Sample preparation: 200 μL Bile + 4 M NaOH:MeOH 50:50, heat at 80° for 16 h, adjust pH to 1.5 with 6 M HCl, extract three times with 10 mL portions of ethyl acetate. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 1 mL dry dichloromethane, add 1 mg p-aminophenol, add 150 μL triethylamine, add at least a 3-fold molar excess of 2-bromo-1-methylpyridinium iodide, heat at 60° for 30 min, cool, concentrate under a stream of nitrogen, add 1 mL 100 mM HCl, add 1 mL ethyl acetate, shake vigorously, centrifuge at 2500 rpm for 5 min, inject an aliquot of the supernatant. (Prepare 2-bromo-1-methylpyridinium iodide by analogy with the preparation of 2-chloro-1-methylpyridinium iodide. Add 15 g methyl iodide to 13.9 g 2-bromopyridine in 3 mL acetone at 0°, stir at room temperature for 3 days. Filter the precipitate and wash it with 50 mL dry ether, dry under reduced pressure to give 2-bromo-1-methylpyridinium iodide (Bull. Chem. Soc. Japan 1977, 50, 1863).)

HPLC VARIABLES

Column: 250 × 4.6 10 μm Nucleosil C-18
Mobile phase: MeOH:water:perchloric acid 75:25:0.1 containing 50 mM sodium perchlorate
Column temperature: 25 ± 0.1
Flow rate: 0.9
Detector: E, 0.75 v, Ag/AgCl reference electrode

CHROMATOGRAM

Retention time: 17

SAMPLE

Matrix: bile, blood, feces, gastric contents, tissue

Sample preparation: Condition a Sep-Pak C18 cartridge with 2 mL 720 mM MeOH in water and 6 mL 100 mM pH 7.0 potassium phosphate buffer. Serum. 200 μL Serum + 1 mL MeCN, mix, sonicate for 10 min, centrifuge at 17000 g for 15 min. Remove a 600 μL aliquot of the supernatant and evaporate it to dryness under a stream of nitrogen at 75°, reconstitute with 5 mL 100 mM pH 7.0 potassium phosphate buffer. Add to the SPE

cartridge at 0.5 mL/min, wash with 2 mL 40 mM MeOH in water, elute with 4 mL 720 mM MeOH in water, filter (0.45 μm), evaporate the filtrate to dryness, reconstitute with 50 μL 250 μM lauric acid in MeOH, add 50 μL 1.8 mM KOH in MeOH, evaporate to dryness under a stream of nitrogen at 75°, reconstitute with 100 μL 10 mM 4-bromomethyl-7-methoxycoumarin in MeCN containing 5 mM dicyclohexyl-18-crown-6, let stand at room temperature for 35 min, inject an aliquot. Liver. Homogenize (glass homogenizer) liver in 1 mL 720 mM EtOH in water, add 2 mL 720 mM EtOH in water, heat at 75° for 15 min, centrifuge at 17000 g for 10 min, remove the supernatant, extract the residue twice more. Combine the supernatants and evaporate them to dryness at 75°, reconstitute with 5 mL 100 mM pH 7.0 potassium phosphate buffer. Add to the SPE cartridge at 0.5 mL/min, wash with 2 mL 40 mM MeOH in water, elute with 4 mL 720 mM MeOH in water, filter (0.45 μm), evaporate the filtrate to dryness, reconstitute with 50 μL 250 μM lauric acid in MeOH, add 50 μL 1.8 mM KOH in MeOH, evaporate to dryness under a stream of nitrogen at 75°, reconstitute with 100 μL 10 mM 4-bromomethyl-7-methoxycoumarin in MeCN containing 5 mM dicyclohexyl-18-crown-6, let stand at room temperature for 35 min, inject an aliquot. Bile. Dilute 20 μL bile with 10 mL 100 mM pH 7.0 potassium phosphate buffer. Add 1 mL to the SPE cartridge at 0.5 mL/min, wash with 2 mL 40 mM MeOH in water, elute with 4 mL 720 mM MeOH in water, filter (0.45 μm), evaporate the filtrate to dryness, reconstitute with 50 μL 250 μM lauric acid in MeOH, add 50 μL 1.8 mM KOH in MeOH, evaporate to dryness under a stream of nitrogen at 75°, reconstitute with 100 μL 10 mM 4-bromomethyl-7-methoxycoumarin in MeCN containing 5 mM dicyclohexyl-18-crown-6, let stand at room temperature for 35 min, inject an aliquot. Gastric juice. Dilute 1 mL gastric juice with 9 mL 100 mM pH 7.0 potassium phosphate buffer, sonicate for 10 min. Add 1 mL to the SPE cartridge at 0.5 mL/min, wash with 2 mL 40 mM MeOH in water, elute with 4 mL 720 mM MeOH in water, filter (0.45 μm), evaporate the filtrate to dryness, reconstitute with 50 μL 250 μM lauric acid in MeOH, add 50 μL 1.8 mM KOH in MeOH, evaporate to dryness under a stream of nitrogen at 75°, reconstitute with 100 μL 10 mM 4-bromomethyl-7-methoxycoumarin in MeCN containing 5 mM dicyclohexyl-18-crown-6, let stand at room temperature for 35 min, inject an aliquot. Feces. Dilute 1 g feces with 9 mL MeOH, mix thoroughly, sonicate for 10 min, centrifuge at 17000 g for 10 min. Remove a 1 mL aliquot of the supernatant and evaporate it to dryness, reconstitute with 5 mL 100 mM pH 7.0 potassium phosphate buffer. Add to the SPE cartridge at 0.5 mL/min, wash with 2 mL 40 mM MeOH in water, elute with 4 mL 720 mM MeOH in water, filter (0.45 μm), evaporate the filtrate to dryness, reconstitute with 50 μL 250 μM lauric acid in MeOH, add 50 μL 1.8 mM KOH in MeOH, evaporate to dryness under a stream of nitrogen at 75°, reconstitute with 100 μL 10 mM 4-bromomethyl-7-methoxycoumarin in MeCN containing 5 mM dicyclohexyl-18-crown-6, let stand at room temperature for 35 min, inject an aliquot.

SAMPLE
Matrix: blood
Sample preparation: Condition a Bond Elut SPE cartridge with 5 mL EtOH and 5 mL water. 100 μL Serum + 250 ng deoxycholic acid 12-propionate + 1 mL 500 mM pH 7.0 phosphate buffer, mix, add to the SPE cartridge, wash with 2 mL water, wash with 1 mL 1.5% EtOH, elute with 2 mL 90% EtOH. Evaporate a 400 μL aliquot of the eluate, add 100 μL 2 mg/mL 1-anthroyl nitrile in MeCN, add 0.16% quinuclidine in MeCN, heat at 60° for 20 min, add 50 μL MeOH, evaporate under nitrogen. Dissolve the residue in 1 mL 90% EtOH, add to a 18 × 6 100 mg column of PHP-LH-20 Sephadex at 0.2 mL/min, wash with 1 mL 90% EtOH, elute with 5 mL 100 mM acetic acid in 90% EtOH (free bile acids),

elute with 5 mL 200 mM formic acid in 90% EtOH (glycine-conjugated bile acids), elute with 5 mL 300 mM pH 6.3 acetic acid-potassium acetate in 90% EtOH (taurine-conjugated bile acids). Evaporate each fraction, dissolve the residue in 100-200 μL MeOH, inject a 5-10 μL aliquot. (Preparation of PHP-LH-20 Sephadex is as follows. Suspend 75.7 g Sephadex LH-20 in 200 mL dichloromethane using a glass stirring rod (not a magnetic stirrer) for 30 min, add 19 mL boron trifluoride ethyl etherate, after 15 min add 50 mL 35% epichlorohydrin in dichloromethane at 1-2 mL/min (Caution! Epichlorohydrin is a carcinogen!), stir for another 30 min, filter, wash with EtOH, dry chlorohydroxypropyl Sephadex LH-20 at 50° (J.Chromatogr. 1971, 59, 45). Stir 27.2 g chlorohydroxypropyl Sephadex LH-20 in 100.5 mL piperidine at room temperature for 30 min, add 5.74 g KOH in 302 mL MeOH, heat at 50-60° for 3 h with occasional shaking, filter, wash with EtOH:water 50:50, wash with 200 mM acetic acid in EtOH:water 70:30, wash with EtOH:water 90:10 until washings become neutral, store in EtOH:water 90:10 (Clin. Chim. Acta 1978 87 141). Prepare 1-anthroyl nitrile as follows. Dissolve 50 g benzanthrone in 500 mL concentrated sulfuric acid with gentle warming, pour this solution cautiously into 4 L hot water with vigorous stirring. Boil the suspension and slowly add 200 g chromium(VI) oxide (Caution! Chromium oxide is a carcinogen and highly corrosive!), after 6 h cool the mixture, filter, wash the precipitate with hot water. Dissolve the precipitate in dilute ammonia and precipitate with acid, crystallize from boiling concentrated nitric acid to give anthraquinone-1-carboxylic acid (Ber. 1924, 57, 1775). Warm, on a water bath, anthraquinone-1-carboxylic acid in dilute ammonia with twice the amount of zinc dust, when the reaction has ceased (30 min ?) filter the reaction mixture, add HCl to the filtrate to obtain anthracene-1-carboxylic acid as yellow needles, recrystallize from EtOH (mp 245°) (Ber 1897, 30, 1118). Stir 1 g anthracene-1-carboxylic acid in 15 mL anhydrous dichloromethane, add 2 mL oxalyl chloride, reflux for 1 h, evaporate to give 1-anthroyl chloride as an oily residue. Dissolve 1-anthroyl chloride in 15 mL dichloromethane, add 3 mL trimethylsilyl cyanide, add 1 mg zinc iodide, stir at room temperature for 2 h, evaporate to dryness, recrystallize from hexane/dichloromethane to give 1-anthroyl nitrile as orange-yellow needles (mp 164-5°) (Anal.Chim.Acta 1983, 147, 397).)

SAMPLE
Matrix: bulk
Sample preparation: Dissolve 1-5 mg bile acid in 500 μL chloroform with enough MeOH to make a solution, add a solution of 1-naphthyldiazomethane in ether until the reddish-orange color persists, if the color disappears within 1 h add more reagent, add 1 drop acetic acid to decompose excess reagent, make up to 1 mL, inject a 5 μL aliquot. (Preparation of 1-naphthyldiazomethane is as follows. Stir 6.7 g 1-naphthaldehyde and 8.5 g 80% hydrazine hydrate in 150 mL EtOH at room temperature for 3 h (Caution! Hydrazine hydrate is a carcinogen!). Remove the solid by filtration and recrystallize it twice from EtOH to give 1-naphthaldehyde hydrazone as white crystals (mp 91-92°). Stir 3.1 g 1-naphthaldehyde hydrazone, 5 g anhydrous sodium sulfate, 50 mL ether, 1 mL EtOH saturated with KOH, and 10 g yellow mercuric oxide for 5 h, filter (sintered glass), concentrate the filtrate under reduced pressure to give 1-naphthyldiazomethane as red crystals (mp 40-41°) (Bull. Chem. Soc. Japan 1967, 40, 691).)

HPLC VARIABLES
Column: 300 mm long μPorasil
Mobile phase: Hexane:THF:MeOH 75:30:2
Flow rate: 1
Injection volume: 5
Detector: UV 280

CHROMATOGRAM
Retention time: 10
Limit of detection: 20-30 ng

OTHER SUBSTANCES
Simultaneous: chenodiol, 3,7-dihydroxy-12-ketocholanic acid, lithocholic acid

KEY WORDS
derivatization; normal phase

SAMPLE
Matrix: solutions
Sample preparation: Mix an aliquot of solution (or hydrolyzed bile) with a 50% molar excess of triethylamine in MeCN, warm briefly, add a 50% molar excess of 100 mM 2-bromoacetophenone in MeCN, heat at 80-90° for 45-60 min, evaporate to dryness, reconstitute with dioxane (Caution! Dioxane is a carcinogen!), filter (0.47 μm), inject an aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Partisil 10/25 ODS
Mobile phase: Gradient. n-Heptane:dioxane 90:10 for 3 min then n-heptane:dioxane:isopropanol 70:25:5 (step gradient). (Caution! Dioxane is a carcinogen!)
Flow rate: 1.2
Detector: UV 254

CHROMATOGRAM
Retention time: 17
Limit of quantitation: 5 pmole

OTHER SUBSTANCES
Simultaneous: chenodiol, cholic acid, hyodeoxycholic acid, lithocholic acid, ursodiol

KEY WORDS
derivatization

SAMPLE
Matrix: solutions
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with water. Treat a bile salt solution with 3α- or 7α-hydroxysteroid dehydrogenase and NAD at 37° for 1 h, add 4 drops concentrated HCl, add to the SPE cartridge, wash with 10 mL water, elute with 5 mL MeOH. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute with 200 μL 650 μL/L concentrated HCl in EtOH and 200 μL 1 mg/mL dansylhydrazine in EtOH, heat at 60° for 10 min, inject an aliquot. (Hydroxy groups are oxidized to ketones which are then derivatized.)

HPLC VARIABLES
Column: 10 μm Radial-Pak C18 (8 mm ID, Waters)
Mobile phase: Gradient. MeOH:10 mM pH 3.4 KH_2PO_4 buffer from 60:40 to 85:15 over 13 min.
Flow rate: 2
Detector: F ex 360 em 510

CHROMATOGRAM
Retention time: 18
Limit of quantitation: 30 pmole

OTHER SUBSTANCES
Simultaneous: cholic acid, deoxycholic acid, glycochenodeoxycholic acid, glycocholic acid, glycodeoxycholic acid, glycolithocholic acid, lithocholic acid, taurochenodeoxycholic acid, taurocholic acid, taurodeoxycholic acid, taurolithocholic acid, ursodeoxycholic acid
Interfering: chenodeoxycholic acid

KEY WORDS
derivatization; SPE; comparison with 2,4-dinitrophenylhydrazine derivatization

SAMPLE
Matrix: solutions
Sample preparation: Mix a 100 μL aliquot of a 1-100 μM solution in 20 mM pH 7.1 phosphate buffer with 10 μL 10 mM tetrabutylammonium hydrogen sulfate in water and 100 μL 1 mM N-(9-acridinyl)bromoacetamide in chloroform, stir at 90° for 20-30 min, cool. Remove a 10 μL aliquot of the organic layer and evaporate it to dryness under reduced pressure, reconstitute with mobile phase, sonicate, inject an aliquot. (Synthesis of N-(9-acridinyl)bromoacetamide is as follows. Dissolve 2.49 g 9-aminoacridine hydrochloride hydrate in water, add dilute NaOH to precipitate the free base, extract with ethyl acetate, dry over anhydrous magnesium sulfate, filter, evaporate to give 9-aminoacridine as yellow needle-shaped crystals (mp 239-240°). Add 1.01 g bromoacetyl bromide in 20 mL diethyl ether dropwise with stirring to 970 mg 9-aminoacridine dissolved in 50 mL acetone containing 1.02 g triethylamine, filter, wash the solid with acetone. Evaporate the filtrate and chromatograph the residue on a 260 × 30 glass column of 70-230 mesh silica gel 60 (Merck) with chloroform:ethyl acetate 2:1. Collect the strong yellow band and evaporate it to dryness, recrystallize from MeOH to give N-(9-acridinyl)bromoacetamide as light yellow crystals (mp 180-182° d).)

HPLC VARIABLES

Matrix: blood
Sample preparation: Condition a Bond-Elut C18 column with 2 volumes MeOH then 2 volumes water. Add 1 mL serum then 200 μL 700 ng/mL promazine in MeOH:0.1 M HCl 13:87 to each column, wash with 2 volumes water, wash with 2 volumes 0.1 M acetic acid, wash with MeOH/water, add 200 μL 10 mM ammonium acetate in MeOH, wait for 30 s, elute with vacuum, repeat elution process two more times. Combine eluates and evaporate them to dryness at 56-8° under compressed air. Reconstitute with 200 μL mobile phase, vortex 10 s, inject 75-100 μL aliquot. (MeOH/water was 500 mL MeOH:water 65:35 plus 25 μL concentrated HCl.)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelco silica
Mobile phase: EtOH:MeCN:t-butylamine 98:2:0.05 (Mix 1 gallon EtOH with 77 mL MeCN and 1.9 mL t-butylamine.)
Flow rate: 2
Injection volume: 75-100
Detector: UV 254

CHROMATOGRAM
Retention time: 9.5
Internal standard: promazine (5.2)
Limit of detection: 4 ng/mL

OTHER SUBSTANCES
Extracted: amitriptyline, desmethyldoxepin, doxepin, imipramine, nortriptyline, protriptyline
Simultaneous: thioridazine, hydroxyamoxapine, meperidine, chlorpromazine, disopyramide, amphetamine, 2-hydroxyimipramine, iprindole, pyrilamine, promethazine, prolixin, amoxapine, N-acetylprocainamide, procainamide, zimeldine, morphine, codeine, trifluoperazine, desmethyldisopyramide, 10-hydroxynortriptyline, prochlorperazine, oxaprotiline, 2-hydroxydesipramine, chlorpheniramine, maprotiline, norzimeldine, iminostilbene, desmethylchlordiazepoxide, buprion, diazepam, demoxepam, chlordiazepoxide, propoxyphene, dextropropoxyphene, cocaine, oxapam, trimipramine, mianserin, trimeprazine, loxepin, fluphenazine, methadone, trifluopromazine, phenteramine, chlorimipramine, perphenazine, quinidine
Noninterfering: thiopropazine

KEY WORDS
serum; normal phase

SAMPLE
Matrix: blood

Sample preparation: 2 mL Plasma + 100 μL 1 μg/mL loxapine in isopropanol:diethylamine 99.9:0.1 + 250 μL 25% potassium carbonate containing 0.1% diethylamine + 5 mL hexane:isoamyl alcohol 97:3, vortex for 30 s, centrifuge at 500 g for 3 min. Remove the organic layer and add it to 100 μL 250 mM HCl, vortex for 30 s, inject a 50 μL aliquot of the aqueous phase.

HPLC VARIABLES

Guard column: 50 × 4.6 40 μm C8 (Supelco)
Column: 250 × 4.6 5 μm Supelcosil C8
Mobile phase: MeCN:water:diethylamine:85% phosphoric acid 53.3:45.1:1:0.4, pH adjusted to 7.2 with NaOH or phosphoric acid
Flow rate: 2
Injection volume: 50
Detector: UV 254

CHROMATOGRAM

Retention time: k' 2.95
Internal standard: loxapine (k' 7.18)
Limit of detection: 2.5 ng/mL

OTHER SUBSTANCES

Extracted: amitriptyline, chlordiazepoxide, chlorpromazine, desmethldiazepam, desmethylchlordiazepoxide, desmethyldoxepin, diazepam, doxepin, fluphenazine, haloperidol, imipramine, nortriptyline, oxazepam, thiothixene
Noninterfering: molindone, perphenazine, trifluoperazine

KEY WORDS

plasma

SAMPLE

Matrix: blood
Sample preparation: 2 mL Serum or plasma + 0.6 mL water, vortex, extract with 10 mL toluene:isoamyl alcohol 99:1 for 10 min on a rotator, centrifuge for 5 min. Remove upper organic layer, evaporate under a stream of nitrogen at 37°, take up in 150 μL mobile phase, vortex for 2 min, add 0.5 mL hexane, vortex briefly, centrifuge for 5 min, discard upper hexane layer, inject a 100 μL aliquot of the lower layer.

HPLC VARIABLES

Column: 250 × 4 Bio-Sil ODS-10 (Bio-Rad)
Mobile phase: MeCN:pH 4.5 50 mM phosphate buffer 30:70 (Buffer was 6.9 g KH_2PO_4 in 1 L adjusted to pH 4.5 with orthophosphoric acid.)
Column temperature: 45
Flow rate: 2.5
Injection volume: 100
Detector: UV 202

CHROMATOGRAM

Retention time: 6.9

OTHER SUBSTANCES

Extracted: alprazolam, imipramine, nortriptyline, triazolam

Noninterfering: N-acetylprocainamide, amitriptyline, caffeine, chlordiazepoxide, chlorpromazine, diazepam, flurazepam, lorazepam, oxazepam, prazepam, procainamide, propranolol, thioridazine
Interfering: protriptyline

KEY WORDS

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 37 μL 2 μg/mL IS in MeOH + 500 μL pH 10 borate buffer + 1.5 mL hexane:isoamyl alcohol 95:5, shake for 10 min. Evaporate the organic layer to dryness under a stream of nitrogen, reconstitute in 100 μL MeOH, inject a 50 μL aliquot. (The borate buffer was prepared as follows. Prepare a solution of 61.8 g boric acid and 74.6 g KCl in 1 L water. Add 630 mL of this solution to 370 mL 106 g/L sodium carbonate solution. Adjust pH to 10.0 with 6 M NaOH and store at 35-37°.)

