. b. And now, let us go back once more to the beginning, and see whether any new consequences will follow.

Let us do as you say.

If one is not, we ask what is to follow in respect of one? That is the question.

Yes.

Do not the words 'is not,' imply absence of being in that of which we say 'is not'?

Just so.

And when we say that a thing is not, do we mean that it is not in one way but is in another? do we not mean, absolutely, that what is not has in no sort or way or kind, participation of being?

In the most absolute sense.

Then, that which is not cannot be, or in any way participate in being?

It cannot.

And did we not mean by becoming, and being destroyed, the assumption of being and the loss of being?

Nothing but that.

And can that which has no participation in being, either assume or lose being?

Impossible.

The one then which in no way is cannot have or lose or assume being in any way?

True.

Then the one that is not, since it in no way partakes of being, neither perishes nor becomes?

No.

Then it is not altered at all; for if it were it would become and be destroyed?

True.

But if it be not altered it cannot be moved?

Certainly not.

Nor can we say that it stands, if it is nowhere ; for that which stands must always be in some place which is the same ?

The same of course.

Then we must say, once more, that what is not neither stands nor is in motion ?

Neither.

Nor has it anything related to it ; for if it had, it would partake of being ?

164

That is clear.

Neither can smallness, nor greatness, nor equality, be attributed to it ?

No.

Nor likeness nor difference, either in relation to itself or to other ?

Clearly not.

Well, and if it has no attribute or relation, can other things be related to it ?

Certainly not.

And therefore other things can neither be like or unlike, the same, or different in relation to it ?

They cannot.

No more can of or to, or some, or this, or of this, or of or to another, or past or future or present, or knowledge, or opinion, or perception, or description, or name, or any other thing that is, have any concern with not being ?

They have none.

Then the one that is not in no way is ?

That appears to be the conclusion.

ii. aa. Yet once more ; if one is not, what becomes of the others ? Let us determine that.

Yes ; let us determine that.

They must surely be, for if they were not, we could not speak of them ?

True.

But if we speak of the others, that implies difference—the terms 'other' and 'different' are synonymous ?

True.

Other means other of other, and different, different from the different?

Yes.

Then, if the others are supposed to be, there must be something of which they will be others?

Certainly.

And what can that be?—for if the one is not, they will not be others of the one.

They will not.

Then they will be others of each other; for failing of that, they are others of nothing.

True.

Then they are each the others of one another, in the plural and not in the singular; for if one is not, they cannot be singulars, but every particle of them is infinite in number; and even if a person takes that which appears to be the smallest fraction, this, which seemed one, in a moment evanesces into many, as in a dream, and from being very small becomes very great, in comparison with the fractions of it?

Very true.

And in such particles the others will be the others of one another, if others are, and not the one?

Exactly.

And will there not be many particles, each appearing to be and not being one, if one is not?

True.

And there will seem to be a number of them, if each of them is one, and they are many?

Yes, there will.

And there will be odd and even among them, which will also have no reality, if one is not?

No.

And they will appear to have a least fraction; and even this
165 will seem large and manifold in comparison with the littleness of each of the fractions into which it is divided?

Certainly.

And each particle will appear equal to the many and little;

for it could not have appeared to pass from the greater to the less without having appeared to arrive at the middle ; and thus would arise the appearance of equality.

Yes.

And having neither beginning, middle, nor end, each separate particle yet appears to have a limit in relation to itself and other.

How is that ?

Because, when a person conceives of any one of these, prior to the beginning another beginning appears, and there is another end, remaining after the end, and in the middle a truer middle within but smaller, because no unity can be conceived of any of them, if the one is not.

Very true.

And so all being which any one can possibly conceive, must be broken up into fractions, for a particle will have to be conceived of without unity ?

Certainly.

And such being when seen indistinctly and at a distance, appears to be one ; but when seen near and with keen vision, every single thing appears to be infinite, if deprived of the one which is not ?

That is most certain.

Then each of the others must appear to be infinite and finite, and one and many, if the others of the one exist and not the one.

They must.

Then will they not appear to be like and unlike ?

How is that ?

Just as in a picture things appear to be all one to a person standing at a distance, and to be in the same state and alike ?

True.

But when you approach them, they appear to be many and different ; and because of the appearance of the other different in kind, and unlike themselves ?

True.

And so must the particles appear to be like and unlike themselves and each other.

Certainly.

And must they not be the same and yet different from another, and in contact and also in separation, and having every sort of motion, and every sort of rest, and becoming and being destroyed, and in neither state, and the like, all which things may be easily enumerated if the one is not and the many are?

Most true.

ii. bb. Once more, let us go back to the beginning, and ask if the one is not, and the others of the one are, what will follow.

Let us ask that question.

In the first place, the others will not be one?

Impossible.

Nor will they be many; for if they were many one would be contained in them. But if no one of them is one, all of them are nought, and therefore they will not be many.

True.

If there be no one in the others, the others are neither many nor one.

166 They are not.

Nor do they appear either as one or many.

Why is that?

Because the others have no sort or manner or way of communion with any sort of not-being, nor can anything which is not be connected with any of the others; for that which is not has no parts.

True.

Nor is there an opinion or any appearance of not-being in connection with the others, nor is not-being ever in any way attributed to the others.

No.

Then if one is not, there is no conception of the others either as one or many; for you cannot conceive the many without the one.

You cannot.

Then if one is not, the others neither are, nor can be conceived to be either one or many?

It would seem not.

Nor as like or unlike?

No.

Nor as the same or different, nor in contact or separation, nor in any of those states which we spoke of as apparent;—the others neither are nor appear to be any of these, if one is not?

True.

Then may we not sum up the argument in a word and say truly: If one is not, then nothing is?

Certainly.

Then now that is said; and let us say further, as seems to be the truth, that, whether one is or is not, one and the others in relation to themselves and one another, all of them, in every way, are and are not, and appear and appear not.

Most true.

THEAETETUS.

INTRODUCTION.

THERE are some dialogues of Plato whose place in the series and relation to the other dialogues cannot be determined with any degree of certainty. The Theaetetus, like the Parmenides, has points of similarity both with his earlier and his later writings. The perfection of style, the humour, the dramatic interest, the complexity of structure, the fertility of illustration, the shifting of the points of view, are characteristic of his best period of authorship. The vain search, the negative conclusion, the figure of the midwives, the constant profession of ignorance on the part of Socrates, also bear the stamp of the early dialogues, in which the original Socrates is not yet Platonized. Had we no other indications, we should be disposed to range the Theaetetus with the Apology and the Phaedrus, and perhaps even with the Protagoras and the Laches.

But when we pass from the style to an examination of the subject, we trace a connexion with the later rather than with the earlier dialogues. In the first place there is the connexion, indicated by Plato himself at the end of the dialogue, with the Sophist, to which in many respects the Theaetetus is so little akin. The same persons reappear (1) including the younger Socrates, whose name is just mentioned in the Theaetetus, 147 C; (2) the theory of rest, which at p. 133 D, Socrates has declined to consider, is resumed by the Eleatic Stranger; (3) there is a similar allusion in both dialogues to the meeting of Parmenides and Socrates, Theaet. 183 E, Soph. 217; and (4) the inquiry into not-being in the Sophist supplements the question of false opinion which is raised in the Theaetetus. (Compare also Theaet. 168 A, 210, and Soph. 230 B; Theaet. 174 D, E, and Soph. 227 A; Theaet. 188 E, and Soph. 237 D; Theaet. 170 A, and Soph. 233 B; Theaet. 172 D, Soph. 253 C, for parallel

Rel
De
Sop
an

turns of thought). Secondly, the later date of the dialogue is confirmed by the absence of the doctrine of recollection and of any doctrine of ideas except that which derives them from generalization and from reflection of the mind upon itself. The general character of the Theaetetus is dialectical, and there are traces of the same Megarian influences which appear in the Parmenides, and which later writers, in their matter of fact way, have explained by the residence of Plato at Megara. Socrates disclaims the character of a professional eristic, 164 C, and also, with a sort of ironical admiration, expresses his inability to attain the Megarian precision in the use of terms, 197 A. Yet he too employs a similar sophistical skill in overturning every conceivable theory of knowledge.

The direct indications of a date amount to no more than this: the conversation is said to have taken place when Theaetetus was a youth, and shortly before the death of Socrates. At the time of his own death he is supposed to be a full-grown man. Allowing nine or ten years for the interval between youth and manhood, the dialogue could not have been written earlier than 390, when Plato was about thirty-nine years of age. No more definite date is indicated by the engagement in which Theaetetus is said to have fallen or to have been wounded, and which may have taken place any time during the Corinthian war, between the years 390-387. The later date which has been suggested, 369, when the Athenians and Lacedaemonians disputed the Isthmus with Epaminondas, would make the age of Theaetetus at his death forty-five or forty-six. This a little impairs the beauty of Socrates' remark, 'that he would be a great man if he lived.'

In this uncertainty about the place of the Theaetetus, it seemed better, as in the case of the Republic, Timaeus, Critias, to retain the order in which Plato himself has arranged this and the two companion dialogues. We cannot exclude the possibility which has been already noticed in reference to other works of Plato, that the Theaetetus may not have been all written at one time; or the still greater probability that the Sophist and Politicus, which differ greatly in style, were only appended after a long interval of time. The allusion to Parmenides at 183, compared with Sophist 217, would probably imply that the dialogue which is called by his name was already in existence; unless, indeed, we suppose the passage in which the allusion occurs to have been inserted afterwards. Again, the Theaetetus may be connected with the Gorgias, either dialogue from different points of view containing an analysis of the real and

apparent (Schleiermacher); and both may be brought into relation with the *Apology* as illustrating the personal life of Socrates. The *Philebus*, too, may with equal reason be placed either after or before what, in the language of Thrasyllus, may be called the Second Platonic Trilogy. Both the *Parmenides* and the *Sophist*, and still more the *Theaetetus*, have points of affinity with the *Cratylus*, in which the principles of rest and motion are again contrasted, and the Sophistical or Protagorean theory of language is opposed to that which is attributed to the disciple of Heracleitus, not to speak of lesser resemblances in thought and language. The *Parmenides*, again, has been thought by some to hold an intermediate position between the *Theaetetus* and the *Sophist*; upon this view, *Soph.* 250 foll. may be regarded as the answer to the problems about One and Being which have been raised in the *Parmenides*. Any of these arrangements may suggest new views to the student of Plato; none of them can lay claim to an exclusive probability in its favour.

The *Theaetetus* is one of the narrated dialogues of Plato, and is the only one which is supposed to have been written down. In a short introductory scene, Euclides and Terpsion are described as meeting before the door of Euclides' house in Megara. This may have been a spot familiar to Plato (for Megara was within a walk of Athens), but no importance can be attached to the accidental introduction of the founder of the Megarian philosophy. The real intention of the preface is to create an interest about the person of Theaetetus, who has just been carried up from the army at Corinth in a dying state. The expectation of his death recalls the promise of his youth, and especially the famous conversation which Socrates had with him when he was quite young, a few days before his own trial and death, as we are once more reminded at the end of the dialogue. Yet we may observe that Plato has himself forgotten this, when he represents Euclides as from time to time coming to Athens and correcting the copy from Socrates' own mouth. The narrative, having introduced Theaetetus, and having guaranteed the authenticity of the dialogue (cp. *Symposium*, *Phaedo*, *Parmenides*) is then dropped. No further use is made of the device. As Plato himself remarks, who in this as in some other minute points, is imitated by Cicero (*De Amicitia*, c. 1), the interlocutory words are omitted.

Theaetetus, the hero of the battle of Corinth and of the dialogue, is a disciple of Theodorus, the great geometrician, whose science is thus indicated to be the propaedeutic to philosophy. An interest has been

already excited about him by his approaching death, and now he is introduced to us anew by the praises of his master Theodorus. He is a youthful Socrates, and exhibits the same contrast of the fair soul and the ungainly face and frame, the Silenus mask and the god within, which are described in the Symposium. The picture which Theodorus gives of his courage and patience and intelligence and modesty is verified in the course of the dialogue. His courage is shown by his behaviour in the battle, and his other qualities shine forth as the argument proceeds. Socrates takes an evident delight in 'the wise Theaetetus,' who has more in him than 'many bearded men'; he is quite inspired by his answers. At first the youth is lost in wonder, and is almost too modest to speak (151 E), but, encouraged by Socrates, he rises to the occasion, and grows full of interest and enthusiasm about the great question. Like a youth (162 D) he has not finally made up his mind, and is very ready to follow the lead of Socrates, and to enter into each successive phase of the discussion which turns up. His great dialectical talent is shown in his power of drawing distinctions (163 E), and of foreseeing the consequences of his own answers (154 D). The enquiry about the nature of knowledge is not new to him; long ago he has felt the 'pang of philosophy,' and has experienced the youthful intoxication which is depicted in the Philebus (p. 15). But he has hitherto been unable to make the transition from mathematics to metaphysics. He can form a general conception of square and oblong numbers (p. 148), but he is unable to attain a similar expression of knowledge in the abstract. Yet at length (p. 185), he begins to recognise that there are universal conceptions of being, likeness, sameness, number, which the mind contemplates in herself, and with the help of Socrates is conducted from a theory of sense to a theory of ideas.

There is no reason to doubt that Theaetetus was a real person, whose name survived in the next generation. But neither can any importance be attached to the notices of him in Suidas and Proclus, which are probably based on the mention of him in Plato. According to a confused statement in Suidas, who mentions him twice over as a pupil, first of Socrates and then of Plato, he is said to have written the first work on the Five Solids. But no early authority cites the work, the invention of which may have been easily suggested by the division of roots, which Plato attributes to him, and the allusion to the backward state of solid geometry in the Republic (vii. 528 B). At any rate, there is no

occasion to recall him to life again (Muller) after the battle of Corinth in order that we may allow time for the completion of such a work. Such a supposition entirely destroys the pathetic interest of the introduction.

Theodorus, the geometrician, had once been the friend and disciple of Protagoras, and is reluctantly drawn from his retirement to defend his old master. He is too old to learn Socrates' game of question and answer, and prefers the digressions to the main argument, because he finds them easier to follow. The mathematician, as Socrates says in the Republic, is not capable of giving a reason in the same manner as the dialectician (vii. 531 D, E), and Theodorus could not therefore have been appropriately introduced as the chief respondent. But he may be fairly appealed to, when the honour of his master is at stake. He is the 'guardian of his orphans,' although this is a responsibility which he wishes to throw upon Callias, the friend and patron of all Sophists, declaring that he himself had early 'run away' from philosophy, and was absorbed in mathematics. His extreme dislike to the Heraclitean fanatics, (like the dislike of Theaetetus (155 E) to the repulsive materialists,) and his ready acceptance of the noble words of Socrates (175, 176) are noticeable traits of character.

The Socrates of the Theaetetus is the same as the Socrates of the earlier dialogues. He is the invincible disputant, now advanced in years, of the Protagoras and Symposium; he is still pursuing his divine mission, his 'Herculean labours,' of which he has described the origin in the Apology; and he still hears the voice of his oracle, bidding him receive or not receive the truant souls. There he is supposed to have a mission to convict men of self-conceit; in the Theaetetus he has assigned to him by God the functions of a man-midwife, who delivers men from their errors, and under this character he is present throughout the dialogue. He is the true prophet who has an insight into the natures of men, and can divine their future (142 C); and he knows that sympathy is the secret power which unlocks their thoughts. The hit at Aristides, the son of Lysimachus, who was specially committed to his charge in the Laches, may be remarked by the way. The attempt to discover the definition of knowledge is in accordance with the character of Socrates as he is described in the Memorabilia, asking What is justice? what is temperance? and the like. But there is no reason to suppose that he would have analysed the nature of perception, or traced the connection of Protagoras and Heraclitus, or have raised the difficulty respecting false opinion. The

humorous illustrations as well as the serious thoughts run through the dialogue. The snubnosedness of Theaetetus, which is characteristic both of him and Socrates, and the man-midwifery of Socrates, are not forgotten in the closing words. At the end of the dialogue, as in the Euthyphro, he is expecting to meet Meletus at the porch of the king Archon, but with the same indifference to the result which is everywhere displayed by him, he proposes that they shall reassemble on the following day at the same spot. The day comes, and in the Sophist the three friends again meet, but no further allusion is made to the trial, and the principal share in the argument is assigned, not to Socrates, but to an Eleatic stranger; the youthful Theaetetus also plays a different and less independent part. And there is no allusion in the Introduction to the second and third dialogues, which are afterwards appended. There seems, therefore, reason to think that there is a real change, both in the characters and in the design.

The dialogue is an enquiry into the nature of knowledge, which is interrupted by two digressions. The first is, the digression about the midwives, which is also a leading thought or continuous image, like the wave in the Republic, appearing and reappearing at intervals. Again and again we are reminded that the successive conceptions of knowledge are extracted from Theaetetus, who in his turn truly declares that Socrates has got a great deal more out of him than ever was in him. Socrates is never weary of working out the image in humorous details; discerning the symptoms of labour, carrying the child round the hearth, fearing that Theaetetus will bite him, comparing the argument to a wind-egg, asserting an hereditary right to the occupation. There is also a serious side to the image, which is an apt similitude of the Socratic theory of education (cp. Republic, 518 D, Sophist, 230), and accords with the ironical spirit in which the wisest of men delights to speak of himself.

The other digression is the famous contrast of the lawyer and philosopher. This is a sort of landing-place or break in the middle of the dialogue. At the commencement of a great discussion, the reflection naturally arises, How happy are they who, like the philosopher, have time for such discussions (cp. Rep. v. 450). There is no reason for the introduction of such a digression; nor is a reason always needed, any more than for the introduction of an episode in a poem, or of a topic in conversation. That which is given by Socrates is quite sufficient, viz. that the philosopher may talk and write as he pleases. But though

not very closely connected, neither is the digression out of keeping with the rest of the dialogue. The philosopher naturally desires to pour forth the thoughts which are always present to him, and to discourse of the higher life. The idea of knowledge, although hard to be defined, is realised in the life of philosophy. And the contrast is the favourite antithesis between the world, in the various characters of sophist, lawyer, statesman, speaker, and the philosopher—between opinion and knowledge, between the conventional and the true.

The greater part of the dialogue is devoted to setting up and throwing down definitions of science and knowledge. Proceeding from the lower to the higher by three stages, in which perception, opinion, reasoning, are successively examined, first, we get rid of the confusion of the idea of knowledge and specific kinds of knowledge;—a confusion which has been already noticed in the *Lysis*, *Laches*, *Meno*, and other dialogues. In the infancy of logic, a form of thought has to be invented before the content can be filled up. We cannot define knowledge until the nature of definition has been ascertained. Having succeeded in making his meaning plain, Socrates proceeds to analyse the first definition which *Theaetetus* proposes: 'Knowledge is sensible perception.' This is speedily identified with the Protagorean saying, 'Man is the measure of all things'; and of this again the foundation is discovered in the perpetual flux of *Heraclitus*. The relativity of sensation is then developed at length, and for a moment the definition appears to be accepted. But soon the Protagorean thesis is pronounced to be suicidal; for the adversaries of Protagoras are as good a measure as he is, and they deny his doctrine. He is then supposed to reply that the perception may be true at any given instant. But the reply is in the end shown to be inconsistent with the *Heraclitean* foundation, on which the doctrine has been affirmed to rest. For if the *Heraclitean* flux is extended to every sort of change in every instant of time, how can any thought or word be detained even for an instant? Sensible perception, like everything else, is tumbling to pieces. Nor can Protagoras himself maintain that one man is as good as another in his knowledge of the future; and 'the expedient,' if not 'the just and true,' belongs to the sphere of the future.

II. And so we must ask again, What is knowledge? The comparison of sensations with one another implies a principle which is above sensation, and which resides in the mind itself. We are thus led to look for knowledge in a higher sphere, and accordingly *Theaetetus*, when again

interrogated, replies that 'knowledge is true opinion.' But how is false opinion possible? The Megarian or Eristic spirit within us revives the question, which has been already asked and indirectly answered in the *Meno*. 'How can a man be ignorant of that which he knows?' No answer is given to this not unanswerable question. The comparison of the mind to a block of wax, or to a decoy of birds, is found wanting.

III. But are we not inverting the natural order in looking for opinion before we have found knowledge? And knowledge is not true opinion, for the Athenian dicasts have true opinion but not knowledge. What then is knowledge? We answer, 'true opinion, with definition or explanation.' But all the different ways in which this statement may be understood are set aside; like the definitions of courage in the *Laches*, or of friendship in the *Lysis*, or of temperance in the *Charmides*. At length we arrive at the conclusion, in which nothing is concluded.

There are two special difficulties which beset the student of the *Theaetetus*: (1) he is uncertain how far he can trust Plato's account of the theory of Protagoras; and he is also doubtful (2) how far, and in what parts of the dialogue, Plato is expressing his own opinion. The dramatic character of the work renders the answer to both these questions difficult. In reply to the first of them, we have only probabilities to offer. There seem to be three main points which have to be decided: (1) Would Protagoras have identified his own thesis, 'man is the measure of all things,' with the other, 'All knowledge is sensible perception'? (2) Would he have based the relativity of knowledge on the Heraclitean flux? (3) Would he have asserted the absoluteness of sensation at each instant? Of the work of Protagoras on 'Truth' we know nothing, with the exception of the two famous fragments, which are cited in this dialogue, 'Man is the measure of all things,' and, 'Whether there are gods or not, I cannot tell.' Nor have we any other trustworthy evidence of the tenets of Protagoras, or of the sense in which his words are used. For later writers, including Aristotle in his *Metaphysics*, have mixed up the Protagoras of Plato, as they have the Socrates of Plato, with the real person.

1. Returning then to the *Theaetetus*, as the only possible source from which an answer to these questions can be obtained, we may remark, that Plato had 'the Truth' of Protagoras before him, and frequently refers to the book. He seems to say expressly, that in this work the doctrine of the Heraclitean flux was not to be found, p. 152; he told the real

truth' (not in the book, which is so entitled, but) 'privately to his disciples'—words which imply that the connection between the doctrines of Protagoras and Heraclitus was not generally recognised in Greece, but was really discovered or invented by Plato. On the other hand, the doctrine that 'Man is the measure of all things,' is expressly identified by Socrates with the other statement, 'that what appears to each man is to him'; and a reference is made to the books in which the statement occurs;—this Theaetetus, who has 'often read the books,' is supposed to acknowledge (152 A: so Cratylus 385 E). And in the speech attributed to Protagoras, he never says that he has been misunderstood: at p. 166 C he rather seems to imply that the absoluteness of sensation at each instant was to be found in his words (cp. 158 E). He is only indignant at the 'reductio ad absurdum' which Socrates devises of his 'homo mensura'; and in this complaint his friend Theodorus agrees.

The question may be raised, how far Plato in the Theaetetus could have misrepresented Protagoras without violating the laws of dramatic probability. Could he have pretended to cite from a well-known writing what was not to be found there? But such a shadowy enquiry is not worth pursuing further. We need only remember that, in the criticism which follows, on the thesis of Protagoras, we are criticising the Protagoras of Plato, and not attempting to draw a precise line between his real sentiments and those which Plato has attributed to him.

2. The other difficulty is a more subtle, and also a more important one, because bearing on the general character of the Platonic dialogues. On a first reading of them, we are apt to imagine that the truth is only spoken by Socrates, who is never guilty of a fallacy himself, and is the great detector of the errors and fallacies of others. But this natural presumption is disturbed by the discovery that the Sophists are sometimes in the right and Socrates in the wrong. Like the hero of a novel, he is not to be supposed always to represent the sentiments of the author. There are few modern readers who do not side with Protagoras, rather than with Socrates, in the dialogue which is called by his name. The Cratylus presents a similar difficulty: in his etymologies, as in the number of the State, we cannot tell how far Socrates is serious; for the Socratic irony will not allow him to distinguish between his real and his assumed wisdom. No one is the superior of the invincible Socrates in argument (except in the first part of the Parmenides, where

he is introduced as a youth); but he is by no means supposed to be in possession of the whole truth. Arguments are often put into his mouth (cp. Introduction to the Gorgias) which must have seemed quite as untenable to Plato as to a modern writer. In this dialogue great part of the answer of Protagoras is just and sound; remarks are made by him on verbal criticism, and on the importance of understanding an opponent's meaning, which are conceived in the true spirit of philosophy. And the distinction which he is supposed to draw between Eristic and Dialectic (167, 168), is really a criticism of Plato on himself and his own criticism of Protagoras.

The difficulty seems to arise from not attending to the dramatic character of the writings of Plato. There are two, or perhaps many, sides to questions; which are parted among the different speakers. Sometimes one view or aspect of a question is made to predominate over the rest, as in the Gorgias or Sophist; but in other dialogues truth is divided, as in the Laches and Protagoras, and the interest of the piece consists in the contrast of opinions. The confusion caused by the irony of Socrates, who, if he is true to his character, cannot say anything of his own knowledge, is increased by the circumstance that in the Theaetetus and some other dialogues, he is occasionally playing both parts himself, and even charging his own arguments with unfairness. In the Theaetetus he is designedly held back from arriving at a conclusion. For we cannot suppose that Plato conceived a definition of knowledge to be impossible. But this is his manner of approaching and surrounding a question. The lights which he throws on his subject are indirect, but they are not the less real for that. He has no intention of proving a thesis by a cut and dried argument; nor does he imagine that a great philosophical problem can be tied up within the limits of a definition. If he has analysed a proposition or notion, even with the severity of an impossible logic, if half-truths have been compared by him with other half-truths, if he has cleared up or advanced popular ideas, or illustrated a new method, the aim of a Platonic dialogue has been attained.

The writings of Plato belong to an age in which the power of analysis had outrun the means of knowledge; and through a spurious use of dialectic, the distinctions which had been already 'won from the void and formless infinite,' seemed to be rapidly returning to their original chaos. The two great speculative philosophies, which a century earlier had so deeply impressed the mind of Hellas, were now degenerating into Eristic.

The contemporaries of Plato and Socrates were vainly trying to find new combinations of them, or to transfer them from the object to the subject. The Megarians, in their first attempts to attain a severer logic, were making knowledge impossible. (Cp. Theaet. 202.) They were asserting 'the one good under many names,' and, like the Cynics, seem to have denied predication; while the Cynics themselves were depriving virtue of all which made virtue desirable in the eyes of Socrates and Plato. And besides these, we find mention in the later writings of Plato, especially in the Theaetetus, Sophist, and Laws, of certain repulsive godless persons, who will not believe what they 'cannot hold in their hands'; and cannot be approached in argument, because they cannot argue. (Theaet. 155 E; Soph. 246 A). No school of Greek philosophers exactly answers to these persons, in whom Plato may perhaps have blended some features of the Atomists with the vulgar materialistic tendencies of mankind in general. (Cp. Introduction to the Sophist.)

And not only was there a conflict of opinions, but the stage which the mind had reached presented other difficulties hardly intelligible to us, who live in a different cycle of human thought. All times of mental progress are times of confusion; we only see, or rather seem to see things clearly, when they have been long fixed and defined. In the age of Plato, the limits of the world of imagination and of pure abstraction, of the old world and the new, were not yet fixed. The Greeks, in the fourth century before Christ, had no words for 'subject' and 'object,' and no distinct conception of them; yet they were always hovering about the question involved in them. The analysis of sense, and the analysis of thought, were equally difficult to them; and hopelessly confused by the attempt to solve them, not through an appeal to facts, but by the help of general theories respecting the nature of the universe.

Plato, in his Theaetetus, gathers up the sceptical tendencies of his age, and compares them. But he does not seek to reconstruct out of them a theory of knowledge. The time at which such a theory could be framed had not yet arrived. For there was no measure of experience with which the ideas swarming in men's minds could be compared; the meaning of the word 'science' could scarcely be explained to them, except from the mathematical sciences, which alone offered the type of universality and certainty. Philosophy was becoming more and more vacant and abstract, and not only the Platonic ideas and

the Eleatic being, but all abstractions seemed to be at variance with sense and at war with one another.

The want of the Greek mind in the fourth century before Christ, was not another theory of rest or motion, or being or atoms, but rather a philosophy which could free the mind from the power of abstractions and alternatives, and show how far rest and how far motion, how far the universal principle of being, and the multitudinous principle of atoms, entered into the composition of the world; which could distinguish between the true and false analogy, and allow the negative as well as the positive a place in human thought. To such a philosophy Plato, in the *Theaetetus*, offers many contributions. He has followed philosophy into the region of mythology, and pointed out the similarities of opposing phases of thought. He has also shown that extreme abstractions are self-destructive; and, indeed, hardly distinguishable from one another. But his intention is not to unravel the whole subject of knowledge, if this had been possible; and several times in the course of the dialogue he rejects explanations of knowledge which have germs of truth in them; as, for example, 'the resolution of the compound into the simple'; or, 'right opinion with a mark of difference.'

Terpsion, who has come to Megara from the country, is described as looking in vain for Euclides in the Agora; the latter explains that he had been down to the harbour, and on his way thither had met Theaetetus, who was being carried up from the army to Athens. He was scarcely alive, for he had been badly wounded at the battle of Corinth, and had taken the dysentery, which prevailed in the camp. The mention of his condition suggests the reflection, 'what a loss he will be.' 'Yes, indeed,' replies Euclid; 'only just now I was hearing of his noble conduct in the battle.' 'That I should expect; but why did he not remain at Megara?' 'I wanted him to remain, but he would not; so I went with him as far as Erineum; and as I parted from him, I remembered that Socrates had seen him when he was a youth, and had a remarkable conversation with him, not long before his own death; and he then prophesied of him, that he would be a great man if he lived.' 'How true that has been; how like all that Socrates said! And could you repeat the conversation?' 'Not from memory; but I took notes when I returned home, which I afterwards filled up at

leisure, and got Socrates to correct them from time to time, when I came to Athens. Terpsion had long intended to ask for a sight of this writing, of which he had already heard. They are both tired, and agree to rest and have the conversation of Socrates read to them by a servant. Here is the roll, Terpsion; I need only observe that I have omitted, for the sake of convenience, the interlocutory words, 'said I,' 'said he'; and that Theaetetus, and Theodorus, the geometrician of Cyrene, are the persons with whom Socrates is conversing.

Socrates begins by asking Theodorus whether, in his visit to Athens, he has found any among the Athenian youth who were likely to attain distinction in science. 'Yes, Socrates, there is one very remarkable youth, with whom I have become acquainted. He is no beauty, and therefore you need not imagine that I am in love with him; and, to say the truth, he is very like you, for he has a snub nose, and projecting eyes, although these features are not so marked in him as in you. He combines the most various qualities, quickness, patience, courage; and he is gentle as well as wise, always silently flowing on, like a river of oil. Look; he is the middle one of those who are coming out of the court into the palestra.'

Socrates, who does not know his name, recognizes the son of Euphronius, who was himself a good man and a rich. He is informed by Theodorus that the youth is named Theaetetus, but the property of his father has disappeared in the hands of trustees; this does not, however, prevent him from adding liberality to his other virtues. At the desire of Socrates, he invites Theaetetus to sit by them.

'Yes,' says Socrates, 'that I may see in you, Theaetetus, the image of my ugly self, as Theodorus declares. Not that his remark is of any importance, for though he is a philosopher he is not a painter, and therefore he is no judge of our faces, though, as he is a man of science, he may be a judge of our minds. And if he were to praise the mental endowments of either of us, in that case the hearer of the eulogy ought to examine into what he says, and the subject should not refuse to be examined.' Theaetetus consents, and is caught in a trap. (Cp. the similar trap which is laid for Theodorus, at p. 166, 168 D.) 'Then now, Theaetetus, you will have to be examined, for he has been praising you in a style of which I never heard the like.' 'He was only jesting.' 'Nay, that is not his way; and I cannot allow you, on that pretence, to retract the assent which you have already

given, or I shall make Theodorus repeat your praises, and swear to them.' Theaetetus, in reply, professes that he is willing to be examined, and Socrates begins by asking him, 'What he learns of Theodorus?' He is himself anxious to learn anything of anybody; and now he has a little question to which he wants Theaetetus or Theodorus (or whichever of the company would not be 'donkey' to the rest) to find an answer. Without further preface, but at the same time apologizing for his eagerness, he asks, 'What is knowledge?' Theodorus is too old to answer questions, and begs him to interrogate Theaetetus, who has the advantage of youth.

Theaetetus replies, that knowledge is what he learns of Theodorus, i. e. geometry and arithmetic; and that there are other kinds of knowledge—shoemaking, carpentering, and the like. But Socrates rejoins, that this answer contains too much and also too little. For although Theaetetus has enumerated several kinds of knowledge, he has not explained the common nature of them; as if he had been asked, 'What is clay?' and instead of saying, 'Clay is moistened earth,' he had answered, 'There is one clay of image-makers, another of potters, another of oven-makers.' Theaetetus at once divines that Socrates means him to extend to all kinds of knowledge the same process of generalization which he has already learned to apply to arithmetic. For he has discovered a division of numbers into square numbers, 4, 9, 16, &c., which are composed of equal factors, and represent figures which have equal sides, and oblong numbers, 3, 5, 6, 7, &c., which are composed of unequal factors, and represent figures which have unequal sides. But he has never succeeded in attaining a similar conception of knowledge, though he has often tried; and, when this and similar questions were brought to him from Socrates, has been sorely distressed by them. Socrates explains to him that he is in labour. For men as well as women have pangs of labour; and both at times require the assistance of midwives. And he, Socrates, is a midwife, although this is a secret; he has inherited the art from his mother bold and bluff, and he ushers into light, not children, but the thoughts of men. Like the midwives, he has no children—the God will not allow him to bring anything into the world of his own. He also reminds Theaetetus that the midwives are or ought to be the only matchmakers; (this is the preparation for a biting jest, 151 B;) for those who reap the fruit are most likely to know on what soil

the plants will grow. But the midwives avoid this department of practice, because they have a character to lose, and do not want to be called procuresses. There are some other differences between his own art and that of the midwives, and between the two sorts of pregnancy. For women bring forth in due course, never anything but children, whereas the offspring of the brain are often monstrous and capricious. And there is no difficulty in discerning the signs of the coming labour in the one case, but in the other the difficulty is far greater. My patients, he says, are barren and stolid at first, but after a while they 'round apace,' if the gods are propitious to them; and this is due not to me but to themselves; I and the god only assist in bringing their ideas to the birth. Many of them have left me too soon, and the result has been that they have produced abortions; or when I have delivered them of children they have given them an ill bringing up, and have ended by seeing themselves, as others see them, to be great fools. Aristides, the son of Lysimachus, is one of these, and there have been others. The truants often return to me and beg to be readmitted; and then, if my familiar allows me, which is not always the case, I receive them, and they begin to grow again. There come to me also those who have nothing in them, and have no need of my art; and I am their matchmaker (see above), and marry them to Prodicus or some other inspired sage who is likely to suit them. I tell you this long story because I suspect that you are in labour. Come then to me, who am a midwife, and the son of a midwife, and I will deliver you. And do not bite me, as the women do, if I abstract your first-born; for I am acting out of good will towards you; the God who is within me is the friend of man, though he will not allow me to dissemble the truth. Once more then, Theaetetus, I repeat my old question — 'What is knowledge?' Take courage, and by the help of God you will discover an answer. 'My answer is, that knowledge is perception.' That is the theory of Protagoras, who has another way of expressing the same thing when he says, 'man is the measure of all things.' He was a very wise man, and we should try to understand him. In order to illustrate his meaning let me suppose that there is the same wind blowing in our faces, and one of us may be hot and the other cold. How is this? Protagoras will reply that the wind is hot to him who is cold, cold to him who is hot. And 'is' means 'appears,' and when you say 'appears,' that means 'he feels.' Thus feeling, appearance, perception, coincide with being. I suspect, however, that this was only a 'façon

de parler,' which he imposed on the common herd like you and me ; he told 'the truth' (in allusion to the title of his book, which was called 'the truth') in secret to his disciples. For he was really a votary of that famous philosophy in which all things are said to be relative ; nothing is great or small, or heavy or light, or one, but all is in motion and mixture and transition and flux and generation, not 'being,' as we ignorantly affirm, but 'becoming.' This has been the doctrine, not of Protagoras only, but of all philosophers, with the single exception of Parmenides ; Empedocles, Heracleitus, and others, and all the poets, with Epicharmus, the king of Comedy, and Homer, the king of Tragedy, at their head, have said the same ; the latter has these words—

‘Ocean, the generation of gods, and mother Tethys.’

And many arguments are used to show, that motion is the source of life, and rest of death ; fire and warmth are produced by friction, and living creatures owe their origin to a similar cause ; the bodily frame is preserved by exercise and destroyed by indolence ; and if the sun ceased to move, ‘chaos would come again.’ Now apply this doctrine of ‘all is motion’ to the senses, and first of all to the sense of sight. The colour of white, or any other colour, is neither in the eyes nor out of them, but ever in motion between the object and the eye, and varying in the case of every percipient. All is relative, and, as the followers of Protagoras remark, endless contradictions arise when we deny this ; e. g. here are six dice ; they are more than four and less than twelve ; more and also less—(you would say that, would you not ? ‘Yes’). And Protagoras will retort : ‘But can anything be more or less without addition ?’

‘I should say “no” if I were not afraid of contradicting my former answer.’

And if you say ‘yes’ the tongue will escape conviction but not the mind, as Euripides would say ? ‘True.’ The thoroughbred Sophists, who know all that can be known, would have a sparring match over this, but we, who have no professional pride, want only to discover whether our ideas are clear and consistent. And we cannot be wrong in saying, first, that nothing can be greater or less while remaining equal ; secondly, that there can be no becoming greater or less without addition or subtraction ; thirdly, that what is and was not, cannot be without having become. But then how is this reconcilable with the case of the dice, and with similar examples ?—that is the question. ‘I am often perplexed

and amazed, Socrates, by these difficulties.' That is because you are a philosopher, and philosophy begins in wonder; Iris is the child of Thaumias. Do you know the original principle on which the doctrine of Protagoras is based? 'No.' Then I will tell you; but we must not let the uninitiated hear, and by the uninitiated I mean the repulsive people who believe in nothing which they cannot hold in their hands. The brethren whose mysteries I am about to unfold to you are far more ingenious. They maintain that all is motion; and that motion has two forms, action and passion, out of which endless phenomena are created also in two forms—sense and the object of sense—which come to the birth together. Motions have various degrees of swiftness; the motions of the agent and the patient are slower, because they move and create in and about themselves, but the things which are born of them have a swifter motion, and pass rapidly from place to place. The eye and the appropriate object come together, and give birth to whiteness and the sensation of whiteness; the eye is filled with seeing, and becomes not sight but a seeing eye, and the object is filled with whiteness, and becomes not whiteness but white; and no other compound of either with another would have produced the same effect. All sensation is to be resolved into a similar combination of an agent and patient. Of either, taken separately, no idea can be formed, and the agent may become a patient, and the patient an agent. Hence there arises a general reflection that nothing is, but all things become; no name can detain or fix them. Are not these speculations charming, Theaetetus, and very good for a person in your interesting situation? I am offering you specimens of other men's wisdom, because I have no wisdom of my own, and I want to deliver you of something; and presently we will see whether you have brought forth wind or not. Tell me, then, what do you think of the notion 'that all things are becoming'?

'When I hear your arguments, I am marvellously ready to assent.'

But I ought not to conceal from you that there is a serious objection which may be urged against this doctrine of Protagoras. For there are states, such as madness and dreaming, in which perception is false; and half our life is spent in dreaming; and who can say that at this instant we are not dreaming? Even the fancies of madmen are real at the time. But if knowledge is perception, how can we distinguish between the true and the false in such cases? Having stated the objection,

I will now state the answer. Protagoras would deny the continuity of phenomena; he would say that what is different is entirely different, and whether active or passive has a different power. There are infinite agents and patients in the world, and these produce in every combination of them a different perception. Take myself as an instance:—Socrates may be ill or he may be well, and remember that Socrates, with all his accidents, is spoken of. The wine which I drink when I am well is pleasant to me, but the same wine is unpleasant to me when I am ill. And there is nothing else from which I can receive the same impression, nor can another receive the same impression from the wine. Neither can I and the object of sense become separately what we become together. For the one in becoming is relative to the other, but they have no other relation; and the combination of them is absolute at each moment. [In modern language the act of sensation is really indivisible, though capable of a mental analysis into subject and object.] My sensation alone is true, and true to me only. And therefore, as Protagoras says, ‘To myself I am the judge of what is and what is not.’ Thus the flux of Homer and Heracleitus, the great Protagorean saying, ‘that man is the measure of all things,’ the doctrine of Theaetetus, ‘that knowledge is perception,’ have all the same meaning. And this is thy new-born child, which by my art I have brought to light; and you must not be angry if instead of rearing your infant we expose him.

‘Theaetetus will not be angry; he is very good-natured. But I should like to know, Socrates, whether you mean to say that all this is untrue?’

First reminding you that I am not the bag which contains the arguments, but that I extract them from Theaetetus, shall I tell you what amazes me in your friend Protagoras?

‘What may that be?’

I like his doctrine that what appears is; but I wonder that he did not begin his great work on truth with a declaration that a pig, or a dog-faced baboon, or any other monster which has sensation, is a measure of all things; then while we were reverencing him as a god he might have produced a magnificent effect by expounding to us that he was no wiser than a tadpole. For if truth is only sensation, and one man’s discernment is as good as another’s, and every man is his own judge, and everything that he judges is right and true, then what need of

Protagoras to be our instructor at a high figure; and why should we be less knowing than he is, or have to go to him, if every man is the measure of all things? My own art of midwifery, and all dialectic, is an enormous folly, if Protagoras' 'truth' be indeed truth, and the philosopher is not merely amusing himself by giving oracles out of his book.

Theodorus thinks that Socrates is unjust to his master, Protagoras; but he is too old and stiff to try a fall with him, and therefore refers him to Theaetetus, who is already driven out of his former opinion by the arguments of Socrates.

Socrates then takes up the defence of Protagoras, who is supposed to reply in his own person—Good people, you sit and declaim about the gods, of whose existence or non-existence I have nothing to say, or you discourse about man being reduced to the level of the brutes; but what proof have you of your statements? And yet surely you and Theodorus had better reflect whether probability is a safe guide. Theodorus would be a bad geometrician if he had nothing better to offer. Theaetetus is affected by the appeal to geometry, and Socrates is induced by him to put the question in a new form. He proceeds as follows:—Should we say that we know what we see and hear, e. g. the sound of words or the sight of letters in a foreign tongue?

'We should say that the figures of the letters, and the pitch of the voice in uttering them, were known to us, but not the meaning of them.'

Excellent; I want you to grow, and therefore I will leave that answer and ask another question: Is not seeing perceiving? 'Very true.' And he who sees knows? 'Yes.' And he who remembers, remembers that which he sees and knows? 'Very true.' But if he closes his eyes does he not remember? 'He does.' Then he may remember and not see; and if seeing is knowing, he may remember and not know. Is not this a 'reductio ad absurdum' of the hypothesis that knowledge is sensible perception? Yet perhaps we are crowing too soon; and if Protagoras, 'the father of the myth,' had been alive, the result might have been very different. But he is dead, and Theodorus, whom he left guardian of his 'orphan,' has not been very zealous in defending him.

Theodorus objects that Callias is the true guardian, but he hopes that Socrates will come to the rescue. Socrates prefaces his defence by resuming the attack. He asks whether a man can know and not know at the same time? 'Impossible.' Quite possible, if you maintain that

seeing is knowing. The confident adversary, suiting the action to the word, shuts one of your eyes; and now, says he, you see and do not see, but do you know and not know? And a fresh opponent darts from his ambush, and transfers to knowledge the terms which are commonly applied to sight. He asks whether you can know near and not at a distance; whether you can have a sharp and also a dull knowledge. While you are wondering at his incomparable wisdom, he gets you into his power, and you will not escape until you have come to an understanding with him about the money which is to be paid for your release.

But Protagoras has not yet made his defence; and already he may be heard contemptuously replying that he is not responsible for the admissions which were made by a boy, who could not foresee the coming move, and therefore had answered in a manner which enabled Socrates to raise a laugh against him. But I cannot be fairly charged, he will say, with an answer which I should not have given; for I never maintained that the memory of a feeling is the same as a feeling, or denied that a man might know and not know the same thing at the same time. Or, if you will have extreme precision, I say that man in different relations is many or rather infinite in number. And I challenge you, either to show that his perceptions are not individual, or that if they are, what appears to him is not what is. As to your pigs and baboons, you are yourself a pig, and you make my writings a sport of other swine. But I still affirm that man is the measure of all things, although I admit that one man may be a thousand times better than another, in proportion as he has better impressions. Neither do I deny the existence of wisdom or of the wise man. But I maintain that wisdom is a practical remedial power of turning evil into good, the bitterness of disease into the sweetness of health, and not any greater truth or superiority of knowledge. For the impressions of the sick are as true as the impressions of the healthy; and the sick are as wise as the healthy. Nor can any man be cured of a false opinion, for there is no such thing; but he may be cured of the evil habit which generates in him an evil opinion. This is effected in the body by the drugs of the physician, and in the soul by the words of the Sophist; and the new state or opinion is not truer, but only better than the old. And philosophers are not tadpoles, but physicians and husbandmen, who till the soil and infuse health into animals and plants, and make the good take the place of the evil, both in individuals and

states. Wise and good rhetoricians make the good to appear just in states (for that is just which appears just to a state), and in return, they deserve to be well paid. And you, Socrates, whether you please or not, must continue to be a measure. This is my defence, and I must request you to meet me fairly. We are professing to reason, and not merely to dispute; and there is a great difference between reasoning and disputation. For the disputer is always seeking to trip up his opponent; and this is a mode of argument which disgusts men as they grow older with philosophy. But the reasoner is trying to understand him and to point out his errors to him, whether arising from his own or from his companions' fault; he does not argue from the customary use of names, which the vulgar pervert in all manner of ways. If you are gentle to an adversary he will follow and love you; and if defeated he will lay the blame on himself, and seek to escape from his own prejudices into philosophy. I would recommend you, Socrates, to adopt this humaner method, and to avoid captious and verbal criticisms.

Such, Theodorus, is the very slight help which I am able to afford to your friend; had he been alive, he would have helped himself in far better style.

'You have made a most valorous defence.'

Yes; but did you observe that Protagoras bid me be serious, and complained of our getting up a laugh against him with the aid of a boy? He meant to intimate that you must take the place of Theaetetus, who may be wiser than many bearded men, but not wiser than you, Theodorus.

'The rule of the Spartan Palaestra is, strip or depart; but you are like the giant Antaeus, and will not let me depart unless I try a fall with you.'

Yes, that is the nature of my complaint. And many a Hercules, many a Theseus mighty in deeds and words has broken my head; but I am always at this rough game. Please, then, to favour me.

'On the condition of not exceeding a single fall, I consent.'

Socrates now resumes the argument. As he is very desirous of doing justice to Protagoras, he insists on citing his own words,—'What appears to each man is to him.' And how, asks Socrates, are these words reconcilable with the fact that all mankind are agreed in thinking themselves wiser than others in some respects, and inferior to them in others? In the hour of danger they are ready to fall down and worship any one who

is their superior in wisdom as if he were a god. And the world is full of men who are asking to be taught and willing to be ruled, and of other men who are willing to rule and teach them. All which implies that men do judge of one another's impressions, and think some wise and others foolish. How will Protagoras answer this argument? For he cannot say that no one deems another ignorant or mistaken. If you form a judgment, thousands and ten of thousands are ready to maintain the opposite. The multitude may not and do not agree in Protagoras' own thesis, 'that man is the measure of all things,' and then who is to decide? Upon his own showing must not his 'truth' depend on the number of suffrages, and be more or less true in proportion as he has more or fewer of them? And he must acknowledge further, that they speak truly who deny him to speak truly, which is a famous jest. And if he admits that they speak truly who deny him to speak truly, he must admit that he himself does not speak truly. But his opponents will refuse to admit this of themselves, and he must admit that they are right in their refusal. The conclusion is, that all mankind, including Protagoras himself, will deny that he speaks truly; and his truth will be true neither to himself nor to anybody else.

Theodorus is inclined to think that this is going too far. Socrates ironically replies, that he is not going beyond the truth. But if the old Protagoras could only pop his head out of the world below, he would doubtless give them both a sound castigation and be off to the shades in an instant. Seeing that he is not within call, we must examine the question for ourselves; and there are clearly great differences in the understandings of men. Admitting, with Protagoras, that immediate sensations of hot, cold, and the like, are to each one such as they appear, yet this hypothesis cannot be extended to judgments or opinions. And even if we were to admit further, (and this is the view of some who are not thorough-going followers of Protagoras,) that right and wrong, holy and unholy, are to each state or individual such as they appear, still Protagoras will not venture to maintain that every man is equally the measure of expediency, or that the thing which seems is expedient to every one. But this begins a new question. 'Well, Socrates, we have plenty of leisure.' Yes, we have, and, after the manner of philosophers, we are digressing; I have often observed how ridiculous this habit of theirs makes them when they appear in court. 'What do you mean?' I mean to say that a philosopher is a gentleman, but a lawyer is a servant. The one

can have his talk out, and wander at will from one subject to another, as the fancy takes him; like ourselves, he may be long or short, as he pleases. But the lawyer is always in a hurry; there is the clepsydra limiting his time, and the brief limiting his topics, and his adversary is standing over him and exacting his rights. He is a servant disputing about a fellow-servant before his master, who holds the cause in his hands; the path never diverges, and often the race is for his life. Such experiences render him keen and shrewd; he learns the arts of flattery, and is perfect in the practice of crooked ways; dangers have come upon him too soon, when the tenderness of youth was unable to meet them with truth and honesty, and he has resorted to counter-acts of dishonesty and falsehood, and become warped and distorted; without any health or freedom or truth in him he has grown up to manhood, and is or esteems himself to be a master of cunning. Such are the lawyers; will you have the companion picture of philosophers? or will this be too much of a digression?

‘Nay, Socrates, the argument is our servant, and not our master. Who is the judge or where is the spectator, having a right to control us?’

I will describe the leaders, then; for the inferior sort are not worth the trouble. The lords of philosophy have not learned the way to the dicastery or ecclesia; they are ignorant of the laws and votes of the state, recited or written; societies, whether political or festive, clubs, and singing maidens do not enter even into their dreams. And the scandals of persons or their ancestors, male and female, they know no more than they can tell the number of pints in the ocean. Neither are they conscious of their own ignorance; for they do not practise singularity in order to gain reputation, but the truth is, that the outer form of them only is residing in the city; the inner man, as Pindar says, is going on a voyage of discovery, measuring as with line and rule the things which are under and in the earth, interrogating the whole of nature, only not condescending to what is near them.

‘What do you mean, Socrates?’

I will illustrate my meaning by the jest of the witty maid-servant, who saw Thales tumbling into a well, and said of him, that he was so eager to know what was going on in heaven, that he could not see what was before his feet. This is applicable to all philosophers. The philosopher is unacquainted with the world; he hardly knows whether his neighbour

is a man or an animal. For he is always contemplating the nature of man, and inquiring what such a nature ought to do or suffer different from any other. Hence, on every occasion in private life and public, as I was saying, when he appears in a law-court or anywhere, he is the joke, not only of maid-servants, but of the general herd, falling into wells and every sort of disaster; he looks such an awkward, inexperienced creature, unable to say anything personal, when he is abused, in answer to his adversaries (for he knows no evil of any one); and when he hears the praises of others, he cannot help laughing from the bottom of his soul at their pretensions; and this also gives him a ridiculous appearance. A king or tyrant appears to him to be a kind of swine-herd or cow-herd, milking away at an animal who is much more troublesome and dangerous than cows or sheep; like the cow-herd, he has no time to be educated, and the pen in which he keeps his flock in the mountains is surrounded by a wall. When he hears of large landed properties of ten thousand acres or more, he thinks of the whole earth; or if he is told of the antiquity of a family, he remembers that every one has had myriads of progenitors, rich and poor, Greeks and barbarians, kings and slaves. And he who boasts of his descent from Amphitryon in the twenty-fifth generation, may, if he pleases, add as many more, and double that again, and our philosopher only laughs at his inability to do a larger sum. Such is the man at whom the vulgar scoff; he seems to them as if he could not mind his feet. 'That is very true, Socrates.' But when he tries to draw the quick-witted lawyer out of his pleas and rejoinders to the contemplation of absolute justice or injustice in their own nature, or from the popular praises of wealthy kings to the view of happiness and misery in themselves, or to the reasons why a man should seek after the one and avoid the other, then the situation is reversed; the little wretch turns giddy, and is ready to fall over the precipice; his utterance becomes thick, and he makes himself ridiculous, not to servant-maids, but to every man of liberal education. Such are the two pictures: the one of the philosopher and gentleman, who may be excused for not having learned how to make a bed, or cook up flatteries; the other a serviceable knave, who hardly knows how to wear his cloak, still less can he awaken harmonious thoughts or hymn virtue's praises.

'If the world, Socrates, were as ready to receive your words as I am, there would be greater peace and less evil among mankind.'

Evil, Theodorus, must ever remain in this world to be the antagonist

of good, out of the way of the gods in heaven. Wherefore also we should fly away from ourselves to them; and to fly to them is to become like them; and to become like them is to become holy, just and true. But many live in the old wives' fable of appearances; they think that you should follow virtue in order that you may seem to be good. And yet the truth is, that God is righteous; and of men, he is most like him who is most righteous. To know this is wisdom; and in comparison of this the wisdom of the arts or the seeming wisdom of politicians is mean and common. The unrighteous man is apt to pride himself on his cunning; when others call him rogue, he says to himself: 'They only mean that I am one who ought to live, and not a mere burden of the earth.' But he should reflect that his ignorance makes his condition worse than if he knew. For the penalty of injustice is not death or stripes, but the fatal necessity of becoming more and more unjust. Two patterns of life are set before him; the one blessed and divine, the other godless and wretched; and he is growing more and more like the one and unlike the other. He does not see that if he continues in his cunning, the place of innocence will not receive him after death. And yet if such a man has the courage to hear the argument out, he often becomes dissatisfied with himself, and has no more strength in him than a child.—But we have digressed enough.

'For my part, Socrates, I like the digressions better than the argument, because I understand them better.'

To return. When we left off, the Protagoreans and Heracliteans were maintaining that the ordinances of the State were just, while they lasted. But no one would maintain that the laws of the State were always good or expedient, although this may be the intention of them. For the expedient has to do with the future, about which we are liable to mistake. Now, would Protagoras maintain that man is the measure not only of the present and past, but of the future; and that there is no difference in the judgments of men about the future? Would a private person, for example, be as likely to know when he is going to have a fever, as the physician who attended him? And if they differ in opinion, which of them is likely to be right; or are they both right? Is not a vine-grower a better judge of a vintage which is not yet gathered, or a cook of a dinner which is in preparation, or Protagoras of the probable effect of a speech than any indifferent person? The last example speaks 'ad hominem.' For Protagoras would never have amassed a fortune if every

man could judge of the future for himself. He is, therefore, compelled to admit that he is a measure; but I, who know nothing, am not equally convinced that I am. This is one way of refuting him; and he is refuted also by the authority which he attributes to the opinions of others, who deny his opinions. I am not equally sure that we can disprove the truth of immediate states of feeling. But this leads us to the doctrine of the universal flux, about which a battle-royal is always going on in the cities of Ionia. 'Yes; the Ephesians are downright mad about the flux; they cannot stop to argue with you, but are perpetually moving themselves in obedience to their text-books. Their restlessness is beyond expression, and if you ask any of them a question, they will not answer, but dart at you some unintelligible saying, and another and another, making no way either themselves or with others; for nothing is fixed in them or their ideas,—they are at war with fixed principles.' I suppose, Theodorus, that you have never seen them in time of peace, when they discourse at leisure to their disciples? 'Disciples! they have none; they are a set of uneducated fanatics, and each of them says of the other that they have no knowledge: we must trust to ourselves, and not to them for the solution of the problem.' Well, the doctrine is old, being derived from the poets, who speak in a figure of Oceanus and Tethys; the truth was once concealed, but is now revealed by the superior wisdom of a later generation, and made intelligible to the cobbler, who, on hearing that all is in motion, and not some things only, as he ignorantly fancied, may be expected to fall down and worship his teachers. And the opposite doctrine must not be forgotten:—

'That is alone unmoved which is named the Universe,'

as Parmenides affirms. Thus we are in the midst of the fray; both parties are dragging us to their side; and we are not certain which of them are in the right, and if neither, then we shall be in a ridiculous position, having to set up our own opinion against ancient and famous men.

Let us first approach the river-gods, or patrons of the flux.

When they speak of motion, must they not include two kinds of motion, change of place and change of nature?—And all things must be supposed to have both kinds of motion; for if not, the same things would be at rest and in motion, which is contrary to their theory. And did we not say, that all sensations of whiteness, heat, and the like arose out of a relation and motion between the patient and agent; the patient

being distinguished from the perception, and the agent not a 'qualitas' but a 'quale,' and neither of them having any absolute existence? But now we make the further discovery, that neither white or whiteness, nor any sense or sensation, can be predicated of anything, for they are in a perpetual flux. And therefore we must modify the doctrine of Theaetetus and Protagoras, by asserting further that knowledge is and is not sensation; and of everything we must say equally, that this is and is not, or becomes or becomes not. And still the word 'this' is not quite correct, for language fails in the attempt to express their meaning.

At the close of the discussion, Theodorus claims to be released from the argument, according to his agreement. But Theaetetus insists that they shall proceed to consider the doctrine of rest. This is declined by Socrates, who has too much reverence for the great Parmenides lightly to attack him. We shall find that he returns to the doctrine of rest in the Sophist; but at present he does not wish to be diverted from his main purpose, which is, to deliver Theaetetus of his conception of knowledge. He proceeds to interrogate him further. When he says, 'That knowledge is perception,' with what does he perceive? The first answer is, 'That he perceives sights with the eye, and sounds with the ear.' This leads Socrates to make the reflection: That nice distinctions of words are sometimes pedantic, but sometimes necessary; and he proposes in this case to substitute the word 'through' for 'with.' For the senses are not like the Trojan warriors in the horse, but have a common centre of perception, from which they spring. This common principle is able to compare them with one another, and must therefore be distinct from them. (Cp. Rep. vii. 523, 524.) And as there are facts of sense which are perceived through the organs of the body, there are also mathematical and other abstractions, such as sameness and difference, likeness and unlikeness, which the soul perceives by herself. Being is the most universal of these abstractions. The good and the beautiful are abstractions of another kind, which exist in relation and which above all others the mind perceives in herself, comparing within her past, present, and future. For example; we know a thing to be hard or soft by the touch, of which the perception is given at birth to men and animals. But the essence of hardness or softness, or the fact that this hardness is, and is the opposite of softness, is slowly learned by reflection and experience. Mere perception does not reach being, and therefore fails of truth; and therefore has no share in knowledge. But if so, knowledge

is not perception. What then is knowledge? The mind, when occupied by herself with being, is said to have opinion—shall we say that ‘knowledge is true opinion’? But still an old difficulty recurs; we ask ourselves, ‘How is false opinion possible?’ This difficulty may be stated as follows:—

Either we know or do not know a thing (for the intermediate processes of learning and forgetting need not at present be considered); and in thinking or having an opinion, we must either know or not know that which we think, and we cannot know and be ignorant at the same time; we cannot confuse one thing which we do not know, with another thing which we do not know; nor can we think that which we do not know to be that which we know, or that which we know to be that which we do not know. And what other case is conceivable, upon the supposition that we either know or do not know all things? Let us try another answer in the sphere of being: ‘When a man thinks, and thinks that which is not.’ But would this hold in any parallel case? Can a man see and see nothing? or hear and hear nothing? or touch and touch nothing? Must he not see, hear, or touch some one existing thing? For if he thinks about nothing he does not think, and not thinking he cannot think falsely. And so the path of being is closed against us, as well as the path of knowledge. But may there not be ‘heterodoxy,’ or transference of opinion;—I mean, may not one thing be supposed to be another? Theaetetus is confident that this must be ‘the true falsehood,’ when a man puts good for evil or evil for good. Socrates will not discourage him by attacking the paradoxical expression ‘true falsehood,’ but passes on. The new notion involves a process of thinking about two things, either together or alternately. And thinking is the conversing of the mind with herself, which is carried on in question and answer, until she no longer doubts, but determines and forms an opinion. And false opinion consists in saying to yourself, that one thing is another. But did you ever say to yourself, that good is evil, or evil good? Even in sleep, did you ever imagine that odd was even? Or did any man in his senses ever fancy that an ox was a horse, or that two are one? So that we can never think that one thing is another; for you must not meet me with the verbal quibble that other is always other (i.e. that both one and other in Greek are called other *ἕτερον, ἕτερον*). He who has both the two things in his mind, cannot misplace them; and he who has only one of them in his mind, cannot

misplace them—on either supposition the notion of transplacement is inconceivable.

But perhaps there may still be a sense in which we can think that which we do not know to be that which we know: e. g. Theaetetus may know Socrates, but at a distance he may mistake another person for him. This process may be conceived by the help of an image. Let us suppose that every man has in his mind a block of wax of various qualities, the gift of Memory, the mother of the Muses; and on this he receives the seal or stamp of those sensations and perceptions which he wishes to remember. That which he succeeds in stamping is remembered and known by him as long as the impression lasts; but that, of which the impression is rubbed out or imperfectly made, is forgotten, and not known. No one can think one thing to be another, when he has the memorial or seal of both of these in his soul, and a sensible impression of neither; or when he knows one and does not know the other, and has no memorial or seal of the other; or when he knows neither; or when he perceives both, or one and not the other, or neither; or when he perceives and knows both, and identifies what he perceives with what he knows (this is still more impossible); or when he does not know one, and does not know and does not perceive the other; or does not perceive one, and does not know and does not perceive the other; or has no perception or knowledge of either—all these cases must be excluded. But he may err when he confuses what he knows or perceives, or what he perceives and does not know, with what he knows, or what he knows and perceives with what he knows and perceives.

Theaetetus is unable to follow these distinctions; which Socrates proceeds to illustrate by examples: first of all remarking, that knowledge may exist without perception, and perception without knowledge. I may know Theodorus and Theaetetus and not see them; I may see them, and not know them. 'That I understand.' But I could not mistake one for the other if I knew you both, and had no perception of either; or if I knew one only, and perceived neither; or if I knew and perceived neither, or in any other of the excluded cases. The only possibility of error is: 1st, when knowing you and Theodorus, and having the impression of both of you on the waxen block—I, seeing you both imperfectly and at a distance, put the foot in the wrong shoe—that is to say, put the seal or stamp on the wrong object: or 2ndly, when knowing

both of you I only see one; or when, seeing and knowing you both, I fail to identify the impression and the object. But there could be no error when perception and knowledge correspond.

The waxen block in the heart of a man's soul, as I may say in the words of Homer, who played upon the word *κῆρ κηρός*, may be smooth and deep, and large enough, and then the signs are clearly marked and lasting, and do not get confused. But in the 'hairy heart,' as the all-wise poet sings, when the wax is muddy or hard or moist, there is a corresponding confusion and want of retentiveness; in the muddy and impure there is indistinctness, and still more in the hard, for there the impressions have no depth of wax, and in the moist they are too soon effaced. Yet greater is the indistinctness when they are all jolted together in a little soul, which is narrow and has no room. These are the sort of natures which have false opinion; from stupidity they see and hear and think amiss; and this is falsehood and ignorance. Error, then, is a confusion of thought and sense.

Theaetetus is delighted with this explanation. But Socrates has no sooner found the new solution than he sinks into a fit of despondency. For an objection occurs to him:—May there not be errors where there is no confusion of mind and sense? e. g. in numbers. No one can confuse the man whom he has in his thoughts with the horse which he has in his thoughts, but he may err in the addition of five and seven; and observe that these are purely mental conceptions. Thus we are involved once more in the dilemma of saying, either that there is no such thing as false opinion, or that a man knows what he does not know.

We are at our wit's end, and may therefore be excused for making a bold diversion. All this time we have been repeating the words 'know,' 'understand,' and we do not know what knowledge is. 'Why, Socrates, how can you argue at all without using them?' Nay, but the true hero of dialectic would have forbid me to use them until I had explained them. And I must explain them now. The verb 'to know' has two senses, to have and to possess knowledge, and I distinguish 'having' from 'possessing.' A man may possess a garment which he does not wear; or he may have wild birds in an aviary; these in one sense he possesses, and in another he has none of them. Let this aviary be an image of the mind, as the waxen block was; when we are young, the aviary is empty; after a time the birds are put in; for under this figure we may describe different forms of knowledge;—

there are some of them in groups, and some single, which are flying about everywhere; and let us suppose a hunt after the science of odd and even, or some other science. The possession of the birds is clearly not the same as the having them in the hand. And the original chase of them is not the same as taking them in the hand when they are already caged.

This distinction between use and possession saves us from the absurdity of supposing that we do not know what we know, because we may know in one sense, i. e. possess, what we do not know in another, i. e. use. But have we not escaped one difficulty only to encounter a greater? For how can the exchange of two kinds of knowledge ever become false opinion? As well might we suppose that ignorance could make a man know, or that blindness could make him see. Theaetetus suggests that in the aviary there may be flying about mock birds, or forms of ignorance, and we put forth our hands and grasp ignorance, when we are intending to grasp knowledge. But how can he who knows the forms of knowledge and the forms of ignorance imagine one to be the other? Is there some other form of knowledge which distinguishes them? and another, and another? Thus we go round and round in a circle and make no progress.

All this confusion arises out of our attempt to explain false opinion without having explained knowledge. What then is knowledge? Theaetetus once more repeats that knowledge is true opinion. But this seems to be refuted by the instance of orators and judges. For surely the orator cannot convey a true knowledge of crimes at which the judges were not present; he can only persuade them, and the judge may form a true opinion and truly judge. But if true opinion were knowledge they could not have judged without knowledge.

Once more. Theaetetus offers a definition which he has heard: Knowledge is true opinion accompanied by definition or explanation. Socrates has had a similar dream, and has further heard that the first elements are names only, and that definition or explanation begins when they are combined; the letters are unknown, the syllables or combination are known. But this new hypothesis when tested by the letters of the alphabet is found to break down. The first syllable of Socrates' name is SO. But what is SO? Two letters, S and O, a sibilant and a vowel, of which no further explanation can be given. And how can any one be ignorant of either of them, and yet know both of them?

There is, however, another alternative:—We may suppose that the syllable has a separate form or idea distinct from the letters or parts. The all of the parts may not be the whole. Theaetetus is very much inclined to adopt this suggestion, but when interrogated by Socrates he is unable to draw any distinction between the whole and all the parts. And if the syllables have no parts, then they are those original elements of which there is no explanation. But how can the syllable be known if the letter remains unknown? In learning to read as children, we are first taught the letters and then the syllables. And in music, the notes, which are the letters, have a much more distinct meaning to us than the combination of them.

Once more, then, we must ask the meaning of the statement, that ‘knowledge is right opinion, accompanied by explanation or definition.’ Explanation may mean, (1) the reflection or expression of a man’s thoughts. But every man who is not deaf and dumb is able to express his thoughts; or (2) the enumeration of the elements of which anything is composed. A man may have a true opinion about a waggon, but when he is able to enumerate the hundred planks of Hesiod—then, and not till then, he has knowledge of a waggon. Or he may know the syllables of the name Theaetetus, but not the letters—and not until he knows both can he be said to have knowledge as well as opinion. But on the other hand he may know the syllable ‘The’ in the name Theaetetus, yet he may be mistaken about the same syllable in the name Theodorus, and in learning to read we often make such mistakes. And even if he could write out all the letters and syllables of your name in order, still he would only have right opinion. Yet there may be a third meaning of the definition besides (1) the image or expression of the mind; (2) the enumeration of the elements;—to these may now be added (3) perception of difference.

For example, I may see a man who has eyes, nose, and mouth;—that will not distinguish him from any other man. Or he may have a snub-nose and prominent eyes;—that will not distinguish him from myself and you and others who are like me. But when I see a certain kind of snub-nosedness, then I recognise Theaetetus. And having this sign of difference, I have knowledge. But have I knowledge or opinion of this difference? If I have only opinion I have not knowledge; if I have knowledge we assume a disputed term—for knowledge is right opinion with knowledge of difference.

And so, Theaetetus, knowledge is neither perception nor true opinion, nor yet definition accompanying true opinion. And I have shown that the children of your brain are not worth rearing. Are you still in labour, or have you brought all you have to say about knowledge to the birth? If you have any more thoughts, you will be the better for having got rid of these; or if you have none, you will be the better for not fancying that you know what you do not know. Observe the limits of my art, which, like my mother's, is an art of midwifery; I do not pretend to compare with the good and wise of this and other ages.

And now I go to meet Meletus at the porch of the King Archon; but to-morrow I shall hope to see you again, Theodorus, at this place.

I. The saying of Theaetetus, that 'knowledge is sensible perception,' may be assumed to be a current philosophical opinion of the age. 'The ancients,' as Aristotle (*De Anim.* iii. 3) says, citing a verse of Empedocles, 'affirmed knowledge to be the same as perception.' We may now examine these words, first with reference to their place in the history of philosophy, and secondly, in relation to modern speculations.

(a) In the age of Socrates the mind was passing from the object to the subject. The same impulse which a century before had led men to form conceptions of the world, now led them to frame general notions of the human faculties and feelings, such as memory, opinion, and the like. The simplest of these is sensation, or sensible perception, by which Plato seems to mean the generalised notion of feelings and impressions of sense, without determining whether they are conscious or not.

The theory that 'knowledge is sensible perception' is the antithesis of that which derives knowledge from the mind (*Theaet.* 185), or which assumes the existence of ideas independent of the mind (*Parm.* 134). Yet from their extreme abstraction these theories do not represent the opposite poles of thought in the same way that the corresponding differences would in modern philosophy. The most ideal and the most sensational have a tendency to pass into one another; Heracleitus, like his great successor Hegel, has both aspects. The Eleatic isolation of being and the Megarian or Cynic isolation of individuals are placed in the same class by Plato, *Soph.* 251 C, D; and the same principle which is

the symbol of motion to one mind is the symbol of rest to another. The Atomists, who are sometimes regarded as the Materialists of Plato, denied the reality of sensation. And in the ancient as well as the modern world there were reactions from theory to experience, from ideas to sense. This is a point of view from which the philosophy of sensation presented great attraction to the ancient thinker. Amid the conflict of ideas and the variety of opinions, the impression of sense remained certain and uniform. Hardness, softness, cold, heat, &c. are not absolutely the same to different persons (cp. 171 D), but the art of measuring could at any rate reduce them all to definite natures (Rep. X, 602 D). Thus the doctrine that knowledge is perception supplies or seems to supply a firm standing ground. Like the other notions of the earlier Greek philosophy, it was held in a very simple way, without much basis of reasoning, and without suggesting the questions which naturally arise in our own minds on the same subject.

(β) The fixedness of impressions of sense furnishes a link of connection between ancient and modern philosophy. The modern thinker often repeats the parallel axiom, 'that all knowledge is experience.' He means to say that the outward and not the inward is both the original source and the final criterion of truth, because the outward can be observed and analysed; the inward is only known by external results, and is dimly perceived by each man for himself. In what does this differ from the saying of Theaetetus? Chiefly in this—that the modern term 'experience,' while implying a point of departure in sense and a return to sense, also includes all the processes of reasoning and imagination which have intervened. The necessary connection between them by no means affords a measure of the relative degree of importance which is to be ascribed to either element. For the inductive portion of any science may be small, as in mathematics or ethics, compared with that which the mind has attained by reasoning and reflection on a very few facts.

II. The saying that 'all knowledge is sensation' is identified by Plato with the Protagorean thesis that 'man is the measure of all things.' The interpretation which Protagoras himself is supposed to give of these latter words is, 'Things are to me as they appear to me, and to you as they appear to you.' But there remains still an ambiguity both in the text and in the explanation, which has to be cleared up. Did Protagoras merely mean to assert the relativity of knowledge to the

human mind? or did he mean to deny that there is an objective standard of truth?

These two questions have not been always clearly distinguished; the relativity of knowledge has been sometimes confounded with uncertainty. The untutored mind is apt to suppose that objects exist independently of the human faculties, because they really exist independently of the faculties of any individual. In the same way, knowledge appears to be a body of truths stored up in books, which when once ascertained are independent of the discoverer. Further consideration shows us that these truths are not really independent of the mind; there is an adaptation of one to the other, of the eye to the object of sense, of the mind to the conception. There would be no world, if there neither were, nor ever had been any one to perceive the world. A slight effort of reflection enables us to understand this; but no effort of reflection will enable us to pass beyond the limits of our own faculties, or to imagine the relation or adaptation of objects to the mind to be different from that of which we have experience. There are certain laws of language and logic to which we are compelled to conform, and to which our ideas naturally adapt themselves; and we can no more get rid of them than we can cease to be ourselves. The absolute and infinite, whether explained as self-existence, or as the totality of human thought, or as the Divine nature, if known to us at all, cannot escape from the category of relation.

But because knowledge is subjective or relative to the mind, we are not to suppose that we are therefore deprived of any of the tests or criteria of truth. One man still remains wiser than another, a more accurate observer and relater of facts, a truer measure of the proportions of knowledge. The nature of testimony is not altered, nor the verification of causes by prescribed methods less certain. Again, the truth must often come to a man through others, according to the measure of his capacity and education. But neither does this affect the testimony, whether written or oral, which he knows by experience to be trustworthy. He cannot escape from the laws of his own mind; and he cannot escape from the further accident of being dependent for his knowledge on others. But still this is no reason why he should always be in doubt; of many personal, of many historical and scientific facts he may indeed be absolutely assured. And having such a mass of acknowledged truth in the mathematical and physical, not to speak of the moral

sciences, the moderns have certainly no reason to acquiesce in the statement, that truth is appearance only, or that there is no difference between appearance and truth.

The relativity of knowledge is a truism to us, but was a great psychological discovery in the fifth century before Christ. Of this discovery, the first distinct assertion is contained in the thesis of Protagoras. Probably he had no intention either of denying or affirming an objective standard of truth. He did not consider whether man in the higher or man in the lower sense was a 'measure of all things.' Like other great thinkers, he was absorbed with one idea, and that idea was the absoluteness of perception. Like Socrates, he seemed to see that philosophy must be brought back from 'nature' to 'truth,' from the world to man. But he did not stop to analyse whether he meant 'man' in the concrete or man in the abstract; any man or some men, 'quod semper quod ubique,' or individual private judgment. Such an analysis lay beyond his sphere of thought; the age before Socrates had not arrived at these distinctions. Like the Cynics, again, he discarded knowledge in any higher sense than perception. For 'truer' or 'wiser' he substituted the word 'better,' and is not unwilling to admit that both states and individuals are capable of practical improvement. But this improvement does not arise from intellectual enlightenment, nor yet from the exertion of the will, but from a change of circumstances and impressions; and he who can effect this change in himself or others may be deemed a philosopher. In the mode of effecting it, while agreeing with Socrates and the Cynics in the importance which he attaches to practical life, he is at variance with both of them. To suppose that practice can be divorced from speculation, or that we may do good without caring about truth, is by no means singular, either in philosophy or life. The singularity of this, as of some other (so-called) sophistical doctrines, is the frankness with which they are avowed, instead of being veiled, as in modern times, under ambiguous and convenient phrases.

Plato appears to treat Protagoras much as he himself is treated by Aristotle; that is to say, he does not attempt to understand him from his own point of view. But he entangles him in the meshes of a more advanced logic. To which Protagoras is supposed to reply by Megarian quibbles, which destroy logic, 'Not only man, but each man, and each man at each moment.' In the arguments about sight and memory there is a palpable unfairness which is worthy of the great 'brainless brothers,'

Euthydemus and Dionysodorus, and may be compared with the ἐγκαλιμμένος ('obvelatus') of Eubulides. For he who sees with one eye only cannot be truly said both to see and not to see; nor is memory, which is liable to forget, the immediate knowledge to which Protagoras applies the term. Theodorus justly charges Socrates with going beyond the truth; and Protagoras has equally right on his side when he protests against Socrates arguing from the common use of words, which 'the vulgar pervert in all manner of ways.'

III. The theory of Protagoras is connected by Aristotle as well as Plato with the flux of Heraclitus. But Aristotle is only following Plato, and Plato, as we have already seen, did not mean to imply that such a connection was admitted by Protagoras himself. His metaphysical genius saw or seemed to see a common tendency in them, just as the modern historian of ancient philosophy might perceive a parallelism between two thinkers of which they were probably unconscious themselves. We must remember throughout that Plato is not speaking of Heraclitus, but of the Heracliteans, who succeeded him; nor of the great original ideas of the master, but of the Eristic into which they had degenerated a hundred years later. There is nothing in the fragments of Heraclitus which at all justifies Plato's account of him. His philosophy may be resolved into two elements—first, change; secondly, law or measure pervading the change: these he saw everywhere, and often expressed in strange mythological symbols. But he has no analysis of sensible perception such as Plato attributes to him; nor is there any reason to suppose that he pushed his philosophy into that absolute negation in which Heracliteanism was sunk in the age of Plato. He never said that 'change meant every sort of change,' and he expressly distinguished between 'the general and particular understanding.' Like a poet, he surveyed the elements of mythology, nature, thought, which lay before him, and sometimes by the light of genius he saw or seemed to see a mysterious principle working behind them. But as has been the case with other great philosophers, and with Plato and Aristotle themselves, what was really permanent and original could not be understood by the next generation, while a perverted logic carried out his chance expressions with an illogical consistency. His simple and noble thoughts, like those of the great Eleatic, soon degenerated into a mere strife of words. And when thus reduced to mere words, they seem to have exercised a far wider influence in the cities of Ionia (where the people 'were mad about them') than in

the life-time of Heraclitus—a phenomenon which, though at first sight singular, is not without a parallel in the history of philosophy and theology.

It is this perverted form of the Heraclitean philosophy which is supposed to effect the final overthrow of Protagorean sensationalism. For if all things are changing at every moment, in all sorts of ways, then there is nothing fixed or defined at all, and therefore no sensible perception, nor any word by which that or anything else can be described. Of course Protagoras would not have admitted the justice of this argument any more than Heraclitus would have acknowledged the 'uneducated fanatics' who appealed to his writings. He might have said, 'The excellent Socrates has first confused me with Heraclitus, and Heraclitus with his Ephesian successors, and has then disproved the existence both of knowledge and sensation. But I am not responsible for what I never said, nor will I admit that my common-sense account of knowledge can be overthrown by unintelligible Heraclitean paradoxes.'

IV. Still at the bottom of the arguments there remains a truth, 'that knowledge is something more than sensible perception;'—that alone would not distinguish man from a tadpole. The absoluteness of sensations at each moment destroys the very consciousness of sensations (cp. Phileb. 21 D), or the power of comparing them. The senses are not mere holes in a 'Trojan horse,' but the organs of a presiding nature, in which they meet. A great advance has been made in psychology when the senses are recognised as organs of sense, and we are admitted to see or feel 'through them' and not 'by them,'—that is a distinction of words which, as Socrates observes, is by no means pedantic. A still further step has been made when the most abstract notions, such as being and not-being, sameness and difference, unity and plurality, are acknowledged to be the creations of the mind herself, working upon the feelings or impressions of sense. In this manner Plato describes the process of acquiring them, in the words (186 D) 'knowledge consists not in the feelings or affections (*παθήμασι*), but in the process of reasoning about them (*συλλογισμῶ*).' Here, as in the Parmenides (132 A), he means something not really different from generalization. As in the Sophist, he is laying the foundation of a rational psychology, which is to supersede the Platonic reminiscence of ideas as well as the Eleatic being and the individualism of Megarians and Cynics.

V. Having rejected the doctrine that 'knowledge is perception,' we

now proceed to look for a definition of knowledge in the sphere of opinion. But here we are met by a singular difficulty: How is false opinion possible? For we must either know or not know that which is presented to the mind or sense. We of course should answer at once: No; the alternative is not necessary, for there may be degrees of knowledge; and we may know and have forgotten, or we may be learning, or we may have a general but not a particular knowledge, or we may know but not be able to explain; and many other ways may be imagined in which we know and do not know at the same time. But these answers belong to a later stage of metaphysical discussion; whereas the question seems to belong rather to the childhood of the human mind, together with the parallel question of not-being. Men had only recently arrived at the notion of opinion; they could not at once define the true and pass beyond into the false. The very word *δόξα* was full of ambiguity, being sometimes, as in the Eleatic philosophy, applied to the sensible world, and again used in the more ordinary sense of opinion. There is no connection between sensible appearance and probability, and yet both of them met in the word *δόξα*, and could only with difficulty be disengaged in the mind of the Greek. To this was often added, as at the end of the fifth book of the Republic, the idea of relation, which is equally distinct from either of them; also a fourth notion, the conclusion of the dialectical process, the making up of the mind after she has been 'talking to herself' (p. 190).

We are not then surprised that the sphere of opinion and of not-being should be a dusky, half-lighted place (Rep. v. p. 478), belonging neither to the old world of sense and imagination, nor to the new world of reflection and reason. Plato attempts to clear up this darkness. In his accustomed manner he passes from the lower to the higher, without omitting the intermediate stages. This appears to be the reason why he seeks for the definition of knowledge first in the sphere of opinion. Hereafter we shall find that something more than opinion is required.

False opinion is explained by Plato at first as a confusion of mind and sense, which arises when the impression in the mind does not correspond to the impression on the senses. It is obvious that this explanation (supposing the distinction between impressions in the mind and impressions on the senses to be admitted) does not account for all forms of error; and Plato has excluded himself from the consideration of the greater number, by designedly omitting the intermediate processes of

learning and forgetting ; nor does he include fallacies in the use of language or erroneous inferences. But he is struck by one possibility of error, which is not covered by his theory, viz. errors in arithmetic. For in numbers and calculation there is no combination of thought and sense, and yet errors may often happen. Hence he is led to discard the explanation which might nevertheless have been supposed to hold good (for anything that he says to the contrary) as a rationale of error, in the case of facts derived from sense.

Another attempt is made to explain false opinion by assigning to error a sort of positive existence. But error or ignorance is essentially negative—a not-knowing ; if we knew an error, we should be no longer in error. We may veil our difficulty under figures of speech, but these, although telling arguments with the multitude, can never be the real foundation of a system of psychology. The figure of the mind receiving impressions, is one of those images which, whether an assistance to thought or not, have rooted themselves for ever in language. The other figure of the enclosure, is also remarkable as affording the first hint of universal all-pervading ideas, which is further carried out in the *Sophist*. This is implied in the birds, some in flocks, some solitary, which fly about anywhere and everywhere. Plato discards both figures, as not really solving the question which to us appears so simple: ‘How we make mistakes?’ The failure of the enquiry seems to show that we should return to knowledge, and begin with that ; and we may afterwards proceed with a better hope of success, to the examination of opinion.

But is true opinion really distinct from knowledge? The difference between these he seeks to establish by an argument, which to us appears singular and unsatisfactory. The existence of true opinion is proved by the rhetoric of the law courts, which cannot give knowledge, but may give true opinion. The rhetorician cannot put the judge or juror in possession of all the facts which prove an act of violence, but he may truly persuade them of the commission of such an act. Here the idea of true opinion seems to be a right conclusion from imperfect knowledge. But the correctness of such an opinion will be purely accidental ; and is really the effect of one man, who has the means of knowing, persuading another who has not. Plato would have done better, if he had said that true opinion was a contradiction in terms.

Assuming the distinction between knowledge and opinion, Theaetetus,

in answer to Socrates, proceeds to define knowledge:—True opinion, with definite or rational explanation. This Socrates identifies with another and different theory, of those who assert that knowledge first begins with a proposition.

The elements may be perceived by sense, but they are names, and cannot be defined. When we assign to them some predicate, they first begin to have a meaning (*ὀνομάτων συμπλοκὴ λόγου οὐσία*). This seems equivalent to saying, that the individuals of sense become the subject of knowledge when they are regarded as they are in nature in relation to other individuals.

Yet we feel a difficulty in following this new hypothesis. For must not opinion be equally expressed in a proposition? The difference between true and false opinion is not the difference between the particular and the universal, but between the true universal and the false. Thought may be as much at fault as sight. When we place individuals under a class, or assign to them attributes, this is not knowledge, but a very rudimentary process of thought; the first generalisation of all, without which language would be impossible. And has Plato kept altogether clear of a confusion, which the analogous word *λόγος* tends to create, of a proposition and a definition? And is not the confusion increased by the use of the analogous term ‘elements,’ or ‘letters’? For there is no real resemblance between the relation of letters to a syllable, and of the terms to a proposition.

Plato, in the spirit of the Megarian philosophy, soon discovers a flaw in the explanation. For how can we know a compound of which the simple elements are unknown to us? Can two unknowns make a known? Can a whole be something different from the parts? The answer of experience is, that they can; for we may know a compound, which we are unable to analyse into its elements; and all the parts, when united, may be more than all the parts separated: e. g. the number four, or any other number, is more than four units; any chemical compound is more than and different from the simple elements. But ancient philosophy in this, as in many other instances, proceeding by the path of mental analysis, was perplexed by doubts which warred against the plainest facts.

Three attempts to explain the new definition of knowledge still remain to be considered. They all of them turn on the explanation of *λόγος*. The first account of the meaning of the word is the reflection of thought

in speech—a sort of nominalism, ‘La science est une langue bien faite.’ But anybody who is not dumb can say what he thinks; therefore mere speech cannot be knowledge. And yet we may observe, that there is in this explanation an element of truth which is not recognised by Plato; viz. that truth and thought are inseparable from language, although mere expression in words is not truth. The second explanation of λόγος is the enumeration of the elementary parts of the complex whole. But this is only definition accompanied with right opinion, and does not yet attain to the certainty of knowledge. Plato does not mention the greater objection, which is, that the enumeration of particulars is endless; such a definition would be based on no principle, and would not help us at all in gaining a common idea. The third is the best explanation;—the possession of a characteristic mark, which seems to answer to the logical definition by genus and difference. But this, again, is equally necessary for right opinion; and we have already determined, although not on very satisfactory grounds, that knowledge must be distinguished from opinion. A better distinction is drawn between them in the *Timaeus* (p. 51 E). They might be opposed as philosophy and rhetoric, and as conversant respectively with necessary and contingent matter. But no true idea of the nature of either of them, or of their relation to one another, could be framed until science obtained a content. The ancient philosophers in the age of Plato thought of science only as pure abstraction, and to this, opinion stood in no relation.

Like *Theaetetus*, we have attained to no definite result. But an interesting phase of ancient philosophy has passed before us. And the negative result is not to be despised. For on certain subjects, and in certain states of knowledge, the work of negation or clearing out the foundations must go on, perhaps for a generation, before the new structure can begin to rise. Plato saw the necessity of combating the illogical logic of the Megarians and Eristics. For the completion of the edifice, he makes preparation in the *Theaetetus*, and crowns the work in the *Sophist*.

Many (1) fine expressions, and (2) remarks full of wisdom, (3) also germs of a metaphysic of the future, are scattered up and down in the dialogue. Such, for example, as (1) the comparison of *Theaetetus*’ progress in learning to the ‘noiseless flow of a river of oil’; the satirical touch, ‘flavouring a sauce or fawning speech’; or the remarkable expression, ‘full of impure dialectic’; or the lively images under which the

argument is described, 'the flood of arguments pouring in,' the fresh discussions 'bursting in like a band of revellers.' As illustrations of the second head, may be cited the remark of Socrates, that 'distinctions of words, although sometimes pedantic, are also necessary'; or the fine touch in the character of the lawyer, 'that dangers came upon him when the tenderness of youth was unequal to them'; or the description of the manner in which the spirit is broken in a wicked man who listens to reproof until he becomes like a child; or the punishment of the wicked, which is not physical suffering, but the perpetual companionship of evil (cp. Gorgias); or the expression, often repeated by Aristotle and others, that 'philosophy begins in wonder, for Iris is the child of Thaumias.'

(3) Important metaphysical ideas are: *a.* the conception of thought, as the mind talking to herself; *b.* the notion of a common sense, developed further by Aristotle, and the explicit declaration, that the mind gains ideas of being, sameness, number, and the like, from reflection on herself; *c.* the excellent distinction of Theaetetus (which Socrates, speaking with emphasis, 'leaves to grow') between seeing the forms or hearing the sounds of words in a foreign language, and understanding the meaning of them, and the distinction of Socrates himself between 'having' and 'possessing' knowledge, in which the answer to the whole discussion appears to be contained.

There is a difference between ancient and modern psychology, and we have a difficulty in explaining one in the terms of the other. To us the inward and outward sense and the inward and outward worlds of which they are the organs are parted by a wall, and appear as if they could never be confounded. The mind is endued with faculties, habits, instincts, and a personality or consciousness in which they are bound together. Over against these are placed forms, colours, external bodies coming into contact with our own body. We speak of a subject which is ourselves, of an object which is all the rest. These are separable in thought, but united in any act of sensation, volition, or reflection. As there are various degrees in which the mind may enter into or be abstracted from the operations of sense, so there are various points at which this separation or union may be supposed to occur. And within the sphere of mind the analogy of sense reappears; and we distinguish

not only external objects, but objects of will and of knowledge which we contrast with them. These again are comprehended in a higher object, which reunites with the subject. A multitude of abstractions are created by the efforts of successive thinkers which become logical determinations; and they have to be arranged in order, before the scheme of thought is complete. The framework of the human intellect is not the *peculium* of an individual, but the joint work of many who are of all ages and countries. What we are in mind is due, not merely to our physical, but to our mental antecedents which we trace in history, and more especially in the history of philosophy. Nor can mental phenomena be truly explained either by physiology or by the observation of consciousness apart from their history. They have a growth of their own, like the growth of a flower, a tree, a human being. They may be conceived as of themselves constituting a common mind, and having a sort of personal identity in which they coexist.

So comprehensive is modern psychology, seeming to aim at constructing anew the entire world of thought. And prior to or simultaneously with this construction a negative process has to be carried on, a clearing away of useless abstractions which we have inherited from the past. Many erroneous conceptions of the mind derived from former philosophies have found their way into language, and we with difficulty disengage ourselves from them. Mere figures of speech have unconsciously influenced the minds of great thinkers. Also there are some distinctions, as, for example, that of the will and of the reason, and of the moral and intellectual faculties, which are carried further than is justified by experience. For if we reflect on ourselves we see that all our faculties easily pass into one another, and are bound together in a single mind or consciousness; but this mental unity is apt to be concealed from us by the distinctions of language.

A profusion of words and ideas has obscured rather than enlightened mental science. It is hard to say how many fallacies have arisen from the representation of the mind as a box, as a 'tabula rasa,' a book, a mirror, and the like. It is remarkable how Plato in the Theaetetus, after having indulged in the figure of the waxen tablet and the decoy, afterwards discards them. The mind is also represented by another class of images, as the spring of a watch, a motive power, a breath, a stream, a succession of points or moments. As Plato remarks in the Cratylus, words expressive of motion as well as of rest are employed to

describe the faculties and operations of the mind; and in these there is contained another store of fallacies. Some shadow or reflection of the body seems always to adhere to our thoughts about ourselves, and mental processes are hardly distinguished in language from bodily ones. To see or perceive are used indifferently of both; the words intuition, moral sense, common sense, the mind's eye, are figures of speech transferred from one to the other. And many other words used in early poetry or in sacred writings to express the works of mind have a materialistic sound; for old mythology was allied to sense, and the distinction of matter and mind had not as yet arisen. Thus materialism receives an illusive aid from language; and both in philosophy and religion the imaginary figure or association easily takes the place of real knowledge.

Again, there is the illusion of looking into our own minds as if our thoughts or feelings were written down in a book. This is another figure of speech, which might be appropriately termed 'the fallacy of the looking-glass.' We cannot look at the mind unless we have the eye which sees, and we can only look, not into, but out of the mind at the thoughts, words, actions of ourselves and others. What we dimly recognize within us is not experience, but rather the suggestion of an experience, which we may gather, if we will, from the observation of the world. The memory has but a feeble recollection of what we were saying or doing a few weeks or a few months ago, and still less of what we were thinking or feeling. This is one among many reasons why there is so little self-knowledge among mankind; they do not carry with them the thought of what they are or have been. The so-called 'facts of consciousness' are equally evanescent; they are facts which nobody ever saw, and which can neither be defined nor described. Of the three laws of thought the first (all $A=A$) is an identical proposition—that is to say, a mere word or symbol claiming to be a proposition: the two others (Nothing can be A and not A , and Everything is either A or not A) are untrue, because they exclude degrees and also the mixed modes and double aspects under which truth is so often presented to us. To assert that man is man is unmeaning; to say that he is free or necessary and cannot be both is a half truth only. These are a few of the entanglements which impede the natural course of human thought. Lastly, there is the fallacy which lies still deeper, of regarding the individual mind apart from

the universal, or either, as a self-existent entity apart from the ideas which are contained in them.

In ancient philosophies the analysis of the mind is still rudimentary and imperfect. It naturally began with an effort to disengage the universal from sense—this was the first lifting up of the mist. It wavered between object and subject, passing imperceptibly from one or being to mind and thought. Appearance in the outward object was for a time indistinguishable from opinion in the subject. At length mankind spoke of knowing as well as of opining or perceiving. But when the word knowledge was found how was it to be explained or defined? It was not an error, it was a step in the right direction, when Protagoras said that ‘man is the measure of all things,’ and that ‘all knowledge is perception.’ This was the subjective which corresponded to the objective ‘All is flux.’ But the thoughts of men deepened, and soon they began to be aware that knowledge was neither sense, nor yet opinion—with or without explanation; nor the expression of thought, nor the enumeration of parts, nor the addition of characteristic marks. Motion and rest were equally ill adapted to express its nature, although both must in some sense be attributed to it; it might be described more truly as the mind conversing with herself; the discourse of reason; the hymn of dialectic, the science of relations, of ideas, of the so-called arts and sciences, of the one, of the good, of the all:—this is the way along which Plato is leading us in his later dialogues. In its higher signification it was the knowledge, not of men, but of gods, perfect and all-sufficing:—like other ideals always passing out of sight, and nevertheless present to the mind of Aristotle as well as Plato, and the reality to which they were both tending. For Aristotle as well as Plato would in modern phraseology have been termed a mystic; and like him would have defined the higher philosophy, ‘knowledge of being or essence,’—words to which in our own day we have a difficulty in attaching a meaning.

Yet, in spite of Plato and his followers, mankind have again and again returned to a sensational philosophy. As to some of the early thinkers, amid the fleetings of sensible objects, ideas alone seemed to be fixed, so to a later generation amid the fluctuation of philosophical opinions the only fixed points appeared to be outward objects. Any pretence of knowledge which went beyond them implied logical processes, of the correctness of which they had no assurance and which at best were only probable. The mind, tired of wandering, sought to rest on firm ground;

when the idols of philosophy and language were stripped off, the perception of outward objects alone remained. The ancient Epicureans never asked whether the comparison of these with one another did not involve principles of another kind which were above and beyond them. In like manner the modern inductive philosophy forgot to enquire into the meaning of experience, and did not attempt to form a conception of outward objects apart from the mind, or of the mind apart from them. Soon objects of sense were merged in sensations and feelings, but feelings and sensations were still unanalysed. At last we return to the doctrine attributed by Plato to Protagoras, that the mind is only a succession of momentary perceptions. At this point the modern philosophy of experience forms an alliance with ancient scepticism.

The higher truths of philosophy and religion are very far removed from sense. Admitting that, like all other knowledge, they are derived from experience, and that experience is ultimately resolvable into facts which come to us through the eye and ear, still their origin is a mere accident which has nothing to do with their true nature. They are universal and unseen; they belong to all times—past, present, and future. Any worthy notion of mind or reason includes them. The proof of them is, 1st, their comprehensiveness and consistency with one another; 2ndly, their agreement with history and experience. But sensation is of the present only, is isolated, is and is not in successive moments. It takes the passing hour as it comes, following the lead of the eye or ear instead of the command of reason. It is a faculty which man has in common with the animals, and in which he is inferior to many of them. The importance of the senses in us is that they are the apertures of the mind, doors and windows through which we take in and make our own the materials of knowledge. Regarded in any other point of view sensation is of all mental acts the most trivial and superficial. Hence the term ‘sensational’ is rightly used to express what is shallow in thought and feeling.

We propose in what follows, first of all, like Plato in the *Theaetetus*, to analyse sensation, and secondly to trace the connection between theories of sensation and a sensational or Epicurean philosophy.

§ I. We, as well as the ancients, speak of the five senses, and of a sense, or common sense, which is the abstraction of them. The term ‘sense’ is also used metaphorically, both in ancient and modern philo-

sophy, to express the operations of the mind which are immediate or intuitive. Of the five senses, two—the sight and the hearing—are of a more subtle and complex nature, while two others—the smell and the taste—seem to be only more refined varieties of touch. All of them are passive, and by this are distinguished from the active faculty of speech: they receive impressions, but do not produce them, except in so far as they are objects of sense themselves.

Physiology speaks to us of the wonderful apparatus of nerves, muscles, tissues, by which the senses are enabled to fulfil their functions. It traces the connection, though imperfectly, of the bodily organs with the operations of the mind. Of these latter, it seems rather to know the conditions than the causes. It can prove to us that without the brain we cannot think, and that without the eye we cannot see: and yet there is far more in thinking and seeing than is given by the brain and the eye. It observes the 'concomitant variations' of body and mind. Psychology, on the other hand, treats of the same subject regarded from another point of view. It speaks of the relation of the senses to one another; it shows how they meet the mind; it analyses the transition from sense to thought. The one describes their nature as apparent to the outward eye; by the other they are regarded only as the instruments of the mind. It is in this latter point of view that we propose to consider them.

The simplest sensation involves an unconscious or nascent operation of the mind; it implies objects of sense, and objects of sense have differences of form, number, colour. But the conception of an object without us, or the power of discriminating numbers, forms, colours, is not given by the sense, but by the mind. A mere sensation does not attain to distinctness: it is a confused impression, as Plato says (Rep. vii. 524 B, *συγκεχυμένον τι*), until number introduces light and order into the confusion. At what point the confusion becomes distinct is a question of degree which cannot be precisely determined. The distant object, the undefined notion, come out into relief as we approach them or attend to them. Or we may assist the analysis by attempting to imagine the world first dawning upon the eye of the infant or of a person newly restored to sight. Yet even with them the mind as well as the eye opens or enlarges. For all three are inseparably bound together—the object would be nowhere and nothing, if not perceived by the sense, and the sense would have no power of distinguishing without the mind.

But prior to objects of sense there is a third nature in which they are

contained—that is to say, space, which may be explained in various ways. It is the element which surrounds them; it is the vacuum or void which they leave or occupy when passing from one portion of space to another. It might be described in the language of ancient philosophy, as ‘the not being’ of objects. It is a negative idea which in the course of ages has become positive. It is originally derived from the contemplation of the world without us—the boundless earth or sea, the vacant heaven, and is therefore acquired chiefly through the sense of sight: to the blind the conception of space is feeble and inadequate, derived for the most part from touch or from the descriptions of others. At first it appears to be continuous; afterwards we perceive it to be capable of division by lines or points, real or imaginary. By the help of mathematics we form another idea of space, which is altogether independent of experience. Geometry teaches us that the innumerable lines and figures by which space is or may be intersected are absolutely true in all their combinations and consequences. New and unchangeable properties of space are thus developed, which are proved to us in a thousand ways by mathematical reasoning as well as by common experience. Through quantity and measure we are conducted to our simplest and purest notion of matter, which is to the cube or solid what space is to the square or surface. And all our applications of mathematics are applications of our ideas of space to matter. No wonder then that they seem to have a necessary existence to us. Being the simplest of our ideas, space is also the one of which we have the most difficulty in ridding ourselves. Neither can we set a limit to it, for wherever we fix a limit, space is springing up beyond. Neither can we conceive a smallest or indivisible portion of it; for within the smallest there is a smaller still; and even these inconceivable qualities of space whether the infinite or the infinitesimal, may be made the subject of reasoning and have a certain truth to us.

Whether space exists in the mind or out of it, is a question which has no meaning. We should rather say that without it the mind is incapable of conceiving the body, and therefore of conceiving itself. The mind may be indeed imagined to contain the body, in the same way that Aristotle (partly following Plato) supposes God to be the outer heaven or circle of the universe. But how can the individual mind carry about the universe of space packed up within, or how can separate minds have either a universe of their own or a common universe? In such conceptions there seems to be a confusion of the individual and the universal. To say that

we can only have a true idea of ourselves when we deny the reality of that by which we have any idea of ourselves is an absurdity. The earth which is our habitation and 'the starry heaven above' and we ourselves are equally an illusion, if space is only a quality or condition of our minds.

Again, we may compare the truths of space with other truths derived from experience, which seem to have a necessity to us in proportion to the frequency of their recurrence or the truth of the consequences which may be inferred from them. We are thus led to remark that the necessity in our ideas of space on which much stress has been laid, differs in a slight degree only from the necessity which appears to belong to some of our ideas of weight, motion, and the like. And there is another way in which this necessity may be explained. We have been taught it, and the truth which we were taught or which we inherited has never been contradicted in all our experience and is therefore confirmed by it. Who can resist an idea which is presented to him in a general form in every moment of his life and of which he finds no instance to the contrary? The greater part of what is sometimes regarded as the *a priori* intuition of space is really the conception of the various geometrical figures of which the properties have been revealed by mathematical analysis. And the certainty of these properties is immeasurably increased to us by our finding that they hold good not only in every instance, but in all the consequences which are supposed to flow from them.

Neither must we forget that our idea of space, like our other ideas, has a history. The Homeric poems contain no word for it; even the later Greek philosophy has not the Kantian notion of space, but only the definite 'place' or 'the infinite.' To Plato, in the *Timaeus*, it is known only as the 'nurse of generation.' When therefore we speak of the necessity of our ideas of space we must remember that this is a necessity which has grown up with the growth of the human mind, and has been made by ourselves. We can free ourselves from the perplexities which are involved in it by ascending to a time in which they did not as yet exist. And when space or time are described as '*a priori* forms or intuitions added to the matter given in sensation,' we should consider that such expressions belong really to the pre-historic age of philosophy—to the eighteenth century, when men sought to explain the human mind without regard to history or language or the social nature of man.

In every act of sense there is a latent perception of space, of which we only become conscious when objects are withdrawn from it. There are

various ways in which we may trace the connexion between them. We may think of space as unresisting matter, and of matter as divided into objects; or of objects again as formed by abstraction into a collective notion of matter, and of matter as rarefied into space. And motion may be conceived as the union of there and not there in space, and force as the materializing or solidification of motion. Space again is the individual and universal in one; or, in other words, a perception and also a conception. So easily do what are sometimes called our simple ideas pass into one another, and differences of kind resolve themselves into differences of degree.

Within or behind space there is another abstraction in many respects similar to it—time, the form of the inward, as space is the form of the outward. As we cannot think of outward objects of sense or of outward sensations without space, so neither can we think of a succession of sensations without time. It is the vacancy of thoughts or sensations, as space is the void of outward objects, and we can no more imagine the mind without the one than the world without the other. It is to arithmetic what space is to geometry; or, more strictly, arithmetic may be said to be equally applicable to both. It is defined in our minds, partly by the analogy of space and partly by the recollection of events which have happened to us, or the consciousness of feelings which we have experienced. Like space, it is without limit, for whatever beginning or end of time we fix, there is a beginning and end before them, and so on without end. We speak of a past, present, and future, and again the analogy of space assists us in conceiving of them as coexistent. When the limit of time is removed there arises in our minds the idea of eternity, which at first, like time itself, is only negative, but gradually, when connected with the world and the divine nature, like the other negative infinity of space, becomes positive. Whether time is prior to the mind and experience or coeval with them, is (like the parallel question about space) unmeaning. Like space it has been realized gradually: in the Homeric poems, or even in the Hesiodic cosmogony, there is no more notion of time than of space. The conception of being is more general than either, and might therefore with greater plausibility be affirmed to be a condition or quality of the mind. The *a priori intuitions* of Kant would have been as unintelligible to Plato as his *a priori synthetical propositions* to Aristotle. The philosopher of Königsberg supposed himself to be analysing a necessary mode of thought: he was not aware that

he was dealing with a mere abstraction. But now that we are able to trace the gradual development of ideas through religion, through language, through abstractions, why should we interpose the fiction of time between ourselves and realities? Why should we single out one of these abstractions to be the *a priori* condition of all the others? It comes last and not first in the order of our thoughts, and is not the condition precedent of them, but the last generalization of them. Nor can any principle be imagined more suicidal to philosophy than to assume that all the truth which we are capable of attaining is seen only through an unreal medium. If all that exists in time is illusion, we may well ask with Plato, 'What becomes of the mind?'

Leaving the *a priori* conditions of sensation we may proceed to consider acts of sense. These admit of various degrees of duration or intensity; they admit also of a greater or less extension from one object, which is perceived directly, to many which are perceived indirectly or in a less degree, and to the various associations of the object which are latent in the mind. In general the greater the intension the less the extension of them. The simplest sensation implies some relation of objects to one another, some position in space, some relation to a previous or subsequent sensation. The acts of seeing and hearing may be almost unconscious and may pass away unnoted; they may also leave an impression behind them or power of recalling them. If, after seeing an object we shut our eyes, the object remains dimly seen in the same or about the same place, but with form and lineaments decayed. This is the simplest act of memory. And as we cannot see one thing without at the same time seeing another, different objects hang together in recollection, and when we call for one the other quickly follows. To think of the place in which we have last seen a thing is often the best way of recalling it to the mind. Hence memory is dependent on association. The act of recollection may be compared to the sight of an object at a great distance which we have previously seen near. Memory is to sense as dreaming is to waking; and like dreaming has a wayward and uncertain power of recalling impressions from the past.

Thus begins the passage from the outward to the inward sense. But as yet there is no conception of a universal—the mind only remembers the individual object or objects, and is always attaching to them some colour or association of sense. The power of recollection seems to depend on the intensity or largeness of the perception, or on the strength

of some emotion with which it is inseparably connected. This is the natural memory which is allied to sense, such as children appear to have and barbarians and animals. It is necessarily limited in range, and its limitation is its strength. In later life, when the mind has become crowded with names, acts, feelings, images innumerable, we acquire by education another memory of system and arrangement which is both stronger and weaker than the first—weaker in the recollection of sensible impressions as they are represented to us by eye or ear—stronger by the natural connexion of ideas with objects or with one another. And many of the notions which form a part of the train of our thoughts are hardly realized by us at the time, but, like numbers or algebraical symbols, are used as signs only, thus lightening the labour of recollection.

And now we may suppose that numerous images present themselves to the mind, which begins to act upon them and to arrange them in various ways. Besides the impression of external objects present with us or just absent from us, we have a dimmer conception of other objects which have disappeared from our immediate recollection and yet continue to exist in us. The mind is peopled with images which pass to and fro before it. Some feeling or association calls them up, and they are uttered by the lips. This is the first rudimentary imagination, which may be truly described in the language of Hobbes, as 'decaying sense,' an expression which may be applied with equal truth to memory as well. For memory and imagination, though we sometimes oppose them, are nearly allied; the difference between them seems chiefly to lie in the activity of the one compared with the passivity of the other. The sense decaying in memory receives a flash of light or life from imagination. Dreaming is a link of connexion between them; for in dreaming we feebly recollect and also feebly imagine at one and the same time. When reason is asleep the lower part of the mind wanders at will amid the images which have been received from without. And so in the first efforts of imagination reason is latent or set aside; and images, in part disorderly, but also having a unity (however imperfect) of their own, pour like a flood over the mind. And if we could penetrate into the heads of animals we should probably find that their intelligence, or the state of what in them is analogous to our intelligence, is of this nature.

Thus far we have been speaking of men, rather in the points in which they resemble animals than in the points in which they differ from them. The animal too has memory in various degrees, and the elements of

imagination, if, as appears to be the case, he dreams. How far their powers or instincts are educated by the circumstances of their lives or by intercourse with one another, we cannot precisely tell. They, like ourselves, have the physical inheritance of form, scent, hearing, sight, and other qualities or instincts. But they have not the mental inheritance of thoughts and ideas handed down by tradition, 'the slow additions that build up the mind' of the human race. And language, which is the great educator of mankind, is wanting in them; whereas in us language is ever present—even in the infant the latent power of naming is almost immediately observable. And therefore the description which has been already given of the nascent power of the faculties is in reality an anticipation. For simultaneous with their growth in man a growth of language must be supposed. The child of two years old sees the fire once and again, and the feeble observation of the same recurring object is associated with the feeble utterance of the name by which he is taught to call it. Soon he learns to utter the name when the object is no longer there, but the desire or imagination of it is present to him. At first in every use of the word there is a colour of sense, an indistinct picture of the object which accompanies it. But in later years he sees in the name only the universal or class word, and the more abstract the notion becomes, the more vacant is the image which is presented to him. Henceforward all the operations of his mind, including the perceptions of sense, are a synthesis of sensations, words, conceptions. In seeing or hearing or looking or listening the sensible impression prevails over the conception and the word. In reflection the process is reversed—the outward object fades away into nothingness, the name or the conception or both together are everything. Language, like number, is intermediate between the two, partaking of the definiteness of the outer and of the universality of the inner world. For logic teaches us that every word is really a universal, and only condescends by the help of position or circumlocution to become the expression of individuals or particulars. And sometimes by using words as symbols we are able to give a 'local habitation and a name' to the infinite and inconceivable.

Thus we see that no line can be drawn between the powers of sense and of reflection—they pass imperceptibly into one another. We may indeed distinguish between the seeing and closed eye—between the sensation and the recollection of it. But this distinction carries us a

very little way, for recollection is present in sight as well as sight in recollection. There is no impression of sense which does not simultaneously recall differences of form, number, colour, and the like. Neither is such a distinction applicable at all to our internal bodily sensations, which give no sign of themselves when unaccompanied with pain, and even when we are most conscious of them, have often no assignable place in the human frame. Who can divide the nerves or great nervous centres from the mind which uses them? Who can separate the pains and pleasures of the mind from pains and pleasures of the body? The words 'inward and outward,' 'active and passive,' 'mind and body,' are best conceived by us as differences of degree passing into differences of kind, and at one time and under one aspect acting in harmony and then again opposed. They introduce a system and order into the knowledge of our being; and yet, like many other general terms, are often in advance of our actual analysis or observation.

According to some writers the inward sense is only the fading away or imperfect realization of the outward. But this leaves out of sight one half of the phenomenon. For the mind is not only withdrawn from the world of sense but introduced to a higher world of thought and reflection, in which, like the outward sense, she is trained and educated. By use the outward sense becomes keener and more intense, especially when confined within narrow limits. The savage with little or no thought has a quicker discernment of the track than the civilized man; in like manner the dog, having the help of scent as well as of sight, is superior to the savage. By use again the inward thought becomes more defined and distinct; what was at first an effort is made easy by the natural instrumentality of language, and the mind learns to grasp universals with no more exertion than is required for the sight of an outward object. There is a natural connexion and arrangement of them, like the association of objects in a landscape. Just as a note or two of music suffices to recall a whole piece to the musician's or composer's mind, so a great principle or leading thought suggests and arranges a world of particulars. The power of reflection is not feebler than the faculty of sense, but of a higher and more comprehensive nature. It not only receives the universals of sense, but gives them a new content by comparing and combining them with one another. It withdraws from the seen that it may dwell in the unseen. The sense only presents us with a flat and impenetrable surface: the

mind takes the world to pieces and puts it together on a new pattern. The universals which are detached from sense are reconstructed in science. They and not the mere impressions of sense are the truth of the world in which we live, and (as an argument to those who will only believe 'what they can hold in their hands') we may further observe that they are the source of our power over it. To say that the outward sense is stronger than the inward is like saying that the arm of the workman is stronger than the constructing or directing mind.

Returning to the senses we may briefly consider two questions—first their relation to the mind, secondly, their relation to outward objects:—

1. The senses are not merely 'holes set in a wooden horse' (Theaet. 184 D), but instruments of the mind with which they are organically connected. There is no use of them without some use of words—some natural or latent logic—some previous experience or observation. Sensation, like all other mental processes, is complex and relative, though apparently simple. The senses mutually confirm and support one another; it is hard to say how much our impressions of hearing may be affected by those of sight, or how far our impressions of sight may be corrected by the touch, especially in infancy. The confirmation of them by one another cannot of course be given by any one of them. Many intuitions which are inseparable from the act of sense are really the result of complicated reasonings. The most cursory glance at objects enables the experienced eye to judge approximately of their relations and distance, although nothing is impressed upon the retina except colour, including gradations of light and shade. From these delicate and almost imperceptible differences we seem chiefly to derive our ideas of distance and position. By comparison of what is near with what is distant we learn that the tree, house, river, &c. which are a long way off are objects of a like nature with those which are seen by us in our immediate neighbourhood, although the actual impression made on the eye is very different in the one case and in the other. This is a language of 'large and small letters' (Rep. 368 D), slightly differing in form and exquisitely graduated by distance, which we are learning all our life long, and which we attain in various degrees according to our powers of sight or observation. There is another consideration. The greater or less strain upon the nerves of the eye or ear is communicated to the mind and silently informs the judgment. We have also the use not of one eye only, but of two, which give us a wider

range, and help us to discern, by the greater or less acuteness of the angle which the rays of sight form, the distance of an object and its relation to other objects. But we are already passing beyond the limits of our actual knowledge on a subject which has given rise to many conjectures. More important than the addition of another conjecture is the observation, whether in the case of sight or of any other sense, of the great complexity of the causes and the great simplicity of the effect.

The sympathy of the mind and the ear is no less striking than the sympathy of the mind and the eye. Do we not seem to perceive instinctively and as an act of sense the differences of articulate speech and of musical notes? Yet how small a part of speech or of music is produced by the impression of the ear compared with that which is furnished by the mind!

Again: the more refined faculty of sense, as in animals so also in man, seems often to be transmitted by inheritance. Neither must we forget that in the use of the senses, as in his whole nature, man is a social being, who is always being educated by language, habit, and the teaching of other men as well as by his own observation. He knows distance because he is taught it by a more experienced judgment than his own; he distinguishes sounds because he is told to remark them by a person of a more discerning ear. And as we inherit from our parents or other ancestors peculiar powers of sense or feeling, so we improve and strengthen them, not only by regular teaching, but also by sympathy and communion with other persons.

2. The second question, namely, that concerning the relation of the mind to external objects, is really a trifling one, though it has been made the subject of a famous philosophy. We may if we like, with Berkeley, resolve objects of sense into sensations; but the change is one of name only, and nothing is gained and something is lost by such a resolution or confusion of them. For we have not really made a single step towards idealism, and any arbitrary inversion of our ordinary modes of speech is disturbing to the mind. The youthful metaphysician is delighted at his marvellous discovery that nothing is, and that what we see or feel is our sensation only: for a day or two the world has a new interest to him; he alone knows the secret which has been communicated to him by the philosopher, that mind is all—when in fact he is going out of his mind in the first intoxication of a great thought. But he soon finds that all things remain as they were—the laws of

nature, the properties of matter, the qualities of substances. After having inflicted his theories on any one who is willing to receive them, 'first on his father and mother, secondly on some other patient listener, thirdly on his dog,' he finds that he only differs from the rest of mankind in the use of a word. He had once hoped that by getting rid of the solidity of matter he might open a passage to worlds beyond. He liked to think of the world as the representation of the divine nature, and delighted to imagine angels and spirits wandering through space, present in the room in which he is sitting without coming through the door, nowhere and everywhere at the same instant. At length he finds that he has been the victim of his own fancies; he has neither more nor less evidence of the supernatural than he had before. He himself has become unsettled, but the laws of the world remain fixed as at the beginning. He has discovered that his appeal to the fallibility of sense was really an illusion. For whatever uncertainty there may be in the appearances of nature, arises only out of the imperfection or variation of the human senses, or possibly from the deficiency of certain branches of knowledge; when science is able to apply her tests, the uncertainty is at an end. We are apt sometimes to think that moral and metaphysical philosophy are lowered by the influence which is exercised over them by physical science. But any interpretation of nature by physical science is far in advance of such idealism. The philosophy of Berkeley, while giving unbounded license to the imagination, is still grovelling on the level of sense.

We may, if we please, carry this scepticism a step further, and deny, not only objects of sense, but the continuity of our sensations themselves. We may say with Protagoras and Hume that what is appears, and that what appears appears only to individuals, and to the same individual only at one instant. But then, as Plato asks,—and we must repeat the question,—What becomes of the mind? Experience tells us by a thousand proofs that our sensations of colour, taste, and the like, are the same as they were an instant ago—that the act which we are performing one minute is continued by us in the next—and also supplies abundant proof that the perceptions of other men are, speaking generally, the same or nearly the same with our own. After having slowly and laboriously in the course of ages gained a conception of a whole and parts, of the constitution of the mind, of the relation of man to God and nature, imperfect indeed, but the best we can, we are asked to

return again to the 'beggarly elements' of ancient scepticism, and acknowledge only atoms and sensations devoid of life or unity. Why should we not go a step further still and doubt the existence of the senses or of all things? We are but 'such stuff as dreams are made of;' for we have left ourselves no instruments of thought by which we can distinguish man from the animals, or conceive of the existence even of a mollusc. And observe, this extreme scepticism has been allowed to spring up among us, not like the ancient scepticism in an age when nature and language really seemed to be full of illusions, but in the eighteenth and nineteenth centuries, when men walk in the daylight of inductive science.

The attractiveness of such speculations arises out of their true nature not being perceived. They are veiled in graceful language; they are not pushed to extremes; they stop where the human mind is disposed also to stop—short of a manifest absurdity. Their inconsistency is not observed by their authors or by mankind in general, who are equally inconsistent themselves. They leave on the mind a pleasing sense of wonder and novelty: in youth they seem to have a natural affinity to one class of persons as poetry has to another; but in later life either we drift back into common sense, or we make them the starting-points of a higher philosophy.

We are often told that we should enquire into all things before we accept them;—with what limitations is this true? For we cannot use our senses without admitting that we have them, or think without presupposing that there is in us a power of thought, or affirm that all knowledge is derived from experience without implying that this first principle of knowledge is prior to experience. The truth seems to be that we begin with the natural use of the mind as of the body, and we seek to describe this as well as we can. We eat before we know the nature of digestion; we think before we know the nature of reflection. As our knowledge increases, our perception of the mind enlarges also. We cannot indeed get beyond facts, but neither can we draw any line which separates facts from ideas. And the mind is not something separate from them but included in them, and they in the mind, both having a distinctness and individuality of their own. To reduce our conception of mind to a succession of feelings and sensations is like the attempt to view a wide prospect by inches through a microscope, or to calculate a period of chronology by minutes. The mind ceases to

exist when it loses its continuity, which though far from being its highest determination, is yet necessary to any conception of it. Even an inanimate nature cannot be adequately represented as an endless succession of states or conditions.

§ II. Another division of the subject has yet to be considered: Why should the doctrine that knowledge is sensation, in ancient times, or of sensationalism or materialism in modern times, be allied to the lower rather than to the higher view of ethical philosophy? At first sight the nature and origin of knowledge appear to be wholly disconnected from ethics and religion, nor can we deny that the ancient Stoics were materialists, or that the materialist doctrines prevalent in modern times have been associated with great virtues, or that both religious and philosophical idealism have not unfrequently parted company with practice. Still upon the whole it must be admitted that the higher standard of duty has gone hand in hand with the higher conception of knowledge. It is Protagoras who is seeking to adapt himself to the opinions of the world; it is Plato who rises above them: the one maintaining that all knowledge is sensation; the other basing the virtues on the idea of good. The reason of this phenomenon has now to be examined.

By those who rest knowledge immediately upon sense, that explanation of human action is deemed to be the truest which is nearest to sense. As knowledge is reduced to sensation, so virtue is reduced to feeling, happiness or good to pleasure. The different virtues—the various characters which exist in the world—are the disguises of self-interest. Human nature is dried up; there is no place left for imagination, or in any higher sense for religion. Ideals of a whole, or of a state, or of a law of duty, or of a divine perfection, are out of place in an epicurean philosophy. The very terms in which they are expressed are suspected of having no meaning. Man is to bring himself back as far as he is able to the condition of a rational beast. He is to limit himself to the pursuit of pleasure, but of this he is to make a far-sighted calculation;—he is to be rationalized, secularized, animalized: or he is to be an amiable sceptic, better than his own philosophy, and not falling below the opinions of the world.

Imagination has been called that 'busy faculty' which is always intruding upon us in the search after truth. But imagination is also that higher power by which we rise above ourselves and the common-

places of thought and life. The philosophical imagination is another name for reason finding an expression of herself in the outward world. To deprive life of ideals is to deprive it of all higher and comprehensive aims and of the power of imparting and communicating them to others. For men are taught, not by those who are on a level with them, but by those who rise above them, who see the distant hills, who soar into the empyrean. Like a bird in a cage, the mind confined to sense is always being brought back from the higher to the lower, from the wider to the narrower view of human knowledge. It seeks to fly but cannot: instead of aspiring towards perfection 'it hovers about this lower world and the earthly nature.' It loses the religious sense which more than any other seems to take a man out of himself. Weary of asking 'What is truth?' it accepts the 'blind witness of eyes and ears'; it draws around itself the curtain of the physical world and is satisfied. The strength of a sensational philosophy lies in the ready accommodation of it to the minds of men; many who have been metaphysicians in their youth, as they advance in years are prone to acquiesce in things as they are, or rather appear to be. They are spectators, not thinkers, and the best philosophy is that which requires of them the least amount of mental effort.

As a lower philosophy is easier to apprehend than a higher, so a lower way of life is easier to follow; and therefore such a philosophy seems to derive a support from the general practice of mankind. It appeals to principles which they all know and recognize: it gives back to them in a generalized form the results of their own experience. To the man of the world they are the quintessence of his own reflections upon life. To follow custom, to have no new ideas or opinions, not to be straining after impossibilities, to enjoy to-day with just so much forethought as is necessary to provide for the morrow, this is regarded by the greater part of the world as the natural way of passing through existence. And many who have lived thus have attained to a lower kind of happiness or equanimity. They have possessed their souls in peace without ever allowing them to wander into the region of religious or political controversy, and without any care for the higher interests of man. But nearly all the good (as well as some of the evil) which has ever been done in this world has been the work of another spirit, the work of enthusiasts and idealists, of apostles and martyrs. The leaders of mankind have not been of the gentle Epicurean type; they

have personified ideas; they have sometimes also been the victims of them. But they have always been seeking after a truth or ideal of which they fall short; and have died in a manner disappointed of their hopes that they might lift the human race out of the slough in which they found them. They have done little compared with their own visions and aspirations; but they have done that little, only because they sought to do, and once perhaps thought that they were doing, a great deal more.

The philosophies of Epicurus or Hume give no adequate or dignified conception of the mind. There is no organic unity in a succession of feeling or sensations; no comprehensiveness in an infinity of separate actions. The individual never reflects upon himself as a whole; he can hardly regard one act or part of his life as the cause or effect of any other act or part. Whether in practice or speculation, he is to himself only in successive instants. To such thinkers, whether in ancient or in modern times, the mind is only the poor recipient of impressions—not the heir of all the ages, or connected with all other minds. It begins again with its own modicum of experience having only such vague conceptions of the wisdom of the past as are inseparable from language and popular opinion. It seeks to explain from the experience of the individual what can only be learned from the history of the world. It has no conception of obligation, duty, conscience—these are to the Epicurean or Utilitarian philosopher only names which interfere with our natural perceptions of pleasure and pain.

There seem then to be several answers to the question, Why the theory that all knowledge is sensation is allied to the lower rather than to the higher view of ethical philosophy:—1st, Because it is easier to understand and practise; 2ndly, Because it is fatal to the pursuit of ideals, moral, political, or religious; 3rdly, Because it deprives us of the means and instruments of higher thought, of any adequate conception of the mind, of knowledge, of conscience, of moral obligation.

THEAETETUS.

PERSONS OF THE DIALOGUE.

SOCRATES.

THEODORUS.

THEAETETUS.

Euclid and Terpsion meet in front of Euclid's house in Megara; they enter the house, and the dialogue is read to them by a servant.

Steph

142

Euclid. Are you only just arrived from the country, Terpsion?

Terpsion. No, I came some time ago: and I have been in the Agora looking for you, and wondering that I could not find you.

Enc. Why, I was not in the city at all.

Terp. Where then?

Enc. As I was going down to the harbour, I met Theaetetus; he was being carried up to Athens from the army at Corinth.

Terp. Do you mean that he was alive or dead?

Enc. He was scarcely alive; for he has been badly wounded, and what is worse, the sickness which prevails in the army has fastened upon him.

Terp. Is that the dysentery?

Enc. Yes.

Terp. Alas! what a loss he will be!

Enc. Yes, Terpsion, he is a noble fellow; only to-day I heard some one highly praising his behaviour in this very battle.

Terp. No wonder; I should rather wonder at hearing any-

thing else of him. But why did he go on, instead of stopping at Megara?

Enc. He wanted to get home; for the fact was that I begged and advised him to remain, but he would not; so I set him on his way, and turned back, and then I remembered what Socrates had said of him, and thought how remarkably this, like all his predictions, had been fulfilled. I believe that he had seen him a little before his own death, when Theaetetus was a youth, and he had a memorable conversation with him, which he repeated to me when I came to Athens; he was full of admiration of his genius, and said that he would most certainly be a great man, if he lived.

Terp. His words have certainly proved true; but what was the conversation? can you tell me?

Enc. No, indeed, not offhand; but I took notes as soon as I got home, which I filled up from memory and wrote out at leisure; and whenever I went to Athens, I asked Socrates about any point which I had forgotten, and on my return I made corrections; thus I have nearly the whole conversation written down.

Terp. I remember—you told me; and I have always been intending to ask you to show me the writing, but have put off doing so; and now, why not out with the book?—having just come from the country, I should greatly like to rest.

Enc. I too shall be very glad of a rest, for I went with Theaetetus as far as Erineum. Let us go in, then, and, while we are reposing, the servant shall read to us.

Terp. Very good.

Enc. Here is the roll, Terpsion; I need only observe that I have introduced Socrates, not as narrating to me, but as actually conversing with the persons whom he mentioned—these were, Theodorus the geometrician (of Cyrene), and Theaetetus. I have omitted, for the sake of convenience, the interlocutory words ‘I said,’ ‘I remarked,’ which he used when he spoke of himself, and again, ‘he agreed,’ or ‘disagreed,’ in the answer, lest the repetition of them should be troublesome.

Terp. Quite right, Euclid.

Enc. And now, boy, you may take the roll and read.

Euclid's servant reads.

Socrates. If I cared enough about the Cyrenians, Theodorus, I would ask you whether there are any rising geometricians or philosophers in that part of the world. But I am more interested in our Athenian youth, and I would rather know who among them are likely to do well. I observe them as far as I can myself, and I enquire of any one whom they follow, and I see that a great many of them follow you, in which they are quite right, considering your eminence in geometry and in other ways. Tell me then, if you have met any one who is good for anything.

Theodorus. Yes, Socrates, I have become acquainted with one very remarkable Athenian youth, whom I commend to you as well worthy of your attention. If he had been a beauty I should have been afraid to praise him, lest you should suppose that I was in love with him; but he is no beauty, and you must not be offended if I say that he is very like you; for he has a snub nose and projecting eyes, although these features are less marked in him than in you. Seeing, 144 then, that he has no personal attractions, I may freely say, that in all my acquaintance, which is very large, I never knew any one who was his equal in natural gifts: for he has a quickness of apprehension which is almost unrivalled, and he is exceedingly gentle, and also the most courageous of men; there is a union of qualities in him such as I have never seen in any other, and should scarcely have thought possible; for those who, like him, have quick and ready and retentive wits, have generally also quick tempers; they are ships without ballast, and go darting about, and grow mad rather than courageous; and the steadier sort, when they have to face study, are stupid and cannot remember. Whereas he moves surely and smoothly and successfully in the path of knowledge and enquiry; he is full of gentleness, and flows on silently like a river of oil; at his age, it is wonderful.

Soc. That is good news; whose son is he?

Theod. The name of his father I have forgotten, but the youth himself is the middle one of those who are approaching

us; he and his companions have been anointing in the outer court, and now they seem to have finished, and are coming towards us. Look and see whether you know him.

Soc. I know the youth, but I do not know his name; he is the son of Euphronius the Sunian, who was himself an eminent man, and such another as his son is, according to your account of him; I believe that he left a considerable fortune.

Theod. Theaetetus, Socrates, is his name; but I rather think that the property disappeared in the hands of trustees; notwithstanding which he is wonderfully liberal.

Soc. He must be a fine fellow; tell him to come and sit by me.

Theod. I will. Come hither, Theaetetus, and sit by Socrates.

Soc. By all means, Theaetetus, in order that I may see the reflection of myself in your face, for Theodorus says that we are alike; and yet if each of us held in his hands a lyre, and he said that they were tuned alike, should we at once take his word, or should we ask whether he who said so was or was not a musician?

Theaetetus. We should ask.

Soc. And if we found that he was, we should take his word; and if not, not?

Theaet. True.

Soc. And if this supposed likeness of our faces is a matter of any interest to us, we should enquire whether he who says that we are alike is a painter or not?

Theaet. Certainly we should.

Soc. And is Theodorus a painter?

Theaet. I never heard that he was.

Soc. Is he a geometrician?

Theaet. Of course he is, Socrates.

Soc. And is he an astronomer and calculator and musician, and in general an educated man?

Theaet. I think so.

Soc. If, then, he remarks on the similarity of our persons, either in the way of praise or blame, there is no particular reason why we should attend to him.

Theaet. I should say not.

Soc. But, if he praises the virtue or wisdom which are the

mental endowments of either of us, then he who heard the praises will naturally desire to examine him who is praised: and he again should be willing to exhibit himself.

Theaet. Very true, Socrates.

Soc. Then now is the time, my dear Theaetetus, for me to examine, and for you to exhibit; since although Theodorus has praised many a citizen and stranger in my hearing, never did I hear him praise any one as he has been praising you.

Theaet. I am glad to hear it, Socrates; but what if he was only in jest?

Soc. Nay, he is not given to jesting; and I cannot allow you to retract your assent on that ground. For if you do, he will have to clear himself on oath, and I am sure that no one will accuse him of false witness. Do not be shy then, but stand to your word.

Theaet. I will do as you wish.

Soc. In the first place, I should like to ask what you learn of Theodorus: something of geometry, I suppose?

Theaet. Yes.

Soc. And astronomy and harmony and calculation?

Theaet. I do my best.

Soc. Yes, my boy, and so do I; and my desire is to learn of him, and of anybody who seems to understand these things. And I get on pretty well in general; but there is a little matter which I want you and the company to aid me in investigating. Will you answer me a question: 'Is not learning growing wiser about that which you learn?'

Theaet. Of course.

Soc. And by wisdom the wise are wise?

Theaet. Yes.

Soc. And is that different from knowledge?

Theaet. What is different?

Soc. Wisdom; are not men wise in that which they know?

Theaet. Certainly.

Soc. Then wisdom and knowledge are the same?

Theaet. Yes.

146 *Soc.* And this is the very difficulty which I can never explain to myself—What is knowledge? Can we answer that question? What do you say? and which of us will answer

first? whoever misses shall sit down, as at a game of ball, and shall be donkey, as the boys say, to the rest of the company; he who lasts out his competitors in the game without missing, shall be our king, and shall have the right of asking any questions which he likes.... Why is there no reply? I hope, Theodorus, that I am not betrayed into rudeness by my love of conversation? I only want to make us talk and be friendly and sociable.

Theod. The reverse of rudeness, Socrates: but I would rather that you would ask one of the young fellows; for the truth is, that I am not in the habit of playing at your game of question and answer, and I am too old to learn; the young will be more apt, and they will improve more than I shall, for youth is always able to improve. Having already made a beginning with him, I would advise you to detain Theaetetus, and interrogate him.

Soc. Do you hear, Theaetetus, what Theodorus says? the philosopher, whom you would not like to disobey, and whose word ought to be a command to a young man, bids me interrogate you. Take courage, then, and nobly say what you think that knowledge is.

Theact. Well, Socrates, I will answer as you and he bid me; and if I make a mistake, you will doubtless correct me.

Soc. We will, if we can.

Theact. Then, I think that the sciences which I learn from Theodorus—geometry, and those which you just now mentioned—are knowledge; and I would include the art of the cobbler and other craftsmen; these, all and each of them, are knowledge.

Soc. Too much, Theaetetus, too much; the nobility and liberality of your own nature make you give many and diverse things, when I am asking for one simple thing.

Theact. What do you mean, Socrates?

Soc. Perhaps nothing. I will endeavour, however, to explain what I believe to be my meaning: When you speak of cobbling, you mean the art of making shoes?

Theact. That is my meaning.

Soc. And when you speak of carpentering, you mean the art of making wooden implements?

Theact. Yes.

Soc. In both cases you define the subject-matter of each of the two arts?

Theact. True.

Soc. But that, Theaetetus, was not the question: we wanted to know not the subjects, nor yet the number of the arts or sciences, for we were not going to count them, but we wanted to know the nature of knowledge in the abstract. Am I not right?

Theact. Perfectly right.

147 *Soc.* Take the following example: Suppose that a person were to ask about some very common and obvious thing—for example, What is clay? and we were to reply, that there is a clay of potters, there is a clay of oven-makers, there is a clay of brick-makers; would not the answer be ridiculous?

Theact. Truly.

Soc. In the first place, there would be an absurdity in assuming that he who asked the question would understand from our answer the meaning of the word 'clay,' merely because we added 'of the image-makers,' or of any other workers. For how can a man understand the name of anything, when he does not know what it is?

Theact. Of course not.

Soc. Then he who does not know what science or knowledge is, has no knowledge of the art or science of making shoes?

Theact. None.

Soc. Nor of any other science?

Theact. No.

Soc. And when a man is asked 'what science or knowledge is,' to give as an answer the name of some art or science, is ridiculous; for the question is, 'What is knowledge?' and he replies, 'a knowledge of this and that.'

Theact. True.

Soc. Moreover, he might answer shortly and simply, but he makes an enormous circuit. For example, when asked about the clay, he might have said simply, that 'clay is moistened earth'—whose clay is not to the point.

Theact. Yes, Socrates, there is no difficulty as you put the question. You mean, if I am not mistaken, something like

what occurred to me and to my friend here, your namesake Socrates, in a recent discussion.

Soc. What was that, Theaetetus?

Theaet. Theodorus was writing out for us something about roots, such as the roots of three or five feet, showing that in linear measurement (i. e. comparing the sides of the squares) they are incommensurable by the unit: he selected the irrational roots of the numbers up to seventeen, but he went no farther; and as there are innumerable roots, the notion occurred to us of attempting to include them all under one name or class.

Soc. And did you find such a class?

Theaet. I think that we did; but I should like to have your opinion.

Soc. Let me hear.

Theaet. We divided all numbers into two classes; those which are made up of equal factors multiplying into one another, which we represented as squares and called squares or equilateral numbers;—that was one class.

Soc. Very good.

Theaet. The intermediate numbers, such as three and five, and every other number which is made up of unequal factors, ¹⁴⁸ either of a greater multiplied by a less, or of a less multiplied by a greater, and when regarded as a figure, is contained in unequal sides;—all these we represented as oblong figures, and called them oblong numbers.

Soc. Capital; and what followed?

Theaet. The lines, or sides, which are the roots of (or whose squares are equal to) the equilateral plane numbers, were called by us lengths or magnitudes; and the lines which are the roots of (or whose squares are equal to) the oblong numbers, were called powers or roots; the reason of this latter name being, that they are commensurable with the others [i. e. with the so-called lengths or magnitudes] not in linear measurement, but in the value of their squares; and the same about solids.

Soc. Excellent, my boy; I think that you fully justify the praises of Theodorus, and that he will not be found guilty of false witness.

Theaet. But I am unable, Socrates, to give you a similar

answer about knowledge, which is what you appear to want; and therefore Theodorus is a deceiver after all.

Soc. Well, but suppose that you were running a course, and some one said in praise of you, that he had never known any youth who was as good a runner, and afterwards you were beaten in a race by a grown-up man, who was a great runner—would his praise be any the less true?

Theaet. Certainly not.

Soc. And is the discovery of the nature of knowledge really a little matter, as I just now said, or one requiring great skill?

Theaet. Requiring the greatest, I should say.

Soc. Well, then, be of good cheer; do not say that Theodorus was mistaken about you, but do your best to ascertain the true nature of knowledge, as well as of other things.

Theaet. I am eager enough, Socrates, if that would bring to light the truth.

Soc. Come, you made a good beginning just now; let your own answer about roots be your model, and as you comprehended them all in one class, try and bring the many sorts of knowledge under one definition.

Theaet. I can assure you, Socrates, that I have tried very often, when I heard the questions which came from you; but I can neither persuade myself that I have any answer to give, nor hear of any one who answers as you would have me answer; and I cannot get rid of the desire to answer.

Soc. These are the pangs of labour, my dear Theaetetus; you have something within you which you are bringing to the birth.

Theaet. I do not know, Socrates; I only say what I feel.

149 *Soc.* And have you never heard, simpleton, that I am the son of a midwife, brave and burly, whose name was Phaenarete?

Theaet. Yes, I have.

Soc. And that I myself practise midwifery?

Theaet. No, never.

Soc. Let me tell you that I do, though, my friend: but you must not reveal the secret, as the world in general have not found me out; and therefore they only say of me, that I am the strangest of mortals and drive men to their wits' end. Did you ever hear that?

Theact. Yes.

Soc. Shall I tell you the reason?

Theact. By all means.

Soc. Bear in mind the whole function of the midwives, and then you will see my meaning better:—No woman, as you are probably aware, who is still able to conceive and bear, attends other women, but only those who are past bearing.

Theact. Yes, I know.

Soc. The reason of this is said to be that Artemis—the goddess of childbirth—is not a mother, and she honours those who are like herself; but she could not allow the barren to be midwives, because human nature cannot know the mystery of an art without experience; and therefore she assigned this office to those who are too old to bear.

Theact. I dare say.

Soc. And I dare say too, or rather I am absolutely certain, that the midwives know better than others who is pregnant and who is not?

Theact. Very true.

Soc. And by the use of potions and incantations they are able to arouse the pangs and to soothe them at will; they can make those bear who have a difficulty in bearing, and if they choose they can smother the embryo in the womb.

Theact. They can.

Soc. Did you ever remark that they are also most cunning matchmakers, and have an entire knowledge of what unions are likely to produce a brave brood?

Theact. No, never.

Soc. Then let me tell you that this is their greatest pride, more than cutting the umbilical cord. And if you reflect, you will see that the same art which cultivates and gathers in the fruits of the earth, will be most likely to know in what soils the several plants or seeds should be deposited.

Theact. Yes, the same art.

Soc. And do you suppose that with women the case is otherwise?

Theact. I should think not.

Soc. Certainly not—but the midwives, who are respectable

women and have a character to lose, avoid this department of practice, because they are afraid of being called procuresses, which is a name given to those who join together man and woman in an unlawful and unscientific way; and yet the true midwife is also the true and only match-maker.

Theaet. Obviously.

Soc. Such are the midwives, whose work is a very important one, but not so important as mine; for women do not bring into the world at one time real children, and at another time idols which are with difficulty distinguished from them; if they did, then the discernment of the true and false birth would be the crowning achievement of the art of midwifery—you would think so?

Theaet. To be sure.

Soc. Well, my art of midwifery is in most respects like theirs; but differs, in that I attend men and not women, and I practise on their souls when they are in labour, and not on their bodies: and the triumph of my art is in thoroughly examining whether the thought which the mind of the young man brings forth is a false idol or a noble and true birth. And like the midwives, I am barren, and the reproach which is often made against me, that I ask questions of others and have not the wit to answer them myself, is very just; and the reason is, that the god compels me to be a midwife, yet forbids me to bring forth. And therefore I am not myself at all wise, nor have I anything which is the invention or birth of my own soul, but those who converse with me profit. Some of them appear dull enough at first, but afterwards, as our acquaintance ripens, if the god is gracious to them, they all make astonishing progress; and this in the opinion of others as well as in their own. No one can imagine that they have learned anything of me, but they have acquired and discovered many noble things of themselves. The god and I only help to deliver them. And the proof of my words is, that many of them in their ignorance, either in their conceit of themselves despising me, or falling under the influence of others¹, have gone away sooner than they ought; and then they have miscarried through evil communications, and also

¹ Reading with the Bodleian MS: ἢ αὐτοὶ ὑπ' ἄλλων πεισθέντες.

have lost the children of which I had previously delivered them by an ill bringing up, being fonder of lies and shadows than of the truth; and they have at last ended by seeing themselves, as others see them, to be great fools. Aristeides, the son of Lysimachus, is one of them, and there are many others. The truants often return to me, and beg that I would converse with them again—they are ready to go down on their knees—and then, if my familiar allows, which is not always the case, I receive them, and they begin to grow again. Dire are the pangs which my art is able to arouse and to allay in those who have intercourse with me, just like the pangs of women in childbirth; night and day they are full of perplexity and travail which is even worse than that of the women. So much for them. And there are others, Theaetetus, who come to me apparently having nothing in them; and as I know that they have no need of my art, I coax them into marrying some one, and by the grace of God I can generally tell who is likely to do them good. Many of them I have given away to Prodicus, and some to other inspired sages. I tell you this long story, friend Theaetetus, because I suspect, as indeed you seem to think yourself, that you are in labour—great with some conception. Come then to me, who am a midwife and the son of a midwife, and try to answer the question which I will ask you. And if I abstract and expose your first-born, because I discover upon inspection that the conception which you have formed is a vain shadow, do not quarrel with me on that account, as the manner of women is when their first children are taken from them. For I have actually known some who were ready to bite me when I deprived them of a darling folly; they did not perceive that I acted from goodwill, not knowing that no god is the enemy of man (that was not within the range of their ideas); neither am I their enemy in all this, but religion will never allow me to admit falsehood, or to stifle the truth. Once more, then, Theaetetus, I repeat my old question, ‘What is knowledge?’—and do not say that you cannot tell; but quit yourself like a man, and by the help of God you will be able to tell.

Theaet. At any rate, Socrates, after such an exhortation I should be ashamed of not trying to do my best. And, accord-

ing to my present notion, he who knows perceives what he knows, and therefore I should say that knowledge is perception.

Soc. Bravely said, boy ; that is the way in which you should express your opinion. And now, shall you and I have an examination, and see whether this conception of yours is a true child or a mere wind-egg? And so you say that perception is knowledge?

Theact. Yes.

Soc. I think that you have delivered yourself of a very important doctrine about knowledge, which is indeed that of Protagoras, who has another way of expressing the same thing when he says, that man is the measure of all things, of the existence of things that are, and of the non-existence of things that are not :—You have read him?

Theact. Yes, I have, again and again.

Soc. Does he not say that things are to you such as they appear to you, and are to me such as they appear to me, for you and I are men?

Theact. Exactly so.

Soc. Such a wise man has doubtless a meaning. Let us try to understand him : the same wind is blowing, and yet one of us may be cold and the other not, or one may be slightly and the other very cold?

Theact. Quite true.

Soc. Now is the wind, regarded not in relation to us but absolutely, cold or not ; or are we to say, with Protagoras, that the wind is cold to him who is cold, and not to him who is not?

Theact. I suppose the last.

Soc. And this is what appears to each of them?

Theact. Yes.

Soc. And 'appears to him' means the same as 'he perceives'?

Theact. True.

Soc. Then appearance and perception coincide in this instance of hot and cold, and in similar instances ; for things appear, or may be supposed to be, to each one such as he perceives them?

Theact. Yes.

Soc. Then perception is always of existence, and being the same as knowledge is unerring?

Theact. Clearly.

Soc. Now, I verily and indeed suspect that Protagoras, who was an almighty wise man, spoke these things in a parable to the common herd, like you and me, but he told the truth, 'his Truth¹, in secret to his own disciples.

Theact. What do you mean, Socrates?

Soc. I am about to speak of an illustrious philosophy, in which all things are said to be relative; you cannot rightly call anything by any name, such as great or small, or heavy or light, for the great will be small and the heavy light—there is no one or some or any sort of nature, but out of motion and change and admixture all things are becoming, which 'becoming' is by us incorrectly called being, but is really becoming, for nothing ever is, but all things are becoming. Summon all philosophers—Protagoras, Heracleitus, Empedocles, and the rest of them, one after another, with the exception of Parmenides, and they will agree with you in this. Summon the great masters of either kind of poetry—Epicharmus, the prince of Comedy, and Homer of Tragedy; when the latter sings of

'Ocean the birth of gods, and mother Tethys,'

does he not mean that all things are the offspring of flux and motion?

Theact. I think so.

Soc. And who could take up arms against such a great army, 153 and Homer who is their general, and not be ridiculous?

Theact. Who indeed, Socrates?

Soc. Yes, Theaetetus; and there are plenty of other proofs which will show that motion is the source of that which is said to be and become, and rest of not-being and destruction; for fire and warmth, which are supposed to be the parent and nurse of all other things, are born of friction, which is a kind of motion²;—is not this the origin of fire?

Theact. Yes.

¹ In allusion to a book of Protagoras' which bore this title.

² Reading τοῦτο δὲ κίνησις.

Soc. And the race of animals is generated in the same way?

Theact. Certainly.

Soc. And is not the bodily habit spoiled by rest and idleness, but preserved for a long time¹ by motion and exercise?

Theact. True.

Soc. And what of the mental habit? Is not the soul informed, and improved, and preserved by thought and attention, which are motions; but when at rest, which in the soul means only want of thought and attention, is uninformed, and speedily forgets whatever she has learned?

Theact. True.

Soc. Then motion is a good, and rest an evil, both of the soul and of the body?

Theact. Clearly.

Soc. I may affirm, also, that the breathless calm and stillness and the like are wasting and impairing, and wind and storm preserving; and the palmary argument of all, which I strongly urge, is the golden chain in Homer, by which he means the sun, thus indicating that while the sun and the heavens go round, all things human and divine are and are preserved, but if the sun were to be arrested in his course, then all things would be destroyed, and, as the saying is, Chaos would come again.

Theact. I believe, Socrates, that you have truly explained his meaning.

Soc. Then apply his doctrine to perception, my good friend, and first of all to vision; that which you call white colour is not in your eyes, and is not a distinct thing which exists out of them; nor can you assign any place to it: for if it had position it would be and be at rest, and there would be no process of becoming.

Theact. Then what is colour?

Soc. Let us carry out the principle which has just been affirmed, that nothing is self-existent, and then we shall see that every colour, white, black, and every other colour, arises out of the eye meeting the appropriate motion, and that what
 154 we term the substance of each colour is neither the active nor

the passive element, but something which passes between them, and is peculiar to each percipient; are you certain that the several colours appear to every animal—say to a dog—as they appear to you?

Theact. Indeed I am not.

Soc. Or that anything appears the same to you as to another man? Would you not rather question whether you yourself see the same thing at different times, because you are never exactly the same?

Theact. I should.

Soc. And if that with which I compare myself in size¹, or which I apprehend, were great or white or hot, it could not without actually changing become different by mere contact with another; nor again, if the apprehending or comparing subject were great or white or hot, could this, when unchanged from within, become changed by any approximation or affection of any other thing. For in our ordinary way of speaking we allow ourselves to be driven into most ridiculous and wonderful contradictions, as Protagoras and all who take his line of argument would remark.

Theact. What sort of contradictions do you mean?

Soc. A little instance will sufficiently explain my meaning: Here are six dice, which are a third more when compared with four, and fewer by a half than twelve—they are more and also fewer. How can you or any one maintain the contrary?

Theact. Very true.

Soc. Well, then, suppose that Protagoras or some one asks whether anything can become greater or more if not by increasing, how would you answer him, Theaetetus?

Theact. I should say no, Socrates, if I were to speak my mind in reference to this last question, and if I were not afraid of contradicting my former answer.

Soc. By Herè, well and divinely said, my friend. And if you reply 'yes,' there will be a case for Euripides; 'for our tongue will be unconvinced, but not our mind².'

Theact. Very true.

¹ Reading with the MSS. ᾧ παραμετρούμεθα.

² In allusion to the well-known line of Euripides, Hippol. 612:

Soc. The thoroughbred Sophists, who know all that can be known about the mind, and argue only out of the superfluity of their wits, would have had a regular sparring-match over this. But you and I, who have no professional aims, only desire to see what is the real nature of our ideas, and whether they are consistent with each other or not.

Theact. Yes, that would be my desire.

Soc. And mine too. But since this is our feeling, and there is plenty of time, why should we not gently and patiently review
155 our own thoughts, and examine and see what these appearances in us really are? Concerning which, if I am not mistaken, we shall say:—first, that nothing can be greater or less, either in number or magnitude, while remaining equal to itself—you would agree?

Theact. Yes.

Soc. Secondly, that without addition or subtraction there is no increase or diminution of anything, but only equality.

Theact. Quite true.

Soc. Thirdly, that what once was not and afterwards was, could not be, without becoming and having become.

Theact. Yes, truly.

Soc. These three axioms, if I am not mistaken, were fighting with one another in our minds in the case of the dice, or, again, in such a case as this—when I say that I, at my age, who neither gain nor lose in height, may this year be taller than you, who are still a youth, and next year not so tall—not that I have lost, but that you have increased: in such a case, I am afterwards what I once was not; and yet I have not become, for certainly I could not have become shorter without becoming, neither could I have become less without losing somewhat of my height; and I could give you ten thousand examples of similar contradictions, if we admit them at all. I believe that you understand me, Theaetetus; for I suspect that you have thought of these questions before.

Theact. Yes, Socrates, and I am amazed when I think of them; indeed I am; and I want to know what is the meaning of them, and there are times when my head quite swims with the contemplation of them.

Soc. I see, my dear Theaetetus, that Theodorus had a true

insight into your nature when he said that you were a philosopher, for wonder is the feeling of a philosopher, and philosophy begins in wonder. He was not a bad genealogist who said that Iris the messenger of heaven is the child of Thaumás (wonder). But do you know what is the explanation of this perplexity on the hypothesis which we attribute to Protagoras?

Theact. Not as yet. †

Soc. Then you will be obliged to me if I help you to unearth the hidden truth or wisdom of a famous man or men.

Theact. To be sure, I shall be very much obliged.

Soc. Take a look round, then, and see that none of the uninitiated are listening. Now by the uninitiated I mean the people who believe in nothing but what they can hold fast in their hands, and who will not allow that action or generation or anything invisible can have real existence.

Theact. Yes, indeed, Socrates, they are very stubborn and repulsive mortals.

Soc. Yes, my boy, outer barbarians. Far more ingenious 156 are the brethren whose mysteries I am about to reveal to you. Their principle is, that all is motion, and upon this all the affections of which we were just now speaking are supposed to depend: there is nothing but motion, which has two forms, one active and the other passive, both in endless number, and out of the union and friction of them there is generated a progeny endless in number, having two forms, sense and the object of sense, which are ever breaking forth and coming to the birth at the same moment. The senses are variously named hearing, seeing, smelling; there is the sense of heat, cold, pleasure, pain, desire, fear, and many more which are named, as well as innumerable others which have no name; with each of them there is born an object of sense,—all sorts of colours born with all sorts of sight and sounds in like manner with hearing, and other objects with the other senses. Do you see, Theaetetus, the bearing of this tale on the preceding argument?

Theact. Indeed I do not.

Soc. Then attend, for I hope to finish the story. The purport is that all these things are in motion, as I was saying,

and that this motion has degrees of swiftness or slowness ; and the slower elements have their motions in the same place and about things near them, and thus beget, but the things begotten are quicker, for their motions are from place to place. Apply this to sense :—When the eye and the appropriate object meet together and give birth to whiteness and the sensation of white, which could not have been given by either of them going to any other [subject or object], then, while the sight is flowing from the eye, whiteness proceeds from the object which combines in producing the colour ; and so the eye is fulfilled with sight, and sees, and becomes, not sight, but a seeing eye ; and the object which combines in forming the colour is fulfilled with whiteness, and becomes not whiteness but white, whether wood or stone or whatever the object may be which happens to be coloured white¹. And this is true of all sensations, hard, warm, and the like, which are similarly to be regarded, as I¹⁵⁷ was saying before, not as having any absolute existence, but as being all of them generated by motion in their intercourse with one another, according to their kinds ; for of the agent and patient, taken singly, as they say, no fixed idea can be framed, for the agent has no existence until united with the patient, and the patient has no existence until united with the agent ; and that which by uniting with something becomes an agent, by meeting with some other thing is converted into a patient. And from all these considerations, as I said at first, there arises a general reflection, that there is no one or self-existent thing, but everything is becoming and in relation ; and being has to be altogether abolished, although from habit and ignorance we are compelled even in this discussion to retain the use of the term. But philosophers tell us that we are not to allow either the word ‘something,’ or ‘belonging to something,’ or ‘to me,’ or ‘this’ or ‘that,’ or any other detaining name to be used ; in the language of nature all things are being created and destroyed, coming into being and passing into new forms ; nor can any name fix or detain them ; he who attempts to fix them is easily refuted. And this should be the way of speaking, not only of particulars but of

aggregates; such aggregates as are expressed in the word 'man,' or 'stone,' or any name of an animal or of a class. O Theaetetus, are not these speculations charming? And do you not like the taste of them?

Theact. I do not know what to say, Socrates; for, indeed, I cannot make out whether you are giving your own opinion or only wanting to draw me out.

Soc. You forget, my friend, that I neither know, nor pretend to know, anything of myself; I am barren, and attend on you as a midwife, and this is why I soothe you, and offer you one good thing after another, that you may taste them. And I hope that I may at last help to bring your own opinion into the light of day: when this has been accomplished, then we will determine whether what you have brought forth is only a wind-egg or a real and genuine creation. Therefore, keep up your spirits, and answer like a man what you think.

Theact. Ask me.

Soc. Is your opinion that nothing is but what becomes?—the good and the noble, as well as all the other things which we were mentioning?

Theact. When I hear you discoursing in this style, I think that there is a great deal in what you say, and I am very ready to assent.

Soc. Let us not leave the argument unfinished, then; as there still remains to be considered an objection which may be raised about dreams and diseases, in particular about madness, and the various illusions of hearing and sight, or of other senses. For you know that in all these cases the theory of the truth of perception appears to be unmistakably refuted, as in dreams and illusions we certainly have false perceptions; 158 and far from saying that everything is which appears, we should rather say that nothing is which appears.

Theact. Very true, Socrates.

Soc. But then, my boy, how can any one contend that knowledge is perception, or that things are to each one as they appear?

Theact. I am afraid to say, Socrates, that I have nothing to answer, because you rebuked me just now for saying so; but I certainly cannot undertake to argue that madmen or

dreamers think truly, when they imagine some of them that they are gods, and others that they can fly, and are flying in their sleep.

Soc. Do you know a question which is raised about these illusions, and especially about waking and sleeping?

Theaet. What question?

Soc. A question which I think that you must often have heard persons ask:—How can you determine whether at this moment we are sleeping, and all our thoughts are a dream; or whether we are awake, and talking to one another in the waking state?

Theaet. Indeed, Socrates, I do not know how you can prove that the one is any more true than the other, for all the phenomena correspond; and there is no difficulty in supposing that during all this discussion we have been talking to one another in a dream; and when we are actually dreaming and talk in our dreams, the resemblance of the two states is quite astonishing.

Soc. You see, then, that a doubt about the reality of sense is easily raised, since there may even be a doubt whether we are awake or in a dream. And as the time is equally divided in which we are asleep or awake, in either sphere of existence the soul contends that the thoughts which are present to our minds at the time are true; and during one half of our lives we affirm the truth of the one, and, during the other half, of the other; and are equally confident of both.

Theaet. Certainly.

Soc. And may not the same be said of madness and other disorders? the difference is only that the times are not equal.

Theaet. Certainly.

Soc. And are truth or falsehood to be determined by duration of time?

Theaet. That would be very ridiculous.

Soc. But can you certainly determine in any other way which of these opinions is true?

Theaet. I do not think that I can.

Soc. Listen, then, to a statement of the other side of the argument, which is made by the champions of appearance. They would say, as I should imagine—Can that which is

wholly other, have any similar quality or power? and observe, Theaetetus, that the word 'other' means not 'partially,' but 'wholly other.'

Theact. Certainly, that which is wholly other cannot have 159 any power or anything the same.

Soc. And must therefore be admitted to be unlike?

Theact. True.

Soc. If, then, anything happens to become like or unlike itself or another, that which becomes like we call the same—that which becomes unlike, other?

Theact. Certainly.

Soc. Were we not saying that there are agents many and infinite, and patients many and infinite?

Theact. Yes.

Soc. And also that different combinations will produce results which are not the same, but different?

Theact. Certainly.

Soc. Let us take you and me, or anything as an example:—there is Socrates in health, and Socrates sick—Are they like or unlike?

Theact. You mean to compare Socrates in health as a whole, and Socrates in sickness as a whole?

Soc. Exactly; that is my meaning.

Theact. I answer, they are unlike.

Soc. And if unlike, they are other?

Theact. Certainly.

Soc. And would you not say the same of Socrates sleeping and waking, or in any of the states which we were mentioning?

Theact. I should.

Soc. All agents have a different patient in Socrates, accordingly as he is well or ill.

Theact. Of course.

Soc. And I who am the patient, and that which is the agent, will produce something different in each of the two cases?

Theact. Certainly.

Soc. The wine which I drink when I am in health, appears sweet and pleasant to me?

Theact. True.

Soc. For, as has been already acknowledged, the patient

and agent meet together and produce sweetness and a perception of sweetness, which are in simultaneous motion, and the perception which comes from the patient makes the tongue percipient, and the quality of sweetness which arises out of and is moving about the wine, makes the wine both to be and to appear sweet to the healthy tongue.

Theact. Certainly; that has been already acknowledged.

Soc. But when I am sick, the wine really acts upon me as if I were another and a different person?

Theact. Yes.

Soc. The combination of the draught of wine, and the Socrates who is sick, produces quite another result; which is the sensation of bitterness in the tongue, and the motion and creation of bitterness in the wine, which becomes not bitterness but bitter; as I myself become not perception but percipient?

Theact. True.

Soc. There is no other object of which I shall ever have
160 the same perception, for another object would give another perception, and would make the percipient other and different; nor can that object which affects me meeting another subject, produce the same or become similar, for that too will produce another result from another subject, and become different.

Theact. True.

Soc. Neither can I for myself, have this sensation, nor the object by or for itself, this quality.

Theact. Certainly not.

Soc. When I perceive I must become percipient of something—there can be no such thing as perceiving and perceiving nothing; the quality of the object, whether sweet, bitter, or any other quality, must have relation to a percipient; there cannot be anything sweet which is sweet to no one.

Theact. Certainly not.

Soc. Then the inference is, that we [the agent and patient] are or become in relation to one another; there is a law which binds us one to the other, but not to any other existence, nor yet to ourselves; and therefore we can only be bound to one another, so that whether a person says that a thing

is or becomes, he must say that it is or becomes to or of or in relation to something else ; but he must not say or allow any one else to say that anything is or becomes absolutely :— such is our conclusion.

Theact. Very true, Socrates.

Soc. Then, if that which acts upon me has relation to me and to no other, I and no other am the percipient of it ?

Theact. Of course.

Soc. Then my perception is true to me, and inseparable from my own being ; and, as Protagoras says, to myself I am judge of what is and what is not to me.

Theact. I suppose so.

Soc. How then, if 'I never err, and if my mind never trips in the conception of being or becoming, can I fail of knowing that which I perceive ?

Theact. You cannot.

Soc. Then you were quite right in affirming that knowledge is only perception ; and the meaning turns out to be the same, whether with Homer and Heracleitus, and all that company, you say that all is motion and flux, or with the great sage Protagoras, that man is the measure of all things ; or with Theaetetus, that, granting these premises, perception is knowledge. Am I not right, Theaetetus, and is not this your newborn child, of which I have delivered you—What say you ?

Theact. I cannot but agree, Socrates.

Soc. Then this is the child, however he may turn out, which you and I have with difficulty brought into the world. And now that he is born, we must run round the hearth with him, and see whether he is worth rearing, or is only a wind-egg 161 and a sham. Is he to be reared in any case, and not exposed ? or will you bear to see an assault made upon him, and not get into a passion if I take away your first-born ?

Theod. Theaetetus will not be angry, for he is very good-natured. But I should like to know, Socrates, by heaven I should, whether all this is true or not ?

Soc. You are fond of an argument, Theodorus, and now you innocently fancy that I am a bag full of arguments, and can easily pull one out which will refute what has been said. But you do not see that in reality none of these arguments come

from me ; they all come from him who talks with me. I only know just enough to extract them from the wisdom of another, and to receive them in a spirit of fairness. And now I shall say nothing of myself, but shall endeavour to elicit something from our friend.

Theod. Do as you say, Socrates ; you are quite right.

Soc. Shall I tell you, Theodorus, what amazes me in your acquaintance Protagoras.

Theod. What is that ?

Soc. I am charmed with his doctrine, that what appears is to each one, but I wonder that he did not begin his great work on Truth with a declaration that a pig or a dog-faced baboon, or some other yet stranger monster which has sensation, is the measure of all things ; then, when we were reverencing him as a god, he might have condescended to inform us that he was no wiser than a tadpole, not to speak of his fellow men—would not this have produced an overpowering effect ? For if truth is only sensation, and one man's discernment is as good as another's, and no man has any superior right to determine whether the opinion of any other is true or false, but each man, as we have several times repeated, is to himself the sole judge, and everything that he judges is true and right, why should Protagoras be preferred to the place of wisdom and instruction, and deserve to be well paid, and we poor ignoramuses have to go to him, if each one is the measure of his own wisdom ? Must he not be talking 'ad captandum' in all this ? I say nothing of the ridiculous predicament in which my own midwifery and the whole art of dialectic is placed ; for the attempt to supervise or refute the notions or opinions of others would be a tedious and enormous piece of folly, if to each man they are equally right ; and this must be the case if Protagoras' Truth is the real truth, and the philosopher is not merely amusing himself by giving oracles out of the shrine of his book.

162 *Theod.* He was a friend of mine, Socrates, as you were saying, and therefore I cannot have him refuted by my lips, nor can I oppose you when I agree with you ; please, then, to take Theaetetus again ; he seemed to answer very nicely.

Soc. If you were to go into a Lacedaemonian palestra, Theo-

dorus, would you have a right to look on at the naked wrestlers, some of them making a poor figure, if you did not strip and give them an opportunity of judging of your own form?

Theod. Why not, Socrates, if they would allow me, as I think you will, in consideration of my age and stiffness; let more supple youth try a fall with you, and do not drag me into the gymnasium.

Soc. Your will is my will, Theodorus, as the proverbial philosophers say, and therefore I will return to the sage Theaetetus: Tell me, Theaetetus, in reference to what I was saying, are you not amazed at finding yourself all of a sudden raised to the level of the wisest of men, or indeed of the gods?—for you would assume the measure of Protagoras to apply to the gods as well as men?

Theact. Certainly I should, and I am amazed, as you say. At first hearing, I was quite satisfied with the doctrine, that whatever appears is to each one, but now the face of things has changed.

Soc. Why, my dear boy, you are young, and your ear is quickly caught and your mind influenced by popular arguments. Protagoras, or some one speaking on his behalf, will doubtless say in reply,—Good people, young and old, you meet and harangue, and bring in the gods, whose existence or non-existence I banish from writing and speech, or you talk about the reason of man being degraded to the level of the brutes, which is a telling argument with the multitude, but not one word of proof or demonstration do you offer. All is probability with you, and yet surely you and Theodorus had better reflect whether you are disposed to admit of probability and figures of speech in matters of such importance. He or any other ¹⁶³ mathematician who argued from probabilities and likelihoods in geometry, would not be worth an ace.

Theact. Neither you nor we, Socrates, would be satisfied with such arguments.

Soc. Then you and Theodorus mean to say that we must look at the matter in some other way?

Theact. Yes, in quite another way.

Soc. And the way will be to ask whether sensation is or is not the same as knowledge; for this was the real point of our

argument, and with a view to this we raised (did we not?) those many strange questions.

Theact. Certainly.

Soc. Shall we say that we know every thing which we see and hear? for example, shall we say that not having learned, we do not know the language of foreigners when they speak to us? or shall we say that hearing them, we also know what they are saying? Or again, if we see letters which we do not understand, shall we say that we do not see them? or shall we maintain that, seeing them, we must know them?

Theact. We shall say, Socrates, that we know what we actually see and hear of them—that is to say, we see and know the figure and colour of the letters, and we hear and know the elevation or depression of the sound of them; but we do not perceive by sight and hearing, or know, that which grammarians and interpreters teach about them.

Soc. Capital, Theaetetus; and about this there shall be no dispute, because I want you to grow; but there is another difficulty coming, which you will also have to repulse.

Theact. What is it?

Soc. Some one will say, Can a man who has ever known anything, and still has and preserves a memory of that which he knows, not know that which he remembers at the time when he remembers? I have, I fear, a tedious way of putting a simple question, which is only, whether a man who has learned, and remembers, can fail to know?

Theact. Impossible, Socrates; and an absurdity.

Soc. Am I dreaming, then? Think: is not seeing perceiving, and is not sight perception?

Theact. True.

Soc. And if our recent definition holds, every man knows that which he has seen?

Theact. Yes.

Soc. And you would admit that there is such a thing as memory?

Theact. Yes.

Soc. And is memory of something or of nothing?

Theact. Of something, surely.

Soc. Of things learned and perceived, that is?

Theact. Certainly.

Soc. Often a man remembers that which he has seen?

Theact. True.

Soc. And if he closed his eyes, would he forget?

Theact. Who, Socrates, would dare to say so?

164

Soc. But we must say so, if the previous argument is to be maintained.

Theact. What do you mean? I am not quite sure that I understand you, though I have a strong suspicion that you are right.

Soc. As thus: he who sees knows, as we say, that which he sees; for perception and sight and knowledge are admitted to be the same.

Theact. Certainly.

Soc. But he who saw, and has knowledge of that which he saw, remembers, when he closes his eyes, that which he no longer sees.

Theact. True.

Soc. And seeing is knowing, and therefore not seeing is not knowing?

Theact. Very true.

Soc. Then the inference is, that a man may have attained the knowledge of something, which he may remember and yet not know, because he does not see; and this has been affirmed by us to be an absurdity.

Theact. Most true.

Soc. Thus, then, the assertion that knowledge and perception are one, involves a manifest impossibility?

Theact. Yes.

Soc. Then they must be distinguished?

Theact. I suppose that they must.

Soc. Once more we shall have to begin, and ask 'What is knowledge?' and yet, Theaetetus, what are we going to do?

Theact. About what?

Soc. Like a good-for-nothing cock, without having won the victory, we walk away from the argument and crow.

Theact. How do you mean?

Soc. After the manner of disputers, we drew inferences from words, and were well pleased if in this way we could gain an

advantage. And, although professing not to be mere Eristics, but philosophers, I suspect that we have unconsciously fallen into the error of that ingenious class of persons.

Theact. I do not as yet understand you.

Soc. Then I will try to explain myself: just now we asked the question, whether a man who had learned and remembered could fail to know, and we showed that a person who had seen might remember when he had his eyes shut and could not see, and then he would at the same time remember and not know. But this was an impossibility, and so the Protagorean fable came to nought, and yours also, who maintained that knowledge is the same as perception.

Theact. True.

Soc. And yet, my friend, I rather suspect that the result would have been different if Protagoras, who was the father of the first of the two brats, had been alive; he would have had a great deal to say for himself. But he is dead, and we insult over his orphan child; and even the guardians whom he left, and of whom Theodorus is one, are unwilling to give any help, and therefore I suppose that I must take up his cause myself, and see justice done?

165 *Theod.* Not I, Socrates, but rather Callias, the son of Hipponicus, is guardian of his orphans. I was too soon diverted from the abstractions of dialectic to geometry. Nevertheless, I shall be grateful to you if you assist him.

Soc. Very good, Theodorus; you shall see how I will come to the rescue. If a person does not attend to the meaning of the terms which are commonly used in argument, he may be involved even in greater paradoxes than these. Shall I explain this matter to you or to Theaetetus?

Theod. To both of us, and let the younger answer; he will incur less disgrace if he is discomfited.

Soc. Then now let me ask the awful question, which is this:—Can a man know and also not know that which he knows?

Theod. How shall we answer, Theaetetus?

Theact. He cannot, I should say.

Soc. He can, if you maintain that seeing is knowing. When you are caught in a well, as they say, and the self-assured adversary closes one of your eyes with his hand, and asks

whether you can see his cloak with the eye which he has closed, how will you answer the inevitable man? —

Theact. I should answer, not with that eye but with the other.

Soc. Then you see and do not see the same thing at the same time.

Theact. Yes, in a certain sense.

Soc. That is not an answer to my question, he will reply; I do not ask 'in what sense you know,' but only whether you know that which you do not know. You have been proved to see that which you do not see; and you have already admitted that seeing is knowing, and that not seeing is not knowing: I leave you to draw the inference.

Theact. Yes; the inference is the contradictory of my assertion.

Soc. Yes, my marvel, and there may be yet worse things in store for you: an opponent will ask whether you can have a sharp and also a dull knowledge, and whether you can know near, but not at a distance, or know the same thing with more or less intensity, and so on without end. When you took up the position, that sense is knowledge, there was lying in wait a light-armed mercenary, who argues for pay; he will dart from his ambush, and make his assault upon hearing, smelling, and the other senses;—he will show you no mercy; and while you are lost in envy and admiration of his wisdom, he will have got you into his net, out of which you will not escape until you have come to an understanding about the sum which is to be paid for your release. Well, you say, and how will Protagoras reinforce his position? Shall I answer for him?

Theact. By all means.

Soc. After touching on the points which I have mentioned in defending him, he will close with us in disdain, and say:— 166
The worthy Socrates asked a little boy, whether the same man could remember and not know the same thing, and the boy said no, because he was frightened, and could not see what was coming, and then Socrates made a fool of me. The truth is, O slatternly Socrates, that when you ask questions about any assertion of mine, and the person asked is found tripping, if he has answered as I should have answered, then I am re-

futed, but if he answers what I should not have answered, he is refuted and not I. For do you suppose that any one would admit the memory of a feeling afterwards to be the same as the feeling was at the time? Certainly not. Or that he would hesitate to acknowledge that the same man may know and not know the same thing at the same time? Or, if he is afraid of making this admission, would he grant that one who has become unlike was the same as before he became unlike? Or would he admit that a man is one at all, and not rather many and infinite as the changes which take place in him? I speak by the card in order to avoid entanglements of words. But O, my good sir, he will say, come to the argument in a more generous spirit; and either show, if you can, that our sensations are not relative and individual, or, if you admit them to be so, prove that this does not involve the consequence that the appearance becomes, or, if you will have it so, is, to the individual only. As to your talk about pigs and baboons, you are yourself a pig, and you make my writings the sport of other swine, which is not right. For I declare that the truth is as I have written, and that each of us is a measure of existence and of non-existence. Yet one man may be a thousand times better than another in proportion as things are and appear different to him. And I am far from saying that wisdom and the wise man have no existence; but I say that the wise man is he who makes the evils which appear and are to a man, into goods which are and appear to him. And I would beg you not to press my words in the letter, but to take the meaning of them as I will explain them. Remember how I said before, that to the sick man his food appears to be and is bitter, and to the man in health the opposite of bitter. Now I cannot conceive that one of these men can be or ought to be made wiser than the
 167 other: nor can you assert that the sick man because he has one impression is foolish, and the healthy man because he has another is wise; but the one state requires to be changed into the other, the worse into the better. As in education, a change of state has to be effected, and the sophist accomplishes by words the change which the physician works by the aid of drugs. Not that any one ever made another think truly, who previously thought falsely. For no one can think

what is not, or think anything different from that which he feels, and which is always true. But as the inferior habit of mind has thoughts of a kindred nature, so I conceive that a good mind causes men to have good thoughts; and these which the inexperienced call true, I maintain to be only better, and not truer than others. And, O my dear Socrates, I do not call wise men tadpoles: far otherwise; I say that they are the physicians of the human body, and the husbandmen of plants—for the husbandmen also take away the evil and disordered sensations of plants, and infuse into them good and healthy sensations and not merely true ones¹; and the wise and good rhetoricians make the good instead of the evil to seem just to states; for whatever appears to be just and fair to a state, while sanctioned by a state, is just and fair to it; but the teacher of wisdom causes the good to take the place of the evil, both in appearance and in reality. And the sophist who is able to train his pupils in this spirit is a wise man, and deserves to be well paid by them. And in this way one man is wiser than another; and yet no one thinks falsely, and you, whether you will or not, must endure to be a measure. On these points the argument stands firm, which you, Socrates, may, if you please, overthrow by an opposite argument, or if you like you may put questions to me, (no intelligent person will object to the method of questions,—quite the reverse.) But I must beg you to put fair questions: for there is great inconsistency in saying that you have a zeal for virtue, and then always behaving unfairly in argument. The unfairness of which I complain is that you never distinguish between mere disputation and dialectic: the disputer may trip up his opponent as often as he likes, and make fun; but the dialectician will be in earnest, and only correct his adversary when necessary, telling him the errors into which he has fallen through his own fault, or that of the company which he has previously kept. If you do so, your adversary will lay the blame of his own 168 confusion and perplexity on himself, and not on you. He will follow and love you, and will hate himself, and escape from himself into philosophy, in order that he may become different

¹ Reading *ἀληθεῖς*, but?

from what he was. But the other mode of arguing, which is practised by the many, will have just the opposite effect upon him; and as he grows older, instead of turning philosopher, he will learn to hate philosophy. I would recommend you, therefore, as I said before, not to encourage yourself in this polemical and controversial temper, but to find out, in a friendly and congenial spirit, what we really mean when we say that all things are in motion, and that what appears is to individuals and states. In this way you will see whether knowledge and sensation are the same or different, but not by arguing, as you are doing, from the customary use of names and words, which the vulgar pervert in all manner of ways, causing infinite perplexity to one another. Such, Theodorus, is the very slight help which I am able to offer to your old friend¹; had he been living, he would have helped himself in a far grander style.

Theod. You are jesting, Socrates; indeed, your defence of him has been most valorous.

Soc. Thank you, friend; and I hope that you observed Protagoras bidding us be serious, as the text, 'man is the measure of all things,' was a solemn one; and he reproached us with making a boy the medium of discourse, and said that the boy's timidity was made to tell against his argument; he also complained that we made a joke of him.

Theod. How could I fail to observe all that, Socrates?

Soc. Well, and shall we do as he says?

Theod. By all means.

Soc. But if his wishes are to be regarded, you and I must take up his argument in good earnest², and ask and answer one another, for you see that the rest of us are all boys. In no other way can we escape the imputation, that we are making fun of him, and examining his thesis with boys.

Theod. Well, and is not Theaetetus better able to follow a philosophical enquiry than a great many men who have long beards?

Soc. Yes, Theodorus, but not better than you; and therefore please not to imagine that I am to defend by every means in

¹ Reading προσήκεσα. ² Reading αὐτοῦ τῶν λόγων.

my power your departed friend; and that you are to defend nothing and nobody. At any rate, my good man, do not sheer 169 off until we know whether you are the true measure of diagrams, or whether all men are equally measures and sufficient for themselves in astronomy and geometry, and other branches of knowledge in which you are supposed to excel them.

Theod. He who is sitting by you, Socrates, will not easily avoid being drawn into an argument; and I am afraid that when I said that you would excuse me, and not, like the Lacedaemonians, compel me to strip and fight, I said a stupid thing—I should rather compare you to Scirrhon, who threw travellers from the rocks; for the Lacedaemonian rule is ‘strip or depart,’ but you seem to go about your work more after the fashion of Antaeus: you will not allow any one who approaches you to depart until you have stripped him, and he has tried a fall with you in argument.

Soc. I see, Theodorus, that you perfectly apprehend the nature of my complaint; but I am even more pugnacious than the giants of old, for I have met with no end of heroes; many a Heracles, many a Theseus, mighty in words, has broken my head; nevertheless I am always at this rough exercise, which inspires me like a passion. Please, then, to try a fall with me, whereby you will do me good as well as yourself.

Theod. I consent; lead me whither you will, for I know that you are like destiny; nor can any man escape from any argument which you may weave for him; but I am not disposed to go further than you suggest.

Soc. Once will be enough; and now take particular care that we do not again unwittingly expose ourselves to the reproach of talking childishly.

Theod. I will try to avoid that error, as far as I am able.

Soc. In the first place, let us return to our old objection, and see whether we were right in blaming and taking offence at Protagoras on the ground that he assumed all to be equal and sufficient in wisdom; although he admitted that there was a better and worse, and that in respect of this, some who as he said were the wise excelled others.

Theod. Very true.

Soc. Had Protagoras been living and answered for himself,

instead of our answering for him, there would have been no need of our reviewing or reinforcing the argument. But as he is not here, and some one may accuse us of speaking without authority on his behalf, had we not better come to a clearer agreement on this head, as a great deal may be at stake?

Theod. That is true.

170 *Soc.* Then let us obtain from his own statement, in the fewest words possible, the basis of agreement.

Theod. In what way?

Soc. In this way:—His words are, ‘to whom a thing seems, that which seems is.’

Theod. Yes, that is what he says.

Soc. And are not we, Protagoras, uttering the opinion of man, or rather of all mankind, when we say that every man thinks himself wiser than other men in some things, and their inferior in others? And in the hour of danger, when they are in perils of war, or of the sea, or of sickness, do they not look up to their commanders as gods, and expect salvation from them, only because they excel them in knowledge? Is not the world full of men in their several employments, who are looking for teachers and rulers of themselves and of the animals? and there are plenty who think that they are able to teach and able to rule. Now, in all this is implied that ignorance and wisdom exist among them, at least in their own opinion.

Theod. Certainly.

Soc. And wisdom is assumed by them to be true thought, and ignorance to be false opinion.

Theod. Exactly.

Soc. How then, Protagoras, would you have us treat the argument? Shall we say that the opinions of men are always true, or sometimes true and sometimes false? In either case, the result is the same, and their opinions are not always true, but sometimes true and sometimes false. For tell me, Theodorus, do you suppose that any friend of Protagoras, or you yourself, would contend that no one deems another ignorant or mistaken in his opinion?

Theod. The thing is incredible, Socrates.

Soc. And yet that absurdity is necessarily involved in the thesis which declares man to be the measure of all things.

Theod. How so?

Soc. Why, suppose that you determine in your own mind something to be true, and declare your opinion to me; let us assume, as he argues, that this is true to you. Now if so you must either say that the rest of us are not the judges of this opinion or judgment of yours, or that we judge you always to have a true opinion? But are there not thousands upon thousands who, whenever you form a judgment, take up arms and have an opposite judgment and opinion, deeming that you judge falsely?

Theod. Yes, indeed, Socrates, thousands and tens of thousands, as Homer says, who give me a world of trouble.

Soc. And will you assert, in that case, that what you say is true to you and false to the ten thousand others.

Theod. No other inference is possible.

Soc. And what is to be said of Protagoras himself? If neither he nor the multitude thought, as indeed they do not think, that man is the measure of all things, then the truth of which Protagoras wrote would be true to no one. But if ¹⁷¹ you suppose that he himself thought this, and that the multitude does not agree with him, you must begin by allowing that in whatever proportion the many are more than one, in that proportion his truth is more untrue than true.

Theod. That would follow if the truth is supposed to vary with individual opinion.

Soc. And the best of the joke is, that he acknowledges the truth of their opinion who believe his opinion to be false; for in admitting that the opinions of all men are true, he in effect grants that the opinion of his opponents is true.

Theod. Certainly.

Soc. And does he not allow that his own opinion is false, if he admits that the opinion of those who think him false is true?

Theod. Of course.

Soc. But the other side do not admit that they speak falsely.

Theod. They do not.

Soc. And he, as may be inferred from his writings, agrees that this opinion is also true.

Theod. Clearly.

Soc. Then all mankind, including Protagoras, will contend, or rather, I should say that he will allow, when he concedes that his adversary has a true opinion—Protagoras, I say, will himself allow that neither a dog nor any ordinary man is the measure of anything which he has not learned—am I not right?

Theod. Yes.

Soc. And the truth of Protagoras being doubted by all, will be true neither to himself nor to any one else?

Theod. I think, Socrates, that we are running my old friend too hard.

Soc. But I do not know that we are going beyond the truth. Doubtless, as he is older, he may be expected to be wiser than we are. And if he could only just get his head out of the world below, he would have overthrown both of us again and again, me for talking nonsense and you for assenting to me, and have been off and underground in no time. But as he is not within call, we must make the best use of our own faculties, such as they are, and say honestly what we think; and one thing which every man thinks is, that there are great differences in the understandings of men.

Theod. In that opinion I quite agree.

Soc. And is there not most likely to be firm ground in the distinction which we drew on behalf of Protagoras, viz. that immediate sensations, such as hot, dry, sweet, are in general only such as they appear, but that if judgments are allowed to differ at all, this certainty of sensation cannot be extended to the knowledge of health or disease, which every woman, child, or living creature is by no means able to cure, neither have they any perception of what is wholesome for themselves; and that in this, if in anything, the difference in different men will appear?

Theod. I quite agree.

172 *Soc.* Again, in politics, while affirming that right and wrong, honourable and disgraceful, holy and unholy, are in reality to each state such as the state thinks and makes lawful, and that in determining these matters no individual or state is wiser than another, still the followers of Protagoras will not deny that in determining the sphere of expediency one counsellor

is better than another, and one state wiser than another—they will scarcely venture to maintain, that what a city deems expedient will always be really expedient. But in the other case, I mean when they speak of justice and injustice, piety and impiety, they are confident that these have no natural or essential basis—the truth is that which is agreed on at the time of the agreement, and as long as the agreement lasts; and this is the philosophy of many who do not altogether go along with Protagoras. Here arises a new question, Theodorus, which is more serious than the last.

Theod. Well, Socrates, we have plenty of leisure.

Soc. That is true, and your remark recalls to my mind an observation which I have often made, that those who have passed their days in the pursuit of philosophy are ridiculously at fault when they have to appear and plead in court. How natural is this!

Theod. What do you mean?

Soc. I mean to say, that those who have been trained in philosophy and liberal pursuits compared with those who from their youth upwards have been knocking about in the courts and such like places, are in their way of life as freemen are to slaves.

Theod. In what is the difference seen?

Soc. In the leisure spoken of by you, which a freeman can always command: he has his talk out in peace, and, like ourselves, wanders at will from one subject to another, and from a second to a third, if his fancy prefers a new one, caring not whether his words are many or few; his only aim is to attain the truth. But the lawyer is always in a hurry; there is the water of the clepsydra driving him on, and not allowing him to expatiate at will: and there is his adversary standing over him, enforcing his rights; the affidavit, which in their phraseology is termed the brief, is recited: and from this he must not deviate. He is a servant, and is disputing about a fellow-servant before his master, who is seated, and has the cause in his hands; the trial is never about some indifferent matter, but always concerns himself; and often the race is for his life. The consequence has been, that he has become keen and shrewd; he has learned how to flatter his master in word and indulge him

in deed ; but his soul is small and unrighteous. His slavish condition has deprived him of growth and uprightness and independence ; dangers and fears, which were too much for his truth and honesty, came upon him in early years, when the tenderness of youth was unequal to them, and he has been driven into crooked ways ; from the first he has practised deception and retaliation, and has become stunted and warped. And so he has passed out of youth into manhood, having no soundness in him ; and is now, as he thinks, a master in wisdom. Such is the lawyer, Theodorus. Will you have the companion picture of the philosopher, who is of our brotherhood ; or shall we return to the argument ? Do not let us abuse the freedom of digression which we claim.

Theod. Nay, Socrates, let us finish what we are about ; for you truly said that we belong to a brotherhood which is free, and are not the servants of the argument ; but the argument is our servant, and must wait our leisure. Who is our judge ? Or where is the spectator having any right to censure or control us, as he might the poets ?

Soc. Then, as this is your wish, I will describe the leaders ; for there is no use in talking about the inferior sort. In the first place, the lords of philosophy have never, from their youth upwards, known their way to the Agora, or the dicastery, or the council, or any other political assembly ; they neither see nor hear the laws or votes of the state written or recited ; the eagerness of political societies in the attainment of offices—clubs, and banquets, and revels, and singing-maidens,—do not enter even into their dreams. Whether any event has turned out well or ill in the city, what disgrace may have descended to any one from his ancestors, male or female, are matters of which the philosopher no more knows than he can tell, as they say, how many pints are contained in the ocean. Neither is he conscious of his ignorance. For he does not hold aloof in order that he may gain a reputation ; but the truth is, that the outer form of him only is in the city : his mind, disdainful of the littlenesses and nothingnesses of human things, is ‘flying all abroad’ as Pindar says, measuring with line and rule the things which are under and on the earth and above the heaven, interrogating the

whole nature of each and all, but not condescending to anything 174
which is within reach.

Theod. What do you mean, Socrates?

Soc. I will illustrate my meaning, Theodorus, by the jest which the clever witty Thracian handmaid made about Thales, when he fell into a well as he was looking up at the stars. She said, that he was so eager to know what was going on in heaven, that he could not see what was before his feet. This is a jest which is equally applicable to all philosophers. For the philosopher is wholly unacquainted with his next door neighbour; he is ignorant, not only of what he is doing, but he hardly knows whether he is a man or an animal; he is searching into the essence of man, and busy in enquiring what belongs to such a nature to do or suffer different from any other;—I think that you understand me, Theodorus?

Theod. I do, and what you say is true.

Soc. And thus, my friend, on every occasion, private as well as public, as I said at first, when he appears in a law-court, or in any place in which he has to speak of things which are at his feet and before his eyes, he is the jest, not only of Thracian handmaids but of the general herd, tumbling into wells and every sort of disaster through his inexperience. His awkwardness is fearful, and gives the impression of imbecility. When he is reviled, he has nothing personal to say in answer to the civilities of his adversaries, for he knows no scandals of any one, and they do not interest him; and therefore he is laughed at for his sheepishness; and when others are being praised and glorified, in the simplicity of his heart he cannot help laughing openly and unfeignedly; and this again makes him look like a fool. When he hears a tyrant or king eulogized, he fancies that he is listening to the praises of some keeper of cattle—a swineherd, or shepherd, or cowherd, who is congratulated on the quantity of milk which he squeezes from them; and he remarks that the creature whom they tend, and out of whom they squeeze the wealth, is of a less tractable and more insidious nature. Then, again, he observes that the great man is of necessity as ill-mannered and uneducated as any shepherd—for he has no leisure, and he is surrounded by a wall, which is his mountain-pen. Hearing of enormous landed proprietors of ten

175 thousand acres and more, our philosopher deems this to be a trifle, because he has been accustomed to think of the whole earth; and when they sing the praises of family, and say that some one is a gentleman because he has had seven generations of wealthy ancestors, he thinks that their sentiments only betray a dull and narrow vision in those who utter them, and who are not educated enough to look at the whole, nor to consider that every man has had thousands and thousands of progenitors, and among them have been rich and poor, kings and slaves, Hellenes and barbarians, many times over. And when people pride themselves on having a pedigree of twenty-five ancestors, which goes back to Heracles, the son of Amphitryon, he cannot understand their poverty of ideas. Why are they unable to calculate that Amphitryon had a twenty-fifth ancestor, who might have been anybody, and was such as fortune made him, and he had a fiftieth, and so on? He amuses himself with the notion that they cannot count, and thinks that a little arithmetic would have got rid of their senseless vanity. Now, in all these cases our philosopher is derided by the vulgar, partly because he is thought to despise them, and also because he is ignorant of what is before him, and always at a loss.

Theod. That is very true, Socrates.

Soc. But, O my friend, when he draws the other into upper air, and gets him out of his pleas and rejoinders into the contemplation of justice and injustice in their own nature and in their difference from one another and from all other things; or from the commonplaces about the happiness of kings to the consideration of government, and of human happiness and misery in general—what they are, and how a man is to attain the one and avoid the other—when that narrow, keen, little legal mind is called to account about all this, he gives the philosopher his revenge; for dizzied by the height at which he is hanging, whence he looks into space, which is a strange experience to him, he being dismayed, and lost, and stammering out broken words, is laughed at, not by Thracian handmaidens or any other uneducated persons, for they have no eye for the situation, but by every man who has not been brought up as a slave. Such are the two characters, Theodorus, the one of the freeman called by you

useless when he has to perform some menial office, such as packing up a bag, or flavouring a sauce or fawning speech; the other, of the man who is able to do all this kind of service smartly and neatly, but knows not how to wear his cloak like 176 a gentleman; still less with the music of discourse can he hymn the true life which is lived by immortals or men blessed of heaven.

Theod. If you could only persuade everybody, Socrates, as you do me, of the truth of your words, there would be more peace and fewer evils among men.

Soc. Evils, Theodorus, can never pass away; for there must always remain something which is antagonist to good. Having no place among the gods in heaven, of necessity they hover around the earthly nature, and this mortal sphere. Wherefore we ought to fly away from earth to heaven as quickly as we can; and to fly away is to become like God, as far as this is possible; and to become like him, is to become holy and just and wise. But, O my friend, you cannot easily convince mankind that they should pursue virtue or avoid vice, not in order that a man may seem to be good, which is the reason given by the world, and in my judgment is only a repetition of an old wives' fable. Whereas, the truth is that God is never unrighteous at all—he is perfect righteousness; and he of us who is the most righteous is most like him. Herein is seen the true cleverness of a man, and also his nothingness and want of manhood. For to know this is true wisdom and virtue, and ignorance of this is too plainly folly and vice. All other kinds of wisdom or cleverness, which seem only, such as the wisdom of politicians, or the wisdom of the arts, are coarse and vulgar. The unrighteous man, or the sayer and doer of unholy things, had far better not yield to the illusion that his roguery is clever; for men glory in their shame—they fancy that they hear others saying of them, 'these are not mere good-for-nothing persons, burdens of the earth, but such as men should be who mean to dwell safely in a state.' Let us tell them that they are all the more truly what they do not know that they are; for they do not know the penalty of injustice, which above all things they ought to know—not stripes and death, as they suppose, a philosopher, who may be excused for appearing simple and

which evil-doers often escape, but a penalty which cannot be escaped.

Theod. What is that?

Soc. There are two patterns eternally set before them; the one blessed and divine, the other godless and wretched: and they do not see, in their utter folly and infatuation, that they are growing like the one and unlike the other, by reason of
177 their evil deeds; and the penalty is, that they lead a life answering to the pattern which they resemble. And if we tell them, that unless they depart from their cunning, the place of innocence will not receive them after death; and that here on earth, they will live ever in the likeness of their own evil selves, and with evil friends—when they hear this they in their superior cunning will seem to be listening to fools.

Theod. Very true, Socrates.

Soc. Too true, my friend, as I well know; there is, however, one peculiarity in their case: when they begin to reason in private about their dislike of philosophy, if they have the courage to hear the argument out, and do not run away, they grow at last strangely discontented with themselves; their rhetoric fades away, and they become helpless as children. These however are digressions from which we must now desist, or they will overflow, and drown the original argument; to which, if you please, we will now return.

Theod. For my part, Socrates, I would rather have the digressions, for at my age I find them easier to follow; but if you wish, let us go back to the argument.

Soc. Had we not reached the point at which the partisans of the perpetual flux, who say that things are as they seem to each one, were confidently maintaining that the ordinances which the state commanded and thought just, were just to the state which imposed them, while they were in force; this was especially asserted of justice; but as to the good, no one had ever yet had the hardihood to contend that the ordinances which the state thought and enacted to be good, were really good while they lasted;—he who said this, would only be playing with the name ‘good,’ and would not really touch our question?

Theod. True.

Soc. And I would not have him speak of the name, but of the thing which is intended by the name.

Theod. Right.

Soc. Whatever name he gives to the thing, he would allow that the good or expedient is the aim of legislation, and that the state as far as possible imposes all laws with a view to the greatest expediency; can legislation have any other aim?

Theod. Certainly not.

178

Soc. But is the aim attained always? do not mistakes often happen?

Theod. Yes, I think that there are mistakes.

Soc. The possibility of error will be more distinctly recognised, if we put the question in reference to the whole class under which the good or expedient falls. That whole class has to do with the future, and laws are passed under the idea that they will be useful in after time; which, in other words, is the future.

Theod. Very true.

Soc. Suppose now, that we ask Protagoras, or one of his disciples, a question:—O, Protagoras, we will say to him, Man, as you declare, is the measure of all things—white, heavy, light: there is nothing of this sort of which he is not the judge; for he has the criterion of them in himself, and when he thinks what he feels, he thinks what is and is true to himself. Is it not so?

Theod. Yes.

Soc. And do you extend your doctrine, Protagoras (as we shall further say) to the future as well as to the present; and has he the criterion not only of what is but of what will be, and do things always happen to him as he expected? For example, take the case of heat:—When a private person thinks that he is going to have a fever, and that this kind of heat is coming on, and another person, who is a physician, thinks the contrary, whose opinion is likely to prove right? Or are they both right?—he will have a heat or fever in his own judgment, and not have a fever in the physician's judgment?

Theod. That would be ludicrous.

Soc. And the vinegrower, if I am not mistaken, is likely to be a better prophet of the sweetness or dryness of the vintage which is not yet gathered than the harp-player?

Theod. Certainly.

Soc. And the musician will be a better judge than the gymnastic-master of the excellence of the music, which the gymnastic-master will himself approve, when he hears the performance?

Theod. Of course.

Soc. And the cook will be a better judge than the guest, who is not a cook, of the pleasure to be derived from the dinner which is in preparation; for of present or past pleasure we are not now arguing, but of the pleasure which will seem to be and will be to each of us in the future, will every one be to himself the best judge?—nay, would not you, Protagoras, be a better judge of the topics which are likely to produce an effect upon us in a court than any private individual?

Theod. Certainly, Socrates, he used to profess in the strongest manner that he was the superior of all men in this respect.

Soc. To be sure, friend: who would have paid a large sum 179 for the privilege of talking to him, if he had really¹ persuaded his visitors that neither a prophet nor any other man was better able to judge what will be and seem to be in the future than every one for himself?

Theod. Who indeed?

Soc. And legislation and expediency are all concerned with the future; and every one will admit that states, in passing laws, must often fail of their highest interests?

Theod. Quite true.

Soc. Then we may fairly argue against your master, that he must admit one man to be wiser than another, and that the wiser is a measure: but I, who know nothing, am not at all obliged to accept the honour which the advocate of Protagoras was just now forcing upon me, whether I would or not, of being a measure of anything.

Theod. That is the way, Socrates, in which his argument is best refuted; although he is also caught when he ascribes truth to the opinions of others, who give the lie direct to his own opinion.