HPLC VARIABLES
Column: 250 × 4.6 Zorbax Sil
Mobile phase: MeOH:ammonium hydroxide 998:2
Flow rate: 1.5
Injection volume: 50
Detector: UV 254

CHROMATOGRAM
Retention time: 13
Internal standard: N-desmethylclomipramine hydrochloride (10)
Limit of quantitation: 20 ng/mL

OTHER SUBSTANCES
Extracted: amitriptyline, nortriptyline, imipramine, 2-hydroxyimipramine, 2-hydroxydesipramine, metabolites
Also analyzed: doxepin, desmethyldoxepin, desmethylclomipramine, clomipramine, maprotiline, protriptyline
Noninterfering: chlordiazepoxide, diazepam, flurazepam, oxazepam, thioridazine

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: Evaporate 200 μL 1 μg/mL clomipramine in MeOH into a tube, add 2 mL plasma, add 2 mL pH 10 Titrisol buffer (Merck), add 8 mL diethyl ether, shake for 15 min, centrifuge at 2800 g for 5 min. Remove the organic phase and shake it with 100 μL 50 mM phosphoric acid for 15 min, centrifuge at 2800 g for 10 s. Remove the aqueous layer and vortex it with 2 mL diethyl ether for 10 s, centrifuge at 2800 g. Discard the organic layer and inject a 10-50 μL aliquot of the aqueous layer.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak C18

Mobile phase: MeCN:25 mM KH_2PO_4:water 45:50:5
Flow rate: 1
Injection volume: 10-50
Detector: UV 254

CHROMATOGRAM
Retention time: 7.2
Internal standard: clomipramine (13)
Limit of detection: 2 ng/mL

OTHER SUBSTANCES
Simultaneous: imipramine, trimipramine
Noninterfering: monodesmethyltrimipramine, flunitrazepam, levomepromazine, alimemazine, alprazolam, amineptine, amitriptyline, caffeine, carbamazepine, citalopram, clobazam, desmethylflunitrazepam, diazepam, dibenzepine, estazolam, ethyl loflazepate, indalpine, loprazolam, lorazepam, meprobamate, nitrazepam, nordiazepam, nortriptyline, oxazepam, viloxazine
Interfering: norclobazam, triazolam

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 200 ng doxepin + 100 µL 1 M NaOH + 9 mL freshly prepared hexane:isoamyl alcohol 99:1, shake vigorously for 5 min, centrifuge. Remove 8.5 mL of the organic phase and add it to 200 µL 50 mM HCl, shake well for 1 min, centrifuge, inject a 50 µL aliquot of the aqueous phase.

HPLC VARIABLES
Column: 300 × 4 µBondapak phenyl
Mobile phase: MeCN:0.01% phosphoric acid containing 0.01% NaCl 35:65, final pH 2.8
Flow rate: 1.5
Injection volume: 50
Detector: UV 210

CHROMATOGRAM
Retention time: 14.2
Internal standard: doxepin (12.2)

OTHER SUBSTANCES
Extracted: cocaine, dextromoramide, meperidine, methadone, normeperidine, norpropoxyphene, pentazocine, propoxyphene
Simultaneous: amitriptyline, buprenorphine, chlorpromazine, codeine, desmethyldoxepin, diphenhydramine, ephedrine, imipramine, nortriptyline, oxazepam, oxycodone, pericyazine, pheniramine, propranolol, quinine, thiopropazate, thioridazine

SAMPLE

Matrix: blood

Sample preparation: Condition a Bond Elut C-18 SPE cartridge twice with MeOH and twice with water. 500 μL Serum + 50 μL 1 μg/mL N-propionylprocainamide in 2.5 mM HCl, add to SPE cartridge, wash with 2 volumes water, wash with 2 volumes 0.1 M acetic acid, wash with 1 volume MeOH:2.5 mM HCl 10:90. Add 200 μL 10 mM acetic acid and 5 mM diethylamine in MeOH to column, let stand 1 min, elute under vacuum, repeat, evaporate eluents to dryness under nitrogen at room temperature, reconstitute in 100 μL mobile phase, inject a 40 μL aliquot.

HPLC VARIABLES

Guard column: Pelliguard LC-CN (Supelco)
Column: 150 × 4.6 5 μm Supelcosil LC-PCN
Mobile phase: MeCN:MeOH:10 mM pH 7.0 phosphate buffer 58:14:28
Flow rate: 1.2
Injection volume: 40
Detector: UV 254

CHROMATOGRAM

Retention time: 14.9
Internal standard: N-propionylprocainamide (6)
Limit of quantitation: 25 ng/mL

OTHER SUBSTANCES

Extracted: amitriptyline, doxepin, imipramine, nortriptyline, protriptyline, trimipramine
Simultaneous: atropine, butalbital, chlorpromazine, maprotiline, methadone, norpropoxyphene, phenylpropanolamine, procainamide, prochlorperazine, promethazine, propranolol, quinidine, trifluoperazine, trimeprazine
Noninterfering: acetaminophen, allopurinol, amikacin, amoxapine, amytal, bretylium, caffeine, carbamazepine, carisoprodol, chloramphenicol, chlordiazepoxide, chlorpropamide, clonazepam, codeine, diazepam, disopyramide, droperidol, ethinamate, ethinamate, ethosuximide, fluphenazine, flurazepam, furosemide, gentamicin, haloperidol, hydrochlorothiazide, hydroxyzine, ibuprofen, kanamycin, lidocaine, loxapine, meperidine, mephobarbital, meprobamate, methaqualone, methotrexate, morphine, nafcillin, naloxone, neomycin, perphenazine, phenacetin, phenobarbital, phenytoin, prazepam, primidone, procaine, propoxyphene, reserpine, salicylamide, salicylic acid, secobarbital, spironolactone, theophylline, thiopental, thioridazine, tobramycin, valproic acid, verapamil
Interfering: desmethylmaprotiline

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 1 mL 0.6 M pH 9.8 carbonate buffer + 40 μL 5 μg/mL maprotiline in 10 mM HCl + 5 mL 200 g/L ethyl acetate in n-heptane, mix by rocking for 10 min, centrifuge at 1500 g for 10 min. Remove organic layer and add it to 150 μL 100 mM HCl, mix 10 min, centrifuge at 1500 g for 10 min. Discard organic layer and evaporate aqueous layer at 45° in a vacuum centrifuge for 1 h. Take up residue in 50 μL 1 M pH 10.3 carbonate buffer and 25 μL 10 mg/mL dansyl chloride in MeCN, vortex, allow to react at room temperature for 45 min, evaporate at 45° in a vacuum centrifuge for 20 min, reconstitute in 125 μL MeCN:water 75:25, vortex, centrifuge for 3-5 min, inject a 25-40 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Supelcosil LC-18
Mobile phase: MeCN:25 mM KH_2PO_4 75:25 + 500 μL/L orthophosphoric acid + 600 μL/L n-butylamine
Flow rate: 2
Injection volume: 25-40
Detector: F ex 235 em 470 (cut-off)

CHROMATOGRAM
Retention time: 11.83
Internal standard: maprotiline (12.8)

OTHER SUBSTANCES
Simultaneous: fluoxetine, propranolol, clovoxamine, fluvoxamine, fenfluramine, amoxapine, nortriptyline, sertraline, norfluoxetine
Noninterfering: amitriptyline, imipramine, clomipramine, trimipramine, mianserin, chlordiazepoxide, trazodone, cyclobenzaprine, nomifensine, bupropion, metoprolol, atenolol, pindolol, tranylcypromine, moclobemide, thioridazine, citalopram, clozapine, carbamazepine, doxepin, loxapine
Interfering: protriptyline

KEY WORDS
plasma

SAMPLE
Matrix: blood
Sample preparation: Condition a 1 mL BondElut C18 SPE cartridge with 1 mL 1 M HCl, 1 mL MeOH, 1 mL water, and 1 mL 1% potassium carbonate. 700 μL Serum + 50 μL 5 μg/mL trimipramine in 5% potassium bicarbonate + 700 μL MeCN, vortex, centrifuge at

1500 g for 5 min, add supernatant to SPE cartridge (at ca. 1 mL/min). Wash with 2 mL water and 1 mL MeCN, elute with 250 μL MeOH:35% perchloric acid 20:1 by gravity (10 min) then centrifuge for 20 s to remove rest of eluant, inject a 50 μL aliquot of the eluate.

HPLC VARIABLES
Guard column: 15 mm 7 μm Brownlee RP-8
Column: 150 × 4.6 5 μm Ultrasphere Octyl
Mobile phase: MeCN:water 37.5:62.5 containing 0.5 g/L tetramethylammonium perchlorate and 0.5 mL/L 7% perchloric acid
Flow rate: 1.5
Injection volume: 50
Detector: UV 215

CHROMATOGRAM
Retention time: 6.4
Internal standard: trimipramine (9.6)
Limit of quantitation: 5 ng/mL

OTHER SUBSTANCES
Extracted: amitriptyline, clomipramine, doxepin, fluoxetine, imipramine, maprotiline, nortriptyline
Interfering: desmethylmaprotiline, fluvoxamine, protriptyline

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 200 ng/mL IS in MeOH + 1 mL 50 mM pH 10 borate buffer, vortex briefly, add to an Extrelut 3 SPE cartridge, let stand for 5 min, elute with 15 mL hexane:dichloromethane 50:50. Add the eluate to 3 mL 50 mM sulfuric acid, mix for 10 min, centrifuge at 3000 g for 10 min. Remove the aqueous layer and add it to 6 mL hexane:dichloromethane 50:50, wash for 5 min, centrifuge. Make the aqueous layer basic with 150 μL 28% ammonia, extract twice with 3 mL hexane:dichloromethane 50:50. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 30 × 4.6 5 μm Spherisorb cyano
Column: 250 × 4.6 5 μm Ultrasphere cyano
Mobile phase: MeCN:buffer 60:40 (Buffer was 50 mM KH_2PO_4 adjusted to pH 6.5 with 28% ammonia.)
Flow rate: 1
Injection volume: 20
Detector: E, 5100 A Coulochem, 5020 guard cell 1.00 V, 5011 analytical cell, detector 1 0.55 V, detector 2 0.80 V, output of detector 2 is monitored

SAMPLE

Matrix: blood

Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES

Guard column: LC-8-DB (Supelco)

Column: 150 × 4.6 LC-8-DB (Supelco)

Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)

Flow rate: 2

Injection volume: 100

Detector: UV 228

CHROMATOGRAM

Retention time: 4.0

OTHER SUBSTANCES

Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, dextromethorphan, diazepam, diphenhydramine, doxepin, encainide, fentanyl, flecainide, fluoxetine, flurazepam, haloperidol, hydroxyethylflurazepam, imipramine, lidocaine, maprotiline, methadone, mexiletine, midazolam, norchlorimipramine, nordoxepin, nordiazepam, norfluoxetine, nortriptyline, pentazocine, propoxyphene, propranolol, quinidine, temazepam, trazodone, trimipramine, verapamil

Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin

Interfering: ibuprofen, methaqualone, norverapamil, promazine, propafenone, protriptyline

SAMPLE
Matrix: blood, tissue
Sample preparation: Blood or serum. 1 mL Blood or serum + 1 μg cianopramine + 1 mL water, vortex, add 1 mL 200 mM sodium carbonate, vortex, add 6 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 100 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer. Liver homogenate. 0.5 mL Liver homogenate + 10 μg cianopramine + 500 μL 2% sodium tetraborate + 8 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 400 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm RP-18 Newguard (Applied Biosystems)
Column: 100 × 4.6 5 μm Brownlee Spheri-5 RP-18
Mobile phase: MeCN:100 mM NaH_2PO_4:diethylamine 40:57.5:2.5

Flow rate: 2
Injection volume: 30
Detector: UV 220

CHROMATOGRAM

Retention time: 5.88
Internal standard: cianopramine (8.93)
Limit of detection: 50 ng/mL

OTHER SUBSTANCES

Simultaneous: amitriptyline, amoxapine, benztropine, brompheniramine, chlorpheniramine, chlorpromazine, clomipramine, cyproheptadine, diphenhydramine, dothiepin, doxepin, fluoxetine, haloperidol, imipramine, loxapine, maprotiline, meperidine, mesoridazine, methadone, metoclopramide, mianserin, moclobemide, nomifensine, nordoxepin, norfluoxetine, norpropoxyphene, northiaden, nortriptyline, pentobarbital, pheniramine, promethazine, propoxyphene, propranolol, quinidine, quinine, sulforidazine, thioridazine, thiothixene, tranylcypromine, trazodone, trihexyphenidyl, trimipramine, triprolidine
Noninterfering: dextromethorphan, norphetidine, phenoxybenzamine, prochlorperazine, trifluoperazine
Interfering: protriptyline

KEY WORDS

serum; whole blood; liver

SAMPLE

Matrix: blood, tissue, urine
Sample preparation: Serum, urine. 500 μL Serum or urine + 100 μL 2 μg/mL diazepam + 200 μL 20% sodium carbonate + 500 μL water + 3 mL n-hexane:isoamyl alcohol 98.5:1.5, mix for 2 min, centrifuge at 1200 g for 5 min. Remove the organic phase and evaporate it under a gentle stream of nitrogen at about 40°. Dissolve the residue in 100 μL mobile phase, inject a 10 μL aliquot. Tissue. Homogenize 1 g sample with 9 mL 100 mM HCl and 100 μL 20 μg/mL diazepam, centrifuge at 15000 g for 10 min. Add 500 μL 20% sodium carbonate and 4 mL n-hexane:isoamyl alcohol 98.5:1.5 to 1 mL of the supernatant, mix for 5 min. Remove the organic phase and evaporate it under a gentle stream of nitrogen at about 40°. Dissolve the residue in 100 μL mobile phase, filter by microconcentrator (Microcon-30, Grace). Inject a 10 μL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 2 μm TSK gel Super-Octyl (A) or 100 × 4.6 5 μm Hypersil MOS-C8 (B), (Yokogawa, Japan)
Mobile phase: MeOH:20 mM pH 7 KH_2PO_4 60:40
Flow rate: 0.6
Injection volume: 10
Detector: UV 254

CHROMATOGRAM

Retention time: 5.6 (A), 7.8 (B)
Internal standard: diazepam (4.4, A)
Limit of quantitation: 50 ng/mL (serum; urine) (A), 500 ng/mL (tissue), (A)

OTHER SUBSTANCES

Extracted: amitriptyline, clomipramine, dothiepin, doxepin, imipramine, melitracen, mianserin, nortriptyline

Noninterfering: barbital, carbamazepine, ethosuximide, hexobarbital, lofepramine, pentobarbital, phenobarbital, phenytoin, primidone, sulpiride, trimethadione, trimipramine
Interfering: amoxapine, maprotiline

SAMPLE
Matrix: blood, urine
Sample preparation: 1 mL Plasma or urine + 20 μL 10 μg/mL pericyazine in MeOH, mix, add 0.2 mL 1 M sodium carbonate buffer to adjust pH to 9.6. Add 10 mL distilled diethyl ether, shake on an automatic shaker for 10 min, centrifuge at 1000 g for 10 min in a refrigerated centrifuge. Remove the upper organic layer and add 100μL 100 mM orthophosphoric acid. Shake for 10 min and centrifuge at 1000 g for 10 min. Discard the top layer and inject a 50 μL aliquot of the acid layer.

HPLC VARIABLES
Guard column: 40 × 4.6 10 μm RP-18
Column: 300 × 3.9 Bondclone 10 C18 (Phenomenex)
Mobile phase: MeCN:100 mM K_2HPO_4, adjust pH to 6.0 with orthophosphoric acid
Flow rate: 2
Injection volume: 50
Detector: E, EDT Chromajet, oxidation cell +1.00 V

CHROMATOGRAM
Retention time: 8.7
Internal standard: pericyazine (6.2)
Limit of detection: 3 ng/mL

OTHER SUBSTANCES
Extracted: metabolites, imipramine

KEY WORDS
plasma; pharmacokinetics; silanize glassware

SAMPLE
Matrix: blood, urine
Sample preparation: 1 mL Plasma or urine + 1 mL 600 mM pH 11.3 K_2CO_3 + 100 μL 5 (plasma) or 20 (urine) μM 2-hydroxydesmethylclomipramine in EtOH + 5 mL heptane: MTBE 1:1 + 5% n-butanol, vortex 1 min, centrifuge at 1400 g for 10 min, freeze at -50° (dry ice/ethanol). Remove organic layer and add it to 1 mL 20 mM HCl, vortex 1 min, centrifuge at 1400 g for 10 min, freeze at -50° (dry ice/ethanol). Discard organic layer. Thaw out aqueous layer and make alkaline (pH 11) by adding 500 μL 600 mM pH 11.3 K_2CO_3. Add 3 mL heptane:MTBE 1:1 + 5% n-butanol, vortex 1 min, centrifuge at 1400 g for 10 min, freeze at -50° (dry ice/ethanol). Remove organic layer and evaporate it to dryness at 50° under a stream of nitrogen. Dissolve residue in 100 μL mobile phase, vortex for 5 s, centrifuge at 1400 g for 1 min, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 20 × 4 7 μm 120 Å Nucleosil
Column: 250 × 4 5 μm 100 Å Nucleosil RP-phenyl
Mobile phase: MeCN:buffer 30:70 (Buffer was 14.05 g sodium perchlorate and 1.6 mL 60% perchloric acid in 5 L water, pH 2.5.)
Column temperature: 30
Flow rate: 1
Injection volume: 20
Detector: UV 220

CHROMATOGRAM

Retention time: 14.32
Internal standard: 2-hydroxydesmethylclomipramine (10.02)
Limit of detection: 10 nM (urine), 5 nM (plasma)

OTHER SUBSTANCES

Simultaneous: imipramine, metabolites

KEY WORDS

plasma

SAMPLE
Matrix: urine
Sample preparation: 500 μL Urine + N-ethylnordiazepam + chlorpheniramine + 100 μL buffer, centrifuge at 11000 g for 30 s, inject a 500 μL aliquot onto column A with mobile phase A, after 0.6 min backflush column A with mobile phase A to waste for 1.6 min, elute column A with 250 μL mobile phase B, with 200 μL mobile phase C, and with 1.15 mL mobile phase D. Elute column A to waste until drugs start to emerge then elute onto column B. Elute column B to waste until drugs started to emerge, then elute onto column C. When all the drugs have emerged from column B remove it from the circuit, elute column C with mobile phase D, monitor the effluent from column C. Flush column A with 7 mL mobile phase E, with mobile phase D, and mobile phase A. Flush column B with 5 mL mobile phase E then with mobile phase D. (Buffer was 6 M ammonium acetate adjusted to pH 8.0 with 2 M KOH.)

HPLC VARIABLES

Column: A 10 × 2.1 12-20 μm PRP-1 spherical poly(styrene-divinylbenzene) (Hamilton); B 10 × 3.2 11 μm Aminex A-28 (Bio-Rad); C 25 × 3.2 5 μm C8 (Phenomenex) + 150 × 4.6 5 μm silica (Macherey-Nagel)

Mobile phase: A 0.1% pH 8.0 potassium borate buffer; B 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid; C MeCN:buffer 40:60 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); D MeCN:buffer 33:67 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); E MeCN:buffer 70:30 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.)

Column temperature: ambient (column A), 40 (columns B and C)

Flow rate: A 5; B-E 1

Injection volume: 500

Detector: UV 210, UV 235

CHROMATOGRAM

Retention time: k' 3.1

Internal standard: N-ethylnordiazepam (k' 2.1), chlorpheniramine (k' 5.9)

Limit of detection: 300 ng/mL

OTHER SUBSTANCES

Extracted: methadone, imipramine, flurazepam, amitriptyline, morphine, codeine, hydromorphone, hydrocodone, caffeine, cotinine, benzoylecgonine, secobarbital, oxazepam, phenobarbital, nordiazepam, diazepam, phenylpropanolamine, phentermine, amphetamine, phenmetrazine, lidocaine, ephedrine

Interfering: pentazocine, methamphetamine, nortriptyline, diphenhydramine

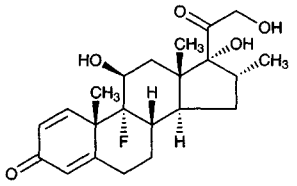
Dexamethasone



Molecular formula: $C_{22}H_{29}FO_5$

Molecular weight: 392.47

CAS Registry No.: 50-02-2, 1177-87-3 (acetate), 55812-90-3 (acetate monohydrate), 2392-39-4 (sodium phosphate), 83880-70-0 (acefurate), 55541-30-5 (dipropionate), 312-93-6 (21-dihydrogen phosphate)

Merck Index: 2986

Lednicer No.: 1 199

SAMPLE

Matrix: blood

Sample preparation: 200 μL Plasma + 10 μL 150 ng/mL beclomethasone in MeOH + 300 μL water + 6 mL diethyl ether, shake for 5 min, centrifuge at 1000 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen. Dissolve in 100 μL MeOH. Add 20 μL copper acetate solution and let stand at room temperature for 1 h. Add 80 μL diaminophthalhydrazide solution, heat at 80° for 110 min, cool, inject a 20 μL aliquot. (Prepare copper acetate solution by dissolving 700 mg copper(II) acetate in 10 mL water, dilute to 100 mL with MeOH, discard after 1 month. Diaminophthalhydrazide solution was 7.5 mM 4,5-diaminophthalhydrazide in 3.5 M hydrochloric acid containing 625 mM β-mercaptoethanol, discard after 5 h. Prepare 4,5-diaminophthalhydrazide dihydrochloride as follows. Reflux 316 g 4-nitrophthalic acid and 50 mL concentrated sulfuric acid in 500 mL MeOH for 10 h, recrystallize the product (dimethyl 4-nitrophthalate) from MeOH (mp 64-65E). Hydrogenate 47.8 g dimethyl 4-nitrophthalate in 300 mL MeOH over 13 g 5% platinum on carbon at an initial hydrogen pressure of 50 psi. When the calculated amount of hydrogen has been absorbed remove the catalyst and evaporate to dryness under reduced pressure, recrystallize the residue from aqueous MeOH to give dimethyl 4-aminophthalate (mp 83-84E). Stir 146.3 g dimethyl 4-aminophthalate in 1.4 L acetic anhydride at 60-70E for 2 h then leave overnight, precipitate product with MeOH. Dry the product and rinse it with sodium carbonate solution, re-dry, recrystallize from benzene/MeOH (Caution! Benzene is a carcinogen!) to give dimethyl 4-acetamidophthalate (mp 138-140E). Add 100.4 g to 600 mL fuming (90%) nitric acid at 0-5E over 30 min, stir at 5-10E for 2.5 h, mix the reaction mixture with 800 mL cold dichloromethane, shake with crushed ice. Remove the organic layer and extract the aqueous layer with 200 mL cold dichloromethane. Combine the organic layers and wash them with ice water, cold sodium bicarbonate solution, and cold water. D ry over anhydrous magnesium sulfate, evaporate to dryness under reduced pressure and, recrystallize repeatedly from MeOH to give dimethyl 4-acetamido-5-nitrophthalate (mp 123-124.5E). Hydrolyze dimethyl 4-acetamido-5-nitrophthalate to dimethyl 4-amino-5-nitrophthalate. Hydrogenate 20.3 g dimethyl 4-amino-5-nitrophthalate in 250 mL MeOH over 1 g 5% platinum on carbon at an initial hydrogen pressure of 50 psi, remove the catalyst, evaporate to dryness under reduced pressure at 25E, recrystallize from chloroform/dichloromethane to give dimethyl 4,5-diaminophthalate (mp 111.5-113E). Add 1.1 g dimethyl 4,5-diaminophthalate to 3 mL hydrazine hydrate (Caution! Hydrazine hydrate is a carcinogen!) and 3 mL triethylamine in 20 mL MeOH, concentrate the resulting solution, triturate with benzene/MeOH, recrystallize from N,N'-dimethylacetamide/acetic acid to give 4,5-diaminophthalhydrazide (6,7-diamino-2,3-dihydrophthalazine-1,4-dione) (mp 407E) (J. Heterocycl. Chem. 1973, 10, 891), mix 4,5-diaminophthalhydrazide with a small amount of concentrated HCl, recrystallize from EtOH to give 4,5-diaminophthalhydrazide dihydrochloride.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm TSKgel ODS-120T (Tosoh, Japan)

Mobile phase: MeCN:tetrahydrofuran:100 mM pH 7.0 phosphate buffer 24:3:73

Flow rate: 1.0

Injection volume: 20

Detector: Chemiluminiscence following post-column reaction. The column effluent mixed with 20 mM hydrogen peroxide in water pumped at 1.0 mL/min and then with 30 mM potassium hexacyanoferrate(III) in 3.0 M NaOH pumped at 2.0 mL/min and flowed to the detector.

CHROMATOGRAM
Retention time: 32
Internal standard: beclomethasone (52)
Limit of detection: 200 pg/mL

OTHER SUBSTANCES
Simultaneous: aldosterone, corticosterone, cortisone, 11-deoxycortisol, hydrocortisone, 18-hydroxycorticosterone, 18-hydroxydeoxycorticosterone, prednisolone, prednisone
Noninterfering: androstendione, cholesterol, estrone, estradiol, estriol, pregnenolone, progesterone
Interfering: betamethasone.

KEY WORDS
plasma; derivatization

SAMPLE

Matrix: blood
Sample preparation: 100 μL Plasma + 10 μL IS in water, extract twice by shaking for 1 min with 1.2 mL dichloromethane, evaporate organic layer below 40° under reduced pressure, dissolve residue in 100 μL MeCN. Add 10 μL reagent 1, add 10 μL reagent 2, heat at 70° for 20 min, cool to room temperature, add 100 μL water, add 200 μL MeOH:water 1:1, add to Sep-Pak C18 cartridge, wash vial with 2 mL MeOH:water 1:1 and add washings to cartridge, wash cartridge with 40 mL MeOH:water 1:1, elute with 5 mL MeOH. Concentrate eluent to 500 μL by evaporation at 40° under reduced pressure, inject 20 μL aliquot. (Reagent 1 was 30 mg 2-(4-carboxyphenyl)-5,6-dimethylbenzimidazole in 3 mL pyridine, add 700 mg 4-piperidinopyridine, dilute to 10 mL with MeCN. Reagent 2 was 700 mg 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide perchlorate in 10 mL MeCN. Prepare 2-(4-carboxyphenyl)-5,6-dimethylbenzimidazole as follows. Add 13 g 4-carboxybenzaldehyde (terephthalaldehydic acid) in 400 mL EtOH dropwise to 4,5-dimethyl-1,2-phenylenediamine in 400 mL EtOH in an ice bath, after 1 h reflux for 8 h, cool to room temperature, collect the precipitate, recrystallize three times from MeOH:water 50:50 to give 2-(4-carboxyphenyl)-5,6-dimethylbenzimidazole as a white amorphous product (mp >300°) (J.Chromatogr. 1991, 585, 219). 4-Piperidinopyridine is not commercially available but 4-dimethylaminopyridine or 4-pyrrolidinopyridine can be used instead although interferences are greater (J. Chromatogr. 1991, 585, 219). Alternatively 4-piperidinopyridine can be synthesized as follows. Add 200 mmoles piperidine dropwise with stirring to 15 g phosphorus pentoxide and 9.51 g 4-hydroxypyridine, heat at 250° for 7 h, cautiously pour onto 200 g ice, add 400 mL 1 M NaOH, add 200 mL ether. Remove the ether layer and extract the aqueous layer three times with 100 mL portions of ether. Combine the organic

layers and dry them over anhydrous potassium carbonate, evaporate, distil the residue, recrystallize from petroleum ether (bp 80-100°) to give 4-piperidinopyridine (bp 167-170°/11 mm Hg; mp 79-80°) (Synthesis 1978, 844). Alternatively, add 1.94 g 4-bromopyridine hydrochloride to 5 mL 50% NaOH, add 5 mL piperidine, add 2.72 g benzyltriethylammonium bromide, heat at 100° for 5 h, remove excess piperidine by distillation, add 25 mL water, extract four times with 25 mL portions of benzene. Combine the organic layers and dry them over anhydrous sodium sulfate, boil the residue with petroleum ether to give 4-piperidinopyridine (mp 80°) (Syn. Commun. 1979, 9, 251). Prepare 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide perchlorate as follows. Stir 1.41 moles isopropylisocyanate in 750 mL dichloromethane at 5°, add 144 g 3-dimethylaminopropylamine (N,N-dimethyl-1,3-propanediamine) in 250 mL dichloromethane at such a rate that the temperature does not exceed 10°, add 500 mL triethylamine, add 300 g p-toluenesulfonyl chloride in 300 mL dichloromethane at such a rate that the temperature does not exceed 10°, reflux for 3 h, add 400 g anhydrous sodium carbonate, add 3.5 L ice water, stir vigorously for 30 min, remove the organic phase. Extract the aqueous phase three times with 500 mL portions of dichloromethane. Combine the organic layers and dry them over anhydrous sodium sulfate, evaporate under reduced pressure, distil the residue to give 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide (bp 91-92°/10 mm Hg (Ber. 1941, 74B, 1285)) (cf. Org. Syn. 1973, Coll. Vol. V, 555). Prepare pyridine perchlorate from pyridine and 20% perchloric acid, crystallize from EtOH (Ber. 1926, 59, 446). Add 18 g pyridine perchlorate in portions to 100 mmoles 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide stirred in 200 mL dichloromethane at 0°, let stand for 30 min, filter, add 200 mL anhydrous diethyl ether to the filtrate. Filter off the precipitate and recrystallize it from dichloromethane/diethyl ether to give 1-isopropyl-3-(3-dimethylaminopropyl)carbodiimide perchlorate (mp 88-90°) (Chem. Pharm. Bull. 1985, 33, 5375).)

HPLC VARIABLES

Guard column: 50 × 4.6 7 μm Zorbax ODS

SAMPLE
Matrix: formulations
Sample preparation: Triturate 1 tablet with a glass rod with 5 mL water, sonicate for 20 min, extract with 9 mL dichloromethane then three times with 5 mL dichloromethane, filter (paper), make up to 25 mL with dichloromethane. Remove a 500 μL aliquot, add 200 μL 1.2 mM phenacetin in dichloromethane + 100 μL 0.5 mM 4-dimethylaminopyridine + 100 μL 100 mM N-CBZ-Phe in dichloromethane + 100 μL 100 mM N,N'-dicyclohexylcarbodiimide in dichloromethane, shake mechanically at 30° for 1 h, inject a 10 μL aliquot.

HPLC VARIABLES
Column: 75 × 3.9 4 μm Nova-Pak silica
Mobile phase: n-Hexane:dichloromethane:isopropanol 100:100:4
Flow rate: 1
Injection volume: 10
Detector: UV 240

CHROMATOGRAM
Retention time: 5
Internal standard: phenacetin (10)
Limit of detection: 4.2 pmol

OTHER SUBSTANCES
Simultaneous: betamethasone

KEY WORDS
tablets; normal phase; derivatization

SAMPLE
Matrix: formulations
Sample preparation: Pulverize tablets, weigh out amount equivalent to about 500 μg betamethasone, add 10 mL water, sonicate for 15 min, extract three times with 15 mL chloroform:n-butanol 95:5. Combine extracts and filter them through 1 g anhydrous sodium sulfate moistened with chloroform:n-butanol 95:5. Collect filtrate and dilute it to 50 mL with chloroform:n-butanol 95:5. Remove a 1 mL aliquot, add 0.5 mL 40 μM cortisone in mobile phase, mix, inject a 5 μL aliquot.

HPLC VARIABLES
Guard column: 5 μm Guard-Pak Resolve Si (dead volume 60-75 μL)
Column: 75 × 3.9 4 μm Nova-Pak silica

Mobile phase: Dichloromethane:EtOH 34:1
Flow rate: 0.7
Injection volume: 5
Detector: UV 240

CHROMATOGRAM
Retention time: 5
Internal standard: cortisone (3)

OTHER SUBSTANCES
Simultaneous: betamethasone, prednisone, hydrocortisone, prednisolone, 6α-methylprednisolone

KEY WORDS
tablets; normal phase

SAMPLE
Matrix: formulations
Sample preparation: Ointment. Add pentane:EtOH 75:25 to ointment, sonicate for 20 min, dilute an aliquot to 100 mL with MeOH, allow to settle. Centrifuge and filter an aliquot of the supernatant, inject an aliquot of the filtrate. Cream, lotion. Stir cream or lotion in EtOH:THF:water 25:25:50 at 40° for 15 min, cool in an ice bath. Centrifuge and filter an aliquot of the supernatant, inject an aliquot of the filtrate. Gel. Dissolve gel in EtOH, sonicate, filter, inject an aliquot.

HPLC VARIABLES
Guard column: present but not specified (?)
Column: 250 × 2.1 10 μm Bondapak C18
Mobile phase: MeCN:water 48:52 containing 0.65% acetic acid, pH 3.18 (At the end of each day flush guard column only with MeOH:THF 75:25 for 30 min.)

Flow rate: 1
Injection volume: 20
Detector: UV 251

CHROMATOGRAM
Retention time: 3.67

OTHER SUBSTANCES
Simultaneous: bamipine lactate, beclomethasone dipropionate, betamethasone-17-valerate, hydrocortisone-21-acetate

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Waring blender) tissue at full speed for 2 min, lyophilize, grind. Extract with supercritical carbon dioxide at 60° at 400 atmospheres with a 20 cm × 21 μm restrictor for 1 h, collect the extract in 1 mL MeOH cooled to 5°. Evaporate the MeOH to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeCN:MeOH:20 mM ammonium formate 15:15:70, inject an aliquot. Alternatively, vortex 5 g ground tissue with 10 mL 40 mM sodium acetate, adjust pH to 4.2-4.7 with glacial acetic acid, add 100 μL β-glucuronidase (Sigma), heat at 37° for 8 h, add 20 mL MeCN, vortex for 30 s, centrifuge at 5000 rpm for 20 min. Remove a 30 mL aliquot of the supernatant and add it to 8 mL hexane and 2 mL dichloromethane, rotate for 3 min, centrifuge at 2000 rpm for 2 min. Remove a 15 mL aliquot of the middle layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 1 mL dichloromethane, inject an aliquot.

HPLC VARIABLES
Column: 50 × 4.6 5 μm Supelcosil
Mobile phase: Gradient. MeCN:MeOH:20 mM ammonium formate from 2.5:2.5:95 to 47.5:47.5:5 over 19 min.
Flow rate: 1

SAMPLE
Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL 400 ng/mL protriptyline in water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM
Retention time: 2.4
Internal standard: protriptyline (4)

OTHER SUBSTANCES
Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, desipramine, diazepam, diphenhydramine, doxepin, encainide, fentanyl, flecainide, fluoxetine, flurazepam, hydroxyethylflurazepam, ibuprofen, imipramine, lidocaine, maprotiline, methadone, methaqualone, mexiletine, midazolam, norchlorimipramine, nordoxepin, nordiazepam, norfluoxetine, nortriptyline, norverapamil, pentazocine, promazine, propafenone, propoxyphene, protriptyline, quinidine, temazepam, trazodone, trimipramine, verapamil
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide,

oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin

Interfering: haloperidol (reduced), propranolol

KEY WORDS

plasma; SPE

SAMPLE
Matrix: microsomal incubations
Sample preparation: 500 μL Microsomal incubation + 500 μL MeOH:water:zinc sulfate 50:45:5 + 10 μM levallorphan in MeOH, centrifuge at 10000 g for 3 min, extract the supernatant twice with 3 mL dichloromethane. Combine dichloromethane extracts, dry under a stream of nitrogen, dissolve the residue in 200 μL MeOH. Inject a 20 μL aliquot.

HPLC VARIABLES
Column: 150 × 4.6 5 μm polymer C18 (Astec, Whippany, NJ)
Mobile phase: MeCN:50 nM (sic) pH 9.0 ammonium carbonate buffer 60:40 (Buffer was adjusted to pH 9.0 with ammonium hydroxide.)
Column temperature: 30

Flow rate: 0.7
Injection volume: 20
Detector: UV (wavelength not given)

CHROMATOGRAM
Retention time: 15.58
Internal standard: levallorphan (11.35)
Limit of detection: 20 ng/mL

OTHER SUBSTANCES
Extracted: dextrorphan

KEY WORDS
liver

SAMPLE
Matrix: urine
Sample preparation: Mix 5 mL urine with 1 mL 200 mM pH 5 acetate buffer, 50 μL 600 mM sodium azide (Caution! Sodium azide is highly toxic!), 75 μL β-glucuronidase (1000 U/10 μL in 200 mM pH 5 acetate buffer). Mix, hydrolyze at 37° for 18 h, add 1 mL glycine buffer, 160 μL 50 ng/μL codeine, and 160 μL 50 ng/μL ethylmorphine. Add 6 mL hexane:ethyl acetate 50:50, rock for 15 min, centrifuge at 700 g for 5 min. Remove the organic phase, add another 6 mL hexane:ethyl acetate 50:50 to the aqueous layer, rock for 15 min, centrifuge at 700 g for 5 min. Combine the organic layers, add 1 mL 100 mM HCl, rock for 15 min, centrifuge at 700 g for 5 min. Discard the upper organic layer and add 1 mL glycine buffer to the aqueous layer. Mix for 5 s, add 8 mL hexane-ethyl acetate 50:50, rock for 15 min, centrifuge at 700 g for 5 min, evaporate the organic phase to dryness under nitrogen. Reconstitute the residue with 150 μL mobile phase, mix for 15 s, inject a 5-120 μL aliquot. (Prepare glycine buffer by mixing equal volumes of 1 M glycine containing 1 M NaCl and 1 M NaOH, adjust pH to 11.3 with either 1 M glycine containing 1 M NaCl or 1 M NaOH.)

HPLC VARIABLES
Guard column: 7 μm cyano (Bioanalytical Systems)
Column: 100 × 8 Nova-Pak CN HP Radial-Pak cartridge
Mobile phase: MeCN:buffer 12:88 (Buffer was 100 mM sodium acetate containing 600 μL triethylamine/L, adjusted to pH 3.0 with phosphoric acid.)
Flow rate: 1
Injection volume: 5-120
Detector: F ex 190 for 7 min, ex 235 for 8 min, return to ex 190 (no emission filter used)

CHROMATOGRAM
Retention time: 17
Internal standard: codeine (5), ethylmorphine (7)
Limit of quantitation: 2 ng/mL

OTHER SUBSTANCES
Extracted: metabolites

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 µm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.

Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30

Detector: UV 200.5

CHROMATOGRAM

Retention time: 15.835

KEY WORDS

whole blood

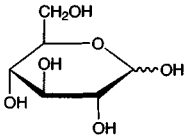
Dextrose



Molecular formula: $C_6H_{12}O_6$

Molecular weight: 180.16

CAS Registry No.: 50-99-7, 77029-61-9 (D-glucopyranose monohydrate), 2280-44-6 (D-glucopyranose), 492-62-5 (α-D-glucopyranose), 492-61-5 (β-D-glucopyranose)

Merck Index: 4467

SAMPLE

Matrix: beverages, food

Sample preparation: Dilute beverages 10-fold, filter (0.45 μm), inject a 10 μL aliquot. Cereal, grain, tobacco. Pulverize 1 g cereal, grain, or tobacco, blend with 100 mL water for 10 min, filter, inject a 10 μL aliquot of the filtrate. Extract fatty samples with hexane: water 50:50, filter the aqueous layer, inject a 10 μL aliquot of the filtrate. Dilute dairy samples 100-fold, filter, inject a 10 μL aliquot of the filtrate.

HPLC VARIABLES

Guard column: H^+ guard column (Bio-Rad)

Column: Carbohydrate column in Pb^{2+} mode (Kratos)

Mobile phase: water

Column temperature: 85

Flow rate: 0.4

Injection volume: 10

Detector: UV 410 post-column reaction. The column effluent mixed with the reagent pumped at 0.5 mL/min and the mixture flowed through a 1 mL reaction coil (ABI Analytical) at 100° to the detector. (Prepare the reagent as follows. Sonicate 2.5 g finely ground 4-aminobenzoic acid hydrazide and 2.46 mL concentrated HCl in 100 mL water until the mixture is homogeneous (Solution A). Sonicate 9.6 g NaOH and 1.46 g NaCl in 200 mL water until the mixture is homogeneous (Solution B). Combine Solution a and Solution B, sparge with helium, maintain at 0-5°.)

CHROMATOGRAM

Retention time: 21

Limit of detection: 20 ng

OTHER SUBSTANCES

Extracted: fructose, galactose, lactose, sucrose

KEY WORDS

post-column reaction; cereal; grain; tobacco; dairy products

SAMPLE

Matrix: beverages, juice, milk

Sample preparation: Orange juice. Dilute orange juice 100-fold with water, filter (Millipore HV, 0.45 μm), dilute filtrate 10-fold, inject an aliquot. Beverages. Dilute soft drinks 1000-fold with water, inject an aliquot. Milk. Dilute 5 mL milk to 100 mL with mobile phase, filter (Millipore HV, 0.45 μm), dilute filtrate 50-fold, inject an aliquot.

HPLC VARIABLES

Guard column: 30 × 4.6 Cation H (Bio-Rad)

Column: 300 × 3.8 9 μm HPX 87-H Aminex (Bio-Rad)
Mobile phase: 10 mM Sulfuric acid
Column temperature: 50
Flow rate: 0.5
Injection volume: 40
Detector: E following post-column reaction, Hewlett-Packard 1049A programmable electrochemical detector, Metrohm detector cell, cuprous oxide working electrode +550 mV, glassy carbon auxiliary electrode, Ag/AgCl (3 M KCl) reference electrode. The column effluent mixed with 200 mM NaOH pumped at 0.4 mL/min, the mixture flowed through a 220 × 0.8 single-bead string reactor packed with 0.6 mm glass beads to the detector. (Prepare cuprous oxide electrode as follows. Stir 300 mg conductive carbon cement (Gerhard Neubauer, Münster), 60 mg cuprous oxide (Fluka), and 300 μL acetone until a thick paste forms as the acetone evaporates. Pack conductive carbon cement into the base of a 3 mm diameter cavity carbon paste electrode base (Metrohm), allow to dry, polish with dry emery paper (grade 2/0, Oakey), remove surface layer with an acetone-soaked tissue, pack the paste into the cavity, allow to dry overnight, polish with dry emery paper (grade 2/0), 3 μm imperial micro finishing film sheet (3M), 0.3 μm imperial micro finishing film sheet (3M), and 0.05 μm alumina particles on a Buehler pad, sonicate for 2 min in water (Anal. Chim. Acta 1995, 300, 5).)