Soc. There are many ways, Theodorus, in which the doctrine

that the opinion of every man is true may be refuted; but there is more difficulty in proving that momentary states of feeling, out of which arise sensations and opinions in accordance with them, are also untrue. And perhaps I may be talking nonsense about them; for very likely they are really unassailable, and those who say that there is evidence of them, and that they are matters of knowledge, may probably be right; in which case our friend Theaetetus has not been far from the mark in identifying perception and knowledge. Here, then, let us approach nearer, as the advocate of Protagoras desires, and give the truth of the universal flux a ring: is the theory sound or not? at any rate, no small war is raging about this way, and there are many combatants.

Theod. No small war, indeed, for in Ionia the sect makes rapid strides; the disciples of Heraclitus are most energetic upholders of the doctrine.

Soc. Then we are the more bound, my dear Theodorus, to examine the question from the beginning as set forth by themselves.

Theod. Certainly we are. About these speculations of Heraclitus, which, as you say, are as old as Homer, or even older still, the Ephesians themselves, who profess to know them, are downright mad, and you cannot talk with them about them. For, in accordance with their text-books, they are always in motion; but as for dwelling upon an argument or a question, and quietly asking and answering in turn, they are absolutely 180 incapable of doing so; or rather, they have no particle of rest in them, and they are in a state of negation of rest which no words can express. If you ask any of them a question, he will produce, as from a quiver, sayings brief and dark, and shoot them at you; and if you enquire the reason of what he has said, you will be hit by some other new-fangled word, and will make no way with any of them, nor they with one another; for their great care is, not to allow of any settled principle either in their arguments or in their minds, conceiving, as I imagine, that any such principle would be stationary; and they are at war with the stationary, which they would like, if they could, to banish utterly.

Soc. I suppose, Theodorus, that you have only seen them when they were fighting and have never stayed with them in

time of peace, for they are no friends of yours ; and their peace doctrines are only communicated by them at leisure, as I imagine, to those disciples of theirs whom they want to make like themselves.

Theod. Disciples! my good sir, they have none ; men of this sort are not one another's disciples, but they grow up anyhow, and get their inspiration anywhere, each of them saying of his neighbour that he knows nothing. From these men, then, as I was going to remark, you will never get a reason, whether with their will or without their will ; we must take the question out of their hands, and make the analysis ourselves, as if we were doing a geometrical problem.

Soc. Quite right too ; but as touching the said problem, have we not heard from the ancients, who concealed their wisdom from the many in poetical figures, that Oceanus and Tethys, the origin of all things, are streams, and that nothing is at rest ; and now the moderns, in their superior wisdom, have declared the same openly, that the cobbler too may hear and learn of them, and no longer foolishly imagine that some things are at rest and others in motion—having learned that all is motion, he will duly honour his teachers? I had almost forgotten the opposite doctrine, Theodorus,

‘ That is alone unmoved which is named the universe.’

This is the language of Parmenides, Melissus, and their followers, who stoutly maintain that all being is one and self-contained, and has no place in which to move. What shall we do, friend, with all these people ; for, advancing step by step, we have imperceptibly got between the combatants, and, unless we can
 181 protect our retreat, we shall pay the penalty of our rashness—like the players in the palaestra who are caught upon the line, and are dragged different ways by the two parties. Therefore I think that we had better begin by considering those whom we first accosted, ‘ the river-gods,’ and, if we find any truth in them, we will pull ourselves over to their side, and try to get away from the others. But if the partisans of ‘ the whole ’ appear to speak more truly, we will fly off from the party which would move the immovable, to them. And if we find that neither of them have anything reasonable to say, we shall be in a ridiculous

position, having ourselves to assert our own poor opinion and reject that of ancient and famous men. O Theodorus, do you think that there is any use in proceeding when the danger is so great?

Theod. Nay, Socrates, not to examine thoroughly what the two parties have to say would be quite intolerable.

Soc. Then examine we must, if you will insist. The first question which, I fancy, has to be determined, is about motion. What do they mean when they say that all things are in motion? Is there only one kind of motion, or, as I incline to think, two? I should like to have your opinion upon the point, that I may err, if I am to err, in your company; tell me, then, when a thing changes from one place to another, or goes round in the same place, is not that motion?

Theod. Yes.

Soc. Here then we have one kind of motion. But when a thing grows old, or becomes black from being white, or hard from being soft, or undergoes any other change, while remaining in the same place, may not that be properly described as motion of another kind?

Theod. I think so.

Soc. Of course, it must be so. I say, then, that of motion there are these two kinds, 'change,' and 'motion in place.'

Theod. You are right.

Soc. And now, having made this distinction, let us address ourselves to those who say that all is motion, and ask them whether all things according to them have the two kinds of motion, and are changed as well as move in place, or is one thing moved in both ways, and another only in one way?

Theod. Indeed, I do not know what to answer; but I think they would say 'that all things are moved in both ways.'

Soc. Yes, my friend; for, if not, then manifestly the same things would be in motion and at rest, and there would be no more truth in saying that all things are in motion, than that all things are at rest.

Theod. To be sure.

Soc. And if they are to be in motion, and nothing is to be devoid of motion, they must suppose that all things have always every sort of motion?

Theod. Most true.

Soc. Consider a further point: did we not understand them to explain the generation of heat, whiteness, or anything else, in some such manner as this:—were they not saying that each of them is moving between the agent and the patient, together with a perception, and the patient then becomes percipient but not perception, and the agent a quale but not a quality? I suspect that quality may appear a strange term to you, and that you do not understand the word when thus generalised. Then I will take particular cases: I mean to say that the producing power or agent becomes neither heat nor whiteness, but hot and white, and the like of other things. For I must repeat what I said before, that neither the agent nor patient have any absolute existence, but when they come together and generate sensations and sensible things, the one becomes of a certain quality, and the other percipient. You remember?

Theod. Of course.

Soc. We may leave the rest of their theory unexamined, but we must not forget to ask them the only question with which we are concerned: Are all things in motion and flux?

Theod. Yes, they will reply.

Soc. And they are moved in both those ways which we distinguished; that is to say, they move and are also changed?

Theod. Of course, if the motion is to be perfect.

Soc. If they only moved, and were not changed, we should be able to say what are the kinds of things which are in motion and flux?

Theod. Exactly.

Soc. But now, since not even white continues to flow white, and the very whiteness is a flux or change which is passing into another colour, and will not remain white, can the name of any colour be rightly used at all?

Theod. How is that possible, Socrates, either in the case of this or of any other quality—if while we are using the word the object is escaping in the flux?

Soc. And what would you say of perceptions, such as sight and hearing, or any other kind of perception? Is there any stopping in the act of seeing and hearing?

Theod. Certainly not, if all things are in motion.

Soc. Then we must not speak of seeing any more than of not seeing, nor of any other perception more than of any non-perception, if all things have any and every kind of motion?

Theod. Certainly not.

Soc. Yet science is perception, as Theaetetus and I were saying.

Theod. That was said.

Soc. Then when we were asked what is knowledge, we no more answered what is knowledge than what is not knowledge?

Theod. I suppose not.

Soc. Here, then, is a fine result: we corrected our first answer 183 in our eagerness to prove that nothing is at rest. But if nothing is at rest, every answer upon whatever subject is equally right: you may say that a thing is or is not this; or, if you prefer, 'becomes' this; and if we say 'becomes,' we shall not then hamper them with words expressive of rest.

Theod. You are right.

Soc. Yes, Theodorus, except in saying 'this' and 'not this.' But you ought not to use the word 'this' or 'not this,' for there is no motion in 'this' or 'not this'; the maintainers of the doctrine have as yet no words to express themselves, and must get a new language. I know of no word that will suit them, except perhaps 'in no way,' which is perfectly indefinite.

Theod. Yes, that is a manner of speaking in which they will be quite at home.

Soc. And so, Theodorus, we have got rid of your friend without assenting to his doctrine, that every man is the measure of all things—a wise man only is a measure; neither can we allow that knowledge is perception, certainly not on the hypothesis of a perpetual flux, unless our friend Theaetetus is able to convince us.

Theod. Very good, Socrates; and now that the argument about the doctrine of Protagoras has been completed, I am absolved from answering, according to the agreement.

Theaet. Not, Theodorus, until you and Socrates have discussed the doctrine of those who say that all things are at rest, as you were proposing.

Theod. You, Theaetetus, who are a young rogue, must not

instigate your elders to a breach of faith, but prepare yourself to answer Socrates in the remainder of the argument.

Theact. Yes, if he wishes; but I would rather have heard about the doctrine of rest.

Theod. Invite Socrates to an argument—invite horsemen to the open plain; do but ask him, and he will answer.

Soc. Nevertheless, Theodorus, I am afraid that I shall not be able to comply with the request of Theaetetus.

Theod. Not comply! for what reason?

Soc. My reason is that I have a kind of reverence; not so much for Melissus and the others, who say that ‘all is one and at rest,’ as for the great leader himself, Parmenides, venerable and awful, as in Homeric language he may be called;—him I should be ashamed to approach in a spirit unworthy of him. I met him when he was an old man, and I was a mere youth, and he appeared to me to have a glorious depth of mind. And I am afraid that we may not understand his language, and may fall short even more of his meaning; and I fear above all that the nature of knowledge, which is the main subject of our discussion, may be thrust out of sight by the unbidden guests who will come pouring in upon our feast of discourse, if they are permitted—besides, the question which we are now stirring is of immense extent, and will be treated unfairly if only considered by the way; or if treated adequately and at length, will put into the shade the other question of knowledge. Neither the one nor the other can be allowed; but I must try by my art of midwifery to deliver Theaetetus of his conceptions about knowledge.

Theact. Very well; do so if you will.

Soc. Then now, Theaetetus, take another view of the subject: you answered that knowledge is perception?

Theact. I did.

Soc. And if any one were to ask you: With what does a man see black and white colours? and with what does he hear sharp and flat sounds?—you would say, if I am not mistaken, ‘With the eyes and with the ears.’

Theact. I should.

Soc. The free use of words and phrases, rather than minute precision, is generally characteristic of a liberal education, and

the opposite is pedantic; but sometimes precision is necessary, and I believe that the answer which you have just given is open to the charge of incorrectness; for which is more correct, to say that we see or hear with the eyes and with the ears, or through the eyes and through the ears.

Theaet. I should say, Socrates, 'through,' rather than 'with.'

Soc. Yes, my boy; for no one can suppose that we are Trojan horses, in whom are perched several unconnected senses, not meeting in some one nature, of which they are the instruments, whether you term this soul or not, with which through these we perceive objects of sense.

Theaet. I agree with you in that opinion.

Soc. The reason why I am thus precise is, because I want to know whether we perceive black and white through the eyes indeed, but with one and the same part of ourselves, and again, other qualities through other organs, and whether, if asked the question, you would refer all such perceptions to the body. Perhaps, however, I had better allow you to answer for yourself. Tell me, then, are not the organs through which you perceive warm and hard and light and sweet, organs of the body?

Theaet. Of the body, certainly.

Soc. And you would admit that what you perceive through ¹⁸⁵ one faculty you cannot perceive through another; the objects of hearing, for example, cannot be perceived through sight, or the objects of sight through hearing?

Theaet. Of course not.

Soc. If you have any thought about both of them, this common perception cannot come to you, either through the one or the other organ?

Theaet. It cannot.

Soc. How about sounds and colours: in the first place you would admit that they both exist?

Theaet. Yes.

Soc. And that either of them is different from the other, and the same with itself?

Theaet. Certainly.

Soc. And that both are two and each of them one?

Theaet. Yes.

Soc. You can further observe whether they are like or unlike one another?

Theact. I dare say.

Soc. But through what do you perceive all this about them? for neither through hearing nor yet through seeing can you apprehend that which they have in common. Let me give you an illustration:—if I were to ask whether sounds and colours are saline or not (supposing that there were any meaning in such a question), you would be able to tell me what faculty would determine that—not sight nor hearing, as is evident, but something else?

Theact. Certainly; the faculty of taste.

Soc. Very good; and what power or instrument will determine the general notions which are common, not only to the senses but to all things, and which you call being and not being, and the rest of them, about which I was just now asking—what organs will you assign for the perception of these?

Theact. You are speaking of being and not being, likeness and unlikeness, sameness and difference, and also of unity and other numbers which are applied to objects of sense; and you mean to ask, through what bodily organ the soul perceives odd and even numbers and other arithmetical notions.

Soc. You follow me excellently, Theaetetus; that is precisely what I am asking.

Theact. Indeed, Socrates, I cannot answer; my only notion is, that they have no separate organ, but that the soul, by a power of her own, contemplates the universals in all things.

Soc. You are a beauty, Theaetetus, and not ugly, as Theodorus was saying; for he who utters the beautiful is himself beautiful and good. And besides being beautiful, you have done well in releasing me from a very long discussion, if you are clear that the soul views some things by herself and others through the bodily organs. For that was my own opinion, and I wanted you to agree with me.

Theact. I am clear on that head.

186 *Soc.* And to which class would you refer being or essence; for this, of all our notions, is the most universal?

Theact. I should say, to that class which the soul aspires to know of herself.

Soc. And would you say this also of like and unlike, some and other?

Theaet. Yes.

Soc. And would you say the same of the noble and base, and of good and evil?

Theaet. These I conceive to be notions which are essentially relative, and which the soul also perceives by comparing in herself things past and present with the future.

Soc. And does she not perceive the hardness of that which is hard by the touch, and the softness of that which is soft equally by the touch?

Theaet. Yes.

Soc. But their essence and what they are, and their opposition to one another, and the essential nature of this opposition, the soul herself endeavours to decide for us by the review and comparison of them?

Theaet. Certainly.

Soc. The simple sensations which reach the soul through the body, are given at birth to men and animals by nature, but their reflections on these and on their relations to being and use, are slowly and hardly gained, if they are ever gained, by education and long experience.

Theaet. Assuredly.

Soc. And can a man attain truth who fails of attaining being?

Theaet. Impossible.

Soc. And can he who misses the truth of anything, have a knowledge of that thing?

Theaet. He cannot.

Soc. Then knowledge does not consist in impressions of sense, but in reasoning about them; in that only, and not in the mere impression, truth and being can be attained?

Theaet. Clearly.

Soc. And would you call the two processes by the same name, when there is so great a difference between them?

Theaet. That would not be right.

Soc. And what name would you give to seeing, hearing, smelling, being cold and being hot?

Theaet. I should call all of them perceiving—what other name could be given them?

Soc. Perception would be the collective name of them?

Theact. Certainly.

Soc. Which, as we say, has no part in the attainment of truth any more than of being?

Theact. Certainly not.

Soc. And therefore cannot have any part in science or knowledge?

Theact. No.

Soc. Then perception, Theaetetus, can never be the same as knowledge or science?

Theact. That is evident, Socrates; knowledge is now most clearly proved to be different from perception.

187 *Soc.* But the original aim of our discussion was to find out rather what knowledge is than what it is not; at the same time we have made some progress, for we no longer seek for knowledge in perception at all, but in that other process, however called, in which the mind is alone and engaged with being.

Theact. That, Socrates, as I conceive, is called thinking.

Soc. You conceive truly. And now, my friend, please to begin again at this point; and having wiped out of your memory all that has preceded, see if you have arrived at any clearer view, and once more say what is knowledge.

Theact. I cannot say, Socrates, that knowledge is all opinion, because there may be a false opinion; but I will venture to say, that knowledge is true opinion: let this then be my answer; and if this is hereafter disproved, I must try to find another.

Soc. That is the way in which you ought to answer, Theaetetus, and not in your former hesitating strain, for if we are bold we shall gain one of two advantages; either we shall find that which we seek, or we shall be less likely to think that we know what we do not know—and this surely is no mean reward. And now, what are you saying?—that there are two sorts of opinion, one true and the other false; and you define knowledge to be the true?

Theact. Yes, according to my present view.

Soc. Is it worth while for us to resume the discussion touching opinion?

Theact. To what are you alluding?

Soc. There is a point which often troubles me, and is a great perplexity to me, both in relation to myself and others. I cannot make out the nature or origin of the mental experience to which I refer.

Theaet. Pray what is it?

Soc. How there can be false opinion—that difficulty still troubles the eye of my mind; and I am uncertain whether I shall leave the question, or begin over again in a new way.

Theaet. Begin again, Socrates,—at least if you think that there is the slightest necessity for doing so. Were not you and Theodorus remarking truly that in discussion of this kind we may take our own time?

Soc. You are right in reminding me, and perhaps there will be no harm in retracing our steps and beginning again. Better a little which is well done, than a great deal imperfectly.

Theaet. Certainly.

Soc. Well, and what is the difficulty? Do we not speak of false opinion, and say that one man holds a false and another a true opinion, as though there were some natural distinction between them?

Theaet. That is what we say.

Soc. All things and everything are either known or not known. I leave out of view the intermediate conceptions of forgetting and learning, because they have nothing to do with our present question.

Theaet. There can be no doubt, Socrates, if you exclude these, that there is no other alternative but knowing or not knowing a thing.

Soc. And must not he who has an opinion, have an opinion about something which he knows or does not know?

Theaet. He must.

Soc. He who knows, cannot but know; and he who does not know, cannot know?

Theaet. Of course.

Soc. What shall we say then? When a man has a false opinion does he think that which he knows to be some other thing which he knows, and knowing both, is he at the same time ignorant of both?

Theaet. That, Socrates, is impossible.

Soc. But perhaps he thinks of something which he does not know as some other thing which he does not know; for example, he knows neither Theaetetus nor Socrates, and yet he fancies that Theaetetus is Socrates, or Socrates Theaetetus?

Theaet. How can he?

Soc. But surely he cannot suppose that what he does not know is what he knows, or that what he knows is what he does not know?

Theaet. That would be monstrous.

Soc. Where, then, is false opinion? For if all things are either known or unknown, there can be no opinion which is not comprehended under the alternative just offered, and so false opinion is excluded.

Theaet. Most true.

Soc. Suppose that we remove the question out of the sphere of knowing or not knowing, into that of being and not being.

Theaet. How do you mean?

Soc. May we not suspect that he who thinks of anything which is not, will think what is false, whatever in other respects may be the state of his mind?

Theaet. That, again, I should imagine to be true, Socrates.

Soc. Then suppose some one to say to us, Theaetetus:—Is this possible—can any man think that which is not, either as a self-existent substance or a predicate of another? And suppose that we answer, ‘Yes, he can, when he thinks that which is not true.’—That will be our answer.

Theaet. Yes.

Soc. And is the like of this to be found anywhere else?

Theaet. What do you mean?

Soc. Can a man see something and yet see nothing?

Theaet. Impossible.

Soc. But if he sees any one thing, he sees something that exists. Do you suppose that one thing is ever to be found among non-existing things?

Theaet. I do not.

Soc. He then who sees anything, sees that which is?

Theaet. Clearly.

189 *Soc.* And he who hears anything, hears some one thing, and hears that which is?

Theaet. Yes.

Soc. And he who touches something, touches some one thing which is one and therefore is?

Theaet. That again is true.

Soc. And does not he who thinks, think some one thing?

Theaet. Certainly.

Soc. And does not he who thinks some one thing, think something which is?

Theaet. I agree.

Soc. Then he who thinks of that which is not, thinks of nothing?

Theaet. Clearly.

Soc. And he who thinks of nothing, does not think at all?

Theaet. Obviously.

Soc. Then no one can think that which is not, either as a self-existent substance or a predicate of another?

Theaet. Clearly not.

Soc. Then to think falsely is different from thinking that which is not?

Theaet. Yes, different.

Soc. Then false opinion has no existence in us, either in the sphere of being or of knowledge?

Theaet. Certainly not.

Soc. But may not the following be the description of what we express by this name?

Theaet. What?

Soc. May we not suppose that false opinion or thought is a sort of heterodoxy; a person may make an exchange in his mind, and say that one real object is another real object. For thus he always thinks that which is, but he misplaces the objects of his thought, and missing of what he is considering, he may be truly said to have false opinion.

Theaet. Now you appear to me to have said the exact truth: when a man puts the base in the place of the noble, or the noble in the place of the base, then he has truly false opinion.

Soc. I see, Theaetetus, that your fear has disappeared, and that you are beginning to despise me.

Theaet. What makes you say so?

Soc. You think, if I am not mistaken, that your 'truly false'

is safe from censure, and that I shall never ask whether there can be a swift which is slow, or a heavy which is light, or any process of nature which is a contradiction in terms. But I will not insist upon this, because I do not wish to discourage you. And so you are satisfied that false opinion is heterodoxy, or the thought of something else?

Theact. I am.

Soc. Then upon your view the mind is able to conceive of one thing as another?

Theact. True.

Soc. But must not the mind, or thinking power, which misplaces them, have a conception either of both objects or of one of them?

Theact. Certainly.

Soc. Either together or in succession?

Theact. Very good.

Soc. And do you mean by thinking the same which I mean?

Theact. What is that?

Soc. I mean the conversation which the soul holds with herself in considering of anything. I speak of what I scarcely
190 know; but the soul when thinking appears to me to be just talking—asking questions of herself and answering them, affirming and denying. And when she has arrived at a decision, either gradually or by a sudden impulse, and has at last agreed, and does not doubt, this is called her opinion. I say, then, that to form an opinion is to speak, and opinion is a word spoken, I mean, to oneself and in silence, not aloud or to another.

Theact. True.

Soc. Then when any one thinks of one thing as another, he is saying to himself that one thing is another?

Theact. Quite true.

Soc. Now recollect whether you have ever said to yourself that the noble is certainly base, or the unjust just; or, take the primary conception of all—have you ever attempted to convince yourself that one thing is another? Nay, even in sleep, did you ever venture to say to yourself that odd is even, or anything of that sort?

Theact. Never.

Soc. And do you suppose that any other man, either in his senses or out of them, ever seriously tried to persuade himself that an ox is a horse, or that two are one?

Theaet. Certainly not.

Soc. But if thinking is speaking to oneself, no one speaking and thinking of two objects, and apprehending them both in his soul, will say and think that the one is the other of them, and I must add, that you will have to let the word 'other' alone [i. e. not insist that 'one' and 'other' are both in Greek called 'other,' *ἕτερον*. Cp. Par. 147 C.] I mean to say, that no one thinks the noble to be base, or anything of the kind.

Theaet. I will give up the word 'other,' Socrates; and I agree in what you say.

Soc. If a man has both of them in his thoughts, he cannot think that the one of them is the other?

Theaet. True.

Soc. Neither, if he has one of them in his mind and not the other, can he think that one is the other?

Theaet. True; for we should have to suppose that he apprehends that which is not in his thoughts at all.

Soc. Then no one who has either both or only one of the two objects in his mind can think that the one is the other. And therefore, he who maintains that false 'doxy' is heterodoxy is talking nonsense; for neither in this, any more than in the previous way, can false opinion exist in us.

Theaet. No.

Soc. But if, Theaetetus, this is not admitted, then we shall be driven into many strange absurdities.

Theaet. What are they?

Soc. I will not tell you until I have endeavoured to consider the matter in every point of view. For I should be ashamed 191 of us if we were driven in our perplexity to admit the absurd consequences of which I speak. But if we find the solution, and get away from them, we may regard them only as the difficulties of others, and the ridicule will not attach to us. On the other hand, if we utterly fail, I suppose that we must be humble, and allow the argument to trample us under foot, as the sea-sick passenger is trampled upon by the sailor, and to

do anything to us. Listen, then, while I tell you how I hope to find a way out of our difficulty.

Theact. Let me hear.

Soc. I think that we were wrong in denying that a man could think what he did not know to be what he knew ; and that there is a way in which such a deception is possible.

Theact. You mean to say, as I suspected at the time, that I may know Socrates, and at a distance see some one who is unknown to me, and whom I mistake for him—and then the deception will occur?

Soc. But has not that position been relinquished by us, because involving the absurdity that we should know and not know the things which we know?

Theact. True.

Soc. Let us make the assertion in another form, which may or may not have a favourable issue ; but as we are in a great strait, every argument should be turned over and tested. Tell me, then, whether I am right in saying that you may learn a thing which at one time you did not know?

Theact. Certainly you may.

Soc. And this may happen over and over again?

Theact. Yes.

Soc. I would have you imagine, then, that there exists in the mind of man a block of wax, which is of different sizes in different men ; harder, moister, and having more or less of purity in one than another, and in some of an intermediate quality.

Theact. I see.

Soc. Let us say that this tablet is a gift of Memory, the mother of the Muses ; and that when we wish to remember anything which we have seen, or heard, or thought in our own minds, we hold the wax to the perceptions and thoughts, and in that receive the impression of them as from the seal of a ring ; and that we remember and know what is imprinted as long as the image lasts ; but when the image is effaced, or cannot be taken, then we forget and do not know.

Theact. Very good.

Soc. Now, when a person has this knowledge, and is con-

sidering something which he sees or hears, may not false opinion arise in the following manner?

Theaet. In what manner?

Soc. When he thinks what he knows sometimes to be what he knows, and sometimes to be what he does not know. We were wrong before in denying the possibility of this.

Theaet. And how would you amend the former statement?

Soc. I should begin by making a list of the impossible cases ¹⁹² which must be excluded. No one can think one thing to be another when he does not perceive either of them, but has the memorial or seal of both of them in his mind; nor can any mistaking of one thing for another occur, when he only knows one, and does not know, and has no impression of the other; nor can he think that what he does not know is what he does not know, or that what he knows is what he does not know; nor that one thing which he perceives is another thing which he perceives, or that a thing which he does not perceive is a thing which he perceives; or that one thing which he does not perceive is another thing which he does not perceive; or that a thing which he perceives is a thing which he does not perceive; nor again, can he think that one thing which he knows and perceives, and of which he has the impression coinciding with sense, is another thing which he knows and perceives, and of which he has the impression coinciding with sense;—this last case, if possible, is still more inconceivable than the others; nor can he think that a thing which he knows is any other thing which he knows and perceives, and of which he has the memorial coinciding with sense; nor so long as these agree, can he think that a thing which he perceives is another thing which he knows and perceives; or that a thing which he does not know and does not perceive, is the same as another thing which he does not know and does not perceive:—nor again, can he suppose that a thing which he does not know is the same as another thing which he does not know and does not perceive; or that a thing which he does not perceive is another thing which he does not know and does not perceive:—All these utterly and absolutely exclude the possibility of false opinion. The only cases, if any, which remain, are the following.

Theaet. What are they? If you tell me, I may perhaps

understand you better ; but at present I am unable to follow you.

Soc. A person may think that some things which he knows and perceives, or which he perceives and does not know, are some other things which he knows ; or that some things which he knows and perceives, are other things which he knows and perceives.

Theact. I understand you less than ever now.

Soc. Hear me once more, then :—I, knowing Theodorus, and remembering in my own mind what sort of person he is, and what sort of person Theaetetus is, at one time see them, and at another time do not see them, and sometimes I touch them, and at another time not, or at one time I may hear them or perceive them in some other way, and at another time not perceive them, but still I remember them, and know them in my own mind.

Theact. Very true.

Soc. Then, first of all, I want you to understand that a man may or may not perceive that which he knows.

Theact. True.

Soc. And that which he does not know will sometimes not be perceived by him and sometimes will be perceived and only perceived ?

Theact. That is true again.

193 *Soc.* See whether you can follow me better now : Socrates knows Theodorus and Theaetetus, but he sees neither of them, nor does he perceive them in any other way ; he cannot then by any possibility imagine in his own mind that Theaetetus is Theodorus. Am I not right ?

Theact. You are quite right.

Soc. Then that was the first case of which I spoke ?

Theact. Yes.

Soc. The second case was, that I, knowing one of you and not knowing the other, and perceiving neither, can never think that he whom I do not know is he whom I know.

Theact. True.

Soc. In the third case, not knowing and not perceiving either of you, I cannot think that a person whom I do not know is some one else whom I do not know. I need not again go over

the catalogue of excluded cases, in which I cannot form a false opinion about you and Theodorus, either when I know both or when I am in ignorance of both, or as knowing one and not knowing the other. And the same of perceiving: do you understand me?

Theact. I do.

Soc. The only possibility of erroneous opinion is, when knowing you and Theodorus, and having the seal or impression of both of you in the wax block, but seeing you both imperfectly and at a distance, I try to assign the right impression of memory visual to the right impression, and fit this into the proper mould: if I succeed, recognition will take place; but if I fail and transpose them, putting the foot into the wrong shoe—that is to say, putting the vision of either of you on to the wrong seal, or seeing you as in a mirror when the sight flows from right to left—then ‘heterodoxy’ and false opinion ensues.

Theact. Yes, Socrates, you have described the nature of opinion with wonderful exactness.

Soc. Or again, when I know both of you, and see as well as know one and not the other, and knowledge does not coincide with perception—that was a case which you did not understand just now?

Theact. No, I did not.

Soc. I meant to say, that when a person knows and perceives one of you, and his knowledge coincides with his perception, he will never think him to be some other person, whom he knows and perceives, and the knowledge of whom coincides with his perception—we agreed to that?

Theact. Yes.

Soc. But there was an omission of the further case, in which, as we now say, false opinion may arise, when knowing both, 194 or seeing, or having some other sensible perception of both, I fail in holding the seal over against the corresponding sensation; like a bad archer, I miss and fall wide of the mark—and this is called falsehood.

Theact. Yes, truly.

Soc. When, therefore, perception is present to one of the seals or impressions and not to the other, and the mind fits the seal of the absent perception on the one which is present, in any case

of this sort the mind is deceived ; in a word, if our view is sound, there can be no error or deception about things which a man does not know and has never perceived, but only in things which are known and perceived ; in these alone opinion turns and twists about, and becomes alternately true and false ;—true when the seals and impressions of sense meet straight and opposite—false when they go awry and are crooked.

Theact. And is not that, Socrates, nobly said?

Soc. Nobly ! yes ; but wait a little and hear the explanation, and then you will say so with more reason ; for to think truly is noble and to be deceived is base.

Theact. Assuredly.

Soc. And the explanation of truth and error is as follows :
—When the wax in the soul of any one is deep and abundant, and smooth and perfectly tempered, then the impressions which pass through the senses and sink into the [waxen] heart of the soul, as Homer says in a parable, meaning to indicate the likeness of the soul to wax ($\kappa\eta\rho\rho\ \kappa\eta\rho\delta\varsigma$) ; these, I say, being pure and clear, and having a sufficient depth of wax, are also lasting, and minds, such as these, easily learn and easily retain, and are not liable to confusion, but have true thoughts, for they have plenty of room, and having clear impressions of things, as we term them, quickly distribute them into their proper places on the block. And such men are called wise. Do you agree?

Theact. Entirely.

Soc. But when the heart of any one is shaggy, as the poet who knew everything says, or muddy and of impure wax, or very soft, or very hard, then there is a corresponding defect in the mind—the soft are good at learning, but apt to forget ; and the hard are the reverse ; the shaggy and rugged and gritty, or those who have an admixture of earth or dung in their com-
195 position, have the impressions indistinct, as also the hard, for there is no depth in them ; and the soft too are indistinct, for their impressions are easily confused and effaced. Yet greater is the indistinctness when they are all jostled together in a little soul, which has no room. These are the natures which have false opinion ; for when they see or hear or think of anything, they are slow in assigning the right objects to the right impressions—in their stupidity they confuse them, and are apt to see

and hear and think amiss—and such men are said to be deceived in their knowledge of objects, and ignorant.

Theact. No man, Socrates, can say anything truer than that.

Soc. Then now we may admit the existence of false opinion in us?

Theact. Certainly.

Soc. And of true opinion also?

Theact. Yes.

Soc. We have at length satisfactorily proven that beyond a doubt there are these two sorts of opinion?

Theact. Undoubtedly.

Soc. Alas, Theaetetus, what a tiresome being is a man who is fond of talking!

Theact. What makes you say that?

Soc. Because I am disheartened at my own stupidity and tiresome garrulity; for what other term will describe the habit of a man who is always arguing on all sides of a question; whose dulness cannot be convinced, and yet he will not leave off?

Theact. But what puts you out of heart?

Soc. I am not only out of heart, but in positive despair; for I do not know what to answer if any one were to ask me:—O Socrates, have you indeed discovered that false opinion arises neither in the comparison of the perceptions with one another nor in the thoughts, but in the union of thought and perception? Yes, I shall say, with the complacency of one who thinks that he has made a noble discovery.

Theact. I see no reason why we should be ashamed of the demonstration, Socrates.

Soc. He will say: You mean to assert that the man whom we only think of and do not see, cannot be confused with the horse which we do not see or touch, but only think of and do not perceive? That I believe to be my meaning, I shall reply.

Theact. Quite right.

Soc. Well, then, he will say, according to that argument, the number eleven, which is only thought, can never be mistaken for twelve, which is only thought. How would you answer him?

Theact. I should say that a mistake may very likely arise between the eleven, or twelve which are seen or handled, but

that no similar mistake can arise between the eleven and twelve which are in the mind.

Soc. Well, but do you think that no one ever did put before
196 his own mind five and seven,—I am not saying five or seven men or horses, but five or seven in the abstract; and these we affirm to be the actual impressions on the waxen block, in which false opinion is held to be impossible;—I say, did no man ever ask himself how many are the numbers five and seven when added, and answer that they are eleven, while another man thinks that they are twelve, or would all agree in thinking and saying that they are twelve?

Theact. Certainly not; many would think they are eleven, and in the higher numbers the chance of error is greater still; for I assume you to be speaking of numbers in general.

Soc. Exactly; and I want you to consider whether this does not imply that the twelve in the waxen block are supposed to be eleven?

Theact. Yes, that seems to be the case.

Soc. Then do we not come back to the old difficulty? For he who makes such a mistake does think one thing which he knows to be another thing which he knows; but this, as we said, was impossible, and afforded an irresistible proof of the non-existence of false opinion, because otherwise the same person would inevitably know and not know the same thing at the same time.

Theact. Most true.

Soc. Then false opinion cannot be explained as a confusion of thought and sense, for in that case we could not have been mistaken about pure conceptions of thought; and thus we are obliged to say, either that false opinion does not exist, or that a man may not know that which he knows;—which alternative do you choose?

Theact. There is no possibility of choosing either, Socrates.

Soc. And yet the argument will scarcely admit of both. But, as we are at our wits' end, suppose that we do a shameless thing?

Theact. What is it?

Soc. Let us attempt to explain the verb 'to know.'

Theact. And why is that shameless?

Soc. You do not seem to be aware that the whole of our discussion from the very beginning has been a search after knowledge, of which we are assumed not to know the nature.

Theact. Nay, I am aware.

Soc. And is it not shameless when we do not know what knowledge is, to be explaining the verb 'to know'? The truth is, Theaetetus, that we have long been infected with logical impurity. Thousands of times have we repeated the words 'we know,' and 'do not know,' and 'we have or have not science or knowledge,' as if we could understand what we are saying to one another, so long as we remain ignorant about knowledge; and at this moment mark how we are using the words 'we understand,' 'we are ignorant,' as though we could still employ them if we were deprived of knowledge or science.

Theact. But if you avoid these expressions, Socrates, how will you ever argue at all?

Soc. I could not, unless I ceased to be myself. The case 197 would be different if I were a true hero of dialectic: and O that such an one were present! for he would have told us to avoid the use of these terms; at the same time he would not have spared in you and me the faults which I have noted. But, seeing that we are no great wits, shall I venture to say what knowing is? for I think that the attempt may be worth making.

Theact. Then by all means venture, and no one shall find fault with you for using the forbidden terms.

Soc. You have heard the common explanation of the verb 'to know'?

Theact. I do not know that I remember at the moment.

Soc. They explain the word 'to know' as meaning 'to have knowledge.'

Theact. True.

Soc. I should like to make a slight change, and say 'to possess' knowledge.

Theact. How do the two expressions differ?

Soc. Perhaps there may be no difference; but still I should like you to hear and help to test my view.

Theact. I will, if I can.

Soc. I should distinguish 'having' from 'possessing': for ex-

ample, a man may buy and keep under his control a garment which he does not wear; and then we should say, not that he has, but that he possesses the garment.

Theact. That would be the correct expression.

Soc. Well, may not a man 'possess' and yet not 'have' knowledge in the sense of which I am speaking? As you may suppose a man to have caught wild birds—doves or any other birds—and to be keeping them in an aviary which he has constructed at home; and then we might say, in one sense, that he always has them because he possesses them, might we not?

Theact. Yes.

Soc. And yet, in another sense, he has none of them; but he has power over them, and has them under his hand in an enclosure of his own, and can take and have them whenever he likes;—he can catch any which he likes, and let the bird go again, and he may do so as often as he pleases.

Theact. True.

Soc. Once more, then, as in what preceded we made a sort of waxen figment in the mind, so let us now suppose that in the mind of each man there is an aviary of all sorts of birds—some flocking together apart from the rest, others in small groups, others solitary, flying anywhere and everywhere.

Theact. Let us imagine such an aviary—and what is to follow?

Soc. We may suppose this receptacle to be empty while we are young, and that the birds are kinds of knowledge; when a man has gotten and detained in the enclosure any of those different kinds of knowledge, then he may be said to have learned or discovered the thing of which the knowledge is: and this is to know.

Theact. Granted.

198 *Soc.* And again, when any one wishes to catch any of these knowledges or sciences, and hold any of them after he has taken them, and again to let them go, how will he express himself?—will he describe the 'catching' of them and the original 'possession' in the same words? I will make my meaning clearer by an example:—You admit that there is an art of arithmetic?

Theaet. Very good.

Soc. Conceive this under the form of a hunt after the science of odd and even in general.

Theaet. I follow.

Soc. Having the use of the art, the arithmetician, if I am not mistaken, has the conceptions of number under his hand, and can transmit them to another.

Theaet. Yes.

Soc. And he who transmits them may be said to teach them, and he who receives to learn them, and he who has them in possession in the aforesaid aviary may be said to know them.

Theaet. Exactly.

Soc. Attend to what follows: must not the perfect arithmetician know all numbers, for he has the science of all numbers in his mind?

Theaet. True.

Soc. And he can calculate a sum of numbers in his head, or he can enumerate the things about him?

Theaet. Of course he can.

Soc. And to calculate is simply to consider how much such and such a number amounts to?

Theaet. Very true.

Soc. Then he considers as if he did not know that which he does know, for we have already admitted that he knows all numbers;—you have heard of these perplexing questions?

Theaet. I have.

Soc. May we not pursue the image of the doves, and say that the chase after knowledge is of two kinds? one kind is prior to possession and for the sake of possession, and the other for the sake of taking and holding in the hands that which is possessed already. And thus, when a man has learned and known something long ago, he may resume and get hold of his knowledge which he has long ago possessed, but has not at hand in his mind.

Theaet. True.

Soc. That was my reason for asking what is calculation; and how we ought to speak when an arithmetician sets about numbering; or a grammarian about reading? Shall we say,

that although he knows, he comes to learn of himself what he knows?

Theact. That would be too absurd, Socrates.

Soc. Shall we say that he is going to read or number what
199 he does not know, although we have admitted that he knows all letters and all numbers?

Theact. That, again, would be an absurdity.

Soc. Then shall we say that about names we care nothing?—any one may twist and turn the words ‘knowing’ and ‘learning’ in any way which he likes, but since we have determined that the possession of knowledge is not the having or using knowledge, we do assert that a man cannot not possess that which he possesses; and, therefore, in no case can a man not know that which he knows, but he may get a false opinion about it; for he may have the knowledge, not of this particular thing, but of some other;—when the various numbers and forms of knowledge are flying about in the aviary, and he takes out of them a particular one for use, and sometimes the wrong one, that is to say, when he thought eleven to be twelve, he got hold of the ring-dove which he had in his mind, when he wanted the pigeon.

Theact. A very rational explanation.

Soc. But when he catches the one which he wants, then he is not deceived, and has an opinion of what is, and thus false and true opinion may exist, and the difficulties which were previously raised disappear. I dare say that you agree with me, do you not?

Theact. Yes.

Soc. Then now we are rid of the difficulty of a man’s not knowing what he knows, for we are not driven to the inference that he does not possess what he possesses, even though we suppose him to be deceived. And yet I fear that a greater difficulty is looking in at the window.

Theact. What is that?

Soc. How can the exchange of one knowledge for another ever become false opinion?

Theact. How do you mean?

Soc. In the first place, how can a man who has the knowledge of anything be ignorant of that which he knows, not

by reason of ignorance, but by reason of his own knowledge? And, again, is it not an extreme absurdity that he should suppose another thing to be this, and this to be another thing;—that, having knowledge present with him in his mind, he should still know nothing and be ignorant of all things?—you might as well argue that ignorance may make a man know, and blindness make him see, as that knowledge can make him ignorant.

Theaet. Perhaps, Socrates, we may have been wrong in making only forms of knowledge our birds: there ought to have been forms of ignorance as well, flying about together in the mind, and he who sought to take one of them may sometimes have caught a form of knowledge, and then a form of ignorance; and thus he will have a false opinion from ignorance, but a true one from knowledge, about the same thing.

Soc. I cannot help praising you, Theaetetus, and yet I must beg you to reconsider your words; let us grant what you say 200—then, according to you, he who takes ignorance will have a false opinion—am I right?

Theaet. Yes.

Soc. He will certainly not think that he has a false opinion?

Theaet. Of course not.

Soc. He will think that his opinion is true, and he will fancy that he knows the things about which he has been deceived?

Theaet. Certainly.

Soc. Then he will think that he has captured knowledge and not ignorance?

Theaet. Clearly.

Soc. And thus, after a long journey, we come back to our original difficulty. The adversary will retort upon us:—‘O my excellent friends, he will say, laughing, if a man knows the form of ignorance and the form of knowledge, can he think that one of them which he knows is the other which he knows? or, if he knows neither of them, can he think that one which he knows not is another which he knows not? or, if he knows one and not the other, can he think that the one which he does not know is the one which he knows? or that the one which he knows is the one which he does not know? or will you tell me that there are other forms of knowledge which distinguish

the right and wrong birds, and which the owner keeps in some other aviaries or waxy blocks according to your foolish images, and which he may be said to know while he possesses them, even though he have them not at hand in his mind? And thus, in a perpetual circle, you will be compelled to go round and round and make no progress.' What are we to say in reply, Theaetetus?

Theaet. Indeed, Socrates; I do not know what we are to say.

Soc. Are not his reproaches just, and does not the argument truly show that we are wrong in seeking for false opinion until we know what knowledge is; that must be first sought after, and, afterwards, the nature of false opinion?

Theaet. I cannot but agree with you, Socrates.

Soc. Then, once more, what shall we say that knowledge is?—for we are not going to lose heart as yet.

Theaet. Certainly, I shall not lose heart, if you do not.

Soc. What definition will be most consistent with our former views?

Theaet. I cannot think of any but our old one, Socrates.

Soc. What was it?

Theaet. That knowledge was true opinion; and true opinion is surely unerring, and the results which follow from it are all noble and good.

Soc. He who led the way into the river, Theaetetus, said 'the
201 experiment will show;' and perhaps if we go forward in the search, we may stumble upon the thing which we are looking for; but if we stay where we are, nothing will come to light.

Theaet. Very true; let us go forward and try.

Soc. The trail soon comes to an end, for a whole profession is against us.

Theaet. How is that, and what profession do you mean?

Soc. The profession of the great wise ones who are called orators and lawyers; for these persuade men by their art and do not teach them, but make them think whatever they like. Do you imagine that there are any teachers in the world so clever as to be able to convey to others the truth about acts of robbery or violence, of which they were not eye-witnesses, while a little water is flowing?

Theaet. Certainly not, they can only persuade them.

Soc. And would you not say that persuading them is making them have an opinion?

Theact. To be sure.

Soc. When, therefore, judges are justly persuaded about matters which you can know only by seeing them, and not in any other way, and when thus judging of them from report they attain a true opinion about them, they judge without knowledge, and yet are rightly persuaded, if they have judged well.

Theact. Certainly.

Soc. And yet, O my friend, if true opinion in law courts¹ and knowledge are the same, the perfect judge could not have judged rightly without knowledge; and therefore I must infer that they are not the same.

Theact. I remember now, Socrates, what I heard some one say, and had forgotten: he said that true opinion, accompanied with reason, was knowledge, but that the opinion which had no reason was out of the sphere of knowledge; and that things of which there is no rational account are not knowable—such was the singular expression which he used—and that things which have a definition or explanation are knowable.

Soc. Excellent; but then, how did he distinguish between things which are and are not 'knowable'? I wish that you would repeat to me what he said, and then I shall know whether you and I have heard the same tale.

Theact. I do not know whether I can recall it; but if another person would tell me, I think that I could follow him.

Soc. Let me give you, then, a dream in return for a dream:—Methought that I too had a dream, and I heard in my dream that the primeval letters or elements out of which you and I and all other things are compounded, have no reason or explanation, but are names only, of which not even existence or non-existence can be predicated; you cannot say of them that they 202 are or are not, for either of the two implies existence, which must not be added on, if one means to speak of this or that thing taken by itself alone. You may not say itself, or that, or each, or alone, or this, or the like; for these go about everywhere and are applied to all things, and are distinct from them;

¹ Reading *κατὰ δικαστήρια*: an emendation suggested by Professor Campbell.

whereas, if the first elements could be described, and had a definition suitable to them, they would be spoken of apart from all else. But none of these primeval elements can be defined; they can only be named, for they have nothing but a name, and the things which are compounded of them, as they are complex, are expressed by a combination of names, for the combination of names is the essence of a proposition. Thus, then, the elements or letters are only objects of perception, and cannot be defined or known; but the combinations or syllables of them are known and expressed and apprehended by true opinion. When, therefore, any one forms the true opinion of anything without definition, you may say that his mind is truly exercised, but has no knowledge; for he who cannot give and receive a definition of a thing, has no knowledge of that thing; but when he adds the definition, then, he is perfected in knowledge and may be all that I have been denying of him. Was that the form in which the dream appeared to you?

Theact. Precisely.

Soc. And you allow and maintain that true opinion, combined with definition, is knowledge?

Theact. Exactly.

Soc. Then may we assume, Theaetetus, that to-day, and in this casual manner, we have found a truth which in former times many wise men have grown old and have not found?

Theact. At any rate, Socrates, I am satisfied with the present statement.

Soc. Which is probably correct—for how can there be knowledge apart from definition and true opinion? And yet there is one point in what has been said which does not quite satisfy me.

Theact. What was it?

Soc. What might seem to be the most ingenious notion of all:—That the elements or letters are unknown, but the combination or syllables known.

Theact. And was that wrong?

Soc. We shall soon know; for we have as hostages the instances which the author of the argument himself used.

Theact. What hostages?

Soc. The letters, which are the elements; and the syllables,

which are the combinations ;—he reasoned, did he not, from the letters of the alphabet?

Theact. Yes ; he did.

203

Soc. Let us examine them, or rather, examine ourselves :—What was the way in which we learned letters? and, first of all, are we right in saying that syllables have a meaning, but that letters have no meaning?

Theact. I think so.

Soc. I think so too ; for, suppose that some one asks you to spell the first syllable of my name :—Theaetetus, he says, what is $\Sigma\Omega$?

Theact. I should reply Σ and Ω .

Soc. That is the definition which you would give of the syllable?

Theact. I should.

Soc. I wish that you would give me a similar definition of the Σ .

Theact. But how can any one, Socrates, tell the elements of an element? I can only reply, that Σ is a consonant, a mere noise, as of the tongue hissing ; B, and most other letters, again, have no sound, and are not even noises. Letters may be most truly said to be undefined ; and the most distinct of them, which are the seven vowels, have a sound only, but no definition at all.

Soc. Then, I suppose, my friend, that we have been so far right in our idea about science?

Theact. Yes ; I think that we have.

Soc. Well, but have we been right in maintaining that the syllables can be known, but not the letters?

Theact. I think that we have been right.

Soc. And do we mean by a syllable two letters, or if there are more, all of them, or an idea which arises out of the combination of them?

Theact. I should say that we mean all the letters.

Soc. Take the case of the two letters S and O, which form the first syllable of my own name ; must not he who knows the syllable, know both of them?

Theact. Certainly.

Soc. He knows, that is, the S and O?

Theact. Yes.

Soc. But can you say that he is ignorant of either of them, and yet knows both?

Theact. Such a supposition, Socrates, is monstrous and unmeaning.

Soc. But if he cannot know both without knowing each, then if he is ever to know the syllable, he must know the letters first; and thus the fine theory has again taken wings and departed.

Theact. Well, that is very sudden.

Soc. Yes, we did not keep watch properly. Perhaps we ought to have maintained that a syllable is not the letters, but rather one single idea framed out of them, having a separate form distinct from them.

Theact. Very true; and a more likely notion than the other.

Soc. Let us consider carefully, and not weakly give up a great and imposing theory.

204 *Theact.* No, indeed.

Soc. Let us assume then, as we now say, that the syllable is a simple form arising out of the several combinations of harmonious elements—of letters or of any other elements.

Theact. Very good.

Soc. And it must have no parts.

Theact. Why not?

Soc. Because that which has parts must be a whole of all the parts. Or would you say that a whole, although formed out of the parts, is a single notion different from all the parts?

Theact. I should.

Soc. And would you say that all and the whole are the same, or different?

Theact. I am not certain; but, as you like me to answer at once, I shall hazard the reply, that they are different.

Soc. I approve of your readiness, Theaetetus, but I must take time to think whether I equally approve of your answer.

Theact. Yes; the approval must be of the answer.

Soc. According to this new view, the whole is supposed to differ from all?

Theact. Yes.

Soc. Well, but is there any difference between all [in the plural] and the all [in the singular]? Take the case of number:

—When we say one, two, three, four, five, six ; or when we say twice three, or three times two, or four and two, or three and two and one, are we speaking of the same or of different numbers?

Theact. Of the same.

Soc. That is of six?

Theact. Yes.

Soc. And in each form of expression we spoke of all the six?

Theact. True.

Soc. And in speaking of all [in the plural] do we not speak of all one thing¹?

Theact. Of course.

Soc. And that is six?

Theact. Yes.

Soc. Then in predicating the word 'all' of things measured by number, we predicate at the same time a unity of all?

Theact. That is evident.

Soc. Again, the number of the acre and the acre are the same ; are they not?

Theact. Yes.

Soc. And the number of the stadium in like manner is the stadium?

Theact. Yes.

Soc. And the army is the number of the army ; and in all similar cases, the entire number of anything is the entirety of anything?

Theact. True.

Soc. And the number of each is the parts of each?

Theact. Exactly.

Soc. Then as many things as have parts are made up of parts?

Theact. Clearly.

Soc. But all the parts are admitted to be the all, if the entire number is the all?

Theact. True.

Soc. Then the whole is not made up of parts, for it would be the all, if consisting of all the parts?

¹ Reading, according to Professor Campbell's conjecture, πᾶν δ' οὐδέν.

Theaet. That is the inference.

Soc. But is a part a part of anything but the whole?

Theaet. Yes, of the all.

205 *Soc.* You make a valiant defence, Theaetetus. And yet is not the all that of which nothing is wanting?

Theaet. Certainly.

Soc. And is not a whole that from which nothing is absent? but that from which anything is absent is neither a whole nor all;—if wanting in anything, both equally lose their entirety of nature.

Theaet. I now think that there is no difference between a whole and all.

Soc. But were we not saying that when a thing has parts, all the parts will be a whole and all?

Theaet. Certainly.

Soc. Then, as I was saying before, must not the alternative be that either the syllable is not the letters, and then the letters are not parts of the syllable, or that the syllable will be the same with the letters, and will therefore be equally known with them?

Theaet. You are right.

Soc. And, in order to avoid this, we suppose it to be different from them?

Theaet. Yes.

Soc. But if letters are not parts of syllables, can you tell me of any other parts of syllables which are not letters?

Theaet. No, indeed, Socrates; for if I admit the existence of parts in a syllable, it would be ridiculous in me to give up letters and seek for other parts.

Soc. Quite true, Theaetetus, and therefore, according to our present view, a syllable must surely be some indivisible form?

Theaet. True.

Soc. But do you remember, my friend, that only a little while ago we admitted and approved the statement, that of the first elements out of which all other things are compounded there could be no definition, because each of them when taken by itself is uncompounded, nor can one rightly attribute to them the words 'being' or 'this,' because they are alien and foreign

words, and for this reason the letters or elements were indefinable and unknown?

Theact. I remember.

Soc. And is not this also the reason why they are simple and indivisible? I do not see that there is any other.

Theact. No other reason can be given.

Soc. Then is not the syllable in the same case as the elements or letters, if it has no parts and is one form?

Theact. To be sure.

Soc. If, then, a syllable is a whole, and has many parts or letters, the letters as well as the syllables must be intelligible and expressible, since all the parts are acknowledged to be the same as the whole?

Theact. True.

Soc. But if it be one and indivisible, then the syllables and the letters are alike undefined and unknown, and for the same reason?

Theact. I cannot deny that.

Soc. We cannot, therefore, agree in the opinion of him who says that the syllable can be known and expressed, but not the 206 letters.

Theact. Certainly not; if we may trust the argument.

Soc. Well, but will you not be equally inclined to disagree with him, when you remember your own experience in learning to read?

Theact. What experience?

Soc. Why, that in learning you were kept trying to distinguish the separate letters both by the eye and by the ear, in order that, when you heard them spoken or saw them written, you might not be confused by their sequence.

Theact. That is very true.

Soc. And is a musical education complete, unless we know what string answers to a particular note; the notes, as every one would allow, are the elements or letters of music?

Theact. Exactly.

Soc. Then, if we argue from the letters and syllables which we know to other simples and compounds, we shall say that the letters or simple elements as a class are much more certainly known than the syllables, and much more indispensable

to a perfect knowledge of each branch ; and if any one says that the syllable is known and the letter unknown, we shall consider that either intentionally or unintentionally he is talking nonsense ?

Theact. Exactly.

Soc. And there might be given other proofs of this belief, if I am not mistaken. But do not let us in looking for them lose sight of the question before us, which is the meaning of the statement, that right opinion with rational definition or explanation is the most perfect form of knowledge.

Theact. We will not.

Soc. Well, and what is the meaning of the term ‘ explanation ’ ? I think that we have a choice of three meanings.

Theact. What are they ?

Soc. In the first place, the meaning may be, manifesting one’s thought by the voice with verbs and nouns, imaging the opinion in the stream which flows from the lips, as in a mirror or water. Does not explanation or definition appear to be of this nature ?

Theact. Certainly ; he who so manifests his thought, is said to explain or define.

Soc. And every one who is not born deaf or dumb is able sooner or later to manifest what he thinks of anything ; and if so, all those who have a right opinion about anything will also have right explanation ; nor will right opinion be anywhere found to exist apart from knowledge.

Theact. True.

Soc. Let us not, therefore, hastily charge him who gave this account of knowledge with uttering an unmeaning word ; for perhaps he only intended to say, that when a person was
207 asked what was the nature of anything, he should be able to answer his questioner by giving the elements of the thing.

Theact. As for example, Socrates ?

Soc. As, for example, when Hesiod says that a waggon is made up of a hundred planks. Now, neither you nor I could describe all of them individually ; but if any one asked what is a waggon, we should be content to answer, that a waggon consists of wheels, axle, body, rims, yoke.

Theact. Certainly.

Soc. And our opponent will probably laugh at us, just as he would if we professed to be grammarians and to give a grammatical account of the name of Theaetetus, and yet could only tell the syllables and not the letters of your name—that would be true opinion, and not knowledge; for knowledge is not attained until, combined with true opinion, there is an enumeration of the elements out of which anything is composed.

Theaet. Yes.

Soc. In the same general way, we might also have true opinion about a waggon; but he who can describe the essence by an enumeration of the hundred planks, adds rational explanation to true opinion, and instead of opinion has art and knowledge of the nature of a waggon, in that he attains to the whole through the elements.

Theaet. And do you not agree in that view, Socrates?

Soc. If you do, my friend; but I want to know first, whether you admit the resolution of all things into their elements to be a rational explanation of them, and the consideration of them in syllables or larger combinations of them to be irrational; what is your view?

Theaet. I quite agree with you.

Soc. Well, and do you conceive that a man has knowledge of any element who at one time affirms and at another time denies that element of something, or says that the same thing is composed of different elements at different times?

Theaet. Assuredly not.

Soc. And do you not remember that in your case and in that of others this often occurred in the process of learning to read?

Theaet. You mean that I mistook the letters and misspelt the syllables?

Soc. Yes.

Theaet. To be sure; I perfectly remember, and I am very far from supposing that they have knowledge who are in this condition.

Soc. When a person at the time of learning writes the name of Theaetetus, and thinks that he ought to write and does write θ and ϵ ; or, again, meaning to write the name of Theo- 208 dorus, thinks that he ought to write and does write τ and ϵ

—can we suppose that he knows the first syllables of your two names ?

Theact. We have already admitted that such a one has not yet attained knowledge.

Soc. And in like manner he may enumerate without knowing them the second and third and fourth syllables of your name ?

Theact. He may.

Soc. And in that case, when he writes out your name, he will write all the letters in order, and will then have right opinion ?

Theact. Clearly.

Soc. But although we admit that he has right opinion, he will still be without knowledge ?

Theact. Yes.

Soc. And yet he will have right explanation, as well as right opinion, for he knew the order of the letters when he wrote ; and this we admit to be right explanation.

Theact. True.

Soc. Then, my friend, there is such a thing as right opinion united with definition or explanation, which does not as yet attain to the exactness of knowledge ?

Theact. That seems to be true.

Soc. And what we fancied to be a perfect definition of knowledge is a dream only. But perhaps we had better not say so as yet, for were there not three explanations of knowledge, one of which must, as we said, be adopted ? And very likely there may be found some one who will not prefer this but the third.

Theact. You are right in reminding me that there is still one remaining. The first was the image or expression of the mind in sound ; the second, which has just been mentioned, is a way of reaching the whole by an enumeration of the elements. But what is the third definition ?

Soc. There is, further, the popular notion of telling the mark or sign of difference which distinguishes the thing in question from all others.

Theact. Can you give me any example of such a definition ?

Soc. As, for example, in the case of the sun, I think that

you may be contented with saying that the sun is the brightest of the heavenly bodies which revolve about the earth.

Theact. Certainly.

Soc. Understand why:—just now the reason is, as I was saying, that if you get at the difference and distinguishing characteristic of each thing, then, as many persons affirm, you will get at the definition or explanation of it; but while you lay hold only of the common and not of the characteristic notion, you will only have the definition of those things to which this common quality belongs.

Theact. I understand you, and your account of definition is in my judgment correct.

Soc. But he, who having right opinion about anything, can find out the difference which distinguishes it from other things will know that of which before he had only an opinion.

Theact. Yes; that is what we are maintaining.

Soc. Nevertheless, Theaetetus, on a nearer view, I find myself quite disappointed in the picture, which at a distance was not so bad.

Theact. What do you mean?

Soc. I will endeavour to explain: I will suppose myself to ²⁰⁹ have true opinion of you, and if to this I add your definition, then I have knowledge, but if not, opinion only.

Theact. Yes.

Soc. The definition was assumed to be the interpretation of your difference.

Theact. True.

Soc. But when I had only opinion, I had no conception of your distinguishing characteristics.

Theact. I suppose not.

Soc. Then I must have conceived of some general or common nature which no more belonged to you than to another.

Theact. True.

Soc. Tell me, now; how in that case could I have formed a judgment of you any more than of any one else? Suppose that I knew Theaetetus to be a man who has nose, eyes, and mouth, and every member complete; how would that enable me to distinguish Theaetetus from Theodorus, or from some outer barbarian?

Theaet. Very true.

Soc. Or if I had further known you, not only as having nose and eyes, but as having a snub nose and prominent eyes, should I have any more notion of you than of myself and others who resemble me?

Theaet. Certainly not.

Soc. Surely I can have no conception of Theaetetus until your snub-nosedness has left an impression on my mind different from the snub-nosedness of all others whom I have ever seen; and your other peculiarities have a like distinctness; and so when I meet you to-morrow the right opinion will be recalled?

Theaet. Most true.

Soc. Then right opinion implies the perception of differences?

Theaet. Clearly.

Soc. What, then, shall we say of adding reason or explanation to right opinion? If the meaning is, that we should form an opinion of the way in which something differs from another thing, the proposal is ridiculous.

Theaet. How so?

Soc. We are required to have a right opinion of the differences which distinguish one thing from another when we have already a right opinion of them, and so we go round and round;—the revolution of the scytal, or pestle, or any other rotatory engine, in the same circles, is as nothing compared to our mode of proceeding; and we may be truly described as the blind directing the blind; for to add those things which we already have, in order that we may learn what we already think, implies a depth of darkness.

Theaet. Tell me, then; what were you going to say just now, when you asked the question?

Soc. If, my boy, the argument, when speaking of adding the definition, had used the word to 'know,' and not merely 'have an opinion' of the difference, this which is the most promising of all the definitions of knowledge would have come to a pretty end, for to know is surely to get knowledge.

Theaet. True.

Soc. Then when the question is asked, What is knowledge? this fair argument will answer, 'right opinion with knowledge,'

—knowledge, that is, of difference, for this, as the said argument maintains, is the explanation or definition to be added.

Theact. That seems to be true.

Soc. But how utterly foolish, when we are asking what is knowledge, that the reply should only be, right opinion with knowledge of difference or of anything! And so, Theaetetus, knowledge is neither sensation nor true opinion, nor yet definition and explanation accompanying true opinion?

Theact. I suppose not.

Soc. And are you still in labour and travail, my dear friend, or have you brought all that you have to say about knowledge to the birth?

Theact. I am sure, Socrates, that you have brought a good deal more out of me than ever was in me.

Soc. And does not my art show that you have brought forth wind, and that the offspring of your brain are not worth bringing up?

Theact. Very true.

Soc. But if, Theaetetus, you chance to conceive again, you will be all the better for the present investigation, and if not, you will be soberer and humbler and gentler to other men, not fancying that you know what you do not know. These are the limits of my art; I can no further go, nor do I know aught of the things which great and famous men know or have known in this or former ages. The office of a midwife I, like my mother, have received from God; she delivered women, and I deliver men; but they must be young and noble and fair.

And now I have to go to the porch of the King Archon, where I am to meet Meletus and his indictment. To-morrow morning, Theodorus, I shall hope to see you again at this place.

SOPHIST.

INTRODUCTION.

THE dramatic power of the dialogues of Plato appears to diminish as the metaphysical interest of them increases. (Cp. Introd. to the *Philebus*.) There are no descriptions of time, place or persons, in the *Sophist* and *Politicus*; but we are plunged at once into philosophical discussions; the poetical charm has disappeared, and those who have no taste for abstruse metaphysics will greatly prefer the earlier dialogues to the later ones. Plato is conscious of the change, and in the *Politicus* (p. 286 B) expressly accuses himself of a tediousness in the two dialogues, which he ascribes to his desire of developing the dialectical method. On the other hand, the kindred spirit of Hegel seemed to find in the *Sophist* the crown and summit of the Platonic philosophy—here was the place at which Plato most nearly approached to the Hegelian identity of Being and not-Being. Nor will the great importance of the two dialogues be doubted by any one who forms a conception of the state of mind and opinion which they are intended to meet. The sophisms of the day were undermining philosophy; the denial of the existence of not-being, and of the connection of ideas, was making truth and falsehood equally impossible. It has been said that Plato would have written differently, if he had been acquainted with the *Organon* of Aristotle. But could the *Organon* of Aristotle ever have been written unless the *Sophist* and *Politicus* had preceded? The swarm of fallacies which arose in the infancy of mental science, and which was born and bred in the decay of the pre-Socratic philosophies, was not dispelled by Aristotle, but by Socrates and Plato. The *summa genera* of thought, the nature of the proposition, of definition, of generalization, of synthesis and analysis, of division and cross-division, are clearly described, and the processes of induction and deduction are constantly employed in the dialogues of

Plato. The 'slippery' nature of comparison, the danger of putting words in the place of things, the fallacy of arguing 'a dicto secundum,' and in a circle, are frequently indicated by him. To all these processes of truth and error, Aristotle, in the next generation, gave distinctness; he brought them together in a separate science. But he is not to be regarded as the original inventor of any of the great logical forms, with the exception of the syllogism.

There is little worthy of remark in the characters of the Sophist. The most noticeable point is the final retirement of Socrates from the field of argument, and the substitution for him of an Eleatic stranger, who is described as a pupil of Parmenides and Zeno, and is supposed to have descended from a higher world in order to convict the Socratic circle of error. As in the *Timaeus*, Plato seems to intimate that he is passing beyond the limits of the teaching of Socrates; and in the *Sophist* and *Politicus*, as well as in the *Parmenides*, he probably means to imply that he is making a closer approach to the schools of Elea and Megara. He had much in common with them, but he must first submit their ideas to criticism and revision. He had once thought, as he says, speaking by the mouth of the Eleatic, that he understood their doctrine of not-Being; but now he does not even comprehend the nature of Being. The friends of ideas (p. 248) are alluded to by him as distant acquaintances, whom he criticises *ab extra*; we do not recognise at first sight that he is criticising himself. The character of the Eleatic stranger is colourless; he is to a certain extent the reflection of his father and master, Parmenides, who is also the protagonist in the dialogue which is called by his name. Theaetetus himself is not distinguished by the remarkable traits which are attributed to him in the former dialogue. He is no longer under the spell of Socrates, or subject to the operation of his midwifery, though the fiction of question and answer is still maintained; and the necessity of taking Theaetetus along with him, is several times insisted upon by his partner in the discussion. There is a reminiscence of the old Theaetetus in his remark that he will not tire of the argument, and in his conviction, which the Eleatic thinks likely to be permanent, that the course of events is governed by the will of God. Throughout the two dialogues Socrates continues a silent auditor, in the *Politicus* just reminding us of his presence at the commencement, by a characteristic jest about the statesman and the philosopher, and by an allusion to his namesake, with whom on that ground he claims affinity, as he had

already claimed affinity with Theaetetus, grounded on the likeness of his ugly face. But in neither dialogue, any more than in the Timaeus, does he offer any criticism on the views which are propounded by another.

The style, though wanting in dramatic power, in this respect resembling the Philebus and the Laws, is very clear and accurate, and has several touches of humour and satire. The language is less fanciful and imaginative than that of the earlier dialogues; and there is more of bitterness, as in the Laws, though traces of a similar temper may also be observed in the description of the 'great brute' in the Republic, and in the contrast of the lawyer and philosopher in the Theaetetus. The following are characteristic passages: 'The ancient philosophers, of whom we may say without offence, that they went on their way rather regardless of whether we understood them or not.' Or, again, the picture of the materialists, or earth-born giants, 'who grasped oaks and rocks in their hands,' and must be improved before they can be reasoned with; and the equally humorous delineation of the friends of ideas, who defend themselves from a fastness in the invisible world; or the comparison of the Sophist to a painter or maker (cp. Rep. x.), and the hunt after him in the rich meadow-lands of youth and wealth. Or, again, the light and graceful touch with which the older philosophies are painted (Italian and Sicilian muses), and the fear of the Eleatic that he will be counted a parricide if he ventures to lay hands on his father Parmenides. Or, once more, the likening of the Eleatic stranger to a god from heaven.—All these passages, notwithstanding the decline of the style, retain the impress of the great master of language. But the equably diffused grace is gone; instead of the endless variety of the early dialogues, traces of the rhythmical monotonous cadence of the Laws begin to appear; and already an approach is made to the technical language of Aristotle, in the frequent use of the words 'essence,' 'power,' 'generation,' 'motion,' 'rest,' 'action,' 'passion,' and the like.

The Sophist, like the Phaedrus, has a double character, and unites two enquiries, which are only in a somewhat forced manner connected with each other. The first is the search after the Sophist, the second is the enquiry into the nature of not-being, which occupies the middle part of the work. For 'not-being' is the hole or division of the dialectical net in which the Sophist has hidden himself. He is the imaginary impersonation of false opinion. But he denies the reality of false opinion; for falsehood is that which is not, and therefore has no existence. At

length the difficulty is solved; the answer, in the language of the Republic, appears tumbling out at our feet. Acknowledging that there is a communion of kinds with kinds, and not merely one being or good having different names, or several isolated ideas or classes incapable of communion, we discover 'not-being' to be the other of 'being.' Transferring this to language and thought, we have no difficulty in apprehending that a proposition may be false as well as true. The Sophist, drawn out of the shelter which Cynic and Megarian paradoxes have temporarily afforded him, is proved to be a dissembler and juggler with words.

The chief points of interest in the Sophist are: (1) the character attributed to the Sophist: (2) the dialectical method: (3) the nature of the puzzle about 'not-being': (4) the battle of the philosophers: (5) the relation of the Sophist to other dialogues.

The Sophist in Plato is the master of the art of illusion; the charlatan, the foreigner, the prince of esprits-faux, the hireling who is not a teacher, and who, from whatever point of view he is regarded, is the opposite of the true teacher. He is the 'evil one,' the ideal representative of all that Plato most disliked in the moral and intellectual tendencies of his own age; the adversary of the almost equally ideal Socrates. He seems to be always growing in the fancy of Plato, now boastful, now eristic, now clothing himself in rags of philosophy, now more akin to the rhetorician or lawyer, now haranguing, now questioning, until the final appearance in the Politicus of his departing shadow in the disguise of a statesman. We are not to suppose that Plato intended by such a description to depict Protagoras or Gorgias, or even Thrasymachus, who all turn out to be 'very good sort of people when we know them,' and all of them part on good terms with Socrates. But he is speaking of a Being as imaginary as the wise man of the Stoics, and whose character varies in different dialogues. Like mythology, Greek philosophy has a tendency to personify ideas. And the Sophist is truly a creation of Plato's in which the falsehood of all mankind is reflected.

A milder tone is adopted towards the Sophists in a well-known passage of the Republic (vi. 492), where they are described as the followers rather than the leaders of the rest of mankind. Plato ridicules the notion that any individuals can corrupt youth to a degree worth speaking of in comparison with the greater influence of public opinion. But there is no real inconsistency between this and other descriptions of the Sophist which occur in the Platonic writings. For Plato is not justifying the

Sophists in the passage just quoted, but only representing their power to be contemptible ; they are to be despised rather than feared, and are no worse than the rest of mankind. But a teacher or statesman may be justly condemned, who is on a level with mankind when he ought to be above them. There is another point of view in which this passage should also be considered. The great enemy of Plato is the world, not exactly in the theological sense, yet in one not wholly different—the world as the hater of truth and lover of appearance, occupied in the pursuit of gain and pleasure rather than of knowledge, banded together against the few good and wise men, and devoid of true education. This creature has many heads : rhetoricians, lawyers, statesmen, poets, sophists. But the Sophist is the Proteus who takes the likeness of all of them ; all other deceivers have a piece of him in them. And sometimes he is represented as the corrupter of the world ; and sometimes the world as the more dangerous corrupter of the two.

Of late years the Sophists have found an enthusiastic defender in the distinguished historian of Greece. He appears to maintain that (1) the term 'Sophist' is not the name of a particular class, and would have been applied indifferently to Socrates and Plato, as well as to Gorgias and Protagoras ; (2) that the bad sense was imprinted on the word by the genius of Plato ; (3) that the principal Sophists were not the corrupters of youth (for that the Athenian youth were no more corrupted in the time of Demosthenes than in the time of Pericles), but honourable and estimable persons, who supplied a training in literature which was generally wanted in their own age. We will briefly consider how far these statements appear to be justified by facts : and,

About the meaning of the word there arises an interesting question :—

1. Many words are used both in a general and a specific sense, and the two senses are not always clearly distinguished. Sometimes the generic meaning has been narrowed to the specific, while in other cases the specific meaning has been enlarged or altered. Examples of the former class are furnished by some ecclesiastical terms : apostles, prophets, bishops, elders, catholics. Examples of the latter class may also be found in a similar field : jesuits, puritans, methodists, and the like. Sometimes the meaning is both narrowed and enlarged ; and a good or bad sense will subsist side by side with a neutral one. A curious effect is produced on the meaning of a word when the very term which is stigmatised by the world is adopted by the obnoxious or derided class ; this

tends to define the meaning. Or, again, the opposite result is produced, when the world refuses to allow to some sect or body of men the possession of some honourable name which they have assumed.

The term 'Sophist' is one of those words of which the meaning has been both contracted and enlarged. Passages may be quoted from Herodotus and the tragedians, in which the word is used in a neutral sense for a contriver or deviser or inventor, without including any ethical idea of goodness or badness. Poets as well as philosophers were called Sophists in the fifth century before Christ. In Plato himself the term is applied in the sense of a 'master in art,' without any bad meaning attaching (*Symp.* 208 C, *Meno* 85 B). In the later Greek, again, 'sophist' and 'philosopher' became almost indistinguishable. There was no reproach conveyed by the word; the additional association, if any, was only that of rhetorician or teacher. Philosophy had become eclecticism and imitation: in the decline of Greek literature there was no original voice lifted up 'which reached to a thousand years because of the god'; and the two words, like the characters represented by them, tended to pass into one another. Yet even here some differences appeared; for the term 'Sophist' would hardly have been applied to the greater names, such as Plotinus, and would have been more often used of a professor of philosophy in general than of a maintainer of particular tenets.

But the question is, not really whether the word 'Sophist' has all these senses, but whether there is not also a specific bad sense in which the term is applied to certain contemporaries of Socrates. Would an Athenian, as Mr. Grote supposes, in the fifth century before Christ, have included Socrates and Plato, as well as Gorgias and Protagoras, under the specific class of Sophists? To this question we must answer, No: wherever the word is so applied, the application is made either by an enemy of Socrates and Plato, or in a neutral sense. Plato, Xenophon, Isocrates, Aristotle, all give a bad import to the word; and the Sophists are regarded as a separate class in all of them. And in later Greek literature, the distinction is quite marked between the succession of philosophers from Thales to Aristotle, and the Sophists of the age of Socrates, who appeared like meteors for a short time in different parts of Greece. For the purposes of comedy, Socrates may have been identified with the Sophists, and he seems to complain of this in the *Apology*. But there is no reason to suppose that Socrates, differing by so many outward marks, would really have been confounded in the mind of Anytus, or Callicles,

or of any intelligent Athenian, with the splendid foreigners who from time to time visited Athens, or appeared at the Olympic games. The man of genius, the great original thinker, the disinterested seeker after truth, the master of repartee whom no one ever defeated in an argument, was separated, even in the mind of the vulgar Athenian, by an 'interval which no geometry can express,' from the balancer of sentences, the interpreter and reciter of the poets, the divider of the meanings of words, the teacher of rhetoric, the professor of morals and manners.

2. The use of the term 'Sophist' in the dialogues of Plato also shows that the bad sense was not affixed by his genius, but already current. When Protagoras says, 'I confess that I am a Sophist,' he implies that he professes an art denoted by an obnoxious term; or when the young Hippocrates, with a blush upon his face which is just seen by the light of dawn, admits that he is going to be made 'a Sophist,' these words would lose their point, unless the term had been already discredited. There is nothing surprising in the Sophists having an evil name; that, whether deserved or not, was a natural consequence of their vocation. That they were foreigners, that they made fortunes, that they taught novelties, that they excited the minds of youth, are quite sufficient reasons to account for the opprobrium which attached to them. The genius of Plato could not have stamped the word anew, or have imparted the associations which occur in contemporary writers, such as Xenophon and Isocrates. Changes in the meaning of words can only be made with great difficulty, and not unless they are supported by a strong current of popular feeling. There is nothing improbable in supposing that Plato may have extended and envenomed the meaning, or that he may have done the Sophists the same kind of disservice with posterity which Pascal did to the Jesuits. But the bad sense of the word is not and could not have been invented by him, and is found in the earlier dialogues, e.g. the Protagoras, as well as in the later.

3. There is no ground for denying that the principal Sophists, Gorgias, Protagoras, Prodicus, Hippias, were good and honourable men. The notion that they were corrupters of the Athenian youth has no real foundation, and partly arises out of the use of the term 'Sophist' in modern times. The truth is, that we know little about them; and the witness of Plato in their favour is probably not much more historical than his witness against them. Of that national decline of genius, unity, political force, which has been sometimes described as the corruption of youth, the

Sophists were one among many signs;—in these respects Athens may have degenerated; but, as Mr. Grote remarks, there is no reason to suspect any greater moral corruption in the age of Demosthenes than in the age of Pericles. The Athenian youth were not corrupted in this sense, and therefore the Sophists could not have corrupted them. It is remarkable, and may be fairly set down to their credit, that Plato nowhere attributes to them that peculiar Greek sympathy with youth, which he ascribes to Parmenides, and which is evidently common in the Socratic circle. Plato delights to exhibit them in a ludicrous point of view, and to show them always at a disadvantage in the company of Socrates. But he has no quarrel with their characters, and does not deny that they are respectable men.

The Sophist, in the dialogue which is called after him, is exhibited in many different lights, and appears and reappears in a variety of forms. There is some want of the higher Platonic art in the Eleatic Stranger eliciting his true character by a laborious process of enquiry, when he had already admitted that he knew quite well the difference between the Sophist and the Philosopher, and had often heard the question discussed;—such an anticipation would hardly have occurred in the earlier dialogues. But Plato could not altogether give up his Socratic method, of which another trace may be thought to be discerned in his adoption of a common instance before he proceeds to the greater matter in hand. Yet the example is also chosen in order to damage the ‘hooker of men’ as much as possible; each step in the pedigree of the angler suggests some injurious reflection about the Sophist. They are both hunters after a living prey, nearly related to tyrants and thieves, and the Sophist is the cousin of the parasite and flatterer. The effect of this is heightened by the accidental manner in which the discovery is made, as the result of a scientific division. His descent in another branch affords the opportunity of more ‘unsavoury comparisons.’ For he is a retail trader, and his wares are either imported or home-made, like those of other retail traders; his art is thus deprived of the character of a liberal profession. But the most distinguishing characteristic of him is, that he is a disputant, and higgles over an argument. A feature of the Eristic here seems to blend with Plato’s usual description of the Sophists, who in the early dialogues, and in the Republic, are frequently depicted as endeavouring to save themselves from disputing with Socrates by making long orations. In this character he parts company from the vain and

impertinent talker in private life, and his differentia is, that he makes, while the other loses money.

But there is another general division under which his art may be also supposed to fall, and that is purification; and from purification is descended education, and the new principle of education is to interrogate men after the manner of Socrates, and make them teach themselves. Here again we catch a glimpse rather of a Socratic or Eristic than of a Sophist in the ordinary sense of the term. And Plato does not on this ground reject the claim of the Sophist to be the true philosopher. One more feature of the Eristic rather than of the Sophist is the tendency of the troublesome animal to run away into the darkness of not-being. Upon the whole, we detect in him a sort of Hybrid or double nature, of which, except perhaps in the *Euthydemus* of Plato, we find no other trace in Greek philosophy; he combines the teacher of virtue with the Eristic; while in his omniscience, in his ignorance of himself, in his arts of deception, and in his lawyer-like habit of writing and speaking about all things, he is still the antithesis of Socrates and of the true teacher.

II. The question has been asked, whether this method of 'abscissio infiniti,' by which the Sophist is taken, is a real and valuable logical process. Modern science feels that this, like other processes of formal logic, presents a very inadequate conception of the actual complex procedure of the mind by which scientific truth is detected and verified. Plato himself seems to be aware that mere division is an unsafe and uncertain weapon. First, in the *Politicus*, when he says that we should divide in the middle, for in that way we are more likely to attain species; secondly, in the parallel precept of the *Philebus*, that we should not pass from the most general notions to infinity, but include all the intervening middle principles, until, as he also says in the *Politicus*, we arrive at the infima species; thirdly, in the *Phaedrus*, when he says that the dialectician will carve the limbs of truth without mangling them; or, as he repeats once more in the *Politicus*, if we cannot bisect species, we must carve them as nearly as we can. No better image of nature or truth, as an organic whole, can be conceived than this. So far is Plato from supposing that mere division and subdivision of general notions will guide men into all truth.

Plato does not really mean to say that the Sophist or the Statesman can be caught in this way. But these divisions and subdivisions were favourite logical exercises of the age in which he lived; and while

indulging his dialectical fancy, and making a contribution to logical method, he delights also to transfix the Eristic Sophist with weapons borrowed from his own armoury. As we have already seen, the division gives him the opportunity of making the most damaging reflections on the Sophist and all his kith and kin, and to exhibit him in the most discreditable light.

Nor need we seriously consider whether Plato was right in assuming that no animal so various could be confined within the limits of a single definition. In the infancy of logic, men sought only to obtain a definition of an unknown or uncertain term; the after reflection scarcely occurred to them that the word might have several senses, which shaded off into one another, and were not capable of being comprehended in a single notion. There is no trace of this reflection in Plato. But neither is there any reason to think, even if the reflection had occurred to him, that he would have been deterred from carrying on the war with weapons fair or unfair against the outlaw Sophist.

III. The puzzle about 'not-being' appears to us to be one of the most unreal difficulties of ancient philosophy. We cannot understand the attitude of mind which could imagine that falsehood had no existence, if reality was denied to not-being: How could such a question arise at all, much less become of serious importance? The answer to this, and to all other difficulties of early Greek philosophy, is to be sought for in the history of ideas, and the answer is only unsatisfactory because our knowledge is defective. In the passage from the world of sense and imagination and common language to that of opinion and reflection the human mind was exposed to many dangers, and often

'Found no end in wandering mazes lost.'

The discovery of abstractions was the great source of all mental improvement in after ages. But each one of this company of abstractions, if we may speak in the metaphorical language of Plato, became in turn the tyrant of the mind, the dominant idea, which would allow no other to have a share in the throne. This is especially true of the Eleatic philosophy: while the absoluteness of being was asserted in every form of language, the sensible world and all the phenomena of experience were comprehended under not-being. Nor did this lead to any difficulty or perplexity, so long as the mind, lost in the contemplation of being, asked no more questions, and never thought of applying the categories of being or not-being to mind or opinion or practical life.

But the negative as well as the positive idea had sunk deep into the intellect of man. The effect of the paradoxes of Zeus extended far beyond the Eleatic circle. And now an unforeseen consequence began to arise. If the many were not, if all things were names of the one, and nothing could be predicated of any other thing, how could truth be distinguished from falsehood? The Eleatic philosopher would have replied that 'being was alone true.' But mankind had got beyond his barren abstractions: they were beginning to analyse, to classify, to define, to ask what is the nature of knowledge, opinion, sensation. Still less could they be content with the descriptions which Achilles gives in Homer of the man whom his soul hates—

ὄς ρ' ἕτερον μὲν κεύθει ἐνὶ φρεσὶν ἄλλο δὲ βιάζει.

For their difficulty was not a practical but a metaphysical one; and their conception of falsehood was really impaired and weakened by a metaphysical illusion.

The strength of the illusion seems to lie in the alternative: If we once admit the existence of being and not-being, as two spheres which exclude each other, no being or reality can be ascribed to not-being, and therefore not to falsehood, which is the image or expression of not-being. Falsehood is wholly false; and to speak of true falsehood, as Theaetetus does, is a contradiction in terms. The fallacy to us is ridiculous and transparent; no better than those which Plato satirizes in the Euthydemus. It is a confusion of falsehood and negation, from which Plato himself is not entirely free. Instead of saying, 'this is not in accordance with facts,' 'this is proved by experience to be false,' and from such examples forming a general notion of falsehood, the mind of the Greek thinker was lost in the mazes of the Eleatic philosophy. And the greater importance which Plato attributes to this fallacy, compared with others, is due to the influence which the Eleatic philosophy exerted over him. He sees clearly to a certain extent; but he has not yet attained a complete mastery over the ideas of his predecessors—they are still ends to him, and not mere instruments of thought. They are too rough-hewn to be harmonised in a single structure, and may be compared to rocks which project or overhang in some ancient city's walls. There are many such imperfect syncretisms or eclecticisms in the history of philosophy. A modern philosopher, though emancipated from scholastic notions of essence or substance, might still be seriously affected by the abstract idea

of necessity; though accustomed, like Bacon, to criticise abstract notions, he might not extend his criticism to the syllogism.

The saying or thinking the thing that is not, would be the popular definition of falsehood or error. If we were met by the Sophist's objection, the reply would probably be an appeal to experience. Ten thousands, as Homer would say (*μάλα μύριοι*), tell falsehoods and fall into errors. And this is Plato's reply, both in the *Cratylus* (429 D) and *Sophist*. 'Theaetetus is flying,' is a sentence in form quite as grammatical as 'Theaetetus is sitting'; the difference between the two sentences is, that the one is true and the other false. But, before making this appeal to common sense, Plato propounds for our consideration a theory of the nature of the negative.

The theory is, that 'not-being is relation.' Not-being is the other of being, and has as many kinds as there are differences in being. This doctrine is the simple converse of the famous proposition of Spinoza, not 'omnis determinatio est negatio,' but 'omnis negatio est determinatio'; —not, all distinction is negation, but, all negation is distinction. Not-being is the unfolding or determining of being, and is a necessary element in all other things that are. We should be careful to observe, first, that Plato does not identify being with not-being; he has no idea of progression by antagonism, or of the Hegelian vibration of moments: he would not have said with Heracleitus, 'All things are and are not, and become and become not.' Secondly, he has lost sight altogether of the other sense of not-being, as the negative of being; although he again and again recognises the validity of the law of contradiction. Thirdly, he seems to confuse falsehood with negation. Nor is he quite consistent in regarding not-being as one class of being, and yet as coextensive with being in general. Before analysing further the topics thus suggested, we will endeavour to trace the manner in which Plato arrived at his conception of not-being.

In all the later dialogues of Plato, the idea of mind or intelligence becomes more and more prominent. That idea which Anaxagoras employed inconsistently in the construction of the world, Plato, in the *Philebus*, the *Sophist*, and the *Laws*, extends to all things; attributing to Providence a care, infinitesimal as well as infinite, of all creation. The divine mind is the leading religious thought of the later works of Plato. The human mind is a sort of reflection of this, having ideas of being, sameness, and the like. At times they seem to be parted by a great gulf

(Parmenides); at other times they have a common nature, and the light of a common intelligence.

But this ever-growing idea of mind is really irreconcilable with the abstract Pantheism of the Eleatics. To the passionate language of Parmenides, Plato replies in a strain equally passionate:—What! has not being mind? and is not being capable of being known? and, if this is admitted, then capable of being affected or acted upon?—in motion, then, and yet not wholly incapable of rest. Already we have been compelled to attribute opposite determinations to being. And the answer to this difficulty may be equally the answer to the difficulty about not-being.

The answer is, that in these and all other determinations of any notion we are attributing to it 'not-being.' We went in search of not-being and seemed to lose being, and now in the hunt after being we recover both. Not-being is a kind of being, and in a sense co-extensive with being. And there are as many divisions of not-being as of being. To every positive idea—'just,' 'beautiful,' and the like, there is a corresponding negative idea—'not just,' 'not beautiful,' and the like.

A doubt may be raised whether this account of the negative is really the true one. The common logicians would say that the 'not just,' 'not beautiful,' are not really classes at all, but are merged in one great class of the infinite or negative. The conception of Plato, in the days before logic, seems to be more correct than this. For the word 'not' does not altogether annihilate the positive meaning of the word 'just': at least, it does not prevent our looking for the 'not just' in or about the same class in which we might expect to find the 'just.' 'Not just is not honourable' is neither a false nor an unmeaning proposition. The reason is that the negative proposition has really passed into an undefined positive. To say that 'not just' has no more meaning than 'not honourable'—that is to say, that the two cannot in any degree be distinguished—is clearly repugnant to the common use of language.

The ordinary logic is also jealous of the explanation of negation as relation, because seeming to take away the principle of contradiction. Plato, as far as we know, is the first philosopher who distinctly enunciated this principle; and though we need not suppose him to have been always consistent with himself, there is no real inconsistency between his explanation of the negative and the principle of contradiction. Neither the Platonic notion of the negative as the principle of difference, nor the Hegelian identity of being and not-being, at all touch the principle of

contradiction. For what is asserted about being and not-being only relates to our most abstract notions, and in no way interferes with the principle of contradiction employed in the concrete. Because not-being is identified with other, or being with not-being, this does not make the proposition 'some have not eaten' any the less a contradiction of 'all have eaten.'

The explanation of the negative given by Plato in the Sophist is a true but partial one; for the word 'not,' besides the meaning of 'other,' may also imply 'opposition.' And difference or opposition may be either total or partial: the not-beautiful may be other than the beautiful, or in no relation to the beautiful, or a specific class in various degrees opposed to the beautiful. And the negative may be a negation of fact or of thought (*οὐ* and *μη*). Lastly, there are certain ideas, such as 'beginning,' 'becoming,' 'the finite,' 'the abstract,' in which the negative cannot be separated from the positive, and 'being' and 'not-being' are inextricably blended.

Plato restricts the conception of not-being to difference. Man is a rational animal, and is not—as many other things as are not included under this definition. He is and is not, and is because he is not. Besides the positive class to which he belongs, there are endless negative classes to which he may be referred. This is certainly intelligible, but useless. To refer a subject to a negative class is unmeaning, unless the 'not' is a mere modification of the positive, as in the example of 'not honourable' and 'dishonourable'; or unless the class is characterised by the absence rather than the presence of a particular quality.

Nor is it easy to see how not-being any more than sameness or otherness is one of the classes of being. They are aspects rather than classes of being. Not-being can only be included in being, as the denial of any particular class of being. If we are to attempt to pursue such airy phantoms at all, the Hegelian identity of being and not-being is a more apt and intelligible expression of the same mental phenomenon. For Plato has not distinguished between the being which is prior to not-being, and the being which is the negation of not-being. (Cf. Par. 162 A, B.)

But he is not thinking of this when he says that being comprehends not-being. Again, we should probably go back for the true explanation to the influence which the Eleatic philosophy exercised over him. Under 'not-being' the Eleatic had included all the realities of the

sensible world. Led by this association and by the common use of language, which has been already noticed, we cannot be much surprised that Plato should have made classes of not-being. It is observable that he does not absolutely deny that there is an opposite of being. He is inclined to leave the question, merely remarking that the opposition, if admissible at all, is not expressed by the term 'not-being.'

On the whole, we must allow that the great service rendered by Plato to psychology in the *Sophist*, is not his explanation of 'not-being' as difference. With this he certainly laid the ghost of 'not-being'; and we may attribute to him in a measure the credit of anticipating Spinoza and Hegel. But his conception is not clear or consistent; he does not recognise the different senses of the negative, and he confuses the different classes of not-being with the abstract notion. As the pre-Socratic philosopher failed to distinguish between the universal and the true, while he placed the particulars of sense under the false and apparent, so Plato appears to identify negation with falsehood, or is unable to distinguish them. The greater service rendered by him to mental science is the recognition of the communion of classes, which, although based by him on his account of 'not-being,' is independent of this. He clearly saw that the isolation of ideas or classes is the annihilation of reasoning. Thus, after wandering in many diverging paths, we return to common sense. And for this reason we may be inclined to do less than justice to Plato, —because the truth which he attains by a real effort of thought is to us a familiar and unconscious truism, which no one would any longer think either of doubting or examining.

IV. The later dialogues of Plato contain many references to contemporary philosophy. Both in the *Theaetetus* and in the *Sophist* he recognises that he is in the midst of a fray; a huge irregular battle everywhere surrounds him (*Theaet.* 153 A). First, there are the two great philosophies going back into cosmogony and poetry: the philosophy of Heracleitus, supposed to have a poetical origin in Homer, and that of the Eleatics, which in a similar spirit he conceives to be even older than Xenophanes (compare *Protagoras*, 316 E). Still older were theories of two and three principles, hot and cold, moist and dry, which were ever marrying and given in marriage: in speaking of these, he is probably referring to Pherecydes and the early Ionians. In the philosophy of motion there were different accounts of the relation of plurality and unity, which were supposed to be joined and severed by love and

hate, some maintaining that this process was perpetually going on (Heracleitus); others (Empedocles) that there was an alternation of them. Of the Pythagoreans or of Anaxagoras he makes no distinct mention. His chief opponents are, first, Eristics or Megarians; secondly, the Materialists.

The picture which he gives of both these latter schools is indistinct; and he appears reluctant to mention the names of their teachers. Nor can we easily determine how much is to be assigned to the Cynics, how much to the Megarians, or whether the 'repulsive Materialists' are Cynics or Atomists, or represent some unknown phase of opinion at Athens. To the Cynics and Antisthenes is commonly attributed, on the authority of Aristotle, the denial of predication, while the Megarians are said to have been Nominalists, asserting the one good under many names to be the true being of Zeno and the Eleatics, and, like Zeno, employing their negative dialectic in the refutation of opponents. But the later Megarians also denied predication; and this tenet, which is attributed to all of them by Simplicius, is certainly in character with their over-refining philosophy. The 'tyros young and old,' of whom Plato speaks, probably include both. At any rate, we shall be safer in accepting the general description of them which he has given, and in not attempting to draw a precise line between them.

Of these Eristics, whether Cynics or Megarians, several characteristics are found in Plato.

1. They pursue verbal oppositions; 2. They make reasoning impossible by their over-accuracy in the use of language; 3. They deny predication; 4. They go from unity to plurality, without passing through the intermediate stages; 5. They refuse to attribute motion or power to being; 6. They are the enemies of sense;—whether they are the 'friends of ideas' who carry on the polemic against sense, is uncertain; probably under this remarkable expression Plato designates those who more nearly approached himself, and may be criticising an earlier form of his own doctrines. We may observe that (1) he professes only to give us a few opinions out of many which were at that time current in Greece; (2) that he nowhere alludes to the ethical teaching of the Cynics; unless the argument in the Protagoras, that 'the virtues are one and not many,' may be supposed to contain a reference to their views, as well as to those of Socrates; and unless they are the school alluded to in

the Philebus, which is described as 'being very skilful in physics, and as maintaining pleasure to be the absence of pain.' That Antisthenes wrote a book called 'Physicus,' is hardly a sufficient reason for describing them as skilful in physics, which appear to have been very alien to the tendency of the Cynics.

The Idealism of the fourth century before Christ in Greece, as in other ages and countries, seems to have provoked a reaction towards Materialism. The maintainers of this doctrine are described in the Theaetetus as repulsive persons who will not believe what they cannot hold in their hands, and in the Sophist as incapable of argument. They are probably the same who are said in the tenth book of the Laws to attribute the course of events to nature, art, and chance. Who they were, we have no means of determining except from Plato's description of them. His silence respecting the Atomists might lead us to suppose that here we have a trace of them. But the Atomists were not Materialists in the grosser sense of the term, nor were they incapable of reasoning; and Plato would hardly have described a great genius like Democritus in the disdainful terms which he uses of the Materialists. Upon the whole, we must infer that the persons here spoken of are unknown to us, like the many other writers and talkers at Athens and elsewhere, of whose endless activity of mind Aristotle in his Metaphysics has preserved an anonymous memorial.

V. The Sophist is the sequel of the Theaetetus, and is connected with the Parmenides by a direct allusion. (Cp. Introduction to Theaetetus and Parmenides.) In the Theaetetus we sought to discover the nature of knowledge and false opinion. But the nature of false opinion seemed impenetrable; for we were unable to understand how there could be any reality in not-being. In the Sophist the question is taken up again; the nature of not-being is detected, and there is no longer any metaphysical impediment in the way of admitting the possibility of falsehood. To the Parmenides, the Sophist stands in a less defined and more remote relation. There human thought is in process of disorganization; no absurdity or inconsistency is too great to be elicited from the analysis of the simple ideas of unity or being. In the Sophist the same contradictions are pursued to a certain extent, but only with a view to their resolution. The aim of the dialogue is to show how the few elemental conceptions of the human mind admit of a natural connection in

thought and speech, which Megarian or other sophistry vainly attempts to deny.

True to the appointment of the previous day, Theodorus and Theaetetus meet Socrates at the same spot, bringing with them an Eleatic Stranger, whom Theodorus introduces as a true philosopher. Socrates, half in jest, half in earnest, declares that he must be a god in disguise, who, as Homer would say, has come to earth that he may visit the good and evil among men, and detect the foolishness of Athenian wisdom. At any rate he is a divine person, one of a class who are hardly recognised on earth, in divers forms appearing—now as statesmen, now as sophists, and they are often deemed madmen. Philosopher, statesman, sophist, says Socrates, repeating the words—I should like to ask our Eleatic friend what his countrymen think of them; do they regard them as one, or three?

The Stranger has been already asked this very question by Theodorus and Theaetetus; and he has no difficulty in replying that they are three; but to explain the difference fully would take time. He is pressed to give the fuller explanation, either in the form of a speech or of question and answer. He prefers the latter, and chooses as his respondent Theaetetus, whom he already knows, and who is recommended to him by Socrates.

We are agreed, he says, about the name Sophist, but we are not equally agreed about his nature. Great subjects should be approached through familiar examples, and, considering that he is a creature not easily caught, I think that, before approaching him, we should try our hand upon some more obvious animal, who may be made the subject of logical experiment; shall we say an angler? 'Very good.'

In the first place, the angler is an artist, and there are two kinds of art;—productive art, which includes husbandry, manufactures, imitations; and acquisitive art, which includes learning, trading, hunting. The angler's is an acquisitive art, and acquisition may be effected either by exchange or by conquest; in the latter case, either by force or craft: conquest by craft is called hunting, and of hunting there is one kind which pursues inanimate, and another which pursues animate objects; and animate objects may be either land animals or water animals, and water animals either fly over the water or live in the water. The hunting of the last is called fishing; and of fishing, one kind uses

enclosures, catching the fish in nets and baskets, and another kind strikes them either with spears by night or with barbed spears or barbed hooks by day; the spears are impelled from above, the hooks are jerked into the head and lips of the fish which is drawn from below upwards. Thus, by a series of divisions, we have arrived at the definition of the angler's art.

And now we may endeavour by a similar process to draw the Sophist from his hiding-place. Like the angler, he is an artist, and the resemblance does not end here. For they are both hunters, and hunters of animals; the one of water, and the other of land animals. But at this point they diverge, the one going to the sea and the rivers, and the other to the rivers of wealth and rich meadow-lands, in which generous youth abide. You may hunt tame animals on land, or you may hunt wild animals. And man is a tame animal, and he may be hunted either by force or persuasion;—either by the pirate, man-stealer, soldier, or by the lawyer, orator, talker. The latter use persuasion, and persuasion is either private or public. Of the private practitioners of the art, some bring gifts to those whom they hunt: these are lovers. And others take hire; and some of these flatter, and in return are fed; others profess to teach virtue and receive a round sum. And who are these last? Tell me who? Have we not unearthed the Sophist?

But, 2, he is a many-sided creature, and may still be traced in another line of descent. The acquisitive art had a branch of exchange as well as of hunting, and exchange is either giving or selling; and the seller is either a manufacturer or a merchant; and the merchant either retails or exports; and the exporter may export either food for the body or food for the mind. And of this trade of food for the mind, one kind may be termed the art of display, and another the sale of learning; and learning may be a learning of the arts or of virtue. The seller of the arts may be called an art-seller; the teacher of virtue, a Sophist.

Again, 3, there is a third line, in which a Sophist may be traced. For is he less a Sophist when, instead of exporting his wares to another country, he stays at home, and either buys or manufactures and then retails them?

Or, 4, he may descend from the acquisitive in the combative line, through the pugnacious, the controversial, the disputatious; and he will be found at last in the eristic section of the latter, disputing in private for gain about the general principles of right and wrong.

And still there is a track of him which has not yet been followed out by us. Do not our household servants talk of sifting, straining, scouring? And they also speak of carding, warping, and the like: all these are processes of division, but they are of two kinds; while in the last-mentioned, like is divided from like—whereas in the former, the good is separated from the bad. The former of the two is termed purification; and again, of purification, there are two sorts—first of bodies, whether animate or inanimate, there are purifications both internal and external—medicine and gymnastic are the internal purifications of the animate, and bathing the external; and of the inanimate, fulling and cleaning and other humble processes, some of which have ludicrous names. Not that dialectic is a respecter of names or persons, or a despiser of humble occupations; nor does she think much of the greater or less benefits conferred by them. For her aim is knowledge;—she wants to know how the arts are related to one another, and would quite as soon learn the nature of hunting from the vermin-destroyer as from the general. And she only desires to have a general name, which shall distinguish purifications of the soul from purifications of the body.

Now purification is the taking away of evil; and there are two kinds of evil in the soul; the one answering to disease in the body, and the other to deformity. Disease is the discord or war of opposite principles in the soul; and deformity is the want of symmetry, or failure in the attainment of a mark or measure. The latter arises from ignorance, and no one is voluntarily ignorant; ignorance is only the aberration of the soul moving towards knowledge. And as medicine cures the diseases and gymnastic the deformity of the body, so correction cures the injustice, and education (which differs among the Hellenes from mere instruction in the arts) cures the ignorance of the soul. Again, ignorance is twofold; simple ignorance, and ignorance which is conceited of knowledge. And education is also twofold; there is the old-fashioned moral training of our forefathers, which was very troublesome and not very successful; and another, of a more subtle nature, which proceeds upon a notion that all ignorance is involuntary. The latter convicts a man out of his own mouth, by pointing out to him his inconsistencies and contradictions; and the consequence is that he quarrels with himself, instead of quarrelling with his neighbours, and is cured of prejudices and obstructions by a mode of treatment which is equally entertaining and effectual. The physician of the soul is aware that his patient will receive no nourishment unless he

has been cleared out; and the soul of the great king himself, if he has not undergone this purification, is unclean and impure.

And who are the ministers of the purification? Sophists I may not call them. Yet they bear about the same likeness to Sophists as the dog, who is the gentlest of animals, does to the wolf, who is the fiercest. Comparisons are slippery things; but for the present let us assume the resemblance, which may probably be disallowed hereafter. And so, from division comes purification; and from this, mental purification; and from mental purification, instruction; and from instruction, education; and from education, that glorious art of Sophistry, which is engaged in the detection of conceit. I do not think that we have yet found the Sophist, or that his will ultimately prove to be the desired art of education; but neither do I think that he can long escape me, for every way is blocked. Before we make the final assault, let us take breath, and reckon up the many forms which he has assumed: 1, he was the paid hunter of wealth and birth; 2, he was the trader in the goods of the soul; 3, he was the retailer of them; 4, he was the manufacturer of his own learned wares; 5, he was the disputant; and 6, he was the purger away of prejudices; although this latter point is admitted to be doubtful.

Now, there must surely be something wrong in the professor of any art having so many names and kinds of knowledge. Does not the very number of them imply that the nature of his art is not understood? And that we may not be involved in the misunderstanding, let us observe which of his characteristics is the most prominent: Above all things he is a disputant. He will dispute and teach others to dispute about things visible and invisible—about man, about the gods, about politics, about law, about wrestling, about all things. But can he know all things? ‘He cannot.’ Then how can he give an answer satisfactory to any one who knows? ‘Impossible.’ Then what is the trick of his art, and why does he receive money from his admirers? ‘Because he is supposed by them to know all things.’ You mean to say that he seems to have a knowledge of them. ‘Yes.’

Suppose a person were to say, not that he would dispute about all things, but that he would make all things, you and me, and all other creatures, the earth and the heavens and the gods, and would sell them all for a few pence—this would be a great jest; but not greater than a man saying that he knows all things, and can teach them in a short time, and at a small cost. For all imitation is a jest, and the most

graceful form of jest. The painter is able to deceive children, who see his pictures at a distance, into the belief that he can make anything; and the Sophist can steal away the hearts of youths, who are still at a distance from the truth, not through their eyes, but through their ears, by the mummery of words; and they, too, are induced to believe that he knows all things. But as they grow older, and come into contact with realities, they learn by experience to see the true proportions of things. The Sophist, then, has not real knowledge; he is only an imitator, or image-maker.

And now, having got him in a corner of the dialectical net, let us divide and subdivide until we catch him. Of image-making there are two kinds; the art of making likenesses, and the art of making appearances. The latter may be illustrated by sculpture and painting, which alter the proportions of figures, and use illusions in order to adapt their works to the eye. And the Sophist also uses illusion, and his imitations are apparent and not real. But how can any thing be an appearance only? Here arises a difficulty which has always beset the subject of appearances. For the argument is asserting the existence of not-being. And this is what the great Parmenides was all his life denying in prose and also in verse. 'You will never find,' he says, 'that not-being is.' And the words prove themselves! Not-being cannot be attributed to any being; for how can any being be wholly abstracted from being? Again, in every predication there is an attribution of singular or plural. But number is the most real of all things, and cannot be attributed to not-being. Therefore not-being cannot be predicated or expressed; for how can we say 'it is,' 'are not,' without number?

And now arises the greatest difficulty of all. If not-being is inconceivable, how can not-being be refuted? And am I not contradicting myself at this moment, in speaking either in the singular or the plural of that to which I deny either plurality or unity? You, Theaetetus, have the might of youth, and I conjure you to exert yourself, and, if you can, to find an expression of not-being which does not imply being and number. 'But I cannot.' Then the Sophist must be left in his hole. We may call him an image-maker if we please, but he will only say, 'And pray, what is an image?' And we shall reply, 'A reflection in the water, or in a mirror'; and he will say, 'Let us shut our eyes and open our minds; what is the common notion of all images?' 'I should answer, Such another, made in the likeness of the true.' Real or not real? 'Not real;

at least, not in a true sense.' And real means 'is,' and not real 'is not'? 'Yes.' Then a likeness is really unreal, and essentially not. Here is a complication of being and not-being, in which the many-headed Sophist has entangled us. He will at once point out that he is compelling us to contradict ourselves, by affirming being of not-being. I think that we must give up looking for him in the class of imitators.

But ought we to give him up? 'I should say, certainly not.' Then I fear that I must lay hands on my father Parmenides; but do not think me a parricide; for there is no way except to show that in some sense not-being is; and if this is not admitted, no one can speak of falsehood, or false opinion, or imitation, without falling into a contradiction. You observe how unwilling I am to undertake the task, because I know that I am exposing myself to the charge of inconsistency in asserting not-being. But if I am to make the attempt, I think that I had better begin at the beginning.

Lightly in the days of our youth, Parmenides and others told us tales about the origin of the universe: one spoke of three principles warring and at peace again, marrying and begetting children; another of two principles, hot and cold, dry and moist, which also formed relationships. There were the Eleatics in our part of the world, saying that all things are one; their doctrine begins with Xenophanes, and is even older. Ionian, and, more recently, Sicilian muses speak of a one and many which are held together by enmity and friendship, ever parting, ever meeting. Some of them do not insist on the perpetual strife, but adopt a gentler strain, and speak of alternation only. Whether they are right or not, who can say? But one thing we can say—that they went on their way without much caring whether we understood them or not: tell me, Theaetetus, do you understand what they mean by their assertion of unity, or by their combinations and separations of two or more principles? I used to think, when I was young, that I knew all about not-being, and now being is as great a puzzle to me as not-being.

Let us proceed first to the examination of being. Turning to the dualist philosophers, we say to them: Is being a third element besides hot and cold? or do you identify one of the two elements with being? At any rate, you can hardly avoid resolving them both into one. Let us next interrogate the patrons of the one. To them we say: Are being and one the same? And how can there be two names of one thing? If you admit of two names, that implies two things; or if you identify

them, then the name will be either the name of nothing or of itself, i. e. a name. Again, the notion of being is conceived of as a whole—in the words of Parmenides, ‘like every way unto a rounded sphere.’ And a whole has parts; but that which has parts is not one, for unity has no parts. Is being, then, one, because the parts of being are one, or shall we say that being is not a whole? In the former case, one is made up of parts; and in the latter there is still plurality, viz. being, and a whole which is apart from being. And being, if not a whole, lacks something of the nature of being, and becomes not-being. Nor can being ever have come into existence, for nothing comes into existence except as a whole; nor can being have number, for that which has number is a whole or sum of number. These are a few of the difficulties which are accumulating one upon another in the consideration of being.

We may proceed now to the less exact sort of philosophers. Some of them drag down everything to earth, and carry on a war like that of the giants, grasping rocks and oaks in their hands. Their adversaries defend themselves warily from an invisible world, and reduce the substances of their opponents to the minutest fractions, until they are lost in generation and flux. The last sort are civil people enough; but the materialists are rude and ignorant of dialectics; they must be taught how to argue before they can answer. Yet, for the sake of the argument, we may assume them to be better than they are, and able to give an account of themselves. They admit the existence of a mortal living creature, which is a body containing a soul, and to this they would not refuse to attribute qualities—wisdom, folly, justice and injustice. The soul, as they say, has a kind of body, but they do not like to assert of these qualities of the soul, either that they are corporeal, or that they have no existence; at this point they begin to make distinctions. ‘Sons of earth,’ we say to them, ‘if both visible and invisible qualities exist, what is the common nature which is attributed to them by the term “being” or “existence”?’ And, as they are incapable of answering this question, we may as well reply for them, that ‘being is the power of doing or suffering.’ Then we turn to the friends of ideas: to them we say, ‘you distinguish becoming from being?’ ‘Yes,’ they will reply. ‘And in becoming you participate through the bodily senses, and in being, by thought and the mind?’ ‘Yes.’ And you mean by the word ‘participation’ a power of doing or suffering? To this they answer (I am acquainted with them, Theætetus, and know their ways better than you do), ‘that being can neither

do nor suffer, though becoming may.' And we rejoin: Does not the soul know? And is not 'being' known? And are not 'knowing' and being 'known' active and passive? That which is known is affected by knowledge, and therefore is in motion. And, indeed, how can we imagine that being is a mere everlasting form, devoid of motion and life or soul; for there can be no thought without soul, nor can soul be devoid of motion. But neither can thought nor mind be devoid of some principle of rest or stability. . And as children say entreatingly, 'Give us both,' so the philosopher must include both the moveable and immoveable in his idea of being. And yet, alas! he and we are in the same difficulty with which we reproached the dualists; for motion and rest are contradictions—how then can they both exist? Does he who affirms this mean to say that motion is rest, or rest motion? 'No; he means to assert the existence of some third thing, different from them both, which neither rests nor moves.' But how can there be anything which neither rests nor moves? Here is a second difficulty about being, quite as great as that about not-being. And we may hope that any light which is thrown upon the one may extend to the other.

Leaving them for the present, let us enquire what we mean by giving many names to the same thing, e. g. white, good, tall, to man; out of which tyros old and young derive such a feast of amusement. Their meagre minds refuse to attribute anything to anything; they say that good is good, and man is man; and that to affirm one of the other would be making the many one and the one many. Let us place them in a class with our previous opponents, and interrogate both of them at once. Shall we assume (1) that being and rest and motion, and all other things, are incommunicable with one another; or (2) that they all have indiscriminate communion; or (3) that there is communion of some and not of others? And we will consider the first hypothesis first of all.

If we suppose the universal separation of kinds, all theories alike are swept away; the patrons of a single principle of rest or of motion, or of a plurality of immutable ideas—all alike have the ground cut from under them; and all creators of the universe by theories of composition and division, whether out of or into a finite or infinite number of elemental forms in alternation or continuance, share the same fate. Most ridiculous is the discomfiture which attends the opponents of predication, who have the voice that answers them, like the ventriloquist Eurycles, in their own breast. For they cannot help using the words 'is,' 'apart,' 'from others,'

and the like ; and their adversaries are thus saved the trouble of refuting them. But (2) if all things have communion with all things, motion will rest, and rest will move ; here is a *reductio ad absurdum*. Two out of the three hypotheses are thus seen to be false ; the third (3) remains, which affirms that only certain things communicate with certain other things. In the alphabet and the scale there are some letters and notes which combine with others, and some which do not ; and the laws according to which they combine or are separated are known to the grammarian and musician. And there is a science which teaches not only what notes and letters, but what classes admit of combination with one another, and what not. This is a noble science, on which we have stumbled unawares ; in seeking after the Sophist we have found the philosopher. He is the master who discerns one whole or form pervading a scattered multitude, and many such wholes combined under a higher one, and many entirely apart—he is the true dialectician. Like the Sophist, he is hard to recognise, though for the opposite reasons ; the Sophist runs away into the obscurity of not-being, the philosopher is dark from excess of light. And now, leaving him, we will return to our pursuit of the Sophist.

Agreeing in the truth of the third hypothesis, that some things have communion and others not, and that some may have communion with all, let us examine the most important kinds which are capable of admixture ; and in this way we may perhaps find out a sense in which not-being may be affirmed to have being. Now the highest kinds are being, rest, motion ; and of these, rest and motion exclude each other, but both of them are included in being ; and again, they are the same with themselves and the other of each other. What is the meaning of these words, 'same' and 'other' ? Are there two more kinds to be added to the three others ? For sameness cannot be either rest or motion, because predicated both of rest and motion ; nor yet being, because if being were attributed to both of them we should attribute sameness to both of them. Nor can other be identified with being ; for then other, which is relative, would have the absoluteness of being. Therefore we must assume a fifth principle, which is universal, and runs through all things, for all things are the others of others. Thus there are five principles : (1) being, (2) motion, which is not, (3) rest, and because participating both in the same and other, is and is not the (4) same with itself, and is (5) other than the other. And motion is not being, but partakes of being,

and therefore is and is not in the most absolute sense. Thus we have discovered that not-being is the principle of the other which runs through all things, being not excepted. And 'being' is one thing, and 'not-being' includes and is all other things. And not-being is not the opposite of being, but only the other. Knowledge has many branches, and the other or difference has as many, each of which is described by prefixing the word 'not' to some kind of knowledge. The not-beautiful is as real as the beautiful, the not-just as the just. And the essence of the not-beautiful is to be separated from and opposed to a certain kind of existence which is termed beautiful. And this opposition and negation is the not-being of which we are in search, and is one kind of being. Thus, in spite of Parmenides, we have not only discovered the existence, but also the nature of not-being—that nature we have found to be relation. In the communion of different kinds, being and other mutually interpenetrate; other is, but is other than being, and other than each and all of the remaining kinds, and therefore in an infinity of ways 'is not.' And the argument has shown that the pursuit of contradictions is childish and useless, and the very opposite of that higher spirit which criticises the words of another according to the natural meaning of them. Nothing can be more unphilosophical than the denial of all communion of kinds. And we are fortunate in having established such a communion for another reason, because in continuing the hunt after the Sophist we have to examine the nature of discourse, and there could be no discourse if there were no communion. For the Sophist, although he can no longer deny the existence of not-being, may still affirm that not-being cannot enter into discourse, and as he was arguing before that there could be no such thing as falsehood, because there was no such thing as not-being, he may continue to argue that there is no such thing as the art of image-making and phantastic, because not-being has no place in language. Hence arises the necessity of examining speech, opinion, and imagination.

And first concerning speech; let us ask the same question about words which we have already answered about the kinds of being and the letters of the alphabet. To what extent do they admit of combination? Some words have a meaning when combined, and others have no meaning. One class of words describe action, another class agents: walks, runs, sleeps are examples of the first; stag, horse, lion of the second. But no combination of words can be formed without a verb

and a noun, e.g. a man learns; the simplest sentence is composed of two words, and one of these must be a subject. For example, in the sentence, 'Theaetetus sits,' which is not very long, Theaetetus is the subject, or in the sentence 'Theaetetus flies,' Theaetetus is again the subject. And those two sentences differ in quality, for the first says of you that which is true, and the second says of you that which is not true, or, in other words, attributes to you things which are not as though they were. This is false discourse in the shortest form. And thus not only speech, but thought and opinion and imagination are proved to be both true and false. For thought is only the process of silent speech, and opinion is only the silent assent or denial which follows this, and imagination is only the expression of this in some form of sense. All of them are akin to speech, and therefore, like speech, admit of true and false. And we have discovered false opinion, which is an encouraging sign of our probable success in the rest of the enquiry.

Then now let us return to our old division of likeness-making and phantastic. When we were going to place the Sophist in one of them, a doubt arose whether there could be such a thing as a likeness, because there was no such thing as falsehood. At length falsehood has been discovered by us, and we have acknowledged that the Sophist is to be discovered in the class of imitators. All art was divided originally by us into two branches—productive and acquisitive. And now we may divide both on a different principle into the creations or imitations which are of human, and those which are of divine, origin. For we must admit that the world and ourselves and the animals did not come into existence by chance, or the spontaneous working of nature, but by divine reason and knowledge. And there are not only divine creations but divine imitations, such as apparitions and shadows and reflections, which are equally the work of a divine mind. And there are human creations and human imitations too, the art of building and the art of drawing a house. Nor must we forget that image-making may be an imitation of realities or an imitation of falsehoods, which last has been called by us phantastic. And this phantastic may be again divided into imitation by the help of instruments, and impersonations. And the latter may be either dissembling or unconscious, either with or without knowledge. A man cannot imitate you, Theaetetus, without knowing you, but he can imitate the form of justice or virtue if he have a sentiment or opinion about them. Not being well provided with names, the former I will

venture to call the imitation of science, and the latter the imitation of opinion.

The latter is our present concern, for the Sophist has no claims to science or knowledge. But the imitator, who has only opinion, may be divided into two classes—the simple imitator, who thinks that he knows, and the dissembler, who knows and disguises his ignorance. And the last may be either a maker of long speeches, or of shorter speeches which compel the person conversing to contradict himself. The maker of longer speeches is the popular orator; the maker of the shorter is the Sophist, whose art may be traced as being the

art of image-making.

In commenting on the dialogue in which Plato most nearly approaches the great modern master of metaphysics it will be interesting and instructive to compare them chiefly on two points:—1st, the Platonic and Hegelian doctrine of the unity of opposites; 2ndly, their use of the terms *idea* and *dialectic*. Or in other words, the idealism of Plato and of Hegel.

i. The unity of opposites was the crux of ancient thinkers in the age of Plato: How could one thing be or become another? That substances have attributes was implied in common language; that heat and cold, day and night, pass into one another was a matter of experience 'on a level with the cobbler's understanding' (*Theaet.* 180 D). But how could philosophy explain the connection of ideas? how justify the passing of them into one another? The abstractions of one, other, being, not-being, rest, motion, individual, universal, which successive generations of philosophers had recently discovered, seemed to be beyond the reach of

human thought, like stars shining in a distant heaven. They were the symbols of different schools of philosophy; in what relation did they stand to one another and to the world of sense? It was hardly conceivable that one could be other, or the same different. Yet without some reconciliation of these elementary ideas thought was impossible. There was no distinction between truth and falsehood, between the Sophist and the philosopher. Everything could be predicated of everything, or nothing of anything. To these difficulties Plato finds what to us appears to be the answer of common sense—'that not-being is the relative or other of being, the defining and distinguishing principle, and that some ideas combine with others, but not all with all.' It is remarkable however that he offers this obvious reply only as the result of a long and tedious enquiry; by a great effort he is able to look down as 'from a height' on the 'friends of the ideas' (248 A) as well as on the pre-Socratic philosophies.

The Platonic unity of differences or opposites is the beginning of the modern view that all knowledge is of relations; it also anticipates the doctrine of Spinoza that all determination is negation. Plato takes or gives so much of either of these theories as was necessary or possible in the age in which he lived. In the Sophist, as in the Cratylus, he is opposed to the Heraclitean flux and equally to the Megarian and Cynic denial of predication, because he regards both of them as making knowledge impossible. He does not assert that everything is and is not, or that the same thing can be affected and not affected in opposite ways at the same time and in respect of the same part of itself. The law of contradiction is as clearly laid down by him in the Republic, (436 ff, iv. v. 454 C,D), as by Aristotle in his Organon. Yet he is aware that in the negative there is also a positive element, and that oppositions may be only differences. And in the Parmenides he deduces the many from the one and not-being from being, and yet shows that the many are included in the one, and that not-being returns to being.

In several of the later dialogues Plato is occupied with the connection of the sciences, which in the Philebus he divides into two classes of pure and applied, adding to them there as elsewhere (Phaedr., Crat., Rep., Polit.) a superintending science of dialectic. This is the origin of Aristotle's Architectonic, which seems, however, to have passed into an imaginary science of essence, and no longer to retain any relation to other branches of knowledge. Of such a science, whether described

as 'philosophia prima,' the science of *οὐσία*, logic or metaphysics, philosophers have often dreamed. But even now the time has not arrived when the anticipation of Plato can be realized. Though many a thinker has framed a 'hierarchy of the sciences,' no one has as yet found the higher science which arrays them in harmonious order, giving to the organic and inorganic, to the physical and moral, their respective limits, and showing how they all work together in the world and in man.

Plato arranges in order the stages of knowledge and of existence. They are the steps or grades by which he rises from sense and the shadows of sense to the idea of beauty and good. Mind is in motion as well as at rest (Soph. 249 B); and may be described as a dialectical progress which passes from one limit or determination of thought to another and back again to the first. This is the account of dialectic given by Plato in the Sixth Book of the Republic (511), which regarded under another aspect is the mysticism of the Symposium (Symp. 211). He does not deny the existence of objects of sense, but according to him they only receive their true meaning when they are incorporated in a principle which is above them (Rep. vi. 511 A, B). In modern language they might be said to come first in the order of experience, last in the order of nature and reason. They are assumed, as he is fond of repeating, upon the condition that they shall give an account of themselves and that the truth of their existence shall be hereafter proved. For philosophy must begin somewhere and may begin anywhere, with outward objects, with statements of opinion, with abstract principles. But objects of sense must lead us onward to the ideas or universals which are contained in them; the statements of opinion must be verified; the abstract principles must be filled up and connected with one another. In Plato we find, as we might expect, the germs of many thoughts which have been further developed by the genius of Spinoza and Hegel. But there is a difficulty in separating the germ from the flower, or in drawing the line which divides ancient from modern philosophy. Many coincidences which occur in them are unconscious, seeming to show a natural tendency in the human mind towards certain ideas and forms of thought. And there are many speculations of Plato which would have passed away unheeded, and their meaning, like that of some hieroglyphic, would have remained undeciphered, unless two thousand years and more afterwards an interpreter had arisen of a kindred spirit

and of the same intellectual family. For example in the Sophist Plato begins with the abstract and goes on to the concrete, not in the lower sense of returning to outward objects, but to the Hegelian concrete or unity of abstractions. In the intervening period hardly any importance would have been attached to the question which is so full of meaning to Plato and Hegel.

They differ however in their manner of regarding the question. For Plato is answering a difficulty; he is seeking to justify the use of common language and of ordinary thought into which philosophy had introduced a principle of doubt and dissolution. Whereas Hegel tries to go beyond common thought, and to combine abstractions in a higher unity: the ordinary mechanism of language and logic is carried by him into another region in which all oppositions are absorbed and all contradictions affirmed, only that they may be done away with. But Plato, unlike Hegel, nowhere bases his system on the unity of opposites, although in the Parmenides he shows an Hegelian subtlety in the analysis of one and being.

It is difficult within the compass of a few pages to give even a faint outline of the Hegelian dialectic. No philosophy which is worth understanding can be understood in a moment; common sense will not teach us metaphysics any more than mathematics. If all sciences demand of us protracted study and attention, the highest of all can hardly be matter of immediate intuition. Neither can we appreciate a great system without yielding a half assent to it—like flies we are caught in the spider's web—and we can only judge of it truly when we place ourselves at a distance from it. Of all philosophies Hegelianism is the most obscure: the difficulty inherent in the subject is increased by the use of a technical language. The saying of Socrates respecting the writings of Heraclitus—'Noble is that which I understand, and that which I do not understand may be as noble; but the strength of a Delian diver is needed to swim through it'—expresses the feeling with which the reader rises from the perusal of Hegel. We may truly apply to him the words in which Plato describes the pre-Socratic philosophers, 'He went on his way rather regardless of whether we understood him or not': or, as he is reported himself to have said of his own pupils, 'There is only one of you who understands me, and he does *not* understand me.'

Nevertheless the consideration of a few general aspects of the Hegelian philosophy may help to dispel some errors and to awaken an interest

about it. (i.) It is an ideal philosophy which, in popular phraseology, maintains not matter but mind to be the truth of things, and this not by a mere crude substitution of one word for another, but by showing either of them to be the complement of the other. Both are creations of thought, and the difference in kind which seems to divide them may also be regarded as a difference of degree. One is to the other as the real to the ideal, and both may be conceived together under the higher form of the notion. (ii.) Under another aspect he views all the forms of sense and knowledge as stages of thought which have always existed implicitly and unconsciously, and to which the mind of the world, gradually disengaged from sense, has become awakened. The present has been the past—the succession in time of human ideas is also the eternal ‘now.’ It is historical and also a divine ideal. The history of philosophy stripped of personality and of the other accidents of time and place is gathered up into philosophy, and again philosophy clothed in circumstance expands into history. (iii.) Whether regarded as present or past, under the form of time or of eternity, the spirit of dialectic is always moving onwards from one determination of thought to another, receiving each successive system of philosophy and subordinating it to that which follows—impelled by an irresistible necessity from one idea to another until the cycle of human thought and existence is complete. It follows from this that all previous philosophies which are worthy of the name are not mere opinions or speculations, but stages or moments of thought which have a necessary place in the world of mind. They are no longer the last word of philosophy, for another and another has succeeded them, but they still live and are mighty—in the language of the Greek poet, ‘There is a great God in them, and he grows not old.’ (iv.) This vast ideal system is supposed to be based upon experience. At each step it professes to carry with it the ‘witness of eyes and ears’ and of common sense, as well as the internal evidence of its own consistency; it has a place for every science, and affirms that no philosophy of a narrower type is capable of comprehending all true facts.

The Hegelian dialectic may be also described as a movement from the simple to the complex. Beginning with the generalizations of sense, (1) passing through ideas of quality, quantity, measure, number, and the like, (2) ascending from presentations, that is pictorial forms of sense, to representations in which the picture vanishes and the essence is detached in thought from the outward form, (3) combining the I and the

not-I, or the subject and object, the natural order of thought is at last found to include the leading ideas of the sciences and to arrange them in relation to one another. Abstractions grow together and again become concrete in a new and higher sense. They also admit of developement from within in their own spheres. Everywhere there is a movement of attraction and repulsion going on—an attraction or repulsion of ideas of which the physical phenomenon described under a similar name is a figure. Freedom and necessity, mind and matter, the continuous and the discrete, cause and effect, are perpetually being severed from one another in thought, only to be perpetually reunited. The finite and infinite, the absolute and relative are not really opposed; the finite and the negation of the finite are alike lost in a higher or positive infinity, and the absolute is the sum or correlation of all relatives. When this reconciliation of opposites is finally completed in all its stages, the mind may come back again and review the things of sense, the opinions of philosophers, the strife of theology and politics, without being disturbed by them. Whatever is, if not the very best—(and what is the best, who can tell?)—is, at any rate, historical and rational, suitable to its own age, unsuitable to any other. Nor can any efforts of speculative thinkers or of soldiers and statesmen materially quicken the ‘process of the suns.’

Hegel was very sensible how great would be the difficulty of presenting philosophy to mankind under the form of opposites. Most of us live in the one-sided truth which the understanding offers to us, and if occasionally we come across difficulties like the time-honoured controversy of necessity and free will, or the Eleatic puzzle of Achilles and the tortoise, we relegate some of them to the sphere of mystery, others to the book of riddles, and go on our way rejoicing. Most men (like Aristotle) have been accustomed to regard a contradiction in terms as the end of strife; to be told that contradiction is the life and mainspring of the intellectual world is indeed a paradox to them. Every abstraction is at first the enemy of every other, yet they are linked together, each with all, in the chain of being. The struggle for existence is not confined to the animals, but appears in the kingdom of thought. The divisions which arise in thought between the physical and moral and between the moral and intellectual, and the like, are deepened and widened by the formal logic which elevates the defects of the human faculties into Laws of Thought; they become a part of the mind which

makes them and is also made up of them. Such distinctions become so familiar to us that we regard the thing signified by them as absolutely fixed and defined. These are some of the illusions from which Hegel delivers us by placing us above ourselves, by teaching us to analyse the growth of 'what we are pleased to call our minds,' by reverting to a time when our present distinctions of thought and language had no existence.

Of the great dislike and childish impatience of his system which would be aroused among his opponents, he was fully aware, and would often anticipate the jests which the rest of the world, 'in the superfluity of their wits,' were likely to make upon him. Men are annoyed at what puzzles them; they think what they cannot easily understand to be full of danger. Many a sceptic has stood, as he supposed, firmly rooted in the categories of the understanding which Hegel resolves into their original nothingness. For, like Plato, he 'leaves no stone unturned' in the intellectual world. Nor can we deny that he is unnecessarily difficult, or that his own mind, like that of all metaphysicians, was too much under the dominion of his system and unable to see beyond: or that the study of philosophy, if made a serious business (cp. *Rep.* vii. 538), involves grave results to the mind and life of the student. For it may encumber him without enlightening his path; and it may weaken his natural faculties of thought and expression without increasing his philosophical power. The mind easily becomes entangled among abstractions, and loses hold of facts. The glass which is adapted to distant objects takes away the vision of what is near and present to us.

To Hegel, as to the ancient Greek thinkers, philosophy was a religion, a principle of life as well as of knowledge, like the idea of good in the Sixth Book of the Republic, a cause as well as an effect, the source of growth as well as of light. In forms of thought which by most of us are regarded as mere categories, he saw or thought that he saw a gradual revelation of the Divine Being. He would have been said by his opponents to have confused God with the history of philosophy, and to have been incapable of distinguishing ideas from facts. And certainly we can scarcely understand how a deep thinker like Hegel could have hoped to revive or supplant the old traditional faith by an unintelligible abstraction: or how he could have imagined that philosophy consisted only or chiefly in the categories of logic. For abstractions, though combined by him in the notion, seem to be never really concrete; they are a metaphysical anatomy, not a living and thinking substance.

Though we are reminded by him again and again that we are gathering up the world in ideas, we feel after all that we have not really spanned the gulph which separates *φαινόμενα* from *ὄντα*.

Having in view some of these difficulties, he seeks—and we may follow his example—to make the understanding of his system easier (*a*) by illustrations, and (*b*) by pointing out the coincidence of the speculative idea and the historical order of thought.

(*a*) If we ask how opposites can coexist, we are told that many different qualities inhere in a flower or a tree or in any other concrete object, and that any conception of space or matter or time involves the two contradictory attributes of divisibility and continuousness. We may ponder over the thought of number, reminding ourselves that every unit both implies and denies the existence of every other, and that the one is many—a sum of fractions, and the many one—a sum of units. We may be reminded that in nature there is a centripetal as well as a centrifugal force, a regulator as well as a spring, a law of attraction as well as of repulsion. The way to the West is the way also to the East; the north pole of the magnet cannot be divided from the south pole; two *minus* signs make a *plus* in Arithmetic and Algebra. Again we may liken the successive layers of thought to the deposits of geological strata which were once fluid and are now solid, which have once been uppermost in the series and are now hidden in the earth; or to the successive rinds or barks of trees which year by year pass inward; or to the ripple of water which appears and reappears in an ever widening circle. Or our attention may be drawn to ideas which the moment we analyse them involve a contradiction, such as ‘beginning’ or ‘becoming,’ or to the opposite poles, as they are sometimes termed, of necessity and freedom, of idea and fact. We may be told to observe that every negative is a positive, that differences of kind are resolvable into differences of degree, and that differences of degree may be heightened into differences of kind. We may remember the common remark ‘that there is much to be said on both sides of a question.’ We may be recommended to look within and to explain how opposite ideas can coexist in our own minds; and we may be told to imagine the minds of all mankind as one mind in which the true ideas of all ages and countries inhere. In our conception of God in his relation to man or of any union of the divine and human nature, a contradiction appears to be unavoidable. Is not the reconciliation of mind and body a necessity, not only of

speculation but of practical life? Reflections such as these will furnish the best preparation and give the right attitude of mind for understanding the Hegelian philosophy.

(b) Hegel's treatment of the early Greek thinkers affords the readiest illustration of his meaning in conceiving all philosophy under the form of opposites. The first abstraction is to him the beginning of thought. Hitherto there had only existed a tumultuous chaos of mythological fancy, but when Thales said 'all is water' a new era began to dawn upon the world. Man was seeking to grasp the universe under a single form which was at first only a material element, the most equable and colourless and universal which could be found. But soon the human mind became dissatisfied with the emblem, and after ringing the changes on one element after another, demanded a more abstract and perfect conception, such as one or being, which was absolutely at rest. But the positive had its negative, the conception of being involved not-being, the conception of one, many, the conception of a whole, parts. Then the pendulum swung to the other side, from rest to motion, from Xenophanes to Heraclitus. The opposition of being and not-being projected into space became the atoms and void of Leucippus and Democritus. Until the Atomists, the abstraction of the individual did not exist; in the philosophy of Anaxagoras the idea of mind, whether human or divine, was beginning to be realized. The pendulum gave another swing, from the individual to the universal, from the object to the subject. The Sophist first uttered the word 'man is the measure of all things,' which Socrates presented in a new form as the study of ethics. Once more we return from mind to the object of mind, which is knowledge, and out of knowledge the various degrees or kinds of knowledge more or less abstract were gradually developed. The threefold division of logic, physic, and ethics, foreshadowed in Plato, was finally established by Aristotle and the Stoics. Thus, according to Hegel, in the course of about two centuries by a process of antagonism and negation the leading thoughts of philosophy were evolved.

There is nothing like this progress of opposites in Plato, who in the Symposium denies the possibility of reconciliation until the opposition has passed away. In his own words, there is an absurdity in supposing that 'harmony is discord; for in reality harmony consists of notes of a higher and lower pitch which disagreed once, but are now reconciled by the art of music.' (Symp. 187 A, B.) He does indeed describe objects

of sense as regarded by us sometimes from one point of view and sometimes from another. As he says at the end of the Fifth Book of the Republic, 'There is nothing light which is not heavy, or great which is not small.' And he extends this relativity to the conceptions of just and good, as well as to great and small. In like manner he acknowledges that the same number may be more or less in relation to other numbers without any increase or diminution. (Theæt. 155 A, B.) But this perplexity only arises out of the confusion of the human faculties; the art of measuring shows us what is truly great and truly small. Though the just and good in particular instances may vary, the *idea* of good is eternal and unchangeable. And the *idea* of good is the source of knowledge and also of being, in which all the stages of sense and knowledge are gathered up and from being hypotheses become realities.

Leaving the comparison with Plato we may now consider the value of this invention of Hegel. There can be no question of the importance of showing that two contraries or contradictories may in certain cases be both true. The silliness of the so-called laws of thought ('all $A=A$,' or, in the negative form, 'nothing can at the same time be both A, and not A,') has been well exposed by Hegel himself (Wallace's Hegel, p. 184), who remarks that 'the form of the maxim is virtually self-contradictory, for a proposition implies a distinction between subject and predicate, whereas the maxim of identity, as it is called, $A=A$, does not fulfil what its form requires. Nor does any mind ever think or form conceptions in accordance with this law, nor does any existence conform to it.' Wisdom of this sort is well parodied in Shakespeare¹. Unless we are willing to admit that two contradictories may be true, many questions which lie at the threshold of mathematics and of morals will be insoluble puzzles to us.

The influence of opposites is felt in practical life. The understanding sees one side of a question only—the common sense of mankind joins one of two parties in politics, in religion, in philosophy. Yet, as every body knows, truth is not wholly the possession of either. But the characters of men are one-sided and accept this or that aspect of the truth. The understanding is strong in a single abstract principle and with

¹ Twelfth Night, Act iv. Sc. 2: '*Clovn*. For as the old hermit of Prague, that never saw pen and ink, very wittily said to a niece of King Gorboduc, "That that is is" . . . for what is "that" but "that," and "is" but "is"?'

this lever moves mankind. Few attain to a balance of principles or recognize truly how in all human things there is a thesis and antithesis, a law of action and of reaction. In politics we require order as well as liberty, and have to consider the proportions in which under given circumstances they may be safely combined. In religion there is a tendency to lose sight of morality, to separate goodness from the love of truth, to worship God without attempting to know him. In philosophy again there are two opposite principles, of immediate experience and of those general or *a priori* truths which are supposed to transcend experience. But the common sense or common opinion of mankind is incapable of apprehending these opposite sides or views—men are determined by their natural bent to one or other of them; they go straight on for a time in a single line, and may be many things by turns but not at once.

Hence the importance of familiarizing the mind with forms which will assist us in conceiving or expressing the complex or contrary aspects of life and nature. The danger is that they may be too much for us, and obscure our appreciation of facts. As the complexity of mechanics cannot be understood without mathematics, so neither can the many-sidedness of the mental and moral world be truly apprehended without the assistance of new forms of thought. One of these forms is the unity of opposites. Abstractions have a great power over us, but they are apt to be partial and one-sided, and only when modified by other abstractions do they make an approach to the truth. Many a man has become a fatalist because he has fallen under the dominion of a single idea. He says to himself, for example, that he must be either free or necessary—he cannot be both. Thus in the ancient world whole schools of philosophy passed away in the vain attempt to solve the problem of the continuity or divisibility of matter. And in comparatively modern times, though in the spirit of an ancient philosopher, Bishop Berkeley, feeling a similar perplexity, is inclined to deny the truth of infinitesimals in mathematics. Many difficulties arise in practical religion from the impossibility of conceiving body and mind at once and in adjusting their movements to one another. There is a border ground between them which seems to belong to both; and there is as much difficulty in conceiving the body without the soul as the soul without the body. To the 'either' and 'or' philosophy ('Everything is either A or not A') should at least be added the clause 'or neither,' 'or both.' The double form

makes reflection easier and more conformable to experience, and also more comprehensive. But in order to avoid paradox and the danger of giving offence to the unmetaphysical part of mankind, we may speak of it as due to the imperfection of language or the limitation of human faculties. It is nevertheless a discovery which, in Platonic language, may be termed a 'most gracious aid to thought.'

The doctrine of opposite moments of thought or of progression by antagonism, further assists us in framing a scheme or system of the sciences. The negation of one gives birth to another of them. The double notions are the joints which hold them together. The simple is developed into the complex, the complex returns again into the simple. Beginning with the highest notion of mind or thought, we may descend by a series of negations to the first generalizations of sense. Or again we may begin with the simplest elements of sense and proceed upwards to the highest being or thought. Metaphysic is the negation or absorption of physiology—physiology of chemistry—chemistry of mechanical philosophy. Or again in mechanics, when we can no further go we arrive at chemistry—when chemistry becomes organic we arrive at physiology: when we pass from the outward and animal to the inward nature of man we arrive at moral and metaphysical philosophy. These sciences have each of them their own methods and are pursued independently of one another. But to the mind of the thinker they are all one—latent in one another—developed out of one another.

This method of opposites has supplied new instruments of thought for the solution of metaphysical problems, and has thrown down many of the walls within which the human mind was confined. Formerly when philosophers arrived at the infinite and absolute, they seemed to be lost in a region beyond human comprehension. But Hegel has shown that the absolute and infinite are no more true than the relative and finite, and that they must alike be negated before we arrive at a true absolute or a true infinite. The conceptions of the infinite and absolute as ordinarily understood are tiresome because they are unmeaning, but there is no peculiar sanctity or mystery in them. We might as well make an infinitesimal series of fractions or a perpetually recurring decimal the object of our worship. They are the widest and also the thinnest of human ideas, or, in the language of logicians, they have the greatest extension and the least compre-

hension. Of all words they may be truly said to be the most inflated with a false meaning. They have been handed down from one philosopher to another until they have acquired a religious character. They seem also to derive a sacredness from their association with the Divine Being. Yet they are the poorest of the predicates under which we describe him—signifying no more than this, that he is not finite, that he is not relative, and tending to obscure his higher attributes of wisdom, goodness, truth.

The system of Hegel frees the mind from the dominion of abstract ideas. We acknowledge his originality, and some of us delight to wander in the mazes of thought which he has opened to us. For Hegel has found admirers in England and Scotland when his popularity in Germany has departed, and he, like the philosophers whom he criticises, is of the past. No other thinker has ever dissected the human mind with equal patience and minuteness. He has lightened the burden of thought because he has shown us that the chains which we wear are of our own forging. To be able to place ourselves not only above the opinions of men but above their modes of thinking, is a great height of philosophy. This dearly obtained freedom, however, we are not disposed to part with, or to allow him to build up in a new form the 'beggarly elements' of scholastic logic which he has thrown down. So far as they are aids to reflection and expression, forms of thought are useful, but no further:—we may easily have too many of them.

And when we are asked to believe the Hegelian to be the sole or universal logic, we naturally reply that there are other ways in which our ideas may be connected. The triplets of Hegel, the division into being, essence, and notion, are not the only or necessary modes in which the world of thought can be conceived. There may be an evolution by degrees as well as by opposites. The word 'continuity' suggests the possibility of resolving all differences into differences of quantity. Again the opposites themselves may vary from the least degree of diversity up to contradictory opposition. They are not like numbers and figures, always and everywhere of the same value. And therefore the edifice which is constructed out of them has only an imaginary symmetry, and is really irregular and out of proportion. The spirit of Hegelian criticism should be applied to his own system, and the terms being, not being, existence, essence, notion, and the

like challenged and defined. For if Hegel introduces a great many distinctions, he obliterates a great many others by the help of the universal solvent 'is not,' which appears to be the simplest of negations, and yet admits of several meanings. Neither are we able to follow him in the play of metaphysical fancy which conducts him from one determination of thought to another. But we begin to suspect that this vast system is not God within us, or God immanent in the world, and may be only the invention of an individual brain. The 'beyond' is always coming back upon us however often we expel it. We do not easily believe that we have within the compass of the mind the form of universal knowledge. We rather incline to think that the method of knowledge is inseparable from actual knowledge, and wait to see what new forms may be developed out of our increasing experience and observation of man and nature. We are conscious of a Being who is without us as well as within us. Even if inclined to Pantheism we are unwilling to imagine that the meagre categories of the understanding, however ingeniously arranged or displayed, are the image of God;—that what all religions were seeking after from the beginning was the Hegelian philosophy which has been revealed in the latter days. The great metaphysician, like a prophet of old, was naturally inclined to believe that his own thoughts were divine realities. We may almost say that whatever came into his head seemed to him to be a necessary truth. He never appears to have criticised himself, or to have subjected his own ideas to the process of analysis which he applies to every other philosopher.

Hegel would have insisted that his philosophy should be accepted as a whole or not at all. He would have urged that the parts derived their meaning from one another and from the whole. He thought that he had supplied an outline large enough to contain all future knowledge, and a method to which all future philosophies must conform. His metaphysical genius is especially shown in the construction of the categories—a work which was only begun by Kant, and elaborated to the utmost by himself. But is it really true that the part has no meaning when separated from the whole, or that knowledge to be knowledge at all must be universal? Do all abstractions shine only by the reflected light of other abstractions? May they not also find a nearer explanation in their relation to phenomena? If many of them are correlatives they are not all so, and the relations which subsist between them, vary from a mere

association up to a necessary connection. Nor is it easy to determine how far the unknown element affects the known, whether, for example, new discoveries may not one day supersede our most elementary notions about nature. To a certain extent all our knowledge is conditional upon what may be known in future ages of the world. We must admit this hypothetical element, which we cannot get rid of by an assumption that we have already discovered the method to which all philosophy must conform. Hegel is right in preferring the concrete to the abstract, in setting actuality before possibility, in excluding from the philosopher's vocabulary the word 'inconceivable.' But he is too well satisfied with his own system ever to consider the effect of what is unknown on the element which is known. To the Hegelian all things are plain and clear, while he who is outside the charmed circle is in the mire of ignorance and 'logical impurity': he who is within is omniscient, or at least has all the elements of knowledge under his hand.

Hegelianism may be said to be a transcendental defence of the world as it is. There is no room for aspiration and no need of any: 'what is actual is rational, what is rational is actual.' But a good man will not readily acquiesce in this aphorism. He knows of course that all things proceed according to law whether for good or evil. But when he sees the misery and ignorance of mankind he is convinced that without any interruption of the uniformity of nature the condition of the world may be indefinitely improved by human effort. There is also an adaptation of persons to times and countries, but this is very far from being the fulfilment of their higher natures. The man of the seventeenth century is unfitted for the eighteenth, the man of the eighteenth for the nineteenth, and most of us would be out of place in the world of a hundred years hence. But all higher minds are much more akin than they are different: genius is of all ages, and there is perhaps more uniformity in excellence than in mediocrity. The sublimer intelligences of mankind—Plato, Dante, Sir Thomas More,—meet in a higher sphere above the ordinary ways of men; they understand one another from afar, notwithstanding the interval which separates them. They are 'the spectators of all time and of all existence'; their works live for ever; and there is nothing to prevent the force of their individuality breaking through the uniformity which surrounds them. But such disturbers of the order of thought Hegel is reluctant to acknowledge.

The doctrine of Hegel will to many seem the expression of an

indolent conservatism, and will at any rate be made an excuse for it. The mind of the patriot rebels when he is told that the worst tyranny and oppression has a natural fitness: he cannot be persuaded, for example, that the conquest of Prussia by Napoleon I. was either natural or necessary, or that any similar calamity befalling a nation should be a matter of indifference to the poet or philosopher. We may need such a philosophy or religion to console us under evils which are irremediable, but we see that it is fatal to the higher life of man. It seems to say to us, 'The world is a vast system or machine which can be conceived under the forms of logic, but in which no single man can do any great good or any great harm. Even if it were a thousand times worse than it is, it could be arranged in categories and explained by philosophers—what more do we want?'

The philosophy of Hegel appeals to an historical criterion: the ideas of men have a succession in time as well as an order of thought. But when we are told that the order of thought in nature is the same as the order of thought in the history of philosophy, is there any sufficient foundation for this statement? In later systems the forms of thought are too numerous and complex to admit of our tracing in them a regular succession. They seem also to be in part reflections of the past, and it is difficult to separate in them what is original and what is borrowed. Doubtless they have a relation to one another—the transition from Descartes to Spinoza or from Locke to Berkeley is not a matter of chance, but it can hardly be described as an alternation of opposites or figured to the mind by the vibrations of a pendulum. Even in Aristotle and Plato, rightly understood, we cannot trace this law of action and reaction. They are both idealists, although to the one the idea is actual and immanent,—to the other only potential and transcendent, as Hegel himself has pointed out (*Wallace's Hegel*, p. 223). The true meaning of Aristotle has been disguised from us by his own appeal to fact and the opinions of mankind in his more popular works, and by the use made of his writings in the Middle Ages. No book, except the Scriptures, has been so much read, and so little understood. The pre-Socratic philosophies are simpler, and we may observe a progress in them, but is there any regular succession? The ideas of being, change, number, seem to have sprung up contemporaneously in different parts of Greece and we have no difficulty in constructing them out of one another—we can see that the union of being and

not-being gave birth to the idea of change or becoming and that one might be another aspect of being. Again, the Eleatics may be regarded as developing in one direction into the Megarian school, in the other into the Atomists, but there is no necessary connection between them. Nor is there any indication that the deficiency which was felt in one school was supplemented or compensated by another. They were all efforts to supply the want which the Greeks began to feel at the beginning of the sixth century before Christ,—the want of abstract ideas. Nor must we forget the uncertainty of chronology:—if, as Aristotle says, there were Atomists before Leucippus, Eleatics before Xenophanes, and perhaps ‘patrons of the flux’ before Heraclitus, Hegel’s order of thought in the history of philosophy would be as much disarranged as his order of religious thought by recent discoveries in the history of religion.

Hegel is fond of repeating that all philosophies still live and that the earlier are preserved in the later; they are refuted, and they are not refuted, by those who succeed them. Once they reigned supreme, now they are subordinated to a power or idea greater or more comprehensive than their own. The thoughts of Socrates and Plato and Aristotle have certainly sunk deep into the mind of the world, and have exercised an influence which will never pass away; but can we say that they have the same meaning in modern and ancient philosophy? Some of them, as for example, the words ‘being,’ ‘essence,’ ‘matter,’ ‘form,’ either have become obsolete, or are used in new senses, whereas ‘individual,’ ‘cause,’ ‘motive,’ have acquired an exaggerated importance. Is the manner in which the logical determinations of thought, or ‘categories’ as they may be termed, have been handed down to us, really different from that in which other words have come down to us? Have they not been equally subject to accident, and are they not often used by Hegel himself in senses which would have been quite unintelligible to their original inventors—as for example, when he speaks of the ‘ground’ of Leibnitz (‘Everything has a sufficient ground’) as identical with his own doctrine of the ‘notion’ (Wallace’s Hegel, p. 195), or the ‘being and not-being’ of Heraclitus as the same with his own ‘becoming’?

As the historical order of thought has been adapted to the logical, so we have reason for suspecting that the Hegelian logic has been in some degree adapted to the order of thought in history. There is unfortunately no criterion to which either of them can be subjected, and not much forcing was required to bring either into near relations with

the other. We may fairly doubt whether the division of the first and second parts of logic in the Hegelian system has not really arisen from a desire to make them accord with the first and second stages of the early Greek philosophy. Is there any reason why the conception of measure in the first part, which is formed by the union of quality and quantity, should not have been equally placed in the second division of mediate or reflected ideas? The more we analyse them the less exact does the coincidence of philosophy and the history of philosophy appear. Many terms which were used absolutely in the beginning of philosophy, such as 'being,' 'matter,' 'cause,' and the like, became relative in the subsequent history of thought. But Hegel employs some of them absolutely, some relatively, seemingly without any principle and without any regard to their original significance.

The divisions of the Hegelian logic bear a superficial resemblance to the divisions of the scholastic logic. The first part answers to the term, the second to the proposition, the third to the syllogism. These are the grades of thought under which we conceive the world first in the general terms of quality, quantity, measure; secondly under the relative forms of ground and existence, substance and accidents, and the like; thirdly in syllogistic forms of the individual mediated with the universal by the help of the particular. Of syllogisms there are various kinds,—qualitative, quantitative, inductive, mechanical, teleological, which are developed out of one another. But is there any meaning in reintroducing the forms of the old logic? Who ever thinks of the world as a syllogism? What connection is there between the proposition and our ideas of reciprocity, cause and effect, and similar relations? It is difficult enough to conceive all the powers of nature and mind gathered up in one. The difficulty is greatly increased when the new is confused with the old, and the common logic is the Procrustes' bed into which they are forced.

The Hegelian philosophy claims, as we have seen, to be based upon experience: it abrogates the distinction of *a priori* and *a posteriori* truth. It also acknowledges that many differences of kind are resolvable into differences of degree. It is familiar with the terms 'evolution' 'development,' and the like. Yet it can hardly be said to have considered the forms of thought which are best adapted for the expression of facts. It has never applied the categories to experience; it has not defined the differences in our ideas of opposition, or development, or cause and effect, in the different sciences which make use of these terms. It rests

on a knowledge which is not the result of exact or serious enquiry, but is floating in the air; the mind has been imperceptibly informed of some of the methods required in the sciences. Hegel boasts that the movement of dialectic is at once necessary and spontaneous: in reality it goes beyond experience and is unverified by it. Further, the Hegelian philosophy, while giving us the power of thinking a great deal more than we are able to fill up, seems also to be wanting in some determinations of thought which we require. We cannot say that physical science, which at present occupies so large a share of popular attention, has been made easier or more intelligible by the distinctions of Hegel. Nor can we deny that he has sometimes interpreted physics by metaphysics, and confused his own philosophical fancies with the laws of nature. The very freedom of the movement is not without suspicion, seeming to imply a state of the human mind which has entirely lost sight of facts. Nor can the necessity which is attributed to it be very stringent, seeing that the successive categories or determinations of thought in different parts of his writings are arranged by the philosopher in different ways. What is termed necessary evolution seems to be only the order in which a succession of ideas presented themselves to the mind of Hegel at a particular time.

The nomenclature of Hegel has been made by himself out of the language of common life. He uses a few words only which are borrowed from his predecessors, or from the Greek philosophy, and these generally in a sense peculiar to himself. The first stage of his philosophy answers to the word 'is,' the second to the word 'has been,' the third to the words 'has been' and 'is' combined. In other words, the first sphere is immediate, the second mediated by reflection, the third or highest returns into the first, and is both mediate and immediate. As Luther's Bible was written in the language of the common people, so Hegel seems to have thought that he gave his philosophy a truly German character by the use of idiomatic German words. But it may be doubted whether the attempt has been successful. First because such words as 'in sich seyn,' 'an sich seyn,' 'an und fur sich seyn,' though the simplest combination of nouns and verbs, require a difficult and elaborate explanation. The simplicity of the words contrasts with the hardness of their meaning. Secondly, the use of technical phraseology necessarily separates philosophy from general literature; the student has to learn a new language of uncertain meaning which he with difficulty remembers. No former

philosopher had ever carried the use of technical terms to the same extent as Hegel. The language of Plato or even of Aristotle is but slightly removed from that of common life, and was introduced naturally by a series of thinkers : the language of the scholastic logic has become technical to us, but in the Middle Ages was the vernacular Latin of priests and students. The higher spirit of philosophy, the spirit of Plato and Socrates, rebels against the Hegelian use of language as mechanical and technical.

Hegel is fond of etymologies and often seems to trifle with words. He gives etymologies which are bad, and never considers that the meaning of a word may have nothing to do with its derivation. He lived before the days of Comparative Philology or of Comparative Mythology and Religion, which would have opened a new world to him. He makes no allowance for the element of chance either in language or thought ; and perhaps there is no greater defect in his system than the want of a sound theory of language. He speaks as if thought, instead of being identical with language, was wholly independent of it. It is not the actual growth of the mind, but the imaginary growth of the Hegelian system, which is attractive to him.

Neither are we able to say why of the common forms of thought some are rejected by him, while others have an undue prominence given to them. Some of them, such as 'ground' and 'existence,' have hardly any basis either in language or philosophy, while others, such as 'cause and effect,' are but slightly considered. All abstractions are supposed by Hegel to derive their meaning from one another. This is true of some, but not of all, and in different degrees. There is an explanation of abstractions by the phenomena which they represent, as well as by their relation to other abstractions. If the knowledge of all were necessary to the knowledge of any one of them, the mind would sink under the load of thought. Again, in every process of reflection we seem to require a standing ground, and in the attempt to obtain a complete analysis we lose all fixedness. If, for example, the mind is viewed as the complex of ideas, or the difference between things and persons denied, such an analysis may be justified from the point of view of Hegel : but we shall find that in the attempt to criticise thought we have lost the power of thinking, and, like the Heracliteans of old, have no words in which our meaning can be expressed. Such an analysis may be useful as a corrective of popular language or thought, but should still allow us to retain the fundamental distinctions of philosophy.

In the Hegelian system ideas supersede persons. The world of thought, though sometimes described as spirit or 'geist,' is really impersonal. The minds of men are to be regarded as one mind, or more correctly as a succession of ideas. Any comprehensive view of the world must necessarily be general, and there may be a use with a view to comprehensiveness in dropping individuals and their lives and actions. In all things, if we leave out details, a certain degree of order begins to appear; at any rate we can make an order which, with a little exaggeration or disproportion in some of the parts, will cover the whole field of philosophy. But are we therefore justified in saying that ideas are the causes of the great movement of the world rather than the personalities which conceived them? The great man is the expression of his time, and there may be peculiar difficulties in his age which he cannot overcome. He may be out of harmony with his circumstances, too early or too late, and then all his thoughts perish; his genius passes away unknown. But not therefore is he to be regarded as a mere waif or stray in human history, any more than he is the mere creature or expression of the age in which he lives. His ideas are inseparable from himself, and would have been nothing without him. Through a thousand personal influences they have been brought home to the minds of others. He starts from antecedents, but he is great in proportion as he disengages himself from them. Moreover the types of greatness differ; while one man is the expression of the influences of his age another is in antagonism to them. One man is borne on the surface of the water; another is carried forward by the current which flows beneath. The character of an individual, whether he be independent of circumstances or not, inspires others quite as much as his words. What is the teaching of Socrates apart from his personal history, or the doctrines of Christ apart from the Divine life in which they are embodied? Has not Hegel himself delineated the greatness of the life of Christ as consisting in his 'shicksallosigkeit' or independence of the destiny of his race? Do not persons become ideas, and is there any distinction between them? Take away the five greatest legislators, the five greatest warriors, the five greatest poets, the five greatest founders or teachers of a religion, the five greatest philosophers, the five greatest inventors,—where would have been all that we most value in knowledge or in life? And can that be a true theory of the history of philosophy which, in Hegel's own language, 'does not allow the individual to have his right'?

Once more, while we readily admit that the world is relative to the

mind, and the mind to the world, and that we must suppose a common or correlative growth in them, we shrink from saying that this complex nature can contain, even in outline, all the endless forms of being and knowledge. Are we not 'seeking the living among the dead' and dignifying a mere logical skeleton with the name of philosophy and almost of God? When we look far away into the primeval sources of thought and belief, do we suppose that the mere accident of our being the heirs of the Greek philosophers can give us a right to set ourselves up as having the true and only standard of reason in the world? Or when we contemplate the infinite worlds in the expanse of heaven can we imagine that a few meagre categories derived from language and invented by the genius of one or two great thinkers contain the secret of the universe? Or, having regard to the ages during which the human race may yet endure, do we suppose that we can anticipate the proportions human knowledge may attain even within the short space of one or two thousand years?

Again we have a difficulty in understanding how ideas can be causes, which to us seems to be as much a 'figure of speech as the old notion of a creator artist who makes the world by the help of the demigods' (Plato, *Tim.*), or with 'a golden pair of compasses' measures out the circumference of the universe (Milton, *P. L.*). We can understand how the idea in the mind of an inventor is the cause of the work which is produced by it; and we can dimly imagine how this universal frame may be animated by a divine intelligence. But we cannot conceive how all the thoughts of men that ever were, which are themselves subject to so many external conditions of climate, country, and the like, even if regarded as the single thought of a divine being, can be supposed to have made the world. We seem to be only wrapping up ourselves in our own conceits—to be confusing cause and effect—to be losing the distinction between reflection and action, between the human and divine.

These are some of the doubts and suspicions which arise in the mind of a student of Hegel, when, after living for a time within the charmed circle, he removes to a little distance and looks back upon what he has learnt, from the vantage ground of history and experience. The enthusiasm of his youth has passed away, the authority of the master no longer retains a hold upon him. But he does not regret the time spent in the study of him. He finds that he has received from him a real enlargement of mind, and much of the true spirit of philosophy, even when he has ceased to believe in him. He returns

again and again to his writings as to the recollections of a first love, not undeserving of his admiration still. Perhaps if he were asked how he can admire without believing, or what value he can attribute to what he knows to be erroneous, he might answer in some such manner as the following :

1. That in Hegel he finds glimpses of the genius of the poet and of the common sense of the man of the world. His system is not cast in a poetic form, but neither has all this load of logic extinguished in him the feeling of poetry. He is the true countryman of his contemporaries Goethe and Schiller. Many fine expressions are scattered up and down in his writings, as when he tells us that 'the Crusaders went to the Sepulchre but found it empty.' He delights to find vestiges of his own philosophy in the older German mystics. And though he can be scarcely said to have mixed much in the affairs of men, for, as his biographer tells us, 'he lived for thirty years in a single room,' yet he is far from being ignorant of the world. No one can read his writings without acquiring an insight into life. He loves to touch with the spear of logic the follies and self-deceptions of mankind, and make them appear in their natural form, stripped of the disguises of language and custom. He will not allow men to defend themselves by an appeal to one-sided or abstract principles. In this age of reason any one can easily find a reason for doing what he likes (Wallace, p. 197). He is suspicious of a distinction which is often made between a person's character and his conduct. His spirit is the opposite of that of Jesuitism or casuistry (Wallace, p. 181). He affords an example of a remark which has been often made, that in order to know the world it is not necessary to have had a great experience of it.

2. Hegel, if not the greatest philosopher, is certainly the greatest critic of philosophy who ever lived. No one else has equally mastered the opinions of his predecessors or traced the connection of them in the same manner. No one has equally raised the human mind above the trivialities of the common logic and the unmeaningness of 'mere' abstractions, and above imaginary possibilities, which, as he truly says, have no place in philosophy. No one has won so much for the kingdom of ideas. Whatever may be thought of his own system it will hardly be denied that he has overthrown Locke, Kant, Hume, and the so-called philosophy of common sense. He shows us that only by the study of metaphysics can we get rid of metaphysics, and that those who are in theory most opposed to them are in fact most entirely

and hopelessly enslaved by them: 'die reine Physiker sind nur die thieren.' The disciple of Hegel will hardly become the slave of any other system-maker. What Bacon seems to promise him he will find realized in the great German thinker, a complete emancipation from the influences of the scholastic logic.

3. Many of those who are least disposed to become the votaries of Hegelianism nevertheless recognize in his system a new logic supplying a variety of instruments and methods hitherto unemployed. We may not be able to agree with him in assimilating the natural order of human thought with the history of philosophy, and still less in identifying both with the divine idea or nature. But we may acknowledge that the great thinker has thrown a light on many parts of human knowledge, and has solved many difficulties. We cannot receive his doctrine of opposites as the last word of philosophy, but we may still regard it as a very important contribution to logic. We cannot affirm that words have no meaning when taken out of their connection in the history of thought. But we recognize that their meaning is to a great extent due to association, and to their correlation with one another. We see the advantage of viewing in the concrete what mankind regard only in the abstract. There is much to be said for his faith or conviction, that God is immanent in the world,—within the sphere of the human mind, and not beyond it. It was natural that he himself, like a prophet of old, should regard the philosophy which he had invented as the voice of God in man. But this by no means implies that he conceived himself as creating God in thought. He was the servant of his own ideas and not the master of them. The philosophy of history and the history of philosophy may be almost said to have been discovered by him. He has thrown greater light upon Greek thought than all other writers put together. Many ideas of development, evolution, reciprocity, which have become the symbols of another school of thinkers may be traced to his speculations. In the theology and philosophy of England as well as of Germany and also in the lighter literature of both countries there are always appearing 'fragments of the great banquet' of Hegel.

SOPHIST.

PERSONS OF THE DIALOGUE.

THEODORUS.

THEAETETUS.

SOCRATES.

AN ELEATIC STRANGER, whom Theodorus and Theaetetus bring with them.

Steph.

216 *Theodorus.* HERE we are, as in duty bound, Socrates, according to the agreement of yesterday, bringing with us a stranger from Elea, who is the follower of Parmenides and Zeno, and a true philosopher.

Socrates. Is he not rather a god, Theodorus, who comes to us in the disguise of a stranger? For Homer says that all the gods, and especially the god of strangers, are companions of the meek and just, and visit the good and evil among men. And may not your companion be one of those higher powers, a cross-examining deity, who, seeing our weakness in argument, has come to inspect and cross-examine us?

Theod. Nay, Socrates, he is not one of the disputatious set—he is too good for that. And, in my opinion, he is not a god at all; but I do call him divine, for this is a title which I should give to all philosophers.

Soc. Very true indeed, my friend; and they are certainly as hard to be discerned as the gods. For the true philosophers, and such as are not merely made up for the occasion, appear in various forms unrecognised by the ignorance of men, and they 'walk to and fro in cities,' as Homer says, looking from above upon human life; and some think nothing of them, and others can never think enough; and sometimes they appear as statesmen, and sometimes as sophists; and then, again, they seem to

many to be no better than madmen. I should like to ask our Eleatic friend, if he would tell us, what is thought in his country 217 about them, and to whom the terms are applied.

Theod. What terms?

Soc. Sophist, statesman, philosopher.

Theod. What is your difficulty about them, and what do you want to ask?

Soc. I want to know whether his countrymen regard them as one or two, or whether, as there are three names, there are not also three classes to which they assign them?

Theod. I dare say that the Stranger will not object to discuss them? what do you say, Stranger?

Stranger. I am far from objecting, Theodorus, nor have I any difficulty in replying that they are regarded by us as three. But to define precisely the nature of each of them is anything but a slight or easy task.

Theod. You have happened to light, Socrates, almost on the very question which we were asking our friend before we came hither, and he excused himself to us, as he does now to you; although he admitted that the question had been well discussed, and that he remembered the answer.

Soc. Then do not, Stranger, deny us the first favour which we ask of you: I am sure that you will not, and therefore I shall only beg you to say whether you like and are accustomed to speak at length on the subject which you want to explain to another, or to proceed by the method of questions. I remember hearing a very noble discussion in which Parmenides employed the latter of the two methods, when I was a young man, and he was far advanced in years.

Str. I prefer to talk with another when he responds pleasantly, and is light in hand; if not, I would rather have my own say.

Soc. Any one of the present company will respond kindly to you, and you can choose whom you like of them; I should recommend you to take a young person—Theaetetus, for example—unless you have a preference for some one else.

Str. I feel ashamed, Socrates, at just coming into a new society, instead of talking a little and hearing others talk, to be spinning out a long soliloquy or address, as if I wanted to show

off. For the true answer will be a very long one, and a great deal longer than might be expected from such a simple question. At the same time, I fear that I may seem ungracious if I refuse
 218 your courteous request, especially after what you have said. For I certainly cannot object to your proposal, that Theaetetus should respond, having already myself conversed with him, and having your recommendation of him.

Theaetetus. But are you sure, Stranger, that this will be quite so acceptable to the rest of the company as Socrates imagines?

Str. You hear them applaud us, Theaetetus; after that, there is nothing more to be said. Well then, I am to argue with you, and if you tire of the argument, you may complain of your friends and not of me.

Theaet. I do not think that I shall tire, and if I do, I shall get my friend, young Socrates, the namesake of the other Socrates, to help; he is about my own age, and my partner at the gymnasium, and is constantly accustomed to work with me.

Str. Very good; you can decide about that for yourself as we proceed. Meanwhile you and I will begin together and enquire into the nature of the Sophist, first of the three: I should like you to make him out and bring him to light in an argument; for at present we are only agreed about the name. I dare say that we may both of us have the thing in our minds, but we ought always to come to an understanding about the thing in terms of a definition, and not merely about the name minus the definition. Now the tribe of Sophists which we are investigating is not easily caught or defined; and the world has long ago agreed, that if great subjects are to be adequately treated, they must be studied in the lesser instances of them before we proceed to the greatest of all. And as I know that the tribe of Sophists is troublesome and hard to be caught, I should recommend that we first practise the method of discovery in something easier, unless you can suggest any better plan.

Theaet. Indeed I cannot.

Str. Then suppose that we work out some lesser example which will be a pattern of the greater?

Theaet. Good.

Str. What is there which is well known and not great, and is

yet as susceptible of definition as any larger thing? Shall I say an angler? He is familiar to all of us, and not a very interesting or important person.

Theact. True.

Str. I suspect that he will supply us with a definition and 219 process of enquiry just such as we want.

Theact. Very true.

Str. Let us begin by asking whether he is a man having art or not having, but having some other power.

Theact. He is clearly a man of art.

Str. And there are two kinds of arts?

Theact. What are they?

Str. There is agriculture, and the tending of mortal creatures, and the art of constructing or moulding vessels, as we term them, and there is the art of imitation—all these may be properly called by a single name.

Theact. What do you mean? And what is the name?

Str. He who brings into existence something that did not exist before is said to be a producer, and that which is brought into existence is said to be produced.

Theact. True.

Str. And all the arts which were just now mentioned are characterised by this power of producing?

Theact. They are.

Str. Then let us sum them up under the name of productive or creative art.

Theact. Very good.

Str. Next follows the whole class of learning and cognition, together with trade, fighting, hunting; since none of these produces anything, but is only engaged in conquering by word or deed, or in preventing others from conquering things which exist and have been already produced—in each and all of these branches there appears to be an art which may be called acquisitive.

Theact. Yes, that is the proper name.

Str. Seeing, then, that all arts are either acquisitive or creative, in which class shall we place the art of the angler?

Theact. Clearly in the acquisitive class.

Str. And the acquisitive may be subdivided into two parts:

there is voluntary exchange, which is effected by gifts, hire, purchase; and the other part of acquisitive, which takes by force of word or deed, may be termed forcible exchange?

Theact. That is implied in what has been said.

Str. And may not this forcible exchange be again subdivided?

Theact. How?

Str. Open force may be called fighting, and secret force may have the general name of hunting?

Theact. Yes.

Str. And there will be a want of discrimination in not further dividing the art of hunting.

Theact. How would you make the division?

Str. Into the hunting of living and of lifeless prey.

Theact. Yes, if both kinds exist.

220 *Str.* Of course they exist; but the hunting after lifeless things having no special name, except in the case of diving, and such small matters, may be omitted; the hunting after living things may be called animal hunting.

Theact. Yes.

Str. And animal hunting may be truly said to have two divisions, land animal hunting, which has many kinds and names, and the other the hunting after animals who swim—water animal hunting?

Theact. True.

Str. And of swimming animals, one class lives on the wing and the other in the water?

Theact. Certainly.

Str. Fowling is the general term under which the hunting of all birds is included.

Theact. True.

Str. The hunting of animals who live in the water has the general name of fishing.

Theact. Yes.

Str. And this sort of hunting may be further divided also into two principal kinds?

Theact. What are they?

Str. There is one kind which takes them in nets, the other which takes them by a blow.

Theact. What do you mean, and how do you distinguish them?

Str. As to the first kind—since all that surrounds and encloses anything to prevent egress, may be rightly called an enclosure—

Theact. Very true.

Str. For which reason twig baskets, casting-nets, nooses, cruives, and the like may all be termed 'enclosures'?

Theact. True.

Str. And therefore this first kind of hunting may be called by us hunting with enclosures, or something of that sort?

Theact. Yes.

Str. The other kind, which is practised with hooks and three-pronged spears, when summed up under one name, may be called striking, unless you, Theaetetus, can find some better name?

Theact. No matter about the name—that will do very well.

Str. There is one mode of striking, which is done at night, and by the light of a fire, and is called by the hunters themselves firing, or spearing by firelight.

Theact. True.

Str. And the fishing by day is called by the general name of 'fishing with barbs,' since the spears, too, are barbed at the point.

Theact. Yes, that is the term.

Str. Of this barb-fishing, that which strikes the fish who is below from above is called spearing, because this is the way in which the three-pronged spears are used.

Theact. Yes, so it is often called.

Str. Then now there is only one kind remaining.

Theact. What is that?

Str. When a hook is used, and the fish is not struck as with the spear, in any part, but only about the head and mouth, and is then drawn out from below upwards with reeds and rods:— 221
What is the right name of that mode of fishing, Theaetetus?

Theact. I suspect that we have now discovered the object of our search.

Str. Then now you and I have come to an understanding not only about the name of the angler's art, but about the definition

of the thing. One half of all art was acquisitive—half of the acquisitive art was conquest or taking by force, half of this was hunting, and half of the hunting was hunting animals, half of this was hunting water animals—of this again, the under half was fishing, half of fishing was striking; the first half of striking was fishing with a barb, and one half of this again being the kind which strikes with a hook and draws the fish from below upwards, is the kind which we are now seeking, and which is hence denoted angling (*ἄσπαλιευτική*, *ἀνασπᾶσθαι*).

Theact. The result has been quite satisfactorily brought out.

Str. And now, having this pattern, let us endeavour to find out what a Sophist is.

Theact. By all means.

Str. The first question about the angler was, whether he was a man of art or a private individual?

Theact. True.

Str. And shall we call our new friend a private individual, or a thorough master of his craft?

Theact. Certainly not a private individual, for his name, as you were saying, must surely express his nature.

Str. Then he must be supposed to have some art.

Theact. What art?

Str. By heaven, they are cousins! it never occurred to us.

Theact. Who are cousins?

Str. The angler and the Sophist.

Theact. In what way are they related?

Str. They both appear to me to be hunters.

Theact. How the Sophist? Of the other we have spoken.

Str. You remember our division of hunting, into hunting after swimming animals and land animals?

Theact. Yes.

Str. And you remember that we subdivided the swimming and left the land animals, saying that there were many kinds of them?

222 *Theact.* Certainly.

Str. Thus far, then, the Sophist and the angler, starting from the art of acquiring, take the same road?

Theact. True.

Str. Their paths diverge when they reach the art of animal

hunting; the one going to the sea-shore, and to the rivers and to the lakes, and angling for the animals which are in them?

Theact. Very true.

Str. While the other goes to land and water of another sort—rivers of wealth and rich meadow-lands of generous youth; and he also is intending to take the animals which are in them.

Theact. What do you mean?

Str. Of hunting on land there are two principal divisions.

Theact. What are they?

Str. One is the hunting of tame, and the other of wild animals.

Theact. But are tame animals ever hunted?

Str. Yes, if you include man under tame animals. But if you like you may say that there are no tame animals, or that, if there are, man is not among them; or you may say that man is a tame animal and is not hunted—you shall decide which of these alternatives you prefer.

Theact. I would rather say that man is a tame animal, and I will admit that he is hunted.

Str. Then let us divide the hunting of tame animals into two parts.

Theact. How shall we make the division?

Str. Let us define piracy, man-stealing, tyranny, the whole military art—one and all as a hunting by force.

Theact. Very good.

Str. But the art of the lawyer, of the popular orator, and the art of conversation may be called in one word the art of persuasion.

Theact. True.

Str. And of persuasion, there may be said to be two kinds?

Theact. What are they?

Str. One is private, and the other public.

Theact. Yes; each of them forms a class.

Str. And of private hunting, one sort receives hire, and the other brings gifts.

Theact. I do not understand you.

Str. Have you never observed the manner in which lovers hunt?

Theact. To what do you refer?

Str. I mean that they lavish gifts on those whom they hunt in addition to other inducements.

Theact. Most true.

Str. Let us admit this, then, to be the amatory art.

Theact. Certainly.

Str. But that sort of hireling whose conversation is pleasing and who baits his hook with pleasure and only exacts his maintenance as the price of his flattery, we should all, if I am not
223 mistaken, describe as possessing an art of sweetening, or making things pleasant.

Theact. Certainly.

Str. And that sort, which professes to form acquaintances only for the sake of virtue, and demands payment in money, may be fairly called by another name.

Theact. To be sure.

Str. And what name is it? Will you tell me?

Theact. There is no difficulty; for I believe that we have discovered the Sophist: and this, as I conceive, is his proper name.

Str. Then now, Theaetetus, his art may be traced as a branch of the appropriative¹, acquisitive family—which hunts living animals,—land animals,—tame animals,—which hunts man,—which hunts private individuals—for hire,—taking money in exchange—having the semblance of education; and this is termed Sophistry, and is a hunt after the souls of rich young men of good repute—that is the conclusion.

Theact. Very true.

Str. Let us take another branch of his genealogy; for he is a professor of a great and many-sided art; and if we look back at what has preceded we see that he presents another aspect, besides that of which we are speaking.

Theact. In what respect?

Str. There were two sorts of acquisitive art; the one concerned with hunting, the other with exchange.

Theact. There were.

Str. And of the art of exchange there are two divisions, the one of giving, and the other of selling.

Theæt. Let us assume that.

Str. Further, we will suppose that the art of selling is divided into two parts.

Theæt. How?

Str. There is one part which is distinguished as the sale of a man's own productions; another, which is the exchange of the works of others.

Theæt. Certainly.

Str. And is not that part of exchange which takes place in the city, being about half of the whole, termed retailing?

Theæt. Yes.

Str. And that which exchanges the goods of one city for those of another by selling and buying is the exchange of the merchant?

Theæt. To be sure.

Str. And this exchange of the merchant is partly an exchange of food for the use of the body, and partly of the food of the soul which is bartered and received in exchange for money.

Theæt. What do you mean?

Str. You want to know what is the meaning of food for the soul; the other kind you understand.

Theæt. Yes.

Str. Take music in general and painting and marionette playing and many other things, which are purchased in one city, and carried away and sold in another—wares of the soul which are hawked about either for the sake of instruction or amusement;—may not he who takes them about and sells them, be quite as truly called a merchant as he who sells meats and drinks?

Theæt. To be sure he may.

Str. And would you not call by the same name him who goes about from city to city, buying knowledge from all quarters and exchanging his wares for money?

Theæt. Certainly I should.

Str. Of this merchandise of the soul, may not one part be fairly termed the art of display? And there is another which is certainly not less ridiculous, but being a trade in learning must be called by some name germane to the matter?

Theæt. Certainly.

Str. There should be distinct names for them, one descriptive of the sale of the knowledge of virtue, and the other of the sale of other kinds of knowledge.

Theact. Of course.

Str. The name of art seller corresponds well enough to the one ; and I hope that you will tell me the name of the other.

Theact. He must be the Sophist, whom we are seeking ; no other name can possibly be right.

Str. No other ; and so this trader in virtue again turns out to be our friend the Sophist, whose art may now be traced a second time, through the art of acquisition — exchange — buying and selling,—by the merchant, not forgetting that there is a merchandise of the soul which is concerned with speech and knowledge.

Theact. Certainly.

Str. And there may be a third reappearance of him ;—for he may have settled down in a city, and partly fabricate as well as buy these same wares, intending to live by selling them, and he would still be called a Sophist?

Theact. Certainly.

Str. Then that part of the acquisitive art which exchanges, and of exchange which either sells a man's own productions or retails those of others, as the case may be, and in either way sells knowledge, you would again term Sophistry?

Theact. I must, if I am to keep up with the argument.

Str. Let us consider once more whether there may not be another aspect of sophistry?

Theact. What is that?

225 *Str.* In the acquisitive there was a subdivision of the combative or fighting art.

Theact. There was.

Str. Perhaps we had better divide it.

Theact. What shall be the divisions?

Str. There shall be one division of the competitive, and the other of the pugnacious.

Theact. Very good.

Str. That part of the pugnacious which is a contest of bodily strength may be properly called by some such name as violent.

Theaet. True.

Str. And when the war is one of words, may be termed controversy?

Theaet. Yes.

Str. And controversy may be of two kinds.

Theaet. What are they?

Str. When long speeches are answered by long speeches, and there is public discussion about the just and unjust, that is forensic controversy.

Theaet. Yes.

Str. And there is a private sort of controversy, which is cut up into questions and answers, and this is commonly called disputation?

Theaet. Yes, that is the name.

Str. And of disputation, that sort which is only a discussion about contracts, and is carried on at random, and without rules of art, is recognised by dialectic to be a distinct class, but has hitherto had no distinctive name, and does not deserve to receive one at our hands.

Theaet. No; for the different species are too minute and heterogeneous.

Str. But that which proceeds by rules of art to dispute about justice and injustice in their own nature, and about things in general, have we not been accustomed to call argumentation (Eristic)?

Str. And of argumentation, one sort wastes money, and the other makes money.

Theaet. Very true.

Str. Suppose we try and give to each of these two classes a name.

Theaet. Let us do so.

Str. I should say that the habit which leads a man to neglect his own affairs for the pleasure of conversation, of which the style is far from being agreeable to the majority of his hearers, may, in my opinion, be fairly termed loquacity.

Theaet. Yes, that is the name which is given.

Soc. But who is the other, who makes money out of private disputation? Will you tell me in return?

Theaet. There is only one true answer: he is the wonderful

Sophist, of whom we are in pursuit, and who reappears again for the fourth time.

226 *Str.* Yes, and with a fresh pedigree, for he is the money-making species of the Eristic, disputatious, controversial, pugnacious, combative, acquisitive family, as the argument has proven.

Theaet. Certainly.

Str. How true was the observation that he was a many-sided animal, and not to be caught with one hand, as they say!

Theaet. Then you must catch him with two.

Str. Yes, we must, if we can. And therefore let us try another track in our pursuit of him: You are aware that there are certain menial occupations which have names among servants?

Theaet. Yes, there are many such; which of them do you mean?

Str. I mean such as sifting, straining, winnowing, threshing¹.

Theaet. Certainly.

Str. And besides these there are a great many more, such as carding, combing, adjusting the warp and the woof; and there are thousands of others.

Theaet. Of what are they to be patterns, and what are we going to do with them all?

Str. I think that in all of these there is implied a notion of division.

Theaet. Yes.

Str. Then if, as I was saying, there is one art which includes all of them, ought not that art to have one name?

Theaet. And what is the name of the art?

Str. The art of discerning.

Theaet. Very good.

Str. Think whether you cannot divide this.

Theaet. I should have to think a long while first.

Str. In all the previously named processes either like has been separated from like or the better from the worse.

Theaet. I see what you mean.

Str. There is no name for the first kind of separation; of the

¹ Reading *δίψειν*, a conjecture of Professor Campbell's.
Univ Calif - Digitized by Microsoft®

second, which throws away the worse and preserves the better, I do know a name.

Theæt. What is it?

Str. Every discernment or separation of that kind, as I perceive upon consideration, is called a purification.

Theæt. Yes, that is the usual expression.

Str. And any one may see that purification is of two kinds.

Theæt. Perhaps so, if he were allowed time to think; but I do not see at this moment.

Str. There are many purifications of bodies which may with propriety be comprehended under a single name.

Theæt. What are they, and what is the word in which they may be summed up?

Str. There is the purification of living bodies in their inward ²²⁷ and in their outward parts, of which the former is duly effected by medicine and gymnastic, the latter by the less dignified art of the bath-man; and there is the purification of inanimate substances—to this the arts of fulling and in general of furbishing attend in a number of minute particulars, and have a variety of names which are thought ridiculous.

Theæt. Very true.

Str. There can be no doubt that they are thought ridiculous, Theætetus; but then the dialectical art never considers whether the benefit to be derived from the purge is greater or less than that to be derived from the sponge, and has no more interest in the one than in the other; her endeavour is to know what is and is not kindred in all arts, with a view to the acquisition of intelligence; and having this in view, she honours them all alike, and when she makes comparisons, she counts one of them not a whit more ridiculous than another; nor does she esteem him who adduces as his example of hunting, the general's art, at all more decorous than another who cites that of the vermin-destroyer, but only as the greater pretender of the two. And as to the question which you were asking about the name which was to comprehend all these arts of purification, whether of animate or inanimate substances, the spirit of dialectic is in no wise particular about fine words, if she may be only allowed to have a general name for all other purifications, binding them up together and separating them off from the

purification of the soul or intellect. For this is the purification at which she wants to arrive, and this we should understand to be her aim.

Theact. Yes, I understand; and I agree that there are two sorts of purification, and that one of them is concerned with the soul, and that there is another which is concerned with the body.

Str. Excellent; and now attend to what I am going to say, and try to divide the term again.

Theact. Whatever line of division you suggest, I will endeavour to follow you.

Str. Do we admit that virtue is distinct from vice in the soul?

Theact. Certainly.

Str. And purification was leaving the good and casting out whatever is bad?

Theact. True.

Str. Then any taking away of evil from the soul may be properly called purification?

Theact. Yes.

Str. And in the soul there are two kinds of evil.

Theact. What are they?

228 *Str.* The one may be compared to disease in the body, the other to deformity.

Theact. I do not understand.

Str. Perhaps you have never reflected that disease and discord are the same.

Theact. To this, again, I know not what I should reply.

Str. Do you not conceive discord to be a dissolution of kindred elements originating in some disagreement?

Theact. Just that.

Str. And is deformity anything but the want of measure, which is always unsightly?

Theact. Exactly.

Str. And do we not see that opinion is opposed to desire, pleasure to anger, reason to pain, and that all similar elements are opposed to one another in the souls of bad men?

Theact. Certainly.

Str. And yet they must all be akin?

Theæt. Of course.

Str. Then we shall be right in calling vice a discord and disease of the soul?

Theæt. Most true.

Str. And when things having motion, and aiming at an appointed mark, continually miss their aim and glance aside, shall we say that this is the effect of symmetry among them, or of the want of symmetry?

Theæt. Clearly of the want of symmetry.

Str. But surely we know that no soul is voluntarily ignorant of anything?

Theæt. Certainly not.

Str. And what is ignorance but the aberration of a mind which is bent on truth, and in which the process of understanding is perverted?

Theæt. True.

Str. Then we are to regard an unintelligent soul as deformed and devoid of symmetry?

Theæt. Very true.

Str. Then there are these two kinds of evil in the soul—the one which is generally called vice, and is obviously disease?

Theæt. Yes.

Str. And there is the other, which they call ignorance, and which, because existing only in the soul, they do not like to admit to be vice¹.

Theæt. I certainly admit what I at first disputed—that there are two kinds of vice in the soul, and that we ought to consider cowardice, intemperance, injustice, and all other vices, to be disease in the soul, and ignorance, of which there are many varieties, to be deformity.

Str. And in the body are there not two arts which have to do with the two bodily states?

Theæt. What are they?

Str. There is gymnastic, which has to do with deformity, and medicine, which has to do with disease.

Theæt. True.

¹ Or, 'although there is no other vice in the soul but this.'

229 *Str.* And where there is insolence and injustice and cowardice, is not correction the art which is most required¹?

Theact. That certainly appears to be the opinion of mankind.

Str. Again, of the various kinds of ignorance, may not instruction be said to be the best remedy?

Theact. True.

Str. Of the art of instruction, shall we say that there is one or more kinds? Are there not two principal ones? Think.

Theact. I will.

Str. I think that I can see how we are most likely to arrive at the answer to this.

Theact. How?

Str. If we could discover a line which divides ignorance into two halves, we should then find the divisions of instruction; for a division of ignorance into two parts would clearly imply that the art of instruction is also twofold, and answers to the two divisions of ignorance.

Theact. Well, and do you see what you are looking for?

Str. I do seem to myself to see one very large and bad sort of ignorance which is quite separate, and may be weighed in the scale against all other parts of ignorance put together.

Theact. What is that?

Str. When a person thinks that he knows and does not know; this appears to be the great source of all the errors of the intellect.

Theact. True.

Str. And this, if I am not mistaken, is the kind of ignorance which specially earns the title of want of sense.

Theact. True.

Str. What name, then, shall be given to that sort of instruction which gets rid of this?

Theact. The instruction of which you speak, Stranger, is not the teaching of handicraft arts, but is what in this part of the world has been termed education by us.

Str. Yes, Theaetetus, and by all Hellenes. But we have still to consider whether education admits of any further division.

Theact. By all means.

Str. I think that there is a point at which such a division is possible.

Theaet. At what point?

Str. Of education, one method appears to be rougher, and there is another which is smoother.

Theaet. How are we to distinguish the two?

Str. There is the time-honoured mode which our fathers commonly practised towards their sons, and which is still adopted by many—either of roughly reproving their errors, or of gently²³⁰ advising them, which may be called by the general term of admonition.

Theaet. True.

Str. But whereas some appear to have arrived at the conclusion that all ignorance is involuntary, and that no one who thinks himself wise is willing to learn any of those things in which he is conscious of his own cleverness, and that the admonitory sort of instruction gives much trouble and does little good—

Theaet. There they are quite right.

Str. Accordingly, they set to work to eradicate the spirit of conceit in another way.

Theaet. In what way?

Str. They cross-examine a man as to what he is saying, when he thinks that he is saying something and is saying nothing; he is easily convicted of inconsistency in his opinions; these they collect, and placing them side by side, show that they contradict one another about the same things, in relation to the same things, and in the same respect. He seeing this is angry with himself, and grows gentle towards others, and thus is entirely delivered from great prejudices and harsh notions, in a way which is most entertaining to hear, and produces the most lasting good effect on the person who is the subject of the operation. For as the physician considers that the body will receive no benefit from taking food until the internal obstacles have been removed, so the instructor of the soul is conscious that his patient will receive no benefit from the applications of knowledge until he is refuted, and from refutation learns modesty; he must be purged of his prejudices and think that he knows only what he knows, and no more.

Theaet. That is certainly the best and most temperate state,

Str. For all these reasons, Theaetetus, we must admit that refutation is the greatest and chiefest of purifications, and he who has not been refuted, though he be the great King himself, is in the highest degree impure; he is uninstructed and deformed in those things in which he who would be truly blessed ought to be pure and fair.

Theact. Very true.

Str. And who are the ministers of this art? I am afraid to
231 say the Sophists.

Theact. Why?

Str. Lest we should assign them too high an honour.

Theact. Yet the description of the Sophist has a certain likeness to our minister of purification.

Str. Yes, the same sort of likeness which a wolf, who is the fiercest of animals, has to a dog, who is the gentlest. But he who would not be found tripping, ought to be very careful in the matter of likenesses, for they are most slippery things; nevertheless, let us assume that the Sophists are the men. I say this provisionally, for I think that the line which divides them will be very marked when they really have to maintain their position.

Theact. Very likely.

Str. Let us grant, then, that of the discerning art comes purification, of purification mental purification, of mental purification instruction is a portion, and of instruction education, and of education, that refutation of vain conceit which has been discovered in the course of the argument; and let us call that the noble art of Sophistry.

Theact. Very well; and yet, considering the number of forms in which he has presented himself, I greatly doubt, after all, how I can with any truth or certainty describe the Sophist.

Str. You naturally feel perplexed; and yet I think that he must be still more perplexed in his attempt to escape us, for as the proverb says, when every way is blocked, there is no escape; now, then, is the time of all others to set upon him.

Theact. True.

Str. First let us wait a moment and recover breath, and while we are reposing, let us reckon up in how many forms he has appeared. In the first place, he was discovered to be a paid hunter after wealth and youth.

Theact. Yes.

Str. In the second place, he was a merchant or trader in the goods of the soul.

Theact. Certainly.

Str. In the third place, he has turned out to be a retailer of the same sort of wares.

Theact. Yes ; and in the fourth place, he sold us the learned wares which he himself manufactured.

Str. Quite right ; I will try and remember the fifth myself, and I believe that I shall be right in saying, fifthly, that he is a hero of dispute, having distinctly the character of an arguer.

Theact. True.

Str. The sixth point was doubtful, and yet we at last agreed that he was a purger of souls, who cleared away notions obstructive to knowledge.

Theact. Very true.

Str. Do you not see that when the professor of any art has ³²² one name and many kinds of knowledge, there must be something wrong ; the multiplicity of names which is applied to him shows that the common principle to which all these branches of knowledge are tending, is not understood ?

Theact. I should imagine that this must be the case.

Str. At any rate we will understand him, and no indolence shall stand in the way of that. Let us begin again, then, and re-examine some of our statements concerning the Sophist ; there was one thing which appeared to me especially characteristic of him.

Theact. To what are you referring ?

Str. We were saying of him, if I am not mistaken, that he was a disputer ?

Theact. We were saying so.

Str. And is he not also a teacher of the art of disputation to others ?

Theact. Certainly he is.

Str. And about what does he profess that he teaches men to dispute ? To begin at the beginning ; does he make them able to dispute about divine things, which are invisible to men in general ?

Theact. At any rate, that is said of him.

Str. And what do you say of the visible things of heaven and earth and the like?

Theact. Certainly he disputes, and teaches to dispute about them.

Str. Then, again, in private conversation, when any universal assertion is made about generation and essence, we know that they are tremendous argufiers, and are able to impart their own skill to others.

Theact. Undoubtedly.

Str. And do they not profess to make men able to dispute about law and about politics in general?

Theact. Why, no one would have anything to say to them, if they did not make these professions.

Str. In all and every art, what the craftsman ought to answer on each occasion is written down and popularised, and he who likes may read.

Theact. I suppose that you refer to the precepts of Protagoras about wrestling and the other arts?

Str. Yes, my friend, and about a good many other things. In a word, is not the art of disputation a power of disputing about all things?

Theact. Certainly, there does not seem to be much which is left out.

Str. But oh! my dear youth, do you suppose this possible? for perhaps your young eyes may see things which to our duller sight do not appear.

233 *Theact.* To what are you referring? for I do not think that I understand your present question.

Str. I ask whether anybody can understand all things.

Theact. That would be too great a happiness for man.

Str. But how can any one who is ignorant give a satisfactory answer to him who knows?

Theact. He cannot.

Str. Then why has the sophistical art such a mysterious power?

Theact. To what do you refer?

Str. How do they make young men believe in their own supreme and universal wisdom? For if they neither answered nor were thought to answer rightly, or when they answered were

deemed no wiser for their controversial skill, then, to quote your own observation, no one would give them money or be willing to learn their art.

Theact. They certainly would not.

Str. But they are willing.

Theact. Yes, they are.

Str. Yes, and the reason, as I should imagine, is that they are supposed to have knowledge of those things about which they dispute?

Theact. Certainly.

Str. And they dispute about all things?

Theact. True.

Str. And therefore, to their disciples, they appear to be all-wise?

Theact. Certainly.

Str. But they are not; for that was shown to be impossible.

Theact. Impossible, of course.

Str. Then the Sophist has been shown to have conjectural or apparent knowledge only of all things, and not the truth?

Theact. Certainly; no better description of him could be given.

Str. Let us now take an illustration, which will still more clearly explain his nature.

Theact. What is it?

Str. I will tell you, and you shall answer me, giving your very closest attention. Suppose that a person were to profess, not that he could speak or answer, but that he knew how to make and do all things, by a single art.

Theact. What do you mean by making all things?

Str. I see that you do not understand the very first word that I utter, for you do not understand the meaning of 'all.'

Theact. No, I do not.

Str. Under all things, I include you and me, and also animals and trees.

Theact. What do you mean?

Str. Suppose a person to say that he will make you and me, and all creatures.

Theact. What do you mean by 'making'? He cannot be a husbandman;—and you have said that he is a maker of animals. 234

Str. Yes ; and I say that he is also the maker of the sea, and the earth, and the heavens, and the gods, and of all other things ; and, further, that he can make them in no time, and sell them for a few pence.

Theact. That must be a jest.

Str. And when a man says that he knows all things, and can teach them to another at a small cost, and in a short time, is not that to be regarded as a jest ?

Theact. Certainly.

Str. And is there any more graceful or artistic form of jest than imitation ?

Theact. Certainly not ; and imitation is a very comprehensive term, which includes under one class the most diverse sorts of things.

Str. We know, of course, that he who professes by one art to make all things is really a painter, and by the painter's art makes resemblances of them which have the same name with them ; and he can deceive the less intelligent sort of young children, to whom he shows his pictures at a distance, into the belief that he has the absolute power of making whatever he likes.

Theact. Certainly.

Str. And may there not be supposed to be an imitative art of reasoning ? Is there any impossibility in stealing the hearts of youths through their ears, when they are still at a distance from the truth, by showing them fictitious arguments, and making them think that they are true, and that the speaker is the wisest of men in all things ?

Theact. Yes ; why should there not be another similar art ?

Str. But as time goes on, and they advance in years, and come more into contact with realities, and have learnt by sad experience to see and feel the truth of things, are they not compelled to change many opinions which they had, so that the great appears small to them, and the easy difficult, and all their seeming speculations are overturned by the facts of life ?

Theact. That is my view, as far as I can judge, although, at my age, I may be one of those who see things at a distance only.

Str. And the wish of all of us, who are your friends, is and always will be to bring you as near to the truth as we can ²³⁵ without the sad reality. And now I should like you to tell me, whether the Sophist is not visibly a magician and imitator of true being; or are we still disposed to think that he may have a true knowledge of the various matters about which he disputes?

Theact. But how is that possible, Stranger? Is there any doubt, after what has been said, that he is to be located in one of the divisions of children's play?

Str. Then we must place him in the class of magicians and mimics.

Theact. Certainly we must.

Str. And now our business is not to let the animal out, for we have got him in a sort of dialectical net, and there is one thing which he certainly will not escape:

Theact. What is that?

Str. The inference that he is a juggler.

Theact. Precisely my own opinion of him.

Str. Then, clearly, we ought as soon as possible to divide the image-making art, and go down into the net, and, if the Sophist does not run away from us, to seize him and deliver him over to reason, who is the lord of the hunt, and announce the capture of him; and if he creeps into the recesses of the imitative art, and secretes himself in one of them, to divide again and follow him up, until in some subsection of imitation he is caught. For our method of tackling each and all is one which neither he nor any other creature will ever escape in triumph.

Theact. That is good, and let us do as you say.

Str. Well, then, pursuing the same analytic method as before, I think that I can discern two divisions of the imitative art, but I am not as yet able to see in which of them the desired form is to be found.

Theact. Will you tell me first what are the two divisions of which you are speaking?

Str. One is the art of likeness-making;—generally a likeness is made by producing a copy which is executed according to the proportions of the original, similar in length and breadth and depth, and also having colours answering to the several parts.

Theact. But is not this always the case in imitation?

Str. Not always; in works either of sculpture or of painting, which are of any magnitude, there is a certain degree of deception; for if the true proportions were given, the upper part, which is farther off, would appear to be out of proportion in comparison with the lower, which is nearer; and so our artists give up the truth in their images and make only the proportions which appear to be beautiful, disregarding the real ones.

Theact. Quite true.

Str. And that which being other is also like, may we not fairly call a likeness or image?

Theact. Yes.

Str. And may we not, as I did just now, call that part of the imitative art which is concerned with making such images the art of likeness-making?

Theact. Let that be the name.

Str. And what shall we call that resemblance of the beautiful, which is due to the unfavourable position of the spectator, but if a person had the power of seeing the great works of which I was speaking as they truly are, would appear not even like that to which it professes to be like? May we not call this an appearance, since it appears only and is not really like?

Theact. Certainly.

Str. There is a great deal of this in painting, and in all imitation?

Theact. Of course.

Str. And may we not fairly call the sort of art, which produces an appearance and not an image, phantastic art?

Theact. That is very fair.

Str. Then there are two kinds of image-making—the art of making likenesses, and phantastic or the art of making appearances?

Theact. True.

Str. I was doubtful before in which of them I should place the Sophist, nor am I even now able to see clearly; verily he is a wonderful being who has the art of making himself invisible. And now in the cleverest manner he has got into an impossible place.

Theact. Yes, he has.

Str. Do you speak advisedly, or are you carried away by the current of the argument into giving a hasty assent?

Theact. May I ask to what you are referring?

Str. My dear friend, we are engaged in a very difficult speculation—there can be no doubt of that; for how a thing can appear and seem and not be, or how a man can say a thing which is not true, has always been and still remains a very perplexing ²³⁷ question;—Can any one say or think that falsehood really exists, and avoid contradiction? Indeed, Theaetetus, these are very difficult questions.

Theact. Why?

Str. He who says that falsehood exists has the audacity to assert the being of not-being, for that is implied in the possibility of falsehood. But, my boy, in the days when I was a boy, the great Parmenides protested against this, and to the end of his life he continued to inculcate the same lesson—always repeating both in verse and out of verse:

‘Keep your mind from this way of enquiry, for never will you show that not-being is:’

Such is his testimony, which is confirmed by the very expression when sifted a little. Would you object to begin with the consideration of the words themselves?

Theact. Never mind about me; I am only desirous that you should carry on the argument in the best way, and that you should take me with you.

Str. Very good; and now say, do we venture to utter that forbidden word, ‘not-being’?

Theact. Certainly we do.

Str. Seriously then, and considering the question neither in strife nor play; suppose that one of those present were asked ‘to what is the term “not-being” to be applied;’ how and to what would he apply the term, and what answer would he make to the enquirer?

Theact. A difficult question, and one not to be answered by a person like myself.

Str. Well, there is no difficulty in seeing that the predicate ‘not-being’ is not applicable to any being.

Theact. Certainly not.

Str. And if not to any being, then not to something.

Theact. Of course not.

Str. This is also plain, that in speaking of something we speak of being, for to speak of an abstract something naked and isolated from all being is impossible.

Theact. Impossible.

Str. You mean by assenting to imply that he who says something must say some one thing?

Theact. Yes.

Str. Some ($\tau\acute{\iota}$) in the singular you would say is the sign of one, some in the dual ($\tau\omega\acute{\epsilon}$) of two, some in the plural of many ($\tau\omega\acute{\epsilon}\varsigma$).

Theact. Exactly.

Str. Then he who says 'not something' must absolutely say nothing.

Theact. Most assuredly.

Str. And as we cannot admit that a man speaks and says nothing, he who says 'not-being' does not speak at all.

Theact. The difficulty of the argument can no further go.

238 *Str.* Not yet, my friend, is the time for such a word; for there still remains of all perplexities the first and greatest, touching the very foundation of the matter.

Theact. What do you mean? Do not be afraid to speak.

Str. To that which is, may be attributed some other thing which is?

Theact. Certainly.

Str. But can anything which is, be attributed to that which is not?

Theact. Impossible.

Str. And all number is to be reckoned among things which are?

Theact. Yes, surely number, if anything, has a real existence.

Str. Then we must not attempt to attribute to not-being number either in the singular or plural?

Theact. The argument implies that we should be wrong in doing so.

Str. But how can a man either express or even conceive not-being or nonentities without number?

Theact. Tell me where is the difficulty.

Str. When we speak of nonentities or not-being ($\mu\eta\ \acute{\omicron}\nu\tau\alpha$) in the plural, are we not attributing plurality to not-being?

Theact. Certainly.

Str. But, on the other hand, when we say not-being in the singular, do we not attribute unity?

Theact. Manifestly.

Str. Nevertheless, we maintain that you may not and ought not to attribute being to not-being?

Theact. Most true.

Soc. Do you see, then, that not-being in the abstract is inconceivable, unutterable, unspeakable, indescribable?

Theact. Quite true.

Str. But I was wrong then in telling you just now that the difficulty which was coming is the greatest of all.

Theact. What! is there a greater still behind?

Str. Well, I am surprised that you do not see the difficulty in which he who would refute the notion of not-being is involved. For the very words which I used imply that he is compelled to contradict himself as soon as he makes the attempt.

Theact. What do you mean? Speak more clearly.

Str. Do not expect clearness from me. For I, who maintain that not-being has no part either in the one or many, just now spoke and am still speaking of not-being as one. For I say not-being,—do you understand?

Theact. Yes.

Str. And a little while ago I said that not-being is unutterable, unspeakable, indescribable.

Theact. I follow after a fashion.

Str. When I said 'is,' did I not contradict what I said before?

Theact. That is evident.

Str. And in using the singular verb, did I not speak of not-being as one?

Theact. Yes.

Str. And when I spoke of not-being as indescribable and unspeakable and unutterable, in using each of these words in the singular, did I not refer to not-being as one?

Theact. Certainly.

Str. And yet we say that, strictly speaking, it should not be

defined either as one or many, and should not be called 'it,' for even the mere use of the word 'it' would imply a form of unity.

Theact. Quite true.

Str. How, then, can any one put any faith in me? For I am at a loss, as I have ever been found to be, in the refutation of not-being. And therefore, as I was saying, you had better not trust to the correctness of my way of speaking about not-being; but let us try the question on you.

Theact. What do you mean?

Str. Make a noble effort, as becomes youth, and try with all your might to speak of not-being according to reason, without implying either existence or unity or plurality.

Theact. It would be a strange boldness in me which would make the attempt when I see you thus discomfited.

Str. Say no more of ourselves; but until we find some one or other who can speak of nothing without number, say rather that the Sophist is a clever rogue who will not be got out of his hole.

Theact. Most true.

Str. And if we say to him that he has some art of making appearances, he will retort our argument upon ourselves, tying our words behind our backs; and when we call him an image-maker he will say, 'Pray what do you mean by an image?' and I should like to know, Theactetus, how we can possibly answer the younker's question?

Theact. We shall doubtless tell him of the images which are reflected in water or in mirrors; also of sculptures, pictures, and other duplicates.

Str. I see, Theactetus, that you have never made the acquaintance of the Sophist.

Theact. Why do you say so?

Str. He will make believe that his eyes are shut, or that he has none.

Theact. What do you mean?

Str. When you tell him of something existing in a mirror.
240 or of statues, and address him as though he had eyes, he will laugh at your words, and will pretend that he knows nothing of mirrors and streams, or of sight at all; he will say that he is asking about an idea.

Theaet. What does he mean?

Str. The common notion which pervades these many objects, which you call by one name, and speak of as one when you pronounce the word 'image.' How will you maintain your ground against him?

Theaet. How can I describe an image except as such another made in the likeness of the true?

Str. When you say such another do you mean another real thing, or what do you mean by 'such'?

Theaet. Certainly not another real thing, but only a resemblance.

Str. And you mean by true or real that which really is?

Theaet. Yes.

Str. And the not true or not real is that which is the opposite of the true or real?

Theaet. Exactly.

Str. A resemblance, then, is not real if, as you say, not true?

Theaet. Yes, it is in a certain sense real.

Str. But you mean to say not in a true sense?

Theaet. No, only real in being a likeness.

Str. Then what we call a likeness is really unreal, and essentially not.

Theaet. In what a strange complication of being and not-being we are involved!

Str. Strange! I should think so. See how, by the help of this reciprocation of opposites, the many-headed Sophist has contrived to make us admit the existence of not-being, much against our will.

Theaet. Yes, indeed, I see.

Str. The difficulty is how to define his art without falling into a contradiction.

Theaet. How do you mean? And where does the danger lie?

Str. When we say that he deceives us with an illusion, and that his art is illusory, shall we say that our soul is led by his arts to think falsely, or what shall we say?

Theaet. There is nothing else to be said.

Str. Again, false opinion is that form of opinion which thinks the opposite of the truth. You would assent?

Theact. Certainly.

Str. You mean to say that false opinion thinks what is not?

Theact. Of course.

Str. Does false opinion hold that things which are not are not, or that in a certain sense they are?

Theact. Things that are not must be imagined to exist in a certain sense, if any degree of falsehood is to be admitted.

Str. And does not false opinion also think that things which most certainly are, are not?

Theact. Yes.

Str. And this, again, is falsehood?

Theact. Falsehood—yes.

Str. And in like manner, a false proposition will be considered to be one which asserts the non-existence of things which are, and the existence of things which are not.

Theact. There is no other way in which a false proposition can be conceived.

241 *Str.* There is not; but the Sophist will deny these statements. And indeed how can any rational man assent to them, seeing that the very expressions which we have just used were before acknowledged by us to be unutterable, unspeakable, indescribable, inconceivable? Do you see his point, Theaetetus?

Theact. Of course he will say that we are contradicting ourselves when we hazard the assertion, that falsehood exists in opinion and in words; for in maintaining this, we are compelled over and over again to assert being of not-being, which we have admitted just now to be an utter impossibility.

Str. You remember well; and now I think we had better hold a consultation as to what we ought to do about the Sophist; for if we persist in looking for him in the class of false workers and magicians, you see that the handles for objection and the difficulties which will arise are very numerous and obvious.

Theact. Very true.

Str. We have gone through a very small portion of them, and they are really infinite.

Theact. If that is the case, we cannot possibly take the Sophist.

Str. Shall we be faint-hearted and give him up?

Theact. Certainly not, I should say, if we can get the slightest hold of him.

Str. Will you then forgive me, and, as your words imply, be contented if I slightly flinch from the grasp of such a sturdy argument?

Theact. To be sure I will.

Str. I have also another request to make.

Theact. Which is — ?

Str. That you will promise not to regard me as a parricide.

Theact. Why do you say that?

Str. Because, in self-defence, I must test the philosophy of my father Parmenides, and try to prove by main force that in a certain sense not-being is, and that being is not.

Theact. Some attempt of the kind is clearly needed.

Str. Yes, a blind man, as they say, might see that, and, unless these questions are decided, no one when he speaks of false words, or false opinion, or idols, or images, or imitations, or appearances, or about the arts which are concerned with them, can avoid falling into ridiculous contradictions.

Theact. Most true.

Str. And therefore I must venture to lay hands on my father's argument; if I am to be over scrupulous, I must entirely give the matter up.

Theact. Nothing in the world should ever induce us to do so.

Str. I have a third little excuse which I wish to offer.

Theact. What is it?

Str. You heard me say what I have always felt and still feel — that I have no heart for this argument?

Theact. I did.

Str. I tremble at the thought of what I have said, and expect that you will deem me mad, when you hear of my sudden changes and shiftings; let me therefore observe to you, that I am examining the question entirely out of regard for you.

Theact. You certainly need not fear my bad opinion, or that I shall impute any impropriety to you, if you attempt this refutation and proof; take heart, therefore, and proceed.

Str. And where shall I begin the perilous enterprise? I think that the road which I had lately taken is

Theæt. Which?—Let me hear.

Str. I think that we had better, first of all, consider the points which at present are regarded as self-evident, lest we should have fallen into some confusion about them, and be too ready to assent to one another, fancying that we have the means of judging.

Theæt. Say more clearly what you mean.

Str. I think that Parmenides, and all who undertook to determine the number and nature of existences, talked to us in rather a light and easy strain.

Theæt. How did they talk to us?

Str. As if we had been children, to whom they repeated each their own particular mythus or story;—one said that there were three principles at one time warring in a manner with one another, and then at peace again; and they were married and begat children, and brought them up; and another spoke of two principles,—a moist and dry, or hot and cold, which he brought together and gave in marriage to one another. The Eleatics in our part of the world say that all things are many in name, but in nature one; this is their mythus, which begins with Xenophanes, and is even older. Then there are Ionian, and in more recent times Sicilian muses, who have conceived the thought that to unite the two principles is safer; and they say that being is one and many, which are held together by enmity and friendship, ever parting, ever meeting, as the more potent masters of harmony assert, while the gentler ones do not insist on the perpetual strife
243 and peace, but admit a relaxation and alternation of them; peace and friendship sometimes prevailing under the sway of Aphrodite, and then again diversity and war, by reason of a principle of strife. Whether any of them spoke the truth in all this is hard to determine; antiquity and famous men should have reverence, and not be liable to accusations so serious. Yet one thing may be said of them without offence—

Theæt. What thing?

Str. That they went on their several ways with a good deal of disdain of people like ourselves; they did not care whether they took us with them, or left us behind them.

Theæt. How do you mean?

Str. I mean to say, that when they talk of one, two, or more

clements, which are or have become or are becoming, or again of heat mingling with cold, and in some other part of their works assume separations and combinations of them,—tell me, Theætetus, do you understand what they mean by these expressions? When I was a younger man, I used to fancy that I understood quite well what was meant by the term ‘not-being,’ which is our present subject of dispute; and now you see in what a perplexity we are.

Theact. I see.

Str. And very likely we have been getting into the same difficulty about ‘being,’ and yet may fancy that when anybody utters the word, we understand him and are in no difficulty, although we still admit that we are ignorant of not-being, when the truth is, that we are equally ignorant of both.

Theact. I dare say.

Str. And the same may be said of all the subjects of the previous discussion.

Theact. True.

Str. Most of them may be deferred for the present; but we had better now consider the chief captain and leader of them.

Theact. I suppose that you are speaking of being, and you want to take this first, and discover what they mean who use the word?

Str. You follow close at my heels, Theætetus. For the right method, I conceive, will be to call into our presence and interrogate the dualistic philosophers. To them we will say, ‘O ye, who speak of hot and cold, or of any other two principles of which the universe consists, what term is this which you apply to both of them, and what do you mean when you say that both and each of them are? How are we to understand the word “are”? Are we to suppose that there is a third principle over and above the other two, and that there are three in all, and not two, according to your notions? For clearly you cannot say that one of the two principles is being, and yet attribute being equally to both of them; for, if you did, whichever of the two is identified with being, will comprehend the other, and so they will be one and not two.’

Theact. Very true.

Str. You mean, then, to call the sum of both of them ‘being’?

Theact. I suppose so.

244 *Str.* 'Then, friends,' we shall reply to them, 'the answer is plainly that the two will thus be resolved into one.'

Theact. Most true.

Str. 'Since, then, we are in a difficulty, please to tell us what you mean, when you speak of being; for there can be no doubt that you always from the first understood your own meaning, whereas we once thought that we understood you, but now we are in a great strait. Please to begin by explaining this matter to us, and let us no longer fancy that we understand you, when we entirely misunderstand you.' There will be no impropriety in our thus enquiring either of the dualists or of the pluralists?

Theact. Certainly not.

Str. And what about the assertors of the oneness of the all—must we not endeavour to ascertain from them what they mean by 'being'?

Theact. By 'all' means.

Str. Then let us ask a question of them: 'One, you say, alone is? Yes, they will reply.'

Theact. True.

Str. 'And, again, being is?'

Theact. Yes.

Str. 'And is being the same as one, and do you apply two names to the same thing?'

Theact. What will be their answer, Stranger?

Str. It is clear, Theaetetus, that he who asserts the unity of being will find a difficulty in answering this or any other question.

Theact. Why so?

Str. To admit of two names, and to affirm that there is nothing but unity, is surely ridiculous?

Theact. Certainly.

Str. And equally irrational to admit that a name has any real existence¹?

Theact. How so?

Str. To distinguish the name from the thing, implies duality.

Theact. Yes.

Str. And yet he who identifies the name with the thing will

be compelled to say that the name is of nothing, or if he says that the name is of a thing, even then the name will only be the name of a name, and of nothing else.

Theact. True.

Str. The one in the same way will be only one of one, and being unity itself, will not be of a name ¹.

Theact. Certainly.

Str. And would they say that the whole is other than the one that is, or the same with it?

Theact. To be sure they will, and do say so.

Str. If the one is a whole, as Parmenides sings,—

‘Every way like the fullness of a well-formed sphere,
Equally balanced from the centre on every side,
And must needs be neither greater nor less,
Neither on this side nor on that—’

then being has a centre and extremes, and, having these, must also have parts.

Theact. True.

Str. And that which has parts may have the attribute of unity ²⁴⁵ in all the parts, and in this way being all and a whole, may be one?

Theact. Certainly.

Str. But that of which this is the condition cannot be absolute unity?

Theact. How is that?

Str. Because, according to right reason, that which is absolutely one must be affirmed to be indivisible.

Theact. Certainly.

Str. But this indivisible, if made up of parts, will contradict reason.

Theact. I understand.

Str. Shall we say that being is one and a whole only as having the attribute of unity? Or shall we say that being is not a whole at all?

Theact. That is a hard alternative to offer.

Str. Most true; for being having in a certain sense the attri-

¹ The text is uncertain; or, reading with Heindorf in the last clause *καὶ τοῦτο ὀνόματος αὐτὸ ἐν ὄν*—‘And one is but the name of one, and that one proves to be a name.’

bute of one, is yet proved not to be the same as one, and the all is therefore more than one.

Theact. Yes.

Str. And yet if being, having the attribute of one, be not a whole, and there be such a thing as an absolute whole, then being lacks something of the nature of being?

Theact. Certainly.

Str. Upon this view, again, being, having a defect of being, will become not-being?

Theact. True.

Str. And, again, the all becomes more than one, for being and the whole will each have their separate nature.

Theact. Yes.

Str. But if the whole does not exist at all, all the previous difficulties remain the same, and there will be the further difficulty, that besides having no being, being can never have come into being.

Theact. Why so?

Str. Because that which comes into being always comes into being as a whole, so that he who does not give whole a place among beings, cannot speak either of essence or generation as existing.

Theact. Yes, that certainly appears to be true.

Str. Again; how can that which is not a whole have any quantity? For that which is of a certain quantity must necessarily be of that quantity taken as a whole.

Theact. Exactly.

Str. And there will be innumerable other points, each of them involving infinite perplexity to him who says that being is either one or two.

Theact. The difficulties which are already appearing prove this; for one objection connects with another, and they are always increasing in difficulty and eliciting fresh doubts about what has preceded.

Str. We are far from having exhausted the more exact thinkers who treat of being and not-being. But let us be content to leave them, and proceed to view those who speak less
246 precisely; and we shall find as the result of all, that the nature of being is quite as difficult to comprehend as that of not-being.

Theact. Then now we are to go to the others.

Str. There appears to be a sort of war of Giants and Gods going on amongst them; they are fighting about the nature of essence.

Theact. How is that?

Str. Some of them are dragging down all things from heaven and from the unseen to earth, and seem determined to grasp in their hands rocks and oaks; of these they lay hold, and are obstinate in maintaining, that the things only which can be touched or handled have being or essence, because they define being and body as one, and if any one else says that what is not a body exists they altogether despise him, and will hear of nothing but body.

Theact. I have often met with such men, and terrible fellows they are.

Str. And that is the reason why their opponents cautiously defend themselves from above, out of an unseen world, mightily contending that true essence consists of certain intelligible and incorporeal ideas; the bodies of the materialists, which by them are maintained to be the very truth, they break up into little bits by their arguments, and affirm them to be generation and not essence. O, Theaetetus, there is an endless war upon this theme which is always being waged between the two armies.

Theact. True.

Str. Let us ask each of them, in turn, to give an account of that which they call essence.

Theact. How shall we get it out of them?

Str. With those who make being to consist in ideas, there will be less difficulty, for they are civil people enough; but there will be very great difficulty, or rather an absolute impossibility, in arguing with those who drag everything down to matter. I will tell you what I think that we must do.

Theact. What?

Str. Let us, if we can, really improve them; but if this is not possible, let us imagine them to be better than they are, and more willing to answer in accordance with the rules of argument, and then their opinion will be more worth having; for that which better men acknowledge has more weight than that which

is acknowledged by inferior men. And we are no respecters of persons, but seekers of the truth.

Theact. Very good.

Str. Then now, on the supposition that they are improved, let us ask them to state their views, and do you interpret them.

Theact. Agreed.

Str. Let them say whether they would admit that there is such a thing as a mortal animal.

Theact. Of course they would.

Str. And do they not acknowledge this to be a body having a soul?

Theact. Certainly they do.

Str. Meaning to say that the soul is a being?

247 *Theact.* True.

Str. And do they not say that one soul is just, and another unjust, and that one soul is wise, and another foolish?

Theact. Certainly.

Str. And that the just and wise soul becomes just and wise by the possession and presence of justice, and the opposite by the opposite?

Theact. Yes, they do.

Str. But surely that which may be present or may be absent will be admitted by them to exist?

Theact. Certainly.

Str. And, allowing that these qualities of virtue, justice, and the like all exist, as well as the soul in which they inhere, do they affirm any of them to be visible and tangible, or are they all invisible?

Theact. None of them surely are invisible.

Str. And would they say that they are corporeal?

Theact. They would distinguish: the soul would be said by them to have a body; but as to the other qualities of justice, wisdom, and the like, about which you asked, they would not venture either to deny their existence, or to maintain that they were all corporeal.

Str. Verily, Theaetetus, I perceive a great improvement in them; the real aborigines, children of the dragon's teeth, would have been deterred by no shame at all, but would have obstin-

ately asserted that nothing is which they are not able to compress in their hands.

Theact. That is pretty much their notion.

Str. Let us push the question; for if they will admit that any, even the smallest particle of being, is incorporeal, that is enough; they must then say what that nature is which is common to both the corporeal and incorporeal, and which they have in their mind's eye when they say of both of them that they 'are.' Perhaps they may be in a difficulty; and if this is the case, there is a possibility that they may accept a notion of ours respecting the nature of essence, having nothing of their own to offer.

Theact. What is the notion? Tell us, and we shall see.

Str. My notion would be, that anything which possesses any sort of power to affect another, or to be affected by another even for a moment, however trifling the cause and however slight and momentary the effect, has real existence; and I hold that the definition of being is simply power.

Theact. They accept your suggestion, having nothing better of their own to offer.

Str. Very good; perhaps we, as well as they, may one day change our mind; but, for the present, this may be regarded as 248 the understanding which is established with them.

Theact. Agreed.

Str. Let us now go to the friends of ideas; of their opinions, too, you shall be the interpreter.

Theact. I will.

Str. To them we say—You would distinguish essence from generation.

Theact. Yes; they reply.

Str. And you would allow that we participate in generation with the body, and by perception; but we participate with the soul by thought in true essence, and essence you would affirm to be always the same and immutable, whereas generation varies.

Theact. Yes; that is what we should affirm.

Str. Well, fair sirs, we say to them, what is this participation, which you assert of both? Do you agree with our recent definition?

Theact. What definition?

Str. We said that participation is an active or passive energy, which arises out of a certain power of elements meeting with one another. Perhaps your ears, Theaetetus, may fail to catch their answer, which I recognise because I am accustomed to them.

Theact. And what is their answer?

Str. They deny the truth of what we were just now saying to the aborigines respecting essence.

Theact. What was that?

Str. Any power of doing or suffering in a degree however slight was held by us to be the definition of existence:

Theact. True.

Str. They deny this, and say that the power of doing or suffering is confined to generation, and that neither idea accords with being.

Theact. And is there not something in what they say?

Str. Yes, but our reply will be, that we want to ascertain from them distinctly, whether they admit that the soul knows, and that being or essence is known.

Theact. There can be no doubt that they say so.

Str. And is knowing and being known, doing or suffering or both, or is the one doing and the other suffering, or has neither any share in either?

Theact. Clearly, neither has any share in either; for if they say anything else, they will contradict themselves.

Str. I understand; but still they will allow that if to know is active, then, of course, to be known is passive—And on this view being, as being known, is acted upon by knowledge, and is therefore in motion, for that which is in a state of rest cannot be acted upon, as we affirm.

Theact. True.

249 *Str.* And, O heavens, can we ever be made to believe that motion and life and soul and mind are not present with absolute being? Can we imagine being to be devoid of life and mind, and to remain in awful unmeaningness an everlasting fixture?

Theact. A terrible admission, Stranger.

Str. But shall we say that being has mind and not life?

Theæt. How can that be?

Str. Or both, but that there is no soul in which they exist?

Theæt. And how else can they exist?

Str. Or that being has mind and life and soul, but although endowed with soul remains entirely unmoved?

Theæt. All three suppositions appear to me to be irrational.

Str. Under being, then, we must include motion, and that which is moved.

Theæt. Certainly.

Str. Then, Theætetus, our inference is, that if there is no motion, neither is there any mind anywhere, or about anything or belonging to any one.

Theæt. Quite true.

Str. And yet this equally follows, if we grant that all things are in motion—upon this view too mind has no existence.

Theæt. How so?

Str. Do you think that sameness and permanence and relation to the same could exist not having rest?

Theæt. Certainly not.

Str. Do you suppose that without them mind could exist, or could come into existence anywhere?

Theæt. No.

Str. And surely contend we must in every possible way against him who would annihilate knowledge and reason and mind, and yet ventures to speak confidently about anything.

Theæt. Very true.

Str. Then the philosopher, who has the truest reverence for being, cannot possibly accept the notion of those who say that the whole is at rest, either in one or many forms: and he will be equally deaf to those who assert universal motion; but as children say entreatingly 'Give us both¹,' so he must include both the moveable and immoveable in his definition of being and all.

Theæt. Most true.

Str. And now, do we not seem to have gained a fair notion of being?

Theæt. Yes truly.

Str. Alas, Theaetetus, methinks that we are now only beginning to see the real difficulty of the enquiry about being.

Theact. What do you mean?

Str. O my friend, do you not see that nothing can exceed our ignorance, and yet we fancy that we are saying something good?

Theact. I certainly thought that we were; and I do not at all understand why you assume this desponding tone.

250 *Str.* Reflect: after having made these admissions, may we not be justly asked the same questions which we were asking of those who said that all was hot and cold?

Theact. What were they? Will you recall them to my mind?

Str. To be sure I will, and I will remind you of them, by putting the same questions to you which I did to them, and then we shall get on.

Theact. True.

Str. Would you not say that rest and motion are in the most entire opposition to one another?

Theact. Of course.

Str. And yet you would say that both and either of them equally are?

Theact. I should.

Str. And when you say that both or either of them are, do you mean to say that both or either of them are in motion?

Theact. Certainly not.

Str. Or do you mean that they are both at rest, when you say that they are?

Theact. Of course not.

Str. Then you conceive of being as some third and distinct nature, under which rest and motion are included; and, observing that they both participate in being, you declare that they are.

Theact. I suspect that we must conceive of being as some third thing, when we say that rest and motion are.

Str. Then being is not the combination of rest and motion, but something different from them.

Theact. That seems to be true.

Str. Being, then, according to its own nature, is neither in motion nor at rest.

Theact. That is very much the truth.

Str. Where, then, is he to look for help who would attain any clear or fixed notion of being in his own mind?

Theact. Where, indeed?

Str. I do not think that he can look anywhere; for that which is not in motion must be at rest, and again, that which is not at rest must be in motion; but being is placed outside of both these classes. Is this possible?

Theact. Utterly impossible.

Str. Here, then, is another thing which we ought to bear in mind.

Theact. What?

Str. When we were asked to what we were to assign the appellation of not-being, we were in the greatest difficulty:—do you remember?

Theact. To be sure.

Str. And are we not now in as great a difficulty about being?

Theact. I should say, Stranger, that we are in one which, if possible, is even greater.

Str. Then let us acknowledge the difficulty, and as being and not-being are involved in a like perplexity, there may be hope that when the one appears more or less distinctly, the other will equally appear; and if we are able to see neither, there may still be a chance of steering our way in between them, without any great discredit.

Theact. Very good.

Str. Let us enquire, then, how we come to predicate many names of the same thing.

Theact. Give an example.

Str. I mean that we speak of man, for example, under many names—that we attribute to him colours and forms and magnitudes and virtues and vices, in all of which and in ten thousand other cases, we not only speak of him as a man, but also as good, and having numberless other attributes; and in the same way anything else which we originally supposed to be one is described by us as many, and under many names.

Theact. That is true.

Str. And thus we provide a rich feast for tyros, whether

young or old; for there is nothing easier than to argue that the one cannot be many, or the many one; and great is their delight in denying that a man is good; but man, they insist, is man and good is good. I dare say that you have met with persons who take an interest in such matters—they are often elderly men, whose meagre sense is thrown into amazement by these discoveries of theirs, which they regard as the highest form of wisdom.

Theæt. Certainly, I have.

Str. Then, not to exclude any one who has ever speculated at all upon the nature of being, let us put our questions to them as well as to our former friends.

Theæt. What questions?

Str. Shall we refuse to attribute being to motion and rest, or anything to anything, but assume that they do not mingle, and are incapable of participating in one another? Or shall we gather all into one class of things communicable with one another? Or are some things communicable and others not?—Which of these alternatives, Theaetetus, will they prefer?

Theæt. I have nothing to answer on their behalf. Suppose that you take all these hypotheses in turn, and see what are the consequences which follow from each of them.

Str. Very good, and first let us assume them to say that nothing is capable of participating in anything else; in that

252 case rest and motion cannot participate in being at all.

Theæt. They cannot.

Str. Would either of them exist if devoid of participation in being?

Theæt. No.

Str. Then by this admission everything is instantly overturned, as well the doctrine of universal motion as of universal rest, and also the doctrine of those who distribute being into immutable and everlasting kinds, for all these add on a notion of being, some affirming that there is a 'being' of motion, and others that there is a 'being' of rest.

Theæt. Certainly.

Str. Again, those who would at one time compound, and at another resolve all things, whether making them into one and out of one creating infinity or dividing them into finite

elements, and compounding them out of these; whether they suppose the processes of creation to be successive or continuous, would be talking nonsense in all this if there were no admixture.

Theact. True.

Str. Most ridiculous of all will be the men themselves, who forbid us to call anything, because participating in some affection from another, by the name of that other.

Theact. Why so?

Str. Why, because they are compelled to use the words 'to be,' 'apart,' 'from others,' 'in itself,' and ten thousand more, which they cannot give up, but must make the connecting links of discourse; and therefore they do not require to be refuted by others, but their enemy, as the saying is, inhabits the same house with them; like the wonderful ventriloquist, Eurycles, they are always carrying about with them an adversary who out of their own bellies audibly contradicts them.

Theact. That is a very exact illustration of them.

Str. And now, if we suppose that all things have the power of communion with one another—what will follow?

Theact. Even I can answer that supposition.

Str. How?

Theact. Why, if all things have communion with all, this implies that rest has motion, and motion has rest.

Str. Than which surely nothing can be a greater absurdity?

Theact. Of course.

Str. Then only the third hypothesis remains.

Theact. True.

Str. But, surely, either all things have communion with all, or nothing with any other thing; or some things communicate with some things and others not.

Theact. Certainly.

Str. And two out of these three suppositions have been proved to be impossible.

Theact. Yes.

Str. Every one then, who desires to answer truly, will adopt the third or remaining hypothesis of the communion of some with some.

Theact. Quite true. Digitized by Microsoft®

253 *Str.* This communion of some with some may be illustrated by the case of letters; for some letters do not fit each other, but others do.

Theact. Of course.

Str. And the vowels, especially, are a sort of bond which pervades all the other letters, so that without a vowel one consonant cannot be joined to another.

Theact. True.

Str. But does every one know what letters will unite with what? Or is art required in order to know?

Theact. Art is required.

Str. What art?

Theact. The art of grammar.

Str. And is not this also true of sounds sharp and flat?—Is not he who has the art to know what sounds mingle, a musician, and he who does not know, not a musician?

Theact. Yes.

Str. And we shall find this to be generally true of art or the absence of art.

Theact. Of course.

Str. And as classes are admitted by us in like manner to be some of them capable and others incapable of admixture, must not he who would rightly show what kinds will unite and what will not, proceed by the help of reason and science? And will he not ask whether there are any universal classes which bind them all together and make them capable of admixture; and other universals, which are necessary in all division?

Theact. To be sure he will require science, and, if I am not mistaken, the very greatest of all sciences.

Str. And what is the name of this science? Have we not unintentionally fallen upon a gentle art, and in looking for the Sophist have entertained the philosopher unawares?

Theact. What do you mean?

Str. Should we not say that the division according to classes, which neither makes the same other, nor makes other the same, is the business of the dialectical science?

Theact. That is what we should say.

Str. Then, surely, he who can divide rightly is able to see clearly one form pervading many individuals which lie apart,

and many different forms contained under one higher form ; and again, one comprehensive form pervading many such wholes, and many others, existing only in separation and isolation. This is the knowledge of classes which determines where they can have communion with one another and where not.

Theact. Quite true.

Str. And the art of dialectic would be attributed by you only to the philosopher pure and true ?

Theact. Who but he can be worthy ?

Str. This is the region in which we shall always discover the philosopher, both now and hereafter ; like the Sophist, he is not easily discovered, but for a different reason.

254

Theact. For what reason ?

Str. Because the Sophist runs away into the darkness of not-being, in which he has learned by habit to feel about, and cannot be discovered himself because of the darkness of the place. Is not that true ?

Theact. Quite so.

Str. And the philosopher, always holding converse through reason with the idea of being, is also dark from excess of light ; for the eyes of the soul of the multitude are unable to endure the vision of the divine.

Theact. Yes ; that is quite as true as the other.

Str. Well, the philosopher may hereafter be more fully considered by us, if we are disposed ; but the Sophist plainly must not be allowed to escape until we have had a good look at him.

Theact. Very good.

Str. Since, then, we are agreed that some classes have a communion with one another, and others not, and some have communion with a few and others with many, and that there is no reason why some should not have universal communion with all, let us now pursue the enquiry, not in relation to all ideas, lest the multitude of them should confuse us, but let us select a few of those which are reckoned to be the principal ones, and consider their several natures and their capacity of communion with one another, in order that if we are not able to apprehend with perfect clearness the notions of being and not-being we may at least reason about them, as far as the

method of the present enquiry permits, and see whether we may be allowed to assert the reality of not-being, and yet escape unscathed.

Theact. That is what we must do.

Str. The most important of all the genera are those which we were just now mentioning—being and rest and motion.

Theact. They are by far the most important.

Str. And two of these are, as we affirm, incapable of communion with one another.

Theact. No doubt.

Str. Whereas being surely has communion with both of them, for both of them are?

Theact. Of course.

Str. That makes up three of them.

Theact. To be sure.

Str. And each of them is other than the two others, and the same with itself.

Theact. True.

Str. But then, what is the meaning of these two words, 'same' and 'other'? Are they two new kinds other than the three, and yet always of necessity holding communion with them, and are we to have five kinds instead of three, or when we speak of the same and other, are we unconsciously speaking
255 of one of the three first kinds?

Theact. Very likely we may be.

Str. But, surely, motion and rest are neither the other nor the same.

Theact. How is that?

Str. Whatever we attribute to motion and rest in common, cannot be either of them.

Theact. Why not?

Str. Because motion would be at rest and rest in motion, for either of them, being predicated of both, will compel the other to change into the opposite of its own nature, because partaking of its opposite.

Theact. Quite true.

Str. Yet they surely both partake of the same and of the other?

Theact. Yes.

Str. Then we must not assert that motion, any more than rest, is either the same or the other.

Theact. No ; we must not.

Str. But are we to conceive that being and the same are identical ?

Theact. Possibly.

Str. But if they are identical, then again in saying that motion and rest have being, we should also be saying that they are the same.

Theact. And that surely cannot be.

Str. Then being and the same cannot be one.

Theact. Scarcely.

Str. Then we may suppose the same to be a fourth class, which is now to be added to the three others.

Theact. Quite true.

Str. And shall we call 'the other' a fifth class ? Or shall we say that being and other are two names of the same class ?

Theact. Very likely.

Str. But you would agree, if I am not mistaken, that existences are relative as well as absolute.

Theact. Certainly.

Str. And the other is always relative of other.

Theact. True.

Str. But this would not be the case unless being and the other entirely differed ; for, if the other, like being, were absolute as well as relative, then there would have been a kind of other which was not other of other. And now we find that what is other must of necessity be in relation to some other.

Theact. That is the true state of the case.

Str. Then we must admit the 'other' as the fifth of our selected classes.

Theact. Yes.

Str. And the fifth class pervades all classes, for they all differ from one another, not by reason of their own nature, but because they partake of the idea of the other.

Theact. Quite true.

Str. Then let us now put the case with reference to each of the five.

Theact. How ?

Str. First there is motion, which we affirm to be the absolute 'other' of rest: that is what we should say.

Theact. True.

Str. And therefore is not rest.

Theact. Certainly not.

Str. And yet is, because partaking of being.

256 *Theact.* True.

Str. Again motion is other than the same?

Theact. Quite true.

Str. And is therefore not the same.

Theact. Certainly not.

Str. Yet, surely, motion is the same, because all things partake of the same.

Theact. True.

Str. Then we must admit, and not object to say, that motion is the same and is not the same, for we do not apply the terms 'same' and 'not the same,' in the same sense; but we call it the same in relation to itself, because partaking of the same, and not the same, because having communion with the other, and being thereby separated from the same, and becoming not that but other, and therefore rightly spoken of as not the same.

Theact. Quite true.

Str. And if absolute motion in any point of view partook of rest, there would be no absurdity in calling motion stationary.

Theact. Right,—that is, on the supposition that some classes mingle with one another, and others not.

Str. That the communion of kinds is according to nature, we had already proved (254 B) before we arrived at this part of our discussion.

Theact. Of course.

Str. Let us proceed, then. May we not say that motion is other than the other, having been also proved by us to be other than the same and other than rest?

Theact. That is certain.

Str. Then, according to this view, motion is other and also not other?

Theact. True.

Str. What is the next step? Shall we say that motion is

other than the three and not other than the fourth, as we agreed that there are five classes, which we had undertaken to consider?

Theæt. Surely we cannot suppose that the number is less than appeared just now.

Str. Then we may fearlessly assert that motion is other than being.

Theæt. There is no reason for fear at all.

Str. The plain result is that motion, in partaking of being, is and also is not?

Theæt. Nothing can be plainer.

Str. Then not-being is of necessity attributed to motion and to every other class; for the nature of the other entering into them all, makes each of them other than being, and so not-being; and therefore of all of them, in like manner, we may say that they are not; and again, inasmuch as they partake of being, that they are.

Theæt. That appears to be true.

Str. Every class, then, has plurality of being and infinity of not-being.

Theæt. That seems to be true.

257

Str. Then being itself may be said to be other than the other kinds.

Theæt. Certainly.

Str. And we infer that being is not—just as many other things as there are; for not being these it is itself alone, and is not the other things, which are infinite in number.

Theæt. That is pretty much the truth.

Str. Neither must we object to this, since the nature of classes is that they participate in one another; and if any one denies our present statement [viz. that being is not, etc.], let him argue with our former arguments [i.e. respecting the communion of ideas], and then he may proceed to argue with us.

Theæt. That is very fair.

Str. Let me ask you to consider a further question.

Theæt. What question?

Str. When we speak of not-being, we speak not of something opposed to being, but only different.

Theæt. How is that?

Str. When we speak of something as not great, does the expression seem to you to imply what is little any more than what is equal?

Theact. Certainly not.

Str. The negative particles, οὐ and μή, when prefixed to words, do not necessarily imply opposition, but only difference from the words, or more correctly from the things represented by the words which follow them.

Theact. Quite true.

Str. There is another point about which I should like to know what you think.

Theact. What is it?

Str. The nature of the other appears to me to be divided into fractions like knowledge.

Theact. How so?

Str. Knowledge is one; and yet the various parts of knowledge have each of them a particular name, and hence there are many arts and sciences.

Theact. Quite true.

Str. And the other is one and yet has many parts.

Theact. Very likely, but will you tell me how?

Str. There is some part of the other which is opposed to the beautiful?

Theact. There is.

Str. Shall we say that this has or has not a name?

Theact. That it has; for that which we call not-beautiful is the other of the beautiful.

Str. And now tell me something else.

Theact. What?

Str. Is not the name not-beautiful a description of nature parted off, and attached to a particular class, and, again, opposed to another class of being?

Theact. True.

Str. Then the not-beautiful is the contrast of being with being?

Theact. Very true.

Str. But upon this view, is the beautiful a more real and the not-beautiful a less real existence?

Theact. Not at all.

Str. And the not-great may be said to exist, equally with the great? 258

Theaet. Yes.

Str. And, in the same way, the just must be placed in the same category with the not-just; and one cannot be said to have any more existence than the other.

Theaet. True.

Str. The same may be said of other things; seeing that the nature of the other has a real existence, the parts of this nature must equally be supposed to exist.

Theaet. Of course.

Str. Then, as would appear, the opposition of the part of the other, and of the part of being, to one another is, if I may venture to say the word, as truly essence as being itself, and signifies not the opposite of being, but only other of being.

Theaet. That is most evident.

Str. What then shall we call this?

Theaet. Clearly, not-being; and this is the very nature which the Sophist compelled us to examine.

Str. And has not this, as you were saying, as real an existence as any other class? May I not say with confidence that not-being has an assured nature of its own? Just as the great is great and the beautiful is beautiful, and the not-great is not great, and the not-beautiful is not beautiful, in the same manner not-being is not being, and is to be reckoned one among many classes of being. Do you, Theaetetus, feel any doubt of this?

Theaet. None whatever.

Str. Do you observe that our scepticism has carried us far beyond the range of Parmenides' prohibition?

Theaet. In what?

Str. We have advanced to a further point, and shown him more than he forbid us to investigate.

Theaet. How is that?

Str. Why, because he says—

‘Not-being never is, and do thou keep thy thoughts from this way of enquiry.’

Theaet. Yes, he says so.

Str. Whereas, we have not only shown that things which are not are, but we have also shown what form of being not-

being is ; for we have shown that the nature of the other is, and is distributed over all things in their mutual relations, and when each part of the other is contrasted with being, that is precisely what we have ventured to call not-being.

Theæt. And surely, Stranger, we were right.

Str. Let not any one say, then, that while affirming the being of not-being, we still assert the opposition of not-being to being, for we have long ago given up speaking of an opposite of being ; —that may or may not be, and may or may not be capable of
259 definition. But as touching our present account of not-being, let a man refute that, and convince us of our error, or, so long as he cannot, he too must say, as we are saying, that there is a communion of classes, and that being, and difference or other, traverse all things and mutually interpenetrate, so that the other partakes of being, and is, by reason of this participation, and yet is not that of which it partakes, but other, and being other than being, is clearly and manifestly not-being. And again, being, through partaking of the other, becomes a class other than the remaining classes, and being other than all of them, is-not each one of them, and is-not all the rest, so that there are thousands upon thousands of cases in which being is not as well as is, and all other things whether regarded individually, or collectively in many respects are, and in many respects, are not.

Theæt. True.

Str. And he who is sceptical of these sort of oppositions, must think how he can find something better to say ; or if he sees a puzzle, and his pleasure is to drag words this way and that, the argument will prove to him, that he is not making a worthy use of his faculties ; for there is no charm in such puzzles, and there is no difficulty in them ; but we can tell him of something else in the pursuit of which there is a great charm and also a difficulty.

Theæt. What is that ?

Str. A thing of which I have already spoken ;—letting alone these puzzles as involving no difficulty, he should be able to follow and criticise in detail every argument, and when a man says that the same is in a manner other, or that other is the same, to understand and refute him from his own point of view,

and in the same respect in which he asserts either of these affections. But to show that somehow and in some sense the same is other, or the other same, or the great small, or the like unlike; and to delight in always thus bringing forward oppositions in argument, is no true refutation, but only proves that he who uses such arguments is a neophyte who has got but a little way in the investigation of truth.

Theact. To be sure.

Str. For certainly, my friend, the attempt to separate all existences from one another is not only tasteless but also illiterate and unphilosophical.

Theact. Why so?

Str. The attempt at universal separation is the final annihilation of all reason; for only by the union of conceptions with one another do we attain to discourse of reason.

Theact. True.

Str. And, observe that we were only just in time in making a resistance to such separatists, and compelling them to make the admission that other did mingle with other.

Theact. Why so?

Str. Why, that we might be able to assert discourse to be a kind of being, since if we were deprived of this we should be deprived of philosophy, which would be the greatest of calamities; and not only so, but the necessity for determining the nature of discourse presses upon us at this moment; whereas if we had allowed that there were no such thing at all we could no longer discourse; and there would have been no such thing if we admitted that there was no admixture of natures at all.

Theact. Very true. But I do not understand why at this moment we must determine the nature of discourse.

Str. Perhaps you will see more clearly by the help of the following explanation.

Theact. What explanation?

Str. Not-being has been acknowledged by us to be one among many classes of being, diffused over all being.

Theact. True.

Str. And thence arises the question, whether not-being mingles with opinion and language.

Theact. How so? Digitized by Microsoft®

Str. If not-being has no part in the proposition, then all things must be true; but if not-being has a part, then false opinion and false speech are possible, for to think or to say what is not—is falsehood, which thus arises in the region of thought and in speech.

Theæt. That is quite true.

Str. And if there is falsehood there is deceit.

Theæt. Yes.

Str. And if there is deceit, then all things must be full of idols and images and fancies.

Theæt. To be sure.

Str. Into that region the Sophist, as we said, made his escape, and, when he had got there, denied the very possibility of falsehood; no one, he argued, either conceived or uttered falsehood, inasmuch as not-being did not in any way partake of being.

Theæt. True.

Str. And now, not-being having been shown to partake of being, he will probably not continue fighting in this direction, but he will say that some ideas partake of not-being, and some not, and that language and opinion are of the non-partaking class; and he will still deny the existence of the image-making and phantastic art, in which we have placed him, because, as he will say, opinion and language do not partake of not-being, and unless this participation subsists, there can be no such thing as falsehood. And, with the view of meeting this evasion, we must begin by enquiring into the nature of language, opinion, and phantasy, in order that when we find them we may find also that they have communion with not-being, and, having made out the connection of them, we may then prove the reality of falsehood; there we will imprison the Sophist, if he can be there detained, or, if not, we will let him go again and look for him in another class.

Theæt. Certainly, Stranger, there appears to be truth in what was said about the Sophist at first, that he was of a class not easily caught, for he seems to have abundance of defences, which he throws up, and which must every one of them be stormed before he can be reached himself. And even now, we have hardly got through his first defence, which is the

not-being of not-being, and lo! here is another; for we have still to show that falsehood is concerned with language and opinion, and there will be another and another, and never any end.

Str. Any one, Theaetetus, who is able to advance even a little ought to be of good cheer, for what would he who is dispirited at a little progress do, if he were making none at all, or even undergoing a repulse? Such a faint heart, as the proverb says, will never take a city: but now that we have succeeded thus far, the citadel is ours, and what remains is easier.

Theact. Very true.

Str. Then, as I was saying, let us first of all obtain a conception of language and opinion, in order that we may have better data for determining, whether not-being has any concern with them, or whether they are both always true, and neither of them ever false.

Theact. True.

Str. Then, now, let us speak of names, as before we were speaking of ideas and letters; for that is the direction in which the answer may be expected.

Theact. And what is the question at issue about names?

Str. The question at issue is whether all names may be connected with one another, or none, or only some of them.

Theact. Clearly the last is true.

Str. I understand you to say that words which have a meaning in their sequence may be connected, but that words which have no meaning in their sequence cannot be connected?

Theact. What are you saying?

Str. What I thought that you intended when you gave your assent, for there are two sorts of intimation of being which are given by the voice.

Theact. What are they?

Str. One of them is called nouns, and the other verbs.

Theact. Describe them.

Str. That which denotes action we call a verb.

Theact. True.

Str. And the other, which is an articulate mark set on those who do the actions, we call a noun.

Theact. Quite true.

Str. The succession of nouns only is not a sentence, any more than of verbs without nouns.

Theact. I do not understand you.

Str. I see that when you gave your assent you had something else in your mind. But what I intended to say was, that a mere succession of nouns or of verbs is not discourse.

Theact. What do you mean?

Str. I mean that words like 'walks,' 'runs,' 'sleeps,' or any other words which denote action, however many of them you string together, do not make discourse.

Theact. Of course not.

Str. Or, again, when you say 'lion,' 'stag,' 'horse,' or any other words which denote agents—neither in this way of stringing words together do you attain to discourse; for there is no expression of action or inaction, or of existence or non-existence indicated by the sounds, until verbs are mingled with nouns; then the words fit, and the first combination of them forms language, and is the simplest and least of all discourse.

Theact. Again I ask, what do you mean?

Str. When any one says 'man learns,' should you not call this the simplest and least of sentences?

Theact. Yes.

Str. Yes, for he now arrives at the point of giving an intimation about something which is, or is becoming, or has become, or will be. And he not only names, but he does something, by connecting verbs with nouns; and therefore we say that he discourses, and to this connection of words we give the name of discourse.

Theact. True.

Str. And as there are some things which fit one another, and other things which do not fit, so there are some vocal signs which do, and others which do not, combine and form discourse.

Theact. Quite true.

Str. There is another small matter.

Theact. What is that?

Str. A sentence must and cannot help having a subject.

Theact. True.

Str. And must be of a certain quality.

Theact. Certainly.

Str. And now let us give our best attention.

Theact. By all means.

Str. I will repeat a sentence to you in which an action is combined with an agent, by the help of a noun and a verb; and you shall tell me of whom the sentence speaks.

Theact. I will, to the best of my power.

Str. 'Theaetetus sits': that is not a very long sentence. 263

Theact. Not very.

Str. Of whom does the sentence speak, and who is the subject? that is what you have to tell.

Theact. Of me, and I am the subject.

Str. Or this sentence, again—

Theact. What sentence?

Str. 'Theaetetus, with whom I am now speaking, is flying.'

Theact. That also is a sentence which will be admitted by every one to speak of me, and to apply to me.

Str. We agreed that every sentence must necessarily have a certain quality.

Theact. Yes.

Str. And what is the quality of each of these two sentences?

Theact. The one, as I imagine, is false, and the other true.

Str. The true one says what is true about you?

Theact. Yes.

Str. And the false one says what is other than true?

Theact. Yes.

Str. And therefore speaks of things which are not as though they were?

Theact. True.

Str. And says of you things really other than what really are; for, as we were saying, in regard to each thing, there is much that is and much that is not.

Theact. Quite true.

Str. The second of the two sentences which related to you was in the shortest form that was consistent with our definition.

Theact. In the form which was certainly said by us just now to be the shortest.

Str. And, in the second place, it related to a subject?

Theact. True.

Str. Who must be you, and can be nobody else?

Theact. Unquestionably.

Str. And this would be no sentence if there were no subject, for, as we proved, a sentence which has no subject is impossible.

Theact. Quite true.

Str. When other, then, is asserted of you as the same, and not-being as being, that combination of nouns and verbs is really and truly false discourse.

Theact. Most true.

Str. And therefore thought, opinion, and phantasy are now proved to exist in our minds both as true and false.

Theact. How so?

Str. You will know better if you first gain a knowledge of what they are, and in what they severally differ from one another.

Theact. Give me the knowledge which you would wish me to gain.

Str. Is not thought the same as speech, with this exception: thought is the unuttered conversation of the soul with herself?

Theact. Quite true.

Str. But the stream of thought which flows through the lips and is audible is called speech?

Theact. True.

Str. And we know that in speech there is affirmation and denial?

264 *Theact.* Yes, that we know.

Str. When the affirmation or denial takes place silently and in the mind only, what would you call that but opinion?

Theact. There can be no other name.

Str. And when opinion is presented, not simply, but in some form of sense, would you not call it phantasy?

Theact. Certainly.

Str. And seeing that language is true and false, and that thought is the conversation of the soul with herself, and opinion is the end of thinking, and phantasy or imagination is the union of sense and opinion, the inference is that these also, as they are akin to language, should have an element of false as well as true? *Univ Calif - Digitized by Microsoft®*

Theact. Certainly.

Str. Do you perceive, then, that false opinion and speech have been discovered sooner than we expected?—For just now we seemed to be undertaking a task which would never be accomplished.

Theact. I perceive.

Str. Then let us not be discouraged about the future; but now having made this discovery, let us go back to our previous classification.

Theact. What classification?

Str. We divided image-making into two sorts; the one likeness-making, the other phantastic.

Theact. True.

Str. And we said that we were uncertain in which we should place the Sophist?

Theact. That was so.

Str. And the twilight deepened into darkness in our minds, when the assertion was made, that there was no such thing as likeness, or image, or appearance, because there was no such thing as falsehood.

Theact. True.

Str. And now, since there has been shown to be false speech and false opinion, imitations of real existences are possible, and out of this condition of the mind, an art of deception may arise.

Theact. Quite possible.

Str. And we have already admitted, in what preceded, that the Sophist was lurking in one of the divisions of the likeness-making art.

Theact. Yes.

Str. Let me, then, renew the attempt, and divide the proposed class, always proceeding from left to right, and holding fast to that which holds the Sophist, until we have stripped him of all his common properties, and reached his difference or peculiar, and he stands confessed as he is in his true nature, first by our- 265
selves and then by kindred dialectical spirits.

Theact. Very good.

Str. You may remember that all art was originally divided by us into creative and acquisitive.

Theact. Yes.

Str. And the Sophist was flitting before us in the acquisitive class, in the subdivisions of hunting, and of contests, and of merchandize, and other similar classes.

Theact. Very true.

Str. But now that the imitative art has enclosed him, it is clear that we must begin by dividing the original art of creation; for imitation is a kind of creation—of images, however, as we affirm, and not of real things.

Theact. Quite true.

Str. In the first place, there are two kinds of creation.

Theact. What are they?

Str. One of them is human and the other divine.

Theact. I do not follow.

Str. Every power, as you may remember our saying originally, which is the cause of things afterwards existing which did not exist before, was defined by us as creative.

Theact. I remember.

Str. Looking, now, at the world and all the animals and plants which grow upon the earth from seeds and roots, and at inanimate substances which form within the earth, fusile or non-fusile, shall we say that they come into existence—not having existed previously—by the creation of God, or shall we agree with vulgar opinion about them?

Theact. What is that?

Str. The opinion that nature brings them into being from some spontaneous and unintelligent cause. Shall we say this, or that they come from God, and are created by divine reason and knowledge?

Theact. I dare say that, owing to my youth, I may often waver in my view, but when I look at you and see that you incline to refer them to God, at present I defer to your authority.

Str. Nobly said, Theactetus, and if I thought that you were one of those who would hereafter change your mind, I would have gently argued with you, and forced you to assent; but as I perceive that you will come of yourself and without any argument of man, to that belief which, as you say, attracts you, I will leave time to do the rest. Let me suppose, then, that things which are made by nature are the work of divine art,

and that things which are made by man out of these are works of human art. And so there are two kinds of making and production, the one human and the other divine.

Theæt. True.

Str. Then, now, subdivide each of the two sections which we have already.

Theæt. How do you mean?

Str. I mean to say that you should make a vertical division ²⁶⁶ of production or invention, as you have already made a lateral one.

Theæt. I have done so.

Str. Then, now, there are in all four parts or segments—two of them have reference to us and are human, and two of them have reference to the gods and are divine.

Theæt. True.

Str. And, again, in the division which was supposed to be made in the other way, one part is the making of the things themselves, but the two remaining parts may be called the making of images; and so the productive art is again divided into two parts.

Theæt. Tell me the divisions once more.

Str. I suppose that we, and the other animals, and the elements out of which they are made—fire, water, and the like—are known by us to be the realities which are the creation and work of God.

Theæt. True.

Str. And there are images of them, which are not them, but which follow them; and these are also the creation of divine skill.

Theæt. What are they?

Str. The appearances which spring up of themselves in sleep or by day, such as the shadow which arises from intercepting the light of the fire, or when the light belonging to things bright and smooth meeting in one upon their surface with the light external to them, makes a reflection which is the reverse of that given by our ordinary sight.

Theæt. Yes; and the images as well as the creation are equally the work of a divine mind.

Str. And what shall we say of human art? Do we not make

a house by the art of building, and then by the art of drawing another house, which is a sort of dream created by man for those who are awake?

Theact. Quite true.

Str. And in other works of human art there are two divisions, the one of creation, the other of imitation?

Theact. Now I begin to understand, and am ready to suppose that there are two kinds of production, and each of them twofold; in the vertical division there is a divine and human production; in the lateral there are realities and similitudes.

Str. And let us not forget that of the imitative class the one part was to have been likeness-making, and the other phantastic, if it could be shown that falsehood is a reality and belongs to the class of real being.

Theact. Yes.

Str. And this appeared to be the case; and therefore now, without hesitation, we shall number the different kinds as two.

Theact. True.

Str. Then, now, let us divide the phantastic art.

267 *Theact.* Where shall we make the division?

Str. There is one kind which is produced by an instrument, and another in which the creator of the appearance is himself the instrument.

Theact. What do you mean?

Str. When any one makes himself appear like another in his figure or his voice, imitation is the name for this part of the phantastic art.

Theact. Yes.

Str. Let this, then, be named the art of mimicry, and this the province assigned to it; as for the other division, we are weary and will give that up, leaving to some one else the duty of making and naming the class.

Theact. Let us do as you say—assign a sphere to the one and leave the other.

Str. There is a further distinction, Theaetetus, which is worthy of our consideration, and for a reason which I will tell you.

Theact. Let me hear.

Str. There are some who imitate, knowing what they imitate,

and some who do not know. And what line of distinction can there possibly be greater than that which divides ignorance from knowledge?

Theact. There can be no greater.

Str. Was not the sort of imitation of which we spoke just now the imitation of those who know? He who imitates you would surely know you and your figure?

Theact. He would.

Str. And what would you say of the figure or form of justice or of virtue in general? Are we not well aware that many who, having no knowledge of either, have nevertheless a sort of opinion of them, endeavour to make their sentiment or opinion appear to be a reality, which they embody as far as they can in their words and actions?

Theact. Yes, that is very common.

Str. And do they always fail in their attempt to be thought just, when they are not? Is not the very opposite rather true?

Theact. The very opposite.

Str. Such an one, then, should be described as an imitator who is to be distinguished from the other, as he who is ignorant is distinguished from him who knows?

Theact. True.

Str. Can we find a suitable name for each of them? This is clearly not an easy task; for among the ancients there was some confusion of ideas, which prevented their rightly dividing genera into species, and no one ever attempted to divide them; wherefore there is no great abundance of names, and yet, for the sake of distinction, I will make bold to call the imitation which coexists with opinion, the imitation of appearance—that which coexists with science, a scientific or learned imitation.

Theact. Granted.

Str. The former is our present concern, for the Sophist was classed with imitators indeed, but not among those who have knowledge.

Theact. Very true.

Str. Let us, then, examine our imitator of appearance, and see whether he is all of a piece or whether there is any cleft in him.

Theact. Let us examine him.

Str. Indeed, there is a very considerable cleft in him ; for if you unfold him you find that one of the two classes of imitators is a simple being, who thinks that he knows that which he only fancies ; the other sort has knocked about among arguments, until he suspects and fears that he is ignorant of that which to the many he pretends to know.

Theact. There are certainly the two kinds which you describe.

Str. Shall we regard one as the simple imitator—the other as the dissembling or ironical imitator ?

Theact. That is good.

Str. And shall we further speak of this latter class as having one or two members ?

Theact. Answer yourself.

Str. Upon consideration, then, there appear to me to be two ; there is the dissembler, who harangues a multitude in public in a long speech, and the dissembler, who in private and in short speeches compels the person who is conversing with him to contradict himself.

Theact. What you say is most true.

Str. And who is the maker of the longer speeches ? Is he the statesman or the public orator ?

Theact. The latter.

Str. And what shall we call the other ? Is he the philosopher or the Sophist ?

Theact. The philosopher he cannot be, for upon our view he is ignorant ; but since he is an imitator of the wise he will have a name which is formed by an adaptation of the word σοφός. What shall we name him ? I am pretty sure that I cannot be mistaken in terming him the true and very Sophist.

Str. Shall we bind up his name as we did before, making a chain from one end to the other ?

Theact. By all means.

Str. He, then¹, who traces the pedigree of his art as follows :—He who, belonging to the conscious or dissembling section of the art of making contradictions, is an imitator of appearance, and has divided off from the art of image-making which

is a branch of phantastic, that further division of creative art, the juggling of words, a creation human, and not divine—any one who affirms the real Sophist to be of this blood and lineage will say the very truth.

Theaet. Undoubtedly.

STATESMAN.

INTRODUCTION.

IN the Phaedrus, the Republic, the Philebus, the Parmenides, and the Sophist, we have observed the tendency of Plato to combine two or more subjects or different aspects of the same subject in a single dialogue. And in his later writings we have remarked a decline of style, and of dramatic power; the characters excite little or no interest, and the digressions are apt to overlay the main thesis; there is not the 'callida junctura' of an artistic whole. Both the serious discussions and the jests are sometimes out of place. The invincible Socrates is withdrawn from view; and new foes begin to appear under old names. Plato is now chiefly concerned, not with the original Sophist, but with the sophistry of the schools of philosophy, who are making reasoning impossible; and is driven by them out of the regions of transcendental speculation back into the path of common sense. A logical or psychological phase takes the place of the doctrine of ideas in his mind. He is constantly dwelling on the importance of regular classification, and of not putting words in the place of things. He has banished the poets, and is beginning to use a technical language. He is bitter and satirical, and seems to be sadly conscious of the realities of human life. Yet the ideal glory of the Platonic philosophy is not extinguished. He is still looking for a city in which kings are either philosophers or gods. (Cp. Laws, iv, 713.)

The Politicus exemplifies these remarks more than any of the preceding dialogues. The idea of the king or statesman and the illustration of method are connected, not like the love and rhetoric of the Phaedrus, by 'little invisible pegs,' but in a confused and inartistic manner, which fails to produce any impression of a whole on the mind of the reader. Plato apologises for his tediousness, and acknowledges that the improvement of his audience has been his only aim in some of his digressions.

His own image may be used as a motto of his style; like an inexperienced statuary (277 A) he has made the figure or outline too large, and is unable to give the proper colours or proportions; he is always making mistakes and correcting them—this seems to be his way of drawing attention to common dialectical errors. The Eleatic stranger, here, as in the Sophist, has no appropriate character, and appears only as the expositor of a political ideal, in the delineation of which he is frequently interrupted by purely logical illustrations. The younger Socrates resembles his namesake in nothing but a name. The dramatic character is so completely forgotten, that a special reference is twice made to discussions in the Sophist; and this, perhaps, is the strongest ground which can be urged for doubting the genuineness of the work. But, when we remember that a similar allusion is made in the Laws (v. 739) to the Republic, we see that the entire disregard of dramatic propriety is not always a sufficient reason for doubting the genuineness of a Platonic writing (*see infra*).

The search after the Statesman, which is carried on, like that of the Sophist, by the method of dichotomy, gives an opportunity for many humorous and satirical remarks. As in the Philebus, several of the jests are mannered and laboured: for example, the turn of the words with which the dialogue opens; or the clumsy joke about man being an animal, who has a power of two-feet—both which are suggested by the presence of Theodorus, the geometrician. There is political as well as logical insight in refusing to admit the division of mankind into Hellenes and Barbarians: 'if a crane could speak, he would in like manner oppose men and animals to cranes.' The pride of the Hellene is further humbled, by being compared to a Phrygian or Lydian. Plato glories in this impartiality of the dialectical method, which places birds in juxtaposition with men, and the king side by side with the bird-catcher; king or vermin-destroyer are objects of equal interest to science. There are other passages which show that the irony of Socrates was a lesson which Plato was not slow in learning—as, for example, the passing remark, that 'the kings and statesmen of our day are in their breeding and education very like their subjects'; or the anticipation that the rivals of the king will be found in the class of servants; or the imposing attitude of the priests, who are the established interpreters of the will of heaven, authorised by law. Nothing is more bitter in all his writings than his comparison of the contemporary politicians to lions, centaurs, satyrs, and

other animals of a feebler sort, who are ever changing their forms and natures. But, as in the Philebus and the Sophist, the play of humour and the charm of poetry have departed, never to return.

Still the Politicus contains a higher and more ideal conception of politics than any other of Plato's writings. The city of which there is a pattern in heaven (Rep. ix), is here described as a Paradisiacal state of human society. In the truest sense of all, the ruler is not man but God; and such a government existed in a former cycle of human history, and may again exist when the gods resume their care of mankind. In a secondary sense, the true form of government is that which has scientific rulers, who are irresponsible to their subjects. Not power but knowledge is the characteristic of a king or royal person. And the rule of a man is better and higher than law, because he is more able to deal with the infinite complexity of human affairs. But mankind, in despair of finding a true ruler, are willing to acquiesce in any law or custom which will save them from the caprice of individuals. They are ready to accept any of the six forms of government which prevail in the world. To the Greek, *nomos* was a sacred word, but the political idealism of Plato soars into a region beyond; for the laws he would substitute the intelligent will of the legislator. Education is originally to implant in men's minds a sense of truth and justice, which is the divine bond of states, and the legislator is to contrive human bonds, by which dissimilar natures may be united in marriage and supply the deficiencies of one another. As in the Republic, the government of philosophers, the causes of the perversion of states, the regulation of marriages, are still the political problems with which Plato's mind is occupied. He treats them more slightly, partly because the dialogue is shorter, and also because the discussion of them is perpetually crossed by the other interest of dialectic, which has begun to absorb him.

The plan of the Politicus or Statesman may be briefly sketched as follows: (1) By a process of division and subdivision we discover the true herdsman or king of men. But before we can rightly distinguish him from his rivals, we must view him, (2) as he is presented to us in a famous ancient tale: this will enable us to distinguish the divine from the human herdsman or shepherd: (3) and besides our fable, we must have an example; for our example we will select the art of weaving, which will have to be distinguished from the kindred arts; and then, following this pattern, we will separate the king from his subordinates or

competitors : (4) But are we not exceeding all due limits ; and is there not a measure of all arts and sciences, to which the art of discourse must conform ? There is ; but before we can apply this measure, we must know what is the aim of discourse : and our discourse only aims at the dialectical improvement of ourselves and others.—Having made our apology, we return once more to the king or statesman, and proceed to contrast him with pretenders in the same line with him, under their various forms of government : (5) His characteristic is, that he alone has science, which is superior to law and written enactments ; these spring out of the necessities of mankind, when they are in despair of finding the true king : (6) The sciences which are most akin to the royal are the sciences of the general, the judge, the orator, which minister to him, but even these are subordinate to him : (7) Fixed principles are implanted by education, and the king or statesman completes the political web by marrying together dissimilar natures, the courageous and the temperate, the bold and the gentle, who are the warp and the woof of society.

The outline may be filled up as follows :

I have reason to thank you, Theodorus, for the acquaintance of Theaetetus and the Stranger. *Theod.* And you will have three times greater reason to thank me when they have delineated the Statesman and Philosopher, as well as the Sophist. *Soc.* Does the great geometer apply the same measure to all three ? Are they not divided by an interval which no geometrical ratio can express ? *Theod.* By the god Ammon, Socrates, you are right ; and I am glad to see that you have not forgotten your geometry. But before I retaliate, I must request the Stranger to finish the argument. . . . The Stranger suggests that Theaetetus shall be allowed to rest, and that Socrates the younger shall respond in his place ; Theodorus agrees to the suggestion, and Socrates remarks that the name of the one and the face of the other give him a right to claim relationship with them. They propose to take the Statesman after the Sophist ; his path they must determine, and part off all other ways, stamping upon them a single negative form (cp. *Soph.* 257).

The Stranger begins the enquiry by making a division of the arts and sciences into theoretical and practical—the one concerned exclusively

with knowledge, and the other with action ; arithmetic and the mathematical sciences are examples of the one, and carpentering and handicraft arts of the other (cp. Philebus, 55 ff.). Under which of the two shall we place the Statesman? Or rather, shall we not first ask, whether the king, statesman, master, householder, practise one art or many? The adviser of a physician may be said to have medical science, and the adviser of a king to have royal science. Hence the Statesman, even if he be a private person, is a king, and there is one science, the science of exercising authority, which embraces all these names and functions. And this science is akin to knowledge rather than to action. For a king rules with his mind, and not with his hands.

But theoretical science may be a science either of judging, like arithmetic, or of ruling and superintending, like that of the architect or master-builder. And the science of the king is of the latter nature, only differing in that he exercises an underived and uncontrolled power, by which he is distinguished from heralds, prophets, and other inferior officers. He is the wholesale dealer in command, and the herald, or other officer, retails his commands to others. Again, a ruler is concerned with the production of some object, and objects may be divided into living and lifeless, and rulers into the rulers of living and lifeless objects. And the king is not like the master-builder, concerned with lifeless matter, but has the task of managing living animals. And the tending of living animals may be either a tending of individuals, or a managing of herds. And the Statesman is not a groom, but a herdsman, and his art may be called either the art of managing the herd, or the art of collective management :—Which do you prefer? ‘No matter.’ Very good, Socrates, and if you are not too particular about words you will be all the richer some day in true wisdom. How would you subdivide the herdsman’s art? ‘I should say, that there is one management of men, and another of beasts.’ Very good, but you are in too great a hurry to get to man. All divisions which are rightly made should cut through the middle ; if you attend to this rule, you will be more likely to arrive at classes. ‘I do not understand the nature of my mistake.’ Your division was like a division of the human race into Hellenes and barbarians, or into Lydians or Phrygians and all other nations ; or like a division of number into ten thousand and all other numbers, instead of dividing number into odd and even, or the human race into male and female. And I should like you to observe further, that though I maintain a class to be a part, there is no similar

necessity for a part to be a class. But to return to your division, you spoke of men and animals as two classes—the second of which you comprehended under the general name of beasts. Now suppose that an intelligent crane were to make a division of animals;—he would put cranes into a class by themselves for their special glory, and jumble together all others, including man, in the class of beasts. An error of this sort can only be escaped by a more regular subdivision. The whole class of animals had been already divided by us into wild and tame, but political science is concerned exclusively with tame animals in flocks: and we forgot this in our hurry to arrive at man, and found by experience, as the proverb says, that ‘the more haste the worse speed.’

And now let us begin again at the art of managing herds. You have probably heard of the fish-preserves in the Nile and in the ponds of the great king, and of the nurseries of geese and cranes in Thessaly. Thus arises a new division into the rearing or management of land-herds or of water-herds:—I need not say with which the king is concerned. And land-herds may be divided into walking and flying; and every idiot knows that the political animal is a pedestrian. At this point we may take a longer or a shorter road, and as we are already near the end, I see no harm in taking the longer, which is the way of mesotomy, and accords with the principle which we were laying down. The tame, walking, herding animal, may be divided into two classes—the horned and the hornless, and the king is concerned with the hornless; and these again may be subdivided into animals having or not having cloven feet, or mixing or not mixing the breed; and the king or statesman has the care of animals which have not cloven feet, and which do not mix the breed. And now, if we omit dogs, who can hardly be said to herd, I think that we have only two species left which remain undivided: and how are we to distinguish them? To geometricians, like you and Theaetetus, I can have no difficulty in explaining that man is a diameter, having a power of two feet; and the power of other animals being the double of two feet, may be said to be the diameter of our diameter. There is another excellent jest which I spy in the two remaining species. Men and birds are both bipeds, and human beings are running a race with the airiest and freest of creation, in which they are far behind their competitors;—this is a great joke, and there is a still better in the juxtaposition of the bird-taker and the king, who may be seen scampering after them. For as we were remarking in the *Sophist*, the dialectical

method is no respecter of persons. But we might have proceeded, as I was saying, by another and a shorter road. Then we should have begun by dividing land animals into bipeds and quadrupeds, and bipeds into winged and wingless; and we might have taken the Statesman and set him over the 'bipes implume,' and put the reins of government into his hands.

Here let us sum up:—The science of pure knowledge had a part which was the science of command, and this had a part which was a science of wholesale command; and this was divided into the management of animals, and was again parted off into the management of animals in herds, and again into land animals, and these into hornless, and these into bipeds; and so at last we arrived at man, and found the political and royal science. And yet we have not clearly distinguished the political shepherd from his rivals. No one would think of usurping the prerogatives of the ordinary shepherd, who on all hands is admitted to be the trainer, matchmaker, doctor, musician of his flock. But the royal shepherd has numberless competitors, from whom he must be distinguished; there are merchants, husbandmen, physicians, who will all claim to be shepherds. I think that we can best distinguish him by having recourse to a famous old tradition, which may amuse as well as instruct us; the narrative is perfectly true, although the scepticism of mankind is prone to doubt the tales of old. You have heard what happened in the quarrel of Atreus and Thyestes? 'You mean about the golden lamb?' No, not that; but another part of the story, which tells how the sun and stars once arose in the west and set in the east, and that the god reversed their motion, as a witness to the right of Atreus. 'There is such a story.' And no doubt you have heard of the empire of Cronos and of the earthborn men? The origin of these and the like stories is to be found in the tale which I am about to narrate.

There was a time when God went round with the world, but at the completion of a certain cycle he let go; and the world, of necessity, turned back, and went round the other way. For divine things alone are unchangeable; but the earth and heavens, although endowed with many glories, have a body, and are therefore liable to perturbation. In the case of the world, the perturbation is very slight, and amounts only to a reversal of motion. For the lord of moving things is alone self-moved; neither can piety allow that he goes at one time in one direction

and at another time in another; or that God has given the universe opposite motions; or that there are two gods contending for pre-eminence in the motion of the world. But the truth is, that there are two cycles of the world, and in one of them the universe is governed by an immediate Providence, and receives life and immortality, and in the other is let go again, and has a reverse action during infinite ages. This new action is spontaneous, and is maintained by exquisite perfection of balance—the greatest of bodies moving on the smallest pivot. All changes in the heaven affect the animal world, and this being the greatest of them, is most destructive to men and animals. At the beginning of the cycle before our own very few of them had survived; and on these a mighty change passed. For their life was reversed like the motion of the world, and first of all coming to a stand then quickly returned to youth and beauty. The white locks of the aged became black; the cheeks of the bearded man were restored to their youth and fineness; the young men grew softer and smaller, and, being reduced to the condition of children in mind as well as body, began to vanish away; and the bodies of those who had died by violence, in a few moments underwent a parallel change and disappeared. In that cycle of existence there was no such thing as the procreation of animals from one another, but they were born of the earth, and of this our ancestors, who came into being immediately after the end of the last cycle and at the beginning of this, have preserved the recollection. Such traditions are often now unduly discredited, and yet they may be proved by internal evidence. For observe how consistent the narrative is; as the old returned to youth, so the dead returned to life; the wheel of their existence having being reversed, they rose again in the opposite order: a few only were reserved by God for another destiny. Such was the origin of the earthborn men.

‘And is this cycle, of which you are speaking, the reign of Cronos, or our present state of existence?’ No, Socrates, that blessed and spontaneous life belongs not to this, but to the previous state, in which God was the governor of the whole world, and there were other gods who ruled over parts of the world, as is still the case in certain places. They were shepherds of men and animals, each of them sufficing for those of whom he had the care. And there was no violence among them, or war, or devouring of one another. Their life was spontaneous, because in those days God ruled over man; and he was to man what

man is now to the animals. Under his government there were no estates, or private possessions, or families; but the earth produced a sufficiency of all things, and men were born out of the earth, having no traditions of the past; and as the temperature of the seasons was mild, they took no thought for raiment, and had no beds, but lived and dwelt in the open air.

Such was the life of Cronos, and the life of Zeus is our own. Tell me, which is the happier of the two? Or rather, shall I tell you that the happiness of these children of Cronos must have depended on how they used their time? If having boundless leisure, and the power of discoursing not only with one another but with the animals, they had employed these advantages with a view to philosophy, gathering from every nature some addition to their store of knowledge;—or again, if they had merely eaten and drunk, and told stories to one another, and to the beasts; in either case, I say, there would be no difficulty in answering the question. But as nobody knows which they did, the question must remain unanswered. And here is the point of my tale. In the fullness of time, when the earthborn men had all passed away, the ruler of the universe let go the helm, and became a spectator; and destiny and passion swayed the world. At the same instant all the inferior deities gave up their hold; the whole universe rebounded, and there was a great earthquake, and utter ruin of all manner of animals. After a while the tumult ceased, and the universal creature settled down in his accustomed course, having authority over all other creatures, and following the instructions of his God and Father, at first more precisely, afterwards with less exactness. The reason of the falling off was the disengagement of a former chaos; ‘a muddy vesture of decay’ was a part of his original nature, out of which he was brought by his Creator, under whose immediate guidance, while he remained in that former cycle, the evil was minimised and the good increased to the utmost. And in the beginning of the new cycle all was well enough, but as time went on, discord entered in; at length the good was minimised and the evil everywhere diffused, and there was a danger of universal ruin. Then the Creator, seeing the world in great straits, and fearing that chaos and infinity would come again, in his tender care again placed himself at the helm and restored order, and made the world immortal and imperishable. Once more the cycle of life and generation was reversed: the infants grew into young men, and the young men

became greyheaded; no longer did the animals spring out of the earth; the parts of the world, like the whole, were in future to be self-created. At first the case of men was very helpless and pitiable; for they were alone among the wild beasts, and had to carry on the struggle for existence without arts or knowledge, and had no food, and did not know how to get any. That was the time when Prometheus brought them fire, Hephaestus and Athene gave them arts, and other gods brought them seeds and plants; and out of these human life was framed, for men were left to themselves, and ordered their own ways; living, like the universe, in one cycle after one manner, and in another cycle after another manner.

Enough of the myth, which may show us two errors of which we were guilty in our account of the king. The first and grand error was in choosing a god, who belongs to the other cycle, instead of a man for our king; there was a lesser error also in our failure to define the nature of the royal functions. The myth gave us only the image of a divine shepherd, whereas the statesmen and kings of our own day very much resemble their subjects in education and breeding. On retracing our steps we find that we gave too narrow a designation to the art which was concerned with the feeding of animals in flocks. This would apply to all shepherds, with the exception of the Statesman; but if we say managing or tending animals, the term would include him as well. Having remodelled the name, we may subdivide as before, first separating the human from the divine shepherd or manager. Then we may subdivide the human art of governing into the government of willing and unwilling subjects—royalty and tyranny—which are the extreme opposites of one another, although we in our simplicity have hitherto confounded them.

And yet the figure of the king is still defective. We have taken up a lump of fable, and have used more than we needed. Like statuaries, we have made some of the features out of proportion, and shall lose time in reducing them. Or our mythus may be compared to a picture, which is well drawn in outline, but is not yet enlivened by colour. And to intelligent persons language is, or ought to be, a better instrument of description than any picture. ‘But what, Stranger, is the deficiency of which you speak?’ No higher truth can be made clear without an example; every man seems to know all things in a dream, and to know nothing when he is awake. And the nature of example can only

be illustrated by an example. Children are taught to read by placing the letters which they do not know side by side with those which they know, until they learn to recognise them in all their combinations. Example comes into use when we identify something unknown with that which is known, and form a common notion of both of them. Like the child who is learning his letters, the soul recognises some of the first elements of things; and then again is at fault and unable to recognise them when they are translated into the difficult language of facts. Let us, then, take an example, which will illustrate the nature of example, and will also assist us in characterising the political science, and in separating the true king from his rivals.

I will select the example of weaving, or, more precisely, weaving of wool. In the first place, all possessions are either productive or preventive; of the preventive sort are spells and antidotes, divine and human, and also defences, and defences are either arms or screens, and screens are veils and also shields against heat and cold, and shields against heat and cold are shelters and coverings, and coverings are blankets or garments, and garments are in one piece or have many parts; and of these latter, some are pierced and others are fastened, and of these again some are made of fibres of plants and some of hair, and of these some are cemented with water and earth, and some are fastened with their own material; the latter are called clothes, and are made by the art of clothing, from which the art of weaving differs only in name, as the political differs from the royal science. Thus we have drawn several distinctions, but as yet have not distinguished the weaving of garments from the kindred and co-operative arts. For the first process to which the material is subjected is the opposite of weaving—I mean carding. And the art of carding, and the whole art of the fuller and the mender, are concerned with the treatment and production of clothes, as well as the art of weaving. Again, there are the arts which make the weaver's tools. And if we say that the weaver's art is the greatest and noblest of those which have to do with woollen garments,—this, although true, is not sufficiently distinct; because these other arts require to be first cleared away. Let us proceed, then, by regular steps:—There are causal or principal, and co-operative or subordinate arts. To the causal class belong the arts of washing and mending, of carding and spinning the threads, and the other arts of working in wool; these are chiefly of two kinds, falling

under the two great categories of composition and division. Carding is of the latter sort. But our concern is chiefly with that part of the art of wool-working which composes, and of which one kind twists and the other interlaces the threads, whether the firmer texture of the warp or the looser texture of the woof. These are adapted to each other, and the orderly composition of them forms a woollen garment. And the art which presides over these operations is the art of weaving.

But why did we go through this circuitous process, instead of saying at once that weaving is the art of entwining the warp and the woof? In order that our labour may not seem to be lost, I must explain the whole nature of excess and defect. There are two arts of measuring—one is concerned with relative size, and the other has reference to a mean or standard of what is meet. The difference between good and evil is the difference between a mean or measure and excess or defect. All things require to be compared, not only with one another, but with the mean, without which there would be no beauty and no art, whether the art of the statesman or the art of weaving or any other; for all these arts guard against excess or defect, which are real evils. This we must endeavour to show, if the arts are to exist; and the proof of this will be a harder piece of work than the demonstration of the non-existence of not-being which we proved in the Sophist. At present I am content with the indirect proof that the existence of such a standard is necessary to the existence of the arts. The standard or measure, which we are now only applying to the arts, may be some day required with a view to the demonstration of absolute truth.

We may now divide this art of measurement into two parts; placing in the one part all the arts which measure the relative size or number of objects, and in the other all those which depend upon a mean or standard. Many accomplished men say that the art of measurement has to do with all things, but these persons are apt to fail in seeing the differences of classes—they jumble together in one the 'more' and the 'too much,' which are very different things. Whereas the right way is to find the differences of classes, and to comprehend the things which have any affinity under the same class.

I will make one more observation by the way. When a pupil at a school is asked the letters which make up a particular word, is he not asked with a view to his knowing the same letters in all words? And our enquiry about the Statesman in like manner is intended not only to

improve our knowledge of politics, but of philosophy generally. Still less would any one analyse the nature of weaving for its own sake. There is no difficulty in exhibiting sensible images, but the greatest and noblest truths have no outward form adapted to the eye of sense, and are only revealed in thought. And all that we are now saying is said for the sake of them. I make these remarks, because I want you to get rid of any impression, that our discussion about weaving and about the reversal of the universe, or the other discussion about the Sophist and not-being, were tedious and irrelevant. Please to observe that they can only be fairly judged when compared with what is meet; and yet not with what is meet for producing pleasure, nor even meet for making discoveries, but for the great end of developing the dialectical method and sharpening the wits of the auditors. He who censures us, should prove that, if our words had been fewer, they would have been better calculated to make us dialecticians.

And now let us return to our king or statesman, and transfer to him the example of weaving. The royal art has been separated from that of other herdsmen, but not from the causal and co-operative arts which exist in states; these do not admit of dichotomy, and therefore they must be carved neatly, like the limbs of a victim, not into more parts than are necessary. And first we have a large class, (1) of instruments, which includes almost everything in the world; from these may be parted off (2) vessels which are framed for the preservation of things, moist or dry, in the fire or out of the fire. The royal or political art has nothing to do with either of these, any more than with the arts of making, (3) vehicles, or (4) defences, whether dresses, or arms, or walls, or (5) with the art of making ornaments, whether pictures or other playthings, as they may be fitly called, for they have no serious use. Then (6) there are the arts which furnish gold, silver, wood, bark, and other materials which should have been put first; these, again, have no concern with the kingly science; any more than the arts, (7) which provide food and nourishment for the human body, and which furnish occupation to the husbandman, huntsman, doctor, cook, and the like, but not to the king or statesman. Besides these seven classes, there are small things, such as coins, seals, stamps, which may with a little violence be comprehended in the class of implements or ornaments. Under the preceding seven heads every species of property may be arranged with the exception of animals,—but these have been already included in the art of tending

herds. There remains only the class of slaves or ministers, among whom I expect that the real rivals of the king will be discovered. I am not speaking of the veritable slave bought with money, nor of the hireling who lets himself out for service, nor of the trader or merchant, who at best can only lay claim to economical and not to royal science. Nor am I referring to government officials, such as heralds and scribes, for these are only the servants of the rulers, and not the rulers themselves. I admit that there may be something strange in any servants pretending to be masters, but I hardly think that I could have been wrong in supposing that the principal claimants to the throne will be of this class. Let us try once more: There are diviners and priests, who are full of pride and prerogative; these, as the law declares, know how to give gifts to the gods which gain a corresponding amount of blessings for men, and in many parts of Hellas the duty of performing solemn sacrifices is assigned to the chief magistrate, as at Athens, to the king Archon. At last, then, we have found a trace of those whom we were seeking. But still they are only servants and ministers.

And who are these who next come into view in various forms of men and animals and other monsters appearing—lions and centaurs and satyrs—who are these? I did not know them at first, for every one looks strange when he is unexpected. But now I recognise the politician and his troop, the chief of Sophists, the prince of charlatans, the most accomplished of wizards, who must be carefully distinguished from the true king or statesman. And here I will interpose a question: What are the true forms of government? Are they not three—monarchy, oligarchy, and democracy? and the distinctions of freedom and compulsion, law and no law, poverty and riches expand these three into six. Monarchy may be divided into royalty and tyranny; oligarchy into aristocracy and plutocracy; and in democracy there is law and no law, two things expressed by one word. But are any of these governments worthy of the name? Is not government a science, and are we to suppose that scientific government is secured by the rulers being many or few, rich or poor, or by the rule being compulsory or voluntary? Can the many attain to science? In no Hellenic city are there fifty good draught players, and certainly there are not as many kings, for by kings we mean all those who are possessed of the political science. A true government must therefore be the government of one, or of a few. And they may govern us either with or without law, and whether

they are poor or rich, and however they govern, provided they govern on some scientific principle,—that makes no difference. And as the physician may cure us with our will, or against our will, and by any mode of treatment, burning, bleeding, lowering, fattening, if he only proceeds scientifically; so the true governor may reduce or fatten or bleed the body corporate, while he acts according to the rules of wisdom, and with a view to the good of the state, whether according to law or without law.

‘I do not like the notion, that there can be good government without law.’

I must explain: Law-making certainly is the business of a king; and yet the best thing of all is, not that the law should rule, but that the king should rule, for the varieties of circumstances are endless, and no simple or universal rule can suit them all, or last for ever. The law is just an ignorant brute of a tyrant, who insists always on his commands being fulfilled, under all circumstances. ‘Then why have we laws at all?’ I will answer that question by asking you whether the training master gives a different discipline to each of his pupils, or whether he has a general rule of diet and exercise which is suited to the constitutions of the majority? ‘The latter.’ The legislator, too, is obliged to lay down general laws, and cannot exact what is precisely suitable to each particular case. He cannot be sitting at every man’s side all his life, and prescribe for him the minute particulars of his duty, and therefore he is compelled to impose on himself and others the restriction of a written law. Let me suppose now, that a physician or trainer, having left directions for his patients or pupils, goes into a far country, and comes back sooner than he intended; owing to some unexpected change in the weather, the patient or pupil seems to require a different mode of treatment: Would he persist in his old commands, under the idea that all others are noxious and heterodox? Viewed in the light of science, would not the continuance of such regulations be ridiculous? And if the legislator, or another like him, comes back from a far country, is he to be prohibited from altering his own laws? The common people say: Let a man persuade the city first, and then let him impose new laws. But is a physician only to cure his patients by persuasion, and not by force? Is he a worse physician who uses a little gentle violence in effecting the cure? Or shall we say, that the violence is just, if exercised by a rich man, and unjust, if by a poor man? May not any man, rich

or poor, with or without law, and whether the citizens like or not, do what is for their good? The pilot saves the lives of his citizens, not by laying down rules, but by making his art a law, and, like him, the true governor has a strength of art which is superior to the law. This is scientific government, and all others are imitations only. Yet no great number of persons can attain to this science. And hence follows an important result. The best course of politicians is to assert the inviolability of the law, which, though not the best thing possible, is best for the imperfect condition of man. I will explain my meaning by an illustration :

Suppose that mankind, indignant at the rogueries and caprices of physicians and pilots, call together an assembly, in which all who like may speak, the skilled as well as the unskilled, and that in their assembly they make decrees for regulating the practice of navigation and medicine which are to be binding on these professions for all time. Suppose that they elect annually by vote or lot those to whom authority in either department is to be delegated. And let us further imagine, that when the term of their magistracy has expired, the magistrates appointed by them are summoned before an ignorant and unprofessional court, and may be condemned or punished for breaking the regulations. They even go a step further, and enact, that he who is found enquiring into the truth of navigation and medicine, and is seeking to be wise above what is written, shall be called no artist, but a dreamer or prating Sophist or corrupter of youth ; and if he try to persuade others to investigate those sciences in a manner contrary to the law, he shall be punished with the utmost severity ; like rules might be extended to any art or science :—now what would be the consequence ?

‘The arts would utterly perish, and human life, which is bad enough already, would become intolerable.’

But suppose, once more, that we were to appoint some one as the guardian of the law, who was both ignorant and interested, and who perverted the law ; would not this be a still worse evil than the other? ‘Certainly.’ For the laws are based on some experience and wisdom. Hence the better course is, that they should be observed, although this is not the best thing of all, but only the second best. And whoever, having skill, should try to improve them, would act in the spirit of the law-giver. But then, as we have seen, no great number of men, whether poor or rich, is capable of making laws. And so, the nearest approach which

we can make to true government is, when men do nothing contrary to their own written laws and national customs. When the rich preserve their customs and maintain the law, this is called aristocracy, or if they neglect the law, oligarchy. When an individual rules according to law, whether by the help of science or opinion, this is called monarchy, and when he has royal science he is called a king, but when he rules in spite of law, and is blind with ignorance and passion, he is called a tyrant. These forms of government exist, because men despair of the true king ever appearing among them; if he were to appear, they would joyfully hand over to him the reins of government. But, as there is no natural ruler of the hive, they meet together and make laws. And do we wonder, when the foundation of politics are in the letter only, that many evils should arise? Ought we not rather to admire the strength of the political bond? For cities have endured time out of mind, though many of them have been shipwrecked, and some are like ships foundering, because their pilots are absolutely ignorant of the science which they profess.

Let us next ask, which of these untrue forms of government is the least bad, and which of them is the worst? I said at the beginning, that each of the three forms of government, royalty, aristocracy, and democracy might be divided into two, so that the whole number of them, including the best, will be seven. Under monarchy we have already distinguished royalty and tyranny; of oligarchy there were two kinds, aristocracy and plutocracy, and democracy may be divided on a similar principle, for there is a democracy which observes, and a democracy which neglects, the laws. The government of one is the best and the worst—the government of a few is less bad and less good—the government of the many is the least bad and least good of them all, being the best of all lawless governments, and the worst of all lawful ones. But the rulers of all these states, unless they have knowledge, are maintainers of idols, and themselves idols—wizards, and also Sophists; for, after many windings the term ‘Sophist’ comes home to them.

And now enough of centaurs and satyrs: the play is ended, and they may quit the political stage. Still there remain some other and better elements, which adhere to the royal science, and must be drawn off in the refiner’s fire before the gold can be left pure. The arts of the general, the judge, and the orator, will have to be separated from the royal art; when the separation has been made, the nature of the king

will be unalloyed. Now there are inferior sciences, such as music and others; and there is a superior science, which determines whether music is to be learnt or not, and this is different from them, and the governor of them. The science which determines whether we are to use persuasion, or not, is higher than the art of persuasion; the science which determines whether we are to go to war, is higher than the art of the general. The science which makes the laws, is higher than that which only administers them. And the science which has authority over the rest, is the science of the king or statesman.

Once more we will endeavour to view this royal science by the light of our example. We may compare the state to a web, and I will show you how the different threads are drawn into one. You would admit (would you not?) that there are parts of virtue (although this position is sometimes assailed by Eristics), and one part of virtue is temperance, and another courage. These are two principles which are in a manner antagonists of one another; and they pervade all nature; the whole class of the good and beautiful is included under them. The beautiful may be subdivided into two lesser classes: one of these is described by us in terms expressive of motion or energy, and the other in terms expressive of rest and quietness. We say, how manly! how vigorous! how ready! and we say also, how calm, how temperate, how dignified! This opposition of terms is extended by us to all actions, to the tones of the voice, the notes of music, the workings of the mind, the characters of men. The two classes both have their exaggerations; and the exaggerations of the one are termed 'hardness,' 'violence,' 'madness'; of the other 'cowardness,' or 'sluggishness.' And if we pursue the enquiry, we find that these opposite characters are naturally at variance, and can hardly be reconciled. In lesser matters the antagonism between them is ludicrous, but in the State may be the occasion of grave disorders, and may disturb the whole course of human life. For the orderly class are always wanting to be at peace, and hence they pass imperceptibly into the condition of slaves; and the courageous sort are always wanting to go to war, even when the odds are against them, and are soon destroyed by their enemies. But the true art of government, first preparing the material by education, weaves the two elements into one, maintaining authority over the carders of the wool, and selecting the proper subsidiary arts which are necessary for making the web. The royal science is queen of educators, and begins by choosing the natures which she is to train,

punishing with death and exterminating those who are violently carried away to atheism and injustice, and enslaving those who are wallowing in the mire of ignorance. The rest of the citizens she blends into one, combining the stronger element of courage, which we may call the warp, with the softer element of temperance, which we may imagine to be the woof. These she binds together, first taking the eternal elements of the honourable, the good, and the just, and fastening them with a divine cord in a heaven-born race, and then fastening the animal elements with a human cord. The good legislator can implant by education the higher principles; and where they exist there is no difficulty in inserting the lesser human bonds, by which the State is held together; these are the laws of intermarriage, and of union for the sake of offspring. Most persons in their marriages seek after wealth or power; or they are clannish, and choose those who are like themselves,—the temperate marrying the temperate, and the courageous the courageous. The two classes thrive and flourish at first, but they soon degenerate; the one become mad, and the other feeble and useless. This would not have been the case, if they had both originally held the same notions about the honourable and the good; for then they never would have allowed the temperate natures to be separated from the courageous, but they would have bound them together by common honours and reputations, by intermarriage, and by the choice of rulers who combine both qualities. The temperate are careful and just, but are wanting in the power of action; the courageous fall short of them in justice, but are superior to them in action: and no state can prosper in which either of these qualities is wanting. The noblest and best of all webs or states is that which the royal science weaves, combining the two sorts of natures in a single texture, and in this enfolding freeman and slave and every other social element, and presiding over them all.

‘You have made, Stranger, a very perfect image of the king and the statesman.’

The principal subjects in the *Politicus* may be conveniently embraced under six or seven heads:—(1) the myth; (2) the dialectical interest; (3) the political aspects of the dialogue; (4) the satirical and paradoxical vein; (5) the necessary imperfection of law; (6) the relation of the work to the other writings of Plato;—lastly, we may briefly consider the

genuineness of the Sophist and Politicus, which can hardly be assumed without proof, since the two dialogues have been questioned by three such eminent Platonic scholars as Socher, Schaarschmidt, and Uberweg.

I. The hand of the master is clearly visible in the myth. First in the connection with mythology ;—he wins a kind of verisimilitude for this as for his other myths, by adopting received traditions, of which he pretends to find an explanation in his own larger conception (cp. Introduction to Critias). The young Socrates has heard of the sun rising in the west and setting in the east, and of the earth-born men ; but he has never heard the origin of these remarkable phenomena. Nor is Plato, here or elsewhere, wanting in denunciations of the incredulity of ‘ this latter age,’ on which the lovers of the marvellous have always delighted to enlarge. And he is not without express testimony to the truth of his narrative ;—such testimony as, in the Timæus, the first men gave of the names of the gods (‘ they must surely have known their own ancestors’). For the first generation of the new cycle, who lived near the time, are supposed to have preserved a recollection of a previous one. He also appeals to internal evidence ; viz. the perfect coherence of the tale, though he is very well aware, as he says in the Cratylus (436 C, D), that there may be consistency in error as well as in truth. The gravity and minuteness with which some particulars are related also lend an artful aid. The profound interest and ready assent of the young Socrates, who is not too old to be amused ‘ with a tale which a child would love to hear,’ are a further assistance. To those who were naturally inclined to believe that the fortunes of mankind are influenced by the stars, or who maintained that some one principle, like the principle of the same and the other in the Timæus, pervades all things in the world, the reversal of the motion of the heavens seemed necessarily to produce a reversal of the order of human life. The spheres of knowledge, which to us appear wide asunder as the poles, astronomy and medicine, were naturally connected in the minds of early thinkers, because there was little or nothing in the space between them. Thus there is a basis of philosophy, on which the improbabilities of the tale may be said to rest. These are some of the devices by which Plato, like a modern novelist, seeks to familiarize the marvellous.

The myth, like that of the Timæus and Critias, is rather historical than poetical ; in this respect corresponding to the general change in the later writings of Plato, when compared with the earlier ones. It is hardly

a myth in the sense in which the term might be applied to the myth of the *Phaedrus*, the *Republic*, the *Phaedo*, or the *Gorgias*, but may be more aptly compared with the didactic tale in which Protagoras describes the fortunes of primitive man, or with the description of the gradual rise of a new society in the third book of the *Laws*. Some discrepancies may be observed between the mythology of the *Politicus* and the *Timaeus*, and between the *Timaeus* and the *Republic*. But there is no reason to expect that all Plato's visions of a former, any more than of a future, state of existence, should conform exactly to the same pattern. We do not find perfect consistency in his philosophy; and still less have we any right to demand this of him in his use of mythology and figures of speech. And we observe that while employing all the resources of a writer of fiction to give credibility to his tales, he is not disposed to insist upon their literal truth. Rather, as in the *Phaedo*, he says, 'something of the kind is true'; or, as in the *Gorgias*, 'this you will think a myth, but I believe to be a truth'; or, as in the *Politicus*, he describes his work as a 'tolerably credible tale,' or as a 'mass of mythology,' which was introduced in order to teach certain lessons.

The greater interest of the myth consists in the philosophical lessons which Plato presents to us in this veiled form. Here, as in the tale of Er, the son of Armenius, he touches upon the question of freedom and necessity, both in relation to God and nature. For at first the universe is governed by the immediate providence of God,—this is the golden age,—but after a while the wheel is reversed, and man is left to himself. Like other theologians and philosophers, Plato relegates his explanation of the problem to a transcendental world; he speaks of what in modern language might be termed 'impossibilities in the nature of things,' hindering God from continuing immanent in the world. But there is some inconsistency; for the 'letting go' is spoken of as a divine act, and is at the same time attributed to the necessary imperfection of matter; there is also a numerical necessity for the successive births of souls. At first, man and the world retain their divine instincts, but gradually degenerate. As in the Book of Genesis, the first fall of man is succeeded by a second; the misery and wickedness of the world increase continually. The reason of this further decline is supposed to be the disorganisation of matter: the latent seeds of a former chaos are disengaged, and envelope all things. The condition of man becomes more and more miserable; he is perpetually waging an unequal warfare with the beasts. At length

he obtains such a measure of education and help as is necessary for his existence. He is aided by God, but not wholly inspired or controlled by him; he has received from Athene and Hephaestus a knowledge of the arts; other gods give him seeds and plants; and out of these human life is reconstructed. He now eats bread in the sweat of his brow, and has dominion over the animals; subjected to the conditions of his nature, and yet able to cope with them by divine help. Thus Plato may be said to represent in a figure—(1) the state of innocence; (2) the fall of man; (3) the still deeper decline into barbarism; (4) the restoration of man by the partial interference of God, and the natural growth of the arts and of civilised society. Two lesser features of this description should not pass unnoticed, (1) the primitive men are supposed to be created out of the earth, and not after the ordinary manner of human generation—half the causes of moral evil are in this way removed; (2) the arts are attributed to a divine revelation: and so the greatest difficulty in the history of pre-historic man is solved. Though no one knew better than Plato that the introduction of the gods is not a reason, but an excuse for not giving a reason (*Cratylus*, 426), yet, considering that more than two thousand years later mankind are still discussing these problems, we may be satisfied to find in Plato a statement of the difficulties which arise in conceiving the relation of man to God and nature, without expecting to obtain from him a solution of them. In such a tale, as in the *Phaedrus*, various aspects of the ideas were doubtless indicated to Plato's own mind, as the corresponding theological problems are to us. The immanence of things in the ideas, or the partial separation of them, and the self-motion of the supreme idea, are probably the forms in which he would have interpreted his own parable.

He touches upon another question of great interest—the consciousness of evil—what in the Jewish Scriptures is called 'eating of the tree of the knowledge of good and evil.' At the end of the narrative (272 B) the Eleatic asks his companion whether this life of innocence, or that which men live at present, is the better of the two. He wants to distinguish between the mere animal life of innocence, the 'city of pigs,' at the mention of which Glaucon, in the *Republic*, revolts, and the higher life of reason and philosophy. But as no one can determine what prevailed in the world before the Fall, the question must remain unanswered. Similar questions have occupied the minds of theologians in later ages; but they can hardly be said to have found an answer.

Professor Campbell well observes, that the general spirit of the myth may be summed up in the words of the Lysis: 'If evil were to perish, should we hunger any more, or thirst any more, or have any similar sensations? Yet perhaps the question what will or will not be is a foolish one, for who can tell?' As in the Theaetetus, evil is supposed to continue,—here, as the consequence of a former state of the world, a sort of mephitic vapour exhaling from some ancient chaos,—there, as involved in the possibility of good, and incident to the mixed state of man.

Once more (and this is the point of connection with the rest of the dialogue), the myth is intended to bring out the difference between the ideal and the actual state of man. In all ages of the world men have dreamed of a state of perfection, which has been, and is to be, but never is, and seems to disappear under the necessary conditions of human society. The uselessness, the danger, the true value of such political ideals have often been discussed; youth is too ready to believe in them; age to disparage them. Plato's 'prudens quaestio' respecting the comparative happiness of men in this and in a former cycle of existence is intended to elicit this contrast between the golden age and 'the life of Zeus' which is our own. To confuse the divine and human, or hastily apply one to the other, is a 'tremendous error.' Of the ideal or divine government of the world we can form no true or adequate conception; and this our mixed state of life, in which we are partly left to ourselves, but not wholly deserted by God, may contain some higher elements of good and knowledge than could have existed in the days of innocence under the rule of Cronos. So we may venture slightly to enlarge a Platonic thought which admits of a further application to Christian theology. Here are suggested also the distinctions between God causing and permitting evil, and between his more and less immediate government of the world.

II. The dialectical interest of the Politicus seems to contend in Plato's mind with the political; the dialogue might have been designated by two equally descriptive titles—either the 'Statesman,' or 'Concerning Method.' Dialectic, which in the earlier writings of Plato is almost exclusively confined to the Socratic question and answer, is now wholly occupied with classification; there is nothing in which he takes greater delight than in processes of division (cp. Phaedr. 266 B); he pursues them to a length out of proportion to their subject, and as if to value

them as a dialectical exercise, and for their own sake. A poetical vision of some order or hierarchy of ideas or sciences has already been floating before us in the Symposium and the Republic. And in the Phaedrus this aspect of dialectic is further sketched out, and the art of rhetoric is based on the division of the characters of mankind into their several classes. The same love of divisions is apparent in the Gorgias. But in a well-known passage of the Philebus occurs the first criticism on the nature of classification. There we are exhorted not to fall into the common error of passing from unity to infinity, but to find the intermediate classes; and we are reminded that in any process of generalisation, there may be more than one class to which individuals may be referred, and that we must carry on the process of division until we have arrived at the *infima species*.

These precepts are not forgotten, either in the Sophist or in the Politicus. The Sophist contains four examples of division, carried on by regular steps, until in four different lines of descent we detect the Sophist. In the Politicus the king or statesman is discovered by a similar process; and we have a summary, probably made for the first time, of possessions appropriated by the labour of man, which are distributed into seven classes. We are warned against preferring the shorter to the longer method;—if we divide in the middle, we are most likely to light upon species; at the same time, the important remark is made, that ‘a part is not to be confounded with a class.’ Having discovered the genus under which the king falls, we proceed to distinguish him from the collateral species. To assist our imagination in making this separation, we require an example. The higher ideas, of which we have a dreamy knowledge, can only be represented by images taken from the external world. But, first of all, the nature of example is explained by an example. The child is taught to read by comparing the letters in words which he knows with the same letters in unknown combinations; and this is the sort of process which we are about to attempt. As a parallel to the king we select the worker in wool, and compare the art of weaving with the royal science, trying to separate either of them from the inferior classes to which they are akin. This has the incidental advantage, that weaving and the web furnish us with a figure of speech, which we can afterwards transfer to the State.

There are two uses of examples or images—in the first place, they

suggest thoughts—secondly, they give them a distinct form. In the infancy of philosophy, as in childhood, the language of pictures is natural to man: truth in the abstract is hardly won, and only by use familiarised to the mind. Examples are akin to analogies, and have a reflex influence on thought; they people the vacant mind, and may often originate new directions of enquiry. Plato seems to be conscious of the suggestiveness of imagery; the general analogy of the arts is constantly employed by him as well as the comparison of particular arts—weaving, the refining of gold, the learning to read, music, statuary, painting, medicine, the art of the pilot—all of which occur in this dialogue alone: though he is also aware that ‘comparisons are slippery things,’ and may often give a false clearness to ideas. A division of sciences has been made in the *Philebus*, into practical and speculative, and into more or less speculative. To this a new class is now added, of master-arts, or sciences, which control inferior ones. Besides the supreme science of dialectic, ‘which will forget us, if we forget her,’ another master-science for the first time appears in view—the science of government, which fixes the limits of all the rest. This conception of the political or royal science as, from another point of view, the science of sciences, which holds sway over the rest, is not originally found in Aristotle, but in Plato.

The doctrine that virtue and art are in a mean, which is familiarised to us by the study of the *Nicomachean Ethics*, is also first distinctly stated in the *Politicus* of Plato. The too much and the too little are in restless motion: they must be fixed by a mean, which is also a standard external to them. The art of measuring or finding a mean between excess and defect, like the principle of division in the *Phaedrus*, receives a particular application to the art of discourse. The excessive length of a discourse may be blamed; but who can say what is excess, unless he is furnished with a measure or standard? Measure is the life of the arts, and may some day be discovered to be the single ultimate principle in which all the sciences are contained. Other forms of thought may be noted—the distinction between causal and co-operative arts, which may be compared with the distinction between primary and co-operative causes in the *Timæus*, 46 D, or between cause and condition in the *Phædo*, 99; the passing mention of economical science; the opposition of rest and motion, which is found in all nature; the general conception of two great arts of composition

and division, in which are contained weaving, politics, dialectic; and in connection with the conception of a mean, the two arts of measuring.

In the *Theaetetus*, Plato remarks that precision in the use of terms, though sometimes pedantic, is sometimes necessary. Here he makes the opposite reflection, that there may be a philosophical disregard of words. The evil of mere verbal oppositions, the requirement of an impossible accuracy in the use of terms, the error of supposing that philosophy was to be found in language, the danger of word-catching, have frequently been discussed by him in the previous dialogues, but nowhere has the spirit of modern inductive philosophy been more happily indicated than in the words of the *Politicus*:—‘If you think more about things, and less about words, you will be richer as you grow older in wisdom.’ A similar spirit is discernible in the remarkable expressions, ‘the long and difficult language of facts’; and ‘the interrogation of every nature, in order to obtain the particular contribution of each to the store of knowledge.’ Who has described ‘the feeble intelligence of all things’ given by metaphysics better than the Eleatic Stranger in the words—‘The higher ideas can hardly be set forth except through the medium of examples; every man seems to know all things in a kind of dream, and then again nothing when he is awake’? Or where is the value of metaphysical pursuits more truly expressed than in the words,—‘The greatest and noblest things have no outward image of themselves visible to man: therefore we ought to practise ourselves in reasoning’ (286 A)?

III. The political aspects of the dialogue are closely connected with the dialectical. As in the *Cratylus*, the legislator has ‘the dialectician standing on his right hand’; so in the *Politicus*, the king or statesman is the dialectician, who, although he may be in a private station, is still a king. Whether he has the power or not, is a mere accident; or rather he has the power, for what ought to be is (was ist vernünftig das ist wirklich); and he ought to be and is the true governor of mankind. There is a reflection in this idealism of the Socratic ‘virtue is knowledge’; and, without idealism, we may remark that knowledge is a great part of power. Plato does not trouble himself to construct a machinery by which ‘philosophers shall be made kings,’ as in the *Republic*: he merely holds up the ideal, and affirms that in some sense science is really supreme over human life.

He is struck by the observation 'quam parvâ sapientiâ regitur mundus,' and is touched with a feeling of the ills which afflict states. The condition of Megara before and during the Peloponnesian War, of Athens under the Thirty and afterwards, of Syracuse and the other Sicilian cities in their alternations of democratic excess and tyranny, might naturally suggest such reflections. Some states he sees already shipwrecked, others foundering for want of a pilot; and he wonders not at their destruction, but at their endurance. For they ought to have perished long ago, if they had depended on the wisdom of their rulers. The mingled pathos and satire of this remark is characteristic of Plato's later style.

The king is the personification of political science. And yet he is something more than this,—the perfectly good and wise tyrant of the *Laws* (iv. 710), whose will is better than any law. He is the special providence who is always interfering with and regulating all things. Such a conception has sometimes been entertained by modern theologians, and by Plato himself, of the Supreme Being. But whether applied to Divine or to human governors the conception is faulty for two reasons, neither of which are noticed by Plato; first, because all good government supposes a degree of co-operation in the ruler and his subjects,—an 'education in politics' as well as in moral virtue; secondly, because government, whether Divine or human, implies that the subject has a previous knowledge of the rules under which he is living. There is a fallacy, too, in comparing unchangeable laws with a personal governor. For the law need not necessarily be an 'ignorant and brutal tyrant,' but gentle and humane, capable of being altered in the spirit of the legislator, and of being administered so as to meet the cases of individuals. Not only in fact, but in idea, both elements must remain—the fixed law and the living will; the written word and the spirit; the principles of obligation and of freedom; and their applications whether made by law or equity in particular cases.

There are two sides from which positive laws may be attacked: either from the side of nature, which rises up and rebels against them in the spirit of Callicles in the *Gorgias*; or from the side of idealism, which attempts to soar above them,—and this is the spirit of Plato in the *Politicus*. But he soon falls, like Icarus, and is content to walk instead of flying; that is, to accommodate himself to the actual state of human things. Mankind have long been in despair of finding the

true ruler; and therefore are ready to acquiesce in any of the five or six received forms of government as better than none. And the best thing which they can do (though only the second best in reality), is to reduce the ideal state to the conditions of actual life. Thus in the *Politicus*, as in the *Laws*, we have three forms of government, which we may venture to term, (1) the ideal; (2) the practical; (3) the sophistical—what ought to be, what might be, what is. And thus Plato seems to stumble, almost by accident, on the notion of a constitutional monarchy, or of a monarchy ruling by laws.

The divine foundations of a State are to be laid deep in education (*Rep.* iv. 423), and at the same time some little violence may be used in exterminating natures which are incapable of education (cp. *Laws*, x). Plato is strongly of opinion that the legislator, like the physician, may do men good against their will (cp. *Gorgias*, 522 foll.). The human bonds of states are formed by the intermarriage of dispositions adapted to supply the defects of each other. As in the *Republic*, Plato has observed that there are opposite natures in the world, the strong and the gentle, the courageous and the temperate, which, borrowing an expression derived from the image of weaving, he calls the warp and the woof of human society. To interlace these is the crowning achievement of political science. In the *Protagoras*, Socrates was maintaining that there was only one virtue, and not many: now Plato is inclined to think that there are not only parallel, but opposite virtues, and seems to see a similar opposition pervading all art and nature. But he is satisfied with laying down the principle, and does not inform us by what further steps the union of opposites is to be effected.

In the loose framework of a single dialogue Plato has thus combined two distinct subjects—politics and method. Yet they are not so far apart as they appear: in his own mind there was a secret link of connection between them. For the philosopher or dialectician is also the only true king or statesman. In the execution of his plan Plato has invented or distinguished several important forms of thought, and made incidentally many valuable remarks. Questions of interest both in ancient and modern politics also arise in the course of the dialogue, which may with advantage be further considered by us:—

a. The imaginary ruler, whether God or man, is above the law, and is a law to himself and to others. Among the Greeks as among the Jews, law was a sacred-name, the gift of God, the bond of states.

But in the *Politicus* of Plato, as in the New Testament, the word has also become the symbol of an imperfect good, which is almost an evil. The law sacrifices the individual to the universal, and is the tyranny of the many over the few (cp. *Rep.* i. 359). It has fixed rules which are the props of order, and will not swerve or bend in extreme cases. It is the beginning of political society, but there is something higher—an intelligent ruler, whether God or man, who is able to adapt himself to the endless varieties of circumstances. Plato is fond of picturing the advantages which would result from the union of the tyrant who has power with the legislator who has wisdom: he regards this as the best and speediest way of reforming mankind. But institutions cannot thus be artificially created, nor can the external authority of a ruler impose laws for which a nation is unprepared. The greatest power, the highest wisdom, can only proceed one or two steps in advance of public opinion. In all stages of civilisation human nature, after all our efforts, remains intractable; not like clay in the hands of the potter, or marble under the chisel of the sculptor. Great changes occur in the history of nations, but they are brought about slowly, like the changes in the frame of nature, upon which the puny arm of man hardly makes an impression. And, speaking generally, the slowest growths, both in nature and in politics, are the most permanent.

b. Whether the best form of the ideal is a person or a law may fairly be doubted. The former is more akin to us: it clothes itself in poetry and art, and appeals to reason more in the form of feeling: in the latter there is less danger of allowing ourselves to be deluded by a figure of speech. The ideal of the Greek state found an expression in the deification of law, the ancient Stoic spoke of a wise man perfect in virtue, who was fancifully said to be a king; but neither they nor Plato had arrived at the conception of a person who was also a law. Nor is it easy for the Christian to think of God as wisdom, truth, holiness, and also as the wise, true, and holy one. He is always wanting to break through the abstraction and interrupt the law, in order that he may present to himself the more familiar image of a divine friend. While the impersonal has too slender a hold upon the affections to be made the basis of religion, the conception of a person on the other hand tends to degenerate into a new kind of idolatry. Neither criticism nor experience allows us to suppose that there are interferences with

the laws of nature; the idea is inconceivable to us and at variance with facts. The philosopher or theologian who could realise to mankind that a person is a law, that the higher rule has no exception, that goodness, like knowledge, is also power, would breathe a new religious life into the world.

c. Besides the imaginary rule of a philosopher or a God, the actual forms of government have to be considered. In the infancy of political science, men naturally ask whether the rule of the many or of the few is to be preferred—The rule of the few good or of the many bad? To the question put in this form there could be but one answer—The rule of the one good and all the rest bad? To this again there would be one reply, which might be expressed in the words of Heracleitus—‘One is ten thousand, if he be the best.’ Or, putting the question in another form,—The rule of a class, neither better nor worse than other classes, not devoid of a feeling of right, but guided mostly by a sense of their own interests, or the rule of all classes, similarly under the influence of mixed motives? To the question put in this form, no one would hesitate to answer—The rule of all rather than one, because all classes are more likely to take care of all than one of another; and the government has greater power and stability when resting on a wider basis. Both in ancient and modern times the best balanced form of government has been held to be the best; and yet it should not be so nicely balanced as to make action and movement impossible.

The statesman who builds his hope upon the aristocracy, upon the middle classes, upon the people, will probably, if he have sufficient experience of them, conclude that all classes are much alike, and that one is as good as another, and that the liberties of no class are safe in the hands of the rest. The higher ranks have the advantage in education and manners, the middle and lower in industry and self-denial; in every class, to a certain extent, a natural sense of right prevails, sometimes communicated from the lower to the higher, sometimes from the higher to the lower, which is too strong for class interests. There have been crises in the history of nations, as in the Crusades or the Reformation, or the French Revolution, when the same fever or inspiration has taken hold of whole peoples, and permanently raised the sense of freedom and justice among mankind.

But even supposing the different classes of a nation, when viewed

impartially, to be on a level with each other in moral virtue, there remain two considerations of opposite kinds which enter into the problem of government. Admitting of course that the upper and lower classes are equal in the eye of God and of the law, yet the one may be by nature fitted to govern and the other to be governed. A ruling caste does not soon altogether lose the governing qualities, nor a subject class easily acquire them. Hence the phenomenon so often observed in the old Greek revolutions, and not without parallel in modern times, that the leaders of the democracy have been themselves of aristocratic origin. The people are expecting to be governed by representatives of their own, but the true man of the people either never appears, or is quickly altered by circumstances. Their real wishes hardly make themselves felt, although their lower interests and prejudices may sometimes be flattered and yielded to for the sake of ulterior objects by those who have political power. They will often learn by experience that the democracy has become a plutocracy. The influence of wealth, though not the enjoyment of it, has become diffused among the poor as well as among the rich; and society, instead of being safer, is more at the mercy of the tyrant, who, when things are at the worst, obtains a guard—that is, an army—and announces himself as the saviour.

The other consideration is of an opposite kind. Admitting that a few wise men are likely to be better governors than the unwise many, yet it is not in their power to fashion an entire people according to their behest. When with the best intentions the benevolent despot begins his régime, he finds the world hard to move. A succession of good kings has at the end of a century left the people an inert and unchanged mass. The Roman world was not permanently improved by the hundred years of Hadrian and the Antonines. The kings of Spain during the last century were at least equal to any contemporary sovereigns in virtue and ability. In certain states of the world the means are wanting to render a benevolent power effectual. These means are not a mere external organisation of posts or telegraphs, hardly the introduction of new laws or modes of industry. A change must be made in the spirit of a people as well as in their externals. The ancient legislator did not really take a blank tablet and inscribe upon it the rules which reflection and experience had taught him to be for a nation's interest; no one would have obeyed him if he had. But he took the customs—which he found already existing—in a half

civilised state of society: these he reduced to form and inscribed on pillars; he defined what had before been undefined, and gave certainty to what was uncertain. No legislation ever sprang, like Athene, in full power out of the head either of God or man.

Plato and Aristotle are sensible of the difficulty of combining the wisdom of the few with the power of the many. According to Plato, he is a physician who has the knowledge of a physician, and he is a king who has the knowledge of a king. But how the king, one or more, is to obtain the required power, is hardly at all considered by him. He presents the idea of a perfect government, but except the regulation for mixing different tempers in marriage, he never makes any provision for the attainment of it. Aristotle, casting aside ideals, would place the government in a middle class of citizens, sufficiently numerous for stability, without admitting the populace; and such appears to have been the constitution which actually prevailed for a short time at Athens—the rule of the five thousand—characterised by Thucydides as the best government of Athens which he had known. It may however be doubted how far, either in a Greek or modern state, such a limitation is practicable or desirable; for those who are left outside the pale will always be dangerous to those who are within, and the leaven of the mob can hardly affect the representation of a great country. There is reason for the argument in favour of a property qualification; there is reason also in the arguments of those who would include all and so exhaust the political situation.

The true answer to the question is relative to the circumstances of nations. How can we get the greatest intelligence combined with the greatest power? The ancient legislator would have found this question more easy than we do. For he would have required that all persons who had a share of government should have received their education from the state and have borne her burdens, and should have served in her fleets and armies. But though we sometimes hear the cry that we must educate the masses, for they are our masters, who would listen to a proposal that the franchise should be confined to the educated or to those who fulfil political duties? Then again, we know that the masses are not our masters, and that they are more likely to become so if we educate them. In modern politics so many interests have to be consulted that we are compelled to do, not what is best, but what is possible.

d. Law is the first principle of society, but it cannot supply all the wants of society, and may easily cause more evils than it cures. Plato is aware of the imperfection of law in failing to meet the varieties of circumstances: he is also aware that human life would be intolerable if every detail of it were placed under legal regulation. It may be a great evil that physicians should kill their patients or captains cast away their ships, but it would be a far greater evil if each particular in the practice of medicine or seamanship were regulated by law. Much has been said in modern times about the duty of leaving men to themselves, which is supposed to be the best way of taking care of them. The question is often asked, What are the limits of legislation in relation to morals? And the answer is to the same effect, That morals must take care of themselves. There is a one-sided truth in these answers, if they are regarded as condemnations of the interference with commerce in the last century or of clerical inquisition in the middle ages. But *laissez faire* is not the best but only the second best. What the best is, Plato does not attempt to determine; he only contrasts the imperfection of law with the wisdom of the perfect ruler.

Laws should be just, but they must also be certain, and we are obliged to sacrifice something of their justice to their certainty. Suppose a wise and good judge, who paying little or no regard to the law, attempted to decide with perfect justice the cases that were brought before him. To the uneducated person he would appear to be the ideal of a judge. Such justice has been often exercised in primitive times, or at the present day among eastern rulers. But in the first place it depends entirely on the personal character of the judge. He may be honest, but there is no check upon his dishonesty, and his opinion can only be overruled, not by any principle of law, but by the opinion of another judging like himself without law. In the second place, even if he be ever so honest, his mode of deciding questions would introduce an element of uncertainty into human life; no one would know beforehand what would happen to him, or would seek to conform in his conduct to any rule of law. For the compact which the law makes with men, that they shall be protected if they observe the law in their dealings with one another, would have to be substituted another principle of a more general character, that they shall be protected by the law if they act rightly in their dealings with one another. The complexity of human actions and also the

uncertainty of their effects would be increased tenfold. For one of the principal advantages of law is not merely that it enforces honesty, but that it makes men act in the same way, and requires them to produce the same evidence of their acts. Too many laws may be the sign of a corrupt and overcivilised state of society, too few are the sign of an uncivilised one: as soon as commerce begins to grow men make themselves customs which have the validity of laws. Even equity, which is the exception to the law, conforms to fixed rules and lies for the most part within the limits of previous decisions.

IV. The bitterness of the *Politicus* is characteristic of Plato's later style, in which the thoughts of youth and love have fled away, and we are no longer attended by the Muses or the Graces. We do not venture to say that Plato was soured by old age, but certainly the kindness and courtesy of the older dialogues have disappeared. He sees the world under a harder and grimmer aspect: he is dealing with the reality of things, not with visions or pictures of them: he is seeking by the aid of dialectic only, to arrive at truth: he is deeply impressed with the importance of classification. In this alone he finds the true measure of human things; and very often in the process of division curious results are obtained. For the dialectical art is no respecter of persons: king and vermin-taker are all alike to the philosopher. There may have been a time when the king was a god, but he now is pretty much on a level with his subjects in breeding and education. Man should be well advised that he is only one of the animals, and the Hellene in particular should be aware that he himself was the author of the distinction between Hellene and Barbarian, and that the Phrygian would equally divide mankind into Phrygians and Barbarians, and that some intelligent animal, like a crane, might go a step further, and divide the animal world into cranes and all other animals. Plato cannot help laughing (cp. *Theæt.* 174) when he thinks of the king running after his subjects, like the pig-driver or the bird-taker. He would seriously have him consider how many competitors there are to his throne, chiefly among the class of serving-men. A good deal of meaning is lurking in the expression—'There is no art of feeding mankind worthy the name.' There is a similar depth in the remark,—'The wonder about states is not that they are short-lived, but that they last so long in spite of the badness of their rulers.' *Univ Calif - Digitized by Microsoft®*

V. There is also a paradoxical element in the Statesman which delights in reversing the accustomed use of words. The law which to the Greek was the highest object of reverence is an ignorant and brutal tyrant—the tyrant is converted into a beneficent king. The sophist too is no longer as in the earlier dialogues, the rival of the statesman, but assumes his form. Plato sees that the ideal of the state in his own day is more and more severed from the actual. From such ideals as he had once formed, he turns away to contemplate the decline of the Greek cities which were far worse now in his old age than they had been in his youth, and were to become worse and worse in the ages which followed. He cannot contain his disgust at the contemporary statesmen, sophists who had turned politicians, in various forms of men and animals appearing, some like lions and centaurs, others like satyrs and monkeys. In this new disguise the Sophists make their last appearance on the scene: in the *Laws* Plato appears to have forgotten them, or at any rate makes only a slight allusion to them in a single passage (*Laws* x, 908 D).

VI. The *Politicus* is naturally connected with the *Sophist*. At first sight we are surprised to find that the Eleatic stranger discourses to us, not only concerning the nature of being and not-being, but concerning the king and statesman. We perceive, however, that there is no inappropriateness in his maintaining the character of chief speaker, when we remember the close connection which is assumed by Plato to exist between politics and dialectic. In both dialogues the Proteus Sophist is exhibited, first, in the disguise of an Eristic, secondly, of a false statesman. There are several lesser features which the two dialogues have in common. The styles and the situations of the speakers are very similar; there is the same love of division, and in both of them the mind of the writer is greatly occupied about method; to which he had probably intended to return in the projected 'Philosopher.'

The *Politicus* stands midway between the *Republic* and the *Laws*, and is also related to the *Timæus*. The mythical or cosmical element reminds us of the *Timæus*, the ideal of the *Republic*. A previous chaos in which the elements as yet were not, is hinted at both in the *Timæus* and *Politicus*. The same ingenious arts of giving verisimilitude to a fiction are practised in both dialogues, and in both, as well as in the myth at the end of the *Republic*, Plato touches on

the subject of necessity and free-will. The words in which he describes the miseries of states seem to be an amplification of the 'cities will never cease from ill' of the Republic. The point of view in both is the same; and the differences not really important, e. g. in the myth, or in the account of the different kinds of states. But the treatment of the subject in the Politicus is fragmentary, and the shorter and later work, as might be expected, is less finished, and less worked out in detail. The idea of measure and the arrangement of the sciences, supply connecting links both with the Republic and the Philebus.

More than any of the preceding dialogues, the Politicus seems to approximate in thought and language to the Laws. There is the same decline and tendency to monotony in style, the same self-consciousness, awkwardness, and over-civility, 286 B, 293 A, 263 B, 265 B, 277 A, B, 283 C, 286 B; and in the Laws is contained the pattern of that second best form of government, which, after all, is admitted to be the only attainable one in this world. The 'gentle violence,' the marriage of dissimilar natures, the figure of the warp and the woof, are also found in the Laws. Both expressly recognise the conception of a first or ideal state, which has receded into an invisible heaven. Nor does the account of the origin and growth of society really differ in them, if we make allowance for the mythic character of the narrative in the Politicus. The virtuous tyrant is common to both of them; and the Eleatic Stranger takes up a position similar to that of the Athenian Stranger in the Laws.

VII. There would have been little disposition to doubt the genuineness of the Sophist and Politicus, if they had been compared with the Laws rather than with the Republic, and the Laws had been received, as they ought to be, on the authority of Aristotle, as an undoubted work of Plato. The detailed consideration of the genuineness and order of the Platonic dialogues has been reserved for another place: a few of the reasons for defending the Sophist and Politicus may be here given.

1. The excellence, importance, and metaphysical originality of the two dialogues: no works at once so good and of such length, are known to have proceeded from the hands of a forger.

2. The resemblances in them to other dialogues of Plato are such as might be expected to be found in works of the same author, and not in those of an imitator; being too subtle and minute to have been invented by another. The similar passages and turns of thought are generally

inferior to the parallel passages in his earlier writings; and we might *à priori* have expected that, if altered, they would have been improved. But the comparison of the Laws proves that this repetition of his own thoughts and words in an inferior form, is characteristic of Plato's later style.

3. The close connection of them with the Theaetetus, Parmenides, and Philebus, involves the fate of these dialogues, as well as of the two suspected ones.

4. The suspicion of them seems mainly to rest on a presumption that in Plato's writings we may expect to find an uniform type of doctrine and opinion. But however we arrange the order, or narrow the circle of the dialogues, we must admit that they exhibit a growth and progress in the mind of Plato. And the appearance of change or progress is not to be regarded as impugning the genuineness of any particular writings, but may be even an argument in their favour. If we suppose the Sophist and Politicus to stand halfway between the Republic and the Laws, and in near connection with the Theaetetus, the Parmenides, the Philebus, the arguments against them derived from differences of thought and style disappear or may be said without paradox in some degree to confirm their genuineness. There is no such interval between the Republic or Phaedrus and the two suspected dialogues, as that which separates all the earlier writings of Plato from the Laws. And the Theaetetus, Parmenides, and Philebus, supply links, by which, however different from them, they may be reunited with the great body of the Platonic writings.

S T A T E S M A N .

PERSONS OF THE DIALOGUE.

THEODORUS.
SOCRATES.

THE ELEATIC STRANGER.
YOUNG SOCRATES.

Steph. *Socrates.* I OWE you many thanks, indeed, Theodorus, for the
257 acquaintance both of Theaetetus and of the Stranger.

Theodorus. And in a little while, Socrates, you will owe me three times as many; when they have completed for you the delineation of the Statesman and of the Philosopher, as well as of the Sophist.

Soc. Sophist, statesman, philosopher! O, my dear Theodorus, do my ears truly witness that this is the estimate formed of them by the great calculator and geometrician?

Theod. What do you mean, Socrates?

Soc. I mean that you rate them all at the same value, whereas they are really separated by an interval, which no geometrical ratio can express.

Theod. By Ammon, the god of Cyrene, Socrates, that is a very fair hit; and shows that you have not forgotten your geometry. I will retaliate on you at some other time, but I must now ask the Stranger, who will not, I hope, tire of his goodness to us, to proceed either with the Statesman or with the Philosopher, whichever he prefers.

Stranger. That is my duty, Theodorus; having begun I must go on, and not leave the work unfinished. But what shall be done with Theaetetus?

Theod. In what respect do you mean?

Str. Shall we relieve him, and take his companion, the Young Socrates, instead of him? What do you advise?
Digitized by Google

Theod. Let the other be taken instead of him, as you propose. The young always do better when they have intervals of rest.

Soc. I think, Stranger, that both of them may be said to be in some way related to me; for the one bears my name and style, and the other, as you affirm, has the cut of my ugly face. ²⁵⁸ (Cp. Theaet. 143 E.) And we should be always ready to acknowledge relations by holding discourse with them. I myself was discoursing with Theaetetus yesterday, and I have just been listening to his answers; my namesake I have not yet examined, but I must. Another time will do for me; to-day let him answer you.

Str. Very good. Young Socrates, do you hear what the elder Socrates is proposing?

Young Socrates. I do.

Str. And do you agree?

Y. Soc. Certainly.

Str. As you do not object, still less can I. After the Sophist, then, I think that the Statesman naturally follows next in the order of enquiry. And please to say, Whether he, too, should be ranked among those who have science?

Y. Soc. Yes.

Str. Then the sciences must be divided as before?

Y. Soc. I dare say.

Str. But yet the division would not be the same?

Y. Soc. How then?

Str. They will be divided at some other point.

Y. Soc. Yes.

Str. Where shall we discover the path of the Statesman? We must find and separate off, and set a seal upon this, and we will set the mark of another class upon all diverging paths. Thus the soul will conceive of all kinds of knowledge under two classes.

Y. Soc. To find the path is your business, Stranger, and not mine.

Str. Yes, Socrates, but the discovery, when once made, will belong to both of us.

Y. Soc. Very good.

Str. Well, and are not arithmetic and certain other kindred arts, merely abstract knowledge, wholly separated from action?

Y. Soc. That is true.

Str. But the knowledge of which the art of carpentering, or the other handicraft arts are possessed, seems to reside in the operation; they know and bring into existence simultaneously the bodies which are produced by them.

Y. Soc. Certainly.

Str. Then let us divide sciences in general into those which are practical and those which are purely intellectual.

Y. Soc. Let us suppose these to be the two principal divisions of the whole of science, which is one.

Str. And is he whom we variously term 'statesman,' 'king,' 'master,' or 'householder,' one and the same; or are there so many different sciences or arts which correspond to these names? Or rather, allow me to put the matter in another way.

259 *Y. Soc.* Let me hear.

Str. If any one who is in a private station has the skill to advise one of the public physicians, must not he also be called a physician?

Y. Soc. Yes.

Str. And if any one who is in a private station has the art to advise the ruler of a country, must not he be said to have the knowledge which the ruler ought to have?

Y. Soc. True.

Str. But surely the science of a true king is royal science?

Y. Soc. Yes.

Str. And will not he who possesses this knowledge, whether he happens to be a ruler or a private man, when regarded only in reference to his art, be truly called 'royal'?

Y. Soc. He certainly ought to be.

Str. And the householder and master are the same?

Y. Soc. Of course.

Str. Again, a large household may be compared to a small state:—will they differ at all, as far as government is concerned?

Y. Soc. They will not.

Str. Then, returning to the point which we were just now discussing, do we not clearly see that there will be one science of all of them; and this science may be either royal or political or economical; we will not quarrel with any one about the name.

Y. Soc. Certainly not.

Str. This, too, is evident, that the king cannot do much with his hands, or with his whole body, towards the maintenance of his empire, compared with what he does by the intelligence and strength of his soul.

Y. Soc. That is evident.

Str. Then, shall we say that the king has a greater affinity to knowledge than to manual arts or to practical life in general?

Y. Soc. Certainly he has.

Str. Then we may put all together as one and the same—statesmanship and the statesman—kingship and the king.

Y. Soc. Clearly.

Str. And now we shall only be proceeding in due order, if we divide the sphere of knowledge?

Y. Soc. Very good.

Str. Think whether you can find any joint or parting in knowledge?

Y. Soc. Tell me of what sort.

Str. Such as this ;—you may remember that we made an art of calculation?

Y. Soc. Yes.

Str. Which was, unmistakeably, one of the arts of knowledge?

Y. Soc. Certainly.

Str. And which knew the difference of numbers, and would form a judgment on them, and had no other function?

Y. Soc. Very true.

Str. Just as the architect does not work himself, but is the ruler of workmen?

Y. Soc. Yes.

Str. He contributes knowledge, but not manual labour?

Y. Soc. True.

Str. And may therefore be justly said to share in theoretical science? 260

Y. Soc. Quite true.

Str. But he ought not, when he has formed a judgment, to regard his functions as at an end, like the calculator ;—he must assign to the individual workmen their appropriate task until they have completed their work?

Y. Soc. True.

Str. Does not this class of sciences, as well as arithmetic and the other kindred arts, belong to pure knowledge; and is not the difference between them, that the one sort has the power of judging only, and the other of ruling as well?

Y. Soc. That is evident.

Str. May we not truly say, that of all knowledge, there are two divisions—one which rules, and the other which judges?

Y. Soc. That is my view.

Str. And surely, when men have anything to do in common, that they should be of one mind is a pleasant thing?

Y. Soc. Very true.

Str. Then while we ourselves are of one mind, we need not mind about the views of others?

Y. Soc. Certainly not.

Str. And now, in which of these divisions shall we place the king?—Is he a judge and spectator? Or shall we assign to him the art of rule or command—for he is assuredly a ruler?

Y. Soc. The latter, clearly.

Str. Then we must see whether there is any mark of division in the art of command. I am inclined to think that there is a division similar to that of manufacturer and retail dealer, which distinguishes the king from the herald.

Y. Soc. How is that?

Str. Why, does not the retailer receive and sell over again the productions of others, which have been sold before?

Y. Soc. Certainly he does.

Str. And is not the herald under command, and does he not receive orders, and in his turn order others?

Y. Soc. Very true.

Str. Then shall we mingle the kingly art in the same class with the art of the herald, the interpreter, the boatswain, the prophet, and the numerous other arts which exercise command; or, as in the preceding comparison we spoke of manufacturers, or sellers for themselves and retailers,—seeing, too, that the class of supreme rulers, or rulers for themselves, is almost nameless—shall we make a word following the same analogy, and refer kings to a supreme or ruling-for-self science, leaving the rest to receive a name from some one else? For we are seeking

the ruler ; and our enquiry is not concerned with him who is not a ruler.

Y. Soc. Very good.

Str. Thus a very fair distinction has been attained between 261 the man who gives his own commands, and him who gives another's ; and now let us see if the supreme power will allow of any further division.

Y. Soc. By all means.

Str. I think that there may be ; and please to assist me in making the division.

Y. Soc. At what point ?

Str. May not all rulers be supposed to command for the sake of producing something ?

Y. Soc. Certainly.

Str. Nor is there any difficulty in dividing articles of production into two classes.

Y. Soc. How would you divide them ?

Str. Of the whole class, some have life and some are without life.

Y. Soc. True.

Str. And by the help of these differences there may be a subdivision, if we please, of the section of knowledge which commands.

Y. Soc. How is that ?

Str. There may be a division into command of the production of lifeless and of living objects ; and in this way the whole will be divided.

Y. Soc. Certainly.

Str. That division, then, is complete ; and now we may leave one half, and take up the other ; which may also be exhaustively divided.

Y. Soc. What half do you mean ?

Str. Of course that which exercises command about animals. For, surely, the royal science is not like that of a master-workman, a science presiding over lifeless objects ;—the king has a nobler function, which is the management and control of living beings.

Y. Soc. True.

Str. And the breeding and tending of living beings may be

observed to be sometimes a tending of the individual ; in other cases, a common care of creatures in flocks ?

Y. Soc. True.

Str. But the statesman is not a tender of individuals—not like the driver or groom of a single ox or horse ; he is rather to be compared with the keeper of a drove of horses or oxen.

Y. Soc. That seems to be a true remark.

Str. Shall we call this art of tending many animals together, the art of managing a herd, or the art of collective management ?

Y. Soc. No matter ;—whichever may happen to occur to us in the course of conversation.

Str. Very good, Socrates ; and, if you continue to be not too particular about names, you will be all the richer in wisdom when you are an old man. And now, as you say, without further discussion of the name, can you see a way in which a
262 person, by showing the art of herding to be of two kinds, may cause that which is now sought amongst twice the number of things, to be then sought amongst half that number ?

Y. Soc. I will try ;—there appears to me to be one management of men and another of beasts.

Str. You have certainly divided them in a most straightforward and manly style ; but you have fallen into an error which hereafter, I think that we had better avoid.

Y. Soc. What is the error ?

Str. I think that we had better not cut off a small portion which is not a species, from many larger portions ; the part should be a species. To separate off at once the subject of investigation, is a most excellent plan, if only the separation be rightly made ; and you were under the impression that you were right, because you saw that you would come to man ; and this led you to hasten the steps. But you should not chip off too small a piece, my friend ; the safer way is to cut through the middle ; which is also the more likely way of finding classes. Attention to this principle makes all the difference in a process of enquiry.

Y. Soc. What do you mean, Stranger ?

Str. I will endeavour to speak more plainly out of love to your good parts, Socrates ; and, although I cannot at present entirely explain myself, I will try, as we proceed, to be a little clearer.

Y. Soc. What was the error of which, as you say, we were guilty in our division ?

Str. The error was just as if some one who wanted to divide the human race, were to divide them after the fashion which prevails in this part of the world ; here they cut off the Hellenes as one species, and all the other species of mankind, which are innumerable, and have no connection or common language, they include under the single name of 'barbarians,' and because they have one name they are supposed to be of one species also. Or suppose that in dividing numbers you were to cut off ten thousand from all the rest, and make of them one species, comprehending the rest under another separate name, you might say that here too was a single class, because you had given it a single name. Whereas you would make a much better and more equal and artistic classification of numbers, if you divided them into odd and even ; or of the human species, if you divided them into male and female ; and only separated off Lydians or Phrygians, or any other tribe, and arrayed them against the rest of the world, when you could no longer make a division into parts which were also classes.

263

Y. Soc. Very true ; but I wish that this distinction between a part and a class could still be made somewhat plainer.

Str. O Socrates, best of men, that is not an easy task which you impose. We have already digressed further from our original intention than we ought, and you would have us wander still further away. But we must now return to our subject ; and hereafter, when there is a leisure hour, we will follow up the other track ; at the same time, I wish you to guard against imagining that you ever heard me declare—

Y. Soc. What ?

Str. That a class and a part are distinct.

Y. Soc. What did I hear, then ?

Str. That a class is necessarily a part, but there is no similar necessity that a part should be a class ; that is the sense which I should always wish you to attribute to my words, Socrates.

Y. Soc. Good.

Str. There is another thing which I should like to know.

Y. Soc. What is it ?

Str. The point at which we digressed ; for, if I am not mistaken, the exact place was at the question, Where you would divide the management of herds, to which you appeared rather too ready to answer that there were two species of animals ; man being one, and all other animals making up the other.

Y. Soc. True.

Str. I thought that in taking away a part, you imagined that the remainder equally formed a part, because you were able to call them by the common name of brutes.

Y. Soc. That is also quite true.

Str. Suppose now, O most courageous of dialecticians, that some wise and understanding creature, such as a crane is reputed to be, were, in imitation of you, to make a similar division, and set up cranes against all other animals to their own special glorification, at the same time jumbling together all the others, including man, under the appellation of brutes,—here would be the sort of error which we must try to avoid.

Y. Soc. How can we be safe ?

Str. If we do not divide the whole class of animals, we shall be less likely to fall into that error.

Y. Soc. We had better not take the whole ?

Str. Yes, there lay the source of our error in a former division.

Y. Soc. Of what error ?

Str. You remember how that part of the art of knowledge which was concerned with command, had to do with the rearing of live stock,—I mean, with animals in herds ?

Y. Soc. Yes.

264 *Str.* In that case, there was already implied a division of all animals into tame and wild ; those whose nature could be tamed were called tame, and those which could not be tamed were called wild.

Y. Soc. True.

Str. And the political science of which we are in search, is and ever was concerned with tame animals, and is also confined to gregarious animals.

Y. Soc. Yes.

Str. But then we ought not to divide, as we did, taking the whole class at once. Neither let us be in too great haste to

arrive quickly at the political science; for this mistake has already brought upon us the misfortune of which the proverb speaks.

Y. Soc. What misfortune?

Str. The misfortune of too much haste, which is too little speed.

Y. Soc. And all the better, Stranger.

Str. Very well: But let us begin again, and endeavour to divide the collective rearing of animals; for, probably, if the argument proceeds by regular steps, your object will be better accomplished than by hasty anticipation. Tell me, then—

Y. Soc. What?

Str. Did you ever hear, as you very likely may—for I do not suppose that you ever actually visited them—of the preserves of fishes in the Nile, and in the ponds of the great king, or you may have seen similar preserves in wells at home?

Y. Soc. Yes, to be sure, I have seen them, and I have often heard the others described.

Str. And you may have heard also, and are assured by report, although you have not been in those regions, of the nurseries of geese and cranes which exist in the plains of Thessaly?

Y. Soc. Certainly.

Str. I asked you, because here is a new division of the management of herds, into the management of land and of water herds.

Y. Soc. There is.

Str. And do you agree that we ought to divide the collective rearing of herds into two corresponding parts, the one the rearing of the watery, and the other of the land herds?

Y. Soc. I do.

Str. There is surely no need to ask which of these two contains the royal art, for it is evident to everybody.

Y. Soc. Certainly.

Str. Any one can divide the herds which feed on dry land?

Y. Soc. How would you divide them?

Str. I should distinguish between flying and walking.

Y. Soc. Most true.

Str. And where shall we look for the political animal? Might not an idiot know that he is a pedestrian?

Y. Soc. Certainly.

Str. The art of managing the walking animal has to be further divided, just as you might halve an even number.

Y. Soc. That is true.

265 *Str.* Let me note that here appear in view two ways to that part or class to which the argument is going,—the one a speedier way, which cuts off a small portion from a large; the other, which agrees better with the principle which we were laying down, is the way of dividing in the middle; but this is longer. We can take either of them, whichever we please.

Y. Soc. Cannot we have both ways?

Str. Together? What a thing to ask! but, if you take them in turn, you clearly may.

Y. Soc. Then I should like to take them in turn.

Str. There will be no difficulty, as we are near the end; if we had been at the beginning, or in the middle, I should have demurred to your request; but now, in accordance with your desire, let us begin with the longer way; while we are fresh, we shall get on better. And now attend to the division.

Y. Soc. Let me hear.

Str. The tame walking herding animals are distributed by nature into two classes.

Y. Soc. Upon what principle?

Str. The one grows horns; and the other is without horns.

Y. Soc. Clearly.

Str. Suppose that you divide the science which manages pedestrian animals into two corresponding parts, and define them; for if you wish to name them, the complexity will be too great.

Y. Soc. How must I speak of them, then?

Str. In this way: let the science of rearing pedestrian animals be divided into two parts, and one part assigned to the horned class, and the other to the class that has no horns.

Y. Soc. All this has been abundantly proved, and may therefore be assumed.

Str. The king is clearly the shepherd of the polled herd, who have no horns.

Y. Soc. That is evident.

Str. Shall we break up this hornless herd into sections, and see which falls to the king?

Y. Soc. By all means.

Str. Shall we distinguish them by their having or not having cloven feet, or by their mixing or not mixing the breed? You know what I mean.

Y. Soc. What?

Str. I mean that the nature of horses and asses is to breed from one another.

Y. Soc. Yes.

Str. But the remainder of the hornless herd of tame animals will not mix the breed.

Y. Soc. Very true.

Str. And of which has the Statesman charge, of the mixed or of the unmixed?

Y. Soc. Clearly of the unmixed.

Str. I suppose that we must divide this again as before.

Y. Soc. We must.

Str. And now every tame and herding animal has been ²⁶⁶ divided into portions, with the exception of two species; for I hardly think that dogs ought to be reckoned among herding animals.

Y. Soc. Certainly not; but how shall we divide the two remaining species?

Str. There is a measure of difference which may be appropriately employed by you and Theaetetus, who are geometers.

Y. Soc. What is that?

Str. The diameter; and, again, the diameter of a diameter.

Y. Soc. What do you mean?

Str. How does man walk, but as a diameter whose power is two feet ¹?

Y. Soc. Just so.

Str. And the power of the remaining kind, being the power of twice two feet, may be said to be the diameter of our diameter ².

Y. Soc. Certainly; and now I think that I pretty nearly understand you.

Str. I descry, Socrates, another famous jest in these divisions.

¹ The diameter of one foot square = $\sqrt{2}$ square feet.

² The diameter of two square feet = the root or side of four square feet.

Y. Soc. What is it?

Str. Human beings have come out in the same class with the freest and airiest of creation, and are running a race with them.

Y. Soc. I remark that very singular result.

Str. And would you not expect that, being the slowest, they will arrive last?

Y. Soc. Indeed I should.

Str. And there is a still more ridiculous consequence, that the king is running about with the herd, and in unequal race with the bird-taker, who of all mankind is most of an adept at the airy life¹.

Y. Soc. Certainly.

Str. Then here, Socrates, is still clearer evidence of the truth of what was said in the discussion about the Sophist.

Y. Soc. What?

Str. That the dialectical method is no respecter of persons, and cares not for great or small, but always arrives in her own way at the truest result.

Y. Soc. Clearly.

Str. And now, I will not wait for you to ask me, but will of my own accord take you by the shorter road to the definition of a king.

Y. Soc. By all means.

Str. I say that we should have begun at first by dividing land animals into biped and quadruped, and as the winged herd, and that alone, comes out in the same class with man, we should divide bipeds into those which have wings and have no wings, and when that is divided, and the art of the management of mankind is brought to light, the time will have come to produce our Statesman and ruler, and place him as charioteer in the State, and hand over to him the reins, for that is his proper science and vocation.

267 *Y. Soc.* Very good; you have paid me the debt; I mean, that you have completed the argument, and I suppose that you added the digression by way of interest.

¹ Plato is not introducing a new class, but only making a reflection on the two kinds of bipeds. Others refer the passage to pigs and a pig-driver. According to this explanation we must translate the words above, 'freest and airiest of creation,' 'worthiest and laziest of creation.'

Str. Then now, let us go back to the beginning, and join the links, which together make the definition of the name of the Statesman's art.

Y. Soc. By all means.

Str. The science of pure knowledge originally had a part which was the science of rule or command, and from this was derived another part, which was called that of command for self, and illustrated by the analogy of wholesale dealing; an important section of this was the management of living animals, and this again was further limited by the management of them in herds, and again in herds of pedestrian animals,—of pedestrian animals who are without horns; here, again, was an important line of demarcation. He who desires to comprehend the right-hand section of this latter class under a single name, must make three folds; he will speak of a science of (1) the shepherding, (2) of animals, (3) who do not mix the breed. The only further sub-division is the art of man-herding,—this has to do with bipeds, and is what we were seeking after, and have now found, being at once the royal and political.

Y. Soc. To be sure we have.

Str. And do you think, Socrates, that we really have found, as you say, the desired end?

Y. Soc. What is the end?

Str. Do you think, I mean, that we have really fulfilled our intention?—There has been a sort of discussion, and yet the investigation seems to me not to be perfectly worked out.

Y. Soc. I do not understand.

Str. I will try to make the thought which is at this moment present in my mind, clearer to us both.

Y. Soc. Let me hear.

Str. There were many arts of shepherding, and one of them was the political, which had the charge of one particular herd?

Y. Soc. There were.

Str. And this the argument defined to be the art of rearing not horses or other animals, but the art of rearing man collectively?

Y. Soc. True.

Str. Note, however, a difference which distinguishes the king from all other shepherds.

Y. Soc. To what do you refer?

Str. I want to ask, whether any of the other herdsmen has a rival who assumes that he is joint-manager of the herd¹?

Y. Soc. What do you mean?

Str. I mean to say that merchants, husbandmen, providers of food, and also training-masters and physicians, will all contend with the herdsmen of humanity, whom we call Statesmen, declaring that they themselves have the care of rearing or
268 managing mankind, and that they rear not only the common herd, but also the rulers themselves.

Y. Soc. Is there not truth in that?

Str. Very likely there may be, and we will consider their claim. But I mean to say that no one will raise a similar claim as against the shepherd, who is allowed on all hands to be the sole and only feeder and physician of his flock; he is also their match-maker and accoucheur; no one else knows that department of science. And he is their merry-maker and musician, and no one can console and soothe his own flock better than he can, either with the tones of his voice or with instruments, as far as their nature is susceptible of such influences. And the same may be said of herdsmen in general.

Y. Soc. Very true.

Str. But if this is true, can our argument about the king be true and unimpeachable? Were we right in selecting him out of ten thousand other claimants to be the shepherd and rearer of the human flock?

Y. Soc. Surely not.

Str. And if not, have we not reason to apprehend, that although we may have described a sort of royal form, we have not as yet accurately worked out the true image of the Statesman? and that we cannot reveal him as he truly is in his own nature, until we have disengaged and separated him from those who hang about him and claim to share in his prerogatives?

Y. Soc. Very true.

Str. And that, Socrates, is what we must do, if we mean not to bring dishonour on the argument.

Y. Soc. We must certainly keep up the credit of the argument.

Str. Then let us make a new beginning, and travel by a different road.

Y. Soc. What road?

Str. I think that we may have a little amusement; there is a famous tale, of which a good portion may with advantage be interwoven, and then we may resume our series of divisions, and proceed in the old path until we arrive at the summit or desired end. Shall we do as I say?

Y. Soc. By all means.

Str. Listen, then, to a tale which a child would love to hear, and you are not too old to be amused as a child.

Y. Soc. Let me hear.

Str. There did really happen, and will again happen, like many other events of which ancient tradition has preserved the record, the portent which is traditionally said to have occurred in the quarrel of Atreus and Thyestes. You remember what that was?

Y. Soc. I suppose you to mean the token of the birth of the golden lamb?

Str. No, not that; but another part of the story, which tells ²⁶⁹ how the sun and the stars rose in the west, and set in the east, and that the god reversed their motion, and gave them that which they have at present as a testimony to the right of Atreus.

Y. Soc. Yes; there is such a legend.

Str. Again, we have been often told of the reign of Cronos.

Y. Soc. Yes, very often.

Str. Did you ever hear that the men of former times were earth-born, and not begotten of one another?

Y. Soc. Yes, that is another old tradition.

Str. All these stories, and ten thousand others which are still more wonderful, have a common origin; many of them have been lost in the lapse of ages, or exist only in fragments; but the origin of them is what no one has told, and may as well be told now; for the tale is suited to throw light on the nature of the king.

Y. Soc. Very good; and I hope that you will give the whole story, and leave out nothing.

Str. Listen, then. There is a time when God goes round with the world, which he himself guides and helps to roll; and there is a time, on the completion of a certain cycle, when he lets go, and the world being a living creature, and having originally received intelligence from its author and creator, turns about and by an inherent necessity revolves in the opposite direction.

Y. Soc. Why is that?

Str. Why, because only the most divine things of all are unchangeable, and body is not included in this class. Heaven and the universe, as we have termed them, although they have been endowed by the Creator with many glories, partake of a bodily nature, and therefore cannot be entirely free from perturbations. But the heavenly motion is, as far as possible, single and in the same place, and in relation to the same; and is therefore only subject to a reversal, which is the least alteration possible. For the lord of all moving things is alone able to move of himself; and to think that he can go at one time in one direction and at another time in another, is unlawful. Hence we must not say that the world is either self-moved always, or all made to go round by God in two opposite courses; 270 or that two Gods, having opposite purposes make it move round. But as I have already said (and this is the only remaining alternative) the world is governed by an accompanying divine power and receives life and immortality by the appointment of the Creator, and then, when let go again, moves spontaneously, being let go at such a time as to have, during infinite cycles of years, a reverse movement: this is due to exquisite perfection of balance, and the size of the universe; which is the greatest of bodies, and turns on the smallest pivot.

Y. Soc. Your account of the world seems to be very reasonable indeed.

Str. Let us now reflect upon what has been said, and try to comprehend the nature of this great mythological wonder, which has been called by us, and assuredly is, the cause of the other wonders.

Y. Soc. To what are you referring?

Str. To the reversal which takes place from time to time of the motion of the universe.

Y. Soc. How is that the cause of the others?

Str. Of all changes of the heavenly motions, this is the greatest and mightiest.

Y. Soc. I should imagine so.

Str. And may be supposed to result in the greatest changes to the human beings who are the inhabitants of the world at the time.

Y. Soc. Such changes would naturally occur.

Str. And animals, as we know, are seriously affected by great changes of many different kinds happening together.

Y. Soc. Very true.

Str. Hence there necessarily occurs a great destruction of them, which extends also to the life of man; few survivors of the race are left, and those who remain become the subjects of several novel and remarkable phenomena, and of one in particular, which was simultaneous with the revulsion, and took place at the time when the transition was made to the cycle opposite to that in which we live.

Y. Soc. What was it?

Str. The life of all animals first came to a stand, and the mortal nature ceased to be or look older, and was then reversed and grew young and delicate; the white locks of the aged darkened again, and the cheeks of the bearded man became smooth, and he was restored to his original youth; the bodies of the young grew finer and smaller, continually by day and night returning and becoming assimilated to the nature of a newly-born child in mind as well as body; in the succeeding stage they wasted away and wholly disappeared. And the bodies of those who had died by violence quickly passed through the like changes, and in a few days were no more seen.

Y. Soc. Then how, Stranger, were the animals created in those 271 days; and in what way were they begotten of one another?

Str. It is evident, Socrates, that there was no such thing in the then order of nature as the procreation of animals from one another; what we have heard of as the earth-born race was the one which existed in that second cycle—they sprang out of the ground in which they were sown; and of this tradition, which is now-a-days often unduly discredited, our ancestors, who came into being immediately after the end of the last period and at

the beginning of this, are the heralds to us. For mark how consistent the sequel of the tale is; after the return of age to youth, follows the return of the dead, who are lying in the earth, to life; the wheel of their existence has been turned back, and they come together and rise and live in the opposite order, unless God has carried any of them away to some other lot. Such is the tradition of the so-called earth-born men, and so, of necessity they came into being.

Y. Soc. Certainly that is quite consistent with what has preceded; but let me interrupt you to ask whether the life which you said existed in the reign of Cronos was in that cycle of the world, or in this? For the change in the course of the stars and the sun must have occurred in both.

Str. I see that you enter into my meaning;—no, that blessed and spontaneous life does not belong to the present cycle of the world, but to the previous one, in which God superintended the whole revolution of the universe; and the several parts of the universe were distributed under the rule of certain inferior deities, which is the way in some places still. There were demigods, who were the shepherds of the various species and herds of animals, and each one was in all respects sufficient for those of whom he was the shepherd; neither was there any violence, or devouring of one another, or war or quarrel among them; and I might tell of ten thousand other blessings, which belonged to that dispensation. The reason why the life of which the tradition speaks was spontaneous, is as follows: In those days God himself was their shepherd, and ruled over them, just as man, who is by comparison a divine being, still rules over the animals. Under him there were no governments or separate
 272 possessions of women and children. For all men rose again from the earth, having no memory of any past events; and they had no property or families, but the earth gave them abundance of fruits, which grew on trees and shrubs unbidden, and were not planted by the hand of man. And they dwelt naked, and mostly in the open air, for the temperature of their seasons was mild; and they had no beds, but lay on soft couches of grass, which grew plentifully out of the earth. Such was the life of man in the days of Cronos, Socrates; the character of our present life, which is said to be under Zeus, you know from your

own experience. Can you, and will you, determine which 'of them you deem the happier?

Y. Soc. I cannot.

Str. Then shall I determine for you as well as I can?

Y. Soc. By all means.

Str. Suppose that the children of Cronos, having this boundless leisure, and the power of holding intercourse, not only with men but with the animal creation, had used all these advantages with a view to philosophy, conversing with the animals as well as with one another, and learning of every nature which was gifted with any special power, and was able to contribute some special experience to the store of wisdom, there would be no difficulty in deciding that they would be a thousand times happier than the men of our own day. Or, again, if they had merely eaten and drunk until they were full, and told stories to one another and to the animals—such stories as are now told of them—in this case also, as I should imagine, the answer would be easy. But as there is no satisfactory reporter of the desires and thoughts of those times, I think that we must leave the question unanswered, and go at once to the reason why we have unearthed this tale, and then we will proceed on our journey. In the fulness of time, when the change was to take place, and the earth-born race had all perished, and every soul had fallen into the earth and been sown her appointed number of times, the governor of the universe let the helm go, and retired to his place of view; and then Fate and innate desire reversed the motion of the world. Then also all the inferior deities who share the rule of the supreme power, being informed of what was happening, let go the parts of the world of which they were severally the guardians. And the world turning round with a sudden shock, 273 having received an opposite impulse at both ends, was shaken by a mighty earthquake, producing a new destruction of all manner of animals. After awhile the tumult and confusion and earthquake ceased, and the universal creature, once more at peace, attained to a calm, and settled down into his own orderly and accustomed course, having the charge and rule of himself and of all other creatures, and remembering and executing the instructions of the Father and Creator of the

world, more particularly at first, but afterwards with less exactness. The reason of the falling off was the admixture of matter in the world; this was inherent in the primal nature, which was full of disorder, until attaining to the present cosmos or order. From God, the constructor, the world indeed received every good, but from a previous state came elements of violence and injustice, which, thence derived, first of all passed into the world, and were transmitted to the animals. While the world was producing animals in unison with God, the evil was small, and great the good which worked within, but in the process of separation from him, when the world was let go, at first all proceeded well enough; but, as time went on, there was more and more forgetting, and the old discord again entered in and got the better, and burst forth; and at last small was the good, and great was the admixture of the elements of evil, and there was a danger of universal ruin of the world and the things in the world. Wherefore God, the orderer of all, in his tender care, seeing that the world was in great straits, and fearing that all might be dissolved in the storm, and go to the place of chaos and infinity, again seated himself at the helm; and reversing the elements which had fallen into dissolution and disorder when left to themselves in the previous cycle, he set them in order and restored them, and made the world imperishable and immortal. And this is the whole tale, of which the first part will suffice to illustrate the nature of the king. For when the world returned to the present cycle of generation, the age of man again stood still, and another change was the result. The small creatures which had almost disappeared grew in stature, and the newly-born children of the earth became grey and died and sank into the earth again. All things changed, imitating and following the condition of the universe, and of necessity agreeing with that in their mode of conception and generation and nurture; for no animal was any longer allowed to come into being in the earth through the agency of other creative beings, but as the world was ordained to be the lord of his own progress, in like manner the parts were ordained to grow and generate and give nourishment, as far as they could, of themselves, impelled by a similar movement. And so we have arrived at the real end of this discourse; for although there might be much

to tell of the lower animals, and of the reasons and causes of their changes, about men there is not much, and that little is more to the purpose. Deprived of the care of God, who had possessed and tended them, they were left helpless and defenceless, and were torn in pieces by the wild beasts, who had grown more savage; moreover, in the first ages they carried on the struggle for existence without arts or resources; the food which once grew spontaneously had failed, and they knew not how to procure any more, because no necessity had hitherto compelled them. For all these reasons they were in a great strait; wherefore also the gifts spoken of in the old tradition were imparted to them by the gods, together with the indispensable knowledge and information of their uses; fire was given to them by Prometheus, the arts by Hephaestus and his fellow-worker (Athene), seeds and plants by others. Out of these human life was framed; since the care of the Gods, as I was saying, had now failed men, and they had to order their course of life for themselves, and were their own masters, just like the universal creature whom they imitate and follow, ever living and being born into the world, at one time after this manner, at another time after another manner. Enough of the story, which may be of use in showing us how greatly we erred in the delineation of the king and the statesman in our previous discourse.

Y. Soc. What was this great error of which you speak?

Str. There were two; the first a lesser one, the other was an error on a much larger and grander scale.

Y. Soc. What do you mean?

Str. I mean to say that when we were asked about a king ²⁷⁵ and statesman of the present cycle and generation, we told of a shepherd who belonged to the other cycle, and of one who was a god when he ought to have been a man; and this was a great error. Again, in so far as we declared him to be the ruler of the entire State, without explaining the nature of his rule, this was not the whole truth, nor clearly expressed, but still was true, and therefore the second error was not so great as the first.

Y. Soc. Very good.

Str. Before we can expect to have a perfect description of the statesman we must define the nature of his office.

Y. Soc. Certainly.

Str. And the mythus was introduced in order to show, not only that all others are rivals of the true shepherd who is the object of our search, but in order that we might have a clearer view of him who is alone worthy to receive this appellation, because he alone of shepherds and herdsmen, according to the image which we have employed, has the care of human beings.

Y. Soc. Very true.

Str. And I cannot help thinking, Socrates, that the form of the divine Shepherd is above even that of a king; whereas the statesmen who are now on earth seem to be much more like their subjects in character, and much more nearly to partake of their breeding and education.

Y. Soc. Certainly.

Str. Still they must be investigated all the same, whether, like the divine Shepherd, they are above their subjects or on a level with them.

Y. Soc. Of course.

Str. To resume:—do you remember that we spoke of a supreme art which had the charge of animals, not singly but collectively, which we called the art of the herdsman?

Y. Soc. Yes, I remember.

Str. There, somewhere, lay our error; for we never included or mentioned the Statesman; and we did not observe that he had no place in our nomenclature.

Y. Soc. How was that?

Str. All herdsmen rear their herds, but this is not a suitable term to apply to the Statesman, who should have a more general name.

Y. Soc. True, if there be such a name.

Str. Why, is not care of herds a more general name? For this implies no feeding, or any special duty; if we say either tending the herds, or managing the herds, or having the care of them, that will include all, and then we may wrap up the Statesman with the rest, as the argument seems to require.

276 *Y. Soc.* Quite right; but how shall we take the next step in the division?

Str. As before we divided the art of rearing herds into land and water animals, winged and wingless, mixing or not mixing the breed, horned and hornless, so we may divide by these same

differences the tending of herds, comprehending in one word both the life which now is, and the rule of Cronos.

Y. Soc. That is clear ; but I still ask, what is to follow ?

Str. If the word had been 'managing' herds, instead of feeding or rearing them, no one would have argued that there was no care of them in the case of the politician, although it was justly contended, that there was no human art of feeding them which was worthy of the name, or at least, if there were, many other arts had more right to the name than any king.

Y. Soc. True.

Str. But no other art or science will claim or have a better or greater right than the royal science to care for human society and men in general.

Y. Soc. Quite true.

Str. In the next place, Socrates, we must surely notice that a great error was committed at the end of our analysis.

Y. Soc. What was that ?

Str. Why, supposing there to be such an art as the art of rearing or nourishing bipeds, there was no reason why we should call this the royal or political art, as though there were no more to be said.

Y. Soc. Certainly not.

Str. Our first duty, as we were saying, was to remodel the name, so as to have the notion of care rather than of feeding, and then to divide, for there may be still considerable divisions.

Y. Soc. How can they be made ?

Str. First, by separating the divine shepherd from the human guardian or manager.

Y. Soc. True.

Str. And the art of management which is assigned to man would again have to be subdivided.

Y. Soc. On what principle ?

Str. On the principle of voluntary and compulsory.

Y. Soc. Why ?

Str. Because, if I am not mistaken, there has been an error here ; for our simplicity led us to rank them together, whereas they are utterly different, and their modes of government are different.

Y. Soc. True.

Str. Then, now, as I said, let us make the correction and divide human care into two parts, on the principle of voluntary and compulsory.

Y. Soc. Certainly.

Str. And if we call the management of violent rulers tyranny, and the voluntary management of voluntary bipeds politics, may we not further assert that he who has this latter art of management is the true king and statesman?

277 *Y. Soc.* I think, Stranger, that we have now completed the account of the Statesman.

Str. Would that we had, Socrates, but I have to satisfy myself as well as you; and in my judgment the figure of the king is not yet perfected; like statuaries who, in their too great haste, having overdone the several parts of their work, lose time in correcting them, so too we, partly out of haste, partly out of a magnanimous desire to detect our former error, and also because we imagined that a king required grand illustrations, have taken up a marvellous lump of fable, and have been obliged to use more than was necessary. This made us discourse at large, and, nevertheless, the story never came to an end. And our discussion might be compared to a picture of some living being which had been fairly drawn in outline, but had not yet attained the life and clearness which is given by the blending of colours. Now to intelligent persons a living being is more truly delineated by language and discourse than by any painting or work of art: to the duller sort by works of art.

Y. Soc. Very true; but what is the imperfection which still remains? I wish that you would tell me.

Str. The higher ideas, my dear friend, can hardly be set forth except through the medium of examples; every man seems to know all things in a kind of dream, and then again to know nothing when he awakes.

Y. Soc. What do you mean?

Str. I fear that I have been unfortunate in my attempt to describe our experience of knowledge.

Y. Soc. Why so?

Str. Why, because my 'example' requires the assistance of another example.

Y. Soc. Proceed, I shall be interested to hear.

Str. I will proceed, finding, as I do, such a ready listener in you : when children are beginning to know their letters——

Y. Soc. What are you going to say?

Str. That they easily recognise the several letters in very short and easy syllables, and are able to tell you them correctly. 278

Y. Soc. Certainly.

Str. Whereas in other syllables they do not recognise them, and think and speak falsely of them.

Y. Soc. Very true.

Str. Will not the best and easiest way of guiding them to the letters which they do not as yet know, be to refer them to the same letters in the words which they know, and to compare these with the letters which as yet they do not know, and show them that they are the same, and have the same character in their different combinations, until the letters, which they do not know, have been all placed side by side with the letters which they do know? in this way they have examples, and are made to learn that every letter in every combination is pronounced always either as the same or not the same.

Y. Soc. Certainly.

Str. Are not examples formed in this manner? We take that which is the same with something in some other separate thing, and when this is rightly conceived and compared with the first, out of the comparison their arises one true notion, which includes both of them.

Y. Soc. Exactly.

Str. Can we wonder, then, that the soul has the same uncertainty about the alphabet of things, and sometimes and in some cases is firmly fixed by the truth, and then, again, in other cases is all abroad ; having somehow or other a correct notion of certain combinations ; but when the elements are translated into the long and difficult language of facts, is again ignorant of them?

Y. Soc. There is nothing wonderful in that.

Str. Could any one, my friend, who began with false opinion ever expect to attain wisdom, or to arrive even at a small portion of truth?

Y. Soc. Hardly.

Str. Then you and I will not be far wrong in trying to see

in a small and partial instance the nature of example in general ; that lesser instance we shall transfer to the similar nature of the king, and to the royal class which is the greatest of all, and by the help of example endeavour to recognise scientifically his calling ; and then the dream will become a reality to us.

Y. Soc. Very true.

279 *Str.* Then, once more, let us resume the previous argument, and as there were innumerable rivals of the royal race who claim to have the care of states, let us part them all off, and leave him alone ; and, as I was saying, a model or example of this process has first to be framed.

Y. Soc. Exactly.

Str. What model is there which is small, and yet has any analogy with the political occupation ? Suppose, Socrates, that if we have no other example at hand, we choose weaving, or, more precisely, weaving of wool—this will be quite enough, without taking the whole of weaving, to illustrate our meaning ?

Y. Soc. Certainly.

Str. Why should we not apply to weaving the same processes of division and subdivision which we have already applied to other classes ; going as rapidly as we can through all the steps until we come to that which is needed for our purpose ?

Y. Soc. How do you mean ?

Str. I shall answer that by actually performing the process.

Y. Soc. Very good.

Str. All things which we create or possess are either creative or preventive ; of the preventive class are spells and antidotes, divine and human, and also defences ; and defences are either military weapons or protections ; and protections are veils, and also shields against heat and cold ; and shields against heat and cold are shelters and coverings ; and coverings are blankets and garments ; and garments are some of them in one piece, and others of them are made in several parts ; and of these latter some are pierced, others are fastened and not pierced ; and of the not pierced, some are made of the sinews of plants, and some of hair ; and of these, again, some are cemented with water and earth, and others are fastened together by themselves. And these last defences and coverings which are fastened together by themselves are called clothes, and the

art which superintends them is called, from the nature of the operation, the art of clothing, just as before the art of the Statesman was derived from the State; and may we not say 280 that the art of weaving, at least that large portion of it which was concerned with the making of clothes (cp. 279 B), differs only in name from this art of clothing, in the same way that, in the previous case, the royal science differed from the political?

Y. Soc. Most true.

Str. In the next place, let us make the reflection, that the art which we term the weaving of clothes, and which an incompetent person might fancy to have been sufficiently described, has been separated off from several others which are of the same family, but not from the co-operative arts.

Y. Soc. And what arts are of the same family?

Str. I see that I have not taken you with me. I think, therefore, that we had better go back and begin at the end once more. We just now parted off from clothing the making of blankets, which differ from clothes in that one is put under and the other is put around: and these are what I termed arts of the same family.

Y. Soc. I understand.

Str. And we have subtracted the manufacture of all articles made of flax and cords, and all that which we just now metaphorically termed the sinews of plants, and we have also separated off the process of felting and the putting together of materials by piercing and sewing, of which the most important part is the cobbler's art.

Y. Soc. Precisely.

Str. Then we separated off the currier's art, which prepared coverings in entire pieces, and subtracted the various arts of sheltering which are employed in building, and in general in carpentering, the art of making water-tight, and all such arts as furnish impediments to thieving and acts of violence, and are concerned with making the lids of boxes and the mortising of doors, being divisions of the art of joining; and we also cut off the manufacture of arms, which is a section of the great and manifold art of making defences; and we originally began by parting off the whole of the magic art which is concerned with antidotes, and have left, as would appear, the very art

of which we were in search, which is an art of protection against winter cold, and fabricates woollen defences, and has the name of weaving.

Y. Soc. Very true.

281 *Str.* Yes, my boy, but that is not all, for the first process to which the material is subjected is the opposite of weaving.

Y. Soc. How is that?

Str. Weaving is a sort of uniting?

Y. Soc. Yes.

Str. But the first process is a separation of the clotted and matted fibres?

Y. Soc. What do you mean?

Str. I mean the work of the carder's art; for we cannot say that carding is weaving, or that the carder is a weaver.

Y. Soc. Certainly not.

Str. Again, if a person were to say that the art of making the warp and the woof was the art of weaving, he would say what was unmeaning and false.

Y. Soc. To be sure.

Str. Shall we say that the whole art of the fuller or of the mender has nothing to do with the care and treatment of clothes, or are we to regard all these as arts of weaving?

Y. Soc. Certainly not.

Str. And yet surely all these arts will maintain that they are concerned with the treatment and production of clothes; and will dispute the exclusive prerogative of weaving, and though assigning a large sphere to that, will still reserve a considerable field for themselves.

Y. Soc. Very true.

Str. Besides these, there are the arts which make tools for the weaver's use, and which will claim to be co-operators in every work of the weaver.

Y. Soc. Most true.

Str. Well, then, suppose that we define weaving, or rather that part of weaving which has been selected by us, to be the greatest and noblest of arts which are concerned with woollen garments—shall we be right? Is not the definition, although true, wanting in clearness and completeness; for do not all those other arts require to be first cleared away?

Y. Soc. True.

Str. Then the next thing will be to separate them, in order that the argument may proceed by regular steps. Let us consider, in the first place, that there are two kinds of arts, which have to do with all processes.

Y. Soc. What are they?

Str. The one is the conditional or co-operative, the other the principal cause.

Y. Soc. What do you mean?

Str. The arts which do not manufacture the actual thing, but which furnish the necessary tools for the manufacture, and without which the several arts could not fulfil their appointed work, I call co-operative, but those which make the things themselves I call causal.

Y. Soc. I see the principle.

Str. The arts which make spindles, shuttles, and other instruments of the production of clothes, I call co-operative, and those which treat and fabricate the things themselves, causal.

Y. Soc. Very true.

Str. To the causal class belong the arts of washing and mending, and the preparatory arts; these may be all comprehended under the art of the fuller, which is a division of the larger sphere of the art of adornment. 282

Y. Soc. Very good.

Str. Another art has to do with carding and spinning threads, and the various arts of manufacturing a woollen garment; and this is just the common art which is called working in wool.

Y. Soc. To be sure.

Str. Of the wool-working, again, there are two divisions, and both these are parts of two arts at once.

Y. Soc. How is that?

Str. Carding and one half of the use of the shuttle, and the other processes of wool-working which separate the composite, may be said to belong both to the art of wool-working, and also to one of the two great arts which are of universal application—the art of composition and the art of division.

Y. Soc. Yes.

Str. To the latter belongs carding, and the other processes of which I was speaking; the art of discernment or division

in wool and yarn, which is effected in one manner with the shuttle and in another with the hands, is variously described under all the names which I just now mentioned.

Y. Soc. Very true.

Str. Again, let us take some process of wool-working which is a portion of the art of composition, and, dismissing the elements of division which we found there, make two halves, one on the principle of composition, and the other on the principle of division.

Y. Soc. Let that be done.

Str. And once more, Socrates, you must divide the part, which belongs at once both to wool-working and composition, if we are ever to discover satisfactorily the aforesaid art of weaving.

Y. Soc. That will be requisite.

Str. Yes, certainly, and let us call one part of the art the art of twisting threads, the other the art of combining them.

Y. Soc. Do I understand you, in speaking of twisting, to be referring to the warp?

Str. Yes, and to the woof also; how, if not by twisting, is the woof made?

Y. Soc. There is no other way.

Str. Then suppose that you define the warp and the woof, for I think that the definition will be of use to you.

Y. Soc. How shall I define them?

Str. As thus: A piece of carded wool which is drawn out lengthwise and breadthwise is said to be pulled out.

Y. Soc. Yes.

Str. And the wool thus prepared, which is twisted by the spindle, and made into a firm thread, is called the warp, and the art which regulates these operations may be called the art of spinning the warp.

Y. Soc. True.

Str. And the threads which are more loosely spun having a softness proportioned to the intertexture of the warp and relative to the degree of force to be used in dressing the cloth,—the threads which are thus spun are called the woof, and the art which is set over them may be called the art of spinning the woof.

Y. Soc. Very true.

Str. And, now, there can be no mistake about the nature of the part of weaving which we have undertaken to define. For when that part of the art of composition which is employed in working of wool forms a web by the regular intertexture of warp and woof, the entire woven substance is called by us a woollen garment, and the art which presides over this is the art of weaving.

Y. Soc. Very true.

Str. But why did we not say at once that weaving is the art of entwining warp and woof, instead of making a long and useless circuit?

Y. Soc. I thought, Stranger, that there was nothing useless in what was said.

Str. Very likely, but you may not always think the same; and in case any feeling of dissatisfaction should hereafter arise in your mind, let me lay down a principle which will apply to arguments in general:

Y. Soc. Proceed.

Str. Let us begin by considering the whole nature of excess and defect, and then we shall have a rational ground on which we may praise or blame the too great length or conciseness of speeches in discussions of this kind.

Y. Soc. Let us do so.

Str. The points on which I think that we ought to dwell are the following:—

Y. Soc. What are they?

Str. The points that I mean are length and shortness, excess and defect, with all of which the art of measurement is conversant.

Y. Soc. Yes.

Str. And the art of measurement has to be divided into two parts, with a view to our present purpose.

Y. Soc. Where would you make the division?

Str. As thus: I would make two parts, one which has to do with relative size; and there is another, without which the existence of production would be impossible.

Y. Soc. What do you mean?

Str. Does not the greater in the order of nature appear to

you to be only relative to the less, and the less only relative to the greater?

Y. Soc. Yes.

Str. Well, but is there not also a greater and less exceeding and exceeded by the principle of the mean, both in words and deeds, and is not this a reality, and does not the chief difference between good and bad men consist in this?

Y. Soc. Plainly.

Str. Then we must suppose that the great and small exist and are discerned in both these ways, and not, as we were saying before, only relatively to one another, but there must also be another comparison of them with the mean or ideal standard; would you like to hear the reason why?

Y. Soc. Certainly.

284 *Str.* If we assume the greater to exist only in relation to the less, there will never be any comparison of either with the mean.

Y. Soc. True.

Str. And would not this doctrine be the ruin of all the arts and their creations; would not the art of the Statesman and the aforesaid art of weaving disappear? For all these arts are on the watch against excess and defect, not as unrealities, but as real evils, which occasion a difficulty in action; and the excellence or beauty of every work of art is due to this observance of measure.

Y. Soc. Certainly.

Str. But if the science of the Statesman disappears, there will be no possibility of finding out the royal science.

Y. Soc. Very true.

Str. Well, then, as in the Sophist we extorted the inference that not-being had an existence, because here was the point at which the argument eluded our grasp, so in this we must endeavour to show that the greater and less are not only to be measured with one another, but also have to do with the production of the mean; for if this is not admitted, neither a statesman nor any other man of action can be an undisputed master of his science.

Y. Soc. Yes, we must certainly do again what we did then.

Str. But this, Socrates, is a greater work than the other.

of which we only too well remember the length. I think, however, that we may fairly assume something of this sort:—

Y. Soc. What?

Str. That we shall some day require this notion of a standard with a view to the demonstration of absolute truth; meanwhile, the argument that the very existence of the arts must be held to depend on the possibility of measuring more or less, not only with one another, but also with a view to the attainment of the mean, seems to afford a grand support and satisfactory proof of the doctrine which we are maintaining; for if there are arts, there is a standard of measure, and if there is a standard of measure, there are arts; but if either is wanting, there is neither.

Y. Soc. True; and what is the next step?

Str. The next step clearly is to divide the art of measurement into two parts, and place in the one part all the arts which measure number, length, depth, breadth, swiftness¹, with their opposites; and to have another part in which they are measured with the mean, and the fit, and the opportune, and the due, and with all those words, in short, which denote a mean or standard removed from the extremes.

Y. Soc. Here are two vast divisions, embracing two very different spheres.

Str. There are many accomplished men, Socrates, who say 285 that the art of measurement is universal, and has to do with all things. And this means what we are now saying, for there is certainly a sense in which all things that are within the province of art partake of measure. But these persons, from not being accustomed to distinguish classes according to their real forms, jumble together two widely different things, relation to one another, and to a standard, under the idea that they are the same, and fall into the converse error of dividing other things not according to their real parts. Whereas the right way is, when a man once sees the unity of things, to go on with the enquiry and not desist until he has found all the differences which exist in distinct classes, nor should he be able to rest satisfied in the contemplation of the innumerable diversities of

kinds until he has comprehended all that have any affinity to each other within the sphere of a single class, notion, or essence. Thus much of excess and defect, and of the art of measurement in general; we have only to keep in mind that the two divisions of the art have been discovered, and not to forget what they are.

Y. Soc. We will not forget.

Str. And now that this discussion is completed, let us go on to another question, which will embrace not this argument only but arguments in general.

Y. Soc. What is this new question?

Str. Suppose that some one should desire us to tell him, Whether, when one of the pupils at a school is asked what letters make up a name,—he is asked in order to improve his grammatical knowledge of the particular word, or of all words?

Y. Soc. Clearly, in order that he may have a better knowledge of all words.

Str. And is our enquiry about the Statesman intended only to improve our knowledge of politics, or our knowledge of philosophy generally?

Y. Soc. Clearly, as in the former example, the purpose is general.

Str. Still less would any rational man seek to analyse the notion of weaving for its own sake. But people seem to forget that some things have sensible images, which may be easily shown, when any one desires to exhibit any of them or explain them to an enquirer, without any trouble or argument; while the greatest and noblest truths have no outward image of themselves visible to man, which he who wishes to satisfy the longing soul of the enquirer can adapt to the eye of sense, and therefore we ought to practise reasoning; for immaterial things, which are the highest and greatest, are shown only in thought and idea, and in no other way, and all that we are now saying is said for the sake of them. Moreover, there is always less difficulty in fixing the mind on small matters than on great.

Y. Soc. Very good.

Str. Let us keep in mind the bearing of all this.

Y. Soc. What is the bearing?

Str. I wanted to get rid of any impression of tediousness which we may have experienced in the discussion about weaving, and the reversal of the universe, and in the discussion concerning the Sophist and the essence of not-being. I know that they were felt to be too long and irrelevant. I reproached myself with this, and all that I have now said is only designed to prevent the recurrence of any such disagreeables for the future.

Y. Soc. Very good. Will you proceed?

Str. Then I would like to observe that you and I, remembering what has been said, would praise or blame the shortness of discussions, not by comparing them with one another, but according to a standard of measure, having in view what is fitting, which, as we were saying, must be borne in mind.

Y. Soc. Very true.

Str. And yet, not everything is to be judged even with a view to what is fitting in all respects; for we do not want such a length as is suited to give pleasure, which is quite a secondary matter; and reason tells us, that we should be contented to make the ease or rapidity with which an enquiry is attained, not the first, but the second object; the first and highest of all being to assert the great method of division according to species,—whether the discourse be shorter or longer is not to the point. No offence should be taken at length, but the longer and shorter are to be employed indifferently, according as either of them is better calculated to sharpen the wits of the auditors. Reason would also say to him who censures the length of discourses and cannot away with their circumlocution, that he should not at once lay them aside or censure them as tedious, but he should ²⁸⁷ prove that if they had been shorter they would have made those who took part in them better dialecticians, and more capable of expressing the truth of things—about any other praise and blame, he need not trouble himself; he need not be supposed to hear them. But we have had enough of this, as you will probably agree with me in thinking. Let us return to our Statesman, and apply to his case the aforesaid example of weaving.

Y. Soc. Very good;—let us do as you say.

Str. The art of the king has been separated from the similar arts of shepherds, and, indeed, from all those which have to do with herds at all. There still remain, however, those causal and co-operative arts which are immediately concerned with States, and which must first be distinguished from one another.

Y. Soc. Very good.

Str. You know that these arts cannot easily be divided into two halves ; the reason will be evident as we go forward.

Y. Soc. We had better go forward.

Str. Then we must carve them like a victim into members or limbs if we cannot bisect them. For we certainly should divide everything into as few parts as possible.

Y. Soc. How is that to be accomplished in this case ?

Str. As in the example of weaving, all those arts which furnished the tools of weaving were regarded by us as co-operative.

Y. Soc. Yes.

Str. So now, and with still more reason, all arts which make any implement in a State, whether great or small, may be regarded by us as co-operative, for without them neither State nor Statesman could exist ; and yet we are not inclined to say that any of them is the work of the kingly art.

Y. Soc. No, indeed.

Str. The task of separating this class from others is not an easy one ; for there is plausibility in saying that anything in the world is the instrument of doing something. But there is another class of possessions in a city, of which I have something to say.

Y. Soc. What class ?

Str. A class which may be described as not having this power¹ ; that is to say, not like an instrument, designed for production, but for the preservation of that which is produced.

Y. Soc. What do you mean ?

Str. The class of vessels, as they are comprehensively termed, which are framed for the preservation of things moist and dry, 288 in the fire or out of the fire ; this is a very large class, and has,

¹ Or, taking the words in a different context, 'As not having political power—I say another class, because not like an instrument, &c.'

if I am not mistaken, literally nothing to do with the royal art.

Y. Soc. Certainly not.

Str. There is a third class also to be discovered, different from these and very extensive, moving or resting on land or water, honourable and also dishonourable, having a name descriptive of sitting, because always intended to be a seat for something.

Y. Soc. What is that?

Str. A vehicle, which is certainly not the work of the Statesman, but of the carpenter, potter, and brassfounder.

Y. Soc. I understand.

Str. And is there not a fourth class which is again different, and in which most of the things formerly mentioned are contained?—Every kind of dress, most sorts of arms, walls and enclosures, whether of earth or stone, and ten thousand other things; all of which being made for the sake of defence, may be truly called defences, and are for the most part to be regarded as the work of the builder or of the weaver, rather than of the Statesman?

Y. Soc. Certainly.

Str. Shall we add a fifth class, of ornamentation and drawing, and of the imitations produced by drawing and music, which are designed for amusement only, and may be fairly comprehended under one name?

Y. Soc. What is it?

Str. Plaything is the name.

Y. Soc. Certainly.

Str. That is a name which may be fitly predicated of all of them, for none of these things have a serious purpose—amusement is the aim of them all.

Y. Soc. I understand.

Str. Then, again, there is a class which provides materials for all these; out of which and in which the arts already mentioned fabricate their works,—this manifold class, I say, which is the creation and offspring of many other arts, may I not rank sixth?

Y. Soc. What do you mean?

Str. I am speaking of gold, silver, and other metals, and all

that wood-cutting and every other sort of cutting provides for the art of carpentry and plaiting; and there is the process of barking and stripping the cuticle of plants, and the carrier's art, which strips off the skins of animals, and other similar arts which manufacture corks and papyri and cords, and provide for the manufacture of composite species out of simple kinds—the whole class may be termed the primitive and simple possession of man, and with this the kingly science has no concern at all.

Y. Soc. True.

Str. The provision of food and of all other things which mingle their particles with the particles of the human body, and minister to the body, may form a seventh class, which may be called by the general term of nourishment, unless you have any better name to offer. This, however, appertains rather to the husbandman, huntsman, trainer, doctor, cook, and is not to be assigned to the Statesman's art.

Y. Soc. Certainly not.

Str. These seven classes include nearly every description of property, with the exception of tame animals. Consider;—there was the original material, which ought to have been placed first; next came instruments, vessels, vehicles, defences, playthings, nourishment; small things, which may be included under any of these—as for example, coins, seals and stamps, are omitted, for they have not in them the character of any larger kind which comprehends them; but some of them may, with a little forcing, be placed among ornaments, and others may be made to harmonize with the class of implements. The art of herding, which has been already divided into parts, will include all property in animals except slaves.

Y. Soc. Very true.

Str. The class of slaves and ministers only remains, and, I suspect, that in this the real aspirants for the throne, who are the rivals of the king in the formation of the political web, will be discovered; just as spinners, carders, and the rest of them, were the rivals of the weaver: all the rest were termed co-operators, and have been already got rid of among the occupations already mentioned, and separated from the royal and political science.

Y. Soc. I agree.

Str. Let us go a little nearer, in order that we may be more certain of the complexion of this remaining class.

Y. Soc. Let us do so.

Str. We shall find that the greatest servants, and those who appear to us from our present point of view to be most truly servants, are in a case and condition which is the reverse of what we anticipated.

Y. Soc. Who are they?

Str. Those who are purchased, and who are unmistakably slaves—they certainly do not claim royal science.

Y. Soc. Certainly not.

Str. Again, freemen who of their own accord become the servants of the other classes in a State, and who exchange and equalise the products of husbandry and the other arts, some sitting in the market-place, others going from city to city by land or sea, and giving money in exchange for money or for other productions—the money-changer, the merchant, 290 the ship-owner, the retailer, will not put in any claim to statecraft or politics.

Y. Soc. No; unless, indeed, to commercial politics.

Str. But surely men whom we see acting as hirelings and serfs, and too happy to turn their hand to anything, will not profess to share in royal science.

Y. Soc. Certainly not.

Str. But what would you say of some other serviceable officials?

Y. Soc. Who are they, and what services do they perform?

Str. There are heralds and scribes, perfected by practice, and divers others who have great skill in various sorts of business connected with the government of states—what shall we call them?

Y. Soc. They are the officials, and servants of the rulers, as you just now called them, not themselves rulers.

Str. There may be something strange in any servant pretending to be a ruler, and yet I do not think that I could have been dreaming when I imagined that the principal claimants to political science belonged to the class of servants.

Y. Soc. Very true.

Str. Well, let us draw nearer, and try the claims of others who have not yet been sifted: in the first place, there are diviners, who have a portion of servile or ministerial science, and are thought to be the interpreters of the gods to men.

Y. Soc. True.

Str. There are also priests who, as the law declares, know how to give the gods gifts from men in the form of sacrifices, which are acceptable to them, and to ask for us a return of blessings from them. Now both these are branches of the servile or ministerial art.

Y. Soc. Yes, clearly.

Str. And here I think that we seem to be getting on the right track; for the priest and the diviner also are full of pride and prerogative—this is due to the greatness of their employments; and in Egypt, the king himself is not allowed to reign, unless he have priestly powers, and if he should be of another class and has thrust himself in, he must get enrolled in the priesthood. In many parts of Hellas, the duty of offering the most solemn propitiatory sacrifices is assigned to the highest magistracies, and here, at Athens, the most solemn and national of the ancient sacrifices are supposed to be celebrated by the King Archon of the year.

Y. Soc. Precisely.

291 *Str.* But who are these elected kings and priests who now come into view with a crowd of retainers, as the former class disappears and the scene changes?

Y. Soc. Whom can you mean?

Str. How strangely they look!

Y. Soc. Why strangely?

Str. A minute ago I thought that they were all sorts of animals; for many of them are like lions and centaurs, and many more like satyrs and the weak and versatile sort of animals;—Protean shapes ever changing their form and nature; and now, Socrates, I begin to see who they are.

Y. Soc. Who are they? You seem to be gazing on some strange vision.

Str. Yes; every one looks strange when you do not know him; and at first sight, coming suddenly upon him, I did not recognise the politician and his troop.

Y. Soc. Who is he?

Str. The chief of sophists and most accomplished of wizards, who must at any cost be separated from the true king or Statesman, if we are ever to see daylight in the present enquiry.

Y. Soc. That certainly is not a hope to be lightly renounced.

Str. Nay, never, if I can help; and, first, let me ask you a question.

Y. Soc. What are you going to ask?

Str. Is not monarchy a recognised form of government?

Y. Soc. Yes.

Str. And, after monarchy, next in order comes the government of the few?

Y. Soc. Of course.

Str. Is not the third form of government the rule of the multitude, which is called by the name of democracy?

Y. Soc. Certainly.

Str. And do not these three expand in a manner into five, producing out of themselves two other names?

Y. Soc. What are they?

Str. There is a criterion of voluntary and involuntary, poverty and riches, law and the absence of law, which men apply to them; the two first they subdivide accordingly, and ascribe to monarchy two forms and two corresponding names, royalty and tyranny.

Y. Soc. Very true.

Str. And the government of the few they distinguish by the names of aristocracy and oligarchy.

Y. Soc. Certainly.

Str. Democracy alone, whether respecting the laws or not, ²⁹² and whether the multitude rule over the men of property with their consent or against their consent, always in ordinary language has the same name.

Y. Soc. True.

Str. But do you suppose that any form of government which is distinguished by these characteristics of the one, the few, or the many, of poverty or wealth, of compulsion or freedom, of written or unwritten law, is a right one?

Y. Soc. Why not?

Str. Think a little; and let me take you with me.

Y. Soc. In what direction?

Str. Shall we abide by what we said at first, or shall we retract our words?

Y. Soc. To what do you refer?

Str. If I am not mistaken, we said that royal power was a science?

Y. Soc. Yes.

Str. And a science of a peculiar kind, which was selected out of the rest as having at once a judicial and commanding nature?

Y. Soc. Yes.

Str. And there was one kind of command of lifeless things and another of living animals; and so we proceeded in the division step by step up to this point, not losing the idea of science, but unable as yet to determine the nature of the particular science?

Y. Soc. True.

Str. Hence we are led to observe that the several forms of government cannot be defined by the words few or many, voluntary or compulsory, poverty or riches; but some notion of science must enter in, if we are to be consistent with what has preceded.

Y. Soc. And we must be consistent.

Str. Well, then, in which of these various forms of States may the science of government, which is among the greatest and most difficult of all sciences, be supposed to reside? That we must discover, and then we shall see who are the false politicians who win popularity and pretend to be politicians and are not, and separate them from the wise king.

Y. Soc. That, as the argument has already intimated, is our duty.

Str. Do you think that the multitude in a State can attain political science?

Y. Soc. Impossible.

Str. But, perhaps, in a city of a thousand men, there would be a hundred, or say fifty, who could?

Y. Soc. In that case political science would certainly be the easiest of all sciences; there could not be found in a city of that number as many really first-rate draught-players, if judged

by the standard of the rest of Hellas, and there would certainly not be as many kings. For kings we may truly call those who possess royal science, whether they rule or not, as was shown in the previous argument.

Str. Thank you for reminding me; and the consequence is ²⁹³ that any true form of government can only be supposed to be the government of one, two, or, at any rate, of a few.