CHROMATOGRAM

Retention time: 10.47
Limit of detection: 1 μM

OTHER SUBSTANCES

Also analyzed: arabinose, cellobiose, fructose, fucose, galactitol, galactose, galacturonic acid, lactose, lactulose, lyxose, maltose, mannitol, mannose, myo-inositol, raffinose, rhamnose, ribose, sorbose, sucrose, xylose

SAMPLE

Matrix: beverages, plants
Sample preparation: Beverages. Dilute 50-fold, filter (0.22 μm), inject an aliquot of the filtrate. Plants. Heat 1 g barley leaves and 10 mL EtOH:water 80:20 at 100° in a sealed tube for 15-30 min. Evaporate the liquid phase to dryness, reconstitute with water, pass through Analytichem trimethylaminopropyl and cyclohexyl SPE cartridges, inject an aliquot.

HPLC VARIABLES

Column: 300 × 6.5 Sugar-Pak I (Waters)
Mobile phase: water
Column temperature: 70
Flow rate: 0.4
Injection volume: 10
Detector: F ex 360 em 470 following post-column reaction. The effluent from the column passed through a 75 × 3.8 reactor containing Dowex 50 W × 2 sulfonic-acid type styrene divinylbenzene copolymer at 100° and mixed with 30 mM benzamidine in 1 M KOH pumped at 1 mL/min. This mixture flowed through a 530 μL reaction coil (Varian PCR-1) at 100° to the detector.

CHROMATOGRAM

Retention time: 18.27

Limit of detection: 60 pmole

OTHER SUBSTANCES
Extracted: fructose, sucrose

SAMPLE

Matrix: blood

Sample preparation: 100 μL Serum + 10 μL 1 μM L-fucose + 400 μL 500 mM trichloroacetic acid, centrifuge at 4° at 1500 g for 5 min. Remove a 100 μL aliquot of the supernatant and add it to 100 μL 1 M pH 11.0 borate buffer, mix, inject a 100 μL aliquot.

HPLC VARIABLES

Column: 150 × 4.6 TSK gel Sugar AXG trimethylammonium-bonded styrene-divinylbenzene copolymer resin strong anion-exchange (Tosoh)

Mobile phase: 1 M pH 9.0 Borate buffer

Column temperature: 60

Flow rate: 0.4

Injection volume: 100

Detector: F ex 330 em 460 following post-column reaction. 600 mM NaOH pumped at 0.15 mL/min mixed with 15 mM meso-1,2-bis(4-methoxyphenyl)ethylenediamine in EtOH:water 30:70 pumped at 0.15 mL/min and the mixture flowed through a 1 m × 0.5 mm ID stainless steel coil. This mixture mixed with the column effluent and the mixture flowed through a 20 m × 0.5 mm ID stainless steel coil at 140° and a 1 m × 0.5 mm ID air-cooled stainless steel coil to the detector. (Prepare meso-1,2-bis(4-methoxyphenyl)ethylenediamine as follows. Heat 105 g benzil and 122 g salicaldehyde in 750 mL EtOH at 60° until they dissolve, introduce a weak stream of ammonia with stirring over 3 h, cool, filter, wash the precipitate with EtOH, dry under vacuum at 80°. Suspend 192 g of this product in 500 mL acetic anhydride, reflux for 14 h using a constant temperature bath at 148-150°, the product (O,O',N,N'-tetraacetyl-meso-1,2-bis(2-hydroxyphenyl)ethylenediamine) crystallized on slow cooling, filter, wash the solid with a little acetic anhydride. Suspend the product in 250 mL 42% hydrobromic acid:acetic acid 50:50 and reflux for 3 h. Filter off the product that separates on cooling and dissolve it in 400 mL hot water, neutralize with 20% NaOH. Filter off the product that separates and recrystallize it from MeCN to give meso-1,2-bis(2-hydroxyphenyl)ethylenediamine as a colorless powder (mp 184-186°). Mix 2.44 g meso-1,2-bis(2-hydroxyphenyl)ethylenediamine with 20 mmole p-anisaldehyde in 100 mL MeCN, reflux until the reaction is complete (at least 1 h), reduce the reaction mixture to half its volume by distillation, cool, filter. Recrystallize the product from toluene to give N,N'-disalicylidene-meso-1,2-bis(4-methoxyphenyl)ethylenediamine (mp 202-207°) (formed via a diaza-Cope rearrangement). Suspend 5 mmole N,N'-disalicylidene-meso-1,2-bis(4-methoxyphenyl)ethylenediamine in 50 mL 2 M sulfuric acid and steam distil until no more salicaldehyde comes over, filter the reaction mixture while it is hot, make the filtrate strongly basic (pH 11) with 20% NaOH. Filter off the crystalline product and recrystallize it from MeCN to give meso-1,2-bis(4-methoxyphenyl)ethylenediamine (mp 151-152°) (Chem. Ber 1976, 109, 1).)

CHROMATOGRAM

Retention time: 28.0

HPLC VARIABLES

Column: 40 × 4 5 μm TSKgel SAX (Cl type) (Showa Denko, Tokyo)

Mobile phase: 50 mM NaOH containing 30 mM sodium butyrate (Protect mobile phase from carbon dioxide absorption with a soda lime guard column. At the start of the day wash column with 500 mM NaOH at 0.5 mL/min for 20 min and with mobile phase at 0.7 mL/min for 10 min.)

Column temperature: 40

Flow rate: 0.7

Injection volume: 50

Detector: Chemiluminescence following post-column reaction. The mobile phase flowed through an immobilized pyranose oxidase reactor and a co-immobilized 3-hydroxybutyrate dehydrogenase/NADH oxidase reactor at 40°. The effluent from the reactors mixed with 2 mM luminol in 400 mM pH 10 carbonate buffer pumped at 0.5 mL/min and 10 mM potassium ferricyanide in water pumped at 0.5 mL/min and the mixture flowed to the detector. (Store luminol solution in a refrigerator for 1 day before use. Prepare immobilized pyranose oxidase reactor as follows. Circulate 10 mL 1 mg/mL pyranose oxidase (EC 1.1.3.10 from Polyporus obtusus, 10 U/mg, Takara Shuzo, Kyoto) in 50 mM pH 7.0 phosphate buffer through a 40 × 4 column of tresylated poly(vinyl alcohol) beads at 0.2 mL/min for 4 h. Prepare a co-immobilized 3-hydroxybutyrate dehydrogenase/NADH oxidase reactor as follows. Circulate 10 mL 0.5 mg/mL 3-hydroxybutyrate dehydrogenase (EC 1.1.1.30, Pseudomonas sp., grade III, 120 U/mg) in 50 mM pH 7.0 phosphate buffer containing 0.5 mg/mL NADH oxidase (from Bacillus megaterium, 50 U/mg, Toyobo, Osaka) through a 40 × 4 column of tresylated poly(vinyl alcohol) beads at 0.2 mL/min for 4 h. Prepare the columns of poly(vinyl alcohol) beads as follows. Wash 1 g 13 μm poly(vinyl alcohol) beads (GS-520, Showa Denko, Tokyo) with 50 mL dry acetone, suspend in 20 mL dry acetone:pyridine 50:50 with vigorous stirring, add 1 mL 2,2,2-trifluoroethanesulfonyl chloride dropwise over 2 min, stir for 10 min, wash beads with 10 mL acetone, wash beads with 20 mL 1 mM HCl, slurry pack in a 40 × 4 column (J. Chromatogr.A 1996, 724, 354).)

CHROMATOGRAM

Retention time: 3

Limit of detection: 2 μg/mL

OTHER SUBSTANCES

Extracted: 1,5-anhydroglucitol, 3-hydroxybutyrate

KEY WORDS

post-column reaction; plasma; ultrafiltrate; immobilized enzyme reactor

SAMPLE

Matrix: blood, erythrocytes, tissue

Sample preparation: Homogenize lens tissue in 4 (human) or 1 (rat) mL 2 mg/mL sodium fluoride. Dilute 600 μL frozen and thawed erythrocytes with 400 μL water. Filter (Amicon Centrifree) 1 mL homogenate, plasma, or diluted erythrocytes while centrifuging at 2400 g for 30 min. 200 μL Filtrate + 10 μL 1 mg/mL IS, mix, lyophilize, add 200 μL 100 mg/mL p-nitrobenzoyl chloride in pyridine, heat at 60° for 1 h, add 1 drop of water, add 2

mL chloroform. Wash mixture twice with 2 mL 5% sodium bicarbonate and twice with 3 mL 1 M HCl by vortexing for 1 min and centrifuging for 30 s, inject a 50 μL aliquot of the organic layer.

HPLC VARIABLES
Column: 250 × 4.6 6 μm Zorbax SIL
Mobile phase: Hexane:chloroform:MeCN 10:3:1.9 containing 0.1% water
Column temperature: 35
Flow rate: 1.5
Injection volume: 50
Detector: UV 260

CHROMATOGRAM
Retention time: 13
Internal standard: perseitol (α-mannoheptitol) (26)
Limit of detection: 1-2 ng

OTHER SUBSTANCES
Extracted: fructose, myo-inositol, sorbitol, mannitol

SAMPLE

Matrix: bulk

Sample preparation: Dissolve 10 μg of a reducing sugar in 100 μL 0.01% perchloric acid in acetic anhydride, let stand for 5 min, add 100 μL EtOH, let stand at room temperature for 30 min, add 1 mg potassium carbonate, add 100 μL dichloromethane, centrifuge. Remove the supernatant and evaporate it to dryness under reduced pressure, reconstitute the residue in 100 μL dichloromethane, add 200 μL 33% HBr in acetic acid, let stand for 1 h, concentrate under reduced pressure below 60°, dissolve the residue in 100 μL acetone, add an excess of (-)-2-tert-butyl-2-methyl-1,3-benzodioxole-4-carboxylic acid, add an equimolar amount of potassium bicarbonate, heat at 60° for 1 h, purify an aliquot by TLC (50 × 50 silica gel on aluminum sheet (Merck DC-Alufolien) developed with toluene:ethyl acetate 2:1), remove the fluorescent band at R_f 0.5, extract with MeCN, inject an aliquot of the extract.

HPLC VARIABLES

Column: 150 × 4.6 ODS

Mobile phase: MeCN:water:isopropanol 40:40:10

Flow rate: 0.8

Detector: F

CHROMATOGRAM
Retention time: 28.5 (L), 30.1 (D)
Limit of detection: "a few pmoles"

OTHER SUBSTANCES
Simultaneous: arabinose, fucose, galactose, mannose, rhamnose, xylose

KEY WORDS
derivatization; chiral

Nishida,Y.; Bai,C.; Ohrui,H.; Meguro,H. A highly sensitive method to identify the DL-configurations of monosaccharides based on (-)-TBMB carboxylic acid and HPLC, *J.Carbohydr.Chem.*, **1994**, *13*, 1003–1008.

SAMPLE
Matrix: carbohydrates
Sample preparation: Mix 10 nmoles total monosaccharides with 200 μL 2 M trifluoroacetic acid, flush with nitrogen for a few min, seal, heat at 100° for 6 h, evaporate to dryness under reduced pressure in a desiccator over NaOH pellets, reconstitute with water, inject an aliquot.

HPLC VARIABLES
Column: 80 × 8 11 μm Hitachi No. 2633 resin (quaternary ammonium)
Mobile phase: Gradient. A was 250 mM pH 8.2 borate buffer. B was 400 mM pH 7.4 borate buffer. C was 600 mM pH 9.3 borate buffer. A:B:C from 100:0:0 to 0:100:0 over 15 min, maintain at 0:100:0 for 20 min, to 0:0:100 over 10 min, maintain at 0:0:100.
Column temperature: 65
Flow rate: 1
Injection volume: 20
Detector: F ex 331 em 383 following post-column reaction. The column effluent mixed with 10% 2-cyanoacetamide in water pumped at 0.25 mL/min and 600 mM pH 9.3 borate buffer pumped at 0.25 mL/min and the mixture flowed through a 10 m × 0.5 mm ID PTFE coil at 100 ± 0.5° to the detector.

CHROMATOGRAM
Retention time: 65
Limit of detection: 0.1-1 nmole

OTHER SUBSTANCES
Simultaneous: arabinose, fucose, galactose, lyxose, mannose, rhamnose, ribose, xylose

KEY WORDS
post-column reaction

SAMPLE
Matrix: food
Sample preparation: Freeze chewing gum, pulverize. Sonicate 1 g with 80 mL EtOH: water 96:4 at 60° for 20 min, cool, filter, rinse the filter, make up the filtrate to 100 mL. Remove a 5 mL aliquot and evaporate it to dryness under reduced pressure, add 4 mL pyridine, add 500 μL benzoyl chloride, sonicate at 60° for 1 h with swirling every 15 min, add 500 μL MeOH, swirl, let stand for 10 min, add 50 mL water (Z. Lebensm. Unters.

Forsch. 1984, 178, 199), shake, add to a Sep-Pak RP-18 SPE cartridge (conditioning of cartridge is not necessary), rinse flask four times with 5 mL portions of water, add the rinses to the SPE cartridge, push 5 mL volumes of air through cartridge 3 times, elute with five 10 mL portions of isooctane:ether:MeCN 60:32:8, make up the volume of the eluate to 50 mL, inject an aliquot.

HPLC VARIABLES
Column: 300 × 3 5 μm LiChrosorb Si 60 (glass column)
Mobile phase: Isooctane:ether:MeCN 150:60:10
Flow rate: 0.9
Injection volume: 10
Detector: UV 230

CHROMATOGRAM
Retention time: 13
Limit of detection: 0.1 ppm

OTHER SUBSTANCES
Extracted: mannitol, saccharose, sorbitol, xylitol

SAMPLE

Matrix: solutions

Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 3 mL MeCN and 5 mL water. Mix 250 μL of an aqueous solution with 225 μL 1% dansylhydrazine in EtOH and 45 μL 10%trichloroacetic acid in water, heat at 65° for 20 min, dilute with water to an organic solvent concentration of ≤5%, add a 5 mL aliquot to the SPE cartridge, wash with 5 mL MeCN:water 5:95 at ≤2 mL/min, elute with 6 mL MeCN:water 20:80 at ≤2 mL/min (J. Chromatogr. 1983, 256, 27), lyophilize the eluate, reconstitute with MeCN:water 20:80, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 10 μm 600 RPB C18 (Alltech)

Mobile phase: MeCN:water 20:80 containing 10 mM formic acid, 40 mM acetic acid, and 1 mM triethylamine. (After each run flush column with MeCN:MeOH 20:80 for 5 min.)

Flow rate: 1

Injection volume: 20

Detector: UV 254

CHROMATOGRAM

Retention time: 9

Limit of detection: 200-300 pmole

OTHER SUBSTANCES

Simultaneous: fucose, galactose, lyxose, mannose, xylose

KEY WORDS

derivatization; SPE

SAMPLE

Matrix: solutions

Sample preparation: Heat 100-200 pmole sample with 20 μL 4 M trifluoroacetic acid and 20 μL 4 M HCl in a tube sealed under vacuum at 100° for 6 h, add 500 pmole L-rhamnose, evaporate to dryness under reduced pressure at 50°, add 50 μL 9.8% sodium bicarbonate solution (freshly prepared), add 2 μL acetic anhydride, let stand at room temperature with occasional stirring for 30 min, add 200 μL 100-200 mesh Dowex 50W-X2 (H^+), check that pH is about 3. Add the mixture to a 100 × 5 column and wash it with 5 bed volumes of water, evaporate to dryness under reduced pressure, add 5 μL reagent, seal tube, heat at 100° for 13-15 min, add 2 μL 20 mg/mL sodium cyanoborohydride in water (freshly prepared), reseal the tube, heat at 90° for 8 h, dilute with 20 μL water, inject the whole amount on to a 600 × 7.5 10 μm TSK-GEL G2000PW column (Toyo Soda) and elute with 20 mM pH 7.5 ammonium acetate buffer at 0.5 mL/min, collect the sugar fraction at 40-55 min. Evaporate the eluate to dryness and reconstitute it with 250 μL water, inject a 5 μL aliquot. (Prepare reagent by mixing 500 mg 2-aminopyridine, 400 μL concentrated HCl, and 11 mL water.)

HPLC VARIABLES

Column: two 250 × 4.6 5 μm Ultrasphere-ODS column in series

Mobile phase: MeCN:250 mM pH 4.0 sodium citrate buffer 1:99

Flow rate: 0.5

Injection volume: 5
Detector: F ex 320 em 400

CHROMATOGRAM
Retention time: 36
Internal standard: L-rhamnose
Limit of quantitation: 10 pmoles

OTHER SUBSTANCES
Simultaneous: N-acetyl-D-mannosamine, N-acetylgalactosamine, N-acetylglucosamine, 2-deoxy-D-ribose, fucose, galactose, mannnose, ribose, xylose

KEY WORDS
derivatization; SPE

SAMPLE

Matrix: solutions

Sample preparation: Mix a 50 μL aliquot of a 500 μM saccharide solution in MeCN:water 30:70 with 50 μL 10 mM reagent in MeCN and 100 μL 0.5% trichloroacetic acid in MeCN, heat at 65° in the dark for 3 h. Remove a 50 μL aliquot of the reaction mixture, add 200 μL water, add 200 μL ethyl acetate, mix, centrifuge at 3000 rpm for 2 min, repeat the ethyl acetate wash twice more. Dry the aqueous layer under reduced pressure, reconstitute with 200 μL MeCN, inject an aliquot. (Synthesis of reagent, R-(+)-DBD-ProCZ, is as follows. Dissolve 0.5 g magnesium sulfate heptahydrate and 6 g NaOH in 60 mL water, throughout the reaction keep the flask at about 20° with cold water cooling, add 15 mL 30% hydrogen peroxide, add 75 mL MeOH, add 12.1 g powdered benzoyl peroxide in one go, stir for 10 min, pour into 150 mL 20% sulfuric acid, extract three times with 50 mL portions of chloroform, determine peroxybenzoic acid concentration by iodometric titration (Tetrahedron 1967, 23, 3327). Slowly add 110 mL 1 M peroxybenzoic acid in chloroform to 7 g 2,6-difluoroaniline dissolved in 100 mL chloroform, stir at room temperature, when reaction is complete (iodometric titration) wash with 2% sodium thiosulfate, wash with 5% sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize 2,6-difluoronitrosobenzene from EtOH (mp 108.5-109.5). Stir 8.5 g 2,6-difluoronitrosobenzene in 85 mL DMSO at room temperature and add a solution of 3.91 g sodium azide in 85 mL DMSO dropwise, let stand for about 1 h, add to a large volume of water, extract with ether, dry the extracts over anhydrous sodium sulfate, evaporate to dryness under reduced pressure and distil to give 4-fluoro-2,1,3-benzoxadiazole as a colorless oil (bp 83°/12 mm Hg) (J.Chem.Soc.(C) 1970, 1433). Add 11 mL chlorosulfonic acid dropwise to 3 g 4-fluoro-2,1,3-benzoxadiazole in 10 mL chloroform at 0-10° (use a calcium chloride drying tube), stir at room temperature for 1 h, reflux for 2 h, cool, slowly pour into ice water, remove the organic layer, extract the aqueous layer with chloroform, combine the organic layer, wash, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, take up the residue in 5 mL benzene (Caution! Benzene is a carcinogen!), chromatograph on a 150 × 30 column of silica gel (100-200 mesh Kanto Chemical) with n-hexane:benzene 50:50, evaporate the appropriate fractions to give 4-(chlorosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (CBD-F) as pale yellow needles (mp 64-66°) (Anal. Chem. 1984. 56, 2461). Stir 0.76 g CBD-F in 70 mL MeCN at 0-10° and add 1 g dimethylamine hydrochloride in 10 mL 100 mM pH 10 borax dropwise, adjust pH to 5 with 1 M HCl, concentrate to about 10 mL under reduced pressure, extract three times with 200 mL portions of diethyl ether, wash with water, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, chromatograph on a 500 × 20 column of silica gel with chloroform, isolate the appropriate fraction and re-chromatograph on the same column with ethyl acetate:benzene 1:2 to give 4-(N,N-dimethylaminosulfonyl)-7-fluoro- 2,1,3-benzoxadiazole (DBD-F) as white needles (mp 124-125°) (yield = 1% !). On a Merck no. 5714 $60F_{254}$ tlc plate eluted with chloroform DBD-F has Rf 0.32

and lies between two other reaction products (Analyst 1989, 114, 413). It is also reported that DBD-F can be purchased from Tokyo Kasei. Add 100 mg DBD-F in 10 mL MeCN to 47 mg R-(+)-proline in 20 mL 250 mM pH 11.5 sodium carbonate solution, stir at room temperature for 30 min, wash with ethyl acetate, adjust the pH of the aqueous layer to 1-2 with 2 M HCl, extract three times with 30 mL ethyl acetate. Combine the extracts and evaporate them under reduced pressure, recrystallize from benzene/ethyl acetate to give R-(+)-4-(N,N-dimethylaminosulfonyl)-7-(2-carboxypyrrolidin-1-yl)-2,1,3-benzoxadiazole (DBD-Pro) as yellow needles (mp 187-9° d) (Analyst 1989, 114, 1233). Suspend 55 mg (R)-(+)-DBD-Pro in 55 mL anhydrous diethyl ether at 0°, add 110 mg phosphorus pentachloride, stir at 5° for 1 h, filter quickly, evaporate to dryness under reduced pressure, dry under vacuum over phosphorus pentoxide for 12 h to give R-(+)-4-(N,N-dimethylaminosulfonyl)-7-(2-chloroformylpyrrolidin-1-yl)-2,1,3-benzoxadiazole (DBD-Pro-Cl) as yellow crystals (mp 116-17°) (Analyst 1993, 118, 759). Add 130 mg DBD-Pro-Cl dissolved in 25 mL anhydrous benzene dropwise to 100 mL MeOH containing 70 mg hydrazine hydrate, stir for 30 min at room temperature, evaporate under reduced pressure, recrystallize from ethyl acetate:MeOH 90:10 to give R-(+)-4-(2-carbazolylpyrrolidin-1-yl)-7-(N,N-dimethylaminosulfonyl)-2,1,3-benzoxadiazole (R-(+)-DBD-ProCZ) as orange crystals (mp 107-109°) (Anal. Proc. 1994, 31, 265).)