Y. Soc. Certainly.

Str. And these, whether they rule with the will, or against the will, of their subjects, with written laws or without written laws, and whether they are poor or rich, and whatever be the nature of their rule, must be supposed, according to our present view, to rule on some scientific principle; just as the physician, whether he cures us against our will or with our will, and whatever be his mode of treatment,—bleeding, burning, or the infliction of some other pain, whether he practises out of a book or not out of a book, and whether he be rich or poor, whether he purges or reduces in some other way, or even fattens his patients, is a physician all the same, while he exercises authority over them according to rules of art, if he only does them good and heals and saves them. And this we lay down to be the only proper test of the art of medicine, or of any other art of command.

Y. Soc. Quite true.

Str. Then that can be the only true form of government in which the governors are found to possess true science, and are not mere pretenders, whether they rule according to law or without law, over willing or unwilling subjects, and are rich or poor themselves,—none of these things can properly be included in the notion of the ruler.

Y. Soc. True.

Str. And whether with a view to the public good they purge the State by killing some, or exiling some; whether they lower or increase the body corporate, by sending out or receiving into the hive swarms of citizens, while they act according to the rules of wisdom and justice, whether with or without laws, if they use their power with a view to the general security and improvement, then the city over which they rule, and which has these characteristics, may be described as the only true

State. All other governments are not genuine or real, but only imitations of this, and some of them are better and some of them are worse; the better are said to be well governed, but they are mere imitations like the others.

Y. Soc. I agree, Stranger, in the greater part of what you say; but as to their ruling without laws—the expression has a harsh sound.

294 *Str.* I was just going to ask, Socrates, whether you objected to any of my statements; and now I see that this notion of there being good government without laws will require some further consideration.

Y. Soc. Certainly.

Str. There can be no doubt that legislation is in a manner the business of a king, and yet the best thing of all is not that the law should rule, but that a man should rule supposing him to have wisdom and royal power. Do you see why this is?

Y. Soc. Why?

Str. Because the law in aiming at what is noblest or most just cannot at once comprise what is best for all. The differences of men and actions, and the endless irregular movements of human things, do not admit of any universal and simple rule. No art whatsoever can lay down a rule which will last for all time.

Y. Soc. Of course not.

Str. But the law is always striving to make one;—like an obstinate and ignorant tyrant, who will not allow anything to be done contrary to his appointment, or any question to be asked—not even in sudden changes of circumstances, when something happens to be better than what he commanded for some one.

Y. Soc. True; such is the manner in which the law treats us.

Str. A perfectly simple principle can never be applied to a state of things which is the reverse of simple.

Y. Soc. True.

Str. Then if the law is not the perfection of right, why are we compelled to make laws at all? The reason of this has next to be investigated.

Y. Soc. Certainly.

Str. Let me ask, whether you have not meetings for gymnastic exercises in your city, such as there are in other cities, at which men compete in running, wrestling, and the like?

Y. Soc. Yes; they are very common among us.

Str. And what are the rules which those who are in authority impose on the pupils at such meetings? Can you remember?

Y. Soc. To what do you refer?

Str. The training-masters do not issue minute rules for individuals, or give every individual what is exactly suited to his constitution; they think that they ought to go more roughly to work, and give a general rule for what will benefit the constitutions of the majority.

Y. Soc. Very true.

Str. And therefore they assign equal amounts of exercise to them all; they send them forth together, and let them rest together from their running, wrestling, or whatever the bodily exercise may be which they prescribe for them.

Y. Soc. True.

Str. Let us consider further, that the legislator who has to 295 preside over the herd, and to enforce justice in their dealings with one another, will not be able, in enacting for the general good, to provide exactly what is suitable for each particular case.

Y. Soc. He cannot be expected to do so.

Str. He will lay down laws in a general form for the majority, roughly meeting the cases of individuals; and some of them he will deliver in writing, and others will be unwritten; and these last will be traditional customs of the country.

Y. Soc. That will be right.

Str. Yes; that will be right, for how can he sit at every man's side all through his life, and prescribe for him the exact particulars of his duty? Who, Socrates, would be sufficient for such a task? No one who really had the royal science, if he had been able to do this, would have imposed upon himself the restriction of having a written code of laws.

Y. Soc. So I should infer from what has now been said.

Str. And yet more, my good friend, from what is going to be said.

Y. Soc. What is that?

Str. Let us put to ourselves the case of a physician, or trainer, who is about to go into a far country, and is expecting to be a long time away from his patients ; he leaves written instructions for the patients or pupils, under the idea that they will not be remembered unless they are written down.

Y. Soc. True.

Str. But what would you say, if he came back sooner than he intended, and, owing to an unexpected change of the winds or other celestial influences, some other remedies happened to be better for them,—would he not venture to suggest those other remedies, although differing from his former prescription? Would he persist in observing the original law, neither himself giving any new commandments, nor the patient daring to do otherwise than was prescribed, under the idea that this course only was healthy and medicinal, all others noxious and heterodox? Viewed in the light of science and true art, would not all such regulations be utterly ridiculous?

Y. Soc. Quite true.

Str. And if he who gave laws, written or unwritten, determining what was good or bad, honourable or dishonourable, just or unjust to the tribes of men who herd in their several cities, and are governed in accordance with them; if, I say, the wise
296 legislator were suddenly to come again, or another like to him, is he to be prohibited from changing them;—would not this prohibition be in reality quite as ridiculous as the other?

Y. Soc. Certainly.

Str. Do you know a plausible saying of the common people which is in point?

Y. Soc. I do not recall what you mean at the moment.

Str. They say that if any one knows how the ancient laws may be improved, he must first persuade his own State of the improvement, and then he may legislate, but not otherwise.

Y. Soc. And are they not right?

Str. I dare say. But supposing that he does use some gentle violence for their good, what is this violence to be called? Or rather, before you answer, let me ask the same question in reference to our previous instances.

Y. Soc. What do you mean?

Str. Suppose that a skilful physician has a patient, of what-

ever sex or age, whom he compels against his will to do something for his good which is contrary to the written rules, what is this compulsion to be called? Would you ever dream of calling it a violation of the art, or breach of the laws of health? Nothing could be more unjust than for the patient to whom such a gentle violence is applied, to charge the physician who practises the violence with wanting skill or aggravating his disease.

Y. Soc. Most true.

Str. In the political art the error is not called disease, but evil, or disgrace, or injustice.

Y. Soc. Quite true.

Str. And when the citizen, contrary to law and custom, is compelled to do what is juster and better and nobler than he did before, and this sort of violence is blamed, the last and most absurd thing which he could say, is that he has incurred disgrace or evil or injustice at the hands of the legislator who uses the violence.

Y. Soc. That is very true.

Str. And shall we say that the violence, if exercised by a rich man, is just, and if by a poor man, unjust? May not any man, rich or poor, with or without written laws, with the will of the citizens or against the will of the citizens, do what is for their interest? Is not this the true principle of government, in accordance with which the wise and good man will order the affairs of his subjects? As the pilot watches over the interests of the ship, 297 or of the crew, and preserves the lives of his fellow-sailors, not by laying down rules, but by making his art a law—even so, and in the self-same way, may there not be a true form of polity created by those who are able to govern in a similar spirit, and who show a strength of art which is superior to the law? Nor can wise rulers ever err while they regard the one great rule of distributing justice to the citizens with intelligence and art, and are able to preserve, and, so far as that is possible, to improve them.

Y. Soc. No one can deny what has been said.

Str. Neither, if you consider, can any one deny the other statement.

Y. Soc. What was it? Digitized by Microsoft®

Str. We said that no great number of persons, whoever they may be, can have political knowledge, or order a State wisely, but that the true government is to be found in a small body, or in an individual, and that other States are but imitations, as has been already said, some for the better and some for the worse, but all of them imitations of this one.

Y. Soc. What are you saying? I must acknowledge that I did not understand at the time the remark which you made about the imitations.

Str. And yet the mere suggestion thus thrown out, even if the error which men now commit [of not keeping the law] be no further investigated, is highly important.

Y. Soc. What do you mean?

Str. The idea which has to be grasped by us is not easy or familiar; but what I mean to say, may be expressed as follows:—Supposing the government of which I have been speaking to be the only true model, then the others must use the written laws of this, which will be their salvation, if they will only do what is now generally approved, although not the best thing in the world.

Y. Soc. What is generally approved?

Str. That no citizen should do anything contrary to the laws, and that any infringement of them should be punished with death and the most extreme penalties; and this is very right and good when regarded as the second best thing, if you set aside the first, of which I was just now speaking. Shall I explain the nature of what I call the second best?

Y. Soc. By all means.

Str. I must again have recourse to my favourite images; through them, and them alone, can I describe kings and rulers.

Y. Soc. What images?

Str. The noble pilot and the wise physician, who 'is worth many another man'—in the similitude of these let us endeavour to discover some image of the king.

Y. Soc. What sort of an image?

298 *Str.* Well, such as this:—Every man will reflect that he suffers strange things at their hands; the physician saves any whom he wishes to save, and any whom he wishes to injure he injures—cutting or burning them, and at the same time requiring them to

bring him payments, which are a sort of tribute, of which a very small part is spent upon the sick man, and the greater part is consumed by him and his domestics; and the finale is that he receives money from the relations of the sick man or from some enemy of his, and puts him out of the way. And the captains of ships are guilty of numberless evil deeds of the same kind; they play false and leave you ashore when the hour of sailing arrives; or they wreck their vessels and cast away freight and lives; not to speak of other rogueries. Now suppose that we, bearing all this in mind, were to determine, after consideration, that neither of these arts shall any longer be allowed to exercise absolute control either over freemen or over slaves, but that we will summon an assembly either of all the people, or of the rich only, and that anybody who likes, whatever may be his calling, or even if he have no calling, may offer an opinion either about ships or about diseases—whether as to the manner in which physic or surgical instruments are to be applied to the patient, or about the vessels and the nautical instruments which are required in navigation, and how to meet the dangers of winds and waves which are incidental to the voyage, how to behave when encountering pirates, and what is to be done with the old-fashioned galleys, if they have to fight with others of a similar build—and that, whatever shall be decreed by the multitude on these points, upon the advice of persons skilled or unskilled, shall be written down on triangular tablets and columns, or embalmed unwritten as national customs; and that in all future time vessels shall be navigated and remedies administered to the patient after this fashion.

Y. Soc. What a strange notion!

Str. Suppose further, that the admirals and physicians are appointed annually, either out of the rich, or out of the whole people, and that they are elected by lot; and that after their election they navigate vessels and heal the sick according to the written rules.

Y. Soc. Worse and worse.

Str. But hear what follows:—When the year of office has expired, the admiral or physician has to come before a court of review, in which the judges are either selected from the wealthy 299 classes or chosen by lot out of the whole people; and anybody

who pleases may accuse them, and he will lay to their charge, that during the past year they have not navigated their vessels or healed their patients according to the letter of the law or according to the ancient customs of their ancestors; and if either of them is condemned, there must be persons to fix what he is to suffer or pay.

Y. Soc. He who is willing to take a command under such conditions, deserves to suffer any penalty.

Str. Yet once more, we shall have to enact that if any one is detected enquiring into sailing and navigation or health, or into the true nature of medicine, or about the winds, or other conditions of the atmosphere, contrary to the written rules, and has any ingenious notions about such matters, he is not to be called a pilot or physician, but a cloudy talking sophist;—also a corrupter of the young, who would persuade them to follow the art of medicine or piloting in an unlawful manner, as the irresponsible masters of the patients or ships; and any one who is qualified by law may inform against him, and indict him in some court, and then if he is found to be corrupting any, whether young or old, he is to be punished with the utmost rigour of the law; for no one should presume to be wiser than the laws; and as touching healing and health and piloting and navigation, the nature of them is known to all, for anybody may learn the written laws and the national customs. If such were the mode of procedure, Socrates, about these sciences and about generalship, and any branch of hunting, or about painting or imitation in general, or carpentry, or any sort of manufacture, or husbandry, or planting, or if we were to see an art of rearing horses, or tending herds, or divination, or any ministerial service, or draught-playing, or any science conversant with number, whether simple or square or cube, or comprising motion,—I say, if all these things were done in this way according to written regulation, and not according to art, what would be the result?

Y. Soc. All the arts would utterly perish, and could never be recovered, because enquiry would be unlawful. And human life, which is bad enough already, would then become utterly unendurable.

300 *Str.* But what, if while compelling all these operations to be regulated by written law, we were to appoint as the guardian of

the laws some one elected by a show of hands, or by lot, and he caring nothing about the laws, were to act contrary to them from motives of interest or favour, and without knowledge,—would not this be a still worse evil than the former ?

Y. Soc. Very true.

Str. To go against the laws, which are based upon long experience, and the wisdom of counsellors who have persuaded the multitude to pass them, would be a far greater and more ruinous error than any adherence to written law ?

Y. Soc. Certainly.

Str. Therefore, as there is a danger of this, the next best thing in legislating is to have the laws observed alike by one and all.

Y. Soc. True.

Str. The laws would be copies of the true particulars of action as far as they admit of being written down from the lips of those who have knowledge ?

Y. Soc. Certainly they would.

Str. And, as we were saying, he who has knowledge and is a true Statesman, will do many things by his art without regard to the laws, when he is of opinion that something other than that which he has written down and enjoined to be observed during his absence would be better.

Y. Soc. Yes, we said so.

Str. And any individual or State, which has fixed laws, would only be acting like the true Statesman, in acting contrary to the laws with a view to something better ?

Y. Soc. Certainly.

Str. If they had no knowledge of what they were doing, they would imitate the truth, and they would always imitate ill ; but if they had knowledge, the imitation would be the perfect truth, and an imitation no longer.

Y. Soc. Quite true.

Str. And the principle that no number of men are able to acquire a knowledge of any art, has been already admitted by us.

Y. Soc. Yes, that has been admitted.

Str. Then the royal or political art, if there be such an art, will never be attained either by the wealthy or by the other mob.

Y. Soc. Impossible.

Str. Then the nearest approach which these lower forms of government can ever make to the true government of the one scientific ruler, is to do nothing contrary to their own written laws and national customs.

Y. Soc. Very good.

Str. When the rich imitate the true form, such a government is called aristocracy; and when they are regardless of the laws, oligarchy.

Y. Soc. True.

Str. Or again, when an individual rules according to law in imitation of him who knows, we call him a king; and if he rules according to law, we give him the same name, whether he rules with opinion or with knowledge.

Y. Soc. To be sure.

Str. And when an individual truly possessing knowledge rules, his name will surely be the same—he will be called a king; and thus the five names of governments, as they are now reckoned, become one.

Y. Soc. That is true.

Str. And when an individual ruler governs neither by law nor by custom, but following in the steps of the true man of science pretends that he can only act for the best by violating the laws, while in reality appetite and ignorance direct the imitation, may not such an one be called a tyrant?

Y. Soc. Certainly.

Str. And this we believe to be the origin of the tyrant and the king, of oligarchies, and aristocracies, and democracies; because men are offended at the one monarch, and can never be made to believe that any one can be worthy of such authority, or can unite the will and the power in the spirit of virtue and knowledge to do justly and holily to all; they fancy that he will be a despot who will wrong and harm and slay whom he pleases of us; for if there could be such a despot as we describe, they would acknowledge that we ought to be too glad to have him, and that he alone would be the happy ruler of a true and perfect State.

Y. Soc. Certainly.

Str. But then, as the State is not like a beehive, and has

no natural head who is the recognized superior in body and mind, mankind are obliged to meet and make laws, and endeavour to approach as nearly as they can to the true form of government.

Y. Soc. True.

Str. And when the foundation of politics is in the letter only and in custom, and knowledge is divorced from action, can we wonder, Socrates, at the miseries that there are, and always will be, in States? Any other art, built on such a foundation, would be utterly undermined,—there can be no doubt of that. 302 Ought we not rather to wonder at the strength of the political bond? For States have endured all this, time out of mind, and yet some of them still remain and are not overthrown, though many of them, like ships foundering at sea, are perishing and have perished and will hereafter perish, through the incapacity of their pilots and crews, who have the worst sort of ignorance of the highest truths—I mean to say, that they are wholly unacquainted with politics, of which, above all other sciences, they believe themselves to have acquired the most perfect knowledge.

Y. Soc. Very true.

Str. Then the question comes:—which of these untrue forms of government is the least oppressive to their subjects, though they are all oppressive; and which is the worst of them? Here is a consideration which is beside our present enquiry, but which we all of us should keep in view in all our actions.

Y. Soc. Certainly we should.

Str. You may say that of the three forms, the same is at once the hardest and the easiest.

Y. Soc. What do you mean?

Str. I mean that there are three forms of government, as I said at the beginning of this discussion—monarchy, the rule of the few, and the rule of the many.

Y. Soc. True.

Str. If we divide each of these we shall have six, from which the true one may be distinguished as a seventh.

Y. Soc. How would you make the distinction?

Str. Monarchy divides into royalty and tyranny; the rule of the few into aristocracy, which has an auspicious name, and

oligarchy ; and democracy or the rule of the many, which before was one, must now be divided.

Y. Soc. On what principle of division ?

Str. On the same principle as before, although the name is equivocal. For the distinction of ruling with law or without law, applies to this as well as to the rest.

Y. Soc. Yes.

Str. There was no use in having such a division, as we showed before, when we were looking for the true State. But now that this has been separated off, and we spoke of the others as the best which we had, the principle of law and the absence of law will bisect them all.

Y. Soc. That would seem to follow, from what has been said.

Str. Then monarchy, when bound by good prescriptions or laws, is the best, and when lawless is the most bitter and oppressive to the subject ?

Y. Soc. True.

303 *Str.* The government of the few, which is intermediate between that of the one and many, is also intermediate in good and evil ; but the government of the many is in every respect weak and unable to do either any great good or any great evil, when compared with the others, because the offices are too much subdivided and too many hold them. And this therefore is the worst of all lawful governments, and the best of all lawless ones. If they are all without the restraints of law, democracy is the form in which to live is best ; if they are well ordered, then this is the last which you should choose, as royalty is the best, with the exception of the seventh, for that excels them all, and is among States what God is among men.

Y. Soc. You are quite right, and we should choose that above all.

Str. The members of all the other States, with the exception of that which has knowledge, may be set aside as being not Statesmen but partisans,—upholders of the most monstrous idols, and themselves idols ; and, being the greatest imitators and magicians, they are also the worst of sophists.

Y. Soc. The name of Sophist after many windings appears to have been most deservedly applied to the politicians, as they are called.

Str. And so the satyric drama has been played out ; and now the troop of centaurs and satyrs, however unwilling to leave the political stage, have taken their departure.

Y. Soc. So I perceive.

Str. There are, however, natures more nearly akin to the king, and more difficult to discern ; the examination of them may be compared to the process of refining gold.

Y. Soc. What is your meaning ?

Str. The workmen begin by sifting away the earth and stones and the like ; they then draw off in the fire, which is the only way of abstracting them, the more precious elements of copper, silver, or other metallic substance, which have an affinity to gold ; these are at last refined away by the use of tests, and the gold is left quite pure.

Y. Soc. Yes, that is the way in which these things are said to be done.

Str. In like manner, all alien and uncongenial matter has been separated from political science, and what is precious and of a kindred nature has been left ; there remain the nobler arts of the general and the judge, and the higher sort of oratory which is an ally of the royal art, and persuades men to do justice, and assists in guiding the helm of States :—What way 304 can be found of taking them away, leaving him whom we seek alone and unalloyed ?

Y. Soc. That is clearly what has to be attempted.

Str. If the attempt is all that is wanting, he shall certainly be brought to light ; and I think that the illustration of music may assist in exhibiting him. Please to answer me a question.

Y. Soc. What question ?

Str. There is such a thing as learning music or other handicraft art ?

Y. Soc. There is.

Str. And is there any other and further science which has to do with judging what sciences are and are not to be learned ;—what do you say ?

Y. Soc. I should answer that there is.

Str. And is this science to be acknowledged as different from the other ?

Y. Soc. Yes.

Str. And ought no science to be superior, or ought the other sciences to be superior to this; or ought this science to be the overseer and governor of all the others?

Y. Soc. The latter.

Str. You mean to say that the science which judges whether we ought to learn or not, must be superior to the science which is learned or which teaches?

Y. Soc. Far superior.

Str. And the science which determines whether we ought to persuade or not, must be superior to the science which is able to persuade?

Y. Soc. Of course.

Str. Very good; and to what science do we assign the power of persuading a multitude by a pleasing tale and not by teaching?

Y. Soc. That power, I think, must clearly be assigned to rhetoric.

Str. And to what science do we give the power of determining whether we are to use persuasion or force in relation to any particular thing or person, or whether the use of them is to be allowed at all?

Y. Soc. To that science which governs the arts of speech and persuasion.

Str. Which, if I am not mistaken, will be politics?

Y. Soc. Very good.

Str. Rhetoric seems to be quickly distinguished from politics, as a different species, which is the handmaiden of the other.

Y. Soc. Yes.

Str. But what would you think of another sort of power or science?

Y. Soc. What science?

Str. The science which has to do with military operations against our enemies—is that to be regarded as a science or not?

Y. Soc. How can generalship and military tactics be regarded as other than a science?

Str. And is the art which is able and knows how to advise when we are to go to war, or to make peace, the same as this or different?

Y. Soc. If we are to be consistent, we must say different.

Str. And we must also suppose that this rules the other, if 305
we are not to give up our former notion?

Y. Soc. True.

Str. And, considering how great and terrible the whole art
of war is, can we imagine any superior art but the truly royal?

Y. Soc. None but that.

Str. The art of the general is only ministerial, and therefore
not political?

Y. Soc. Exactly.

Str. Once more let us consider the nature of the righteous
judge.

Y. Soc. Very good.

Str. Does he do anything but decide the dealings of men
with one another to be just or unjust in accordance with the
standard which he receives from the king and legislator,—
showing his own peculiar virtue only in this, that he is not
perverted by gifts, or fears, or pity, or any sort of love or
hatred, into deciding the suits of men with one another contrary
to the appointment of the legislator?

Y. Soc. No; his office is such as you describe.

Str. Then the inference is that the power of the judge is not
royal, but only the power of a guardian of the law which minis-
ters to the royal power?

Y. Soc. True.

Str. The review of all these sciences shows that none of
them is political or royal. For the truly royal ought not to
act, but to rule over those who are able to act, and to take
the initiative; the king ought to know when to begin, and
to seize the opportunities of action, whilst others execute his
orders.

Y. Soc. True.

Str. And, therefore, the arts which we have described, as
they have no authority over themselves or one another, but
are each of them concerned with some special action of their
own, have, as they ought to have, special names corresponding
to their several actions.

Y. Soc. I agree.

Str. And that common science which is over them all, and

guards the laws, and all things that there are in the State, and truly weaves them all into one, if we would describe under a name characteristic of this common nature, most truly we may call politics.

Y. Soc. By all means.

Str. Then, now that we have discovered the various classes in a State, shall I analyse politics after the pattern which weaving supplied?

Y. Soc. I greatly wish that you would.

306 *Str.* Then I must describe the nature of the royal web, and show how the various threads are drawn into one.

Y. Soc. Clearly.

Str. A task has to be accomplished, which, although difficult, appears to be necessary.

Y. Soc. Certainly the attempt must be made.

Str. To assume that one part of virtue differs in kind from another, is a position easily assailable by contentious disputants, who appeal to common opinion.

Y. Soc. I do not understand.

Str. Let me put the matter in another way: I suppose that you would consider courage to be a part of virtue?

Y. Soc. Certainly I should.

Str. And you would think temperance to be different from courage; and that would also be a part of virtue?

Y. Soc. True.

Str. I shall venture to put forward a strange theory about them.

Y. Soc. What is it?

Str. That they are two principles which are full of hatred and antagonism to one another, and pervade a great part of nature.

Y. Soc. How singular!

Str. Yes, very—for all the parts of virtue are commonly said to be friendly to one another.

Y. Soc. Yes.

Str. Then let us carefully investigate whether this is universally true, or whether there are not parts of virtue which are at war with their kindred in some respect.

Y. Soc. Tell me how we shall consider that question.

Str. We must extend the question to all those things which

we consider beautiful and at the same time place in two opposite classes.

Y. Soc. Explain ; what are they ?

Str. Acuteness and quickness, whether in body or soul or speech, and in the imitations of them which painting and poetry supply, you must have often praised, and have observed others to praise them.

Y. Soc. Certainly.

Str. And do you remember the terms in which they are praised ?

Y. Soc. I do not.

Str. I wonder whether I can explain to you in words the thought which is passing in my mind.

Y. Soc. Why not ?

Str. You fancy that this is all so easy : Well, let us consider these notions with reference to the opposite classes¹ of action under which they fall. When we praise quickness and energy and acuteness, whether of mind or body or speech, we express our praise of the quality which we admire by one word, and that one word is manliness or courage.

Y. Soc. How ?

Str. We speak of an action as energetic and manly, quick and manly, and vigorous and manly ; which is the common epithet applicable to all persons of this class.

Y. Soc. True.

Str. And do we not often praise the quiet strain of action also ? 307

Y. Soc. To be sure.

Str. And do we not then say the opposite of what we said of the other ?

Y. Soc. How do you mean ?

Str. In speaking of the mind, we say how calm ! how temperate ! These are the terms in which we describe the working of the intellect ; and again we speak of actions as soft and slow, and of the voice as smooth and deep, and of all rhythmical movement and of music in general as having a proper solemnity. Of all such actions we predicate not courage, but a name indicative of order.

¹ Or reading, as Professor Campbell suggests, γενέσσει, 'in their opposite workings.' *Univ Calif - Digitized by Microsoft* ®

Y. Soc. Very true.

Str. But when, on the other hand, either of these is out of place, the names of either are changed into terms of censure.

Y. Soc. How is that?

Str. Too great sharpness or quickness or hardness is termed violence or madness; too great slowness or gentleness is called cowardice or sluggishness; and we may observe, that these qualities, and in general the temperance of one class of characters and the manliness of another, are arrayed as enemies on opposite sides, and do not mingle with one another in their respective actions; and if we pursue the enquiry, we shall find that the men who have these qualities are at variance with one another.

Y. Soc. How do you mean?

Str. In the instance which I mentioned, and very likely in many others, there are some things which they praise as being like themselves, and other things which they blame as belonging to the opposite characters—and out of this many quarrels and occasions of quarrels arise among them.

Y. Soc. True.

Str. The difference between the two classes is amusing enough at times; but when affecting really important matters, becomes a most utterly hateful disorder in the State.

Y. Soc. To what do you refer?

Str. To nothing short of the whole course of human life. For the orderly class are always ready to lead a peaceful life, and do their own business; this is their way of living with all men at home, and they are equally ready to keep the peace with foreign States. And on account of this fondness of theirs for peace, which is often out of season where their influence prevails, they become by degrees unwarlike, and bring up their young men to be like themselves; they are at the command of others; and hence in a few years they and their children and the whole city often pass imperceptibly from the condition of freemen into that of slaves.

308 *Y. Soc.* What a cruel fate!

Str. And now think of what happens with the more courageous natures. Are they not always inciting their country to go to war, owing to their excessive love of the military life—

their enemies are many and mighty—and they either utterly destroy their cities or they enslave and subject them to their enemies?

Y. Soc. That, again, is true.

Str. Must we not admit, then, that these two classes are always in the greatest antipathy and antagonism to one another?

Y. Soc. We cannot deny it.

Str. Have we not found, as we said at first, that considerable portions of virtue are at variance with one another, and give rise to a similar opposition in the characters who are endowed with them?

Y. Soc. True.

Str. Let us consider a further point.

Y. Soc. What is it?

Str. I want to know, whether any constructive art will make any, even the smallest thing, out of bad and good materials indifferently, if this can be avoided? whether all art does not rather reject the bad as far as possible, and accept the good and fit materials, and out of these elements whether like or unlike, gathering all into one, work out some form or idea?

Y. Soc. To be sure.

Str. Then the true natural art of statesmanship will never allow any State to be formed by a combination of good and bad men, if this can be avoided; but will begin by testing human natures in play, and after testing them, will entrust them to proper teachers who are her ministers—she will herself give orders, and maintain authority; like weaving, which continually gives orders and maintains authority over the carders and all the others who prepare the material for the work, showing to the subsidiary arts, the works which she deems necessary for making the web.

Y. Soc. Quite true.

Str. In like manner, the royal science appears to me to be the mistress of all careful educators and instructors, and having this queenly power, will not allow any of them to train characters unsuited to the political constitution which she desires to create, but such as are suitable only. Other natures, which have no share of manliness and temperance, or any other

virtuous inclination, and, from the necessity of an evil nature, are violently carried away to godlessness and injustice and violence, she exterminates by death, and punishes them by exile and the greatest of disgraces.

Y. Soc. That is commonly said.

309 *Str.* But those who are wallowing in ignorance and baseness she bows under the yoke of slavery.

Y. Soc. Quite right.

Str. The rest of the citizens, of whom, if they have education, something noble may be made, and who are capable of social science, the kingly art blends and weaves together; taking on the one hand those whose natures tend rather to courage, which is the stronger element and may be regarded as the warp, and on the other hand those which incline to order and gentleness, and which are represented in the figure as spun thick and soft, after the manner of the woof—these, which are naturally opposed, she seeks to bind and weave together in the following manner—

Y. Soc. In what manner?

Str. First of all, she takes the eternal element and binds that with a kindred, that is, with a divine cord, and then the element of life, and binds that with human cords.

Y. Soc. I do not understand what you mean.

Str. The meaning is, that the opinion about the honourable and the just and good and their opposites, which is true and confirmed by reason, is a divine principle, and when implanted in the soul, is implanted, as I maintain, in a nature of heavenly birth.

Y. Soc. Yes; what else should it be?

Str. Only the Statesman and the good legislator, having the inspiration of the royal muse, can implant this opinion, and he, only in the rightly educated, whom we were just now describing.

Y. Soc. Likely enough.

Str. But him who cannot, we will not designate by any of the names which are the subject of the present enquiry.

Y. Soc. Very right.

Str. The courageous soul when attaining this truth, becomes civilized, and rendered more capable of partaking of justice; but when not partaking, is inclined to brutality. Is not that true?

Y. Soc. Certainly.

Str. And again, the peaceful and orderly nature, if sharing in these opinions, becomes temperate and wise, as far as there can be wisdom in States, but if not, is justly styled silly.

Y. Soc. Quite true.

Str. Can we say that such a connection as this will lastingly unite the evil with one another or with the good, or that there is any science which would seriously think of using a bond of this kind to join such materials?

Y. Soc. Impossible.

Str. But in those which were originally noble natures, and 310 have been trained accordingly—in those only may we not say that the bond of union is implanted by law, and that this is the medicine which art prescribes for them, and the divine bond, which, as I was saying, heals and unites dissimilar and contrary parts of virtue?

Y. Soc. Very true.

Str. Where this divine bond exists there is no difficulty in imagining, or when you have imagined, in creating the other human bonds.

Y. Soc. How is that, and of what bonds do you speak?

Str. Those of intermarriage, and those which are formed between States by giving and taking children in marriage, as well as by private betrothals and espousals. For many persons form unions of an improper kind, with a view to the procreation of children.

Y. Soc. In what way?

Str. They seek after wealth and power, which in matrimony are objects not worthy even of a serious censure.

Y. Soc. There is no need to consider them at all.

Str. More reason is there to consider the practice of those who make family their chief aim, and to indicate their error.

Y. Soc. Yes, that is reasonable.

Str. They act on no principle at all; they seek their ease and receive with open arms those who are like themselves, and hate those who are unlike them; and are wholly under the influence of their feelings of dislike.

Y. Soc. How is that?

Str. The quiet orderly class seek for natures like their own,

and as far as they can they marry and give in marriage exclusively in this class, and the courageous do the same; they seek natures like their own, whereas they should both do precisely the opposite.

Y. Soc. How and why is that?

Str. Because courage, when untempered by the gentler nature during many generations, may at first bloom and strengthen, but at last bursts forth into every sort of madness.

Y. Soc. Like enough.

Str. And then, again, the soul which is over-full of modesty and has no element of courage in many successive generations, is apt to grow very indolent, and at last to become utterly paralyzed and useless.

Y. Soc. That, again, is quite likely.

Str. It was of these bonds I said that there would be no difficulty in creating them, if only both classes originally held the same opinion about the honourable and good;—indeed, in this single word, the whole process of royal weaving is comprised—never to allow temperate natures to be separated from the brave, but to weave them together, like the warp and the woof, by
311 common sentiments and honours and opinions, and by the giving of pledges to one another; and out of them forming one smooth and even web, to entrust to them the offices of State.

Y. Soc. How do you mean?

Str. Where one officer only is needed, you must choose a ruler who has both these qualities—when many, you must mingle some of each, for the temperate ruler is very careful and just and safe, but is wanting in thoroughness and go.

Y. Soc. Certainly, that is very true.

Str. The character of the courageous, on the other hand, falls short of the former in justice and caution, but has the power of action in a remarkable degree, and where either of these two qualities is wanting, there cities cannot altogether prosper either in their public or private life.

Y. Soc. Certainly they cannot.

Str. This then, according to our view, is the perfection of the web of political action. There is a direct intertexture of the brave and temperate natures, when the kingly science has drawn the two sorts of lives into communion by unanimity and kind-

ness ; and having completed the noblest and best of all the webs which civic life admits, and enveloping therein all other inhabitants of cities, whether slaves or freemen, binds them in one fabric and governs and presides over them, omitting no element of a city's happiness.

Y. Soc. You have completed, Stranger, a very perfect image of the king and of the Statesman.

| LAWS | I |
| INDEX | 545 |

L A W S.

INTRODUCTION.

THE genuineness of the Laws is sufficiently proved (1) by more than twenty citations of them in the writings of Aristotle, who was residing at Athens during the last years of the life of Plato, and who returned to Athens after the death of Plato, at the time when he was himself writing his Politics and Constitutions; (2) by the allusion of Isocrates¹—writing 346 B. C., a year after the death of Plato, and not more than two or three years after the composition of the Laws—who speaks of the Laws and Republics written by philosophers (sophists); (3) by the reference (Athen. 226 A) of the comic poet Alexis, a younger contemporary of Plato (fl. B. C. 356–306), to the enactment about prices, which occurs in Laws, xi. 917 B, viz. that the same goods should not be sold at two prices on the same day²; (4) by the unanimous voice of later antiquity and the absence of any suspicion among ancient writers

¹ Oratio ad Philippum Missa, p. 85: Τὸ μὲν ταῖς πανηγύρεσιν ἐνοχλεῖν καὶ πρὸς ἅπαντας λέγειν τοὺς συντρέχοντας ἐν αὐταῖς πρὸς οὐδένα λέγειν ἔστιν, ἀλλ' ὁμοίως οἱ τοιοῦτοι τῶν λόγων (sc. speeches in the assembly) ἄκυροι τυγχάνουσιν ὄντες τοῖς νόμοις καὶ ταῖς πολιτείαις ταῖς ὑπὸ τῶν σοφιστῶν γεγραμμένας.

² Οὐ γέγονε κρείττων νομοθέτης τοῦ πλουσίου Ἀριστονίκου· τίθησι γὰρ νυνὶ νόμον τῶν ἰχθυοπωλῶν ὅστις ἂν πωλῶν τινὲ ἰχθὺν ὑποτιμήσας ἀποδῶτ' ἐλάττονος ἧς εἶπε τιμῆς εἰς τὸ δεσμωτήριον εὐθὺς ἀπάγεσθαι τοῦτον, ἵνα δεδοικότες τῆς ἀξίας ἀγαπῶσιν, ἢ τῆς ἐσπέρας σαπροῦς ἅπαντας ἀποφέρωσιν οἰκαδε.

Meincke, Frag. Com. vol. iii. p. 438.

worth speaking of to the contrary; for it is not said of Philippus of Opus that he composed any part of the Laws, but only that he copied them out of the waxen tablets, and wrote the *Epinomis* (*Diog. Laert.* iii. 25). That the longest and one of the most excellent writings bearing the name of Plato should be a forgery, even if the work were unsupported by external testimony, would be a singular phenomenon in ancient literature; and although the critical worth of the consensus of late writers is generally not to be compared with the express testimony of contemporaries, yet a somewhat greater value may be attributed to their consent in the present instance, because the admission of the Laws is combined with doubts about the *Epinomis*, a spurious writing, which seems to stand in nearly the same relation to the larger work in which the *Timaeus* Locrus stands to the *Timaeus*. This shows that the reception of the Laws was not altogether indiscriminating.

The suspicion which has attached to the Laws of Plato in the judgment of some modern writers appears to rest partly (1) on differences in the style and form of the work, and (2) on differences of thought and opinion which they observe in them. Their suspicion is increased by the fact that these differences are accompanied by resemblances as striking to passages in other Platonic writings. They are sensible of a want of point in the dialogue and a general inferiority in the ideas, plan, manners, and style. They miss the luminous and poetical flow, 'smoother than a river of oil,' the dramatic verisimilitude, the life and variety of the characters, the dialectic subtlety, the Attic purity, the exquisite urbanity; instead of which they find tautology, obscurity, self-sufficiency, sermonizing, rhetorical declamation, uncouth forms of sentences, and peculiarities in the use of words and idioms. They are unable to discover any unity in the patched, irregular structure. The speculative element both in government and education is superseded by a narrow economical or religious vein. The grace and cheerfulness of Athenian life have disappeared; and a spirit of moroseness and religious intolerance has taken their place. There is a cynical levity in them, and a tone of disappointment and lamentation over human things. They seem also to observe in them bad imitations of thoughts which are better expressed in Plato's other writings. Lastly, they wonder how the mind which conceived the *Republic* could have left the *Critias*, *Hermocrates*, and *Philosophus* incomplete or unwritten, and have devoted the last years of life to the completion of the Laws.

The questions which have been thus indirectly suggested may be considered by us under five or six heads: I, the characters; II, the plan; III, the style; IV, the imitations of other writings of Plato; V, the more general relation of the Laws to the Republic and the other dialogues; and VI, to the existing Athenian and Spartan states.

I. Already in the *Philebus* the character of Socrates has disappeared; and in the *Timaeus*, *Sophist*, and *Politicus* his function of chief speaker is handed over to the Pythagorean philosopher *Timaeus*, and to the Eleatic Stranger, at whose feet he sits, and is silent. More and more Plato seems to have felt in his later writings that the character and method of Socrates were no longer suited to be the vehicle of his philosophy. He is no longer interrogative but dogmatic; not 'a hesitating enquirer,' but one who speaks with the authority of a legislator. Even in the *Republic* we have seen that the dialogue is unreal, and that the argument which is carried on in the old style with *Thrasymachus* in the first book soon passes into the form of exposition.

The *Laws* are discussed by three representatives of Athens, Crete, and Sparta. The Athenian, as might be expected, is the protagonist or chief speaker, while the second place is assigned to the Cretan, who, as one of the leaders of a new colony, has a special interest in the conversation. At least four-fifths of the answers are put into his mouth. The Athenian talks to the two others, although they are his equals in age, in the style of a master discoursing to his scholars; he frequently praises himself; he entertains a very poor opinion of their understanding. Certainly the boastfulness and rudeness of the *Laws* is the reverse of the refined irony and courtesy which characterize the earlier dialogues. We are no longer in such good company as in the *Phaedrus* and *Symposium*.

The scene is laid in Crete, and the conversation is held in the course of a walk from *Cnosus* to the cave and temple of *Zeus*, which takes place on one of the longest and hottest days of the year (iii. 683 C). The companions are said to start at dawn, and to arrive at the point in their conversation which terminates the fourth book, about noon (iv. 722 C). The God to whose temple they are going is the lawgiver of Crete, and may be supposed at this very cave to have given his oracles to *Minos*. But the externals of the scene, which are briefly and inartistically described, soon disappear, and we plunge abruptly into the subject of the dialogue. We are reminded by contrast of the higher art of the *Phaedrus*, in which the summer's day, and the cool stream, and the

chirping of the grasshoppers, and the fragrance of the agnus castus, and the legends of the place are present to the imagination throughout the discourse.

The typical Athenian apologizes for the tendency of his countrymen 'to spin a very long discussion out of slender materials,' and in a similar spirit the Lacedaemonian Megillus also apologizes (cp. Thucyd. iv. 17) for the Spartan brevity; he admits that long discourses may be sometimes necessary. The family of Megillus is the proxenus of Athens and Sparta; and he pays a beautiful compliment to the Athenian, significant of a certain Athenian element which is discernible in the Laws. A good Athenian, he says, is more than ordinarily good, because he is inspired by nature and not manufactured by law. The love of listening which is attributed to the Timocrat in the Republic (viii. 548 E) is also exhibited in him (iii. 683 C). The Athenian on his side has a pleasure in speaking to the Lacedaemonian of the struggle in which their ancestors were jointly engaged against the Persians. A connection with Athens is likewise intimated by the Cretan Cleinias. He is the relative of Epimenides, whom, by an anachronism of seventy or eighty years, he describes as coming to Athens, not after the attempt of Cylon, but ten years before the Persian war. The Cretan and Lacedaemonian can hardly be said to contribute to the argument of which the Athenian is the expounder; they only supply information when asked about the institutions of their respective countries. A kind of simplicity or stupidity is ascribed to them (x. 885 ff., 888 E). At first, they are dissatisfied with the free criticisms which the Athenian passes upon the laws of Minos and Lycurgus, but they acquiesce in his greater experience and knowledge of the world. They admit that there can be no objection to the enquiry; for in the spirit of the legislator himself, they are discussing his laws when there is no one present to hear them. They are unwilling to allow that the Spartan and Cretan lawgivers can have been mistaken in honouring courage as the first part of virtue (ii. 667 A), and are puzzled at hearing for the first time (ii. 661 D) 'that goods are only evil to the evil.' Several times they are on the point of quarrelling, and by an effort learn to restrain their natural feeling (cp. Shakespeare, Henry V, act iii. sc. 2). In Book vii. (806 D), the Lacedaemonian expresses a momentary irritation at the accusation which the Athenian brings against the Spartan institutions, of encouraging licentiousness in their women, but he is reminded by the Cretan that the permission to criticize them freely has

been given, and cannot be retracted. His only criterion of truth is the authority of the Spartan lawgiver; he is 'dumb-founded' (i. 636 E) at the speculations of the Athenian, but inclines to prefer the ordinances of Lycurgus.

The three interlocutors all of them speak in the character of old men, which forms a pleasant bond of union between them. They have the feelings of old men about youth, about the state, about human things in general. Nothing in life seems to be of much importance to them; they are spectators rather than actors, and men in general appear to the Athenian speaker to be the playthings of the Gods and of circumstances. Still they have a fatherly care of the young, and are deeply impressed by sentiments of religion. They would give confidence to the aged by an increasing use of wine, which, as they get older, is to unloose their tongues and make them sing. The prospect of the existence of the soul after death is constantly present to them; though they can hardly be said to have the cheerful hope and resignation which animates Cephalus in the Republic. We shall not be wrong in supposing that Plato is expressing his own feelings in remarks of this sort. For at the time of writing the first book of the Laws he was at least seventy-four years of age, if we suppose him, at p. 638 A, to allude to the victory of the Syracusans under Dionysius the Younger over the Locrians, which occurred in the year 356. Such a sadness was the natural effect of declining years and failing powers, which make men ask, 'after all, what profit is there in life?' They feel that their work is beginning to be over, and are ready to say, 'all the world is a stage'; or, in the actual words of Plato, 'let us play as many good plays as we can,' though 'we must be sometimes sericus, which is not agreeable, but necessary.' These are feelings which have crossed the minds of reflective persons in all ages. And there is no reason to connect the Laws any more than other parts of Plato's writings with the very uncertain narrative of his life, or to imagine that this melancholy tone is attributable to disappointment at having failed to convert a Sicilian tyrant into a philosopher.

II. The plan of the Laws is more irregular and has less connection than any other of the writings of Plato. As Aristotle says in the Politics, 'The greater part consists of Laws'; in Books v, vi, xi, xii the dialogue almost entirely disappears. They seem to be rather the materials for a work, nearly but not quite complete, than a finished composition which may rank with the other Platonic dialogues. To use

his own image, 'Some stones are regularly inserted in the building; others are lying on the ground ready for use.' There is probably truth in the tradition that the Laws were not published until after the death of Plato. We can easily believe that he has left imperfections, which would have been removed if he had lived a few years longer. The arrangement might have been improved; the connection of the argument might have been made plainer, and the sentences more accurately framed. Something also may be attributed to the feebleness of old age. Even a rough sketch of the *Phaedrus* or *Symposium* would have had a very different look. There is, however, an interest in possessing one writing of Plato which is in the process of creation.

We must endeavour to find a thread of order which will carry us through this comparative disorder. The first four books are described by Plato himself as the preface or preamble. Having arrived at the conclusion that each law should have a preamble, the lucky thought occurs to him at the end of the fourth book that the preceding discourse is the preamble of the whole. This preamble or introduction may be abridged as follows:—

The institutions of Sparta and Crete are admitted by the Lacedaemonian and Cretan to have one aim only: they were intended by the legislator to inspire courage in war. To this the Athenian objects that the true lawgiver should frame his laws with a view to all the virtues and not to one only. Better is he who has temperance as well as courage, than he who has courage only; better is he who is faithful in civil broils, than he who is a good soldier only. Better, too, is peace than war; the reconciliation than the defeat of an enemy. And he who would attain all virtue should be trained amid pleasures as well as pains. Hence there should be convivial intercourse among the citizens, and a man's temperance should be tested in his cups, as we test his courage amid dangers. He should have a fear of the right sort, as well as a courage of the right sort.

At the beginning of the second book the subject of pleasure leads to education, which in the early years of life is wholly a discipline imparted by the means of pleasure and pain. The discipline of pleasure is implanted chiefly by the practice of the song and the dance. Of these the forms should be fixed, and not allowed to depend on the fickle breath of the multitude. There will be choruses of boys, girls, and grown-up persons, and all will be heard repeating the same strain, that 'virtue is

happiness.' One of them will give the law to the rest; this will be the chorus of aged minstrels, who will sing the most beautiful and the most useful of songs. They, too, will require a little wine, in order to mellow the austerity of age, and make them amenable to our laws.

After having laid down the first principle of politics, and briefly discussed music and festive intercourse, at the commencement of the third book Plato makes a digression, in which he speaks of the origin of society. He describes, first of all, the family; secondly, the patriarchal stage, which is an aggregation of families; thirdly, the founding of regular cities, like Ilium; fourthly, the establishment of a military and political system, like that of Sparta, with which he identifies Argos and Messene, dating from the return of the Heraclidae. But the aims of states should be good, or else, like the prayer of Theseus, they may be ruinous to themselves. This was the case in two out of three of the Heracleid kingdoms. They did not understand that the powers in a state should be balanced. The balance of powers saved Sparta, while the excess of tyranny in Persia and the excess of liberty at Athens have been the ruin of both.

This discourse on politics is suddenly discovered to have an immediate practical use; for Cleinias the Cretan is about to give laws to a new colony. The fancy which in the Critias was left incomplete, of locating the ideal state in the island of Atlantis, is partially realized in the Laws.

At the beginning of the fourth book, after enquiring into the circumstances and situation of the colony, the Athenian proceeds to make further reflections. Chance, and God, and the skill of the legislator, all co-operate in the formation of states. And the most favourable condition for the foundation of a new one is when the government is in the hands of a virtuous tyrant who has the good fortune to be the contemporary of a great legislator. But a virtuous tyrant is a contradiction in terms; we can at best only hope to have magistrates who are the servants of reason and the law. This leads to the enquiry, what is to be the polity of our new state. And the answer is, that we are to fear God, and honour our parents, and to cultivate virtue and justice; these are to be our first principles. Laws must be definite, and we should create in the citizens a predisposition to obey them. The legislator will teach as well as command; and with this view he will prefix preambles to his principal laws.

The fifth book commences in a sort of dithyramb with another and higher preamble about the honour due to the soul, whence are deduced

the duties of a man to his parents and his friends, to the suppliant and stranger. He should be true and just, free from envy and excess of all sorts, forgiving to crimes which are not incurable and are partly involuntary; and he should have a true taste. The noblest life has the greatest pleasures and the fewest pains. Having finished the preamble, and touched on some other preliminary considerations, we proceed to the Laws, beginning with the constitution of the state. This is not the best or ideal state, having all things common, but only the second best, in which the land and houses are to be distributed among 5040 citizens divided into four classes. There is to be no gold or silver among them, and they are to have moderate wealth, and to respect number and numerical order in all things.

In the first part of the sixth book, Plato completes his sketch of the constitution by the appointment of officers. He explains the manner in which guardians of the law, generals, priests, wardens of town and country, ministers of education, and other magistrates are to be appointed; and also in what way courts of appeal are to be constituted, and omissions in the law to be supplied. At this point (p. 772) the Laws strictly speaking begin, with enactments respecting marriage and the procreation of children, respecting property in slaves as well as of other kinds, respecting houses, married life, common tables for men and women. The question of age in marriage suggests the consideration of a similar question about the time for holding offices, and for military service, which had been previously omitted.

Resuming the order of the discussion, which was indicated in the previous book, from marriage and birth we proceed to education in the seventh book. Education is to begin at or rather before birth; to be continued for a time by mothers and nurses under the inspection of the state; finally, to comprehend music and gymnastics. Under music is included reading, writing, playing on the lyre, arithmetic, and a knowledge of astronomy and mathematics, sufficient to preserve the minds of the citizens from impiety in after life. Gymnastics are to be practised chiefly with a view to their use in war. The discussion of education, which was lightly touched upon in Book ii, is here completed.

The eighth book contains regulations for civil life, beginning with festivals, games, and contests, military exercises and the like. On such occasions Plato seems to see young men and maidens meeting together, and hence he takes occasion to discuss the relations of the sexes, the

evil consequences which arise out of the indulgence of the passions, and the remedies for them. Then he proceeds to speak of agriculture, of arts and trades, of buying and selling, and foreign commerce.

The remaining books of the Laws, ix—xii, are chiefly concerned with criminal offences. In the first class are placed offences against the Gods, especially sacrilege or robbery of temples: next follow offences against the state, beginning with thefts. The mention of thefts suggests a distinction between voluntary and involuntary, curable and incurable offences. Proceeding to the greater crime of murder, he distinguishes between mere homicide, manslaughter, and murder with malice pre-pense; murders by kindred, murders by slaves, wounds with or without intent to kill, actions done from passion, which are partly voluntary and partly involuntary, crimes of or against slaves, and insults to parents. To these various modes of purification or degrees of punishment are assigned, and the terrors of another world are also invoked against them.

At the beginning of Book x, all acts of violence, including sacrilege, are summed up in a single law. The law is preceded by an admonition, in which the offenders are informed that no one ever did an unholy act, or said an unlawful word, retaining his belief in the existence of the Gods; but either he denied their existence, or he believed that they took no care of man, or that they might be turned from their course by sacrifices and prayers. The remainder of the book is devoted to the refutation of these three classes of unbelievers, and concludes with the means to be taken for their reformation, and the announcement of their punishments if they continue obstinate and impenitent.

The eleventh book is taken up with laws and admonitions relating to individuals, which follow one another without any exact order. There are laws concerning deposits and the finding of treasure; concerning slaves and freedmen; concerning retail trade, bequests, divorces, enchantments, poisonings, magical arts, and the like. In the twelfth book the same subjects are continued. Laws are passed concerning violations of military discipline, concerning the censorship of magistrates, and of the citizens living and dead; concerning oaths and the violation of them, and the punishments of those who neglect their duties as citizens. Foreign trade is then discussed, and the permission to be accorded to citizens of travelling in foreign parts; the classes of strangers who may visit the city are spoken of, and

the manner in which they are to be received. Laws are added respecting sureties, searches for property, right of possession by prescription, abduction of witnesses, theatrical competition, plots against the state, and bribery in offices. Rules are also given respecting tribute, respecting economy in sacred rites, respecting judges, their duties and sentences, and respecting sepulchral places and ceremonies. Here (at p. 960) the laws end. Lastly, a nocturnal council is instituted for the preservation of the state, consisting of older and younger members, who are to exhibit in their lives that virtue which is the basis of the state, to know the one in many, and to be educated in divine and every other knowledge, which will enable them to fulfil their office.

III. The style of the Laws differs in several important respects from the other dialogues of Plato: (1) in the want of character, power, and lively illustration; (2) in the frequency of mannerisms (cp. Introduction to the *Philebus*); (3) in the form and rhythm of the sentences; (4) in the use of words. On the other hand, there are many passages (5) which are characterized by a sort of ethical grandeur; and (6) in which, perhaps, a greater insight into human nature, and a greater reach of practical wisdom is shown, than in any other of Plato's writings.

i. The discourse of the three old men is described by themselves as an old man's game of play, which is compared to a game of draughts. Yet there is little of the liveliness of a game in their mode of treating the subject. They do not throw the ball to and fro, but two out of the three are listeners to the third, who is constantly asserting his superior wisdom and opportunities of knowledge, and apologizing (not without reason) for his own want of clearness of speech. He will 'carry them over the stream'; he will answer for them when the argument is too difficult for them to follow; he is afraid of their ignorance of mathematics, but admits that gymnastic is likely to be more intelligible to them;—he has repeated his words several times, and yet they cannot understand him (ii. 664 C). The subject did not properly take the form of dialogue, and also the dramatic vigour of Plato had passed away. The old men speak as they might be expected to speak, and in this there is a touch of dramatic truth, as well as judgment in the treatment of the subject. Plato has given the Laws that form which was most suited to his own powers of writing in the decline of life. There is no regular plan—none of that consciousness

of what has preceded and what is to follow, which makes a perfect style,—but there are several attempts at a plan; the argument is ‘pulled up,’ and frequent explanations are offered why a particular topic was introduced.

The fictions of the Laws have no longer that verisimilitude which we find in the Phaedrus and the Timæus, or even in the Politicus. We can hardly suppose that an educated Athenian would have placed the visit of Epimenides to Athens ten years before the Persian war (i. 642 D); or have imagined that a war with Messene prevented the Lacedæmonians from coming to the rescue of Hellas (iii. 692 D). The narrative of the origin of the Dorian institutions (iii. 685 foll.), said to be due to fear of the growing power of the Assyrians and the assertion that Troy was a part of the Assyrian empire, are evidently audacious inventions, which may be compared with the tale of the island of Atlantis in the poem of Solon, but are not accredited by similar arts of deception. Nor is there anywhere in the Laws that lively *ἐνάργεια*, that vivid *mise en scène*, which is as characteristic of Plato as of some modern novelists.

The old men are afraid of the ridicule which ‘will fall on their heads more than enough’ (vi. 781 D, vii. 790 A, 800 B), and they do not often indulge in a joke. In one of the few which occur, the book of the Laws if left incomplete is compared to a monster wandering about without a head (vi. 752 A). But we no longer breathe the atmosphere of humour which pervades the earlier writings of Plato, and which makes the broadest Aristophanic joke as well as the subtlest refinement of wit possible; and hence an impression of baldness and feebleness is left upon our minds. Some of the descriptions in the Laws, which to us are most amusing, as, for example, of children roaring for the first three years of life; or of the Athenians walking into the country with fighting-cocks under their arms; or of the slave doctor who knocks about his patients finely (iv. 720 C; cp. viii. 857 D), and the gentleman doctor who civilly persuades them; or of the way of keeping order in the theatre, seem not to have been intended to suggest anything ludicrous. The irony of the earlier dialogues, of which some traces occur in the tenth book, is replaced by a severity which hardly condescends to regard human things. ‘Let us say, if you please, that man is of some account; but I was speaking of him in comparison with God.’

The imagery and illustrations are poor in themselves, and are not

assisted by the surrounding phraseology. We have seen how in the Republic, and in the earlier dialogues, figures of speech such as 'the wave,' 'the drone,' 'the chase,' 'the bride,' appear and reappear at intervals. Notes are struck which are repeated from time to time, as in a strain of music. There is none of this subtle art in the Laws. The illustrations, such as the two kinds of doctors, 'the three kinds of funerals,' the fear potion, the puppet, the painter leaving a successor to restore his picture, the 'young man standing to consider where three ways meet,' the 'channel of discourse from which he will not divert the water,' can hardly be said 'to do much credit to his invention.' The citations from the poets have lost that fanciful character which gave them their charm in the earlier dialogues. We are tired of images taken from the arts of navigation, or archery, or weaving, or painting, or medicine, or music. Yet the comparisons of life to a tragedy (vii. 817), or of the working of mind to the revolution of the self-moved (x. 897), or of the aged parent to the image of a God dwelling in the house (xi. 931), or the reflection that 'man is made to be the plaything of God, and that this rightly considered is the best of him' (vii. 803 C), have great beauty.

2. The clumsiness of the dialogue leads to frequent mannerisms and repetitions. The perfection of the Platonic dialogue consists in the accuracy with which the question and answer are fitted into one another, and the regularity with which the steps of the argument succeed one another. This finish of style is no longer discernible in the Laws. There is a want of variety in the answers; nothing can be drawn out of the respondents but 'Yes' or 'No'; the insipid form 'What do you mean?' is constantly recurring. Again and again the speaker is charged, or charges himself, with obscurity; and he repeats again and again that he will explain his views more clearly. In several passages the Athenian praises himself in the most unblushing manner, very unlike the irony of the earlier dialogues, as when he declares 'that the laws are a divine work given by some inspiration of the Gods,' and 'that youth should commit them to memory instead of the compositions of the poets.' The prosopopoeia which is adopted by Plato in the Protagoras and other dialogues is repeated until we are weary of it. The legislator is always addressing the speakers or the young of the state, and the speakers are constantly making addresses to the legislator. A tendency to a paradoxical manner of statement is also observable.

'We must have drinking,' 'we must have a virtuous tyrant,'—this is too much for the duller wits of the Lacedaemonian and Cretan, who at first start back in surprise. More than in any other writing of Plato the tone is hortatory; the laws are sermons as well as laws; they are considered to have a religious sanction, and to rest upon a religious sentiment in the mind of the citizens. The mannerism of attributing the words of the Athenian to the Lacedaemonian and Cretan, who are supposed to have made them their own, is still maintained. Resumptions of subjects which have been half disposed of in a previous passage constantly occur: the arrangement has neither the clearness of art nor the freedom of nature. Irrelevant remarks are made here and there, or illustrations used which are not properly fitted in. The dialogue is generally weak and laboured, and is in the later books fairly given up; apparently, because unsuited to the subject of the work. The long speeches or sermons of the Athenian, often extending over several pages, have never the grace and harmony which are exhibited in the earlier dialogues. For Plato is incapable of sustained composition; his genius is dramatic rather than oratorical; he can converse, but he cannot speak. Even the *Timaeus*, which is one of his most finished works, is full of abrupt transitions. There is the same kind of difference between the dialogue and the continuous discourse of Plato as between the narrative and speeches of *Thucydides*.

3. The perfection of style is variety in unity, freedom, ease, clearness, the power of saying anything, and of striking any note in the scale of human feelings without impropriety; and such is the divine gift of language possessed by Plato in the *Symposium* and *Phaedrus*. From this there are many fallings-off in the *Laws*: first, in the structure of the sentences, which are rhythmical and monotonous,—the formal and sophistical manner of the age is superseding the natural genius of Plato: second, they are often of enormous length, and the latter end frequently appears to forget the beginning of them,—they seem never to have received the second thoughts of the author; either the emphasis is wrongly placed, or there is a want of point in a clause; or an absolute case occurs which is not properly separated from the rest of the sentence; or words are aggregated in a manner which fails to show their relation to one another; or the connecting particles are omitted at the beginning of sentences: the use of the relative and antecedent is more indistinct, the changes of person and number more frequent,

examples of pleonasm, tautology, and periphrasis, unmeaning antitheses of positive and negative, and other affectations, are more numerous than in the other writings of Plato; there is also a more common and sometimes unmeaning use of qualifying formulae, *ὡς ἔπος εἰπεῖν, κατὰ δύναμιν*, and of double expressions, *παντῇ πάντως, οὐδάμως οὐδαμῇ, ὅπως καὶ ὅπη*—these are too numerous to be attributed to errors in the text; again, there is an over-curious adjustment of verb and participle, noun and epithet—many forms of affected variety in cadence and expression take the place of natural variety: thirdly, the absence of metaphorical language is remarkable—the style is not devoid of ornament, but the ornament is of a debased rhetorical kind, patched on to instead of growing out of the subject; there is a great command of words, and a laboured use of them; forced attempts at metaphor occur in several passages,—e. g. viii. 844 A, *παροχετεύειν λόγοις*; ix. 858 C, *τὰ μὲν τιθέμενα τὰ δὲ παρατιθέμενα*; vi. 773 D, *οἶνος κολαζόμενος ὑπὸ νήφοντος ἑτέρου θεοῦ*; the plays on the word *νόμος = νοῦ διανομή*, iv. 714 A, *ᾠδὴ ἑτέρα*, iii. 700 B: fourthly, there is a foolish extravagance of language in other passages, ‘the swinish ignorance of arithmetic,’ vii. 819 D; ‘the justice and suitableness of the discourse on laws,’ vii. 811 C; over-emphasis at ix. 861 D; ‘best of Greeks,’ vii. 820, said of all the Greeks, and the like: fifthly, poor and insipid illustrations are also common, e. g. i. 638 C, 639 A, ii. 644 E: sixthly, we may observe an unmeaning use of climax and hyperbole, vii. 808 A, *αἰσχρὸν λέγειν χρὴ πρὸς αὐτοὺς δοῦλόν τε καὶ δοῦλην καὶ παῖδα καὶ εἴ πως οἶόν τε ὄλην τὴν οἰκίαν*; i. 636 B, *δοκεῖ τοῦτο τὸ ἐπιτήδευμα κατὰ φύσιν τὰς περὶ τὰ ἀφροδίσια ἡδονὰς οὐ μόνον ἀνθρώπων ἀλλὰ καὶ θηρίων διεφθαρκέαι*.

4. The peculiarities in the use of words which occur in the Laws have been collected by Zeller and Stallbaum: first, in the use of nouns, such as *ἀλλοδημία, ἀπειναίτησις, γλυκυθυμία, θρασυξενία, μεγαλόνοια, παιδουργία, διαθέτηρ, κόρος*. Secondly, in the use of adjectives, such as *αἴστωρ, βιόδοτος, ἐχθοδοπὸς, ἡίθεος, χρόμιος*, and of adverbs, such as *ἀνιδιτι, ἀνατεί, νηπουιεί*. Thirdly, in the use of verbs, such as *αἴσσειν (αἴξειεν εἰπεῖν, iv. 709 A), εἰθιμονύεισθαι, παραποδίζεσθαι, τημελεῖν, τητάν*. These words however, as Stallbaum remarks, are formed according to analogy, and nearly all of them have the support of some poetical or other authority.

Zeller and Stallbaum have also collected forms of words in the Laws, differing from the forms of the same words which occur in other places: e. g. *βλάβος* for *βλάβη*, *ἄβιος* for *ἀβίωτος*, *ἀχάριστος* for *ἄχαρις*, *δοῦλειος* for

δουλικός, παιδείος for παιδικός, ἐξαγριῶ for ἐξαγριαίνω, ἰλοῖμαι for ἰλάσκομαι, and the Ionic word σωφρομιστὺς, meaning 'correction.' Zeller has noted a fondness for substantives, ending in *μα* and *σις*, such as γεώργημα, διά-*παυμα*, ἐπιθύμημα, ζημίωμα, κωμώδημα, ὀμίλημα; βλάβις, λοιδορήσις, παρά-*γελσις*, and others; also a use of substantives in the plural, which are commonly found only in the singular, *μανίαι*, ἀθεότητες, φθόνοι, φόβοι, φύσεις. Also, a peculiar use of prepositions in composition, as in ἐνείργω, ἀποβλάπτω, διανομοθετέω, διείρηται, διευλαβεῖσθαι, and others:— also a frequent use of the Ionic datives plural in *αισι* and *οισι*.

To these peculiarities he has added a list of peculiar expressions and constructions. The most characteristic are the following, viii. 841 D, ἄθυτα παλλακῶν σπέρματα; ix. 855 C, ἄμορφοι ἔδραι; iii. 690 D, ὅσα ἀξιώματα πρὸς ἄρχοντας; vi. 744 B, οἱ κατὰ πόλιν καιροί; μῦθος, used in several places of 'the discourse about laws'; and connected with this the frequent use of παραμύθιον and παραμυθεῖσθαι in the general sense of 'addressing'; vii. 823 E, αἰμύλος ἔρωσ; xii. 960 B, ἄταφοι πράξεις; vi. 752 A, μῦθος ἀκέφαλος; vi. 755 D, ἦθος εὐθύπορον. He remarks also on the frequent use of the abstract for the concrete; e. g. ὑπηρεσία for ὑπηρεταί, φυγαὶ for φυγάδες, μηχαναὶ in the sense of contrivers, δουλεία for δοῦλοι, βασιλείαι for βασιλεῖς, μαίνουmena κηδεύματα for γυναικα μαυνομένην; ἡ χρεία τῶν παίδων in the sense of indigent children, and παίδων ἰκανότης; τὸ ἔθος τῆς ἀπειρίας for ἡ εἰωθῆναι ἀπειρία; κυπαρίττων ὕψη τε καὶ κάλλη θαυμάσια for κυπαρίττοι μάλα ὕψηλαι καὶ καλά. He further notes some curious uses of the genitive case, e. g. φιλίας ὁμολογίαι, μανίαι ὀργῆς, λαιμαργίαι ἡδονῆς, χειμῶνων ἀνυποδησίαι; and of the dative, ὀμιλίαι ἔχθροισι, νομοθεσίαι ἐπιτρόποις; and also some rather uncommon periphrases, θρέμματα Νείλου, ξυγγεννήτωρ τέκνων for ἄλοχος, Μούσης λέξις for ποιήσις, ζωγράφων παῖδες, ἀνθρώπων σπέρματα and the like; the fondness for particles of limitation, especially *τις* and *γε*, σύν *τισι* χάρισι, τοῖς *γε* δυναμένοις and the like; the pleonastic use of *τανῶν*, of *ὡς*, of *ὡς* ἔπος εἰπεῖν, of *ἐκάστοτε*; and the periphrastic use of the preposition *περί*. Lastly, he observes the tendency to hyperbata or transpositions of words; and to rhythmical uniformity as well as grammatical irregularity in the structure of the sentences.

For nearly all the expressions which are adduced by Zeller as arguments against the genuineness of the Laws, Stallbaum finds some sort of authority. There is no real ground for suspecting their genuineness, because several words occur in them which are not

found in the other writings of Plato. An imitator will often preserve the usual phraseology of a writer better than he would himself. But, on the other hand, the mere fact that authorities may be quoted in support of most of these uses of words, does not show that the diction is not peculiar. Several of them seem to be poetical or dialectical, and exhibit an attempt to enlarge the limits of Greek prose, by the introduction of Homeric and tragic expressions. Most of them do not appear to have retained any hold on the later language of Greece. Like several 'experiments in language' of the writers of the Elizabethan age, they were afterwards lost; and though occasionally found in Plutarch, and imitators of Plato, they have not passed current in Aristotle or the common dialect of Greece.

5. Unequal as the style of the Laws is, they contain a few passages which are very grand and noble. For example, the address to the poets at vii. 817: 'Best of strangers, we also are poets of the best and noblest tragedy; for our whole state is an imitation of the best and noblest life, which we affirm to be indeed the very truth of tragedy.' Or again, the sight of young men and maidens in friendly intercourse with one another, suggesting the dangers to which youth is liable from the violence of passion (viii. 835-841); or the eloquent denunciation of unnatural lusts in the same passage; or the charming thought that the best legislator 'orders war for the sake of peace and not peace for the sake of war' (i. 628 E, foll.); or the pleasant allusion 'O Athenian—inhabitant of Attica, I will not say, for you seem to me worthy to be named after the Goddess Athene because you go back to first principles' (i. 626 D); or the pithy saying 'many a victory has been and will be suicidal to the victors, but education is never suicidal' (i. 641 C); or the fine expression that 'the walls of a city should be allowed to sleep in the earth, and that we should not attempt to disinter them' (vi. 778 D); or the remark that 'God is the measure of all things in a sense far higher than any man can be' (iv. 716 C); or that 'a man should be from the first a partaker of the truth, that he may live a true man as long as possible' (v. 730 C); or the principle repeatedly laid down, 'that the sins of the fathers are not to be visited on the children,' e. g. ix. 856 C; or the description of the funeral rites of those blessed persons who depart in innocence (xii. 947 B, foll.); or the noble sentiment, that we should do more justice to slaves than to equals, (vi. 777 D); or the curious observation, founded, perhaps, on his own experience, that there are

a few 'divine men in every state however corrupt, whose conversation is of inappreciable value' (xii. 951 C); or the acute remark, that public opinion is to be respected, because the judgments of mankind about virtue are better than their practice (xii. 950 B); or the deep religious and also modern feeling which pervades the tenth book (whatever may be thought of the arguments); the sense of the duty of living as a part of a whole, and in dependence on the will of God (x. 903 D, E), who takes care of the smallest things as well as the greatest (x. 900 C); and the picture of parents praying for their children (x. 887 D, foll.) (not as we may say, slightly altering the words of Plato, as if there were no reality in the Gentile religions, but as if there were the greatest), are very striking to us. We must remember that the Laws are not, like the Republic, an ideal state, but are supposed to be on the level of human motives and feelings; hence there is an attempt made to show that the pleasant is also just. But, on the other hand, the priority of the soul to the body, and of God to the soul, is always insisted upon as the true incentive to virtue; especially with great force and eloquence at the commencement of Book v. And the work of legislation is carried back to the first principles of morals.

6. There is none of Plato's writings which shows so deep an insight into the sources of human evil as the Laws. That 'cities will never cease from ill until they are better governed,' is the text of the Laws as well as of the Politicus and Republic. The remark that the balance of power preserves states (iii. 691, 692); the reflection that no one ever passed his whole life in disbelief of the Gods (x. 888 C); the idea, original to the Greek, that the characters of men are best seen in convivial intercourse (i. 649 B); the observation that the people must be allowed to share not only in the government, but in the administration of justice (trial by jury); the desire to make laws, not with a view to courage only but to all virtue; the clear perception that education begins with birth, or even as he would say before birth (vii. 789 A); the attempt to purify religion; the modern reflections, that punishment is not vindictive (ix. 854 E), and that limits must be set to the power of bequest (xi. 922, 923); the impossibility of undeceiving the victims of quacks and jugglers (xi. 933 A); the necessity of sanitary measures (vi. 761 B); above all, perhaps, the distinct consciousness that under the actual circumstances of mankind the ideal cannot be carried out (v. 739 B, 746 B), and yet may be a guiding principle—will appear

to us, if we remember that we are still in the dawn of politics, to show a great depth of political wisdom.

IV. The Laws of Plato contain numerous passages which closely resemble other passages in his writings, as for example, the comparison of philosophy to a yelping she-dog, both in the Republic and in the Laws (Laws, xii. 967 D; Rep. x. 607 C): the remark that no man can practise two trades (Laws, viii. 846 D; Rep. iii. 394 E, etc.): or the advantage of the middle condition (Laws, v. 736 E; Rep. iv. 421 foll.): or the moulds (*τύποι*) of religion (Laws, vii. 800 foll.; Rep. ii. 379 foll.): or the remark (Laws, xii. 945 E) that 'the relaxation of justice makes many cities out of one,' which may be compared with the Republic (Rep. iv. 422 E): or the description of lawlessness 'creeping in little by little in the fashions of music' (Laws, iii. 701 foll.; Rep. iv. 424 E). These are a few out of many examples which may be adduced of resemblances in the Laws to the other writings of Plato. They are far more numerous than the resemblances between other parts of his writings. No dialogues so nearly approach one another in thought as the Republic and the Politicus or the Laws, notwithstanding their differences. And at first sight a suspicion arises that the repetition shows the unequal hand of the imitator. For why should a writer say over again, in a more imperfect form, what he had already said in his most finished style and manner? And yet it may be urged on the other side that an author whose original powers are beginning to decay will be very liable to repeat himself, as in conversation, so in books. He may have forgotten what he had written before; he may be unconscious of the decline of his own powers. Hence arises a question of great interest, bearing on the genuineness of ancient writers. Is there any criterion by which we can distinguish the genuine from the spurious imitation, or, in other words, the repetition of a thought or passage by an author himself from the appropriation of it by another? The question has, perhaps, never been fully discussed; and, though a real one, does not admit of a precise answer. A few general considerations on the subject may be offered:—

(a) Is the difference such as might be expected to arise at different times of life or under different circumstances?—There would be nothing surprising in a writer, as he grew older, losing something of his own originality, and falling more and more under the spirit of his age. 'What a genius I had when I wrote that book!' was the pathetic exclamation of a famous English author, when in old age he chanced to take up one

of his early works. There would be nothing surprising again in his losing somewhat of his powers of expression, and becoming less capable of framing language into a harmonious whole. There would also be a strong presumption that if the variation of style was uniform, it was attributable to some natural cause, and not to the arts of the imitator. The imitation might be the result of feebleness and of want of activity of mind. As in the well-known instance of Milton's 'Paradise Regained,' the decline of power which impaired the execution of a work might also enfeeble an author's judgment about the child of his old age. In other words, he might be a worse writer and a worse critic of his own writings. But the natural weakness of a great author would be different from the artificial weakness of an imitator; whereas the forger would be unable to maintain this equality in the appearance of his writings. He would fill his work with irregular patches, sometimes taken verbally from the writings of the author whom he personated, but rarely acquiring his spirit. His imitation would be obvious, irregular, superficial. The patches of purple would be easily detected among his threadbare and tattered garments. He would rarely take the pains to put the same thought into other words. Speaking of ancient forgers generally, we may say that they were far from being masters in the art of deception, and had rarely any motive for being so.

(b) But, secondly, the imitator will commonly be least capable of understanding that which is really the most characteristic part of a great writer. In every man's writings there is something like himself and unlike others, which gives individuality. To appreciate this latent quality would require a kindred mind, and minute study and observation. There are a class of similarities which may be called undesigned coincidences, which are so remote as to be incapable of being borrowed from one another, and yet when they are compared find a natural explanation in their being the work of the same mind. The imitator might imitate the turns of style—he might repeat images or illustrations, but he could not enter into the inner circle of Platonic philosophy. He would understand that part of it which became popular in the next generation, as for example, the doctrine of ideas or of numbers: he might criticise and condemn communism. But the higher flights of Plato about the science of dialectic, or the unity of virtue, or a person who is above the law, would have been unintelligible to him.

(c) The argument from imitation assumes a different character when

the supposed imitations are associated with other passages having the impress of original genius (cp. *Introd. to Appendix, Vol. II*). Then all the probabilities that can be urged on behalf of similar passages being the work of an original writer are greatly increased by their juxtaposition with other passages which certainly are so. The great excellence, not only of the whole, but even of the parts of writings, is a strong proof of their genuineness—for although the great writer may fall below, the forger or imitator cannot rise much above himself. Whether we can attribute the worst parts of a work to a forger and the best to a great writer,—as for example, in the case of some of Shakespeare's works,—depends upon the probability that they have been interpolated, or have been the joint work of two writers; and this can only be established by a comparison of other writings of the same class. If the interpolation or double authorship of Greek writings in the time of Plato could be shown to be common, then a question, perhaps insoluble, would arise, not whether the whole but whether parts of the Platonic dialogues are genuine, and, if parts only, which parts. And although Hebrew prophecies and Homeric poems and *Laws of Manu* may have grown together in early times, there is no proof of any such tendency in the later ages of Greece after authorship had become a regular profession.

It must be admitted that these principles, although real, are difficult of application. Yet a criticism may be worth making which rests only on probabilities or impressions. Great disputes will arise about the merits of different passages, about what is really characteristic and original or trivial and borrowed. Many have thought the *Laws* to be one of the greatest of Platonic writings, while in the judgment of Mr. Grote they hardly rise above the level of the forged epistles. The manner in which a writer would or would not have written at a particular age must be acknowledged to be a matter of conjecture. But enough has been said to show that similarities of a certain kind, whether criticism is able to detect them or not, may be such as must be attributed to an original writer, and not to a mere imitator.

(d) Applying these principles to the case of the *Laws*, we have now to point out that they contain the class of latent refined similarities which are indicative of genuineness. That these are found in a work which contains many beautiful and remarkable passages, will be admitted by any one who refers back to § III, 6. We may therefore begin by claiming this presumption in their favour. Such undesigned coincidences, as

we may venture to call them, are the following. The conception of justice as the union of temperance, wisdom, courage (Laws, i. 631 C; Rep. iv. 433 foll.): the latent idea of dialectic implied in the notion of dividing laws after their kinds (Laws, i. 630 E); and again (xii. 965 C), the exaggerated approval of the method of looking at one idea gathered from many things, 'than which a truer was never discovered by any man': or again the description of the Laws as parents (Laws, ix. 859 A; Rep. vii. 538 D): the assumption that religion has been already settled by the oracle of Delphi (Laws, v. 738 B; Rep. iv. 427 B), to which an appeal is also made for the decision of disputes: the notion of the battle with self, a paradox for which Plato in a manner apologises both in the Laws and the Republic (Laws, i. 627 B; Rep. iv. 430 E, foll.): the remark (Laws, ix. 859 D) that just men, even when they are deformed in body, may still be perfectly beautiful in respect of the excellent justice of their minds (cp. Rep. iii. 402 D, E): the argument that ideals are none the worse because they cannot be carried out (Rep. v. 472 D; Laws, v. 746 B): the near approach to the idea of good in 'the principle which is common to all the four virtues,' a truth which the guardians must be compelled to recognise (Laws, xii. 965 D; cp. Rep. vii. 534 D): or again the recognition by reason of the right pleasure and pain, which had previously been matter of habit (Laws, ii. 653 B; Rep. iii. 402 A): or the blasphemy of saying that the excellency of music is to give pleasure (Laws, ii. 665 D; Rep. vi. 509 A, B): again the story of the Sidonian Cadmus (Laws, ii. 663 E), is a variation of the Phoenician tale of the earth-born men (Rep. iii. 414 C): the danger of altering the modes of music in the Republic (iv. 424 C) may be compared with the danger of altering the plays of children in the Laws (vii. 797 B): the apology for delay and diffuseness which occurs not unfrequently in the Republic, is carried to an excess in the Laws: the remarkable thought (Laws, x. 899 A) that the soul of the sun is better than the sun, agrees with the relation in which the idea of good stands to the sun in the Republic, and with the substitution of mind for the idea of good in the Philebus: the passage about the tragic poets (Laws, vii. 817 A, foll.) agrees generally with the treatment of them in the Republic, but is more finely conceived, and worked out in a nobler spirit. Some lesser similarities of thought and manner should not be omitted, such as the mention of the thirty years old students in the Republic (vii. 539 B), and the fifty years old choristers in the Laws (ii. 670 A); or the image of the wax from which the citizens are to be

made in the Laws as in the Republic ; or the number of the tyrant (729), which is nearly equal with the number of days and nights in the year (730), compared with the 'slight correction' of the sacred number 5040, which, 'if two families be deducted may be divided by all the numbers from one to twelve' (Laws, vi. 771 C) ; or once more, we may compare the ignorance of solid geometry of which he complains in the Republic (vii. 528 C), and the puzzle about fractions (vii. 524 E) with the difficulty in the Laws about commensurable and incommensurable quantities, (Laws vii. 819, 820)—and the malicious emphasis on the word *γυναικεῖος* (Laws, vii. 790 A) with the use of the same word (Rep. v. 469 E.) These and similar passages tend to show that the author of the Republic is also the author of the Laws. They are echoes of the same voice, coincidences too subtle to have been invented by the ingenuity of any imitator. The force of the argument is increased, if we remember that no passage in the Laws is exactly copied,—nowhere do five or six words occur together which are found together elsewhere in Plato's writings.

Several passages in the Laws have parallels with other writings of Plato as well as with the Republic. In general, as we might expect, such resemblances occur chiefly in the dialogues, which, on other grounds, we may suppose to be of later date. The punishment of evil is to be like evil men (Laws, v. 728 B), as he says also in the Theaetetus (176 E). Compare again the dependence of tragedy and comedy on one another, of which he gives the reason in the Laws (vii. 816 D)—'For serious things cannot be understood without laughable, nor opposites at all without opposites, if a man is really to have intelligence of either ;' here he puts forward the principle which is the groundwork of the thesis of Socrates (Symp. 223 C), 'that the genius of tragedy is the same as that of comedy, and that the writer of comedy ought to be a writer of tragedy also.' There is a truth and right which is above Law (Laws, ix. 875 C), as we learn also from the Politicus. That men are the possession of the Gods (Laws, x. 902 C), is a reflection which likewise occurs in the Phaedo (62 B). The remark, whether serious or ironical (Laws, xii. 948 C), that 'the sons of the Gods naturally believed in the Gods, because they had the means of knowing about them,' is found in the Timaeus (40 D). The reign of Cronos, who is the divine ruler (Laws, iv. 713 B), is the reminiscence of the Politicus (269 A, foll.). It is remarkable that in the Sophist and Politicus (Soph. 232 E), Plato, speaking in the character of the Eleatic stranger, has already put on

the old man. The madness of the poets, again, is a favourite notion of Plato's, which occurs also in the *Laws* (iv. 719 C), as well as in the *Phaedrus* (245 A) and elsewhere. There are traces in the *Laws* (iii. 685 A, foll.) of the same desire to base speculation upon history which we find in the *Critias*. Once more there is a striking parallel with the paradox of the *Gorgias* (472 E, foll.), that 'if you do evil, it is better to be punished than to be unpunished,' in the *Laws* (ii. 661 D), 'To live having all goods without justice and virtue is the greatest of evils if life be immortal, but not so great if the bad man lives but a short time.'

The point to be considered is whether these are the kind of parallels which would be the work of an imitator. Would a forger have had the wit to select the most peculiar and characteristic thoughts of Plato; would he have caught the spirit of his philosophy; would he, instead of openly borrowing, have half concealed his favourite ideas; would he have formed them into a whole such as the *Laws*; would he have given another the credit which he might have obtained for himself? Without pressing such arguments as absolutely certain, we must acknowledge that such a comparison affords a new ground of real weight for believing the *Laws* to be a genuine writing of Plato.

V. The relation of the *Republic* to the *Laws* is clearly set forth by Plato in Book v. 739. The *Republic* is the best state, the *Laws* is the best possible under the existing conditions of the Greek world. The *Republic* is the ideal, in which no man calls anything his own, which may or may not have existed in some remote clime, under the rule of some God, or son of a God (who can say?), but is, at any rate, the pattern of all other states and the exemplar of human life. The *Laws* distinctly acknowledge what the *Republic* partly admits, that the ideal is inimitable by us, but that we should lift up our eyes to the heavens and try to regulate our lives according to the divine image. The citizens are no longer to have wives and children in common, and are no longer to be under the government of philosophers. But the spirit of communism or communion is to continue among them; the sexes are to be as nearly on an equality as possible; they are to meet at common tables, and to share warlike pursuits (if the women will), and to have a common education. The legislator has taken the place of the philosopher, but a council of elders is retained, who are to fulfil the duties of the legislator when he has passed out of life. The addition of younger persons to this council by cooptation is an improvement on

the governing body of the Republic. The scheme of education in the Laws is obviously of a far lower kind than that which he has conceived in the Republic. There he would have his rulers trained in all knowledge meeting in the idea of good, of which the different branches of mathematical science are but the handmaidens or ministers; here he stops short with the preliminary sciences, and they are to be studied partly with a view to their practical usefulness, which in the Republic he holds cheap; and still more with a view to avoiding impiety, of which in the Republic he says nothing. Yet in the Laws there remain traces of the old educational ideas. He is still for banishing the poets; and as he finds the works of prose writers equally dangerous, he would substitute for them the study of his own Laws. He insists strongly on the importance of mathematics as an educational instrument. He is no more reconciled to the Greek mythology than in the Republic, though he would rather say nothing about it out of a pious reverence for antiquity; and he is equally willing to have recourse to fictions, provided they have a moral tendency. He harps back upon a golden age in which the sanctity of oaths was respected and in which men living nearer the Gods were more disposed to believe in them; but we must legislate for the world as it is, now that the old beliefs have passed away (xii. 948 C). Though he is no longer fired with dialectical enthusiasm, he would compel the guardians to 'look at one idea gathered from many things,' and to 'perceive the principle which is the same in all the four virtues' (xii. 965 C). He still recognizes the enormous influence of music, in which every citizen is to be trained for three years; and he seems to attribute the existing degeneracy of the Athenian state and the laxity of morals partly to musical innovation, manifested in the unnatural divorce of the instrument and the voice, and partly to the influence of the mob who ruled at the theatres. He assimilates the education of the two sexes, as far as possible, both in music and gymnastic, and, as in the Republic, he would give to gymnastic a purely military character. In marriage, his object is still to produce the finest children for the state. As in the Politicus, he would unite in wedlock dissimilar natures—the passionate with the dull, the courageous with the gentle. And the virtuous tyrant of the Politicus, who has no place in the Republic, again appears (iv. 709 E). In this, as in all his writings, he has the strongest sense of the degeneracy and incapacity of the rulers of his own time.

In the *Laws*, the philosophers, if not banished, like the poets, are at least ignored; and religion takes the place of philosophy in the regulation of human life. It must however be remembered that the religion of Plato is coextensive with morality, and is that purified religion and mythology of which he speaks in the second book of the *Republic*. There is no real discrepancy in the two works. In a popular treatise, he speaks of religion rather than of philosophy; just as he appears to identify virtue with pleasure, and rather seeks to find the common element of the virtues than to maintain his old paradoxical thesis that they are one, or that they are identical with knowledge. The dialectic and the idea of good, which even Glaucon in the *Republic* could not understand, would be obviously out of place in a more popular work.

Some confusion occurs in the passage in which Plato speaks of the *Republic*, occasioned by his reference to a third state, which he proposes (D.V.) hereafter to expound (v. 739 B, foll.). Like many other thoughts in the *Laws*, the allusion is obscure from not being worked out. The passage is explained by Aristotle (*Polit.* iv. 1), who supposes Plato to mean by the third state, neither the best absolutely, nor the best under existing conditions, but an imaginary state, inferior to either, destitute, as he supposes, of the necessaries of life: apparently such a beginning of primitive society as he describes in *Laws* iii. Aristotle, however, had no more power of divining the obscure hint than we have. And it is not improbable that Plato may have meant by his third state an historical sketch, bearing the same relation to the *Laws* which the unfinished *Critias* would have borne to the *Republic*; or he may, perhaps, have intended to describe a state more nearly approximating than the *Laws* to existing Greek states.

The *Politicus* is a mere fragment when compared with the *Laws*, yet combining a second interest of dialectic as well as politics, which is wanting in the larger work. Several points of similarity and contrast may be observed between them. In some respects the *Politicus* is even more ideal than the *Republic*, looking back to a former state of paradisiacal life, in which the Gods ruled over mankind, as the *Republic* looks forward to a coming kingdom of philosophers. Of this kingdom of Cronos there is also mention in the *Laws* (iv. 713 B). Again, in the *Politicus*, the Eleatic Stranger rises above law to the conception of the living voice of the Lawgiver, who is able to provide for individual cases.

A similar thought is repeated in the *Laws* (ix. 875 C): 'If in the order of nature, and by divine destiny, a man were able to apprehend the truth about these things, he would have no need of laws to rule over him; for there is no law or order above knowledge, nor can mind without impiety be deemed the subject or slave of any, but rather the lord of all.' The union of opposite natures, who form the warp and the woof of the political web, is a favourite thought expressed under the same figure of speech in both dialogues.

VI. The Republic may be described as the Spartan constitution appended to a government of philosophers. But in the *Laws* an Athenian element is also introduced. Many enactments are taken from the Athenian; the four classes are borrowed from the constitution of Cleisthenes, which Plato regards as the best form of Athenian government, and the guardians of the law bear a certain degree of resemblance to the archons. Life is to wear, as at Athens, a joyous and festive look; there are to be Bacchic choruses, and men of mature age are encouraged in moderate potations. On the other hand, the common meals, the public education, the *crypteia* are borrowed from Sparta and not from Athens, and the superintendence of private life, which was to be practised by the governors, has also its prototype in Sparta. The extravagant dislike which Plato shows both to a naval power and to democracy is the reverse of Athenian.

The best-governed Hellenic states traced the origin of their laws to individual lawgivers. There can be no doubt that these were real persons, though we are uncertain how far they originated or only modified the institutions which are ascribed to them. But the lawgiver, though not a myth, was a fixed idea in the mind of the Greek,—as fixed as the Trojan war or the earth-born Cadmus. This was what 'Solon meant or said' was the form in which the Athenian expressed his own conception of right and justice, or argued a disputed point of law. And the constant reference in the *Laws* of Plato to the lawgiver is altogether in accordance with Greek modes of thinking and speaking.

There is also, as in the Republic, a Pythagorean element. The highest branch of education is arithmetic; to know the order of the heavenly bodies, and to reconcile the apparent contradiction of their movements, is an important part of religion; there is to be measure in the lives of the citizens, and also in their vessels and coins; the great blessing of the state is the number 5040. Plato is deeply impressed by the antiquity of

Egypt, and the unchangeableness of her ancient forms of song and dance. And he is also struck by the progress which the Egyptians had made in the mathematical sciences,—in comparison of them the Greeks appeared to him to be little better than swine. Yet he censures the Egyptian meanness and inhospitality to strangers. He has traced the growth of states from their rude beginning in a philosophical spirit; but of any life or growth of the Hellenic world in future ages he is silent. He has made the reflection that past time is the maker of states; but he does not argue from the past to the future, that the process is always going on, or that the institutions of nations are relative to their stage of civilization. If he could have stamped indelibly upon Hellenic states the will of the legislator, he would have been satisfied. The utmost which he expects of future generations is that they should supply the omissions, or correct the errors which younger statesmen detect in his enactments. When institutions have been once subjected to this process of criticism, he would have them fixed for ever.

THE PREAMBLE.

BOOK I. Stranger, let me ask a question of you—Was God or man the author of your laws? ‘God, Stranger. In Crete, Zeus is said to have been the author of them, in Sparta, as Megillus will tell you, Apollo.’ You believe, as Homer says, that Minos went every ninth year to converse with his Olympian sire, and gave you laws which he brought from him? ‘Yes; and there was Rhadamanthus, his brother, who is reputed among us to have been the justest of men—he assisted in the work.’ That is a reputation worthy of the son of Zeus. And as you and Megillus have been trained under their laws, I may ask you to give me an account of them. We can talk about them in our walk from Cnosus to the cave and temple of Zeus. I am told that the distance is considerable, but probably there are shady places under the trees, at which, being no longer young, we may often rest and talk. ‘Yes, Stranger, a little onward there are lofty groves of cypresses which are wonderfully beautiful, and green meadows in which we may repose.’

My first question is, why has the law ordained that you should have common meals, and practise gymnastics, and bear arms? ‘My answer is, that our common meals are the life of the camp transferred to the

city; and we carry bows and arrows because our island home is rugged, and does not admit of cavalry. The legislator thought that war was the natural state and serious occupation of all mankind, and that peace is only a pretence; no possessions seemed to him to have any value which were not secured against enemies, and hence he arranged all our institutions with a view to war.' And do you think that superiority in war is the true aim of government? 'Certainly I do, and my Spartan friend will agree with me.' And are there wars not only of state against state, but of village against village, of family against family, of individual against individual? 'Yes.' And is a man his own enemy? 'There you come to first principles, like a true votary of the goddess Athene; and this is all the better, for you will the sooner recognise the truth of what I am saying—that all men everywhere are the enemies of all, and each individual of every other and of himself.' What do you mean? 'I mean what I say; and, further, that there is a victory and defeat—the best and the worst—which each man sustains, not at the hands of another, but of himself.' And does this extend to states and villages as well as to individuals? 'Certainly; there is a better in them which conquers the worse.' Whether the worse ever really conquers the better, is a question of words which may be left for the present; but your meaning is, that bad citizens do, under certain circumstances, overcome the good, and that the state is then conquered by herself, and that when they are defeated the state is victorious. Or, again, in a family there may be several brothers, the offspring of a single pair, and the bad may be a majority; and when the bad majority conquer the good minority, the family are worse than themselves. The use of the terms better or worse than him or themselves may be doubtful, but about the thing meant there can be no dispute. 'Very true.' Such a struggle might be determined by a judge. And which would be the better judge, he who destroys the worse and lets the better rule, or he who lets the better rule and makes the others voluntarily obey; or, thirdly, he who reconciles the two parties, and gives them laws which they mutually observe? 'The last, clearly.' But of such a legislator the object would not be war. 'That is true.' And as there are two kinds of war, one within a state and one without, of which the internal is by far the worse, will not the legislator direct his attention to this latter rather than to the other? He will reconcile the contending parties, and unite them against their external enemies. 'Certainly.' Every legislator will aim at the

greatest good, and the greatest good is not victory in war, whether civil or external, but mutual peace and good-will, as in the body, health is preferable to the purgation of disease. And the legislator who makes war his object instead of peace, or who pursues war except for the sake of peace, is not a true statesman. 'And yet I am greatly mistaken, Stranger, if the laws of Crete and Sparta do not exclusively aim at war.' Perhaps so; but that is no reason why we should quarrel with one another about your legislators instead of gently questioning them, for they are in earnest quite as much as we are. The poet Tyrtæus (you have heard of his poems in Crete, and my Lacedæmonian friend is perfectly saturated with them)—he was an Athenian by birth, and a Spartan citizen;—well, he says, 'I sing not, I care not about any man, however rich or happy, unless he is brave in war.' Now I should like, in the name of us all, to ask the poet a question. O Tyrtæus, I would say to him, are there not two kinds of war? Cleinias and Megillus and I are agreed with you in praising those who excel in war; but which kind of war do you mean? that dreadful war which is termed civil, or the milder sort which is waged against foreign enemies? 'It is a milder sort.' You say that you abominate those who are not eager to taste their enemies' blood, and you seem to mean chiefly their foreign enemies? He will assent to this? 'Certainly.' Now we say that there are men better far than the heroes whom you, Tyrtæus, celebrate, concerning whom another poet, Theognis the Sicilian, says that in a civil broil they are worth their weight in gold and silver. For in a civil war, not only courage, but justice and temperance and wisdom are required, and all virtue is better than a part. The mercenary soldier is ready to stand firm and die at his post; but he is a violent, senseless sort of animal. And the inspired legislator, or even the uninspired, will make laws with a view to the highest virtue; and this is not brute courage, but loyalty in the hour of danger. The virtue of Tyrtæus, although needed at the time when he sang, is really of a very fourth-rate description. 'Stranger, you are degrading our legislator to the level of the barbarians.' Nay, I think that we should be degrading not him, but ourselves, if we believe that the laws of Lycurgus and Minos had a view to war only. A divine lawgiver must surely have had regard to all the different kinds of virtue, and he must have arranged his laws in classes corresponding to them, and not in the modern fashion, which only makes them after the want of them is felt, about matters of inheritance, assault,

and the like. As you truly said, virtue is the business of the legislator; but you went wrong when you referred all legislation to a part of virtue, and to an inferior part. For the object of laws, whether the Cretan or any other, is to make men happy. Now happiness or good is of two kinds—there are divine and there are human goods. And he who has the divine has the human ‘added to him’; but he who has lost the greater is deprived of both. The lesser goods are health, beauty, strength, and, lastly, wealth; not the blind God, but one who has the eye of sense; for sense or mind is the most divine of all goods. Then, comes temperance, and from the union of these with courage, which is the fourth or last, springs justice. These take precedence, and with a view to them the legislator will arrange all his ordinances, the human going back to the divine, and the divine to their leader mind. There will be enactments about marriage, about education, about all the states and feelings and experiences of men and women, at every age, in weal and woe, in war and peace; upon all the law will fix a stamp of praise and blame. There will also be regulations about property and expenditure, about contracts, about rewards and punishments, until the round of life is finished with the funeral rites and honours of the dead. The law will appoint guardians to preside over these things, some who walk by intelligence, others having true opinion only; and mind will harmonize the ordinances of the legislator, and show them to be in unison with the virtues. Now I want to know whether these are the principles observed in the laws of Lycurgus and Minos, or, as I should rather say, of Apollo and Zeus. We must go through the virtues, beginning with courage, and then we will show that what has preceded has relation to virtue.

Megillus, the Lacedaemonian, wishes that the Athenians should criticise Cleinias and the Cretan laws. Yes, is the reply, and I will criticise you and myself, as well as him. Tell me, Megillus, were not the common meals and gymnastic training instituted by your legislator with a view to war? ‘Yes, they were; and hunting comes third in the order of importance, and fourth the endurance of pain in gymnastic exercises and the institution of the *crypteia*. Marvellous is the power of enduring pain among our youth; they go about the country night and day without shoes on their feet, or beds to lie upon, and are their own servants; they wrestle and practise gymnastic exercises under the heat of a blazing sun, and they have many similar practices.’ Well, but

is courage only a combat against fear and pain, and not against pleasure and flattery? 'Against both, I should say.' And which is worse, to be overcome by pain or to be overcome by pleasure? 'The latter.' But did the divine lawgivers of Crete and Sparta legislate for a courage which is lame of one leg, able only to meet the attacks of pain, but not of pleasure, or able to meet both? 'For a courage which is able to meet both, I should say.' But if that is the case, where are the institutions which train your citizens to be equally brave against pleasure and pain, and superior to the enemies which are within as well as without them? 'We confess that neither in Sparta nor in Crete are there any institutions worth mentioning which are of this character.' I am not surprised, and will therefore only request forbearance on the part of us all, in case the love of truth should lead any of us to censure the laws of the others. Remember that I am more in the way of hearing criticisms of your laws than you can be; for in any well-ordered state, although an old man may sometimes speak of them in private to a ruler or elder, a similar liberty is not allowed to the young. But now being alone we shall not offend your legislator by a friendly examination of his laws. 'Take any freedom which you like.'

My first observation is, that your lawgiver ordered you to abstain from amusements and to endure hardships, because he thought that those who had not this discipline would run away from those who had. But he ought to have considered further, that those who had never been taught to resist pleasure would be equally at the mercy of those who could, and who are often among the worst of mankind. Pleasure, like fear, would overcome them, and take away their courage and freedom. 'There seems to be truth in that; but I should not like to be hasty in giving my assent to you.'

Next as to temperance, what institutions have you which are adapted to promote temperance? 'There are the common meals and gymnastic exercises.' These are partly good and partly bad, and, as in medicine, what is good at one time and for one person, is bad at another time and for another person. Now, although gymnastics and common meals do good, they are also a cause of sedition, and they appear to encourage unnatural love. The evil effect of them may be seen at Miletus, in Boeotia, and at Thurii. And the Cretans, who are supposed to be addicted to such love, are said to have invented the tale of Zeus and Ganymede in order to justify their evil practices by the example of the God who was

their lawgiver. Leaving the story, we may observe that all law has to do with pleasure and pain ; these are two fountains which are ever flowing in human nature, and he who drinks of them when and as much as he ought, is happy, and he who indulges in them to excess, is miserable. ‘I do not know how to answer you, but I still incline to think that the Lacedaemonian lawgiver was right in forbidding pleasure, if I may judge from the result. For there is no drunken revelry in Sparta, and any one found in a state of intoxication is severely punished ; he is not excused as an Athenian would be at Athens on account of a festival. I myself have seen the Athenians drunk at the Dionysia—and happening to be at our colony, Tarentum, on a similar occasion, I have beheld the whole city in a state of intoxication.’ Yes, I admit that these festivals should be properly regulated. And I may reply, Yes, Spartans, that is not your vice ; but look at home and remember the licentiousness of your women. And to all such accusations, whether brought against the Tarentines, or us, or you, each of us may reply in turn:—‘Wonder not, Stranger ; there are different customs in different countries.’ And this may be a sufficient answer ; but we are speaking about the wisdom of lawgivers and not about the customs of men. To return to the question of drinking : shall we have total abstinence, as you have, or hard drinking, like the Scythians and Thracians, or moderate potations like the Persians ? ‘Give us arms, and we send all these nations flying before us.’ My good friend, be modest ; you know that victories and defeats often arise from unknown causes, and afford no proof of the goodness or badness of institutions. The stronger overcomes the weaker, as the Athenians have overcome the Ceans, or the Syracusans the Locrians, which latter appear nevertheless to be the best governed state in Magna Graecia. People are apt to praise or censure practices without enquiring into the nature of them. This is the way with drink : one person has a cloud of witnesses, who sing the praises of wine ; another declares that sober men defeat drunkards in battle ; and he again is refuted in turn. I should like to conduct the argument on some other method ; for here are two cities on one side, and, if you regard numbers, there are ten thousand on the other. ‘I am ready to pursue any method which is likely to lead us to the truth.’ Let me put the matter thus : Somebody praises the useful qualities of a goat ; another has seen goats running about wild in a garden, and blames a goat or any other animal who happens to be without a keeper. There is no sense in this. ‘Certainly not.’ Is a pilot

who is sea-sick a good pilot? 'No.' Or is a general who is sick and drunk with fear and ignorant of war a good general? 'A general of old women he ought to be.' But can any one form an estimate of any society, which is intended to have a ruler, and which he only sees in an unruly and lawless state? 'Not if he has never seen the orderly state also.' There is a convivial form of society—is there not? 'Yes.' And has this convivial society ever been rightly ordered? Of course you Spartans have never seen anything of the kind, but I have had wide experience, and made many enquiries about such societies, and have hardly ever found anything right or good in them. 'We acknowledge our want of experience, and desire to learn of you.' Will you admit that in all societies there must be a leader? 'Yes.' And in time of war he must be a man of courage and absolutely devoid of fear, if this were possible. 'Yes, he would be the right man.' But we are talking now of a general who shall preside at meetings of friends—and this sort of meeting having a tendency to be uproarious, ought above all others to have a governor. 'Very good.' He should be a sober man and a man of the world, who will keep, make, and increase the peace of the society; a drunkard in charge of drunkards would be singularly fortunate if he avoided doing a serious mischief. 'He certainly would.' Suppose the case of a person censuring such meetings—he may be right in his censure, but there is also a possibility that he may have known them only in their disorderly state, when the master of the feast is drunk with the rest; and no one expects a drunken general or pilot to be the saviour of an army or of a ship. 'That remark is true; but although I see the advantage of an army having a good general, I do not equally see the good of a feast being well managed.' If you mean to ask what good accrues to the state from the right training of a single youth or a single chorus, I should reply, not much; but if you ask what is the good of education in general, I answer, that education makes good men, and that good men act nobly and overcome their enemies in battle. And though victory makes men insolent and is often suicidal to the victors, education is never suicidal. 'You seem to mean that the regulation of convivial meetings is a part of education; how will you prove this?' I will tell you. But first let me offer a word of apology. We Athenians are universally reputed among the Hellenes to be fond of talking, whereas the Lacedaemonian is celebrated for brevity, and the Cretan is considered to be sagacious and reserved. Now, I fear that I may be charged with

eliciting a long discourse out of slender materials. For drinking cannot be rightly ordered without correct principles of music, and music runs up into education generally, and if I am to discuss all these matters, I cannot avoid being tedious; I will, therefore, offer you the alternative of passing on to another part of our subject. 'Do you know, Athenian, that our family is your proxenus at Sparta, and that from my boyhood I have regarded Athens as a second country, and having often fought your battles in my youth, I have become attached to you, and love the sound of the Attic dialect? And now I bethink me of the saying, that the best Athenians are more than ordinarily good, because they are genuinely and naturally good; therefore, be assured that I shall be glad to hear you talk as much as you please.' 'I, too,' adds Cleinias, 'have something to say about the Cretans, Stranger, which may give you confidence. You must have heard of Epimenides; he was a Cretan saint and hero, who came and offered sacrifices in your city by the command of an oracle ten years before the Persian war. The Athenians were in dread of the Persians, and he prophesied to them that the Persian host would not come for ten years, and would go away again, having suffered more harm than they had inflicted. Now, Epimenides was of my family, and when he visited Athens he formed ties of friendship with your forefathers.' I see that you are willing to listen, and I have the will to speak, if I had only the ability. But, first, I must define the nature and power of education, and by this road we will travel on to the God Dionysus. The man who is to be good at anything must have early training;—he who is to be a workman should have his box of tools when he is a child; the future soldier should learn to ride; the young carpenter should be taught to measure and use the rule,—all the thoughts and pleasures of children should bear on their after profession:—Do you agree with me? 'Certainly.' And we must remember further that the education of which we speak is not the education of a trainer, or of the captain of a ship, but of a perfect citizen who knows how to rule and how to obey; and such an education aims at virtue, and not at wealth or strength or mere cleverness. To the good man, education is of all things the most precious, and is also in constant need of renovation. 'We agree.' And we have before agreed that good men are those who are able to control themselves, and bad men are those who are not. Let me offer you an illustration which will assist our argument. Man is one; but in one and the same man are two

foolish counsellors who contend within him—pleasure and pain, and of either he has expectations which may be termed hope and fear; and he is able to reason about good and evil, and reason, when affirmed by the state, becomes law. ‘We cannot follow you.’ Let me put the matter in another way: Every creature is the puppet of the Gods—whether he is a mere plaything or has any serious use we do not know; but this we know, that he is drawn different ways by cords and strings: there is a soft golden cord which draws him towards virtue—this is the law of the state. And there are other cords made of iron and hard materials drawing him other ways. The golden reasoning influence has nothing of the nature of force, and therefore requires ministers. I am giving an illustration of the doctrine that cities and citizens both conquer and are conquered by themselves. The individual follows reason, and the city law, which is embodied reason, either derived from the Gods or from the legislator. When this is made plain, education will be more clearly understood, and in particular the relation of education to convivial intercourse. And now let us try the experiment of setting wine before the puppet. ‘Very well.’ You admit that wine stimulates the passions? ‘Yes.’ And does wine equally stimulate the reasoning faculties? ‘No; it brings the soul back to a state of childhood.’ In such a state a man has the least control over himself, and is, therefore, worst? ‘Very true.’ The drunkard is, like the aged, in a second childhood? ‘Good.’ Then, can we ever bring ourselves to believe that drinking is right? ‘If you say so, I suppose that something may be urged on behalf of the paradox.’ And I am ready to maintain my position. ‘We should like to hear you prove that a man ought to make a beast of himself.’ Are you speaking of the degradation of the soul? ‘We are.’ And how about the body? Would any man willingly degrade or weaken that? ‘Certainly not.’ And yet if he goes to a doctor, does he not make himself ill in the hope of getting well, for no one would like to be always taking medicine, or always to be in training? ‘Very true.’ And may not convivial meetings have a similar remedial use? ‘Certainly.’ And if they have any such use, are they not to be preferred to other modes of training because they are painless? ‘But have they any such use?’ Let us see: are there not two kinds of fear—fear of evil and fear of public opinion? ‘There are.’ The latter kind of fear is opposed both to the fear of pain, and also to the love of pleasure. This is called by the legislator reverence, and is greatly encouraged by him

and by every good man; and shamelessness, which is the opposite of this, is the worst fault both of individuals and of states. This sort of fear or reverence is the chief cause of victory and safety in war, or at least one of the two chief causes, fearlessness of enemies being the other. 'True.' Then every one should be both fearful and fearless? 'Yes.' The right sort of fear is infused into a man when he comes face to face with shame, or cowardice, or the temptations of pleasure, and has to conquer them. He learns to take up arms against himself, over whom he must win many victories, if he is ever to be made perfect. 'That is reasonable enough.' And now, suppose that the Gods had given mankind a drug, of which the effect was to exaggerate every sort of evil and danger, so that the bravest man entirely lost his presence of mind and became a coward for a time:—would such a drug have any value? 'But is there such a drug?' No: but suppose that there were; might not the legislator use such a mode of testing courage and cowardice? 'To be sure he might.' You mean to say that the legislator would induce fear in order to implant fearlessness; and would give rewards and punishments to those who behaved well or the reverse, under the influence of the drug? 'Certainly he would.' And this mode of training,—whether practised in the case of one or many, whether in the solitude of the desert, out of sight of man, or in the presence of a large company,—if a man have sufficient confidence in himself to drink the potion amid his boon companions, leaving off in time and not taking too much,—would equally test his temperance. 'Very true.' Let us return to the lawgiver and say to him, Well, lawgiver, no such fear-producing potion has been given by God or invented by man, for 'witchcraft has no place at our feasts,' but a potion which will make men fearless has been given to men. 'Yes, you mean wine.' Yes; has not wine an effect the contrary of that which I was just now describing? First mellowing and humanizing a man, and then filling him with brave hopes, making him fearless and ready to say or do anything? 'Certainly.' Let us not forget that there are two qualities which should be cultivated in the soul—first, the greatest fearlessness; and, secondly, the greatest fear. 'Yes; you were saying that both are parts of reverence.' Courage and fearlessness are trained amid fears; but we have still to consider how fear is to be trained. For we desire to attain fearlessness and confidence without the insolence and boldness which commonly attend them. And do not love, ignorance, avarice, wealth, beauty, strength, while they stim-

ulate courage, also madden and intoxicate the soul, and are they not the causes of ten thousand crimes? What better and more innocent test of them can be devised than festive intercourse? Would you make a bargain with a man in order to try the experiment whether he is honest? or would you ascertain whether he is licentious by putting your wife or daughter into his hands? Neither Cretan nor any other man would deny that the test proposed is fairer, speedier, and safer than any other. And such a test will be most useful in the political science, which desires to know human natures and characters. 'Very true.'

BOOK II. And are there any other uses of well-ordered potations? There are ; but, in order to explain them, I must repeat what I mean by right education, which, if I am not mistaken, depends on the due regulation of convivial intercourse. 'A high assumption.' I believe that virtue and vice are originally present to the mind of children in the form of pleasure and pain; later in life only do they arrive at reason and fixed principles, and happy is he who, even when he is old, possesses them, and the blessings which they confer. When pleasure and pain, and love and hate, are rightly implanted in the yet unconscious soul, and after the attainment of reason are discovered to be in harmony with her, this harmony of the soul is virtue, and the preparatory stage, anticipating reason, I call education. But the finer sense of pleasure and pain is apt to be impaired in the course of life ; and therefore the Gods, pitying the toils and sorrows of mortals, have allowed them to have holidays, and given them the Muses and Apollo and Dionysus for leaders and playfellows. All young creatures are full of motion and frolic and utterance of the delight which is in them ; but man only is capable of taking pleasure in rhythmical and harmonious movements. With these education begins ; and the uneducated is he who has never known the discipline of the chorus, and the educated is he who has. The chorus is partly dance and partly song, and therefore the educated must sing and dance well. But when we say he sings and dances well, we mean that he sings and dances what is good. And if he thinks that to be good which is really good, he will have a much higher music and harmony in him, and be a far greater master of imitation in sound and gesture than he who has not this knowledge. 'Yes, Stranger, he will be far better educated than the other.' Then, if we know what is good and bad in

song and dance, we shall know what education is? 'Very true.' The next enquiry will relate to the figure, melody, song, and dance. Will the same figures or sounds be equally well adapted to the manly and the cowardly? 'How can they be, when the very colours of their faces are different?' Figures and melodies have a rhythm and harmony which are adapted to the expression of different feelings (I may remark, by the way, that the term 'colour,' which is a favourite word of music-masters, is not really applicable to music). And one class of harmonies is akin to courage and all virtue, the other to cowardice and all vice. 'We agree.' And do all men equally like all dances? 'Far otherwise.' How is this? Do some figures appear to be beautiful which are not? For no one will admit that he prefers the forms of vice to the forms of virtue, or that the choice of one or the other of them is a matter of opinion. Yet some persons say that the merit of music is to give pleasure. But this is impiety. There is, however, a more plausible account of the matter given by others, who make their likes or dislikes the criterion of excellence. Sometimes nature crosses habit, or conversely, and then they say that such and such fashions or gestures are pleasant, but they do not like to exhibit them before men of sense, although they enjoy them in private. 'Very true.' And do vicious measures and strains do any harm, or good measures any good to the lovers of them? 'I think that they must.' Say, rather, I am certain that they must have the effect of any indulgence shown to the vices of men, which are often censured by us gently and playfully, and with a sort of suspicion that the indulgence will one day be required by ourselves. And there can be no greater evil than this. 'I know of none.' Then in a city which has good laws, the poet will not be allowed to make the songs of the people just as he likes, or to corrupt the minds of youth as he pleases? 'Such a liberty is not to be thought of.' And yet he may do this anywhere except in Egypt. 'What is the custom of Egypt?' You will wonder when I tell you; ages ago they discovered the great truth which I am now asserting, that the youth of a people should be educated in forms and strains of virtue. These they fixed and consecrated in their temples; and no sculptor or painter is allowed to deviate from them. They are literally the same which they were ten thousand years ago. And this practice of theirs suggests the reflection that legislation about music is not an impossible thing. But the particular enactments must be the work of some divine man, or God, as in Egypt their ancient chants are

said to be the composition of the goddess Isis. The melodies which have a natural truth and correctness should be embodied in a law, and then the desire of novelty is not strong enough to change the old fashions. Is not the origin of music as follows? We rejoice when we think that we prosper, and we think that we prosper when we rejoice, and at such times we cannot rest, but our young men dance dances and sing songs, and our old men, who have lost the elasticity of youth, regale themselves with the memory of the past, while they contemplate the life and activity of the young. 'Most true.' People say that he who gives us most pleasure at such festivals is to be crowned and receive the prize: are they right? 'Possibly.' Let us not be hasty in deciding, but first imagine a festival at which there are no distinct trials or contests; the lord of the festival, having assembled the citizens, makes a proclamation that he shall be crowned victor who gives the most pleasure, from whatever source derived. We will further suppose that there are various exhibitions of rhapsodists and musicians, tragic and comic poets, and we do not disdain marionette-players,—which of the innumerable pleasure-makers will win? 'I cannot say unless I see them.' Shall I answer for you? 'Very good.' The marionette-players will please the children; youths will be advocates of comedy; young men, educated women, and people in general will prefer tragedy; we old men are lovers of Homer and Hesiod. Now which of them is right? If you and I are asked, we must say that the old men are right, and that the Epic recitation which they approve is the best of all. 'Very true.' I am ready to admit that the excellence of music is to be measured by pleasure; but then the pleasure must be that of the good and educated, or better still, of one supremely virtuous and educated man. And the true judge, who is to lead the theatre and not be led by them, will have need of both wisdom and courage. For out of that mouth which has just appealed to the Gods in proof of his integrity, he ought not to give a false judgment, and he should be the enemy of all pandering to the popular taste. The ancient and common custom of Hellas, which still prevails in Italy and Sicily, left the judgment to the spectators, but this custom has been the ruin of the poets, and has degraded the theatre. For the spectators have their pleasures lowered to themselves. What is the inference from all this? The inference, at which we arrive for the fourth time, is that education is the training of the young idea in what the law affirms and the elders approve. And as the soul of a child

is too young to be trained in earnest, a kind of education has been invented which tempts him with fair and beautiful words and songs, as the sick are tempted by pleasant meats and drinks. 'But is this the practice of states in general, or only of Crete and Lacedaemon? For in any other state, as far as I know, dances and music are constantly changed at the pleasure of the hearers. Their institutions are the reverse of the Egyptian.' I am afraid that I misled you; not liking to be always finding fault with mankind as they are, I described them as they ought to be. But let me understand: you would say (would you not?) that such customs exist among the Cretans and Lacedaemonians, and that the rest of the world would be improved by adopting them? 'Much improved.' And you would compel your poets to declare that the righteous are happy, and that the wicked man, even if he be as rich as Midas, is unhappy? Or, in the words of Tyrtæus, 'I sing not, I care not about him' who is a great warrior not having justice; if he be unjust 'I would not have him look calmly upon death or be swifter than the wind'; and may he be deprived of every good. For even if he have the goods which men regard, these are not really goods: first health; beauty next; thirdly wealth; and there are others. A man may have every sense purged and improved; he may be a tyrant, and do what he likes, and live for ever: But you and I will maintain that sight and hearing and immortality are goods to the just and evils to the unjust, and that the evil is lessened by the comparative shortness of life. If a man had health and wealth, and the power of a tyrant, and was insolent and unjust, his life would still be miserable; he might be fair and rich, and do what he liked, but he would live basely, and if basely evilly, and if evilly painfully. 'There I cannot agree with you.' Then may heaven give us the spirit of agreement, for I am as convinced of the truth of what I say as of the existence of the island of Crete; and, if I were a lawgiver, I would exercise a censorship over the poets, and I would punish them if they said that the wicked are happy, or that the unjust is the gainful. And these are not the only matters in which I should make my citizens speak in a different strain from the Cretans or Lacedaemonians, or the world in general. 'Tell me,' I would say to your legislators, 'did the Gods who gave you laws, affirm the most just life to be also the pleasantest?' If they say 'no,' which is an answer I should not like to put into the mouth of God, I would again ask the legislator which is the happier, the just or the pleasant life? And if he replies the

pleasanter, then I should say to him, 'O my father, did you not tell me that I should live as justly as possible; and if to be just is to be happy, what is that principle of happiness or good which is superior to pleasure? Is the approval of gods and men to be deemed good and honourable, but unpleasant, and their disapproval the reverse? Or is the neither doing nor suffering evil good and honourable, although not pleasant? But you cannot make men like what is not pleasant, and therefore you must make them believe that the just is pleasant. The business of the legislator is to clear up this mist and confusion which reigns in the minds of men as of children. He will, therefore, show the just and the unjust to be identical with the pleasurable and the painful, from the point of view of the just man. This is the judgment of the better soul and of the truth, and even if not the truth, is the best and most moral of fictions; and the legislator who desires to propagate this fiction, may be encouraged by remarking that mankind have believed the story of Cadmus and the dragon's teeth, and therefore he may be assured that he can make them believe anything, and effect the desired uniformity in hymns and tales, if he pleases, and need only consider what fiction will do the greatest good. That the happiest is also the holiest, this shall be our strain, which shall be sung by all three choruses alike. First will enter the choir of children, who will lift up their voices on high; and after them the young men, who will pray the God Paean to be gracious to the youth, and to testify to the truth of their words; then will come the chorus of elder men, between thirty and fifty or sixty; and, lastly, there will be the old men, preaching the same virtues in tales and discourses, as with the voice of an oracle. 'I do not understand about the third chorus; will you be a little plainer?' You remember how I spoke at first of the restless nature of young creatures, who jumped about and called out in a disorderly manner, and I said that no other animal attained any perception of rhythm; but that to us the Gods gave Apollo and the Muses and Dionysus to be our playfellows. Of the two first choruses I have already spoken, and I have now to speak of the third, or Dionysian chorus, which is composed of those who are between thirty and sixty years old. 'Will you explain?' We are agreed (are we not?) that men, women, and children should be always charming themselves with strains of virtue, and that there should be a variety in the strains, that they may not weary of them? Now the fairest and most useful of strains will be uttered by the elder men, and therefore we cannot let them off.

But then how can we make them sing? For a discreet elderly man is ashamed to hear the sound of his own voice in private, and still more in public. The only way is to give them drink; this will mellow the sourness of age. Children should be forbidden by law to drink wine; youths may take a little; but when men have reached forty years, they may be initiated into the mystery of drinking, and they will become softer and more impressible. When a man's heart is warm within him, he will be more ready to charm himself with song. And what songs shall he sing? 'At Crete and Lacedaemon we only know choral songs.' Yes; that is because your way of life is military. Your young men are like wild colts feeding in a herd together; no one takes the individual colt and rubs him down, and tries to give him the qualities which would make a man a statesman as well as a soldier. He who was thus trained would be a greater warrior than those of whom Tyrtaeus speaks, for he would be courageous, and yet he would know that courage was not first but fourth in the scale of virtue. 'Once more, I must say, Stranger, that you run down our lawgivers.' Not intentionally, my good friend, but whither the argument leads I follow; and I am trying to find some style of poetry which we may assign to those who are ashamed of the common sort. 'Very good.' In all things which have a charm, either this charm is their good, or they have some accompanying truth or advantage. For example, in eating and drinking there is pleasure and also profit, that is to say, health; and in learning there is a pleasure and also truth. There is a pleasure or charm, too, in the imitative arts, as well as a law of proportion or equality; but the pleasure which they afford, however innocent, is not the criterion of their truth. The test of pleasure can only be applied to that which has no other good or evil, no truth or falsehood. But that which has truth must be judged of by the standard of truth, and therefore imitation and proportion are to be judged of by their truth, and by that only. 'Certainly.' And music is imitative? 'Yes.' Then music is not to be judged by the criterion of pleasure, and the Muse whom we seek is the muse not of pleasure but of truth, for imitation has a truth? 'Doubtless.' And if so, the judge must know what is being imitated before he decides on the quality of the imitation, and he who does not know what is true will not know what is good. 'He will not.' Will any one be able to imitate the human body, if he does not know the number, proportion, colour, or figure of the limbs? 'How can he?' But suppose we know some picture or figure to be an

exact resemblance of a man, should we not also require to know whether the picture is beautiful or not? for not every one can tell in what the beauty of a figure consists. 'Quite right.' The judge of the imitation, then, is required to know, first the original, secondly the truth, and thirdly the merit of the execution? 'That appears to be the case.' Then let us not weary in the attempt to bring music to the standard of the Muses and of truth. The Muses are not like human poets; they never spoil or mix rhythms or scales, or mingle instruments and human voices, or confuse the manners and strains of men and women, or of freemen and slaves, or of rational beings and brute animals. They do not practise the baser sorts of musical arts, such as the 'matured judgments,' of whom Orpheus speaks, would ridicule. But modern poets separate metre from music, and melody and rhythm from words, and use the instrument alone without the voice. The consequence is, that the meaning of the rhythm and of the time become doubtful. I am endeavouring to show how our fifty-year-old choristers are to be trained, and what they are to avoid. For the multitude are ridiculous judges of the proprieties of these matters; he who is only made to step in time by sheer force cannot be a critic of music. 'He cannot.' Then our newly-appointed minstrels must be trained in music sufficiently to understand the nature of rhythms and systems; and they should select such as are suitable to men of their age, and will enable them to give and receive innocent pleasure. This is a knowledge which goes beyond that either of the poets or of their auditors. For although the poet must understand rhythm and music, he need not necessarily know whether the imitation is good or not, which was the third point required in a judge; but our chorus of elders must know all three, if they are to be the instructors of our youth.

And now we will resume the original argument, which may be summed up as follows: A convivial meeting is apt to grow tumultuous as the drinking proceeds; every man becomes light-headed, and is ready to be an emperor. 'Doubtless.' And did we not say that the souls of the drinkers when fired with wine are made softer and more malleable at the hand of the legislator? the docility of childhood returns to them? At times however they become too valiant and disorderly, drinking out of their turn, and interrupting one another. And the business of the legislator is to infuse into them that divine fear, which we call shame, in opposition to this disorderly boldness. But in order to discipline them

there must be guardians of the law of drinking, and sober generals who shall take charge of the private soldiers; they are as necessary in drink as in war, and he who disobeys these Dionysiac commanders will be equally disgraced. 'Very good.' If a drinking festival were well regulated, men would go away, not as they now do, greater enemies, but better friends. Of the greatest gift of Dionysus I hardly like to speak, lest I should be misunderstood. 'What is that?' According to our tradition Dionysus was driven mad by his stepmother Herè, and in order to revenge himself he inspired others with Bacchic madness. But these are stories which I do not like to repeat. However I do acknowledge that all men are born in an imperfect state, and during the first few years of life are mad, irrational, restless, roaring creatures: this, as you will remember, has been already said by us when treating of the origin of music and gymnastic. 'I remember.' And that Apollo and the Muses and Dionysus gave us harmony and rhythm? 'Very true.' The other story implies that wine was given to punish us and make us mad; but we say that wine is a balm and a cure; a spring of modesty in the soul, and of health and strength in the body. Again, the work of the chorus is co-extensive with the work of education; rhythm and melody answer to the voice, and the motions of the body correspond to all three, and the sound enters in and educates the soul in virtue? 'Yes.' And the movement of the body which is termed dancing, when studied according to regular rules, becomes gymnastic. Shall we now proceed to speak of this? 'What Cretan or Lacedaemonian would approve of your omitting gymnastic?' Your question implies assent; and you will have no difficulty in understanding a subject which is familiar to you. Gymnastic is based on the natural tendency of every animal to rapid motion; to this man adds a sense of rhythm, which is awakened by music; and music and dancing together form the choral arts. But before proceeding I must add a crowning word about drinking, which may be extended to other pleasures. There is a lawful use of all of them; but if a state or individual is inclined to drink at will, I cannot allow them. I would go further than Crete or Lacedaemon and have the law of the Carthaginians, which is to the effect that no slave of either sex should drink wine at all, and no soldier while he is on a campaign, and no ruler or general or pilot or judge or counsellor while he is on duty, and that no one should drink by daylight or on a bridal night. And there are so many other occasions on which wine ought to

be prohibited, that there will not be many vines grown or vineyards required in the state.

BOOK III. If a man wants to know the origin of states and societies, he should behold them from the point of view of time. Thousands and thousands of cities have come into being and passed away again in infinite ages, rising and falling, waxing and waning; and if we could ascertain the cause of these changes in states, that would probably explain their origin. What do you think of ancient traditions about deluges and destructions of mankind, and the preservation of a remnant? 'Every one believes in them.' Then let us suppose the world to have been destroyed by a deluge. The survivors would be shepherds dwelling in the tops of mountains,—small sparks of the human race, who would be isolated, and unacquainted with the arts and vices of civilization. We may further suppose that cities on the plain and on the coast have been utterly destroyed, and that all inventions and implements, and every sort of knowledge, have perished. 'Why, yes, my friend; and if all things were as they now are, nothing would have ever been invented. All our famous discoveries, like those of Daedalus, have been made within the last thousand years, and many of them are but of yesterday.' Yes, Cleinias, and you must not forget the name of your friend Epimenides, who was really of yesterday; he practised the lesson of moderation and abstinence which Hesiod only preached. 'Yes, that is our tradition.' After the great destruction we may imagine that the earth was a vast desert, in which there were a herd or two of oxen and a few goats, hardly enough to support those who tended them; while of politics and governments the survivors would know nothing. And out of this state of things have arisen arts and laws, and a great deal of virtue and a great deal of vice; little by little the world has come to be what the world is. At first, the few inhabitants may be supposed to have had a natural fear of descending into the plains; although they would want to have intercourse with one another, they would have great difficulty in getting about, having lost the arts, and having no means of extracting metals from the earth, or of felling timber; for even if there were any tools found in the mountains, these would have soon been worn out, and they could get no more until in the course of generations the art of metallurgy had been rediscovered. Faction and war would be extinguished among them, for being solitary they would incline to be friendly;

and having abundance of pasture and plenty of milk and flesh, they would have nothing to quarrel about. We may assume that they had also dwellings and abundance of clothing, for the weaving and plastic arts do not require the use of metals. In those days they were neither poor nor rich, and there was no insolence or injustice among them; for they were of noble natures, and lived up to their principles, and believed what they were told; knowing nothing of land or naval warfare, or of legal practices or party conflicts, they were simpler and more temperate, and also more just than the men of our day. 'Very true.' I am showing whence the need of lawgivers arises, for in primitive ages they had none, and did not want them. Men lived according to the customs of their fathers, under a sort of patriarchal government, which still exists both among Hellenes and barbarians, and is described in Homer as existing among the Cyclopes:—

'They have no laws, and they dwell in rocks or on the tops of mountains, and every one is the judge of his wife and children, and they do not trouble themselves about one another.'

'That is a charming poet of yours, though I know little of him, for in Crete foreign poets are not much read.' 'He is well known in Sparta, though his description of life and manners is Ionian rather than Dorian, and he seems to take your view of primitive society.' May we not suppose that government arose out of scattered families who survived the destruction, and were under the rule of a patriarch, because they had originally descended from a single father and mother? 'That is very probable.' At a later period they increased in number, and tilled the ground, and protected themselves by walls and common households against wild beasts; each family had different laws and customs, which they received from their first parents. They would naturally like their own laws better than those of another family, and would be already formed by them when they met in a common society: thus legislation imperceptibly began among them. In the next stage the associated families would appoint plenipotentiaries or lawgivers, who would review their laws and choose the best of them. They would change the patriarchal or dynastic form into aristocracy or monarchy. 'That would be the next step.' In the third stage various forms of government would arise. This state of society is described by Homer, who in speaking of the foundation of Dardania says:—

'Dardania was built at the foot of many-fountained Ida, for Ilium, the city of the plain, as yet was not.'

Such is the history of primeval society which is given in this passage, and also in the account of the Cyclopes by the inspired writer, who is not only a charming poet but a true prophet. 'Proceed with your tale.' Ilium was built in a fair wide plain, on a low hill, which was surrounded by streams descending from Ida. This shows that many ages must have passed; for the men who remembered the deluge would never have placed their city at the mercy of the waters amid numerous streams, trusting to not very high hills either. When mankind began to multiply, many other cities were built in similar but less elevated situations, and even by the shores of the ocean, for the fear of the sea had been lost. These cities carried on a war against Troy which lasted ten years, and, in the meantime, while the chiefs of the army were at Troy, their homes fell into confusion. The youth revolted and refused to receive their own fathers; deaths, murders, exiles ensued. Under the new name of Dorians, which they received from their chief Dorieus, the exiles returned: the rest of the story is part of the history of Sparta.

Thus, after a digression which carried us away into the subject of music and drinking, we again come back to the settlement of Sparta which in laws and institutions is the sister of Crete. We have seen the rise of a first, second, and third state, which in infinite time have grown out of each other; and now we arrive at a fourth state, and out of the comparison of all four we propose to gather the nature of laws and governments, and the changes which may be desirable in them. 'If,' replies the Spartan, 'the speculations on which we are about to enter are likely to be as profitable as those which have preceded, I would go a long way to hear them, and think the longest day too short for such an employment.'

Let us imagine the time when Lacedaemon, and Argos, and Messenè, and the countries about them were all subject, Megillus, to your ancestors. Afterwards, they distributed the army into three portions, and made three cities—Argos, Messenè, Lacedaemon. 'Yes.' Temenus was the king of Argos, Cresphontes of Messenè, Procles and Eurysthenes of Lacedaemon. 'Just so.' And they all swore to assist any one of their number whose kingdom was subverted? 'Yes.' But did we not say, what we seem now to have forgotten, that kingdoms or governments can only be subverted by themselves? 'That is true.' Yes, and not only true, but proved by facts: there were certain conditions upon which the three kingdoms were to assist one another; the government was to

be mild and the people obedient, and the kings and people were to unite in assisting either of the two others when they were wronged; am I not correct? 'Quite correct.' The condition that the two states should unite against a third which transgressed, was a great source of security. 'Clearly.' Most persons say that lawgivers should make such laws as the people like; but we say that a physician might as well bid his patients to use only such remedies as are agreeable to them, whereas he is often too glad if he can effect a cure at the cost of a considerable amount of pain. 'Very true.' The early lawgivers had a great advantage—they were saved from the reproach which attends a division of land and abolition of debts. No one could quarrel with the Dorians for dividing the territory, and they had no debts of long standing. 'They had not.' Then what was the reason why their legislation signally failed? 'How failed?' Why, there were three kingdoms, and two of them quickly lost their original constitution. 'What was the reason of their failure?' That is a question which we cannot refuse to answer, if we mean to proceed with our old man's game of enquiring into laws and institutions. And the Lacedaemonian institutions are more worthy of enquiry than any other, having been evidently intended to be a protection not only to the Peloponnese, but to all the Hellenes against the Barbarians; for Ilium was a part of the great Assyrian Empire, which was feared in those days just as we now fear the great King. The second capture of Troy was deeply resented by the Assyrians, who sought to retaliate; and, in order to meet this danger, the royal Heraclid brothers devised their military constitution, which was a far better organised plan than the old Trojan expedition; and the Dorian Heraclidae themselves were far superior to the old Achaeans, who had taken part in that expedition, and had been conquered by them. 'Certainly.' Such a scheme, undertaken by men who had shared with one another toils and dangers, sanctioned by the Delphian oracle, under the guidance of the Heraclidae, seemed to have a promise of permanence. 'Naturally.' And yet this promise of permanence has entirely failed. Instead of the three being one, they have always been at war; had they been united, in accordance with the original intention, they would have been invincible.

And what caused their ruin? Did you ever observe that there are beautiful things of which men often say, 'What wonders they would have effected if rightly used!' and yet, after all, this may be a mistake. And so I say of the Heraclidae and their expedition, which I may

perhaps have been justified in admiring, but which nevertheless suggests to me the general reflection,—‘What wonders might not strength and military resources have accomplished, if the possessor had only known how to use them!’ Apply this remark to the case which we are considering: if the generals of the army had only known how to arrange their forces, might they not have given their subjects everlasting freedom and dominion, and the power of doing what they would in all the world, and have themselves obtained glory? ‘Very true.’ Suppose a person to express his admiration of wealth or rank, does he not do so under the idea that by the help of these he will attain his desires? All men wish to obtain the control of all things, and what they desire to obtain for themselves they desire to obtain for those dear to them. ‘Certainly.’ We ask for our friends what they ask for themselves. ‘True.’ Dear is the son to the father, and yet the son will pray to obtain what the father will pray that he may not obtain. ‘Before the son has come to years of discretion, you mean?’ Yes; and when the father has passed them, the son, like Hippolytus, may have reason to pray that the vow of his father may not be fulfilled. ‘I understand. You mean to say that a man should pray to have right desires, before he prays that his desires may be fulfilled; and that wisdom is the first thing for which states and individuals ought to pray?’ Yes; and you will remember my saying that this was to be the first object of the legislator; but you said that defence in war came first. And to this I replied, that there were four virtues, whereas you acknowledged one only—courage, and not wisdom which is the guide of all the rest. And I repeat in jest if you like, or in earnest if you like, and I would rather that you should receive my words in earnest—that ‘the prayer of a fool is full of danger.’ I will prove to you, if you will allow me, that the ruin of those states was not caused by cowardice or ignorance in war, but by ignorance of human nature and evil ways of another sort. ‘Go on, Stranger: attention will show better than compliments that we prize your words.’ I maintain that ignorance is the ruin of states; and if this be true, the legislator should seek to implant in them wisdom, and banish ignorance; and the greatest ignorance is the love of what is known to be evil, and the hatred of what is known to be good; this is the last and greatest conflict of pleasure and reason in the soul. I say the greatest, because affecting the greater part of the soul. For the passions are in the individual what the people are in a state. And when they become opposed

to reason or law, and instruction is no longer of any use—that is the last and greatest ignorance of states; the errors and faults of craftsmen are more venial. ‘I understand and agree.’ Let this, then, be our first principle:—That the citizen who does not know how to choose between good and evil, must not be entrusted with authority; he may have great quickness and power of calculation, and many accomplishments, and yet be really ignorant. On the other hand, he who has this knowledge may be unable either to read or write; nevertheless, he shall be counted wise and permitted to rule. For how can there be even a shadow of wisdom where there is no harmony?—wisdom is the greatest harmony, and he who is devoid of wisdom is the ruin of states and households: let this be laid down. ‘Very good.’ The first claim of authority will be that of parents to rule over their children; the second, that of the noble to rule over the ignoble; thirdly, the elder must govern the younger; in the fourth place, the slave must obey his master; fifthly, there is the power of the stronger, which is indeed a rule not to be disobeyed, and which the poet Pindar declares to be according to nature; sixthly, there is the rule of the wiser, which is also according to nature, as I must inform Pindar, if he does not know, and is the rule of law over obedient subjects. ‘Most true.’ And there is a seventh kind of rule which the Gods love,—in this the ruler is elected by lot.

Now, turning to the legislator who is fancying that his task is to be an easy one, we playfully say to him:—You see, legislator, the many and inconsistent claims to authority; here is a spring of troubles which you must stay: And first of all you must help us to consider how the kings of Argos and Messenè destroyed that famous empire of olden time—did they forget the saying of Hesiod, that ‘the half is better than the whole’? And do we suppose that the ignorance of this truth is less fatal to kings than to peoples? ‘Probably the evil is increased by their way of life.’ The kings of those days transgressed the laws and violated their oaths. Their deeds did not agree with their words, and their folly, which seemed to them wisdom, was the ruin of the state. And what ought the legislator to have done in order to prevent this evil?—The remedy is easy to see now, but was not easy to foresee at the time. ‘What is the remedy?’ The institutions of Sparta may teach you, Megillus. Wherever there is excess, whether the sail has too much wind, or the body too much food, or the mind too much power, there is a probability of a downfall. No man is able to resist the temptation of arbitrary power. The despot is

quickly corrupted, and grows hateful to his dearest friends. In order to guard against this evil, the God who watches over Sparta gave you two kings instead of one, that they might balance and moderate one another; and further to lower the pulse of your body politic, some human wisdom, mingling with the divine power, tempered the strength and self-sufficiency of youth with the moderation of age in the institution of your senate. A third saviour bridled your rising and swelling power by ephors, whom he assimilated to officers elected by lot: and thus the kingly power was preserved. Had the constitution been arranged by Cresphontes and Temenus, not even the portion of Sparta would have been preserved; for they had no political experience, and were foolish enough to imagine that a youthful spirit might be bound by oaths. Now that God has instructed us in the arts of legislation, there is no merit in seeing all this, or in learning wisdom after the event. But if the coming danger could have been foreseen, and the union preserved, then no Persian or other enemy would have dared to despise Hellas; and indeed there was not so much credit to us in defeating the enemy, as discredit in our disloyalty to one another. For of the three cities one only fought on behalf of Hellas; and of the two others, one, Argos, which in old days had the precedence, refused to aid; and the other, Messenia, was actually at war with her: and if the Lacedaemonians and Athenians had not united, the Hellenes would have been absorbed in the Persian empire, and mingled with the barbarians. We lay these remarks of ours at the feet of the legislator, and proceed to enquire what else could have been done, reminding him of what we were saying before, that a state can only be free and wise and harmonious where there is a balance of powers. There are many words by which we express the aims of the legislator, who is equally desirous to promote temperance, wisdom, friendship, and the like; but we need not therefore be disturbed, for these names have all the same meaning. 'I should like to hear at which of them in your opinion the legislator should aim.' Hear me, then. There are two mother forms of states—one monarchy, and the other democracy: the Persians have the first, and the Athenians the second. Most other governments are made up of a union of the two; and any good government must include both of them. There was a time when both the Persians and Athenians had more the character of a constitutional state than they now have. In the days of Cyrus the Persians were freemen, as well as lords of others, and their soldiers were

free and equal, and they used and honoured all the talent which they could find, and so the nation waxed in freedom and friendship and communion of soul. But Cyrus, though a great and patriotic general, never troubled himself about the education of his family, or the order of his household. He was a soldier from his youth upward, and left his children who were born in the purple to be educated by women, who honoured and flattered them, never allowing any desire which they had to be thwarted. 'A rare education, truly!' Yes, such an education as women, and especially princesses who had recently grown rich, might be expected to give in a country where the men were solely occupied with war and danger. 'Likely enough.' Their father had possessions of men and animals, and never considered that he was about to make them over to a race who had been brought up in a very different school, not like the Persian mountaineer, who was well able to take care of himself and his own. He never remembered that his children had been brought up in the Median fashion, under the superintendence of women and eunuchs. The consequence was that the son of Cyrus slew his brother, and lost the kingdom by his own folly. Observe, again, that Darius, who restored the kingdom, was not born a king, and had not received a royal education. He was one of the seven chiefs, and when he came to the throne he divided the empire into seven provinces, of which there yet remain traces; and he made equal laws, and implanted friendship among the people. Hence his subjects were greatly attached to him, and cheerfully extended the borders of his empire. Next followed Xerxes, who had received the same royal education as Cambyses; and this has been the fate of nearly every succeeding sovereign. We are tempted to say to him, 'O Darius, how could you with all your experience, have made such a mistake!' The ruin of Xerxes was not fate or fortune, but the evil life which is generally led by the sons of very rich and royal persons; and this is what the legislator has seriously to consider. Justly may the Lacedaemonians be praised for not giving special honour to any one in a state because he surpasses another in wealth any more than because he surpasses him in swiftness, strength, or beauty, if he be without virtue, or have virtue without temperance. 'Explain.' No one would like to live in the same house with a very courageous man who had no control over himself, nor with an artizan who was clever at his profession, but a rogue. Nor can justice and wisdom ever be separated from temperance. But considering these

qualities with reference to the meed of honour and dishonour which is to be assigned to them in states, would you say, on the other hand, that temperance without the other virtues, isolated in the soul of a man, is worth anything or nothing? 'I cannot tell.' You have answered well. It would be absurd to speak of temperance as belonging to the class of honoured or of dishonoured qualities, because all other things in their various classes require temperance to be added to them; having the addition, they are honoured not in proportion to that, but to their own excellence. And ought not the legislator to determine these classes? 'Certainly.' Suppose then, as we are playing at legislation, that, without going into details, we make three great classes of them. 'By all means.' Most honourable are the goods of the soul, always assuming temperance as a condition of them; secondly, those of the body; thirdly, external possessions. Any man who inverts or adds to these classes is no friend to the state.

These remarks were suggested to me by the history of the Persian kings; and to them I will now return. The ruin of their empire was caused by the loss of freedom and the growth of despotism, which destroyed the good-will of the people, and the disinterestedness of the government. Hatred and spoliation took the place of friendship; the people never fought heartily for their masters; their countless myriads were useless on the field of battle. They resorted to mercenaries as their only salvation, and were thus compelled by their circumstances to proclaim the stupidest of falsehoods—that virtue is a trifle in comparison of money. 'Very true.'

But enough of the Persians: a different lesson is taught by the opposite extreme of the Athenians, whose example shows that a limited freedom is far better than an unlimited. Ancient Athens, at the time of the Persian invasion, had such a limited freedom. They were divided into four classes, arranged according to a property census, and the love of order was their queen; moreover, the fear of the approaching host made them obedient and willing citizens. For, ten years previously, Darius had sent Datis and Artaphernes, commanding them under pain of death to subjugate the Eretrians and Athenians. A report came to Athens that all the Eretrians had been 'netted'; this report, which may or may not have been true, terrified the Athenians, and they sent all over Hellas for assistance. None came to their relief except the Lacedaemonians, who arrived a day too late, when the battle of Marathon

had been already fought. In process of time Xerxes came to the throne, and the Athenians heard of nothing but the bridge of the Hellespont, and the canal of Athos, and the innumerable host and fleet. They knew that these were intended to avenge the defeat of Marathon. Their case seemed desperate, for there was no one to help them; no Hellene was likely to assist them by land, and at sea they were attacked by more than a thousand vessels;—their only hope, however slender, was in victory; so they relied upon themselves and upon the Gods. Their common danger, and the influence of their old constitution, greatly tended to promote harmony among them: Reverence and fear—that fear which the coward never knows—made them fight for their country and for their country's shrines and sepulchres. If they had not had such a fear, they would have been dispersed all over the world. 'Your words, Athenian, are worthy of your country.' Yes; and you, who have inherited the virtues of your ancestors, are worthy to hear them. Let me ask you to take the moral of my tale. The Persians have lost their liberty in absolute slavery, and we in absolute freedom. In ancient times the Athenian people were not the masters, but the servants of the laws. 'Of what laws?' In the first place, there were laws about music, and the music was of various kinds: there was one kind which consisted of hymns, another of lamentations; there was also the pæan and the dithyramb, each of them having their own laws (*νόμοι*) or strains, as they were termed. The regulation of such matters was not left to the whistling and clapping of a tasteless crowd; there was silence while the judges decided, and the boys, and the audience in general, were kept in order by raps of a stick. But after a while there arose a new race of poets, men of genius certainly, however careless of musical truth and propriety, who made pleasure the only criterion of excellence. That was a test which the spectators could apply for themselves; the whole audience instead of being mute became vociferous, and a theatrocracy took the place of an aristocracy. Could the judges have been free, there would have been no great harm done; a musical democracy would have been well enough—but conceit has been our ruin. Everybody knows everything, and is ready to say anything; the age of reverence is gone, and the age of irreverence and licentiousness has succeeded. 'Most true.' And with this freedom comes disobedience to rulers, parents, elders; in the latter days to the law also: the end returns to the beginning, and the old Titanic nature

reappears—men have no regard for the Gods or for oaths; and the evils of the human race seem as if they would never cease. Whither are we running away? Once more we must pull up the argument with bit and curb, lest, as the proverb says, we should fall off our ass. ‘Good.’ Our purpose in what we have been saying, is to show that the legislator ought to aim at securing for a state three things—freedom, friendship, wisdom. ‘Just so.’ And we chose two states;—one was the type of freedom, and the other of despotism; and we showed that their highest pinnacle of fortune coincided with the greatest moderation of their respective forms of government. In a similar spirit we spoke of the Dorian expedition, and of the settlement in the plains of Troy; and of music, and wine, and of all that preceded.

And now, has all this discussion been of any use? ‘Stranger, I can answer that question; for by a singular coincidence the Cretans are about to send out a colony. And the settlement of this colony has been committed to the Cnosians, who have appointed ten commissioners, of whom I am one, to give laws to the colonists. We may give them any laws which we please—Cretan or foreign. And therefore let us make a selection from what has been said for the benefit of the infant colony.’ I like your proposal, and I place myself at your service. ‘Very good.’

BOOK IV. And now what is this city? I do not ask what is or is to be the name of the place; for a river or some local deity will determine that. But I want to know what the situation is, whether maritime or inland. ‘The new city, Stranger, is about eleven miles from the sea.’ Are there good harbours? ‘Excellent.’ And is the surrounding country self-supporting? ‘Almost.’ Any neighbouring states? ‘No; and that is the reason for choosing the place, which has been deserted from time immemorial.’ And is there a fair proportion of hill and plain and wood? ‘Like the rest of Crete in that, more hill than plain.’ Then there is some hope for your citizens; had the city been on the sea, and dependent for support on other countries, a more than human power would have been required to preserve you from corruption. The distance of eleven miles is not enough, but is better than nothing; and I must be satisfied. For the sea, although an agreeable, is a dangerous companion, and a highway of strange morals and manners as well as of commerce. But as the country is moderately fertile there will be no great exports, or imports, or returns of gold and

silver, which are the ruin of states. Is there timber for ship-building? 'There is no pine or fir, and not much cypress; and very little stone-pine or planewood for the interior of ships.' That is good. 'Why?' Because the city will be unable to imitate the bad ways of her enemies. 'What is the bearing of that remark?' To explain my meaning, I would ask you just to remember what I said about the Cretan laws, which, as you and I agreed, had an eye to war only; and I maintained that they ought to have included all virtue. And I hope that you in your turn will retaliate upon me if I am false to my own principle. For I consider that the lawgiver should go straight to the mark of virtue and justice, and disregard wealth and every other good when separated from virtue. What further I mean, when I speak of the imitation of enemies, I will illustrate by the story of Minos, which is so ancient that I hope our Cretan friend will not be offended at the mention of it. Minos, who was a great sea king, imposed upon the Athenians a cruel tribute, for in those days they were not a maritime power; they had no timber for ship-building, and therefore they could not 'imitate their enemies'; and better far, as I maintain, would it have been for them to have lost many times over the lives which they devoted to the tribute than to have turned soldiers into sailors. Naval warfare is not a very praiseworthy art; men should not be taught, after running on shore, to throw away their arms, and to hurry back to their ships, as they do now; bad customs ought not to be gilded with fine words. And retreat is always bad, as we are taught in Homer, when he introduces Odysseus, setting forth to Agamemnon the danger of ships being at hand when soldiers are disposed to fly. An army of lions trained in such ways would fly before a herd of deer. Further, the rewards of valour have to be distributed among pilots and oarsmen, who do not deserve such honours, and the undue awarding of honours is the ruin of states. 'Still, in Crete we say that the battle of Salamis was the salvation of Hellas.' And that is the prevailing opinion. But I and Megillus say that the battle of Marathon began the deliverance, which the battle of Plataea completed; and that these battles made men better, whereas the battles of Salamis and Artemisium made them no better. And we further affirm that not the mere continuance of existence is the great political good of individuals or states, but the continuance of the best existence. 'Certainly.' Let us then endeavour to follow this principle in colonization and legislation.

And first, let me ask you who are to be the colonists? May any one come from any city of Crete which is overpeopled? for you would surely not send a general invitation to all Hellas. Yet I observe that in Crete there are people who have come from Argos and Aegina and other places. 'Our expedition is drawn from all Crete, and we invite Peloponnesians of Argos to join. As you observe, there are Argives among the Cretans; for example, the Gortynians, who are the best of all Cretans, have come from Gortys in Peloponnesus.'

Colonization is in some ways easier when the colony is drawn from one country, and goes out in a swarm like bees, owing to the pressure of population, or revolution, or war. There is an advantage in this mode of procedure, and also there are disadvantages. The advantage is, that the new colonists have a common language and laws, and a spirit of friendship diffused among them. But then again, they are less willing to obey the hand of the legislator; they are too fond of the laws and customs which have been the ruin of them at home. A mixed multitude is more tractable, although there is a difficulty in making them pull together. There is nothing, however, which perfects the virtue of men like legislation and colonization. And yet I have a word to say on the other side, which may seem to be depreciatory of legislators. 'What is that?'

I was going to make the saddening reflection, that accidents of all sorts are the true legislators; wars and pestilences and famines and the constant recurrence of bad seasons. He who observes the course of events will be inclined to say that almost all human things are chance; and this may certainly be said about navigation and medicine, and the art of the general. But there is another thing which may equally be said. 'What is it?' That God governs all things, and that chance and opportunity co-operate with Him. But according to a third view, art has part with them, for surely when there is a storm there must be an advantage in having a pilot. And of legislation we may say the same: however great the coincidence of fortunate circumstances, the hand of the legislator is still required. 'Most true.' All artists would pray for certain conditions under which to exercise their art. 'Certainly.' And the legislator would do the same? 'I believe that he would.' Come, legislator, let us say to him, and what are the conditions which you would have? Shall we put the conditions into his mouth? 'Yes.' He will say, Grant me a city which is in the possession of a tyrant; and let the tyrant be young, thoughtful, teachable, courageous, magnanimous; and

let him have the crowning condition of all virtue, which is temperance—not prudence, but that natural temperance which is the gift of children and animals, and is hardly reckoned among goods—with this he must be endowed, if the state is to acquire the form most conducive to happiness in the speediest manner. And I must add one other quality to the tyrant's virtues: he must be fortunate, and his good fortune must consist in his being the contemporary of a great legislator. When the God has done this, he has done the best which he can for a state; not so well if he has given them two legislators instead of one, and less and less well if he has given them a great many. An orderly tyranny most easily passes into the perfect state; in the second degree, a monarchy; in the third degree, democracy; an oligarchy is worst of all. 'I do not understand.' I suppose that you have never seen a city which is subject to a tyranny? 'And I have no desire to see one.' You would have seen what I am describing, if you ever had. The tyrant can speedily change the manners of a state, and affix the stamp of praise or blame on any action which he pleases; for the citizens are eager to follow the example which he sets them. And this is the quickest way of making changes; but there is a counterbalancing difficulty. 'What is that?' The difficulty is to find the divine love of temperance and justice existing in any powerful forms of government, whether in a monarchy or an oligarchy of birth or of wealth. Nestor, who was the most eloquent and temperate of mankind, lived in the times of Troy, but there is no one like him now. If there is, has been, or ever shall be again, such an one among us, blessed is he, and blessed are they who listen to his words. And this may be said of power in general; where power and wisdom and temperance meet in one there are the best laws and constitutions. I am endeavouring to show you how easy under the conditions supposed, and how difficult under any other, is the task of giving a city good laws. 'How do you mean?' We shall see, if we try the experiment of giving a constitution to our new state, which will be an excellent amusement for our second childhood. 'Proceed. What constitution shall we give—democracy, oligarchy, or aristocracy?' To which of these classes, Megillus, do you refer your own state? 'The Spartan constitution seems to me to contain all these elements; our state is a democracy and also an aristocracy; the power of the Ephors is tyrannical, and we have an ancient monarchy.' 'And the same,' adds Cleinias, 'may be said of Crete.' The reason is that you have politics, but other states are mere aggregations of

citizens, which are named after their several ruling powers; whereas a state, if an 'ocracy' at all, should be called a theocracy. A tale of old will explain my meaning. In the primeval world there is a tradition of a golden age, in which all things were spontaneous and abundant. Cronos, the lord of the world, knew that man was not able to endure the temptations of power, and therefore he appointed demons or demi-gods, who are of a superior race, to have dominion over him, as he has dominion over the animals. They took care of us with great ease and pleasure to themselves, and no less to us; and the tradition says that only when God, and not man, is the ruler, can the human race cease from ill. This was the way of human life under Cronos, which should be imitated by us as far as the principle of immortality dwells in us, and is imitated by us when we live according to law and the dictates of right reason. But in an oligarchy or democracy, when the governing principle is athirst for pleasure, there is no possibility of salvation. The laws are trampled under foot. Are there not often said to be as many forms of laws as there are governments, and that they have no concern either with any virtue or with all virtue, but are relative to the state in which you live? Which is as much as to say that 'might makes right.' 'What do you mean?' I mean that governments make their own laws, and that every government regards first of all the law of self-preservation. 'Very true.' And he who transgresses this law is regarded as an evil-doer, and punished accordingly. 'Naturally.' This was the evil of which we were speaking when we said that parents should rule their children, the elder the younger, the noble the ignoble; and there were other principles of government, including 'the law justifying violence' of Pindar. To which of them is our state to be entrusted? For many a government is only a victorious faction which has a monopoly of power, and refuses any share in the government to the conquered, lest when they return to power they should remember their wrongs. Such governments are not politics, but parties; nor are any laws good which are made in the interest of particular classes only, and not of the whole. And in our state I mean to protest against making any man a ruler because he is rich, or strong, or noble. But he who is the most obedient to the laws, and who wins the victory of obedience, shall be the minister or servant of them according to the degree of his obedience. When I call the ruler the servant or minister of the law, this is not a mere paradox, but I mean to say that upon a willingness to obey the law the very

existence of the state depends. 'Truly, Stranger, you have a keen vision.' Why, yes; every man when he is old has his intellectual vision most keen. And now shall we call in our colonists and make a speech to them? Friends, we say to them, God holds in His hand the beginning, middle, and end of all things, and He moves in a straight line towards the full accomplishment of His will. Justice always follows Him, and punishes those who fall short of His laws. He who would be happy is obedient to Him; but he who is lifted up with pride, or money, or honour, or beauty, is soon deserted by God, and, being deserted, he takes to him others who are like himself, and dances about in wild disorder. But in a short time he is utterly destroyed, and his family and city with him. Wherefore, seeing these things, what ought we to do or think? 'Every man ought to follow God.' There is an old saying, that like agrees with like, and God is the measure of all things in a sense far higher than any man. Those who would be dear to Him must be like Him, and the temperate man is the friend of God because he is like Him, and the intemperate man is not his friend, because he is not like Him. And the inference is, that the best of all things for a good man is to pray and sacrifice to the Gods; but the bad man has a polluted soul, and from one who is polluted neither a good man nor God is right in receiving gifts. And therefore the unholy waste their service upon the Gods, but the good are accepted of them. I have told you the mark at which we ought to aim. You will say, how? and with what weapons? In the first place we affirm, that after the Olympian Gods and the Gods of the state, honour should be given to the Gods below, and to them should be offered everything in even numbers and of the second choice; while the auspicious odd numbers and everything of the first choice are reserved for the Gods above. Next to the Gods, demi-gods or spirits must be honoured, and then heroes, and after them family gods, who will have their seats of local worship and their ritual according to law. Further, the honour due to parents should not be forgotten; all that children have is derived from them, and they owe to them a debt of nurture. Their children should never utter an unbecoming word before them; for there is an avenging angel who hears them when they are angry, and the child should consider that the parent to whom he owes life, when he has been wronged has a right to be angry with him. After their death let them have sepulchral rites according to their wealth and rank; as they did to their fathers, so let us do to them; and there shall

be an annual commemoration of them. He does best who preserves their memory without incurring any very great expense. Living on this wise, we shall be accepted of the Gods, and shall pass our days in good hope. The law will determine all our various duties towards relatives and friends and other citizens, and the whole state will be happy and prosperous. If the legislator would persuade as well as command, he will add prefaces to his laws which will predispose our citizens to virtue. I want them to be in the right frame of mind when the legislator speaks to them. Even a little accomplished in the way of gaining the hearts of men is of great value. For most men do not wish to be made good speedily. Their case rather proves the saying of Hesiod :

‘Long and steep is the first half of the way to virtue,
But when you have reached the top the other half is easy.’

‘Those are excellent words.’ Yes; but will you allow me to tell you the effect which the preceding discourse has had upon me? I will express my meaning in an address to the lawgiver :—O lawgiver, if you know what we ought to do and say, you can surely tell us—and were not you just now saying that the poet ought not to be allowed to do what he likes? And the poet may reply, that when he sits down on the tripod of the Muses he is not in his right mind, and that being a mere imitator he may be allowed to say two opposite things, and cannot tell which of them is true. But this licence cannot be allowed to the lawgiver. For example, let us suppose that there are three kinds of funerals; one of them is excessive, another mean, a third moderate, and you say that the last is always to be approved. Now, if I had a rich wife, and she told me to bury her, and I were to sing of her burial, I should praise the extravagant kind; a poor man would approve a funeral of the meaner sort, and a man of the middle class would find a moderate funeral suited to his resources. But you, as legislator, would have to determine the meaning of the words excessive, mean, moderate. ‘Very true.’ And is our lawgiver to have no preamble or interpretation of his laws, never offering a word of advice to his subjects, after the manner of some doctors? For of doctors are there not two kinds? the one gentle and the other rough, doctors and doctors’ assistants, freemen who learn themselves and teach their pupils, and slaves who learn medicine at the bidding of their masters? ‘Of course there are.’ And did you ever observe that the gentlemen doctors practise upon freemen, and that slave doctors confine themselves to slaves? The latter go about the country and wait for the slaves at the

dispensaries. None of them holds any parley with his patients about their diseases or the remedies of them; they practise by the rule of thumb, and give their decrees, as if they knew all about the disorder, in a very arbitrary manner. When they have doctored one patient they run off to another, whom they treat with equal assurance, their duty being to relieve the master of the care of his sick slaves. But the other doctor, who practises on freemen, has quite another mode of proceeding. He takes counsel with his patient and learns from him, and never does anything until he has persuaded him of what he is doing. He trusts to influence rather than force. Now is not the use of both methods far better than the use of either alone? And both together may be advantageously employed by us in legislation.

We may illustrate our proposed way of proceeding by an example. The laws relating to marriage are the first of laws, and will therefore be the best for us to begin with. The simple law would be as follows:—A man shall marry between the ages of thirty and thirty-five; if he do not, he shall pay a fitting penalty. The double law would add the reason why: Forasmuch as man desires immortality, which he attains by the procreation of children, none should deprive himself of his share in this good. He who obeys the law is blameless, but he who disobeys must not be a gainer by his celibacy; and therefore he shall pay a fine, and shall not be allowed to receive honour from the young. That is an example of what I call the double law, which may enable us to judge how far the addition of persuasion to threats is desirable. ‘Lacedaemonians in general, Stranger, are in favour of brevity; in this case, however, I prefer length. But Cleinias is the real lawgiver, and therefore I think that he should be first consulted.’ ‘Thank you, Megillus.’ Whether words are to be many or few, is a foolish question:—the best and not the shortest forms are always to be approved. And no legislator has ever thought of the advantage which he might derive from the employment of the two sources of power, which answer to the two sorts of doctors, persuasion as well as force. And I have something else to say about the matter. ‘What is that?’ A strange thought arises in my mind. Here have we been from the early dawn until noon, discoursing about laws, and all which we have been saying is only the preamble of them. I tell you this, because I want you to observe that songs and strains have all of them preludes, but that laws, though called by the same name (*νόμοι*), have never any prelude. Now I am disposed to give preludes to

laws, dividing them into two parts—one containing the despotic command, which I described under the image of the slave doctor—the other the persuasive part, which I term the preamble. The legislator should give preludes or preambles to his laws. ‘That shall be the way in my colony.’ I am glad that you agree with me; the law should be clearly explained at the beginning. All laws might have, but will not equally require a preamble; this must be left to the lawgiver, as the preamble of a strain or speech is left to the orator or musician. ‘Most true: and now, having a preamble, let us make a second and better beginning.’ Enough has been said of Gods and parents, and we may proceed to consider persons—their souls, bodies, properties,—their occupations and amusements; and so arrive at the nature of education.

The first word of the Laws somewhat abruptly introduces the thought which is present to the mind of Plato throughout the work, namely, that Law is of divine origin. In the words of a great English writer—‘Her seat is the bosom of God, her voice the harmony of the world.’ Though the particular laws of Sparta and Crete had a narrow and imperfect aim, this is not true of divine laws, which are based upon the principles of human nature, and not framed to meet the exigencies of the moment. They have their natural divisions, too, answering to the kinds of virtue (i. 630 E); very unlike the discordant enactments of an Athenian assembly or of an English Parliament. Yet we may observe two inconsistencies in Plato’s treatment of the subject: first, a lesser one, inasmuch as he does not clearly distinguish the Cretan and Spartan laws, of which the exclusive aim is war, from those other laws of Zeus and Apollo which are said to be divine, and to comprehend all virtue. Secondly, we may retort on him his own complaint against Sparta and Crete, that he has himself given us a code of laws, which for the most part have a military character; and that we cannot point ‘to obvious examples of similar institutions which are concerned with pleasure.’ The military spirit which is condemned by him in the beginning of the Laws, reappears in the eighth and ninth books.

The mention of Minos the great lawgiver, and of Rhadamanthus the righteous administrator of the law, suggest the two divisions of the laws into enactments and appointments of officers (cp. vi. 751). The legislator and the judge stand side by side, and their functions cannot be wholly distinguished. For the judge is in some sort a legislator, at

any rate in small matters (cp. ix. 875 E, foll.); and his decisions growing into precedents, must determine the innumerable details which arise out of the conflict of circumstances. These are what Plato proposes to leave to a younger generation of legislators. The action of courts of law in making law seems to have escaped him, probably because the Athenian law courts were popular assemblies; and, except in a mythical form, he can hardly be said to have had before his eyes the ideal of a judge. In reading the Laws of Plato, or any other ancient writing about Laws, we should consider how gradual the process is by which not only a legal system, but the administration of a court of law, becomes perfected.

There are other subjects on which Plato breaks ground, as his manner is, in the first book. First, he gives a sketch of the subject of laws; they are to comprehend the whole of human life, from infancy to age, and from birth to death, although the proposed plan is far from being regularly executed in the books which follow, partly owing to the necessity of describing the constitution as well as the laws of his new colony. Secondly, he touches on the power of music, which may exercise so great an influence on the character of men for good or evil; he refers especially to the great offences—on which he afterwards dilates at length, and which he has already condemned in the Republic—of separating the words from the music, and varying the modes and rhythms. Thirdly, he reprobates in energetic terms the prevalence of unnatural loves in Sparta and Crete, which he seems to attribute to the practice of *syssitia* and gymnastic exercises, when not accompanied by any higher training. To this subject he again returns in the sixth book. Fourthly, the virtues are shown to be inseparable from one another, even if not absolutely one; this, too, is a principle which he re-asserts at the conclusion of the work. As in the beginnings of Plato's other writings, we have here several 'notes' struck, which form the preludes of longer discussions, although the hint is less ingeniously given, and the promise more imperfectly fulfilled than in the earlier dialogues.

The distinction between ethics and politics has not yet dawned upon Plato's mind. To him, law is still floating in a region between the two. He would have desired that all the acts and laws of a state should have regard to all virtue. But he did not see that politics and law are subject to their own conditions, and are distinguished from ethics by natural differences. The actions, of which politics take cognisance are neces-

sarily collective or representative; the actions of which law takes cognisance are necessarily external, and they affect others as well as the agents. But Plato has never made this analysis. He fancies that the life of the state is as plastic, and can be as easily fashioned, as that of the individual. He is favourable to a balance of power, but never seems to have considered that power might be so balanced as to produce an absolute immobility in the state. Nor is he alive to the evils of confounding vice and crime; or to the necessity of governments abstaining from excessive interference with their subjects. He would have set no limits to the power of legislation.

Yet this confusion of ethics and politics has also a better and a truer side. If unable to grasp some important distinctions, Plato is at any rate seeking to elevate the lower to the higher; he does not pull down the principles of men to their practice, or narrow the ideal of what the state may be to the immediate necessities of politics. Political ideals of freedom and equality, of a divine government which has been or will be in some other age or country, have greatly tended to educate and enoble the human race. And if not the first author of such ideals (for they are as old as Hesiod), Plato has done more than any other writer to impress them on the world. To those who censure his idealism we may reply in his own words—‘He is not the worse painter who draws a beautiful figure, because no such figure ever had a real existence.’

A new thought about education suddenly occurs to him, and for a time exercises a sort of fascination over his mind, though in the later books of the *Laws* forgotten or overlooked. As true courage is allied to temperance, so there must be an education which shall train mankind to resist pleasure as well as to endure pain. No one can be on his guard against that of which he has no experience. The perfectly trained citizen should have been accustomed to look pleasure in the face, and to measure his strength against her. This education in pleasure is to be given partly by festive intercourse, chiefly by the song and dance. Youth are to learn music and gymnastics; their elders are to be trained and tested at drinking parties. According to the old proverb, *in vino veritas*, they will then be open and visible to the world in their true characters; and also they will be more amenable to the laws, and more easily moulded by the hand of the legislator. The first reason is curious enough, though not important; the second can hardly be thought deserving of much attention. Yet if Plato means to say that society

is one of the principal instruments of education in after life, he has expressed in an obscure fashion a principle which is true, and to his contemporaries was also new. He seems to be carried away by the really original thought which had occurred to him, and which he has not yet learned to present to his mind in an abstract form. He is sensible that moderation is better than total abstinence, and that asceticism is but a one-sided training. He makes the sagacious remark, 'that those who are able to resist pleasure may often be among the worst of mankind.' He is as much aware as any modern utilitarian that the love of pleasure is the great motive of human action. This cannot be eradicated, and must therefore be regulated, and the pleasure must be of the right sort. Such reflections seem to be the real, though imperfectly expressed, groundwork of the discussion. As in the juxtaposition of the Bacchic madness and the great gift of Dionysus, or where he speaks of the senses in which pleasure is and is not the object of imitative art, or in the illustration of the failure of the Dorian institutions from the vow of Theseus—we have to gather his meaning as well as we can from the connection.

The feeling of old age is discernible in this as well as in several other passages of the Laws. Plato has arrived at the time when men sit still and look on at life; and he is willing to allow himself and others the few pleasures which remain to them. Wine is to cheer them now that their limbs are old and their blood runs cold. They are the best critics of dancing and music, but cannot be induced to join in song unless they have been enlivened by drinking. Youth has no need of the stimulus of wine, but age can only be made young again by its healing influence. Total abstinence for the young, moderate and increasing potations for the old, is Plato's principle. The fire, of which there is too much in the one, has to be brought to the other. Drunkenness, like madness, had a sacredness and mystery to the Greek; if, on the one hand, as in the case of the Tarentines (i. 637 B), it degraded a whole population, it was also a mode of worshipping the god Dionysus, which was to be practised on certain occasions. Moreover, the intoxication produced by the fruit of the vine was very different from the grosser forms of drunkenness which prevail among some modern nations.

The physician in modern times would restrict the old man's use of wine within narrow limits. He would tell us that you cannot restore strength by a stimulus. Wine may call back the vital powers in disease,

but cannot reinvigorate old age. In his maxims of health and longevity, though aware of the importance of a simple diet, Plato has omitted to dwell on the perfect rule of moderation. His commendation of wine is probably a passing fancy, and may have arisen out of his own habits or tastes. If so, he is not the only philosopher whose theory has been based upon his practice.

Like the importance which he attaches to festive entertainments, his depreciation of courage to the fourth place in the scale of virtue, appears to be somewhat rhetorical and exaggerated. But he is speaking of courage in the lower sense of the term, not as including loyalty or temperance. He does not insist, as in the Protagoras, on the unity of the virtues; or as in the Laches, on the identity of wisdom and courage. But he endeavours to show how they all depend upon their leader mind, and how, out of the union of wisdom and temperance with courage, springs justice. Elsewhere he is disposed to regard temperance rather as a condition of all virtue than as a particular virtue. He generalizes temperance, as in the Republic he generalizes justice. The nature of the virtues is to run up into one another, and in the Laws Plato makes but a faint effort to distinguish them. He still quotes the poets, somewhat enlarging, as his manner is, or playing with their meaning. The martial poet Tyrtæus, and the oligarch Theognis, furnish him with happy illustrations of the two sorts of courage. The fear of fear, the division of goods into human and divine, the acknowledgment that peace and reconciliation are better than military superiority, the analysis of temperance into resistance of pleasure as well as endurance of pain, the distinction between the education which is suitable for a trade or profession, and for the whole of life, are important and probably new ethical conceptions. Nor has Plato forgotten his old paradox, that to be punished is better than to be unpunished, when he says, that to the bad death is the only mitigation of his evil. He is not less ideal in many passages of the Laws than in the Gorgias or Republic. But his wings are heavy, and he is unequal to any sustained flight.

There is more attempt in the first book to carry out the dramatic interest than in the later parts of the work. The outburst of martial spirit in the Lacedæmonian, at p. 638 A, 'O best of men'; the anger which the Cretan expresses at the supposed insult to his lawgiver; the cordial acknowledgment on the part of both of them that laws should not be discussed publicly by those who live under their rule; the diffi-

culty which they alike experience in following the speculations of the Athenian, are highly characteristic.

In the next book, Plato pursues further his notion of educating by a right use of pleasure. He begins by conceiving an endless power of youthful life, which is to be reduced to rule and measure by harmony and rhythm. Men differ from the lower animals in that they are capable of musical discipline. But music, like all art, must be truly imitative, and imitative of what is true and good. Art and life agree in rejecting pleasure as the criterion of good. True art is inseparable from the highest and most ennobling ideas. Plato is the enemy of songs without words, which he supposes to have some confusing or enervating effect on the mind of the hearer; and he is also opposed to the modern degeneracy of tragedy, which he would probably have illustrated, like Aristophanes, from Euripides and Agathon. From this passage we seem to gather a more perfect conception of art than from any other of Plato's writings. He understands that art is at once imitative and ideal, an exact representation of truth, and also a representation of the highest truth. The same double view of art may be gathered from a comparison of the third and tenth books of the Republic, but is here more clearly and pointedly expressed. We are inclined to suspect exaggeration of the influence which is attributed by him to the song and the dance. But we must remember also the susceptible nature of the Greek, and the perfection to which these arts were carried by him.

In speaking of the chorus of elders, Plato takes occasion to revert to his old proposal of the use of wine. There is not much point in this, which may be regarded as an illustration of an illustration. The use of wine was a particular instance of social intercourse, and this is a particular instance of the use of wine.

At the beginning of the third book, Plato abruptly asks the question, What is the origin of states? The answer is, Infinite time. We have already seen—in the Theætetus, where he supposes that in the course of ages every man has had numberless progenitors, kings and slaves, Greeks and barbarians; or in the Critias, where he says that nine thousand years have elapsed since the ancient Athenian empire passed away—that Plato is no stranger to the conception of long periods of time. He supposes human society to have been interrupted by natural convulsions; and beginning from the last of these, he traces the steps

by which the family has passed into the state, and the original scattered society has received the impress of a military civilization. His conception of the origin of states is far truer in the *Laws* than in the *Republic*; but it must be remembered that here he is giving an historical, there an ideal account of the growth of society.

Modern enquirers, like Plato, have found in infinite ages the explanation not only of states, but of languages, men, animals, the world itself; they have also detected in later institutions the vestiges of a patriarchal state still surviving. Thus far Plato speaks as 'the spectator of all time and all existence,' who may be thought by some divine instinct to have guessed at truths which were hereafter to be revealed. He is far above the vulgar notion that Hellas is the civilized world, or that civilization only began when the Hellenes appeared on the scene. But as he approaches more historical times, in preparing the way for his own theory of mixed government, he argues very falsely and imperfectly. He is desirous of showing the imperfection of the Dorian institutions, and hence he is led to attribute them to the Argives and Messenians. The decay of one of these Græek tribes, and the destruction of the other, are adduced by him as a manifest proof of their failure. But there is no more reason to suppose that the Dorian rule of life ever prevailed in Argos and Messene, than to assume that Dorian institutions were framed to protect the Greeks against the power of Assyria; or that the empire of Assyria was in any way affected by the Trojan war (this was not a part of any legend); or that the return of the Heraclidæ was only the return of Achæan exiles, who received a new name from their leader Dorieus. Such fancies were chiefly based, as far as they had any foundation, on the use of analogy, which played a great part in the dawn of historical and geographical research. Because there was a Persian empire which was the natural enemy of the Greek, there must also have been an Assyrian empire, which had a similar hostility; and not only the fable of the island of Atlantis, but the Trojan war, derived some features from the Persian struggle. The river Nile answered to the Ister, and the valley of the Nile to the Red Sea (Herod. ii. 119). In the *Republic*, Plato is flying in the air regardless of fact and possibility—in the *Laws*, he is making history by analogy. In the one, he appears to be like some modern philosophers, absolutely devoid of historical sense; in the other, he is on a level not with Thucydides, or the critical historians of Greece, but with Herodotus, or even with Ctesias.

The chief object of Plato in tracing the origin of society, is to show the point at which regular government superseded the patriarchal authority, and laws common to many families took the place of the old customs. The customs were systematized by legislators, and new forms of government began to spring up. According to Plato, the only sound principle on which any of them was based was a mixture or balance of power. The balance of power had saved Sparta, when the two other Heraclid cities fell into disorder. Here, again, is probably the first trace of a great political idea, which has exercised a vast influence both in ancient and modern times. And yet we might fairly ask, a little parodying the language of Plato—O legislator, is unanimity only mutual jealousy; or is the balance of powers in a state better than the harmony of them?

In the fourth book we approach the realities of politics, and Plato begins to ascend to the height of his great argument. The reign of Cronos has passed away, and various forms of government have succeeded, which are all based on self-interest and self-preservation. Right and wrong, instead of being measured by the will of God, are created by the law of the state. The strongest assertions are made of the purely spiritual nature of religion—‘Without holiness no man is accepted of God’; and of family duties, ‘Honour thy father and thy mother, if thou wouldst have a family.’ The legislator must teach these precepts as well as command them. He is to be the educator as well as the lawgiver of future ages, and the laws are themselves to form a part of the education of the state. Unlike the poet, he must be definite and rational; he cannot say one thing at one time, and another thing at another—he must know what he is about. And yet legislation has a poetical or rhetorical element, and must find words which will wing their way to the hearts of men. Laws must be promulgated before they are put in execution, and mankind must be reasoned with before they are punished. The legislator will begin by entreating courteously those who are willing to hear his voice. Upon the rebellious only does the heavy blow descend. A sermon and a law in one, blending the secular punishment with the religious sanction, appeared to Plato a new idea which might have a great result in reforming the world. The experiment had never been tried of reasoning with mankind; the laws of others had never had any preambles, and Plato seems to have great pleasure in contemplating his discovery.

In these quaint forms of thought and language, great principles of morals and legislation are enunciated by him for the first time. They all go back to mind and God, who holds the beginning, middle, and end of all things in His hand. The adjustment of the divine and human elements in the world is conceived in the spirit of modern popular philosophy, differing not much in the mode of expression. At first sight the legislator appears to be impotent, for all things are the sport of chance. But we admit also that God governs all things, and that chance and opportunity co-operate with Him (compare the saying, that chance is the name of the unknown cause). Lastly, while we acknowledge that God and chance govern mankind, and provide the conditions of human action, experience will not allow us to deny a place to art. We know that there is a use in having a pilot, though the storm may overwhelm him; and a legislator is required to provide for the happiness of a state, although he will pray for favourable conditions under which he may exercise his art.

BOOK V. Hear now, all ye who heard the laws about Gods and ancestors: Of all human possessions the soul is most divine, and most truly a man's own. For in every man there are two parts—a better which rules, and an inferior which serves—and the ruler is to be preferred to the servant. And I tell every one next after the Gods to honour his own soul, and he can only honour her by making her better. A man does not honour his soul by flattery, or gifts, or self-indulgence, or conceit of knowledge, nor when he blames others for his own errors; nor when he indulges in pleasure or refuses to bear pain; nor when he thinks that life at any price is a good, because he fears the world below, which, far from being an evil, may be the greatest good: nor when he prefers beauty to virtue—not reflecting that the soul which came from heaven is more honourable than the body which is earth-born; nor when he desires money, of which no amount is equal in value to virtue—in a word, when he counts that which the legislator pronounces evil to be good, he misbehaves towards his soul, which is the divinest part of him. He does not consider the real punishment of evil, which is, that he grows like evil men, and is compelled to fly from the company of the good: and he who is joined to evil men, must do and suffer what such men by nature do and say to one another, which suffering is not justice but retribution. For justice is noble, but retribution is only the

attendant of injustice. And whether a man escapes or whether he is punished, he is equally miserable; for in the one case he is not cured, and in the other case he is destroyed that the rest of the world may be saved.

The glory of man is to follow the better and improve the inferior. And the soul is that part of man which is most inclined to avoid the evil and dwell with the good. Wherefore also the soul is second only to the Gods in honour, and in the third place the body is to be esteemed, which often has a false honour. For honour is not to be given to the fair or the strong, or the swift, or the tall, or the healthy, any more than to the opposite of these, but to the mean states; and the same of property and external goods. No man should heap up riches that he may leave them to his children. The best condition is a middle one, in which there is a freedom without luxury. And the best inheritance of children is modesty. But modesty cannot be implanted by admonition only—the elders must set the example.

He who honours his kindred and family, may fairly expect that the Gods will give him children. He who would have friends must think much of their favours to him, and little of his to them. He who prefers to an Olympic, or any other victory, the service of the laws, is also the best servant of his country. Engagements with strangers are to be deemed most sacred, because the stranger having no law to protect him is immediately under the protection of the God of strangers. A prudent man will avoid sinning against the stranger; and still more careful should he be of sinning against the suppliant, which is an offence never passed over by the Gods.

I will now speak of those particulars which are matters of praise and blame only, and which, although the law is not cognisant of them, greatly affect the disposition to obey the law. Truth has the first place among the gifts of Gods and men; for truth is faithfulness, and unfaithfulness is the voluntary love as ignorance is the involuntary reception of a lie: and he is not to be trusted who loves voluntary falsehood, and he who loves involuntary falsehood is a fool. He who would lead a happy life must begin early, that he may partake of truth as long as possible. For he who is untruthful is in old age miserable and desolate, and has not a friend to close his eyes. Good is he who does no injustice—better who prevents others from doing any—best of all who joins the rulers in punishing injustice. And this is true of goods

and virtues in general; he who has and communicates them to others is the best of all; he who would, if he could, is second best; he who has them and is jealous of imparting them to others is to be blamed, but the good or virtue which he has is to be valued still. Let every man contend in the race without envy; for the unenvious man increases the strength of the city; himself foremost in the race, he harms no one with calumny. Whereas the envious man is weak himself, and drives his rivals to despair with his slanders, thus depriving the city of proper training for the contest of virtue, and tarnishing her glory. Every man should be gentle, but he should also be passionate; for against incurable and malignant evil he must fight, and to this end passion is required. But there is another kind of evil which is remediable, and ought to be dealt with more in sorrow than anger. He who is unjust is to be pitied in any case; for no man does evil or allows evil to exist or continue voluntarily in the highest part of his soul: and we can afford to forgive as well as pity the evil which can be cured: and therefore he who deals with the curable sort has need of gentleness—he should keep his temper, and not get into feminine rages; but the incurable shall have the vials of our wrath poured out upon him. The greatest of all evils is one which a man is always excusing in himself and never correcting—that is to say, self-love; which is thought to be natural and enforced as a duty, and yet is the cause of many errors. The lover of himself is blinded about the object of his affections; he is perverted in his judgments about good and evil, and prefers his own interests to the truth; for the truly great man is not a lover of himself but of justice. Self-love is the source of that ignorant conceit of knowledge which is always doing and never succeeding. Wherefore let every man avoid self-love, and condescend to follow the guidance of his betters. There are lesser matters of which a man should remind himself; for wisdom is like a stream, ever flowing in and out, and recollection is the flowing in of failing knowledge. Let no man be given to excess either of laughter or of tears; but let him control his feelings at the crisis of his fate, either when he is on 'sunlit heights' or falling over a precipice, believing that the Gods will diminish the evils and increase the blessings of good men. These are the thoughts which should ever occupy a good man's mind; he should feel the frailty of human life, and the probability of reverses, and should remember both in play and in seriousness, and remind others of the alternations of fortune, and await the end in hope.

So much of man's relation to God. But man is man, and dependent on pleasure and pain; and therefore to acquire a true taste respecting either is a great matter. And what is a true taste? This can only be explained by a comparison of one life with another. Pleasure is an object of desire, pain of avoidance; and the absence of pain is to be preferred to pain, but not to pleasure. There are infinite kinds and degrees of both of them, and we choose the life which has more pleasure and avoid that which has less; but we do not choose that life in which the elements of pleasure are either feeble or equally balanced. All the lives which we desire are pleasant, and if we choose any others, our choice is due to inexperience.

Now there are four lives—the temperate, the rational, the courageous, the healthful; and to these let us oppose four others—the intemperate, the cowardly, the foolish, the diseased. The temperate life has gentle pains and pleasures, the intemperate life has violent delights, and still more violent desires. And the pleasures of the temperate exceed the pains, while the pains of the intemperate exceed the pleasures. But if this is true, none are voluntarily intemperate, but all who lack temperance are either ignorant or wanting in self-control: for men always choose the life which exceeds in pleasure. The wise, the healthful, the courageous life have a similar advantage—they also exceed their opposites in pleasure. And, generally speaking, the life of virtue is far more pleasurable and honourable, fairer and happier far, than the life of vice. Let this be the preamble of our laws; the strain will follow.

As in a web the warp is stronger than the woof, so should the rulers be stronger than their half-educated subjects: in the constitution of a state there are two parts, the appointment of the rulers, and the rules which are prescribed for them. But, before proceeding to discuss them, there are some preliminary matters which have to be considered.

As of animals, so also of men, a selection must be made. The legislator must purify them, and if he be not a despot he will find even the mildest form of purification a difficult task. This milder process is as follows: When men are poor and show a disposition to attack the property of the rich, the legislator will despatch them to another land, and this is euphemistically termed the sending out of a colony. But our case will not require this remedy. We shall only need to purify the streams before they meet. This may often be a difficult process, but in

theory we may suppose the operation performed, and the desired purity attained. Evil men we will hinder from coming, and receive the good as friends with open arms.

Like the old Heracleid colony, we are fortunate in escaping the abolition of debts and the distribution of land, which are difficult and dangerous questions; the legislator may pray and hope, and may perhaps lessen the difficulty a little in a long period of years, but only when there is abundance of land. His aim will be to create a kindly spirit between creditors and debtors. Those who have should give to those who are in want; they should deem poverty to be not the diminution of a man's property, but the increase of his desires. Good will is the basis of a state: upon this alone can the political superstructure be safely reared. Among citizens there should be no outstanding quarrels: a legislator of sense will not proceed a step in the arrangements of a state until they are settled. For him to introduce fresh bones of contention would be the height of folly.

Let us now proceed to the distribution of our state, and determine the size of the territory and the number of the allotments. The territory should be sufficient to maintain the citizens in moderation, and the population should be numerous enough to defend themselves, and sometimes to aid their neighbours. We will fix the number of citizens at 5040, to which the number of houses and portions of land shall correspond. Let the number be divided into two parts and then into three; and again into four and five, and any number of parts up to ten. For the whole number is very convenient for the purposes of distribution, and is capable of fifty-nine divisions; ten of these proceed without interval from one to ten. Here are numbers enough for war and peace, and for all contracts and dealings. These properties of numbers are true, and should be ascertained with a view to use.

No man of sense will make any alterations in religious institutions, when they have been once settled by the oracles of Delphi and Dodona. All sacrifices, and altars, and temples, whatever may be their origin, whether derived from Tyrrhenia or Cyprus, or some other place, should remain as they are, and be supported by grants of land. Every division should have a patron God or hero; to these a portion of the domain should be appropriated, and at their temples those who are charged with their support should meet together from time to time, in their several divisions, for the sake of mutual help and friendship. All the citizens of

a state should be known to one another ; for when there is darkness and not light in the daily intercourse of life, there can be no justice or right administration. Every man should be true and simple, and should not allow others to take advantage of him.

And now the game opens, and we begin to move the pieces. At first sight, our constitution may appear unsuitable to a legislator who has not despotic power ; but on second thoughts will be deemed to be if not the very best, the second best. For there are three forms of government, a first, a second, and a third best, out of which Cleinias has now to choose. The first and highest form is that in which friends have all things in common, including wives and property,—in which they have common fears, hopes, desires, and do not even call their eyes or their hands their own. This is the ideal state ; than which there never can be a truer or better—a state, whether inhabited by Gods or men, which will make the dwellers therein blessed. Here is the pattern on which we must ever fix our eyes ; but we are now concerned with another, which is next in degree, and we will afterwards proceed to a third.

Inasmuch as our citizens are not fitted either by nature or education to receive the saying, Friends have all things in common, let them retain their houses and private property, but use them in the service of their country, who is their God and parent. Their first care should be to preserve the number of their lots. This may be secured in the following manner : where there is a family the lot shall be left to the best-beloved child, who will become the heir of all the family interests and duties, to Gods, home and country. Of the remaining children, the females must be given in marriage according to the law, to be hereafter enacted ; childless males will have children assigned to them. How to equalize families and allotments will be one of the chief cares of the supreme council. When parents have too many children they may give to those who have none, or couples may abstain from having children, or take special care to obtain them ; or if the number of citizens becomes excessive, we may have recourse to our old plan of a colony. If, on the other hand, a war, or flood, or plague diminish the number of the allotments, new citizens will have to be introduced ; and you certainly ought not to introduce those who are ill-born and ill-educated. Still there may be cases in which you cannot avoid doing so, for even God cannot fight against necessity.

Wherefore we will say to our citizens : Good friends, honour order

and equality, and above all the number 5040. Secondly, respect the original division, which must not be infringed by buying and selling; for the law says that the land which a man has is sacred—God gave him the lot, and He will assuredly punish the alienation of His gift. And those who alienate either house or lot, shall be cursed by priests and priestesses once and again, and their curses shall be written down on tablets of cypress for the instruction of posterity. The all-seeing eye of the chief magistrate will be upon them, and he will punish those who disobey God and the law.

To appreciate the benefit of such an institution a man requires to be well educated; for he certainly will not make a fortune in our state. No man will be allowed to exercise any illiberal occupation. The law also provides that no man shall have gold or silver, but only some coin for daily use, which will not pass current in other countries. The common Hellenic currency is to be used in defraying the expenses of expeditions, or of embassies, or when a man is on foreign travels; but he who uses it is to deliver up what is over on his return home to the treasury from which the issue came, on pain of losing the sum in question; and he who does not inform against him is to be mulcted in an equal sum. No money is to be given or taken as a dowry, or to be lent on interest, or lent at all, except to an honest man. The law will not protect a man in recovering either interest or principal. All these regulations imply that the aim of the legislator is not to make the city as rich as possible, or as mighty as possible, but the greatest virtue and the greatest happiness are to be his principles. Now men can hardly be at the same time very virtuous and very rich. Over-much honesty is not consistent with excess of wealth. And why is this? Because he who makes twice as much and saves twice as much as he ought, receiving where he ought not and not spending where he ought, will be at least twice as rich as he who makes money where he ought, and spends where he ought. On the other hand, an utterly bad man is generally profligate and poor, while he who acquires honestly, and spends what he acquires on noble objects, can rarely be very rich. A very rich man is not a good man, and therefore not a happy one. Now the object of our laws is to make the citizens as friendly and happy as possible, which they will be, not when there are the most wrongs and suits, but when there are the fewest. And, therefore, we say that there is to be no silver or gold in the state, nor the meaner sort of trade which is carried on by

usury or the rearing of stock, nor money-making, which will lead men to neglect that for the sake of which money is made, that is to say, the soul first and afterwards the body;—which are not good for much without music and gymnastic. Money is to be held in honour last or third; the highest interests being those of the soul, and in the second class are to be ranked those of the body. This is the true order of legislation, which would be inverted by placing health before temperance, or wealth before health. Let our citizens take the lot upon these conditions.

It might be well if every man could come to the colony having equal property; but equality is impossible, and therefore we must avoid causes of offence by valuations of properties, and proportionate taxation. To this end, let us make four classes in which the citizens may be placed according either to their original property, or to the changes of their fortune. The greatest of evils is revolution; and this, as the law will say, is caused by extremes of poverty or wealth. The limit of either shall be the lot, which must not be diminished, and may be increased fourfold, but not more. He who exceeds the limit shall be deprived of the surplus, which shall be divided between the informer and the Gods, and he shall pay as much again out of his own property. All property other than the lot must be inscribed in a register, so that any disputes which arise may be easily determined.

The city shall be in a suitable situation, and in the centre of the country, and shall be divided into twelve wards. First, we will erect an acropolis, encircled by a wall, within which shall be placed the temples of Hestia, and Zeus, and Athene. From this shall be drawn lines dividing the city, and also the entire country, into twelve sections containing 5040 lots. Each lot shall be subdivided into two parts, and there shall be a residence on both. The distance of one part of the lot shall be compensated by the nearness of the other; the badness and goodness by the greater or less size. Twelve of the lots will be assigned to the twelve Gods, and they will give their names to the tribes. The divisions of the country shall correspond to those of the town.

The objection will naturally arise, that all the advantages of which we have been speaking will never concur. The citizens will not tolerate a settlement in which they are deprived of gold and silver, and have the number of their families regulated, and the sites of their houses fixed by law. They will say that our city is a mere image of wax. And the

legislator will answer 'I know it, but I maintain that we ought to set forth an ideal which is as perfect as possible. If difficulties arise in the execution of the plan, we must avoid them and carry out the remainder. But the legislator must first be allowed to complete his idea without interruption.'

The number twelve, which is the number of division, runs through all parts of the state, phratries, villages, ranks of soldiers, coins and measures wet and dry, which are all to be made commensurable with one another. There is no meanness in requiring that the smallest vessels should have a common measure, which may be used in all measurements of height and depth, as well as of sounds and motions, upwards or downwards, or round and round. And the use of such a measure should be duly imposed by the legislator on all the citizens. No instrument of education is more valuable than arithmetic; nothing more tends to sharpen and improve and inspire the dull intellect. But such an education presupposes a lofty and generous spirit; there must be no meanness in the mind of the student. Otherwise, what should make a wise man will go to the formation of a rogue; and this evil tendency may be actually observed among the Egyptians and Phoenicians, who, notwithstanding their knowledge of arithmetic, are degraded in their general character; whether this defect in them is to be attributed to misfortune or to the disastrous influence of their education. And do not let us be deceived into thinking that we can disregard physical causes, or that there are not great differences in the power of regions to produce good men: heat and cold, and water and food, are certainly productive of many and great effects on the souls and bodies of men; and greater still are the influences of particular places, in which the air is holy, and Gods and demi-Gods have taken up their abode. To all this the legislator must attend, so far as lies within the scope of human prudence.

BOOK VI. And now we are about to consider (1) the appointment of magistrates; (2) the laws by which their powers and rights are to be determined. I may observe by the way that laws, however good, are useless and also ridiculous unless the magistrates are able to execute them. And therefore (1) the intended rulers of our imaginary state should be tested from their youth upwards until the time of their election; and (2) those who are to elect them ought to be trained in habits of law, that they may form a right judgment of good and bad men. But

uneducated colonists who are unacquainted with each other, will not be likely to choose well. What, then, shall we do? I will tell you: The colony will have to be intrusted to the ten commissioners, of whom you are one, and I will help you and them, which is my reason for inventing this romance. And I cannot bear that the tale should go wandering about the world without a head,—left in this amorphous state, it will be such an ugly monster. ‘Very good.’ Yes; and I will be as good as my word, if God and old age will be gracious to me. And God will be gracious: but let us not forget what a great and daring creation this our city is. ‘Why daring?’ Why, surely our courage is shown in imagining that the new colonists will quietly receive our laws; for no man likes to receive laws when they are first imposed: could we only wait until those who had been educated under them were grown up, and of an age to vote in the public elections, there would be far greater reason to expect permanence in our institutions. ‘Very true.’ The Cnosian founders should take pains to clear themselves in the matter of the colony, and above all in the election of the higher officers. ‘How would you appoint them?’ In this way: The Cnosians who take the lead in the colony, together with the colonists, will choose thirty-seven persons, of whom nineteen will be colonists, and the remaining eighteen Cnosians—you must be one of the eighteen yourself, and become a citizen of the new state. ‘Why do not you and Megillus join us?’ Athens is proud, and Sparta too; and they are both a long way off. But let me proceed with my scheme. As time goes on, the mode of election will be as follows: All who are of full age in the various departments of the military service will be electors; and the election will be held in the most sacred of the temples. The voter will place on the altar a tablet, inscribing thereupon his vote, together with the name of his father, tribe, and ward, and his own name; and he may take away the tablet and replace it in the agora within thirty days. The 300 who obtain the greatest number of votes will be publicly announced, and out of them there will be a second election of 100; and out of the 100 a third election of thirty-seven, who have the greatest number of votes: these are to be the rulers; and the last election is to be accompanied by the solemnity of the electors passing through victims: But then who is to arrange all this? There is a common saying, that the beginning is half the whole; and I should say a good deal more than half. ‘Most true.’ The only way of making a beginning is from the parent city; and though in after ages the tie may be broken, and

quarrels may arise between them, yet in early days the child naturally looks to the mother for care and education. And, as I said before, the Cnosians ought to take an interest in the colony, and select 100 elders of their own citizens, to whom shall be added 100 of the colonists, to be their rulers; and when the colony has been started, the Cnosians may return home and leave the colonists to themselves. The thirty-seven shall have the following functions: first, they shall be guardians of the law; secondly, of the registers of property in the four classes—not including the two, three, four minae, which are allowed as a surplus. He who is found to possess what is not described in the registers, in addition to the confiscation of such property shall be proceeded against by law, and if he be cast he shall lose his share in the public property or distributions of property; he shall all his life long be confined to the lot; and his sentence shall be inscribed in some public place. The thirty-seven guardians are to continue in office twenty years only, and to commence holding office at fifty years, or if later, they are not to remain after seventy.

Generals have now to be elected, and commanders of horse and brigadiers of foot. The generals shall be natives of the city, proposed by the guardians of the law, and elected by those who are or have been of the age for military service. Any one may challenge the person nominated and start another candidate, whom he affirms upon oath to be better qualified. The three who obtain the greatest number of votes shall be elected. The generals thus elected shall propose the taxiarchs or brigadiers, and the challenge may be made, and the voting taken, in the same manner as in the previous case. Assemblies for elections are to be held in the first instance, and until the prytanes and council come into being, by the guardians of the law in some holy place; and they shall divide the citizens into hoplites and cavalry, placing in a third division all the rest. All are to vote for general and cavalry officers. The brigadiers are to be voted for by those who carry shields. Next, the cavalry are to choose phylarchs in the presence of the army; but captains of archers and other irregular troops are to be appointed by the generals themselves. The generals of cavalry shall be proposed and voted upon by the same persons who vote for generals of the army. The two who have the greatest number of votes shall be leaders of all the horse. Disputes about the voting may be raised once or twice, but if oftener the presiding officers shall decide.