SAMPLE

Matrix: tissue

Sample preparation: 10 g Meat + 52 mL EtOH, make up to 100 mL with water, stir magnetically for 10 min, filter (paper) about 45 mL. 20 mL Filtrate + 15 mL petroleum ether, shake vigorously for 1 min, let stand for 5 min, wash twice more with petroleum ether. Add aqueous layer to a Sep-Pak C18 SPE cartridge, evaporate the effluent to dryness under vacuum at 40°, reconstitute the residue in 2 mL water, add to ion-exchange columns, rinse flask four times with 4 mL water, add rinses to ion-exchange columns. Combine all column effluents, add 5 mL EtOH, evaporate to dryness under vacuum at 40°. Reconstitute the residue in 1 mL water, vortex for 45 s, let stand for 1 min, filter (0.45 μm Fluoropore), inject an aliquot. (Prepare ion-exchange columns as follows. Rinse resins several times with water until supernatants are colorless and pH is unchanged. Place AG 50W-X8 50-100 mesh cation exchange resin (hydrogen form) to a height of 38 mm in an 8 mm i.d. polypropylene column (column I). Place AG 3-X4A 20-50 mesh anion exchange resin (chloride form) to a height of 14 mm in an 8 mm i.d. polypropylene column. Wash with two volumes 500 mM NaOH at 1 mL/min and with water until chloride free (test with nitric acid/silver nitrate) (column II). Place column I above column II.)

SAMPLE

Matrix: urine

Sample preparation: Condition a 300 mg Bond Elut Certify SPE cartridge with 2 mL MeOH and 2 mL water. 5 mL Urine + 1 mL concentrated HCl, vortex, heat at 120° for 30 min, cool, adjust pH to between 7.0 and 8.0 with 10 M KOH. 5 mL Urine or hydrolysed urine + nalorphine, add to the SPE cartridge, wash with 2 mL water, wash with 1 mL pH 4 acetate buffer, wash with 2 mL MeOH, elute with 2 mL dichloromethane:isopropanol 80:20 containing 2% ammonia. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 0.5-1 mL pentane:dichloromethane 90:10. (Use unhydrolysed urine to determine diamorphine and unconjugated compounds.)

HPLC VARIABLES

Column: 200 × 2 3 μm Hypersil
Mobile phase: Pentane:dichloromethane:MeOH containing 0.5% diethylamine 65:29.8:5.2
Flow rate: 0.4
Injection volume: 50
Detector: UV 280

CHROMATOGRAM

Retention time: 4
Internal standard: nalorphine (5)

Limit of detection: <20 ng/mL

OTHER SUBSTANCES

Extracted: codeine, 6-monoacetylmorphine, pholcodine, dihydrocodeine, morphine
Simultaneous: diphenhydramine, ephedrine, hydrocodone
Noninterfering: aspirin, caffeine, chlordiazepoxide, dextropropoxyphene, diazepam, lignocaine, naloxone, norcodeine, normorphine, papaverine, procaine, quinine, theobromine, theophylline

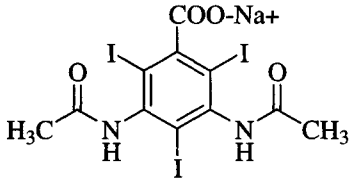
Diatrizoate sodium



Molecular formula: $C_{11}H_8I_3N_2NaO_4$
Molecular weight: 635.90
CAS Registry No.: 737-31-5, 117-96-4 (free acid), 50978-11-5 (free acid, dihydrate), 131-49-7 (diatrizoate meglumine)
Merck Index: 3040

SAMPLE

Matrix: blood, tissue
Sample preparation: Plasma. 50 μL Plasma + 150 μL buffer, centrifuge at 1000 g at 0° for 10 min, inject a 10 μL aliquot. Tissue. Weigh 2 testes, add 5 mL buffer, homogenize (Kinematica type PT 10/35, setting 7.5) for 1 min, vortex, centrifuge at 1000 g at 0° for 10 min. Remove a 50 μL aliquot of the supernatant and add it to 150 μL buffer, centrifuge at 1000 g at 0° for 10 min, inject a 10 μL aliquot. (Buffer was 5 mM metaphosphoric acid and 5 mM disodium EDTA.)

HPLC VARIABLES

Guard column: C18 Bondapak guard column
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeCN:buffer 2.5:97.5–5:95 (Buffer was 100 mM NaH_2PO_4 and 0.2 mM Na_2EDTA adjusted to pH 3.1 with orthophosphoric acid.)
Flow rate: 1
Injection volume: 10
Detector: UV 254

CHROMATOGRAM

Retention time: 9.5
Limit of detection: 710 ng/mL

OTHER SUBSTANCES

Also analyzed: iohexol, iopamidol

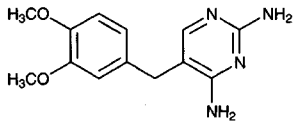
Diaveridine



Molecular formula: $C_{13}H_{16}N_4O_2$
Molecular weight: 260.30
CAS Registry No.: 5355-16-8
Merck Index: 3041

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM

Retention time: 7.022

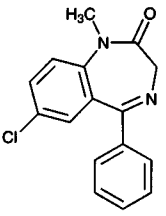
Diazepam



Molecular formula: $C_{16}H_{13}ClN_2O$
Molecular weight: 284.74
CAS Registry No.: 439-14-5
Merck Index: 3042
Lednicer No.: 1 365; 2 395

SAMPLE

Matrix: bile, blood, gastric contents, tissue, urine

Sample preparation: Chop 5-g tissue and homogenize (Ultra Turrax T25) at 8500, 9500, 13500, 20500, and 24000 rpm for 1 min each. Add homogenate to 20 mL water. Dilute blood, urine, gastric contents, and bile four times with water. Mix 4 mL sample with 10 μL 1 mg/mL prazepam and 1 mL pH 7.4 phosphate buffer, vortex briefly, add 4 mL diethyl ether and mix for 15 min (Spiramix 10, Denley, UK). Separate the organic layer, add 4 mL diethyl ether to extraction sample, mix. Evaporate combined organic layers to dryness under a stream of dry air at 50°. Purify extracts by partition between 1 mL MeCN and 2 mL heptane, separate MeCN layer, evaporate it to dryness, reconstitute the residue in 100 μL MeOH and inject a 20 μL aliquot of the solution.

HPLC VARIABLES

Guard column: 20 × 4.6 5 μm Apex II ODS
Column: 150 × 4.6 5 μm Apex II ODS
Mobile phase: MeCN:MeOH:10 mM phosphoric acid:10 mM Na_2HPO_4 40:20:36:4
Flow rate: 1
Injection volume: 20
Detector: UV 240

CHROMATOGRAM

Retention time: 8.5
Internal standard: prazepam (14.5)
Limit of quantitation: 100 ng/mL

SAMPLE
Matrix: formulations
Sample preparation: Mix 1 g sample with 10 mL THF, after total dissolution add 35 mL THF, filter the polyvinyl chloride precipitate. Repeat this operation, then add 4 mL 6 mg/mL benzophenone in dioxane and dilute to 100 mL with EtOH. Inject a 5 μL aliquot. (Caution! Dioxane is a carcinogen!)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Kromasil 110 ODS C18
Mobile phase: MeCN:water 85:15
Flow rate: 1
Injection volume: 5
Detector: UV 250

CHROMATOGRAM
Retention time: 5.77
Internal standard: benzophenone (4.23)

OTHER SUBSTANCES
Simultaneous: dibutyl phthalate

KEY WORDS
polymer matrix

SAMPLE
Matrix: solutions
Sample preparation: Equilibrate column A with 10 mL MeCN and 10 mL water (pH 7). Pump 200 mL drinking water through column A at 3 mL/min, back flush contents of column A onto column B with the mobile phase and start the gradient.

HPLC VARIABLES
Column: A 10 × 2.1 5 μm RP-18 octadecylsilica (E. Merck); B 150 × 4.6 5 μm Nucleosil C18
Mobile phase: Gradient. MeCN:water from 40:60 to 60:40 over 15 min
Injection volume: 200000
Detector: UV 254

CHROMATOGRAM
Retention time: 19.75
Limit of detection: 0.06 ng/mL

OTHER SUBSTANCES
Extracted: azinphos-methyl, carbaryl, parathion-methyl, azinphos-ethyl, fenitrothion, parathion, phosmet

KEY WORDS
drinking water; column-switching

REFERENCE

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 100 × 4.6 C18
Mobile phase: Gradient. Isopropanol:20 mM pH 2.5 sodium phosphate buffer containing 20 mM sodium dodecyl sulfate from 10:90 to 50:50 over 15 min
Flow rate: 1
Detector: UV 230

CHROMATOGRAM
Retention time: 16

OTHER SUBSTANCES
Simultaneous: aldicarb, chloroxuron, diuron, fluometuron, linuron, metobromuron, monuron, neburon, parathion, prometryne, propazine, siduron, terbacil
Interfering: prometon

REFERENCE
Zhang,Y.; El Rassi,Z. High performance micellar liquid chromatography with silica microparticles having surface-bound cationic surfactant moieties. I. SAMPLE
Matrix: solutions
Sample preparation: Condition a 10 × 2 SPE column packed with 40 μm octadecylsilica (Spark Holland) with 10 mL MeCN, 10 mL MeOH, and 10 mL water at 2 mL/min. Add nitric acid to a final concentration of 0.5% to water sample, filter (0.45 μm), add a 150 mL aliquot to the SPE column at 3 mL/min, wash with 3 mL distilled water, elute the contents of the SPE column on to the analytical column with the mobile phase.

HPLC VARIABLES
Column: 250 × 4 4 μm Superspher 60 RP-8 endcapped C8 (Merck)
Mobile phase: Gradient. A was MeCN:MeOH 80:20. B was water. A:B from 10:90 to 40:60 over 10 min, maintain at 40:60 for 5 min, to 90:10 over 33 min, return to initial conditions over 5 min.
Flow rate: 1
Detector: UV 220

CHROMATOGRAM
Retention time: 39.8

OTHER SUBSTANCES
Simultaneous: azinphos-ethyl, azinphos-methyl, chlorfenvinphos, dichlorvos, fenitrothion, malathion, mevinphos, parathion-ethyl, parathion-methyl
Interfering: fenthion

KEY WORDS
groundwater; wastewater; SPE

SAMPLE
Matrix: solutions
Sample preparation: Inject 100 mL river water on to column A at 5 mL/min and let the effluent flow to waste, backflush the contents of column A on to column B and start the gradient, monitor the effluent from column B. At the end of each run backflush column A with 5 mL water, with 30 mL 100 mM pH 2 sodium citrate buffer, with 10 mL water, with 5 mL MeCN, and with 10 mL hexane:dichloromethane 50:50. Wash new column A with 10 mL water.

HPLC VARIABLES
Column: A 20 × 3 10 μm PRP-1 (Hamilton); B 30 × 4.6 10 μm RP-18 (Brownlee) + 250 × 4.6 5 μm LiChrospher C18
Mobile phase: Gradient. MeCN:water from 5:95 to 90:10 over 1 h, maintain at 90:10 for 4 min, return to initial conditions (?) over 1 min, re-equilibrate for 10 min.
Flow rate: 1 for 64 min, to 1.5 over 1 min, maintain at 1.5 for 5 min, to 1 over 5 min
Injection volume: 100000
Detector: UV 210

CHROMATOGRAM
Retention time: 47.5
Limit of detection: 50 ng/L

OTHER SUBSTANCES
Simultaneous: alachlor, aldicarb, aldicarb oxime, atrazine, carbofuran, chlorobenzilate, chlorothalonil, chlorpyrifos methyl, chlortoluron, cypermethrin, p,p'-DDE, DDT, deltamethrin, diclofop methyl, dimethoate, diuron, ethofumesate, fenitrothion, fenvalerate, fluazifop butyl, fluometuron, linuron, metalaxyl, metamitron, methomyl, metobromuron, metolachlor, molinate, oxamyl, paraoxon, paraoxon methyl, parathion methyl, pendimethalin, permethrin, phenmediphan, pirimphos, pirimphos methyl, prometryne, propanil, propiconazole, simazine, terbuthylazine, trifluraline
Interfering: parathion

KEY WORDS
river water; column-switching

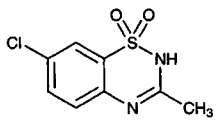
Diazoxide



Molecular formula: $C_8H_7ClN_2O_2S$
Molecular weight: 230.67
CAS Registry No.: 364-98-7
Merck Index: 3051

SAMPLE

Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform: isopropanol:n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 µL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 µL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES

Column: 300 × 3.9 4 µm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 265

CHROMATOGRAM

Retention time: 3.13
Limit of detection: <120 ng/mL

KEY WORDS

SAMPLE

Matrix: blood, saliva

Sample preparation: Serum. 200 μL Serum + 100 μL buffer + 50 μL 20% perchloric acid, vortex, centrifuge at 2000 g for 5 min, inject a 250 μL aliquot of the supernatant onto column A, then inject 700 μL buffer onto column A, elute the contents of column A onto column B with mobile phase for 1 min, remove column A from circuit, elute column B with mobile phase, monitor the effluent from column B. Backflush column A with 2 mL MeOH:buffer 50:50 then forward flush with 1 mL buffer. Saliva. Centrifuge saliva at 3000 g for 4 min. 100 μL Supernatant + 150 μL water + 100 μL buffer, vortex, inject a 250 μL aliquot onto column A, then inject 700 μL buffer onto column A, elute the contents of column A onto column B with mobile phase for 1 min, remove column A from circuit, elute column B with mobile phase, monitor the effluent from column B. Backflush column A with 2 mL MeOH:buffer 50:50 then forward flush with 1 mL buffer. (Buffer was 50 mM pH 4.6 $(NH_4)H_2PO_4$.)

HPLC VARIABLES

Column: A 30 mm long 30-40 μm C18; B 10 × 4.6 5 μm Spherisorb S5 ODS-1 C18 end-capped + 250 × 4.6 5 μm Spherisorb S5 ODS-1 C18 end-capped

Mobile phase: MeCN:buffer 12:88 (Buffer was 50 mM pH 4.6 $(NH_4)H_2PO_4$.)

Column temperature: 40

Flow rate: 2

Injection volume: 250

Detector: UV 295

CHROMATOGRAM

Retention time: 8.5

Internal standard: diazoxide (8.5)

OTHER SUBSTANCES

Extracted: dapsone

KEY WORDS

serum; diazoxide is IS; column-switching

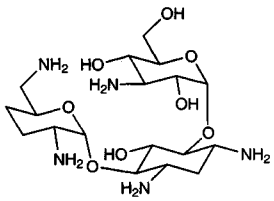
Dibekacin



Molecular formula: $C_{18}H_{37}N_5O_8$
Molecular weight: 451.52
CAS Registry No.: 34493-98-6, 58580-55-5 (sulfate)
Merck Index: 3052

SAMPLE

Matrix: blood
Sample preparation: Mix 1 mL plasma with 2 mL EtOH. Add 7 mL dichloromethane and 1 mL water, mix, centrifuge. Inject an aliquot of the aqueous supernatant onto column A, elute to waste with mobile phase A, after 4 min elute the contents of column A onto column B with mobile phase B, elute column B with mobile phase B. Mix the effluent from column B with o-phthalaldehyde at 0.2 mL/min and monitor.

HPLC VARIABLES

Column: A 3.9 × 4.0 10 μm Guard Pak Cyano (Waters); B 150 × 4.6 5 μm Shandon Hypersil C18
Mobile phase: A 17 mM acetic acid containing 10 mM hexanesulfonic acid; B 17 mM acetic acid containing 10 mM hexanesulfonic acid, 100 mM sodium acetate, and 3.53 M MeOH
Detector: F ex 338 em 450 (cut-off filter) following post-column reaction. The column effluent mixed with o-phthalaldehyde pumped at 0.2 mL/min and the mixture flowed to the detector.

CHROMATOGRAM

Retention time: 9.5
Internal standard: dibekacin
Limit of quantitation: 100 ng/mL

OTHER SUBSTANCES

Extracted: isepamicin
Simultaneous: aspirin, caffeine, chlorpheniramine, gentamicin, neomycin, netilmicin, sisomicin

KEY WORDS

plasma; post-column reaction; column-switching; dibekacin is IS

REFERENCE

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A: B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM

Retention time: 14.053

KEY WORDS

whole blood

SAMPLE

Matrix: urine
Sample preparation: 2 mL Urine + 0.5 g solid buffer I (pH 5-5.5), vortex 15 s, add 4 mL ethyl acetate, agitate for 10 min, centrifuge at 600 g for 5 min. Remove organic layer and vortex it with 2 mL 5% aqueous lead acetate for 10 s, centrifuge at 600 g for 5 min, remove and keep organic phase. 2 mL Urine + 0.5 g solid buffer II (pH 9-9.5), vortex 15 s, add 4 mL ethyl acetate, agitate for 10 min, centrifuge at 600 g for 5 min. Remove organic layer and combine it with previous organic layer. Evaporate to dryness at 50° under a stream of nitrogen, reconstitute in 300 µL 50 µg/mL β-hydroxyethyltheophylline in MeOH, inject 5 µL aliquot. (Solid buffer I was KH_2PO_4:Na_2HPO_4 99:1, solid buffer II was $NaHCO_3$:K_2CO_3 3:2.)

HPLC VARIABLES

Column: 250 × 4.6 5 µm HP Hypersil ODS (A) or HP LiChrosorb RP-18 (B)
Mobile phase: Gradient. MeCN:buffer from 15:85 at 2 min to 80:20 at 20 min (Buffer was 50 mM NaH_2PO_4 containing 16 mM propylamine hydrochloride, adjusted to pH 3 with concentrated phosphoric acid.)
Flow rate: 1
Injection volume: 5
Detector: UV 230, UV 275

CHROMATOGRAM

Retention time: 9.37 (A), 10.3 (B)
Internal standard: β-hydroxyethyltheophylline (3.7 (A), 4.4 (B))
Limit of detection: 1000 ng/mL

OTHER SUBSTANCES

Extracted: furosemide, metolazone, amiloride, acetazolamide, chlorothiazide, hydrochlorothiazide, quinethazone, triamterene, hydroflumethiazide, chlorthalidone, trichloromethiazide, methyclothiazide, benzthiazide, cyclothiazide, polythiazide, bendroflumethiazide, ethacrynic acid, bumetanide, probenecid, spironolactone, canrenone, flumethiazide
Noninterfering: acetaminophen, aspirin, caffeine, diflunisal, fenoprofen, ibuprofen, indomethacin, methocarbamol, naproxen, phenylbutazone, sulindac, tetracycline, theobromine, theophylline, tolmetin, trimethoprim, verapamil

REFERENCE

SAMPLE

Matrix: urine
Sample preparation: Buffer urine to 4.9 by mixing with an equal volume of pH 4.9 200 mM sodium phosphate buffer. Inject a 40 µL aliquot onto column A with mobile phase A, after 3 min backflush the contents of column A onto column B with mobile phase B and start the gradient. At the end of the run re-equilibrate for 10 min.

HPLC VARIABLES

Column: A 20 × 4 5 μm Hypersil octadecylsilica ODS; B 200 × 4.6 5 μm Shiseido SG-120 polymer-based C18

Mobile phase: A water; B Gradient. MeCN:buffer from 7:93 to 15:85 over 3.5 min, to 50:50 over 8.5 min, maintain at 50:50 for 11 min (Buffer was 6.9 g $NaH_2PO_4.H_2O$ in 1 L water, pH adjusted to 3.1 with phosphoric acid.)

Flow rate: 1

Injection volume: 40

Detector: UV 230

CHROMATOGRAM

Retention time: 14.1

Limit of detection: 1000 ng/mL

OTHER SUBSTANCES

Extracted: acetazolamide, amiloride, bendroflumethiazide, benzthiazide, bumetanide, caffeine, carbamazepine, chlorothiazide, cvhlorthalidone, clopamide, ethacrynic acid, furosemide, hydrochlorothiazide, metyrapone, probenecid, spironolactone, triamterene, trichlormethiazide

KEY WORDS

column-switching; optimum detection wavelengths vary for each drug

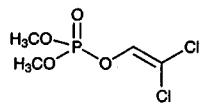
Dichlorvos



Molecular formula: $C_4H_7Cl_2O_4P$
Molecular weight: 220.98
CAS Registry No.: 62-73-7
Merck Index: 3129

SAMPLE

Matrix: blood
Sample preparation: 1.5 mL Serum + 2 mL 200 mM pH 7.0 phosphate buffer, add to an Extrelut No. 3 SPE column, let stand for 10 min, elute with 15 mL n-hexane:diethyl ether 80:20. Evaporate the eluate to dryness under a stream of nitrogen at 40°, reconstitute the residue with 150 µL MeOH:water 70:30, inject a 100 µL aliquot.