The council shall consist of 360, who may be conveniently divided into four sections of ninety each, making ninety councillors of each class. In the first place, all the citizens shall vote for members of the council taken from the first class; and they all shall be compelled to vote under pain of fine—this shall be the business of the first day. On the second day a similar election shall be made from the second class. On the third day, members of the council shall be elected from the third class; but the compulsion to vote shall only extend to the voters of the three first classes, who, if they fail to vote, shall pay a fine according to their class. On the fourth day, members of the council shall be elected from the fourth class; they shall be elected by all, but the compulsion to vote shall only extend to the second class, who shall pay a fine triple the fine which was exacted at first, and to the first class, who shall pay a quadruple fine. On the fifth day, the names shall be exhibited, and out of them every citizen shall choose 180 of each class: these are to be reduced by lot to ninety, and 90×4 will form the council for the year.

The mode of election which has been described is a mean between monarchy and democracy, and such a mean should ever be observed in the state. For servants and masters cannot be friends, and, although equality makes friendship, we must remember that there are two sorts of equality. One of them is the bare external rule of number and measure; but there is also a higher equality, which is the judgment of Zeus. This latter has little place in human affairs, but that little is the source of the greatest good to cities and individuals. This is that equality which gives more to the better and less to the inferior, and is the true political justice; to this the legislator looks, and we in our state desire to look, not to the interests either of tyrants or mobs. But justice cannot always be strictly enforced, and then equity and mercy have to be substituted: and for a similar reason, when true justice will not be endured, we must have recourse to the rougher justice of the lot, which God must be entreated to guide.

These are the principal means of preserving the state, but perpetual care will also be required. The sailor has to keep a look-out for the ship night and day; and the vessel of state is tossing in a political sea, and therefore watch must succeed watch, and rulers must join hands with rulers, never allowing their vigilance to relax. Of the 360 senators, the greater part may be permitted to go and manage their own affairs,

but a twelfth portion must be set aside in each month for the administration of the state. Their business will be to receive information and answer embassies, also to prevent or heal internal disorders; wherefore they should exercise authority over all assemblies. These matters will be ordered by the monthly division of the council.

Besides the council, there ought to be wardens of ways, buildings, harbours, market-places, fountains, and the like. The temples should have their priests and priestesses, whether hereditary or appointed, and there should be officers having dominion over men and beasts; three kinds will be enough. The first may be called wardens of the city; the second, wardens of the agora; the priests are the third kind, and they will commonly hold family priesthoods; and if these do not exist in the new colony, let priests and priestesses be appointed. Some of our magistrates shall be elected by vote, some by lot; and the upper and lower classes shall be mingled in a friendly manner in the election to offices. The appointment of priests should be left to the God—that is, to the lot in which the God will manifest his will, the person elected undergoing a scrutiny, in proof of his being in his own person sound of body and legitimate, and his family as well as himself free from impurity and homicide. The laws which are to govern the temples should be brought from Delphi, and executed under the direction of the interpreters of them. Priests and priestesses are to be of sixty years of age, and shall hold office for a year only; the twelve tribes shall be formed into bodies of four, who will elect three apiece, making twelve in all. The three who have the greatest number of votes shall be appointed, and undergo a scrutiny; the remaining nine shall go to Delphi, in order that the God may select one out of each triad—and they shall be appointed for life. When any one dies, another shall be elected from the tribe of the deceased. There shall also be treasurers of the temples and groves, having authority over the produce and the letting of them.

The defence of the city should be committed to the generals, and other officers of the army, and to the wardens of the city and agora. The defence of the country shall be on this wise: there are twelve districts and twelve tribes, and in each there shall be five wardens of the country, and each of the five shall select twelve others out of their own district, of not more than thirty or less than twenty-five years of age. Every month they shall have one of the twelve portions of the country allotted to them, and go from one to the other, and back again from

west to east, and from east to west, changing the stations in their progress backwards and forwards in different months, that they may know the country at all seasons of the year. Every third year they shall have new wardens of the country, and commanders of the watch. While on service, their first duty will be to see that the country is well fortified, trenching and throwing up works in different places, with the assistance of the inhabitants; they will use the beasts of burden and the labourers whom they find on the spot, taking care however to interfere as little as possible with the regular course of agriculture. They will keep the roads in good order, and render every part of the country as inaccessible as possible to enemies, and as accessible as possible to friends. They will restrain and preserve the rain which comes down from heaven, making the barren places fertile, and the wet places dry. They will ornament the fountains with plantations and buildings, and guide the streams to the temples and groves of the gods; providing water by irrigation at all seasons of the year. In sacred places the youth should make gymnasia for themselves, and warm baths for the aged; there the weary frame of the rustic, worn with toil, will be kindly received, and experience far better treatment than at the hands of a country doctor.

The duties of the service will be useful as well as ornamental, for the sixty police will be the guardians of the several portions of the country assigned to them; the five monthly rulers shall decide small matters, and the seventeen, composed of the five and the twelve, shall decide greater matters up to three minae. Every judge except the highest of all is to give an account. If the wardens of the country do any wrong to the inhabitants, let them submit to the decision of the villagers in the neighbourhood, where the question is only of a mina; but in suits of a greater amount, or in cases of appeal, the injured party may bring his suit into the common courts, and, if he obtain a verdict, may exact a double penalty.

The wardens, while on their two years' service, shall live and eat together, and he who is absent from the daily meal without permission or sleeps out at night, shall be regarded as a deserter, and be liable to be punished by any one who meets him. If any of the rulers is guilty of such an irregularity, the whole company of sixty shall have him punished; and he of them who screens him shall be liable to a still heavier penalty. He who is not a good servant will not be a good master; and a man should pride himself more upon serving well than

upon commanding: (1) upon serving the laws and the Gods; and (2) upon serving ancient and honourable men. The twelve and the five should serve themselves and one another, determining not to use the labour of the villagers for their private advantage, but only for the good of the public. Let them search the country through, and acquire a perfect knowledge of every locality; with this view, hunting and field sports should be encouraged. The service to whom these duties are committed, may be called the secret or rural police.

Next we have to speak of the elections of the wardens of the agora and of the city. The wardens of the city shall be three in number, and they shall have the care of the streets, roads, buildings, also of the water supply, which they will provide pure and abundant. They shall be chosen out of the highest class, and when the number of candidates has been reduced to six, three out of the six shall be taken by lot, and, after being tested by a scrutiny, shall be admitted to their office. The wardens of the agora shall be five in number—ten are to be first elected, and every one shall vote for all of them; the ten shall be afterwards reduced to five, as in the former election. The first and second class shall be compelled to go to the assembly, but not the third and fourth, unless they are specially summoned. The wardens of the agora shall have the care of the temples and fountains which are in the agora, and shall punish those who injure them by stripes and bonds, if they be slaves or strangers; and by fines if they be citizens. And the wardens of the city shall have a similar power of inflicting punishment and fines in their own department.

In the next place, there must be ministers of music and gymnastic; one class of them superintending gymnasia and schools, and the education and housing of youth, male and female—the other having to do with contests of music and gymnastic. In musical contests there shall be one set of judges of solo singing or playing, who will judge of rhapsodists, flute-players, harp-players and the like, and another of choruses. Each chorus of men, and boys, and maidens, must have a leader—one will be enough, and he should not be less than forty years of age; secondly, there must be a master of monody, aged not less than thirty years; he will introduce the competitors to the stage, and refer the judgment of them to the judges. The choregus is to be elected for a year in an assembly at which all who take an interest in music are compelled to attend, and no one else. Anybody may challenge on the

ground that so and so is unfit; and to this the other party may reply that he is fit. One is to be chosen by lot out of ten who are elected by vote. Next shall be elected out of the second and third classes the judges of gymnastic contests, who are to be three in number, chosen, after they have been tested, out of twenty who have been elected by the three highest classes—these being compelled to attend at the election.

One minister remains, who will have the general superintendence of the education of either sex. Let him be not less than fifty years old, and the father of children born in wedlock, of one sex if not of both; and let him and the electors agree in regarding his office as the highest in the state. For the right growth of the first shoot in plants and animals, tame or wild, including man, is the chief cause of matured perfection. Man is supposed to be a tame animal, but he is made either the gentlest or the fiercest of all creatures, accordingly as he is well or ill educated. Wherefore he who is elected to preside over education should be the best man possible. He shall hold office for five years, and shall be elected out of the guardians of the law, by the votes of the other magistrates with the exception of the senate and prytanes; and the election shall be held by ballot in the temple of Apollo.

When a magistrate dies before his term of office has expired, another shall be elected in his place; and, in case the guardian of an orphan dies, another shall be appointed by the relations within ten days; and they shall be fined a drachma a day for every day which they delay.

The city which has no courts of law will soon cease to be a city; and a judge who is silent and leaves the enquiry wholly to the litigants, as in arbitrations, is not a good judge. For making enquiry, a few judges are better than many, but the few must be good. The matter in dispute should be clearly elicited from the contending parties; time and examination will find out the truth. Before going to law, causes should first be tried among neighbours who know the circumstances, and if they cannot be settled by them, let them be referred to a higher court; and if the two courts do not agree, to a higher still, of which the decision shall be final.

Every magistrate is a judge, and every judge is a magistrate, on the day on which he is deciding a suit. The best tribunal will be that on which the litigants agree; and let there be two other tribunals, one for public and the other for private causes. The high court of appeal shall be composed of all the officers of state; they shall meet on the last day

of the year, and choose one judge for each court, to be their first-fruits : and those who are elected, after they have undergone a scrutiny, shall decide causes and judge appeals. They shall give their votes openly, in the presence of the magistrates who have elected them ; and if any one charges another with deciding against him unfairly, he shall lay his accusation before the guardians of the law, and if the judge be found guilty he shall pay damages to the extent of half the injury, unless the guardians of the law deem that he is worthy of a severer judgment.

As the whole people are injured by offences against the state, they should share in the trial of them. Such causes should be decided by any three of the highest magistrates upon whom the defendant and plaintiff can agree. Also in private suits all should judge as far as possible, and therefore there should be a court of law in every ward ; for he who has no share in the administration of justice, appears to himself to have no share in the state. The final judgment shall rest with that court which, as we maintain, has been established in the most incorruptible form possible. And so, having done with the appointment of courts and the election of rulers, we may proceed to make our laws.

‘ I like your way, Stranger, and particularly approve your manner of joining the beginning to the end.’

Then so far our old man’s game of play has gone off well.

‘ Say, rather, our serious and noble pursuit.’

Perhaps ; but let me ask you whether you have ever observed the manner in which painters put in and rub out colour : I want you to remark that their endless labour will last but a short time, unless they leave behind them some successor who will restore the picture, and make good the ravages of time. ‘ Certainly.’ And is not this what you and I have to do at the present moment ? We are in the evening of life ourselves, and therefore we must leave our work of legislation to be improved and perfected by the next generation ; not only making laws for them, but making them lawgivers. ‘ We must do our best.’ Let us address them as follows : Beloved saviours of the laws, we give you an outline of legislation which you must fill up, according to a rule which we will prescribe for you : Megillus and Cleinias and I are agreed, and we hope that you will agree with us in thinking, that the whole energies of a man should be devoted to the attainment of manly virtue, whether this is to be gained by study, or habit, or some kind of acquirement, or desire, or opinion, or knowledge. He must admit of no impediments.

And rather than accept institutions which tend to degrade and enslave him, he should fly his country and endure any hardship. These are our principles, and we would ask you to judge of our laws, and praise or blame them accordingly as they are or are not capable of implanting this character.

And first of laws concerning religion. In the consideration of these we shall have to return to the number 5040, of which the twelfth part is $420 = 20 \times 21$; this division corresponds to the number of the twelve tribes, and each tribe may be further subdivided by 12. Every divisor is a gift of God, and corresponds to the months of the year and to the movement of the universe. Every city has a number, but some numbers are more fortunate than others, and nothing can be more fortunate than our own, which can be divided by all numbers up to 12, with the exception of 11, and even by 11, if two families are deducted. The truth of this may be easily proved when we have leisure. But leaving the proof for the present, we will proceed to assign to each division some God or demigod, who shall have altars raised to them, and sacrifices offered twice a month; and assemblies shall be held in their honour, twelve for the tribes, and twelve for the city. The object of them will be first to promote religion, secondly to encourage friendship and family intercourse; for families must be acquainted before they marry; if they are not, great mistakes will arise. Let there be innocent dances of young men and maidens, who may have the opportunity of seeing one another in modest undress. To the details of all this the masters of choruses and the guardians will attend, embodying in laws the results of their experience; and after ten years making the laws permanent, with the consent of the legislator, if he be alive, or, if he be not alive, the guardians of the law shall perfect them and settle them once for all. At least, if any further changes are required, the magistrates must take the whole people into counsel, and obtain the sanction of all the oracles.

Whenever any one who is between the ages of twenty-five and thirty-five wants to marry, let him do so; but first let him hear the strain which we will address to him —

Son of a virtuous sire: you ought to marry, but not for wealth—even a little inferiority in this respect may be well; nor should you avoid poverty, for your object is to have a well-balanced and harmonious home. A man is commonly disposed to marry some one who

is like himself in property and character. But the interests of the state require that he should do the contrary, for by equal marriages a society becomes unequal. And yet to enact a law that the rich and mighty shall not marry the rich and mighty, that the passionate shall be united to the dull, or the dull to the passionate, will arouse anger in some persons and laughter in others; for they do not understand that the state is a cup in which two elements mingle, the one frothing wine, the other sober water,—the admixture of these is an excellent drink. The object at which we aim must therefore be left to the influence of public opinion. And do not forget our former precept, that every one should seek to attain immortality and raise up a fair posterity to serve God:—This is the prelude of the law, to which if a man will not listen, and at thirty-five years of age is still unmarried, let him pay an annual fine: if he be of the first class, 100 drachmas; if of the second, 70; if of the third, 60; and if of the fourth, 30. This fine shall be consecrated in the temple of Herè; and if he refuse to pay, a tenfold penalty shall be exacted by the treasurer of Herè, who shall be responsible for the payment. Further, the unmarried man shall receive no honour or obedience from the young, and he shall not retain the right of punishing others. A man is neither to give nor receive a dowry beyond a certain fixed sum; and in our state he will not grow old in poverty, for every one is provided with the necessaries of life. If the woman is not rich, her husband will not be her humble servant. He who obeys this law does well, and he who disobeys shall pay a fine according to his class, which shall be exacted by the treasurers of Herè and Zeus.

The betrothal of the parties shall be made by the next of kin in various degrees, or if there are none, by the guardians. The offerings and ceremonies of marriage shall be determined by the interpreters of sacred rites. Let the wedding party be moderate, and never exceed a man's means; five male and five female friends, and a like number of kinsmen, are enough. The expense should not exceed, for the first class, a mina; and for the second class, half a mina. Extravagance is to be regarded as vulgarity and ignorance of nuptial proprieties. Much wine is only to be drunk at the festivals of Dionysus, and certainly not on the occasion of a marriage. The bride and bridegroom, who are taking a great step in life, ought to have all their wits about them; they should be especially careful of the night on which God may give them the

seed of increase, and which this will be none can tell. Their bodies and souls should be in the most temperate condition; they should abstain from all that partakes of the nature of disease or vice, which will otherwise become hereditary. There is an original divinity in man which preserves all things, if used with proper respect. He who marries should make the second house the nest and nursery of his young; he should leave his father and mother, and then he will have more affection for them; 'there ought to be *desiderium* to get rid of *offensiones*.' He will go forth as to a colony and will beget and bring up his children in another place, handing on the torch of life to another generation.

About property in general there is little difficulty, with the exception of property in slaves, which is an institution of a very doubtful character. The slavery of the Helots is affirmed by some to be the greatest good, and by others the greatest misfortune of Sparta. To a certain extent there is the same doubt about the slavery of the Mariandynians at Heraclea and of the Thessalian Penestae. This makes us ask, What shall we do with our slaves? to which every one would agree in replying, Let us have the best and most attached whom we can get. All of us have heard stories of slaves who have saved the lives and properties of their masters, and been better to them than a son or a brother. 'Certainly.' Yet there is an opposite doctrine, that slaves are good for nothing, and not to be trusted; as Homer says, 'Slavery takes away half a man's understanding.' And different persons treat them in different ways: there are some who never trust them, and beat them like dogs, until they make them not thrice, but many times as slavish as they were before; and others pursue the opposite plan. Man is a troublesome animal, as has been often shown, Megillus, in your Mesenian wars; and great mischiefs have arisen in countries where there are large bodies of slaves who speak a common language. Two rules may be given for their management: first that those of them who come from the same country should be dispersed; and secondly, that they should be treated by their master with perfect justice, even more than equals, and for his own sake quite as much as theirs. For the truly just man is he who hates injustice when easy; and he who is righteous in the treatment of his slaves, or of any inferiors, will sow in them the seed of virtue. Masters should never play with their slaves: this, which is a common practice, is a great piece of folly, and increases

the difficulty and painfulness of managing them to both parties. 'You are quite right.'

Next as to habitations. These ought to have been spoken of before; for no man can marry a wife, and have slaves, who has not a house for them to live in. Let us supply the omission. The agora should be in the centre of the city, and the temples in the neighbourhood of the Acropolis. Near them should be the residences of the magistrates, and the courts of law in which capital offences are to be tried. Matters serious in themselves are rendered more serious by their proximity to the Gods. As to walls, Megillus, let them sleep in the earth, as at Sparta; 'cold steel is the best wall,' as the poet tells us. Besides, what an absurdity there would be in sending our youth to dig fosses and raise buildings in defence of the borders of our country, and then to build a city wall, which is very unhealthy, and is apt to make people fancy that they may run there and rest in idleness, not knowing that true rest must always follow toil, and that toil of another sort is the consequence of idleness. If, however, there must be a wall, the private houses had better be so arranged as to form one wall; this will have an agreeable aspect, and the building will be safer and more defensible. The inhabitants will keep the wall in repair under the superintendence of the aediles, who will enforce cleanliness, and preserve the public buildings from the encroachments by buildings or diggings of individuals. The aediles will also take care to let the rains flow off easily, and will regulate other matters concerning the general administration of the city. What remains may be left to the guardians of the law.

And now, having provided buildings, and having married our citizens, we will proceed to speak of their mode of life. In a well-constituted state, individuals cannot be allowed to live as they please. Why do I say this? Because I am going to enact that the bridegroom shall not absent himself from the common meals. They were instituted originally on the occasion of some war, and, though deemed singular when first founded, they have tended greatly to the security of states. There was a difficulty in introducing them, but there is no difficulty in them now. There is, however, another institution about which I would speak, if I dared. I may preface my proposal by remarking that disorder in a state is the source of all evil, and order of all good. Now in Sparta and Crete there are common meals for men, and this,

as I was saying, is a divine and natural institution. But the women are left to themselves; they live in dark places, and, being weaker, and therefore wickeder, than men, they are at the bottom of a good deal more than half the evil of states. This must be corrected, and the institution of common meals extended to both sexes. But who can establish them where they are lost; and still more, who can compel women to eat and drink in public? They will dare the legislator to come and take them out of their holes. And in any other state such a proposal would be drowned in clamour, but in our own I think that I can show the attempt to be just and reasonable. 'There is nothing which we should like to hear better.' Listen, then; having plenty of time, we will go back to the beginning of things, which is an old subject with us. 'Right.' Either the race of mankind never had a beginning and will never have an end, or the time which has elapsed since man first came into being is all but infinite. 'No doubt.' And in this infinity of time there have been constitutions and destructions of states, and all kinds of order and disorder, desires of meats and drinks of all sorts, and vicissitudes of the seasons, affecting animals in numberless ways. 'Certainly.' Vines and olives were at length discovered, and the blessings of Demeter and Persephone, of which one Triptolemus is said to have been the minister; before his time the animals had been eating one another. And there are nations in which mankind still sacrifice their fellow men, and other nations in which they will not sacrifice animals, or so much as taste of a cow—they offer fruits or cakes moistened with honey; and some have led a sort of Orphic existence, abstaining from everything that has animal life, and eating only that which is without life. Perhaps you will ask me what is the bearing of these remarks? 'That is certainly passing in my mind.' I will endeavour to explain their drift. I see that the virtue of human life depends on the due regulation of three wants or desires: the first is the desire of meat, the second of drink; these begin with birth, and refuse to listen to any voice other than that of pleasure and pain. The third and fiercest and greatest need is felt latest; this is love, which is a madness setting men's whole nature on fire. These three disorders of mankind we must endeavour to restrain by three mighty influences—fear, and law, and reason, which, with the aid of the Muses, and the Gods of contests, may extinguish our lusts.

But to return. After marriage let us proceed to the generation of

children, and then to their nurture and education — thus gradually approaching the subject of *syssitia*. There are, however, some other points which are suggested by the three words — meat, drink, love. ‘Proceed.’ The bride and bridegroom ought to set their mind on having a brave offspring. Now a man only succeeds when he takes pains; wherefore the bridegroom ought to take special care of the bride, and the bride of the bridegroom, at the time when their children are about to be born. And let there be a jury of matrons who shall meet at the command of the magistrates, and shall attend at the temple of *Eilithyia* until noon, and inform against any man or woman who does not observe the laws of married life. The time of begetting children and the supervision of the parents shall last for ten years only; if at the expiration of this period they have no children, they may part, with the consent of their relatives and the official matrons, and with a due regard to the interests of either; if a dispute arise, the matrons shall enter the houses of the young people, and advise and threaten them. If their efforts fail, let them go to the guardians of the law; and if they too fail, the offender, if he be a man, shall lose the privileges of citizenship, and both men and women shall be forbidden to be present at all family ceremonies. If when the time for begetting children has ceased, either husband or wife have connection with others who are of an age to beget children, they shall be liable to the same penalties as those who are still having a family. But when both parties have ceased to beget children there shall be no penalties; men and women ought to live soberly and maintain a good reputation; but recourse is to be had to punishment only if there is great disorder of manners.

The first year of children’s lives is to be registered in their ancestral temples; the name of the archon of the year is to be inscribed on a whited wall in every phratry, and the names of the living members of the phratry at the side, and to be erased at their decease. The proper time of marriage for a woman shall be from sixteen years to twenty; for a man, from thirty to thirty-five (cp. Rep. v. 460 E). The age of holding office for a woman is to be forty, for a man thirty years. The time for military service for a man is to be from twenty years to sixty; for a woman, from the time that she has ceased to bear children until fifty.

BOOK VII. Now that we have married our citizens and brought their children into the world, we have to find nurture and education

for them. This is a matter of precept rather than of law, and cannot be precisely regulated by the legislator. For minute regulations are apt to be transgressed, and frequent transgressions impair the habit of obedience to the laws. I speak darkly, but I will try to exhibit my wares in the light of day. Am I not right in saying that a good education tends to the improvement of body and mind? 'Certainly.' And the comeliness of the body ought to begin as soon as possible after birth. 'Very true.' And we observe that the first shoot of every living thing is the greatest, and there are many who contend that man is not at twenty-five twice the height that he was at five. 'True.' And growth without symmetrical exercise of the limbs is the source of endless evils in the body. 'Yes.' The body should have the most exercise when growing most. 'What, the bodies of young infants?' Nay, the bodies of unborn infants. I should like to explain to you the sort of gymnastics which may be used during the process of gestation. The Athenians are fond of cock-fighting, and in our country the people who keep cocks, far from thinking that they have enough movement in fighting one another, take them out for long walks, holding them in their hands or under their arms; this is done for the sake of health, that is to say, not their own health, but the health of the cocks. Here is a proof of the use and glory of motion, whether of rocking, swinging, riding, or tossing upon the wave; for all these kinds of motion have a great effect in increasing strength and the powers of digestion. Hence we infer that our women, when they are with child, should walk about and fashion the embryo; and the children, when born, should be carried by stout nurses—one or more—and not suffered to walk until they are three years old, lest they should grow rickety. Shall we impose penalties for the neglect of these rules? The greatest penalty, that is, ridicule, and the difficulty of making the nurses do as we bid them, will be incurred by ourselves. 'Then why speak of these matters?' In the hope that heads of families may learn that the due regulation of them is the foundation of law and order in the state.

And now, leaving the body, let us proceed to the soul; but we must first repeat that perpetual motion by night and by day is good for all, and especially for the infant; his life should be borne upon the wave. This is proved by the Corybantian cure of motion, and by the practice of nurses who rock children in their arms, lapping them at the same time in sweet measures. What is the reason of this? The reason is

obvious. The affections, both of the Corybantes and of the children arise from fear, and this fear is occasioned by something wrong which is going on within them. Now a violent external commotion tends to calm the violent internal one; it quiets the palpitation of the heart, giving sleep to some, and bringing back others who are awake to their right minds by the help of religious dances and acceptable sacrifices. There seems to be reason in that. 'No doubt.' Observe also that the mind of a child which is habitually in a state of terror will be likely to grow up timorous, and the overcoming of fear in childhood will become courage. 'Very true.' The motion of children will inspire their souls with the virtue of cheerfulness. 'Of course.' Softness enervates and irritates the temper of the young, and violence renders them mean and misanthropical. 'But how is the state to educate them when they are as yet unable to understand the meaning of words?' Why, surely they roar and cry, like the young of any other animal, and the nurse knows the meaning of these intimations of the child's likes or dislikes, and the occasions which call them forth. About three years is passed by children in a state of imperfect articulation, and this is no insignificant portion of human life, quite long enough to make them either good or ill tempered. Now you should contrive that, during these first three years, the infant should be as free as possible from fear and pain. 'Yes, and he should have as much pleasure provided for him as possible.' There I cannot agree with you; for I consider the influence of pleasure in the beginning of education to be fatal. 'Explain.' My principle is that a man should neither pursue pleasure nor wholly avoid pain. He should embrace the mean, and cultivate that state of calm which the religious feeling of mankind, taught by inspiration, attributes to God; and he who would be like God should neither be too fond of pleasure himself, nor should he permit any other, male or female, young or old, to be thus given; above all, not the infant, who in infancy is being fashioned and formed more than at any other time. I shall be laughed at for saying that a woman in her pregnancy should be carefully watched, and not suffered to indulge in excitement; her ways should be gentle and gracious.

'I quite agree with you about the duty of avoiding extremes and following the mean.'

Let us now consider a further matter. The unwritten customs or usages of our ancestors are made up of details which are not laws, but they

fill up the interstices of law, and are the props and ligatures on which the strength of the whole building depends. Laws without customs never last. No wonder, then, that habit and custom overflow into the domain of law. 'Very true.' And there may be great advantage in the influence exercised by custom upon three-years-old children. From three to six their minds have to be amused; and they must receive gentle chastisement, about which the same rule holds as in the case of slaves — neither to punish them in hot blood, nor by sparing to spoil them. Children at that age invent amusements for themselves when they meet, and the nurses should bring parties of them to their own village temple, and be careful to keep good order among them, being responsible themselves to one of the twelve matrons annually chosen by the women who have authority over marriage. These shall be appointed, one out of each of the twelve tribes, and when appointed, they shall go to the temples, and reprove and chastise offenders; and, in case their authority is disputed, shall bring them before the magistrates. After six years of age there shall be a separation of the sexes; the boys going to learn riding and the use of arms, and the girls may, if they please, also learn. Here I note a practical error in early training. The folly of mammæ and nurses believes that the left hand is by nature different from the right, whereas the left leg and foot are acknowledged to be the same as the right. But the truth is that nature made all things to balance, and the use of the other hand, which is of little importance in the case of the plectrum of the lyre, may make a great difference in the art of the warrior, who should be a sort of pancratiast, in every part of his body whole and perfect, and able to fight and balance himself in any position. If a man were a Briareus, he should be able to hurl a hundred darts with a hundred hands; at any rate, let him make good use of two. To all these matters the magistrates, male and female, should attend; the women superintending the nursing and amusement of their children, and the men superintending their education, that all of them, boys and girls alike, may be sound, wind and limb, and not spoil the gifts of nature by bad habits.

Education has two branches—gymnastic, which is concerned with the body; and music, which is designed for the improvement of the soul. And gymnastic has two parts, dancing and wrestling. Dancing aims at the preservation of stateliness and freedom; wrestling is concerned with

the training of the limbs and parts of the body, and gives the proper flexure and extension to each of them, diffusing harmony throughout the frame. There is no military use in the complex systems of wrestling which pass under the names of Antaeus and Cercyon, or in the science of boxing, which is attributed to Amycus and Epeius; but good wrestling and the habit of extricating the neck, hands, and sides, should be diligently learnt and taught; and in our dances imitations of war should be practised, as in the dances of the Curetes in Crete and of the Dioscuri at Sparta, or as in the dances in complete armour which were taught and practised by the goddess Athene, and are still performed in her honour. Youths who are not yet of an age to go to war should take part in religious processions armed and on horseback, moving slower or faster, chanting prayers to the Gods; and there should be games and rehearsals, which, whether in war or peace, are of great political importance.

Next follows music, to which we will once more return; and here I shall venture to repeat my old paradox, that amusements have great influence on laws. He who has been taught to play at the same games and with the same playthings will be content with the same laws. There is no greater evil in a state than the spirit of innovation. Even in external nature change is a dangerous thing; in the changes of the seasons and winds, there is danger to our bodies and the habits of our minds; changes of diet are also dangerous. And in everything but what is bad the same rule holds. Every one venerates and acquiesces in the laws to which he is accustomed; and if they have continued during long periods of time owing to some providential arrangement, and there is no knowledge or memory of any other, people are absolutely afraid to change them. Now by what device shall we create this spirit of immobility in the laws? I say, by not allowing innovations in the plays and games of children. The children who are always changing their plays, when grown up, will change their laws. Changes in mere fashions are not serious evils, but changes in the praise and blame of characters are most serious; and rhythms and music are representations of characters, and therefore we must avoid novelties in dance and song; and no better method can be imagined of securing permanence than that of the Egyptians. 'What is their method?' The consecration of dances and hymns at appointed festivals and in honour of certain Gods; having been first selected by

individuals, they should be solemnly ratified by all the citizens, and an 'act of uniformity' passed. He who introduces other hymns or dances shall be excluded by the priests and priestesses, with the help of the guardians of the law; and if he refuses to submit, he may be prosecuted. But we must not be too ready to speak about such great matters. Even a young man, when he hears something new and strange, stands and looks this way and that, and, like a traveller in an unknown land, tries to find out where he is and whither he is going; and at our age a man ought to be very sure of his ground in so singular an argument. 'Very true.' Then, leaving the point which we are considering to receive further examination at some other time, let us look forward to the end of our laws about education, for that may probably throw light upon our present difficulty. 'Let us do as you say.' The ancients used the term νόμοι to signify harmonious strains, and perhaps they dreamed or fancied that there was a connection between the songs and laws of a country. And we say—Whosoever shall transgress the strains by law established is a transgressor of the laws, and shall be punished by the guardians of the law and by the priests and priestesses. 'Let this be as you say.' How can we legislate about them so as to command respect? Moulds or types of them must be first made, and one of the types shall be, Abstinence from evil words at sacrifices. When a son or brother blasphemes at a sacrifice there is a sound of ill omen heard in the family. 'Very true.' Yet this is a common practice. Many a chorus stands by the altar uttering inauspicious words, and he is crowned victor who excites the hearers most with lamentations. Such lamentations should be reserved for evil days, and if they are ever uttered should be uttered only by hired mourners, like those who accompany a funeral with barbarous Carian chants; and let them not have circlets or ornaments of gold. To avoid every evil word shall be the first of our types. 'Agreed.' Our second law or type shall be, that prayers ever accompany sacrifices; and our third, that prayers shall be only for good, for they are requests, and our poets must be made to understand this. 'Certainly.' Were we not saying just now that the golden and silver images of Plutus were not to be allowed in our city? and did not this show that we were dissatisfied with the poets; and may we not reasonably fear that, if they are allowed to compose prayers which are bad prayers, they will bring the greatest misfortunes on the state? And we must therefore make a law that the poet is not to contradict the laws or

ideas of the state; nor is he to show his poems to any private persons until they have first received the *imprimatur* of the director of education. After prayers to the Gods, there naturally follow hymns to the Gods; and after these, prayers and hymns to the heroes and demigods. There will be no danger in praising the dead, but until a man's life is finished we must wait. And men and women may be equally deserving of praise. Many ancient songs, poems, figures of the dance, are excellent, and out of these a selection will be made by judges, who ought not to be less than fifty years of age. They will choose some, and reject or amend others, sometimes with the aid of the poets themselves, their object being to bring the hymns and dances into accord with the intentions of the legislator. The regular and temperate music is the style in which to educate children, who, if they are used to this, will deem the opposite kind to be illiberal, or, if they are used to the other, will count this to be cold and unpleasing. 'Very good.' Further, a distinction should be made between the melodies of men and women. Nature herself seems to teach that the grand or manly style should be assigned to men, and to women the temperate and orderly. How this is to be carried out in detail is a further consideration. I am only, like the shipwright, laying down the keel of the vessel of the soul in which we are to sail through life. Human affairs are hardly serious, and yet to be serious about them is a disagreeable necessity; and if we can discover how to be serious, that will best beseem us. 'Very true.' I say then, that concerning the serious we should be serious, and that the nature of God is a serious reality. But man is a piece of mechanism and the plaything of the Gods; and therefore his aim should be to pass through life, not in grim earnest, but in play; and he should play as many good plays as he can—man and woman alike—in an opposite way to that which is now in vogue. 'How is that?' The common opinion is, that work is for the sake of play, war of peace; whereas in war there neither is, nor ever will be, lesson or amusement worth speaking of. The life of peace is that which men should chiefly desire to lengthen out and improve. They should live sacrificing, singing, and dancing, with the view of propitiating Gods and heroes. I have already told you the type which they should follow:—

'Some things,' as the poet says, 'you will devise for yourself—others, God will suggest to you.'

These words of his may be applied to our pupils. They will teach

themselves, and God will teach them the art of propitiating Him; for they are His puppets, and have only a small portion in truth. 'You have no great opinion of human nature.' You must not wonder at my depreciating man when I compare him with God; but, if you are offended, I will place him a little higher.

Next follow the buildings; there will be gymnasia and schools in the midst of the city, and outside the city circuses and open spaces for riding and archery. In all of these there ought to be instructors of the young, drawn from foreign parts by pay, and they will teach them music and war. Education shall be compulsory; parents shall not be allowed to send their children to school or not, as they please; for they belong to the state more than to their parents. And I say further, without fear or scruple, that the same education in riding and gymnastic shall be given both to men and women. The ancient traditions about the female hosts of the Sauromatidae, who practise the art of riding as well as archery and the use of arms, is an entirely credible tradition which confirms me in this view; and if I am right, nothing can be more foolish than our modern fashion of training men and women differently, whereby one-half of the power of the city is lost. For reflect—if women are not to have the education of men, some other must be found for them, and what other can we propose? Shall they, like the women of Thrace, tend cattle and till the ground; or, like our own, spin and weave, and take care of the house? or shall they follow the Spartan custom, which is between the two?—there the maidens share in gymnastic exercises and in music; and the grown women no longer engaged in spinning, weave the web of life, although they are not like the Amazons, trained to the use of spear and shield; nor can they imitate the warrior goddess, even in the extremity of their country's need. Compared with our women, the Sauromatian women are like men. But your legislators, Megillus, as I maintain, only half did their work; they took care of the men, and left the women to take care of themselves.

'Shall we suffer the Stranger, Cleinias, to run down Sparta in this way?'

'Why, yes; for we cannot retract the liberty which we have already conceded to him.'

What will be the manner of life of men in moderate circumstances, freed from the toils of agriculture and business, and having common

meals for both sexes; from which they are dismissed by the magistrates, male and female, who will inspect their conversation, and at whose bidding, when libations have been offered, they will return home? Are men who have these institutions only to eat and fatten like beasts? He who lives like a fatted beast will share the fate of a fatted beast, which is to be torn in pieces by some other more valiant beast than himself. True, theirs is not the perfect way of life, for they have not all things in common; but the second best way of life also confers great blessings; and those who live in the second state have a work to do far greater, or rather twice as great as the work of any Pythian or Olympic victor; for they indeed work for the body only, but we both for body and soul. And this higher work ought not to be interfered with by any bye-work, but should be pursued night and day; for life is not long enough for the completion of it. The watchman of the city should not sleep, and the master of the household should be up early and before all his servants; and the mistress, too, should awaken her handmaidens, and not be awakened by them. Much sleep is not required either for our souls or bodies. When a man is asleep, he is no better than if he were dead; and he who loves life and wisdom will have no more sleep than is necessary for health, which is not much. Magistrates who are wide awake at night are terrible to the bad; but they are respected by the wise and good, and useful to themselves and the state.

When the morning dawns, let the boy go to school. As the sheep need the shepherd, so the boy needs a master; he may be called *animal ferae naturae*, and is the most unmanageable and deceitful of all creatures; for he has the springs of intelligence in him not yet regulated. Let him be taken out of the hands of mothers and nurses, and tamed with bit and bridle, being treated as a freeman in that he learns and is taught; but as a slave in that he is chastised and smitten by all other freemen; and the freeman who neglects to chastise him, shall himself be reprimanded by the director of education.

We must now give instructions to our director of education—him we will address as follows: We have spoken to you, O illustrious teacher of youth, of the song, the time, and the dance, and of martial exercises; but of prose writings, and of music, and of the use of calculation for military and domestic purposes we have not spoken, nor yet of the higher use of numbers in reckoning divine things—

such as the revolutions of the stars, or the arrangements of days in months, or of months in years, of which the true calculation is necessary to the knowledge of the order of seasons and festivals, which enliven and wake up a city, rendering to the Gods their due, and making men know them better. There are many things about which we have not as yet instructed you—and first, as to reading and the lyre: Shall the pupil be a perfect scholar and musician, or not even enter on the study? He should certainly enter on the study, and apply himself to letters from the age of ten to thirteen. At thirteen he will begin to handle the lyre, and continue to learn music until he is sixteen, and no longer, however fond he or his parents may be of the pursuit. The study of letters he should carry to the extent of reading and writing, without caring for calligraphy and tachygraphy, if he has no natural taste for them and cannot acquire them in three years. And here arises a question as to the learning of compositions, whether in poetry or prose, when unaccompanied with music. They are a dangerous species of literature. Speak then, O guardians of the law, and tell us what we shall do about them. ‘You seem to be in a difficulty.’ Why, yes; there is a difficulty in setting a single voice against the opinion of all the world. ‘But have we not already disregarded the opinion of the world in many of our enactments?’ Very true. I see that you would marshal me on the unpopular road, which the many hate, and you would have me cast in my lot with the few who are better than the many. ‘Certainly.’ Then I will begin by observing that we have many poets writing in hexameters, trimeters, and various other metres, comic as well as tragic, with whose compositions, as all the world affirms, youth are to be imbued and saturated. Some would have them learn by heart entire poets, while others prefer extracts; and this is supposed to constitute a gentleman’s education. Now I am of opinion, and, if I am not mistaken, everybody would agree with me, that some of the things which they learn are good, and some bad. ‘Then how shall we reject some and select others?’ A happy thought suddenly occurs to me; this discourse, which has lasted the live-long day, is just a sample of what we want, and is moreover an inspired work and a kind of poem. I am naturally pleased in looking back at all this creation of mine, which appears to me to have a wonderful propriety, and is just the thing for a young man to hear. I would venture, then, to offer to the legislator this

treatise of laws as a sample of what he wants; and in case he should find any compositions of the same family, written or oral, I would have him preserve them with the utmost care, and commit them in the first place to the teachers who are willing to learn them (he should turn off the teacher who refuses), and let them communicate the lesson to the young.

I have said enough of reading and writing; and now we will proceed to the teachers of the lyre. The teacher of the lyre must be reminded of the advice which was given by us to the sexagenarian minstrels; like them he should be quick to perceive the rhythms suited to the expression of virtue, and to reject the opposite. With a view to perfecting the imitation, the pupil and his instructor are to use the lyre on account of the distinctness of the notes; the voice and note should coincide note for note: nor should there be harmonies and contrasts of intervals, or variations of times or rhythms. Three years' study is not long enough to give a knowledge of these complexities. And when so many subjects of education are necessary, the pupil should not be overwhelmed with the unnecessary. The tunes and hymns which are to be consecrated for each festival, and to be handed down in after ages, have been already determined, and the regulation of them may be left to our director of music.

Let us now proceed to dancing and gymnastic, which must also be taught to boys and girls by masters and mistresses. Our minister of education will have a great deal to do. Being an old man how will he get through so much work? There is no difficulty; for the law will provide him with assistants, male and female, as many as he pleases; and he will consider how important his office is. For if education prospers, the vessel of state sails merrily along; or if education fails, the very mention of the consequences in an infant state would be ill-omened. Of dancing and gymnastics something has been said already. We include under them the various uses of arms, and the movements and positions of the body corresponding to them, as well as military tactics. There should be public teachers of both arts, paid by the state, and women as well as men should be trained in them. The maidens should learn the armed dance, and the grown-up women be practised in the drill and use of arms, if only in case of extremity, when the men are gone out to battle, and they are left to guard their families. Birds and beasts defend their young, but women instead

of fighting run to the altars, thus degrading man below the level of the animals. There is something unseemly in such cowardice, to say nothing of the real harm. And therefore women are enjoined by law to learn the art of war.

Wrestling is to be pursued as a military exercise, but the meaning of this, and the nature of the art, can only be explained when action is combined with words. Next follows dancing, which is of two kinds; imitative, first, of the serious and beautiful; and, secondly, of the ludicrous and grotesque. The first kind may be further divided into the dance of war and the dance of peace; the first of the two is the Pyrrhic, in which the movements of attack and defence are imitated—the postures of hurling, slinging, shooting, striking, or again of escape and guard. Of all these the true style is manly and direct, and indicates strength and sufficiency of body and mind. The second is the dance of peace; and is sometimes attended with Dionysiac revelry of a debatable sort, personifications of Pan and Silenus, and of nymphs and satyrs in their cups. This latter is a dance which can hardly be tolerated in a civilized state, and cannot be characterized either as warlike or peaceful. But with this exception the two kinds may be admitted. The first of them is the more violent, being an expression of joy and triumph after toil and danger; the other is more tranquil, symbolizing the continuance and preservation of good. In speaking or singing we naturally move our bodies, and gesture is the imitation of words. As the dancer has more or less courage or self-control the dance becomes more or less violent and excited. Every one must imitate harmonically or inharmonically, and this is the origin of the art of dancing. The warlike kind is appropriately called the Pyrrhic, and the peaceful kind with equal propriety *Emmeleia*, or the dance of order. The types of these dances are to be fixed by the legislator, and the guardians of the law should assign them to the several festivals, and consecrate them to the good of the state.

Thus much of the fair forms and noble souls which are personated in choral dances. Comedy, which is the opposite of them, remains to be considered. For the serious implies the ludicrous, and opposites cannot be understood without opposites. But a man of repute will desire to avoid doing what is ludicrous. He should leave such performances to slaves: they are not serious, and there should be some element of novelty in them. Concerning tragedy, let our law

be as follows: When the inspired poet comes to us with a request to be admitted into our state, we will reply in courteous words—We also are tragedians and your rivals; and the drama which we enact is the best and noblest, being the imitation of the truest and noblest life, with a view to which our state is ordered. You are poets, and we are poets and rivals of yours, and our hope is to perform a play which is the creation of perfect law. And we cannot allow you to pitch your stage in the agora, and make your voices be heard above ours, or suffer you to address our women and young men, and people in general, on opposite principles to our own. Come then, soft sirs, children of the Lydian Muse, and present yourselves first to the magistrates, and if they decide that your hymns are as good or better than ours, you shall have your chorus; but if not, not.

There remain three kinds of knowledge which are to be learnt by freemen—arithmetic, geometry of surfaces and of solids, and thirdly, astronomy. Few can make an accurate study of such sciences; and of special students we will speak at another time. But the many must be content with the study of them which is absolutely necessary, and may be said to be a divine necessity, very unlike our human necessities, being of that sort against which God himself is unable to contend. ‘What are these divine necessities of knowledge?’ Necessities of a knowledge without which neither gods, nor demigods, can govern mankind. Far is he from being a divine man who cannot distinguish one, two, odd and even; who cannot number day and night, and is ignorant of the revolutions of the stars; for to every higher knowledge a knowledge of number is necessary—a fool may see this; how much, is a matter requiring more careful consideration. ‘Very true.’ But the legislator cannot enter into such details, and therefore we must defer the more careful consideration of the subject to a better opportunity. ‘You seem to fear our habitual want of training in these subjects.’ Still more I fear the danger of bad training, which is far worse than none at all. ‘Very true.’ I think that a gentleman and a freeman may be expected to know as much as an Egyptian child. In Egypt, arithmetic is a game which is taught children by a distribution of apples or garlands in numbers which admit of division and subdivision; or a calculation is made of the various combinations which are possible among a set of boxers or wrestlers; or gold, brass, and silver are put into vessels, mixed and unmixed, and the child counts

them. The knowledge of arithmetic which is thus acquired is a great help, either in drawing up an army or in the management of a household; and wherever measure is employed, men are more wide-awake in their dealings, and they get rid of their ridiculous ignorance. 'What do you mean?' I have observed the existence of this ignorance among my countrymen—they are as bad as pigs—and I am heartily ashamed both on my own behalf and on that of all the Hellenes. 'In what respect?' I will endeavour to explain by asking you a question. You know that there are such things as length, breadth, and depth? 'Yes.' And the Hellenes imagine that they are commensurable (1) with themselves, and (2) with each other; whereas they are not always commensurable with themselves, and never with each other. But if this is true, then we are in an unfortunate case, and may well say to our compatriots that not to possess necessary knowledge is a disgrace, though to possess such knowledge is nothing very grand. 'Certainly.' The discussion of arithmetical problems is a much better amusement for old men than their favourite game of draughts. 'Yes, mathematics and the game of draughts seem to me to have much in common.' These are the subjects in which youth should be trained. They may be regarded as amusements, and will do great good and no harm; I think that we may include them provisionally. 'Yes; they will fill up the details which are wanting in our laws.' The next question is, whether astronomy shall be made a part of education. About the stars there is a strange notion prevalent. 'What is that?' There is said to be an impiety in investigating the nature of God and the world, whereas the very reverse is the truth. 'What do you mean?' The idea may seem absurd and at variance with the usual language of age, and yet if true and advantageous to the state, and pleasing to God, ought not to be withheld. 'Of what knowledge are you going to speak?' My dear friend, what falsehoods we and all the Hellenes tell about the sun and moon. 'What falsehoods?' We are always saying that they and certain of the other stars go different ways, and we term them planets. 'Yes; and I have seen Lucifer and Hesperus go all manner of ways, and the sun and moon doing what we know that they always do. But I wish that you would explain your meaning further.' You will easily understand what I have had no difficulty in understanding myself, though we are both of us past the time of learning. 'True; but what is this marvellous knowledge

which youth are to learn, and of which we are ignorant?' Men say that the sun, moon, and stars are planets or wanderers; but this is the reverse of the fact. Each of them moves in one orbit only, and not in many; nor is the swiftest of them the slowest as appears to human eyes. What a great insult should we offer to Olympian racers if we were to put the first last and the last first! And if that is a ridiculous error in speaking of men, how much more in speaking of the Gods? 'Yes; worse than ridiculous.' Certainly, the Gods cannot be very well pleased at our telling falsehoods about them. 'Certainly not.' Then people should at least learn so much about them as will put a stop to blasphemy.

Enough of education. Similar principles should regulate hunting and other matters. Something of a mixed kind, which is neither law nor yet admonition, has often entered into our discourse, as we found in speaking of the nurture of young children. And therefore the whole duty of the citizen will not consist in mere obedience to the laws. The perfect citizen is he who regards not only the laws but the precepts of the legislator. This may be illustrated by the example of hunting. Now of this there are many kinds—hunting of fish and fowl, man and beast, enemies and friends; but the legislator cannot include in his enactments all these varieties. He must praise and blame hunting, having in view the discipline and exercise of youth. And the young man will regard his praises and censures much more than his penalties; neither the love of pleasure nor the fear of pain will hinder him. The legislator will proceed to express himself in the form of a pious wish—O my young friends, he will say, may you never be induced to hunt for fish in the sea, either by day or night; or for men, whether by sea or land. Never let the wish to steal enter into a corner of your minds; neither be ye fowlers, for this is not a gentlemanlike occupation. Land animals remain, which may be hunted by night in a good-for-nothing way, and also by day, likewise in indolent fashion, resting at intervals, and using snares and nets. The only mode of hunting which the legislator can praise is with horses and dogs, running, shooting, striking at close quarters. There is no other kind which is esteemed by men of courage. The law, then, shall be as follows:

Let no one hinder the holy order of huntsmen; but let the nightly hunters who lay snares and nets be everywhere prohibited. Let the fowler confine himself to waste places and to the mountains. The

fisherman is also permitted, except in harbours and sacred streams, and pools and lakes; but in all other places he may fish, provided he does not defile the waters by the use of poisonous mixtures.

BOOK VIII. Next, with the help of the Delphian Oracle, we will appoint festivals and sacrifices. The times and number of them may be left to us. 'The number, yes.' Then let us determine the number of them to be 365, one for every day in the year. There shall always be one magistrate daily sacrificing according to rites prescribed by a convocation of priests and interpreters, who shall co-operate with the guardians of the law, and supply what the legislator has omitted. For the law will only appoint twelve festivals to the twelve Gods after whom the twelve tribes are named. These shall be celebrated every month with musical and gymnastic contests appropriate to the Gods and the seasons. There shall also be female festivals in honour of the goddesses who are worshipped by women only, and a festival of the Gods below. Pluto shall have his own in the twelfth month. He is not the enemy, but the friend of man, who releases the soul from the body, which is at least as good a work as to unite them. Further, consider that our state has leisure and abundance, and wishing to be happy, like an individual, should lead a good life, and a good life is immunity from doing or receiving injury, of which the first is very easy, and the second very difficult of attainment, and is only to be acquired by perfect virtue. A good city has peace, but the evil city is full of wars within and without. Wherefore the citizens should practise war at least one day in every month, and should have contests and sacrifices and hymns in praise of victory—the victory which they celebrate being the victory in the battle of life, as well as the victory of the festival. Let poets celebrate them; not, however, every poet—but he should be a man of fifty years old at least, and himself a distinguished person, who has done great deeds. Of such an one the poems may be sung, even though they are not quite equal to his deeds. To the director of education and the guardians of the law shall be committed the judgment, and no song which has not been licensed by them, even though sweeter than those of Thamyras and Orpheus, shall be recited, but only the praises or censures which they approve. These regulations about poetry, and about military expeditions, apply equally both to men and to women.

The legislator may be conceived to make the following address to

himself:—With what object am I training my citizens? Are they not strivers for mastery in combats? Certainly, will be the reply. And if they were boxers or wrestlers, would any man in his senses think of entering the lists without many days' practice? And would he not as far as possible imitate all the circumstances of the contest, putting on gloves and using the weapons of the contest; and if he had no one to box with, would he not practise on a shadow, heedless of the laughter of the spectators? 'That would be the way to learn.' And shall the soldiers go to the greatest of all contests, and fight for life and kindred and property unprepared, because sham fights are thought to be ridiculous? Will not the legislator require that his citizens shall practice war daily, performing lesser exercises without arms, while the combatants on a greater scale will carry arms, and take up positions, and lie in ambuscade? And let their combats be not without danger, that opportunity may be given for distinction, and the brave man and the coward may receive their meed of honour or disgrace. If occasionally a man is killed, there is no great harm done; the homicide did not mean to kill him. There are others as good as he is, and the state can better afford to lose a few than to lose the only means of testing them.

'We agree, Stranger, that the state should legislate about warlike exercises.' But then, why have such military amusements become obsolete? Do we not all know the reasons, which are (1) the inordinate love of wealth? This absorbs the soul of a man, and leaves him no time for any other pursuit. Knowledge and action are valued by him only as they tend to the attainment of wealth. All is lost in the desire of heaping up gold and silver; anybody is ready to do anything, right or wrong, for the sake of eating and drinking, and the indulgence of his animal passions. 'Most true.' This is one of the causes which prevents a man being a good soldier, or anything else which is good; he becomes a shopkeeper or a servant, and sometimes, if he happens to be brave, a burglar or a pirate. Many of these latter are men of fine character, and greatly to be pitied, because their souls are hungering and thirsting all their lives long. The bad forms of government (2) are another reason—democracy, oligarchy, tyranny, which, as I was saying, are not states, but states of discord, in which the rulers are afraid of their subjects, and therefore do not like them to become rich, or valiant, or indeed soldiers at all. Now the state for which we are legislating has escaped these two causes of evil; the society is per-

fectly free, and has plenty of leisure, and is not allowed by the laws to be absorbed in the pursuit of wealth: hence we have an excellent field for a perfect education, and for the introduction of martial pastimes. Let us proceed to describe the character of these pastimes. Activity of body—quickness of foot to escape or take—quickness of hand or arm to grasp—are, in the strictest sense, military qualities; and yet you have not the greatest military use of them unless the competitors are armed. The runner should enter the lists in armour, and in the races which our heralds proclaim, no prize is to be given except to armed warriors. Let there be five courses—first, the stadium; secondly, the diaulos or double course; thirdly, the horse course; fourthly, a long course; fifthly, a race between a heavy-armed soldier, who shall pass over sixty stadia and finish at the temple of Ares, and an archer, who shall go among the mountains across country a distance of a hundred stadia, and his goal shall be the temple of Apollo and Artemis. The contests of each kind shall be in number three—one for boys, another for youths, a third for men in heavy and light armour; the course for the boys we will fix at half, and that for the youths at two-thirds of the entire length. Women shall join in the races: young girls who are not grown up shall run naked, and shall continue to run from thirteen to eighteen or until marriage; they may run up to twenty, but after thirteen shall be suitably dressed. As to trials of strength, single combats in armour, or battles between two and two, or of any number up to ten, shall take the place of wrestling and the heavy exercises. And there must be experts, as there are now in wrestling, to determine what is a fair hit and who is conqueror. Instead of the pancratium, let there be contests in which the combatants carry bows and wear light shields and hurl javelins and throw stones. The next provision of the law will relate to horses, which, as we are in Crete, need be rarely used by us, and chariots never; our horse-racing prizes will only be given to single horses, whether foals, half-grown, or full-grown. Their riders are to wear armour, and they may also be archers; a Cretan archer or javelin-man does good service. Women, if they have a mind, may join in the exercises of men.

But enough of gymnastics, and nearly enough of music. All musical contests will take place on holy days, months, and years, whether every third or every fifth year, which are to be fixed by the guardians of the law, the judges of the games, and the director of education, who for

this purpose shall become legislators and arrange times and persons. The principles on which such contests are to be ordered have been often repeated by the first legislator; no more need be said of them, nor are the details of them important. But there is another subject of the highest importance, which, if possible, should be determined by the laws, not of man, but of God; or, if a direct revelation is impossible, there is need of some bold and sincere man who, alone against the world, having reason for his guide, will speak plainly of the corruption of human nature, and go to war with the passions of mankind. 'I do not know what you mean.' I dare say, and therefore I will make my meaning plainer. In speaking of education, I seemed to see young men and maidens in friendly intercourse with one another; and there arose in my mind a natural fear about a state, in which, as I reflected, the young of either sex are well fed, and have little to do, and have their time chiefly occupied in festivals and dances. How can the voice of reason be lifted up, as with the force of a law, against those passions which are the ruin of numbers of both sexes? The prohibition of wealth, and the influence of education, and the all-seeing eye of the ruler, have a good effect in promoting temperance; but they will not wholly extinguish the temptation to the unnatural loves of both sexes, which have been the destruction of states; and against this evil what remedy can be devised? Lacedaemon and Crete, excellent as are many of their institutions, afford us no help here; on the subject of love, as I may whisper in your ear, they are against us. Suppose a person were to urge that you ought to follow nature and the example of animals, and restore the natural use which existed before the days of Laius; he would be quite right, but he would not be supported by public opinion in either of your states. Or try the matter by another test, which we always apply to all laws, the test of virtue; who will say that the permission of such things tends to virtue? Will the spirit of courage pass into the soul of him who gives up his person to another? Will the seducer be gifted with temperance? And will any one, who has a notion of law, be found to praise such actions, or to make them legal?

But to judge of this matter truly, we must understand the nature of love and friendship, which may take very different forms. For we speak of friendship, first, when there is some similarity or equality of virtue; secondly, when there is some want; and either of these, when

in excess, is termed love. The first kind is gentle and communicable; the second is fierce and unmanageable; and there is also a third kind, which is ambiguous, and is under the dominion of opposite principles—the one urging the lover to take his fill of the bloom of youth, the other forbidding him. The one is of the body, and has no regard for the character of the beloved; but he who is under the influence of the other disregards the body, and is a looker rather than a lover, and has a true reverence for the modesty and courage and wisdom of his friend, with whom he would fain associate in holy purity. Here are three kinds of love: ought the legislator to prohibit all of them equally, or to allow the virtuous love to remain? ‘The latter, clearly.’ I expected to gain your approval, and therefore I need not go out of my way to censure the Spartan custom. I will reserve the task of persuading Cleinias for another occasion. ‘Very good.’ How we are to make right laws on this subject is in one point of view easy, and in another most difficult; for we know that most men do abstain in some cases, and for the most part willingly, from intercourse with the fair. ‘When do they?’ There is an unwritten law which prohibits members of the same family from such intercourse. And this law is willingly obeyed, and no thought of anything else ever enters into the minds of men in general. ‘Very true.’ A little word is enough to put out the fire of their lusts. ‘What is it?’ The declaration that they are hateful to the Gods, and of all abominable things the most abominable and unholy. The reason is that everywhere, in jest and earnest alike, this is the doctrine which is repeated to all from their earliest youth. They see on the stage that such monsters as Oedipus and Thyestes, when detected, are put to death. There is an undoubted power in public opinion when no breath is heard adverse to the law. And the legislator who would enslave these slavish passions must consecrate such a public opinion all through the city. ‘Good: but how will you set about creating this public opinion?’ You are right in asking that question, for I promised to try and find some means of restraining loves to their natural objects. Men should not be the destroyers of their kind, spilling the power of life upon the ground; and they should abstain from the women whom they do not intend to make mothers. A law which would accomplish this as effectually as incest is at present prohibited by law, would be of endless benefit, first, as being in accordance with nature, and getting rid of excesses in meats and drinks and adulteries and frenzies, making men love

their wives, and having other excellent effects. I can imagine that some lusty youth overhears what we are saying, and roars out in abusive terms that we are legislating for impossibilities. And so a person might have said of the *syssitia*, or common meals; but this is refuted by facts, although even now they are not extended to women. 'True.' There is no impossibility or super-humanity in my proposed law, as I shall endeavour to prove. 'Do so.' Will not a man find abstinence more easy when his body is sound than when he is in some peculiar or diseased condition? 'Yes; when he is in good condition he will find abstinence more easy.' Have we not heard of *Iccus* of Tarentum and other famous wrestlers who abstained wholly? And they had not the benefits of education which we bestow on the minds of our citizens, and in their bodies they were far more lusty. 'Yet the fact remains.' And shall they have abstained for the sake of an athletic contest, and our citizens be incapable of a similar endurance for the sake of a victory which is higher and nobler far—the highest and noblest of all? 'What victory do you mean?' 'The victory over pleasure, which is true happiness; whereas the slavery to pleasure is misery. Will not the fear of impiety enable us to conquer that which many who are inferior to us have conquered? 'It ought to do so.' And therefore the law must say right out, that our citizens should not fall below the other animals, who dwell together in great flocks, and are pure and chaste until the time of procreation comes, when they marry, and are ever after faithful to their contract. Our citizens may be expected to be a little better than the brutes; and if the corruption of public opinion and the practice of lawless love is too great to allow our first law to be carried out, then our guardians of the law must turn legislators, and try their hand at a second law. They must minimize the appetites, diverting the strength of youth into other channels, and making the practice of love secret and shameful. Three higher principles or elements may be brought to bear on the single principle which is corrupt. 'What are they?' Religion, honour, and the love of the higher qualities of the soul. Perhaps this is a dream only, yet the best of dreams; and if not the whole, yet, by the grace of God, a part of what we desire may be realized. Either men may learn to abstain wholly from any loves, natural or unnatural, except of their wedded wives; or, at least, they may give up unnatural loves; or, if detected, may be punished with

loss of citizenship, as aliens from the state in their morals. 'I entirely agree with you,' said Megillus, 'but I should like to hear what Cleinias says.' 'I will give my opinion bye-and-bye.'

We were speaking of the *syssitia*, which will be a natural institution in a Cretan colony. Whether the institution is to follow the model of Crete or Lacedaemon, or one different from either, is not a question of much importance. The manner of them will be determined without difficulty. We may, therefore, proceed to speak of the mode of life among our citizens, which in other cities will be far more complex, and must at any rate be twice as complex as in this; a state which is inland and not maritime requires only half the number of laws. There is no trouble about retail traders, merchants, hotels, mines, customs, loans, compound interest, or a thousand other things. The legislator has only to regulate the affairs of husbandmen and shepherds, and keepers of bees, and the makers of implements, who will be easily managed, now that the principal questions relating to marriage, education, and government have been settled.

Let us begin with husbandry: First, let there be a law of Zeus, the God of boundaries, against removing a neighbour's landmark, which is the real impiety of 'moving the immovable.' The least stone which marks an agreement is more sacred than the greatest rock which is not a boundary. Zeus, the God of kindred, witnesses to the wrongs of citizens, and Zeus, the God of strangers, to the wrongs of strangers—and their wrath is terrible. The impiety of removing a boundary shall receive two punishments—the first will be inflicted by the God himself; the second will be a fine imposed by the judges. In the second place, the differences between neighbours about encroachments must be guarded against. He who encroaches shall pay twofold the price of the injury; of all such matters the wardens of the country shall be cognizant, or in greater cases the military force of the division. The injury done by cattle, the decoying of bees, the firing of your own wood without thinking of your neighbour, the encroachment on his plantations, shall all be visited with proper damages. Such details have been determined by previous legislators, and need not now be mixed up with greater matters. Ancient husbandmen made excellent rules about streams and waters; and we need not let the stream of our discourse diverge from them. Anybody may take water from the main stream, if he does not cut below the open well of his neighbour; but he must not do any damage or take the

water through a house or temple. If land is without water the occupier shall dig down to the clay, and if at this depth he find no water, he shall have a right of getting water from his neighbours to supply his household; and if their supply is limited, he shall receive from them a measure of water, fixed by the wardens of the country. When two persons live on lands, one above and the other beneath, or one of the two has a common wall, the upper must not turn the heavy falls of rain on the under at his pleasure, or the under refuse an exit. If they cannot agree in the matter they shall go before the wardens of the city or country, and if a man refuses to abide by their decision, he shall pay double the damage which he causes.

In autumn God gives us two boons—one the joy of Dionysus not to be laid up—the other to be laid up. About the fruits of autumn let the law be as follows: He who gathers the storing fruits of autumn, whether grapes or figs, before the time of the vintage, which is the rising of *Aecturus*, shall pay fifty drachmas as a fine to Dionysus, if he gathers on his own ground; if on his neighbour's one-third of a mina, and two-thirds of a mina if on that of another. The vine or fig not used for storing a man may gather when he pleases on his own ground, but on that of others he must pay the penalty of removing what he has not laid down. If he be a slave who has gathered, he shall receive a stroke for every grape or fig. A metic may purchase the cultivated fruits, and a stranger may pluck for himself and his attendant. This right of hospitality, however, does not extend to storing grapes. A slave who eats of the storing grapes or figs shall receive a stroke for every grape or fig, and the freedman shall receive an admonition. Pears, apples, pomegranates, may be taken secretly, but he who is detected in the act of taking them shall be lightly beaten off, if he be not more than thirty years of age. An exception to this law must be made for the stranger and the elder; the latter, however, if he goes beyond the law, and carries away as well as eats, shall fail in the competition of virtue, if anybody brings up his offence against him.

Water is also in need of protection; being, unlike the other elements—soil, air, and sun—which conspire in the growth of plants, easily corrupted. And therefore he who spoils another's water, whether in springs or reservoirs, either by trenching, or by any sort of pollution or poisonous impurity, shall pay a penalty and repair the damage. At the getting-in of the harvest everybody shall have a right of way over his neighbours' ground, provided he is careful to do no damage beyond the

trespass, unless any damage which he does is attended with three times the benefit to himself. Of all this the magistrates are to take cognizance, and they are to have the power of fining where the injury done is not more than three minae; any greater damage can only be tried in the public courts. A charge against a magistrate is to be referred to the public courts, and any one who is found guilty of deciding corruptly shall pay twofold to the aggrieved person. Matters of detail relating to punishments and modes of procedure, and summonses, and the number of witnesses, do not require the mature wisdom of the aged legislator; the younger generation may determine them according to their experience; but when once determined, they shall be unaltered.

The following are to be the regulations respecting handicrafts: No citizen, or servant of a citizen, is to practise them. For the citizen has already a trade and mystery, which is the care of the state; and no man can practise two trades, or practise one and superintend another. For the same reason, no smith should be a carpenter, and no carpenter having many slaves who are blacksmiths should look after them himself; but let each man practise one art which is to be his livelihood. Every man is to be one man and not many. The wardens of the city should see to this, punishing the citizen who offends with temporary deprivation of his rights—the foreigner shall be imprisoned, fined, exiled. Any disputes about contracts shall be determined by the wardens of the city up to fifty drachmae—above that sum by the public courts. No customs are to be exacted either on imports or exports. Nothing unnecessary is to be imported from abroad, whether for the service of the Gods or for the use of man—neither purple, nor other dyes, nor frankincense,—and nothing needed in the country is to be exported. These things are to be decided on by the twelve guardians of the law who are next in seniority to the five elders. Arms and the materials of arms are to be imported and exported only with the consent of the generals, and then only by the state. There is to be no retail trade in anything. For the distribution of the produce of the country, the Cretan laws afford a rule which may be usefully followed. All shall be required to distribute corn, grain, animals, and other valuable produce, into twelve portions. Each of these shall be subdivided into three parts—one for freemen, another for servants, and the third shall be sold for the supply of artizans, strangers, and others. And where the produce of the land exceeds the average, let what is over be again distributed

into three portions, and let the citizens determine how much they will give to slaves or freemen, and how much they will distribute among the animals.

Next as to houses—there shall be twelve villages, one in the centre of each of the twelve portions ; and in every village there shall be temples and an agora—also shrines for heroes or for any old Magnesian deities who linger about the place. In every division there shall be temples of Hestia, Zeus, and Athenè, surrounded by buildings on eminences, which will be the guard-houses of the police. The rest of the country shall be arranged in thirteen portions, corresponding to as many bands of artisans. One of these bands will be settled in the city, and divided into twelve parts, for the town districts ; the remainder will be settled in the country. And the magistrates will fix them on the spots where they will be most serviceable in supplying the wants of the husbandmen.

Next in importance to the regulation of the temples, is the fair dealing and good order of the markets—this will be the care of the wardens of the agora. They will also see that the sales effected by the citizens to strangers are legally made. The law shall be, that on the first day of each month the auctioneers to whom the sale is entrusted shall offer grain ; and at this sale a twelfth part of the whole shall be exposed, and the foreigner shall supply his wants for a month. On the tenth, there shall be a sale of liquids, and on the twenty-third of animals, skins, woven or woollen stuffs, and other things which husbandmen have to sell and foreigners want to buy. None of these commodities, any more than barley or flour, or any other food, may be retailed by a citizen to a citizen ; but foreigners may sell them to one another in the foreigners' market. There must also be butchers who will sell parts of animals to foreigners and craftsmen, and their servants ; and foreigners may buy firewood wholesale of the commissioners of woods, and may sell retail to foreigners. All other goods must be sold in the market, in the presence of the magistrates, and in the place indicated by them, and shall be paid for on the spot. He who gives credit, and is cheated, will have no redress. In buying or selling, any excess or diminution of what the law allows shall be registered. The same rule is to be observed about the property of metics. Anybody who has a handicraft may come and remain twenty years from the day on which he is enrolled, at the expiration of which time he shall

take what he has and depart. The only condition which is to be imposed upon him as the tax of his sojourn is good conduct; and he is not to pay any tax for being allowed to buy or sell. But if he wants to extend the time of his sojourn, and has done any service to the state, and he can persuade the ecclesia to grant his request, he may remain. The children of metics may also be metics; and the period of twenty years, during which they are permitted to sojourn, is to count, in their case, from their fifteenth year.

No mention occurs in the Laws of the doctrine of Ideas. The will of God, the standard of the legislator, and the dignity of the soul, have taken their place in the mind of Plato. If we ask what is that truth or principle which, towards the end of his life, seems to have absorbed him most, like the idea of good in the Republic, or of beauty in the Symposium, or of the unity of virtue in the Protagoras, we should answer the priority of the soul to the body: his later system mainly hangs upon this. In the Laws, as in the Sophist and Politicus, we pass out of the region of metaphysical or transcendental ideas into that of psychology.

The opening of the fifth book, though abrupt and unconnected in style, is one of the most elevated passages in Plato. The religious feeling which he seeks to diffuse over the commonest actions of life, the blessedness of living in the truth, the great mistake of a man living for himself, the pity as well as anger which should be felt at evil, the kindness due to the suppliant and the stranger, have the temper of Christian philosophy. The remark that elder men, if they want to educate others, should begin by educating themselves; the necessity of creating a spirit of obedience in the citizens; the desirableness of limiting property; the relative nature of political equality, have also the tone of a modern writer. In many of his views of politics, Plato seems to us like some modern politicians, to be half socialist, half conservative.

In the Laws, we remark a change in the place assigned by him to pleasure and pain. There are two ways in which even the ideal systems of morals may regard them: either like the Stoics, and other ascetics, we may say that pleasure must be eradicated; or if this seems unreal to us, we may affirm that virtue is the true pleasure; and then, as Aristotle says, 'to be brought up to take pleasure in what we ought, exercises

a great and paramount influence on human life.' Or as Plato says in the *Laws*, 'A man will recognize the noblest life as having the greatest pleasure and the least pain, if he have a true taste.' If we admit that pleasures differ in kind, the opposition between these two modes of speaking is rather verbal than real. The Greek philosopher may speak of the 'contemplation of the ideas,' or the Christian father of the *fruitio Dei*, as the first of pleasures. Throughout the greater part of the writings of Plato, these two views seem to alternate with each other. In the *Republic*, the mere suggestion that pleasure may be the chief good, is received by Socrates with a cry of abhorrence; but in the *Philebus*, innocent pleasures vindicate their right to a place in the scale of goods. In the *Protagoras*, speaking in the person of Socrates rather than in his own, Plato admits the calculation of pleasure to be the true basis of ethics, while in the *Phaedo* he indignantly denies that the exchange of one pleasure for another is the exchange of virtue. So wide of the mark are they who would attribute to Plato entire consistency in thoughts or words.

He acknowledges that the second state is inferior to the first—in this, at any rate, he is consistent; and he still casts longing eyes upon the ideal. Several features of the first are retained in the second: the education of men and women is to be as far as possible the same; they are to have common meals, though separate, the men by themselves, the women with their children; the citizens, if not actually communists, are in spirit communistic; they are to be lovers of equality; only a certain amount of wealth is permitted to them, and their burdens and also their privileges are to be proportioned to this. The constitution in the *Laws* is a timocracy of wealth, modified by an aristocracy of merit. Yet the political philosopher will observe that the first of these two principles is fixed and permanent, while the latter is uncertain and dependent on the opinion of the multitude. Wealth, after all, plays a great part in the *Second Republic* of Plato. Like other politicians, he deems that a property qualification will contribute to the stability of the state. The four classes seem to be derived from the constitution of Cleisthenes, just as the form of the city which is clustered around a citadel set on a hill, is suggested by the Acropolis at Athens. Plato, writing under Pythagorean influences, seems really to have supposed that the well-being of the city depended almost as much on the number 5040 as on justice and moderation. But he is not prevented by Pythagoreanism

from observing the effects which climate and soil exercise on the characters of nations.

He was doubtful in the Republic whether the ideal or communistic state could be realized, but was at the same time prepared to maintain that whether it existed or not made no difference (Rep. ix. 592 B). He has now altogether lost faith in the practicability of his scheme—he is speaking to ‘men, and not to Gods or sons of Gods.’ Yet he still maintains it to be the true pattern of the state which we must approach as nearly as possible. As Aristotle says, ‘after having created a more general form of state, he gradually brings it round to the other’ (Pol. ii. 3, 2). He does not seem to be aware, either here or in the Republic, that in such a commonwealth there would be less room for the development of individual character. In several respects the second state is an improvement on the first, especially in being based more distinctly on the dignity of the soul. The standard of truth, justice, temperance, is as high as in the Republic;—in one respect higher, for temperance is now regarded, not as a virtue, but as the condition of all virtue. The treatment of moral questions is less speculative but more human. The idea of good has disappeared; the excellence of individuals—of the true patriot, of the perfect guardian of the law, are the patterns to which the life of the citizens is to conform. Plato is never weary of speaking of the honour of the soul, which can only be honoured truly by being improved. To make the soul as good as possible, and to prepare here for communion with the Gods in another world by communion with them in this, is the end of life (Laws, x. 904 D). If the Republic is far superior to the Laws in form and style, and perhaps in reach of thought, the Laws leave on the mind of the modern reader much more strongly the impression of a struggle against evil, and an enthusiasm for human improvement. When Plato says that he must carry out that part of his ideal which is practicable (Laws, v. 746), he does not appear to have reflected that part of an ideal cannot be detached from the whole.

The great defect of both his constitutions is the fixedness which he seeks to impress upon them. He had seen the Athenian empire, almost within the limits of his own life, wax and wane, but he never seems to have asked himself what would happen if, a century from the time at which he was writing, the Greek character should have as much changed as in the century which had preceded. He fails to perceive that the greater part of the political life of a nation is not that which

is given them by their legislators, but that which they give themselves. He has never reflected that without progress there cannot be order, and that mere order can only be preserved by an unnatural and despotic repression. The possibility of a great nation or of an universal empire arising never occurred to him. He sees the enfeebled and distracted state of the Hellenic world in his own later life, and thinks that the remedy is to make the laws unchangeable. The same want of insight is apparent in his judgments about art. He would like to have the forms of sculpture and of music fixed as in Egypt. He does not consider that this would be fatal to the true principle of art, which, as Socrates had himself taught, was to give life (Xen. Mem. iii. 10. 6). We wonder how, familiar as he was with the statues of Pheidias, he could have endured the lifeless and half monstrous works of Egyptian sculpture. The 'chants of Isis,' we might imagine, would have been barbarous in an Athenian ear. But although he is aware that there are some things 'which are not so well among the children of the Nile,' he is deeply struck with the stability of Egyptian institutions. Both in politics and in art Plato seems to have seen no way of bringing order out of disorder, except by taking a step backwards. Antiquity, compared with the world in which he lived, had a sacredness and authority for him: the men of a former age were supposed by him to have retained a sense of reverence which was wanting among his own contemporaries. He could imagine the early stages of civilization; he never thought of what the future might bring forth. His experience is limited to a century or two, to a few Greek states, and to an uncertain report of Egypt and the East. There are many ways in which the limitations of their knowledge affected the genius of the Greeks; above all in depriving them of the power of criticism.

The colony is to receive from the mother-country her first constitution, and some of her guardians of the law. The guardians of the law are to be ministers of justice, and the president of education is to take precedence of them all. They are to take measures for the defence of the country; they are to enforce the education of their children upon unwilling parents; they are to provide for the supply and purity of the waters, and in general for the public health; they are to superintend buildings, to keep the registers of property, to hear appeals from inferior courts; and they are to be superannuated at seventy years of age. Several questions of modern politics seem to be anticipated by Plato in the

functions which he assigns to them. He hopes that in his state will be found neither poverty nor riches ; and therefore neither the legislator, nor his subjects, have any need to consider the danger of falling into poverty. Almost in the spirit of the Gospel he would say, 'how hardly can a rich man dwell in a perfect state.' For he cannot be a good man who is always gaining too much and spending too little (cp. Arist. Eth. iv. 2, 3). Plato, though he admits wealth as a political element, would deny that material prosperity can be the foundation of a really great community. A man's soul, as he often says, is more to be esteemed than his body ; and his body than the things of his body. He repeats the complaint which has been made in all ages, that the love of money is the corruption of states. He has a sympathy with pirates and burglars, 'many of whom are men of fine character and greatly to be pitied, because their souls are hungering and thirsting all their lives long,' but he has no sympathy with shopkeepers or retailers. For traders and artisans a moderate gain was, in his opinion, best. He has never, like modern writers, idealized the wealth of nations, any more than he has worked out the problems of political economy, which among the ancients had not yet grown into a science. The isolation of Greek states, their constant wars, the want of a free industrial population, and of the means of exchange usually termed 'credit,' prevented any great extension of commerce among them : and so prevented them from forming a theory of the laws which regulate the accumulation and distribution of wealth.

The constitution of the army is democratic ; the soldiers are supposed to be the best judges of their leaders. The way of carrying out the democratic principle is as follows : The guardians of the law nominate generals, and the generals retain the nomination of the inferior officers. But if any one is ready to swear that he knows of a better man, he may put the claims of the candidate for the office of general to the vote either of the whole army, or of the division of the service which he is destined to command. Except at these military elections, in which all who have ever borne arms take part, there is no assembly or general meeting of the people. In the election of the council, the legislator attempts to mix aristocracy and democracy. This is effected first, as in the Servian constitution, by balancing wealth and numbers ; the people are divided into four classes, of whom the first, though inferior in numbers, has an equal vote with the three others. Secondly, all classes are compelled to vote for the first and second class ; but the fourth class is not compelled

to vote for the third, nor the third and fourth for the fourth. Thirdly, out of the 180 persons who are thus chosen from each of the four classes, 720 in all, 360 are to be taken by lot; these form the council for the year.

These political adjustments of Plato's will be criticised by the practical statesman as being for the most part fanciful and ineffectual. He will observe, first of all, that the only real check on democracy is the division into classes. The second of the three proposals, though ingenious, and receiving some light from the apathy to politics which is often shown by the higher classes in a democracy, would have little power in times of excitement and peril, when the precaution was most needed. At such political crises, all the lower classes would vote equally with the higher. The subtraction of half the persons chosen at the first election by the chances of the lot would not raise the character of the senators, and is open to the objection of uncertainty, which necessarily attends this and similar double schemes of representative government. The voters cannot be expected to retain the continuous political interest which would be required for carrying them out. Who could select 180 persons of each class, fitted to be senators? And whoever were chosen in the first instance, by a particular vote, his wishes might be neutralized by the action of the lot. Yet the scheme of Plato is not really so extravagant as the actual constitution of Athens, in which all the senators appear to have been elected by lot (*ἀπὸ κλήρου βουλευταί*); at least, after the revolution made by Cleisthenes, for the constitution of the senate which was established by Solon probably had some aristocratic features, though their precise nature is unknown to us. The ancients knew that election by lot was the most democratic of all modes of appointment, seeming to say in the objectionable sense, 'that one man is as good as another.' Plato, who is desirous of mingling different elements, makes a partial use of the lot which he applies to candidates already elected by vote.

The functions of the council are administrative rather than legislative. The whole number of 360, as in the Athenian constitution, is distributed among the months of the year according to the number of the tribes. Not more than one-twelfth is to be in office at once, so that the government would be made up of twelve administrations succeeding one another in the course of the year. They are to exercise a general superintendence, and, like the Athenian counsellors, are to preside in monthly divisions over all assemblies. But neither in Plato's Laws nor in his Republic, is

there any mention of an ecclesia. Nothing is less in his mind than a House of Commons, carrying on year by year the work of legislation. For he supposes the laws to be already provided; what is omitted is to be supplied by the eldest guardians of the law, who are to partake of the spirit of the legislator. As little would he approve of a body like the Roman Senate. The people and the aristocracy alike are to be represented, not by assemblies, but by officers elected for one or two years, except the guardians of the law, who are elected for twenty years.

The evils of this system are obvious. If in any state, as Plato says in the *Politicus* (292 E), it is easier to find fifty good draught-players than fifty good rulers, the greater part of the 360 who compose the council must be unfitted to rule. The unfitness would be increased by the short period during which they held office. There would be no traditions of government among them, as in a Greek or Italian oligarchy, and no individual would be responsible for any of their acts. Everything seems to have been sacrificed to a false notion of equality, according to which all have a turn of ruling and being ruled. In the constitution of the Magnesian state Plato has not emancipated himself from the limitations of ancient politics. His government may be described as a democracy of magistrates elected by the people. He never troubles himself about the political consistency of his scheme. He does indeed say that the greater part of the good of this world arises, not from equality, but from proportion, which he calls the judgment of Zeus (Aristotle's *Distributive Justice*, N. E. v. 6), but he hardly makes any attempt to carry out the principle in practice. There is no body in his commonwealth which represents the life either of a class or of the whole state. The manner of appointing magistrates is taken chiefly from the old democratic constitution of Athens, of which it retains some of the worst features, such as the use of the lot, while by the omission of the popular assembly the mainspring of the machine is taken out. The guardians of the law, thirty-seven in number, of whom the ten eldest reappear as a part of the nocturnal council at the end of the twelfth Book, are to be elected by the whole people as in a democracy, but they are to hold office for twenty years, and would therefore have the character of an oligarchy. Nothing is said of the manner in which the functions of the council are to be harmonized with those of the guardians of the law.

Similar principles are applied to inferior offices. In the elections to

them, Plato endeavours to mix or balance in a friendly manner 'demus and not demus.' Only the priests are to be directly appointed by God, that is, by the lot. The commonwealth of the Laws, like the ideal state, cannot dispense with a spiritual head, which is the oracle of Delphi. To this the choice of some of the higher officers, and the settlement of disputes about ceremonies and purifications, as well as changes in the law, are to be referred. Plato is not disposed to encourage amateur attempts to revive religion in states. For, as he says in the Laws, 'To institute religious rites is the work of a great intelligence only.'

Though the council is framed on the model of the Athenian Boulé, the law courts of Plato do not equally conform to the pattern of the Athenian dicasteries. Plato thinks that the judges should speak and ask questions:—this is not possible if they are numerous; he would, therefore, have a few judges only, but good ones. He is nevertheless aware that both in public and private suits there must be a popular element. This he proposes to supply by an elective judiciary, than which, in the opinion of modern political writers, no form of appointment can be worse. The ingenious expedient of dividing the questions of law and fact between a judge and jury did not occur to him or to any other ancient political philosopher. He might thus have combined the popular element with the judicial. Though desirous to have a few good judges, he does not seem to have understood that a body of law must be formed by decisions as well as by legal enactments.

He remarks truly that some cases are better decided on the spot and from local knowledge. But in such cases he would allow an appeal to a superior court; and this seemed to him to involve the necessity, where the two decisions differed, of a further reference to a final court. This final court of appeal is to be composed of three magistrates, upon whom the plaintiff and defendant might agree; or if they could not agree, the judges were to be chosen by the council. Plato's judges are not appointed for life, but only for a year, and they are liable to be called to account before the guardians of the law.

Returning to the subject in Book ix, he proposes to leave the modes of procedure to a younger generation of legislators. But he insists that the vote of the judges shall be given openly, and before they vote they are to hear speeches from the plaintiff and defendant. They are then to take evidence in support of what has been said, and to examine witnesses. The eldest judge is to ask his questions first, and then the second, and

then the third. They are not to be silent, and he would not prevent them from communicating with one another (cp. Arist. Pol. ii. 5, 8). The interrogatories are to continue for three days, and the evidence is to be written down. Apparently he does not expect the judges to be professional lawyers, any more than he expects the members of the council to be trained statesmen.

In forming marriage connections, Plato supposes that the public interest will prevail over private inclination. There was nothing in this very shocking to the notions of Greeks, among whom the feeling of love towards the other sex was almost deprived of sentiment or romance. Married life is to be regulated solely with a view to the good of the state. The newly married couple are not allowed to absent themselves from their respective *syssitia*, even during their honeymoon; they are to give their whole mind to the procreation of children; their duties to one another at a later period of life is not a matter about which the state is equally solicitous. Divorces are readily allowed for incompatibility of temper. As in the Republic, physical considerations seem almost to exclude moral and social ones. To modern feelings there is a degree of coarseness in his treatment of the subject. Yet Plato also makes some shrewd remarks on marriage, as for example, that he who does not marry for money will not be the humble servant of his wife. And he shows a true conception of the nature of the family, when he requires that the newly married couple 'should leave their father and mother,' and have a separate home. He also provides against extravagance in marriage festivals; which in some states of society, as appears to be the case among the Hindoos, has been a social evil of the first magnitude.

In treating of property, Plato takes occasion to speak of property in slaves. They are to be treated with perfect justice; but, for their own sake, to be kept at a distance. The motive is not humanity towards the slave, of which there are hardly any traces (although Plato allows that many in the hour of peril have found a slave more attached than members of their own family), but the self-respect which the freeman and citizen owes to himself (cp. Rep. viii. 549 A). If they commit crimes, they are doubly punished; only if they inform against treasonable and illegal practices of their masters, they are to receive a protection, which would probably be ineffectual, from the guardians of the law. Plato still breathes the spirit of the old Hellenic world, in which

slavery was a necessity, because leisure must be provided for the citizen.

The education propounded in the *Laws* differs in several points from the *Republic*. Plato seems to have reflected as deeply and earnestly on the importance of infancy as Rousseau, or Jean Paul (cp. the saying of the latter—‘not the moment of death, but the moment of birth, is probably the more important’). He would fix the amusements of children in the hope of fixing their characters in after-life. In the spirit of the statesman who said, ‘Let me make the ballads of a country, and I care not who make their laws,’ Plato would have said, ‘Let the amusements of children be unchanged, and they will not want to change the laws.’ The ‘Goddess Harmonia’ plays a great part in Plato’s ideas of education. The natural restless force of life in children, ‘who do nothing but roar until they are three years old,’ is gradually to be reduced to law and order. As in the *Republic*, he fixes certain forms in which songs are to be composed: (1) they are to be strains of peace; (2) they are to be hymns or prayers addressed to the Gods; (3) they are to sing only of the lawful and good. The poets are again expelled, or rather ironically invited to depart; and those who remain are required to submit their poems to the censorship of the magistrates. Youth are no longer compelled to commit to memory many thousand lyric and tragic Greek verses; yet, perhaps, a worse fate is in store for them. Plato has no belief in the ‘liberty of prophesying’; and having guarded against the dangers of poetry, he remembers that there is an equal danger in prose writers. He cannot leave his old enemies, the Sophists, in possession of the field; and therefore he proposes that youth shall learn by heart, instead of the compositions of poets or prose writers, his own inspired work on laws. These, and music and mathematics, are the chief staple of his education.

Mathematics are to be cultivated, not as in the *Republic* with a view to the higher science of the idea of good, but rather with a religious and political aim. They are a sacred study which teaches men how to distribute the portions of a state, and which is to be pursued in order that they may learn not to blaspheme about astronomy. Against three errors Plato is in profound earnest. First, the error of supposing that the three dimensions of length, breadth, and height, are really commensurable with one another. The difficulty which he feels is analogous to the difficulty which he formerly felt about the connection of ideas, and

equally characteristic of ancient philosophy: he fixes his mind on the point of difference, and cannot at the same time take in the similarity. Secondly, he is puzzled about the nature of fractions: like the arithmeticians in the Republic, 525 E, he is disposed to deny the possibility of their existence. Thirdly, his optimism leads him to insist (unlike the Portuguese king who thought that he could have improved on the mechanism of the heavens) on the perfect or circular movement of the heavenly bodies. He appears to mean, that instead of regarding the stars as overtaking or being overtaken by one another, or as planets wandering in many paths, a more comprehensive survey of the heavens would enable us to infer that they all alike moved in a circle around a centre (cp. Timaeus, fol. 40; Rep. x. 617). He probably suspected, though unacquainted with the true cause, that the appearance of the heavens did not agree with the reality: at any rate, his notions of what was right or fitting easily overpowered the results of actual observation. To the early astronomers, who lived at the revival of science, as to Plato, there would have seemed to be nothing absurd in *à priori* astronomy, and they would probably have made fewer real discoveries if they had followed any other track. (Cp. Introduction to the Republic, p. 94 foll.)

The science of dialectic is nowhere mentioned by name in the Laws, nor is anything said of the education of after-life; the child is to begin to learn at ten years of age: he is to be taught reading and writing for three years from ten to thirteen, and no longer; and for three years more, from thirteen to sixteen, he is to be instructed in music. The great fault which Plato finds in the contemporary education is the almost total ignorance of arithmetic and astronomy, in which the Greeks would do well to take a lesson from the Egyptians. (Cp. Rep. vii. 525 foll.) Dancing and wrestling are to have a military character, and women as well as men are to be taught the use of arms. The military spirit which Plato has vainly endeavoured to expel in the first two books returns again in the seventh and eighth. His genius has evidently a sympathy with the soldier, as he has with the poet, and he is no mean master of the art, or at least of the theory of war (cp. Laws, vi. 760 foll.; Rep. v. 467-470), though inclining rather to the Spartan than to the Athenian practice of it (Laws, iv. 706, 707). Of a supreme or master science which was to be the 'coping stone' of the rest, few traces appear in the Laws. He seems to have lost faith in it, or perhaps to have realized that the time for such a science had not yet come, and that he was unable to fill up the outline

which he had sketched. There is no requirement that the guardians of the law shall be philosophers, nor are we told how the leisure of the citizens, when they are grown up, is to be employed. In this respect we note a falling off from the Republic. Their public and family duties were, probably, to be their main business, and they would, no doubt, take up a great deal more time than in the modern world we are willing to allow to either of them. But of any regular training to be pursued under the superintendence of the state from eighteen to thirty, or from thirty to thirty-five, he no longer entertains the idea; he has taken the first step downwards on 'Constitution Hill.' (Rep. viii. 547, 548.)

Few among us are either able or willing to carry education into later life; five or six years spent at school, three or four at a university, or in the preparation for a profession, an occasional attendance at a lecture to which we are invited by friends when we have an hour to spare from housekeeping or money-making—these comprise, as a matter of fact, the education even of the educated; and then the lamp is extinguished 'more truly than Heracleitus' sun, never to be lighted again.' (Rep. vi. 497 B.) The description which Plato gives in the Republic of the state of adult education among his contemporaries may be applied almost word for word to our own age. But in the Laws he no longer entertains the idea that the deficiency can be corrected, or that a regular course of study is possible in mature years. He does not, however, go on to remark, that the education of after-life is of another kind, and must consist with the majority of the world rather in the improvement of character than in the acquirement of knowledge. It comes from the study of ourselves and other men: from moderation and experience: from reflection on circumstances: from the pursuit of high aims: from a right use of the opportunities of life. It is the preservation of what we have been, and the addition of something more. The power of abstract study or continuous thought is very rare, but such a training as this can be given by every one to himself.

The singular passage in Book vii. (803 C), in which Plato describes life as a pastime, like many other passages in the Laws, is imperfectly expressed. Two thoughts seem to be struggling in his mind: first, the reflection to which he returns at the end of the passage (804 B), that men are playthings or puppets, and that God only is the serious aim of human endeavours; this suggests to him the afterthought that, although playthings, they are the playthings of the Gods, and that this is the best

of them. The cynical ironical fancy of the moment insensibly passes into a religious sentiment. Life is a play in the higher sense, as well as a sort of mystery in which we have the Gods for playfellows. Men imagine that war is their serious pursuit, and they make war that they may return to their amusements. But neither wars nor amusements are the true satisfaction of men, which is to be found only in the society of the Gods, in sacrificing to them and propitiating them. Like a Christian ascetic, Plato seems to suppose that life should be passed wholly in the enjoyment of divine things.

In one of the noblest passages of Plato, he speaks of the relation of the sexes (viii. 835-842). Natural relations had been established of old; a 'little word' had put a stop to incestuous connections between members of the same family. But unnatural unions still continued to prevail at Crete and Lacedaemon, and were even justified by the example of the Gods. They, too, might be banished, if the feeling that they were unholy and abominable could sink into the minds of men. The legislator is to cry aloud, and spare not, 'Let not men fall below the level of the beasts.' Plato does not shrink, like some modern philosophers, from 'carrying on war against the mightiest lusts of mankind'; neither does he expect to extirpate them, but only to confine them to their natural use and purpose, by the enactments of law, and by the influence of public opinion.

BOOK IX. Punishments of offences, and modes of procedure, will be our next subject. The idea that in a well-ordered state there will be great criminals who require to be punished by the law, is a disgrace to us; but as we are legislating for men and not for Gods, there will be no uncharitableness in apprehending that there may be some rampant citizen, whose heart, like the seed which has touched the ox's horn, will be hardened against the law. None who are well-educated will be guilty of such a crime, but one of their servants may, and with a view to him, and at the same time with a remoter eye to the general infirmity of human nature, I will lay down the law concerning the robbing of temples, beginning with a prelude. To the robber we will say—O sir, the complaint which troubles you is not human; but some curse or plague has fallen upon you, inherited from the crimes of your ancestors, of which you must purge yourself: go and sacrifice to the Gods, frequent the society of the good, avoid the wicked; and if you are cured of the

fatal impulse, well; but if not, acknowledge death to be better than life, and depart.

These are the accents, soft and low, in which we address the criminal. And if he refuse to listen to them, then cry aloud as with the sound of a trumpet: Whosoever robs a temple, if he be a slave or foreigner shall be branded in the face and hands, and scourged, and then cast naked beyond the border. And perhaps this may improve him: for the law aims either at the reformation of the criminal, or the repression of crime, and no punishment is designed to inflict useless injury. But if the offender be a citizen, he must be incurable, and death is the least penalty which he deserves. His iniquity, however, shall not be visited on his children; nor is his property to be confiscated, or any fine inflicted upon him or upon any one which will interfere with the integrity or cultivation of the lot: the guardians of the law are to be careful about this.

If a fine is inflicted upon a man which he cannot pay, and for which his friends are unwilling to be security, he shall be imprisoned and chastised, but not exiled or deprived of citizenship; though he may be put to death, or imprisoned, or beaten, or fined, or pilloried, or removed to some temple on the borders. Capital offences shall come under the cognizance of the guardians of the law, and a college of the best of the ex-archons of the previous year. The mode of procedure we shall leave to the lawgivers of the future, and only determine the mode of voting. The votes are to be given openly, in the presence of an audience of the citizens: on the first day the plaintiff and defendant shall make their speeches; and the judges, beginning with the eldest, shall ask questions and collect evidence during three days, which, at the end of each day, shall be deposited in writing on the altar of Hestia; and when they have evidence enough, after a solemn declaration that they will decide justly, they shall vote and end the case.

Next to religion, the preservation of the constitution is the first object of the law. The greatest enemy of the state is he who attempts to set up a tyrant, or breeds plots and conspiracies; not far below him in guilt, is a magistrate who either knowingly, or in ignorance, fails to bring the offender to justice. Any one who is good for anything will give information against traitors. The mode of proceeding in such cases will be the same as in cases of sacrilege; the penalty, death. But neither in this case nor in any other is the son to bear the iniquity of the father, unless father, grandfather, great-grandfather, have all of them been capitally

convicted, and then the family are to be sent off to the mother country, retaining their property, with the exception of the lot and its fixtures. And ten are to be selected from the second sons of the other citizens—one of whom is to be chosen by the oracle of Delphi to be heir of the lot. This third law about the judges and processes of treason, and the removal of families, shall apply equally to the traitor, the sacrilegious, and the conspirator.

A thief, whether he steals much or little, must refund twice the amount, if he is able to do so without impairing his lot; if he cannot, he must go to prison until he either pays or satisfies the plaintiff, or in case of a public theft, the city. 'But should all the different kinds of thefts incur the same penalty?' You remind me of what I know—that legislation is never perfect. The men for whom laws are made may be compared to the slave who is being doctored, according to our old image, by the unscientific doctor. For he, if he chance to meet the educated physician and gentleman talking to his patient, and entering into the philosophy of his disease, would burst out laughing and say, as doctors delight in doing, 'You old fool, instead of curing the patient you are educating him!' And he would be quite right, and not far wrong, if he went on to observe, that he who legislates in our fashion preaches to the citizens instead of legislating for them. 'Perhaps.' There is, however, one advantage which we possess—that being amateurs only, we may either take the most ideal, or the most necessary and utilitarian view. 'But why offer such an alternative? as if all our legislation must be done to-day, and nothing put off until the morrow. Like builders, or other constructors, we may surely rough-hew them first, and shape and place them afterwards.' That will be the best way of getting the most general view of our laws. The writings of legislators are like any other writings in prose or verse, or rather they are the most important of all. The legislator should determine the nature of good and evil, and how they should be studied with a view to our instruction. What these are the legislator should teach, and how they are to be pursued. Are not Solon and Lycurgus as much disgraced as Homer and Tyrtaeus, when they write ill about the institutions of life? The laws of states ought to be the models of writing, and what is at variance with them should be deemed ridiculous. And we may further imagine them to express the affection and good sense of a father or mother, and not to be the fiats of a tyrant? 'Very true.'

Let us enquire more particularly about sacrilege, theft and other crimes, for which we have already legislated in part. And this leads us to ask, first of all, whether we are agreed or disagreed about the nature of the honourable and just. 'To what are you referring?' I will endeavour to explain. All are agreed that justice is honourable, whether in men or things, and no one who maintains that a very ugly man who is just, is in his mind fair, would be thought extravagant. 'Very true.' But if honour is to be attributed to justice, are just sufferings honourable, or only just actions? 'What do you mean?' Why, our own laws supply a case in point; for we enacted that the robber of temples, and the enemy of our laws, should die; and this was just, but the reverse of honourable. 'That is true.' But are we consistent in holding this language? I have already said that the evil are involuntarily evil; and the evil are the unjust. Now the voluntary cannot be the involuntary; and if you two come to me and say, 'Shall we legislate?' of course, I shall reply—'Then will you distinguish what crimes are voluntary, and what involuntary, and shall we impose lighter penalties on the first, and heavier on the latter? Or shall we refuse to determine what is the meaning of voluntary and involuntary, and maintain that our words have come down from heaven, and that they should be at once embodied in a law?' All states legislate under the idea that there are two classes of actions, the voluntary and the involuntary, but there appears to be great confusion about them reigning in the minds of men; and the law can never act unless they are distinguished. 'That is true, Stranger.' And we must either abstain from affirming that unjust actions are involuntary, or explain the meaning of this statement: for not to speak the truth is impiety. Believing, then, that acts of justice cannot be divided into voluntary and involuntary, I must endeavour to show that they must be divided on some other principle. 'Do so by all means.' Hurts may be voluntary, or involuntary; and involuntary hurts, whether great or small, are not injuries: and, on the other hand, a benefit may be an injury. An act which gives or takes away anything is not simply just; but the legislator has to consider the animus of the agent, and to provide satisfaction and retribution with a view to the reconciliation of the parties. 'Excellent.' Where injustice, like disease, is remediable, there the remedy must be applied in word or deed, with the assistance of pleasures and pains, of bounties and penalties, or any other influence

which may inspire man with the love of justice, or hatred of injustice; and this is the noblest work of law. When the legislator perceives the evil to be incurable, he will consider that the death of the offender will be a good to himself, and in two ways a good to society: first, as he becomes an example to others; secondly, because the city will be quit of a rogue; and in such a case, but in no other, the legislator will punish with death. 'I think that there is truth in what you say. I wish, however, that you would distinguish more clearly the difference of injury and harm, and the complications of voluntary and involuntary.' I will.—You will admit that anger is of a violent and destructive nature? 'That cannot be denied.' And further, that pleasure is different from anger, and is derived from an opposite source to anger, working by persuasion and the force of deceit? 'Yes.' Ignorance is the third source of error; this the legislator may note as being of two kinds—simple ignorance and ignorance doubled by conceit of knowledge; the latter, when accompanied with power, is a source of terrible errors, but excusable when only weak and childish. We are in the habit of saying that one man masters, and another is mastered by pleasure and anger. 'Just so.' But no one says that one man masters, and another is mastered by ignorance. 'Very true.' All these motives actuate men and sometimes drive them in different ways. 'That is often the case.' Now, then, I am in a position to define the nature of just and unjust. By injustice I mean the dominion of anger and fear, and pleasure and pain, and envy and desire in the soul, whether doing harm or not: by justice I mean the rule of the opinion of the best, whether in states or individuals, extending to the whole of life; although actions done in error are often thought to be involuntary injustice. No controversy need be raised about names at present; we are only desirous of fixing in our memories the heads of error. And the pain which is called fear and anger is our first head of error; the second is the class of pleasures and desires; and the third, of hopes which aim at true opinion about the best, the latter falling into three divisions, accordingly as they proceed from anger, desire, ignorance, making in all five. And the laws relating to them may be summed up under two heads. 'What are they?' Deeds of violence and irregularity, deeds of darkness and deceit; to which may be added the combination of both, and these last should be visited with the utmost rigour of the law. 'Very properly.'

Let us now return to the enactment of laws. We have treated of sacrilege, and of treason, and of sedition. Any of these crimes may be committed by a person not in his right mind, or in the second childhood of old age. And if this is proved before the select tribunal, the person in question shall only have to pay for the injury, and not be punished further. In case of homicide he shall be exiled for a year, and if he return before the expiration of the year, shall be retained in the public prison two years.

Homicides may be divided into voluntary and involuntary: and first of involuntary homicide. He who unintentionally kills another man at games or at gymnastics duly authorized by the archons, whether death follow immediately or after an interval, shall be acquitted, subject only to the purification required by the Delphian Oracle. Any physician whose patient dies against his will shall in like manner be acquitted. Any one who unintentionally kills a slave, with or without weapons, shall bear the master of the slave harmless, or pay a penalty amounting to twice the value of the slave, and to this let him add a purification greater than in the case of the deaths at the games. If a man kill his own slave, a purification only is required of him. If he kill a freeman unintentionally, let him also make purification, not forgetting the ancient tradition which says that the murdered man is indignant at seeing his murderer walk about in his own former haunts, and that he terrifies him with the consciousness of his crime. And therefore the homicide should go into exile for a year, and keep away from his own land or that of the murdered man. If he complies with this condition, the nearest kinsman of the deceased shall take pity upon him and be reconciled to him; but if he refuses to remain in exile, or attempts to go and sacrifice before he has been purified, then let the kinsman proceed against him, and demand a double penalty. Or if the kinsman neglects this duty, then he himself shall incur a curse, and any one who likes may proceed against him, and compel him to leave his country for five years. If a stranger involuntarily kill a stranger, any one may proceed against him in the same manner: and the homicide, if he be a metic, shall be banished for a year; but if he be an entire stranger, whether he have murdered metic, citizen, or stranger, he shall be banished for ever; and if he return, he shall be punished with death, and his property shall go to the next of kin of the murdered man. If he come back by sea against his will, he

shall be kept with his feet in the water waiting for a vessel to sail; or if he be brought back by land, the magistrates shall send him unharmed beyond the border.

Next follows murder done from anger, which is of two kinds—either arising out of a sudden impulse, and attended with remorse; or retaliation of an injury, which is unattended with remorse. The cause of both is anger, and both are intermediate between voluntary and involuntary. The one which is committed from sudden impulse, though not wholly involuntary, bears the image of the involuntary, and is therefore the more excusable of the two, and should receive a gentler punishment. The act of him who nurses his wrath is more voluntary, and therefore more culpable. The degree of culpability depends on the presence or absence of intention, to which the degree of punishment should correspond. For the first kind of murder, that which is done from anger, let two years exile be the penalty; for the second, that which is accompanied with malice prepense, three. When the time of exile has expired, the judges shall send twelve of their number to enquire into the manner of life of the exiles; and they shall impose a rule upon them which shall be binding. He who after returning repeats the offence, shall be exiled and return no more. He who in a fit of anger kills his own slave, shall purify himself; and in the case of another man's slave, he shall pay to him double the value. Any one may proceed against the offender if he appear in public places, not having been purified; and may bring to trial both the next of kin to the dead man and the homicide, and shall compel the one to exact, and the other to pay, a double penalty. If a slave kill his master, or a freeman who is not his master, in anger, the kindred of the murdered person may do what else they please with him, but they must not spare his life. If a father or mother kill their son or daughter in anger let them remain in exile for three years; and on their return let them separate, and not continue to cohabit, or have the same sacred rites with those whom they have deprived of a brother or sister. The same penalty is decreed against the husband who murders his wife, or the wife who murders her husband. Let them be absent three years, and on their return never join in the sacred rites or meals of their children. Nor is a brother or sister who have lifted up their hands against a brother or sister, ever to partake of the hearth or sacrifices of their parents. If a son feels such violent hatred against his father or

mother as to take the life of either of them, then, if the father forgive him before his death, he shall only suffer the penalty due to involuntary homicide ; but if he be unforgiven, there are many laws against which he has offended ; he is guilty of outrage, impiety, sacrilege all in one, and deserves to be put to death many times over. If the law will not allow him to kill the author of his being even in defence of his own life, no other penalty can be inflicted upon him. If a brother kill a brother in self-defence, or a citizen a citizen, or a slave a slave, or if a citizen kill a citizen, or a stranger a stranger, let them be free from blame, as he is who slays an enemy in battle. But if a slave kill a freeman, let him be as a parricide. In all cases, however, the forgiveness of the injured party may acquit the agents ; and then they shall only be purified, and remain in exile for a year.

Enough of actions that are involuntary, or done in anger ; let us proceed to voluntary and premeditated actions. The great source of voluntary crime is the desire of money, which is begotten by evil education ; and this arises out of the false praise of riches, common both among Hellenes and barbarians, which, although in the third rank of goods, is placed by them in the first. For the body is not for the sake of wealth, but wealth for the body, as the body is for the soul. If this were better understood, the crime of murder of which avarice is the chief cause, would soon cease among men. Next to avarice, ambition is a source of crime, dangerous to the ambitious man himself, as well as to the chief men of the state. And next to ambition, base fear is a motive which has led many an one to commit murder in order that he may get rid of the witnesses of his crimes. Let this be said as a prelude to all enactments about crimes ; there may be added a doctrine of revenge or retaliation in the world below : and if a man is deterred by the fear of a future state of punishment, he will have no need of the law ; but in case he disobey, let the law be declared against him as follows :—He who of malice prepense kills one of his kindred, shall in the first place be outlawed ; neither temple, harbour, nor agora shall be polluted by his presence. And if a kinsman of the deceased refuse to proceed against his slayer, he shall take the curse of pollution upon himself, and also be liable to suffer punishment at the hands of any one who will avenge the dead. Let him who is willing, after due sacrifices and purifications, carry out the process of justice appointed by the legislator. The exact mode will be best determined by a conclave

of prophets and guardians of the law, and the judges of the cause shall be the same as in cases of sacrilege. He who is convicted shall be punished with death, and not be buried within the limits of the country of the murdered person. He who runs away shall undergo perpetual banishment; and if he return, he may be put to death with impunity by any of the citizens, or bound and delivered to the archons. He who brings an accusation shall demand satisfactory bail of the accused, and if this is not forthcoming, the magistrate shall keep him in prison against the day of trial. If a man commit murder by the hand of another, he shall be tried in the same way as in the cases previously supposed, but if the offender be a citizen, he shall not be deprived of burial in the land.

If a slave kill a freeman, or conspire to kill him, let him be taken to the grave of the murdered man, and there receive as many stripes at the hand of the public executioner as the person who took him pleases; and if he survive he shall be put to death. If a slave be put out of the way to prevent his informing of some crime, his death shall be punished like that of a citizen. If the putting of him to death have arisen out of some of those horrible crimes which occur in families where there is a bad state of society, of which the legislator, however unwilling, cannot avoid taking cognizance, he will repeat the old saw or myth of the divine vengeance against the perpetrators of such atrocities. The myth will say that the murderer must suffer what he has done: if he have slain his father, he must be slain by his children; if his mother, he must become a woman and perish at the hands of his offspring in another age of the world. Such a preamble announcing the anger of the Gods may terrify him; but if, notwithstanding, he falls into the recklessness of crime, and murders father or mother or brethren or children, the mode of proceeding shall be as follows:—Him who is convicted, the officers of the judges shall slay, and expose naked without the city in a place where three ways meet; and all the magistrates shall cast a stone upon his head and justify the city, and he shall be thrown unburied beyond the border. But what shall we say of him who deprives destiny of her right, and takes the life which is dearest to him, that is to say, his own; and this not from any disgrace or calamity, but from cowardice and indolence? The manner of his burial and the purification of his crime is a matter for God to decide and for his kinsmen to execute. Let him, at any rate, be buried alone

in some undistinguished spot, and be without name or monument. If a beast kill a man, not in a public contest, let him be slain and carried without the border by the relations of the deceased. Also inanimate things which have caused death, except in the case of lightning and other visitations from heaven, shall be carried without the border. If the body of a dead man is found, and the murderer, after every effort to detect him, remains unknown, the trial shall take place all the same, and the unknown murderer, if found guilty, shall be warned not to set foot in the temples or come within the borders of the land; if discovered, he shall die the death, and his body shall be cast out. A man is justified in taking the life of a thief entering the house by night, of a footpad, of a violator of women or youth; and he may take the life of another in defence of father, mother, brother, or other relations.

The nurture and education which are necessary to the existence of men have been considered, and the punishment of acts of violence which destroy life. There remain maimings, wounding, and the like, which admit of a similar division into voluntary and involuntary. About this class of actions the preamble shall be: Whereas men would be like wild beasts unless they obeyed the laws, the first duty of citizens is the care of the public interests, which unite and preserve states, as private interests distract them. A man may know what is for the public good, but if he be undisciplined, human nature will impel him to seek pleasure instead of virtue, and so darkness will come over his soul and over the state. If he had knowledge, he would have no need of law; for knowledge is the perfection of law. But such a freeman, 'whom the truth makes free,' is hardly to be found; and therefore law and order are necessary, which are the second best, and they regulate many things, but not everything. For actions have innumerable characteristics, which must be partly determined by the law and partly left to the judge. The judge must determine the fact; nor can the law always prescribe the punishment. What shall the law prescribe, and what shall be left to the judge? A city is unfortunate in which the tribunal is either secret and speechless, or, what is worse, noisy and public, and like a theatre, resounding with the applause and censure of the advocates. Such courts a legislator would rather not have; but if he must have them, he will speak plainly himself, and leave as little as possible in the power of the court. But where the courts are good, and presided over by well-trained judges, the penalties to be inflicted

may be in a great measure left to them; and as there are to be good courts among our colonists, there will be no need for us to determine beforehand the exact proportion of the penalty and the crime. Returning, then, to our legislator, let us indite a law about wounding, which shall run as follows:—He who wounds with intent to kill, and fails in his object, shall be tried as if he had succeeded. But since God has favoured both him and his victim, instead of being put to death, he shall be allowed to go into exile and take his property with him, the damage due to the sufferer having been previously estimated by the court, which shall be the same as would have tried the case if death had ensued. If a child intentionally wound its parent, or a servant his master, or if brother or sister wound brother or sister with malice prepense, the penalty shall be death. If a husband or wife wound one another with intent to kill, the penalty which is inflicted upon them shall be perpetual exile, and if they have children not yet grown up their property shall be placed in the hands of trustees. If they have no children, their kinsmen male and female shall meet, and after a consultation with the priests and guardians of the law, shall appoint an heir of the house; for the house and family belong to the state, being a 5040th portion of the whole. And the state is bound to preserve her families happy and holy; therefore, when the heir of a house has committed a capital offence, or is in exile for life, the house is to be purified, and then the kinsmen of the house and the guardians of the law are to enquire about those who are conspicuous for virtue, and introduce one of them to be the heir and priest of the house. He shall assume the fathers and ancestors of the family, while the first son dies in dishonour and his name is blotted out.

Some actions are intermediate between the voluntary and involuntary, and differ in degree. Those done from anger are of this class. If a man wounds another in anger, let him pay double the value of the injury, if curable; or fourfold, if curable, and at the same time dishonourable; and fourfold, if incurable; the payment is to be assessed by the judges. If the wounded person is rendered incapable of military service, besides the other penalties which he undergoes the injurer shall serve in his stead, or be liable to a suit for refusing to serve. If brother wounds brother, then their parents and kindred, of both sexes, shall meet and judge the crime. The damages shall be assessed by the parents; and if the amount fixed by them is disputed, an appeal

shall be made to the male kindred ; or in the last resort to the guardians of the law. Parents who wound their children are to be tried by judges of at least sixty years of age, who have children of their own ; and they are to determine whether death, or what greater or in any degree less punishment, is to be inflicted upon them—no relatives are to take part in the trial. If a slave in anger smite a freeman, he is to be delivered up by his master to the injured person. If the master suspect collusion between the slave and the injured person, he may try the matter. And if he fail he shall pay three times the injury ; or if he obtain a conviction, the contriver of the conspiracy shall be made his slave. He who wounds another unintentionally, shall pay single and not double damages. The lawgiver cannot control accidents.

In all outrages and acts of violence, the elder is to be more regarded than the younger ; as among the Gods so also among men. An injury done by a younger man to an elder is abominable and hateful ; but the younger man who sustains an injury at the hands of an elder is to bear with him patiently, considering that he who is twenty years older is *loco parentis*. Let him keep his hands, too, from the stranger ; instead of taking upon himself to chastise him when he is insolent, he shall bring him before the wardens of the city, who, not without thought of the God who protects strangers, shall inflict upon him as many blows as he has given ; or if he be innocent, they shall warn and threaten his accuser. When an equal strikes an equal, whether an old man an old man, or a young man a young man, let them use only their fists and have no knives. He who being above forty years of age commences a battle, or retaliates, shall be counted mean and base.

To this preamble, let the law be added : If a man smite another who is his elder by twenty years or more, let the bystander, in case he be older than the combatants, part them ; or if he be younger than the person struck, or of the same age with him, let him defend him as he would a father or brother ; and let the striker be brought to trial, and if convicted imprisoned for a year or more at the discretion of the judges. If he be a stranger, he shall be imprisoned for two years, and if a metic for three. He who is standing by and gives no assistance, shall be punished according to his class in one of four penalties—a mina, fifty, thirty, twenty, drachmas. The generals and other superior officers of the army shall form the court who try this class of offences. Laws are made to instruct the good, and in the hope that there may

be no need of them; also to control the bad, whose hardness of heart will not be hindered from crime. The uttermost penalty is reserved for the parricide and the matricide, who despise the universal moral sense and tradition of mankind; for such there are reserved tortures worse than death in the world below. These, however, are not believed by them, else there would be no such criminals—wherefore the tortures which will then await them must be anticipated in life. Let the law be as follows:—

If a man, being in his right mind, dares to smite his father and mother, or his grandfather and grandmother, let the passer-by come to the rescue; and if he be a metic or stranger who comes to the rescue, he shall have the first place at the games; or if he do not come to the rescue, he shall be a perpetual exile. Let the citizen in the like case be praised or blamed, and the slave receive freedom or a hundred stripes. The wardens of the agora, the city, or the country, shall see to the execution of the law. And he who is an inhabitant of the same place and is present shall help; or if he do not he shall be under a curse.

If a man be convicted of assaulting his parents, let him be banished from the city into the country, and let him abstain from sacrificing; and if he do not abstain, let him be punished by the wardens of the country; and if he return to the city, let him be put to death. If any freeman consort with him, let him be purified before he return to the city. If a slave strike a freeman, whether citizen or stranger, let the bystander be bound to seize and deliver him into the hands of the injured person, who may inflict upon him as many blows as he pleases, and shall then return him safely to his master. The law will be as follows:—The slave who strikes a freeman shall be bound by his master, and not set at liberty without the consent of the person whom he has injured. All these laws apply to women as well as to men.

BOOK X. The greatest wrongs arise out of youthful insolence, and the greatest of all are committed against public temples: they are in the second degree great when private rites and sepulchres are insulted; in the third degree, when committed against parents; in the fourth degree, when they offend against the authority or property of the rulers; in the fifth degree, when the rights of individuals are violated. Most of these offences have been already considered; but there remains the question of admonition and punishment of offences against the

Gods. Let the admonition be in the following terms:—No man who ever did or said anything impious, had a true belief in the existence of the Gods; but, either he thought that there were no Gods, or that they did not care about men, or that they were easily appeased by sacrifices and prayers. ‘What shall we say or do to such persons?’ My good sir, let us first hear the jests which they in their superiority will make upon us. ‘What will they say?’ Probably something of this kind:—‘Strangers, you are right in thinking that some of us do not believe in the existence of the Gods; while others assert that they do not care for us, and others that they are propitiated by prayers and offerings. But we want you to preach to us before you threaten; you should prove that there are Gods, and that they are too good to be bribed. Poets, priests, prophets, rhetoricians, even the best of them, speak to us of atoning for evil, and not of avoiding evil. From gentle legislators we ask for instruction, which may, at least, have the persuasive power of truth, if no other.’ What have you to say? ‘Well, there is no difficulty in proving the being of the Gods. The sun, and earth, and stars, moving in their courses, the recurring seasons, are evidences of their existence; and there is the general opinion of mankind.’ I am afraid that the unbelievers—not that I have any respect for them—will despise us. You do not seem to see that their impiety proceeds, not from sensuality, but from ignorance taking the garb of wisdom. ‘What do you mean?’ At Athens there are current tales, written both in metre and out of metre, of a kind which are not tolerated in a well-regulated state like yours. The oldest of them speak of the origin of the world, and they go on to tell of the birth and life of the Gods. Now these narratives have not a good influence on family relations; but as they are old we will let them pass, and consider another kind of tales, invented by a younger generation of wiseacres, who are fond of repeating that the Gods are earth and stones, which can have no care of human things, and that theology is a cooking-up of words. ‘One such teacher is bad enough, and alas! you imply that there are many of them.’ What shall we say or do? Shall we suppose some impious man to charge us with assuming the existence of the Gods, and make a defence? Or shall we leave the preamble and go on to the laws? ‘No man hurries us, and we have often said that the shorter and worse method should not be preferred to the longer and better. The proof that there are Gods who are good, and the friends of justice, is the preamble of all law.’ Come, then, and

let us talk with the impious, who have been brought up from their infancy in the belief of religion, and have heard their own fathers and mothers praying for them and talking with the Gods as if they were convinced of their existence; who have seen mankind prostrate before the rising and setting sun and moon at every turn of fortune, and have despised and disbelieved all this. Can we keep our temper with them, when they compel us to argue on such a theme? We must; or like them we shall go mad, though with more reason. Let us address them as follows:

O my son, you are young; time and experience will make you change many of your opinions. Do not be hasty in forming a conclusion about the divine nature; and let me mention to you a fact which I know. You and your friends are not the only or the first persons who have held these opinions about the Gods. There are always a considerable number who are infected by them: I have known many of these persons, and can assure you that no one who was an unbeliever in his youth ever persisted till he was old in denying the existence of the Gods. The two other opinions, first, that the Gods exist and have no care of men, secondly, that they care for men, but may be propitiated by sacrifices and prayers, may indeed last through life in a few instances, but even this is not common. I would beg of you to be patient, and learn the truth of the legislator and others; in the mean time abstain from impiety. 'Thus far your address is admirable.'

I will now speak of a strange doctrine, which is regarded by many as the crown of philosophy. They say that all things come into being either by art or nature or chance, and that the greater things are done by nature and chance, and the lesser things by art, which receives from nature the larger creations and fashions them in detail. 'What do you and they mean?' They mean to say that fire, water, earth, and air all exist by nature and chance, and not by art; and that out of these the sun, moon, stars, and earth were afterwards framed, and are inanimate substances, moved by chance, according to a natural kindred of hot and cold, hard and soft.

Thus, in their opinion, the heaven and earth were created, as well as the animals and plants, and by these two causes—nature and chance. Art came later, and is of mortal birth; by her power were invented certain images and partial imitations of the truth, of which kind are music and painting: but they say that there are other arts which combine with nature, and have a deeper truth, such as medicine,

husbandry, gymnastics. Also the greater part of politics they imagine to co-operate with nature, but in a less degree, having more of art, and that legislation is wholly a work of art. 'How do you mean?' In the first place, they say that the Gods exist neither by nature nor by art, but by the laws of states, which are different in different countries; and that virtue is one thing by nature and another by convention; and that justice is altogether conventional, and made by law. This is repeated to young men, both in prose and verse, and leads to all manner of impieties, and the pretended life according to nature and in disobedience to law; for nobody believes the Gods to be such as the law affirms. 'Too true; and oh! how injurious to states and to families!' But then, what should the lawgiver do? Should he stand up in the state and threaten all mankind with the dire consequences of unbelief, at the same time making no attempt to calm and persuade them? 'Nay, Stranger, a legislator who is worth anything ought never to weary of endeavouring to help the people in their belief that there are Gods; law and art should be affirmed by him to be the creations of mind.' Yes, Cleinias; but we are entering on questions which are difficult and tedious. 'And shall our patience, which was not exhausted in the enquiry about music or drink, weary now of discoursing about the Gods? Laws may be difficult, but when written down they remain, and time and diligence will decipher them; if they are useful there would be neither reason nor religion in rejecting them on account of their length.' Most true. And the general spread of unbelief shows that the legislator should do something in vindication of the laws, when they are being undermined by bad men. 'He should.' You agree with me, Cleinias, that the heresy consists in supposing earth, air, fire, and water to be the first of all things. These the heretics call nature, and conceive them to be prior to the soul. 'I agree.' You would further agree that natural philosophy is the source of this impiety—the study appears to be pursued in a wrong way. 'In what way do you mean?' The error consists in transposing first and second causes. 'I do not yet understand your meaning.' I mean to say that they err in not knowing that the soul is before the body, and before all other things, and the author and ruler of them all in their vicissitudes. And if the soul is prior to the body, then the things of the soul are prior to the things of the body. 'Certainly.' In other words, opinion, attention, mind, art, law, are prior to sensible qualities; and the first and greater works of creation are the results of art and mind, whereas the works of nature, as

they are improperly termed, are secondary and subsequent. 'Quite true.' When they speak of nature they seem to mean the generation of the first elements. And if the soul is first, and not fire and air, then the soul may be truly said to have a creative power. But this can only be on the supposition that the soul is prior to the body. 'Most true.' Shall I go to the point? 'By all means.' I fear that the greenness of our argument will ludicrously contrast with the ripeness of our ages. But as we must go into the water, and the stream is strong, I will first try the experiment of crossing by myself, and if I arrive at the bank, you shall follow. Remembering that you are not in the habit of answering questions, I will interrogate myself with the view of establishing the priority of the soul to the body. 'Do so.' I must first pray the Gods to assist at the demonstration of their own existence—never was there a more fitting occasion. Let me now hold fast to the rope, and enter into the depths: Shall I put the question to myself in this form?—Are all things at rest, and is nothing in motion? or are some things in motion, and some things at rest? 'The latter.' And are they moving or resting in some place or places? 'Yes.' There may be motion in the same place, as in revolution on an axis, which is imparted swiftly or slowly to the lesser and larger circle; and there may be motion in different places, having sometimes one centre of motion and sometimes more. When bodies in motion come against other bodies which are at rest, they are divided by them, and when they meet other bodies coming from an opposite direction they unite with them; and they grow by union while their constitution remains the same, but are destroyed either by union or division, when their constitution is lost. There is a growth from one dimension to two, and from a second to a third, which then becomes perceptible to sense; and these are all the motions possible with the exception of two. 'What are they?' Just the two with which our enquiry is concerned; for our enquiry relates to the soul. Now there is one kind of motion which is only able to move other things; there is another which can move itself as well. 'Granted.' That which moves and is moved by another is the ninth kind of motion; that which is self-moved and moves others is the tenth. And this tenth kind of motion is the mightiest, and is really the first, and is followed by that which was improperly called the ninth. 'How do you mean?' Must not that which is moved by others finally depend upon that which is moved by itself? Nothing can be effected by any transition prior to

self-motion. Then the first and eldest principle in motion, whether in things at rest or not at rest, will be the principle of self-motion; and that which is changed by others and moves others will be the second. 'True.' Let me ask another question :

What is the name which is given to self-motion when manifested in any material substance? 'Life.' The soul is life? 'Very good.' And are there not three kinds of knowledge — a knowledge (1) of the essence, (2) of the definition, (3) of the name? And sometimes the name leads us to ask the definition, sometimes the definition to ask the name; for example, number may be defined as that which is divisible into two equal parts, and when thus divided is termed even, and the definition of even and the word 'even' have the same meaning? 'Very true.' And what is the definition of that which is named 'soul'? Must we not reply the self-moved? And have we not proved that the self-moved is the source of motion in other things? 'That has been proved.' And the motion which is not self-moved will be inferior to this? 'True.' And if so, we shall be right in saying that the soul is prior and superior to the body, and the body by nature subject and inferior to the soul. 'Quite right.' And we agreed that if the soul was prior to the body, the things of the soul were prior to the things of the body? 'Certainly.' And therefore desires, and manners, and thoughts, and true opinions, and recollections, are prior to the length and breadth and force of bodies. 'Of course.' In the next place, we acknowledge that the soul is the cause of good and evil, just and unjust, if we suppose her to be the cause of all things. 'Certainly.' And the soul which orders all things must also order the heavens? 'Of course.' One soul or more? More, I will answer for you; less than two are inconceivable, one good, the other evil. 'Most true.' The soul directs all things in heaven and earth and sea by her movements, which we call will, consideration, attention, deliberation, opinion true and false, joy, sorrow, courage, fear, hatred, love, and similar affections. These are the primary movements, and they receive the secondary movements of the body, and guide all things to increase and decline, separation and union, and to all the qualities which accompany them—cold, hot, heavy, light, hard, soft, white, black, sweet, bitter; and the soul, herself a goddess, uses these and other qualities, and by the help of the divine mind guides all things into truth and happiness, or under the impulse of folly works out an opposite result. For the controller of heaven and earth and the circle of the world is

either the wise and good soul, or the foolish and vicious soul, working in them. 'What do you mean?' If we say that the whole course and motion of heaven and earth is in accordance with the workings and reasonings of mind, clearly the best soul must have the care of the heaven, and guide it along that better way. 'True.' But if the heavens move wildly and disorderly, then they must be under the guidance of the evil soul. 'True again.' What is the nature of the movement of the soul? We must not lead people to suppose that they can see and know the soul with their bodily eyes, any more than they can see objects in the midday sun; they had better look at an image only. 'How do you mean?' Let us find in the ten kinds of motion an image of the motion of the mind. You remember, as we said, that all things are divided into two classes; and some of them were moved and some at rest. 'Yes.' And of those which were moved, some were moved in the same place, others in more places than one. 'Just so.' The motion which was in one place was circular, as in the motion of a top; this is akin to the course of mind. 'What do you mean?' The motion of the top in the same place, and in the same relations, is an excellent and ingenious image of the motion of mind. 'Very true.' The motion of the other sort, which has no fixed place or manner or relation or order or proportion, is a species of motion akin to folly and nonsense. 'Very true.' After what has been said, there is no difficulty in distinctly stating that, since the soul carries round all things, some soul which is either very good or the opposite, carries round the circumference of heaven. But we cannot suppose that soul to be other than the best. Again, the soul carries round the sun, moon, and stars, and there is good reason for believing that if the sun has a soul, then either the soul of the sun is within and moves the sun as the soul moves the body; or, secondly, the sun is contained in some external air or fire, which the soul provides; or, thirdly, the course of the sun is given by the soul acting in some miraculous manner without the body. 'Yes, in one of those ways the soul must guide all things.' And this soul of the sun, which is better than the sun, whether driving him in a chariot or employing any other agency, is by every man called a God? 'Yes, by every man who has any sense.' And of the seasons, stars, moon, and year, in like manner, it may be affirmed that the soul or souls from which they derived their excellence are divine; and without insisting on the manner of their working, no one can deny that all things are full of Gods. 'No one.'

And now let us offer an alternative to him who denies that there are Gods. 'What alternative?' Either he must show that the soul is not the origin of all things, or he must live for the future in the belief that there are Gods.

Next, as to the man who believes in the Gods, but refuses to acknowledge that they take care of human things — let him too have a word of admonition. 'Best of men,' we will say to him, 'some affinity to the Gods leads you to honour them and to believe in them. But there are strokes of fortune, which you have observed; the rewards of wicked men are often praised by poets and approved by the world, and these draw you away from your natural piety. Perhaps you have seen the wicked growing old in prosperity, and leaving great offices to their children; or you have watched the tyrant succeeding in his career of crime; and seeing all these things you were led to believe in an irrational way that the Gods take no care of human things. That your error may not increase, I will endeavour to purify your soul.' Do you, Megillus and Cleinias, make answer for the youth, and when we come to a difficulty, I will carry you over the water. 'Very good.' There is no difficulty in proving to him that the Gods care for the small as well as the great, for he heard what was said of their goodness and of their having all things under their hand. 'He certainly heard.' Then now let us enquire what is meant by the virtue of the Gods. To possess mind belongs to virtue, and the contrary to vice. 'That is what we say.' And is not courage a part of virtue, and cowardice of vice? 'Certainly.' And to the Gods we ascribe virtues; but are idleness and indolence virtues? 'Of course not.' And is God to be conceived of as a careless, indolent fellow, whom the poet would compare to a drone? 'Impossible.' Can we be right in praising any one who cares for great matters and leaves the small to take care of themselves? Whether God or man, he who does so, must either think the neglect of such matters to be of no consequence, or he is indolent and careless. But no one would say that he neglects them because he is unable to attend to them. 'Certainly not.'

And now we will examine both classes of offenders against the Gods — the one who say that they may be appeased, the other that they take no care of small matters: do they not acknowledge that the Gods know all things, and have all power, human and divine, and that they are best? 'Certainly.' Then they cannot be indolent, for

indolence is the offspring of idleness, and idleness of cowardice, and there is no cowardice in God. 'True.' If they neglect small matters, they must either know or not know that such things are not to be regarded. But of course they know, and knowing they cannot be supposed to neglect their duty, overcome by the seductions of pleasure or pain? 'Impossible.' Have not all human things a soul, and is not man the most religious creature in the earth, and the possession of the Gods, as the heavens are also their possession? And the Gods, being the most provident beings, should take care of their property, whether small or great. Consider further, that the greater the power of perception, the less the power of action. 'What do you mean?' It is harder to see and hear the small than the great, but easier to control them. Suppose a physician who had to cure a patient—would he ever succeed if he attended to the great and neglected the little? 'Impossible.' And is not life made up of littles?—the pilot, general, householder, statesman, all attend to small matters; and the builder will tell you that large stones will not lie without small ones. Let us not then suppose God to be inferior to mortal craftsmen, who in proportion to their skill are careful in the details of their work; or that the best and wisest is a lazy good-for-nothing, who wants a holiday, and thinks small and easy matters to be beneath his notice. 'Never, never!' He who charges the Gods with neglect has been forced to admit that he is in error; but I should like further to persuade him that the author of all has put all together for the preservation of the whole, and that the smallest part has an appointed state of action or passion, and that the least action or passion of any part has a presiding minister. You, we say to him, are a minute fraction of this universe, created with a view to the whole; the blessed world is not made for the sake of you, but you are made to increase the blessedness of the whole; for the good physician and the good artist regard the whole first, and afterwards the parts. And you are annoyed at not seeing how that which is best for you is best also for the universe. The soul has many changes of bodies; and all that the player can do is to put the pieces into their right places. 'What do you mean?' I mean that God acts in the way which is simplest and easiest. Where change is ever going on, and new forms and fashions of life are springing up, the transposition of the Cosmos is endless; and yet there is not much trouble in the government of the world. 'What do you mean?' I mean to

say that when the king saw the actions of the living souls and bodies, and the virtue and vice which were in them, and the indestructibility of them, (although they were not eternal,) he contrived to place them where virtue might conquer and vice be overcome as far as possible; and with this view he gave them a place and seat adapted to them, leaving the direction of their separate actions to men's own wills and characters, which make us to be what we are. 'That is very reasonable.' All things which have a soul are changing, and possess in themselves the principle of change, and so move according to the law and order of fate; when they change gradually they move along the surface of the ground; when they change greatly for the worse, they are weighed down into Hades and the infernal world. And in all great changes in the direction of good and evil which are produced by the will of the soul and the mighty influence of others, there is a change of place. The good soul, which has intercourse with the divine nature, passes into a holier and better place. The evil soul, in like manner, as she grows worse changes her place for the worse. This is the law of the Gods in heaven—the worse to the worse, the better to the better, like to like, in life and in death, and in every state of being or of suffering. You, O youth, who fancy yourself unnoticed by the Gods, shall depart to more unrighteous souls, and shall endure what those who are like you see fit to impose upon you. That is the law which will govern you, and which no man will ever boast that he has escaped. Thou art not so little that thou canst creep into the earth, or so high that thou canst mount to heaven; but either here, or in the world below, or in some yet more savage place, you shall pay the penalty. This is also the explanation of the prosperity of the wicked, in whose actions as in a mirror you seemed to see the neglect of the Gods, not considering the end of these men and their relation to the whole. And yet without knowing these things how can you form any idea of their real happiness? If Cleinias and Megillus and I succeed in persuading you that you know not what you say about the Gods, God will help you; but if there is still any deficiency of proof, hear our answer to the third opponent.

Enough has been said to prove that the Gods exist and care for us; that they can be propitiated, or that they receive gifts is not to be allowed or admitted for an instant. 'Let us proceed.' Tell me, by the Gods, I say, how the Gods are to be propitiated by us? Are they

not rulers, charioteers, pilots, perhaps generals, or physicians healing the strife of bodily disease, husbandmen observing the perils of the seasons, shepherds watching their flocks? To whom shall we compare them? We acknowledged that the world is full both of good and evil, but having more of evil than of good. There is an immortal conflict going on, in which Gods and demigods are our allies; and the most extraordinary care is required to save the property of the Gods, that is to say, the soul of man, which is preserved by justice and virtue, and destroyed by folly and wickedness. There is little of the first to be found on earth; and brutal and unjust natures fawn upon their keepers, who may be dogs or shepherds, as they may be also the best and most perfect of masters. But we affirm that dishonesty is to human souls what disease is to human bodies, what plague or pestilence is to the seasons, what injustice is to states. 'Just so.' And they who maintain that the Gods can be appeased, must say that they forgive the sins of men, if they are allowed to share in their dishonesties; as you might suppose wolves to throw the dogs a bit, and then to be left by them in peace, that they may devour the flock. 'That is the argument.' But let us apply our images to the Gods—are they the pilots who eat and are drunken and wreck their own ships—or the charioteers who are bribed to lose the race—or the generals, or doctors, or husbandmen, who are perverted from their duty—or the dogs who are seduced by wolves? 'God forbid.' Are they not rather our best guardians; and shall we suppose them to fall short even of a moderate degree of human and canine virtue, which will not pervert justice for reward? 'Impossible.' He, then, who maintains such a doctrine, is the most blasphemous of mankind.

And now our three points are proven; and we are agreed (1) that there are Gods, (2) that they have a care for man, (3) that they are inflexible in justice. I have spoken warmly, from a fear lest this impiety of theirs should lead to a perversion of life. And our warmth will not have been in vain, if we have succeeded in persuading these men to abominate themselves, and to change their ways. 'There may be a hope of doing so; and, at any rate, the sermon does credit to the lawgiver.' Then now that the preamble is completed, we will make a proclamation commanding the impious to leave their ways; and in case they refuse, the law shall be added: If a man is guilty of impiety in word or deed, let the bystander inform the rulers, and let the rulers

bring him before the court. If any of the rulers refuse to act, he also shall be tried for impiety; and if he be found guilty, he shall be fined for each offence. All such criminals are to be imprisoned. There shall be three prisons—one for common offences against life and property; another, in connection with the nocturnal council, which is to be called the house of improvement; a third, in some desolate and wild region in the centre of the country, which shall be the house of vengeance. There are three causes of impiety, and from each of them spring two kinds of impiety, six in all. First, there is the impiety of those who deny the existence of the Gods; these may be honest men, haters of evil, who are only dangerous because they talk loosely about the Gods and make converts; but there is also a vicious and self-indulgent class of them, who are full of craft and licentiousness. To this latter belong diviners and enchanters, despots and demagogues, generals, hierophants of private mysteries, and cunning sophists. The first class shall be only imprisoned and admonished. The second class should be put to death, if they could be, many times over. The two other sorts of impiety, first of those who deny the care of the Gods, and secondly, of those who affirm that they may be propitiated, have similar subdivisions, varying in degree of guilt. Those who have learnt to blaspheme from ignorance or evil education, shall be imprisoned in the house of improvement for five years at least, and not allowed to see any one but members of the council, who shall converse with them touching their souls' health. If any of the prisoners come to their right mind, at the end of five years let them be restored to sane company; but he who again offends shall die. As to that class of monstrous natures who not only believe that the Gods are negligent, or may be propitiated, but pretend to practise on the souls of quick and dead, and promise to charm the Gods, and to effect the overthrow of houses and states—he, I say, who is guilty of these things, shall be bound in the central prison, and shall have no intercourse with any freeman, receiving only his daily rations of food; and if he die, let him be cast beyond the border. But his sins shall not be visited upon his children, who, like other orphans, shall be educated by the state. Further, let there be a general law which will have a tendency to repress actions of impiety. A man shall not be allowed to have religious services in his house, but he shall go with his friends to pray and sacrifice in the temples. The reason of this is, that religious institutions can only be framed by a great intelligence.

But women and weak men are always consecrating the event of the moment; they are under the influence of dreams and visions, and awakenings, and they build altars and temples in every village, and on every open spot. The law is designed to prevent this, and also to deter men from the practice of propitiating the Gods by secret sacrifices, which only multiply their sins. Therefore let the law run—No one shall have private religious rites; and if a man or woman who has not been previously noted for any impiety offend in this way, let him be admonished to remove his rites to a public temple; but if he be one of the impious sort, and has offered a sacrifice which is impure, supposing him to be of full age and serious purpose, he shall be brought to trial before the guardians, and if he be found guilty, let him die.

BOOK XI. As to dealings between man and man, the principle of them is simple—Thou shalt not take what is not thine; and may I do to others as I would that they should do to me. First, of treasure trove:—May I never find, or desire to find, or be induced by the counsel of diviners, to lift a treasure which one who was not my ancestor has laid down; for I shall not gain so much in money as I shall lose in virtue. The saying, ‘Move not the immovable,’ may be repeated in a new sense; and there is a common belief which asserts that such deeds prevent a man from having a family. To him who is careless of such consequences, and, despising the word of the wise, reaps where he has not sown, and lifts a treasure which is not his—what will be done by the hand of the Gods, God only knows,—but I would have him who sees the offender, inform the magistrates in town or country; and they, when they have received the information, shall send to Delphi and act upon the decision of the oracle. If the informer be a freeman, he shall be honoured; if a slave, he shall be enfranchised; but if the freeman do not inform, he shall be dishonoured, and the slave if he does not inform, shall be put to death. If a man leave anything great or small, intentionally or unintentionally, in the possession of another, let him who finds the property deem the deposit sacred to the Goddess of ways. And he who appropriates the same, if he be a slave, shall be beaten with many stripes; if a freeman, he shall pay tenfold, and be held to have done a dishonourable action. If a person says that another has something of his, and the other allows that he

has, but maintains the property in dispute to be his own, let the ownership be proved out of the registers of property; and, if the property is registered as belonging to some one who is absent, possession shall be given to him who offers the best security on behalf of the absentee; or if the property is not registered, let it remain with the three eldest archons, and if the thing be an animal, the defeated party must pay the cost of its keep to the archons. A man may carry off his own runaway slave or the runaway slave of a friend for safe keeping. If any one claims a slave he must produce three responsible persons as securities; and if he do not, he will be liable, if he be cast, to pay double damages for violence. A freedman who does not pay due respect to his patrons, may also be seized. Due respect consists in going three times a month to the house of his patron, and offering to do what he can for him; promising to marry whom he will, and not get any richer than his master; or if he does, giving the excess to his master. He is not to remain in the state, except with the consent of the archons, for more than twenty years; and whenever his census exceeds that of the third class, he must in any case leave the state within thirty days, taking his property with him. If he is convicted of offending against this law he is to die, and his property to be confiscated. All suits about these matters are to be decided in the tribes, unless the parties have made the matter up, or appointed arbiters. If anybody claims a beast, or anything else, let the possessor refer to the seller or giver of the property within thirty days, if in the city, or within five months—of which the middle month is to be reckoned from the summer solstice—if the goods have been received from a stranger. All purchases and exchanges are to be made in the agora, and paid for on the spot; no credit is allowed. If credit is given, or purchases are made elsewhere, no law shall enforce payment. No law shall protect the money subscribed for clubs. He who sells anything of greater value than fifty drachmas, shall abide in the city for ten days, and let his whereabouts be known to the buyer, in case of any reclamation. When a slave is sold who is subject to epilepsy, stone, or any other invisible disorder, the buyer, if he be a physician or trainer, or if he be warned, shall have no redress; but in other cases within six months, or in epileptic disorders within twelve months, he may have a jury of physicians to be agreed upon by both parties; and the seller who loses the suit, if he be an expert, shall pay twice the

price; or if he be a private person the bargain shall be rescinded, and he shall refund. If a person knowingly sells a homicide to another, who is informed of his character, there is no redress. But if the judges—who are to be the five youngest guardians of the law—decide that the purchaser was not aware, then the seller is to pay threefold, and to purify the house of the buyer. He who exchanges money for money, or beast for beast, must warrant either of them to be sound and good. As in the case of other laws, let us have a preamble, relating to all this class of crime. Adulteration is a kind of falsehood about which the many are in the habit of saying, that at proper times the practice is right. But the legislator will tell them, that no man should invoke the Gods when he is practising deceit or fraud in word or deed. For he is the enemy of heaven, first, who swears falsely, not thinking of the Gods by whom he swears, and secondly, he who lies in the presence of his superiors: and superiors are better in relation to worse, the elders to the younger, parents to children, men in relation to women, and rulers to subjects. The trader who cheats in the agora, outrages the names and presence of Gods and rulers. If after hearing this he will still be dishonest, let him listen to the law: The seller shall not have two prices on the same day, neither must he praise his goods, nor offer to swear about them. If he break the law, any citizen not less than thirty years of age may smite him. If he sell fraudulent goods, the slave or metic who informs against him shall have the goods; the citizen, if he fail in proving the charge, shall be dishonoured; or if he succeed, shall offer up the goods in question to the Gods of the agora. The cheating tradesman, if he is detected, shall be deprived of his goods, and shall have a stripe inflicted upon him for every drachma of their value, after proclamation has been made by a herald of the offence. The wardens of the agora and the guardians of the law shall learn of experienced persons the rogueries and tricks of the vendors, and write on a column the laws and regulations of the agora.

Next in order follows the subject of retail trades, which in their natural use are the reverse of mischievous; for every man is a benefactor who reduces what is unequal to symmetry and proportion. Money is the instrument by which this is accomplished, and the shop-keepers, and merchants, and hotel-keepers do but supply and equalise the wants of mankind. Why, then, does any dishonour attach to a beneficent occupation? Let us consider the fact first, and then

speak of the remedy. 'What is your drift?' Dear Cleinias, there are few men in the world who are so gifted by nature, and improved by education, as to be able to control their desires; or who, when they might have wealth, keep their heads and prefer moderation to accumulation. But the great majority think that they can never have enough, and the consequence is that retail trade has fallen into disrepute and become a reproach. Whereas, however ludicrous the idea may seem, if noble men and noble women could be induced to open a shop, and to trade upon incorruptible principles, then the aspect of things would change, and retail traders would be regarded as nursing fathers and mothers. Now, when the trader goes and settles in remote and distant places, he receives the sea-tossed sailor hospitably at first, but in the end he treats him as an enemy and a captive, whom he only liberates for an enormous ransom. This is what has brought retail trade into disrepute, and against this the legislator ought to provide. Men have said of old, that to fight against two enemies of opposite kinds is beyond the strength of mortals; and the two enemies whom I mean are wealth and poverty—the one corrupting men by luxury; the other, through misery, depriving them of the sense of shame. What remedies are there for this disease in the body politic? The first remedy is, to have as few retail traders as possible; the second is, to give retail trade over to a class whose corruption will not injure the state; and the third is, to restrain the insolence and meanness of the retailers.

Let us make the following laws:—(1) In the city of the Magnetes which the God is founding anew, none of the 5040 citizens shall be a retailer or merchant, or do any service to any private persons who are not his equals, except to his father and mother, or to any of his elder kindred, being freemen. He who follows an illiberal calling may be cited for dishonouring his family, and kept in bonds for a year; and if he offend again, he shall be bound for two years; and for every offence his punishment shall be doubled: (2) Every retailer shall be a metic or a foreigner: (3) The guardians of the law shall have a special care of this part of the community, which, not having received the benefit of education, has peculiar temptations. They shall consult with those who have experience in the different trades, as in the similar case of fraud, and find out what prices will yield the traders a moderate profit, and fix them.

When a man does not fulfil his contract, he being under no legal or

other impediment, the case shall be brought before the court of the tribes, if not previously settled by arbitration. The makers of household implements are sacred to Hephaestus and Athene; the makers of weapons to Ares and Athene: all of whom, remembering that the Gods are their ancestors, should be ashamed to deceive in the practice of their craft. If any man is lazy in the fulfilment of his work, and fancies, like a fool, that the God who gave him the means of life will forgive him because he is an acquaintance, he will be punished by the God; and let the law follow: He who fails in his undertaking shall pay the value, and do the work gratis in a specified time. The contractor, like the seller, is enjoined by law to charge the simple value of his work; in a free city, art should be a true thing, and the artist should not be practising on the ignorance of others. If, on the other hand, he who has ordered the work does not pay the workman according to agreement, and, for the sake of making a little money, dishonours Zeus and Athene, and breaks the bonds of society, the law shall punish him. If he does not pay at the time agreed, let him pay double; and although interest is forbidden in other cases, let the workman receive after the expiration of a year compound interest at the rate of an obol a month for every drachma (equal to 200 per cent. per ann.). And we may observe, by the way, in speaking of craftsmen, that if our military craft do their work well, the state will praise those who honour them, and blame those who do not honour them. Not that the first place of honour is to be assigned to the warrior; a higher still is reserved for those who obey the laws.

Most of the dealings between man and man are now settled, with the exception of such as relate to orphans and guardianships. These lead us to speak of the intention of the dying, about which we must make regulations. I say 'must'; for mankind cannot be allowed to do absolutely what they will with their own, in opposition to the laws and customs of the living. For a dying person is a strange being, and is not easily managed. 'What do you mean?' He wants to be master of all he has, and is apt to use angry words. 'What does he say?' He says, I ought to be allowed to do what I will with my own, and to give much to those who deserve well of me, and little to those who deserve ill. 'There is reason in that.' O Cleinias, in my judgment the older lawgivers were too softhearted, and wanting in insight into human affairs. 'What do you mean?' I mean to say that they were too ready to listen to the outcry of a dying man, and hence they were induced to give him an

absolute power of bequest. But I would say to him,—O creature of a day, you know neither the nature of your property, nor your own nature. For you are not your own, and your property is not your own, but belongs to your whole family, who have preceded and will follow you, and property and family alike belong to the State. And therefore, fearing that you may make an indiscreet will, I will take out of your hands the charge of what you leave behind you, with a view to the interests of all. And I hope that you will not quarrel with us, for you are going the way of all mankind. Let this be our address to the living and dying, and let the law be as follows:—The father who has sons shall appoint one of them to be the heir of the lot; and the lot of any other son who shall be adopted by another shall also be recorded; and if he has still a son who has no lot, and has a chance of going to a colony, he may give him what is over; or if he has more than one son, he may divide the money between them. A son who has the family inheritance, and a daughter who is betrothed, are not to share in the bequest of money; and the son or daughter who, having inherited one lot, acquires another, is to give back the first inheritance to the next of kin. If a man has only daughters, he may adopt their husbands; or if he have lost a son, he may adopt another in his will. If he have no children, he may give away a tenth of his acquired property to whomsoever he will; but he must adopt an heir to inherit the lot, and leave the remainder to him. Also he may appoint guardians for his children; or if he die without appointing them or without making a will, the nearest kinsmen,—two on the side of the father, and two on the side of the mother, and one friend of the departed,—shall be appointed guardians under the authority of the fifteen eldest guardians of the law, who are to be the special trustees of the orphan. The whole number of fifteen shall be divided into committees of three, who will succeed one another every year for five years. If a man dying intestate have daughters, the dead must not be offended at the law looking, first to relationship, and secondly to the preservation of the lot. The legislator cannot regard the character of the heir, which to the father is the first consideration. The law will therefore run as follows:—If the intestate leave daughters, they are to marry, first, their father's brothers, who shall take possession of the dead man's lot; secondly, the sons of brothers, if they are of suitable age; thirdly, of their sisters; fourthly, their great-uncles; fifthly, their cousins by a paternal uncle; sixthly,

their cousins by a paternal aunt. They will first take the male line and then the female, and they must suit in point of age. Concerning this the judge shall decide, after having made an inspection of the youth naked, and of the maiden naked down to the waist. If the maiden has no relations within the degree of third cousin, she may choose whom she likes, with the consent of her guardians; even a colonist may return home and become heir to her father's lot. If he be a kinsman, he will take the lot by law; if not, he must have her guardian's consent, and also hers. When a man dies without children and without a will, let a young man and a young woman, being the nearest of kin and of the same family, go forth and take up their abode in the desolate house. The legislator foresees that laws such as those about the marriage of relations will sometimes press heavily, and that there may be innumerable obstacles to his intention being fulfilled; as for example, when there are mental and bodily defects in the persons who are enjoined to marry. He is aware of these impediments, and he must be excused for not being always able to reconcile the general principles of public interest with the particular circumstances of individuals; and he is willing to allow the same excuse in the individual, who is not always able to bear the burden which the lawgiver has in ignorance imposed upon him. And then arbiters must be chosen, who will determine equitably the causes which arise under the law. 'How will that be?' A rich cousin may sometimes have an eye to a grander match, or the requirements of the law can only be fulfilled by marrying a madwoman. To meet such cases let the law run as follows:—If any one comes forward and says of a testamentary law, respecting marriage or any other matter, that the lawgiver, had he been alive, would not have required the carrying out of the law, and that he has left the fifteen eldest guardians of the law to be the trustees for the orphan; to the fifteen let them go; and their decision shall be final in smaller cases, but in the greater causes there shall be an appeal to the court of select judges, and he who fails in his cause shall suffer loss of reputation.

Orphans shall have in a manner a second birth in order to make their sad condition as light as possible. The guardians of the law shall be their parents, who shall be admonished to take care of them. And what admonition can be more appropriate than the assurance which we formerly gave that the souls of the dead watch over mortal affairs? About this there are many tales and ancient traditions, which may be

taken on trust from the legislator. Let men fear, in the first place, the Gods above; secondly, the souls of the departed, who naturally care for their own descendants; thirdly, the aged living, who are quick to hear of any neglect of family duties, especially in the case of orphans, who are the holiest and most sacred of all deposits, and the special care of guardians and magistrates. And those who bring them up well will receive a return in the care of themselves and their families. He who listens to the preamble of the law will never know the severity of the legislator; but he who disobeys, and injures the orphan, will pay twice the penalty he would have paid if the parents had been alive. More laws might have been made about orphans, did we not suppose that the guardians have children of their own and property of their own which are protected by the laws; and the duty of the guardian is the same as that of a father, though his honour or disgrace is greater. A legal admonition and threat may, however, be of service: the guardian of the orphan and the guardian of the law who is over him, shall love the orphan as his own child, and take more care of his or her property than of his own. If he neglect his duty the archon shall fine him; and the guardian shall have him tried. And the guardian may also have the archon tried in the court of select judges, and he shall pay, if convicted, a double penalty. Also the guardian of the orphan who is careless may be fined on the information of any of the citizens in a fourfold penalty, half to go to the orphan and half to the prosecutor of the suit. When the orphan is of age, if he thinks that he has been ill-used, his guardian may be brought to trial by him within five years. Or if the archon has neglected the orphan, he shall pay damages to him; but if he have defrauded him, he shall be deposed.

If irremediable differences arise between fathers and sons, the father may want to renounce his son, or the son may indict his father for imbecility: such violent separations only take place when the family are 'a bad lot'; if only one of the two parties is bad, the differences do not grow to so great a height. But here arises a difficulty. Although in any other state a son who is disinherited does not cease to be a citizen, in this he does; for the number of citizens cannot exceed 5040. And therefore he who is to suffer such a penalty ought to be abjured, not only by his father, but by the whole family. The law therefore should run as follows:—If any man's evil fortune or temper lead him to disinherit his son, let him not do so lightly or on the instant; but let him

have a council of his relations male and female, including the maternal relations of his son, and set forth to them the propriety of disinheriting him, and allow his son to answer. And if more than half his relations male and female, being of full age, condemn him, let him be disinherited. If any other citizen desires to adopt him, he may, for young men's characters often change in the course of life. But if, after ten years, he remains unadopted, let him be sent to a colony. If disease, or old age, or evil disposition drive a man out of his senses, and he is ruining his house and property, and his misfortune is only known to those who live with him, and his son doubts about trying his lunacy, let him lay the case before the eldest guardians of the law, and consult with them. And if, after the cause has been heard, the father is decided to be imbecile, he shall live like a child in the house, and have no more control over his property.

If a man and his wife are of incompatible tempers, ten guardians of the law and ten of the matrons shall take their case in hand, and reconcile them, if possible. If, however, their swelling souls cannot be pacified, the wife may try and find a new husband, and the husband a new wife; probably they are not very gentle creatures, and should therefore be joined to milder natures. Married persons may separate and marry again when they have few or no children, or when in old age they require special care. If a woman dies, leaving children male or female, the law would advise, though unwilling to compel, the widower to abstain from a second marriage; but if she leave no children, he shall be compelled to marry. Also a widow, if she is old enough to live honestly without marriage, is not to marry; but in case a widow or widower have no children, they may marry for the sake of them. There is sometimes an uncertainty which parent the offspring is to follow: in unions of a female slave with a male slave, or with a freedman or freeman, or of a freewoman with a male slave, the offspring is to belong to the master; but if the master or mistress be themselves the parent of the child, the slave and the child are to be sent away to another place. Concerning duty to parents, let the preamble be as follows:—We honour the Gods in their lifeless images, and believe that we propitiate them. But he who has an aged father or mother has a far more sacred and living image, of which the cherishing will do him much more good than the worship of any other image. 'What do you mean by cherishing them?' I will tell you. Oedipus and Amyntor and Theseus cursed

their children, and their curses took effect. This proves that the Gods hear the curses of parents who are wronged; and shall we doubt that they hear and fulfil their blessings too, when in the joy of their hearts they pray for their children's good? 'Surely not.' And, as we were saying, we cannot possess any image which the Gods count more honourable than a withered father and mother; and when honour is done to them, the God who hears their prayers is rejoiced, and their influence is greater than that of any lifeless image; they pray that good or evil may come to us in proportion as they are honoured or dishonoured, but the image is silent. 'That is excellent.' Every man of sense fears and reverences the prayers of parents, because he knows that they are often fulfilled. Aged relatives are a blessing to the good, whereas the bad fear them. Wherefore let every one honour his parents, and if this preamble fails of influencing him, let him hear the law:—If any one cares not for his parents more than he cares for himself and his children, let the aggrieved person go or send to the three eldest guardians of the law and three of the women who are concerned with marriages. Women up to forty years of age, and men up to thirty, who are found guilty of thus offending, shall be beaten with stripes. After that age they are to be brought before a court composed of the eldest citizens, who may inflict any punishment upon them which they please. If the injured party is unable to inform, some other freeman shall be bound to inform; and if a slave informs he shall be set free,—if the slave of one of the parties, by the magistrate,—if owned by another, at the cost of the state.

The injuries which one person does to another by the use of incantations and magic potions, whether given in food, ointments, or any other form, are of two kinds; they affect either the body or the mind. There is no use in arguing with a man who can be affected by waxen images set at doors or sepulchres, or in places where three ways meet. But to the wizards themselves we must address a solemn preamble, begging them not to treat mankind like children, or compel the legislator to expose their imposture, and show that the doctor who is ignorant of medicine and the wizard who is not a prophet or diviner, are equally quacks. Let the law be as follows:—He who does any injury not fatal to a man or his servants, or any injury whether fatal or not to another's cattle or bees, is to be punished with death if he be a physician, and if he be a private person he is to suffer the punishment awarded by the

court. And the wizard or conjuror, whether he be a diviner or not shall be put to death. Any one who injures another shall pay damages at least equal to the injury; and every one who does wrong is to suffer punishment by way of admonition. The foolish youth who is incited by others is to have a lighter punishment; and he whose folly is occasioned by his own jealousy or desire or anger is to suffer more heavily. Punishment is to be inflicted not for the sake of vengeance, for what is done cannot be undone, but for the sake of prevention and information. And there should be a proportion between the punishment and the crime, in which the judge, having a discretion left him, must, by estimating the crime, second the legislator, who gives the outlines, which he, like a painter, must fill up. That is just the work which remains to be done, if Gods and heroes are propitious to us in our legislation.

A madman is not to be allowed to go about the city, but is to be taken care of by his relatives. Neglect on their part is to be punished in the first class by a fine of a hundred drachmas, and proportionally in the others. Now madness is of various kinds; in addition to that which arises from disease there is the madness of passion. No one is to speak evil of another, but when men differ in opinion they are to instruct one another without speaking evil; for out of a little heat and a few harsh words there often spring up most serious evils. No one should seek to rouse the passions which education has calmed. He who feeds and nurses his wrath is liable to fall into ribald jests at the expense of his opponent, with a loss of character or dignity to himself. And for this reason no one may use any ribald word in a temple, or at sacrifices, or games, or other public places; and he who offends shall be censured by him who has charge of such matters; and the magistrate, if he fail to censure him, shall not claim the prize of virtue. In any other place the reviler who indulges in anger, whether he be the beginner or not, may be chastened by an elder. No man shall use ridicule in anger; and even without anger ridicule is equally culpable. Nor can we allow the comic poet to ridicule our citizens, under a penalty of expulsion from the contest or a fine of three minae. There may be comic fun in which there is no offence; but the question of offence shall be determined by the director of education, who is to be the licenser of theatrical performances.

The righteous man who is in adversity will not be allowed to starve in

a well ordered city; he will never be a beggar. Therefore let the law be as follows:—No beggar shall be allowed; and he who begs shall be expelled by the magistrates both from town and country.

If a slave, male or female, does any harm to the property of another, who is not himself a party to the harm, the master shall compensate the injury or give up the offending slave. But if the master says that there was complicity in the sufferer of the injury, he may put him on his trial for malpractices, and recover from him twice the value of the slave; or if he is cast he must make good the damage and deliver up the slave. The damage done by a horse or other animal shall be compensated in like manner.

A witness who will not come of himself may be summoned, and if he fail in appearing, he shall be liable to punishment: if he swears that he does not know, he may leave the court. A judge who is called upon as a witness must not vote. A free woman may witness, and plead, and bring her action, if she have no husband, and be more than forty years of age, but while her husband lives, she can only be a witness. A slave, male or female, and a child may witness and plead, but they must give sureties that they will appear at the trial; for they may be charged with false witness. Such charges are to be proceeded with, pending the trial, and the other accusations shall be kept under seal by the archons until the trial for perjury comes off. He who is twice convicted of perjury is not to be compelled, and if three times, is not to be allowed to witness, or, if he persists, is to be punished with death. When more than half the evidence is proved to be false there must be a new trial.

The best things in human life are liable to be defiled and perverted. And justice, which has been the civilizer of mankind, is no exception to this principle. Fair though she be, she has fallen into an evil name. An art has sprung up which is said to make the worse appear the better cause, and only requires money in return for the service of the advocate. Such an art will be banished by the legislator, and requested to depart to another city. To the disobedient let the voice of the law be heard saying:—He who tries to pervert justice in the minds of the judges, or to increase litigation, shall be brought before the supreme court. If he does so from contentiousness, let him be silenced, and, if he offend again, put to death. If he have acted from a love of gain, let him be exiled if he be a foreigner, or if he be a citizen let him be put to death.

BOOK XII. If a false message be taken to or brought from other states, whether friendly or hostile, by ambassadors or heralds, who are the ministers of Hermes and Zeus, they shall suffer a fixed penalty. Stealing is mean; plundering is shameless. Let no man deceive himself by the example of the Gods, for no God or son of a God ever practised either force or fraud. On this point the legislator is better informed than all the poets and mythologers put together. He who listens to him shall be for ever happy, but he who will not listen shall have the following law directed against him:—He who steals much, or he who steals little of the public property is deserving of the same penalty; for they are both impelled by the same evil motive. When the law punishes one more lightly than the other, this is done under the idea, not that he is less guilty, but that he is more curable. Now a thief who is a foreigner or slave may be curable; but the thief who is a citizen, and has had the advantages of education, should be put to death, for he is incurable.

Many laws have been made about military expeditions; the great principle of all is that no one, male or female, in war or peace, in great matters or small, shall be without a commander. Whether a man stands or walks, or exercises, or pursues, or retreats, or washes, or eats, he must do everything according to a common rule. We should practise from our earliest youth every one to obey, every one to command. All dances, relaxations, endurances of meats and drinks, of cold and heat, and of hard beds, should have a view to war, and care should be taken not to destroy the natural covering and use of the head and feet by wearing shoes and caps; for the head is the lord of the body, and the feet are the best of servants. The soldier should have thoughts like these; and let him hear the law:—He who is enrolled shall serve, and if he fail to serve, or return home before the expedition is finished, he shall be indicted for cowardice before his own arm of the service, and if he be found guilty he shall suffer the penalty which the courts award, and never be allowed to contend for any prize of valour, or to accuse another of misbehaviour. After the courts for the failure of service and desertion have been held, the generals shall hold another court, in which the several arms of the service will award prizes for the expedition which has just concluded. The prize is to be a crown of olive, and he who obtains a first, second, or third prize shall offer up the prize at the temple of his favourite war God. Let the indictment be scrupulously true, for justice is an honourable maiden, to whom falsehood is naturally hateful. When

men have lost their arms, care should be taken to distinguish between cases in which they have been lost from necessity and from cowardice. For example, the hero Patroclus, if instead of being dead he had been brought back alive from the field, might have been reproached with having lost the divine armour. And a man may lose his arms in a storm at sea, or from a fall, and under many other circumstances, which should be carefully distinguished. Language has made the distinction for us in the use of the two terms, 'thrower away of a shield' (*ρήψασπις*), and 'loser of arms' (*ἀποβολεὺς ὀπλων*), one being the voluntary, the other the involuntary relinquishment of them. Let the law be as follows:—If any one is overtaken by the enemy, having arms in his hands, and he leaves them behind him voluntarily, choosing base life instead of honourable death, he shall receive an appropriate punishment. The old legend of Caeneus the Thessalian, who was changed by the Gods from a woman into a man, may teach by contraries the right sort of punishment. Let him be changed from a man into a woman—that is to say, let him be all his life out of danger, and never again be admitted by any commander into the ranks of his army; and let him pay a heavy fine according to his class.

All magistrates, whether temporary or permanent, must give an account of their magistracy. But where shall we find the magistrate who is worthy to supervise them, or to judge of the crooked ways into which they may have been driven by the difficulties of their position? For there are many causes of the dissolution of states; which like ships or animals have their cords, and girders, and sinews easily relaxed, and fall into a state of atony. Nothing tends more to the good and preservation of states, than the supervision of them by examiners who are better than the magistrates; failing in this they fall to pieces, and become many states instead of one. Wherefore let the people meet after the summer solstice, in the precinct of Apollo, and in his presence appoint three men of not less than fifty years of age; each citizen voting, not for himself, but for him whom he thinks the best. The persons selected shall be reduced to one half, who have the greatest number of votes, if the number named be an even number; but if an odd number, he who has the smallest number of votes shall be withdrawn. The division shall continue until three only remain; and if the number of their votes be equal, a distinction between the first, second, and third shall be made by lot. The three shall be crowned with an olive wreath, and

proclamation made, that the city of the Magnetes, once more preserved by the Gods, presents her three best men to Apollo and the Sun, to whom she dedicates them as long as their lives answer to the judgment formed of them. They shall choose in the first year of their office twelve examiners, to continue until they are seventy-five years of age; afterwards three a year, who, while they hold office, shall dwell within the precinct of the God. They are to divide all the magistracies into twelve classes, and may apply any methods of enquiry, and inflict any punishments which they please; in some cases singly, in other cases together, announcing the acquittal or punishment of the magistrate in the agora. There may be an escape from their judgment by an impeachment; but if the appellant is cast, and he is not condemned to death, his punishment shall be doubled. Those who have been selected by the state for their pre-eminence in virtue, shall have the first place at all sacrifices, and in all assemblies and public places, and on sacred embassies, and have the exclusive privilege of wearing a crown of laurel. They are priests of Apollo and the Sun, and he of their number who is chosen first shall be high priest, and give his name to the year. Their manner of burial, too, shall be different from that of the other citizens. The colour of their funeral array shall be white, and, instead of the voice of lamentation, around the bier shall stand a chorus of fifteen youths and fifteen men, chanting hymns in honour of the deceased all day long; and in the morning a band of a hundred youths, to be selected by the relatives from the palaestra, shall carry the bier to the place of sepulture marching in armour, or if they are horsemen, with their horses, and the youths around and in front of the bier shall sing their national hymns, while the maidens and women past child-bearing follow after. Priests and priestesses may also follow, for the funeral rites are pure, unless the Pythian oracle forbids. The sepulchre shall be a long tomb of stone intended to last for ever, and having many resting-places, in one of which they shall deposit the remains of the departed saint, surrounding the place of interment with a mound and with groves of trees, except on one side, where an opening shall be left for other tombs in case they shall be hereafter needed. There shall be annual games—musical, gymnastic, or equestrian, in honour of those who are acquitted by the examiners. But if any one, confident in having been acquitted, begin to show the wickedness of human nature, he may be tried again by any one who pleases in a court composed of the guardians of the law, and of select

judges, and of any of the former examiners who are alive. If he fail he shall be deprived of his honours, and if the accuser fail he shall pay a fine according to his class.

What is called the judgment of Rhadamanthus is suited to 'ages of faith,' but not to our days. He knew that his contemporaries believed in the Gods, for there were many of them who were the sons of Gods; and he thought that the easiest and surest method of ending litigation was to commit the decision to Heaven. In our own day, men either deny the existence of Gods or their care of men, or maintain that they may be bribed by attentions and gifts; and this mode of proceeding would therefore be out of date. When the religious ideas of mankind change, their laws should also change. Thus oaths should no longer be taken from plaintiff and defendant, instead of simple statements of affirmation and denial. For there is something dreadful in the thought, that nearly half the citizens who meet one another in society are perjured men. There is no objection to an oath, where a man has no interest in forswearing himself; as, for example, in holding an election for a magistracy, or in the judgment of games and contests. But where there would be a premium on perjury, oaths and imprecations should be prohibited as irrelevant, like appeals to feeling. Let the principles of justice be learned and taught without words of evil omen. The oaths of a stranger against a stranger may be allowed, because they are not likely to breed or become inveterate in our state.

Trials for minor matters are to be regulated by the same rules. The non-attendance at a chorus or sacrifice, or the omission to pay a war-tax, may be regarded as in the first instance remediable, and the defaulter may give security; if the tax remains unpaid, the goods pledged shall be made over to the state. But for obstinate disobedience, the magistrate shall have the power of inflicting greater penalties.

A city which is without trade or merchandise, must consider the subject of emigration and reception of strangers. For out of intercourse with strangers there arises great confusion of manners, which in most states is not of any consequence, because the confusion exists already; but in a well-ordered state may be a great evil. Yet the absolute prohibition of foreign travel, or the exclusion of strangers, is impossible, and would appear barbarous to the rest of mankind. Now public opinion should never be lightly regarded, for mankind are not so far wrong in their judgments as in their lives. Even the worst of men have often a divine

instinct, which enables them to distinguish good from bad. States are rightly advised when they desire to have the praise of men; and the greatest and truest praise is that of virtue. And a state formed after the model of Crete should, and probably will, have a character for virtue, such as few cities have under the sun. Let this, then, be our law about foreign travel and the reception of strangers:—No one shall be allowed to leave the country who is under forty years of age—of course military service abroad is not included in this—and no one at all on any private occasion. To the Olympic, and Pythian, and Nemean, and Isthmian games, shall be sent the fairest and best and bravest, who shall support the dignity of the city in peace. These, when they come home, shall teach the youth the inferiority of all other governments. And if any citizen have the curiosity to know the manners of other states, no law shall hinder him. For a state which has no experience, and no knowledge of the reason of things, however innocent of evil, will never be perfectly civilized. Moreover, in all states, bad as well as good, there are men of genius who are inspired by heaven; and in the footsteps of these incorruptibles the good citizen should strive to follow, over the water and over the land; and learn from them what laws are good, with a view to their firmer establishment, and what laws are bad, with a view to their improvement. ‘How can these two objects be accomplished?’ In the first place, let the visitor of foreign countries be between fifty and sixty years of age, and let him be a citizen of repute, and especially of military repute. On his return he shall appear before the legislative council: this is the council which sits early in the morning, before the sun is high in the heavens, and includes amongst its members the priests who have gained the prize of virtue, and the ten oldest guardians of the law, and the director and past directors of education; and each of them shall bring with him a younger friend of his own selection, who is between thirty and forty years of age. The assembly thus constituted is to consider the laws of their own and other states, and to gather information which may throw light on the subject of law. The elder senators are to make a selection of extracts, which the younger members may learn by heart. These latter, if they are worthy, shall also be made guardians of the state, and receive reward or punishment according to their merits. This is the assembly to which the visitor of foreign countries shall come and tell anything which he has heard in the course of his travels, or himself observed relative to the laws. If

he be neither improved nor deteriorated, let him be praised for his zeal; and yet more praised if he be improved, and be also honoured after death by the authority of the council. But if he be deteriorated by his travels, let him be prohibited from speaking to any one; and if he submit, he may live as a private individual: but if he be convicted of making innovations in education and the laws, let him die.

Next, as to the reception of strangers. Of these there are four classes: merchants, who find their way over the sea at a certain time of the year, that they may exhibit their wares. These should be received in markets and public buildings without the city, by proper officers, who shall see that they receive justice, and shall also watch against any political designs which they may entertain; no more intercourse is to be held with them than is absolutely necessary. Secondly, there are the visitors at the festivals, who shall be entertained by hospitable persons at the temples for a reasonable time; the priests and ministers of the temple shall be their judges and protectors. Thirdly, there are ambassadors of foreign states; these are to be honourably received by the generals and prytanes, and placed under the care of the persons with whom they are lodged. Fourthly, there is the philosophical stranger, who will rarely make his appearance; he, like our own foreign commissioners, will come to see whatever is great and noble in our state. Like them he must be fifty years of age: let him be received with honour, and be a welcome guest at the houses of the rich and wise; for example, at the house of the director of education and other noble persons, who are to instruct and be instructed by him. These are the rules of missions into foreign countries, and of the reception of strangers. Let Zeus, the God of hospitality, be honoured; and let not the stranger be driven away, as in Egypt, by distinctions of meats and sacrifices, and by savage proclamations.

Let guarantees be clearly given in writing and before witnesses. The number of witnesses shall be three when the value is under a thousand drachmas, or five when above. The seller at first and second hand shall be equally liable. He who would search another man's house must swear that he expects to find something there; and he shall enter naked, or having on a single garment. The owner shall place at his disposal all his goods, sealed as well as unsealed; if he refuse, he shall be liable in double the value of the property proved to have been in his possession. If the owner be absent, he may counter-seal

the property which is under seal, and place watchers. In case of prolonged absence, he shall take the magistrates, and open the sealed places, and seal them up again in the presence of the magistrates. The recovery of goods disputed, except in the case of lands and houses, is to be barred by time. The public and unimpeached use of anything for a year in the city, or for five years in the country, or the private possession and domestic use for three years in the city, or for ten years in the country, is to give a right of ownership. But in a foreign country there is no bar as to time. The proceedings of any trial are to be void, in which either the parties or the witnesses, whether bond or free, have been forcibly prevented from attending. In the case of a slave the suit shall be invalid; in the case of a freeman, he who is guilty of this violence shall be made a slave and imprisoned for a year. If one competitor forcibly prevents another from attending at the games, the other may be inscribed as victor in the temples, and the first, whether victor or not, shall be subjected to an action for damages. The receiver of stolen goods is to be punished as well as the stealer. The receiver of an exile shall be put to death. A man shall have the same friends and enemies as his country; and he who makes war or peace for himself shall be put to death. And if a party in the state make war or peace, their leaders shall be put on their trial by the generals, and, if convicted, put to death. The ministers of a country ought not to receive gifts; the doctrine that we may be paid for deciding justly is liable to abuse. He who will not be persuaded let him die.

Taxes may be demanded either upon income or upon property, whether the wardens of the country choose to levy the tax upon an annual return, or upon a proportion of the whole value.

The good man will offer moderate sacrifices to the Gods; every man's land and hearth is consecrated to the Gods, and no second temple is required. Gold and silver, whether in houses or temples, are not the true riches; ivory, which is taken from the dead body of an animal, is unholy; iron and brass are materials of war. Wood and stone of a single piece may be offered, also woven work which has not occupied one person more than a month in making. White colours are always acceptable to the Gods; figures of birds and similar offerings are the best of gifts, but they must be such as the sculptor can make in a day.

Next concerning lawsuits. Judges, or rather arbiters, may be agreed upon by the plaintiff or defendant; and if no decision is obtained from them, their fellow-tribesmen or townsmen shall judge, and the court shall consist of a twelfth part of them. At this stage they shall demand an increased penalty, and the defendant, if he be cast, shall pay a fifth more than the assessed damages. If he further persist, and appeal a third time, the case shall be heard before a court of select judges; and he shall pay, if beaten, half as much again as the penalty. If the pursuer appeal he shall receive, and if beaten he shall pay, a fifth part; and if he appeal again and fail, he shall pay half of the assessed damages. Other matters relating to trials have been already determined; lesser points, such as the allotment of suits, the times of sitting, the modes of pleading and procedure, may be supplied by younger legislators.

These are to be the rules of private courts; and there are many states which have excellent modes of procedure in their public courts which may serve for a model, and these also, when duly tested by experience, should be ratified and made permanent.

Let the judge be accomplished in the laws. He should possess writings about them, that he may learn them; for laws are the highest instrument of mental improvement, and derive their name from mind. They afford a measure of all censure and praise, whether in verse or prose, in conversation or in books, and are an antidote to the vain disputes of men and their equally vain assents and agreements. The just judge is he who has imbibed their spirit, and is seeking to establish the continuance of justice for the good, and to change the tempers of the bad, if they can be changed, or to denounce death, which is the only remedy, to the incurable, the thread of whose life cannot be reversed.

After the judgments of the year are over, execution is to follow. The court is to award the property of the defendant who loses to the plaintiff, reserving to him only the bare means of life. If the plaintiff is not satisfied within a month, the court shall put into his hands the property of the defendant. If the defendant fails in payment to the amount of a drachma, he shall lose the use and protection of the court; or if he defraud the court, he who suffers by the fraud shall bring the offender before the guardians of the law, and if he be found guilty, he shall be put to death.

Man having been born, educated, having begotten and brought up

children, and gone to law, is at last gathered to his fathers. The rites which are to be celebrated after death in honour of the Gods above and below shall be determined by the interpreters. Places of sepulture shall be chosen with reference to the convenience of the living; they shall be out of sight and on barren spots. For no one either in life or after death has any right to deprive the living of the sustenance which mother earth provides for them. No sepulchral mound is to be raised higher than the labour of five men in five days can accomplish, and the stone tablet which is placed upon it is not to be larger than will contain an inscription of four heroic verses. The dead are only to be exposed for three days, which is long enough to test the reality of death. The legislator will instruct the people that the body is a mere *eidolon*, and that the soul, which is our true being, is gone to give an account of herself before the Gods below. When they hear this, the good are full of hope, and the evil are terrified, knowing that there will not be much help for them after death. And therefore in life all men's relatives should help them to live innocently and holily, that they may depart in peace. When a man loses a son or a brother, he should consider that the true man has gone away to fulfil his destiny in another life, and not waste money over his lifeless remains. Let the law then order a moderate funeral of five minae for the first class, three for the second, two for the third, one for the fourth. The magistrates, or one of them selected by the relatives, are to assist the relatives in arranging the affairs of the deceased. There would be a want of delicacy in prescribing that there should be or should not be mourning for the dead. But, at any rate, such mourning should be confined to the house, and the dead body should be taken out of the city before daybreak. Other regulations relating to the burial or non-burial of parricides and other sacrilegious persons have already been laid down. The work of legislation is therefore nearly completed, and that work is the preservation of the state.

Do you remember the names of the Fates? Lachesis is the first of them; Clotho the second, Atropos the third and last—she makes the threads of the web irreversible. We too want to make our laws irreversible, for the unchangeable quality in them is the salvation of the State, and the source of health and order in the bodies and souls of our citizens. 'But can such a quality be implanted?' I think that it may; and at any rate we must try; for, after all our labour, to have been piling up a fabric

which has no foundation would be too ridiculous. 'What foundation would you lay?' Have we not already instituted an assembly which was composed of the ten oldest guardians of the law, and secondly, of those who have received prizes for virtue, and thirdly, of the travellers who had gone abroad to enquire into the laws of other countries. These were to form a synod, and each of the members was to choose a young man, of not less than thirty years of age, to be approved by the rest. The meeting was to be held at dawn, when all the world is at leisure—that was our proposal; and this assembly was to anchor the vessel of State, and provide the means of permanence; for the governments of States, like all other things, have their proper saviours, which are to them what the head and soul are to the living being. 'How do you mean?' Mind in the soul, and sight and hearing in the head, or rather, the perfect union of mind and sense, may be justly called every man's salvation. 'Certainly.' Yes; but of what nature is this union? In the case of a ship, for example, are not the senses of the sailors added to the intelligence of the pilot? These together save themselves and the ship. Or, to offer another illustration: The physician and the general have their objects; and the object of one is health, of the other victory. And States have their objects, and the ruler must understand, in the first place, the nature of them, and secondly, the means of attaining them, whether in laws or men. The State which is wanting in this knowledge cannot be expected to be wise when the time for action arrives. Now what class or institution is there in our State which secures the object of the State? 'I suspect that your words have reference to the nocturnal council.' Yes, to that council which is to have all virtue, and whose members are to aim directly at the mark. 'Very true.' The inconsistency of legislation in most States is not surprising, when the variety of their objects is considered. One of them makes their rule of justice the government of a class, without regard to good or bad; another aims at wealth, whether with or without freedom; another at freedom, or at freedom and power; and some who are supposed to be philosophers maintain that you should seek for all of them at once. But our object is unmistakably virtue, and virtue is of four kinds. 'Yes; and we said that mind is the head and ruler of the three other kinds of virtue and of all else.' Yes, Cleinias, and having already declared the object which is present to the mind of the pilot, the general, the physician, we will now interrogate the mind of the statesman. Tell me, I say, as the physician

and general have told us their object, what is the object of the statesman? Can you tell me? 'We cannot.' Did we not say that there are four virtues — courage, wisdom, and two others, which are called by the common name of virtue, and are in a sense one? 'Certainly we did.' The difficulty is not in understanding the differences of the virtues, but in apprehending their unity. Why do we call virtue, which is a single thing, by the two names of wisdom and courage? To this I have no difficulty in replying that courage is concerned with fear, and is found in children, and is common to brutes; for the soul may be courageous without reason, but no soul was, or ever will be, wise without reason. 'That is true.' I have explained to you the difference, and do you explain to me the unity. But first let us consider whether the knowledge of names can be separated from the knowledge of the ideas which they represent. Is not the knowledge of words without ideas a disgrace to a man of sense? and can any subject be more worthy of the attention of our legislators than the four virtues of which we are speaking—courage, temperance, justice, wisdom? And ought not they and all other guardians and interpreters of the law to instruct him who needs instruction in the nature of virtue and vice, instead of leaving them to be taught by some chance poet or schoolmaster? A city which is without instruction suffers the usual fate of cities in our day. What then shall we do? How shall we perfect the ideas of our guardians about virtue? how shall we give our State a head and eyes? 'Yes; how shall we accomplish what is thus described by you in a figure?' The city will be the body or trunk; the best of our young men will mount into the acropolis and be our eyes; these will look about them, and inform the elders, who are the mind, and will use the younger men as their instruments: together they will save the State. Shall this be our constitution, or shall all be alike, and the special training be given up? 'Impossible; the inequality in their duties requires that they should be differently educated.' Let us then attain to some more exact idea of education. Did we not say that the true artist or guardian ought to have an eye, not only to the many, but to the one, and to order all things with a view to the one? Can there be any more philosophical speculation than how to reduce many things which are unlike to one idea? 'Perhaps not.' Say rather, 'Certainly not'; for no more philosophical method was ever attained by the wit of man. And the rulers of our divine State ought to have an exact knowledge of that common

principle in courage, temperance, justice, wisdom, which is called by the name of virtue; and unless we know whether virtue is one or many, we shall hardly know what virtue is. Shall we contrive some means of engrafting this knowledge on our State or give the matter up? 'Anything rather than give up.' But how are we to effect our object? Let us begin by making an agreement. 'By all means, if we can.' Well, are we not agreed that our guardians ought to think that the good and the honourable are not only many, but also one? 'Yes, they are one.' And can we give no account of this? 'If we cannot, we are slaves.' The true guardian ought to know the truth, and should also be able to interpret and execute the truth. 'Certainly.' And is there any higher knowledge than the knowledge of the existence and power of the Gods? The people may be excused for following tradition only; but the guardian must not be admitted to his office if he is unable to give a reason of the faith which is in him. He who is careless or incapable in such matters is out of the pale of the good. And there are two great evidences of religion — the priority of the soul and the order of the heavens, which, if rightly understood, are far from tending to the substitution of necessity for reason and will. For the truth is diametrically opposed to the opinions of those who maintain that they are inanimate beings. The men of a former generation (Anaxagoras) wondered at them, and a suspicion arose, which later investigations have confirmed, that things inanimate could never without mind have attained such scientific accuracy; and some even in those days ventured to assert that mind had ordered all things in heaven; but they had no idea of the priority of mind, and they turned the world, or more properly themselves, upside down, and filled the universe with stones, and earth, and other inanimate bodies. This led to great impiety, and the poets said many foolish things against philosophy, which they compared to a yelping she-dog. No man can now be religious who does not believe that the soul is eternal, and prior to the body, and the ruler of all bodies, and does not perceive also that there is mind in the stars; or, who has not heard the connection of them with music, and harmonized them with manners and laws, giving a reason of things which are matters of reason. He who is unable to acquire this knowledge as well as the ordinary virtues of a citizen, can only be a servant, and not a ruler in the State.

Let us then add to our other laws a law respecting the nocturnal council, which has been associated with us in our education. 'Very

good.' To establish this will be my aim, and I hope that you and others will assist me. 'Let us proceed along the road in which God seems to guide us.' We cannot, Megillus and Cleinias, anticipate the details which will hereafter be needed; they must be supplied by experience. 'What do you mean?' First of all a register will have to be made of all those whose aim, character, or education would qualify them to be guardians. The subjects which they are to learn, and the order in which they are to be learnt, are mysteries which cannot be explained beforehand, but not mysteries in any other sense. 'If that is the case, what is to be done?' We must run a risk, in which I am willing to share, in coming to any determination about education. And I would have you, Cleinias, who are the founder of the Magnesian State, and will incur the greatest glory if you succeed, and will be praised for your courage, if you fail, take especial heed of this matter. Soon the State will have to be handed over to the nocturnal council. The dream will then become a reality; and our citizens, if they are carefully chosen and educated, will be saviours such as the world has hitherto never seen.

The want of completeness in the Laws becomes more apparent in the later books. There is less arrangement, and the transitions are more abrupt from one subject to another. The discourse concerning religion is introduced as a prelude to offences against the Gods, and this is the only remaining portion of the work which is fully executed.

In the last four books of the Laws, several questions occur for consideration: (I) the proportion of punishments to offences; (II) the nature of the voluntary and involuntary; (III) the arguments against atheism, and against the opinion that the Gods have no care of human affairs; (IV) the remarks upon retail trade and adulteration of goods; (V) the institution of the nocturnal council.

I. The weakest point in the Laws of Plato is the amount of inquisition into private life which is to be made by the rulers. The magistrate is always watching and waylaying the citizens. He is constantly to inform or to receive informations against improprieties of life. Plato does not seem to be aware that espionage can only have a negative effect. He has not yet discovered the boundary line which parts the domain of law from that of morality or social life. Men will not tell of one another; nor will he ever be deemed the most virtuous citizen, who gives the most frequent information about offenders to the magistrates.

As in some writers of fiction, so also in philosophers, we may observe the effect of age. Plato becomes more conservative as he grows older, and he would govern the world entirely by men like himself, who are above fifty years of age; for in them he hopes to find a principle of stability. He is like the old man (xi. 922 B, foll.) who insists that he shall 'tie up' his property after his death—all his efforts are directed towards maintaining the institutions of the legislator in after ages. But he does not observe that, in destroying the freedom he is destroying also the life of the State. While he differs from mere conservatives in his love of truth, he is impatient of the extravagances to which the love of truth almost necessarily leads. He seems to have forgotten what he once knew—that the wise man is sure to be in opposition to the rest of mankind; for some degree of eccentricity generally accompanies originality; as Democritus said, 'the philosopher, if we could see him, would appear to be a strange being.' In the Magnesian state all the citizens are to be reduced to rule and measure; there would have been none of those great men 'whose acquaintance is beyond all price;' and Plato would have found that in the worst-governed Hellenic State, there was more of a *carrière ouverte* for extraordinary genius and virtue than in his own. The first principle of Plato's laws, borrowed apparently from the Spartan military system, 'that no one is to be without a commander,' is literally that of the Jesuit order.

Plato's judicial system has several characteristic features. He has an evident dislike of the Athenian dicasteries, and prefers a few good judges who make pertinent remarks on the case, to a great number. He allows of numerous appeals—from the neighbours who are to judge because they know the circumstances, to the magistrates of the town; and from the magistrates of the town to the guardians of the law; in each case exacting a double penalty. Modern jurists would disapprove of the redress of injustice being purchased only at an increasing risk; though indirectly the burden of legal expenses, which seems to have been little felt among the ancients, has a similar effect. The love of litigation, which is a remnant of barbarism quite as much as a corruption of civilization, and was inherent in the Athenian people, is diminished in the new state by references to arbitration.

In the Laws the crime of murder, and indeed almost all offences, have a religious character; they are pollutions rather than crimes. Regarded from this point of view, the heinousness of offences is apt to depend on

accidental circumstances, such as the shedding of blood, and not on the real guilt or injury to society. They are measured by the horror which they arouse in a barbarous age. For there is a superstition in law as well as in religion, and the superstitious feelings of a primitive age have a traditional hold on the mass of the people. On the other hand, Plato is absolutely free from the crime of visiting the sins of the fathers upon the children, and he is quite aware that punishment has an eye to the future, and not to the past. Compared with that of most European nations in the last century his criminal code is reasonable and humane.

A defect in Plato's criminal jurisprudence, is his remission of the punishment when the offender has obtained the forgiveness of the murdered person; as if crime were a personal affair between individuals, and not an offence against the State. There is also a ridiculous disproportion in his punishments. Because a slave may fairly receive a blow for stealing a fig or a bunch of grapes, or a tradesman for defrauding to the amount of a drachma, that is no reason why a slave should receive as many blows as he has taken grapes or figs, or why a tradesman who has defrauded to the amount of a thousand drachmas should receive a thousand blows. The punishments to be inflicted on slaves are suggested by the cruelty of fear. Though Plato is aware that the distinction between Greeks and barbarians is due to Hellenic vanity, he is fully imbued with the Greek spirit about slavery. Yet he makes the acknowledgment, that many a one in the hour of danger has found a slave better to him than a son or a brother.

II. Before punishment can be inflicted at all, the legislator must determine the nature of the voluntary and involuntary. The great question of the freedom of the will, which in modern times has been worn threadbare with purely abstract discussion, was approached both by Plato and Aristotle—first, from the judicial; secondly, from the sophistical point of view. Their want of clearness in treating the subject is to be attributed to the difficulty which they experienced in disentangling the abstract from the concrete.

In attempting to distinguish between hurt and injury, Plato says that mere hurt is not injury; but that a benefit when done in a wrong spirit may sometimes injure, e. g. when conferred without regard to right and wrong, or to the good or evil consequences which may follow. He means to say that the good or evil disposition of the agent is the principle which characterizes actions; and this is not sufficiently

described by the terms voluntary and involuntary. You may hurt another involuntarily, and no one would suppose that you had injured him; and you may hurt him voluntarily, as in inflicting punishment—neither is this injury; but if you hurt him under the impulse of passion or desire, this is injury. In other words, injustice is the victory of desire or passion or self-conceit over reason, as justice is the subordination of them to reason. Plato is so far from allowing voluntary hurt to be injury, that he is disposed to affirm, in some paradoxical sense, all injustice to be involuntary; because no man would do injustice who could calculate the consequences of what he is doing. Yet, on the other hand, he admits that the distinction of voluntary and involuntary, taken in another and more obvious sense, is the basis of legislation. His conception of justice and injustice is complicated (1) by the want of a distinction between justice and virtue, that is to say, between the quality which primarily regards others, and the quality in which self and others are equally regarded; (2) by the confusion of doing and suffering justice; (3) by the unwillingness to renounce the old Socratic paradox, that evil is involuntary.

III. The Laws rest on a religious foundation; in this respect they bear the stamp of primitive legislation. They do not escape the almost inevitable consequence of making irreligion penal. If laws are based upon religion, the greatest offence against them must be irreligion. Hence the necessity for what in modern language, and according to a distinction which Plato would scarcely have understood, might be termed persecution. But the spirit of persecution in Plato, unlike that of modern religious bodies, arises out of the desire to enforce a true and simple form of religion, and is directed against the superstitions which tend to degrade mankind. Sir Thomas More, in his *Utopia*, is in favour of tolerating all except the intolerant, though he would not promote to high offices those who disbelieved in the existence of the soul after death. Plato has not advanced quite so far as this in the path of toleration. But in judging of his enlightenment, we must remember that the evils of necromancy and divination were far greater than those of intolerance in the ancient world. Human nature is always having recourse to the first; but only when organized into some form of priesthood falls into the other; although in primitive as in later ages the institution of a priesthood may claim probably to be an advance on some form of religion which preceded. The laws would, no doubt,

have rested on a sounder foundation, if Plato had ever distinctly realized to his mind the difference between crime and sin or vice. Of this, as of many other controversies, a clear definition might have been the end. But such a definition belongs to a later age of philosophy.

The arguments which Plato uses for the being of a God, have an extremely modern character: first, the *consensus gentium*; secondly, the argument which has already occurred in the *Phaedrus*, of the priority of the self-moved. The answer to the second class of objectors is, that God governs the world by general laws; but that he who takes care of the great will assuredly take care of the small. Plato did not feel, and has not attempted to consider, the difficulty of reconciling the special with the general providence of God. Yet he is unconsciously on the true road to the solution, when he regards the world as a whole, of which all the parts work together towards the final end.

We are surprised to find that the dangers of scepticism, which are supposed to exist among young men now, existed then (cp. *Rep.* vii. 538); that the Epicureanism expressed in the lines of Horace—

‘*Namque Deos didici securum agere aevum,*’

was already prevalent in the age of Plato; and that the terrors of another world were freely used in order to gain advantages over other men in this. The same objection which struck the Psalmist—‘Then saw I the wicked in great prosperity’—is supposed to lie at the root of the better sort of unbelief. And the answer is substantially the same which the modern theologian would offer:—that the ways of God in this world cannot be justified unless there be a future state of rewards and punishments. Yet this future state of rewards and punishments is not any addition of happiness or suffering imposed from without, but the permanence of good and evil in the soul: here Plato is in advance of many modern theologians. The Greek, too, had his difficulty about the existence of evil, which in one solitary passage, remarkable for being inconsistent with his general system, Plato explains, after the Magian fashion, by a good and evil spirit (896 D; cp. *Theaet.* 176 A, *Polit.* 269). This passage is also remarkable for being at variance with the general optimism of the Tenth Book—not ‘all things are ordered by God for the best,’ but some things by a good, others by an evil spirit.

The Tenth Book of the *Laws* presents a picture of the state of belief among the Greeks singularly like that of the world in which we live.

Plato is disposed to attribute the incredulity of his own age to several causes. First, to the bad effect of mythological tales, of which he still retains his disapproval; but he has a weak side for antiquity, and is unwilling, as in the Republic, wholly to proscribe them. Secondly, he remarks the self-conceit of a younger generation of philosophers, who declare that the sun, moon, and stars, are earth and stones only; and who also maintain that the Gods are made by the laws of the state. Thirdly, he notes a confusion in the minds of men arising out of their misinterpretation of the appearances of the world around them: they do not always see the righteous rewarded and the wicked punished. So in modern times there are some whose infidelity has arisen from doubts about the inspiration of ancient writings; others who have been made unbelievers by physical science, or again by the seemingly political character of religion; while there is a third class to whose minds the difficulty of 'justifying the ways of God to man' has been the chief stumblingblock. Plato is very much out of temper at the impiety of some of his contemporaries; yet he is determined to reason with the victims, as he regards them, of these illusions before he punishes them. His answer to the unbelievers is twofold: first, that the soul is prior to the body; secondly, that the ruler of the universe being perfect has made all things with a view to their perfection. If we compare the Gods with men at all, we must compare them not with the least but with the highest of human beings. The difficulties arising out of ancient sacred writings were far less serious in the age of Plato than in our own.

We too have our popular Epicureanism, which would allow the world to go on as if there were no God. When the belief in him, whether of ancient or modern times, begins to fade away, men relegate him either in theory or practice into a distant heaven. They do not like expressly to deny God when it is more convenient to forget him; and so the theory of the Epicurean becomes the practice of mankind in general. Nor can we be said to be free from that which Plato justly considers to be the worst unbelief—of those who put superstition in the place of true religion. For the larger half of Christians continue to assert that the justice of God may be turned aside by gifts, if not by the 'odour of fat, and the sacrifice steaming to heaven,' still by another kind of sacrifice placed upon the altar, and by masses for the quick and dead, by dispensations, by building churches, by rites and ceremonies—by the same means which the heathen used, taking other names and

shapes. And the indifference of Epicureanism and unbelief is in two ways the parent of superstition, partly because it permits, and also because it creates a necessity for its development in religious and enthusiastic temperaments. If men cannot have a rational belief, they will have an irrational. And hence the most superstitious countries are also at a certain point of civilization the most unbelieving, and the revolution which takes one direction is quickly followed by a reaction in the other. So we may read 'between the lines' ancient history and philosophy into modern, and modern into ancient. Whether we compare the theory of Greek philosophy with the Christian religion, or the practice of the Gentile world with the practice of the Christian world, they will be found to differ more in words and less in reality than we might have supposed. The greater opposition which is sometimes made between them seems to arise chiefly out of a comparison of the ideal of the one with the practice of the other.

To the errors of superstition and unbelief Plato opposes the simple and natural form of religion; the best and highest, whether in the form of a person or a principle, as the divine mind or the idea of God, is regarded by him as the true basis of human life. That all things are working together for good to the good and evil to the evil in this or in some other world to which human actions are transferred, is the sum of his faith or theology. Unlike Socrates, he is absolutely free from superstition. Religion and morality are one and indivisible to him. He nowhere speaks of omens or of sacrifices. He dislikes the 'heathen mythology,' which, as he significantly remarks, was not tolerated at Sparta. He gives no encouragement to individual enthusiasm; 'the establishment of religion could only be the work of a mighty intellect.' Like the Hebrews, he prohibits private rites; for the avoidance of superstition, he would transfer all worship of the Gods to the public temples. He would not have men and women consecrating the accidents of their good or bad fortune. He trusts to human punishments and not to divine judgments; though he is not unwilling to repeat the old tradition that certain kinds of dishonesty 'prevent a man from having a family.' He considers that the 'ages of faith' have passed away and cannot now be recalled. Yet he is far from wishing to extirpate the sentiment of religion, which he sees to be common to all mankind—Barbarians as well as Hellenes. He remarks that no one passes through life without, sooner or later, experiencing its power. To

which we may add the further remark that the greater the irreligion, the more violent has often been the religious reaction.

It is remarkable that Plato's account of mind at the end of the *Laws* goes beyond Anaxagoras, and beyond himself in any of his previous writings. Aristotle, in a well-known passage (*Met.* i. 3) which is an echo of the *Phaedo* (p. 97), remarks on the inconsistency of Anaxagoras in introducing the agency of mind, and yet having recourse also to the lesser agencies of material causes. But Plato makes the further criticism, that the error of Anaxagoras consisted not in denying the universal agency of mind, but in denying the priority, or, as we should say, the eternity of it. Yet in the *Timæus* he had himself allowed that God made the world out of pre-existing materials: in the *Politicus* he says that there were seeds of evil in the world arising out of the remains of a former chaos which could not be got rid of; and even in the Tenth Book of the *Laws* he had admitted that there were two souls, a good and evil. In the *Meno*, the *Phaedrus*, and the *Phaedo*, he had spoken of the recovery of ideas from a former state of existence. But now he has attained to a clearer point of view: he has discarded these fancies. From meditating on the priority of the human soul to the body, he has learnt the nature of soul absolutely. The power of the best, of which he gave an intimation in the *Phaedo* and in the *Republic*, now, as in the *Philebus*, takes the form of an intelligence or person. He no longer, like Anaxagoras, supposes mind to be introduced at a certain time into the world and to give order to a pre-existing chaos, but to be prior to the chaos, everlasting and evermoving, and the source of order and intelligence in all things. This appears to be the last form of Plato's religious philosophy, which might almost be summed up in the words of Kant, 'the starry heaven above and the moral law within.' Or rather, perhaps, 'the starry heaven above and the harmony of mind in the world.'

IV. The remarks about retail trade, about adulteration, and about mendicity, have a very modern character. Greek social life was more like our own than we are apt to suppose. There was the same division of ranks, the same aristocratic and democratic feeling, the same preference for land and for agricultural pursuits. Plato may be claimed as the first free-trader, when he prohibits the imposition of customs on imports and exports, though he was clearly not aware of the importance of the principle which he enunciated. The discredit

of retail trade he attributes to the rogueries of traders, and is inclined to believe that if a nobleman would keep a shop, which heaven forbid! retail trade might become honourable. He has hardly lighted upon the true reason, which appears to be the essential distinction between buyers and sellers, the one being necessarily in some degree dependent on the other. When he proposes to fix prices 'which would allow a moderate gain,' and to regulate trade in several minute particulars, we must remember that this is by no means so absurd in a city consisting of 5040 citizens, in which almost every one would know and become known to everybody else, as in our own vast population. Among ourselves we are very far from allowing every man to charge what he pleases. Of many things the prices are fixed by law. Do we not often hear of wages being adjusted in proportion to the profits of employers? The objection to regulating them by law and thus avoiding the conflicts which continually arise between the buyers and sellers of labour, is not so much the undesirableness as the impossibility of doing so. Wherever free competition is not reconcilable either with the order of society, or, as in the case of adulteration with common honesty, the government may lawfully interfere. The only question is, Whether the interference will be effectual, and whether the evil of interference may not be greater than the evil which is prevented by it.

He would prohibit beggars, because in a well-ordered state no one will be allowed to starve. This again is a prohibition which might be easily enforced, for there is no difficulty in maintaining the poor when the population is small. Among modern nations the difficulty of pauperism is rendered far greater, (1) by the enormous numbers, (2) by the facility of locomotion, (3) by the increasing tenderness for human life and suffering. And the only way of meeting the difficulty seems to be by modern nations subdividing themselves into small bodies having local knowledge and acting together in the spirit of ancient communities.

V. Regarded as the framework of a polity the Laws are deemed by Plato to be a decline from the Republic, which is the dream of his earlier years. He nowhere imagines that he has reached a higher point of speculation. He is only descending to the level of human things, and he often returns to his original idea. His guardians of the law are not expected to have any special training; but he adds to them

a select body, who are supposed to retain the spirit of the legislator dwelling in them. These are the nocturnal council, who, although they are not trained in dialectic, must know the relation of the one to the many in virtue. Plato has been arguing throughout the *Laws* that temperance is higher than courage, peace than war, and that the love of both must enter into the character of the good citizen. And at the end the same thought is summed up by him in an abstract form. The true artist or guardian must be able to reduce the many to the one, than which, as he says with an enthusiasm worthy of the *Phaedrus* or *Philebus*, 'no more philosophical method was ever attained by the wit of man.' But the sense of unity in difference can only be acquired by study; and Plato does not explain to us the nature of this study, which we may reasonably infer, though there is a remarkable omission of the word, to be akin to the dialectics of the *Republic*.

The nocturnal council is to consist of the three citizens pre-eminent in virtue, and the ten eldest guardians of the law; each of whom is to elect for approval a younger coadjutor, making twenty-six in all. This council of twenty-six is not the administrative but the legislative body, who are to make legislation a study; they have an exceptional power, probably suggested by the power which a similar council exercised in the Pythagorean city of Crotona. And they are supposed to share in the education of the State, which is declared to be a great advantage; although Plato has provided no special training for them, alleging that he will not anticipate in detail the previous studies which experience may hereafter show to be best fitted for them.

The *Laws* of Plato contain the latest phase of his philosophy, showing in many respects an advance, and in others a decline, in his views of life and the world. His doctrine of ideas passed among his disciples into a theory of numbers, the nature of which we gather chiefly from the *Metaphysics* of Aristotle. Of the speculative side of this theory we find no traces in the *Laws*, but doubtless Plato found, or seemed to find, a wonderful confirmation of his arithmetical speculations in the possibility of applying number and measure to the revolution of the heavens, and to the regulation of human life. In this there appears to be rather a retrogression than an advance; for the most barren logical abstraction is of a higher nature than number and figure. Again, there is less enthusiasm for the higher education, which is now confined to the thirty-seven members of the council. The speculative truth which

was the food of the guardians in the Republic, is for the majority of the citizens restricted to practical truth. The law, which is the expression of mind written down, takes the place of the living word of the philosopher. (Compare the contrast of Phaedrus 275 E, and Laws x. 891 A; also the plays on the words νοῦς νόμος νοῦ διανομή.) The State is based on virtue and religion rather than on knowledge; and virtue is no longer identified with knowledge, being of the commoner sort, and spoken of in the sense generally understood. Yet there are many traces of advance as well as retrogression in the Laws of Plato. The attempt to reconcile the ideal with actual life is an advance; to 'have brought philosophy down from heaven to earth,' is a praise which may be justly claimed for him as well as for his master Socrates. And the nocturnal council are to continue students of the 'one in many' and of the nature of God.

Plato's increasing appreciation of the difficulties of human affairs, and of the element of chance which so largely influences them, is an indication not of a narrower, but of a maturer mind, which had become more conversant with realities. Nor can we fairly attribute any want of originality to him, because he has borrowed many of his provisions from Sparta and Athens. He has freely intermingled the spirit of the one with the laws of the other, while in many points he has departed equally from both. The praise of obedience, the authority assigned to elders, the prohibition of dowries, the enforcement of marriage, the common meals, the distribution and inalienability of land, the institution of the Crypteia, the freedom of bequest to a favourite son, the dislike of city walls,—all reflect the customs of Sparta. In one or two points he seems to prefer the form which the Dorian institutions had assumed in Crete. The syssitia are to be maintained at the public expense, and the produce of the land to be divided in fixed proportions, which Aristotle (Polit. ii. 7, 4) declares to have been the custom in Crete. Plato denounces the Spartan practice of expelling strangers; he condemns the licentiousness of their women; also their preference of war to peace, and of gymnastic exercises to music, which was characteristic of Cretans as well as Lacedaemonians, while he raises his voice against the unnatural vices allowed by public opinion to exist in both states.

The use of the lot, the scrutiny of the magistrates, the monthly courses of the council, the election of the generals, the pardon of the forgiven

homicide, most of the regulations about testaments and the guardianship of orphans, the degrees of consanguinity recognised by law, correspond with Athenian laws and customs. (Cp. Hermann, 'De Vestigiis Institutorum veterum per Platonis de Legibus libros indagandis.') But there seems to be little which we can add with certainty from the Laws of Plato to our knowledge either of Athenian or Spartan institutions. Only the proposed division of land in the city of the Magnetes affords a strong reason for supposing that a similar institution already existed at Sparta, which of late years has been doubted by Mr. Grote and others. Though Plato is smitten with some features of government which he finds in Egypt, and especially with the immutability of their laws, which he vainly hopes to create in the ever-changing minds of his own countrymen, the Laws, like the Republic, and unlike the Cyropedia of Xenophon, are in spirit essentially Greek. They are the correction of the laws of Lycurgus and Solon; in the phraseology of modern times they may also be said to form a code or digest of them. They contain some enactments, as for example the refusal of credit, borrowed from Charondas; and other provisions which at first sight appear singular are probably taken from other ancient legislators. They do not rest, like the lost Politics of Aristotle, on an analysis of three hundred constitutions; but Plato makes good use of three. And although he falls short of Aristotle in the observation of facts, he is superior to him in some other respects, and in two especially: (1) the attempt to raise the female sex by education, and (2) to base politics on morals and religion.

Thus we have arrived at the end of the writings of Plato, and at the last stage of philosophy which was really his. For in what followed, which we chiefly gather from the uncertain intimations of Aristotle, the spirit of the master no longer survived. The doctrine of ideas passed into one of numbers—instead of advancing from the abstract to the concrete, the theories of Plato were taken out of their context, and either asserted or refuted with a provoking literalism; the Socratic or Platonic element in his teaching was absorbed into the Megarian or Pythagorean; his poetry was converted into mysticism; his unsubstantial visions were assailed *secundum artem* by the rules of logic. His political speculations lost their interest when the freedom of Hellas had passed away. Of all his writings the Laws were the furthest removed from the traditions

of the Platonic school in the next generation. Both his political and his metaphysical philosophy are for the most part misinterpreted by Aristotle. The best of him—his love of truth, and his ‘contemplation of all time and all existence,’ was soonest lost; and some of his greatest thoughts have slept in the ear of mankind almost ever since they were first uttered.

We have followed him during his forty or fifty years of authorship, from the beginning when he first attempted to depict the teaching of Socrates in a dramatic form, down to the time at which the character of Socrates had disappeared, and we have the latest reflections of Plato’s own mind upon Hellas and the world. He, who was ‘the last of the poets,’ in his book of *Laws* writes prose only; he has himself fallen under the rhetorical influences which in his earlier dialogues he was combating. The progress of his writings is also the history of his life; for we have no other authentic life of him. The great effort which he makes is first to realize abstractions, and secondly to connect them. In the attempt to realize them, he was carried into a transcendental region in which he isolated them from experience, and we pass out of the range of science into poetry or fiction. The fancies of mythology for a time cast a veil over the gulf which divides phenomena from ontia. In his return to earth Plato meets with a difficulty which has long ceased to be a difficulty to us. He cannot understand how these obstinate, unmanageable ideas, residing alone in their heaven of abstraction can be either combined with one another, or adapted to phenomena. That which is the most familiar process of our own minds, to him appeared to be the crowning achievement of the dialectical art. For by his conquests in the world of mind not only are our thoughts widened, but he has furnished us with the instruments of thought. We have endeavoured to see him as he truly was, a great original genius struggling with unequal conditions of knowledge, not prepared with a system nor evolving in a series of dialogues ideas which he had long conceived, but inconsistent, contradictory, enquiring as he goes along, following the argument from one point of view only, and therefore arriving at opposite conclusions, hovering around the light, and sometimes dazzled with excess of light, but always moving in the same element of ideal truth. We have seen him also in his decline, when the wings of his imagination have begun to droop, but his experience of life remains, and he turns away from the contemplation of the eternal to take a last sad look at human affairs.

L A W S.

BOOK I.

PERSONS OF THE DIALOGUE.

AN ATHENIAN STRANGER.

CLEINIAS, a Cretan.

MEGILLUS, a Lacedaemonian.

Steph. *Athenian Stranger.* TELL me, Strangers, is God or man
624 supposed to be the author of your laws?

Cleinias. God, Stranger; nothing truer can be said of them than that they are the work of God: among us Cretans the author of them has been supposed to have been Zeus, but in Lacedaemon, as our Lacedaemonian friend will tell you, they say that Apollo is their lawgiver.

Megillus. Just so.

Ath. And do you believe, as Homer says, that Minos went every ninth year to converse with his Olympian sire, and was inspired by him to make laws for your cities?

Cle. Yes, that is our tradition; and there was Rhadamanthus, a brother of his, with whose name you are familiar; he also
625 is reputed to have been the justest of men, and we Cretans are of opinion that he derived his reputation from his righteous administration of justice when he was alive.

Ath. Yes, and a noble reputation too, and worthy of a son of Zeus. As you and Megillus have been trained in these institutions, I dare say that you will not be unwilling to give an account of your government and laws; on our way we can pass the time pleasantly in talking about them, for I am told that the distance from Cnosus to the cave and temple of Zeus is considerable; and doubtless there are shady places under

the lofty trees, which will protect us from this scorching sun. Being no longer young, we may often stop to rest beneath them, and so beguile the walk by conversation.

Cle. Yes, Stranger, and if we proceed onward we shall come to groves of cypresses, which are of rare height and beauty, and there are green pastures, in which we may repose and converse.

Ath. Very good.

Cle. Yes, very good, and better still when we see them ; let us move on cheerily.

Ath. I am willing.—And first, I want to know why the law has ordained that you shall have common meals and gymnastic exercises, and wear arms.

Cle. I think, Stranger, that the aim of our institutions is easily intelligible to any one. Look at the character of our country : Crete is not like Thessaly, a large plain ; and for this reason they have horses there, and we have runners on foot here—the inequality of the ground in our country is more adapted to locomotion on foot ; but then, if you have runners you must have light arms,—no one can run carrying a heavy weight, and the lightness of bows and arrows is convenient for running. Now all these regulations have been made with a view to war, and the legislator appears to me to have looked to war in all his arrangements ; and the common meals, if I am not mistaken, were instituted by him for a similar reason, because he saw that while they are in the field the citizens are compelled to take their meals together for the sake of mutual protection. He seems to me to have thought the world foolish in not understanding that all men are always going to war with one another ; and if in time of war there ought to be common meals 626 under military authority, having regular guards for the sake of defence, they should be continued in peace ; for what men in general term peace is, as he said, only a name ; in reality every city is in a natural state of war with every other, not indeed proclaimed by heralds, but everlasting. And if you observe, you will find that this was the intention of the Cretan legislator ; all institutions, private as well as public, were arranged by him with a view to war ; and he gave his laws to be observed with this intent, because he thought that all possessions or

institutions ceased to be of any value if a man was defeated in war; for all the good things of the conquered pass into the hands of the conquerors.

Ath. You appear to me, Stranger, to have been thoroughly trained in the Cretan institutions, and to be well informed about them; will you tell me a little more explicitly what is the principle of government which you would lay down? You seem to imagine that a state ought to be so ordered as to conquer all other states in war: am I right in supposing this?

Cle. Certainly; and my Lacedaemonian friend also, if I am not mistaken, will say the same.

Meg. Why, my good friend, how could any Lacedaemonian say anything else?

Ath. And does what you are saying apply only to states, or also to villages?

Cle. To both alike.

Ath. The case is the same?

Cle. Yes.

Ath. And in the village will there be the same war of family against family, and of individual against individual?

Cle. The same.

Ath. And are we to conceive each man as warring against himself: or how is that to be?

Cle. O Athenian Stranger, inhabitant of Attica I will not call you, who seem to me worthy to be named after the goddess Athene, because you go back to first principles; you from the light which you have thrown upon the argument, will more readily recognise the truth of my assertion, when I said just now that all men are the enemies of all other men, both in public and private, and every individual of himself.

Ath. My good sir, what do you mean?

Cle. I mean what I say; and, further, that there is a victory and defeat,—the first and best of victories, the lowest and worst of defeats,—which each man gains or sustains at the hands, not of another, but of himself; this shows that there is a war against ourselves going on in every one of us.

627 *Ath.* Let us now reverse the order of the argument: Seeing that every individual is either his own superior or his own

inferior, may we say that there is the same principle in the house, the village, and the state?

Cle. You mean that in each of them there is a principle of superiority or inferiority to self?

Ath. Yes.

Cle. You are quite right in asking that question, for there certainly is such a principle, and above all in states; and the state in which the better citizens win a victory over the mob and over the inferior classes, may be truly said to be better than itself, and may be justly praised, where the victory is gained, or censured in the opposite case.

Ath. Whether the better is ever really conquered by the worse, is a question which requires more discussion, and may be therefore left for the present. But I quite understand your meaning when you say that citizens who are of the same race and live in the same cities, may unjustly conspire, and having the superiority in numbers may overcome and enslave the few just; and when they prevail, the state may be truly called its own inferior and therefore bad; and when they are defeated, superior and therefore good.

Cle. Your remark, Stranger, is very singular, and yet must be admitted to be true.

Ath. Here is another case for consideration;—in a family there may be several brothers, who are the offspring of a single pair; very possibly the majority of them may be unjust, and the just may be in a minority.

Cle. Very possibly.

Ath. And you and I ought not to raise a question of words as to whether this family and household are rightly said to be superior when they conquer, and inferior when they are conquered; for we are not considering what may or may not be the proper or customary way of speaking, but we are considering the natural principles of right and wrong in laws.

Cle. That, Stranger, is most true.

Meg. Excellent, I say, in my opinion too, as far as we have gone.

Ath. Again; might there not be a judge over these brethren, of whom we were speaking?

Cle. Certainly.

Ath. Now, which would be the better judge,—one who destroyed the bad and required the good to govern themselves; or one who, while allowing the good to govern, let the bad live, and made them voluntarily submit? Or lastly, there might be a third excellent judge, who, finding the family distracted, not
628 only did not destroy any one, but reconciled them to one another for ever after, and gave them laws which they mutually observed, and was able to keep them friends.

Cle. The last would be by far the best sort of judge and legislator.

Ath. And yet the aim of all the laws which he gave would be the reverse of war.

Cle. Very true.

Ath. And will he who constitutes the state and orders the life of man have in view external war, or that sort of intestine war called civil, which no one, if he could prevent, would like to have occurring in his own state; and when occurring, every one would wish to get rid of as soon as possible.

Cle. He would have the latter chiefly in view.

Ath. And would he prefer that war should be terminated by the destruction of one of the parties, and by the conquest of the other, or that peace and friendship should be re-established among them; for then they would be able to give undivided attention to their foreign enemies?

Cle. Every one would desire the latter in the case of his own state.

Ath. And would not that also be the desire of the legislator?

Cle. Certainly.

Ath. And would not every one always make laws for the sake of the best?

Cle. To be sure.

Ath. But war, whether external or civil, is not the best, and the need of either is to be deprecated; but peace with one another, and good will, are best. Nor is the victory of the state over itself to be regarded as a really good thing, but as a necessity; a man might as well say that the body was in the best state when sick and purged by medicine, forgetting that there is also a state of the body which needs no purge. And in like manner no one can be a true statesman, whether he aims at

the happiness of the individual or state, who looks only, or first of all, to external warfare; nor will he ever be a sound legislator who orders peace for the sake of war, and not war for the sake of peace.

Cle. I suppose that there is truth, Stranger, in that remark of yours; and yet I am greatly mistaken if war is not the entire aim and object of our institutions, and also of the Lacedaemonians.

Ath. I dare say; but there is no reason why we should rudely 629 quarrel with one another about your legislators, instead of gently questioning them, seeing that they as well as ourselves are quite in earnest. Let me take you with me; and first we will summon Tyrtaeus, who was an Athenian by birth, and also a Spartan citizen, and who of all men was most eager about war. 'Well,' he says,

'I sing not, I care not, about any man,

even if he were the richest of men, and possessed every good (and then he gives a list of them), unless he be the bravest in war.' I imagine that you, too, must have heard his poems; our Lacedaemonian friend has probably heard too much of them.

Meg. Very true.

Cle. And they have found their way from Lacedaemon to Crete.

Ath. Come now and let us all join in asking this question of Tyrtaeus: O most divine poet, we will say to him, the excellent praise which you have bestowed on those who excel in war sufficiently proves that you are wise and good, and I and Megillus and Cleinias of Cnosus do, as I believe, entirely agree with you. But we should like to be quite sure that we are speaking of the same men; tell us, then, do you agree with us in thinking that there are two kinds of war; or what would you say? A far inferior man to Tyrtaeus would have no difficulty in replying quite truly, that there are two kinds of war,—one which is universally called civil war, and is, as we were just now saying, of all wars the worst; the other, as we should all admit, in which we fall out with other nations who are of a different race, is a far milder form of warfare.

Cle. Certainly, far milder.

Ath. Well, now, when you praise and blame war in this high-

flown strain, whom are you praising or blaming, and to which kind of war are you referring? I suppose that you must mean foreign war, if I am to judge from expressions of yours in which you say that you abominate those

‘Who refuse to look upon fields of blood, and will not draw near and strike at their enemies.’

And we shall naturally go on to say to him,—You, Tyrtaeus, certainly appear to praise those who distinguish themselves in external and foreign war; and he must admit this.

Cle. Certainly.

Ath. They are good; but we say that there are still better
630 men whose virtue is displayed in the greatest of all battles. And we too have a poet whom we summon as a witness, Theognis, citizen of Megara in Sicily, who says:—

‘Cyrnus,’ he says, ‘he who is faithful in a civil broil is worth his weight in gold and silver.’

And such an one is far better, as we affirm, than the other in a more difficult kind of war, much in the same degree as justice and temperance and wisdom, when united with courage, are better than courage only; for a man cannot be faithful and good in civil strife without having all virtue. But in the war of which Tyrtaeus speaks, many a mercenary soldier will take his stand and be ready to die at his post, and yet they are generally and almost without exception insolent, unjust, violent men, and the most senseless of human beings. You will ask what the conclusion is, and what I am seeking to prove: I maintain that the divine legislator of Crete, like any other who is worthy of consideration, will always in making laws have regard to the greatest virtue; which, according to Theognis, is loyalty in the hour of danger, and may be truly called perfect justice. Whereas, that virtue which Tyrtaeus highly praises is well enough, and was sung of by the poet in the hour of need, yet in place and dignity may be said to be only fourth-rate.

Cle. Stranger, we are degrading our inspired lawgiver to a very low rank in the scale of legislators.

Ath. Nay, I think that we degrade not him but ourselves, if we imagine that Lycurgus and Minos laid down laws both in Lacedaemon and Crete mainly with a view to war.

Cle. What ought we to say then?

Ath. What truth and what justice require of us, if I am not mistaken, when speaking in behalf of divine excellence;—that the legislator when making his laws had in view not a part only, and this the lowest part of virtue, but all virtue, and that he devised classes of laws answering to the kinds of virtue; not in the way in which modern inventors of laws make the classes, for they only investigate and offer laws of which the want is being felt, and one man has a class of laws about inheritances in part or sole, another about assault; others about ten thousand other matters of a similar nature. But we say that ⁶³¹ the right way of enquiry is to proceed as we have now done, and I admired the spirit of your exposition; for you are quite right in beginning with virtue, and saying that this was the aim of the giver of the law, but I thought that you went wrong when you added that he referred all to a part, and a most inferior part of virtue, and my subsequent observations had a bearing on this. Will you allow me then to explain how I should have liked to have heard you expound the matter?

Cle. By all means.

Ath. You ought to have said, Stranger,—The Cretan laws are with good reason famous among the Hellenes; for they fulfil the object of laws, which is to make those who use them happy, for all goods are derived from them. Now goods are of two kinds: there are human and there are divine goods, and the human hang upon the divine; and the state which attains the greater, at the same time acquires the less, or not having the greater loses both. Of the lesser goods the first is health, the second beauty, the third strength, including swiftness in running and bodily agility generally, and the fourth is wealth, not the blind god [Pluto], but one who is keen of sight, because he has wisdom for his companion. For wisdom is chief and leader of the divine class of goods, and next follows temperance; and from the union of these two with courage springs justice, and fourth in the scale of virtue is courage. The four naturally take precedence of the other goods, and this is the order in which the legislator must place them, and after them he will enjoin the rest of his ordinances on the citizens having a view to these, the human looking to the divine, and the divine looking to their leader mind. Some

of his ordinances will relate to contracts of marriage, which they make one with another, and to the procreation and education of children, both male and female; the duty of the lawgiver will be to take charge of his citizens, in youth and age, and at every time of life, and to give them punishments and rewards; and in reference to all their intercourse with one another, he ought to consider their pains and pleasures and desires, and the vehemence of all their passions; he should keep a watch over them, and
 632 blame and praise them rightly by the mouth of the laws themselves. Also with regard to anger and terror, and the other perturbations of the soul, which arise out of misfortune, and the deliverances from them which prosperity brings, and the experiences which come to men in diseases, or in war, or poverty, or the opposite of these; in all these states he should determine what is the good and evil of the condition of each. In the next place, the legislator has to watch over the property and expenditure of the citizens, and their mutual contracts and cessations of contracts, whether voluntary or involuntary: he should see how they order all this, and consider among whom justice as well as injustice is found or is wanting; and honour those who obey the law, and impose fixed penalties on those who disobey, until the round of civil life is ended, and the time has come for the consideration of the proper funeral rites and honours of the dead. And the lawgiver reviewing his work, will appoint guardians to preside over these things,—some who walk by intelligence, others by true opinion only, and then mind will bind together all his ordinances and show them to be in harmony with temperance and justice, and not with wealth or ambition. This is the spirit, Stranger, in which I was and am desirous that you should pursue the subject. And I want to know how all these matters are, and are arranged in the laws of Zeus, as they are termed, and in those of the Pythian Apollo which Minos and Lycurgus gave; and how the order of them is discovered to his eyes, who has experience and skill in laws, although they are far from being self-evident to the rest of mankind like ourselves.

Cle. How shall we proceed, Stranger?

Ath. I think that we must begin again as before, and first discuss the habit of courage; afterwards we will go through

the other forms of virtue, if you please. Then we shall have a model of the whole; and with these and similar discourses we will beguile the way. And when we have gone through all the virtues, we will show, by the grace of God, that what has preceded has relation to virtue.

Meg. Very good; and suppose that you first criticise this 633
praiser of Zeus and the laws of Crete.

Ath. I will try to criticise you and myself, as well as him, for we are all concerned in the argument. Tell me,—were not the common meals, and secondly the gymnasia, invented by your legislator with a view to war?

Meg. Yes.

Ath. And what comes third, and what fourth, in the order of your legislation? For that, I think, is the sort of enumeration which ought to be made of the parts of virtue, no matter whether you call them parts or what their name is, provided the meaning is clear.

Meg. Then I, or any other Lacedaemonian, would reply that hunting is third in order.

Ath. Let us see if we can discover what comes fourth and fifth.

Meg. I think that I can get as far as the fourth head, which is the frequent endurance of pain, exhibited by them in certain hand-to-hand fights; also in stealing with the prospect of getting a beating; there is, too, the so-called *Crypteia*, or secret service, in which wonderful endurance is shown,—they wander over the whole country by day and by night, and even in winter have not any shoes on their feet, and are without beds to lie upon, and have no one to attend them. Marvellous, too, is the endurance which our citizens show in their gymnastic exercises, contending against the violent summer heat; and there are many similar practices, to speak of which in detail would be endless.

Ath. Excellent, O Lacedaemonian stranger. But how ought we to define courage? Is that to be regarded only as a combat against fears and pains, or also against desires and pleasures, and against flatteries; which exercise such a tremendous power, that they make the hearts even of respectable citizens to melt like wax?

Meg. I should say the latter.

Ath. In what preceded, as you well remember, our Cnosian friends spoke of a man or a city being inferior to themselves?

Cle. I did so.

Ath. Now, which is in the truest sense inferior, the man who is overcome by pleasure or by pain?

Cle. I should say the man who is overcome by pleasure; for all men deem him to be inferior in a more disgraceful sense, than the other who is overcome by pain.

Ath. But surely the lawgivers of Crete and Lacedaemon have
634 not legislated for a courage which is lame of one leg, able only to meet attacks which come from the left, but impotent against the insidious flatteries which come from the right?

Cle. Able to meet both, I should say.

Ath. Then let me once more ask, what institutions have you in either of your states which give a taste of pleasures, and do not avoid them any more than they avoid pains; but which set a person in the midst of them, and compel or induce him by motives of honour to get the better of them? Where is an ordinance about pleasure similar to that about pain to be found in your laws? Tell me what there is of this nature among you:—What is there which makes your citizen equally brave against pleasure and pain, conquering what they ought to conquer, and superior to the enemies who are most dangerous and nearest home?

Meg. I was able to tell you, Stranger, many laws which were directed against pain; but I do not know that I can point out any great or obvious examples of similar institutions which are concerned with pleasure; there are some lesser parts of laws, however, which I might mention.

Cle. No more can I show anything of that sort which is at all prominent in the Cretan laws.

Ath. No wonder, my dear friends; and if, as is very likely, in our search after the true and good, one of us may have to censure the laws of the others, we must not take offence, but be gentle to one another.

Cle. You are quite right, Athenian Stranger, and we will do as you say.

Ath. At our time of life, Cleinias, there should be no feeling of irritation.

Cle. Certainly not.

Ath. I will not at present determine whether he who censures the Cretan or Lacedaemonian polities is right or wrong. But I believe that I can tell better than either of you what the many say about them. For assuming that you have reasonably good laws, one of the best of them will be a law forbidding any young men to enquire which of them are right or wrong; but with one mouth and one voice, they must all agree that the laws are all good and of divine origin; and any one who says the contrary is not to be listened to. But an old man who remarks any defect, may communicate his observation to a ruler or to an equal when no young man is present.

Cle. Exactly so, Stranger; and like a diviner, although not 635 there at the time, you seem to me quite to have hit the meaning of the legislator, and to say what is most true.

Ath. As there are no young men present, and the legislator has given old men free licence, there will be no impropriety in our discussing these matters now that we are alone.

Cle. True. And therefore you may be as free as you like in your censure of our laws, for there is no discredit in knowing what is wrong; he who receives what is said in a generous and friendly spirit will be the better for it.

Ath. Very good; however, I am not going to censure your laws until to the best of my ability I have examined them, but I am going to raise doubts about them. For you are the only people known to us, whether Greek or barbarian, whom the legislator commanded to eschew all great pleasures and amusements; whereas in the matter of pains or fears which we have just been discussing, he thought that they who from infancy had always avoided the pains and fears and sorrows which must be, when they were compelled to face them would run away from those who were hardened in them and become their subjects. Now the legislator ought to have considered that this was equally true of pleasure; he should have said to himself, that if our citizens are from their youth upward unacquainted with the greatest pleasure, and unused to endure amid the temptations of pleasure, and are not disciplined to refrain from all things evil, the sweet feeling of pleasure will overcome them just as fear would overcome the former class; and in

another, and even a worse manner, they will be the servants of those who are able to endure amid pleasures, and have had the opportunity of enjoying them, they being often the worst of mankind. One half of their souls will be a slave, the other half free; and they will not be worthy to be called in the true sense men and freemen. Tell me whether you assent to my words?

Cle. On first hearing, what you say appears to be the truth; but to be hasty in coming to a conclusion about such important matters, would be very childish and simple.

Ath. Suppose, Cleinias and Megillus, that we consider the virtue which follows next of those which we intended to discuss (for after courage comes temperance), what institutions shall we find in our three states about temperance, which like our military institutions we call those of other ordinary states.

636 *Meg.* That is not an easy question to answer; still I should say that the common meals and gymnastic exercises have been excellently devised for the promotion both of temperance and courage.

Ath. There seems to be a difficulty, Stranger, in so ordering acts and words in politics, that there should be no dispute about them. As in the human body, the manner of life which does good in one way does harm in another; and we can hardly say that any one course of treatment is adapted to a particular constitution. Now the gymnasia and common meals do a great deal of good, and yet they are a source of evil in civil troubles; as is shown in the case of Milesian, and Boeotian, and Thurian youth, among whom these institutions seem always to have had a tendency to degrade the ancient and natural custom of love below the level, not only of man, but of the beasts. The charge may be fairly brought against your cities above all others, and is true in general of states which especially cultivate gymnastics. Whether such matters are to be regarded jestingly or seriously, I think that the pleasure is to be deemed natural which arises out of the intercourse with men and women; but that the intercourse of men with men, or of women with women, is contrary to nature, and that the bold attempt was originally due to unbridled lust. The Cretans are always accused of having invented the story of Ganymede and Zeus because they

wanted to justify themselves in the enjoyment of unnatural pleasures by the practice of the god whom they believe to have been their lawgiver. Leaving the story, we may observe that any speculation about laws turns almost entirely on pleasure and pain, both in states and in private characters: these are two fountains which nature lets flow, and he who draws from them where and when, and as much as he ought, is happy; and this holds of men and animals—of individuals as well as states; and he who indulges in them ignorantly and in excess, is the reverse of happy.

Meg. I admit, Stranger, that your words are well spoken: at the same time, I hardly know what to say, and I still think that the Spartan lawgiver was quite right in forbidding pleasure. Of the Cretan laws, I shall leave the defence to my Cnosian friend. But the laws of Sparta in as far as they relate to pleasure, ⁶³⁷ appear to me to be the best in the world; for that which leads mankind in general into the wildest pleasure and licence, and every other folly, the law has clean driven out; and neither in the country nor in towns which are under the control of Sparta, will you find revelries and the many incitements of every kind of pleasure which accompany them; and any one who meets a drunken and disorderly person, will immediately have him most severely punished, and will not let him off on any pretence, not even at the time of a Dionysiac festival; although I have remarked that this may happen at your performances 'on the cart,' as they are called; and among our Tarentine colonists I have seen the whole city drunk at a Dionysiac festival; but nothing of the sort happens among us.

Ath. O Lacedaemonian Stranger, these festivities are praiseworthy where there is a spirit of endurance, but are very senseless when they are under no regulations. In order to retaliate, an Athenian has only to point out the licence which exists among your women. To all such accusations, whether they are brought against the Tarentines, or us, or you, there is one answer which exonerates the practice in question from impropriety. When a stranger expresses wonder at the singularity of what he sees, any inhabitant will naturally answer him:—Wonder not, O stranger; this is our custom, and you may very likely have some other custom about the same things.

Now we are speaking, my friends, not about men in general, but about the merits and defects of the lawgivers themselves. Let us then discourse a little more at length about them, and about the nature of intoxication at large, which is a very important matter, and will seriously task the discrimination of the legislator. I am not talking of the mere practice of drinking or not drinking wine in general, but about downright intoxication: are we to follow the custom of the Scythians, and Persians, and Carthaginians, and Celts, and Iberians, who are all warlike nations, or, that of your countrymen, who, as you say, wholly abstain? Whereas the Scythians and Thracians, both men and women, drink unmixed wine, which they also pour on their garments, and this they think a happy and glorious institution. The Persians again, are much given to other practices of luxury which you reject, but they have more moderation in them than the Thracians and Scythians.

638 *Meg.* O best of men, we have only to take arms into our hands, and we drive all these nations flying before us.

Ath. Nay, my good friend, do not say that; there have been, as there always will be, flyings and pursuings of which no account can be given, and therefore we cannot say that victory or defeat in battle afford more than a doubtful proof of the goodness or badness of institutions. For when the greater states conquer and enslave the lesser, as the Syracusans have done the Locrians, who appear to be the best-governed people in their part of the world, or as the Athenians have done the Cceans (and there are ten thousand other instances of the same sort of thing), all that is not to the point; let us endeavour rather to form a conclusion about the various institutions themselves, and say nothing, at present, of victories and defeats. Let us only say that such a custom is honourable, and the other not. And first permit me to tell you how good and bad are to be estimated in reference to these very matters.

Meg. How do you mean?

Ath. All those who are ready at a moment's notice to praise or censure any practice which is matter of discussion, seem to me to proceed in a wrong way. Let me give you an illustration of what I mean:—You may suppose a person to be praising wheat as a good sort of food, whereupon another person instantly

blames wheat, without ever enquiring into its effect or use, or in what way, or to whom, or with what, or in what state, wheat is to be applied. And that is just what we are doing in this discussion. At the very mention of the word intoxication, one side is ready with their praises and the other with their censures, and this is absurd. For either side adduce their witnesses and approvers, and some of us think that we speak with authority because we have many witnesses; and others because they see those who abstain conquering in battle, and this again is disputed by us. Now I cannot say that I approve of such a method of discussing laws. And about this very point of intoxication I should like to speak in another way, which I hold to be the right one; for if number is to be the criterion, are there not myriads upon myriads of nations ready to dispute the point with you who are only two cities?

Meg. I shall gladly welcome any method of enquiry which 639 is right.

Ath. Let me put the matter thus:—Suppose a person to praise the keeping of goats, and the creatures themselves as capital things to have, and then some one who had seen goats feeding without a goatherd in cultivated spots, and doing mischief, was to censure a goat or any other animal who has no keeper, or a bad keeper, would there be any sense or justice in such censure?

Meg. Certainly not.

Ath. Does a captain require only to have nautical knowledge in order to be a good captain, whether he is or is not sea-sick? What do you say?

Meg. I say that he is not a good captain if he is liable to sickness.

Ath. And what would you say of the commander of an army? Will he be able to command merely because he has military skill if he be a coward, who, when danger comes, is sick and drunk with fear?

Meg. Impossible.

Ath. And what if besides being a coward he have no skill?

Meg. He is a miserable fellow, who is only fit to be a commander of old women.

Ath. And what would you say of some one who blames or

praises any sort of meeting which is intended by nature to have a ruler, and is well enough when under his presidency? The critic, however, has never seen the society meeting together at an orderly feast under the control of a president, but always without a ruler or with a bad one:—when observers of this class praise or blame such meetings is what they say of any value?

Meg. Certainly not, if they have never seen or been present at such a meeting when rightly ordered.

Ath. But think; may not banqueters and banquets be said to constitute a sort of meeting?

Meg. Certainly.

Ath. And did any one ever see this convivial meeting rightly ordered? Of course you two will answer at once that you have never seen them at all, because they are not customary or lawful in your country; but I have come across many of them in many different places, and moreover I have made enquiries about them wherever I went, as I may say, and never did I see or hear of anything of the sort which was carried on altogether rightly; in some few particulars they might be right, but in general they were utterly wrong.

Cle. What do you mean, Stranger, by this remark? Explain. For we, as you say, from our inexperience in such matters, might very likely not know, even if we came in their way, what was right or wrong in such societies.

640 *Ath.* Likely enough; then let me try to be your instructor: you would acknowledge, would you not, that in all gatherings of mankind, of whatever sort, there ought to be a leader?

Cle. Certainly I should.

Ath. And we were saying just now, that when men are at war the leader ought to be a brave man?

Cle. Certainly.

Ath. The brave man is less likely than the coward to be disturbed by fears?

Cle. That is also true.

Ath. And if there were a possibility of having a general of an army who was absolutely fearless and imperturbable, should we not by all means appoint him?

Cle. To be sure.

Ath. Now, however, we are speaking not of a general who is

to command an army, when foe meets foe in time of war, but of one who is to regulate meetings of another sort, when friend meets friend in time of peace.

Cle. True.

Ath. And that sort of meeting, if attended with drunkenness, is apt to be unquiet.

Cle. Certainly ; the reverse of quiet.

Ath. In the first place, then, the revellers as well as the soldiers will require a ruler.

Cle. To be sure ; no men more so.

Ath. And we ought, if possible, to provide them such a quiet ruler?

Cle. Certainly.

Ath. And he should be a man who understands society ; for his duty is to preserve the friendly feelings which exist among the company at the time, and to increase them for the future by his use of the occasion.

Cle. Very true.

Ath. Must we not appoint a sober man and a wise to be our master of the revels? For if the ruler of drinkers be himself young and drunken, and not over-wise, only by some special good fortune will he be saved from doing some great evil.

Cle. It will be by a singular good fortune that he is saved.

Ath. Now suppose such associations to be framed in the best way possible in states, and that some one blames the very fact of their existence—he may very likely be right. But if he blames a practice which he only sees very much mismanaged, he shows clearly that he is not aware of the mismanagement, and also not aware that everything done in this way will turn out to be wrong, because done without the superintendence of a sober ruler. Do you not see that a drunken pilot or a drunken ruler of any sort will ruin ship, chariot, army—anything, in 641 short, of which he has the direction?

Cle. The last remark is very true, Stranger ; and I see quite clearly the advantage of an army having a good leader—he will give victory in war to his followers, which is a very great advantage, and so of other things. But I do not see any similar advantage which either individuals or states gain from the good management of a feast ; and I want you to tell me

what great good will be effected, supposing that this drinking ordinance is duly established.

Ath. If you mean to ask what great good accrues to the state from the right training of a single youth, or of a single chorus,—when the question is put in that form, we cannot deny that the good is not very great in any particular instance. But if you ask what is the good of education in general, the answer is easy—that education makes good men, and that good men act nobly, and conquer their enemies in battle, because they are good. Education certainly gives victory, although victory sometimes produces forgetfulness of education; for many have grown insolent from victory in war, and this insolence has engendered in them innumerable evils; and many a victory has been and will be suicidal to the victors; but education is never suicidal.

Cle. You seem to imply, my friend, that convivial meetings, when rightly ordered, are an important element of education.

Ath. Certainly I do.

Cle. And can you show that what you have been saying is true?

Ath. To be absolutely sure of the truth of matters concerning which there are many opinions, is an attribute of the Gods not given to man, Stranger; but I shall be very happy to tell you what I think, especially as we are now proposing to enter on a discussion concerning laws and constitutions.

Cle. Your opinion, Stranger, about the questions which are now being raised, is precisely what we want to hear.

Ath. Very good; I will try to find a way of explaining my meaning, and you shall try to have the gift of understanding me. But first let me make an apology. The Athenian citizen is reputed among all the Hellenes to be a great talker, whereas Sparta is renowned for brevity, and the Cretans have more wit
642 than words. Now, I am afraid of appearing to elicit a very long discourse out of very small materials. For drinking indeed may appear to be a slight matter, and yet is one which cannot be rightly ordered according to nature, without correct principles of music; these are necessary with a view to any satisfactory treatment of the subject, and music again runs up into education generally, and there will be no end to the discussion. What

would you say then to leaving these matters for the present, and passing on to some other question of law?

Meg. O Athenian Stranger, let me tell you what perhaps you do not know, that our family is your proxenus. I imagine that from their earliest youth all boys, when they are told that they are the proxeni of a particular state, feel kindly towards their second country; and this has certainly been my own feeling. I can well remember from the days of my boyhood, how, when any Lacedaemonians praised or blamed the Athenians, they used to say to me,—‘ See, Megillus, how ill or how well, as the case might be, has your state treated us;’ and having always had to fight your battles against detractors when I heard you assailed, I became warmly attached to you. And I always like to hear the Athenian tongue spoken; the common saying is quite true, that a good Athenian is more than ordinarily good, for he is the only man who is freely and genuinely good by the inspiration of nature, and is not manufactured by the law. Therefore be assured that I shall like to hear you say whatever you have to say.

Cle. I can say the same, Stranger; and that you may speak with the greater confidence, let me also remind you of a tie which unites you to Crete. You must have heard the story of the prophet Epimenides, who was of my family, and came to Athens ten years before the Persian war, in accordance with the response of the Oracle, and offered certain sacrifices which the God commanded. The Athenians were at that time in dread of the Persian invasion; and he said that for ten years they would not come, and that when they came, they would go away again without accomplishing any of their objects, and would suffer more evil than they inflicted. At that time my forefathers formed ties of hospitality with you; thus ancient is the friendship which I and my parents have had for you.

Ath. You seem to be quite ready to listen; and I am also ⁶⁴³ ready to perform as much as I can of an almost impossible task, which I will nevertheless attempt. At the outset of the discussion, let me define the nature and power of education; for this is the way by which our argument must travel onwards to the God Dionysus.

Cle. Let us proceed, if you please.

Ath. Well, then, if I tell you what are my notions of education, will you tell me whether you agree with them?

Cle. Let us hear.

Ath. According to my view, he who would be good at anything must practise that thing from his youth upwards, both in sport and earnest, in the particular manner which the work requires: for example, he who is to be a good builder, should play at building children's houses; and he who is to be a good husbandman, at tilling the ground; those who have the care of their education should provide them when young with mimic tools. And they should learn beforehand the knowledge which they will afterwards require for their art. For example, the future carpenter should learn to measure or apply the line in play; and the future warrior should learn riding, or some other exercise for amusement, and the teacher should endeavour to direct the children's inclinations and pleasures by the help of amusements, to their final aim in life. The most important part of education is right training in the nursery. The soul of the child in his play should be trained to that sort of excellence in which when he grows up to manhood he will have to be perfected. Do you agree with me thus far?

Cle. Certainly.

Ath. Then let us not leave the meaning of education ambiguous or ill-defined. At present, when we speak in terms of praise or blame about the bringing-up of each person, we call one man educated and another uneducated, although the uneducated man may be sometimes very well educated for the calling of a retail trader, or of a captain of a ship, and the like. For we are not speaking of education in this narrower sense, but of that other education in virtue from youth upwards, which makes a man eagerly pursue the ideal perfection of citizenship, and teaches him how rightly to rule and how to obey. This is the only education which, upon our view, deserves the name; that other sort of training, which aims at the acquisition of wealth or bodily strength, or mere cleverness apart from intelligence and justice, is mean and illiberal, and is not worthy to be called education at all. But let us not quarrel with one another about a word, provided that the proposition which has just been granted, hold good: to wit, that those who are rightly

educated generally become good men. Neither must we cast a slight upon education, which is the first and fairest thing that the best of men can ever have, and which, though liable to take a wrong direction, is capable of reformation. And this work of reformation is the great business of every man while he lives.

Cle. Very true; and we quite agree with you.

Ath. And we agreed before that they are good men who are able to rule themselves, and bad men who are not.

Cle. Most true.

Ath. Let me now proceed, if I can, to clear up the subject a little further by an illustration which I will offer you.

Cle. Proceed.

Ath. Do we not consider each of ourselves as one?

Cle. True.

Ath. And each one of us has in his bosom two counsellors, both foolish and also antagonistic; of which, the one we call pleasure and the other pain.

Cle. True.

Ath. Also there are opinions about the future, which have the general name of expectations; and the specific name of fear, when the expectation is of pain; and of hope, when of pleasure; and further, there is reflection about the good or evil of them, and this, when embodied in a decree by the State, is called Law.

Cle. I am hardly able to follow you; proceed, however, as if I were.

Meg. I am in the like case.

Ath. Let us look at the matter in this way: May we not regard every living being as a puppet of the Gods, either their plaything only, or created with a purpose—which of the two we cannot certainly know? But this we know, that these affections in us are like cords and strings, which pull us different and opposite ways, and to opposite actions; and herein lies the difference between virtue and vice. According to the argument there is one among these cords which every man ought to grasp and never let go, but to pull with it against all the rest; and this is the sacred and golden cord of reason, called by us the common law of the State; there are others which are hard and

of iron, but this is soft because golden; and there are several other kinds. Now we ought always to co-operate with the lead of the best, which is law. For inasmuch as reason is beautiful and gentle, and not violent, her rule must needs have ministers in order to help the golden principle in vanquishing the other principles. And thus the moral of the tale about our being puppets will not be lost, and the meaning of the expression 'superior or inferior to a man's self' will become clearer; as also that in this matter of pulling the strings of the puppet, cities as well as individuals should live according to reason; which the individual attains in himself, and the city receives from some god or from the legislator, and makes it her law in her dealings with herself and with other states. In this way virtue and vice will be more clearly distinguished by us. And when they have become clearer, education and other institutions will in like manner become clearer; and in particular that question of convivial entertainment, which may seem, perhaps, to have been a very trifling matter, and to have taken a great many more words than were necessary.

Cle. Perhaps, however, the theme may turn out not to be unworthy of the length of discourse.

Ath. Very good; let us proceed with any enquiry which really bears on our present object.

Cle. Proceed.

Ath. Suppose that we give this puppet of ours drink,—what will be the effect on him?

Cle. With what view do you ask that question?

Ath. I will tell you bye and bye. When the puppet is brought to the drink, what sort of result is likely to follow? I will endeavour to explain my meaning more clearly: what I am asking is this—Does the drinking of wine heighten and increase pleasures and pains, and passions and loves?

Cle. Very greatly.

Ath. And are perception and memory, and opinion and prudence, heightened and increased? Do not these qualities entirely desert a man if he becomes saturated with drink?

Cle. Yes, they entirely desert him.

Ath. Does he not return to the state of the soul in which he was when a young child?

Cle. To be sure.

Ath. Then at that time he will have the least control over himself?

Cle. The least.

Ath. And will he not be in a most wretched plight?

646

Cle. Most wretched.

Ath. Then not only an old man but also a drunkard becomes a second time a child?

Cle. Well said, Stranger.

Ath. Will any argument prove to us that we ought to encourage the taste for drinking instead of doing all we can to avoid it?

Cle. I suppose so; at any rate, you said just now that you were ready to maintain such a doctrine.

Ath. True, I did; and I hold to my word, as you both declared that you were ready to hear me.

Cle. To be sure we will hear you, if only for the strangeness of the paradox, which asserts that a man ought of his own accord to plunge into utter degradation.

Ath. Are you speaking of the soul?

Cle. Yes.

Ath. And what would you say about the body, my friend? Are you not surprised at any one of his own accord bringing upon himself deformity, leanness, ugliness, decrepitude?

Cle. Certainly.

Ath. Yet when a man goes of his own accord to a doctor's shop, and takes medicine, is he not quite aware that soon, and for many days afterwards, he will be in a state of body which he would die rather than accept as the permanent condition of his life? Are not those who train in gymnasia, at first beginning reduced to a state of weakness?

Cle. Yes, all that is well known.

Ath. Also that they go of their own accord for the sake of the subsequent benefit?

Cle. Very good.

Ath. And we may conceive this to be true in the same way of other practices?

Cle. Certainly.

Ath. And the same view may be taken of the pastime of

drinking wine, if we are right in supposing that the same effect follows?

Cle. To be sure.

Ath. If such convivialities should turn out to have any like advantage equal in importance to the bodily one, they are in their very nature to be preferred to mere bodily exercise, inasmuch as they have no accompaniment of pain.

Cle. True; but I hardly think that we shall be able to discover any such benefits to be derived from them.

Ath. That is just what I am about to show. And let me ask you a question:—Do we not distinguish two kinds of fear, which are very different?

Cle. What are they?

Ath. There is the fear of expected evil.

Cle. Yes.

Ath. And there is the fear of an evil reputation; we are afraid
647 of being thought evil, because we do or say some dishonourable thing, which fear we and all men term shame.

Cle. Certainly.

Ath. These are the two fears, as I called them; one of which is the opposite of pain and other fears, and the opposite also of the greatest and most numerous sort of pleasures.

Cle. Very true.

Ath. And does not the legislator and every one who is good for anything, hold this fear in the greatest honour? This is what he terms reverence, and the confidence which is the reverse of this he terms insolence; and the latter he always deems to be a very great evil both to individuals and to states.

Cle. True.

Ath. Does not this sort of fear preserve us in many important ways? What is there which so surely gives victory and safety in war? For there are two things which give victory—confidence before enemies, and fear of disgrace before friends.

Cle. True.

Ath. Then each of us should be fearless and also fearful; and what we fear or ought not to fear has been determined.

Cle. Certainly.

Ath. And when we want to make any one fearless, we and the law bring him face to face with many fears.

Cle. Clearly.

Ath. And when we want to make him rightly fearful, must we not bring him face to face with disgrace, and exercise him in taking up arms against his own pleasures and overcoming them? Or does this principle apply to courage only, and must he who would be perfect in valour fight against and overcome his own natural character,—since if he be unpractised and inexperienced in such conflicts, he will not be half the man which he might have been—but are we to suppose, that with temperance it is otherwise, and that he who has never fought with the shameless and unrighteous temptations of his pleasures and lusts, and conquered them, in earnest and in play, and in every sort of way, word, or work, will still be perfectly temperate?

Cle. How unlikely!

Ath. Suppose that some God had given a fear potion to men, and that the more a man drank of this the more he regarded himself as a child of misfortune on every occasion of drinking, and that he feared everything happening or to happen to him; and that at last the most courageous of men utterly lost his presence of mind for a time, and only came to himself again when he had slept off the influence of 648 the draught.

Cle. But do you know of any such draught, Stranger, which is really to be found among men?

Ath. I do not; but, if there were, might not such a draught have been of use to the legislator as a test of courage? Might we not go and say to him, ‘O legislator, whether you are legislating for the Cretans, or the Spartans, or any other, would you not like to have a touchstone of the courage and cowardice of your citizens?’

Cle. ‘I should,’ will be the answer of every one.

Ath. ‘And you would rather have a touchstone in which there is no risk and no great danger than the reverse?’

Cle. From that proposition, again, no one will dissent.

Ath. ‘And, in order to make use of the draught, you would lead them amid such imaginary terrors, and prove them, when the affection of fear was working upon them, and compel them to be fearless, exhorting and admonishing them, and also

honouring them, but dishonouring any one who will not be persuaded by you to be in all respects such as you command him; and if he underwent the trial well and manfully, you would let him go unscathed; but if ill, you would inflict a punishment upon him? Or would you abstain from using the potion altogether, although you have no reason for abstaining?’

Cle. He would be certain, Stranger, to use the potion.

Ath. This would be a mode of testing and training which would be wonderfully easy in comparison with those now in use, and might be applied to a single person, or to a few, or indeed to any number; and he would do well who provided himself with the potion, which alone is of more efficacy than ten thousand other things, whether he preferred to be by himself in the wilderness, and there contend with his fears, because he was ashamed to be seen by the eye of man until he was perfect; or trusting to the force of his own nature and habits, and believing that he had been already disciplined sufficiently, he did not hesitate to train himself in company with any number of others, and display his power in conquering the irresistible influence of the draught—his virtue being such, that he never in any instance fell into any great unseemliness, but was always himself, and left off before he arrived at the last cup, fearing that he, like all other men, might be overcome by the potion.

Cle. Yes, Stranger, in that last case, too, he might equally show his self-control.

649 *Ath.* Let us return to the lawgiver, and say to him:—‘Well, lawgiver, there is certainly no such fear potion which man has either received from the Gods or himself discovered; for witchcraft has no place at our board. But is there any potion which might serve as a test of overboldness and excessive and indiscreet boasting?’

Cle. I suppose that he will say, Yes,—meaning that wine is such a potion.

Ath. Is not the effect of this quite the opposite of the effect of the other? When a man drinks wine he begins to be better pleased with himself, and the more he drinks the more he is filled full of brave hopes, and the opinion of his power, and at last the string of his tongue is loosened, and fancying himself

wise, he is brimming over with lawlessness, and has no more fear or respect, and is ready to do or say anything.

Cl. I think that every one will admit the truth of your description.

Meg. Certainly.

Ath. Now, let us remember, as we were saying, that there are two things which should be cultivated in the soul: first, the greatest courage; secondly, the greatest fear—

Cl. Which you described as parts of reverence, if I am not mistaken.

Ath. Thank you for reminding me. But now, as the habit of courage and fearlessness is to be trained amid fears, let us consider whether the opposite quality is not also to be trained among opposites.

Cl. I dare say.

Ath. There are times and seasons at which we are by nature more than commonly valiant and bold; now we ought to train ourselves on these occasions to be as free from impudence and shamelessness as possible, and to be afraid to say or suffer or do anything that is base.

Cl. True.

Ath. Are not the moments in which we are apt to be bold and shameless such as these?—when we are under the influence of anger, love, pride, ignorance, avarice, cowardice? or when wealth, beauty, strength, and all the intoxicating workings of pleasure madden us? What is better adapted than the festive use of wine, in the first place to test, and in the second place to train the character of a man, if care be taken in the use of it? What is there cheaper, or more innocent? For do but consider which is the greater risk:—Would you rather test a man of a harsh and uncivil nature, which is the source of ten thousand acts of injustice, by making bargains with him at a risk to yourself, or by having him as a companion at the festival of Dionysus? Or would you, if you wanted to apply a touch-
650
stone to a man who is prone to love, entrust your wife, or your sons, or daughters to him, perilling your dearest interests in order to have a view of the condition of his soul? I might add numberless particulars, in which the advantage would be manifest of getting to know a character in sport, and

without paying dearly for experience. And I do not believe that either a Cretan, or any other man, will doubt that such a test is a fair test, and safer, cheaper, and speedier than any other.

Cle. That is certainly true.

Ath. And this knowledge of the natures and habits of men's souls will be of the greatest use in that art which has the management of them; and that art, if I am not mistaken, is politics.

Cle. Certainly.

BOOK II.

Athenian Stranger. AND now we have to consider whether 652
the insight into human nature is the only advantage derived
from well-ordered potations, or whether there are not other
advantages greater and more to be desired still. The argument
seems to imply that there are. But how and in what way
these are to be attained, will have to be considered attentively,
or we may be entangled in an error.

Cleinias. Proceed.

Ath. Let me once more recall our doctrine of right education ;
which, if I am not mistaken, depends on the due regulation of 653
convivial intercourse.

Cle. You talk rather grandly.

Ath. Pleasure and pain I maintain to be the first perceptions of
children, and I say that they are the forms under which virtue and
vice are originally present to them. As to wisdom and true
and fixed opinions, happy is the man who acquires them, even
when declining in years ; and he who possesses them, and the
blessings which are contained in them, is a perfect man. Now,
I mean by education that training which is given by suitable
habits to the first instincts of virtue in children ;—when pleasure,
and friendship, and pain, and hatred, are rightly implanted in
souls not yet capable of understanding the nature of them,
and who find them, after they have attained reason, to be in
harmony with her. This harmony of the soul, when perfected,
is virtue ; but the particular training in respect of pleasure and
pain, which leads you always to hate what you ought to hate,
and love what you ought to love, from the beginning to the
end, may be separated off ; and, in my view, will be rightly
called education.

Cle. I think, Stranger, that you are quite right in all that you
have said and are saying about education.

Ath. I am glad to hear that you agree with me; for, indeed, the true discipline of pleasure and pain which, when rightly ordered, is a principle of education, has been often relaxed and corrupted in human life. And the Gods, pitying the toils which our race is born to undergo, have appointed holy festivals, in which men alternate rest with labour; and have given them the Muses and Apollo the leader of the Muses, and Dionysus, to be partners in their revels, that they may improve what education they have, at the festivals of the gods and by their aid. I should like to know whether a common saying is true to nature or not. For what men say is that the young of all creatures cannot be quiet in their bodies or in their voices; they are always wanting to move, and cry out; at one time leaping and skipping, and overflowing with sportiveness and delight at something, and then again uttering all sorts of cries. But, whereas other animals have no perception of order or disorder in their movements, that is, of rhythm or harmony, as they are called, to us, the Gods, who, as we say, have been appointed to
654 be our partners in the dance, have given the pleasurable sense of harmony and rhythm; and so they stir us into life, and we follow them and join hands with one another in dances and songs; and these they call choruses, which is a term naturally expressive of cheerfulness¹. Shall we begin, then, with the acknowledgment that education is first given through Apollo and the Muses? What do you say?

Cl. I assent.

Ath. And the uneducated is he who has not been trained in the chorus, and the educated is he who has been well trained?

Cl. Certainly.

Ath. And the chorus is made up of two parts, dance and song?

Cl. True.

Ath. Then he who is well educated will be able to sing and dance well?

Cl. I suppose that he will.

Ath. Let us see; what are we saying?

Cl. What?

¹ χορὸς, erroneously connected with χαίρειν.

Ath. He sings well and dances well; now must we add that he sings what is good and dances what is good?

Cle. Let us make the addition.

Ath. We will suppose that he knows the good to be good, and the bad to be bad, and makes use of them accordingly: which now is the better trained in dancing and music;—he who is able to move his body and to use his voice in what is understood to be the right manner, but has no delight in good or hatred of evil; or he who is incorrect in gesture and voice, but is right in his sense of pleasure and pain, and welcomes what is good, and is offended at what is evil?

Cle. There is a great difference, Stranger, in the two kinds of education.

Ath. If we know what is good in song and dance, then we know also who is rightly educated and who is uneducated; but if not, then we certainly shall not know wherein lies the safeguard of education, and whether there is any or not.

Cle. True.

Ath. Let us follow the scent like hounds, and go in pursuit of beauty of figure, and melody, and song, and dance; if these escape us, there will be no use in talking about true education, whether Hellenic or barbarian.

Cle. Yes.

Ath. And what is beauty of figure, or beautiful melody? When a manly soul is in trouble, and when a cowardly soul ⁶⁵⁵ is in similar case, are they likely to use the same figures and gestures, or to give utterance to the same sounds?

Cle. How can they, when the very colours of their faces differ?

Ath. Good, my friend; I may observe, however, in passing, that in music there certainly are figures and there are melodies: and music is concerned with harmony and rhythm, so that you may speak of a melody or figure having rhythm or harmony; the term is correct enough, but you cannot speak correctly, as the masters of choruses have a way of talking metaphorically of the 'colour' of a melody or figure, although you can speak of the melodies or figures of the brave and the coward, praising the one and censuring the other. And not to be tedious, the figures and melodies which are expressive of virtue of soul or

body, or of images of virtue, are without exception good, and those which are expressive of vice are the reverse of good.

Cle. You are right in calling upon us to make that division.

Ath. But are all of us equally delighted with every sort of dance?

Cle. Far otherwise.

Ath. And what, then, is the cause of error or division among us? Are beautiful things not the same to us all, or are they the same in themselves, but not in our opinion of them? For no one will admit that forms of vice in the dance are more beautiful than forms of virtue, or that he himself delights in the forms of vice, and others in a muse of another character. And yet most persons say, that the excellence of music is to give pleasure to our souls. But this is intolerable and blasphemous; there is, however, a more plausible account of the delusion.

Cle. What is that?

Ath. There is a way of making our likes and dislikes the criterion of excellence. Choric movements are imitations of manners occurring in various actions, chances, characters,—each particular is imitated, and those to whom the words, or songs, or dances are suited, either by nature or habit or both, cannot help feeling pleasure in them and applauding them, and calling them beautiful. But those whose natures, or ways, or habits are unsuited to them, cannot delight in them or applaud them, and they call them base. There are others, again, whose natures are right and their habits wrong, or whose habits are right and their natures wrong, and they praise one thing, but are pleased at another. For they say that certain things are pleasant, but not
656 good. And in the presence of those whom they think wise, they are ashamed of dancing and singing in the baser manner, or of deliberately lending their countenance to such proceedings; and yet, they have a secret pleasure in them.

Cle. Very true.

Ath. And is any harm done to the lover of vicious dances or songs, or any good done to the approver of the opposite sort of pleasure?

Cle. I think that there is.

Ath. 'I think' is not the word, but I would say, rather, 'I am certain.' For must they not have the same effect as when a

man is in evil company, whom he likes and approves rather than dislikes, and only censures them playfully as if he had a suspicion of his own badness? In that case, he who takes pleasure in them will surely become like those in whom he takes pleasure, even though he be ashamed to praise them. And what greater good or evil can any destiny ever make us undergo?

Cle. I know of none.

Ath. Then in a city which has or in future ages is to have good laws, and where there is a due regard to the instruction and amusement which the Muses give, can we suppose that the poets are to be allowed to teach in the dance anything which the poet himself likes, in the way of rhythm, or melody, or words, to the children and youth of well-conditioned parents? Is he to train his choruses as he pleases, without reference to virtue or vice?

Cle. That is surely quite unreasonable, and is not to be thought of.

Ath. And yet he may do this in almost any state with the exception of Egypt.

Cle. And what are the laws about music and dancing in Egypt?

Ath. You will wonder when I tell you: Long ago they appear to have recognised the very principle of which we are now speaking—that their young citizens must be habituated to forms and strains of virtue. These they fixed, and exhibited the patterns of them in their temples; and no painter or artist is allowed to innovate upon them, or to leave the traditional forms and invent new ones. To this day, no alteration is allowed either in these arts, or in music at all. And you will find that their works of art are painted or moulded in the same forms which they had ten thousand years ago;—this is literally true and no exaggeration,—their ancient paintings and sculptures are 657 not a whit better or worse than the work of to-day, but are made with just the same skill.

Cle. How extraordinary!

Ath. I should rather say, how wise and worthy of a great legislator! I know that other things in Egypt are not so good. But what I am telling you about music is true and deserving

of consideration, because showing that a lawgiver may institute melodies which have a natural truth and correctness without any fear of failure. To do this, however, must be the work of God, or of a divine person; in Egypt they have a tradition that their ancient chants are the composition of the Goddess Isis. And therefore, as I was saying, if a person can only find in any way the natural melodies, he may confidently embody them in a fixed and legal form. For the love of novelty which arises out of pleasure in the new and weariness of the old, has not strength enough to vitiate the consecrated song and dance, under the plea that they have become antiquated. At any rate, they are far from being antiquated in Egypt.

Cle. Your arguments seem to prove your point.

Ath. May not the true use of music and choral festivities be described as follows: we rejoice when we think that we prosper, and again we think that we prosper when we rejoice?

Cle. Exactly.

Ath. And when rejoicing is our good fortune, we are unable to be still?

Cle. True.

Ath. Our young men break forth into dancing and singing, and we who are their elders deem that we are fulfilling our part in life when we look on at them. Having lost the agility of youth, we delight in their sports and merry-making; because we love to think of our former selves, and gladly institute contests for those who are able to awaken in us the memory of what we once were.

Cle. Very true.

Ath. People say that we ought to regard him as the wisest of men, and the winner of the palm, who gives us the greatest amount of pleasure and mirth. For when mirth is to be the order of the day, he ought to be honoured most, and, as I was saying, bear the palm, who gives most mirth to the greatest
658 number. Now I want to know whether this is a true way of speaking or of acting?

Cle. Possibly.

Ath. But, my dear friend, let us distinguish between different cases, and not be hasty in forming a judgment: One way of considering the question will be to imagine a festival at which

there are entertainments of all sorts, including gymnastic, musical, or equestrian contests: the citizens are assembled, and proclamation is made that any one who likes may enter the lists, and that he is to bear the palm who gives the most pleasure to the spectators—there is to be no regulation about the manner how; but he who is most successful in giving pleasure is to be crowned victor, and is deemed to be the pleasantest of the candidates: What is likely to be the result of such a proclamation?

Cle. In what respect?

Ath. There would be various exhibitions: the Homeric bard would exhibit a rhapsody, another a performance on the lute; one would have a tragedy, and another a comedy. Nor would there be anything astonishing in some one imagining that he could gain the prize by exhibiting a puppet-show. Suppose these competitors to meet, and not these only, but innumerable others as well, can you tell me who ought to be the victor?

Cle. I do not see how I can answer you, unless I myself hear the several competitors; the question is absurd.

Ath. Well, then, if neither of you can answer, shall I answer this question which you deem absurd?

Cle. By all means.

Ath. If very small children are to determine the question, they will decide for the puppet-show?

Cle. Of course.

Ath. The older children will be advocates of comedy; educated women, and young men, and people in general, will favour tragedy.

Cle. Very likely.

Ath. And I believe that we old men would have the greatest pleasure in hearing a rhapsodist recite well the Iliad and Odyssey, or one of the Hesiodic poems, and would award the victory to him? But, who would really be the victor? that is the question.

Cle. Yes.

Ath. Clearly you and I will be compelled to reply that the old men are right; their way of thinking is far better than any other which now prevails in the world.

Cle. Certainly.

Ath. Thus far I too should agree with the many, that the excellence of music is to be measured by pleasure. But the pleasure must not be that of chance persons; the fairest music is that which delights the best and best educated, and especially
659 that which delights the one man who is pre-eminent in virtue and education. And therefore the judges will require virtue—they must possess wisdom and also courage; for the true judge ought not to learn from the theatre, nor ought he to be panic-stricken at the clamour of the many and his own incapacity; nor again, knowing the truth, ought he through cowardice and unmanliness carelessly to deliver a lying judgment, out of the very same lips which have just appealed to the Gods before he judged. He is sitting not as the disciple of the theatre, but, in his proper place, as their instructor, and he ought to be the enemy of all pandering to the pleasure of the spectators. The ancient and common custom of Hellas, which still prevails in Italy and Sicily, did certainly leave the judgment to the body of spectators, who determined the victor by the show of hands; yet this custom has been the destruction of the poets;—for they are now in the habit of composing with a view to please the bad taste of their judges, and the result is that the spectators instruct themselves, which has been the ruin of the theatre;—when they ought to be having characters put before them better than their own, and so receiving a higher pleasure, they themselves make them inferior. Now what is the inference to be deduced from all this? Shall I tell you?

Cle. What?

Ath. The inference at which we arrive for the third or fourth time is, that education is the constraining and directing of youth towards that right reason, which the law affirms, and which the experience of the best of our elders has agreed to be truly right. In order, then, that the soul of the child may not be habituated to feel joy and sorrow in a manner at variance with the law, and those who obey the law, but may rather follow the law and rejoice and sorrow at the same things as the aged—in order, I say, to produce this effect, songs appear to have been invented, which are really charms, and are designed to implant that harmony of which we speak. And, because the mind of the child is incapable of enduring serious training, they are called

plays or songs, and are performed in play; just as when men are sick and ailing in their bodies, their attendants give them wholesome diet in pleasant meats and drinks, but unwholesome 660 diet in disagreeable things, in order that they may learn, as they ought, to like the one, and to dislike the other. And similarly the true legislator will persuade, and, if he cannot persuade, will compel the poet to express, as he ought, by fair and noble words, in his rhythms, the figures, and in his melodies, the music of temperate and brave and in every way good men.

Cle. But do you really imagine, Stranger, that this is the way in which poets generally compose in States at the present day? As far as I can observe there is nothing of the sort, except among us and among the Lacedaemonians, as you now tell me; in other places novelties are always being introduced in dancing and in music, generally not under the authority of any law, but at the instigation of lawless pleasures; and these pleasures are so far from being the same, as you describe the Egyptian to be, or having the same principles, that they are never the same.

Ath. Most true, Cleinias; and I daresay that I may have expressed myself obscurely, and so led you to imagine that I was speaking of some really existing state of things; whereas I was only saying what regulations I would like to have about music, and hence there occurred a misapprehension on your part. For when evils are far gone and irremediable, the task of censuring them is never pleasant, although at times necessary. But as we do not really differ, will you let me ask you whether you maintain that such institutions are more prevalent among the Cretans and Lacedaemonians than among the other Hellenes?

Cle. Certainly they are.

Ath. And if they were extended to the other Hellenes, would that be an improvement?

Cle. There would be a very great improvement, if the customs which prevailed among them were such as prevail among us and the Lacedaemonians, and such as you were just now saying ought to prevail.

Ath. Let us see whether we understand one another:—Are not the principles of education and music which prevail among you as follows: you compel your poets to say that the good

man, if he be temperate and just, is fortunate and happy; and this whether he be great and strong, or small and weak, and whether he be rich or poor; and, on the other hand, if he have a wealth passing that of Cinyras or Midas, and be unjust, he is miserable and lives in pain. As the poet says, and with truth: I sing not, I care not about him who accomplishes all noble things, not having justice; let him who 'draws near and smites
661 his enemies be a just man.' But if he be unjust, I would not have him 'look calmly upon bloody death,' nor 'surpass in swiftness the Thracian Boreas;' and let no other thing that is called good ever be his. For the goods of which the many speak are not really good: first in the catalogue is placed health, beauty next, wealth third; and then innumerable others, as for example to have a keen eye or a quick ear, and in general to have all the senses perfect; or, again, to be a tyrant and do as you like; and the final consummation of happiness is to have acquired all these things, and as soon as you are possessed of them to be immortal. But you and I say, that while to the just and holy all these things are the best of possessions, to the unjust they are all, including even health, the greatest of evils. For in truth, to have sight, and hearing, and the use of the senses, or to live at all without justice and virtue, even though a man be rich in all the so-called goods of fortune, is the greatest of evils, if life be immortal; but not so great, if the bad man lives a very short time. These are the truths of which you must persuade, or if they will not be persuaded, must compel your poets to sing with suitable accompaniments of harmony and rhythm, and in these they must train up your youth. Am I not right? For I plainly declare that evils as they are termed are goods to the unjust, and only evils to the just, and that goods are truly good to the good, but evil to the evil. Let me ask again, Are you and I agreed about this?

Cle. I think that in some things we agree, in others not.

Ath. When a man has health and wealth and a tyranny which lasts, and is pre-eminent in strength and courage, and has the gift of immortality, and none of the so-called evils which counter-balance these goods, but only the injustice and insolence of his own nature—of such an one you are, I suspect, unwilling to believe that he is miserable rather than happy.

Cle. There is my difficulty.

Ath. Once more : Suppose that he be valiant and strong, and handsome and rich, and does throughout his whole life whatever he likes, still, if he be injurious and insolent, would you not both agree that he will live basely? You will surely grant so much? 662

Cle. Certainly.

Ath. And an evil life too?

Cle. I am not equally disposed to grant that.

Ath. Will he not live painfully and to his own disadvantage?

Cle. How can I possibly say so?

Ath. How? Then may Heaven make us to be of one mind, for now we are of two. To me, dear Cleinias, the truth of what I am saying is plainer than the fact that Crete is an island. And, if I were a lawgiver, I would try to make the poets and all the citizens speak in this strain; and I would inflict the heaviest penalties on any one in all the land who should dare to say that there are bad men who lead pleasant lives, or that the profitable and gainful is one thing, and the just another; and there are many other matters about which I should make my citizens speak in another strain from the Cretans and Lacedaemonians of this age, and I may say, indeed, from the world in general. Why, my good friends, if I were to ask Zeus and Apollo, the Gods who were your legislators,—Is not the most just life also the pleasantest? or are there two lives, one of which is the juster and the other the pleasanter?—and they were to reply that there are two; and thereupon I proceeded to ask (that would be the right way of pursuing the enquiry) Which are the happier—those who lead the justest, or those who lead the pleasantest life? and they replied, Those who lead the pleasantest—that would be a very strange answer, which I should not like to put into the mouth of God. The words will come with more propriety from the lips of fathers and legislators, and therefore I will repeat my former questions to one of them, and suppose him to say again that he who leads the pleasantest life is the happiest. And to that I rejoin:—O my father, did you not wish me to live as happily as possible? And yet you also never ceased telling me that I should live as justly as possible. Now, here the giver of the rule, whether he be

legislator or father will be in a dilemma, and will in vain endeavour to be consistent with himself. But if he were to declare that the justest life is also the happiest, every one hearing him would enquire, if I am not mistaken, what is that
 663 good and noble principle in life which the law approves, and which is superior to pleasure and pain? For what good can the just man have which is separated from pleasure? Shall we say that glory and fame, coming from Gods and men, though good and noble, are nevertheless unpleasant, and infamy pleasant? Certainly not, sweet legislator. Or shall we say that the not-doing of wrong and there being no wrong done is good and honourable, although there is no pleasure in it, and that the doing wrong is pleasant, but evil and base?

Cle. Impossible.

Ath. The view which identifies the pleasant and the just and the good and the noble has an excellent moral and religious tendency. And the opposite view is most at variance with the designs of the legislator, and, in his opinion, infamous; for no one, if he can help, will be persuaded to do that which gives him more pain than pleasure. But as distant prospects are apt to be dimly seen, especially in childhood, the legislator will try to purge away the darkness and exhibit the truth; he will persuade the citizens, in some way or other, by customs and praises and words, that just and unjust are opposed to one another as shadow and light, and that, seen from the point of view of a man's own evil and injustice, the unjust appears pleasant and the just unpleasant; but that, seen from the just man's point of view, the very opposite is the appearance which they wear.

Cle. True.

Ath. And which may be supposed to be the truer judgment—that of the inferior or of the better soul?

Cle. Surely, that of the better soul.

Ath. Then the unjust life must not only be more base and depraved, but also more unpleasant than the just and holy life?

Cle. That seems to be implied in the present argument.

Ath. And even supposing this were otherwise, and not as the argument has proven, still the lawgiver, who is worth anything, if he ever ventures to tell a lie to the young for their good, could not invent a more useful lie than this, or one which will have a

better effect in making them do what is right, not on compulsion but voluntarily.

Cle. Truth, Stranger, is a noble thing and a lasting, but a thing of which men are hard to be persuaded.

Ath. And yet the story of the Sidonian Cadmus, which is so improbable, has been readily believed, and also innumerable other tales.

Cle. What is that story?

Ath. The story of armed men springing up after the sowing of teeth, which the legislator may take as a proof that he can 664 persuade the minds of the young of anything; so that he has only to reflect and find out what belief will be of the greatest public advantage, and then use all his efforts to make the whole community utter one and the same word in their songs and tales and discourses all their life long. But if you do not agree with me, there is no reason why you should not argue on the other side.

Cle. I do not see that any argument can fairly be raised by either of us against what you are now saying.

Ath. The next suggestion which I have to offer is, that all our three choruses shall sing to the young and tender souls of children, reciting in their strains all the noble thoughts of which we have already spoken, or are about to speak; and the sum of them shall be, that the life which is by the Gods deemed to be the happiest is the holiest;—we shall affirm this to be a most certain truth; and the minds of our young disciples will be more likely to receive these words of ours than any others which we might address to them.

Cle. I assent to what you say.

Ath. First will enter in their natural order the sacred choir composed of children, which is to sing lustily the heaven-taught lay to the whole city. Next will follow the choir of young men under the age of thirty, who will call upon the God Paeon to testify to the truth of their words, and will pray him to be gracious to the youth and to turn their hearts. Thirdly, the choir of elder men, who are from thirty to sixty years of age, will also sing. There remain those who are too old to sing, and they will tell stories, illustrating the same virtues, as with the voice of an oracle.

Cle. Who are those who compose the third choir, Stranger; for I do not clearly understand whom you mean?

Ath. And yet almost all that I have been saying has been said with a view to them.

Cle. Will you try to be a little plainer?

Ath. I was speaking at the commencement of our discourse, as you will remember, of the fiery nature of young creatures: I said that they were unable to keep quiet either in limb or voice, and that they called out and jumped about in a disorderly manner; and that no other animal attained to any perception
665 of order, but man only. Now the order of motion is called rhythm, and the order of the voice, in which high and low are duly mingled, is called harmony; and both together are termed choric song. And I said that the Gods had pity on us, and gave us Apollo and the Muses to be our playfellows and leaders in the dance; and Dionysus, as I daresay that you will remember, was the third.

Cle. I quite remember.

Ath. Thus far I have spoken of the chorus of Apollo and the Muses, and I have still to speak of the remaining chorus, which is that of Dionysus.

Cle. How is that arranged? There is something strange, at any rate on first hearing, in a Dionysiac chorus of old men, if you really mean that those who are above thirty, and may be fifty, or from fifty to sixty years of age, are to form a dance in his honour.

Ath. Very true; and I think with you that some reason should be given for the proposal.

Cle. Certainly.

Ath. Are we agreed thus far?

Cle. About what?

Ath. That every man and boy, slave and free, both sexes, and the whole city, should never cease charming themselves with the strains of which we have spoken; and that there should be every sort of change and variation of them in order to take away the effect of sameness, so that the singers may always receive pleasure from their hymns, and may never weary of them.

Cle. Every one will agree.

Ath. Where, then, will that best part of our city which, by reason of age and intelligence, has the greatest influence, sing these fairest of strains, which are to do so much good? Shall we be so foolish as to let them off who would give us the most beautiful and also the most useful of songs?

Cle. But we cannot let them off; that is already implied.

Ath. Then how can we accomplish our purpose? Let us see.

Cle. How are we to see?

Ath. When a man is advancing in years, he no longer likes to sing;—he has no pleasure in his own performances; and if compulsion is used, he will be more and more ashamed, the older and more discreet he grows;—What do you say?

Cle. Certainly he will.

Ath. Well, and will he not be yet more ashamed if he has to stand up and sing in the theatre to a mixed audience?—and if when he is required to do so, like the other choirs who contend for prizes, and have been trained under a singing master, he is pinched and hungry, he will certainly have a feeling of shame and discomfort which will make him very unwilling to exhibit.

Cle. No doubt.

Ath. How, then, shall we reassure him, and get him to sing? Shall we begin by enacting that boys shall not taste wine at all until they are eighteen years of age; we will tell them that fire must not be poured upon fire, whether in the body or in the soul, until they begin to go to labour (this is a precaution against the excitableness of youth); afterwards they may taste wine in moderation up to the age of thirty, but while a man is young he should abstain altogether from intoxication and excess of wine; when, at length, he has reached forty years, and is feasted at public banquets, he may invite not only the other Gods, but Dionysus above all, to the mystery and festivity of the elder men, making use of the wine which he has given them to be the cure of the sourness of old age; that in age we may renew our youth, and forget our sorrows; and also in order that the nature of the soul, like iron melted in the fire, may become softer and more impressible. In the first place, will not any one whose heart is warm within him, be more ready and less ashamed to sing,—I do not say before a large audience, but before a

moderate number ; nor yet among strangers, but among his familiars, and, as we have often said, to chant, and to enchant.

Cle. He will be far more ready.

Ath. There will be no impropriety in using such a method of persuading them to join in song.

Cle. None at all.

Ath. And what strain will they sing, and what muse will they hymn? The strain should clearly be one suitable to them.

Cle. Certainly.

Ath. And what strain is suitable for heroes? Shall they sing a choric strain?

Cle. Truly, Stranger, we of Crete and Lacedaemon know no strain other than that which we have learnt and been accustomed to sing in our chorus.

Ath. I dare say ; for you have never acquired the knowledge of the most beautiful kind of song in your military way of life, which is modelled after the camp, and is not like that of dwellers in cities ; and you have your young men herding and feeding together like young colts. No one takes his own individual colt and drags him away from his fellows against his will, raging and foaming, and gives him a groom for him alone, and trains and rubs him down privately, and gives him the qualities in education which will make him not only a good soldier, but also a governor of a state and of cities. Such an one, as we were saying at first, would be a greater warrior than him of whom
667 Tyrtaeus sings ; and he would honour courage everywhere, but always as the fourth, and not as the first part of virtue, either in individuals or states.

Cle. Once more, Stranger, I must complain that you depreciate our lawgivers.

Ath. Not intentionally, if at all, my good friend ; but whither the argument leads, thither let us follow ; for if there be indeed some strain of song more beautiful than that of the choruses or the public theatres, I should like to impart it to those who, as we say, are ashamed of the ordinary strains, and want to have the best.

Cle. Certainly.

Ath. When things have an accompanying charm, either the best thing in them is this very charm, or there is some right or

utility possessed by them;—for example, I should say that eating and drinking, and the use of food in general, have an accompanying charm which we call pleasure; but that their rectitude is that which we term the rightness and utility of the things served up to us, or more precisely their healthful quality.

Cle. Very true.

Ath. Thus, too, I should say that learning has a certain accompanying charm which is the pleasure; and that the right and the profitable, the good and the noble, are qualities given to it by the truth.

Cle. Exactly.

Ath. And so in the imitative arts,—if they succeed in making likenesses, and are accompanied by pleasure, may not their works be said to have a charm?

Cle. Yes.

Ath. But equal proportions, whether of quality or quantity, and not pleasure, speaking generally, would give them truth or rightness.

Cle. Yes.

Ath. Then that only can be rightly judged by the standard of pleasure, which makes or furnishes no utility or truth or likeness, nor on the other hand is productive of any hurtful quality, but exists solely for the sake of the accompanying charm; and the term 'pleasure' is most appropriately used when these other qualities are absent.

Cle. You are speaking of harmless pleasure, are you not?

Ath. Yes; and this I term amusement, when doing neither harm nor good in any degree worth speaking of.

Cle. Very true.

Ath. Then, if such be our principles, we must assert that imitation is not to be judged of by pleasure and false opinion; and this is true also of equality, for the equal is not equal or the symmetrical symmetrical, because somebody thinks or likes something, but they are to be judged of by the standard of truth, and by no other whatever.

Cle. Quite true.

Ath. Do we not regard all music as representative and imitative?

Cle. Certainly.

Ath. Then, when any one says that music is to be judged of by pleasure, his doctrine cannot be admitted; and if there be any music of which pleasure is the criterion, such music is not to be sought out or deemed to have any real excellence, but only that other kind of music which is an imitation of the good.

Cle. Very true.

Ath. And those, who seek for the best kind of song and music ought not to seek for that which is pleasant, but for that which is true; and the truth of imitation consists, as we were saying, in rendering the thing imitated according to quantity and quality.

Cle. Certainly.

Ath. And every one will admit that musical compositions are all imitative and representative. Will not poets and spectators and actors all agree in this?

Cle. They will.

Ath. Surely then he who would judge correctly must know what each composition is; for if he does not know what is the character and meaning of the piece, and what it represents, he will never discern whether the intention is true or false.

Cle. Certainly not.

Ath. And will he who does not know what is true be able to distinguish what is good and bad? My statement is not very clear; but perhaps you will understand me better if I put the matter in another way.

Cle. How is that?

Ath. There are ten thousand likenesses of objects of sight?

Cle. Yes.

Ath. And can he who does not know what the exact object is which is imitated, ever know whether the resemblance is truthfully executed? I mean, for example, whether a statue has the proportions of a body, and the true situation of the parts, what those proportions are, and how the parts fit into one another in due order; also their colours and conformations, or whether this is all confused in the execution: do you think that any one can know about this, who does not know what the animal is which has been imitated?

Cle. Impossible.

Ath. But even if we know that the thing pictured or sculptured is a man, who has received at the hand of the artist all

his proper parts and forms and colours, must we not also know 669 whether the work is beautiful or in any respect deficient in beauty?

Cle. If this were not required, Stranger, we should all of us be judges of beauty.

Ath. Very true; and may we not say that in everything imitated, whether in drawing, music, or any other art, he who is to be a competent judge must possess three things;—he must know, in the first place, of what the imitation is; secondly, he must know that it is true; and thirdly, that it has been well executed in words and melodies and rhythms?

Cle. Certainly.

Ath. Then let us not faint in discussing the peculiar difficulty of music. Music is more celebrated than any other kind of imitation, and therefore requires the greatest care of them all. For if a man makes a mistake here, he may do himself the greatest injury by welcoming evil dispositions, and the mistake may be very difficult to discern, because the poets are artists very inferior in character to the Muses themselves, who would never fall into the monstrous error of assigning to the words of men the gestures and songs of women; nor combine the melodies and gestures of freemen with the rhythms of slaves and men of the baser sort; or, beginning with the rhythms and gestures of freemen, assign to them a melody or words which are of an opposite character; nor would they mix up the voices and sounds of animals and of men and instruments, and every other sort of noise, as if they were all one. But human poets are fond of introducing this sort of inconsistent mixture, and thus make themselves ridiculous in the eyes of those who, as Orpheus says, 'are ripe for pleasure.' The experienced see all this confusion, and yet the poets go on and make still further havoc by separating the rhythm and the figure of the dance from the melody, setting words to metre without music, and also separating the melody and rhythm from the words, using the lyre or the flute alone. For when there are no words, it is very difficult to recognise the meaning of the harmony and rhythm, or to see that any worthy object is imitated by them. And we must acknowledge that all this sort of thing, which aims only at swiftness and smoothness and a brutish noise, and uses

670 the flute and the lyre not as the mere accompaniments of the dance and song, is exceedingly rude and coarse. The use of either, when unaccompanied by the others, leads to every sort of irregularity and trickery. This is all true enough. But we are considering not how our choristers, who are from thirty to fifty years of age, and may be over fifty, are not to use the Muses, but how they are to use them. And the considerations which we have urged seem to show in what way these fifty years' old choristers who are to sing, may be expected to be better trained. For they need to have a quick perception and knowledge of harmonies and rhythms; otherwise, how will they ever know which melodies would be rightly sung to the Dorian mode, or to the rhythm which the poet has assigned to them?

Cle. Clearly they cannot.

Ath. The common people are ridiculous in imagining that they know what is in proper harmony and rhythm, and what is not, when they can only be made to sing and step in rhythm by sheer force; they never consider that they do not know what they are about. Now every melody is right when suitably accompanied, and wrong when unsuitably.

Cle. That is most certain.

Ath. But can a man who does not know a thing, as we were saying, know that the thing is right?

Cle. Impossible.

Ath. Then now, as would appear, we are making the discovery that our newly-appointed choristers, whom we hereby invite and in a manner compel to sing, but of their own free will, must be educated to such an extent as to be able to follow the steps of the rhythm and the notes of the song, that they may know the harmonies and rhythms, and be able to select what are suitable for men of their age and character to sing; and may sing them, and have innocent pleasure from their own performance, and also lead younger men to receive with dutiful delight good dispositions. Having such training, they will attain a more accurate knowledge than falls to the lot of the common people, or even of the poets themselves. For the poet need not know the third point, viz. whether the imitation is good or not, though he can 671 hardly help knowing the laws of melody and rhythm. But the aged chorus must know all the three, that they may choose the

best, and that which is nearest to the best ; for otherwise they will never be able to charm the souls of young men in the way of virtue. And now the original design of the argument which was intended to bring eloquent aid to the Chorus of Dionysus, has been accomplished to the best of our ability, and let us see whether we were right :—I should imagine that a drinking assembly is likely to become more and more tumultuous as the drinking goes on : this, as we were saying at first, will certainly be the case.

Cle. Certainly.

Ath. Every man has a more than natural elevation ; his heart is glad within him, and he will say anything and will be restrained by nobody at such a time ; he fancies that he is able to rule over himself and all mankind.

Cle. Quite true.

Ath. Were we not saying that on such occasions the souls of the drinkers become like iron heated in the fire, and grow softer and younger, and are easily fashioned by him who knows how to educate and fashion them, just as when they were young, and that this fashioner of them is the same who prescribed for them in the days of their youth, viz. the good legislator ; and that he ought to enact laws of the banquet, which, when a man is confident, bold, and impudent, and unwilling to wait his turn of silence and speech, and drinking and music, will change his character into the opposite—such laws as will infuse into him a just and noble fear, which will take up arms at the approach of insolence, being that divine fear which we have called reverence and shame ?

Cle. True.

Ath. And the calm and sober generals of others who are not sober, are the guardians of these laws and fellow-workers with them ; and without their help there is greater difficulty in fighting against drink than in fighting against enemies, when the commander of an army is not himself calm ; and he who is unwilling to obey them and the commanders of Dionysiac feasts who are more than sixty years of age, shall suffer a disgrace as great as he who disobeys military leaders, or even greater.

Cle. Right.

Ath. If, then, drinking and amusement were regulated in

this way, would not the companions of our revels be improved? 672 they would part better friends than they were, and not as now, enemies. Their whole intercourse would be regulated by law, and the sober would be the leaders of those who are not sober.

Cle. I think so too, if drinking were regulated as you propose.

Ath. Let us not then simply censure the gift of Dionysus as bad and unfit to be received into the State. For wine has many excellences, and one pre-eminent one, about which there is a difficulty in speaking to the many, from a fear of their misconceiving and misunderstanding what is said.

Cle. To what do you refer?

Ath. There is a tradition or story, which has somehow gone about the world, that Dionysus was robbed of his wits by his stepmother Here, and that out of revenge he inspires Bacchic furies and dancing madneses in others; for which reason he gave men wine. Such traditions concerning the Gods I leave to those who think that they may be safely uttered; I only know that no animal at birth is mature or perfect in intelligence; and in the intermediate period, in which he has not yet acquired his own proper sense, he rages and roars without rhyme or reason; and when he has once got on his legs he jumps about without rhyme or reason; and this, as you will remember, has been already said by us to be the origin of music and gymnastic.

Cle. To be sure, I remember.

Ath. And did we not say that the sense of harmony and rhythm sprang from this beginning among men, and that Apollo and the Muses and Dionysus were the Gods whom we had to thank for them?

Cle. Certainly.

Ath. The other story implied that wine was given man out of revenge, and in order to make him mad; but our present doctrine, on the contrary, is, that wine was given him as a balm, and in order to implant modesty in the soul, and health and strength in the body.

Cle. That, Stranger, is exactly what was said.

Ath. Then half the subject may now be considered to have been discussed; shall we proceed to the consideration of the other half?

Cle. What is the other half, and how do you divide the subject?

Ath. The whole choral art is also in our view the whole of education; and of this art, rhythms and harmonies, having to do with the voice, form a part.

Cle. Yes.

Ath. And the movement of the body and the movement of the voice have a common form which is rhythm, but they differ, in that the one is gesture, and the other song.

Cle. Most true.

Ath. And the sound of the voice which reaches and educates 673 the soul, we have ventured to term music.

Cle. True.

Ath. And the movement of the body, which, when regarded as an amusement, we termed dancing; when pursued with a view to the improvement of the body, according to rules of art, may be called gymnastic.

Cle. Quite true.

Ath. Music, which was one half of the choral art, may be said to have been completely discussed. Shall we proceed to the other half or not? What would you like?

Cle. My good friend, when you are talking with a Cretan and Lacedaemonian, and we have discussed music and not gymnastic, what answer are either of us likely to make to you?

Ath. That question is pretty much of an answer; and I understand and accept what you say both as an answer, and also as a command to proceed with gymnastic.

Cle. You quite understand me; do as you say.

Ath. I will; and there will be small difficulty in speaking intelligibly to you about a subject with which both of you are far more familiar than with music.

Cle. That is very true.

Ath. Is not the origin of gymnastics, too, to be sought in the tendency to rapid motion which exists in all animals; man, as we were saying, having attained the sense of rhythm, created and invented dancing; and melody arousing and awakening rhythm, both united formed the choral art?

Cle. Very true.

Ath. And one part of this subject has been already discussed by us, and there remains another part to be discussed?

Cle. Exactly.

Ath. I have first to add a crown to my discourse about drink.

Cle. What more would you say?

Ath. I should say that if a city seriously means to adopt the practice of drinking under due regulation and with a view to the enforcement of temperance, and in like manner, and on the same principle, will allow of other pleasures, designing to gain the victory over them—in this way all of them may be used. But if the State makes drinking an amusement only, and whoever likes may drink whenever he likes, and with whom
674 he likes, and add to this any other indulgences, I shall never agree or allow that this city or this man should adopt such a usage of drinking. I would go farther than the Cretans and Lacedaemonians, and am disposed rather to the law of the Carthaginians, that no one while he is on a campaign should be allowed to taste wine at all; but I would say that he should drink water during all that time, and that in the city no slave, male or female, should ever drink wine; and that no rulers should drink during their year of office, nor pilots of vessels, nor judges while on duty should taste wine at all; nor any one who is going to hold a consultation about any matter of importance, nor in the day-time at all, unless in consequence of exercise or as medicine; nor again at night, when any one, either man or woman, is minded to get children. There are numberless other cases also in which those who have good sense and good laws ought not to drink wine, so that if what I say is true, no city will need many vineyards. Their husbandry and their way of life in general will follow an appointed order, and their cultivation of the vine will be the most limited and moderate of their employments. And this, Stranger, shall be the crown of my discourse about wine, if you agree.

Cle. Excellent: we agree.

BOOK III.

Athenian Stranger. ENOUGH of this. And what, then, is to 676
be regarded as the origin of government? Will not a man
be able to judge best from a point of view in which he may
behold the progress of states and their transitions to good or
evil?

Cleinias. What do you mean?

Ath. I mean that he might watch them from the point of
view of time, and observe the changes which take place in them
during infinite ages.

Cle. How so?

Ath. Why, do you think that you can reckon the time which
has elapsed since cities first existed and men were citizens of
them?

Cle. Hardly.

Ath. But you are sure that it must be vast and incalculable?

Cle. Quite true.

Ath. And have there not been thousands and thousands of
cities which have come into being and perished during this
period? And has not every place had endless forms of govern-
ment, and been sometimes rising and at other times falling, and
again improving or waning?

Cle. Certainly.

Ath. Let us endeavour to ascertain the cause of these
changes; for that will probably explain the first origin and
succession of states.

Cle. Very good. You shall endeavour to impart your thoughts
to us, and we will make an effort to understand you.

Ath. Do you believe that there is any truth in ancient 677
traditions?

Cle. What traditions?

Ath. The traditions about the many destructions of mankind which have been occasioned by deluges and diseases, and in many other ways, and of the preservation of a remnant.

Cle. Every one is disposed to believe them.

Ath. Let us imagine one of them: I will take the famous one which was caused by a deluge.

Cle. What is to be remarked in them?

Ath. I mean to say that those who then escaped would only be hill shepherds,—small sparks of the human race preserved on the tops of mountains.

Cle. Clearly.

Ath. Such survivors would necessarily be unacquainted with the arts of those who live in cities, and with the various devices which are suggested to them by interest or ambition, and all the wrongs which they contrive against one another.

Cle. Very true.

Ath. Let us suppose, then, that the cities in the plain and on the sea-coast were utterly destroyed at that time.

Cle. Very good.

Ath. Would not all implements perish and every other excellent invention of political or any other sort of wisdom utterly fail at that time?

Cle. Why, yes, my friend; and if things had always continued as they are at present ordered, how could any discovery have ever been made even in the least particular? For it is evident that the arts were unknown during thousands and thousands of years. And no more than a thousand or two thousand years have elapsed since the discoveries of Daedalus, Orpheus and Palamedes,—since Marsyas and Olympus invented music, and Amphion the lyre,—not to speak of numberless other inventions which are but of yesterday.

Ath. Have you forgotten, Cleinias, the name of a friend who is really of yesterday?

Cle. I suppose that you mean Epimenides.

Ath. The same, my friend; for his ingenuity does indeed far overleap the heads of all your great men; what Hesiod had preached of old, he carried out in practice, as you declare.

Cle. Yes, according to our tradition.

Ath. After the great destruction, may we not suppose that the state of man was something of this sort:—In the beginning of things there was a fearful illimitable desert and a vast expanse of land; a herd or two of oxen would be the only survivors of the animal world; and there might be a few goats, hardly 678 enough to support the life of those who tended them.

Cle. True.

Ath. And of cities or governments or legislation, about which we are now talking, do you suppose that they could have any recollection at all?

Cle. They could not.

Ath. And out of this state of things has there not sprung all that we now are and have: cities and governments, and arts and laws, and a great deal of vice and a great deal of virtue?

Cle. What do you mean?

Ath. Why, my good friend, how can we possibly suppose that those who knew nothing of all the good and evil of cities could have attained their full development, whether of virtue or of vice?

Cle. I understand your meaning, and you are quite right.

Ath. But, as time advanced and the race multiplied, the world came to be what the world is.

Cle. Very true.

Ath. Doubtless the change was not made all in a moment, but little by little, during a very long period of time.

Cle. That is to be supposed.

Ath. At first, they would have a natural fear ringing in their ears which would prevent their descending from the heights into the plain.

Cle. Of course.

Ath. The fewness of the survivors would make them desirous of intercourse with one another; but then the means of travelling either by land or sea would have been almost entirely lost, as I may say, with the loss of the arts, and there would be great difficulty in getting at one another; for iron and brass and all metals would have become confused, and would have disappeared; nor would there be any possibility of extracting them; and they would have no means of felling timber. Even if you suppose that some implements might have been preserved

in the mountains, they would quickly have worn out and disappeared, and there would be no more of them until the art of metallurgy had again revived.

Cle. There could not have been.

Ath. In how many generations would this be attained?

Cle. Clearly, not for many generations.

Ath. During this period, and for some time afterwards, all the arts which require iron and brass and the like would disappear.

Cle. Certainly.

Ath. Faction and war would also have died out in those days, and for many reasons.

Cle. How would that be?

Ath. In the first place, the desolation of these primitive men would create in them a feeling of affection and friendship towards one another; and, in the second place, they would have no occasion to fight for their subsistence, for they would have
679 pasture in abundance, except just at first, and in some particular cases; on this pasture-land they would mostly support life in a primitive age, having plenty of milk and flesh, and procuring other food by the chase, not to be despised either in quantity or quality. They would also have abundance of clothing, and bedding, and dwellings, and utensils either capable of standing on the fire or not; for the plastic and weaving arts do not require any use of iron: God has given these two arts to man in order to provide him with necessaries, that, when reduced to their last extremity, the human race may still grow and increase. Hence in those days mankind were not very poor; nor was poverty a cause of difference among them; and rich they could not be, if they had no gold and silver, and such at that time was their condition. And the community which has neither poverty nor riches will always have the noblest principles; there is no insolence or injustice, nor, again, are there any contentions or envyings among them. And therefore they were good, and also because they were what is called simple-minded; and when they were told about good and evil, they in their simplicity believed what they heard to be very truth and practised it. No one had the wit to suspect another of a falsehood, as men do now; but what they

heard about Gods and men they believed to be true, and lived accordingly; and therefore they were in all respects such as we have described them.

Cle. That quite accords with my views, and with those of my friend here.

Ath. Would not many generations living on in a simple manner, although ruder, perhaps, and more ignorant of the arts generally, and in particular of those of land or naval warfare, and likewise of other arts, termed in cities legal practices and party conflicts, and including all conceivable ways of hurting one another in word and deed;—although inferior to those who lived before the deluge, or to the men of our day in these respects, would they not, I say, be simpler and more manly, and also more temperate and in general more just? The reason has been already explained.

Cle. Very true.

Ath. I should wish you to understand that what has preceded and what is about to follow, has been, and will be said, with the intention of explaining what need the men of that 680 time had of laws, and who was their lawgiver.

Cle. And thus far what you have said has been very well said.

Ath. They could hardly have wanted lawgivers as yet; nothing of that sort was likely to have existed in their days, for they had no letters at this early stage; they lived by habit and the customs of their forefathers, as they are called.

Cle. Probably.

Ath. But there was already existing a form of government which, if I am not mistaken, is generally termed a lordship, and this still remains in many places, both among Hellenes and barbarians, and is the government which is declared by Homer to have prevailed among the Cyclopes:—

‘They have neither councils nor judgments, but they dwell in hollow rocks on the tops of high mountains, and every one is the judge of his wife and children, and they do not trouble themselves about one another.’

Cle. That must be a charming poet of yours; I have read some other verses of his, which are very clever; but I do not know much of him, for foreign poets are little read among the Cretans.

Meg. But they are in Lacedaemon, and he appears to be the prince of them all; the manner of life, however, which he describes is not Spartan, but rather Ionian, and he seems quite to confirm what you are saying, tracing up the ancient state of mankind by the help of tradition to barbarism.

Ath. Yes; and we may accept his witness to the fact that there was a time when primitive societies had this form.

Cle. Very true.

Ath. And did not such states spring out of single habitations and families who were scattered and thinned in the devastations; and the eldest of them was their ruler, because with them government originated in the authority of a father and a mother, whom, like a flock of birds, they followed, forming one troop under the patriarchal rule and sovereignty of their parents, which of all sovereignties is the most just?

Cle. Very true.

Ath. After this they came together in greater numbers, and increased the size of their cities, and betook themselves to husbandry, first of all at the foot of the mountains, and made enclosures of loose walls and works of defence, in order to keep off wild beasts; thus creating a single large and common habitation.

Cle. Yes; at least we may suppose it.

Ath. There is another thing which would probably happen.

Cle. What?

Ath. When these larger habitations grew up out of the lesser original ones, each of the lesser ones would survive in the larger; every family would be under the rule of the eldest, and, owing to their separation from one another, would have peculiar customs in things divine and human, which they would have received from their several parents who had educated them; and these customs would incline them to order, when the parents had the element of order in them; and to courage, when they had the element of courage in them. And they would naturally stamp upon their children, and upon their children's children, their own institutions; and, as we are saying, they would find their way into the larger society, having already their own peculiar laws.

Cle. Certainly.

Ath. And every man surely likes his own laws best, and the laws of others not so well.

Cle. True.

Ath. Then now we seem to have stumbled upon the beginnings of legislation?

Cle. Exactly.

Ath. The next step will be that these persons who meet together, must choose some arbiters, who will inspect the laws of all of them, and will publicly present such of them as they approve to the chiefs who lead the tribes, and are in a manner their kings, and will give them the choice of them. These will themselves be called legislators, and will appoint the magistrates, framing some sort of aristocracy, or perhaps monarchy, out of the dynasties or lordships, and in this altered state of the government they will live.

Cle. Yes, they would be appointed in the order which you mention.

Ath. Then, now let us speak of a third form of the state in which all other forms and conditions of politics and cities concur.

Cle. And what is that?

Ath. The form pointed out by Homer was the third form, which succeeds the second. In speaking of the foundation of Dardania, he says,

‘For not as yet had the holy Ilium been built on the plain to be a city of articulately-speaking men; but they were still dwelling at the foot of many-fountained Ida.’

For indeed, in these verses, and in what he said of the Cyclopes, he speaks the words of God and nature; for the inspiration of poets is divine, and often in their strains, by the aid of the Muses and the Graces, they attain truth. 682

Cle. Yes.

Ath. Then now let us proceed with the rest of our tale, which will probably be found to illustrate in some degree our proposed design:—Shall we do so?

Cle. By all means.

Ath. Ilium was built when they had descended from the mountain, in a large and fair plain, on a sort of low hill, watered by many rivers descending from Ida.

Cle. Such is the tradition.

Ath. And that we must suppose to have taken place many ages after the deluge?

Cle. Yes; many ages must have elapsed.

Ath. A marvellous forgetfulness of the former destruction would appear to have come over them, when they placed their town right under numerous streams flowing from the heights, and trusting for security to not very high hills, either.

Cle. There must have been a long interval, clearly.

Ath. And, as men increased in number, many other cities would begin to be built on the plain?

Cle. Doubtless.

Ath. Those cities made war against Troy—by sea as well as land—for at that time men were ceasing to be afraid of the sea.

Cle. Clearly.

Ath. The Achaeans remained ten years, and overthrew Troy.

Cle. True.

Ath. And during the ten years in which the Achaeans were besieging Ilium, the homes of the besiegers were falling into an evil plight. Their youth revolted; and when the soldiers returned to their own cities and families, they did not receive them properly, and as they ought to have done, and numerous deaths, murders, exiles, were the consequence. The exiles came again, under a new name, no longer Achaeans, but Dorians,—a name which they derived from Dorieus, who was the assembler of them. The rest of the story is told by you Lacedaemonians as part of the history of Sparta.

Meg. Certainly.

Ath. Thus, after digressing from the original subject of laws into music and drinking-bouts, the argument has, providentially, come back to the same point, and presents to us another handle. For we have come to the settlement of Lacedaemon; which, as you truly say, is in laws and in institutions the sister of Crete. And we are all the better for the digression, because we have gone through various states

and settlements, and have been present at the foundation of a first, second, and third state, succeeding one another in infinite time. And now there appears on the horizon a fourth state or nation which was in process of settlement and has continued to this day. If, out of all these, we are able to discern what is well or ill settled, and what laws are the salvation or destruction of cities, and what changes would make a state happy, O Megillus and Cleinias, we may now begin again, unless we have some reason to find fault with what has preceded.

Meg. If some God, Stranger, would promise us that our new enquiry about legislation would be as good and full as the last, I would go a long way to hear such another, and would think that the longest day—and we are now approaching the summer solstice—was too short for the discussion.

Ath. Then I suppose that we must consider this subject?

Meg. Certainly.

Ath. Let us place ourselves in thought at the moment, when Lacedaemon and Argos and Messene and the other countries were all in complete subjection, Megillus, to your ancestors; for at a later date, as the legend informs us, they divided their army into three portions, and settled three cities, Argos and Messene and Lacedaemon.

Meg. True.

Ath. Temenus was the king of Argos, Cresphontes of Messene, Procles and Eurysthenes of Lacedaemon.

Meg. To be sure.

Ath. To these kings all the men of that day made oath that they would assist them, if any one subverted their kingdom.

Meg. True.

Ath. But can a kingdom be destroyed, or was any other form of government ever destroyed, by any but the rulers themselves? Surely not. Have we forgotten what has just been laid down?

Meg. No.

Ath. And may we not now further confirm what was then said? For we have come upon facts which have brought us

684 back again to the principle; so that, in resuming the discussion, we shall not be enquiring about an empty theory, but about events which actually happened. The case was as follows:—Three royal heroes made oath to three cities which were under a kingly government, and the cities to the kings, that both rulers and subjects should govern and be governed according to the laws which were common to all of them: the rulers promised that as time and the race went forward they would not make their rule more arbitrary; and the subjects said that, if the rulers observed these conditions, they would never subvert or permit others to subvert those kingdoms; the kings were to assist kings and peoples when injured, and the peoples were to assist peoples and kings in like manner. Is not this true?

Meg. Certainly.

Ath. And these three states to whom laws were given, whether by their kings or by any others, had a further security for the maintenance of their constitutions?

Meg. What security?

Ath. That the other two states were always to come to the rescue against a rebellious third.

Meg. True.

Ath. Many persons say that legislators ought to impose such laws as the mass of the people will be ready to receive; but this is just as if one were to command gymnastic masters or physicians to treat or cure their pupils or patients in an agreeable manner.

Meg. Exactly.

Ath. Whereas the physician may often be too happy if he can restore health, and make the body whole, without any very great infliction of pain.

Meg. Certainly.

Ath. There was also another advantage possessed by the men of that day, which greatly lightened the task of passing laws.

Meg. What advantage?

Ath. The legislators of that day, when they equalized property, escaped the great accusation which generally arises in legislation, if a person attempts to disturb the possession of

had only known how to make a right use of it—in some way or other; and yet this mode of looking at things may turn out after all to be a mistake, and not according to nature, either in our own case or in any other?

Meg. To what are you referring?

Ath. I was thinking of my own admiration of the afore-said Heraclid expedition, which was so noble, and might have had such wonderful results for the Hellenes, if only rightly used; and I was just laughing at myself.

Meg. But were you not right and wise in speaking as you did, and we in assenting to you?

Ath. Perhaps; and yet I cannot help observing that any one who sees anything great or powerful, immediately has the feeling that—‘If the owner only knew how to use his great and noble possession, how happy would he be, and what great results would he attain!’

Meg. And would he not be right? 687

Ath. Reflect; in what point of view does this sort of praise appear just: First, in reference to the question in hand:—If the then commanders had known how to arrange their army properly, how would they have attained success? Would not this have been the way? They would have bound them all firmly together and preserved them for ever, giving them freedom and dominion at pleasure, combined with the power of doing in the whole world, Hellenic and barbarian, whatever they and their descendants desired. What other aim would they have had?

Meg. Very good.

Ath. Suppose any one were in the same way to express his admiration at the sight of great wealth or family honour, or the like, he would praise them under the idea that through them he would attain either all or the greater and chief part of what he desires.

Meg. He would.

Ath. Well, now, and does not the argument show that there is one common desire of all mankind?

Meg. What is it?

Ath. The desire which a man has, that all things may

come to pass in accordance with the will of his soul, things human at any rate, if not things divine.

Meg. Certainly.

Ath. And having this desire always, and at every time of life, he cannot help always praying for the fulfilment of it.

Meg. No doubt.

Ath. And we join in the prayers of our friends, and ask for them what they ask for themselves?

Meg. Certainly.

Ath. Dear is the son to the father—the younger to the elder.

Meg. Of course.

Ath. And yet the son often prays to obtain things which the father prays that he may not obtain.

Meg. When the son is young and foolish, you mean?

Ath. Yes; and when the father, in the dotage of age or the heat of youth, having no sense of right and justice, prays with fervour, under the influence of feelings like those of Theseus when he cursed the unfortunate Hippolytus, do you imagine that the son, having a sense of right and justice, will join in his father's prayers?

Meg. I understand you to mean that a man should not desire or endeavour to have all things according to his wish, for his wish may be at variance with his reason. Every one of us, whether individual or state, ought to pray and endeavour
688 that he may have wisdom.

Ath. Yes; and I remember, and you will remember, what I said at first, that a statesman and legislator ought to ordain laws with a view to wisdom; whereas you were arguing that the good lawgiver ought to order all with a view to war. And to this I replied that there were four virtues, whereas your regards were fixed upon one of the four only; but that you ought to regard all virtue, and especially that which comes first, and is the guide of all the rest—I mean wisdom and mind and opinion united with the affection and desire which waits upon them. And now the argument returns to the same point, and I say once more, in jest if you like, or in earnest if you like, that the prayer of a fool is

full of danger, being likely to end in the opposite of what he desires. And if you would rather receive my words in earnest, I am willing that you should; and you will find, I suspect, as I have said already, that not cowardice was the cause of the ruin of the Dorian kings and of their whole design, nor ignorance of military matters, either on the part of the rulers or of their subjects; but the cause was the corrupting influence of the other vices, and especially their ignorance of the most important human affairs. That was then, and is still, and always will be the case, as I will endeavour, if you will allow me, to make out and demonstrate to you who are my friends, in the course of the argument.

Cle. Pray go on, Stranger;—compliments are troublesome, but we will show, not in word but in deed, how greatly we prize your words, for we will give them our best attention; and that is the way in which a gentleman expresses his approval.

Meg. Excellent, Cleinias; let us do as you say.

Cle. By all means, if Heaven wills. Go on.

Ath. Well, then, proceeding in the same train of thought, I say that the greatest ignorance was the ruin of the Dorian power, and that now, as then, ignorance is ruin. And if this be true, the legislator must endeavour to implant wisdom in states, and banish ignorance to the utmost of his power.

Cle. That is evident.

Ath. Then now consider what is really the greatest ignorance. I should like to know whether you and Megillus would agree with me in what I am about to say; for my opinion is—

Cle. What?

Ath. That the greatest ignorance is when a man hates that which he nevertheless thinks to be good and noble, and loves and embraces that which he knows to be unrighteous and evil. This disagreement between the sense of pleasure and the judgment of reason in the soul is, in my opinion, the worst ignorance; and the greatest too, because affecting the great mass of the human soul; for the principle which feels pleasure and pain in the individual is like the mass or popu-

lace in a state. And when the soul is opposed to knowledge, or opinion, or reason, which are her natural lords, that I call folly, just as in the state, when the multitude refuses to obey their rulers and the laws; or, again, in the individual, when fair reasonings have their habitation in the soul and yet do no good, but rather the reverse of good. All these cases I term the worst ignorance, whether in individuals or in states. I am not speaking, Stranger, as you will understand, of the ignorance of handicraftsmen.

Cle. Yes, my friend, we understand and agree.

Ath. Let us, then, in the first place declare and affirm that the citizen who does not know these things ought never to have any kind of authority entrusted to him: he must be stigmatized as ignorant, even though he be skilful in calculation and versed in all sorts of accomplishments, and feats of mental dexterity; and the opposite are to be called wise, even although, in the words of the proverb, they know neither how to read nor how to swim; and to them, as to men of sense, authority is to be committed. For, O my friends, how can there be the least shadow of wisdom when there is no harmony? There is none; but the noblest and greatest of harmonies may be truly said to be the greatest wisdom; and of this he is a partaker who lives according to reason; whereas he who is devoid of reason is the destroyer of his house and the opposite of the saviour of the state: he is ignorant of political wisdom. Let this, then, as I was saying, be laid down by us.

Cle. Let this be laid down.

Ath. I suppose that there must be rulers and subjects in states?

Cle. Certainly.

690 *Ath.* And what are the received principles of rule and obedience in cities, whether great or small; and similarly in families? What are they, and how many in number? Is not one claim of authority which is always just, that of fathers and mothers and in general of progenitors over their offspring?

Cle. Certainly.

Ath. Next follows the principle that the noble should rule

over the ignoble; and, thirdly, that the elder should rule and the younger obey?

Cle. To be sure.

Ath. And, fourthly, that slaves should be ruled, and their masters rule?

Cle. Of course.

Ath. Fifthly, if I am not mistaken, comes the principle that the stronger shall rule, and the weaker be ruled?

Cle. That is a rule not to be disobeyed.

Ath. Yes, and a rule which prevails very widely among all creatures, and is according to nature, as the Theban poet Pindar once said; and the sixth principle, and the greatest of all, is, that the wise should lead and command, and the ignorant follow and obey; and yet, O thou most wise Pindar, as I should reply to him, it surely is not contrary to nature, but according to nature, being the rule of law over willing subjects, and not a rule of compulsion.

Cle. Very true.

Ath. There is a seventh kind of rule which is conferred by the arbitrament of the lot, and is dear to the Gods and a token of good fortune: he on whom the lot falls is a ruler, and he who fails in obtaining the lot goes away and is the subject; and this we affirm to be quite just.

Cle. Certainly.

Ath. Then now, as we say playfully to any of those who lightly undertake the making of laws, You see before you, legislator, the principles of government, and you see the opposition which is naturally inherent in them. There we have discovered a fountain-head of seditions, to which you must attend. And, first, we will ask you to consider with us, how and in what respect the kings of Argos and Messene violated these our maxims, and ruined themselves and the great and famous Hellenic power of the olden time. Was this because they did not know the truly excellent saying of Hesiod, that the half is often greater than the whole? His meaning was, that when the whole was injurious and the half moderate, then the moderate was more and better than the immoderate.

Cle. Very true.

Ath. And are we to suppose that this ignorance is less fatal among kings than among peoples?

691 *Cle.* The probability is that ignorance will be a more prevalent disorder among kings, because they lead a proud and luxurious life.

Ath. Is it not palpable that the kings of that time were guilty of trying to be above the established laws, and that they did not consistently observe what they had agreed to observe by word and oath? This inconsistency of theirs may have had the appearance of wisdom, but was really, as we assert, the greatest ignorance, and utterly overthrew the whole empire through fatal error and perversity.

Cle. Very likely.

Ath. Good; and what ought the then legislator to have done in order to avert this calamity? Truly there is no great wisdom in knowing, and no great difficulty in telling, after the evil has happened; but to have foreseen the remedy at the time would have taken a much wiser head than ours.

Meg. What do you mean?

Ath. Any one who looks at what has occurred with you, Megillus, may easily know and may easily say what ought to have been done at that time.

Meg. Speak a little more clearly.

Ath. Nothing can be clearer than the observation which I am about to make.

Meg. What is it?

Ath. That if any one gives too great a power to anything, too large a sail to a vessel, too much food to the body, too much authority to the mind, and is regardless of the mean, everything is overthrown, and, in the wantonness of excess, runs in the one case to disorder, and in the other to injustice, which is the child of excess. I mean to say, my dear friends, that there is no soul of man, young and irresponsible, who will be able to sustain the temptation of arbitrary power—no one who will not, under such circumstances, become filled with folly, that worst of diseases, and be hated by his nearest and dearest friends: when this happens his kingdom is undermined, and, all his power vanishes from him.

And great legislators who know the mean should take heed of the danger. As far as we can guess at this distance of time, what happened was as follows:—

Meq. What?

Ath. A God, who watched over Sparta, seeing into the future, gave you two families of kings instead of one; and thus brought you within the limits of moderation. In the next place, some human wisdom mingled with divine power, observing that the constitution of your government was still feverish and excited, tempered your inborn strength and pride of birth with the moderation which comes of age, making the power of your twenty-eight elders equal with ⁶⁹² that of the kings in your most important matters. But your third saviour, perceiving that your government was still swelling and foaming, imposed as a curb the power of the Ephori, nearly resembling that of officers elected by lot; and by this arrangement the kingly office, being compounded of the right elements and duly moderated, was preserved, and was the means of preserving all the rest. Since, if there had been only the original legislators, Temenus, Cresphontes, and their contemporaries, as far as they were concerned, not even the portion of Aristodemus would have been preserved; for they had no proper experience in legislation, or they would surely not have imagined that oaths would moderate a youthful spirit invested with a power which might be converted into a tyranny. Now that God has instructed us what sort of government would have been or will be lasting, there is no wisdom, as I have already said, in judging after the event; there is no difficulty in learning from an example which has already occurred. But if any one could have foreseen all this at the time, and had been able to moderate the government of the three kingdoms and unite them into one, he might have saved all the excellent institutions which were then conceived; and no Persian or any other armament would have dared to attack us, or would have regarded Hellas as a power to be despised.

Cle. True.

Ath. There was small credit to us, Cleinias, in defeating them; and the discredit was, not that the conquerors did not

win many great battles both by land and sea ; but what, in my opinion, brought discredit was, first of all, the circumstance that of the three cities one only fought on behalf of Hellas, and the two others were so utterly good for nothing that the one was waging a mighty war against Lacedaemon, and thus prevented her from coming to the rescue, and the city of Argos, which had the precedence at the time of the distribution, when asked to aid in repelling the barbarian, would not answer to the call, or give aid. Many things might be told about Hellas in connection with that war which are far from honourable ; nor, indeed, can we rightly say that Hellas repelled the invader ; for the truth is, that unless the Athenians and Lacedaemonians, in concert, had repulsed the advancing host, all the tribes of Hellas would have been fused in a chaos of barbarians mingling with Hellenes, and Hellenes with barbarians ; just as nations who are now subject to the Persian power, owing to unnatural separations and combinations of them, are dispersed and scattered, and live miserably. These things, Megillus, we lay at the door of statesmen and legislators, as they are called, past and present, in order that we may analyse the causes of them, and find out what else might have been done. We were saying, for instance, just now, that there ought to be no great and unmingled powers ; and this was under the idea that a state ought to be free and wise and harmonious, and that a legislator ought to legislate with a view to this end. Nor is there any reason to be surprised at our continually proposing aims for the legislator which appear not to be always the same ; but we should consider when we say that temperance is to be the aim, or wisdom is to be the aim, or friendship is to be the aim, that all these are really the same ; and if so a variety in the modes of expression ought not to disturb us.

Cle. Let us resume the argument in that spirit : And now, speaking of friendship and wisdom and freedom, I wish that you would tell me at what, in your opinion, the legislator should aim ?

Ath. Hear me, then : there are two mother forms of states from which the rest may be truly said to be derived ; and

one of them may be called monarchy and the other democracy: the Persians have the highest form of the one, and we of the other; almost all the rest, as I was saying, are varying mixtures of these. Now, if you are to have liberty and the combination of friendship with wisdom, you must have both these forms of government in a measure; the argument emphatically declares that no city can be well governed which is not made up of both.

Cle. Impossible.

Ath. The state which has become exclusively and excessively attached to monarchy or to freedom, has neither of them in moderation; but your states, the Laconian and Cretan, have a certain moderation; and the Athenians and Persians having had more at first, have now less. Shall I tell you why?

Cle. By all means, if it will tend to the elucidation of our 694 subject.

Ath. Hear, then:—There was a time when the Persians had more of the state which is a mean between slavery and freedom. In the reign of Cyrus they were freemen and also lords of many others: the rulers gave a share of freedom to the subjects, and being treated as equals, the soldiers were on better terms with their generals, and showed themselves more ready in the hour of danger. And if there was any wise councillor among them, he imparted his wisdom to the public; for the king was not jealous, but allowed him full liberty of speech, and gave honour to those who were able to be his counsellors in anything, and allowed all men equally to participate in wisdom. And the nation waxed in all respects, because there was freedom and friendship and communion of soul among them.

Cle. That certainly appears to have been the case.

Ath. How, then, was this advantage lost under Cambyses, and again recovered under Darius? Shall I try to divine?

Cle. That question, certainly, has a bearing on the subject of our enquiry.

Ath. I imagine that Cyrus, though a great and patriotic general, had never given his mind to education, and never attended to the order of his household.

Cle. What makes you say so?

Ath. I think that from his youth upwards he was a soldier, and entrusted the bringing up of his children to the women; and they brought them up from their childhood as the favourites of fortune, who were blessed already, and needed no more blessings. They thought that they were happy enough, and that no one should be allowed to oppose them in any way, and they compelled every one to praise all that they said or did. This was the manner in which they brought them up.

Cle. A splendid education truly!

Ath. Such an education as women were likely to give them, and especially princesses who had recently grown rich, and in the absence of the men, too, who were occupied in wars and dangers, and too busy to look after them.

Cle. What would you expect?

Ath. Their father had possessions of cattle and sheep, and 695 many herds of men and other animals; but he did not consider that those to whom he was about to make them over were not trained in his own calling, which was Persian; for the Persians are shepherds—sons of a rugged land, which was a stern mother, and well fitted to produce a sturdy race able to live in the open air and watch, and to fight also, if fighting was required. He did not observe that his sons were trained differently; through the so-called blessing of being royal they were educated in the corrupt Median fashion by women and eunuchs, which led to their becoming such as people do become when they are brought up unreprieved. And so, after the death of Cyrus, his sons, in the fulness of luxury and licence, took the kingdom, and first one slew the other because he could not endure a rival; and, afterwards, the slayer himself, mad with wine and brutality, lost his kingdom through the Medes and the eunuch, as they called him, who despised the folly of Cambyses.

Cle. That is what is said, and is probably the truth.

Ath. Yes; and the tradition says, that the empire came back to the Persians, through Darius and the seven chiefs.

Cle. True.

Ath. Let us note the rest of the story. Observe, that Darius

was not the son of a king, and had not received a luxurious education. When he came to the throne, being one of the seven, he divided the country into seven portions, and of this arrangement there are some shadowy traces still remaining; he made laws upon the principle of introducing universal equality in the order of the state, and he embodied in a law the settlement of the tribute which Cyrus promised,—thus creating a feeling of friendship and community among all the Persians, and attaching the people to him with money and gifts. Hence his armies cheerfully acquired for him countries as large as those which Cyrus had left behind him. Darius was succeeded by his son Xerxes; and he again was brought up in the royal and luxurious fashion. Might we not justly say: ‘O Darius, why did you not learn wisdom from the misfortunes of Cyrus, instead of bringing up Xerxes in the same way in which he brought up Cambyses?’ For Xerxes being the creation of the same education, met with much the same fortune as Cambyses; and from that time to this there has never been a really great king among the Persians, although they are all called great. And their degeneracy is not to be attributed to chance as I maintain; the reason is rather the evil life which is generally led by the sons of very rich and 696 royal persons; for never will boy or man, young or old, excel in virtue, who has been thus educated. And this, I say, is what the legislator has to consider, and what at this moment has to be considered by us. Justly may you, O Lacedaemonians, be praised for this—that you do not give special honour or maintenance to wealth rather than to poverty in particular, or to a royal rather than to a private station, where the divine and inspired lawgiver has not originally commanded them to be given. For no man ought to have preeminent honour in a state because he surpasses others in wealth, any more than because he is swift or fair or strong, unless he have some virtue in him; nor even if he have virtue, unless he have this particular virtue of temperance.

Meg. What do you mean, Stranger?

Ath. I suppose that courage is a part of virtue?

Meg. To be sure.

Ath. Then, now hear and judge yourself:—Would you like

to have for a fellow-lodger or neighbour a very courageous man, who had no control over himself?

Meg. Heaven forbid!

Ath. Or an artist, who was clever in his profession, but a rogue?

Meg. Certainly not.

Ath. And surely justice does not grow apart from temperance?

Meg. Impossible.

Ath. Any more than our pattern wise man, whom he exhibited as having his pleasures and pains in accordance with and corresponding to true reason, can be without temperance?

Meg. No.

Ath. There is a further consideration pointing to the due and undue award of honours in states.

Meg. What is it?

Ath. I should like to know whether temperance without the other virtues, existing alone in the soul of man, is rightly to be had in honour or dishonour?

Meg. I cannot tell.

Ath. And that is the best answer; for whichever alternative you had chosen, I think that you would have gone wrong.

Meg. I am fortunate.

Ath. Very good; a quality, which is a mere appendage of things honourable and dishonourable, does not deserve an expression of opinion, but is best expressed by silence.

Meg. You are speaking of temperance, when you say this?

Ath. Yes; but of the other virtues, that which having this appendage is also most beneficial, will be most deserving of honour, and next that which is beneficial in the next degree; and so, each of them will be rightly honoured according to a regular order.

Meg. True.

697 *Ath.* And ought not the legislator to determine these classes?

Meg. Certainly he should.

Ath. Suppose that we leave to him the arrangement of details. But the general division of laws according to their importance into a first and second and third class, we who are lovers of law may make ourselves.

Meg. Very good.

Ath. We maintain, then, that a State which would be safe and happy, as far as the nature of man allows, must and ought to distribute honour and dishonour in the right way. And the right way is to place the goods of the soul first and highest in the scale, always assuming temperance as a condition of them; and in the second place, the goods of the body; and in the third place, those of money and property. And if any legislator or state departs from this rule by giving money the place of honour, or in any way preferring that which is really last, may we not say, that he or the state is doing an unholy and unpatriotic thing?

Meg. Yes; let that be plainly asserted.

Ath. The consideration of the Persian governments led us thus far to enlarge. We remarked that the Persians grew worse and worse. And we affirm the reason of this to have been, that they too much diminished the freedom of the people, and introduced too much of despotism, and so destroyed friendship and community of feeling. And when there is an end of these, no longer do the governors govern on behalf of their subjects or of the people, but on behalf of themselves; and if they think that they can gain ever so little for themselves, they devastate cities, and send fire and desolation among friendly races. And as they hate ruthlessly and horribly, so are they hated; and when they want the people to fight for them, they find no community of feeling or willingness to risk their lives in fighting for them; their untold myriads are useless to them on the field of battle, and they think that their salvation depends on the employment of mercenaries and strangers whom they hire, just as if they were in want of men. And they cannot help being stupid, since they proclaim by their actions that the ordinary distinctions of right and wrong are a trifle, when compared with gold and silver.

Meg. Quite true.

Ath. And now enough of the Persians, and their present maladministration of their government, which is owing to the prevalence of slavery and despotism among them.

Meg. Good.

Ath. Next, we must pass in review the government of Attica

in like manner, and from this show that entire freedom and the absence of all superior authority, is not by any means so good as a limited government, which was our ancient Athenian constitution at the time when the Persians made their attack on Hellas, or, speakingly more correctly, on the whole continent of Europe. There were four classes, arranged according to a property census, and reverence was our queen and mistress, and made us willing to live in obedience to the laws. Also the vastness of the Persian armament, both by sea and on land, caused a helpless terror, which made us more and more the servants of our rulers and of the laws; and for all these reasons an exceeding harmony prevailed among us. About ten years before the naval engagement at Salamis, Datis came, leading a Persian host by command of Darius, which was expressly sent against the Athenians and Eretrians, having orders to carry them away captive; and these orders he was to execute under pain of death. Now Datis and his myriads soon became complete masters of Eretria, and a fearful report reached Athens that no Eretrian had escaped him; for the soldiers of Datis had joined hands and netted the whole of Eretria. And this report, whether well or ill founded, was terrible to all the Hellenes, and above all to the Athenians, and they sent embassies in all directions, but no one was willing to come to their relief, with the exception of the Lacedaemonians; and they, either because they were detained by the Messenian war, which was then going on, or for some other reason (for the truth of the matter is not accurately known), came a day too late for the battle of Marathon. After this, the news arrived of mighty preparations being made, and innumerable threats came from the king. Then, as time went on, a rumour reached us that Darius had died, and that his
699 son, who was young and hot-headed, had come to the throne and was persisting in his design. The Athenians were under the impression that the whole expedition was directed against them, in consequence of the battle of Marathon; and hearing of the bridge over the Hellespont, and the canal of Athos, and the host of ships, considering that there was no salvation for them either by land or by sea, for there was no one to help them, and remembering that in the first expedition, when the

Persons delivered letters, as one day, to the
and the danger of an alliance with the
would happen again, at least in less
to the sea, could they destroy any
were attacked by a thousand vessels
of every manner, slight boats and
etc. They saw that on the other hand
a victory impossible victory, and a
found that their only refuge was
lands. All these things considered in
days there was the immediate but
what present law, which every one
their traditional laws, and which I
proving themselves called enemies,
to do as he might be a willing
noted with it that it apt to be
if they had not been possessed
land and the victory, or
they and their country, and
due to them, as they did, but
have been all captured and
disputed.

My: Your words, I think, are not
enough out of your country.

Mr: They are true, Virginia, and
the nature of your enemies, I may
tell it that day. And I would
consider whether my words have
not done all I can do, only to
but for the opportunity sake. There
times both of ourselves and the
the same. In they had their
own interests, the other will
no question? In I would like
improvements have a good deal
to say for the same.

My: Yes, but I wish that you
expression.

Mr: I will. Under the
you are not as soon the market
of the day.

What laws do you mean?

In the first place, let us speak of the laws about music, to say, such music as then existed: in order that we may see the growth of the excess of freedom from the laws of music was early divided among us into certain different manners. One sort consisted of prayers to the gods, and were called *hymns*: and there was another and more solemn sort called lamentations, and another termed paeans, and a third called dithyrambs: of which latter the subject, if we are not mistaken, was the birth of Dionysus. And they were not called by that word 'laws,' or *nomoi*, meaning 'song,' only because they used such an instrument, as the harp, for example, which was not thought to denote a particular strain. All these different sorts were duly distinguished, nor were they allowed to be confounded with another. And the authorities were determined and gave judgment, and punished the poets who were not expressed in a hiss, nor in the most unbecoming voices of the multitude, as in our days; nor in the clappings of the hands. But the directors of the education insisted that the spectators should listen in silence, and that the women and boys, and their tutors, and the multitude, were kept quiet by the touch of the wand. The multitude of good order which the multitude were willing to follow, would not have dared to give judgment by their applause. And then, as time went on, the poets themselves began to be in the reign of ignorance and misrule. They were ignorant of the laws, but they had no knowledge of what is just and reasonable in music; raging like Bacchanals and possessed with the same delights — mingling lamentations with hymns, and dithyrambs; imitating the sounds of the flute and making out general confusion: ignorantly saying that the music has no truth, and, whether good or bad, is to be judged of rightly by the pleasure of the hearer. And by composing such licentious poems, and adding to them the same licentiousness, they have inspired the multitude with a boldness, and made them fancy that they can give judgment of themselves about melody and song. And in this manner the dumb, who had been before mute, have become vocal, as if they had understanding of good and bad in music.

Persians destroyed Eretria, no one came to their help, or would risk the danger of an alliance with them, they thought that this would happen again, at least on land; nor, when they looked to the sea, could they descry any hope of salvation; for they were attacked by a thousand vessels and more. One chance of safety remained, slight indeed and desperate, but their only one. They saw that on the former occasion they had gained a seemingly impossible victory, and anchored on this hope, they found that their only refuge was in themselves and in the Gods. All these things created in them the spirit of friendship; there was the immediate fear of the occasion, and that other present fear, which sprang out of the habit of obeying their traditional laws, and which I have several times in the preceding discourse called reverence, to which the good man is, as he ought be, a willing servant, and of which the meaner sort of man is apt to be independent and fearless. If they had not been possessed by this fear, they would never have met the enemy, or defended their temples and sepulchres and their country, and everything that was near and dear to them, as they did; but little by little they would have been all scattered and dispersed.

Meg. Your words, Athenian, are quite true, and worthy of yourself and of your country.

Ath. They are true, Megillus; and to you, who have inherited the virtues of your ancestors, I may properly speak of the actions of that day. And I would wish you and Cleinias, to consider whether my words have not also a bearing on legislation; for I am not discoursing only for the pleasure of talking, but for the argument's sake. Please to remark that the experience both of ourselves and the Persians was, in a certain sense, the same; for they led their people as we led ours, the one into utter servitude, the other into all freedom. And now, how shall we proceed? for I would like you to observe that our previous arguments have a good deal to say for themselves.

Meg. True; but I wish that you would give us a fuller ⁷⁰⁰ explanation.

Ath. I will. Under the ancient laws, my friends, the people was not as now the master, but rather the willing servant of the laws.

Mcg. What laws do you mean?

Ath. In the first place, let us speak of the laws about music; that is to say, such music as then existed; in order that we may trace the growth of the excess of freedom from the beginning; for music was early divided among us into certain kinds and manners. One sort consisted of prayers to the Gods, which were called hymns; and there was another and opposite sort called lamentations, and another termed paeans, and another called dithyrambs; of which latter the subject, if I am not mistaken, was the birth of Dionysus. And they used the actual word 'laws,' or νόμοι, meaning 'song,' only adding such and such an instrument, of the harp, for example, when they wanted to denote a particular strain. All these and others were duly distinguished, nor were they allowed to intermingle one sort of music with another. And the authority which determined and gave judgment, and punished the disobedient, was not expressed in a hiss, nor in the most unmusical 'sweet voices' of the multitude, as in our days; nor in applause and clappings of the hands. But the directors of public instruction insisted that the spectators should listen in silence to the end; and boys and their tutors, and the multitude in general, were kept quiet by the touch of the wand. Such was the good order which the multitude were willing to observe; they would not have dared to give judgment by noisy cries. And then, as time went on, the poets themselves introduced the reign of ignorance and misrule. They were men of genius, but they had no knowledge of what is just and lawful in music; raging like Bacchanals and possessed with inordinate delights — mingling lamentations with hymns, and paeans with dithyrambs; imitating the sounds of the flute on the lyre, and making one general confusion; ignorantly affirming that music has no truth, and, whether good or bad, can only be judged of rightly by the pleasure of the hearer. And by composing such licentious poems, and adding to them words as licentious, they have inspired the multitude with lawlessness and boldness, and made them fancy that they can

701 judge for themselves about melody and song. And in this way the theatres from being mute have become vocal, as though they had understanding of good and bad in music

and poetry; and instead of an aristocracy, an evil sort of theatrocracy has grown up. For if the democracy which judged had only consisted of freemen, there would have been no fatal harm done; but in music there first arose the universal conceit of omniscience and general lawlessness;—freedom came following afterwards, and men, fancying that they knew what they did not know, had no longer any fear, and the absence of fear begets shamelessness. For what is shamelessness but the insolent refusal to regard the opinion of the better by reason of an over-daring sort of liberty?

Meg. Very true.

Ath. Consequent upon this freedom comes the other freedom of disobedience to rulers; and then the attempt to escape the control and exhortation of father, mother, elders, and when near the end, the control of the laws also; and at the very end there is the contempt of oaths and pledges, and no regard at all for the Gods,—herein they exhibit and imitate the old Titanic nature; and thus they return again to the old, and lead a life of evils which have no end. Why do I say so? Because I think that the argument ought to be pulled up from time to time, and not be allowed to run away, but held with bit and bridle, and then we shall not, as the proverb says, fall off our ass. Let us then once more ask the question, to what end has all this been said?

Meg. Very good.

Ath. This, then, has been said for the sake——

Meg. Of what?

Ath. We said that the lawgiver ought to have three things in view: first, that the city for which he legislates should be free; and secondly, be at unity with herself; and thirdly, should have understanding; these were our principles, were they not?

Meg. Certainly.

Ath. With a view to this we selected two kinds of government, the one the most despotic, and the other the most free; and now we are considering which of them is the right form: we took a mean in both cases, of despotism in the one, and of liberty in the other, and we saw that in a mean they attained their perfection; but that when they were

carried to the extreme of either, slavery or despotism, neither party were the gainers.

702 *Meg.* Very true.

Ath. And that was our reason for considering the settlement of the Dorian army, and of the country at the foot of the Dardanian mountains, and the removal of the city to the plain by the sea, and the first men who were the survivors of the deluge. And all that was said about music and drinking, and what preceded, has been said with the view of seeing how a state might be best administered, and how an individual might best order his own life. And now, Megillus and Cleinias, how can we put to the proof the value of our words?

Cle. Stranger, I think that I see how a proof of their value may be obtained. This discussion of ours appears to me to have been singularly fortunate, and just what I at this moment want; most auspiciously have you and my friend Megillus come in my way. For I will tell you what has happened to me; and I regard the coincidence as a sort of omen. The greater part of Crete is going to send out a colony, and they have entrusted the management of the affair to the Cnosians; and the Cnosians to me and nine others. And they desire us to give them any laws which we please, whether taken from the Cretan model or from any other; and they do not mind about their being foreign if they are better. Grant me then this favour, which will also be a gain to yourselves:—Let us make a selection from what has been said, and then let us imagine a State of which we will suppose ourselves to be the original colonizers. Thus we shall proceed with our enquiry, and at the same time I may have the use of the framework which you are constructing, for the city which is in contemplation.

Ath. Good news, Cleinias; if Megillus has no objection, you may be sure that I will do all in my power to please you.

Cle. I agree.

Meg. And I too.

Cle. Excellent; and now let us begin to frame the State.

BOOK IV.

Athenian Stranger. And now, what will this city be? I do ⁷⁰⁴ not mean to ask what is or will be the name of the place; that may be determined by the accident of locality or of the original settlement,—a river or fountain, or some local deity may give the sanction of a name to the newly-founded city; but I do want to know what the situation is; whether maritime or inland?

Cleinius. I should imagine, Stranger, that the city of which we are speaking is about eighty stadia distant from the sea.

Ath. And are there harbours on the seaboard?

Cle. Excellent harbours, Stranger; there could not be better.

Ath. You don't say so! And is the surrounding country productive, or in need of importations?

Cle. Hardly in need of anything.

Ath. And is there any neighbouring state?

Cle. None whatever, and that is the reason for selecting the place; in days of old, there was a migration of the inhabitants, and the region has been deserted from time immemorial.

Ath. And has the place a fair proportion of hill, and plain, and wood?

Cle. Like the rest of Crete in that.

Ath. You mean to say that there is more rock than plain?

Cle. Exactly.

Ath. Then there is some hope that your citizens may be virtuous: had you been on the sea, and well provided with harbours, and an importing rather than a producing country, some mighty saviour would have been needed, and lawgivers more than mortal, if you were ever to have a chance of preserving your state from degeneracy and discordance of manners. But there is comfort in the eighty stadia; although the sea is too near, especially if, as you say, the harbours are so

705 good. Still we must be satisfied. The sea is pleasant enough as a daily companion, but has also a bitter and brackish quality; filling the streets with merchants and shopkeepers, and begetting in the souls of men uncertain and unfaithful ways—making the state unfriendly and unfaithful both to her own citizens, and also to other nations. There is a consolation, therefore, in the country producing all things at home; and yet, owing to the ruggedness of the soil, not providing anything in great abundance. Had there been abundance there might have been a great export trade, and a great return of gold and silver; which, as we may safely affirm, has the most fatal results on a State whose aim is the attainment of just and noble sentiments: this was said by us, if you remember, in the previous discussion.

Cle. I remember, and am of opinion that we both were and are in the right.

Ath. Well, but let me ask, how is the country supplied with timber for ship-building?

Cle. There is no pine of any consequence, or fir, and not much cypress; and you will find very little stone-pine or plane-wood, which shipwrights always require for the interior of ships.

Ath. These are also natural advantages.

Cle. Why so?

Ath. Because no city ought to be easily able to imitate its enemies in what is mischievous.

Cle. How does that bear upon any of the matters of which we have been speaking?

Ath. Remember, my good friend, what I said at first about the Cretan laws, that they looked to one thing only, and this, as you both agreed, was war; and I replied that such laws, in so far as they tended to promote virtue, were good; but in that they regarded a part only, and not the whole of virtue, I disapproved of them. And now I hope that you in your turn will follow and watch me if I legislate with a view to anything but virtue, or with a view to a part of virtue. For I consider that the true lawgiver, like an archer, aims only at
706 that on which some eternal beauty is always attending, and dismisses everything else, whether wealth or any other benefit,

when separated from virtue. I was saying that the imitation of enemies was a bad thing; and I was thinking of a case in which a maritime people are harassed by enemies, as the Athenians were by Minos (I do not speak from any desire to recall past grievances); but he, as we know, was a great naval potentate, who compelled the inhabitants of Attica to pay him a cruel tribute; and in those days they had no ships of war as they now have, nor was the country filled with ship timber, and therefore they could not readily build them. Hence neither could they learn how to imitate their enemy at sea, or become sailors themselves, and in this way directly repel their enemies. Better for them to have lost many times over the seven youths, than that heavy-armed and stationary troops should have been turned into sailors, and accustomed to leap quickly on shore, and again to hurry back to their ships; or should have fancied that there was no disgrace in not awaiting the attack of an enemy and dying boldly; and that there were good reasons, and plenty of them, for a man throwing away his arms, and betaking himself to flight; which is not dishonourable, as people say, at certain times. This is the language of naval warfare, and is anything but worthy of extraordinary praise. For we should not teach bad habits, least of all to the best part of the citizens. You may learn the evil of such a practice from Homer, by whom Odysseus is introduced, rebuking Agamemnon, because he desires to draw down the ships to the sea at a time when the Achaeans are hard pressed by the Trojans,—he gets angry with him, and says:—

‘Who, at a time when the battle is in full cry, biddest to drag the well-oared ships into the sea, that the prayers of the Trojans may be accomplished yet more, and high ruin fall upon us? For the Achaeans will not maintain the battle, when the ships are drawn into the sea, but they will look behind and will cease from strife; in that the counsel which you give will prove injurious.’

707

You see that he quite knew triremes on the sea, in the neighbourhood of fighting men, to be an evil;—lions might be trained in that way to fly from a herd of deer. Moreover, naval powers which owe their safety to ships, do not honour that sort of warlike excellence which is most deserving of

honour. For he who owes his safety to the pilot and the captain, and the oarsman, and all sorts of rather good-for-nothing persons, cannot rightly give honour to whom honour is due. But how can a state be in a right condition which cannot duly award honour?

Cle. It is hardly possible, I admit; and yet, Stranger, we Cretans are in the habit of saying that the battle of Salamis was the salvation of Hellas.

Ath. Why, yes; and that is an opinion which is widely spread both among Hellenes and barbarians. But Megillus and I say, rather, that the battle of Marathon was the beginning, and the battle of Plataea the completion of the great deliverance, and that these battles made the Hellenes better; whereas the sea-fights of Salamis and Artemisium—for I may as well put them both together—made them no better, if I may say so without offence about the battles which helped to save us. And in estimating the goodness of a state, we regard both the situation of a country and the order of the laws, considering that the mere preservation and continuance of life is not the most honourable thing for men, as the vulgar think, but the continuance of the best life, while we live; and that again, if I am not mistaken, is a remark which has been made already.

Cle. Yes.

Ath. Then we have only to ask, whether we are taking the course which we acknowledge to be the best for the settlement and legislation of states.

Cle. The best by far.

Ath. And now let me proceed to another question: Who are to be the colonists? May any one come out of all Crete; and is the idea that the population in the several states is too numerous for the means of subsistence? For I suppose that you are not going to send out a general invitation to any Hellene who likes to come. And yet I observe that in your country there are people who have come
708 from Argos and Aegina and other parts of Hellas. Tell me, then, whence do you draw your recruits in the present enterprise?

Cle. They will come from all Crete; and of other Hellenes,

Peloponnesians will be most acceptable. For, as you truly observe, there are Cretans of Argive descent; and the race of Cretans which has the highest character at the present day, is the Gortynian, and this has come from Gortys in the Peloponnesus.

Ath. Cities find colonization in some respects easier when the colonists are one race, which like a swarm of bees is sent out from a single country, friends from friends, owing to some pressure of population, or other similar necessity, or because a portion of a state is driven by factions to emigrate. And there have been whole cities which have taken flight when utterly conquered by a superior power in war. This, however, which is in one way an advantage to the colonist or legislator, in another point of view creates a difficulty. There is an element of friendship in the community of race, and language, and laws, and in common sacrifices, and the like; but colonies which are of this homogeneous sort are apt to kick against any laws different from their own; and although the badness of their own laws has undone them, yet because of the force of habit they would fain preserve the very customs which were their ruin; and the leader of the colony, who is their legislator, finds them troublesome and rebellious. On the other hand, the conflux of several populations might be more disposed to listen to new laws; but then, to make them combine and pull together, as they say of horses, is a most difficult task, and the work of years. And yet there is nothing which perfects the virtue of men like legislation and colonization.

Cle. No doubt; but I should like to know why you say so.

Ath. My good friend, I am afraid that the course of my speculations is leading me to say something depreciatory of legislators; but if the word be to the purpose there can be no harm. And yet, why am I disquieted, for I believe that the same principle applies equally to all human things?

Cle. To what are you referring?

709

Ath. I was going to say that man never legislates, but accidents of all sorts, which legislate for us in all sorts of ways. The violence of war and the hard necessity of poverty are constantly overturning governments and changing laws.

And the power of disease has often caused innovations in the state, when there have been pestilences and bad seasons continuing during many years. Any one who sees all this, naturally rushes to the conclusion of which I was speaking, that no mortal legislates in anything, but that in human affairs chance is almost everything. And this may be said of the arts of the sailor, and the pilot, and the physician, and the general, and may seem to be well said ; and yet there is another thing which may be said with equal truth of all of them.

Cl. What is it?

Ath. That God governs all things, and that chance and opportunity co-operate with Him in the government of human affairs. There is, however, a third and less extreme view, that art should be there also ; for I should say that in a storm there must surely be a great advantage in having a pilot. You would agree?

Cl. Yes.

Ath. And might not this be also said of legislation as well as of other things : even supposing all other circumstances favourable, the true legislator is still required, from time to time, to provide for the happiness of the state?

Cl. That I admit.

Ath. In each case the artist would be right in praying for certain favourable conditions, under which he would only require to exercise his art?

Cl. Very true.

Ath. And all other artists, if they had to offer up their prayers, would do likewise?

Cl. Certainly.

Ath. And the legislator would do so too?

Cl. I believe that he would.

Ath. ‘Come, legislator,’ we will say to him ; ‘what conditions do you require of us before you organize your state?’ What ought he to answer? Shall I give the answer of the legislator?

Cl. Very good.

Ath. He will say—‘Give me a state which is governed by a tyrant, and let the tyrant be young and have a good memory ; let him be quick at learning, and of a courageous and noble nature ; let him have that which, as I said before, is the

inseparable companion of all the other parts of virtue, if there 710
is to be any good in them.'

Cle. I suppose, Megillus, that this companion virtue of which the Stranger speaks, must be temperance?

Ath. Yes, Cleinias, temperance in the vulgar sense; not that which in the exaggerated language of some philosophers is demonstrated to be prudence, but that which is the natural gift of children and animals, and makes some of them live continently and others incontinently, but when isolated, was, as we said, hardly worth reckoning in the catalogue of goods. I think that you must understand my meaning?

Cle. Certainly.

Ath. Then our tyrant must have this as well as the other qualities, if the state is to acquire in the best manner and in the shortest time the form of government which is most conducive to happiness; for there neither is nor ever will be a better or speedier way of establishing a polity than by a tyranny.

Cle. By what possible arguments, Stranger, can you prove such a monstrous doctrine?

Ath. There is surely no difficulty in seeing, Cleinias, what is in accordance with the order of nature?

Cle. You would assume, as you say, a tyrant who was young, temperate, quick at learning, having a good memory, courageous, of a noble nature?

Ath. Yes; and you must add fortunate; and his good fortune must be that he is the contemporary of a great legislator, and that some happy chance brings them together. When this has been accomplished, God has done all that He can ever do for a state which he desires to be eminently prosperous; He has done second best for a state in which there are two such rulers, and third best for a state in which there are three. The difficulty increases with the increase of the number, and diminishes with the diminution of the number.

Cle. You mean to say, I suppose, that the best government is produced from a tyranny, and originates in a good lawgiver and an orderly tyrant, and most easily and rapidly passes out of such a tyranny into a perfect form of government; and, in

the second degree, out of an oligarchy; and, in the third degree, out of a democracy: is not that your meaning?

Ath. Not so; I mean rather to say that the change is best made out of a tyranny; and secondly, out of a monarchy; and thirdly, out of some sort of democracy: fourth, in the capacity for improvement, comes oligarchy, which has the greatest difficulty in admitting of such a change, because the government is in the hands of a number of potentates. I am supposing that the legislator is by nature of the true sort, and that his strength is united with that of the chief men of the state; and when he is strongest, and, at the same time, 711 there are the fewest persons concerned, as in a tyranny, there the change is likely to be easiest and most rapid.

Cle. How? I do not understand.

Ath. And yet I have repeated what I am saying a good many times; but I suppose that you have never seen a city which is under a tyranny?

Cle. No; I cannot say that I have any great desire to see one.

Ath. And yet, where there is a tyranny, you might certainly see that of which I am now speaking.

Cle. What do you mean?

Ath. I mean that you might see how, without trouble and in no very long period of time, the tyrant, if he wishes, can change the manners of a state: he has only to go in the direction of virtue or of vice, whichever he prefers, he himself setting an example in his own person, praising and countenancing some actions, and reproving and setting a note of dishonour upon others.

Cle. But how can we imagine that the citizens in general will at once follow the example set to them; or how can he have this power both of persuading and of compelling them?

Ath. Let no one, my friends, persuade us that there is any quicker and easier way in which laws act upon states than when the rulers lead: such changes never have, nor ever will, come to pass in any other way. The real impossibility or difficulty is of another sort, and is rarely surmounted in the course of ages; but when once it is surmounted, ten thousand or rather all blessings follow.

Cle. Of what are you speaking?

Ath. The difficulty is to find the divine love of temperate and just institutions existing in any powerful forms of government, whether in a monarchy or oligarchy of wealth or of birth. You might as well hope to reproduce the character of Nestor, who is said to have excelled all men in the power of speech, and yet more in his temperance. This, however, according to the tradition, was in the times of Troy; in our own days there is nothing of the sort; but if such an one either has or ever shall come into being, or is now among us, blessed is he and blessed are they who hear the wise words that flow from his lips. And this may be said of power in general: When the supreme power ⁷¹² in man coincides with the greatest wisdom and temperance, then the best laws and the best constitution come into being; but in no other way. And I would have what I am saying regarded as a sort of divination and declaration that, in one point of view, there may be a difficulty for a city to have good laws, but that there is another point of view in which nothing can be easier or sooner effected, granting our supposition.

Cle. How do you mean?

Ath. Let us try to put into words the laws which are suitable to your state; like children, framing our lips to utter them.

Cle. Let us proceed without delay.

Ath. Then let us invoke God at the settlement of our state; may He hear and be propitious to us, and come and set in order the State and the laws!

Cle. May he come!

Ath. But what form of polity are we going to give the city?

Cle. Tell me what you mean a little more clearly. Do you mean what form of polity, as, for example, democracy or oligarchy, or aristocracy or monarchy? For I suppose that you would not include tyranny.

Ath. Which of you will answer first, to which of these classes your own government is to be referred?

Meg. Ought I to answer first, since I am the elder?

Cle. Perhaps you should.

Meg. And yet, Stranger, I perceive that I cannot say, without more thought, what I should call the government of Lacedaemon, for it seems to me to be like a tyranny; the

power of our Ephors is marvellously tyrannical; and sometimes it appears to me to be of all cities the most democratical; and who can reasonably deny that it is an aristocracy? We have also a monarchy which is held for life, and is said by all mankind, and not by ourselves only, to be the most ancient of all monarchies; and, therefore, when asked on a sudden, I cannot precisely say which form of government the Spartan is.

Cle. I am in the same difficulty, Megillus, for I do not feel confident that the polity of Cnosus is any of these.

Ath. The reason is, my excellent friends, that you really have polities, but the cities of which we were speaking are
713 mere aggregations of citizens who are the subjects and servants of parts of their own state; they are named after their several ruling powers, and are not polities at all. But if states are to be named after their rulers, the true state ought to be called by the name of the God who rules over wise men.

Cle. And who is this God?

Ath. May I still make use of fable to some extent, in the hope that I may be better able to answer your question: shall I?

Cle. By all means.

Ath. In the primeval world, and a long while before the cities came into being whose settlements we have described, there is said to have been in the time of Cronos a blessed state and way of life, of which the best-ordered of existing states is a copy.

Cle. It will be very necessary to hear about that.

Ath. I quite agree with you; and therefore I have introduced the subject.

Cle. Most appropriately; and since the tale is to the point, you will do well in giving us the whole story.

Ath. I will do as you suggest. There is a tradition of the happy life of mankind in days when all things were spontaneous and abundant. And of this the reason is said to have been as follows:—Cronos knew what we ourselves were declaring, that no human nature invested with supreme power is able to order human affairs and not overflow with insolence and wrong. Which reflection led him to appoint not men but demigods, who

are of a higher and more divine race, to be the kings and rulers of our cities; he did as we do with flocks of sheep and other tame animals. For we do not appoint oxen to be the lords of oxen, or goats of goats; but we ourselves are a superior race, and rule over them. In like manner God, in His love of mankind, placed over us the demons, who are a superior race, and they with great ease and pleasure to themselves, and no less to us, taking care of us and giving us peace and reverence and order and justice never failing, made the tribes of men happy and peaceful. And this tradition, which is true, declares that cities of which some mortal man and not God is the ruler, have no escape from evils and toils. Still we must do all that we can to imitate the life which is said to have existed in the days of Cronos, and, as far as the principle of immortality dwells in us, to that we must hearken, both in private and public life, and regulate our cities and houses ⁷¹⁴ according to law, meaning by the very term 'law,' the distribution of mind¹. But if either an oligarchy or a democracy has a soul eager after pleasures and desires—wanting to be filled with them, yet retaining none of them, and perpetually afflicted with an endless and insatiable disorder; and this evil soul, having first trampled the laws under foot, becomes the master either of a state or an individual,—then, as I was saying, there is no possibility of salvation. And now, Cleinias, we have to consider whether you will or will not accept my view.

Cle. Certainly we will.

Ath. Do you know that there are often said to be as many forms of laws as there are of governments? And how many there are of these we have already stated. And this you must regard as a matter of very great importance. For what is to be the standard of just and unjust, is once more the point at issue. Men say that the law ought not to regard either peace or war, or virtue in general, but only the interests and power and preservation of the existing form of government; this is thought by them to be the best way of expressing the natural definition of justice.

Cle. How?

¹ νόμος = νοῦ διανομή.

Ath. Justice is said by them to be the interest of the stronger.

Cle. Speak plainer.

Ath. I will; they surely assume that the governing power makes whatever laws have authority in any state?

Cle. True.

Ath. Well, they would say, and do you suppose that tyranny or democracy, or any other conquering power, does not make the continuance of the power which is possessed by them the first or principal object of their laws?

Cle. How can they have any other?

Ath. And whoever transgresses these laws is punished as an evil-doer by the legislator, who calls the laws just?

Cle. Naturally.

Ath. This, then, is always the mode and fashion in which justice exists?

Cle. Certainly, if we are correct in our view.

Ath. Why, yes, this is one of the evil forms of government to which we were referring.

Cle. What were they?

Ath. Those which we were examining when we spoke of who ought to govern whom. Did we not arrive at the conclusion that parents ought to govern their children, and the elder the younger, and the noble the ignoble? And there were many other principles, if you remember, and they were not
715 always consistent. One principle was that of Pindar; he spoke of law in the order of nature doing and justifying violence.

Cle. Yes; I remember.

Ath. Consider, then, to whom our state is to be entrusted. For there is a thing which has occurred times without number in states—

Cle. What?

Ath. That when there has been a contest for power, and the conquerors have monopolized the government, and have refused all share to the defeated party and their descendants, they have lived watching one another, in perpetual fear that some one will come into power who has a recollection of former wrongs, and will rise up against them. Now, according to our view, such governments are not politics at all, nor are laws right which are

passed for the good of particular classes and not for the good of the whole state. States which have such laws are not polities but parties, and their notion of justice is simply unmeaning. I say this, because I am going to assert that we must not entrust the government in your state to any one because he is rich, or because he possesses any advantage, such as strength, or stature, or again birth: but he who is most obedient to the laws of the state, he shall win the palm; and to him who is victorious in the first degree shall be given the highest office and chief ministry of the gods; and the second to him who bears the second palm; and in a similar ratio shall all the other offices be assigned to their holders. And when I call the rulers servants or ministers of the law, I give them this name not for the sake of novelty, but because I certainly believe that upon their service or ministry depends the well- or ill-being of the state. For that state in which the law is subject and has no authority, I perceive to be on the highway to ruin; but I see that the state in which the law is above the rulers, and the rulers are the inferiors of the law, has salvation, and every blessing which the Gods can confer.

Cle. Truly, Stranger, you see with the keen vision of age.

Ath. Why, yes; every man when he is young has that sort of vision dullest, and when he is oldest most keen.

Cle. Very true.

Ath. And now, what is to be the next step? May we not suppose the colonists to have arrived, and proceed to make our speech to them?

Cle. Certainly.

Ath. 'Friends,' we say to them,—'God, as the old tradition declares, holding in His hand the beginning, middle, and end of all that is, moves according to His nature in a straight line towards the accomplishment of His end. Justice always follows Him, and is the punisher of those who fall short of the divine law. To that law, he who would be happy holds fast, and follows it in all humility and order; but he who is lifted up with pride, or money, or honour, or beauty, who has a soul hot with folly, and youth, and insolence, and thinks that he has no need of a guide or ruler, but is able himself to be the guide of others, he, I say, is left deserted of God; and being

thus deserted, he takes to him others who are like himself, and dances about, throwing all things into confusion, and many think that he is a great man, but in a short time he pays a penalty which justice cannot but approve, and is utterly destroyed, and his family and city with him. Wherefore, seeing that human things are thus ordered, what should a wise man do or think, or not do or think?'

Cl. Every man ought to make up his mind that he will be one of the followers of the God; there can be no doubt of that.

Ath. Then what life is agreeable to God, and becoming in his followers? One only, according to the old saying that 'like agrees with like, with measure measure,' but things which have no measure agree neither with themselves nor with the things which have measure. Now, God is the measure of all things, in a sense far higher than any man, as they say, can ever hope to be. And he who would be dear to God must, as far as is possible, be like Him and such as He is. Wherefore the temperate man is the friend of God, for he is like Him; and the intemperate man is unlike Him, and different from Him, and unjust. And the same holds of other things, and this is the conclusion, which is also the noblest and truest of all sayings:—that for the good man to offer sacrifice to the Gods, and hold converse with them by means of prayers and offerings and every kind of service, is the noblest and best of all things, and also the most conducive to a happy life, and very fit and meet. But with the bad man, the opposite of this holds: for the bad man has an impure soul, whereas the good is pure; and from one who is polluted, neither a good man nor God is right in receiving gifts. And therefore the unholy waste
717 their much service upon the Gods, which, when offered by any holy man, is always accepted of them. Such is the mark at which we ought to aim. But what weapons shall we use, and how shall we direct them? In the first place, we affirm that next after the Olympian Gods, and the Gods of the State, honour should be given to the Gods below; they should receive everything in even numbers, and of the second choice, and of evil omen, while the odd numbers and the first choice, and the things of lucky omen, are given to the Gods above, by him who would rightly hit the mark of piety. Next to these Gods,

a wise man will do service to the demons or spirits, and then to the heroes, and after them will follow the sacred places of private and ancestral Gods, having their ritual according to law. Next comes the honour of living parents, to whom, as is meet, we have to pay the first and greatest and oldest of all debts, considering that all which a man has belongs to those who gave him birth and brought him up, and that he must do all that he can to minister to them: first, in his property; secondly, in his person; and thirdly, in his soul; paying the debts due to them for the care and travail which they bestowed upon him of old, in the days of his infancy, and which he is now to pay back to them when they are old and in the extremity of their need. And all his life long he ought never to utter, or to have uttered, an unbecoming word to them; for of all light and winged words he will have to give an account; Nemesis, the messenger of justice, is appointed to watch over them. When they are angry and want to satisfy their feelings in word or deed, he should not resist them; for a father who thinks that he has been wronged by his son may be reasonably expected to be very angry. At their death, the most moderate funeral is best, neither exceeding the customary expense, nor yet falling short of the honour which has been usually shown by the former generation to their parents; and let a man not forget to pay the yearly tribute of respect to the dead, honouring them chiefly by omitting nothing that conduces to a perpetual remembrance 718 of them, and giving a reasonable portion of his fortune to the dead. Doing this, and living after this manner, we shall receive our reward from the Gods and those who are above us; and we shall spend our days for the most part in good hope. And how a man ought to order what relates to his descendants and his kindred and friends and citizens, and the rites of hospitality taught by Heaven, and the intercourse which arises out of them, all with a view to the embellishment and orderly regulation of his own life—these things, I say, the laws, as we proceed with them, will accomplish, partly persuading, and partly when natures do not yield to the persuasion of custom, chastising them by might and right, and will thus render our state, if the Gods co-operate with us, prosperous and happy. But of what has to be said, and must be said by the legislator who is of my way of

thinking, and yet, if said in the form of law, would be out of place—of this I think that he may give a sample for the instruction of himself and of those for whom he is legislating; and then when, as far as he is able, he has gone through all the preliminaries, he may proceed to the work of legislation. Now, what will be the form of such prefaces? There may be a difficulty in including or describing them all under a single form, but I think that we may get some notion of them if we can guarantee one thing.

Cle. What is that?

Ath. I should wish the citizens to be as receptive of virtue as possible; this will surely be the aim of the legislator in all his laws.

Cle. Certainly.

Ath. What I have been proposing appears to me to have some use; for a person will listen with more gentleness and good-will to the precepts addressed to him by the legislator, when his soul is not altogether unprepared to receive them. Even a little done in the way of conciliation gains his ear, and is always worth having. For there is no great inclination or readiness on the part of mankind to be made as good, or as quickly good, as possible. The case of the many proves the wisdom of Hesiod, who says that the road to wickedness is smooth and very short, and there is no need of perspiring:—

‘But before virtue the immortal Gods have placed the sweat of labour, and
719 long and steep is the way thither, and rugged at first; but when you have reached the top, then, however difficult, it becomes easy.’

Cle. Yes; and he certainly speaks well.

Ath. Very true: and now let me tell you the effect which the preceding discourse has had upon me.

Cle. Proceed.

Ath. Suppose that we have a little conversation with the legislator, and say to him—‘O, legislator, speak; if you know what we ought to say and do, you can surely tell.’

Cle. Certainly, he can.

Ath. Did we not hear you just now saying, that the legislator ought not to allow the poets to do what they liked? For that they did not know in which of their words they went against the laws, to the hurt of the state.

Cl. That is true.

Ath. May we not fairly make answer to him on behalf of the poets—

Cl. What answer shall we make to him?

Ath. That the poet, according to the tradition which has ever prevailed among us, and is accepted of all men, when he sits down on the tripod of the muse, is not in his right mind; like a fountain, he allows the stream of thought to flow freely, and his art being imitative, he is often compelled to represent men under opposite circumstances, and thus to say two different things; neither can he tell whether there is any truth in either of them, or in one more than in the other. But this is not the case in a law; the legislator must give not two rules about the same thing, but one only. Take an example from what you have just been saying. Of three kinds of funerals, there is one which is too extravagant, another is too niggardly, the third in a mean; and you choose and approve and order the last without qualification. But if I had an extremely rich wife, and she bade me bury her, and I were to describe her burial in poetry, I should praise the extravagant sort; and a poor miserly man, who had not much money to spend, would approve of the niggardly; and the man of moderate means, who was himself moderate, would praise a moderate funeral. Now you in the capacity of legislator must not barely say 'a moderate funeral,' but you must define what moderation is, and how much; unless you are definite, you must not suppose that you are speaking a language that can become law.

Cl. Very true.

Ath. And is our legislator to have no preface to his laws, but to say at once Do this, avoid that—and then holding the penalty in terrorem, to go on to another law; offering never a word of advice or exhortation to those for whom he is legis- 720
lating, after the manner of some doctors? For of doctors, as you doubtless know, there are two kinds, a gentler and a ruder, and two modes of cure; and as children ask the doctor to be gentle with them, so we will ask the legislator to cure our disorders with the gentlest remedies. What I mean to say is, that besides doctors there are their assistants, who are also styled doctors.

Cle. Very true.

Ath. And whether they are slaves or freemen makes no difference; they acquire their knowledge of medicine by obeying and observing their masters; empirically and not rationally, as the manner of freemen is, who have learned scientifically themselves the art which they impart to their pupils. You are aware that there are these two classes of doctors?

Cle. To be sure.

Ath. And did you ever observe that there are two classes of patients in states, slaves and freemen; and the slave doctors run about and cure the slaves, and wait for them in the dispensaries—practitioners of this sort never talk to their patients individually, or let them talk about their own individual complaints? The doctor prescribes what he thinks good, out of the abundance of his experience, as if he had no manner of doubt; and when he has given his orders, like a tyrant, he rushes off with equal assurance to some other servant who is ill; and so he relieves the master of the house of the care of his invalid slaves. But the other doctor, who is a freeman, attends and practises upon freemen; and he carries his enquiries far back, and goes into the nature of the disorder; he enters into discourse with the patient and with his friends, and is at once getting information from the sick man, and also instructing him as far as he is able, and he will not prescribe for him until he has first convinced him; at last, when he has brought the patient more and more under his persuasive influences and set him on the road to health, he attempts to effect a cure. Now, which is the better way of proceeding in a physician and in a trainer? Is he the better who accomplishes his ends in a double way, or he who works in one way, and that the ruder and inferior?

Cle. I should say, Stranger, that the double way is far better.

Ath. Should you like to see an example of the double and single method in legislation?

Cle. Certainly I should.

721 *Ath.* What will be our first law? Will not the legislator, observing the order of nature, begin by making regulations for births?

Cle. Certainly.

Ath. And in all states the birth of children goes back to the connection of marriage?

Cle. Very true.

Ath. Then, according to the true order, the laws relating to marriage should be those which are first determined in every state?

Cle. Quite true.

Ath. Then let me first give the law of marriage in a simple form, which may be as follows:—A man shall marry between the ages of thirty and thirty-five, or, if he does not, he shall pay such and such a fine, or shall suffer the loss of such and such privileges. This would be the simple law about marriage. The double law would run as follows:—A man shall marry between the ages of thirty and thirty-five, considering that the human race naturally partakes of immortality, of which all men have the greatest desire implanted in them; for the desire of every man that he may become famous, and not lie in the grave without a name, is only the love of continuance. Now, mankind are coeval with all time, and are ever following, and will ever follow, the course of time; and so they are immortal, inasmuch as they leave children behind them, and partake of immortality in the unity of generation. And for a man voluntarily to deprive himself of this gift, as he deliberately does who will not have a wife or children, is impiety. He who obeys the law shall be free, and shall pay no fine; but he who is disobedient, and does not marry, when he has arrived at the age of thirty-five, shall pay a yearly fine of a certain amount, in order that his celibacy may not be a source of ease and profit to him; and he shall not share in the honours which the young men in the state give to the aged. Comparing now the two forms of the law, you will be able to arrive at a judgment about any other laws—whether they should be double in length even when shortest, because they have to persuade as well as threaten, or whether they shall only threaten and be of half the length.

Mcg. The Lacedaemonians, Stranger, would generally prefer the shorter form; although, for my own part, if any one were to ask me which I myself prefer in the state, I should certainly determine in favour of the longer; and I would have every law 722

made after the same pattern, if I had to choose. But I think that Cleinias is the person to be consulted, for his is the state which is going to use these laws.

Cle. Thank you, Megillus.

Ath. Whether, in the abstract, words are to be many or few, is a very unmeaning question; the best form, and not the shortest, is to be approved; nor is length at all to be regarded. In the form of law which has been recited, the one kind is not only twice as good in practical usefulness as the other, but the case is like that of the two kinds of doctors, of whom I was just now speaking. And yet legislators never appear to have considered that whereas they have two instruments which they might use in legislation—persuasion and force, in so far as a rude and uneducated multitude are capable of being affected by them, they use one only; for they do not mingle persuasion with antagonism, but employ force pure and simple. There is a third point, sweet friends, which ought to be, and never is, regarded in our existing laws.

Cle. What is that?

Ath. A point arising out of our previous discussion, which comes into my mind I know not how. All this time, from early dawn until noon, have we been talking about laws in this charming retreat: now we are going to promulgate our laws, and what has preceded was only the prelude of them. Why do I mention this? For this reason:—Because all discourses and vocal exercises have preludes and overtures, which are a sort of artistic beginnings intended to help the strain which is to be performed; lyric measures and every other sort of music have preludes framed with wonderful care. But of the truer and higher strain of law and politics, no one has ever yet uttered any prelude, or composed or published any, as though there was no such thing in nature. Whereas our present discussion seems to me to imply that there is—these double laws, of which we were speaking, are not exactly double, but they are in two parts, the law and the prelude of
723 the law. The arbitrary command, which was compared to the commands of the physicians, whom we described as of the meaner sort, was the law pure and simple; and that which preceded, and was described by our friend as hortatory only,

was, in fact, an exhortation, and is analogous to the preamble of a discourse. For I imagine that all this language of conciliation, which the legislator has been uttering in the preface of the law, was intended to create good-will in the person whom he addressed, in order that, by reason of this good-will, he might more intelligently receive his command, that is to say, the law. And therefore, in my way of speaking, this is more rightly described as the preamble than as the matter of the law. And I must further proceed to observe, that the legislator should not make laws which have no preambles; he should remember how great will be the difference between them, accordingly as they have, or have not, preambles, as in the instance already given.

Cle. The lawgiver, if he asks my opinion, will certainly legislate in the form which you advise.

Ath. I think that you are quite right, Cleinias, in affirming that all laws have preambles, and that throughout the whole of this work of legislation every single law should have a suitable preamble at the beginning; for that which is to follow is most important, and whether this is clearly recorded or not is a very serious matter. Yet we should be wrong in requiring that all laws, small and great alike, should have preambles of the same kind, any more than all songs or speeches; although they may be natural to all, they are not always necessary, and whether they are to be employed or not has to be left to the judgment of the speaker or the musician, or, in the present instance, of the lawgiver.

Cle. That I think is most true. And now, Stranger, without delay, let us return to the argument, and, as people say in play, make a second and better beginning, if you please, with the principles which we have been laying down, which we never thought of regarding as a preamble before, but of which we may now make a preamble, and not merely consider them to be chance topics of discourse. Let us acknowledge, then, that we have a preamble. About the honour of the Gods and the respect of parents, enough has been already said; and we may proceed to the topics which follow next in order, until the preamble is deemed by you to be complete: and after that you shall go through the laws themselves.

724 *Ath.* I understand you to mean that we have made a sufficient preamble about the Gods and demons, and about parents living or dead; and now you would have us bring the rest of the subject into the light of day?

Cle. Exactly.

Ath. After this, as is meet and for the general interest, I the speaker, and you the listeners, will try to estimate all that relates to the souls and bodies and properties of the citizens, as regards both their occupations and amusements, and thus arrive, as far as in us lies, at the nature of education—that will follow next in order.

Cle. Very good.

BOOK V.

Athenian Stranger. LISTEN, all ye who have just now heard 726
the laws about Gods, and about our dear forefathers:—Of all
the things which a man has, next to the Gods, his soul is the
most divine and most truly his own. Now in every man there
are two parts: the better and superior part, which rules, and
the worse and inferior part, which serves; and the ruler is
always to be preferred to the servant. Wherefore I am right 727
in bidding every one next to the Gods, who are our masters,
and those who in order follow them, to honour his own soul,
which every one seems to honour, but no one honours as he
ought; for honour is a divine good, and no evil thing is
honourable; and he who thinks that he can honour the soul
by word or gift, or any sort of compliance, without making
her in any way better, seems to honour her, but honours her
not at all. For example, every man, from his very boyhood,
fancies that he is able to know everything, and thinks that
he honours his soul by praising her, and he is very ready
to let her do whatever she may like. But I mean to say that
in acting thus he only injures his soul, and does not honour
her; whereas, in our opinion, he ought to honour her as
second only to the Gods. Again, when a man thinks that
others are to be blamed, and not himself, for the errors which
he has committed, and the many and great evils which befell
him in consequence, and is always fancying himself to be
exempt and innocent, he is under the idea that he is honour-
ing his soul; whereas the very reverse is the fact, for he is
really injuring her. And when, disregarding the word and
approval of the legislator, he indulges in pleasure, then again
he is far from honouring her; he only dishonours her, and fills

her full of evil and remorse; or when he does not endure to the end the labours and fears and sorrows and pains which the legislator approves, but gives way before them, then, by yielding, he does not honour the soul, but by all such conduct he makes her to be dishonourable; nor when he thinks that life at any price is a good, does he honour her, but yet once more he dishonours her; for the soul having a notion that the world below is all evil, he yields to her, and does not resist and teach or convince her that, for aught she knows, the world of the Gods below, instead of being evil, may be the greatest of all goods. Again, when any one prefers beauty to virtue, what is this but the real and utter dishonour of the soul? For such a preference implies that the body is more honourable than the soul; and this is false, for there is nothing of earthly birth which is more honourable than the heavenly, and he who thinks otherwise of the soul has no idea how greatly he under-
 728 values this wonderful possession; nor, again, when a person is willing, or not unwilling, to acquire dishonest gains, does he then honour his soul with gifts?—far otherwise; he sells her glory and honour for a small piece of gold; but all the gold which is under or upon the earth is not enough to give in exchange for virtue. In a word, I may say that he who does not estimate the base and evil, the good and noble, according to the standard of the legislator, and abstain in every possible way from the one and practise the other with all his might, does not know that he is most foully and disgracefully abusing his soul, which is the divinest part of man; for no one, as I may say, ever considers that which is declared to be the greatest penalty of evil-doing—namely, to grow into the likeness of bad men, and growing like them to fly from the conversation of the good, and be cut off from them, and cleave to and follow after the company of the bad. And he who is joined to them must do and suffer what such men by nature do and say to one another, a suffering which is not justice but retribution; for justice and the just are noble, whereas retribution is the suffering which waits upon injustice; and whether a man escape or endure this, he is miserable,—in the former case, because he is not cured; while in the latter, he perishes in order that the rest of mankind may be saved.

Speaking generally, our glory is to follow the better and improve the inferior, which is susceptible of improvement, in the best manner possible. And of all the possessions which a man has, the soul is by nature most inclined to avoid the evil, and search out and find the chief good; and having found, to dwell with the good during the remainder of life. Wherefore the soul also is second in honour; and third, as every one will perceive, comes the honour of the body in natural order. Having determined this, we have next to consider that there is a genuine honour of the body, and that of honours some are and some are not genuine. The legislator, as I suspect, ranks them in the following order:—Honour is not to be given to the fair, or the strong, or the swift, or the tall, or the healthy body (although many may think otherwise), any more than to their opposites; but the mean states of all these habits are by far the safest and most moderate; for the one extreme makes the soul braggart and insolent, and the other, illiberal and mean; and money, and property, and distinction all go to the same tune. The excess of any of these things is apt to be a ⁷²⁹ source of hatreds and divisions among states and individuals; and the defect of them is commonly a cause of slavery. And, therefore, I would not have any one fond of heaping up riches for the sake of his children, in order that he may leave them as rich as possible. For the possession of great wealth is of no use, either to them or to the state. The condition of youth which is free from flattery, and at the same time not in need of the necessaries of life, is the best and most harmonious of all, being in accord and agreement with our nature, and making life to be most entirely free from sorrow. Let parents, then, bequeath to their children not riches, but the spirit of reverence. We, indeed, fancy that they will inherit reverence from us, if we rebuke them when they show a want of reverence. But this quality is not really imparted to them by the present style of admonition, which only tells them that the young ought always to be reverential. A sensible legislator will rather exhort the elders to reverence the younger, and above all to take heed that no young man sees or hears him doing or saying anything base; for where old men have no shame, there young men will most certainly be devoid of reverence. The best way

of training the young, is to train yourself at the same time; not to admonish them, but to be always carrying out your own principles in practice. He who honours his kindred, and reveres those who share in the same Gods, and are of the same blood and family, may fairly expect that the Gods who preside over generation will be propitious to him, and will quicken his seed. And he who deems the services which his friends and acquaintances do to him, greater and more important than they themselves deem them, and his own favours to them less than theirs to him, will have their good-will in the intercourse of life. And surely in his relations to the state and his fellow-citizens, he is by far the best, who rather than the Olympic or any other victory of peace or war, desires to win the palm of obedience to the laws of his country; and who, of all mankind, is the person reputed to have obeyed them best during his whole life. In his relations to strangers, a man should consider that a contract is a most holy thing, and that all concerns and wrongs of strangers are more directly dependent on the protection of God, than the wrongs done to citizens; for the stranger having no kindred and friends, is more to be pitied by Gods and men. Wherefore, also, he who is most able to assist him is most zealous in his cause; and he who is most able is the divinity and god of the stranger, who follows in the train of Zeus, the
 730 god of strangers. And for this reason, he who has a spark of caution in him, will do his best to pass through life without sinning against the stranger. And of offences committed, whether against strangers or fellow-countrymen, that against suppliants is the greatest. For the God who witnessed to the agreement made with the suppliant, becomes in a special manner the guardian of the sufferer; and he will certainly not suffer unavenged.

Thus we have fairly described the manner in which a man is to act about his parents, and himself, and his own affairs; and in relation to the state, and his friends, and kindred, both in what concerns his own countrymen, and in what concerns the stranger. I will now describe what manner of man he must be who would best pass through life in respect of those other things which are not matters of law, but of praise and blame only; in which praise and blame educate a man, and

make him more tractable and amenable to the laws which are about to be imposed.

Truth is the beginning of every good thing, both in heaven and on earth; and he who would be blessed and happy, should be from the first a partaker of the truth, that he may live a true man as long as possible, for then he can be trusted; but he is not to be trusted who loves voluntary falsehood, and he who loves involuntary falsehood is a fool. Neither condition is to be desired, for the untrustworthy and ignorant has no friend, and as time advances he becomes known, and lays up in store for himself isolation in crabbed age when life is on the wane: so that, whether his children or friends are alive or not, he is equally solitary. Worthy of honour, too, is he who does no injustice, and of more than twofold honour if he not only does no injustice himself, but hinders others from doing any; the first may count as one man, the second is worth many men, because he informs the rulers of the injustice of others. And yet more highly to be esteemed is he who co-operates with the rulers in correcting the citizens as far as he can—he shall be proclaimed the great and perfect citizen, and bear away the palm of virtue. The same praise may be given about temperance and wisdom, and all other goods which may be imparted to others, as well as acquired by a man for himself; he who imparts them shall be honoured as the man of men, and he who is willing, yet is not able, may be allowed the second place; but he who is jealous and will not, if he can help, allow 731 others to partake in a friendly way of any good, is deserving of blame: the good, however, which he has, is not to be undervalued because possessed by him, but to be acquired by us to the utmost of our power. Let every man, then, freely strive for the prize of virtue, and let there be no envy. For the unenvious nature increases the greatness of states—he himself contends in the race and defames no man; but the envious, who thinks that he ought to get the better by defaming others, is less energetic himself in the pursuit of true virtue, and reduces his rivals to despair by his unjust slanders of them. And thus he deprives the whole city of the proper training for the contest of virtue, and diminishes

her glory as far as in him lies. Now every man should be valiant, but he should also be gentle. From the cruel, or hardly curable, or altogether incurable acts of injustice done by others, a man can only escape by fighting and defending himself and conquering, and by never ceasing to punish them; and no man who is not of a noble spirit is able to accomplish this. As to the actions of those who do evil, but whose evil is curable, in the first place, let us remember that the unjust man is not unjust of his own free will. For no man of his own free will would choose to possess the greatest of evils, and least of all in the most honourable part of himself. And the soul, as we said, is of a truth deemed by all men the most honourable. In the soul, then, which is the most honourable part of him, no one, if he could help, would admit, or allow to continue the greatest of evils. The unjust and the unfortunate are always to be pitied in any case; and one can afford to forgive as well as pity him who is curable, and refrain and calm one's anger, not giving way to passion, and continuing wrathful like a woman who has been piqued. But upon him who is incapable of reformation and wholly evil, the vials of our wrath should be poured out; wherefore, I say, that good men ought, when occasion arises, to be both gentle and passionate. The greatest evil to men, generally, is one which is innate in their souls, and which a man is always excusing in himself and never correcting; I mean, what is expressed in the saying, 'that every man by nature is and ought to be his own friend.' Whereas the excessive love of self is in reality the source to each man of all offences; for the lover is blinded about the beloved, so that he judges wrongly of the just, the good, and the honour-
732 able, and thinks that he ought always to prefer his own interest to the truth. But he who would be a great man, ought to regard what is just, and not himself or his interests, whether in his own actions, or those of others. Through a similar error, men are induced to fancy that their own ignorance is wisdom, and thus we who may be truly said to know nothing, think that we know all things; and because we will not let others act for us in what we do not know, we are compelled to act amiss ourselves. Wherefore, let every man

avoid excess of self-love, and condescend to follow a better man than himself, not allowing any false shame to stand in the way. There are also lesser matters than these which are often repeated, and with good reason; a man should recollect them and remind himself of them. For when a stream is flowing out, there should be water flowing in too; and recollection is the flowing in of failing knowledge. Therefore I say that a man should refrain from excess either of laughter or tears, and should exhort his neighbour to do the same; he should veil his immoderate sorrow or joy, and seek to behave with propriety, whether the genius of his good fortune remains with him, or whether at the crisis of his fate, when he seems to be mounting high and steep places, the Gods oppose him in some of his enterprises. Still he may hope, that when calamities supervene upon the blessings which the God gives him, he will lighten them and change existing evils for the better; and as to the goods which are the opposite of these evils, he will not doubt that they will be ever present with him, and that he will be fortunate. Such should be men's hopes, and such should be the exhortations with which they admonish one another, never losing an opportunity, but on every occasion distinctly reminding themselves and others, of all these things both in jest and earnest.

Enough has now been said of divine matters, both as touching the practices which men ought to follow, and the several characters which they ought to cultivate. But of human things we have not as yet spoken, and we must; for to men we are discoursing and not to Gods. Pleasures and pains and desires are a part of human nature, and on them every mortal being must of necessity hang and depend with the most eager interest. And therefore we must praise the noblest life, not only as the fairest in appearance, but if a man will only taste, and not as in the days of youth run away to another, he will find that this nobler life surpasses also in the very thing which we all of us desire,—I mean in 733 having the greatest pleasure and the least pain during the whole of life. And this will be plain, and will be quickly and clearly seen, if a man has a true taste of them. But what is a true taste? That we have to learn from the argu-

ment,—the point being what is according to nature, and what is not according to nature. One life must be compared with another; the more pleasurable with the more painful, after this manner:—We desire to have pleasure, but we neither desire nor choose pain; and the neutral state we are ready to take in exchange, not for pleasure but for pain; and we also choose less pain and greater pleasure, but less pleasure and greater pain we do not choose; and an equal balance of either we cannot venture to assert that we should desire. And all these differ or do not differ severally in number and magnitude and intensity and equality, and in the opposites of these when regarded as objects of choice, in relation to the will. And such being the necessary order of things, we choose that life in which there are many great and intense elements of pleasure and pain, and in which the pleasures are in excess, and do not choose that in which the opposites exceed; nor, again, do we choose that in which the elements of either are small and few and feeble, and the pains exceed. And when, as I said before, there is a balance of pleasure and pain in life, this is to be regarded by us as the balanced life; while other lives are preferred by us because they exceed in what we like, or are rejected by us because they exceed in what we dislike. All the lives of men may be regarded by us as bound up in these, and we must also consider what sort of lives we by nature choose. And if we wish for any others, I say that we choose them only through some ignorance and inexperience of the lives which actually exist.

Now, what lives are they, and how many in which, having searched out and beheld the objects of will and desire and their opposites, and making of them a law, choosing, I say, the dear and the pleasant and the best and noblest, a man may live in the happiest way possible? Let us say that the temperate life is one kind of life, and the rational another, and the courageous another, and the healthful another; and to these four let us oppose four other lives,—the foolish, the cowardly, the intemperate, the diseased. He who knows the temperate life will describe it as in all things gentle, having gentle pains and gentle pleasures, and placid desires and
 734 loves not insane; whereas the intemperate life is impetuous

in all things, and has violent pains and pleasures, and vehement and stinging desires, and loves utterly insane; and in the temperate life the pleasures exceed the pains, but in the intemperate life the pains exceed the pleasures in greatness and number and intensity. Hence one of the two lives is naturally and necessarily more pleasant and the other more painful, and he who would live pleasantly cannot possibly choose to live intemperately. And if this is true, the inference clearly is that no man is voluntarily intemperate; but that the whole multitude of men lack temperance in their lives, either from ignorance or from want of self-control or both. And the same holds of the diseased and healthy life; they both have pleasures and pains, but in health the pleasure exceeds the pain, and in sickness the pain exceeds the pleasure. Now, our intention in choosing the lives is not that the painful should exceed, but the life in which pain is exceeded by pleasure we determine to be the more pleasant life. And we should say that the temperate life has the elements both of pleasure and pain fewer and minuter and less concentrated than the intemperate, and the wise life than the foolish life, and the life of courage than the life of cowardice; the one class exceeding in pleasure and the other in pain, the courageous surpassing the coward, and the wise exceeding the fool. And so in all lives the one class exceed the other class in pleasure; the temperate and courageous and wise and healthy exceed the cowardly and foolish and intemperate and diseased lives; and generally speaking, that which has any virtue, whether of body or soul, is pleasanter than the vicious life, and far superior in beauty and rectitude and excellence and goodness and reputation, and causes him who lives accordingly to be infinitely happier than the opposite.

Enough of the preamble; and now the laws should follow; or, to speak more correctly, an outline of them. As, then, in the case of a web or any other tissue, the warp and the woof cannot be made of the same materials, but the warp is necessarily superior as being stronger, and having a certain character of firmness, whereas the woof is softer and has a proper degree of elasticity;—in a similar manner those who are to hold great offices in states, should be distinguished truly in each

case from those who have been but slenderly proven by education. I say, therefore, that there are two parts in the constitution of a state—one the appointment of officers, the other the rules which are prescribed for them.

But, before all this, comes the following consideration:—The shepherd or herdsman, or breeder of horses or the like, when he has received his animals will not begin to train them until he has first purified them in a manner which befits a community of animals; he will divide the healthy and unhealthy, and the good breed and the bad breed, and will send away the unhealthy and badly bred to other herds, and tend the rest, reflecting that his labours will be vain and without effect, either on the souls or bodies of those whom nature and ill nurture have corrupted, and that they will involve in destruction the pure and healthy nature and being of every other animal, if he neglect to purge them away. Now, the case of other animals is not so important;—they are only worth mentioning for the sake of illustration, but what relates to man is of the highest importance; and the legislator should make inquiries, and indicate what is proper for each in the way of purification and of any other procedure. Take, for example, the purification of a city—there are many kinds of purification, some easier and others more difficult; and some of them, and the best and most difficult of them, the legislator, if he be also a despot, may be able to effect; but he who without a despotism sets up a new government and laws, even if he attempt the mildest of purgations, may think himself happy if he can complete his work. The best kind of purification is painful, like similar cures in medicine, involving righteous punishment and inflicting death or exile in the last resort. For in this way we commonly dispose of great sinners who are incurable, and are the greatest injury of the

736 whole state. But the milder form of purification is as follows:—when men who have nothing, and are in want of food, show a disposition to follow their leaders in an attack on the property of the rich—these, who are the natural plague of the state, are sent away by the legislator in a friendly spirit as far as he is able; and this dismissal of them is euphemistically termed a colony. And every legislator should contrive to

do this at once. Our present case, however, is peculiar. For there is no need to devise any colony or purifying separation under the circumstances in which we are placed. But, as when many streams flow together from springs and mountain torrents into a single lake, we ought to attend and take care that the confluent waters should be perfectly clear, and in order to effect this, should pump and draw off and divert impurities, so in every political arrangement there may be trouble and danger. But, seeing that we are discoursing and not acting, let our selection be supposed to be completed, and the desired purity attained. Touching evil men, who want to join and be citizens of our state, we will not allow them to come until we have tested them by persuasion and time; but the good we will to the utmost of our ability receive as friends with open arms.

Another piece of good fortune must not be forgotten, which, as we were saying, the Heraclid colony had, and which is also ours,—that we have escaped division of land and the abolition of debts; for these are always a source of dangerous contention, and a city which is driven to legislation upon such matters can neither allow the old ways to continue, nor yet venture to alter them. We must have recourse to prayers, as men say, and hope that a slight change may be cautiously effected in a length of time. And such a change can be accomplished¹ by those who have abundance of land, and having also many debtors, are willing, in a kindly spirit, to share with those who are in want, sometimes remitting and sometimes giving, holding fast in a path of moderation, and deeming poverty to be the increase of a man's desires and not the diminution of his property. For this is the chiefest foundation of a state, and upon this lasting basis may be erected afterwards whatever political order is suitable under the circumstances; but if the change be based upon an unsound principle, the political superstructure which is added will hardly succeed. That is a danger which, as I⁷³⁷ am saying, is escaped by us, and yet we had better say how, if we had not escaped, we might have escaped; and we may venture now to assert that no other way of escape, whether narrow or broad, can be devised but a just contentment—upon

¹ Reading ὑπάρχει.

this rock our city shall be built; for there ought to be no disputes among citizens about property. If there are quarrels of long standing among them, no legislator of any degree of sense will proceed a step in the arrangement of the state until they are settled. But that they to whom God has given, as He has to us, to be the founders of a new state free from enmity—that they should create themselves enmities by reason of their mode of dividing lands and houses, would be super-human folly and wickedness.