HPLC VARIABLES

Column: 300 × 3.9 10 µm µBondapak C18
Mobile phase: Gradient. MeOH:water from 70:30 to 90:10.
Flow rate: 1
Injection volume: 200
Detector: MS, Hitachi Model M-2000, APCI non-equilibrium interface, vaporizer 250°, nebulizer 400°, ionization needle electrode current 5 µA, drift voltage 230 V, vacuum 0.0001 Pa, ion-source slit 500 µm, collector slit 400 µm, accelerated electrical potential 4 kV, secondary electronic step-up tube potential 1.3 kV, positive-ion mode

CHROMATOGRAM

Retention time: 4.4
Limit of detection: 2 ng

OTHER SUBSTANCES

Extracted: diazinon, dimethoate, dimethylvinphos, ediphenphos, fenthion, IBP, isoxathon, malathion, phenthoate, propaphos, pyridafenthion

KEY WORDS

serum; SPE; m/z 221

SAMPLE

Matrix: blood
Sample preparation: 400 µL Plasma + 80 µL 6 M HCl, vortex for 1 min, centrifuge at 0-5° at 39000 g for 30 min. Freeze the supernatant, thaw, centrifuge at 0-5° at 11000 g for 5 min, filter (0.2 µm, Schleicher and Schuell RC58) while centrifuging at 0-5° at 3000 g for 15 min, inject a 200 µL aliquot of the filtrate. (Trichlorfon may degrade to dichlorvos during sample preparation unless whole blood is immediately acidified with phosphoric acid (J.Chromatogr. 1993,612, 336).)

HPLC VARIABLES

Guard column: 37-50 µm C18/Corasil
Column: 200 × 3.9 10 µm C18 (Waters)
Mobile phase: MeOH:water 30:70 containing 1 mM octanesulfonic acid, pH 3.0
Flow rate: 1.5
Injection volume: 200

Detector: UV 210

CHROMATOGRAM
Retention time: 12.6
Limit of detection: 40 ng/mL

KEY WORDS
plasma

REFERENCE
Unni,L.K.; Hannant,M.E.; Becker,R.E. High-performance liquid chromatographic method using ultraviolet detection for measuring metrifonate and dichlorvos levels in human plasma, *J.Chromatogr.*, **1992**, *573*, 99–103.

SAMPLE
Matrix: blood, tissue
Sample preparation: Homogenize tissue with an equal volume of water, treat with a saturated solution of calcium chloride, let stand overnight, filter. Extract filtrate, blood, or other body fluid with an equal volume of ether. Adjust pH of aqueous layer to 2 with 2 M HCl, extract with an equal volume of ether. Combine the ether layers, evaporate to dryness, recxonstitute in a suitable solvent, inject an aliquot. (Note that dichlorvos may be volatilized under these conditions. A hexane solution of dichlorvos was volatilized under a stream of nitrogen and all the dichlorvos disappeared (J.Chromatogr. 1992, 573, 99).)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Zorbax cyano
Mobile phase: Iso-octane:ethyl acetate 80:20
Flow rate: 1
Injection volume: 20
Detector: RI

CHROMATOGRAM
Retention time: 6.25
Limit of detection: 100 ng

OTHER SUBSTANCES
Extracted: carbaryl, monocrotophos, quinalphos, malathion, phosphomidon, baygon
Interfering: methyl parathion

KEY WORDS
liver; lung

SAMPLE
Matrix: solutions
Sample preparation: Condition a 10 × 2 SPE column packed with 40 μm octadecylsilica (Spark Holland) with 10 mL MeCN, 10 mL MeOH, and 10 mL water at 2 mL/min. Add nitric acid to a final concentration of 0.5% to water sample, filter (0.45 μm), add a 150 mL aliquot to the SPE column at 3 mL/min, wash with 3 mL distilled water, elute the contents of the SPE column on to the analytical column with the mobile phase.

HPLC VARIABLES
Column: 250 × 4 4 μm Superspher 60 RP-8 endcapped C8 (Merck)

Mobile phase: Gradient. A was MeCN:MeOH 80:20. B was water. A:B from 10:90 to 40:60 over 10 min, maintain at 40:60 for 5 min, to 90:10 over 33 min, return to initial conditions over 5 min.
Flow rate: 1
Detector: UV 220

CHROMATOGRAM

Retention time: 19.1
Limit of detection: 99 ng/L

OTHER SUBSTANCES

Simultaneous: azinphos-ethyl, azinphos-methyl, chlorfenvinphos, diazinon, fenitrothion, fenthion, malathion, mevinphos, parathion-ethyl, parathion-methyl

KEY WORDS

groundwater; wastewater; SPE

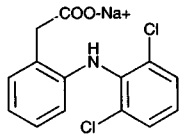
Diclofenac sodium



Molecular formula: $C_{14}H_{10}Cl_2NNaO_2$
Molecular weight: 318.13
CAS Registry No.: 15307-79-6
Merck Index: 3132
Lednicer No.: 2 70

SAMPLE

Matrix: aqueous humor
Sample preparation: 100 μL Aqueous humor + 500 μL MeCN + 30 μL 400 ng/mL (+)-naproxen, mix mechanically for 90 s, centrifuge at 3000 g for 20 min. Remove supernatant and dry it under nitrogen at room temperature. Dissolve residue in 50 μL mobile phase by swirl mixing for 1 min, centrifuge at 3000 g for 20 s. For concentrations of < 20 ng/mL, reduce volume to 20-30 μL under nitrogen.

HPLC VARIABLES

Column: 150 × 4.5 5 μm Ultrasphere octyl
Mobile phase: 505 mL MeCN containing 0.65 mL triethylamine + 495 mL 1.65% glacial acetic acid, apparent pH 4.35
Column temperature: 30
Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM

Retention time: 7.14
Internal standard: naproxen (3.89)
Limit of detection: 3 ng/mL

OTHER SUBSTANCES

Extracted: flurbiprofen
Simultaneous: bacitracin, cortisone, diazepam, fluorometholone, hydrocortisone, imipramine, indomethacin, ketoprofen, ketorolac, levobunolol, meclofenamic acid, metipranolol, neomycin, prednisolone, proraracaine, propranolol, salicylic acid, sulfacetamide, suprofen
Noninterfering: acebutolol, acetaminophen, acetazolamide, alprenolol, apraclonidine, atenolol, atropine, betamethasone, betaxolol, bupivacaine, caffeine, cyclopentolate, dexamethasone, diphenhydramine, erythromycin, haloperidol, lidocaine, phenylephrine, polymyxin B, procaine, scopolamine, timolol, tropicamide.

SAMPLE

Matrix: blood
Sample preparation: 50 μL Plasma + 50 μL MeCN, mix, centrifuge at 12000 g for 2 min, inject a 50 μL aliquot of the supernatant.

HPLC VARIABLES

Guard column: 15 × 3.2 5 μm NewGuard ODS
Column: 150 × 4 5 μm Nucleosil C18

Mobile phase: MeCN:buffer 32:68 (Buffer was 40 mL 1 M NaH_2PO_4 and 40 mL 500 mM Na_2HPO_4 made up to 680 mL with water, pH 6.6.)
Flow rate: 0.7
Injection volume: 50
Detector: F ex 288 em 360 following post-column reaction. The column effluent flowed through a 1.3 m × 1 mm ID PTFE tube irradiated by a UV 254 lamp (Philips TUV 6W, TYP 103314) to the detector.

CHROMATOGRAM
Retention time: 10
Limit of detection: 6 ng/mL

KEY WORDS

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 200 μL 1.5 μg/mL IS in water + 4 mL 2 M phosphoric acid + 6 mL hexane:isopropanol 9:1, shake at 150 oscillations/min for 15 min, centrifuge at 1500 g for 10 min. Remove organic layer and evaporate it to dryness at 37° under a gentle stream of nitrogen. Reconstitute in 250 μL mobile phase, inject 100 μL aliquot onto column A, after 2 min switch eluent from column A onto column B, after another 2 min switch column A out of circuit and continue to flush it to waste with mobile phase. Monitor eluent from column B.

HPLC VARIABLES
Column: A 35 × 4.6 10 μm Nucleosil C18; B 150 × 4.6 10 μm Nucleosil C18
Mobile phase: MeCN:MeOH:22 mM pH 7.1 sodium acetate 23:25:52 (both columns)
Flow rate: 1.5
Injection volume: 100
Detector: UV 280

CHROMATOGRAM
Retention time: 6.4
Internal standard: CGP-4287 (7.6)
Limit of detection: 2.5 ng/mL

SAMPLE
Matrix: blood, tissue, urine
Sample preparation: Plasma: Mix 50 μL MeCN and 50 μL plasma for 30 s, centrifuge at 5000 g for 15 min. Inject an aliquot of the supernatant. Urine: Mix 100 μL MeCN with 100 μL urine for 30 s, centrifuge at 5000 g for 15 min. Inject an aliquot of the supernatant. Tissue. Weigh out finely chopped tissue, suspend in 200 μL water. Mix with 200 μL MeCN, centrifuge at 10000 g for 15 min. Inject an aliquot of the supernatant.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm Newguard C18 (Alltech)
Column: 250 × 4.6 5 μm Alltima C18 (Alltech)
Mobile phase: MeCN:50 mM pH 5.0 sodium dihydrogen phosphate 30:70
Flow rate: 1.0
Detector: UV 214

CHROMATOGRAM
Retention time: 13.9
Internal standard: dicloxacillin

OTHER SUBSTANCES
Extracted: penicillin G, flucloxacillin

SAMPLE

Matrix: milk
Sample preparation: Condition a 6 mL 500 mg Bond Elut C18 SPE cartridge with 10 mL MeOH, 10 mL water, 5 mL 2% NaCl, and 5 mL 100 mM pH 8 phosphate extraction buffer. Add 30 mL 100 mM pH 8 phosphate extraction buffer to 5 mL milk, add 1.65 mL 1 M sulfuric acid to reach pH 4.0-4.5, vortex for 30 s, centrifuge at 2400 g for 10 min, add 600 μL 5 M NaOH to the supernatant to reach pH 8, vortex, centrifuge at 2400 g for 5 min. Add the supernatant to a reservoir attached to the SPE cartridge, pull through the SPE cartridge at 3 mL/min, remove the reservoir and elute with 1 mL MeCN:water 40:60. Add 500 μL derivatizing reagent to the eluate, vortex, heat at 65° for 10 min, cool to room temperature (protect from light), inject a 100 μL aliquot of the derivatized sample. (Prepare the 100 mM pH 8 phosphate extraction buffer as follows. Dissolve 15.6 g K_2HPO_4 dihydrate in 800 mL water, adjust pH to 8 with 10 M NaOH, make up to 1 L. Prepare the derivatizing reagent as follows. Weigh out 13.78 g 1,2,4-triazole, add 60 mL water, stir, add 10 mL 100 mM mercuric chloride solution, mix, adjust pH to 9.0 ± 0.5 with 5 M NaOH, dilute to 100 mL with water.)

HPLC VARIABLES

Column: 150 × 3.9 5 μm Symmetry C8 (Waters)
Mobile phase: MeCN:MeOH:buffer 37:5:58 (Prepare the 100 mM pH 6.5 phosphate buffer containing 15 mM thiosulfate and 30 mM tetrabutylammonium hydrogen sulfate as follows. Weigh 4.969 g anhydrous NaH_2PO_4, 10.139 g Na_2HPO_4 dihydrate, 3.894 g sodium thiosulfate pentahydrate, and 10.186 g tetrabutylammonium hydrogen sulfate, dissolve in 800 mL water, adjust pH to 6.5 with 5 M NaOH, dilute to 1 L with water, mix thoroughly, filter under vacuum (0.45 μm).)
Flow rate: 1
Injection volume: 100
Detector: UV 340

SAMPLE
Matrix: milk
Sample preparation: 50 g Milk + 2 drops penicillinase (Difco Laboratories), let stand 1 h at 37°, add 50 MeCN, shake vigorously for 1 min, centrifuge at 9000 g for 10 min, decant, add 5 g NaCl, swirl to dissolve, add 100 mL dichloromethane, shake for 1 min, centrifuge at 1000 g for 10 min. Remove top aqueous layer and extract organic layer with 25 mL 10% NaCl by shaking and centrifuging as before. Combine aqueous layers, add 1 mL 0.3% mercuric chloride in water, let stand 30 min, add 1 mL 2 M HCl, extract with three 50 mL portions of dichloromethane by shaking each portion for 1 min and centrifuging at 1000 g for 10 min, filter dichloromethane extracts through 30 g anhydrous sodium sulfate, evaporate to dryness under reduced pressure at 35°, if water remains add 5-10 mL MeOH to flask and complete evaporation. Dissolve residue in 1 mL 10% acetic acid, add 0.5 mL 0.08% dansyl hydrazine in 10% acetic acid, let stand 90 min to overnight in the dark, transfer reaction mixture to a separatory funnel with three 25 mL portions of dichloromethane, add 5 mL 2 M HCl, shake for 1 min, wash organic layer with 5 mL 5% $NaHCO_3$ solution, filter through 10-20 g anhydrous sodium sulfate. Extract acid aqueous layer again with 25 mL dichloromethane. Combine dichloromethane layers and evaporate to dryness at 35° under reduced pressure. Dissolve residue in 2 mL IS solution, inject a 20 μL aliquot. (Prepare IS solution by dissolving 10 μL benzaldehyde in 100 mL dichloromethane, evaporate 1 mL to dryness under reduced pressure, dissolve residue in 1 mL 10% acetic acid, add 0.5 mL 0.08% dansyl hydrazine in 10% acetic acid, let stand 90 min to overnight in the dark, transfer reaction mixture to a separatory funnel with three 25 mL portions of dichloromethane, add 5 mL 2 M HCl, shake for 1 min, wash organic layer with 5 mL 5% $NaHCO_3$ solution, filter through 10-20 g anhydrous sodium sulfate. Extract acid aqueous layer again with 25 mL dichloromethane. Combine dichloromethane layers and evaporate to dryness at 35° under reduced pressure. Dissolve residue in 100 mL MeCN then dilute an aliquot 1:4 with MeCN.)

SAMPLE
Matrix: milk
Sample preparation: Condition a 500 mg tC18 SPE cartridge (Waters) with 20 mL MeOH, 20 mL water, and 10 mL 2% NaCl. Centrifuge 30 mL milk at 1500 g for 10 min. Dilute a 10 mL portion of the defatted milk with 20 mL water, add 200 μL 2 μg/mL penicillin V in pH 9.0 buffer, add 6 mL 170 mM sulfuric acid, add 5.6 mL 5% sodium tungstate, shake vigorously for 1 min, allow to stand for 5 min, check that the pH is in the range 4.6-4.8 (if it is outside this range start again using a different volume of sodium tungstate solution), centrifuge at 1500 g for 10 min, adjust the pH of the supernatant to 8.1-8.2 with 5 M and 0.1 M NaOH, filter (glass fiber) the clear liquid phase. Pass the filtrate through the SPE cartridge at 2 mL/min, wash with 2 mL water, dry by pulling air through the cartridge for 1 min, elute with 2 mL MeCN. Add 150 μL pH 9.0 buffer to the eluate and evaporate to about 100 μL under a stream of nitrogen at 45-50°, add 400 μL pH 9.0 buffer, add 75 μL reagent I, vortex for 30 s, let stand at room temperature for 10 min, use 500 μL water to transfer the mixture to a separatory funnel, add 20 mL dichloromethane, add 5 mL pH 2.45 buffer, shake for 1 min, let stand for no more than 5 min. Remove the organic layer and evaporate it to dryness under reduced pressure at 35-40°, dissolve the residue in 500 μL pH 9.0 buffer, add 75 μL reagent I, vortex for 30 s, let stand at room temperature for 10 min, add 450 μL reagent II, vortex for 1 min, heat at 55 ± 1° for 30 min, cool, filter (0.45 μm), inject a 150 μL aliquot. (Prepare pH 9.0 buffer by dissolving 0.34 g KH_2PO_4 in water, adjusting the pH to 9.0 with NaOH, and making up to 100 mL with water. Prepare pH 2.45 buffer by dissolving 2.72 g KH_2PO_4 in water, adjusting the pH to 2.45 with phosphoric acid, and making up to 100 mL with water. Prepare reagent 1 by dissolving 1.13 g benzoic anhydride in MeCN, make up to 25 mL with MeCN. Prepare reagent II by dissolving 6.905 g 1,2,4-triazole in 30 mL water and adding 5 mL 26 mM mercuric chloride in water, adjust pH to 9.0 ± 0.05 with 5 M NaOH, make up to 50 mL. Prepare reagents I and II 1-4 h before use. Silanize glassware with dichlorodimethylsilane.)

HPLC VARIABLES

SAMPLE
Matrix: solutions
Sample preparation: React the antibiotic, triethylamine, and 1-(2,5-dihydroxyphenyl)-2-bromoethanone in a 1:2:4 molar ratio in DMF at 45° for 2 h (use dibenzo-18-crown-6 to make the sodium salt soluble), inject a 10 μL aliquot. (Preparation of 1-(2,5-dihydroxyphenyl)-2-bromoethanone is as follows. Stir 27.6 g 1,4-dimethoxybenzene and 28 mL bromoacetyl bromide at 0°, add 53.4 g aluminum bromide over 10 min (an exothermic reactions ensues), let stand at room temperature for 12 h, add 100 mL 48% HBr, add 100 g ice, stir for 1 h, extract twice with 200 mL portions of diethyl ether. Combine the extracts and wash them 3 times with 200 mL portions of water, dry over 40 g anhydrous magnesium sulfate, evaporate to dryness, recrystallize the product 3 times from EtOH to yield 1-(2,5-dihydroxyphenyl)-2- bromoethanone monobromoacetate (mp 105-107°). Dissolve 11 g 1-(2,5-dihydroxyphenyl)-2-bromoethanone monobromoacetate in 200 mL warm dry MeOH saturated with HBr, stir for 18 h, add 200 mL water, cool to -10°. Collect the yellow solid and dry it under vacuum at 50° for 48 h, recrystallize from toluene:heptane 50:50 then toluene to obtain 1-(2,5-dihydroxyphenyl)-2-bromoethanone as yellow needles (mp 117-119°).)

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Ultra-Turrax) 25 g tissue with 25 mL MeCN for 1 min, add 5 mL 500 mM pH 2.2 phosphate buffer while the homogenizer is still running, add 65 mL MeCN, homogenize for 1 min, centrifuge at 4000 g for 10 min. Remove the supernatant and add it to 7 g NaCl and 50 mL dichloromethane, shake for 2 min, allow to stand for 30 min. Remove the upper organic layer and add it to 5 g anhydrous sodium sulfate, shake for 30 s, filter through a cotton-wool plug, evaporate to about 4 mL under reduced pressure at 30°, add 3 mL dichloromethane, evaporate to about 4 mL, add 3 mL light petroleum, evaporate to about 0.5 mL, Suspend this residue with sonication in three 3 mL portions of light petroleum and place these fractions in a separate tube, rinse the original tube with 2 mL pH 7 phosphate buffer. Add the phosphate buffer rinse to the light petroleum extracts, vortex for 30 s, centrifuge, remove the aqueous layer. Extract the light petroleum layer with 2 mL pH 7 phosphate buffer and with two 1.5 mL portions of pH 7 phosphate buffer, combine all the aqueous phase, centrifuge, inject a 200 μL aliquot on to column A and elute to waste with mobile phase B, after 15 min elute to waste with mobile phase C at 2 mL/min, after 10 min elute the contents of column A on

to column B with mobile phase D, after 2 min remove column A from the circuit, elute column B with mobile phase D, monitor the effluent from column B. (Wash column A with mobile phase A at 2 mL/min for 7 min, with mobile phase A at 1 mL/min for 5 min, with mobile phase B at 2 mL/min for 8 min, and with mobile phase B at 1 mL/min for 6 min.)

HPLC VARIABLES

Column: A 4 × 4 5 μm LiChrospher 100 RP-18e; B 250 × 4 5 μm LiChrospher 100 RP-18e
Mobile phase: A MeCN:water 50:50; B 20 mM pH 7 phosphate buffer; C MeCN:20 mM pH 3 phosphate buffer 10:90; D MeCN:200 mM pH 3.0 phosphate buffer 35:65 containing 2 mM disodium EDTA
Column temperature: 35
Flow rate: 1 (except where indicated)
Injection volume: 200
Detector: E, Merck Model L3500, glassy carbon working electrode +0.65 V, stainless-steel auxiliary electrode, Ag/AgCl reference electrode following post-column reaction. The column effluent flowed through a 10 m × 0.3 mm ID woven PTFE coil illuminated by a UV 254 low-pressure mercury lamp to the detector.