How can we rightly order our citizens? In the first place, their number has to be determined, and also the number and size of the portions which are to be assigned to them; and the land and the houses will then have to be apportioned by us as fairly as we can. The number of citizens can only be estimated satisfactorily in relation to the territory and the neighbouring states. The territory must be sufficient to maintain a certain number of inhabitants in a moderate way of life—more than this is not required; and the number of citizens should be sufficient to defend themselves against the injustice of their neighbours, and also to give them the power of aiding their neighbours when they are wronged. Upon this basis we will define the limits of theirs and their neighbours' territory both in theory and fact. And now, let us proceed to legislate with a view to perfecting the form and outline of our state. The number of our citizens shall be 5040—this will be a convenient number; and these shall be owners of the land and protectors of the ownership. The houses and the land will be divided in the same way, so that every man may correspond to a lot. Let the whole number be first divided into two parts, and then into three; and the number is further capable of being divided into four or five parts, or any number of parts up to ten. Every legislator ought to know so much arithmetic as to be able to tell what number is most likely
738 to be useful to all cities; and we are going to take that number which contains the greatest and most regular and unbroken series of divisions. The whole of number has every possible division, and the number 5040 can be divided by exactly fifty-nine divisors, and ten of these proceed without interval from one to ten: this will furnish numbers for war and peace,

and for all contracts and dealings, including taxes and divisions. These properties of number should be ascertained at leisure by those who are bound by law to know them; for they are true, and should be proclaimed at the foundation of the city, with a view to use. Whether the legislator is establishing a new state or restoring an old and decayed one, in respect of Gods and temples,—the temples which are to be built in each city, and the Gods or demi-gods after whom they are to be called,—if he be a man of sense, he will make no change in anything which the oracle of Delphi, or Dodona, or Ammon, or any ancient tradition has sanctioned in whatever manner, whether by apparitions or reputed inspiration of Heaven in obedience to which mankind have established sacrifices in connection with mystic rites, either originating on the spot, or derived from Tyrrhenia or Cyprus or some other place, and on the strength of these traditions have consecrated oracles and images, and altars and temples, and made sacred groves for each of them. The least part of all these ought not to be disturbed by the legislator; but he should assign to the several districts some God, or demi-god, or hero, and, in the distribution of the soil, should give to these first their separate domain and all things fitting, that the inhabitants of the district may meet at fixed times, and that they may readily supply their several wants, and entertain one another with sacrifices, and become friends and acquainted; for there is no greater good in a state than that the citizens should be known to one another. When darkness and not light reigns in the daily intercourse of life, no man will receive the honour of which he is deserving, or the power or the justice to which he is fairly entitled: wherefore, in every state, above all other things, every man ought to take heed of this,—that he have no deceit in him, but that he be always true and simple, and that no other deceitful person take any advantage of him.

And now comes the movement of the pieces from the sacred 739 line as in the game of draughts. The form of constitution being unusual, may excite wonder when mentioned for the first time; but, upon reflection and trial, will appear to us, if not the best, to be the second best. And yet a person may not approve this form, because he thinks that the sort of legislation is ill adapted

to a legislator who has not despotic power. The truth is, that there are three forms of government, the best, the second and third best, which we may just mention, and then leave the selection to the ruler of the settlement. Following this method in the present instance, let us speak of that state which is first and second and third in excellence, and then leave to Cleinias, or to some one else, the selection of that form of polity which he approves in his own country.

The first and highest form of the state and of the government and of the law is that in which there prevails most widely the ancient saying, that 'Friends have all things in common.' Whether there is now, or ever will be, this communion of women and children and of property, in which the private and individual is altogether banished from life, and things which are by nature private, such as eyes and ears and hands, have become common, and in some way see and hear and act in common, and all men express praise and blame, and feel joy and sorrow, on the same occasions, and the laws unite the city to the utmost,—whether all this is possible or not, I say that no man, acting upon any other principle, will ever constitute a state more exalted in virtue, or truer or better than this. Such a state, whether inhabited by Gods or sons of Gods, will make them blessed who dwell therein; and therefore to this we are to look for the pattern of the state, and to cling to this, and, as far as possible, to seek for one which is like this. The state which we have now in hand, when created, will be nearest to immortality and unity in the next degree; and after that, by the grace of God, we will complete the third one. And we will begin by speaking of the nature and origin of the second.

740 Let them at once distribute their land and houses, and not till the land in common, since a community of goods goes beyond their proposed origin, and nurture, and education. But in making the distribution, let the several possessors feel that their particular lots also belong to the whole city; and seeing that the earth is their parent, let them tend her more carefully than children do their mother. For she is a goddess and their queen, and they are her mortal subjects. Such also are the feelings which they ought to entertain to the Gods and demi-

gods of the country. And in order that the distribution may always remain, they ought to consider further that the present number of families should be always retained, and neither increased nor diminished. This may be secured for the whole city in the following manner:—Let the possessor of a lot leave the one of his children who is his best beloved, and one only, to be the heir of his dwelling, and his successor in the duty of ministering to the Gods, the family and the state, as well the living as those who are departed; but of his other children, if he have more than one, he shall give the females in marriage according to the law to be hereafter enacted, and the males he shall distribute as sons to such of the citizens as have no children, and are likely to be thankful; or if there are none, and particular individuals have too many children, male or female, or too few, as in the case of barrenness—in all these cases let the highest and most honourable magistracy created by us, judge and determine what is to be done with the redundant or deficient, and devise a means that the number of 5040 houses shall always remain the same. There are many ways of regulating numbers; for they in whom generation is affluent may be made to refrain, and, on the other hand, special care may be taken to increase the number of births by rewards and stigmas, and by the instruction and admonition of the younger by their elders—in this way the object may be attained. And if after all there be very great difficulty about the preservation of the 5040 houses, and there be an excess of citizens, owing to the too great love of those who live together, and we are at our wit's end, there is still the old device often mentioned by us of sending out a colony, which will part friends with us, and be composed of suitable persons. If, on the other 741 hand, there come a wave bearing a deluge of disease, or a plague of war, and the inhabitants become much fewer than the appointed number by reason of mortality, you ought not to introduce citizens of spurious birth and education, if this can be avoided; but even God is said not to be able to fight against necessity.

Wherefore let us suppose this 'high argument' of ours to address us in the following terms:—Best of men, cease not to honour in their natural order similarity and equality and

sameness and agreement, as manifested in number and in every quality of goodness and greatness. And, above all, observe the aforesaid number 5040 throughout life; in the second place, do not disparage the small and modest proportions of the inheritances which you received in the distribution, by buying and selling them to one another. For then neither will the God who gave you the lot be your friend, nor will the legislator; and indeed the law declares to the disobedient the terms upon which he may or may not take the lot. In the first place, the earth as he is informed is sacred to the Gods; and in the next place, priests and priestesses will offer up prayers over the sacrifices, once, twice, and thrice, that he who buys or sells the houses or lands which he has received, may suffer the punishment which he deserves; and these their prayers they shall write down in the temples, on tablets of cypress-wood, for the instruction of posterity. Moreover they will set a watch over all these things, that they may be observed—the magistracy which has the sharpest eyes shall keep watch that any infringements of their commands may be discovered and punished as offences both against the law and the God. How great is the benefit of such an ordinance to all those cities, which obey and are administered accordingly, no bad man can ever know, as the old proverb says; but only a man of experience and good habits. For in such an order of things, there will not be much opportunity for making money; no man either ought, or indeed will be, allowed to exercise any ignoble occupation, of which the vulgarity deters a freeman, and disinclines him to acquire riches by any such means.

742 Further, the law enjoins that no private man shall be allowed to possess gold and silver, but only coin for daily use, which is almost necessary in dealing with artisans, and for payment of all those hirelings whose labour he may require, whether slaves or immigrants. Wherefore our citizens, as we say, should have a coin passing current among themselves, but not accepted among the rest of mankind; with a view, however, to expeditions and journeys to other lands,—for embassies, or for any other occasion which may arise of sending out a herald, the state must also possess a common

Hellenic currency. If a private person is ever obliged to go abroad, let him have the consent of the archons and go; and if when he returns he has any foreign money remaining, let him give the surplus back to the treasury, and receive a corresponding sum in the local currency. And if he is discovered to appropriate it, let it be confiscated, and let him who knows and does not inform be subject to curse and dishonour equally with him who brought the money, and also to a fine not less in amount than the foreign money which has been brought back. In marrying and giving in marriage, no one shall give or receive any dowry at all; and no one shall deposit money with another whom he does not trust as a friend, nor shall he lend money upon interest; and the borrower should be under no obligation to repay either capital or interest. That these principles are best, any one may see who compares them with the first principle and intention of a state. The intention, as we affirm, of a reasonable statesman, is not what the many declare to be the object of a good legislator; namely, that the state for which he is advising should be as great and as rich as possible, and should possess gold and silver, and have the greatest empire by sea and land;—this they imagine to be the true object of legislation, at the same time adding, inconsistently, that the true legislator desires to have the city the best and happiest possible. But they do not see that some of these things are possible, and some of them are impossible; and he who orders the state will desire what is possible, and will not indulge in vain wishes or attempts to accomplish that which is impossible. The citizen must indeed be happy and good, and the legislator will seek to make him so; but very rich and very good at the same time he cannot be, not, at least, in the sense in which the many speak of riches. For they describe by the term ‘rich’ the few who have the most valuable possessions, 743 although the owner of them be a rogue. And if this is true, I can never assent to the doctrine that the rich man will be happy—he must be good as well as rich. And good in a high degree, and rich in a high degree at the same time, he cannot be. Some one will ask, why not? And we shall answer,—because acquisitions which come from sources which

are just and unjust indifferently, are more than double those which come from just sources only; and the sums which are expended neither honourably nor disgracefully, are only half as great as those which are expended honourably and on honourable purposes. Thus, if one acquires double and spends half, the other who is in the opposite case and is a good man cannot possibly be wealthier than he. The first—I am speaking of the saver and not of the spender—is not always bad; he may indeed in some cases be utterly bad, but, as I was saying, a good man he never is. For he who receives money unjustly as well as justly, and spends neither justly nor unjustly, will be a rich man if he be also thrifty. On the other hand, the utterly bad is in general profligate, and therefore poor; while he who spends on noble objects, and acquires wealth by just means only, can hardly be remarkable for riches, any more than he can be very poor. The argument then is right, in declaring that the very rich are not good, and, if they are not good, they are not happy. But the intention of our laws was, that the citizens should be as happy as possible, and as friendly as possible to one another. And men who are always at law with one another, and amongst whom there are many wrongs done, can never be friends to one another, but only those among whom crimes and lawsuits are few and slight. Therefore, we say that gold and silver ought not to be allowed in the city, nor much of the vulgar sort of trade which is carried on by lending money, or rearing the meaner kinds of live stock; but only the produce of agriculture, and only so much of this as will not compel us in pursuing it to neglect that for the sake of which riches exist,—I mean, soul and body, which without gymnastics, and without education, will never be worth anything; and therefore, as we have said not once but many times, the care of riches should have the last place in our thoughts. For there are in all three things about which every man has an interest; and the interest about money, when rightly regarded, is the third and lowest of them: midway comes the interest of the body; and, first of all, that of the soul; and the state which we are describing will have been rightly constituted if it ordains

honours according to this scale. But if, in any of the laws 744 which have been ordained, health be preferred to temperance, or wealth to health and temperate habits, that law must clearly be wrong. Wherefore, also, the legislator ought often to impress upon himself the question—‘What do I want?’ and ‘Do I attain my aim, or do I miss the mark?’ In this way, and in this way only, he may acquit himself and free others from the work of legislation. Let the allottee then hold his lot upon the conditions which we have mentioned.

It would be well that every man should come to the colony having all things equal; but seeing that this is not possible, and one man will have greater possessions than another, for many reasons and in particular for the sake of equality in the various occasions of the state, qualifications of property must be unequal, in order that officers and contributions and distributions may be proportioned to the value of each person’s wealth, and not solely to the virtue of his ancestors or himself, nor yet to the strength and beauty of his person, but also to the measure of his wealth or poverty; and so by a law of inequality, which will be in proportion to his wealth, he will receive honours and offices as equally as possible, and there will be no quarrels and disputes. To which end there should be four different standards appointed: there should be a first and a second and a third and a fourth class, in which the citizens will be placed, and they will be called by these and similar names: they may continue in the same rank, or pass into another in any individual case, on becoming richer from being poorer, or poorer from being richer. The form of law which I should propose would be as follows:—In a state which is desirous of being saved from the greatest of all plagues—not faction, but rather distraction—there should exist among the citizens neither extreme poverty, nor, again, excessive wealth, for both are productive of both these evils. Now the legislator should determine what is to be the limit of poverty or wealth. Let the limit of poverty be the value of the lot; this ought to be preserved, and no ruler, nor any one else who aspires after a reputation for virtue, will allow the lot to be impaired in any case. This the legislator gives as a measure, and he will permit a man to acquire double or triple,

or as much as four times the amount of this. But if a person have yet greater riches, whether he has found them, or they have been given to him, or he has made them in business, or has acquired by any stroke of fortune that which is
 745 in excess of the measure, if he give them back to the state, and to the Gods who are the patrons of the state, he shall suffer no penalty or loss of reputation; but if he disobeys this our law, any one who likes may inform against him and receive half the value of the excess, and the delinquent shall pay a sum equal to the excess out of his own property, and the other half of the excess shall belong to the Gods. And let every possession of every man, with the exception of the lot, be publicly registered with the archons whom the law appoints, in order that all suits relating to money may be easy and quite simple.

The next thing to be noted is, that the city should be placed as nearly as possible in the centre of the country; we should choose a place which possesses what is suitable for a city, and this may easily be imagined and described. Then we will divide the city into twelve portions, first founding a temple to Hestia and Zeus and Athene, to be termed the Acropolis, which we surround with a circular enclosure, and make the division of the entire city and country radiate from this point. The twelve portions shall be equalized in the following manner:—The smaller portions shall be of good land and the larger of inferior land; and the lots shall be 5040 in number. Further, each of them shall be divided into two, and the two sections shall form one allotment, having a share of the land which is near the city and of the land which is at a distance: let the portion which is close to the city be added to that which is farthest, and form one lot, and the portion which is next nearest be added to the portion which is next farthest, and so on of the rest. Moreover, in the two sections of the lots the same principle of equalization of the soil ought to be maintained; the badness and goodness shall be compensated by more and less. And the legislator shall divide the citizens into twelve parts, and arrange the rest of their property, as far as possible, so as to form twelve equal parts; and there shall be a description of all. After this they shall

assign twelve lots to twelve Gods, and call them by their names, and dedicate to each God their several portions, and call the tribes after them. And they shall distribute the twelve divisions of the city in the same way in which they divided the country; and every man shall have two habitations, one near the centre of the country, and the other at the extremity. Enough, then, of the manner of settlement.

Now we ought to consider always that there can never be such a happy concurrence of circumstances as we have described; neither can all things coincide as they are wanted. Men who will not take offence at such a mode of living together, and will endure all their life long to have their property fixed at a moderate limit, and to beget children in accordance with our ordinances, and will allow themselves to be deprived of gold and other things which the legislator, as is evident from these enactments, will certainly forbid them; and will endure, further, the two dwellings, the one centralized in the city and the other round about;—all this is like the legislator telling his dreams, or making a city and citizens out of wax. There is truth in these objections, and therefore every one should take to heart what I am going to say. Once more, then, the legislator shall appear and address us:—‘O, my friends,’ he will say to us, ‘do not suppose me ignorant that there is a certain degree of truth in these words; but I am of opinion that, in matters which are not present but future, he who exhibits a pattern of that at which he aims, should in nothing fall short of the fairest and truest; and that he who finds any part of his work impossible of execution should avoid and not execute that part, but he should contrive to carry out that which is nearest and most akin to it; and he should let the legislator perfect his design, and when it is perfected, he should join with him in considering what part of his legislation is expedient and what will arouse opposition; for surely the artist who is to be deemed worthy of any regard at all, ought always to make his work self-consistent.’

Having determined that there is to be a distribution into twelve parts, let us now see in what way this is to be accomplished. There is no difficulty in perceiving that the twelve parts admit of the greatest number of divisions of that which is

included under them, consisting of other parts which agree with them, and are produced out of them up to 5040; and hence the law ought to order phratries and demes and villages, and also military ranks and movements, as well as coins and measures, dry and liquid, and weights, so as to be commensurable and agreeable to one another. Nor should we fear the appearance of minuteness, if the law commands that all the vessels which a man possesses should have a common measure, when we
747 consider that the divisions and variations of numbers have a use in respect of all the variations of which they are susceptible, both in themselves and as measures of height and depth, and in all sounds and motions, as well those which proceed in a straight direction, upwards or downwards, as in those which go round and round. The legislator is to consider all these things, and to bid the citizens, as far as possible, not to lose sight of numerical order; for no single instrument of youthful education has such mighty power, both as regards domestic economy and politics, and in the arts, as the study of arithmetic. Above all, arithmetic stirs up him who is by nature sleepy and dull, and makes him quick to learn, retentive, shrewd, and aided by art divine he makes progress quite beyond his natural powers. All these, if only the legislator, by laws and institutions, can banish meanness and covetousness from the souls of the disciples, and enable them to profit by them, will be excellent and suitable instruments of education. But if he cannot, he will unintentionally create in them, instead of wisdom, the habit of craft, which evil tendency may be observed in the Egyptians and Phoenicians, and many other races, through the general illiberality of their pursuits and possessions, whether some unworthy legislator of theirs has been the cause, or some impediment of chance or nature. For we must not fail to observe, O Megillus and Cleinias, that there is a difference in places, and that some beget better men and others worse; and we must legislate accordingly. Some places are subject to strange and fatal influences by reason of diverse winds and violent heats, some by reason of waters; or, again, from the character of that subsistence which the earth supplies them, which not only affects the bodies of men for good or evil, but produces similar results in their souls. And in all such qualities those spots excel in which there is

a divine inspiration, and in which the Gods have their appointed lots, and are propitious to the dwellers in them. To all these matters the legislator, if he have any sense in him, must attend as far as man can, and frame his laws accordingly. And this is what you, Cleinias, must do, and to matters of this kind you must turn your mind since you are going to colonize a new country.

Cleinias. Your words, Athenian Stranger, are excellent, and I will do as you say.

BOOK VI.

75¹ *Athenian Stranger.* AND now having made an end of the preliminaries we will proceed to the appointment of the magistrates.

Cleinias. Very good.

Ath. In the government of a state there are two parts : first, the number of the magistrates, and the mode of appointing them ; and, secondly, when they have been appointed, laws will have to be provided for each of them, in nature and number suitable to them. But before electing the magistrates let us stop a little and say a word in season.

Cle. What have you got to say ?

Ath. This is what I have to say ;—every one can see, that although the work of legislation is a most important matter, yet if a well-ordered city superadd to good laws unsuitable officers, there will be no use in having the good laws ; not only are they ridiculous and useless, but the greatest political injury and evil accrues from them.

Cle. Of course.

Ath. Then now, my friend, let us observe what will happen in the constitution of our intended state. In the first place, you will acknowledge that those who are duly appointed to magisterial power, and their families, should severally give satisfactory proof of what they are, from their youth upward until the time of their election ; in the next place, those who are to elect should be trained in habits of law, and be well educated, that they may have a right judgment, and may be able to select or reject men whom they approve or disapprove, as they are worthy of either. But how can we imagine that those who are brought together for the first time, and are

strangers to one another, and also uneducated, will avoid making mistakes in the choice of magistrates?

Cle. Impossible.

Ath. The matter is serious, and excuses will not serve the turn. I will tell you, then, what you and I will have to do, since you, as you tell me, with nine others, have offered to settle the state on behalf of the people of Crete, and I am to help you, which is my reason for inventing this romance. ⁷⁵² I certainly should not like to leave the tale wandering all over the world without a head;—a headless monster is such a hideous thing.

Cle. Excellent, Stranger.

Ath. Yes; and I will be as good as my word.

Cle. Let us by all means do as you propose.

Ath. That we will, by the grace of God, if old age will only permit us.

Cle. But God will be gracious.

Ath. Yes; and under His guidance let us consider a further point.

Cle. What is that?

Ath. Let us remember what a courageously mad and daring creation this our city is.

Cle. What had you in your mind when you said that?

Ath. I had in my mind the free and easy manner in which we are ordaining that the inexperienced colonists shall receive our laws. Now a man need not be very wise, Cleinias, in order to see that no one can easily receive laws at their first imposition. But if we could anyhow wait until those who have been imbued with them from childhood, and have been nurtured in them, and become habituated to them, take their part in the public elections; I say, if this could be accomplished, and rightly accomplished by any way or contrivance,—then, I think that there would be very little danger, at the end of the time, of a state thus trained not being permanent.

Cle. That may be believed.

Ath. Then let us consider if we can find any way of doing as you say; for I maintain, Cleinias, that the Cnosians, above all the other Cretans, should not be satisfied with barely discharging their duty to the colony, but they ought to take

the utmost pains to establish the principal offices of the state in the best and surest manner. Above all, this applies to the selection of the guardians of the law, who must be chosen first of all, and with the greatest care; the others are of less importance.

Cle. What method can we devise of electing them?

Ath. This will be the method:—Sons of the Cretans, I shall say to them, inasmuch as the Cnosians have precedence over the other states, they should, in common with those who join this settlement, choose of themselves a body of thirty-seven in all, nineteen of them being taken from the settlers, and the
753 remainder from the citizens of Cnosus. Of these latter the Cnosians shall make a present to your colony, and you yourself shall be one of the eighteen, and shall become a citizen of the new state; and if you and the others will not agree, they may fairly use a little violence in order to accomplish their end.

Cle. But why, Stranger, do not you and Megillus take a part in our new city?

Ath. O, Cleinias, Athens is proud, and Sparta too; and they are both a long way off. But you and the other colonists are conveniently situated as you describe. I have been speaking of the way in which the new citizens may be best managed under present circumstances; but in after ages, and when the city is permanently established, let the election be on this wise. All who are horse or foot soldiers, or have taken part in war during the age for military service, shall share in the election of magistrates; and the election shall be held in whatever temple the state deems most venerable, and every one shall carry his vote to the altar of the God, writing down on a tablet the name of his father, and tribe, and ward; and at the side he shall write his own name in like manner. Any one who is dissatisfied with that which he has written may, if he pleases, take away his tablet, and, within a period of not less than thirty days, replace it in the agora. The tablets which are judged to be first, to the number of 300, shall be exhibited by the archons to the whole city, and the city shall in like manner select from these the candidates whom they prefer; and this second selection, to the number of 100, shall be again exhibited to

the citizens; in the third, let any one who pleases select out of the 100, walking through the parts of victims, and let them choose for magistrates and proclaim the seven-and-thirty who have the greatest number of votes. But who, Cleinias and Megillus, will order for us in the colony all this matter of the magistrates, and the scrutinies of them? If we reflect, we shall see that the cities which are thus constituted must originally have some such persons, who cannot possibly be elected before there are any magistrates¹; and yet they must be elected in some way, and they are not to be inferior men, but the best possible. For as the proverb says, 'a good beginning is half the business;' and 'to have begun well' is praised by all, and in my opinion is a great deal more than half the business, and has never been 754 praised by any one enough.

Cle. That is very true.

Ath. Then let us recognise the difficulty, and make clear to our own minds how the beginning is to be accomplished. There is only one proposal which I have to offer, and that is one which, under our circumstances, is both necessary and expedient.

Cle. What is that?

Ath. I maintain that this colony of ours has a father and mother, which is no other than the colonizing state. Well, I know that many colonies have been, and will be, at enmity with their parents. But in early days the child, as in a family, loves and is beloved; even if there come a time later when the tie is broken, still, while he is in want of education, he naturally loves his parents and is beloved by them, and flies to them for protection, and finds in them his natural defence in time of need; and this parental feeling already exists in the Cnosians, as is shown by their care of the new city; and there is a similar feeling on the part of the young city towards Cnosus. And I repeat what I was saying—for there is no harm in repeating what is good—that the Cnosians should take a public interest in all these matters, and choose, as far as they can, the eldest and best of the colonists, to the number of not less than a hundred; and let there be another hundred of the Cnosians themselves. These, I say, on their arrival, should have a joint

¹ Reading *πρὸ πασῶν*.

care that the magistrates should be appointed according to law, and that when they are appointed they should undergo a scrutiny. When this has been effected, the Cnosians shall return home, and the new city do the best she can for her own preservation and happiness. I would have the seven-and-thirty now, and in all future time, chosen to fulfil the following duties : Let them, in the first place, be the guardians of the law ; and, secondly, of the registers in which each one registers before the magistrate the amount of his property, excepting four minae which are allowed to citizens of the first class, three to the second, two to the third, and a single mina to the fourth. And if any one, despising the laws, for the sake of gain be found to possess anything more which has not been registered, let all that he has in excess be confiscated, and let him suffer a punishment which shall be the reverse of honourable or fortunate. And let any one who will, indict him on the charge of loving base gains, 755 and proceed against him before the guardians of the law. And if he be cast, let him lose his share of the public possessions, and when there is any public distribution, let him have nothing but the original lot ; and let him be written down a criminal as long as he lives, in some place in which any one who pleases can read about his crimes. The guardian of the law shall not hold office longer than twenty years, and shall not be less than fifty years of age when he is elected ; or if he is elected when he is sixty years of age, he shall hold office for ten years only ; and upon the same principle, he must not imagine that he will continue to hold such an important office as that of guardian of the laws, after he is seventy years of age, if he live so long.

These are the three first ordinances about the guardians of the law ; as the work of legislation progresses, there will be laws for each of them, which will assign to them their further duties. And now we may proceed in order to speak of the election of other officers ; for generals have to be elected, and these again must have their ministers, generals, and colonels of horse, and commanders of brigades of foot, who would be more rightly called by their popular name of brigadiers. The guardians of the law shall propose generals, who are natives of the city, and a selection from the candidates proposed shall be made by those who are or have been of the age of military

service. And if one who is not proposed is thought by somebody to be better than one who is, let him name him whom he prefers in the place of the other, and make oath that he is better, and propose him; and whichever of them is approved by vote shall be taken; and the three who have the greatest number of votes shall be appointed generals, and superintendents of military affairs, after previously undergoing a scrutiny, like the guardians of the law. And let the generals thus elected propose twelve brigadiers, one for each tribe; and there shall be a right of counter-proposal as in the case of the generals, and the voting and decision shall take place in the same way. Until the prytanes and council are elected, the guardians of the law shall convene the assembly in some holy spot which is suitable to the purpose, placing the hoplites by themselves, and the cavalry by themselves, and in a third division all the rest of the army. All are to vote for the general officers of foot [and horse], but the brigadiers are to be voted for only by those who carry shields. Let the body of cavalry choose phylarchs 756 for the generals; but captains of light troops, or archers, or any other division of the army, shall be appointed by the generals for themselves. There only remains the appointment of officers of cavalry: these shall be proposed by the same persons who proposed the generals, and the election and proposal of other candidates shall be carried out in the same way as in the case of the generals, and let the cavalry vote and the infantry look on at the election; the two who have the greatest number of votes shall be the leaders of all the horse. Disputes about the voting may be raised once or twice; but if the dispute be raised a third time, the presiding officers in each case shall decide.

The council shall consist of 360 members,—this will be a convenient number for sub-division. If we divide the whole number into four parts of ninety each, we get ninety counsellors for each class. First, all the citizens shall vote for members of the council taken from the first class; they shall be compelled to vote, and, if they do not, shall be duly fined. When the candidates have been elected, some one shall mark them down; this shall be the business of the first day. And on the following day, the election shall be made from the second class in the same manner and under the same conditions as on the previous

day; and on the third day an election shall be made from the third class, at which every one may if he likes vote, and the three first classes shall be compelled to vote; but the fourth and lowest class shall be under no compulsion, and any member of this class who does not vote shall not be punished. On the fourth day members of the council shall be elected from the fourth and smallest class; they shall be elected by all, but he who is of the fourth class shall suffer no penalty, nor he who is of the third, if he be not willing to vote; but he who is of the first or second class, if he does not vote shall be punished;—he who is of the second class shall pay a fine triple the fine which was exacted at first, and he who is of the first class quadruple. On the fifth day the rulers shall bring out the names noted down, in the presence of all the citizens, and every man shall choose out of them, under pain, if he do not, of suffering the first penalty; and when they have chosen 180 out of each of the classes, they shall choose one-half of them by lot, who shall undergo a scrutiny:—These are to form the council for the year.

The mode of election which has been described, is in a mean between monarchy and democracy, and such a mean the state
757 ought always to observe; for servants and masters never can be friends, nor good and bad, merely because they are said to have equal privileges. For to unequals equals become unequal, if they are not harmonised by measure; and both by reason of equality, and by reason of inequality, cities are filled with seditions. The old saying, that 'equality makes friendship,' is witty and also true; but there is obscurity and confusion as to what sort of equality is meant. For there are two equalities which are called by the same name, but are in reality in many ways almost the opposite of one another; one of them may be introduced without difficulty, by any state or any legislator in the distribution of honours: this is the rule of measure, weight, and number, which regulates and apportions them. But there is another equality, of a better and higher kind, which is not at once recognised. This is the judgment of Zeus, which has little place in human things; that little, however, is the source of the greatest good to individuals and states. For it gives to the greater more, and to the inferior less always and

in proportion to the nature of each ; and, above all, greater honour to the greater virtue, and to the less less ; and to either in proportion to their respective measure of virtue and education. And this is justice, and is ever the true principle of politics, at which we ought to aim, and according to this rule order the new city which we are founding, and any other city which may be hereafter founded. To this the legislator should look,—not to the interests of tyrants one or more, or to the power of the people, but to justice always ; which, as I was saying, is the distribution of natural equality among unequals. But there are times at which every state is compelled to use the words, ‘just’ ‘equal,’ in a secondary sense, in the hope of escaping in some degree from factions. For equity and indulgence are infractions of the perfect and strict rule of justice. And this is the reason why we are obliged to use the equality of the lot, in order to avoid the discontent of the people ; and we invoke God and fortune in our prayers, and beg that they themselves will direct the lot with a view to supreme justice. And therefore, although we are compelled to use both equalities, we should use that into which the element of chance enters as seldom as possible.

758

Thus, O my friends, and for the reasons given, should a state act which would endure and be saved. But as a ship sailing on the sea has to be watched night and day, in like manner a city also is sailing on a sea of politics, and is liable to all sorts of insidious assaults ; and therefore from morning to night, and from night to morning, rulers must join hands with rulers, and watchers succeed watchers, receiving and giving up their trust in a perpetual order. A multitude can never fulfil a duty of this sort with anything like energy ; moreover, the greater number of the senators will have to be left during the greater part of the year to order their concerns at their own homes. They must be arranged in twelve portions, answering to twelve months, and serve as guardians each portion for a single month. Their business is to be at hand and receive any foreigner or citizen who comes to them, whether to give information, or to put questions of which other states are to receive the answers ; or when the city desires to ask a question and receive an answer ; or again, when there is a likelihood of internal com-

motions, which are always liable to happen in some form or other, they will, if they can, prevent their occurring; or if they have already occurred, will lose no time in making them known to the city, and healing the evil. Wherefore, also, this which is the presiding body of the state ought always to have the control of their assemblies, and the dissolutions of them, regular as well as occasional. All this is to be ordered by the twelfth part of the council, which is always to keep watch together with the other officers of the state during one portion of the year, and to rest during the remaining eleven portions.

Thus will the city be fairly ordered. And now, who is to have the superintendence of the country, and what shall be the arrangement? Seeing that the whole city and the entire country have been both of them divided into twelve portions, ought there not to be appointed superintendents of the ways of the city, and of the houses, and buildings, and harbours, and the agora, and fountains, and groves, and temples, and the like?

Cle. To be sure there ought.

759 *Ath.* Let us assume, then, that there ought to be servants of the temples, and priests and priestesses, and three kinds of officers who shall preside over roads and buildings, and the order of them;¹ and over men that they may keep them from crime, and over beasts who are within the enclosure and suburb of the city, according to the requirements of the city. Those who have the care of the city shall be called wardens of the city; and those who have the care of the agora shall be called wardens of the agora; and those who have the care of the temples shall be called priests. Those who hold the hereditary office of priest or priestess, shall not be disturbed; but if there be few or none such, as is probable at the foundation of a new city, priests and priestesses shall be appointed to be servants of the Gods who have no servants. Some of them shall be elected, and others appointed by lot, and they shall mingle in a friendly manner those who are of the people and those who are not of the people in every place and city, that the state may be as far as possible of one mind. The officers of the temple shall be appointed by lot; in this way their election will be committed to God, who will do what is agree-

able to Him. And he who obtains a lot shall undergo a scrutiny, first, as to whether he is sound of body and of legitimate birth; and in the second place, in order to show that he is of a perfectly pure family, not stained with homicide or any similar impiety in his own person, and also that his father and mother have led a similar unstained life. Now the laws about all divine things should be brought from Delphi, and they should use them under the direction of the interpreters of them. The tenure of the priesthood should always be for a year and no longer; and he who will duly execute the sacred office, according to the laws of religion, must be not less than sixty years of age,—the laws shall be the same about priestesses; and let the twelve tribes taken by fours appoint interpreters, one out of each tribe, and let this be done thrice; and let the three who have the greatest number of votes undergo a scrutiny, and the remaining nine go to Delphi, in order that the God may return one out of each triad; their age shall be the same as that of the priests, and the scrutiny of them shall be conducted in the same manner; let them be interpreters for life, and when any one dies let the tribes, taken as before by fours, select another from the tribe of the deceased: moreover, they shall choose treasurers of the property of the several temples, and of the sacred groves, who shall have authority over the produce and the letting of them; and three of them 760 shall be chosen from the highest classes for the greater temples, and two for the lesser, and one for the least of all; the manner of their election and the scrutiny of them shall be the same as that of the generals. This shall be the order of the temples.

Let everything have a guard as far as possible; and let the defence of the city be committed to the generals, and taxiarchs, and hipparchs, and phylarchs, and prytanes, and the wardens of the city, and of the agora, when the election of them has been completed. The defence of the country shall be provided for as follows:—The entire land has been already distributed into twelve as nearly as possible equal parts, and let one tribe, taken by lot, provide annually for each division five wardens of the country and commanders of the watch; and let each of the five have the power of selecting twelve others out of

the youth of their own tribe, — these shall be not less than twenty-five years of age, and not more than thirty. And let there be allotted to them severally every month one of the twelve portions of the land, in order that they may all acquire knowledge and experience of the whole country. This duty and service of commanders and of watchers shall continue during two years. At first, they will have their stations allotted to them, and will afterwards go from place to place in regular order, making their round from left to right as their commanders direct them; (when I speak of going to the right, I mean that they are to go to the east). And at the commencement of the second year, in order that as many as possible of the guards may not only get a knowledge of the country at any one season of the year, but may also have experience of the manner in which different places are affected at different seasons of the year, their then commanders shall lead them again towards the left, from place to place in succession, until they have completed the second year. In the third year they shall choose other wardens of the country, and commanders of the watch, five in number, who are to be the superintendents of the bands of twelve. While on service at each station, their attention shall be directed to the following points:—In the first place, they shall see that the country is well protected against enemies; they shall trench and dig wherever this is required, and, as far as they can, they shall confine in fastnesses the evil-disposed, in order to prevent them from doing any harm to the country or the property; they shall use the beasts of burden and the labourers whom
761 they find on the spot: these will be their instruments whom they will superintend, taking them, as far as possible, at the times when they are not engaged in their regular business. They shall make every part of the country inaccessible to enemies, and as accessible as possible to friends; there shall be ways for man and beast, and they shall take care to have them always as smooth as they can; and shall provide against the rains doing harm instead of good to the land, when they come down from the mountains into the hollows; and shall keep them back by the help of works and ditches, in order that they may receive and drink up the rain from heaven, and making fountains

and streams in the fields and places which are underneath, may furnish even to the dry places plenty of good water. The fountains of waters, whether of rivers or of springs, shall be ornamented with plantations and buildings for beauty ; and let them bring together the streams in subterraneous channels, and make water plentiful by irrigation at all seasons of the year ; and if there be a sacred grove or dedicated precinct in their neighbourhood, they shall let the stream have a way to the actual temples of the Gods. Everywhere in such places the youth shall make gymnasia for themselves, and warm baths for the aged, placing by them abundance of dry wood, for the benefit of those labouring under disease—there the weary frame of the rustic, worn with toil, will be kindly received, and experience far better treatment than at the hands of a not over-wise doctor.

The building of these and the like works will be useful and ornamental ; they will provide a pleasing amusement, but they will be a serious employment too ; for the companies of sixty will have to guard their own positions, not only with a view to enemies, but also with an eye to professing friends. When a quarrel arises among neighbours or citizens, and any one whether slave or freeman wrongs another, let the five rulers decide small matters on their own authority ; but where the charge against another relates to greater matters, the seventeen composed of the five and the twelve, shall determine any charges which one man brings against another, not involving more than three minae. Every judge and ruler shall be liable to give an account of his conduct in office, except those who, like kings, have the final decision. Moreover, as regards the aforesaid wardens of the country, if they do any wrong to those of whom they have the care, whether by imposing upon them unequal tasks, or by taking the produce of the soil or implements of husbandry without their consent ; also if they receive anything in the way of a bribe, or decide suits unjustly, or if they yield to the influences of flattery, let them be publicly dishonoured ; and in regard to any other wrong which they do to the inhabitants of the country, if the question be of a mina, let them submit to the decision of the villagers in the neighbourhood ; but in suits of greater amount, or in case of the lesser if they

refuse to submit, trusting that their monthly removal into another part of the country will enable them to escape—in such cases the injured party may bring his suit in the common court, and if he obtain a verdict he may exact from the defendant who refused to submit a double penalty.

The rulers and the wardens of the country, while on their two years' service, shall have common meals at their several stations, and shall all live together; and he who is absent from the daily meal, or sleeps out at night, unless by order of the rulers, or by reason of absolute necessity, if the five denounce him and inscribe his name in the agora as not having kept his guard, let him be deemed to have betrayed the city, and let him be disgraced and beaten with impunity by any one who meets him and is willing to punish him. If any of the rulers is guilty of such an irregularity, the whole company of sixty shall see to it, and he who is cognisant of the offence, and does not bring the offender to trial, shall be amenable to the same laws as the younger offender himself, and shall pay a heavier fine, and be incapable of ever commanding the young. The guardians of the law are to be careful inspectors of these matters, and shall either prevent or punish offenders. Every man should remember the universal rule, that he who is not a good servant will not be a good master; a man should pride himself more upon serving well than upon commanding well: first upon serving the laws, which is also the service of the Gods; in the second place, upon having served ancient and honourable men in the days of his youth. Moreover, during the two years in which he is a warden of the country, his daily food ought to be of a simple and humble kind. When the twelve are gathered
763 together, let them take counsel with the five, and determine that they will serve themselves, and will not have other slaves and servants for their own use, neither will they use those of the villagers and husbandmen for their private advantage, but for the public service only; and in general let them make up their minds to live independently by themselves, servants of the state and their own. Further, at all seasons of the year, summer and winter alike, let them survey minutely the whole country, bearing arms and keeping guard,—at the same time acquiring a perfect knowledge of every locality. There can be

no more important kind of information than the exact knowledge of a man's own country; and for this as well as for more general reasons of pleasure and advantage, hunting with dogs and other kinds of sports should be pursued by the young. The service to whom this is committed may be called the secret police or wardens of the country; the name does not much signify, but every one who has the safety of the state at heart will use his utmost diligence in this service.

After the wardens of the country, we have to speak of the election of wardens of the agora and of the city. The wardens of the country were sixty in number, and the wardens of the city will be three, and will divide the twelve parts of the city into three; like the former, they shall have care of the ways, and of the different high roads which lead out of the country into the city, and of the buildings, that they may be all made according to law;—also of the waters, which those who superintend and preserve the waters convey to them, care being taken that they may reach the fountains pure and abundant, and be both an ornament and a benefit to the city. These also shall be men of ability, and at leisure to take care of the public interest. Let every man propose as warden of the city any one whom he likes out of the highest class, and when the vote has been given on them, and the number is reduced to the six who have the greatest number of votes, let the electing officers choose by lot three out of the six, and when they have undergone a scrutiny let them hold office according to the law appointed for them. Next, let the wardens of the agora be elected in like manner, out of the first and second class, five in number: ten are to be first elected, and out of the ten five are to be chosen by lot, as in the election of the wardens of the city; and when they have undergone a scrutiny, they shall be proclaimed wardens of the agora. Every one shall vote for all the ten, and he who will not vote, if he be informed against before the archons, shall be fined fifty drachmae, and shall also be deemed a bad citizen. Let any ⁷⁶⁴ one who likes go to the assembly and to the general council; this shall be compulsory on citizens of the first and second class, and they shall pay a fine of ten drachmae if they be found not answering to their names at the assembly. But the

third and fourth class shall be under no compulsion, and shall be let off without a fine, unless the rulers have commanded all to be present, in consequence of some urgent necessity. The wardens of the agora shall observe the order appointed by law for the agora, and shall have the charge of the temples and fountains which are in the agora; and they shall see that no one injures them, and punish him who does so, with stripes and bonds, if he be a slave or stranger; but if he be a citizen who misbehaves in this way, they shall have the power themselves of inflicting a fine upon him to the amount of a hundred drachmae, or with the consent of the wardens of the city up to double that amount. And let the wardens of the city have a similar power of imposing punishments and fines in their own department; and let them impose fines by their own authority, up to a mina, or up to two minae with the consent of the wardens of the agora.

In the next place, it will be proper to appoint ministers of music and gymnastic, two of each kind—one whose business will be education, and the other for the superintendence of contests. In speaking of education, the law means to speak of those who have the care of order and instruction in gymnasia and schools, and of the going to school and lodging of boys and girls; and in speaking of contests, the law refers to the judges of gymnastics and of music; these again are divided into two classes, the one having to do with music, the other with gymnastic; and the same who judge of the gymnastic contests of men, shall judge of horses; but in music there shall be one set of judges of solo singing, and of imitation—I mean of rhapsodists, players on the harp, the flute and the like, and another who shall judge of choruses. First of all, we must choose leaders for the choruses of boys, and men, and maidens, whom they shall follow in the amusement of the dance, and in our other musical arrangements;—one leader will be enough
765 for them, and he should be not less than forty years of age. One leader of the solo singers will also be enough to introduce them, and to give judgment on the competitors, and he ought not to be less than thirty years of age. The leader and regulator of the choruses shall be elected after the following manner:—Let any persons who commonly take an interest in

such matters go to the meeting, and be fined if they do not go (the guardians of the law shall judge of their fault), but those who have no interest shall not be compelled. The elector shall propose as leader some one who understands music, and in the scrutiny he may be challenged on the one part by those who say he has no skill, and defended on the other hand by those who say that he has. Ten are to be elected by vote, and he of the ten who is chosen by lot shall undergo a scrutiny, and lead the choruses for a year according to law. And in like manner the competitor who wins the lot shall be leader of the solo and concert music for that year; and he [who is elected] shall refer the judgment of them to the judges. In the next place, we have to choose judges in the contests of horses and of men; these shall be selected from the third and also from the second class of citizens, and the three first classes shall be compelled to go to the election, but the lowest class shall not be compelled; and let there be three elected by lot out of the twenty who have been chosen previously, and they must also have the vote and approval of the examiners. But if any one is rejected in the scrutiny at any ballot or decision, others shall be chosen in the same manner, and undergo a similar scrutiny.

There remains the minister of the education of youth, male and female; he too will rule according to law, being a single magistrate of fifty years old at least;—the father of children lawfully begotten, of both sexes, or of one at any rate. He who is elected, and he who is the elector, should consider that of all the great offices of state this is the greatest; for the first shoot of any plant rightly tending to the perfection of its own nature, has the greatest effect on its maturity; and this is not only true of plants, but of animals wild and tame, and also of men. Man, as we say, is a tame or civilized animal; nevertheless, he requires proper instruction and a fortunate nature, and then of all animals he becomes the most divine and most civilized; but if he be insufficiently or ill educated he is the most savage of earthly creatures. Wherefore the legislator ought not to allow the education of children to become a secondary or accidental matter. In the first place, he who would be rightly provident about them, should begin by taking

care that he is elected, who of all the citizens is in every respect the best; him they shall do their best to appoint as guardian and superintendent. To this end all the magistrates, with the exception of the council and prytanes, shall go to the temple of Apollo, and elect by ballot him of the guardians of the law whom they severally think will be the best superintendent of education. And he who has the greatest number of votes, after he has undergone a scrutiny at the hands of all the magistrates who have been his electors, with the exception of the guardians of the law,—shall hold office for five years; and in the sixth year let another be chosen in like manner to fill his office.

If any one dies while he is holding a public office, and more than thirty days before his term of office expires, let those who are concerned with the matter elect another to the office in the same manner as before. And if any one who is entrusted with orphans dies, let the relations both on the father's and mother's side, who are residing at home, including cousins, appoint another guardian within ten days, and be fined a drachma a day for neglect.

A city which has no regular courts of law ceases to be a city; and again, if a judge is silent and says no more than the litigants in preliminary trials and in private arbitrations, he will never be able to decide justly; wherefore a multitude of judges will not easily judge well, nor a few if they are not good judges. The point in dispute should be made clear by both parties; and time, and deliberation, and repeated examination, greatly tend to clear up doubts. For this reason, he who goes to law with another, should go first of all to his neighbours and friends who know best the questions at issue.

767 And if he be unable to obtain from them a satisfactory decision, let him have recourse to another court; and if the two courts cannot settle the matter, let the third put an end to the suit.

Now the establishment of courts of justice may be regarded as a choice of magistrates, for every magistrate must also be a judge of some things; and the judge, though he be not a magistrate, yet in certain respects is a very important magistrate on the day on which he is determining a suit. Regarding

then the judges also as magistrates, let us say who are fit to be judges, and of what they are to be judges, and how many of them are to judge in each suit. Let that be the supreme tribunal which the litigants agree to appoint in common for themselves. And let there be two other tribunals: one for private individuals, who desire to have causes of action decided against one another; the other for public causes, in which some citizen is of opinion that the public has been wronged by an individual, and is willing to vindicate the common interests. And we must not forget to mention how the judges are to be qualified, and who they are to be. In the first place, let there be a tribunal open to all private persons who are trying causes one against another for the third time, and let this be composed as follows: All the officers of state, as well annual as those holding office for a longer period, at the beginning of the new year, in the month which follows the summer solstice, shall meet on the evening before the expiration of the year in some temple, and calling God to witness, shall dedicate one judge of every court to be their first-fruits, choosing the one in each office who seems to them to be the best, and whom they deem likely to decide the causes of his fellow-citizens during the ensuing year in the best and holiest manner. And when the election is completed, a scrutiny shall be held in the presence of the electors themselves, and if any one be rejected another shall be chosen in the same manner. Those who have undergone the scrutiny shall judge the causes of those who have declined the inferior courts, and shall give their vote openly. The counsellors and other magistrates who have elected them shall be required to be hearers and spectators of the causes; and any one else may be present who pleases. If one man charges another with having intentionally decided wrong, let him go to the guardians of the law and lay his accusation before them, and he who is found guilty in such a case shall pay damages to the injured party equal to half the injury; but if he shall appear to deserve a greater penalty, the judges shall determine what additional punishment he shall suffer, and what he ought to pay to the public treasury, or to the party who brought the original suit.

In the judgment of offences against the state, the people 768

ought to participate, for when any one wrongs the state they are all wronged, and may reasonably complain if they are not allowed to share in the decision. Such causes ought to originate with the people, and they ought also to have the final decision of them, and the trial of them shall take place before three of the highest magistrates, upon whom the plaintiff and the defendant shall agree; and if they are not able to come to an agreement themselves, the council shall choose one of the two proposed. And in private suits, too, as far as is possible, all should have a share; for he who has no share in the administration of justice, is apt to imagine that he has no share in the state at all. And for this reason there shall be a court of law in every ward, and the judges shall be chosen by lot;—they shall give their decisions at once, and shall be inaccessible to entreaties. The final judgment shall rest with that court which, as we maintain, has been established in the most incorruptible form of which human things admit: this shall be the court established for those who are unable to get rid of their suits either in the courts of the neighbours or of the tribes.

Thus much of the courts of law, which, as I was saying, cannot be defined either as being or not being offices; a superficial sketch has been given of them, and some things have been told and others omitted. For the right place of an exact statement of the laws respecting suits, under their several heads, will be at the end of the body of legislation;—let us then expect them at the end. Hitherto our legislation has been chiefly occupied with the appointment of offices. Perfect unity and exactness, extending to the whole and every particular of political administration, cannot be attained to the full, until the discussion shall have a beginning, middle, and end, and is complete in every part. At present we have reached the election of rulers, and this may be regarded as a sufficient termination of what has preceded. And now there need no longer be any delay or hesitation in making laws.

Cle. I like your way, Stranger, both in what you have said, and still more in what you are going to say. I particularly approve of your manner of joining the beginning to the end.

Ath. Thus far, then, the old man's game of play has gone ⁷⁶⁹ off well.

Cle. I suppose you mean to say rather their serious and noble pursuit?

Ath. Perhaps; but I should like to know whether you and I are agreed about a certain thing?

Cle. What is that?

Ath. You know the endless labour which painters expend upon their pictures—they and their apprentices are always putting in or taking out colours, or performing some operation of this sort; they seem as if they would never cease touching up their works, which are always being made brighter and more beautiful.

Cle. I know something of them from report, although I have never had much acquaintance with their art.

Ath. No matter; we may make use of the illustration notwithstanding:—Suppose that some one had a mind to paint a figure in the most beautiful manner, in the hope that his work instead of losing would always improve as time went on—do you not see that being a mortal, unless he leaves some one to succeed him who will correct the flaws which time has introduced, and be able to add what is left imperfect through the defect of the artist, and who will brighten up and improve the picture, all his great labour will last but a short time?

Cle. True.

Ath. And is not the aim of the legislator similar? First, he desires that his laws should be written down with the requisite exactness; in the second place, as time goes on and he has made an actual trial of his decrees, will he not find omissions? Do you imagine that there ever was a legislator so foolish as not to know that many things are necessarily omitted, which some one coming after him must observe and correct, if the constitution and the order of government is not to deteriorate, but to improve in the state which he is establishing?

Cle. Certainly, that is the sort of thing which every one would desire.

Ath. And if any one possesses any means of accomplishing this by word or deed, or has any way great or small by which he can teach a person to understand how he can maintain and

amend the laws, he should finish what he has to say, and not leave the work incomplete.

Cle. Certainly.

770 *Ath.* And is not this what you and I have to do at the present moment?

Cle. What have we to do?

Ath. As we are about to legislate and have chosen our guardians of the law, and are ourselves in the evening of life, and they as compared with us are young men, we ought not only to legislate for them, but to endeavour to make them both lawgivers and guardians of the law themselves as far as this is possible.

Cle. Certainly ; if we can.

Ath. At any rate, we must do our best.

Cle. Certainly.

Ath. We will say to them,—O friends and saviours of our laws, in laying down any law, there are many particulars which we shall omit, and this cannot be helped ; at the same time, we will do our utmost to describe what is important, and will give an outline which you shall fill up. And I will explain to what principle you are to look in accomplishing this work. Megillus, and I, and Cleinias, have often spoken to one another touching these matters, and we are of opinion that we have spoken well. And we hope that you will be of the same mind with us, and become our disciples, and keep in view the things which in our united opinion the legislator and guardian of the law ought to keep in view. There was one principle in particular about which we were agreed—that a man's whole energies throughout life should be devoted to the acquisition of the virtue proper to a man, whether this was to be gained by study, or habit, or some kind of possession, or desire, or opinion, or knowledge—and this applies equally to men and women, old and young—the aim of all should always be such as I have described ; anything which may be an impediment, the good man ought to show that he utterly disregards. And if at last necessity plainly compels him to be an outlaw from his native land, rather than bow his neck to the yoke and be ruled by inferiors, and he has to fly, he must be an exile and endure all these things rather than accept another form of government,

which is likely to make men worse. These are our original principles; and do you now, fixing your eyes upon the standard of what a man and a citizen ought to be, praise and blame the laws—blame those which have not this power of making the citizen better, but embrace those which have; and with gladness 771 receive and live in them; bidding a long farewell to other institutions which aim at goods, as they are termed, of a different kind.

Let us proceed to another class of laws, beginning with their foundation in religion. And we must first return to the number 5040—the entire number had, or rather has, a great many convenient divisions, and the number of the tribe which was a twelfth part of the whole, being correctly formed by 21×20 , also has them. And not only is the whole number divisible by twelve, but also the number of each tribe is divisible by twelve. Now every portion should be regarded by us as a sacred gift of Heaven, corresponding to the months and to the movement of the universe. Every city has a guiding or sacred principle given by nature, but in some the division or distribution has been more right than in others, and has been more sacred and fortunate. In our opinion, nothing can be more right than the selection of the number 5040, which may be divided by all numbers from one to twelve with the single exception of eleven, and that admits of a very easy correction; for if two families be deducted from 5040, the division by eleven is restored. And the truth of this may be easily proved when we have leisure. But for the present, trusting to the mere assertion of this principle, let us divide the state; and assigning to each portion some God or son of a God, let us give them altars and sacred rites, and at the altars let us hold assemblies for sacrifice twice in the month—twelve assemblies for the tribes, and twelve for the city, according to their divisions; the first in honour of the Gods and divine things, and the second to promote friendship and ‘better acquaintance,’ as the phrase is, and every sort of good fellowship with one another. For people must be acquainted with those into whose families they marry and to whom they are given in marriage; in such matters, as far as possible to avoid mistakes is all important, and with this serious purpose let games be instituted in which youths and

772 maidens shall dance together, seeing and being seen naked, at a proper age, and on a suitable occasion, not transgressing the rules of modesty. The masters of choruses will be the superintendents and regulators of these games, and they, together with the guardians of the law, will legislate in any matters which we have omitted; for, as we were saying, where there are numerous and minute details, the legislator cannot but fail. And the annual officers who have experience, and know what is wanted, must make arrangements and improvements year by year, until such enactments and provisions are sufficiently determined. A ten years' experience of sacrifices and dances, if extending to all particulars, will be quite sufficient; and if the legislator be alive they shall communicate with him, but if he be dead then the several officers shall bring the omissions which come under their notice before the guardians of the law, until all is perfect; and from that time there shall be no more change, and they shall establish and use the new laws with the others which the legislator originally gave them, and of which they are never, if they can help, to change aught; or, if some necessity overtakes them, the magistrates must be called into counsel, and the whole people, and they must go to all the oracles of the Gods; and if they are all agreed, in that case they may make the change, but in any other case he who objects according to law shall prevail.

Whenever any one of twenty-five years of age, seeing and being seen, believes himself to have found a marriage connection which is to his mind, and suitable for the procreation of children, let him marry if he be under the age of five-and-thirty years; but let him first hear how he ought to seek after what is suitable and appropriate. For, as Cleinias says, every law like a strain of music should have a suitable prelude.

Cle. You recollect at the right moment, Stranger, and do not miss the opportunity of saying a word in season.

773 *Ath.* I thank you. We will say to him:—O my son, he who is born of good parents ought to make such a marriage as wise men would approve. Now they would advise you neither to avoid a poor marriage, nor specially to desire a rich one; but if other things are equal, always to honour inferiors, and with them to form connections;—this will be for the benefit of the

city and of the families which are united ; for the equable and symmetrical tends infinitely more to virtue than the unmixed. And he who is conscious of being too headstrong, and carried away more than is fitting in all his actions, ought to desire to become the relation of orderly parents ; and he who is of the opposite temper ought to seek the opposite alliance. Let there be one word concerning all marriages :—Every man shall follow, not after the marriage which is most pleasing to himself, but after that which is most beneficial to the state. For somehow every one is by nature prone to that which is likest to himself, and in this way the whole city becomes unequal in property and in disposition ; and hence there arise in most states results which we least desire to happen. Now, to add to the law an express provision, not only that the rich man shall not marry into the rich family, nor the powerful into the family of the powerful, but that the slower natures shall be compelled to enter into marriage with the quicker, and the quicker with the slower, may awaken anger as well as laughter in the minds of many ; for there is a difficulty in perceiving that the city ought to be well mingled like a cup, in which the maddening wine is hot and fiery ; but when chastened by a soberer God, receives a fair admixture and becomes an excellent and temperate drink. Yet in marriage no one is able to see the necessity of this. Wherefore also the law must leave such matters, and try to charm the spirits of men into believing the equability of their children's disposition to be of more importance than equality in excessive fortune when they marry ; and him who is too desirous of forming a rich marriage they should endeavour to turn aside by reproaches, not, however, by any compulsion of written law. Let this then be our exhortation concerning marriage, not forgetting what was said before—that man should cling to immortality—and leave behind him posterity who shall be 774 servants of the God in his place. All this and yet more may truly be said about the duty of marrying in the way of prelude. But if a man will not listen, and remains unsocial and alien among his fellow-citizens, and is still unmarried at thirty-five years of age, let him pay a yearly fine ;—he who is of the highest class shall pay a fine of a hundred drachmae, and he who is of the second class a fine of seventy drachmae ; the third class

shall pay sixty drachmae, and the fourth thirty drachmae, and let the money be sacred to Herè; he who does not pay the fine in the year shall owe ten times the sum, which the treasurer of the goddess shall exact; and if he fails in doing so, let him be answerable and give an account of the money at his audit. He who refuses to marry shall be thus punished in money, and also be deprived of all honour which the younger show to the elder; let no young man voluntarily obey him, and, if he attempt to punish any one, let every one come to the rescue and defend the injured person, and he who is present and does not come to the rescue, shall be pronounced by the law to be a coward and a villain. Of the marriage portion I have already spoken; and again I say for the benefit of poor men that he who neither gives nor receives a dowry on account of poverty, has a compensation; for the citizens of our state have the necessaries of life, and their wives will be less likely to be insolent, and husbands to be mean and subservient to them on account of property. And he who obeys this law will do a noble action; but he who will not obey, and gives or receives more than fifty drachmae as the price of the marriage garments if he be of the lowest, or more than a mina, or a mina-and-a-half, if he be of the third or second classes, or two minae if he be of the highest class, shall owe to the public treasury a similar sum, and that which is given or received shall be sacred to Herè and Zeus; and let the treasurers of these Gods exact the money, as was said before about the unmarried—that the treasurers of Herè were to exact the money, or pay the fine themselves.

The betrothal by a father shall be valid in the first degree, that by a grandfather in the second degree, and in the third degree, betrothal by brothers who have the same father; but if there are none of these alive, the betrothal by a mother shall be valid in like manner; in cases of unexampled fatality, the next of kin and the guardians shall have authority. What are to be the rites before marriages, or any other sacred acts, relating either to the future, or the present, or the past, shall be referred to the interpreters; and he who follows their advice may be
775 satisfied. Touching the marriage festival, they shall assemble not more than five male and five female friends of both families,

and a like number of members of the family of either sex, and no man shall spend more than his means will allow; he who is of the richest class may spend a mina,—he who is of the second, half a mina, and in the same proportion as the census of each decreases: all men shall praise him who is obedient to the law; but he who is disobedient shall be punished by the guardians of the law as a man wanting in true taste, and uninstructed in the hymeneal strains of the Muses. Drunkenness is always improper, except at the festivals of the God who gave wine; and peculiarly dangerous, when a man is engaged in the business of marriage; for at such a crisis of their lives a bride and bridegroom ought to have all their wits about them, and they ought to take care that their offspring may be born of reasonable beings; and who can tell on what day or night Heaven will give them increase? Moreover, they ought not to be begetting children when their bodies are dissipated by intoxication, but their offspring should be compact and solid, quiet and compounded properly; whereas the drunkard is all abroad in all his actions, and is beside himself both in body and soul. Wherefore, also, the drunken man is bad and unsteady in sowing the seed of increase, and is likely to beget offspring who will be unstable and untrustworthy, and cannot be expected to walk straight either in body or mind. Hence during the whole year and all his life long, and especially while he is begetting children, he ought to take care and not intentionally to do what is injurious to health, or what involves insolence and wrong; for it needs must be that the souls and bodies of the children receive the impress which is stamped upon them at birth, and he begets children in every way inferior. And especially on the day and night of marriage should a man abstain from such things. For there is an original indwelling divinity in man which preserves all things, if used with proper respect by each individual. He who marries is to consider, that one of the two houses in the lot is the nest and nursery of his young, and there he is to marry and make the home of himself and his children, going away from his father and mother. For in friendships there must be some degree of desire, in order to cement and bind together diversities of character; but excessive intercourse not having the desire

which is created by time, insensibly dilutes friendships from a feeling of satiety; wherefore a man and his wife shall leave to his and her father and mother their own dwelling-places, and themselves go as to a colony and dwell there, and visit and be visited by their parents; and they shall beget and bring up children, handing on the torch of life from one generation to another, and worshipping the Gods according to law for ever.

In the next place, we have to consider what sort of property will be most convenient. There is no difficulty either in understanding or acquiring most kinds of property, but there is great difficulty in what relates to slaves. And the reason is, that we speak about them in a way which is right and which is not right; for what we say about our slaves is consistent and also inconsistent with our practice about them.

Meg. I do not understand, Stranger, what you mean.

Ath. I am not surprised, Megillus, for the state of Helots among the Lacedaemonians is of all Hellenic forms of slavery the most controverted and disputed about, some approving and some condemning it; there is less dispute about the slavery which exists among the Heracleots, who have subjugated the Mariandynians, and about the Thessalian Penestae. Looking at these and the like examples, what ought we to do concerning property in slaves? I made a remark, in passing, which naturally elicited a question about my meaning from you. I said that we should all agree as to the necessity of having the best and most attached slaves whom we can get. For many a man has found his slaves better in every way than brethren or sons, and many times they have saved the lives and property of their masters and their whole house — such tales are well known.

Meg. To be sure.

Ath. But may we not also say that the soul of the slave is utterly corrupt, and that no man of sense ought to trust them as a class? And the wisest of our poets, speaking of Zeus, says:

‘Far-seeing Zeus takes away half the understanding of men whom the day
777 of slavery subdues.’

Different persons have got these two different notions of slaves

in their minds—some of them utterly distrust their servants as a class, and, as if they were wild beasts, chastise them with goads and whips, and make their lives three times, or rather many times, as slavish as they were before ;—and others do just the opposite.

Meg. True.

Cle. Then what are we to do, Stranger, when, in our own country, there are such differences in the treatment of slaves by their owners?

Ath. Well, Cleinias, there can be no doubt that man is a troublesome animal, and therefore is not, and is not likely to become very manageable when you attempt to introduce the necessary division of slave, and freeman, and master.

Cle. That is obvious.

Ath. He is a troublesome piece of goods, as has been often shown in the frequent revolts of the Messenians, and the great mischiefs which happen in states having many slaves who speak the same language ; and the numerous robberies and lawless life of the Italian banditti, as they are called. A man who considers all this is fairly at a loss. Two alternatives are open to us,—not to have the slaves of the same country, or if possible, speaking the same language ; in this way they will more easily be held in subjection : secondly, we should tend them carefully, not only out of regard to them, but yet more out of respect to ourselves. And the right treatment of slaves is to behave properly to them, and to do to them, if possible, even more justice than to those who are our equals ; for he who really and naturally reverences justice, and hates injustice, is discovered in his dealings with any class of men to whom he can easily be unjust. And he who in regard to the natures and actions of his slaves is undefiled by impiety and injustice, will best sow the seeds of virtue in them ; and this may be truly said of every master, and tyrant, and of every other having authority in relation to his inferiors. Slaves ought to be punished as they deserve, and not admonished as if they were freemen, which will only make them conceited. The language used to a servant ought always to be that of a command, and we ought not to jest with them, whether 778 they are males or females—this is a foolish way which many people have of setting up their slaves, and making the life of

servitude more disagreeable both for them and for those who command them.

Cle. True.

Ath. Now that each of the citizens is provided, as far as possible, with a sufficient number of suitable slaves who can help him in what he has to do, we may next proceed to describe their dwellings.

Cle. Very good.

Ath. The city being new and hitherto uninhabited, care ought to be taken of all the buildings, and the manner of building each of them, and also of the temples and walls. These, Cleinias, were matters which properly came before the marriages;—but, as we are only talking, there is no objection to changing the order. If, however, our plan of legislation is ever carried out, then the house shall precede the marriage if God so will, and afterwards we will come to the regulations about marriage; but at present we are only describing these matters in a general outline.

Cle. Quite true.

Ath. The temples are to be placed all round the agora, and the whole city built in a circle on the heights, for the sake of defence and for the sake of purity. Near the temples are to be placed the houses of the magistrates and the courts of law; in these plaintiff and defendant will receive their rights, and the places will be regarded as most holy, partly because they have to do with holy things, and partly because they are the dwelling-places of holy Gods: and in them will be the courts in which cases of homicide and other trials of capital offences may fitly take place. As to the walls, Megillus, I agree with Sparta in thinking that they should be allowed to sleep in the earth, and that we should not attempt to disinter them; there is a poetical saying, which is finely expressed, that ‘walls ought to be of steel and iron, and not of earth;’ besides, how ridiculous of us to be sending out our young men annually into the country to dig and to trench, and to keep off the enemy by fortifications, under the idea that they are not to be allowed to set foot in our territory, and then, that we should surround ourselves with a wall, which, in the first place, is by no means conducive to the health of cities, and is also apt to produce a certain effeminacy

in the minds of the inhabitants, inviting men to run thither instead of repelling their enemies, and leading them to imagine 779 that their safety is due not to their keeping guard day and night, but that when they are protected by walls and gates, then they may sleep in safety; as if they were meant not to labour, and did not know that true repose comes from labour, and that disgraceful indolence and a careless temper of mind is only the renewal of trouble. If men must have walls, the private houses ought to be so arranged from the first that the whole city may be one wall, having all the houses capable of defence by reason of their uniformity and equality towards the streets. The form of the city being that of a single dwelling will have an agreeable aspect, and being easily guarded will have great advantages of security. At the first building of the city these should be principal objects of the inhabitants; and the wardens of the city should see to them, and should further impose a fine on him who neglects them; and in all that relates to the city they should have a care of cleanliness, and no citizen should encroach upon any public property either by buildings or diggings. Further, they ought to take care that the rains from heaven flow off easily, and of any other matters which may have to be administered either within or without the city. The guardians of the law shall pass any further enactments which their experience may show to be necessary, and supply any other points in which the law may be deficient. And now that these matters, and the buildings about the agora, and the gymnasia, and places of instruction, and theatres, are all ready and waiting for scholars and spectators, let us proceed to the subjects which follow marriage in the order of legislation.

Cle. By all means.

Ath. Assuming that marriages exist already, Cleinias, the mode of life during the year after marriage, before children are born, will follow next in order. In what way bride and bridegroom ought to live in a city which is to be superior to other cities, is a matter not at all easy for us to determine. There have been many difficulties already, but this will be the greatest of them, and the most disagreeable to the many. Still I cannot but say what appears to me to be right and true, Cleinias.

Cle. Certainly.

Ath. He who imagines that he can give laws for the public conduct of states, while he leaves the private life of citizens wholly to take care of itself; who thinks that individuals may pass the day as they please, and that there is no necessity of order in all things; he, I say, who gives up the control of their private lives, and supposes that they will conform to law in their common and public life, is making a great mistake. Why have I made this remark? Why, because I am going to enact that the bridegrooms should live at the common tables, just as they did before marriage. This was a singularity when first enacted by the legislator in your parts of the world, Megillus and Cleinias, as I should suppose, on the occasion of some war or other similar danger, which caused the passing of the law, and which would be likely to occur in thinly-peopled places, and in times of pressure. But when men had once tried and been accustomed to a common table, experience showed that the institution greatly conduced to security; and in some such manner the custom of having common tables arose.

Cle. Likely enough.

Ath. I said that there may have been singularity and danger in imposing such a custom at first, but that now there is not the same difficulty. There is, however, another institution which is the natural sequel to this, and would be excellent, but nowhere exists at present. The institution of which I am about to speak is not easily described or executed; and would be like the legislator setting the river on fire¹, as people say, or performing any other impossible feat.

Cle. What is the cause, Stranger, of this extreme hesitation?

Ath. You shall hear without any further loss of time. That which has law and order in a state is the cause of every good, but that which is disordered or ill-ordered is often the ruin of that which is well-ordered; and at this point the argument is
781 now waiting. For in your country, Cleinias and Megillus, the common tables of men are a heaven-born and admirable institution, but you are mistaken in leaving the women unregulated by law. They have no similar institution of public tables in the light of day, and just that part of the human race which is by nature prone to secrecy and stealth on account of their weak-

¹ Literally, carding the fire.

ness—I mean the female sex—has been left without regulation by the legislator, which is a great mistake. And, in consequence of this neglect, many things have grown lax among you, which might have been far better, if they had been only regulated by law; for the neglect of regulations about women may not only be regarded as a neglect of half the entire matter, but in proportion as woman's nature is inferior to that of men in capacity of virtue, in that proportion is she more important than the two halves put together. The careful consideration of this matter, and the arranging and ordering on a common principle all our institutions relating both to men and women, greatly conduces to the happiness of the state. But at present, such is the unfortunate condition of mankind, that no man of sense will even venture to speak of common tables in places and cities in which they have never been established at all; and how can any one avoid being utterly ridiculous, who attempts to compel women to show how much they eat and drink in public? There is nothing at which the sex is more likely to take offence. For women are accustomed to creep into dark places, and when dragged out into the light they will exert their utmost powers of resistance, and be far too much for the legislator. And therefore, as I said before, in most places they will not endure to have the truth spoken without raising an outcry, but in this state perhaps they may. And if we may assume that our whole discussion about the state has not been mere idle talk, I should like to prove to you, if you will consent to listen, that this institution is good and proper; but if you had rather not, I will refrain.

Cle. There is nothing which we should both of us like better, Stranger, than to hear what you have to say.

Ath. Very good: And you must not be surprised if I go back a little, for we have plenty of leisure, and there is nothing to prevent us from considering in every point of view the subject of law.

Cle. True.

Ath. Then let us return once more to what we were saying at first. Every man should understand that the human race, either had no beginning at all, and will never have an end, but always will be and has been; or had a beginning an immense time ago.

Cle. Certainly.

Ath. Well, and have there not been constitutions and destructions of states, and all sorts of pursuits both orderly and disorderly, and diverse desires of meats and drinks always, and in all the world, and all sorts of changes of the seasons in which animals may be expected to have undergone innumerable transformations?

Cle. Certainly.

Ath. And may we not suppose that vines appeared, which had previously no existence, and also olives, and the gifts of Demeter and her daughter, of which one Triptolemus was the minister, and that, before they existed, animals took to devouring each other as they do still?

Cle. True.

Ath. And the practice of men sacrificing one another still exists among many nations; and, on the other hand, we hear of other human beings who did not even venture to taste¹ the flesh of a cow and had no animal sacrifices, but only cakes and fruits swimming in honey, and similar pure offerings, but no flesh or animals; from these they abstained under the idea that they ought not to eat them, and might not stain the altars of the Gods with blood. In former days men are said to have lived a sort of Orphic life, having the use of all lifeless things, but abstaining from all living things.

Cle. Such has been the constant tradition, and is very likely true.

Ath. Some one might say to me, what is the drift of all this?

Cle. A very pertinent question, Stranger.

Ath. And therefore I will endeavour, Cleinias, if I can, to draw the natural inference.

Cle. Proceed.

Ath. I see that among men all things depend upon three wants and desires, of which the end is virtue, if they are rightly led by them, or the opposite if wrongly. Now these are eating and drinking, which begin at birth; every animal has a natural desire for them, and is violently excited, and rebels against him who says that he must not satisfy all his pleasures and appetites, and get rid of the corresponding pains. And the third and

¹ Reading ἔτι and ἐτόλμων.

greatest and sharpest want and desire breaks out last, and is the fire of sexual lust, which kindles in men every species of wantonness and madness. And these three disorders we must endeavour to master by the three great principles of fear and law and right reason; turning them away from that which is called pleasantest to the best, using the Muses and the Gods who preside over contests to extinguish their increase and influx.

But to return: After marriage let us speak of the birth of children, and after their birth of their nurture and education. In the course of discussion the several laws will be perfected, and we shall at last arrive at the common tables. Whether such associations are to be confined to men, or extended to women also, we shall see better when we approach and take a nearer view of them; and we may then determine what previous institutions are required and will have to precede them. As I said before, we shall see them more in detail, and shall be better able to lay down the laws which are proper or suited to them.

Cle. Very true.

Ath. Let us keep in mind the words which have now been spoken; for hereafter there may be need of them.

Cle. What do you bid us keep in mind?

Ath. That which we comprehended under the three words—first, eating; secondly, drinking; thirdly, the excitement of love.

Cle. I shall be sure to remember, Stranger.

Ath. Very good. Then let us now proceed to marriage, and teach persons in what way they shall beget children, threatening them, if they disobey, with the terrors of the law.

Cle. What do you mean?

Ath. The bride and bridegroom should consider that they are to produce for the state the best and fairest specimens of children which they can. Now all men who are associated in any action always succeed when they attend and give their mind to what they are doing, but when they do not give their mind or have no mind, they fail; wherefore let the bridegroom give his mind to the bride and to the begetting of children, and the bride in like manner give her mind to the bridegroom, and

particularly at the time when their children are not yet born.
78+ And let the women whom we have chosen to be the overseers of these matters, whether many or few, in whatever number and at whatever time the magistrates may command, assemble every day in the temple of Eileithyia during a third part of a day, and being there assembled, let them inform one another of any one whom they see, whether man or woman, of those who are begetting children without due regard to the provisions of the law concerning nuptial rites and sacrifices; and let the begetting of children and the supervision of those who are begetting them continue ten years and no longer, during the time when marriage is fruitful. But if any continue without children up to this time, let them take counsel with their kindred and with the women holding office, and be divorced for their mutual benefit. If, however, any dispute arises about what is proper and for the interest of either party, they shall choose ten of the guardians of the law and abide by their permission and appointment. The women who preside over these matters shall enter into the houses of the young, and partly by admonitions and partly by threats make them give over their ignorance and error; and if they rebel, let them go and tell the guardians of the law, and they shall prevent them; and if they cannot prevent them, they shall declare the matter to the public assembly; and let them write up their names and make oath that they cannot reform such and such an one; and let him who is thus written up, if he cannot in a court of law convict those who have inscribed his name, be deprived of the privileges of a citizen in the following respects:—let him not go to weddings nor to the birthday solemnities of children; and if he go, let any one who pleases strike him with impunity; and let the same regulations hold about women: let not a woman be allowed to appear abroad, or receive honour, or go to nuptial and birthday festivals, if she in like manner be written up as acting disorderly and cannot obtain a verdict. And if, when they themselves have done begetting children according to the law, a man or woman have connection with another man or woman who are still begetting children, let the same penalties be inflicted upon them as upon those who are still having a family; and when the time for procreation has passed let the man or woman who refrain in such

matters be held in esteem, and let those who do not refrain be held in the contrary of esteem—that is to say, disesteem. Now, 785 if the greater part of mankind behave modestly, the enactments of law may be left to slumber; but, if they are disorderly, the enactments having been passed, let them be carried into execution. To every man the first year is the beginning of life, and the time of birth ought to be written down in the temples of their fathers as the beginning of existence to every child, whether boy or girl. Let every phratria have inscribed on a whited wall the names of the successive archons by whom the years are reckoned. And near to them let the living members of the phratria be inscribed, and when they depart life let them be erased. The limit of marriageable ages for a woman shall be from sixteen to twenty years at the longest,—for a man, from thirty to thirty-five years; and let a woman hold office at forty, and a man at thirty years. Let a man go out to war from twenty to sixty years, and for a woman, if there appear any need to make use of her in military service, let the time of service be after she shall have brought forth children up to fifty years of age; and let regard be had to what is possible and suitable to each.

BOOK VII.

788 AND now, assuming that children of both sexes have been born, their nurture and education will properly follow next in order ; this cannot be left altogether unnoticed, and yet may be thought rather a subject for precept and admonition than for law. In private life there are many little things, not always apparent, arising out of the pleasures and desires and pains of individuals, which are contrary to the intention of the legislator—these minutiae alter and discompose the characters of the citizens, and cause great evil in states ; for they are so small and of such frequent occurrence, that there would be an unseemliness and want of propriety in making them penal by law ; and if made penal, they are the destruction of the written law, because mankind get the habit of frequently transgressing in small matters. The result is that you cannot legislate about them, and still less can you say nothing. I speak somewhat darkly, but I shall endeavour also to bring my wares into the light of day, for I acknowledge that at present there is a want of clearness in what I am saying.

Cle. Very true.

Ath. Am I not right in maintaining that a good education is that which tends most to the improvement of mind and body ?

Cle. Undoubtedly.

Ath. And nothing can be plainer than that the fairest bodies ought to grow up from infancy in the best and straightest manner ?

Cle. Very true.

Ath. And do we not further observe that the first shoot of

every living thing is by far the greatest and fullest? Many will even contend that a man at twenty-five does not grow to twice the height which he attained at five.

Cle. True.

Ath. Well, and is not rapid growth without proper and abundant exercise the source of endless evils in the body?

Cle. Yes.

Ath. And the body should have the most exercise when 789 growing most?

Cle. But, Stranger, are we to impose this great amount of exercise upon newly-born infants?

Ath. Nay, rather on the bodies of infants still unborn.

Cle. What do you mean, my good sir? In the process of gestation?

Ath. Exactly. I am not at all surprised that you have never heard of this very peculiar sort of gymnastic applied to such little creatures, which, although strange, I will endeavour to explain to you.

Cle. By all means.

Ath. The practice is more easy for us to understand than for you, by reason of certain amusements which are carried to excess at Athens. Not only boys, but often older persons, are in the habit of keeping quails and cocks, which they train to fight one another. And they are far from thinking that the contests in which they stir them up to fight with one another are sufficient exercise; for, in addition to this, they carry them about—each having a big bird tucked in under his arms, and the smaller in his hands, and go for a walk of a great many miles for the sake of health, that is to say, not their own health but the health of the birds; and this proves to any one who is capable of understanding, that all bodies are benefited by shakings and movements, when they are moved without weariness, whether the motion proceeds from themselves, or from a swing, or at sea, or on horseback, or is caused by other bodies in whatever way moving, and thus gaining the mastery over food and drink, and being able to impart beauty and health and strength:—admitting all this, what follows? Shall we make a ridiculous law that the pregnant woman shall walk about and fashion the embryo within as we fashion wax before it hardens, and after birth

swathe it for two years. Suppose that we compel nurses, under penalty of a legal fine, to be always carrying the children somewhere or other, either into the country, or to the temples, or to their relations' houses until they are well able to stand, and to take care that their limbs are not distorted by leaning on them when they are too young,—they should continue to carry them until the infant has completed its third year; the nurses should be strong, and there should be more than one of them. Shall these be our rules, and shall we impose a penalty for the neglect of them? No, no; penalty more than enough will fall upon our own heads.

Cle. What penalty?

Ath. Ridicule, and the difficulty of getting the feminine servant-like dispositions of the nurses to comply.

Cle. Then why was there any need to speak of the matter at all?

Ath. The reason is, that masters and freemen in states when they hear of it are very likely to arrive at a true conviction that without due regulation of private life in cities, stability in the laying down of laws is hardly to be expected; and he who makes this reflection may himself adopt the laws just now mentioned, and, adopting them, may order his house and state well and be happy.

Cle. Likely enough.

Ath. And therefore let us proceed with our legislation until we have determined the exercises which are suited to the souls of young children, in the same manner as we have begun to go through the rules which relate to their bodies.

Cle. By all means.

Ath. Let us assume, then, as a first principle in relation both to the body and soul of very young creatures, that nursing and moving about by day and night is good for them all, and that the younger they are, the more they will need it; infants should live, if that were possible, as if they were always rocking at sea. This is the lesson which nurses have learned from experience, and which we may also learn from the use of the remedy of motion in the rites of the Corybantes; for when mothers want their restless children to go to sleep they do not employ rest, but, on the contrary, motion—rocking them in their arms; nor

do they give them silence, but they sing to them and lap them in sweet strains; and the Bacchic women are cured of their frenzy in the same manner by the use of the dance and of music.

Cle. Well, Stranger, and what is the reason of this?

Ath. The reason is obvious.

Cle. What?

Ath. The affection both of the Corybantes and of the children is an emotion of fear; and fear springs out of an evil habit of the soul. And when some one applies external agitation to affections of this sort, the motion coming from without gets the better of the terrible and violent internal one, and produces a peace and calm in the soul, and quiets the restless palpitation of the heart, which is a thing much to be desired, sending some to sleep, and making others who are awake to dance to the pipe with the help of the Gods to whom they offer acceptable sacrifices, and producing in them a sound mind, which takes the place of their former agitations. And in this, as I would shortly say, there is a considerable amount of sense.

Cle. Certainly.

Ath. But if fear has such a power we ought to consider further, that every soul which from youth upward has been familiar with fears, will be made more liable to fear, and every one will admit that this is the way to form a habit of cowardice and not of courage.

Cle. Certainly.

Ath. And, on the other hand, the habit of overcoming, from our youth upwards, the fears and terrors which beset us, may be said to be an exercise of courage?

Cle. True.

Ath. And we may say that the use of exercise and motion in the earliest years of life has a great tendency to create a part of virtue in the soul?

Cle. Quite true.

Ath. Further, a cheerful temper, or the reverse, may be regarded as having much to do with high spirit on the one hand, or with cowardice on the other?

Cle. To be sure.

Ath. Then now we must endeavour to show how and to what

extent we may, if we please, implant either character in the young.

Cle. Certainly.

Ath. There is a common opinion, that luxury makes the disposition of youth morose and irascible and vehemently excited by trifles; that on the other hand excessive and savage servitude makes men mean and abject, and haters of their kind, and therefore makes them undesirable associates.

Cle. But how can the state educate those who do not as yet understand the language of the country, and are therefore incapable of appreciating any sort of instruction?

Ath. I will tell you how: Every animal that is born is wont to utter some cry, and this is especially the case with man, and he is also affected with the inclination to weep more than any other animal.

Cle. Quite true.

Ath. Do not nurses, when they want to know what an
792 infant desires, judge by these signs?—when anything is brought to the infant and he is silent, then he is supposed to be pleased, but, when he weeps and cries out, then he is not pleased. For tears and cries are the inauspicious signs by which children show what they love and hate. Now the time which is thus spent is no less than three years, and is a very considerable portion of life to be passed ill or well.

Cle. True.

Ath. Does not the morose and ill-natured man appear to you to be full of lamentations and sorrows more than a good man ought to be?

Cle. Certainly he does.

Ath. Well, but if during these three years every possible care were taken that our nursling should have as little of sorrow and fear, and in general of pain as was possible, might we not expect in early childhood to make his soul more gentle and cheerful?

Cle. To be sure, Stranger,—more especially if we could procure him a variety of pleasures.

Ath. There I cannot agree with you, sweet Cleinias: to begin educating him in that way would be his utter ruin. Let us see whether I am right.

Cle. Proceed.

Ath. The point about which you and I differ is of great importance, and I hope that you, Megillus, will help to decide between us. For I maintain that the true life should neither seek for pleasures, nor, on the other hand, entirely avoid pains, but should embrace the middle state, which I just spoke of as gentle or propitious, and is a state which we by some divine presage and inspiration rightly ascribe to God. Now, I say, he among us who would be divine ought to pursue after this mean habit—he should not rush headlong into pleasures, for he will not be free from pains; nor should we allow any one, young or old, male or female, to be thus given any more than ourselves, and least of all the newly-born infant, for in infancy more than at any other time the character is engrained by habit. Nay, more, if I were not afraid of appearing to be ridiculous, I would say that a woman during her year of pregnancy should of all women be most carefully tended, and kept from violent or excessive pleasures and pains; and at that time she should cultivate gentleness and benevolence and kindness.

Cle. You need not ask Megillus, Stranger, which of us has 793 most truly spoken; for I agree that all men ought to avoid the life of unmingled pain or pleasure, and pursue always a middle course. And having spoken well, may I add that you have been well answered?

Ath. Very good, Cleinias; and now let us all three consider a further point.

Cle. What is it?

Ath. That all the matters which we are now describing are commonly called by the general name of unwritten customs, and what are termed the laws of our ancestors are all of similar nature. And then arises in our minds the further reflection that we ought not to call these things laws, nor yet to leave them unmentioned; for they are the bonds of the whole state, and come in the intervals of the written laws which are or are hereafter to be laid down; they are just ancient hereditary customs, which, if they are rightly ordered and made habitual, envelope and entirely preserve the previously existing written law; but if they depart from right and fall into disorder, then they are like the props of builders which give way in the

centre and produce a common ruin in which one part drags another down, and the fair superstructure falls because the old foundations are undermined. Reflecting upon this, Cleinias, you ought to bind together the new state in every possible way, omitting nothing, whether great or small, of what are called laws or manners or pursuits, for by these means a city is bound together, and all these things are only lasting when they depend upon one another; and, therefore, we must not wonder if we find that many apparently trifling customs or usages come pouring in and lengthening out our laws.

Cle. Very true: we are disposed to agree with you.

Ath. Up to the age of three years, whether of boy or girl, if a person strictly carries out our previous regulations and makes them a principal aim, he will do much for the advantage of the young creatures. But at three, four, five, and six years the childish nature will require sports; now is the time to get rid of self-will in him, punishing him, not so as to disgrace him. As we were saying about slaves, that we ought neither to punish them in hot blood or so as to anger them, nor yet to leave them unpunished lest they become self-willed, a like rule is to be observed in the case of the free-born. Children at that age have certain natural modes of amusement which they find out for themselves when they meet. And all the children who are between the ages of three and six ought to meet at the temples of the villages, the several families of a village uniting on one spot, and the nurses seeing that the children behave properly and orderly,—they themselves and their whole company being under the care of one of the twelve women aforesaid annually appointed out of their number by the guardians of the law to inspect and order each company. Let the twelve be appointed by the women who have authority over marriage, one out of each tribe and all of the same age; and when appointed, let them hold office and go to the temples every day, punishing all offenders, male or female, who are slaves or strangers, by the help of some of the public servants; but if any citizen disputes the punishment, let her bring him before the wardens of the city; or, if there be no dispute, let her punish him herself. After the age of six years the time has arrived for the separation of the sexes,—

let boys live with boys, and girls in like manner with girls. Now they must begin to learn—the boys going to teachers of horsemanship and the use of the bow, the javelin, and sling; and if they do not object, let women also go to learn if not to practise; above all, they ought to know the use of arms; for I may note, that the practice which now almost universally prevails is due to ignorance.

Cle. In what respect?

Ath. In this respect, that the right and left hand are supposed to differ by nature when we use them; whereas no difference is found in the use of the feet and the lower limbs; but in the use of the hands we are in a manner lame, by reason of the folly of nurses and mothers; for although our several limbs are by nature balanced, we create a difference in them by bad habit. In some cases this is of no consequence, as, for example, when we hold the lyre in the left hand, and the plectrum in the right, but it is downright folly to make the same distinction in other cases. The custom of the Scythians proves our error; 795 for they not only hold the bow from them with the left hand and draw the arrow to them with their right, but use either hand for both purposes. And there are many similar examples in charioteering and other things, from which we may learn that those who make the left side weaker than the right act contrary to nature. In the case of the plectrum, which is of horn only, and similar instruments, as I was saying, it is of no consequence, but makes a great difference, and may be of very great importance to the warrior who has to use iron weapons, bows and javelins, and the like; above all, when in heavy armour, he has to fight against heavy armour. And there is a very great difference between one who has learnt and one who has not, and between one who has been trained in gymnastic exercises and one who has not been. For as he who is perfectly skilled in the Pancratium or boxing or wrestling, is not unable to fight from his left side, and does not limp and draggle in confusion when his opponent makes him change his position, so in heavy-armed fighting, and in all other things, if I am not mistaken, the like holds—he who has these double powers of attack and defence ought not in any case to leave them either unused or untrained: and if a person had the

nature of Geryon or Briareus he ought to be able with his hundred hands to throw a hundred darts. Now, the rulers, male and female, should see to all these things; the women superintending the nursing and amusements of the children, and the men superintending their education, that all of them, boys and girls alike, may be sound hand and foot, and may not, if they can help, spoil the gifts of nature by bad habits.

Education has two branches,—one of gymnastic, which is concerned with the body, and the other of music, which is designed for the improvement of the soul. And gymnastic has also two parts—dancing and wrestling; and one sort of dancing imitates musical recitation, and aims at preserving dignity and freedom; the other aims at producing health, agility, and beauty in the limbs and parts of the body, giving the proper flexion and extension to each of them, diffusing and accompanying the harmonious motion of the dance everywhere. As 796 regards wrestling, the tricks which Antaeus and Cercyon devised in their systems out of a vain spirit of competition, or the tricks of boxing which Epeius or Amycus invented, are useless for war, and do not deserve to have much said about them; but the art of wrestling erect and keeping free the neck and hands and sides, working with energy and constancy, with a composed strength, and for the sake of health—these are always useful, and are not to be neglected, but to be enjoined alike on masters and scholars, when we reach that part of legislation; and we will desire the one to give their instructions freely, and the others to receive them thankfully. Nor, again, must we omit suitable imitations of war in our dances; in Crete there are the armed sports of the Curetes, and in Lacedaemon of the Dioscori. And our virgin lady, delighting in the sports of the dance, thought it not fit to dance with empty hands; she must be clothed in a complete suit of armour, and in this attire go through the dance; and youths and maidens should in every respect imitate her example, honouring the Goddess both with a view to the actual necessities of war, and to festive amusements: it will be right also for the boys until such time as they go out to war to make processions and supplications to the Gods in goodly array, armed and on horseback, in dances and marches,

fast or slow, offering up prayers to the Gods and to the sons of Gods; and also engaging in contests and preludes of contests, if at all, with these objects. For these sort of exercises, and no others, are useful both in peace and war, and are beneficial both to states and to private houses. But other labours and sports and excessive training of the body are unworthy of freemen, O Megillus and Cleinias.

I have now completely described the kind of gymnastic which I said at first ought to be described; if you know of any better, will you communicate your thoughts?

Cle. It is not easy, Stranger, to put these principles of gymnastic aside and to enunciate better ones.

Ath. Next in order follow the gifts of the Muses and of Apollo: before, we fancied that we had said all, and that gymnastic alone remained to be discussed; but now we see clearly what points have been omitted, and should be first proclaimed; of these, then, let us proceed to speak.

Cle. By all means.

797

Ath. Hear me once more, although you have heard me say the same before—that caution must be always exercised, both by the speaker and by the hearer, about anything that is singular and unusual. For my tale is one which many a man would be afraid to tell, and yet I have a confidence which makes me go on.

Cle. What have you to say, Stranger?

Ath. I say that in states generally no one has observed that the plays of childhood have a great deal to do with the permanence or want of permanence in legislation. For when plays are ordered with a view to children having the same plays and amusing themselves after the same manner, and finding delight in the same playthings, the more solemn institutions of the state are allowed to remain undisturbed. Whereas if sports are disturbed and innovations are made in them, and they constantly change, and the young never speak of their having the same likings, or the same established notions of good and bad taste, either in the bearing of their bodies or in their dress, but he who devises something new and out of the way in figures and colours and the like is held in special honour, we may truly say that no greater evil can happen in

a state; for he who changes the sports is secretly changing the manners of the young, and making the old to be dishonoured among them and the new to be honoured. And I affirm that there is nothing which is a greater injury to all states than saying or thinking thus. Will you hear me tell how great I deem it to be?

Cle. You mean the evil of blaming antiquity in states?

Ath. Exactly.

Cle. If you are speaking of that, you will find in us hearers who are disposed to receive what you say not unfavourably but most favourably.

Ath. I should expect so.

Cle. Proceed.

Ath. Well, then, let us give all the greater heed to one another's words. The argument says that to change from anything except the bad is the most dangerous of all things; this is true in the case of the seasons and of the winds, in the management of our bodies and the habits of our minds—true of all things except, as I said before, of the bad. He who looks at the constitution of individuals accustomed to eat any sort of meat or drink any drink or do any work which they could get, may see that they are at first disordered, but afterwards, as time goes on, their bodies grow adapted to them, and they learn to know and like variety, and have good health and enjoyment of life; and if ever afterwards they are confined again to a superior diet, at first they are troubled with disorders, and with difficulty become habituated to their new food. A similar principle we may imagine to hold good about the minds of men and the nature of their souls. For when they have been brought up in certain laws, which by some Divine Providence have remained unchanged during long ages, so that no one has any memory or tradition of their ever having been otherwise than they are, then every one is afraid and ashamed to change that which is established. The legislator must somehow find a way of implanting this reverence for antiquity, and I would propose the following way:—People are apt to fancy, as I was saying before, that when the plays of children are altered they are merely plays, not seeing that the most serious and detrimental consequences arise out of the change; and they readily comply

with the child's wishes instead of deterring him, not considering that these children who make innovations in their games, when they grow up to be men will be different from the last generation of children, and, being different, will desire a different sort of life, and under the influence of this desire will want other institutions and laws; and no one ever apprehends that there will follow what I just now called the greatest of evils to states. Changes in bodily fashions are no such serious evils, but frequent changes in the praise and censure of manners are the greatest of evils, and require the utmost prevision.

Cle. To be sure.

Ath. And now do we still hold to our former assertion, that rhythms and music in general are imitations of good and evil characters in men? What say you?

Cle. That is the only doctrine which I can admit.

Ath. Must we not, then, try in every possible way to prevent our youth desiring imitations and novelties either in dance or song? nor must any one be allowed to offer them varieties of pleasures.

Cle. Most true.

Ath. Can any better mode of effecting this object be imagined 799 by any of us than that of the Egyptians?

Cle. What is their method?

Ath. They consecrate every sort of dance or melody, first ordaining festivals,—calculating for the year what they ought to be, and at what time, and in honour of what Gods, sons of Gods, and heroes they ought to be celebrated; and, in the next place, what hymns ought to be sung at the several sacrifices, and with what dances the particular festival is to be honoured. This is to be arranged at first by certain persons, and, when arranged, the whole assembly of the citizens are to offer sacrifices and libations to the Fates and all the other Gods, and to consecrate the several odes to Gods and heroes: and if any one offers any other hymns or dances to any one of the Gods, the priests and priestesses, with the consent of the guardians of the law, shall religiously and lawfully exclude him, and he who is excluded, if he do not submit, shall be liable all his life long to have a suit of impiety brought against him by any one who likes.

Cle. Very good.

Ath. In the consideration of this subject, let us remember what is due to ourselves.

Cle. To what are you referring?

Ath. I mean that any young man, and much more any old one, when he sees or hears anything strange or unaccustomed, does not at once run to embrace the paradox, but he stands considering, like a person who is at a place where three ways meet, and does not very well know his way—he may be alone or he may be walking with others, and he will say to himself and them, ‘Which is the way?’ and will not move forward until he is satisfied that he is going right. And this is our case, for a strange discussion on the subject of law has arisen, which requires the utmost consideration, and we should not at our age be too ready to speak about such great matters, or be confident that we can say anything certain all in a moment.

Cle. Most true.

Ath. Then we will allow time for reflection, and decide when we have given the subject sufficient consideration. But that we may not be hindered from completing the natural arrangement of our laws, let us proceed to the conclusion of them in due order; for very possibly, if God will, the exposition of them, when completed, may throw light on our present perplexity.

Cle. Excellent, Stranger; let us do as you propose.

Ath. Let us then affirm the paradox that strains of music are our laws (*νόμοι*), and this latter being the name which the
800
ancients gave to lyric songs, they probably would not have very much objected to our proposed application of the word. Some one, either asleep or awake, must have had a dreamy suspicion of their nature. And let our decree be as follows:—No one in singing or dancing shall offend against public and consecrated models, and the general fashion among the youth, any more than he would offend against any other law. And he who observes this law shall be blameless; but he who is disobedient, as I was saying, shall be punished by the guardians of the laws, and by priests and priestesses: suppose that we imagine this to be our law.

Cle. Very good.

Ath. Can any one who makes such laws escape ridicule? Let us see. I think that our only safety will be in first framing certain models for them. One of these models shall be as follows:—If when a sacrifice is going on, and the victims are being burnt according to law,—if, I say, any one who may be a son or brother, standing by another at the altar and over the victims, horribly blasphemes, will he not inspire despondency and evil omens and forebodings in the mind of his father and of his other kinsmen?

Cle. Of course.

Ath. And this is just what takes place in almost all our cities. A magistrate offers a public sacrifice, and there come in not one but many choruses, who stand by themselves a little way from the altar, and from time to time pour forth all sorts of horrible blasphemies on the sacred rites, exciting the souls of the audience with words and rhythms, and melodies most sorrowful to hear; and he who can at the instant the city is sacrificing make the citizens weep most, carries away the palm of victory. Now, ought we not to forbid such strains as these? And if ever our citizens must hear such lamentations, then on some unblest and inauspicious day let there be choruses of foreign and hired minstrels, like those who accompany the departed at funerals with barbarous Carian chants. That is the sort of thing which will be appropriate if we have such strains at all; and let the apparel of the singers be not circlets and ornaments of gold, but the reverse. Enough of the description. And now I will ask once more whether we shall lay down as one of our principles of song—

Cle. What?

Ath. That we should avoid every evil word. I need hardly 801ask again, but shall assume that you agree with me.

Cle. By all means; that law is approved by the suffrage of all of us.

Ath. But what shall be our next musical law or type? Ought not prayers to be offered up to the Gods when we sacrifice?

Cle. Certainly.

Ath. And our third law, if I am not mistaken, will be to the effect, that our poets understanding prayers to be requests which we make to the Gods, will take especial heed that they do not

by mistake ask for evil instead of good. To make such a prayer would surely be too ridiculous.

Cle. Very true.

Ath. Were we not a little while ago quite determined that no silver or golden Plutus should dwell in our state?

Cle. To be sure.

Ath. And what did this illustration mean? Did we not imply that the poets are not always quite capable of knowing what is good or evil? And if one of them utters a mistaken prayer in song or words, he will make our citizens pray for the opposite of what is good in matters of the highest import; than which, as I was saying, there can be few greater mistakes. Shall we then propose as one of our laws and models relating to the Muses—

Cle. What?—will you explain the law more precisely?

Ath. Shall we make a law that the poet shall compose nothing contrary to the ideas of the lawful, or just, or beautiful, or good, which are allowed in the state? nor shall he be permitted to communicate his compositions to any private individuals, until he shall have shown them to the appointed judges, and the guardians of the law, and they are satisfied with them. As to the persons whom we appoint to be our legislators about music and directors of education, they have been already indicated. Once more then, as I have asked more than once, shall this be our third law, and type, and model—What do you say?

Cle. Yes, by all means.

Ath. Next it will be proper to have hymns and praises of the Gods, intermingled with prayers; and after the Gods prayers and praises should be offered in like manner to demigods and heroes, suitable to their several characters.

Cle. Certainly.

Ath. In the third place there will be no objection to a law, that citizens who are departed and have done good and energetic deeds, either with their souls or with their bodies, and have been obedient to the laws, should receive eulogies; this will be very fitting.

802 *Cle.* Quite true.

Ath. But to honour with hymns and panegyrics those who

are still alive is not safe; a man should run his course, and make a fair ending, and then we will praise him; and let praise be given equally to women as well as men who have been distinguished in virtue. The order of songs and dances shall be as follows:—There are many ancient musical compositions and dances which are excellent, and from these the government may freely select what is proper and suitable; and they shall choose judges of not less than fifty years of age, who shall make the selection, and any of the old poems which they deem sufficient they shall include; any that is deficient or altogether unsuitable, they shall either utterly throw aside, or examine and amend, taking into their counsel poets and musicians, and making use of their poetical genius; but explaining to them the wishes of the legislator in order that they may regulate dancing, music, and all choral strains, according to his mind; and not allowing them to indulge, except in some minor matters, their individual pleasures and fancies. Now, the irregular strain of music is always made ten thousand times better by attaining to law and order, and rejecting the honied Muse—not however that we mean wholly to exclude pleasure, which is the characteristic of all music. And if a man be brought up from childhood to the age of discretion and maturity in the use of the orderly and severe music, when he hears the opposite he detests it, and calls it illiberal; but if trained in the sweet and vulgar music, he deems the opposite cold and displeasing. So that, as I was saying before, while he who hears them gains no more pleasure from the one than from the other, the one has the advantage of making those who are trained in it better men, whereas the other makes them worse.

Cle. Very true.

Ath. Again, we must distinguish and determine on some general principle what songs are suitable to women, and what to men, and must assign to them their proper melodies and rhythms. It is shocking for a whole harmony to be inharmonical, or for a rhythm to be unrhythmical, and this will happen when the melody is inappropriate to them. And, therefore, the legislator must assign to them also their forms. Now, both sexes have melodies and rhythms which of necessity

belong to them; and those of women are clearly enough indicated by their natural difference. The grand, and that which tends to courage, may be fairly called manly; but that which inclines to moderation and temperance, may be declared both
803 in law and in ordinary speech to be the more womanly quality: This, then, will be the general order of them.

Let us now speak of the manner of teaching and imparting them, and the persons to whom, and the time when, they are severally to be imparted. As the shipwright first lays down the lines of the keel, and draws the design in outline, so do I seek to distinguish the patterns of life, and lay down their keels according to the nature of different men's souls; seeking truly to consider by what means, and in what ways, we may go through the voyage of life best. Now, human affairs are hardly worth considering in earnest, and yet we must be in earnest about them,—a sad necessity constrains us. And having got thus far, there will be a fitness in our completing the matter, if we can only find some suitable means of doing so. But what am I saying? and yet very probably there may be a meaning latent in these very words.

Cle. To be sure.

Ath. I say that about serious matters a man should be serious, and about a matter which is not serious he should not be serious; and that God is the natural and worthy object of a man's most serious and blessed endeavours; who, as I said before, is made to be the plaything of God, and that this, truly considered, is the best of him; wherefore every man and woman should walk seriously, and pass life in the noblest of pastimes, and be of another mind from what they now are.

Cle. In what respect?

Ath. Now they think that their serious pursuits should be for the sake of their sports, for they deem war a serious pursuit, which must be managed well for the sake of peace; but the truth is, that there neither is, nor has been, nor ever will be, either amusement or instruction in any degree worth speaking of in war, which is nevertheless deemed by us to be the most serious of our pursuits. And therefore, as we say, every one of us should live the life of peace as long and as well as he can. And what is the right way of living? Are we to live in sports

always? If so, in what kind of sports? We ought to live sacrificing, and singing, and dancing, and then a man will be able to propitiate the Gods, and to defend himself against his enemies and conquer them in battle. The type of song or dance by which he will propitiate them has been described, and the paths along which he is to proceed have been cut for him. He will go forward in the spirit of the poet:—

804

‘Telemachus, some things thou wilt thyself find in thy heart, but other things God will suggest; for I deem that thou wast not born or brought up without the will of the Gods.’

And this ought to be the view of our alumni; they ought to think that what has been said is enough for them, and that any other things some God or a demi-God will suggest to them—he will tell them to whom, and when, and to what Gods severally they are to sacrifice and perform dances, and how they may propitiate the deities, and live according to the appointment of nature; being for the most part puppets, but having some little share of reality.

Meg. You have a low opinion of mankind, Stranger.

Ath. Nay, Megillus, I was only comparing them with the Gods; and under that feeling I spoke. Let us grant, if you wish, that the human race is not to be despised, but is worthy of some consideration.

Next follow the buildings for gymnasia and schools open to all; these are to be in three places in the midst of the city; and outside the city and in the surrounding country there shall be schools for horse exercise, and open spaces also in three places, arranged with a view to archery and the throwing of missiles, at which young men may learn and practise. Of these mention has already been made; and if the mention be not sufficiently explicit, let us speak further of them and embody them in laws. In these several schools let there be dwellings for teachers, who shall be brought from foreign parts by pay, and let them teach the frequenters of the school the art of war and the art of music, and the children shall come not only if their parents please, but if they do not please; and if their education is neglected, there shall be compulsory education, as the saying is, of all and sundry, as far as this is possible; and the pupils shall be regarded as belonging to the state rather than to their

parents. My law would apply to females as well as males; they shall both go through the same exercises. I assert without fear of contradiction that gymnastic and horsemanship are as suitable to women as to men. Of the truth of this I am persuaded from ancient tradition, and at the present day there are said to be myriads of women in the neighbourhood of the Black Sea, called Sauromatides, who not only ride on
805 horseback like men, but have enjoined upon them the use of bows and other weapons equally with the men. And I further affirm, that if these things are possible, nothing can be more absurd than the practice which prevails in our own country of men and women not following the same pursuits with all their strength and with one mind, for thus the state, instead of being a whole, is reduced to a half, and yet has the same imposts to pay and the same toils to undergo; and what can be a greater mistake for any legislator to make?

Cle. Very true; and much of what has been asserted by us, Stranger, is contrary to the custom of states; still, in saying that the discourse should be allowed to proceed, and that when the discussion is completed, we should choose what seems best, you have spoken very properly, and have made me feel compunction for what I said. Tell me, then, what you would next wish to say.

Ath. I should wish to say, Cleinias, as I said before, that if the possibility of these things were not sufficiently proven in fact, then there might be an objection to the argument, but the fact being as I have said, he who rejects the law must find some other ground of objection; and, failing this, our exhortation will still hold good, nor will any one deny that women ought to share as far as possible in education and in other ways with men, for consider;—if women do not share in their whole life with men, then they must have some other order of life.

Cle. Certainly.

Ath. And what arrangement of life to be found anywhere is preferable to this community which we are now assigning to them? Shall we prefer that which is adopted by the Thracians and many other races who use their women to till the ground and to be shepherds of their herds and flocks, and to minister

to them like slaves? Or shall we do as we and people in our part of the world do? getting together, as the phrase is, all our goods and chattels into one dwelling—these we entrust to our women, who are the stewards of them; and who also preside over the shuttles and the whole art of spinning. Or shall we take a middle course, as in Lacedaemon, Megillus, letting the 806 girls share in gymnastic and music, while the grown-up women, no longer employed in spinning wool, are actively engaged in weaving the web of life, which will be no cheap or mean employment, and in the duty of serving and taking care of the household and bringing up children in which they will observe a sort of mean, not participating in the toils of war; and if there were any necessity that they should fight for their city and families, unlike the Amazons, they would be unable to take part in archery or any other skilled use of missiles, nor could they, after the example of the Goddess, carry shield or spear, or stand up nobly for their country when it was being destroyed, and strike terror into their enemies, if only because they were seen in regular order? Living as they do, they would never dare at all to imitate the Sauromatides, whose women, when compared with ordinary women, would appear to be like men. Let him who will, praise your legislators, but I must say what I think. The legislator ought to be whole and perfect, and not half a man only; he ought not to let the female sex live softly and waste money and have no order of life, while he takes the utmost care of the male sex, and leaves half of life only blest with happiness, when he might have made the whole state happy.

Meg. What shall we do, Cleinias? Shall we allow a stranger to run down Sparta in this fashion?

Cle. Yes; for as we have given him liberty of speech we must let him go on until we have perfected the work of legislation.

Meg. Very true.

Ath. Then now I may proceed?

Cle. By all means.

Ath. What will be the manner of life among men who may be supposed to have their food and clothing provided for them in moderation, and who have entrusted the practice of the arts

to others, and whose husbandry committed to slaves paying a part of the produce, brings them a return sufficient for men living temperately; who, moreover, have common tables in which the men are placed apart, and near them are the common tables of their families, of their daughters and mothers, which day by day, the rulers, male and female, are to inspect and look to their mode of life and so dismiss them; after which the magistrate and his attendants shall honour with libations those Gods to whom that day and night are dedicated, and then go home? To men whose lives are thus ordered, is there no work to be done which is necessary and fitting, but shall each one of them live fattening like a beast? Such a life is neither just nor honourable, nor can he who lives it fail of meeting his due; and the due reward of the idle fatted beast is that he should be torn in pieces by some other valiant beast whose fatness is worn down by labours and toils. These regulations, if we duly consider them, will never perfectly take effect under present circumstances, nor as long as women and children and houses and all other things are the private property of individuals; but if we can attain the second-best form of polity, with that we may be satisfied. And to men living under this second polity there remains a work to be accomplished which is far from being small or insignificant, but is the greatest of all works, and ordained by the appointment of righteous law. For the life which is wholly concerned with the virtue of body and soul may truly be said to be twice, or more than twice, as full of toil and trouble as the pursuit after Pythian and Olympic victories, which debars a man from every employment of life. For there ought to be no bye-work interfering with the greater work of providing the necessary exercise and nourishment for the body, and instruction and education for the soul. Night and day are not long enough for the accomplishment of their perfection and consummation; and therefore to this end all freemen ought to arrange the time of their employments during the whole course of the twenty-four hours, from morning to evening and from evening to the morning of the next sunrise. There may seem to be some impropriety in the legislator determining minutely the little details of the management of the house, including such particulars as the

duty of wakefulness in those who are to be perpetual watchmen of the whole city ; for that any citizen should continue during the whole night in sleep, instead of being seen by all his servants, always the first to awake and the first to rise—this, whether the regulation is to be called a law or only a practice, should be deemed base and unworthy of a freeman ; also that the mistress of the house should be awakened by her handmaidens instead of herself first awakening them, is what her slaves, male and female, and her children, and, if that were possible, everything in the house should regard as base. If they rise early, they may all of them do much of their public and of their household business, as magistrates in the city, and masters and mistresses in their private houses, before the sun is up. Much sleep is not required by nature, either for our souls or bodies, or for the actions in which they are concerned. For no one who is asleep is good for anything, any more than if he were dead ; but he of us who has the most regard for life and reason keeps awake as long as he can, reserving only so much time for sleep as is expedient for health ; and much sleep is not required, if the habit of not sleeping be once formed. Magistrates in states who keep awake at night are terrible to the bad, whether enemies or citizens, and are honoured and revered by the just and temperate, and are useful to themselves and to the whole state.

A night which is short and devoted to work, in addition to all the above-mentioned advantages, infuses a sort of courage into the minds of the citizens. When the day breaks, the time has arrived for youth to go to their schoolmasters. Now, neither sheep nor any other animals can live without a shepherd, nor can children be left without tutors, or slaves without masters. And of all animals the boy is the most unmanageable, inasmuch as he has the fountain of reason in him not yet regulated ; he is the most insidious, sharp-witted, and insubordinate of animals. Wherefore he must be bound with many bridles ; in the first place, when he gets away from mothers and nurses, he must be under the control of tutors on account of his childishness and foolishness ; then, again, being a freeman, he must have teachers and be educated by them in anything which they teach, and must learn what he has to learn ; but

he is also a slave, and in that regard any freeman who comes in his way may punish him and his tutor and his instructor, if any of them does anything wrong; and he who comes across
809 him and does not inflict upon him the punishment which he deserves, shall incur the greatest disgrace; and let the guardian of the law, who is the director of education, see to him who coming in the way of the offences which we have mentioned, does not chastise them when he ought, or chastises them in a way which he ought not; let him keep a sharp look-out, and take especial care of the training of our children, directing their natures, and always turning them to good according to the law.

And how can our law sufficiently train the director of education himself; for as yet all has been imperfect, and nothing has been said either clear or satisfactory? Now, as far as possible, the law ought to leave nothing to him, but to explain everything, that he may be the interpreter and tutor of others. About dances and music and choral strains, I have already spoken both as to the character of the selection of them, and the manner in which they are to be improved and consecrated. But we have not yet spoken, O illustrious guardian of education, of the manner in which your pupils are to use those strains which are written in prose, although you have been informed what martial strains they are to learn and practise; what relates in the first place to the learning of letters, and secondly, to the lyre, and also to calculation, which, as we were saying, is needful for them all to learn, and any other things which are required with a view to war and the management of house and city, and, looking to the same object, what is useful in the revolutions of the heavenly bodies—the stars and sun and moon, and the various regulations about these matters which are necessary for the whole state—I am speaking of the arrangements of days in periods of months, and of months in years, which are to be observed, in order that times and sacrifices and festivals may proceed in regular and natural order, and keep the city alive and awake, the Gods receiving the honours due to them, and men having a better understanding about them: all these things, O my friend, have not yet been sufficiently declared by the legislator. Attend, then, to what

I am now going to say: We were telling you, in the first place, that you were not sufficiently informed about letters, and the objection made was to this effect,—‘That you were never told whether he who was meant to be a respectable citizen should apply himself in detail to that sort of learning, or not apply himself at all;’ and the same remark was made about the lyre. But now we say that he ought to attend to them. A fair time for a boy of ten years old to spend in letters is three 810 years; at thirteen years he should begin to handle the lyre, and he may continue at this for another three years, neither more nor less, and whether his father or himself like or dislike the study, he is not to be allowed to spend more or less time in learning music than the law allows. And let him who disobeys the law be deprived of those youthful honours of which we shall hereafter speak. Hear, however, first of all, what the young ought to learn in the early years of life, and what their instructors ought to teach them. They ought to be occupied with their letters until they are able to read and write; but the acquisition of perfect beauty or quickness in writing, if nature has not stimulated them to acquire these accomplishments in the given number of years, they should let alone. And as to the learning of compositions committed to writing which are unaccompanied by song, whether metrical or without rhythmical divisions, compositions in prose, as they are termed, having no rhythm or harmony—seeing how dangerous are the writings handed down to us by many writers of this class—what will you do with them, O most excellent guardians of the law? or how can the lawgiver rightly direct you about them? I believe that he will be in great difficulty.

Cle. What troubles you, Stranger? and why are you so perplexed in your mind?

Ath. You naturally ask, Cleinias, and to you, who are my partners in the work of education, I must state the difficulties of the case.

Cle. To what do you refer in this instance?

Ath. I will tell you. There is a difficulty in opposing many myriads of mouths.

Cle. Well, and have we not already opposed the popular voice in many important enactments?

Ath. That is quite true ; and you mean to imply that the road which we are taking may be disagreeable to some but is agreeable to as many others, or if not to as many, at any rate to persons not inferior to the others, and in company with them you bid me, at whatever risk, proceed along the path of legislation which has opened out of our present discourse, and to be of good cheer, and not to faint.

Cle. Certainly.

Ath. And I do not faint ; I say, indeed, that we have a great many poets writing in hexameter, trimeter, and all sorts of measures—some who are serious, others who aim only at raising a laugh—and all mankind declare that the youth who are rightly educated should be brought up and saturated with them ; they should be constantly hearing them read at recitations, and some would have them learn by heart entire poets ; while others select choice passages and long speeches, and make compendiums of them, saying that these shall be committed to memory, and that in this way only can a man be made good and wise by experience and learning. And you want me to say plainly in what they are right and in what they are wrong.

Cle. Yes, I do.

Ath. But how can I in one word rightly comprehend all of them ? I am of opinion, and, if I am not mistaken, there is a general agreement, that every one of these poets has said many things well and many things the reverse of well ; and if this be true, then I do affirm that much learning brings danger to youth.

Cle. Then how would you advise the guardian of the law to act ?

Ath. In what respect ?

Cle. I mean to what pattern should he look as his guide in permitting the young to learn some things and forbidding them to learn others. Do not shrink from answering.

Ath. My good Cleinias, I rather think that I am fortunate.

Cle. In what ?

Ath. I think that I am not wholly in want of a pattern, for when I consider the words which we have spoken from early dawn until now, and which, as I believe, have been inspired by

Heaven, they appear to me to be quite like a poem. When I reflected upon all these words of ours, I naturally felt pleasure, for of all the discourses which I have ever learnt or heard, either in poetry or prose, this seemed to me to be the justest, and most suitable for young men to hear; I cannot imagine any better pattern than this which the guardian of the law and the educator can have. They cannot do better than advise the teachers to teach the young these and the like words, and if they should happen to find writings, either in poetry or prose, or even unwritten discourses like these of ours, and of the same family, they should certainly preserve them, and commit them to writing. And, first of all, they shall constrain the teachers themselves to learn and approve them, and any of them who will not, shall not be employed by them, but those whom they find agreeing in their judgment, they shall make use of and shall commit to them the instruction and education of youth. And here and on this wise let my fanciful tale about letters and teachers of letters come to an end. 812

Cle. I do not think, Stranger, that we have wandered out of the proposed limits of the argument; but whether we are right or not in the whole design I cannot be very certain.

Ath. The truth, Cleinias, may be expected to become clearer when, as we have often said, we arrive at the end of the whole discussion about laws.

Cle. Yes.

Ath. And now that we have done with the teacher of letters, the teacher of the lyre has to receive orders from us.

Cle. Certainly.

Ath. I think that we have only to recollect our previous discussions, and we shall be able to give suitable regulations touching all this part of instruction and education to the teachers of the lyre.

Cle. To what do you refer?

Ath. We were saying, if I remember rightly, that the sixty years' old choristers of Dionysus were to be specially quick in their perceptions of rhythm and musical composition, that they might be able to distinguish good and bad imitation, or in other words, the imitation of the good or bad soul when under the influence of passion, rejecting the one and displaying the other

in hymns and songs, charming the souls of youth, and inviting them to follow and attain virtue by the way of imitation.

Cle. Very true.

Ath. And with this view the teacher and the learner ought to use the sounds of the lyre because its notes are pure, the player who teaches and his pupil giving note for note in unison ; but complexity, and variation of notes, when the strings give one sound and the poet or composer of the melody gives another ; also when they make concords and harmonies in which lesser and greater intervals, slow and quick, or high and low notes, are combined ; or, again, when they make complex variations of rhythms, which they adapt to the notes of the lyre,—all that sort of thing is not suited to those who have to acquire a speedy and useful knowledge of music in three years ; for opposite principles are confusing, and create a difficulty in learning, and our young men should learn quickly, and their mere necessary acquirements are not few or trifling, as will be shown in due course. Let our educator attend to the principles concerning music which we are laying down. As to the songs and words themselves which the masters of choruses are to teach and the character of them, they have been already described by us, and
813 are the same which we said were to be consecrated as may suit the several feasts, and so furnish an innocent and useful amusement to cities.

Cle. That, again, is true.

Ath. Then let the musical president who has been elected receive these rules from us as the very truth ; and may he prosper in his office ! Let us now proceed to lay down other rules about dancing and gymnastic exercise in general. Having said what remained to be said about the teaching of music, let us speak in like manner about gymnastic. For boys and girls ought to learn to dance and practise gymnastic exercises—ought they not ?

Cle. Yes.

Ath. Then the boys ought to have dancing masters, and the girls dancing mistresses to exercise them.

Cle. Very good.

Ath. Then once more let us call him who will have the chief trouble, the superintendent of youth ; he will have plenty to do, if he is to have the charge of music and gymnastic.

Cle. But how will an old man be able to attend to such great charges?

Ath. O, my friend, there will be no difficulty, for the law has already given and will give him permission to select as his assistants in this charge any citizens, male or female, whom he desires; and he will know whom he ought to choose, and will be anxious not to make a mistake, from a sense of responsibility, and from a consciousness of the importance of his office, and also because he will consider that if young men have been and are well brought up, then all things go swimmingly, but if not, it is not meet to say, nor do we say, what will follow, lest the regarders of omens should take alarm about our infant state. Many things have been said by us about dancing and about gymnastic movements in general; for we include under gymnastics all military exercises, such as archery, and all hurling of weapons, and the use of the light shield, and all fighting with heavy arms, and military evolutions, and movements of armies, and encampments, and all that relates to horsemanship. Of all these things there ought to be public teachers, receiving pay from the state, and their pupils should be the men and boys in the state, and also the girls and women, who are to know all these things. While they are yet girls they should have practised dancing in arms and the whole art of fighting—when they are grown-up women, applying themselves to evolutions and tactics, and the mode of grounding and taking up arms; if for no other reason, yet in case the whole people should have to 814
leave the city and carry on operations of war outside, that the young who are left to guard and the rest of the city may be equal to the task; and, on the other hand (what is far from being an impossibility), when enemies, whether barbarian or Hellenic, come from without with mighty force and make a violent assault upon them, and thus compel them to fight for the possession of the city, great would be the disgrace to the state, if the women had been so miserably trained that they could not fight for their young, as birds will, against any creature however strong, and die or undergo any danger, but must instantly rush to the temples and crowd at the altars and shrines, and bring upon human nature the reproach, that of all animals man is the most cowardly.

Cle. Such a want of education, Stranger, is certainly an unseemly thing to happen in a state, and also a great misfortune.

Ath. Suppose that we carry our law to the extent of saying that women ought not to neglect military matters, but that all citizens, male and female alike, shall attend to them?

Cle. I quite agree.

Ath. Of wrestling we have spoken in part, but of what I should call the most important part we have not spoken, and cannot easily speak without showing at the same time by gesture as well as in word what we mean; when word and action combine, and not till then, we shall explain clearly what has been said, pointing out that of all movements wrestling is most akin to the military art, and is to be pursued for the sake of this, and not this for the sake of wrestling.

Cle. Excellent.

Ath. Thus far we have spoken of the palestra, and we will now proceed to speak of other movements of the body. Such motion may be in general called dancing, and is of two kinds: one of nobler figures, imitating the honourable, the other of the more ignoble figures, imitating the mean; and of both these there are two further sub-divisions. Of the serious, one kind is of those engaged in war and vehement action, and is the exercise of a noble person and a manly heart; the other exhibits a temperate soul in the enjoyment of prosperity and modest pleasures, and may be truly called and is the dance of
815 peace. The warrior dance is different from the peaceful one, and may be rightly termed Pyrrhic; this imitates the modes of avoiding blows and darts, by dropping or giving way, or springing aside, or rising up or falling down; also the opposite postures which are those of action, as, for example, the imitation of archery and the hurling of javelins, and of all sorts of blows. And when the imitation is of brave bodies and souls, and the action is direct and muscular, giving for the most part a straight movement to the limbs of the body—that, I say, is the true sort; but the opposite is not right. In the dance of peace the consideration is whether a man bears himself naturally and gracefully, and after the manner of well-conditioned men. But before proceeding I must distinguish the dancing about which

there is any doubt, from that about which there is no doubt. How shall we distinguish them? There are dances of the Bacchic sort, in which they imitate, as they say, the Nymphs, and Pan, and drunken Silenuses, and Satyrs, after whom they name them, making purifications and celebrating mysteries,—all this sort of dancing cannot be distinguished as having either a peaceful or a warlike character, or indeed as having any meaning whatever, and may, I think, be most truly described as distinct from the warlike dance, and distinct from the peaceful, and not suited for a city at all. Having left this behind us, we will now proceed to the dances of war and peace, about which there can be no doubt in our state. Now the unwarlike muse, which honours in dance the Gods and the sons of the Gods, is associated with the consciousness of prosperity; and this may be sub-divided into classes, of which one is expressive of an escape from some labour or danger into good, and has greater pleasures; the other expressive of preservation and increase of former good, in which the pleasure is less exciting;—in all these cases, every man when the pleasure is greater, moves his body more, and less when the pleasure is less; and, again, if he be more orderly and disciplined he moves less; but if he be a coward, and has 816 no training or self-control, he makes greater and more violent movements, and in general when he is speaking or singing he is not altogether able to control his body; and so out of the imitation of words in gestures the art of dancing has originated. And in these various kinds of imitation one man moves in an orderly, another in a disorderly manner; and as the ancients may be observed to have given many names which are according to nature and deserving of praise, so there is an excellent one which they have given to those dances of men in their times of prosperity, who are moderate in their pleasures—whoever he was gave them a very true, and poetical, and rational name, when he called them *Emmeleiai*, or dances of order; thus establishing two kinds of dances of the nobler sort, the dance of war which he called the *Pyrrhic*, and the dance of peace which he called *Emmeleia*, or the dance of order; giving to each their appropriate and becoming name. These things the legislator should indicate in general outline, and the guardian of the law should enquire into them and search them out, combining

dancing with music, and assigning to the several sacrificial feasts that which is suitable to them; and when he has consecrated them all in due order, he shall for the future change nothing, whether of dance or song. Thenceforward the city and the citizens shall continue to have the same pleasures, themselves being as far as possible alike, and shall live well and happily.

I have described the dances which are appropriate to noble bodies and generous souls. But it is necessary also to consider and know uncomely persons and thoughts, and those which are intended to produce laughter in comedy, and have a comic character both in respect to style, and song, and dance, whether real or imitated. For serious things cannot be understood without laughable things, nor opposites at all without opposites, if a man is really to have intelligence of either; but he cannot carry out both in action, if he is to have any degree of virtue. And for this very reason he should learn them both, in order that he may not in ignorance do or say anything which is ridiculous and out of place—he should command slaves and hired strangers to imitate such things, but he should never take any serious interest in them himself, nor should any freeman or freewoman be discovered learning them; and there should always be some element of novelty in the imitation. Let these then be laid down, both in law and in our narrative, as the regulations of
 817 laughable amusements which are generally called comedy. And, if any of the serious or tragic poets, as they are termed, come to us and say—‘O strangers, may we go to your city and country or may we not, and shall we bring with us our poetry—what is your will about these matters?’ How shall we answer the divine men? I think that our answer should be as follows:—Best of strangers, we will say to them, we also according to our ability are tragic poets, and our tragedy the best and noblest; for our whole state is an imitation of the best and noblest life, which we affirm to be indeed the very truth of tragedy. You are poets and we are poets, your rivals and antagonists in the noblest of dramas, which true law will carry out in act, as our hope is. Do not then suppose that we shall all in a moment allow you to erect your stage in the agora, or introduce the fair voice of your actors, speaking above our own, and permit you to harangue our women and children, and the

mass of mankind, about our institutions, in language other than our own, and very often the opposite of our own. For a state would be mad which gave you this licence, until the magistrates had determined whether your poetry might be recited, and was fit for publication or not. Wherefore, O ye sons and scions of the softer Muses, first of all show your songs to the magistrates, and let them compare them with our own, and if they are the same or better we will give you a chorus; but if not, then, my friends, we cannot. Let these, then, be the customs ordained by law about all dances and the teaching of them, and let matters relating to slaves be separated from those relating to masters, if you do not object.

Cle. We can have no hesitation in assenting when you put the matter thus.

Ath. There still remain three studies suitable for freemen. Arithmetic is one of them; the measurement of length, surface, and depth is the second; and the third has to do with the revolutions of the stars in relation to one another. Not every one has need to toil through all these things in a strictly 818 scientific manner, but only a few, and who they are to be, we will hereafter indicate in the proper place; not to know what is necessary for mankind in general, and what is the truth, is disgraceful to every one: and yet to enter into these matters minutely is neither easy, nor at all possible for every one; but there is something in them which is necessary and cannot be set aside, and probably he who made the proverb about God originally had this in view when he said, 'that not even God himself can fight against necessity;'—he meant, if I am not mistaken, divine necessity; for as to the human necessities of which men often speak when they talk in this manner, nothing can be more ridiculous than such an application of the words.

Cle. And what necessities of knowledge are there, Stranger, which are divine and not human?

Ath. I conceive them to be those of which he who has no use nor any knowledge at all cannot be a God, or demi-god, or hero to mankind, or able to take any serious thought or charge of them. And very unlike a divine man would he be, who is unable to count one, two, three, or to distinguish odd and even numbers; or is unable to count at all, or reckon night and day,

and who is totally unacquainted with the revolution of the sun and moon, and the other stars. There would be great folly in supposing that all these are not necessary parts of knowledge to him who intends to know anything about the highest kinds of knowledge; but which these are, and how many there are of them, and when they are to be learned, and what is to be learned together and what apart, and the whole correlation of them, must be rightly apprehended first; and these leading the way we may proceed to the other parts of knowledge. For so necessity grounded in nature constrains us, against which we say that no God contends, or ever will contend.

Cle. I think, Stranger, that what you have now said is very true and agreeable to nature.

Ath. Yes, Cleinias, I quite agree with you. But it is difficult for the legislator to begin with these studies; at a more convenient time we will make regulations for them.

Cle. You seem, Stranger, to be afraid of our habitual ignorance of the subject: there is no reason why that should prevent you
819 from speaking out.

Ath. I certainly am afraid of the difficulties to which you allude, but I am still more afraid of those who apply themselves to this sort of knowledge, and apply themselves badly. For entire ignorance is not so terrible or extreme an evil, and is far from being the greatest of all; too much cleverness and too much learning, accompanied with ill bringing up, are far more fatal.

Cle. True.

Ath. All freemen, I conceive, should learn as much of these branches of knowledge as every child in Egypt is taught when he learns his alphabet. In that country arithmetical games have been actually invented for the use of children, which they learn as a pleasure and amusement. They have to distribute apples and garlands, using the same number sometimes for a larger and sometimes for a lesser number of persons; and they arrange pugilists and wrestlers as they pair together by lot or remain over, and show the order in which they follow. Another mode of amusing them is by distributing vessels, some in which gold, brass, silver, and the like are mixed, others in which they are unmixed; as I was saying, they adapt to their amusement

the numbers in common use, and in this way make more intelligible to their pupils the arrangements and movements of armies and expeditions, and in the management of a household they make people more useful to themselves, and more wide awake; and again in measurements of things which have length, and breadth, and depth, they free us from that natural ignorance of all these things which is so ludicrous and disgraceful.

Cle. What kind of ignorance do you mean?

Ath. O my dear Cleinias, I, like yourself, have late in life heard with amazement of our ignorance in these matters; to me we appear to be more like pigs than men, and I am quite ashamed, not only of myself, but of all Hellenes.

Cle. About what? Say, Stranger, what you mean.

Ath. I will; or rather I will show you my meaning by a question, and do you please to answer me: You know, I suppose, what length is?

Cle. Certainly.

Ath. And what breadth is?

Cle. To be sure.

Ath. And you know that these are two distinct things, and that there is a third thing called depth?

Cle. Of course.

Ath. And do not all these seem to you to be commensurable with one another?

Cle. Yes.

Ath. That is to say, length is naturally commensurable with length, and breadth with breadth, and depth in like manner with depth?

820

Cle. Undoubtedly.

Ath. But if some things are commensurable and others wholly incommensurable, and you think that all things are commensurable, what is your position in regard to them?

Cle. Clearly, far from good.

Ath. Concerning length and breadth when compared with depth, or breadth and length when compared with one another, are not all the Hellenes agreed that these are commensurable with one another in some way?

Cle. Quite true.

Ath. But if they are absolutely incommensurable, and yet

all of us regard them as commensurable, have we not reason to be ashamed of our compatriots; and might we not say to them:—O ye best of Hellenes, is not this one of the things of which we were saying that not to know them is disgraceful, and of which to know only what is necessary is no great distinction?

Cle. Certainly.

Ath. And there are other things akin to these, in which there spring up other errors of the same family.

Cle. What are they?

Ath. The natures of commensurable and incommensurable quantities in their relation to one another. A man who is good for anything ought to be able, when he thinks, to distinguish them; and different persons should compete with one another in asking questions, which will be a far better and more graceful way of passing their time than the old man's game of draughts.

Cle. I dare say; and these pastimes are not so very unlike a game of draughts.

Ath. And these, as I maintain, Cleinias, are the studies which our youth ought to learn, for they are innocent and not difficult; the learning of them will be an amusement, and they will benefit the state. If any one is of another mind, let him say what he has to say.

Cle. Of course you are right.

Ath. Then if these studies are such as we say, we will include them; if not, they shall be excluded.

Cle. Assuredly: but may we not now, Stranger, prescribe these studies as necessary, and so fill up the lacunae of our laws?

Ath. They shall be regarded as pledges which may be refused hereafter by the state, if they do not please either us who impose them, or you upon whom they are imposed.

Cle. A fair condition.

Ath. Next let us see whether we are willing that the study of astronomy shall or shall not be proposed for our youth.

Cle. Proceed.

Ath. Here occurs a strange phenomenon, which certainly cannot in any point of view be tolerated.

Cle. To what are you referring?

Ath. Men say that we ought not to enquire into the supreme God and the nature of the universe, nor busy ourselves in searching out the causes of things, and that such enquiries are impious; whereas the very opposite is the truth.

Cle. What do you mean?

Ath. Perhaps what I am saying may seem paradoxical, and at variance with the usual language of age. But when any one has any good and true notion which is for the advantage of the state and in every way acceptable to God, he cannot abstain from expressing it.

Cle. Your words are reasonable enough; but shall we find any good or true notion about the stars?

Ath. My good friends, at this day all of us Hellenes speak falsely, if I may use such an expression, of those great Gods, the Sun and the Moon.

Cle. What is the falsehood?

Ath. We say that they and divers other stars do not keep the same path, and we call them planets or wanderers.

Cle. Very true, Stranger; and in the course of my life I have often myself seen the morning star and the evening star and divers others not proceeding in their own path, but wandering out of their path in all manner of ways, and I have seen the sun and moon doing what we all know that they do.

Ath. Just so, Megillus and Cleinias, and I maintain that our citizens and our youth ought to learn about the nature of the Gods in heaven, so far as to be able to offer sacrifices and pray to them in pious language, and not to blaspheme about them.

Cle. There you are right, if such a knowledge be only attainable; and if we are wrong in our mode of speaking now, and can be better instructed and learn to use better language, then I quite agree with you that such a degree of knowledge as will enable us to speak rightly should, if attainable, be acquired by us. And now do you try to explain to us your whole meaning, and we, on our part, will endeavour to understand you.

Ath. There is some difficulty in understanding my meaning, but not a very great one, nor will any great length of time be required; and of this I am myself a proof; for I did not know

these things long ago, nor in the days of my youth ; and yet I can explain them to you in a brief space of time, whereas if they had been difficult I could certainly never have explained them all, old as I am, to old men like yourselves.

Cle. True ; but what is this study which you describe as
822 wonderful and fitting for youth to learn, but of which we are ignorant ? Try and explain the nature of it to us as clearly as you can.

Ath. I will. For, O my good friends, that other doctrine about the wandering of the sun and the moon and the other stars is not the truth, but the very reverse of the truth. Each of them moves in the same path—not in many paths, but in one only, which is circular, and the varieties are only apparent. Nor are we right in supposing that the swiftest of them is the slowest, nor conversely, that the slowest is the quickest. And if what I say is true, only just imagine that we had a similar notion about horses running at Olympia, or about men who ran in the long course, and that we addressed the swiftest as the slowest and the slowest as the swiftest, and sang the praises of the vanquished as though he were the victor,—in that case our praises would not be true, nor very agreeable to the runners, though they be but men ; and now, to commit the same error about the Gods which would have been ludicrous and erroneous in the case of men,—is not that ludicrous and erroneous ?

Cle. Worse than ludicrous, I should say.

Ath. At all events, the Gods cannot like us to be spreading a false report of them.

Cle. Most true, if such is the fact.

Ath. And if we can show that such is really the fact, then all these matters ought to be learned so far as is necessary for the avoidance of impiety ; but if we cannot, they may be let alone, and let this be our decision.

Cle. Very good.

Ath. Enough of laws relating to education and learning. But hunting and similar pursuits in like manner claim our attention. For the legislator appears to have a duty imposed upon him which goes beyond mere legislation. There is something over and above law which lies in a region between admonition and law, and has several times occurred to us in the course of dis-

cussion ; for example, in the education of very young children there were things, as we maintain, which are not to be defined, and to regard them as matters of positive law is a great absurdity. Now, our laws and the whole constitution of our state having been thus delineated, the praise of the virtuous citizen is not complete when he is described as the person who serves the laws best and obeys them most, but the highest form of praise is that which describes him as the good citizen who goes through life undefiled and is obedient to the words of the 823 legislator, both when he is giving laws and when he assigns praise and blame. This is the truest word than can be spoken in praise of a citizen ; and the true legislator ought not only to write his laws, but also to interweave with them all such things as seem to him honourable and dishonourable. And the perfect citizen ought to seek to strengthen these no less than the principles of law which are sanctioned by punishments. I will adduce an example which will clear up my meaning. Hunting is of wide extent, and has a name under which many things are included, for there is a hunting of creatures in the water, and of creatures in the air ; and there is a great deal of hunting of land animals of all sorts, and not of wild beasts only ; the hunting after man is also worthy of consideration ; there is the hunting after him in war, and there is often a hunting after him in the way of friendship, which is praised and also blamed ; and there is thieving, and the hunting which is practised by robbers, and that of armies against armies. Now the legislator, in laying down laws about hunting, can neither abstain from noting these things, nor can he make threatening ordinances which will assign rules and penalties about all of them. What is he to do ? He will have to praise and blame hunting with a view to the discipline and exercise of youth. And, on the other hand, the young man must listen obediently ; neither pleasure nor pain should hinder him, and he should regard as his standard of action the praises and injunctions of the legislator rather than the punishments which he imposes by law. This being premised, there will follow next in order moderate praise and censure of hunting ; the praise being assigned to that which will make the souls of young men better, and the censure to that which has the opposite effect. And now let us address young

men in the form of a pious wish for their welfare : O, my friends, we will say to them, may no desire or love of hunting in the sea, or of angling or of catching the creatures in the sea, ever take possession of you, either when you are awake or when you are asleep, by hook or with weels, which latter is a very lazy contrivance ; and let not any desire of catching men and of piracy by sea enter into your souls and make you cruel and lawless hunters. And as to the desire of thieving in town or country, may it never enter into your most passing thoughts ; nor let the insidious fancy of catching birds, which is hardly worthy of freemen, come into the head of any youth. There remains therefore for our athletes only the hunting and catching of land animals, of which the one sort is called hunting by night, in which the hunters sleep in turn and are lazy ; this is not to be commended any more than that which has intervals of rest, in which the wild strength of beasts is subdued by nets and snares, and not by the victory of a laborious spirit. Thus, only the best kind of hunting is allowed at all—that of quadrupeds, which is carried on with horses and dogs and men's own persons, and they get the victory over the animals by running them down and striking them and hurling at them, those who have a care of godlike manhood taking them with their own hands. The praise and blame which is assigned to all these things has now been declared ; and let the law be as follows : Let no one hinder our sacred hunters from following the chase wherever and whithersoever they will ; but the nightly hunter, who trusts to his nets and springs, shall not be allowed to hunt anywhere. The fowler in the mountains and waste places shall be permitted, but on cultivated ground and on consecrated wilds he shall not be permitted ; and any one who meets him may stop him. As to the hunter in waters, he may hunt anywhere except in harbours or sacred streams or marshes or pools, provided only that he do not trouble the water with poisonous mixtures. And now we may say that all our enactments about education are complete.

Cl. Very good.

BOOK VIII.

Athenian Stranger. NEXT, with the help of the Delphian⁸²⁸ oracle, we have to institute festivals and make laws about them; and to determine what sacrifices will be for the good of the city, and to what Gods they shall be offered; but when they shall be offered, and how often, may be partly regulated by us.

Cleinias. The number—yes.

Ath. Then we will first determine the number; and let the whole number be 365—one for every day,—so that one magistrate at least will sacrifice daily to some God or demi-god on behalf of the city, and the citizens, and their possessions. And the interpreters, and priests, and priestesses, and prophets shall meet, and, in company with the guardians of the law, ordain those things which the legislator of necessity omits; and I may remark that they are the very persons who ought to take note of what is omitted. The law will say that there are twelve feasts dedicated to the twelve Gods, after whom the several tribes are named; and that to each of them they shall sacrifice every month, and appoint choruses, and musical and gymnastic contests, corresponding to the several Gods and seasons of the year. And they shall have festivals of women, distinguishing those which ought to be separated from the men's festivals, and those which ought not. Further, they shall not confuse the infernal deities and their rites with the Gods who are termed heavenly and their rites, but shall separate them, giving to Pluto his own in the twelfth month, which is sacred to him, according to the law. To such a deity warlike men should entertain no

aversion, but they should honour him as being always the best friend of man. For the connection of soul and body is no way better than the dissolution of them, as I am ready to maintain quite seriously. Moreover, those who would regulate these matters rightly, should consider, that our city among existing cities has indeed no fellow, either in respect of leisure or command of the necessaries of life, but also like an individual ought to live happily. And those who would live happily should in the first place do no wrong to one another, and ought not themselves to be wronged by others; to attain the first is not difficult, but there is great difficulty in acquiring the power of not being wronged. No man can be perfectly secure against wrong, unless he has become perfectly good; and cities are like individuals in this, for a city if good has a life of peace, but if evil, a life of war within and without. Wherefore the citizens ought to practise war—not in time of war, but rather while they are at peace. And every city which has any sense, should go on military expeditions at least for one day in every month, and for more if the magistrates think fit, taking no thought about winter cold or summer heat; and they should go out in one body, including their wives and their children, when the magistrates determine to lead forth the whole people, or in such portions as are summoned by them; and they should always provide that there should be games and sacrificial feasts, and they should have tournaments, imitating in as lively a manner as they can real battles. And they should distribute prizes of victory and valour to the competitors, passing censures and encomiums on one another according to the characters which they bear in the contests and in their whole life; honouring him who seems to be the best, and blaming him who is the opposite. And let poets celebrate the victors,—not however every poet, but only one who in the first place is not less than fifty years of age; nor should he be one who, although he may have musical and poetical gifts, has never in his life done any noble or illustrious action; but those who are good and honourable in the state, poets of noble actions—let their poems be sung, even though they be not very musical. And let the judgment of them rest with the instructor of youth and the other guardians of the laws, who shall give them this privilege, and they alone

shall be free to sing; but the rest of the world shall not have this liberty. Nor shall any one dare to sing a song which has not been approved by the judgment of the guardians of the laws, not even if his strain be sweeter than the songs of Thamyras and Orpheus; but only such poems as have been judged sacred and dedicated to the Gods, and such as are the works of good men, works of praise or blame which have been deemed to fulfil their design fairly.

The regulations about war, and about liberty of speech in poetry, ought to apply equally to men and women. The legislator may be supposed to argue the question in his own mind:—Who are my citizens for whom I have set in order the city? Are they not competitors in the greatest of all contests, and 830 have they not innumerable rivals? To be sure, is the natural reply. Well, but if we were training boxers, or pancratiasts, or any other sort of athletes, would they never meet until the hour of contest arrived; and should we do nothing to prepare ourselves previously? Surely, if we were boxers, we should have been learning to fight for many days before, and exercising ourselves in imitating all those blows and wards which we were intending to execute in the hour of conflict; and in order that we might come as near to reality as possible, instead of cestuses we should put on boxing-gloves, that the blows and the wards might be practised by us to the utmost of our power. And if there were a lack of competitors, the fear of ridicule would not deter us from hanging up a lifeless image and practising at that. Or if we had no adversary at all, animate or inanimate, should we not venture in the dearth of antagonists to spar by ourselves? In what other manner could we ever study the art of self-defence?

Cle. The way which you mention, Stranger, would be the only way.

Ath. And shall the warriors of our city, who are destined when occasion calls to enter the greatest of all contests, and to fight for their lives, and their children, and their property, and the whole city, be worse prepared than boxers? And will the legislator, because he is afraid that their practising with one another may appear ridiculous, abstain from commanding them to go out and fight; will he not ordain that soldiers shall

perform lesser exercises without arms every day, making dancing and all gymnastic tend to this end; and also will he not require that they shall practise some gymnastic exercises, greater as well as lesser, as often as every month; and that they shall have contests one with another in every part of the country, seizing upon posts and lying in ambush, and imitating in every respect the reality of war; fighting with boxing-gloves and hurling javelins, and using weapons somewhat dangerous, and as nearly as possible like the true ones, in order that the sport may not be altogether without fear, but may have terrors and
831 to a certain degree show the man who has and who has not courage; and that the honour and dishonour which are assigned to them respectively, may prepare the whole city for the true conflict of life? If any one dies in these mimic contests, the homicide is involuntary, and we will make the slayer, when he has been purified according to law, to be pure of blood, considering that if a few men should die, others as good as they will be born; but that if fear is dead, then the citizens will never find a test of superior and inferior in desert, which is a far greater evil to the state than the loss of a few.

Cle. We are quite agreed, Stranger, that we should legislate about such things, and that the whole state should practise them.

Ath. And what is the reason that dances and contests of this sort hardly ever exist in states, at least not to any extent worth speaking of? Is this due to the ignorance of mankind and their legislators?

Cle. Perhaps.

Ath. Certainly not, sweet Cleinias; there are two causes, which are quite enough to account for the deficiency.

Cle. What are they?

Ath. One cause is the love of wealth, which wholly absorbs men, and never for a moment allows them to think of anything but their own private possessions; on this the soul of every citizen hangs suspended, and can attend to nothing but his daily gain; mankind are ready to learn any branch of knowledge, and to follow any pursuit which tends to this end, and they laugh at every other:—that is one reason why a city will not be in earnest about war or any other good and honourable

pursuit. From an insatiable love of gold and silver, every man is willing to endure the practice of any art or contrivance, seemly or unseemly, in the hope of becoming rich; and will make no objection to performing any action, holy, or unholy and utterly base, if only like a beast he have the power of eating and drinking all sorts of things, and procuring for himself in every sort of way the gratification of his lusts.

Cle. True.

Ath. Let this, then, be deemed one of the causes which prevent states from pursuing in an efficient manner the art of war, or any other noble aim, but makes the orderly and temperate part of mankind into merchants, and captains of ships, and servants, and converts the valiant sort into thieves and burglars, and robbers of temples, and violent, tyrannical persons; many 832 of whom are not without ability, but they are unfortunate.

Cle. What do you mean?

Ath. Must not they be truly unfortunate whose souls are compelled to pass through life always hungering?

Cle. Then that is one cause, Stranger; but you spoke of another.

Ath. Thank you for reminding me.

Cle. The insatiable lifelong love of wealth, as you were saying, is one cause which absorbs mankind, and prevents them from rightly practising the arts of war:—Granted; and now tell me, what is the other?

Ath. Do you imagine that I delay because I am in a perplexity?

Cle. No; but we think that you are too severe upon the money-loving temper, of which you seem in the present discussion to have a peculiar dislike.

Ath. That is a very fair rebuke, Stranger; and I will now proceed to the second cause.

Cle. Proceed.

Ath. I say that governments are a cause—democracy, oligarchy, tyranny, concerning which I have often spoken in the previous discourse; or rather governments they are not, for none of them exercises a voluntary rule over voluntary subjects; but they may be truly called states of discord, in which while the government is voluntary, the subjects always obey against their

will, and have to be coerced; and the ruler fears the subject, and will not, if he can help, allow him to become either noble, or rich, or strong, or valiant, or warlike at all. These two are the causes of almost all evils, and of the evils of which I have been speaking they are the special causes. But our state has escaped both of them; for her citizens have the greatest leisure, and they are not subject to one another, and will, I think, be made by these laws the reverse of lovers of money. Such a constitution may be reasonably supposed to be the only one existing which will accept the education which we have described, and the martial pastimes which have been perfected according to our idea.

Cle. Good.

Ath. Then next we must remember, about all gymnastic contests, that only the warlike sort of them are to be practised and to have prizes of victory; and those which are not military are to be given up. The military sort had better be completely described and established by law; and first, let us speak of running and swiftness.

Cle. Very good.

Ath. Certainly the most military of all qualities is general activity of body, whether of foot or hand. For escaping or
833 for capturing an enemy, quickness of foot is required; but hand-to-hand conflict and combat need vigour and strength.

Cle. Certainly.

Ath. Neither of them can attain their greatest efficiency without arms.

Cle. How can they?

Ath. Then our herald, in accordance with the prevailing practice, will first summon the runner;—he will appear armed, for to an unarmed competitor we will not give a prize. And he shall enter first who is to run the single course bearing arms; next, he who is to run the double course; third, he who is to run the horse-course; and fourthly, he who is to run the long course; the fifth class whom we start, shall be the first who goes forth in heavy armour,—and he shall run a course of sixty stadia to some temple of Ares—him we will call the heavy-armed runner; he shall run over smooth ground, and his competitor shall be an archer, and carry the equipments of an

archer, and he shall run a distance of 100 stadia over the mountains, and across every sort of country, to the temple of Apollo and Artemis; this shall be the order of the contest, and we will wait for them until they return, and will give a prize to the conqueror in each.

Cle. Very good.

Ath. Let us suppose that there are three sorts of contests,—one of boys, another of beardless youths, and a third of men. For the youths we will fix the length of the contest at two-thirds, and for the boys at half of the entire course, whether they contend as archers or as heavy-armed. Touching the women: let the girls who are not grown up compete naked in the stadium and the double course, and the horse-course and the long course, and let them run on the race-ground itself; those who are thirteen years of age and upwards until their marriage shall continue to share in contests if they are not more than twenty, and shall be compelled to run up to eighteen; and they shall descend into the arena in suitable dresses. Let these be the regulations about contests in running both for men and women.

Respecting contests of strength, instead of wrestling and similar contests of the heavier sort, we will institute conflicts in armour of one against one, and two against two, and so on up to ten against ten. As to what a man ought not to suffer or do, and to what extent, in order to gain the victory—as in wrestling, the masters of the art have laid down what is fair and what is not fair, so in fighting in armour—we ought to call in skilful persons, who shall judge for us and be our assessors in the work of legislation; they shall say who deserves to be victor in combats of this sort, and what he is not to do or suffer, and in like manner what rule determines who is 834 defeated; and let the same ordinances apply to women until they are married as well as to men. The pancration shall have a counterpart in a combat of the light-armed; they shall contend with bows and with light shields and with javelins and with slings and throwing of stones by hand; and laws shall be made about it, and rewards and prizes given to him who best fulfils the ordinances of the law.

Next in order we shall have to legislate about the horse

contests. Now, we do not need many horses, for they cannot be of much use in a country like Crete, and hence we naturally do not take much pains about the rearing of them or about horse races. There is no one who keeps a chariot among us, and any rivalry in such matters would be altogether out of place; there would be no sense nor any shadow of sense in instituting contests which are not after the manner of our country. And, therefore, we give our prizes for single horses and for colts who have not cast their teeth, and for those who are intermediate between the full-grown horses themselves; and thus our equestrian games will accord with the nature of the country. Let them have conflict and rivalry in these matters in accordance with the law, and let the colonels and generals of horse decide together about all courses and about the armed competitors in them. But we have nothing to say to the unarmed either in gymnastic exercises or in these contests. On the other hand, the Cretan bowman or javelin-man who fights in armour on horseback is useful, and therefore we may as well place a competition of this sort among our amusements. Women are not to be forced to compete by laws and ordinances; but if they have acquired the habit and are strong enough and like to share in the contest, let them be allowed, girls as well as boys, and no blame to them.

Thus the competition and the mode of learning gymnastic have been described; and we have spoken also of the toils of the contest, and of daily exercise in the house of the teacher. Likewise, what relates to music has been, for the most part, completed. But as to rhapsodes and their vocation, and the contests of choruses which are to perform at feasts, these shall be arranged when the months and days and years have been appointed for Gods and demi-gods, whether every third year, or again every fifth year, or in whatever way or manner the
 835 Gods may put into men's minds the distribution and order of them. At the same time, we may expect that the musical contests will be celebrated in turn by the command of the judges and the instructor of youth and the guardians of the law meeting together for this purpose, and themselves becoming legislators of the times and nature and conditions of the choral contests and of dancing in general. What they ought severally

to be in language and song, and in the admixture of harmony with rhythm and the dance, has been often declared by the original legislator; and his successors ought to follow him, making the games and sacrifices duly to correspond at fitting times, and appointing public festivals. It is not difficult to determine how these and the like matters may have a regular order; nor, again, is the alteration of them of any serious importance to the state. There is, however, another matter of great importance and difficulty, concerning which God should legislate, if there were any possibility of obtaining from him an ordinance about it. But seeing that divine aid is not to be had, there appears to be a need of some bold man who specially honours plainness of speech, and will say outright what is best for the city and citizens,—ordaining what is good and convenient for the whole state amid the corruptions of human souls, opposing the mightiest lusts, and having no man his helper but himself, standing alone and following reason only.

Cle. What is this, Stranger, that you are saying? For thus far we do not understand your meaning.

Ath. Very likely; I will endeavour to explain myself more clearly. When I came to the subject of education, I beheld young men and maidens holding friendly intercourse with one another. And there naturally arose in my mind a sort of apprehension—I could not help thinking how one is to deal with a city in which youths and maidens are well nurtured, and have nothing to do, and are not undergoing the excessive and servile toils which extinguish wantonness, and whose only cares during their whole life are sacrifices and festivals and dances. How, in such a state as this, will they abstain from desires which thrust many a man and woman into perdition; and from which reason, assuming the functions of law, commands them to abstain? The ordinances already made may possibly get 836 the better of most of these desires; the prohibition of excessive wealth is a very considerable gain in the direction of temperance, and the whole education of our youth imposes a law of moderation on them; moreover, the eye of the rulers is required always to watch over the young, and never to lose sight of them; and these provisions do, as far as human means can effect anything, exercise a regulating influence upon the desires

in general. But how can we take precautions against the unnatural loves of either sex, from which innumerable evils have come upon individuals and cities? How shall we devise a remedy and way of escape out of so great a danger? Truly, Cleinias, here is a difficulty. In many ways the island of Crete and Lacedaemon furnish a great help to those who make peculiar laws; but in the matter of love, as we are alone, I must confess that they are quite against us. For if any one following nature should lay down the law which existed before the days of Laius, and denounce these lusts as contrary to nature, adducing the animals as a proof that such unions were monstrous, he might prove his point, but he would be wholly at variance with the custom of your states. Further, they are repugnant to a principle which we say that a legislator should always observe, for we are always enquiring which of our enactments tends to virtue and which not. And suppose we grant that these loves are accounted by law to be honourable, or at least not disgraceful, how about virtue? Will such passions implant in the soul of him who is seduced the habit of courage, or in the soul of the seducer the principle of temperance? Who will ever believe this?—or rather, who will not blame the effeminacy of him who yields to pleasures and is unable to hold out against them? Will not all men censure as womanly him who imitates the woman? And who would ever think of establishing such a practice by law? Certainly no one who had in his mind the image of true law. How can we prove
 837 that what I am saying is true? He who would rightly consider these matters must see the nature of friendship and desire, and of these so-called loves, for they are of two kinds, and out of the two arises a third kind, having the same name; and this similarity of name causes all the difficulty and obscurity.

Cle. How is that?

Ath. Dear is the like in virtue to the like, and the equal to the equal; dear also, though after another fashion, is he who has abundance to him who is in want. And when either of these friendships becomes excessive, we term the excess love.

Cle. Very true.

Ath. The friendship which arises from contraries is horrible and coarse, and has often no tie of communion; but that which

arises from likeness is gentle, and has a tie of communion, which lasts through life. As to the mixed sort which is made up of them both, there is, first of all, a difficulty in determining what he who is possessed by this third love desires; moreover, he is drawn different ways, and is in doubt between the two principles; the one exhorting him to enjoy the beauty of youth, and the other forbidding him. For the one is a lover of the body, and hungers after beauty, like ripe fruit, and would feign satisfy himself without any regard to the character of the beloved; the other holds the desire of the body to be a secondary matter, and looking rather than loving with his soul, and desiring the soul of the other in a becoming manner, regards the satisfaction of the bodily love as wantonness; he reverences and respects temperance and courage and magnanimity and wisdom, and wishes to live chastely with the chaste object of his affection. Now the sort of love which is made up of the other two is that which we have described as the third. Seeing then that there are these three sorts of love, ought the law to prohibit and forbid them all to exist among us? Is it not rather clear that we should wish to have in the state the love which is of virtue and which desires the beloved youth to be the best possible; and the other two, if possible, we should hinder? What do you say, friend Megillus?

Meg. I think, Stranger, that you are perfectly right in what you have been now saying.

Ath. I knew well, my friend, that I should obtain your assent, which I accept and therefore have no need to analyse your custom any further. Cleinias shall be prevailed upon to give me his assent at some other time. Enough of this; and now let us proceed to the laws.

Meg. Very good.

Ath. Upon reflection I see a way of imposing the law, which, in one respect, is easy, but in another is of the utmost difficulty.

Meg. What do you mean?

Ath. We are all aware that most men, in spite of their lawless natures, are very strictly and precisely restrained from intercourse with the fair, and this not at all against their will, but entirely with their will.

Meg. What do you mean?

Ath. When any one has a brother or sister who is fair; and about a son or daughter the same unwritten law holds, and is a most perfect safeguard, so that no open or secret connection ever takes place between them. Nor does the thought of such a thing ever enter at all into the minds of most of them.

Meg. Very true.

Ath. Does not a little word extinguish all pleasures of that sort?

Meg. What word?

Ath. The declaration that they are unholy, hated of God, and most infamous; and is not the reason of this that no one has ever said the opposite, but every one from his earliest days has heard men saying the same about them always and everywhere, whether in comedy or in the graver language of tragedy? When the poet introduces on the stage a Thyestes or an Oedipus, or a Macareus having secret intercourse with his sister, he represents him, when found out, ready to kill himself as the penalty of his sin.

Meg. You are very right in saying that tradition, if no breath of opposition ever assails it, has a marvellous power.

Ath. Am I not also right in saying that the legislator who wants to master any of the passions which master man may easily know how to subdue them? He will consecrate the tradition of their evil character among all, slaves and freemen, women and children, throughout the city:—that will be the surest foundation of the law which he can make.

Meg. Yes; but will he ever succeed in making all mankind use the same language about them?

Ath. A good objection; but was I not just now saying that I had a way to make men use natural love and abstain from
839 unnatural not intentionally destroying the seeds of human increase, or sowing them in stony places, in which they will take no root; and that I would command them to abstain too from any female field of increase in which that which is sown is not likely to grow? Now, if a law to this effect could only be made perpetual, and gain an authority such as already prevents intercourse of parents and children—such a law extending to other sensual desires, and conquering them, would be the source of

ten thousand blessings. For, in the first place, moderation is the appointment of nature, and deters men from all frenzy and madness of love, and from all adulteries and immoderate use of meats and drinks, and makes them good friends to their own wives. And innumerable other benefits would result if such a law could only be enforced. I can imagine some lusty youth who is standing by, and who, on hearing this enactment, declares in scurrilous terms, that we are making foolish and impossible laws, and fills the world with his outcry. And therefore I said that I knew a way of enacting and perpetuating such a law, which was very easy in one respect, but in another most difficult. There is no difficulty in seeing that such a law is possible, and in what way; for, as I was saying, the ordinance once consecrated would master the soul of every man, and terrify him into obedience. But matters have now come to such a pass that the enactment of the law seems to be impossible, and never likely to take place, just as the continuance of an entire state in the practice of common meals is also deemed impossible. And although this latter is partly disproven by the fact of their existence among you, still even in your cities the common meals of women would be regarded as unnatural and impossible. I was thinking of the rebelliousness of the human heart when I said that the permanent establishment of these things is very difficult.

Mcg. Very true.

Ath. Shall I try and find some sort of persuasive argument which will prove to you that such enactments are possible, and not beyond human nature?

Cle. By all means.

Ath. Is a man more likely to abstain from the pleasures of love and to do what he is bidden about them, when his body is in a good condition, or when he is in an ill condition, and out of training?

Cle. He will be far more temperate when he is in training.

Ath. And have we not heard of Iccus of Tarentum, who, with a view to the Olympic and other contests, in his zeal for his art, 840 and also because he was of a manly and temperate constitution, never had any connection with a woman or a youth during the whole time of his training? And the same is said of Crison and

Astylus and Diopompus and many others; and yet, Cleinias, they were far worse educated in their minds than your and my fellow citizens, and in their bodies far more lusty.

Cle. No doubt this fact has been often affirmed positively by the ancients of these athletes.

Ath. And shall they be willing to abstain from what is ordinarily deemed a pleasure for the sake of a victory in wrestling, running, and the like; and our young men be incapable of a similar endurance for the sake of a much nobler victory, which is the noblest of all, as from their youth upwards we will tell them, charming them, as we hope, into the belief of this by tales in prose and verse?

Cle. Of what victory are you speaking?

Ath. Of the victory over pleasure, which if they win, they will live happily, or if conquered the reverse of happily. And, further, will not the fear of impiety enable them to master that which other inferior people have mastered?

Cle. I dare say.

Ath. And since we have reached this point in our legislation, and have fallen into a difficulty by reason of the vices of mankind, I affirm that our ordinance should simply run in the following terms: Our citizens ought not to fall below the nature of birds and beasts in general, who are born in great multitudes, and yet remain until the age for procreation virgin and unmarried, and when they have reached the proper time of life are coupled, male and female, and lovingly pair together, and live the rest of their lives in holiness and innocence, abiding firmly in their original compact:—surely, we will say to them, you should be better than the animals. But if they are corrupted by the other Hellenes and the common practice of barbarians, and they see with their eyes and hear with their ears of the so-called illicit love everywhere prevailing among them, and they themselves are not able to get the better of the temptation, the guardians of the law, exercising the functions of lawgivers, shall devise a second law against them.

841 *Cle.* And what law would you advise them to pass if this one failed?

Ath. Clearly, Cleinias, the one which would naturally follow.

Cle. What is that?

Ath. Our citizens should not allow pleasures to strengthen with indulgence, but should by toil divert the aliment and exuberance of them into other parts of the body; and this will happen if no immodesty be allowed in the practice of love. Then they will be ashamed of frequent intercourse, and they will find pleasure, if seldom enjoyed, to be a less imperious mistress. They should not be found out doing anything of the sort. Concealment shall be honourable, and sanctioned both by custom and unwritten law; on the other hand, to be detected shall be esteemed dishonourable, but not, to abstain wholly. In this way there will be a second legal standard of honourable and dishonourable, having a second notion of right. Three principles will comprehend all those corrupt natures whom we call inferior to themselves, which is their common class, and will compel them not to transgress.

Cle. What are they?

Ath. The principle of piety, the love of honour, and the desire of beauty, not in the body but in the soul. These are, perhaps, romantic aspirations; but they are the noblest of aspirations, if they could only be realized in any state, and, God willing, in the matter of love we may be able to enforce one of two things—either that no one shall venture to touch any person of the freeborn or noble class except his wedded wife, or sow the unconsecrated and bastard seed among harlots, or in barren and unnatural lusts; or at least we may abolish altogether the connection of men with men; and as to women, if any man has to do with any but those who come into his house duly married by sacred rites, whether they be bought or acquired in any other way, and he offends publicly in the face of all mankind, we shall be right in enacting that he be deprived of civic honours and privileges, and be deemed to be, as he truly is, a stranger. Let this law, then, whether it is one, or ought rather to be called two, be laid down respecting love in general, and the intercourse of the sexes which arises out of the desires, whether rightly or wrongly indulged.

Meg. I, for my part, Stranger, would gladly receive this ⁸⁴² law. Cleinias shall speak for himself, and tell you what is his opinion.

Cle. I will, Megillus, when an opportunity offers; at present,

I think that we had better allow the Stranger to proceed with his laws.

Meg. Very good.

Ath. We had got about as far as the establishment of the common tables, which in most places would be difficult, but in Crete no one would think of introducing any other custom. There might arise a question about the manner of them—whether they shall be such as they are here in Crete, or such as they are in Lacedaemon,—or is there a third kind which may be better than either of them? The answer to this question might be easily discovered, but the discovery would do no good, for at present they are very well ordered.

Leaving the common tables, we may therefore proceed to the means of providing life. Now, in cities the means of life are gained in many ways and from divers sources, and in general from two sources, whereas our city has only one. For most of the Hellenes obtain their food from sea and land, but our citizens from land only. And this makes the task of the legislator less difficult—half as many laws will be enough, and much less than half; and they will be of a kind better suited to free men. For he has nothing to do with laws about shipowners and merchants and retailers and innkeepers and tax-collectors and mines and moneylending and compound interest and innumerable other things—bidding good-bye to these, he gives laws to husbandmen and shepherds and bee-keepers, and the guardians and superintendents of their implements; and he has already legislated for greater matters, as, for example, what relates to marriage and the procreation and nurture of children, and education, and the establishment of offices—and now he must direct his enactments to those who labour in providing food.

Let us first of all, then, have a class of laws which shall be called the laws of husbandmen. And let the first of them be the law of Zeus, the god of boundaries. Let no one shift the boundary line either of a fellow-citizen who is a neighbour, or, if he dwells at the extremity of the land, of any stranger who is

is the sworn arbiter of friendship and hatred between neighbours; for Zeus, the god of kindred, is the witness of the citizen, and Zeus, the god of strangers, of the stranger, and when aroused, terrible is their wrath. He who obeys the law will never know the fatal consequences of disobedience, but he who despises the law shall be liable to a double penalty, the first coming from the Gods, and the second from the law. For let no one voluntarily remove the boundaries of his neighbour's land, and if any one does, let him who will, inform the land-owners, and let them bring him into court, and if he be convicted of re-dividing the land by stealth or by force, let the court determine what he ought to suffer or pay. In the next place, many small injuries done by neighbours to one another through their multiplication, may cause a weight of enmity, and make neighbourhood a very disagreeable and bitter thing. Wherefore a man ought to be very careful of committing any offence against his neighbour, and especially of encroaching on his neighbour's land; for any man may easily do harm, but not every man can do good to another. He who encroaches on his neighbour's land, and transgresses his boundaries, shall make good the damage, and, to cure him of his impudence and also of his meanness, he shall pay a double penalty to the injured party. Of these and the like matters the wardens of the country shall take cognizance, and be the judges of them and assessors of the damage; in the more important cases, as has been already said, the whole military force belonging to any one of the twelve divisions shall decide, and in the lesser cases the officers: or, again, if any one pastures his cattle on his neighbour's land, they shall see the injury, and adjudge the penalty. And if any one, by decoying the bees, gets possession of another's swarms and draws them to himself by making noises, he shall pay the damage; or if any one sets fire to his own wood and takes no care of his neighbour's property, he shall be fined at the discretion of the magistrates. And if in planting he does not leave a fair distance between his own and his neighbour's land, he shall be punished, in accordance with the enactments of many lawgivers, which we may use, not deeming it necessary that the great legislator of our state should determine all the trifles which might be decided by any

body ; for example, husbandmen have of old had excellent laws about waters, and there is no reason why we should let the stream of our discourse diverge from them : he who likes may draw water from the fountain-head of the common stream on to his own land, if he do not cut off the spring which clearly belongs to some other owner ; and he may take the water in any direction which he pleases, except through a house or temple or sepulchre, but he must be careful to do no harm beyond the channel. And if there be in any place a natural dryness of the earth, which absorbs the rain from heaven, and there is a deficiency in the supply of water, let him dig down on his own land as far as the brick clay, and if at this depth he finds no water, let him carry water from his neighbours, as much as is required for his servants' drinking, and if his neighbours, too, are limited in their supply, let him have a fixed measure, which shall be determined by the wardens of the country. This he shall receive each day, and on these terms have a share of his neighbour's water. If there be heavy rain, and one of those on the lower ground injures some tiller of the upper ground, or some one who has a common wall refuses to give his neighbour an outlet for water ; or, again, if some one living on the higher ground recklessly lets off the water on his lower neighbour, and they cannot come to terms with one another, let him, if he will, summon the offender, if he be in the city, before the warden of the city, or if he be in the country before the warden of the country, and let him obtain a decision determining what each of them is to do. And he who will not abide by the decision shall suffer for his malignant and morose temper, and pay a fine equivalent to double the value of the injury, because he was unwilling to submit to the magistrates.

Now, the participation of fruits shall be ordered on this wise. The goddess of Autumn has two gracious gifts : one, the joy¹ of Dionysus which is not treasured up ; the other, which nature intends to be stored. Let this be the law, then, concerning the fruits of autumn : he who tastes the common or storing fruits of autumn, whether grapes or figs, before the season of vintage which coincides with Arcturus, either on his own land or on that

¹ Reading *παίδιον*.

of others,—let him pay fifty drachmae, which shall be sacred to Dionysus, if he pluck them from his own land; and if from his neighbour's land a mina, and if from any others two-thirds of a mina. And he who would gather the fresh grapes or the fresh figs, as they are now termed, if he take them off his own land let him pluck them how and when he likes; but if he takes them from the ground of others without their leave, let him in that case be always punished in accordance with the law which ordains that he should not move what he has not laid down. And if a slave touches any fruit of this sort, without the consent 845 of the owner of the land, he shall be beaten with as many blows as there are grapes on the bunch, or figs on the fig-tree. Let a metic purchase the fresh autumnal fruit, and then, if he pleases, he may gather it; but if a stranger is passing along the road, and desires to eat, let him take of the fresh grape for himself and a single follower without price, as a tribute of hospitality. The law however forbids strangers from sharing in the sort which is not used for eating; and if any one, whether he be master or slave, takes of them in ignorance, let the slave be beaten, and the master be dismissed with admonitions, and instructed to take of the other autumnal fruits which are unfit for making raisins and wine, or for laying by as dried figs. As to pears, and apples, and pomegranates, and similar fruits, there shall be no disgrace in taking them secretly; but he who is found out, if he be of less than thirty years of age, shall be struck and beaten off, but not wounded; and no freeman shall have any right of satisfaction for such blows. Of these fruits the stranger may partake just as he may of the fruits of autumn. And if an elder who is more than thirty years of age, eat of them on the spot, let him, like the stranger, be allowed to partake of all such fruits, but he must carry away nothing. If, however, he will not obey the law, let him run the risk of failing in the competition of virtue, in case any one takes notice of his actions before the judges.

Water is the greatest element of nutrition in gardens, but is easily polluted. You cannot poison the soil, or the sun, or the air, which are the other elements of nutrition in plants, or divert them, or steal them; but all these things may very likely happen in regard to water, which must therefore be protected by law:

and let this be the law — If any one intentionally pollutes the water of another, whether the water of a spring, or collected in reservoirs, either by poisonous substances, or by digging, or by theft, let the injured party bring the cause before the wardens of the city, and claim in writing the value of the loss; and if he be found guilty of injuring the water by deleterious substances, let him not only pay damages, but purify the stream or the vessel which contains the water, in such manner as the laws of the interpreters order the purification to be made by the parties in each case.

846 With respect to the gathering in of the fruits of the soil, let a man, if he pleases, carry his own fruits through any place in which he either does no harm to any one, or himself gains three times as much as his neighbour loses. Now of these things the archons should be made cognisant, as of all other things in which a man intentionally does injury to another or to the property of another, by fraud or force, in the use which he makes of his own property. All these matters a man should lay before the magistrates, and receive damages, supposing the injury to be under three minae; or if he have a charge against another which involves a larger amount, let him bring the suits into the public courts and have the evil-doer punished. But if any of the magistrates appears to give unjust punishments in the penalties which he imposes, let him be adjudged to pay double to the injured party. Any one may bring the offences of magistrates, in any particular case, before the public courts. There are innumerable little matters relating to the modes of punishment, and applications for suits, and the summonses and witnesses to summons; for example, whether two witnesses should be required for a summons, or how many, and all such details, which cannot be omitted in legislation and are beneath the wisdom of an aged legislator. These lesser matters, as they indeed are, in comparison with the greater ones, let a younger generation regulate by law, after the patterns which have preceded, and according to their own experience of the usefulness and necessity of them; and when they are duly regulated let there be no alteration, but let the citizens live in the observance of them.

Now of artizans, let the regulations be as follows:—In the

first place, let no native or servant of a native be occupied in handicraft arts; for a citizen who is to make and preserve the public order of the state, has an art which requires much study and many kinds of knowledge, since it does not admit of being made a secondary occupation; and hardly any human being is capable of pursuing two professions or two arts rightly, or of practising one art himself, and superintending some one else who is practising another. Let this, then, be our first principle in the state: No one who is a smith shall also be a carpenter, and if he be a carpenter he shall not superintend the smith's art rather than his own, under the pretext that in superintending many servants who are working for him, he is likely to superintend them better, because more revenue will accrue to him from them than from his own art; but let every man in the state have one art, and get his living by that. Let the wardens⁸⁴⁷ of the city labour to maintain this law, and if any citizen inclines to any other art rather than the study of virtue, let them punish him with disgrace and infamy, until they bring him back into his own right course; and if any stranger profess two arts, let them chastise him with bonds and money penalties, and expulsion from the state, until they compel him to be one only and not many.

But as touching payments for hire, and contracts of work, or in case any one does wrong to any of the citizens, or they do wrong to any other, up to fifty drachmae, let the wardens of the city decide the case; but if a greater amount is involved, then let the public courts decide according to law. Let no one pay any duty either on the importation or exportation of goods; and as to frankincense and similar perfumes, used in the service of the Gods, which come from foreign parts, and purple and other dyes which are not produced in the country, or the materials of any art which have to be imported, and which are not necessary—no one should import them; nor, again, should any one export anything which is wanted in the country. Of all these things let there be inspectors and superintendents, taken from the guardians of the law; and they shall be the twelve next in order to the five seniors. Concerning arms, and all military implements, if there be need of introducing any art, or plant, or metal, either for the purpose of making chains, or

bridles and reins for animals, let the commanders of the horse and the generals have authority over their importation and exportation; the city shall give them out and receive them again, and the guardians of the law shall make fit and proper laws about them. But let there be no retail trade for the sake of moneymaking, either in this or any other article, in the city or country at all.

With respect to food and the distribution of the produce of the country, the right and proper way seems to be nearly that which is the custom of Crete; for there all are required to distribute the fruits of the soil into twelve parts, and in this way
848 consume them. Let the twelfth portion of each (as for instance of wheat and barley, which the rest of the fruits of the earth shall follow, as well as the animals which are sold in each of the twelve divisions) be further divided into three parts; one part for freemen, another for their servants, and a third part for craftsmen, and in general for the strangers, and any sojourners who may be dwelling in the city, and like other men must live; and there may be those who come on some business which they have with the state, or with some individual. Let only a third part of all necessaries be required to be sold; out of the other two-thirds no one shall be compelled to sell. And how will they be best distributed? In the first place, we see clearly that the distribution will be of equals in one point of view, and in another point of view of unequals.

Cle. What do you mean?

Ath. I mean that the earth of necessity produces and nourishes the various articles of food, sometimes better and sometimes worse.

Cle. Of course.

Ath. Such being the case, let no one of the three portions be greater than either of the other two;—neither that which is assigned to masters and slaves, nor again that of the stranger; but let the distribution to all be alike, and let every one of the citizens who gets his two portions have power to determine how much, and of what quality, he will distribute to slaves and freemen. And what remains he shall distribute by measure and number among the animals who have to be sustained from the earth, taking the whole number of them.

In the second place, our citizens should have separate houses duly ordered ; and this shall be the order of them. There shall be twelve hamlets, one in the middle of each twelfth lot, and in each hamlet they shall first separate off a market-place, and the temples of the Gods, and of their attendant demi-gods, and if there be any local deities of the Magnetes, or holy seats of other ancient deities, whose memory has been preserved—to these let them pay their ancient honours. But Hestia, and Zeus, and Athene, and whatever other God may preside in each of the twelve portions, shall have temples everywhere. And the first erection of houses shall be around these temples, where the ground is highest, in order to provide the safest and most defensible place of retreat for the guards. All the rest of the country they shall settle in the following manner:—They shall make thirteen divisions of the craftsmen ; one of them shall dwell in the city, and this, again, they shall subdivide into twelve lesser divisions, among the twelve districts of the city, distributed in the outskirts all around ; and in each village they shall settle various classes of craftsmen, with a view to the convenience of the husbandmen. And the chief officers of the 849 wardens of the country shall watch over all these matters, and see how many of them, and which class of them, each place requires ; and fix them where they are likely to give the least inconvenience, and to be most useful to the husbandman. And the officers of the wardens of the city shall see to similar matters in the city.

Now the wardens of the agora ought to see to the details of the agora. Their first care, after the temples have been cared for, should be to prevent any one from doing any wrong in dealings between man and man ; in the second place, as being inspectors of temperance and violence, they should chastise him who requires chastisement. Touching articles of sale, they should first see whether the articles which the citizens are under regulations to sell to strangers are sold to them, as the law ordains. And let the law be as follows:—On the first day of the month, the persons in charge, whoever they are, whether strangers or slaves, who have the charge, shall produce to the strangers the portion which falls to them, in the first place, a twelfth portion of the corn ;—the stranger shall purchase corn

for the whole month, and other food, on the first market day ; and on the tenth day of the month the one party shall sell, and the other buy, liquids sufficient to last during the whole month ; and on the twenty-third day there shall be a sale of animals and of utensils, and of other things which husbandmen require, such as skins and all kinds of clothing, either woven or made of felt, and other goods of the same sort ; and strangers shall be compelled to buy and purchase them from others. As to the retail trade in these things, whether of barley or wheat made into flour, or any other kind of food, no one shall sell them to citizens or their slaves, nor shall any citizen buy them ; but let the stranger sell them in the market of strangers, to artisans and their slaves, making an exchange of wine and food, which is commonly called retail trade. And butchers shall likewise offer for sale dismembered animals to the strangers, and artisans, and their servants. Let any stranger who likes buy fuel from day to day wholesale, from those who have the care of it in the country, and let him sell to the strangers as much as he pleases and when he pleases. As to other goods and implements which are likely to be wanted, they shall sell them in the common market, at any place which the guardians of the law and the wardens of the market and city, choosing according to their judgments, shall determine ; at such places they shall exchange money for goods, and goods for money, neither party giving credit to the other ; and he who gives credit, whether he obtain
850 his money or not, must be satisfied, for in such exchanges he will not be protected by law. But whenever property has been bought or sold, greater in quantity or value than is allowed by the law, which has determined within what limits a man may increase and diminish his possessions, let the excess be registered in the books of the guardians of the law ; or in case of diminution, let there be an erasure made. And let the same rule be observed about the registration of the property of the metics. Any one who likes may come and be a metic on certain conditions ; a foreigner, if he likes, and is able to settle, may dwell in the land, but he must practise an art, and not abide more than twenty years from the time at which he has registered himself ; and he shall pay no sojourner's tax, however small, except good conduct, nor any other tax for buying and selling.

But when the twenty years have expired, he shall take his property with him and depart. And if in the course of these years he should chance to distinguish himself by any considerable benefit which he confers on the state, and he thinks that he can persuade the council and assembly, either to grant him delay in leaving the country, or to allow him to remain for the whole of his life, let him go and persuade the city, and whatever they assent to at his instance shall take effect. For the children of the metics being artisans, and of fifteen years of age, let the time of their sojourn commence after their fifteenth year; and let them remain for twenty years, and then go where they like; but any of them who wishes to remain, may remain, if he can persuade the council and assembly. And if he do not remain, let him erase all the entries which have been made by him in the registry kept by the archons.

BOOK IX.

853 NEXT to the matters which have preceded in the natural order of legislation, will come suits of law. Of suits those which relate to agriculture have been already described, but the more important have not been described. Having mentioned them severally under their usual names, we will proceed to say what punishments are to be inflicted for each offence, and who are to be the judges of them.

Cle. Very good.

Ath. There is a sense of disgrace in legislating, as we are about to do, for all the details of crime in a state which, as we say, is to be well regulated and will be perfectly adapted to the practice of virtue. To assume that in such a state there will arise some accomplice in crimes as great as any which are ever perpetrated in other states, and that we must legislate for him by anticipation, and threaten and make laws against him if he should arise; in order to deter him, and punish his acts, under the idea that he will arise—this, as I was saying, is in a manner disgraceful. But seeing that we are not like the ancient legislators, who gave laws to demi-gods and sons of Gods, being themselves, according to the popular belief, the offspring of the Gods, and legislating for others, who were also the children of divine parents, whereas we are only men who are legislating for the sons of men, there is no uncharitableness in apprehending that some one of our citizens may be like a seed which has touched the ox's horn, and have a heart which cannot be softened any more than those seeds can be softened by fire. Among our citizens there may be those who cannot be subdued by all the strength of the laws; and for their sake, though an ungracious task, I will proclaim my first law about

the robbing of temples, in case such a crime should ever be committed. I do not expect or imagine that any well-brought-up citizen will ever take the infection, but their servants, and strangers, and strangers' servants may be guilty of many impieties. And with a view to them especially, and yet not 854 without a provident eye to the weakness of human nature generally, I will proclaim the law about robbers of temples and similar incurable, or almost incurable, criminals. Having already agreed that such enactments ought always to have a short prelude, we may speak to the criminal whom some tormenting desire by night and by day tempts to go and rob a temple, in words of admonition and exhortation:—O sir, we will say to him, the impulse which moves you to rob temples is not an ordinary human malady, nor yet a visitation of heaven, but a madness which is begotten in a man from ancient and unexpiated crimes of his race, destroying him when his time is come;—against this you must guard as well as you can, and how you are to guard I will explain to you. When any such thought comes into your mind, go and perform expiations, go as a suppliant to the temples of the Gods who avert evils, go to the society of those who are called good men among you; hear them tell and yourself try to repeat after them, that every man should honour the noble and the just. Fly from the company of the wicked—fly and turn not back; and if your disorder is lightened by these remedies, well and good, but if not, then acknowledge death to be nobler than life, and depart hence.

Such are the preludes which we sing to all who have thoughts of unholy and treasonable actions, and to him who hearkens to them the law has nothing more to say. But to him who is disobedient when the prelude is over, cry with a loud voice—He who is taken in the act of robbing temples, if he be a slave or stranger, shall have his evil deed engraven on his face and hands, and shall be beaten with as many stripes as may seem good to the judges, and be cast naked beyond the borders of the land. And if he suffers this punishment he will probably be corrected and improved; for no penalty which the law inflicts is designed for evil, but always makes him who suffers either better or not so bad. But if any citizen be found guilty of any great or unmentionable wrong, either in relation to the

855 Gods, or his parents, or the state, let the judge deem him to be incurable, remembering what an education and training he has had from youth upward, and yet has not abstained from the greatest of crimes. The penalty of death is to him the least of evils; and others will be benefited by his example, if he be put away out of the land with infamy. But let his children and family, if they avoid the ways of their father, have glory, and let honourable mention be made of them, as having nobly and manfully escaped out of evil into good. None of them should have their goods confiscated to the state, for the lots of the citizens ought always to continue the same and equal.

Touching the exaction of penalties, when a man appears to have done anything which deserves a fine, he shall pay the fine, if he have anything in excess of the lot which is assigned to him; but more than that he shall not pay. And to secure exactness, let the guardians of the law refer to the registers, and inform the judges of the precise truth, in order that none of the lots may go uncultivated for want of money. But if any one seems to deserve a greater penalty, let him be imprisoned for a time and otherwise dishonoured, unless some of his friends are willing to be surety for him, and liberate him by becoming partners in the fine. And let no one be outlawed for any offence whatever, nor be banished beyond the frontier, but let him receive punishment—death, or bonds, or blows, or degrading posts or positions, or removed to some temple on the borders of the land, or let him pay money penalties, as we said before. In cases of death, let the judges be the guardians of the law, and a court selected by merit from last year's magistrates. But how the causes are to be brought into court, and the summonses, and manner of proceeding and the like, may be left to the younger generation of legislators to determine; the manner of voting we must determine ourselves.

Let the vote be given openly; but before they come to the vote let the judges sit in order of seniority over against plaintiff and defendant, and let all the citizens who can spare time hear and take a serious interest in listening to such causes. First of all the plaintiff shall make one speech, and then the defendant shall make another; and after the speeches have been made the

eldest judge shall begin to examine the parties, and proceed to make a satisfactory enquiry into what has been said; and after the oldest has spoken, every one shall proceed in order to examine either party as to what he may have said or omitted to say; and he who has nothing more to ask shall pass over the examination to another. And on so much of what has been said as is to the purpose, they shall put the seals of all the judges with their signatures in writing, and place the writings on the altar of Hestia. On the next day they shall ⁸⁵⁶ meet again, and in like manner put their questions and go through the cause, and again set their seals upon the evidence; and when they have three times done this, and have had witnesses and evidence enough, they shall each of them give a holy vote, after promising by Hestia that they will decide justly and truly to the utmost of their power; and so they shall put an end to the suit.

Next, after what relates to the Gods, follows what relates to the dissolution of the state:—Whoever by promoting a man to power enslaves the laws, and subjects the city to factions, using violence and stirring up sedition contrary to law, him we will deem the greatest enemy of the whole state. But he who takes no part in such proceedings, and yet being the chief magistrate of the state, knowing of them or not knowing of them, by reason of cowardice does not interfere on behalf of his country, such an one we must consider nearly as bad. Every man who is worth anything will inform the magistrates, and bring the conspirator to trial for making a violent and illegal attempt to change the government. The judges of the traitor shall be the same as of the robbers of temples; and let the whole proceeding be carried on in the same way, and the vote of the majority condemn to death. But let there be a general rule, that the disgrace and punishment of the father is not to be visited on the children, except in the case of some one whose father, grandfather, and great-grandfather have successively undergone the penalty of death. Such persons the city shall send away with all their possessions, reserving only and wholly their appointed lot to their original city and country. And out of the citizens who have more than one son of not less than ten years of age, they shall select ten whom

their father or grandfather by the mother's or father's side shall appoint, and let them send to Delphi the names of those who are selected, and him whom the God appoints they shall establish as heir of the house which has failed; and may he have better fortune than his predecessors!

Cle. Very good.

857 *Ath.* Once more let there be a third general law respecting the judges who are to give judgment, and the manner of conducting suits against those who are tried on an accusation of treason; and as concerning the remaining or departure of their descendants,—there shall be one law for all three, for the traitor, and the robber of temples, and the subverter by violence of the laws of the state. For a thief, whether he steal much or little, let there be one law, and one punishment for all alike; in the first place, let him pay double the amount of the theft if he be convicted, and if he have so much over and above the allotment. If he have not, he shall be bound until he pay the penalty, or persuade him who has obtained the sentence against him to forgive him. But if a person is convicted of a theft against the state, then if he can persuade the city, or if he will pay back twice the amount of the theft, he shall be set free from his bonds.

Cle. What makes you say, Stranger, that a theft is all one; whether the thief may have taken much or little and either from sacred or secular places—and these are not the only differences in thefts:—seeing, then, that they are of many kinds, ought not the legislator to adapt himself to them, and impose upon them entirely different penalties?

Ath. Excellent. I was running on too fast, Cleinias, and you impinged upon me, and brought me to my senses, reminding me of what, indeed, had occurred to my mind already, that legislation was never yet rightly worked out, as I may say in passing:—Do you remember the image in which I likened the men for whom laws are now made to slaves who are doctored by slaves? For of this you may be very sure, that if one of those empirical physicians, who practise medicine without science, were to come upon the gentleman physician talking to his gentle patient, and using the language almost of philosophy—beginning at the beginning of the disease and dis-

coursing about the whole nature of the body, he would burst into a hearty laugh—he would say what most of those who are called doctors always have at their tongue's end:—Foolish fellow, he would say, you are not healing the sick man, but you are educating him; and he does not want to be made a doctor, but to get well.

Cle. And would he not be right?

Ath. Perhaps he would; and he might remark upon us, that he who discourses about laws, as we are now doing, is giving the citizens education and not laws; that would be rather a telling observation.

Cle. Very true.

Ath. But we are fortunate.

Cle. In what way?

858

Ath. Inasmuch as we are not compelled to give laws, but we may take into consideration every form of government, and ascertain what is best and what is most needful, and how they may both be carried into execution; and we may also, if we please, at this very moment choose what is best, or, if we prefer, what is most necessary—which shall we do?

Cle. There is something ridiculous, Stranger, in our proposing such an alternative, as if we were legislators, simply bound under some great necessity which cannot be deferred to the morrow. But we, as I may by the grace of Heaven affirm, like gatherers of stones or beginners of some composite work, may collect a heap of materials, and afterwards, at our leisure, select what is suitable for our intended construction. Let us then suppose ourselves to be at leisure, not of necessity building, but rather like men who are partly providing materials, and partly putting them together. And we may truly say that some of our laws, like stones, are already fixed in their places, and others lie about.

Ath. Certainly, in that case, Cleinias, our view of law will be more in accordance with nature. For there is another matter affecting legislators, which I must earnestly entreat you to consider.

Cle. What is that?

Ath. Divers other persons, and not legislators only, have composed writings and speeches.

Cle. To be sure.

Ath. Shall we give heed rather to the writings of those others, —poets and the like, who either in metre or out of metre have recorded their own notes of life, and not to the writings of legislators, or shall we give heed to them above all?

Cle. Yes; to them above all others.

Ath. And ought not the legislator to have an opinion concerning those who write about the beautiful, the good, and the just, and to teach what they are, and how they are to be pursued by those who intend to be happy?

Cle. Certainly he should.

Ath. And is it disgraceful for Homer and Tyrtaeus and other poets to lay down evil precepts in their writings respecting life and the pursuits of men, but not disgraceful for Lycurgus and Solon and others who were legislators as well as writers? Of all the writings which there are in cities, are not those which relate to laws, when you unfold and read them, found to be by far the noblest and the best, and do not other writings either
859 agree with them, or if they disagree, are they not ridiculous? We should consider whether the laws of states ought to have the character of loving and wise parents, or of tyrants and masters, who command and threaten, and, after writing their decrees on walls, go their ways; and whether, in discoursing of laws, we shall take the gentler view of them which may or may not be attainable, but to which we, at any rate, will show our readiness to give effect, and be prepared to undergo whatever may be the result. And may the result be good, and by the favour of Heaven it shall be good!

Cle. Excellent; let us do as you say.

Ath. Then we will now consider accurately, as we proposed, what relates to robbers of temples, and all kinds of thefts and offences in general; and we must not be annoyed if, in the course of legislation, we have enacted some things, and have not made up our minds about some others; for as yet we are not legislators, but we may be some day. Let us, then, if you please, consider these matters.

Cle. By all means.

Ath. Concerning all principles of honour and justice, let us endeavour to ascertain how far we are consistent with ourselves,

and how far we are inconsistent, acknowledging indeed that our aim is to contradict the majority—and we may note how far the many are inconsistent with one another.

Cle. What are the inconsistencies which you observe in us?

Ath. I will endeavour to explain. If I am not mistaken, we are agreed that justice and just men and things and actions are all fair, and, if a person were to maintain that just men, even when they are deformed in body, are still perfectly beautiful in respect of the excellent justice of their minds, no one would say that there was any inconsistency in this.

Cle. They would be quite right.

Ath. Perhaps; but let us consider further, that even if all things which are just are fair and honourable, there are always passive states deemed by us to be equivalent to the active ones.

Cle. And what is the inference?

Ath. The inference is, that a just action in partaking of the just partakes also in the same degree of the fair and honourable?

Cle. Certainly.

Ath. And must not a suffering which partakes of the just principle be admitted to be in the same degree fair and 860 honourable, if the argument is consistently carried out?

Cle. True.

Ath. But then if we admit suffering to be just and yet dishonourable, and the term 'dishonourable' is applied to justice, will not the just and the honourable disagree?

Cle. What do you mean?

Ath. A thing not difficult to understand; the laws which have been already enacted would seem to announce principles directly opposed to what we are saying.

Cle. To what?

Ath. We were saying, if I am not mistaken, that the robber of temples, and he who was the enemy of law and order, might justly be put to death, and we were proceeding to make divers other enactments of a similar nature. But we refrained, because we saw that these inflictions of sufferings are infinite in number and degree, and are, at once, the most just and also the most dishonourable of all sufferings. And if this is true, are not

the just and the honourable at one time all the same, and at another time in the most diametrical opposition?

Cle. Such appears to be the case.

Ath. In this discordant and inconsistent fashion does the language of the many rend asunder the honourable and just.

Cle. Very true, Stranger.

Ath. Then now, Cleinias, let us see how far we are consistent about these matters.

Cle. Consistent in what?

Ath. I think that I have clearly stated in the former part of the discussion, but if I did not, let me now state——

Cle. What?

Ath. That all bad men are always involuntarily bad; and from this I must proceed to draw a further inference.

Cle. What is it?

Ath. That the unjust man may be bad, but that he is bad against his will. Now that an action which is done involuntarily should be voluntary is a contradiction; wherefore he who maintains that injustice is involuntary will deem that the evil-doer does evil involuntarily. I admit therefore that all men do evil involuntarily, and if any contentious or disputatious person says that men are evil-doers against their will, and yet that many do evil willingly, I certainly cannot agree with him. But, then, how can I avoid being inconsistent with myself, if you, Cleinias, and you, Megillus, say to me,—Well, Stranger, and how about legislating for the city of the Magnetes—shall we legislate or not—what do you advise? Certainly we will, I should reply. Then will you determine for them what are voluntary and what are involuntary crimes, and shall we make the punishments greater of voluntary errors and crimes and less for the involuntary; or shall we make the punishment of all to be alike, 861 under the idea that there is no such thing as voluntary crime?

Cle. Very good, Stranger; and what shall we say in answer to these objections?

Ath. That is a very fair question. In the first place, let us——

Cle. Do what?

Ath. Let us remember what has been well said by us already, that our ideas of justice are in the highest degree confused

and inconsistent. Bearing this in mind, let us proceed to ask ourselves once more whether we have discovered a way out of the difficulty. Have we ever determined in what respect these two classes of actions differ from one another? For in all states and by all legislators whatsoever, two kinds of actions have been distinguished—the one, voluntary, the other, involuntary; and they have legislated about them accordingly. But shall this new word of ours, like an oracle of God, be only spoken, and have no explanation or verification? How can a word not understood be the basis of legislation? Impossible. Before proceeding to legislate, then, we must prove that they are two, and what is the difference between them, that when we impose the penalty upon either, every one may understand our proposal, and be able in some way to judge whether the penalty is fitly or unfitly enacted.

Cle. I agree with you, Stranger; for one of two things is certain: either we must not say that all unjust acts are involuntary, or we must show the meaning and truth of this statement.

Ath. Of these two alternatives, the one is quite intolerable—not to speak what I know to be the truth would be to me unlawful and unholy. But if acts of injustice cannot be divided into voluntary and involuntary, I must endeavour to find some other distinction in them.

Cle. Very true, Stranger; there cannot be two opinions among us upon that point.

Ath. Reflect, then; there are hurts of various kinds done by the citizens to one another in the intercourse of life, affording plentiful examples both of the voluntary and involuntary.

Cle. Certainly.

Ath. I would not have any one suppose that all these hurts are injuries, and that injuries are of two kinds,—one, voluntary, and the other, involuntary; for the involuntary hurts are quite as many and as great as the voluntary. . And please to consider 862 whether I am right or not in what I am going to say; for I deny, Cleinias and Megillus, that he who harms another involuntarily does him an injury involuntarily, nor should I legislate about such an act under the idea that I am legislating for an involuntary injury. But I should rather say that such a hurt, whether great or small, is not an injury at all; and, on the

other hand, if I am right, when a benefit is wrongly conferred, the author of the benefit may often be said to injure. For I maintain, O my friends, that the mere giving or taking away of anything is not to be described either as just or unjust; but the legislator has to consider whether any one does good or harm to another out of a just principle and intention. On the distinction between injustice and hurt he must fix his eye; and when there is hurt, he must, as far as he can, make the hurt good by law, and save that which is ruined, and raise up that which is fallen, and make that which is dead or wounded whole. And when compensation is given, the law must always seek to win over the doers and sufferers of the several hurts from feelings of enmity to those of friendship.

Cle. Very good.

Ath. Then as to unjust hurts (and gains also, supposing the injustice to bring gain), of these we may heal as many as are capable of being healed, regarding them as diseases of the soul, and the cure of injustice will take the following direction—

Cle. What direction?

Ath. When any one commits any injustice, small or great, the law will admonish and compel him either never at all to do the like again, or never voluntarily, or at any rate in a far less degree; and he must in addition pay for the hurt. Whether the end is to be attained by word or action, with pleasure or pain, by giving or taking away privileges, by means of penalties or gifts, or in whatsoever way the law shall proceed to make a man hate injustice, and love or not hate the nature of the just,—this is quite the noblest work of law. But if the legislator sees any one who is incurable, for him he will appoint a law and a penalty. He knows quite well that to such men themselves there is no profit in the continuance of their lives, and that they would do a double good to the rest of mankind if they would
863 take their departure, inasmuch as they would be an example to other men not to offend, and they would relieve the city of bad citizens. In such cases, and in such cases only, the legislator ought to inflict death as the punishment of offences.

Cle. What you have said appears to me to be very reasonable, but will you favour me by stating a little more clearly the difference between hurt and injustice, and the various

complications of the involuntary and voluntary which arise in these cases?

Ath. I will endeavour to comply with your request : Concerning the soul, thus much would be generally said and allowed, that one element in her nature is passion ; which may be described either as a state or a part of the soul, and is hard to be striven against and contended with, and by irrational force overturns many things.

Cle. Very true.

Ath. And pleasure is not the same with passion, but has an opposite power, working by persuasion and by the force of deceit in all things.

Cle. Quite true.

Ath. A man may truly say that ignorance is a third cause of crimes. Ignorance, however, may be conveniently divided by the legislator into two sorts : there is simple ignorance, which is the source of lighter offences, and double ignorance, which is accompanied by conceit of wisdom ; and he who is under the influence of the latter, fancies that he knows all about matters of which he knows nothing. This second kind of ignorance, when possessed of power and strength, will be held by the legislator to be the source of great and monstrous crimes, but when attended with weakness will only result in the errors of children and old men ; and these he will treat as errors, and will make laws accordingly for those who commit them, which will be the mildest and most merciful of all laws.

Cle. Quite right.

Ath. We all of us remark of one man that he is superior to pleasure and passion, and of another that he is inferior to them ; and this is true.

Cle. Certainly.

Ath. But no one was ever yet heard to say that one of us is superior and the other inferior to ignorance.

Cle. Very true.

Ath. We are speaking of motives which incite men to the fulfilment of their will ; although they may often draw an individual in opposite directions at the same time.

Cle. Yes, often.

Ath. And now I can define to you clearly, and without

ambiguity, what I mean by the just and unjust, according to my notion of them: When anger and fear, and pleasure and pain, and jealousies and desires, tyrannize over the soul, whether
 864 they do any harm or not—I call them all injustice. But when the opinion of the best, whatever states or individuals may suppose that to be, has dominion in the soul and orders the life of every man, even if it be sometimes mistaken, yet what is done in accordance therewith, and the principle in individuals which obeys this rule, and is best for the whole life of man, is to be called just; although the action, done in error, is thought by the multitude to be involuntary injustice. Leaving the question of names, about which we are not going to quarrel, and having already delineated three sorts of errors, we may begin by recalling them somewhat more vividly to our memory: One kind was of the painful sort, which we denominate anger and fear?

Cle. Quite right.

Ath. There was a second class of pleasures and desires, and a third class of hopes, which aimed at true opinion about the best. This latter being further subdivided into three, there arise five kinds of actions, and for these five kinds we will make laws of two kinds.

Cle. What are the two kinds?

Ath. There is one kind of actions done by violence and in the light of day, and another kind of actions which are done in darkness and with secret deceit, or sometimes both with violence and deceit; the laws concerning these last ought to have a character of severity.

Cle. Naturally.

Ath. And now let us return from this digression and complete the work of legislation. Laws have been already enacted by us concerning the robbers of the Gods, and concerning traitors; and also concerning those who corrupt the laws for the purpose of subverting the government. A man may very likely commit some of these crimes, either in a state of madness or when affected by disease, or under the influence of extreme old age, or in a fit of childish wantonness, himself no better than a child. And if this be made evident to one of the judges elected to try the cause, on the appeal of the criminal or his advocate, and

he be judged to have been in this state when he committed the offence, he shall simply pay for the hurt which he may have done to another; but he shall be exempt from other penalties, unless he have slain some one, and have on his hands the stain of blood. And in that case he shall go to another land and country, and there dwell for a year; and if he return before the expiration of the time which the law appoints, or even set his foot at all on his native land, he shall be bound by the guardians of the law and shall be the bondsman of the state for two years, and then go free.

865

Having begun to speak of homicide, let us endeavour to lay down laws concerning every different kind of homicide; and, first of all, concerning violent and involuntary homicides. If any one in an athletic contest, and at the public games, involuntarily kills a friend, and he dies either at the time or afterwards of the blows which he has received; or if the like misfortune happen to any one in war or military exercises, or mimic contests of which the rulers enjoin the practice, whether with or without arms, when he has been purified according to the law brought from Delphi relating to these matters, he shall be innocent. And so in the case of physicians, if their patient die against their will, they shall be held guiltless by the law. And if one slay another with his own hand, but unintentionally, whether he be unarmed or have some instrument or dart in his hand; or if he kill him by giving him food and drink, or by the application of fire or cold, or by suffocating him, whether he do the deed by his own hand, or by the agency of others, he shall be regarded as the agent, and shall suffer the following penalties:—If he kill the slave of another in the belief that he is his own, he shall bear the master of the dead man harmless from loss, or shall pay a penalty of twice the value of the dead man, which the judges shall assess; but they must use purifications greater and more than in the case of those who committed homicide at the games;—what they are to be, the interpreters whom the God appoints shall be authorized to declare. And if a man kills his own slave, when he has been purified according to law, he shall be quit of the homicide. And if a man kills a freeman unintentionally, he shall undergo the same purification as he did who killed the slave. But let him not

forget also a tale of olden time, which is to this effect : He who has suffered a violent end, when newly dead, if he has had the soul of a freeman in life, is angry with the author of his death ; and being himself full of fear and panic by reason of his violent death, when he sees his murderer walking about in his own accustomed haunts, he is said to become disordered, which disorder of his, aided by the guilty recollection of the other, is communicated by him with overwhelming force to the murderer and his deeds. Wherefore also the doer must avoid the sufferer for the entire period of a year, and must not be found in any of the places that belong to him in the whole country. And if the dead man be a stranger, he shall abstain
 866 from the whole country of the stranger during a like period. If any one voluntarily obey this law, the next of kin to the deceased seeing all that has happened shall take pity on him, and make peace with him, and deal with him as he ought. But if any one is disobedient, and either ventures to go to any of the temples and sacrifice unpurified, or will not continue in exile during the appointed time, the next of kin to the deceased shall proceed against him for murder ; and if he be convicted every part of his punishment shall be doubled. And if the next of kin do not proceed against the perpetrator of the crime, then the pollution shall be deemed to fall upon his own head ;— the sufferer shall call for vengeance upon his kinsman, and he who has a mind to proceed against him may compel him to be absent from his country during five years, according to law. If a stranger involuntarily kill a stranger who is dwelling in the city, he who likes shall prosecute the cause according to the same rules. If he be a metic, let him be absent for a year, or if he be an entire stranger, in addition to the purification, whether he slay a stranger, or a metic, or a citizen, he shall be banished for life from the country which is under the dominion of our laws. And if he return contrary to law, let the guardians of the law punish him with death ; and let them hand over his property, if he have any, to him who is next of kin to the sufferer. And if he be wrecked, and driven on the coast against his will, he shall take up his abode on the sea-shore, wetting his feet in the sea, and watching for an opportunity of sailing ; but if he be brought by land, and

is not his own master, let the magistrate whom he first comes across in the city, release him and send him unharmed over the border.

If any one slays a freeman with his own hand, and the deed be done in passion, in the case of such actions we must begin by making a distinction. For a deed is done from passion either when men suddenly, and without intention to kill, cause the death of another by blows and the like on a momentary impulse, and are sorry for the deed immediately afterwards; or again, when after having been insulted in deed or word, men pursue revenge, and kill a person intentionally, and are not sorry for their deed. And, therefore, we must assume that there are two kinds of homicide, both of them arising from passion, which may be justly said to be in a mean between the voluntary and involuntary; at the same ⁸⁶⁷ time, they are neither of them anything more than a likeness or shadow of either. He who treasures up his anger, and avenges himself, not immediately and at the moment, but with insidious design, and after an interval, is like the voluntary; but he who does not treasure up his anger, and takes vengeance on the instant, and without malice prepense, approaches to the involuntary; and yet even he is not altogether involuntary, but is only the image or shadow of the involuntary; wherefore about homicides committed in hot blood, there is a difficulty in determining whether in legislating we shall reckon them as voluntary or as partly involuntary. The best and truest view is to regard either, as a likeness only of the voluntary or involuntary. We may, however, divide them accordingly as they are done with or without premeditation. And we make the penalties heavier for those who commit homicide with angry premeditation, and lighter for those who do not premeditate, but smite upon the instant; for that which is like a greater evil should be punished more severely, and that which is like a less evil should be punished less severely: this shall be the rule of our laws.

Cle. Certainly.

Ath. Let us proceed: If any one slays a freeman with his own hand, and the deed be done in a moment of anger, and without premeditation, let the offender suffer in other respects

as the involuntary homicide would have suffered, undergoing an exile of two years, that he may learn to school his passions. But he who slays another from passion, yet with premeditation, shall undergo the same penalty as the former; and to this shall be added an exile of three instead of two years,—his punishment is to be longer because his passion is greater. The manner of their return shall be on this wise: (and here the law has difficulty in determining exactly; for in some cases the murder which is judged by the law to be worse may really be the less cruel, and he who is judged the less cruel may be really the worse, and may have executed the murder in a more savage manner, whereas the other may have been gentler. But in general the degrees of guilt will be such as we have described them. Of all these things the guardians of the law must take cognizance):—When either of them has completed his term of exile, they shall send twelve judges to the borders of the land; these during the interval shall have been informed of the actions of the criminals, and they shall judge respecting their pardon and 868 reception; and the homicides shall abide by their judgment. But if after they have returned home, either of them in a moment of anger repeats the deed, let him be an exile, and return no more; or if he return, let him suffer as the stranger was to suffer in a similar case. He who kills his own slave shall undergo a purification, but if he kills the slave of another in anger, he shall pay twice the amount of the loss to his owner. And if a homicide is disobedient to the law, and without purification pollutes the agora, or the games, or the temples, he who pleases may bring to trial the next of kin to the dead man for permitting him, and the murderer with him, and may compel the one to exact and the other to suffer a double amount of fines and purifications; and the accuser may himself receive the fine which is imposed by law. If a slave in a fit of passion kills his master, the kindred of the deceased man may do with the murderer (provided only they do not spare his life) whatever they please, and they will be pure; or if he kills a freeman, who is not his master, the owners shall give up the slave to the relatives of the deceased, and they shall be under an obligation to put him to death, but this may be done in any manner which they please. And if (which is a rare occurrence, but does some-

times happen) a father or a mother in a moment of passion slay a son or daughter by blows, or some other violence, they shall undergo the same purification as in other cases, and be exiled during three years; but when they return from exile the wife shall separate from the husband, and the husband from the wife, and they shall never afterwards beget children together, or live under the same roof, or partake of the same sacred rights with those whom they have deprived of a child or of a brother. And he who is impious and disobedient in such a case shall be brought to trial for impiety by any one who pleases. If in a fit of anger a husband kills his wife, or the wife her husband, they shall undergo the same purification, and their term of exile shall be three years. And when he who has committed any such crime returns, let him have no communion in sacred rites with his children, neither let him sit at the same table with them, and the father or son who disobeys shall be liable to be brought to trial for impiety by any one who pleases. If a brother or a sister in a fit of passion kills a brother or a sister, they shall undergo a purification and a year's exile, as was the case with parents who kill their offspring: they shall not come under the same roof, or share in the sacred rites of those whom they have deprived of their brethren, or of their children. And he who is disobedient shall be justly liable to the law 869 concerning impiety, which relates to these matters. If any one is so violent in his passion against his parents, that in the madness of his anger he dares to kill one of them, if the dead man, when dying, of his own accord acquits the murderer, let him undergo the purification which is assigned to those who have been guilty of involuntary homicide, and do as they do, and he shall be pure. But if he be not acquitted, the perpetrator of such a deed shall be amenable to many laws, for he shall be amenable to the extreme punishments for assault, and impiety, and robbing of temples, for he has robbed his parent of life; and if a man could be slain more than once, most justly would he who in a fit of passion has slain father or mother, undergo many deaths. How can he, whom, even in defence of his life, and when about to suffer death at the hands of his parents, no law will allow to kill his father or his mother who are the authors of his being, and whom the legislator will

command to endure any extremity rather than this—how can he, I say, lawfully receive any other punishment? Let death then be the appointed punishment of him who in a fit of passion slays his father or his mother. But if brother kill brother in a civil broil, or under other like circumstances, if the other have begun, and he only defend himself, let him be free from guilt, as he would be if he had slain an enemy. And if a citizen kill a citizen, or a stranger a stranger; or if a stranger kill a citizen, or a citizen a stranger, let him be free from guilt in like manner; and so in the case of a slave who has killed a slave; but if a slave have killed a freeman in self-defence, let him be subject to the same law as he who has killed a father; and let the law about the remission of penalties in the case of parricide apply equally to every other remission. Whenever any sufferer of his own accord remits the guilt of homicide to another, and declares his act to have been involuntary, let the perpetrator of the deed undergo a purification and remain in exile for a year, according to law.

Enough has been said of murders violent and involuntary and committed in passion: we have now to speak of voluntary crimes done with injustice of whatever kind and premeditation, through the influence of pleasures, and desires, and jealousies.

Cle. Very good.

Ath. Let us first speak, as far as we are able, of their number and nature. The greatest cause of them is lust, which gets the mastery of the soul maddened by desire; and this is most commonly found to exist where the passion reigns which is strongest and most prevalent among the mass of mankind: I mean where the power of wealth breeds endless desires of never-to-be-satisfied acquisition, originating in natural disposition, and a miserable want of education. Of this want of education, the false admiration of wealth which is bruited about among Hellenes and barbarians is the cause; they deem that to be the first of goods which in reality is only the third. And in this way they wrong both posterity and themselves, for nothing can be nobler and better than that the truth about wealth should be spoken in all states—namely, that riches are for the sake of the body as the body is for the sake of the soul. They are good, and wealth is intended by nature to be for the

sake of them, and is therefore inferior to them both, and third in order of excellence. This argument teaches us that he who would be happy ought not to seek to be rich, or rather he should seek to be rich justly and temperately, and then there would be no murders in states, which require to be purged away by other murders. But now, as I said at first, avarice is the chiefest cause and source of voluntary homicide, and hence the worst trials arise. A second cause is ambition: this creates jealousies, which are troublesome companions, above all to the jealous man himself, and in a less degree to the chiefs of the state. And a third cause is cowardly and unjust fear, which has been the occasion of many murders. When a man is doing or has done something which he desires that no one should know him to be doing or to have done, he will take the life of those who are likely to inform of such things, if he have no other means of getting rid of them. Let this be said as a prelude concerning crimes in general; and I must not omit to mention a tradition which is firmly believed by many, and has been received from those who are learned in the mysteries; they say that the crime will be punished in the world below, and also that when the perpetrators return to this world they will suffer what they did by a compensation of nature, and end their lives in like manner by the hand of another. If he who is about to commit a crime believes this, and is induced by the prelude to fear such a penalty, there is no need to proceed with the proclamation of the law. But if he will not listen, let the following law be declared and registered against him:—Whoever shall wrongfully and of 871 design slay with his own hand any of his kinsmen, shall in the first place be deprived of legal privileges; and he shall not pollute the temples, or the agora, or the harbours, or any other place of meeting, whether he is forbidden of men or not; for the law, which represents the whole state, forbids him, and always is and will be in the attitude of forbidding him. And he who, being of the kindred of the deceased, whether on the male or female side, does not prosecute the homicide when he ought, and proclaim him an outlaw, shall in the first place be involved in the pollution, and incur the hatred of the Gods, even as the curse of the law stirs up the voices of

men against him ; and in the second place he shall be in the power of any one who is willing to inflict retribution on behalf of the dead. And he who wishes to punish him shall observe all the precautionary ceremonies of lavation, and any others which the Gods command in cases of this kind. Let him make proclamation, and then go forth and compel the perpetrator to suffer the execution of justice according to the law. Now the legislator may easily show that these things must be accomplished by prayers and sacrifices to certain Gods, who are concerned with the prevention of murders in states. But who these Gods are, and what should be the true manner of bringing such trials before the God, the guardians of the law, aided by the interpreters, and the prophets, and the God, shall determine, and when they have determined let them carry on the prosecution at law. The cause shall have the same judges who are appointed to decide finally in the case of those who plunder temples. Let him who is convicted be punished with death, and let him not be buried in the country of the murdered man, for this would be shameless as well as impious. But if he fly and will not stand his trial, let him fly for ever ; or, if he set foot anywhere on any part of the murdered man's country, let any relation of the deceased, or any other citizen who may first happen to meet with him, kill him with impunity, or bind and deliver him to the archons who determined the suit, that they may put him to death ; and let the prosecutor demand surety of him whom he prosecutes ; three sureties sufficient in the opinion of the magistrates who try the cause shall be provided by him, and they shall undertake to produce him at the trial. But if he is unwilling or unable to provide sureties, then the magistrates shall take him and keep him in

872 bonds, and produce him at the day of trial. If a man do not commit the murder with his own hand, but has contrived the death of another, and is the author of the deed in intention and design, having his soul not pure of the guilt of murder, and he is dwelling in the city, let him be tried in the same way, except in what relates to the sureties ; and also, if he be found guilty, he shall have burial in his native land, but in all other respects this case shall be as the former ; and whether a stranger shall kill a citizen, or a citizen a stranger, or a slave a slave, there

shall be no difference as touching the mere intention and the actual performance, except in the matter of sureties; and these, as has been said, shall be required of the actual murderer only, and he who brings the accusation shall bind them over at the time. If a slave be convicted of killing a freeman voluntarily, or of plotting to kill him, let the public executioner take him either to the sepulchre, or to a place at which he can see the sepulchre of the dead, and inflict upon him as many stripes as the person who took him orders, and if he survives, let him put him to death. And if any one kills a slave who has done no wrong, because he is afraid that he may inform of some base and evil deeds of his own, or for some similar reason, in such a case let him pay the penalty of murder, as he would have done if he had slain a citizen. There are things about which it is terrible and unpleasant to legislate, but impossible not to legislate. If, for example, there should be murders of kinsmen, either perpetrated by the hands of kinsmen, or by their contrivance, and out of malice prepense, which may often happen in ill-regulated states, and perhaps even in a country where a man would not expect to find them, we must repeat once more the tale, which we narrated a little while ago, in the hope that he who hears us will be the more disposed to abstain voluntarily on these grounds from murders, which are utterly abominable. For the tale of tradition, whether under this or some other name, has been plainly set forth by priests of old; they have pronounced that the justice which inspects and avenges the blood of kindred, follows the law of retaliation, and ordains that he who has done any murderous act should of necessity suffer that which he has done. He who has slain a father shall himself be slain at some time or other by his children, and if he have slain his mother he shall of necessity take a woman's nature, and lose his life at the hands of his offspring in after ages; for where a family is polluted with blood there is no other purification, nor can the pollution be washed out until the homicidal soul which did the deed has given life for life, and has propitiated and laid to sleep the wrath of the whole family. These are the retributions of Heaven, and by such punishments men should be deterred. But if they are not deterred, and any one should be incited by some fatality to

deprive his father, or mother, or brethren, or children, of life voluntarily and of purpose, for him the earthly lawgiver legislates as follows:—There shall be the same proclamations about outlawry, and there shall be the same sureties which have been enacted in the former cases. But in his case, if he be convicted, the servants of the judges and the magistrates shall slay him at an appointed place where three ways meet, and cast him naked out of the city, and all the magistrates on behalf of the whole city shall carry stones, and each of them shall cast a stone upon the head of the dead man, and deliver the city from pollution; and after that, they shall bear him to the borders of the land, and throw him out unburied, according to law. And what shall he suffer who slays him who of all men, as they say, is his own best friend? I mean the suicide, who deprives himself by violence of his appointed share of life, not because the law of the state requires him, nor yet under the compulsion of some painful and inevitable fortune which has come upon him, nor because he has had to suffer from irremediable and intolerable shame, but from sloth or want of manliness, imposes upon himself an unjust penalty. For him, what ceremonies there are to be of purification and burial God knows, and about these the next of kin should enquire of the interpreters and of the laws, and do according to their injunctions. They who meet their death in this way shall be buried alone, and none shall be laid by their side; they shall be buried ingloriously in the borders of the twelve portions of the land, in such places as are uncultivated and nameless, and no column or name shall mark the place of their interment. And if a beast of burden or other animal cause the death of any one, except in the case of anything of that kind happening in the public contests, the kinsmen of the deceased shall prosecute the slayer for murder, and the wardens of the country, such, and so many as the kinsmen appoint, shall try the cause, and let the beast when condemned be slain by them, and cast beyond the borders. And if any lifeless thing deprive a man of life, except in the case of a thunderbolt or other fatal dart sent from the Gods,—whether a man is killed by lifeless objects falling upon him, or by his falling upon them, the nearest of kin shall appoint the nearest neighbour to be a judge, and thereby acquit himself

and the whole family of guilt. And he shall cast forth the guilty thing beyond the border, as has been said about the animals.

If a man is found dead, and his murderer be unknown, and after a diligent search cannot be detected, there shall be the same proclamation as in the previous cases, and the same interdict on the murderer; and they shall proceed against him, and announce in the agora, that he who has slain such and such a person, and has been convicted of murder, shall not set his foot in the temples, nor at all in the country of the murdered man, and if he appears and is discovered he shall die, and be cast forth unburied beyond the border. Let us enact this, which shall be one of our laws about murder.

Enough of murder: and now let the cases in and for which the murderer may rightly be deemed pure be recited:—If a man catch a thief coming into his house by night to steal, and he take him and kill him, or if he slay a footpad in self-defence, he shall be guiltless. And any one who does violence to a free woman or a youth, shall be slain with impunity by the injured person, or by his or her father or brothers or sons. If a man find his wife suffering violence, he may kill the violator, and be guiltless in the eye of the law; or if a person kill another in warding off death from his father or mother or children or brethren or wife who are doing no wrong, he shall assuredly be guiltless.

Thus much as to the nurture and education of the living soul of man, having which, he can, and without which, if he unfortunately be without them, he cannot live; and also concerning the punishments which are to be inflicted for violent deaths, let thus much be enacted. Of the nurture and education of the body we have spoken before, and now we have to speak of deeds of violence, voluntary and involuntary, which men do to one another; these we will now distinguish according to their nature and number, and determine what will be the suitable penalties of each; assigning them their proper place in the series of our enactments. The poorest legislator will have no difficulty in determining that wounds and mutilations arising out of wounds should follow next in order after deaths. Let wounds be divided as homicides were divided—into those which

are involuntary, and which are given in passion or from fear, and those which are voluntary and premeditated acts. Concerning all this, we must make some such proclamation as the following:—Mankind must have laws, and conform to
 875 them, or their life would be as bad as that of the most savage beast. And the reason of this is that no man's nature is able to know what is best for the social state of man; or knowing, always able to do what is best. In the first place, there is a difficulty in apprehending that the true art of politics is concerned, not with private but with public good;—for public good binds together states, but private only distracts them,—nor do men always see that the gain is greater both to the individual and the state, when the state and not the individual is first considered. In the second place, even if a person know as a matter of science that this is the truth, but is possessed of absolute and irresponsible power, he will never be able to abide in this principle or to persist in regarding the public good as primary in the state, and the private good as secondary. Human nature will be always drawing him into avarice and selfishness, avoiding pain and pursuing pleasure without any reason, and will bring these to the front, obscuring the juster and better; and so working darkness in his soul will at last fill with evils both him and the whole city. For if a man were born so divinely gifted that he could naturally apprehend the truth, he would have no need of laws to rule over him; for there is no law or order which is above knowledge, nor can mind, without impiety, be deemed the subject or slave of any man, but rather the lord of all. I speak of mind, true and free, and in harmony with nature. But then there is no such mind anywhere, or at least not much; and therefore we must choose law and order, which are second best. Yet these look at things as they exist for the most part only, and are unable to survey the whole of them. And therefore we make laws.

And now we will determine what penalty he ought to pay or suffer who has hurt or wounded another. Any one may easily imagine the questions which have to be asked:—What did he wound, or whom, or how, or when? for there are innumerable particulars of this sort which greatly vary from one another. And to allow courts of law to determine all

these things, or not to determine any of them, is alike impossible. There is one particular which they must determine in all cases—the question of fact. And then, again, that the legislator should not permit them to determine what punishment is 876 to be inflicted in any of these cases, but should himself decide about all of them, small or great, is next to impossible.

Cle. Then what is to be the inference?

Ath. The inference is, that some things should be left to courts of law ; others the legislator must decide for himself.

Cle. And what ought the legislator to decide, and what ought he to leave to the courts of law?

Ath. I may reply, that in a state in which the courts are bad and mute, and decide causes secretly and clandestinely ; or what is worse, when they are disorderly and noisy, as in a theatre, clapping or hooting in turn this or that orator—I say that then there is a very serious evil, which affects the whole state. Unfortunate is the necessity of having to legislate for such courts, but where the necessity exists, the legislator should only allow them to ordain the penalties for the smallest offences ; if the state for which he is legislating be of this character, he must take most matters into his own hands and speak distinctly. But when a state has good courts, and the judges are well trained and scrupulously tested, the determination of the penalties or punishments which shall be inflicted on the guilty may fairly and with advantage be left to them. And we are not to be blamed for not legislating concerning all that large class of matters which judges far worse educated than our's would be able to determine, assigning to each offence the due proportion of wrong done and suffered. They are best able to judge, and therefore to them the greater part may be left. At the same time, as I have often said, we should exhibit to the judges, as we have done, the outline and form of the punishments to be inflicted, and then they will not transgress the just rule. That was an excellent practice, which we observed before, and now that we are resuming the work of legislation, may with advantage be repeated by us.

Let the enactment about wounding be in the following terms :
If any one has a purpose and intention to slay another who is not his enemy, and whom the law does not permit him to slay,

877 and he wounds him, but is unable to kill him, he who had the intent and has wounded him is not to be pitied—he should be regarded as a murderer and be tried for murder. Still having respect to the fortune which has in a manner favoured him, and to the providence who in pity to him and to the wounded man saved the one from a fatal blow, and the other from an accursed fate and calamity—as a thank-offering to this deity, and in order not to oppose his will—in such a case the law will remit the punishment of death, and only compel the offender to emigrate to a neighbouring city during his life; where he shall remain in the enjoyment of all his possessions. But if he have injured the wounded man, he shall make such compensation for the injury as the court deciding the cause shall assess, and the same judges shall decide who would have decided if the man had died of his wounds. And if a child intentionally wound his parents, or a servant his master, death shall be the penalty. And if a brother or a sister intentionally wound a brother or a sister, and is found guilty, death shall be the penalty. And if a husband wound a wife, or a wife a husband, with intent to kill, let him or her undergo perpetual exile; if they have sons or daughters who are still young, the guardians shall take care of their property, and have charge of the children as orphans. If their sons are grown up, they shall be under no obligation to support the exiled parent, but they shall possess the property themselves. And if he who meets with such a misfortune has no children, his kindred to the degree of sons of cousins of the exiled man, both on the male and female side, shall meet together, and after consulting with the guardians and the priests, shall appoint a 5040th citizen to be the heir of the house, considering and reasoning that no house of all the 5040 belongs to the inhabitant or to the whole family, but is the public and private property of the state. Now, the state should seek to have its houses as holy and happy as possible. And if any one of the houses be unfortunate, and stained with impiety, and the heir leave no posterity, and dies unmarried, or married and childless, having suffered death as the penalty of murder or some other crime committed against the Gods or against his fellow-citizens, of which death is the penalty distinctly laid down in the law;

or if any of the citizens be in perpetual exile, and also childless, that house shall first of all be purified and undergo expiation according to law; and then let the kinsmen of the house, as we were just now saying, and the guardians of the law, meet and consider what family there is in the state which is of the highest repute for virtue and also for good fortune, in which there are a number of sons; and let them adopt one of them, and introduce him to the father and forefathers of the dead man, and call him their son, for the sake of the omen, that he may be the continuer of their family, the keeper of their hearth, and the minister of their sacred rites with better fortune than his father had; and when they have made this supplication, they shall make him heir according to law, and the offending person they shall leave nameless and childless and portionless when calamities such as these overtake him. 878

Now, there is not in all things a limit which touches limit; many things have a common boundary which is betwixt and between them; and we were saying that what is done from passion is of this nature, and is in a mean between the voluntary and involuntary. If a person be convicted of having inflicted wounds in a passion, in the first place he shall pay twice the amount of the injury, if the wound be curable, or, if incurable, four times the amount of the injury; or if the wound be curable, and at the same time cause great and notable disgrace to the wounded person, he shall pay fourfold. And whenever any one in wounding another injures not only the sufferer, but also the city, and makes him incapable of defending his country against the enemy, he, besides the other penalties, shall pay a penalty for the loss which the state has incurred. And the penalty shall be, that in addition to his own times of service, he shall serve on behalf of the disabled person, and shall take his place in war; or, if he refuse, he shall be liable to be convicted by law of refusal to serve. The amount of the injury, whether to be paid twofold or threefold or fourfold, shall be fixed by the judges who convict him. And if, in like manner, a brother wounds a brother, the parents and kindred of either sex, including the children of cousins, whether on the male or female side, shall meet, and when they have judged the cause, they shall entrust the assessment of damages to the parents, as is

natural; and if the estimate be disputed, then the arbitrators on the male side shall make the estimate, or if they cannot, they shall commit the matter to the guardians of the law. And when similar charges of wounding are brought by children against their parents, those who are more than sixty years of age, having children of their own, not adopted, shall be required to decide; and if any one is convicted, they shall determine whether he ought to die, or suffer some other punishment either 879 greater than death, or, at any rate, not much less. A kinsman of the offender shall not be allowed to judge the cause, not even if he be of the age which is permitted by the law. If a slave in a fit of anger wound a freeman, the owner of the slave shall give him up to the wounded man, who may do as he pleases with him, and if he do not give him up he shall make good the injury. And if any one says that the slave and the wounded man are conspiring together, let him argue the point, and if he is cast, he shall pay the injury three times over, but if he convict the other two, the freeman who conspired with the slave shall be liable to be made a slave. And if any one unintentionally wounds another he shall simply pay for the harm, for no legislator is able to control chance. In such a case the judges shall be the same as those who are appointed in the case of children and their parents; and they shall estimate the amount of the injury.

All the preceding injuries and every kind of assault are deeds of violence; and every man, woman, or child ought to consider that the elder has the precedence of the younger in honour, both among the Gods and also among men who would live happily. Wherefore it is a foul thing and hateful to the Gods to see an elder man assaulted by a younger in the city; and it is reasonable that a young man when struck by an elder should lightly endure his anger, laying up in store for himself a like honour when he is old. Let this be the law:—Every one shall reverence his elder in word and deed; he shall respect any one who is twenty years older than himself, whether male or female, regarding him or her as his father or mother; and he shall abstain from laying hands on any one who is of an age to have been his father or his mother out of reverence to the Gods who preside over birth; and in like manner he shall abstain from

a stranger, whether he be an old inhabitant or newly arrived; he shall not venture to correct such an one by blows, either as the aggressor or in self-defence. If he thinks that some stranger has struck him out of wantonness or insolence, and ought to be punished, he shall take him to the wardens of the city, but let him not strike him, that he may be kept far away from the possibility of lifting up his hand against a citizen, and let the wardens of the city take the offender and examine him, not forgetting their duty to the God of Strangers, and in case the stranger appear to have struck the citizen unjustly, let them inflict upon him as many blows as he has himself inflicted, and quell his insolence. But if he have done no wrong, then they shall threaten and rebuke the accuser, and let them both go. If a person strike another of the same age or somewhat older 880 than himself, who has no children, whether he be an old man who strikes an old man or a young man who strikes a young man, let him defend himself in the natural way without a weapon and with his hands only. He who, being more than forty years of age, dares to fight with another, whether he be the aggressor or in self-defence, shall be regarded as rude and ill-mannered and slavish;—this will be a disgraceful punishment, and therefore suitable to him. The obedient nature will readily yield to such exhortations, but the disobedient, who heeds not the prelude, shall have the law ready for him. If any man smites another who is older than himself, either by twenty or by more years, in the first place, he who meets him, not being younger than the combatants, or their equal in age, shall separate them, or be disgraced according to law; but if he be the equal in age of the person who is struck or younger, he shall defend the person injured as he would a brother or father or still older relative. Further, let him who dares to smite an elder be tried for assault, as I have said, and if he be found guilty, let him be imprisoned for a period of not less than a year, or for a longer period at the pleasure of the judges. But if a stranger or metic smite one who is older by twenty years or more, the same law shall hold about the bystanders assisting, and he who is found guilty in such a suit, if he be a stranger and not a sojourner, shall be imprisoned during a period of two years; and let him who is a metic and disobeys

the laws be imprisoned for three years, unless the court assign him a longer time of punishment. And let him who was present in any of these cases and did not assist according to law be punished, if he be of the highest class, by paying a fine of a mina; or if he be of the second class, of fifty drachmas; or if of the third class, by a fine of thirty drachmas; or if he be the fourth class, by a fine of twenty drachmas; and the generals and taxiarchs and phylarchs and hipparchs shall form the court in such cases.

Laws are partly framed for the sake of good men, in order to instruct them how they may live on friendly terms with one another, and partly for the sake of those who refuse to be instructed, whose spirit cannot be subdued, or softened, or hindered from plunging into evil. These are the persons who cause the word to be spoken which I am about to utter; for them the legislator legislates of necessity, and in the hope that there may be no need of his laws. He who shall dare to lay violent hands upon his father or mother, or any still older relative, having no fear either of the wrath of the Gods above,
 881 or of the punishments that are spoken of in the world below, but transgresses in contempt of ancient and universal traditions as though he were too wise to believe in them, requires some extreme measure of prevention. Now death is not the worst that can happen to men; far worse are the punishments which are said to pursue them in the world below. But although they are most true tales, they work on such souls no prevention; for if they had any effect there would be no slayers of mothers, or impious hands lifted up against parents, and therefore the punishments of this world which are inflicted during life ought not in such cases to fall short, if possible, of the terrors of the world below. Let our enactment then be as follows:—If a man dare to strike his father or his mother, or their fathers or mothers, he being at the time of sound mind, then let any who may be near come to the rescue as has been already said, and the metic or stranger who comes to the rescue shall be called to the first place in the games; but if he do not come he shall suffer the punishment of perpetual exile. He who is not a metic, if he comes to the rescue shall have praise, and if he do not come blame. And if a slave come to the rescue

let him be made free, but if he do not come to the rescue let him receive 100 strokes of the whip, by order of the wardens of the agora, if the occurrence take place in the agora, or if in any place in the city the wardens of the city who are within reach shall punish him; or if in the country then the chief officers of the wardens of the country. But if he who is near at the time be an inhabitant of the land, whether he be a youth, or man, or woman, let him come to the rescue and call upon the impious offender by name; and he who does not come to the rescue shall fall under the curse of Zeus, the God of kindred and of ancestry, according to law. And if any one is found guilty of assaulting a parent, let him in the first place be for ever banished from the city into the country, and let him abstain from all sacred rites; and if he do not abstain, the wardens of the country shall punish him with blows, or in any way which they please, and if he return he shall be put to death. And if any freeman eat or drink, or have any other sort of intercourse with him, or only meeting him has voluntarily touched him, he shall not enter into any temple, nor into the agora, nor into the city, until he be purified; for he should consider that he has become a partaker of a fatal crime. And if he disobey the law, and pollute the city and the temples contrary to law, the magistrate who sees him and does not indict him, shall have to answer for an offence of the worst kind.

If a slave strike a freeman, whether a stranger or a citizen, 882 let any one who is present come to the rescue, or pay the penalty already mentioned; and let the companions of the wounded man bind him, and deliver him up to the injured person, and he receiving him shall put him in chains, and inflict on him as many stripes as he pleases; but having punished him he must surrender him to his master according to law, and not deprive him of his property. Let the law be as follows:—The slave who strikes a freeman, not at the command of the magistrates, his owner shall receive bound from the man whom he has stricken, and not release him until the slave has persuaded the man whom he has stricken that he ought to be released and live. And let there be the same laws about women in relation to women, and about men and women in relation to one another.

BOOK X.

884 AND now having spoken of assaults, let us sum up all acts of violence under a single law, which shall be as follows:—No one shall take or carry away any of his neighbour's goods, neither shall he use anything which is his neighbour's without the consent of the owner; for these are the offences which are and have been, and will ever be, the source of all the aforesaid evils. The greatest of them are excesses and insolences of youth, and are offences against the greatest when they are done against religion; and especially great when in violation of public and holy rites, or of those in
885 which tribes and phratries partake; and in the second degree great when they are committed against private rites and sepulchres, and in the third degree (not to repeat the acts formerly mentioned), when insults are offered to parents; the fourth kind of violence is when any one regardless of the authority of the rulers, takes or carries away or makes use of anything which belongs to them, not having their consent; and the fifth kind is when the violation of the civil rights of individual citizens invites retaliation: There should be a common law embracing all these cases. For we have already said in general terms what shall be the punishment of sacrilege, whether fraudulent or violent, and now we have to determine what is to be the punishment of those who speak or act insolently toward the Gods. But first we must give them an admonition which may be in the following terms:—No one ever intentionally did any unholy act, or uttered any unlawful word, retaining a belief in the existence of the Gods, but he must have supposed one of three things,—either that they did not exist,—which is the first possibility, or secondly, that, if they did, they took no care of man, or thirdly, that

they were easily appeased by sacrifices, or turned from their course by prayers.

Cle. What shall we say or do to these persons?

Ath. My good friend, let us first hear the jests which I suspect that they in their superiority will utter against us.

Cle. What jests?

Ath. They will make some irreverent speech of this sort: O inhabitants of Athens, and Sparta, and Cnosus, they will reply, in that you speak truly; for some of us deny the very existence of the Gods, while others, as you say, are of opinion that they do not care about us; and others that they are turned from their course by gifts. Now we have a right to claim, as you yourself allowed, in the matter of the laws, that before you are hard upon us and threaten us, you should argue with us and convince us—you should first attempt to teach and persuade us that there are Gods by reasonable evidences, and also that they are too good to be unrighteous, or to be propitiated, or turned from their course by gifts. For when we hear these and the like things said of them by those who are esteemed to be the best of poets, and orators, and prophets, and priests, and innumerable others, the thoughts of most of us are not set upon abstaining from unrighteous acts, but upon doing them and making atonement for them. When lawgivers profess that they are gentle and not stern, we think that they should first of all use persuasion to us, and show us the existence of Gods, if not in a better manner than other men, at any rate in a truer; and who knows but that we shall hearken to them? If then our request is a fair one, please to accept our challenge.

Cle. But is there any difficulty in proving the existence of the Gods?

Ath. How would you prove their existence? 886

Cle. How? In the first place, the earth and the sun, and the stars and the universe, and the fair order of the seasons, and the division of them into years and months, furnish proofs of their existence; and also there is the fact that all Hellenes and barbarians believe in them.

Ath. I am afraid, my sweet friend, though I will not say I am ashamed, of the contempt with which the profane will be likely to assail us. For you do not understand the nature of

their complaint; and fancy that their minds rush into impiety only from a love of sensual pleasure.

Cle. Why, Stranger, what other reason is there?

Ath. One which you who live in another part of the world would never guess.

Cle. What is it?

Ath. A very grievous sort of ignorance which is imagined to be the greatest wisdom.

Cle. What do you mean?

Ath. At Athens there are tales preserved in writing which the virtue of your state, as I am informed, refuses to admit. They speak of the Gods in prose as well as verse, and the oldest of them tell of the origin of the heavens and of the world, and not far from the beginning of their story they proceed to narrate the birth of the Gods, and how after they were born they behaved to one another. Whether these stories have a good or a bad influence, I should not like to be severe upon them, because they are ancient; but I must say that, looking at them with reference to the duties of children to their parents, I cannot praise them, or think that they are useful, or at all true. Of the words of the ancients I have nothing more to say; and I should wish to say of them only what is pleasing to the God. But as to our younger generation and their wisdom, I cannot let them off when they do mischief. For do but mark the effect of their words: when you and I argue for the existence of the Gods, and produce the sun, moon, and stars, claiming for them a divine being, if we¹ would listen to the aforesaid philosophers we should say that they are earth and stones only, which can have no care at all of human affairs, and that all religion is a cooking up of words and a make-believe.

Cle. One such teacher, O Stranger, would be bad enough, and you imply that there are many of them, which is worse.

Ath. Well, then; what shall we say or do?—shall we assume that some one is accusing us among unholy men, and that they, 887 and not we, are the real defendants in the matter of legislation; they will say of us—How dreadful that we should legislate on the supposition that there are Gods! shall we make a defence? or shall we leave them and return to our laws, lest the preamble

should become longer than the law? For the discourse will certainly extend to great length, if we are to treat the impiously disposed as they desire, partly arguing with them, as they demand, partly frightening them, or inspiring aversion in them, and then proceed to the requisite enactments.

Cle. Yes, Stranger; but then how often have we repeated already that there is no reason why brevity should be preferred to length; for there is nobody to hurry us, and it would be paltry and ridiculous to prefer the shorter to the better. It is a matter of no small consequence, in some way or other to prove that there are Gods, and that they are good, and regard justice more than men. The demonstration of this would be the best and noblest preamble of all our laws. And therefore, without impatience, and without hurry, let us unreservedly consider the whole matter; summoning up all the power of persuasion which we possess.

Ath. When I see you thus earnest, I feel impelled to offer up a prayer, and can no longer refrain. Who can be calm when he is called upon to prove the existence of the Gods? Who can avoid hating and abhorring the men who are and have been the cause of this argument; I speak of those who will not believe¹ the words which they have heard as babes and sucklings from their mothers and nurses, repeated by them both in jest and earnest, like charms, who have also heard and seen their parents offering up sacrifices and prayers—sights and sounds delightful to children—sacrificing, I say, in the most earnest manner on behalf of them and of themselves, and with eager interest talking to the Gods, and beseeching them, as though they were firmly convinced of their existence; who likewise see and hear the genuflexions and prostrations which are made by Hellenes and barbarians to the rising and setting sun and moon, in all the various turns of good and evil fortune, not as if they thought that there were no Gods, but as if there could be no doubt of their existence, and no suspicion of their non-existence; when men, knowing all these things, despise them on no real grounds, as would be admitted by all who have any particle of intelli- 888

¹ The text in this sentence is corrupt; we may read *λεγομένους*, or suppose the genitive in construction with *ἀκούοντες* suggested by the sound of the preceding genitive.

gence, and when they force us to say what we are now saying, how can any one in gentle terms remonstrate with the like of them, when he has to begin by proving to them the very existence of the Gods? Yet the attempt must be made; for it would be unseemly that one-half of mankind should go mad in their lust of pleasure, and the other half in righteous indignation at them. Our address to these lost and perverted natures should not be spoken in passion; let us suppose ourselves to select some one of them, and gently reason with him, smothering our anger:—O my son, we say to him, you are young, and the advance of time will make you reverse many of the opinions which you now hold. Wait, therefore, until the time comes, and do not attempt to judge of high matters at present; and that is the highest of which you think nothing—to know the Gods rightly and to live accordingly. And in the first place let me indicate to you one point which is of great importance, and of the truth of which I am quite certain:—You and your friends are not the first who have held this opinion about the Gods. There have always been persons more or less numerous who have had the same disorder. I have known many of them, and can tell you, that no one who had taken up in youth this opinion, that the Gods do not exist, ever continued in the same until he was old; the two other notions certainly do continue in some cases, but not in many; the notion, I mean, that the Gods exist, but take no heed of human things, and also the notion that they do take heed of them, but are easily propitiated with sacrifices and prayers. What may be the true doctrine, if you are patient, and take my advice, you will hereafter discover, by the help of the legislator and of others. In the meantime take heed lest you offend about the Gods. For the duty of the legislator is and always will be to teach you the truth of these matters.

Cle. Your address, Stranger, thus far, is excellent.

Ath. Most true, Megillus and Cleinias, but I am afraid that we have unconsciously lighted on a strange doctrine.

Cle. What doctrine do you mean?

Ath. The wisest of all doctrines, in the opinion of many.

Cle. I wish that you would speak plainer.

Ath. The doctrine that all things which are or have been or

will be, exist, some by nature, some by art, and some by chance.

Cle. Is not that true?

Ath. Well, philosophers are probably right; at any rate we may as well follow in their track, and examine what is the 889 meaning of them and their disciples.

Cle. By all means.

Ath. They say that the greatest and fairest things are done by nature and chance, and the lesser by art, which receives from nature all the greater and primeval creations, and fashions them in detail; and these lesser works are generally termed artificial.

Cle. What do you and they mean?

Ath. You will understand their meaning better if I take the elements as an example; they mean to say that fire and water, and earth and air, all exist by nature and chance, and not by art, and that as to the bodies which come next in order,—earth, and sun, and moon, and stars,—they are created by the help of these absolutely inanimate existences, and that they are severally moved by chance and some inherent influence according to certain affinities of hot with cold, or of dry with moist, or of soft with hard, and other chance admixtures of opposites which have united of necessity, and that on this manner the whole heaven has been created, and all that is in the heaven, including animals and all plants, and that all the seasons come from these elements, not by the action of mind, as they say, or of any God, or from art, but as I was saying, by nature and chance only; and that art sprang up after these and out of them, mortal and of mortal birth, and produced in play certain images and very partial imitations of the truth, having an affinity to one another, such as music and painting create and their companion arts. And there are other arts which have a serious purpose, and these co-operate with nature, such, for example, as medicine, and husbandry, and gymnastic. And they say that politics co-operate with nature, but in a less degree, and have more of art; also that legislation is entirely a work of art, and is based on assumptions which are not true.

Cle. How do you mean?

Ath. In the first place, my dear friend, they would say that the Gods exist neither by nature nor by art, but only by the

laws of states, which are different in different places, according to the agreement of those who make them; and that the honourable is one thing by nature and another thing by law, and that the principles of justice have no existence at all in nature, but that mankind are always disputing about them and altering them; and that the alterations which are made by art and by
 890 law have no basis in nature, but are of authority for the moment and at the time at which they are made: these, my friends, are the sayings of wise men, poets and prose writers, which find a way into the minds of youth. They are told by them that the highest right is might, and in this way the young fall into impieties, under the idea that the Gods are not such as the law bids them imagine them; and hence arise contentions—the philosophers inviting them to lead a true life according to nature, that is, to live in real dominion over others, and not in legal subjection to them.

Cle. What a dreadful picture, Stranger, have you given of young men, and how great is the injury which they inflict on states and families!

Ath. True, Cleinias; but then what should the lawgiver do when this evil is of long standing? should he only rise up in the state and threaten all mankind, declaring that if they will not say and think that the Gods are such as the law ordains (and this may be extended generally to the honourable, the just, and all other important principles which have to do with virtue and vice), he will insist on their actions conforming to the copy which the law gives them; and that he who will not submit to the established religion shall die, or suffer stripes and bonds, or privation of citizenship, or in some cases be punished by loss of property and exile? Should he not rather, when he is making laws for men, at the same time infuse the spirit of persuasion into his words, and mitigate the severity of them as far as he can?

Cle. Why, Stranger, if such persuasion be at all possible, then a legislator who has anything in him ought never to weary of persuading men; he ought to leave nothing unsaid in support of the ancient opinion that there are Gods, and of all those other truths which you were just now mentioning; he ought to support the law and also art, and acknowledge, that both alike

exist by nature, or by that which is not inferior to nature, if they are the creations of mind in accordance with right reason, as you appear to me to maintain, and I am disposed to agree with you in thinking.

Ath. Yes, my enthusiastic Cleinias ; but are not these things when spoken to a multitude hard to be understood, not to mention that they take up a dismal length of time ?

Cle. Why, Stranger, shall we, whose patience failed not when drinking or music were the themes of discourse, weary now of discoursing about the Gods, and about divine things? And the greatest help to rational legislation is that the laws when once written down are always at rest ; they can be put to the test 891 at any future time, and therefore, if on first hearing they seem difficult, there is no reason for apprehension about them, because any man however dull can understand them, if he go over them often ; nor if they are tedious but useful, is there any reason or religion in any man refusing to maintain the principles of them to the utmost of his power.

Meg. Stranger, I like what Cleinias is saying.

Ath. Yes, Megillus, and we should do as he proposes ; for if impious discourses were not scattered, as I may say, throughout the world, there would have been no need of the argument in support of the existence of the Gods—but seeing that they are spread far and wide, such arguments are needed ; and who should come to the rescue of the greatest laws, when they are being undermined by bad men, but the legislator himself ?

Meg. There is no more proper champion of them.

Ath. Well, then, tell me, Cleinias, for I must ask you to be my partner,—does not he who talks in this way conceive fire and water and earth and air to be the first elements of all things? these he calls nature, and out of these he supposes the soul to be formed afterwards ; and this is not a vague suspicion of his, but he really means and confidently asserts such to be the case.

Cle. Very true.

Ath. Then, by Heaven, we have discovered the source of this vain opinion of all those physical investigators ; and I would have you examine them with the utmost care, for their impicity is a very serious matter ; they not only make a bad

and mistaken use of dialectic, but they lead away the minds of others: that is my opinion of them.

Cle. Very true; but I should like to know how this happens.

Ath. I am afraid that the argument might seem singular.

Cle. Do not hesitate, Stranger; I see that you are afraid of such a discussion carrying you beyond the limits of legislation. But if there be no other way of showing our agreement in the belief of the Gods whom the law is now said to approve, let us take this way, my good sir.

Ath. Then I suppose that I must repeat the singular argument of those who manufacture the soul according to their own impious notions; they affirm that which is the first cause of the generation and destruction of all things, to be not first but last, and that which was last to be first, and hence they have fallen into error about the true nature of the Gods.

892 *Cle.* Still I do not understand you.

Ath. Nearly all of them, my friends, seem to be ignorant of the nature and power of the soul, especially in what relates to her origin: they do not know that she is among the first of bodies, and before them all, and is the chief author of their changes and transpositions. And if this is true, and if the soul is older than the body, must not the things which are of the soul's kindred be of necessity before those which appertain to the body?

Cle. Certainly.

Ath. Then thought and attention and mind and art and law will be prior to that which is hard and soft and heavy and light; and the great and primitive works and actions will be works of art; they will be the first, and after them will come nature and works of nature, which however is a wrong term to apply to them; these will follow, and will be under the government of art and mind.

Cle. But why is the word 'nature' wrong?

Ath. Because those who use the term mean to say that nature is the first creative power; but if the soul turn out to be the primeval element and not fire or air, then in the truest sense and beyond other things the soul may be said to have a natural or creative power: and this would be true if you proved that the soul is older than the body, but not otherwise.

Cle. You are quite right.

Ath. Shall we, then, take this as the next point to which our attention should be directed?

Cle. By all means.

Ath. I fear that we may be quite deceived, and that the greenness with which we let the argument escape us, may ludicrously contrast with the ripeness of our ages. Who knows but we may be aiming at the greater, and fail of attaining the lesser? Suppose that we three have to pass a rapid river, and I, being the youngest of the three and experienced in rivers, have the duty thrown upon me of making the attempt first by myself; leaving you in safety on the bank, I am to examine whether the river is passable by older men like yourselves, and if such appears to be the case then I will invite you to follow, and help you across by my knowledge; but if the river is impassable by you, then I shall have had all the danger myself,—does not that seem to be a very fair proposal? I mean to say that the argument in prospect is likely to be too much for you, and out of your depth, and I should be afraid that the stream of my ⁸⁹³ questions might create in you who are unaccustomed to dialectics, giddiness and confusion of mind, and hence a feeling of unpleasantness and unsuitableness might arise. I think therefore that I had better first ask and answer the questions myself while you listen in safety; in that way I can carry on the argument until I have completed the proof that the soul is prior to the body.

Cle. Excellent, Stranger, and I hope that you will do as you propose.

Ath. Come, then, and if ever we are to call upon the Gods, let us call upon them now in all seriousness to come to the demonstration of their own existence. And so holding fast to the rope we will venture upon the depths of the argument. When questions of this sort are asked of me, my safest answer would appear to be as follows: Some one says to me, 'O Stranger, are all things in rest and nothing in motion, or is the exact opposite of this true, or are some things in motion and others at rest?'—To this I shall reply that some are in motion and others at rest. 'And do not things which move move in a place, and are not the things which are at rest at rest in

a place?’ Certainly. ‘And some move or rest in one place and some in more places than one?’ You mean to say, we shall rejoin, that those things which rest at the centre move in the same place as when the circumference goes round and the circle is said to be at rest? ‘Yes.’ And we observe that, in the revolution, the motion which carries round the larger and the lesser circle at the same time is proportionally distributed to greater and smaller, and is greater and smaller in a certain proportion. Here is a wonder which might be thought an impossibility, that the same motion should impart swiftness and slowness in due proportion to larger and lesser circles. Very true. ‘And when you speak of bodies moving in many places, you seem to me to mean those which move from one place to another, and sometimes have one centre of motion and sometimes several in the course of their revolutions; and sometimes impinging upon each other they come against bodies which are at rest, and are divided by them, or meeting other bodies which are coming violently from an opposite direction unite with them and interpenetrate them:’ I admit the truth of this. Also when they unite they grow, and when they are divided they waste away,—that is, supposing the constitution of each to remain, or if that fails, then there is a second reason of their dissolution. ‘And when are all things created and
894 how?’ Clearly, they are created when the principle of motion receives increase and attains the second dimension, and from this arrives at the one which is neighbour to this, and after reaching the third becomes perceptible to sense. Everything which is thus changing and moving is in process of generation, and has real existence only when at rest, but when passing into another state is destroyed utterly. Have we not mentioned all the kinds of motion, and by the help of number comprehended them under their kinds with the exception, my friends, of two?

Cle. Which are they?

Ath. Just the two, with which our present enquiry is concerned.

Cle. Speak plainer.

Ath. I suppose that our enquiry has reference to the soul?

Cle. Very true.

Ath. Let us assume that there is a motion able to move other

things, but not to move itself;—that is one kind; and there is another kind which can move itself as well as other things, working in composition and decomposition, by increase and diminution, and generation and destruction,—that is also one of the many kinds of motion?

Cle. Granted.

Ath. And we will assume that which moves other, and is changed by other, to be the ninth, and that which changes itself and others, and has a place in every action and in every passion, and is the true principle of change in all that truly is,—that we shall be inclined to call the tenth.

Cle. Certainly.

Ath. And which of these ten motions ought we to prefer as being the mightiest and most efficient?

Cle. I must say that the motion which is able to move itself is ten thousand times superior to all the others.

Ath. Very good; but may I make one or two corrections in what I have been saying?

Cle. What are they?

Ath. When I spoke of the tenth sort of motion, that was not quite correct.

Cle. What was the error?

Ath. According to the true order, the tenth was really the first in generation and power; then follows the second, which was improperly termed the ninth by us.

Cle. What do you mean?

Ath. I mean this: when one thing moves another, and that another, will there be any primary changing element? Can there be, considering that what changes first will always have been changed by another? There cannot. And when the self-moved changes other, and that again other, and thus, thousands upon tens of thousands of bodies are set in motion, must not the beginning of all this motion be the change of the 895 self-moving principle?

Cle. Very true, and I quite agree.

Ath. Or, to put the question in another way: If, as most of these philosophers have the audacity to affirm, all things were at rest in one mass, which of the above-mentioned principles of motion would first spring up among them?

Cle. Clearly the self-moving; for there could be no change in them arising out of any external cause, if there had been no previous change in themselves.

Ath. Then we must say that self-motion being the origin and beginning of motion, as well among things at rest as among things in motion, is the eldest and mightiest principle of change, and that which is changed by another and yet moves other is second.

Cle. Quite true.

Ath. At this stage of the argument let us put a question.

Cle. What question?

Ath. If I were to see this power existing in any earthy, watery, or fiery substance, simple or compound—how should we describe it?

Cle. You mean to ask whether we should call the self-moving power life?

Ath. I do.

Cle. Certainly we should.

Ath. And when we see soul in anything, must we not do the same—must we not admit that this is life?

Cle. We must.

Ath. And now, I beseech you, reflect;—you would admit that we have a threefold knowledge of things?

Cle. What do you mean?

Ath. I mean that we know the essence, and that we know the definition of the essence, and the name,—these are the three; and there are two more questions which may be raised about anything.

Cle. How two?

Ath. Sometimes a person may give the name and ask the definition; or he may give the definition and ask the name. I may illustrate what I mean in this way—

Cle. How?

Ath. Number like other things is capable of being divided into equal parts; when thus divided, number is termed 'even,' and the definition of the term 'even' is 'number divisible into two equal parts'?

Cle. True.

Ath. I mean to say, that when we are asked, about the

definition and give the name, or when we are asked about the name and give the definition—in either case we are dividing number into two equal parts, and the name and definition of ‘even’ have the same import.

Cle. Quite true.

Ath. And what is the definition of that which is named ‘soul’? Can we conceive of any other than that which has 896 been already given—the motion which is self-moved?

Cle. You mean to say that the essence which is defined as the self-moved is identical with that which we call soul?

Ath. Yes; and if this is true, do we still maintain that there is anything wanting in the proof that the soul is the first origin and moving power of all that is, or has been, or will be, and their contraries, when she has been clearly shown to be the source of change and motion in all things?

Cle. Certainly not; the soul as being the source of motion, has been most satisfactorily shown to be the oldest of all things.

Ath. And is not that motion which takes place in another, or by reason of another, but never has any self-moving power at all, being in truth the change of an inanimate body, to be reckoned in the second degree, or in any lower degree which you may prefer?

Cle. Very true.

Ath. Then we are right, and speak the most perfect and absolute truth, when we say that the soul is prior to the body, and that the body is second and comes afterwards, and is born to obey the soul, which is the ruler?

Cle. Nothing can be more true.

Ath. Do you remember our old admission, that if the soul was prior to the body the things of the soul were also prior to those of the body?

Cle. Certainly.

Ath. Then characters and manners, and wishes and reasonings, and true opinions, and reflections, and recollections are prior to length and breadth and depth and strength of bodies, if the soul is prior to the body.

Cle. Of course.

Ath. In the next place, must we not of necessity admit that

the soul is the cause of good and evil, base and honourable, just and unjust, and of all other opposites, if we suppose her to be the cause of all things?

Cle. Certainly.

Ath. And as the soul orders and inhabits all things moving every way, must we not say that she orders also the heavens?

Cle. Of course.

Ath. One soul or more? More than one—I will answer for you; at any rate, we must not suppose that there are less than two—one the author of good, and the other of evil.

Cle. Very true.

Ath. Yes, very true; the soul then directs all things in heaven, and earth, and sea by her movements, and these are 897 described by the terms—will, consideration, attention, deliberation, opinion true and false, joy and sorrow, confidence, fear, hatred, contentment, and other primary motions akin to these; which again receive the secondary motions of corporate substances, and guide all things to growth and decay, to composition and decomposition, and to the qualities which accompany them, such as heat and cold, heaviness and lightness, hardness and softness, blackness and whiteness, bitterness and sweetness, and all those other qualities which the soul uses, herself a goddess, when truly receiving the divine mind and disciplining all things rightly to their happiness; but when the companion of folly, doing the very contrary of all this. Shall we assume so much, or do we still entertain doubts?

Cle. There is no room at all for doubt.

Ath. Shall we say then that soul is the nature which controls heaven and earth, and the whole world? Is it the principle of wisdom and virtue, or a principle which has neither wisdom nor virtue? Suppose that we make answer as follows:—

Cle. How would you answer?

Ath. If, my friend, we say that the whole path of heaven, and the movement of all that is therein, is by nature akin to the movement and revolution and calculation of mind, and proceeds by kindred laws, then, as is plain, we must say that the best soul takes care of the world and guides it along the good path.

Cle. True.

Ath. But when the world moves wildly and irregularly, then the evil soul guides it?

Cle. True again.

Ath. Of what nature is the movement of mind?—Here we are met by a difficulty, and therefore I ought to assist you in framing the answer.

Cle. Very good.

Ath. Then let us not answer as if we would look right at the sun, making ourselves darkness from excess of light,—I mean as if we were under the impression that we could see with mortal eyes, or know adequately the nature of mind;—it will be safer to look at the image only.

Cle. What do you mean?

Ath. Let us select of the ten motions the one which mind chiefly resembles; this I will bring to your recollection, and will then request you to assist me in giving the answer.

Cle. That will be excellent.

Ath. You will surely remember our saying that all things were either at rest or in motion?

Cle. Yes.

Ath. And that of things in motion some were moving in one place, and others in more than one?

898

Cle. That is true.

Ath. Of these two kinds of motion, that which moves in one place must move about a centre after the manner of a top, and is most entirely akin and similar to the circular movement of mind.

Cle. What do you mean?

Ath. In saying that both mind and the motion which is in one place move in the same and like manner, in and about the same, and in relation to the same, and according to one law and order, and are like the motion of a top, we invented a fair image, which did no discredit to our ingenuity.

Cle. It did us credit.

Ath. And the motion of the other sort which is not after the same manner, nor in the same, nor about the same, nor in relation to the same, nor in one place, nor in order, nor according to any rule or proportion, may be said to be akin to senselessness and folly.

Cle. That is most true.

Ath. Then, after what has been said, there is no difficulty in distinctly stating, that since soul carries all things round, either the best soul or the contrary must of necessity carry round and order and arrange the revolution of the heaven.

Cle. And judging from what has been said, Stranger, there would be impiety in asserting that any but the most perfect soul or souls carries round the heavens.

Ath. You have understood my meaning right well, Cleinias, and now let me ask you another question.

Cle. What are you going to ask?

Ath. If the soul carries round the sun and moon, and the other stars, does she not carry round each individual of them?

Cle. Certainly.

Ath. Then of one of them let us speak, and the same argument will apply to all.

Cle. Which will you take?

Ath. Every one sees the body of the sun, but no one sees his soul, nor the soul of any other body living or dead; and yet there is great reason to believe that this nature, unperceived by any of our senses, is circumfused around them all, but is apprehended by mind only; and only by reflection do we ascertain what I am about to mention.

Cle. What is that?

Ath. If the soul carries round the sun, we shall not be far wrong in supposing one of three alternatives.

Cle. What are they?

Ath. Either the soul which moves the sun this way and that, resides within the circular and visible body, just as the soul in us carries us about every way; or the soul provides herself with 899 an external body of fire or air, as some affirm, and violently propels body by body; or thirdly, she is without a body, but has some extraordinary and wonderful guiding power.

Cle. Yes, certainly; the soul can only order all things in one of these three ways.

Ath. And this soul of the sun, which is therefore better than the sun, whether taking the sun about in a chariot to give light to men, or acting from without, or in whatever way, ought by every man to be deemed a God.

Cle. Yes, by every man who has the least particle of sense.

Ath. And of the stars too, and of the moon, and the years, and months, and seasons, must we not say in like manner, that since a soul or souls having every sort of excellence are the causes of all of them, those souls are divine, whether they are living beings and reside in bodies, and in this way order the whole heaven, or whatever be the place and mode of their existence;—and will any one who admits all this venture to deny that all things are full of Gods?

Cle. No one, Stranger, would be such a madman.

Ath. And now, Megillus and Cleinias, let us offer an alternative to him who has hitherto denied the existence of the Gods, and leave him.

Cle. What alternative?

Ath. Either he shall teach us that we were wrong in saying that the soul is the original of all things, and arguing accordingly; or, if he be not able to say anything better, then he must yield to us and live for the remainder of his life in the belief that there are Gods: Let us see, then, whether we have said enough or not enough to those who deny that there are Gods.

Cle. Certainly quite enough, Stranger.

Ath. Then to them we will say no more. And now we are to address him who, believing that there are Gods, believes also that they take no heed of human affairs: To him we say, O thou best of men, in believing that there are Gods you are led by some affinity to them, which attracts you towards your kindred and makes you honour and believe in them. But the fortunes of evil and unrighteous men in private as well as public life, which, though not really happy, are wrongly counted happy in the judgment of men, and are sung or spoken of by poets and prose writers, draw you aside from your natural piety. Perhaps you have seen impious men growing old and leaving their 900 children's children in high offices, and their prosperity shakes your faith; you have known or heard or been yourself an eyewitness of many monstrous impieties, and have beheld men by these criminal means from small beginnings reaching the pinnacle of greatness, and considering all these things you do not like to accuse the Gods of them, because they are your

relatives; and so from some want of reasoning power, and also from an unwillingness to find fault with them, you are led to believe that they exist indeed, but have no thought or care of human things. Now, that your present evil opinion may not grow to still greater impiety, and that we may if possible use arguments which may drive away the pollution of error, we will add another argument to that which we addressed to him who utterly denied the existence of the Gods. And do you, Megillus and Cleinias, answer for the young man as you did before; and if there is any difficulty or impediment in the way, I will take the word out of your mouths, and carry you over the river as I did before.

Cl. Very good; do as you say, and we will help you as well as we can.

Ath. There will surely be no difficulty in proving to him that the Gods care about the small as well as about the great. For he was present and heard what was said, that they are perfectly good, and that the care of all things is most entirely natural to them.

Cl. He certainly heard that.

Ath. Let us consider together in the next place what we mean by this virtue which we ascribe to them. Surely we should say that to possess mind belongs to virtue, and the contrary to vice?

Cl. Certainly.

Ath. Yes; and courage is a part of virtue, and cowardice of vice?

Cl. True.

Ath. And the one is dishonourable, and the other honourable?

Cl. To be sure.

Ath. And the one, like other meaner things, is a human quality, but the Gods have no part in anything of the sort?

Cl. No one will deny that.

Ath. But do we imagine carelessness and idleness and luxury to be virtues? What do you think?

Cl. Certainly not.

Ath. They rank under the opposite class?

Cl. Yes.

Ath. And their opposites would fall under the opposite class? 901

Cle. Yes.

Ath. But can we suppose that one who takes care of great and small will be luxurious and heedless and idle, like those whom the poet compares to stingless drones¹?

Cle. And the comparison is a most just one.

Ath. Surely God must not be supposed to have a nature which he himself hates?—and if any one dares to say anything of that sort, he must not be allowed for a moment.

Cle. He must not—of course not.

Ath. Should we not on any principle be entirely mistaken in praising any one who has some special business entrusted to him, if he have a mind which takes care of great matters and no care of small ones? Reflect; he who acts in this way, whether he be God or man, must act from one of two principles.

Cle. What are they?

Ath. Either he must think that the neglect of the small matters is of no consequence to the whole, or if they are of consequence, and he neglects them, his conduct must be attributed to carelessness and indolence. Is there any other way in which his neglect can be explained? For, surely, he will not neglect anything, whether small or great, from any impossibility of taking care of all—or be careless about those things of which an inferior being, who has not the power, whether God or man, might be unable to take care?

Cle. Impossible.

Ath. Now, then, let us examine the offenders, who both alike confess that there are Gods, but with a difference,—the one saying that they may be appeased, and the other that they have no care of small matters: there are three of us and two of them, and we will say to them, In the first place, you both acknowledge that the Gods hear and see and know all things, and that nothing can escape them which is matter of sense and knowledge:—do you admit this?

Cle. Yes.

Ath. And do you admit also that they have all power which mortals and immortals can have?

Cle. They will, of course, admit this also.

Ath. And surely we three and they two—five in all—have acknowledged that they are good and perfect.

Cle. Assuredly.

Ath. But, if they are such as we conceive them to be, can we possibly suppose that they ever act in the spirit of carelessness and indolence? For in us inactivity is the child of cowardice, and carelessness of inactivity and indolence.

Cle. Most true.

Ath. Then not from inactivity and carelessness is any God ever negligent; for he has no cowardice in him.

Cle. That is very true.

902 *Ath.* Then the alternative which remains is, that if the Gods neglect the lighter and lesser concerns of the universe, they neglect them because they know that they ought not to care about such matters—what other alternative is there but their ignorance?

Cle. There is none.

Ath. And, O most excellent and best of men, do I understand you to mean that they are ignorant, and do not know that they ought to take care, or that they know and yet like the meanest sort of men, knowing the better, choose the worse because they are overcome by pleasures and pains?

Cle. Impossible.

Ath. Do not all human things partake of the nature of soul? And is not man the most religious of all animals?

Cle. That is certainly true.

Ath. And we acknowledge that all mortal creatures are the property of the Gods, to whom also the whole of heaven belongs?

Cle. Certainly.

Ath. And, therefore, whether a person says that these things are to the Gods great or small—in either case the Gods who own us and who are the most careful and the best of owners, are not likely to neglect us. There is also a further consideration.

Cle. What is that?

Ath. Sensation and power are in an inverse ratio to each other in respect to their ease and difficulty.

Cle. What do you mean?

Ath. I mean that there is greater difficulty in seeing and hearing the small than the great, but more facility in moving them and controlling them and taking care of them than of their opposites.

Cle. Far more.

Ath. Suppose the case of a physician who is willing and able to cure some living thing as a whole,—how will the whole fare at his hands if he takes care only of the greater and neglects the lesser?

Cle. Certainly not well.

Ath. No better would be the result with pilots or generals, or housholders or statesmen, or any other class, if they neglected the small and regarded only the great;—as the builders say, the larger stones do not lie well without the lesser.

Cle. Of course not.

Ath. Let us not, then, deem God inferior to human workmen, who, in proportion to their skill, finish and perfect their works, small as well as great, by one and the same art; or that God, 903 the wisest of beings, who is willing and able to extend His care to all things, like a lazy good-for-nothing, wants a holiday, and takes no thought of smaller and easier matters, but of the greater only.

Cle. Never, Stranger, let us admit a supposition about the Gods which is both impious and false.

Ath. I think that we have now said enough to him who charges the Gods with neglect.

Cle. Yes.

Ath. He has been forced to acknowledge that he is in error, but he still seems to me to need some words of consolation.

Cle. What consolation will you offer him?

Ath. Let us say to the youth: 'The ruler of the universe has ordered all things with a view to the preservation and perfection of the whole, and each part has an appointed state of action and passion; and the smallest action or passion of any part affecting the minutest fraction has a presiding minister. And one of these portions of the universe is thine own, stubborn man, which, however little, has the whole in view; and you do not seem to be aware that this and every other creation is for the sake of the whole, and in order that the life of the whole may

be blessed ; and that you are created for the sake of the whole, and not the whole for the sake of you. For every physician and every skilled artist does all things for the sake of the whole, directing his effort towards the common good, executing the part for the sake of the whole, and not the whole for the sake of the part. And you are annoyed because you do not see how that which is best for you is, as far as the laws of the creation admit, best also for the universe.' Now, as the soul combining first with one body and then with another undergoes all sorts of changes, either of herself, or through the influence of another soul, all that remains to the player of the game is that he should shift the pieces ; sending the better nature to the better place, and the worse to the worse, and so assigning to them their proper portion.

Cl. In what way ?

Ath. In a way which may be supposed to make the care of all things easy to the Gods. For if any one were to form or fashion¹ all things without any regard to the whole,—if, for example, he formed a living element of water out of fire, instead of forming many things out of one or one out of many in
904 regular order attaining to a first or second or third birth (cp. Tim. 42 B. C.), the transmutation would have been infinite ; but now the ruler of the world has a wonderfully easy task.

Cl. How so ?

Ath. I will explain :—When the king saw that our actions had life, and that there was much virtue in them and much vice, and that the soul and body, although not eternal, were, like the Gods of popular opinion, indestructible (for if either of them had been destroyed, there would have been no generation of living beings) ; and when he observed that the good of the soul was by nature designed to profit men, and the evil to harm them—he, seeing all this, contrived so to place them in each of the parts that their position might in the easiest and best manner procure the victory of good and the defeat of evil in the whole. And he contrived a general plan by which a thing of a certain nature found a certain seat and room. But the formation² of qualities he left to the wills of individuals. For every one of us

¹ Reading *μη̄ προς τὸ ὅλον*.

² Reading *τοῦ ποίου*.

is made pretty much what he is by the bent of his desires and the nature of his soul.

Clc. Yes, that is probably true.

Ath. Then all things which have a soul change, and possess in themselves a principle of change, and in changing move according to law and the order of destiny: lesser changes of nature move on level ground, but greater crimes sink into the abyss, that is to say, into Hades and other places in the world below, of which the very names terrify men, and about which they dream that they live in them absent from the body. And whenever the soul receives more of good and evil from her own energy and the strong influence of others—when she has communion with divine virtue and becomes divine, she is carried into another and better place, which is also divine and perfect in holiness; and when she has communion with evil, then she also changes the place of her life.

‘For that is the justice of the Gods who inhabit heaven¹.’

O youth or young man, who fancy that you are neglected by the Gods, know that if you become worse you shall go to the worse souls, or if better to the better, and in every succession of life and death you will do and suffer what like may fitly suffer at the hands of like. This is a divine justice, which neither you nor any other unfortunate will ever glory in escaping, and which the ordaining powers have specially ordained; take good heed⁹⁰⁵ of them, for a day will come when they will take heed of you. If you say:—I am small and will creep into the depths of the earth, or I am high and will fly up to heaven, you are not so small or so high but that you shall pay the fitting penalty, either in the world below or in some yet more savage place still whither you shall be conveyed. This is also the explanation of the fate of those whom you saw, who had done unholy and evil deeds, and from small beginnings had become great, and you fancied that from being miserable they had become happy; and in their actions, as in a mirror, you seemed to see the universal neglect of the Gods, not knowing how they make all things work together and contribute to the great whole. And thinkest thou, bold man, that thou needest not to know this?—which he

¹ Hom. Odyss. xix. 43.

who knows not can never have any true idea of happiness or unhappiness, or say any true word respecting them. If Cleinias and this our reverend company succeed in proving to you that you know not what you say of the Gods, then will God help you; but should you desire to hear more, listen to what we say to the third opponent, if you have any understanding left in you. For I think that we have sufficiently proved the existence of the Gods, and that they have the care of man,—that they are appeased by wicked men, and take gifts is what I will not allow, and what every man should disprove to the utmost of his power.

Cle. Very good; let us do as you say.

Ath. Well, then, by the Gods themselves I conjure you to tell me more about them,—if they are to be propitiated, how are they to be propitiated? Who are they, and what is their nature? Must not the eternal administrators of heaven be at least rulers?

Cle. True.

Ath. And to what earthly rulers can they be compared, or who to them? How in the less can we find an image of the greater? Are they charioteers of contending pairs of steeds, or pilots of vessels? Perhaps they might be compared to the generals of armies, or they might be likened to physicians providing against the strife of bodily disease, or to husbandmen observing anxiously the effects of the seasons or the growth of plants; or perhaps to shepherds of flocks. For as we acknowledge the heaven to be full of many goods and also of evils, and of more evils than goods, there is, as we affirm, an immortal conflict going on among us, which requires marvellous watchfulness; and in that conflict the Gods and demigods are our allies, and we are their property. Injustice and insolence and folly are the destruction of us, and justice and temperance and wisdom are the salvation of us; and the place of these latter is in the life of the Gods, and of their virtues some vestige may occasionally be discerned among mankind. But upon this earth there dwell souls who have an unjust spirit¹, and they, like brute animals, fawn upon their keepers, who may be dogs

¹ Reading λῆμα.

or shepherds, or may be the best and most perfect masters ; and upon these, as the wicked declare, they prevail by flattery and prayers and incantations, and are allowed to make their gains with impunity. And this sin, which is termed dishonesty, is an evil of the same kind as what is termed disease in living bodies or blight in the seasons, and in cities and governments has another name, which is injustice.

Cle. Quite true.

Ath. What else can he say who declares that the Gods are always lenient to the doers of unjust acts, if they divide the spoil with them? As if wolves were to toss a portion of their prey to the dogs, and they, mollified by the gift, suffered them to tear the flocks. Must not he who maintains that the Gods are to be propitiated argue thus?

Cle. Precisely so.

Ath. And to which of the above-mentioned classes of guardians would any man compare the Gods without absurdity? Will he say that they are like pilots, who are themselves turned away from their duty by draughts of wine and the savour of fat, and at last overturn both ship and sailors?

Cle. Certainly not.

Ath. And surely they are not like charioteers who are bribed to give up the victory to other chariots?

Cle. That would be a fearful image of the Gods.

Ath. Nor are they like generals, or physicians, or husbandmen, or shepherds; and no one would compare them to dogs who have been silenced by wolves.

Cle. A thing not to be spoken of.

Ath. And are not all the Gods the chiefest of all guardians, 907 and do they not guard our highest interests?

Cle. Yes ; the chiefest.

Ath. And shall we say that those who guard our noblest interests, and are the best of guardians, are inferior in virtue to dogs, and to men even of moderate excellence, who would never betray justice, for the sake of gifts which unjust men impiously offer them?

Cle. Certainly not ; nor is such a notion to be endured, and he who holds this opinion may be fairly singled out and

characterized as of all impious men the wickedest and most impious.

Ath. Then are the three assertions—that the Gods exist, and that they take care of men, and that they will not be entreated to injustice, now sufficiently demonstrated? May we say that they are?

Cle. You have our entire assent to your words.

Ath. I have spoken with vehemence because I was jealous of evil men; and I will tell you, dear Cleinias, why I am so. I would not have the wicked suppose that they, having the superiority in argument, may do as they like in accordance with their various imaginations about the Gods; and this zeal has led me to speak more vehemently; but if we have at all succeeded in persuading the men to hate themselves and love their opposites, the preamble of our laws about impiety will not have been spoken in vain.

Cle. So let us hope; and even if we have failed, the style of our argument will not discredit the lawgiver.

Ath. After the preamble shall follow a discourse, which will be the interpreter of the law; this shall proclaim to all impious persons that they must depart from their ways and go over to the pious. And to those who disobey, let the law about impiety be as follows:—If a man is guilty of any impiety in word or deed, any one who happens to be present shall give information to the rulers, in aid of the law; and let the rulers who receive the information bring them before the appointed court according to the law; and if the magistrate, after receiving information, refuses to act, he shall be tried for impiety at the instance of any one who is willing to vindicate the laws; and if he be cast, the court shall estimate the punishment of each act of impiety; and let all such criminals be imprisoned. There shall be three prisons in the state: the first of them is to be the common prison in the neighbourhood of the agora for the safe-keeping of the generality of offenders; another is to be in the neighbourhood of the nocturnal council, and is to be called the 'house of reformation'; another, to be situated in some wild and desolate region in the centre of the country, shall be called by some name expressive of retribution. Now, men fall into impiety from three causes, which have been

already mentioned, and from each of these causes arise two sorts of impiety, in all six, requiring judicial decision, but differing greatly in their degrees of guilt. For he who does not believe in the gods, and yet has a righteous nature, hates the wicked and dislikes and refuses to do injustice, and avoids unrighteous men, and loves the righteous. But they who besides believing that the world is devoid of Gods are intemperate, and have at the same time good memories and quick wits, are worse; although both of them are unbelievers, much less injury is done by the one than by the other. The one may talk loosely about the Gods and about sacrifices and oaths, and perhaps by laughing at other men he may make them like himself, if he be not punished. But the other unbeliever, who has ability, is full of stratagem and deceit—men of this class are prophets and jugglers of all kinds, and out of their ranks sometimes come tyrants and demagogues and generals and hierophants of private mysteries and the ingenuities of so-called Sophists. There are many kinds of unbelievers, but two only for whom legislation is required; one the hypocritical sort, whose crime is deserving of death many times over, while the others need only bonds and admonition. In like manner also the notion that the Gods take no thought of men produces two other sorts of crimes, and the notion that they may be propitiated produces two more. Assuming these divisions, let those who have been made what they are only from want of understanding, and not from malice or an evil nature, be placed by the judge in the house of reformation, and ordered to suffer imprisonment during 909 a period of not less than five years. And in the meantime let them have no intercourse with the other citizens, except with members of the nocturnal council, and with them let them converse touching the improvement of their souls' health. And when the time of their imprisonment has expired, if any of them be of sound mind let him be restored to sane company, but if not, and if he be condemned a second time, let him be punished with death. As to that class of monstrous natures who not only believe that there are no Gods, or that they are negligent, or to be propitiated, but conjure the souls of the living and say that they can conjure the dead and promise to charm the Gods with sacrifices and prayers, and will utterly

overthrow whole houses and states for the sake of money—let him who is guilty of any of these things be condemned by the judge to be bound according to law in the prison which is in the centre of the land, and let no freeman ever approach him, but let him receive the rations of food appointed by the magistrates from the hands of slaves; and when he is dead let him be cast out of the borders unburied, and if any freeman assist in burying him let him pay the penalty of impiety to any one who is willing to bring a suit against him. But if he leaves behind him children who are fit to be citizens, let the guardians of orphans take care of them, just as they would of any other orphans, from the day on which their father was convicted.

In all these cases there should be one law, which will make men in general less liable to transgress in word or deed, and less foolish, because they will not be allowed to practise religious rites contrary to law. And let this be the simple form of the law:—No man shall have sacred rites in a private house. But when he is disposed to sacrifice, let him place his offerings in the hands of the priests and priestesses, who have under their care the holy rite, and let him pray himself, and let any one who pleases join with him in prayer. The reason of this is as follows:—Gods and temples are not easily established, and to establish them rightly is the work of a mighty intellect. And women especially, and men too, when they are sick or in danger, or in any sort of difficulty, or again on their receiving any good fortune, have a way of consecrating the occasion, offering up prayers and sacrifices, and promising statues to Gods, demigods, and sons of Gods; and when they are awakened by terrible apparitions, and have dreams or remember visions, they find in altars and temples the remedies of them, and will fill every house and village with them, placing them in the open air or in any chance place; and with a view to all these cases we should act as the law enacts. The law has also regard to the impious, and would not have them fancy that by the secret performance of these actions—by raising temples and altars in private houses, they can propitiate the God secretly with sacrifices and prayers, while they are really multiplying their crimes infinitely, bringing guilt from heaven upon themselves, and also upon those who permit them, and who

are better men than they are ; and the consequence is that the whole state reaps the fruit of their impiety, which, in a certain sense, is deserved : assuredly God will not blame the legislator.

Let this, then, be the language of the law :—No one shall possess shrines of the Gods in private houses, and he who is found to possess them, and perform any sacred rites not publicly authorized,—supposing the offender to be some man or woman who is not guilty of any other great and impious crime,—shall be informed against by him who is acquainted with the fact, which shall be announced by him to the guardians of the law ; and let them issue orders that he or she shall carry away his private rites to the public temples, and if they do not persuade them, let them inflict a penalty on them until they comply. And if a person be proven guilty of impiety, not merely from childish levity, but such as grown-up men may be guilty of, whether he have sacrificed publicly or privately to any Gods, let him be punished with death, for his sacrifice is impure. Whether the deed has been done in earnest, or only from childish levity, let the guardians of the law determine, before they prosecute the offender for impiety.

BOOK XI.

913 IN the next place, dealings between man and man require to be suitably regulated. The principle of them is very simple: Thou shalt not touch that which is mine, if thou canst help, or remove the least thing which belongs to me without my consent; and may I, being of sound mind, do to others as I would that they should do to me. First, let us speak of treasure-trove: May I never pray the Gods to find the hidden treasure, which a man has laid up for himself and his family, he not being one of my ancestors, nor lift, if I should find, such a treasure. And may I never have any dealings with the diviners, as they are called, who in any way or manner counsel me to take up the deposit entrusted to the earth, for I should not gain so much in the increase of my possessions, if I take up the prize, as I should grow in justice and virtue of soul, if I abstain; and this will be a better possession to me than the other in a better part of myself; for the possession of justice in the soul is preferable to the possession of wealth. And of many things it is well said,—‘move not the immovables,’ and this may be truly regarded as one of them. And we shall do well to believe the common tradition which says, that such deeds prevent a man from having a family. Now, as to him who is careless about having children and regardless of the legislator, taking up that which neither he deposited, nor any ancestor of his, without the consent of the depositor, violating the simplest and noblest of laws which was the enactment of no mean man: ‘Take not up that which you have not laid down,’—of him, I say, who despises these two legislators, and takes up, not some small matter which he has

not deposited, but perhaps a great heap of treasure, what he ought to suffer at the hands of the Gods, God only knows; but I would have the first person who sees him go and tell the wardens of the city, if the occurrence has taken place in the city, or if the occurrence has taken place in the agora he shall tell the wardens of the agora, or if in the country he shall tell the wardens of the country and their officers. When information ⁹¹⁴ has been received they shall send to Delphi, and, whatever the God answers about the money and the remover of the money, that the city shall do in obedience to the oracle; the informer, if he be a freeman, shall have the honour of doing rightly, or if he inform not, the dishonour of doing wrongly; and if he be a slave who gives information, let him be freed, as he ought to be, by the state, which shall give his master the price of him; but if he do not inform he shall be punished with death. Next in order shall follow a similar law, which shall apply equally to matters great and small: If a man happens to leave behind him some part of his property, whether intentionally or unintentionally, let him, who may meet with the left property, suffer it to remain, reflecting that such things are under the protection of the Goddess of ways, and are dedicated to her by the law. But if any one defies the law, and takes the property home with him, let him, if he be a slave of little worth, be beaten with many stripes by him who meets him, being a person of not less than thirty years of age. Or if he be a freeman, in addition to being thought a mean person and despiser of the laws, let him pay ten times the value of the treasure which he has moved to the leaver. And if some one accuses another of having anything which belongs to him, whether little or much, and the other admits that he has this thing, but says that the property in dispute belongs to him, if the property be registered with the archons according to law, the claimant shall summon the possessor, who shall appear before the magistrates; and when the matter is cleared up, if it be registered in the public registers, to which of the litigants it belonged, let him take it and go his way. Or if the property be registered as belonging to some one who is not present, whoever will give sufficient surety on behalf of the absent person that he will give it up to him, let him take it away as the representative of the other.

But if the property which is deposited be not registered with the archons, let it remain until the time of trial with three of the eldest of the archons; and if that for which bail is given be an animal, then he who loses the suit shall pay the archons for its keep, and the archons shall determine the cause within three days.

Any one who is of sound mind may carry off his own slave, and do with him whatever he will of such things as are lawful; and he may carry off the runaway slave of any of his friends or kindred with a view to his safe-keeping. And if any one takes away him who is being carried off as a slave, intending to liberate him, he who is carrying him off shall let him go; but he who takes him away shall give three sufficient sureties; and if he give them, and not without giving them, he may take him away, but if he take him away after any other manner he shall be guilty of violence, and being convicted shall pay double the
 915 penalty of the loss to him from whom he has taken the slave. Let him also carry off the freedman, if he do not pay respect or not sufficient respect to him who freed him. Now the respect shall be, that the freedman go three times in the month to the house of the person who freed him, and offer to do whatever he can and ought to do, and he shall agree to make such a marriage as his former master pleases. He shall not be permitted to have more property than he who gave him liberty, and what more he has shall belong to his master. The freedman shall not remain in the state more than twenty years, but like other foreigners shall go away, taking his entire property with him, unless he have the consent of the magistrates and of his former master to remain. If a freedman or any other stranger have a property greater than the census of the third class, at the expiration of thirty days from the day on which this comes to pass, he shall take that which is his and go his way, and in this case he shall not be allowed to remain any longer by the archons. And if any one disobeys this regulation, and is brought into court and convicted, he shall be punished with death, and his property shall be confiscated. Suits about these matters shall take place before the tribes, unless the plaintiff and defendant have got rid of the accusation either before their neighbours or before arbitrators. If a man lay claim to any

animal or anything else which he declares to be his, let him who is the possessor refer to some honest and trustworthy person, who has sold or given, or in some legitimate way made over the property to him; if he be a citizen or a metic, sojourning in the city, within thirty days, or, if the property have been delivered to him by a stranger, within five months, of which the middle month shall be the summer solstice. When goods are exchanged by selling and buying, a man shall deliver them, and receive the price of them, at a fixed place in the agora, and have done with the matter; but he shall not buy or sell anywhere else, nor give credit. And if in any other manner or in any other place there be an exchange of one thing for another, and the seller with whom he is dealing give him credit, he must do this on the understanding that the law gives no protection in cases of things sold not in accordance with these regulations. Again, as to contributions, any man who likes may go about collecting contributions as a friend with friends, but if any difference arises about the collection, he is to act on the understanding that the law gives no protection in such cases. He who sells anything up to the value of fifty drachmas shall be required to remain in 916 the city for ten days, and the purchaser shall be informed of the house of the seller, with a view to the sort of charges which are apt to arise in such cases, and the restitutions which the law allows. And let legal restitution be on this wise: If a man sells a slave who is in a consumption, or who has the disease of the stone, or of strangury, or epilepsy, or some other tedious and incurable disorder of body or mind, which is not discernible to the ordinary man, if the purchaser be a physician or trainer, he shall have no right of restitution; nor shall there be any right of restitution if the seller has told the truth beforehand to the buyer. But if a skilled person sells to another who is not skilled, let the buyer appeal for restitution within six months, except in the case of epilepsy, and then the appeal may be made within a year, and shall be determined by such physicians as the parties may agree to choose; and he who loses the suit shall pay double the price at which he sold. If a private person sell to another private person, he shall have the right of restitution, and the decision shall be given as before, but he who loses the suit shall only pay back the price of the slave. If a

person sells a homicide to another, and they both know of the fact, let there be no restitution in such a case, but if he do not know of the fact, there shall be a right of restitution, whenever the buyer makes the discovery; and the decision shall rest with five of the youngest guardians of the law, and if the decision be that the seller was cognisant of the fact, he shall purify the house of the purchaser, according to the law of the interpreters, and shall pay back three times the purchase-money.

He who exchanges either money for money, or anything whatever for anything else, either with or without life, let him give and receive them genuine and unadulterated, in accordance with the law. And let us have a preamble about all this sort of roguery, like the preambles of our other laws. Every man should regard adulteration as a particular kind of falsehood, concerning which the many are too fond of saying that at proper times the practice may often be right. But they leave the time and place and occasion undefined and unregulated, and from this want of definiteness in their language they do a great deal of harm to themselves and to others. Now, a legislator ought not to leave the matter undefined; he ought to prescribe some limit, either greater or less. Let this, then, be the limit prescribed: No one shall call the Gods to witness, when he says or does anything false or deceitful or dishonest, unless he would be the most hateful of mankind
 917 to them. And he is most hateful to them who takes a false oath, and never thinks of the Gods; and in the second place, he who tells a falsehood in the presence of his superiors. Now, better men are the superiors of worse men, and in general elders are the superiors of the young; wherefore also parents are the superiors of their children, and men of women and children, and rulers of their subjects; for all men ought to reverence any one who is in any position of authority, and especially those who are in state offices. And this is the reason why I have spoken of these matters. For every one who is guilty of adulteration in the agora tells a falsehood, and deceives, and when he invokes the Gods, according to the customs and cautions of the wardens of the agora, he is perjured, and has no respect either for God or man. Certainly, it is an excellent rule not lightly to profane the names of the Gods, after the fashion of men in general,

who care little about piety and purity in their actions. But if a man will not conform to this rule, let the law be as follows:— He who sells anything in the agora shall not ask two prices of that which he sells, but he shall ask one price, and if he do not obtain this, he shall take away his goods; and on that day he shall not value them, either at more or less; and there shall be no praising of any goods, or oath taken about them. If a person disobeys this command, any citizen who is present, not being less than thirty years of age, may chastise and beat the swearer, and he shall be guiltless, but if he takes no heed and disobeys, he shall be liable to the charge of having betrayed the laws. If a man sell any adulterated goods and will not obey these regulations, he who knows and can prove the fact, and does prove it in the presence of the magistrates, if he be a slave or a metic, shall have the adulterated goods; but if he be a citizen, and do not prove it, he shall be disgraced and deemed to have robbed the Gods of the agora; or if he prove the charge, he shall dedicate the goods to the Gods of the agora. He who is proved to have sold any adulterated goods, in addition to losing the goods themselves, shall be beaten with stripes,—a stripe for a drachma, according to the price of the goods; and the herald shall proclaim in the agora the offence for which he is going to be beaten. The wardens of the agora and the guardians of the law shall obtain information from experienced persons about the roguceries and adulterations of the sellers, and shall write up what the seller ought and ought not to do in each case; and let them inscribe their laws on a column in front of the court of the agora, that they may be clear instructors of those who have business in the agora. Enough has been said 918 in what has preceded about the wardens of the city, and if anything seems to be wanting, let them communicate with the guardians of the law, and write down the omission, and place on a column in the court of the city the first and second regulations which are laid down for them about their office.

After the practices of adulteration naturally follow practices of retail trade. Concerning these, we will first of all give a word of counsel and reason, and the law shall come afterwards. Retail trade in a city is not by nature intended to do any harm, but quite the contrary; for is not he a benefactor who

reduces the inequalities and immeasurabilities of goods to equality and measure? And this is what the power of money accomplishes, and the merchant may be said to be appointed for this purpose. The hireling and the tavern-keeper, and many other occupations, some of them more and others less seemly—all alike have this object;—they seek to satisfy our needs and equalize our possessions. Let us then endeavour to see what is the accusation brought against retail trade, and wherein lies the dishonour and unseemliness of it in order that if not entirely we may yet partially remove the objection by law. To effect this is no easy matter, and implies a great deal of virtue.

Cle. What do you mean?

Ath. Dear Cleinias, the class of men is small—they must have been rarely gifted by nature, and trained by education,—who, when compelled by wants and desires, are able to hold out and observe moderation, and when they might make a great deal of money are sober in their wishes, and prefer a moderate to a large gain. But the mass of mankind are the very opposite: their desires are unbounded, and when they might gain in moderation they prefer gains without limit; wherefore all that relates to retail trade and merchandise, and keeping of taverns, is denounced and numbered among dishonourable things. For if what I trust may never be and will not be, we were to compel, if I may venture to say a ridiculous thing, the best men everywhere to keep taverns for a time, or carry on retail trade, or do anything of that sort; or if, in consequence of some dire necessity, the best women were compelled to follow a similar calling, then we should know how agreeable and pleasant all these things are; and all such occupations if they were carried on according to pure reason, would be honoured as we honour a mother or a nurse: but now that a man goes to desert places and builds houses which
919 can only be reached by long journeys, for the sake of retail trade, and receives strangers who are in need at the desired resting-places, and gives them peace and calm when they are tossed by the storm, or cool shade in the heat; and then instead of behaving to them as friends, and showing the duties of hospitality to his guests, treats them as enemies and captives

who are at his mercy, and will not release them until they have paid the highest, most abominable, and dishonest price,—these are the sort of practices, and foul evils they are, which cast a reproach upon the succour of adversity. And the legislator ought always to be devising a remedy for evils of this sort. There is an ancient saying, which is also a true one—‘To fight against two opponents is a difficult thing,’ as is seen in diseases and in many other cases. And in this case also the war is against two enemies—wealth and poverty; one of whom corrupts the soul of man with luxury, while the other drives him by pain into utter shamelessness. What remedy can a city of sense find against this disease? In the first place, they must have as few retail traders as possible; and in the second place, they must assign the occupation to that class of men whose corruption will be the least injury to the state; and in the third place, they must devise some way whereby the followers of these occupations themselves will not readily fall into habits of unbridled shamelessness and meanness.

After this preface let our law run as follows, and may fortune favour us:—No landowner among the Magnetes, whose city the God is restoring and resettling—no one, that is, of the 5040 families, shall become a retail trader either voluntarily or involuntarily; neither shall he be a merchant, or do any service for private persons who are not his equals, except for his father or his mother, and their fathers and mothers; and in general for his elders who are freemen, and whom he serves as a freeman. Now it is difficult to determine accurately the things which are worthy or unworthy of a freeman, but let those who have obtained the prize of virtue give judgment about them in accordance with their feelings of right and wrong. He who in any way shares in the illiberality of retail trades may be indicted by any one who likes for dishonouring his race, before those who are judged to be the first in virtue; and if he appear to throw dirt upon his father’s house by an unworthy occupation, let him be imprisoned for a year and abstain from that sort of thing; and if he repeat the offence, for two years; and every time that he is taken let the time of his imprisonment be doubled. This shall be the second law:—He who engages in retail trade must be either a metic or a stranger. And a third

law shall be : In order that the retail trader who dwells in our city may be as good or as little bad as possible, the guardians of the law shall remember that they are guardians not only of those who may be easily watched and prevented from becoming lawless or bad, because they are well-born and bred ; but still more should they have a watch over those who are of another sort, and follow pursuits which have a very strong tendency to make men bad. And, therefore, in respect of the multifarious occupations of retail trade, that is to say, in respect of such of them as are allowed to remain, because they seem to be quite necessary in a state,—about these the guardians of the law should meet and take counsel with those who have experience of the several kinds of retail trade, as we before commanded concerning adulteration (which is a matter akin to this), and when they meet they shall consider what amount of receipts after deducting expenses will produce a moderate gain, and they shall fix in writing and strictly maintain what they find to be the right percentage of profit ; this should be done by the wardens of the agora, and by the wardens of the city, and by the wardens of the country. And so retail trade will benefit every one, and do the least possible injury to those in the state who practise it.

When a man makes an agreement which he does not fulfil, unless the agreement be of a nature which the law or a vote of the assembly does not allow, or which he has made under the influence of some unjust compulsion, or which he is prevented from fulfilling against his will by some unexpected chance, the other party may go to law with him in the courts of the tribe, for not having completed his agreement, if the parties are not able previously to come to terms before arbiters or before their neighbours. The class of craftsmen who have furnished human life with the arts, is dedicated to Hephaestus and Athene ; and there is a class of craftsmen who preserve the works of all craftsmen by arts of defence, the votaries of Ares and Athene ; and they also deserve to be dedicated to the Gods. All these continue through life serving the country and the people ; some of them are leaders in battle ; others make for hire implements and works, and they ought not to deceive

in such matters, out of respect to the Gods who are their ⁹²¹ ancestors. If any craftsman through indolence omit to execute his work in a given time, not reverencing the God who gives him the means of life, but considering, foolish fellow, that he is his own God and will let him off easily; in the first place, he shall suffer at the hands of the God; and in the second place, the law shall follow in a similar spirit. He shall owe to him who contracted with him the price of the works which he has failed in performing, and he shall begin again and execute them gratis in the given time. When a man undertakes a work, the law gives him the same advice which was given to the seller, that he should not attempt to raise the price, but simply ask the value; this the law enjoins also on the contractor; for the craftsman assuredly knows the value of his work. Wherefore, in free states the man of art ought not to attempt to impose upon private individuals by the help of his art, which is by nature a true thing; and he who is wronged in a matter of this sort, shall have a right of action against the party who has wronged him. And if any one lets out work to a craftsman, and does not pay him duly according to the lawful agreement, disregarding Zeus the saviour of the city and Athene, who are the partners of the state, and overthrows the foundations of society for the sake of a little gain, in his case let the law and the Gods maintain the common bonds of the state. And let him who, having already received the work in exchange, does not pay the price in the time agreed, pay double the price; and if a year has elapsed, whereas usury in general is not to be taken on money lent in our state, let him for every drachma which he owes to the contractor pay a monthly interest of an obol. Suits about these matters are to be decided by the courts of the tribes; and by the way, now that we are mentioning craftsmen, we must not forget to speak of generals and tacticians, who are the craftsmen of our art of safety, which is war, and like other craftsmen undertake some public work either of their own accord, or because they are appointed by the state; and if they execute their work well the law will never be tired of praising him who gives them ¹

¹ Reading, according to Schneider, ὅς τούτοις αὖ.

those honours which are the just rewards of the soldier ; but if any one, having already received the benefit of any noble service in war, does not make the due return of honour, the law will blame him. Let this then be the law, having an ingredient ⁹²² of praise, not compelling but advising the great body of the citizens to honour the brave men who are the saviours of the whole state, whether by their courage or by their military skill ;—they should honour them, I say, in the second place ; for the first and highest tribute of respect is to be given to those who are able above other men to honour the words of good legislators.

The greater part of the dealings between man and man have been now regulated by us with the exception of those that relate to orphans and the supervision of orphans by their guardians. These follow next in order, and must be regulated in some way. But to arrive at them we must begin with the testamentary wishes of the dying and the case of those who may have happened to die intestate. When I said, Cleinias, that we must regulate them, I had in my mind the difficulty and perplexity in which all such matters are involved. You cannot leave them unregulated, for individuals would make regulations at variance with one another, and repugnant to the laws and habits of the living and to their own previous habits, if a person were simply allowed to make any will which he pleases, and this were to take effect in whatever state he may be at the end of life ; for most of us lose our senses in a manner, and are prostrated in mind when we think that we are soon about to die.

Cle. What do you mean, Stranger ?

Ath. O, Cleinias, a man when he is about to die is a fearful thing, and may cause a great deal of anxiety and trouble to the legislator.

Cle. In what way ?

Ath. He wants to have the entire control of all his property, and will use angry words.

Cle. Such as what ?

Ath. O ye Gods, he will say, how monstrous that I am not allowed to give, or not to give, my own to whom I will—less to him who has been bad to me, and more to him who has been good to me, and whose badness and goodness has been tested by

me in time of sickness or in old age and in every other sort of fortune?

Cle. Well, Stranger, and may he not very fairly say that?

Ath. In my opinion, Cleinias, the ancient legislators were too good-natured, and made laws without sufficient observation or consideration of human things.

Cle. What do you mean?

Ath. I mean, my friend, that they were afraid of the testator's reproaches, and so they passed a law to the effect that a man should be allowed to dispose of his property in all respects as he likes, but you and I, if I am not mistaken, will have something better to say to our departing citizens.

923

Cle. What?

Ath. O my friends, we will say to them, hard is it for you, who are creatures of a day, to know what is yours,—hard, too, to know yourselves, as the Delphic oracle says, at this hour. Now I, as the legislator, regard you and your possessions, not as belonging to yourselves, but as belonging to your whole family, both past and future, and yet more do I regard both family and possessions as belonging to the state; wherefore, if some one steals upon you with flattery, when you are tossed on the sea of disease or old age, and persuades you to dispose of your property in a way that is not for the best, I will not, if I can help, allow this; but I will legislate with a view to the whole, considering what is best both for the state and for the family, esteeming as I ought the feelings of an individual at a lower rate; and I hope that you will depart in peace and kindness towards us, as you are going the way of all mankind; and we will impartially take care of all your concerns, not neglecting any of them, if we can possibly help. Let this be our warning and consolation of the living and dying, Cleinias, and let the law be as follows:—He who makes a disposition in a testament, being a father and having children, shall first of all inscribe as his heir any one of his sons whom he may think fit; and if he have given any of his children to be adopted by another citizen, let the adoption be inscribed. And if he has a son remaining over and above who has not had any portion assigned to him, and who may reasonably be expected to go out to a colony according to law, to him his father may give as much

as he pleases of the rest of his property, with the exception of the paternal lot and the property on the lot. And if there are more sons than one, let the father distribute what there is more than the lot in any way that he pleases. And if one of the sons has the family inheritance, he shall not give him of the money, nor shall he give money to a daughter who is betrothed to a husband, but if she is not betrothed he may give her money. And if any of the sons or daughters shall be found to have a lot of land in the country, which has accrued after the testament has been made, he shall leave the lot which he has inherited to the heir of the man who has made the will. If the testator has no sons, but only daughters, let him choose the husband of any one of his daughters, and leave and inscribe him as his son and heir. And if a man have lost his son, when he was a child, and before he came to be reckoned among grown-up men, whether his own or an adopted son, let the testator make mention of the circumstance and
924 inscribe whom he will to be his second son, in hope of better fortune; and if the testator has no children at all, he may select and give to any one whom he pleases the tenth part of the property which he has acquired. Let him, as he ought, give all the rest to his adopted son, and make a friend of him according to the law. If the sons of a man require guardians, and he dies and makes a will appointing guardians who are agreeable and willing to take charge of his children, whoever they are, and as many as he pleases, let the choice of the guardians have force according to what he has written. But if he dies and has made no will, or a will in which he has appointed no guardians, then the next of kin, two on the father's and two on the mother's side, and one of the friends of the deceased, shall have the authority of guardians; whom the guardians of the law shall appoint when the orphans require guardians. And fifteen of the eldest of the guardians of the law, according to seniority, shall have the whole care and charge of the orphans, and shall divide themselves into threes, —a body of three for one year, and then another body of three for the next year, until the cycle is complete, and this, as far as possible, is to continue always. If a man dies, having made no will at all, and leaves sons who require the care of guardians,

they shall share in the protection which is afforded by these laws. And if a man dying by some unexpected fate leave daughters behind him, let him pardon the legislator if he gives his daughter in marriage, having a regard only to two out of three conditions,—nearness of kin and the preservation of the lot, and omits the third condition, which a father would naturally consider, for he would choose out of all the citizens a son for himself, and a husband for his daughter, with a view to his character and disposition—he shall forgive the legislator, I say, if he disregards this, which to him is an impossible consideration. Let the law about these matters where practicable be as follows:—If a man dies without making a will, and leaves behind him daughters, let his brother, being the son of the same mother, having no lot, marry the daughter and have the lot of the dead man. And if he have no brother, but only a brother's son, in like manner let them marry, if they be of a suitable age; and if there be not even a brother's son, but only the son of a sister, let them do likewise, and so in the fourth degree if there be only a father's brother, or in the fifth degree a father's brother's son, or in a sixth degree the child of a father's sister. Let kindred be always reckoned in this way: if a person leaves daughters the relationship shall proceed upwards through brother's and brother's son, and first the males shall come, ⁹²⁵ and after them the females in the same family. The judge shall consider and determine the suitability or unsuitability of age in marriage; he shall make an inspection of the males naked, and of the women naked down to the navel. And if there be a lack of kinsmen in a family extending to grandchildren of a brother, or to the grandchildren of a grandfather's children, the maiden may choose with the consent of her guardians any one of the citizens whom she will, and he shall be the heir of the dead man, and the husband of his daughter. Circumstances vary, and there may sometimes be a still greater lack of relations within the limits of the state; and if any maiden has no kindred living in the city, and there is some one who has been sent out to a colony, and she is disposed to make him the heir of her father's possessions, if he be indeed of her kindred, let him proceed to her lot according to the regulation

of the law ; but if he be not of her kindred, and there be no kinsmen within the pale of the city, and he be chosen by the daughter of the dead man, and empowered to marry by the guardians, let him return home and take the lot of him who died intestate. And if a man has no children, either male or female, and dies without making a will, let the previous law in general hold ; and let a man and a woman go forth from the family and share the deserted house, and let the lot belong absolutely to them ; and let the heiress in the first degree be a sister, and in a second degree a daughter of a brother, and in the third, a daughter of a sister, in the fourth degree the sister of a father, and in the fifth degree the daughter of a father's brother, and in a sixth degree of a father's sister ; and these shall dwell with their male kinsmen, according to the degree of relationship and right, as we enacted before. Now we must not conceal from ourselves that such laws are apt to be oppressive and that there may sometimes be a hardship in the lawgiver commanding the kinsman of the dead man to marry his relation ; he may be thought not to have considered the innumerable hindrances which may arise among men in the execution of such ordinances ; for there may be cases in which the parties refuse to obey, and are ready to do anything rather than marry, when there is some bodily or mental malady or defect among those who are bidden to marry or be married. Persons may fancy that the legislator never thought of this, but there they are mistaken ; wherefore let us make a common prelude on behalf of the lawgiver and of his subjects, the law begging the latter to forgive the legislator, in that he, having to take care of the common weal, cannot order at the same time the various
936 circumstances of individuals, and begging him to pardon them if they are sometimes unable to fulfil the act which he in his ignorance imposes upon them.

Cle. And how, Stranger, can we act most fairly under the circumstances ?

Ath. There must be arbiters chosen to deal with such laws and the subjects of them.

Cle. What do you mean ?

Ath. I mean to say, that a case may occur in which the brother's son, having a rich father, will be unwilling to marry

the daughter of his uncle ; he will have a feeling of pride, and he will wish to look higher. And there are cases in which the legislator will be imposing upon him the greatest calamity, and he will be compelled to disobey the law, if he is required, for example, to take a wife who is mad, or has some other terrible malady of soul or body, such as makes life intolerable to the sufferer. Then let what we are saying concerning these cases be embodied in a law : If any one finds fault with the established laws respecting testaments, both as to other matters and especially in what relates to marriage, and asserts that the legislator, if he were alive, would not compel him to obey,—that is to say, would not compel those who are by our law required to marry or be given in marriage, to do either,—and some kinsman or guardian assent to this, let them say that the legislator left the fifteen guardians of the law to be arbiters and fathers of orphans, male or female, and to them let the disputants have recourse, and by their aid determine any matters of the kind, admitting their decision to be final. But if any one thinks that too great power is thus given to the guardians of the law, let him bring his adversaries into the court of the select judges, and there have the points in dispute determined. And he who loses the cause shall have censure and blame from the legislator, which, by a man of sense, is felt to be a penalty far heavier than a great loss of money.

Thus will orphan children have a second birth : After their first birth we spoke of their nurture and education, and after their second birth, when they have lost their parents, we ought to take measures that the misfortune of orphanhood may be as little sad as possible to them. In the first place, as we are saying, we appoint them the guardians of the law, to be fathers to them, not inferior to their natural fathers. Moreover, they shall take charge of them year by year as of their own kindred ; and we have given both to them and to the children's own guardians a suitable admonition concerning the nurture of orphans. And we seem to have spoken opportunely in our ⁹²⁷ former discourse, when we said that the souls of the dead have the power after their death of taking an interest in human affairs, about which there are many tales and traditions, long indeed, but true ; and seeing that they are so many and so

ancient, we must believe them, and we must also believe the lawgivers, who tell us that these things are true, if they are not to be regarded as utter fools. But if these things are really so, in the first place men should have a fear of the Gods above, who regard the loneliness of the orphans; and in the second place of the souls of the departed, who by nature incline to take an especial care of their own children, and they are friendly to those who honour them, and unfriendly to those who do not. Men should also fear the living who are aged; wherever a city is well ordered and prosperous, their descendants cherish them, and so live happily; old persons are quick to see and hear all that relates to them, and are propitious to those who are just in the fulfilment of these duties, and they punish those who wrong the orphan and the desolate, considering that they are the greatest and most sacred of deposits. To all which matters the guardian and magistrate ought to apply his mind, if he has any, and take heed of the nurture and education of the orphans, seeking in every possible way to do them good, and contributing to his own good and that of his children. He who obeys the tale which precedes the law, and does no wrong to an orphan, will never have experience of the wrath of the legislator. But he who is disobedient, and wrongs any one who is bereft of father or mother, shall pay twice the penalty which he would have paid if he had wronged one whose parents had been alive. As touching other legislation concerning guardians in their relation to orphans, or concerning magistrates and their superintendence of the guardians, if they did not possess¹ examples of the manner in which children of freemen should be brought up in the bringing up of their own children, and of the care of their property in the care of their own; or, if they had not just laws fairly stated about these very things,—there would have been reason in making laws for them, under the idea that they were a peculiar class, and we might distinguish and make separate rules for the life of those who are orphans and of those who are not orphans. But as the case stands, the condition of orphans with us is not different from the case of those who have a father, though in regard

¹ Reading *εἰ μὲν μή*.

to honour and dishonour, and the attention given to them, the two are not usually placed upon a level. Wherefore, touching the legislation about orphans, the law speaks in serious accents, both of persuasion and threatening, and such a threat as the following will be by no means out of place: He who is the guardian of an orphan of either sex, and he among the guardians of the law who has the care of the guardians, shall love the unfortunate orphan as though he were his own child, and he shall be as careful and diligent as he would be in the management of his possessions, or even more careful and diligent than he would be if they were his own. Let every one who has the care of an orphan observe this law. But if any one acts contrary to the law on these matters, if he be a guardian the archon may fine him, or if he be the archon, the guardian may bring him before the court of select judges, and punish him, if convicted, by a fine of double the amount, which the court shall impose. And if a guardian appears to the relations of the orphan, or to any other citizen, to act negligently or dishonestly, let them bring him before the same court, and whatever penalty is imposed upon him, let him pay fourfold, and let half belong to the orphan and half to him who procured the conviction. If any orphan arrives at years of discretion, and thinks that he has been ill-used by his guardians, let him within five years of the expiration of the guardianship be allowed to bring his guardian to trial; and if he be convicted, the court shall determine what he shall pay or suffer. And if the archon shall appear to have wronged the orphan by his neglect, and he be convicted, let the court determine what he shall suffer or pay to the orphan, and if there be dishonesty in addition to neglect, besides paying the fine, let him be deposed from his office of guardian of the law, and let the state appoint another guardian of the law for the city and for the country in his room.

Greater differences than there ought to be sometimes arise between fathers and sons, on the part either of fathers who will be of opinion that the legislator should enact that they may, if they wish, lawfully renounce their son by the proclamation of a herald in the face of the world, or of sons who will be of opinion that they should be allowed to indict their fathers on the charge of imbecility when they are degraded by disease or old age. These

things only happen as a matter of fact, where the natures of men are very bad ; for where only half is bad, as, for example, if the father be not bad, but the son is bad, or conversely, no bad effect is the offspring of this amount of hatred. In another state, a son disowned by his father would not of necessity cease to be a citizen, but in our state, of which these are to be the laws, the disinherited must necessarily emigrate into another country, for no addition can be made even of a single family to the 5040 households ; and, therefore, he who deserves to suffer these things must be renounced not only by his father, who is a single person, but by the whole family, and what is done in these cases must be regulated by some such law as the following :—He who in the sad disorder of his soul has a mind, justly or unjustly, to expel from his family a son whom he has begotten and brought up, shall not lightly or at once execute his purpose ; but first of all he shall collect together his own kinsmen, extending to cousins, and in like manner his son's kinsmen by the mother's side, and in their presence he shall accuse his son, setting forth that he deserves at the hands of them all to be dismissed from the family ; and the son shall be allowed to address them in a similar manner, and show that he does not deserve to suffer any of these things. And if the father persuades them, and obtains the suffrages of more than half of his kindred, exclusive of the father and mother and the offender himself—I say, if he obtain more than half the suffrages of all the other grown-up members of the family, of both sexes, the father shall be permitted to put away his son, but not otherwise. And if any other citizen is willing to adopt the son who is put away, no law shall hinder him ; for the characters of young men are subject to many changes in the course of their lives. And if he has been put away, and in a period of ten years no one is willing to adopt him, let those who have the care of the superabundant population that are sent out into colonies, see to him, in order that he may be suitably provided for in the colony. And if disease or age or harshness of temper, or all these together, make a man to be more out of his mind than the rest of the world are,—but this is not observable, except to those who live with him,—and he, being master of his property, is the ruin of the house, and his son doubts and hesitates about indicting his father for insanity, let

the law in that case ordain that he shall first of all go to the eldest guardians of the law and tell them of his father's misfortune, and they shall duly look into the matter, and take counsel as to whether he shall indict him or not. And if they advise him to proceed, they shall be both his witnesses and his advocates; and if the father is cast, he shall henceforth be incapable of ordering the least particular of his life; let him be as a child dwelling in the house for the remainder of his days. And if a man and his wife have an unfortunate incompatibility of temper, ten of the guardians of the law, who are impartial, and ten of the women who regulate marriages shall look to the matter, and if they are able to reconcile them they shall be formally reconciled; but if their souls are too much tossed with passion, they shall endeavour to find other partners. Now, they are not likely to have very gentle tempers; and, therefore, we must endeavour to associate with them deeper and softer natures. Those who have no children, or but a few, at the time of their separation, should choose their new partners with a view to the procreation of children; but those who have a sufficient number of children should separate and form new connections in order that one of the two partners may be able to take care of the other in old age. If a woman dies, leaving children, male or female, the law will advise rather than compel the husband to bring up the children which they have, and not introduce into the house a stepmother. But if he have no children, then he shall be compelled to marry until he have begotten a sufficient number of sons to his family and to the state. And if a man die leaving a sufficient number of children, the mother of his children shall remain with them and bring them up. But if she appears to be too young to live virtuously without a husband, let her relations communicate with the women who superintend marriage, and let both together do what they think best in these matters; if there is a lack of children, let the choice be made with a view to having them; two children, one of either sex, shall be deemed sufficient in the eye of the law. When a child is admitted to be the offspring of certain parents and is acknowledged by them, but there is need of a decision as to which parent the child is to follow,—in case a female slave have intercourse with a male slave, or with a freeman or freedman, the

offspring shall always belong to the master of the female slave. Again, if a free woman have intercourse with a male slave, the offspring shall belong to the master of the slave; but if a child be born either of a slave by her master, or of his mistress by a slave—and this be proven—the offspring of the woman and its father shall be sent away by the women into another country, and the guardians of the law shall send away the offspring of the man and the mother.

Neither God, nor a man who has understanding, will ever advise any one to neglect his parents. To a discourse concerning the honour and dishonour of parents, a prelude such as the following, about the service of the Gods, will be a suitable introduction:—There are ancient customs about the Gods which are universal, and they are of two kinds: some of the Gods we
931 see with our eyes and honour them, of others we honour the images; raising statues of them which we adore; and though they be lifeless, yet we imagine that the living Gods have a good will and gratitude to us on this account. Now, if a man has a father or mother, or their father or mother treasured up in his house stricken in years, let him consider that no statue can be more potent to grant his requests than they are, who are sitting at his hearth, if only he knows how to show true service to them.

Cle. And what do you call the true mode of service?

Ath. I will tell you, O my friend, for such things are worth listening to.

Cle. Proceed.

Ath. Oedipus, as tradition says, when dishonoured by his sons, invoked on them the fulfilment of those curses from the God which every one declares to have been heard and ratified by the Gods, and Amyntor in his wrath invoked curses on his son Phoenix, and Theseus upon Hippolytus, and innumerable others have also called down wrath upon their children, which is a plain proof that the Gods listen to the imprecations of parents; for the curses of a parent are, as they ought to be, mighty against his children as no others are. And shall we suppose that the prayers of a father or mother who is specially dishonoured by his or her children, are heard by the Gods in accordance with nature; and that if a man is honoured by them, and in the gladness of his heart earnestly entreats the

Gods in his prayers to do them good, he is not equally heard, and that they do not minister to his request? If not, they would be very unjust ministers of good, and that we affirm to be contrary to their nature.

Clc. Certainly.

Ath. May we not think, as I was saying just now, that we can possess no image which is more honoured by the Gods, than that of a father or grandfather, or of a mother stricken in years? whom when a man honours, the heart of the God rejoices, and he is ready to answer their prayers. And, truly, the figure of an ancestor is a wonderful thing, far higher than that of a lifeless image. For when they are honoured by us, they join in our prayers, and when they are dishonoured, they utter imprecations against us; but lifeless objects do neither. And, therefore, if a man makes a right use of his father and grandfather and other aged relations, he will have the best of all images which can procure him the favour of the Gods.

Clc. Excellent.

Ath. Every man of understanding fears and respects the prayers of his parents, knowing well that many times and to many persons they have been accomplished. Now, these things being thus ordered by nature, good men think that they are the gainers by having aged parents living to the end of their life, or 93² if they depart early, they are deeply lamented by them; and to the bad they are very terrible. Wherefore let every man honour with every sort of lawful honour his own parents agreeably to what has now been said. But if this prelude be an unmeaning sound in the ears of any one, let the law follow, which may be rightly imposed in these terms: If any one in this city be not sufficiently careful of his parents, and do not regard and gratify in every respect their wishes more than those of his sons and of his other offspring or of himself,—let him who experiences this sort of treatment either come himself, or send some one to inform the three eldest guardians of the law, and three of the women who have the care of marriages; and let them look to the matter and punish the evildoers with stripes and imprisonment until they are thirty years of age, that is to say, if they be men, or if they be women let them undergo the same punishment up to forty years of age. But if, when they are still more

advanced in years, they continue the same neglect of their parents, and do them any hurt, let them be brought before a court, in which every single one of the eldest citizens shall be the judges, and if the offender be convicted, let the court determine what he ought to pay or suffer, and any penalty may be imposed on him which a man can do or suffer. If the person who has been wronged is unable to inform the archons, let any freeman who hears of his case inform, and if he do not, he shall be deemed base, and shall be liable to pay damages on the requisition of any one who likes. And if a slave informs, he shall be free, and if he be the slave of the injurer or injured party he shall be enfranchised by the magistrates, or if he belong to any other citizen the public shall pay a price on his behalf to the owner, and let the archons take heed, that no one wrongs him out of revenge, and because he has given information.

As to cases in which one injures another by poisons, where they are fatal we have already spoken of them; but about other cases in which a person intentionally and of malice harms another with meats, or drinks, or ointments, nothing has as yet been determined. For there are two kinds of poisons used among men, which cannot clearly be distinguished. There is one kind of poison which injures bodies by the use of other
 933 bodies according to a natural law, and of this we have spoken; but there is another kind which injures by sorceries, and incantations, and magic bonds, as they are termed, and induces one class of men to injure others as far as they can, and persuades others that they above all persons are liable to be injured by the powers of the magician. Now it is not easy to know the nature of all these things; nor if a man do know can he readily persuade others of his belief. And when men are disturbed at the sight of waxen images fixed either at the doors, or in a place where three ways meet, or in the sepulchres of parents, there is no use in trying to persuade them that they should despise all such things, because they have no certain knowledge about them. But we must have a law in two parts, concerning poisoning, in whichever of the two ways the attempt is made, and we must entreat, and exhort, and advise men not to have recourse to such practices, by which they scare the

multitude out of their wits, as if they were children, compelling the legislator and the judge to heal the fears which the sorcerer arouses, and to tell them in the first place, that he who attempts to poison or enchant others knows not what he is doing, either as regards the body (unless he have a knowledge of medicine), or as regards his enchantments, unless he happens to be a prophet or diviner. Let the law, then, run as follows about poisoning or witchcraft: He who employs poison to do any injury not fatal to a man himself, or to his servants, or any injury whether fatal or not, to his cattle or his bees, if he be a physician, and be convicted of poisoning, shall be punished with death; or if he be a private person, the court shall determine what he is to pay or suffer. But he who seems to be the sort of man who injures others by magic knots, or enchantments, or incantations, or any of the like practices, if he be a prophet or diviner, let him die; and if, not being a prophet, he be convicted of witchcraft, as in the previous case, let the court fix what he ought to pay or suffer.

When a man does another any injury by theft or violence, for the greater injury let him pay a greater penalty to the injured man, and a less penalty for the smaller injury; but in all cases, whatever the injury be, as much as will compensate the loss. And besides the compensation of the wrong, let a man pay a further penalty for the chastisement of his offence: he who has done the wrong instigated by the folly of another¹, 934 through the lightheartedness of youth or the like, shall pay a lighter penalty; but he who has injured another through his own folly, when overcome by pleasure or pain, in cowardice and fear, or lust, or envy, or implacable anger, shall endure a heavier punishment. Not that he is punished because he did wrong, for that which is done can never be undone, but in order that in future times, he, and those who see him corrected, may utterly hate injustice, or at any rate abate much of their evil-doing. Having an eye to all these things, the law, like a good archer, should aim at the right measure of punishment, and in all cases at the deserved punishment. In the attainment of this the judge shall be a fellow-worker with the legislator,

¹ Putting the comma after ἀλλοτρίῳ.

whenever the law leaves to him to determine what the offender shall suffer or pay; and he, like a painter, shall fill up the outline with suitable details. This is what we must do, Megillus and Cleinias, in the best and fairest manner that we can: saying what the punishments are to be of all actions of theft and violence, and giving laws of such a kind as the Gods and sons of Gods would have us give.

If a man be mad he shall not be at large in the city, but his relations shall keep him at home in any way which they can; or if not, let them pay a penalty,—he who is of the highest class shall pay a penalty of one hundred drachmas, whether he be a slave or a freeman whom he neglects; and he of the second class shall pay four-fifths of a mina; and he of the third class three-fifths; and he of the fourth class two-fifths. Now, there are many sorts of madness, some arising out of disease, which we have already described; and there are other kinds, which originate in an evil and passionate temperament, and are increased by education; out of a slight quarrel this class of madmen will often raise a storm of abuse against one another, and nothing of that sort ought to be allowed to exist in a well-ordered state. Let this, then, be the law about abuse, which shall relate to all cases: No one shall speak evil of another; and when a man disputes with another he shall teach and learn of the disputant and the company, but he shall abstain from evil speaking; for out of the imprecations which men utter
 935 against one another, and the feminine habit of casting aspersions on one another, and using foul names, beginning in words light as air, they proceed to deeds, and the greatest enmities and hatreds spring up. For the speaker gratifies his anger, which is an ungracious element of his nature; and nursing up his wrath by the entertainment of evil thoughts, and exacerbating that part of his soul which was formerly civilized by education, he lives in a state of savageness and moroseness, and pays a bitter penalty for his anger. And in such cases almost all men have a way of saying something ridiculous about their opponent, and there is no man who is in the habit of laughing at another who does not miss virtue and earnestness altogether, or lose the better half of greatness. Wherefore let no one say anything of that sort at the temple, or at the public sacrifices, or at the

games, or in the agora, or in a court of justice, or in any public assembly. And let him who has the charge of such matters chastise an offender, and he shall be blameless; but if he fail in doing so, he shall not claim the prize of virtue; for he is one who heeds not the laws, and does not do what the legislator commands. And if in any other place any one indulges in these sort of revilings, whether he have begun the quarrel or is only retaliating, let any elder who is present support the law, and control with blows those who give way to passion, which is another great evil; and if he fail, let him be liable to pay the appointed penalty. And we say further, that he who is engaged in the practice of reviling cannot revile without attempting to say what is ludicrous; and this is the use of ridicule, employed in a moment of anger, which we condemn. Again, do we admit into our state the comic writers who are so fond of making mankind ridiculous, if they attempt in a good-natured manner to turn the laugh against our citizens? or do we draw the distinction of jest and earnest, and allow a man to make use of ridicule in jest and without anger about any thing or person; but as we were saying, not if he be angry and have a set purpose? We forbid earnest—that is unalterably fixed; but we have still to say who are to be sanctioned or not to be sanctioned by the law in the employment of innocent humour. A comic poet, or maker of iambic or satirical lyric verse, shall not be permitted to ridicule any of the citizens, either by word or image, either in anger or without anger. And if any one is disobedient, the judges shall either at once expel him from the place, or he shall pay a fine of three minae, which shall be dedicated to the God who presides over the contests. Those only who have already received permission 936 shall be allowed to write verses at one another without anger and in jest, but in anger and in serious earnest they shall not be allowed. The decision of this matter shall be left to the superintendent of the general education of the young, and whatever he may license, the writer shall be allowed to produce, and whatever he rejects let neither the poet himself exhibit, nor ever teach any other, slave or freeman, under the penalty of being dishonoured, and held disobedient to the laws.

Now, he is not to be pitied who is only hungry, or who

suffers any bodily pain, but he who is temperate, or has other virtues, and at the same time suffers from misfortune, he is to be pitied; and it would be an extraordinary thing if such an one, whether slave or freeman, were utterly forsaken and fell into the extremes of poverty in any tolerably well-ordered city or government. Wherefore the legislator may safely make a law applicable to such cases in the following terms: Let there be no beggars in our state; and if anybody begs, seeking to collect the means of life by perpetual prayers, let the wardens of the agora turn him out of the agora, and the wardens of the city out of the city, and the wardens of the country send him out of any other part of the country over the border, that so the country may be cleared of this sort of animal.

If a slave of either sex injure anything, which is not his or her own, through inexperience, or some improper practice, and the injured person be not in part to blame, the master of the slave who has done the harm shall either make full satisfaction, or give up the person who has done the injury. But if the master argue that the charge has arisen by collusion between the injured party and the injurer, with the view of obtaining the slave, let him sue him who says that he has been injured for malpractices. And if he convict him let him receive double the value which the court fixes as the price of the slave; and if he lose his suit, let him make amends for the injury, and give up the slave. And if an animal, whether horse, or dog, or any other beast, injure a neighbour, the owner shall in like manner pay for the injury.

If any man voluntarily refuses to be a witness, he who wants him shall summon him, and he who is summoned shall come to the trial; and if he knows and is willing to bear witness, let him bear witness, but if he says he does not know let him swear by the three divinities Zeus, and Apollo, and Themis, that he
 937 does not know, and have done with the cause. And he who is summoned to give witness and does not answer to his summoner, shall be liable for the harm which ensues according to law. And if any one summons as witness one who is a judge, let him give his witness, but he shall not afterwards vote in the cause. A free woman may give her witness and plead, if she be more than forty years of age, and may

bring an action if she have no husband ; but if her husband be alive she shall only be allowed to bear witness. A slave of either sex and a child shall be allowed to give evidence and to plead, but they must produce sufficient sureties that they will certainly remain until the trial, in case they should be charged with false witness. And either of the parties in the cause may bring an accusation of false witness against them, touching their evidence in whole or in part, if he asserts that such evidence has been given, previous to the final decision of the cause. The magistrates shall preserve the accusations of false witness, and have them kept under the seal of both parties, and produce them on the day when the trial for false witness takes place. If a man be twice convicted of false witness, he shall not be required, and if thrice, he shall not be allowed to bear witness ; and if he dare to witness after he have been convicted three times, let any one who pleases inform against him to the magistrates, and let the magistrate hand him over to the court, and if he be convicted he shall be punished with death. And in any case in which the evidence is found to be false, and yet to have given the victory to him who wins the suit, and more than half the witnesses are condemned, the decision which was gained by these means shall be rescinded, and there shall be a discussion and a decision as to whether the suit was determined by that false evidence or not ; and in whichever way the decision may be given, the previous suit shall be determined accordingly.

There are many noble things in human life, but to most of them attach evils which are fated to corrupt and spoil them. Is not justice noble, which has been the civilizer of humanity? How then can the advocate of justice be other than noble? And yet upon this profession which is presented under the fair name of science has come an evil reputation. In the first place, we are told that by ingenious pleas and the help of an advocate the law enables a man to win a particular cause, whether just or unjust ; and that both the art and the power 938 of speech which is thereby imparted are at the service of him who is willing to pay for them. Now, in our state this so-called art, whether really an art or only an experience and practice destitute of any art, ought if possible never to come into

existence, or if existing among us should listen to the request of the legislator and go away into another land, and not speak contrary to justice. If the offenders obey we say no more ; but if they disobey let them hear the voice of the law : If any one thinks that he will pervert the power of justice in the minds of the judges, and unseasonably litigate or advocate, let any one who likes indict him for malpractices of law and dishonest advocacy, and let him be judged in the court of select judges ; and if he be convicted let the court determine whether he may be supposed to act from a love of money or from contentiousness. And if he be supposed to act from contentiousness, the court shall fix a time during which he shall not be allowed to institute or plead a cause ; and if he be supposed to act as he does from love of money, in case he be a stranger he shall leave the country, and never return under penalty of death ; but if he be a citizen he shall die, because he is a lover of money, however gained ; and equally, if he be judged to have acted more than once from contentiousness, he shall die.

BOOK XII.

IF any herald or ambassador carry a false message to any 941
other city, or bring back a false message from the city to which
he is sent, or be proved to have brought back, whether from
friends or enemies, in his capacity of herald or ambassador,
what they have never said, let him be indicted for having
offended, contrary to the law, in the sacred office and appoint-
ment of Hermes and Zeus, and let there be a penalty fixed,
which he shall suffer or pay if he be convicted.

Theft is a mean, and robbery a shameless thing ; and none of
the sons of Zeus delight in fraud and violence, or ever practised
either. Wherefore let no one be deluded by poets or mytholo-
gists into a mistaken belief of such things, nor let him suppose
when he thives or is guilty of violence, that he is doing nothing
base, but only what the Gods themselves do. For such tales
are untrue and improbable ; and he who steals or robs contrary
to the law, neither is nor ever was a God or the son of a God ;
of this the legislator ought to be a better judge than all the
poets put together. Happy is he and may he be for ever happy,
who is persuaded and listens to our words ; but he who disobeys
shall have the following law directed against him : If a man
steals anything belonging to the public, whether that which he
steals be much or little, he shall have the same punishment.
For he who steals a little steals with the same wish as he who
steals much, but with less power. He who takes up anything
more than he has deposited is unjust in the highest degree ;
and therefore the law is not disposed to inflict a less penalty on
the one than on the other, because his theft is less, but on the

ground that the thief may possibly be in the one case still curable, and in the other case is incurable. If any one convict in a court of law a stranger or a slave of a theft of public property, let the court determine what punishment he shall suffer, or what penalty he shall pay, bearing in mind that he is probably not incurable. But the citizen who has been brought up, as our citizens will have been, if he be found guilty of robbing his country by fraud or violence, whether he be caught in the act or not, shall be punished with death ; for he is incurable.

942 Now for expeditions of war much consideration and many laws are required ; the great principle of all is that no one of either sex should be without a commander ; nor should the mind of any one be accustomed to do anything either in jest or earnest of his own motion, but in war and in peace he should look to and follow his leader, and in the least things be under his guidance ; for example, he should stand or move, or exercise, or wash, or take his meals, or get up in the night to keep guard and deliver messages when he is bidden ; and in the hour of danger he should not pursue and not retreat except by order of his superior ; and in a word, not teach the soul or accustom her to know or understand how to do anything apart from others. Of all soldiers the life should be in common and together ; there neither is nor ever will be a higher, or better, or more scientific principle than this for the attainment of salvation and victory in war. And from youth upwards we ought to practise this habit of commanding others, and of being commanded by others ; anarchy should have no place in the life of man or of the beasts who are subject to man. I may add that all dances ought to be performed with a view to military excellence, and agility and ease should be cultivated with a similar view ; and also endurance of the want of meats and drinks, and winter cold and summer heat, and hard couches ; and, above all, care should be taken not to destroy the natural qualities of the head and the feet by surrounding them with extraneous coverings, and so hindering their natural growth of hair and soles. For these are the extremities, and of all the parts of the body, whether they are preserved or not is of the greatest consequence ; the one is the servant of the whole body, and the other the master,

943 in whom all the ruling senses are by nature set. Let the

young man, when I say this, imagine that he hears the praises of the military life; and the law shall be as follows: He shall serve in war who is enrolled or appointed to some special service, and if any one wrongly absents himself, and without the leave of the generals, he shall be indicted before the military commanders for failure of service when the army comes home; and the soldiers shall be his judges; the heavy-armed, and the cavalry, and the other arms of the service shall form separate courts; and they shall bring the heavy-armed before the heavy-armed, and the horsemen before the horsemen, and the others in like manner before their peers; and he who is found guilty shall never be allowed to compete for the prize of valour, or indict another for not serving on an expedition, or be an accuser at all in any military matters. Moreover, the court shall further determine what punishment he shall suffer, or what penalty he shall pay. When the several suits for failure of service are completed, the generals shall once more hold an assembly, and they shall adjudge the prizes of valour; and he who likes shall give judgment in his own rank of the service, saying nothing about any former expedition, nor producing any proof or witnesses to confirm his statement, but speaking only of the actual expedition. The crown of victory shall be an olive wreath which the victor shall offer up at the temple of any war God whom he likes, adding an inscription for a testimony to last during life, that such an one has received the first, the second, or the third prize. If any one goes on an expedition, and returns home before the appointed time, when the generals have not withdrawn the army, he shall be indicted for desertion before the same persons who took cognizance of failure of service, and if he be found guilty the same punishment shall be inflicted on him. Now, every man who is engaged in any suit ought to be very careful of bringing false witness against any one, either intentionally or unintentionally, if he can help, for justice is truly said to be an honourable maiden¹, and falsehood is naturally hateful to honour and justice. A witness ought to be very careful not to sin against justice, as for example in what relates to the throwing away of arms—he must distinguish the throwing them away when necessary, and not make that a

¹ Reading αἰδέομαι.

reproach, or bring an action against some undeserving person
944 on that account. To make the distinction may be difficult ;
but still the law must attempt to define the crime in some way.
Let me endeavour to explain my meaning by an illustration :
If Patroclus had been brought to the tent still alive but without
his arms (and this has happened to innumerable persons), the
original arms, which the poet says were given to Peleus by the
Gods as a nuptial gift when he married Thetis, remaining in
the hands of Hector, then the base spirits of that day might
have reproached the son of Menoetius with having cast away
his arms. Again, there is the case of those who have been
thrown down precipices and lost their arms ; and of those who
at sea, and in stormy places, have been suddenly overwhelmed
by floods of water ; and there are numberless things of this kind
which one might adduce by way of consolation, and with the
view of glossing over a misfortune which looks suspicious. We
must, therefore, endeavour to divide to the utmost of our power
the greater and more serious evil from the lesser. And language
admits of a distinction in the use of terms. A man
does not always deserve to be called the thrower away of his
shield ; he may be only the loser of his arms. For there is a
great or rather absolute difference between him who is deprived
of his arms by a sufficient force, and him who voluntarily lets
his shield go. Let the law then be as follows : If a person
having arms be overtaken by the enemy and does not turn
round and defend himself, but lets them go voluntarily or
throws them away, choosing a base life and a swift escape
rather than a courageous and noble and blessed death—in such
a case of the throwing away of arms let justice be done ; but
the judge need take no note of the case just now mentioned,
for the bad man ought always to be punished, in the hope that
he may be improved, but not the unfortunate, for there is no
use in that. And what shall be the punishment suited to him
who has thrown away his weapons of defence ? Tradition says
that Caeneus, the Thessalian, was changed by a God from a
woman into a man ; but the converse miracle cannot now be
wrought, or no punishment would be more proper than that
the man who throws away his shield should be changed into
a woman. This however is impossible, and therefore let us

make a law as nearly like this as we can—that he who loves his life too well shall be in no danger for the remainder of his days, but shall live for ever under the stigma of cowardice. And let the law be in the following terms: When a man is found guilty of disgracefully throwing away his arms in war, no general or military officer shall allow him to serve as a soldier, or give him any place at all in the ranks of soldiers; and if he give him any place, he shall suffer a penalty which 945 the public examiner shall exact of him; and the general who gives him any place if he be of the highest class, shall pay a thousand drachmae; or if he be of the second class, five minae; or if he be of the third, three minae; or if he be of the fourth class, one mina. And he who is found guilty, shall not only be dismissed from manly dangers, which is a disgrace appropriate to his nature, but he shall pay a thousand drachmae, if he be of the highest class, and five minae if he be of the second class, and three if he be of the third class, and a mina, like the preceding, if he be of the fourth class.

What regulations will be proper about examiners, seeing that some of our magistrates are elected by lot, and for a year, and some for a longer time and from selected persons? Of such persons who will be a sufficient censor or examiner, if any of them, weighed down by the pressure of office and his own inability to support the dignity of his office, be guilty of any crooked practice—who will be a sufficient examiner of these things? It is by no means easy to find a ruler who excels rulers in virtue, but still we must endeavour to discover some censor or examiner who is more than man. For the truth is, that there are many elements of dissolution in a state, as there are also in a ship, or in an animal; they all have their cords, and girders, and sinews, and one nature diffused in many places, and called by many names; and the office of examiner is a most important element in the preservation and dissolution of states. For if the examiners are better than the magistrates, and their duty is fulfilled justly and without blame, then the whole state and country flourishes and is happy; but if the examination of the magistrates is carried on in a wrong way, then by the relaxation of that justice which is the uniting principle of all constitutions, every power in

the state is rent asunder from every other; they no longer incline in the same direction, but fill the city with faction, and make many cities out of one, and soon bring all to destruction. Wherefore the censors ought to be admirable in every sort of virtue. Let us invent a mode of creating them, which shall be as follows:—Every year, after the summer solstice, the whole city shall meet in the common precincts of Helios and Apollo, and shall present to the God three men out of their own number in the manner following: Each citizen shall select, not
946 himself, but some other citizen whom he deems in every way the best, and who is not less than fifty years of age. And out of the selected persons who have the greatest number of votes, they shall make a further selection until they reduce them to one-half, if they are an even number; but if they are not an even number, they shall subtract the one who has the smallest number of votes, and make them an even number, and then take the half which has the greater number of votes. And if two persons have an equal number of votes, and thus increase the number beyond one-half, they shall withdraw the younger of the two and do away the excess; and then including all the rest they shall again vote, until there are left three having an unequal number of votes. But if all the three, or two out of the three, have equal votes, let them commit the election to good fate and fortune, and separate off by lot the first, and the second, and the third; these they shall crown with an olive wreath and give them the prize of excellence, at the same time proclaiming to all the world that the city of the Magnetes, by the providence of the Gods, is again preserved, and presents to the Sun her three best men as the first-fruits of Apollo, dedicated according to the ancient law to him and to the Sun, as long as their lives answer to the judgment formed of them. And these shall appoint in their first year twelve examiners, to continue until each has completed seventy-five years, to whom three shall afterwards be added yearly; and let these divide all the magistracies into twelve parts, and prove the holders of them freely by every sort of test; and let them live while they hold office in the precinct of Helios and Apollo, in which they were chosen, and let each one form a judgment of some things individually, and of others in company with his colleagues; and let him place a writing

in the agora about each magistracy, and what the magistrate ought to suffer or pay, according to the decision of the examiners. And if a magistrate does not admit that he has been justly judged, let him bring the examiners before the select judges, and if he is acquitted by their decision, let him, if he will, accuse the examiners themselves; and if he be convicted, and have been condemned to death by the examiners, let him die (and of course he can only die once). But any other penalties which admit of being doubled let him suffer twice over.

And now let us pass under review the examiners themselves; when are they to be examined? and what rewards or punishments are to be assigned to them? During the life of these men, whom the whole state counts worthy of the rewards of 947 virtue, they shall have the first seat at all public assemblies, and at all Hellenic sacrifices and sacred missions, and other public and holy ceremonies in which they share. The chiefs of each sacred mission shall be selected from them, and they only of all the citizens shall be adorned with a crown of laurel; they shall all be priests of Apollo and Helios; and one of them, who is judged first of the priests created in that year, shall be high priest; and they shall write up his name in each year to be a measure of time as long as the city lasts; and after their death they shall be laid out and carried to the grave and entombed in a manner different from the other citizens. They shall be decked in a robe all of white, and there shall be no cryings or lamentations over them; but a chorus of fifteen youths, and another of men, shall stand around the bier on either side, hymning the praises of the dead in alternate responses, the priests blessing them in song all day long; and in the morning an hundred of the youths who practise gymnastic exercises, and whom the relations of the departed shall choose, shall carry the bier to the sepulchre, the young men marching first, dressed in the garb of warriors, the cavalry with their horses, the heavy-armed with their arms, and the others in like manner. And the youths around the bier and in front shall sing their national hymn, and maidens shall follow behind, and with them the women who have passed the age of child-bearing; next, unless the Pythian Oracle forbid them, shall

follow priests and priestesses, because this burial is free from pollution, although they are interdicted from other burials. The place of burial shall be an oblong vaulted chamber constructed of tufa, which will last for ever, having stone couches placed side by side. And here they will lay the blessed person, and surround the sepulchre with a mound of earth and with a grove of trees on every side but one; and on that side the sepulchre shall be allowed to extend for ever, and will not need a mound. Every year they shall have contests in music and gymnastics, and in horsemanship, in honour of the dead. These are the honours which shall be given to those who are acquitted by the examiners; but if any of them, trusting to the scrutiny being over, should, after the judgment has been given, manifest the wickedness of human nature, let the law ordain that he who
948 pleases shall indict him, and let the cause be tried in the following manner. In the first place, the court shall be composed of the guardians of the law, and to them the surviving examiners shall be added, as well as the court of select judges; and let the pursuer lay his indictment in this form:—He shall say that so-and-so is unworthy of the prize of virtue and of his office; and if the defendant be convicted let him be deprived of his office, and of the burial, and of the other honours given him. But if the prosecutor do not obtain the fifth part of the votes, let him, if he be of the first class, pay twelve minae, and eight if he be of the second class, and six if he be of the third class, and two minae if he be of the fourth class.

The so-called decision of Rhadamanthus is worthy of all admiration. He knew that the men of his own time believed and had no doubt that there were Gods, which was a reasonable belief in those days, because most men were the sons of Gods, and according to tradition he was one himself. He appears to have thought that he ought to commit judgment to no man, but to the Gods only, and in this way suits were simply and speedily decided by him. For he made the two parties at issue take an oath respecting the points in dispute, and so got rid of the matter speedily and safely. But now that a certain portion of mankind do not believe at all in the existence of the Gods, and others imagine that they have no care of us, and the opinion of most men and of the worst men is that

in return for a small sacrifice and flattering words they will aid them in abstracting a great deal of money, and deliver them from divers and great penalties, the way of Rhadamanthus is no longer suited to the needs of justice, for as the opinions of men about the Gods are changed, the laws should also be changed:—In the granting of suits a rational legislation ought to do away with the oaths of the parties on either side—he who obtains leave to bring in a lawsuit should write down the charges, but not add an oath; and the defendant in like manner should give his denial to the magistrates in writing, and not swear; for it is a dreadful thing to know, when many lawsuits are going on in a state, that almost half the people who are in the habit of meeting one another at the public meals and in other companies and relations of private life are perjured. Let the law, then, be as follows:—A judge who is about to give judgment shall take an oath, and he who appoints the magistrates of the state by oaths or by the giving of votes which he carries from the temple, shall take an oath; and the judge of dances and of all music, and the superintendents and umpires of 949 gymnastic and equestrian contests, and any others in which, as far as men can judge, there is nothing to be gained by a false oath; but all cases in which a denial confirmed by an oath clearly results in a great advantage to the taker of the oath, shall be decided without the oath of the parties to the suit, and the presiding judges shall not permit either of them to use an oath for the sake of persuading, nor to call down curses on himself and his race, nor to use unseemly supplications or womanish laments. But they shall teach and learn what is just quietly, avoiding words of ill omen; and he who utters them shall be supposed to speak beside the point, and the judges shall again bring him back to the question at issue. On the other hand, strangers in their dealings with strangers shall legally give and receive oaths, for they will not grow old in the city or leave a fry of young ones like themselves to be the sons and heirs of the land.

In minor matters, when the penalty is less than stripes or imprisonment or death, permission shall be given to all persons who wish to prosecute any freeman who disobeys the law. But as regards the attendance at choruses or processions or any other

public shows or services, or the celebration of sacrifice in time of peace, or the payment of contributions in war—in all these cases, first the necessity of providing for the loss has to be met; and by those who will not obey, there shall be security given to those who are empowered by the city and the law to exact the sum due; and if they forfeit their security, let the goods which they have pledged be sold and the money given to the city; but if they ought to pay a larger sum, the several magistrates shall impose upon the disobedient a suitable penalty, and bring them before the court, until they are willing to do what they are ordered.

Now, a state which makes money from the cultivation of the soil only, and has no foreign trade, must consider what it will do about the emigration of its own people to other countries, and the reception of strangers from elsewhere. About these matters the legislator has to consider, and he will begin by using his influence as far as he can. The intercourse of cities with one another is apt to create a confusion of manners; strangers are
 950 always suggesting novelties to strangers. When states are well governed by good laws the mixture causes the greatest possible injury; but seeing that most cities are the reverse of well ordered, the confusion which arises in them from the reception of strangers, and from the citizens themselves rushing off into other cities, whenever any one young or old desires to travel abroad at any time or to go anywhere, is of no consequence. On the other hand, the refusal of states to receive others and to allow their own citizens to go to other places is utterly impossible, and to the rest of the world is likely to appear ruthless and uncivilized; we call the practice by the name xenelasia or banishment of strangers, which is a hard word, and is descriptive of hard and morose ways, as men think. And to be thought or not to be thought well of by the rest of the world is no light matter; for the many are not so far wrong in their judgment of who are bad and who are good, as they are removed from the nature of virtue in themselves. Even bad men have a divine instinct which guesses rightly, and very many who are utterly depraved form correct notions and judgments about the differences of good and bad. Wherefore also the generality of cities are right in exhorting men to value a good reputation

in the world, for there is no truth greater and more important than this—that he who is really good (I am speaking of him who would be perfect) seeks for reputation with, but not without, the reality of goodness. And our Cretan colony ought also to acquire the fairest and noblest reputation for virtue from other men; and there is every reason to expect that, if the reality answers to the idea, there will be few like her among well-ordered cities, beholding the face of the sun and of the other Gods. Wherefore, in the matter of emigration to other countries and the reception of strangers, we enact as follows:— In the first place, let no one be allowed to go anywhere at all into a foreign country who is less than forty years of age; and no one shall go in a private capacity, but only in some public one, as a herald, or on an embassy, or on a sacred mission. Going abroad on an expedition or in war is not to be included among travels of the class authorized by the state. To Apollo at Delphi and to Zeus at Olympia and to Nemea and to the Isthmus citizens should be sent to take part in the sacrifices and games dedicated to these Gods; and they should send as many as possible, and the best and fairest that can be found, and they will make the city renowned at holy meetings in time of peace, procuring a glory which shall be the converse of that 951 which is gained in war; and when they come home they shall teach the young that the institutions of other states are inferior to their own. And they shall send spectators of another sort, if they have the consent of the guardians, being such citizens as desire to look a little more at leisure at the doings of other men; and these no law shall hinder. For a city which has no experience of good and bad men or intercourse with them, can never be thoroughly and perfectly civilized, nor, again, can the citizens of a city properly observe the laws by habit only, and without an intelligent understanding of them. And there always are in the world a few inspired men whose acquaintance is beyond price, and who spring up quite as much in ill-ordered as in well-ordered cities. And he who lives in a well-ordered city should be ever tracking them out, going forth by sea and land to seek after him who is incorruptible—desiring to establish more firmly institutions which are good already, and amending what is deficient; for without this examination and enquiry a

city will never continue perfect any more than if the examination is ill-conducted.

Cle. How can these two objects be attained?

Ath. In this way: In the first place, our spectator shall be of not less than fifty years of age; he shall be a man of repute, especially in military matters, who will exhibit to other cities a model of the guardians of the law, but when he is more than sixty years of age he shall no longer continue in his office of spectator. And when he has carried on his inspection during as many out of the ten years of his office as he pleases, on his return home let him go to the assembly of those who review the laws. This shall be a mixed body of young and old men, who shall be required to meet daily between the hour of dawn and the rising of the sun. They shall consist, in the first place, of the priests who have obtained the rewards of virtue; and, in the second place, of guardians of the law, choosing the ten eldest of them; the general superintendent of education shall also be a member, as well the last of them as those who have been released from the office, and each of them shall take with him as his companion a young man, whomsoever he chooses, between the ages of thirty and forty. These shall compose the assembly, and they shall always discourse about the laws 952 of their own city or any different ones of which they may hear existing elsewhere; also about kinds of knowledge which may appear to be of use, and will throw light upon the examination, or of which the want will make the subject of laws dark and uncertain to them. Any knowledge of this sort which the elders approve, the younger men shall learn with all diligence; and if any one of those who have been invited appear to be unworthy, the whole assembly shall blame him who invited him. The rest of the city shall watch over those among the young men who distinguish themselves, having an eye upon them, and especially honouring them if they succeed, but dishonouring them above the rest if they turn out to be inferior to the rest. This is the assembly to which he who has visited the institutions of other men, on his return home shall straightway go, and if he have discovered any one who has anything to say about the enactment of laws or education or nurture, or if he has himself made any observations, let him communicate his dis-

coveries to the whole assembly. And if he be seen to have come home neither better nor worse, let him be praised at any rate for his enthusiasm; and if he be much better, let him be much praised; and not only while he lives but after his death let the assembly honour him with fitting honours. Or if on his return home he appear to have been corrupted, pretending to be wise when he is not, let him be prohibited from speaking with any one, whether young or old; and if he will hearken to the rulers, then he shall be permitted to live as a private individual; but if he will not, let him die, if he be convicted in a court of law of interfering about education and the laws. And if he deserve to be indicted, and none of the magistrates indict him, let that be counted as a disgrace to them when the rewards of virtue are decided.

Let such be the character of the person who goes abroad, and let him go abroad under these conditions. In the next place, the stranger who comes from abroad should be received in a friendly spirit. Now, there are four kinds of strangers, of whom we must make some mention—the first is, he who comes and stays throughout the summer; this class are like birds of passage, taking wing in pursuit of commerce, and flying over the sea to other cities, while the season lasts; he shall be received in market-places and harbours and public buildings, near the city but outside, by those magistrates who are appointed to superintend these matters; and they shall take care that a stranger, whoever he be, duly receives justice; but he shall not be allowed to make any innovation. They shall hold 953 the intercourse with him which is necessary, and this shall be as little as possible. The second kind is just a spectator who comes to see with his eyes and hear with his ears the festival of the Muses; such ought to have entertainment provided them at the temples by hospitable persons, and the priests and ministers of the temple should see and attend to them. But they should not remain more than a reasonable time; let them see and hear that for the sake of which they came, and then go away, neither having suffered nor done any harm. The priests shall be their judges, if any of them receives or does any wrong up to the sum of fifty drachmae, but if any greater charge be brought, in such cases the suit shall come before

the wardens of the agora. The third kind of stranger is he who comes on some public business from another land, and is to be received with public honours. He is to be specially received by the commanders of horse and foot, and the host by whom he is entertained, in conjunction with the Prytanes, shall have a special care of what concerns him. There is a fourth class of persons answering to our spectators, who come from another land to look at ours. In the first place, such visits will be rare, and the visitor should be at least fifty years of age; he may possibly be wanting to see something that is rich and rare in other states, or himself to show something in like manner to another city. Let such an one, then, go unbidden to the doors of the wise and rich, being himself one of them: let him go, for example, to the house of the superintendent of education, confident that he is a fitting guest of such a host, or let him go to the house of some of those who have gained the prize of virtue and hold discourse with them, both learning from them, and also teaching them; and when he has seen and heard all, he shall depart, as a friend taking leave of friends, and be honoured by them with gifts and suitable tributes of respect. These are the customs, according to which our city should receive all strangers of either sex who come to them from other countries, and should send forth her own citizens, showing respect to Zeus, the God of hospitality, not driving away strangers at meats and sacrifices and by savage proclamations, as is the manner which prevails among the children of the Nile.

When a man becomes surety, let him give the security in a distinct form, acknowledging the whole transaction in a written document, and in the presence of not less than three witnesses if the sum be under a thousand drachmae, and of not less than five witnesses if the sum be above a thousand drachmae. He
 954 who is agent for another who sells dishonestly and is not able to make good the loss, shall himself be responsible; the agent and the principal shall be equally liable. If a person wishes to find anything in the house of another, he shall enter naked, or having only a short tunic and no upper girdle, having first taken an oath by the customary Gods that he expects to find it there; he shall then make his search, and the other shall throw open

his house and allow him to search things both sealed and unsealed. And if a person will not allow the searcher to make his search, he who is prevented shall go to law with him, estimating the value of the goods after which he is searching, and if he be convicted he shall pay twice the value of the article. If the master be absent from home, the dwellers in the house shall let him search the unsealed property, and on the sealed property the searcher shall set another seal, and shall appoint any one whom he likes, to guard them during five days; and if the master of the house be absent during a longer time, he shall take with him the wardens of the city, and so make his search, opening the sealed property as well as the unsealed, and then, together with the members of the family and the wardens of the city, he shall seal them up again as they were before. There shall be a limit of time in the case of disputed things, and he who has had possession of them during a certain time shall no longer be liable to be disturbed. This shall not, however, apply to houses and lands; but if a man has any other possessions which he has used and openly shown in the city and in the agora, and no one has put in a claim to them, and the other says that he was looking for the goods at the time, and the owner is proved to have made no concealment, if they have continued for a year, the one having the goods and the other looking for them, no one shall be permitted to claim them after the expiration of a year; or if he does not use or show the lost property in the market, but only in the country, and no one offers himself as the owner during five years, at the expiration of the five years the claim shall be barred for ever after; or if he uses them in the city, where there are houses, then the appointed time of claiming the goods shall be three years, or ten years if he has them in the country in private. And if he has them in another land, there shall be no limit of time or prescription, and whenever any one finds them he may claim them.

If any one prevents another by force from being present at a trial, whether a principal party or his witnesses;—if the witness prevented be a slave, whether his own or belonging to another, the suit shall be incomplete and invalid; but if he who is prevented be a freeman, besides the suit being incomplete

955 the other who has prevented him shall be imprisoned for a year, and may be made a slave by any one who pleases. And if any one hinders by force a rival competitor in gymnastic or music, or any other sort of contest, from being present at the contest, let him who has a mind inform the presiding judge, and they shall liberate him who is desirous of competing; and if they are not able, and he who hinders the other from competing wins the prize, then they shall give the prize of victory to him who is prevented, and inscribe him as the conqueror in any temples which he pleases, and he who hinders the other shall not be permitted to make any offering or inscription having reference to that contest, and he shall be liable for damages, whether he be defeated or whether he conquer.

If any one knowingly receives anything which has been stolen, he shall undergo the same punishment as the thief, and if a man receives an exile he shall be punished with death. Every man should regard the friend and enemy of the state as his own friend or enemy; and if any one makes peace or war with another on his own account, and without the authority of the state, he shall in like manner undergo the penalty of death. And if any fraction of the city declare war or peace against any, the generals shall indict the authors of this proceeding, and if they are convicted death shall be the penalty. Those who serve their country ought to serve without receiving gifts, and there ought to be no excusing or approving the saying, 'Men should receive gifts as the reward of good, but not of evil deeds'; for to know what is good and to persevere in what we know is no easy matter. The safest course is to obey the law which says, 'Do no service for a bribe,' and let him who disobeys, if he be convicted, simply die. With a view to taxation, and for many reasons, every man ought to have had his property valued: and the tribesmen should likewise bring a register of the yearly produce to the wardens of the country, that in this way there may be two valuations; and the public officers may use annually whichever on consideration they deem the best, whether they prefer to take a certain portion of the whole value, or of the annual revenue, after subtracting what is paid to the common tables.

Touching offerings to the Gods, the moderate man should

offer moderate ornaments. Now the land and the hearth of the house of all men is sacred to all Gods; wherefore let no man dedicate a second shrine to the Gods. In other cities, gold and silver, whether possessed by private persons or in temples, is an invidious thing, and ivory, the product of a dead body, is not a proper offering; brass and iron, again, are instruments of war—let a man, therefore, offer what he likes which is made of wood only, and in like manner of stone to the public temples, but of woven work let him not offer more than one woman can execute in a month. White colours are suitable to the Gods, especially in woven works, but dyes should only be used for the adornments of war. The most divine of gifts are figures of birds and similar offerings, and they should be such as one painter can execute in a single day, and let other offerings follow the same rule or pattern.

Now that the whole city has been divided into parts of which the nature and number have been described, and laws have been given about all the most important contracts as far as this was possible, the next thing will be to have justice done. In the first place, there shall be elected judges in the courts, who shall be chosen by the plaintiff and defendant in common: these shall be called arbiters rather than judges. And in the second place there shall be judges taken from the village and tribe, a twelfth part of whom will be selected, and before these the litigants shall go to contend for greater damages, if the suit be not decided before the first judges; the defendant, if he be defeated the second time, shall pay a fifth more than the damages mentioned in the indictment; and if he finds fault with his judges and would try a third time, let him carry the suit before the select judges, and if he be again defeated, let him pay the whole of the damages and half as much again. And the plaintiff, if when defeated before the first judges he persist in going on to the second, shall, if he wins receive a fifth part of the damages, and if defeated he shall pay a like sum; but if he is not satisfied with the previous decision, and will insist on proceeding to a third court, then if he win he shall receive from the defendant the amount of the damages and, as I said before, half as much again, but if he lose he shall pay half the assessed damages. Now of the assignation of courts and completion

of the number of the judges and the appointment of servants to the different magistrates, and the times at which the several causes should be heard, and the votings and delays and all the things that necessarily concern suits and the order of causes and the time in which answer is to be given and parties are to appear—of these and other things akin to these we have indeed already spoken, but there is no harm in repeating what is right twice or thrice:—All lesser and easier matters which the elder legislator has omitted may be supplied by the younger
 957 one. Private courts will be sufficiently regulated in this way, and the public and state courts, and those which the magistrates must use in the administration of their several offices, exist in many other states. Many very respectable institutions of this sort have been framed by good men, and from them the guardians of the law may by reflection derive what is necessary for the order of our new state, considering and correcting them, and bringing them to the test of experience, until every detail appears to be satisfactorily determined; and then putting the final seal upon them, and making them irreversible, they shall use them for ever afterwards. As to what relates to the silence of judges and the abstinence from words of evil omen and the reverse, and the differences that there are in the notions of the just and good and honourable which exist in other states, they have been partly mentioned already, and another part of them will be mentioned in their place toward the end. To all these matters he who would be an equal judge shall justly look, and he shall possess writings about them that he may learn them. For of all kinds of knowledge the knowledge of good laws has the greatest power of improving the learner; otherwise there would be no meaning in the divine and admirable law possessing a name akin to mind (*νοῦς, νόμος*). And of all other words, such as the praises and censures of individuals which occur in poetry and also in prose, whether written down or uttered in daily conversation, whether men dispute about them in the spirit of contention or weakly assent to them, as is often the case—of all these the one sure test is the writings of the legislator, which the righteous judge ought to have in his mind as the antidote of all other words, and thus make himself and the city stand upright, procuring for the good

the continuance and increase of justice, and for the bad, on the other hand, a conversion from ignorance and intemperance, and in general from all unrighteousness, as far as their evil minds can be healed, but to those whose web of life is in reality finished, giving death, which is the only remedy for souls in their condition, as I may truly say again and again. And such judges and chiefs of judges will be worthy of receiving praise from the whole city. 958

When the suits of the year are completed the following laws shall regulate their execution: In the first place, the judge shall assign to the party who wins the suit the whole property of him who loses, with the exception of mere necessities, after the votes have been announced by the herald in the hearing of the judges, and when the month arrives following the month in which the courts are sitting, (unless the gainer of the suit has been previously satisfied,) the court shall follow up the case, and hand over to the winner the goods of the loser; but if they find that he has not the means of paying, and the sum deficient is not less than a drachma, the insolvent person shall not have any right of going to law with any other man until he have satisfied the debt of the winning party; but other persons shall still have the right of bringing suits against him. And if any one after he is condemned refuses to acknowledge the authority which condemned him, let the magistrates who are thus deprived of their authority bring him before the court of the guardians of the law, and if he be cast, let him be punished with death, as a subverter of the whole state and of the laws.

Thus a man is born and brought up, and after this manner he begets and brings up his own children, and has his share of dealings with other men, and suffers if he has done wrong to any one, and receives satisfaction if he has been wronged, and so at the appointed time, under the dominion of the laws, he grows old, and meets his end in the order of nature. Concerning the dead of either sex, the religious ceremonies which may fittingly be performed, whether appertaining to the Gods of the under world or of this, shall be decided by the interpreters with absolute authority. Their sepulchres are to be in places which are not cultivated, and there shall be no monu-

ments to them, either large or small, but they shall occupy that part of the country which is naturally adapted for receiving and concealing the bodies of the dead with as little hurt as possible to the living. No man, living or dead, shall deprive the living of the sustenance which the earth, our mother, is naturally inclined to bear to them. And let not the mound be piled higher than would be the work of five men completed in five days; nor shall the stone which is placed over the spot be larger than would be sufficient to receive the praises of the dead included in four heroic lines. Nor shall the laying
959 out of the dead continue for a longer time than is sufficient to distinguish between him who is in a trance only and him who is really dead, and speaking generally, the third day after death will be a fair time for carrying out the body to the sepulchre. Now we must believe the legislator when he tells us that the soul is in all respects superior to the body, and that even in life what makes each one of us to be what we are is only the soul; and that the body follows us about in the likeness of each of us, and therefore, when we are dead, the bodies of the dead are rightly said to be our shades or images; for that the true and immortal being of each one of us which is called the soul goes on her way to other Gods, that before them she may give an account—an inspiring hope to the good, but very terrible to the bad, as the laws of our fathers tell us, which also say that not much can be done in the way of helping a man after he is dead. But the living—he should be helped by all his kindred, that while in life he may be the holiest and justest of men, and after death may have no great sins to be punished in the world below. If this be true, a man ought not to waste his substance under the idea that all this lifeless mass of flesh which is in process of burial is connected with him; he should consider that the son, or brother, or the beloved one, whoever he may be, whom he thinks he is laying in the earth, has gone away to complete and fulfil his own destiny, and that his duty is rightly to order the present, and to spend moderately on the lifeless altar of the Gods below. But the legislator does not intend moderation to be taken in the sense of meanness. Let the law, then, be as follows:—The expenditure on the entire funeral, of him who is of the highest class, shall not

exceed five minae, and for him who is of the second class, three minae, and for him who is of the third class two minae, and for him who is of the fourth class one mina, will be a fair limit of expense. The guardians of the law ought to take especial care of the different ages of life, whether childhood or manhood, or any other age. And at the end of all, let there be some one guardian of the law presiding, who shall be chosen by the friends of the deceased to superintend, and let it be glory to him to manage with fairness and moderation the affairs of the dead, and a discredit to him if they are not well managed. Let the laying out and other ceremonies be in accordance with the law, but the lawgiver may also concede in some points to the customs of his fellow citizens. It would be monstrous for example that he should command any man to weep or abstain from weeping over the dead ; but he may forbid cries of lamentation, and not allow the voice of the mourner to be heard outside the 960 house ; also, he may forbid the bringing of the dead body into the open streets, or the processions of mourners in the streets, and may require that before daybreak they should be outside the city. Let these, then, be our laws relating to such matters, and let him who obeys be free from penalty ; but he who disobeys even a single guardian of the law shall be punished by them all in a fitting penalty. Other modes of burial, or again of denial of burial, which is to be refused in the case of robbers of temples and parricides and the like, have been described and embodied in the preceding laws, so that now our work of legislation is pretty near an end ; but in all cases the end does not consist in doing something or acquiring something or building something, but the end will be attained and finally accomplished, when we have provided for the perfect and lasting continuance of our institutions ; until then the work is incomplete.

Cle. That is very good, Stranger ; but I wish you would tell me more clearly what you mean.

Ath. O Cleinias, many things of old time were well said and sung ; and the saying about the Fates was one of them.

Cle. What is it ?

Ath. The saying that Lachesis or the giver of the lots is the first of them, and that Clotho or the weaver is the second of

them, and that Atropos or the unchanging one is the third of them; and that she is the preserver of the things which are woven, [which may be compared in a figure to the welding power of fire,] working¹ the quality of unchangeableness in them. I am speaking of the things which in a state and government give not only health and salvation to the body, but law, or rather preservation of the law, in the soul; and, if I am not mistaken, this seems to be still wanting in our laws: we have still to see how we can implant in them this irreversible nature.

Cle. It will be a great thing if we can only discover how such a nature can be implanted.

Ath. But that is not impossible; so much I can quite clearly see.

Cle. Then let us not think of desisting until we have imparted this quality to our laws; for it is ridiculous, after a great deal of labour has been spent, to place a thing at last on an insecure foundation.

Meg. I approve of your suggestion, and am quite of the same mind with you.

Cle. Very good: And now what, according to you, is to be the salvation of our government and of our laws, and how is it to be effected?

Ath. Were we not saying that there must be in our city a
961 council which was to be of this sort: Ten of the oldest guardians of the law, and all those who have obtained prizes of virtue, were to meet, and the council was also to include those who had visited foreign countries in the hope of hearing something that might be of use in the preservation of the laws, and who, having come safely home, and having been tested in these same matters, had proved themselves to be worthy to take part in the meeting;—each of the members was to select some young man of not less than thirty years of age, he himself judging in the first instance whether the young man is worthy by nature and education, and then introducing him to the others, and if he seem to them also to be worthy he was to be adopted by them; but if not, they are forbidden to elect him, and still more is

¹ Reading ἀπεργαζομένην, as in Stallbaum's note.

he forbidden to accept their nomination. The meeting of the council was to be held early in the morning, when everybody was at leisure from all other business, whether public or private,—something of that sort was said by us before.

Cle. True.

Ath. Then now returning to the council, I would say further,—that this institution having all the required conditions, might save us all, and be the anchor of the state, if let down into the sea.

Cle. How so?

Ath. Now is the time for me to speak the truth in all earnestness.

Cle. Well said, and I hope that you will fulfil your intention.

Ath. Know, Cleinias, that every work has a saviour, as of the animal the soul and the head are the chief saviour.

Cle. Once more, what do you mean?

Ath. The well-being of those two is obviously the preservation of every living thing?

Cle. How is that?

Ath. The soul, besides other things, contains mind, and the head, besides other things, contains sight and hearing; and the mind, mingling with the noblest of the senses, and becoming one with them, may be truly called the salvation of all things.

Cle. Yes, quite so.

Ath. Yes, indeed; but with what is that intellect concerned which, mingling with the senses, is the salvation of ships in storms as well as in fair weather? In the ship, is it not the mind which pilots; and the sailors uniting their perceptions with the piloting mind, preserve themselves and the ship?

Cle. Very true.

Ath. We do not want many illustrations about such matters:—What aim would the general of an army, or what aim would a physician propose to himself, if he were seeking to attain salvation—?

Cle. Very good.

Ath. Does not the general aim at victory and superiority in war, and do not the physician and his minister aim at producing health in the body?

Cle. Certainly.

Ath. And a physician who is ignorant about the body, that is to say, who knows not that which we just now called health, or a general who knows not victory, or any others who are ignorant of the particulars of the arts which we mentioned, cannot be said to have understanding about any of these matters?

Cle. Impossible.

Ath. And what would you say of the state, if a person proves to be ignorant of the aim to which the statesman should look? Ought he to be called a ruler at all; and further, will he ever be able to preserve that of which he does not even know the aim?

Cle. Impossible.

Ath. And therefore, if our settlement of the country is to be perfect, we ought to have some institution, which, as I was saying, will tell what is the aim of the state, and will inform us how we are to attain this, and what law or what man will advise us with that view. Any state which has no such institution is likely to be devoid of mind and sense, and in all her actions will proceed by mere chance.

Cle. Very true.

Ath. In which, then, of the parts or institutions of the state is any such guardian power to be found? Can we say?

Cle. I am not quite certain, Stranger; but I have a suspicion that you are referring to the assembly which you just now said was to meet at night.

Ath. You have answered rightly, Cleinias; and we must assume, as the argument implies, that this council possesses all virtue; and the beginning of virtue is not to make mistakes by guessing many things, but to look at one thing, and on this to fix all our aims.

Cle. Quite true.

Ath. Then now we shall see why there is nothing wonderful in states going astray—the reason is that their legislators have such different aims; nor is there anything wonderful in some laying down as their rule of justice, that certain individuals should bear rule in the state, whether they be good or bad, and others that the citizens should be rich, not caring whether they are the slaves of other men or not. The tendency of

others, again, is towards freedom, and some legislate with a view to both at once; they want to be at the same time free and the lords of other states; but the wisest men, as they deem themselves to be, look to all these and similar aims, and there is no one of them which they exclusively honour, and to which they would have all things look.

Cle. Then, Stranger, our old assertion will hold, for we were 963 saying that laws generally should look to one thing only; and this, as we admitted, was rightly said to be virtue.

Ath. Yes.

Cle. And we said that virtue was of four kinds?

Ath. Quite true.

Cle. And that mind was the leader of all four, and that to her the three other virtues and all other things ought to have regard?

Ath. You follow me capitally, Cleinias, and I would ask you to follow me to the end, for we have told you to what the mind of the pilot, the mind of the general and of the physician ought respectively to look; and now we may turn to mind political, of whom, as of a human creature, we will ask a question: O wonderful being, and to what are you looking? The physician is able to tell his single aim in life, but you, the superior, as you declare yourself to be of all intelligent beings, when you are asked are not to able to tell. Can you, Megillus, and you, Cleinias, say distinctly what is the aim of mind political, in return for the many explanations of things which I have given you?

Cle. We cannot, Stranger.

Ath. Well, but ought we not to desire to see it, and to see in what it is found?

Cle. For example, in what?

Ath. For example, we were saying that there are four kinds of virtue, and as there are four of them, each of them must be one.

Cle. Certainly.

Ath. And further, all four of them we call one; for we say that courage is a virtue, and that prudence is a virtue, and the same of two others, as if they were in reality not many but one.

Cle. Quite so.

Ath. There is no difficulty in seeing in what way the two differ from one another, and have received two names, and so of the rest. But there is more difficulty in explaining why we call these two and the rest of them by the single name of virtue.

Cle. How do you mean?

Ath. I have no difficulty in explaining what I mean. Let us distribute the subject into questions and answers.

Cle. Once more, what do you mean?

Ath. Do you ask me what is that one thing which I call virtue, and then again speak of as two, one part being courage and the other wisdom? I will tell you how that occurs: One of them has to do with fear; in this the beasts also participate, and quite young children,—I mean courage; for a courageous temper is a gift of nature and not of reason. But without reason there never has been, or is, or will be a wise and understanding soul; hence the difference.

Cle. That is true.

Ath. I have now told you in what way the two are different, 964 and do you in return tell me in what way they are one and the same. Suppose that I ask you in what way the four are one, and when you have answered me, you will have a right to ask of me in return in what way they are four; and then let us proceed to enquire whether in the case of things which have a name and also a definition to them, true knowledge consists in knowing the name only and not the definition? Can he who is good for anything be ignorant about great and glorious truths without discredit?

Cle. I suppose not.

Ath. And is there anything greater to the legislator and the guardian of the law, and to him who thinks that he excels all other men in virtue, and has the rewards of virtues, than these very qualities of which we are now speaking,—courage, temperance, wisdom, justice?

Cle. How can there be anything greater?

Ath. And ought not the interpreters, the teachers, the law-givers, the guardians of others to excel all other men, and perfectly to show him who desires to learn and know, or whose evil actions require to be punished and reprov'd, what is the

nature of virtue and vice—shall the teacher be some poet who may find his way into the city, or some chance instructor of youth who professes to be better than him who has won the palm in every virtue? And can we wonder that when the guardians are not adequate in speech or action, and have no adequate knowledge of virtue, the city being unguarded should experience the common fate of cities in our day?

Cle. Wonder! no.

Ath. Well, then, as I was saying just now, what are we to do? How can we provide our guardians with a more than common virtue in speech or action, or in what way can our city be truly likened to the head and senses of rational beings because possessing such a guardian power?

Cle. What, Stranger, is the drift of your comparison?

Ath. Do we not see that the city is the trunk, and are not the younger guardians, who are chosen for their natural gifts, placed in the head of the state, having their souls all full of eyes, with which they look about the whole city? They keep watch and hand over their perceptions to the memory, and inform the elders of all that happens in the city; and those 965 whom we compared to the mind, because they have many wise thoughts—that is to say, the old men—take counsel, and making use of the younger men as their ministers, and advising with them,—in this way both together truly preserve the whole state:—Shall this be the order of our state, or shall we have some other order? Shall we say that they are all alike the owners of the state, and not merely individuals among them who have had the most careful training and education?

Cle. That, my good sir, is impossible.

Ath. Then we ought to proceed to some more exact training than that which has preceded.

Cle. Certainly.

Ath. And must not that of which we are in need be the one to which we were just now alluding?

Cle. Very true.

Ath. Did we not say that the workman or guardian, if he be perfect in every respect, ought not only to be able to see the many aims, but he should press onward to the one, which he should know, and knowing, order all things with a view to that?

Cle. True.

Ath. And can any one have a more exact way of considering or contemplating anything, than the being able to look at one idea gathered from many different things?

Cle. Perhaps not.

Ath. Not 'perhaps not,' but 'certainly not,' my good sir, is the right answer. There never has been a truer method than this discovered by any man.

Cle. I bow to your authority, Stranger; let us proceed in the way which you propose.

Ath. Then, as would appear, we must compel the guardians of our divine state to perceive, in the first place, what that principle is which is the same in all the four—the same, as we affirm, in courage and in temperance, and in justice and in prudence, and which, being one, we call as we ought, by the single name of virtue. To this, my friends, we will, if you please, hold fast, and not let go until we have sufficiently explained what that is to which we are to look, whether to be regarded as one or as a whole, or as both, or in whatever way. Are we likely ever to be in a virtuous condition, if we cannot tell whether virtue is many, or four, or one? Certainly, if you will take our advice, we shall in some way contrive that this principle has a place amongst us; but if you have made up your mind that we should let the matter alone, we will.

Cle. We must not, Stranger, by the God of strangers I swear that we must not; for in our opinion you speak most truly, but we should like to know how you will accomplish your purpose.

966 *Ath.* Wait a little before you ask; and let us, first of all, be quite agreed with one another that the purpose has to be accomplished.

Cle. Certainly, if that is possible.

Ath. Well, and about the good and the honourable, are we to take the same view—that each of them are many, but that our guardians are to regard them as in some sense one?

Cle. We must consider in what sense.

Ath. And are we to consider only, and to be unable to say what we think?

Cle. Certainly not; that would be the state of a slave.

Ath. And may not the same be said of all good men—that the true guardians of the laws ought to know their truth, and to be able to interpret them in words, and carry them out in action, judging of what is and of what is not well, according to nature?

Cle. Certainly.

Ath. Is not the knowledge of the Gods one of the noblest sorts of knowledge;—to know that they are and know how great is their power, as far as in man lies? We do indeed excuse the majority of mankind, who only follow the voice of the laws, but refuse to admit as guardians any who do not labour to obtain every possible evidence that there is respecting the Gods; they are forbidden and not allowed to choose as a guardian of the law, or to place in the select order of virtue, him who is not an inspired man, and has not laboured at these things.

Cle. It is certainly just, as you say, that he who is indolent about such matters or incapable should be rejected, and that things honourable should be put away from him.

Ath. Are we assured that there are two things which lead men to believe in the Gods, as we have already stated?

Cle. What are they?

Ath. One is the argument about the soul, which has been already mentioned—that it is the eldest and most divine of all things, to which motion attaining generation gives perpetual existence; the other was an argument from the order of motion of the heavens, and of all things under the dominion of the mind which ordered the universe. If a man look upon the world not lightly or foolishly, there was never any one so godless who did not experience an effect opposite to that which the many imagine. For they think that those who handle these matters by the help of astronomy, and the accompanying arts of demonstration, may become godless; because they see, as far as they can see, things happening by necessity, and not by an intelligent will accomplishing good.

Cle. But what is the fact?

Ath. Just the opposite of the opinion which once prevailed among men, that the sun and stars are without soul. Even in those days men wondered about them, and that which is now

ascertained was then conjectured by some who had a more exact knowledge of them—that if they had been things without soul, and had no mind, they could never have moved according to such exact calculations; and even at that time some ventured to hazard the conjecture that mind was the orderer of the universe. But these same persons again mistaking the nature of the soul, which they conceived to be younger and not older than the body, once more overturned the world, or rather, I should say, themselves, for what they saw before their eyes in heaven, all appeared to be full of stones, and earth, and many other lifeless bodies, and to these they assigned the various causes of all things. Such studies gave rise to much atheism and perplexity, and the poets took occasion to be abusive,—comparing the philosophers to she-dogs uttering vain howlings, and saying other nonsense of the same sort. But now, as I said, the case is reversed.

Cle. How is that?

Ath. No man can be a true worshipper of the Gods who does not know these two principles—that the soul is the eldest of all things which are born, and is immortal and rules over all bodies; moreover, as I have now said several times, he who has not contemplated the mind of nature which is said to exist in the stars, and gone through the previous training, and seen the connection of them with music, and harmonized them all with laws and institutions, is not able to give a reason of such things as have a reason. And he who is unable to acquire this in addition to the ordinary virtues of a citizen, 968 can hardly be a good ruler of a whole state; but he should be the subordinate of other rulers. Wherefore, Cleinias and Megillus, let us consider whether we may not add to all the other laws which we have discussed this further one,—that the nocturnal assembly of the magistrates, which has also been associated with us in our whole scheme of education, shall be a guard set according to law for the salvation of the state. Shall we propose this?

Cle. Certainly, my good friend, we will if the thing is possible.

Ath. Let us strive to the utmost that we may attain this object; you shall have my best assistance. Of these matters

I have had much experience, and have often considered them, and I dare say that I shall be able to find others who will also help.

Cle. I agree, Stranger, that we should proceed along the road in which God is guiding us; and how we can proceed rightly has now to be investigated and explained.

Ath. O, Megillus and Cleinias, about these matters we cannot legislate further until the city is established; when that is done, then we will determine what authority the citizens shall have of their own; but the explanation of how this is all to be ordered would only be given rightly in a long discourse.

Cle. What do you mean?

Ath. In the first place, a list would have to be made out of those who by their ages and studies and dispositions and habits, are well fitted for the duty of a guardian. In the next place, it will not be easy for them to discover themselves what they ought to learn, or become the disciple of one who has already made the discovery. Furthermore, to write down the times at which, and during which, they ought to receive the several kinds of instruction, would be a vain thing; for the learners themselves do not know what is learned to advantage until the knowledge which is the result of learning has found a place in the soul of each. And so these details, although they could not be truly said to be secret, might be said to be incapable of being stated beforehand, because when stated they would have no meaning.

Cle. What then are we to do, Stranger, under these circumstances?

Ath. There is a proverb of universal application which may also be applied to us: We must risk the whole constitution on the chance of throwing thrice six or thrice ace, and I am willing to share with you the danger of stating and explaining 969 to you my views about education and nurture, which is the question coming to the surface again. The danger is not a slight or ordinary one, and I would advise you, Cleinias, in particular, to see to the matter; for if you order rightly the city of the Magnetes, or whatever name God may give it, you will obtain the greatest glory; or at any rate you will be thought the most courageous of men in the estimation of posterity.

Dear companions, if this our divine assembly can only be established, to them we will hand over the city; none of the present company of legislators, as I may call them, would hesitate about that. And the state will be perfected and become a waking reality, which a little while ago we attempted to create as a dream and in idea only, mingling together reason and mind in one image, in the hope that our citizens might be duly mingled and rightly educated; and being educated, and dwelling in the citadel of the land, might become perfect guardians, such as we have never seen in all our previous life, by reason of the saving virtue which is in them.

Meg. Dear Cleinias, after all that has been said, either we must detain the Stranger, and by supplications and in all manner of ways make him share in the foundation of the city, or we must give up the undertaking.

Cle. Very true, Megillus; and you must join with me in detaining him.

Meg. I will.

I N D E X.

The following Index refers to the pages of Stephens, which are given in the margin of the translation. The page of Stephens is divided into five parts by the letters A, B, C, D, E, which are retained in the Index of Proper Names, though they are not given in the margin. Thus the letter A signifies the first portion of the page, the letter B the second, and so on.

The order in which the dialogues are arranged in the translation is as follows:

VOL. I.

| | | | | |
|----------------|-------|----------|---------------|----------|
| Charmides, .. | pages | 9—37. | Stephens, ii. | 153. |
| Lysis, | " | 46—70. | " | ii. 203. |
| Laches, | " | 79—105. | " | ii. 177. |
| Protagoras, .. | " | 121—179. | " | i. 309. |
| Euthydemus, .. | " | 193—236. | " | i. 271. |
| Ion, | " | 243—256. | " | i. 530. |
| Meno, | " | 269—304. | " | ii. 70. |

INDEX.

A.

ABARIS, the Hyperborean, his charms, Charm. 158 B.
 Abdera, Protagoras of, Protag. 309 C; Rep. 10. 600 C.
 Abolition of debt, Laws 5. 736.
 Abortion allowed, Rep. 5. 461.
 Absolute, the, unknown, Parm. 133, 134; absolute knowledge possessed by God, *ib.* 134.
 Abstract ideas, origin of, Rep. 7. 523; Phaedo 74; abstract and concrete in opposition, Phaedo 103. Cp. Ideas.
 Academia, Lysis 203 B.
 Acarnanians, the two, Euthyd. 271 C.
 Accents, change of, Crat. 399 B.
 Acesimbrotus, a physician's name, Crat. 394 C.
 Achaeans, Rep. 3. 389 E, 390 E, 393 A, D, 394 A; Laws 3. 682 D, E, 685 E, 706 D, E; 1 Alcib. 112 B.
 Achaemenes, 1 Alcib. 120 E.
 Acharnian, Calicles the, Gorg. 495 D.
 Achelous, Phaedr. 230 B, 263 D.
 Achéron, Phaedo 112 E, 113 D.
 Acherusian lake, Phaedo 113 A, B, C, 114 A.
 Achilles, the son of Thetis, Apol. 28 C; Hipp. min. 371 D; attacks Scamander, Protag. 340 A; better than Odysseus, Hipp. min. 363 B, E, 364 B, C, D, 365 B, 369 B, C, 371 D; attacks Hector, Ion 535 B; his grief, Rep. 3. 388 A; his avarice, *ib.* 390 E; son of Peleus, *ib.* 391 C; sent to the Islands of the Blest, Symp. 179 E, 180 A, B; dies for Patroclus, *ib.* 208 D; Brasidas compared to, *ib.* 221 C; taught by Cheiron, Hipp. min. 371 D; his master Phoenix, Rep. 3. 390 E; his speech to Ajax (Il. 9. 644), Crat. 428 C.
 Acquaintance, importance of friendship and, Laws 6. 711.

Acropolis, the, in ancient Athens, Crit. 112 A; in Atlantis, *ib.* 115 D foll.
 Actions, kinds of, Laws 9. 864; voluntary and involuntary, Hipp. min. 373, 374.
 Active life, age for, Rep. 7. 539, 540.
 Acumenus, a physician, Phaedr. 269 A; father of Eryximachus, *ib.* 268 A; Symp. 176 B; a companion of Socrates, Phaedr. 227 A.
 Acusilaus, Symp. 178 C.
 Adamant, Tim. 59.
 Adeimantus, son of Ariston, a person in the dialogue *Parmenides*, Parm. 126 A; a person in the dialogue *Republic*, Rep. 1. 327 C, 2. 362 D, 376 D; brother of Plato, Apol. 34 A; his genius, Rep. 2. 368 A; takes up the discourse, *ib.* 368 E, 376 E, 4. 419 A, 6. 487 E, 548 E.
 Adeimantus, son of Cepis, present at the *Protagoras*, Protag. 315 E.
 Adeimantus, son of Leucolophides, present at the *Protagoras*, Protag. 315 E.
 Admetus, Symp. 179 B, 208 D.
 Admonition, Soph. 230.
 Adonis, the gardens of, Phaedr. 276 B.
 Adoption, Laws 9. 877, 878.
 Adrasteia, her ordinance, Phaedr. 248 C; prayed to, Rep. 5. 451 A.
 Adrastus, the 'mellifluous,' Phaedr. 269 A.
 Adulteration, Laws 11. 916; punishment of, *ib.* 917.
 Advocates, Laws 11. 938.
 Aeacus, a judge in Hades, Apol. 41 A; Gorg. 523 E, 524 A, 526 C, E; son of Aegina, *ib.* 526 E; grandfather of Achilles, Hipp. min. 363 B; 1 Alcib. 121 B.
 Acantodorus, brother of Apollodorus, Apol. 34 A.
 Aegina, Crat. 433 A; Phaedo 59 D; Laws 4. 707 E; 1 Alcib. 121 B; two obols required for the passage from Aegina to Athens, Gorg. 511

- D; the nymph, mother of Aeacus, *ib.* 526 E.
- Aeginetans, in Crete, Laws 4. 707 E.
- Aeneas, his horses (Il. 5. 223, 8. 108), Laches 191 B.
- Aeschines, son of Lysanias, Apol. 33 E; was present at the death of Socrates, Phaedo 59 B.
- Aeschines, an orator, Menex 234 B.
- Aeschylus, his false statement concerning Achilles, Symp. 180 A. Quoted:—S. c. T. 1, Euthyd. 291 D; S. c. T. 451, Rep. 8. 550 C; S. c. T. 592, Rep. 2. 361 D; S. c. T. 593, *ib.* 2. 362 A; Niobe fr. 146, Rep. 3. 391 E; Niobe, fr. 151, Rep. 3. 380 A; Xanthians, fr. 159, Rep. 2. 381 D; Telephus fr. 222, Phaedo 107 E; Fab. incert. 266, Rep. 3. 383 B; Fab. incert. 326, *ib.* 8. 563 C.
- Aesculapius (Asclepius), not ignorant of the lingering treatment, Rep. 3. 406 D; bribed to restore a rich man to life, *ib.* 408 B; descendants of, *ib.* 406 A; his sons at Troy, *ibid.* (cf. Asclepiadae); left disciples, *ib.* 10. 599 C; father of physicians, Symp. 186 E; 'we owe a cock to,' Phaedo 118 A; festival in honour of, at Epidaurus (Asclepiaea), Ion 530 A.
- Aesop, his fables, Phaedo 60 C, D, 61 B, C; his fable of the fox and lion (fab. 137), 1 Alcib. 123 A.
- Aexone, the deme of, Democrates of, Lysis 204 E; Laches of, Laches 197 C.
- Affinity, degrees of, Rep. 5. 461.
- Agamemnon, and Achilles, Hipp. min. 370 C; meaning of the name, Crat. 395 A, B; his excellence, Symp. 174 C; reproved in the tragedies by Palamedes, Rep. 7. 522 D; abused by Odysseus, Laws 4. 706 D; his soul became an eagle, Rep. 10. 620 B; his dream, *ib.* 3. 383 A; his gifts to Achilles, *ib.* 390 E; his anger against Chryses, *ib.* 392 E. foll.
- Agathocles, a great Sophist, Protag. 316 E; a teacher of Damon, Lach. 180 D.
- Agathon, and Pausanias, Protag. 315 E; absent from Athens, Symp. 172 C; his first victory, *ib.* 173 A; his wisdom, *ib.* 175 E; his speech, *ib.* 194 E foll.; Agathon and Alcibiades, *ib.* 212 D foll.
- Age, for philosophy, Rep. 7. 539; for active life, *ib.* 549; authority of, Laws 3. 690, 9. 879; for service, *ib.* 6. 785; of the guardians *ib.* 755; for marriage, *ib.* 774 (cp. Rep. 5. 460).
- Agent and patient have the same qualities, Gorg. 476; Rep. 4. 437.
- Agis, a general's name, Crat. 394 C; the son of Archidamus, 1 Alcib. 124 A.
- Aglaophon, a painter, father of Aristophon, Gorg. 448 B; of Polygnotus, Ion 532.
- Agora, Laws 8. 849.
- Agra (Artemis), Phaedr. 229 C.
- Agreement, breach of, Laws 11. 920.
- Agriculture, tools required for, Rep. 2. 370; wild trees, etc., older than domesticated, Tim. 77; irrigation, *ibid.*: laws concerning (cp. Model City), about boundaries, Laws 8. 842; about neighbours, *ib.* 843; about trespass of cattle, *ibid.*; about swarms of bees, *ibid.*; about damage by fire, *ibid.*; about distances in planting, *ibid.*; about watering, *ib.* 844; about rain-water, *ib.*; about tasting fruits, *ib.* foll.; about pollution of water, *ib.* 845; about harvesting, *ib.* 846; agriculture allowed in the model state, *ib.* 5. 743; among the nobler arts, *ib.* 10. 889.
- Aim of life, Laws 6. 770.
- Air, Tim. 49; form of, *ib.* 56; air-passages, *ib.* 78.
- Ajax the son of Telamon, Apol. 41 A; Ajax and Odysseus, Hipp. min. 371 B, D, E; Ajax and Achilles (Il. 9. 644), Crat. 428 C; the reward of his bravery, Rep. 5. 468 D; his soul turns into a lion, *ib.* 10. 620 B; not to be wounded by steel, Symp. 219 E.
- Alcestis, her love for Admetus, Symp. 179 B, D, 180 B, 208 D.
- Alcetas, brother of Perdiccas, Gorg. 471 A.
- Alcibiades, father of Axiochus, Euthyd. 275 B.
- Alcibiades (a person in the dialogues, 1 Alcibiades, *Protagoras*, and *Symposium*), Euthyd. 275 A; Alcibiades and Socrates, Protag. 309 A; Gorg. 481 D; Symp. 213 B; son of Cleinias, *ibid.*; son of Dinomachè, 1 Alcib. 105 D; a descendant of Eurysaces, *ib.* 121 A; his attendant Zopyrus, *ib.* 122 B; Pericles his guardian, *ib.* 104 A, 118 C; his property, *ib.* 123 C; his beauty, Protag. 309 A; would not learn the flute, 1 Alcib. 106 E; his praise

- of Socrates, *Symp.* 215 A foll.; his drunken entry into Agathon's house, *ib.* 212 C; with Socrates at Delium, *ib.* 220 E foll.; at Potidaea, *ib.* 220 A, 221 A.
- Alcinous, 'tales of,' *Rep.* 10. 614 B.
- Alcuaadae, *Meno* 70 B.
- Alexander, son of Alcetas, *Gorg.* 471 B.
- Alexidemus, father of Meno, *Meno* 76 E.
- Aliens, chosen to be generals at Athens, *Ion* 541.
- 'All' or 'one,' *Soph.* 244, 245.
- Allotments in the model city, *Laws* 5. 745.
- Alopece ('Foxmoor'), the deme of Socrates, *Gorg.* 495 D.
- Alphabet, *Phil.* 17, 18; of things, *Pol.* 278. Cp. *Letters*.
- Alternation, a condition of existence, *Phaedo* 72.
- Amazons, their invasion of Attica, *Menex.* 239 B; famous as archers, *Laws* 7. 806 A.
- Ambassadors, laws concerning, *Laws* 12. 941.
- Amasis of Sais, *Tim.* 21 E.
- Amber, attraction of, *Tim.* 80.
- Ambition is of immortality, *Symp.* 208.
- Ameles, the river (= Lethe), *Rep.* 10. 621 A, C.
- Amestris, the wife of Xerxes, 1 *Alcib.* 123 C.
- Amusement defined, *Laws* 2. 667; comparative value of, *ib.* 658.
- Ammon, a god in Egypt, *Phaedr.* 274 D; the oracle of, *ib.* 275 C; *Laws* 5. 738 C; 'by Ammon,' the oath of Theodorus, *Pol.* 257 B.
- Ampheres, a son of Poseidon, *Crit.* 114 B.
- Amphion in the play of Euripides, *Gorg.* 485 E, 506 B.
- Amphipolis, Socrates at, *Apol.* 28 E.
- Amphitryon, *Theaet.* 175 A.
- Amycus, a boxer, *Laws* 7. 796.
- Amynder, a tribesman of Critias, *Tim.* 21 C.
- Amyntor, father of Phoenix, *Laws* 11. 931 B.
- Anacharsis the Scythian, his inventions, *Rep.* 10. 600 A.
- Anacreon, 'the wise,' *Phaedr.* 235 C; his verses in honour of the house of Critias, *Charm.* 157 E.
- Analogy of the arts and justice, *Rep.* 1. 349; of the arts applied to rulers, *ib.* 341; of men and animals, *ib.* 375, 5. 459; of medicine and friendship, *Lysis* 217; of medicine and education, *Laches* 185; of sense and mental qualities, *ib.* 190; of death and sleep, *Phaedo* 71; of thought and sense, *Theaet.* 188; use of in arguments, *Pol.* 285, 286, 297; of arts and politics, 1 *Alcib.* 107; argument from, *Hipp. min.* 373; of arts and moral qualities, *ibid.*
- Analysis of language, *Crat.* 421, 422; of primary names, *ib.* 424.