CHROMATOGRAM

Retention time: 13.0
Limit of detection: 4.6 ng

OTHER SUBSTANCES

Extracted: cloxacillin, oxacillin, penicillin V, penicillin G

KEY WORDS

SAMPLE
Matrix: blood
Sample preparation: Condition a Toyopak ODS M SPE cartridge (Tosoh, Tokyo) with 6 mL MeOH, 12 mL water, and 2 mL 100 mM pH 4.5 phosphate buffer. 100 μL Plasma + 10 μL 85 μM IS + 890 μL 100 mM pH 4.5 phosphate buffer, mix, add to the SPE cartridge at 120-150 μL/min, wash with 2 mL 100 mM ph 4.5 phosphate buffer, wash with 2 mL water, elute with 1 mL MeOH. Evaporate the eluate to dryness under a stream of nitrogen at 37°, reconstitute the residue in 100 μL dry pyridine, add 900 μL 3 mM reagent in dry benzene (Caution! Benzene is a carcinogen!), heat at 100° in the dark for 50 min, cool, evaporate to dryness under a stream of nitrogen at 60°, reconstitute the residue in 1 mL mobile phase, inject a 20 μL aliquot. (The reagent was 2-(5-chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran (Dojindo Laboratories, Kumamoto, Japan). Synthesis is as follows. Add ethyl oxalyl chloride in ether to a solution of diazomethane in ether at 0° to give ethyl diazopyruvate (Caution! Diazo compounds are explosive and toxic!) (cf. Bueh-

ler,C.A.; Pearson,D.E. Survey of Organic Syntheses, Wiley, New York, 1970, p. 179). Heat 100 mg ethyl diazopyruvate, a few mg copper(II) acetylacetonate, and 400 μL chloroacetonitrile in benzene at 60° overnight (Caution! Benzene is a carcinogen!), cool, add to sodium bicarbonate solution, extract with ether, dry the organic layer, evaporate, chromatograph on silica with petroleum ether:ethyl acetate 90:10, distil the product at 90°/12 mm Hg to give ethyl 2-chloromethyl-5-oxazolecarboxylate as an oil in 18% yield (US Patent 4 603 209 (July 29, 1986)). Add 2 mL phosphorus oxychloride dropwise to a solution of 2 g sesamol in 3 mL DMF at 0°, heat on a steam bath with frequent shaking for 1 h, cool in ice, add 50 mL saturated sodium acetate solution, heat on a steam bath for 30 min, cool, filter, recrystallize the solid from EtOH to give 2-hydroxy-4,5-methylenedioxybenzaldehyde as colorless needles (mp 125-126°) (Bull. Chem. Soc. Jpn. 1962, 35, 1321). Stir 1.4 g ethyl 2-chloromethyl-5-oxazolecarboxylate, 1.5 g 2-hydroxy-4,5-methylenedioxybenzaldehyde, 2 g potassium carbonate, and 50 mL anhydrous DMF at 120° overnight, cool, filter. Evaporate the filtrate to dryness under reduced pressure to give 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran as a colorless crystalline powder (mp 186°) (yield 39%). Reflux 260 mg 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran, 100 mg KOH, 20 mL EtOH, and 30 mL water for 2 h, concentrate under reduced pressure, dissolve the residue in 100 mL water, wash with ethyl acetate, treat the aqueous layer with activated carbon, acidify the aqueous layer to pH 2 with 2 M HCl. Filter the precipitate and recrystallize it from EtOH to give 2-(2-oxazole-5-carboxylic acid)-5,6-methylenedioxybenzofuran as a colorless crystalline powder (mp 294-295°). Reflux 150 mg 2-(2-oxazole-5-carboxylic acid)-5,6-methylenedioxybenzofuran and 5 mL thionyl chloride for 2 h, pour the reaction mixture into 300 mL petroleum ether. Filter the precipitate and dry it over KOH to give 2-(5-chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran (mp 290°) (Anal. Sci. 1989, 5, 525).)

HPLC VARIABLES

Column: 150 × 4.6 5 μm TSKgel ODS-80TM

SAMPLE

Matrix: urine
Sample preparation: 10 mL Urine + glucuronidase/sulfatase (Helix pomatia), incubate at 37° for 1 h, extract twice with 5 mL diethyl ether, add 225 μL water and evaporate ether under nitrogen, add 400 μL MeOH, inject a 250 μL aliquot of this mixture.

HPLC VARIABLES

Guard column: 75 × 2.1 Corasil C18
Column: 150 × 4.6 5 μm Hypersil ODS
Mobile phase: MeOH:water 60:40
Flow rate: 2
Injection volume: 250
Detector: UV 240

CHROMATOGRAM

Retention time: 7 (α), 10 (β)
Limit of detection: about 6 ng/mL

OTHER SUBSTANCES

Simultaneous: trans-diethylstilbestrol, meso-hexestrol

KEY WORDS

cow

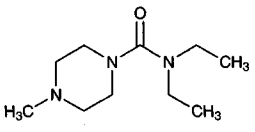
Diethylcarbamazine



Molecular formula: $C_{10}H_{21}N_3O$
Molecular weight: 199.30
CAS Registry No.: 90-89-1, 1642-54-2 (citrate)
Merck Index: 3165
Lednicer No.: 1 278

SAMPLE

Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM

Retention time: 2.1

OTHER SUBSTANCES

Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenhydramine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimetrazine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protripty-

line, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

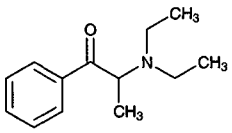
Diethylpropion



Molecular formula: $C_{13}H_{19}NO$
Molecular weight: 205.30
CAS Registry No.: 90-84-6, 134-80-5 (HCl)
Merck Index: 3175

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM

Retention time: 8.688

KEY WORDS

whole blood

SAMPLE

Matrix: solutions
Sample preparation: Dissolve in MeOH at a concentration of 1 mg/mL, inject a 20 µL aliquot.

HPLC VARIABLES

Column: 250 × 5 Spherisorb S5W
Mobile phase: MeOH:buffer 90:10 (Buffer was 94 mL 35% ammonia and 21.5 mL 70% nitric acid in 884 mL water, adjust the pH to 10.1 with ammonia.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 1.53

OTHER SUBSTANCES
Simultaneous: phendimetrazine, methylphenidate, phenelzine, epinephrine, pipradol, phenylpropanolamine, fencamfamin, chlorphentermine, norpseudoephedrine, phentermine, fenfluramine, methylenedioxyamphetamine, amphetamine, normetanephrine, 4-hydroxyamphetamine, bromo-STP, STP, prolintane, 2-phenethylamine, tyramine, trimethoxyamphetamine, phenylephrine, pseudoephedrine, ephedrine, methylephedrine, dimethylamphetamine, methamphetamine, mescaline, mephentermine, norpipanone, levallorphan, hydroxypethidine, normethadone, meperidine, dipipanone, diamorphine, pentazocine, acetylcodeine, monoacetylmorphine, thebacon, oxycodone, thebaine, norlevorphanol, methadone, benzylmorphine, ethylmorphine, morphine-N-oxide, codeine, codeine-N-oxide, morphine, ethoheptazine, morphine-3-glucuronide, pholcodeine, norpethidine, hydrocodone, dihydrocodeine, dihydromorphine, levorphanol, norcodeine, normorphine

Noninterfering: dopamine, levodopa, methyldopa, methyldopate, norepinephrine

Interfering: pemoline, benzphetamine, mazindol, tranylcypromine, caffeine, fenethyline, buprenorphine, dextromoramide, phenoperidine, fentanyl, etorphine, piritramide, noscapine, papaverine, naloxone, dextropropoxyphene, nalorphine, phenazocine

SAMPLE

Matrix: tissue

Sample preparation: Homogenize 2.5 g tissue with 10 mL acetone for 20 s, sonicate for 5 min, centrifuge at 3200 rpm. Decant the supernatant into a silanized tube. Add 8 mL acetone to the pellet and repeat the extraction. Combine the supernatants. Add to a 5 mL pipette tip containing 1.5 g alumina (80-200 mesh, Brockman activity 1) followed by an Econo-Column filled with 1.0 g AGMP-1 resin (Bio-Rad), allow to pass through by gravity. Wash with four 1 mL portions of acetone:water 95:5. Remove the alumina column, wash the ion-exchange column with 1 mL acetone:water 95:5, elute with four 1 mL portions of 10% acetic acid in acetone. Evaporate the combined eluates to dryness with nitrogen at 40°. Add 500 μL water to the residue, extract twice with 2 mL potions of ether. Combine the ether layers and evaporate them to dryness. Reconstitute the residue in mobile phase B. Inject a 20 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Supelco silica

Mobile phase: Gradient. A was hexane. B was MeOH:hexane:2-propanol 45:40:15. A:B from 100:0 to 60:40 over 15 min.
Flow rate: 2.0
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: 10.81
Limit of detection: 10 ng

OTHER SUBSTANCES
Extracted: estradiol, zeralenone, zeranol
Simultaneous: estrone, zeralenol, zeralanone

KEY WORDS
chicken; muscle; normal phase; SPE

SAMPLE
Matrix: tissue
Sample preparation: Dry pack 60 × 8 mm glass columns with 250 mg Carbopack B (200-400 mesh) and 60 × 4 mm glass columns with 50 mg Amberlite CG-400 I (100-200 mesh). Wash Carbopack column with 5 mL MeOH, 15 mL dichloromethane:MeOH 70:30, and MeOH:water 85:15. Wash Amberlite column with 3 mL 0.5 M NaOH, 8 mL dichloromethane:MeOH 70:30, 1 mL water, and 3 mL 1 M HCl. Repeat this cycle 4 times. Finally pass through 20 mL 50 mM NaOH then 1 mL water. Keep column in water. (Process converts Amberlite to OH form.) Homogenize 1 g of tissue in 5 mL MeOH, sonicate 5 min, centrifuge at 6000 rpm for 10 min. Add another 5 mL MeOH to pellet and repeat. Combine supernatants, make up to 6.8 mL with MeOH, add 1.2 mL water. Pass through Carbopack column, wash column with 2 mL MeOH:water 85:15, collect all eluates and pass onto Amberlite column, wash with 1 mL MeOH, 1 mL 1 M HCl, aspirate with vacuum for 1 min, elute with 2 mL 30 mM HCl in MeCN:MeOH 20:80. Evaporate eluate to dryness with nitrogen at 40°, take up in 100 μL mobile phase, inject 50 μL aliquot

HPLC VARIABLES
Guard column: 20 × 4.6 5 μm Supelguard LC-18
Column: 250 × 4.6 5 μm Supelco C18
Mobile phase: MeCN:10 mM KH_2PO_4 adjusted to pH 3.0 with phosphoric acid 48:52
Flow rate: 1.2
Injection volume: 50
Detector: E, Coulochem 5100A, detector 1 0.05 V, detector 2 0.30 V

SAMPLE
Matrix: tissue
Sample preparation: Homogenize (Waring blender) tissue at full speed for 2 min, lyophilize, grind. Extract with supercritical carbon dioxide at 60° at 400 atmospheres with a 20 cm × 21 μm restrictor for 1 h, collect the extract in 1 mL MeOH cooled to 5°. Evaporate the MeOH to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeCN:MeOH:20 mM ammonium formate 15:15:70, inject an aliquot. Alternatively, vortex 5 g ground tissue with 10 mL 40 mM sodium acetate, adjust pH to 4.2-4.7 with glacial acetic acid, add 100 μL β-glucuronidase (Sigma), heat at 37° for 8 h, add 20 mL MeCN, vortex for 30 s, centrifuge at 5000 rpm for 20 min. Remove a 30 mL aliquot of the supernatant and add it to 8 mL hexane and 2 mL dichloromethane, rotate for 3 min, centrifuge at 2000 rpm for 2 min. Remove a 15 mL aliquot of the middle layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 1 mL dichloromethane, inject an aliquot.

HPLC VARIABLES
Column: 50 × 4.6 5 μm Supelcosil
Mobile phase: Gradient. MeCN:MeOH:20 mM ammonium formate from 2.5:2.5:95 to 47.5:47.5:5 over 19 min.
Flow rate: 1
Injection volume: 20
Detector: UV 245 or MS, Sciex TAGA 6000E tandem triple quadrupole, APCI

CHROMATOGRAM
Retention time: 13
Limit of detection: 100 ppb

OTHER SUBSTANCES
Extracted: dexamethasone, medroxyprogesterone, melengestrol acetate, trenbolone, triamcinolone acetonide, zeranol

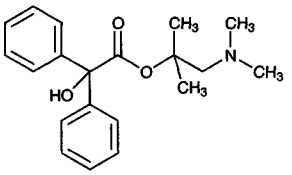
Difemerine



Molecular formula: $C_{20}H_{25}NO_3$
Molecular weight: 327.42
CAS Registry No.: 80387-96-8, 70280-88-5 (HCl)
Merck Index: 3180

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

CHROMATOGRAM

Retention time: 13.222

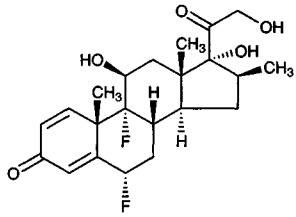
Diflorasone



Molecular formula: $C_{22}H_{28}F_2O_5$
Molecular weight: 410.46
CAS Registry No.: 2557-49-5, 33564-31-7 (diacetate)
Merck Index: 3186

SAMPLE

Matrix: bulk, formulations
Sample preparation: Cream. Weigh out cream containing 1 mg diflorasone diacetate, add 30 mL 40 μg/mL isoflupredone acetate in water-saturated chloroform, shake for 30 min, centrifuge at 2000 rpm for 15 min, inject a 10 μL aliquot of the lower chloroform layer. Ointment. Weigh out ointment containing 0.5 mg diflorasone diacetate, add 15 mL 40 μg/mL isoflupredone acetate in water-saturated chloroform, shake for 30 min, centrifuge at 2000 rpm for 15 min, inject a 10 μL aliquot of the lower chloroform layer. Bulk. Dissolve 1.5 mg bulk drug in 50 mL 40 μg/mL isoflupredone acetate in water-saturated chloroform, inject a 10 μL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 3 μm silica gel (Perkin-Elmer part 0258-1500)
Mobile phase: Butyl chloride:dichloromethane:THF:acetic acid 70:25:2:3 (Butyl chloride and dichloromethane were saturated with water.)
Flow rate: 2.5
Injection volume: 10
Detector: UV 254

CHROMATOGRAM

Retention time: 11 (diflorasone diacetate)
Internal standard: isoflupredone acetate (24)

OTHER SUBSTANCES

Simultaneous: related compounds

SAMPLE

Matrix: milk
Sample preparation: Condition a 500 mg Bond Elut LRC PRS SPE cartridge with 5 mL MeOH and 5 mL extracting solution 65:35. Add 25 mL extracting solution to 5 mL milk, shake for 15 s, add 4 g anhydrous sodium sulfate, shake for 15 s, centrifuge at 3000 rpm at 5° for 5 min. Remove the supernatant and repeat the extraction with 25 mL extracting solution as before except do not add any more sodium sulfate, mix mechanically, centrifuge, combine the supernatants, add 25 mL 1% acetic acid, shake for 10-15 s. Freeze for 30 min to facilitate precipitation, centrifuge at 2500 rpm at 5° for 10 min. Add 75 mL to the SPE cartridge, pass the entire sample through the cartridge, then add 2 mL MeOH, wash with 5 mL water, wash with 2 mL MeOH. Elute with 2.5 mL 25% ammonium hydroxide-MeOH. Evaporate to dryness under nitrogen at 55°, dissolve the residue in 2 mL 1% acetic acid, sonicate for 1 min, vortex for 20 s, filter (0.45 μm), inject an aliquot. (Extracting solution was 1% aqueous acetic acid:EtOH 1:99.)

HPLC VARIABLES

Column: 150 × 4.6 5 μm Inertsil
Mobile phase: MeCN:2% acetic acid 15:85
Column temperature: 40
Flow rate: 1
Injection volume: 50
Detector: F ex 278 em 450, with a 418 nm cut-off filter

CHROMATOGRAM
Retention time: 6.1
Limit of detection: 0.7 ppb
Limit of quantitation: 5 ppb

SAMPLE
Matrix: blood, urine
Sample preparation: Serum. Acidify 5 mL serum to pH 4 with 25 μL of 50% citric acid, dilute with an equal volume MeCN, centrifuge at 18 000 g for 4 min. Urine. Acidify 1 mL urine to pH 4 with 3 mg of citric acid, dilute with an equal volume MeCN, centrifuge at 18 000 g for 4 min.

HPLC VARIABLES
Column: 250 × 4.6 5μm Spherisorb Octyl
Mobile phase: MeOH:20 mM pH 3.6 potassium citrate + 0.02 mM tetramethylammonium hydrogen sulfate 48:52
Column temperature: 40
Flow rate: 1
Injection volume: 10
Detector: UV 254

CHROMATOGRAM
Retention time: 28

OTHER SUBSTANCES
Simultaneous: metabolites, glucuronides

KEY WORDS
serum

SAMPLE
Matrix: formulations
Sample preparation: Powder tablet and add amount containing ca. 50 mg diflunisal to 30 mL MeCN, sonicate, dilute to 50 mL, filter. Add 40 μL filtrate to 300 μL 1 mg/mL IS in MeCN, dilute to 5 mL with MeCN, inject 15 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 5 μm Ultrasphere ODS
Mobile phase: MeCN:water:glacial acetic acid:THF 200:200:80:20
Flow rate: 1.8
Injection volume: 15
Detector: UV 254

CHROMATOGRAM
Retention time: 3.9

Internal standard: diflunisal ethyl ester (10.6)
Limit of detection: 5000 ng/mL

OTHER SUBSTANCES
Noninterfering: aspirin, phenacetin, salicylic acid
Interfering: diclofenac, indomethacin, ibuprofen

KEY WORDS
tablets

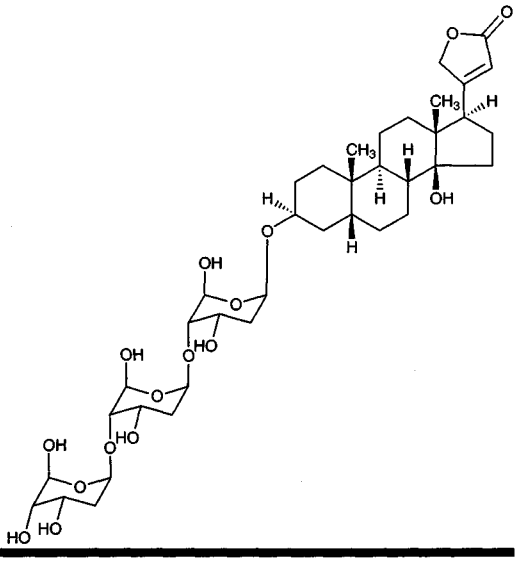
Digitoxin

Molecular formula: $C_{41}H_{64}O_{13}$
Molecular weight: 764.95
CAS Registry No.: 71-63-6
Merck Index: 3206



SAMPLE

Matrix: blood

Sample preparation: Add 40 μL 1 μg/mL oleandrin in MeOH, 1 mL pH 9.5 ammonium chloride buffer, and 5 mL chloroform:2-propanol 95:5 (Caution! Chloroform is a carcinogen!) to 4 mL plasma, shake gently on a horizontal agitator for 10 min, centrifuge at 3500 g for 10 min, evaporate the lower organic phase to dryness in a rotary evaporator at 45°. Add 25 μL MeOH:2 mM pH 3.0 ammonium acetate buffer 20:80 to the dried residue, vortex for 10 s, centrifuge at 10000 g for 5 min, inject a 5 μL aliquot of the supernatant.

HPLC VARIABLES

Guard column: 15 × 1.0 5 μm Opti-Guard C18 (Interchim, France)
Column: 150 × 2.0 4 μm NovaPak C18
Mobile phase: Gradient. A was MeCN. B was 2 mM pH 3.0 ammonium acetate buffer. A: B from 20:80 to 38:62 in 5 min, from 38:62 to 65:35 in 1 min, from 65:35 to 70:30 in 2.5 min, maintain at 70:30 for 1 min, from70:30 to 20:80 in 0.5 min, maintain at 20:80 for 5 min (At the end of each chromatographic session rinse the column with MeCN:water 80: 20 for 30 min, then 50:50 for 3 h.)
Flow rate: 0.2
Injection volume: 5
Detector: MS, Perkin-Elmer Sciex API-100, ionspray, nebulizing nitrogen gas, positive ionization mode 4.5 kV, orifice +20 V, electron multiplier +2600 V, m/z 783

CHROMATOGRAM

Retention time: 8.08
Internal standard: oleandrin (8.30)
Limit of detection: 200 pg/mL

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.

Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30

Detector: UV 219.3

CHROMATOGRAM

Retention time: 18.725

SAMPLE

Matrix: bulk, formulations

Sample preparation: Ampoules. Add the contents of 1 ampoule (2 mL) to 15 mL 2% sodium bicarbonate solution, extract 5 times with 10 mL portions of chloroform:isopropanol 60:40, wash each extract with the same 10 mL portion of water, wash with another 10 mL portion of water. Combine the organic layers and evaporate them to dryness, transfer the residue to another tube with two 1 mL portions of chloroform:pyridine 10:1, evaporate to dryness under reduced pressure at 50°, add 200 μL reagent, shake well, let stand at room temperature for 10 min, evaporate to dryness under reduced pressure at 50°, flush the tube with a stream of air or nitrogen, add 2 mL 5% sodium carbonate solution containing 2.5 mg/mL 4-dimethylaminopyridine, shake or sonicate for 5 min, extract with 2 mL chloroform. Wash the extract with 2 mL 5% sodium bicarbonate solution, wash twice with 3 mL portions of 50 mM HCl containing 5% NaCl, inject a 20 μL aliquot. Bulk. Prepare a solution in pyridine containing ≤10 mg/mL. Add 150 μL reagent to 50 μL solution, shake well, let stand at room temperature for 10 min, evaporate to dryness under reduced pressure at 50°, flush the tube with a stream of air or nitrogen, add 2 mL 5% sodium carbonate solution containing 2.5 mg/mL 4-dimethylaminopyridine, shake or sonicate for 5 min, extract with 2 mL chloroform. Wash the extract with 2 mL 5% sodium bicarbonate solution, wash twice with 3 mL portions of 50 mM HCl containing 5% NaCl, inject a 20 μL aliquot. (Prepare reagent fresh each day by dissolving 100 mg 4-nitrobenzoyl chloride in 1 mL pyridine with gentle warming.)

HPLC VARIABLES
Column: 200 × 3 5 μm Merckosorb SI 60
Mobile phase: n-Hexane:chloroform:MeCN 30:10:9

SAMPLE
Matrix: feces, urine
Sample preparation: Urine. 1 mL Urine + 2 mL dichloromethane, shake by hand 4 times, centrifuge 1650 g. Remove organic layer and wash it twice with 2 mL 5% sodium bicarbonate solution, evaporate under nitrogen at 50°. Add 25 mg 4-dimethylaminopyridine and 10 μL 1-naphthoyl chloride, add 100 μL MeCN, vortex thoroughly, place in water bath at 50° for 1 h, centrifuge, evaporate at 50° under nitrogen. Add 2 mL 5% sodium bicarbonate solution, shake mechanically for 5 min, add 2 mL chloroform, shake by hand. Remove organic layer and wash it twice with 2 mL 5% sodium bicarbonate solution, wash three times with 0.05 M HCl containing 5% NaCl, evaporate chloroform, dissolve residue in mobile phase. Feces. Dilute 5:1 (v/w) with 5 μg/mL clindamycin in water to stop bacterial metabolism, homogenize with mechanical shaking for 15 min. 1 g Homogenate + 1 mL water, vortex 30 s, shake 15 min, centrifuge 1 h. Pour off supernatant and extract it with 2 mL dichloromethane. Wash the extract twice with 2 mL 5% sodium bicarbonate solution, evaporate under nitrogen at 50°. Add 25 mg 4-dimethylaminopyridine and 10 μL 1-naphthoyl chloride, add 100 μL MeCN, vortex thoroughly, place in water bath at 50° for 1 h, centrifuge, evaporate at 50° under nitrogen. Add 2 mL 5% sodium bicarbonate solution, shake mechanically for 5 min, add 2 mL chloroform, shake by hand. Remove organic layer and wash it twice with 2 mL 5% sodium bicarbonate solution, wash three times with 0.05 M HCl containing 5% NaCl, evaporate chloroform, dissolve residue in mobile phase.

SAMPLE

Matrix: solutions

Sample preparation: Inject a 10 μL aliquot of a solution in mobile phase.

HPLC VARIABLES

Column: 250 × 4.6 Deltabond C18 (Keystone)

Mobile phase: Gradient. MeCN:water from 10:90 to 45:55 over 8 min.

Flow rate: 1.3

Injection volume: 10

Detector: E, Dionex pulsed electrochemical detector, integrated amperometry mode, 1.4 mm gold working electrode with 0.005 inch gasket, E1 +0.07 V, t1 400 ms, E2 +0.70 V, t2 120 ms, E3 1.00 V, t3 300 ms, stainless steel counter electrode, Ag/AgCl reference electrode, following post-column reaction. The column effluent mixed with 1 M NaOH pumped at 0.5 mL/min and the mixture flowed through a 500 μL reaction coil (Dionex) to the detector.

CHROMATOGRAM

Retention time: 12

Limit of detection: 400 ng/mL

OTHER SUBSTANCES

Simultaneous: digitoxigenin, digitoxigenin bisdigitoxoside, digitoxigenin monodigitoxoside, digoxigenin, digoxigenin bisdigitoxoside, digoxigenin monodigitoxoside, digoxin

KEY WORDS

post-column reaction

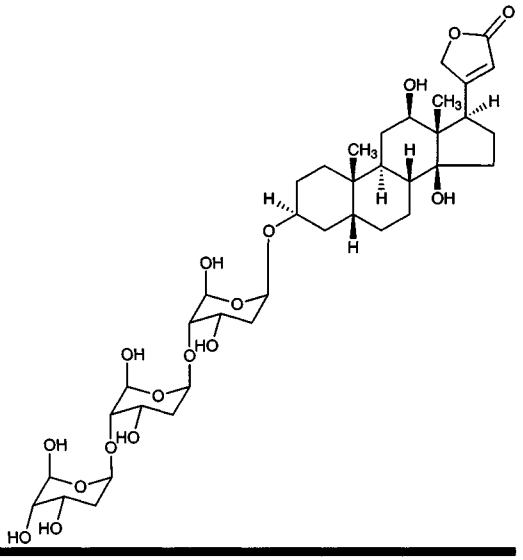
Digoxin

Molecular formula: $C_{41}H_{64}O_{14}$
Molecular weight: 780.95
CAS Registry No.: 20830-75-5
Merck Index: 3210



SAMPLE

Matrix: blood

Sample preparation: Add 40 μL 1 μg/mL oleandrin in MeOH, 1 mL pH 9.5 ammonium chloride buffer, and 5 mL chloroform:2-propanol 95:5 (Caution! Chloroform is a carcinogen!) to 4 mL plasma, shake gently on a horizontal agitator for 10 min, centrifuge at 3500 g for 10 min, evaporate the lower organic phase to dryness in a rotary evaporator at 45°. Add 25 μL MeOH:2 mM pH 3.0 ammonium acetate buffer 20:80 to the dried residue, vortex for 10 s, centrifuge at 10000 g for 5 min, inject a 5 μL aliquot of the supernatant.

HPLC VARIABLES

Guard column: 15 × 1.0 5 μm Opti-Guard C18 (Interchim, France)
Column: 150 × 2.0 4 μm NovaPak C18
Mobile phase: Gradient. A was MeCN. B was 2 mM pH 3.0 ammonium acetate buffer. A: B from 20:80 to 38:62 in 5 min, from 38:62 to 65:35 in 1 min, from 65:35 to 70:30 in 2.5 min, maintain at 70:30 for 1 min, from70:30 to 20:80 in 0.5 min, maintain at 20:80 for 5 min (At the end of each chromatographic session rinse the column with MeCN:water 80: 20 for 30 min, then 50:50 for 3 h.)
Flow rate: 0.2
Injection volume: 5
Detector: MS, Perkin-Elmer Sciex API-100, ionspray, nebulizing nitrogen gas, positive ionization mode 4.5 kV, orifice +20 V, electron multiplier +2600 V, m/z 799

CHROMATOGRAM

Retention time: 6.00
Internal standard: oleandrin (8.30)
Limit of detection: 250 pg/mL

OTHER SUBSTANCES

Extracted: digitoxin, lanatoside C, acetyldigitoxin

KEY WORDS

plasma

SAMPLE
Matrix: blood
Sample preparation: Prepare an SPE column by packing 200 mg LCA-SiO6 short-chain alkyl silica material (Sykam) into a 4 mL column, wash with 5 mL MeCN, wash with 4 mL water. 1 mL Plasma or serum + 100 μL (1 mL) water, add to the SPE cartridge, wash with 2 (1) mL MeOH:water 20:80, wash with 3 mL water, wash with 2 (1) mL acetone water 15:85, suck dry, wash with 1.5 (1) mL hexane:ethyl acetate 90:10, (wash with 2 mL hexane:acetone 90:10), dry with a stream of nitrogen, elute with 1.5 (0.5) mL hexane: acetone 60:40. Evaporate the eluate to dryness, reconstitute the residue in 300 μL MeOH: water 20:80, inject the whole amount. (Values in parentheses represent those given for the schematic procedure which differs from the written procedure.)

HPLC VARIABLES
Guard column: 25 × 4 40-63 μm LiChrolut RP18 (Merck)
Column: 100 × 2 4 μm Superspher RP18
Mobile phase: Gradient. MeCN:water 10:90 for 0.1 min, to 18:82 over 3.9 min, to 26:74 over 15 min, to 75:25 over 7 min, return to initial conditions over 3 min, re-equilibrate for 15 min.
Flow rate: 0.2
Injection volume: 300
Detector: F ex 379 em 423 following post-column reaction. The column effluent mixed with 0.08% copper(II) acetate in 95% sulfuric acid pumped at 0.35 mL/min and the mixture flowed through a knitted 5 m × 0.3 mm ID PTFE coil at 75° to the detector.

CHROMATOGRAM
Retention time: 21.1
Limit of detection: 70 pg
Limit of quantitation: 280 pg

OTHER SUBSTANCES
Extracted: digoxigenin, digoxigenin bisdigitoxoside, digoxigenin monodigitoxoside

SAMPLE
Matrix: blood, perfusate
Sample preparation: 200 μL Plasma or perfusate + 20 μL ethinyl estradiol solution + 5 mL dichloromethane, vortex, centrifuge for 10 min. Remove a 4.5 mL aliquot of the lower organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 200 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES
Column: LiChrocart 100 RP-18
Mobile phase: MeOH:isopropanol:dichloromethane:water 40:9:4:47
Flow rate: 1
Injection volume: 50
Detector: UV 220

CHROMATOGRAM
Internal standard: ethinyl estradiol (17α-ethynylestradiol)

KEY WORDS
plasma; rat; pharmacokinetics

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.

Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30

Detector: UV 220.5

CHROMATOGRAM

Retention time: 13.852

SAMPLE

Matrix: urine

Sample preparation: Condition a 300 mg Bond Elut Certify SPE cartridge with 2 mL MeOH and 2 mL water. 5 mL Urine + 1 mL concentrated HCl, vortex, heat at 120° for 30 min, cool, adjust pH to between 7.0 and 8.0 with 10 M KOH. 5 mL Urine or hydrolysed urine + nalorphine, add to the SPE cartridge, wash with 2 mL water, wash with 1 mL pH 4 acetate buffer, wash with 2 mL MeOH, elute with 2 mL dichloromethane:isopropanol 80:20 containing 2% ammonia. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 0.5-1 mL pentane:dichloromethane 90:10. (Use unhydrolysed urine to determine diamorphine and unconjugated compounds.)

HPLC VARIABLES

Column: 200 × 2 3 μm Hypersil

Mobile phase: Pentane:dichloromethane:MeOH containing 0.5% diethylamine 65:29.8:5.2
Flow rate: 0.4
Injection volume: 50
Detector: UV 280

CHROMATOGRAM

Retention time: 13
Internal standard: nalorphine (5)
Limit of detection: <20 ng/mL

OTHER SUBSTANCES

Extracted: codeine, 6-monoacetylmorphine, pholcodine, diamorphine, morphine
Simultaneous: diphenhydramine, ephedrine, hydrocodone
Noninterfering: aspirin, caffeine, chlordiazepoxide, dextropropoxyphene, diazepam, lignocaine, naloxone, norcodeine, normorphine, papaverine, procaine, quinine, theobromine, theophylline

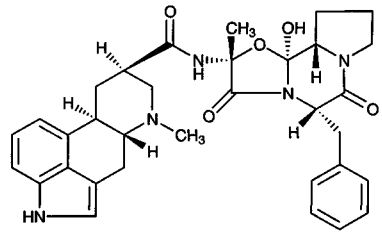
Dihydroergotamine



Molecular formula: $C_{33}H_{37}N_5O_5$
Molecular weight: 583.69
CAS Registry No.: 511-12-6, 6190-39-2 (mesylate)
Merck Index: 3217

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 50 µL 1 µg/mL dihydroergocristine mesylate in water + 30 µL 5 M NaOH + 7 mL chloroform, shake on a reciprocal shaker for 10 min, centrifuge at 2000 g for 15 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue in 100 µL mobile phase, inject a 10-30 µL aliquot.

HPLC VARIABLES

Column: 250 × 4 10 µm RP-8 (Merck)
Mobile phase: MeCN:buffer 60:40 (Buffer was 9 mM NaH_2PO_4 and 9 mM Na_2HPO_4, pH 7.2.)
Flow rate: 1
Injection volume: 10-30
Detector: UV 223 or F ex 295 em 350

CHROMATOGRAM

Retention time: 5.2
Internal standard: dihydroergocristine mesylate (7.9)
Limit of detection: 0.5-0.7 ng/mL (F), 5-10 ng/mL (UV)

OTHER SUBSTANCES

Simultaneous: dihydroergocornine, dihydroergocryptine

KEY WORDS

plasma; rat

REFERENCE

SAMPLE

Matrix: blood, urine
Sample preparation: Plasma. 3 mL Plasma + 100 µL 75 ng/mL IS in water + 300 µL 25% ammonium hydroxide, vortex for 15 s, centrifuge at 1500 g for 5 min. Remove the supernatant and add it to a 3 mL Extrelut SPE cartridge, let stand for 15 min, elute with 15 mL diethyl ether. Evaporate the eluate to dryness under a stream of nitrogen at 35°, reconstitute in 200 µL MeCN:ammonium carbamate 50:50, vortex for 15 s, sonicate for 30 s, centrifuge at 2000 g for 5 min, inject a 100 µL aliquot of the supernatant onto column A and start the gradient, after 4.5 min switch effluent from column A to column B for 1.4 min. Next, wash column A with MeCN for 1.5 min and A:B 60:40 for 2 min, stop flow through column B for this time. At the end of this time reconnect column B and elute with both columns with A:B 60:40, monitor the effluent from column B. At the end of the elution wash both columns with MeCN for 4.5 min, column B with A:B 60:40 for 5.5 min, and column A with A:B 100:0 for 3.5 min. Urine. Condition a Sep-Pak C18 SPE cartridge with 5 mL MeCN and 5 mL 10 mM ammonium carbamate. 5 mL Urine + 100 µL 250 ng/

mL IS in water + 400 μL 25% ammonium hydroxide, vortex for 15 s, centrifuge at 1500 g for 5 min. Remove the supernatant and add it to the SPE cartridge at 10 mL/min, wash with 1.5 mL MeCN:ammonium carbamate 45:55, apply vacuum to remove most of liquid, elute with 2 mL MeCN:MeOH 90:10. Evaporate the eluate to dryness under a stream of nitrogen at 35°, reconstitute in 200 μL MeCN:ammonium carbamate 50:50, vortex for 15 s, sonicate for 30 s, centrifuge at 2000 g for 5 min, inject a 100 μL aliquot of the supernatant onto column A and start the gradient, after 4.5 min switch effluent from column A to column B for 1.4 min. Next, wash column A with MeCN for 1.5 min and A:B 60:40 for 2 min, stop flow through column B for this time. At the end of this time reconnect column B and elute with both columns with A:B 60:40, monitor the effluent from column B. At the end of the elution wash both columns with MeCN for 4.5 min, column B with A:B 60:40 for 5.5 min, and column A with A:B 100:0 for 3.5 min.

HPLC VARIABLES

Column: A 30 × 2.1 30 μm Aquapore RP 300 (Brownlee); B 83 × 4.6 3 μm HS3 C18 (Perkin-Elmer)
Mobile phase: Gradient. A was 10 mM pH 8.5 ammonium carbamate. B was MeCN. A:B 100:0 for 0.5 min, to 78:22 over 1.5 min, to 66:34 over 3 min, then as above.
Column temperature: 30
Flow rate: 1.8
Injection volume: 100
Detector: F ex 296 em 355

CHROMATOGRAM

Retention time: 13.3
Internal standard: dihydroergocornine methanesulfonate (14.5)
Limit of detection: 0.1 ng/mL (urine), 0.08 ng/mL (plasma)

SAMPLE

Matrix: tissue, milk
Sample preparation: Tissue. Condition a 5 mL 500 mg 40 μm Bakerbond aromatic sulfonic acid SPE cartridge with 5 mL water. Homogenize (Polytron Model PT 10/35) 5 g tissue with 10 mL 3.6% perchloric acid for 10-15 s, shake horizontally for 5 min, centrifuge at 2000 g for 5 min, add the supernatant to the SPE cartridge at 2 mL/min, wash with 3 mL water, allow to dry, elute with 9 mL buffer. Add 500 μL 200 mM 1-hexanesulfonic acid in water and 150 μL perchloric acid to the eluate, make up to 10 mL with water, filter (0.45 μm), inject a 2 mL aliquot of the filtrate on to column A and elute to waste with mobile phase A, after 5 min elute the contents of column A on to column B with mobile phase B, after 5 min remove column A from the circuit, elute column B with mobile phase B, monitor the effluent from column B. Milk. 10 g Milk + 3 mL 3.6% perchloric acid, shake horizontally for 30 s, centrifuge at 2000 g for 5 min. Add the supernatant to 70 μL 5 M NaOH and 500 μL 200 mM 1-hexanesulfonic acid, make up to 10 mL with water, filter (0.45 μm), inject a 2 mL aliquot of the filtrate on to column A and elute to waste with mobile phase A, after 5 min elute the contents of column A on to column B with mobile phase B, after 5 min remove column A from the circuit, elute column B with mobile phase B, monitor the effluent from column B (J. AOAC Int. 1994, 77, 765). (Prepare the buffer by dissolving 33.46 g K_2HPO_4 and 1.05 g KH_2PO_4 in 1 L water, pH 8.0. At the end of each day wash with MeCN:water 50:50 at 1.5 mL/min for 10 min.)

HPLC VARIABLES

Column: A 40 × 4.6 5 μm Inertsil C8; B 250 × 4.6 5 μm LC8-DB (Supelco)
Mobile phase: A 10 mM 1-Hexanesulfonic acid adjusted to pH 3.3 with acetic acid; B MeCN:water 17:83 containing 10 mM 1-hexanesulfonic acid and 400 μM 1,2-naphthoquinone-4-sulfonic acid, adjust pH to 3.3 with acetic acid
Flow rate: A 1; B 1.5

Injection volume: 2000
Detector: F ex 347 em 418 (tissue) or ex 365 em 418 (milk) following post-column reaction. The column effluent mixed with 500 mM NaOH pumped at 0.5 mL/min and the mixture flowed through a 2 mL reaction coil (Pickering, Mountain View CA) at 50° to the detector. (At the end of each day wash the post-column reaction system with 1% acetic acid for 10 min and with water for 10 min.)

CHROMATOGRAM

Retention time: 23
Limit of detection: 20 ppb

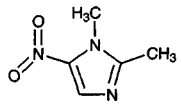
Dimetridazole



Molecular formula: $C_5H_7N_3O_2$
Molecular weight: 141.13
CAS Registry No.: 551-92-8
Merck Index: 3315
Lednicer No.: 1 240

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 317.6

CHROMATOGRAM

Retention time: 9.955

SAMPLE

Matrix: blood

Sample preparation: 10 μL Serum + 44 μL MeOH + 1 μL pyridine, sonicate for 5 min, add 25 μL 100 mM reagent in DMF, add 20 μL 400 mM 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide in MeOH, let stand at 25° for 2 h, centrifuge, inject an aliquot. (Reagent

was 2-(5-hydrazinocarbonyl-2-furyl)-5,6-dimethoxybenzothiazole which was synthesized as follows. Pass dry hydrogen chloride into a mixture of 12.6 g methyl 2-furoate, 4.5 g paraformaldehyde, and 3.4 g anhydrous zinc chloride in 50 mL dry chloroform for 3 h while holding the reaction temperature at 30°. After cooling pour the contents of the flask into 100 mL cold water, remove the chloroform layer, extract the aqueous layer with chloroform (cf Coll. Czech. Chem. Commun. 1960, 25, 1058). Combine the chloroform layers, neutralize, dry over anhydrous calcium chloride, evaporate, distil to give 5-chloromethyl furyl-2-carboxylic acid methyl ester (bp 108°/4 mm Hg). Reflux 10 g 5-chloromethyl furyl-2-carboxylic acid methyl ester and 25 g silver carbonate in 100 mL THF: water 70:30 for 5 h, filter through Celite, concentrate the filtrate under reduced pressure, chromatograph the product on silica gel with chloroform to give 5-hydroxymethyl furyl-2-carboxylic acid methyl ester as a light yellow oil. Add a solution of 2.9 g 5-hydroxymethyl furyl-2-carboxylic acid methyl ester in 30 mL dichloromethane to 12 g pyridinium chlorochromate in 100 mL, dichloromethane, stir at room temperature for 4 h, evaporate to dryness under reduced pressure, chromatograph on silica with dichloromethane to give 5-formyl furyl-2-carboxylic acid methyl ester as a light yellow powder. Add 10 mL concentrated nitric acid dropwise to 20 g 4-bromoveratrole in 60 mL acetic acid while keeping the temperature at 10-30° with occasional cooling, when the addition is complete pour the reaction mixture into ice-water. Collect the precipitate and dissolve it in 500 mL hot EtOH, add activated charcoal, filter, add 40 mL water to the filtrate to give 4,5-dimethoxy-2-nitrobromobenzene as a light yellow crystalline solid (mp 121-122°). Prepare sodium sulfide by melting together 5 g sodium sulfide nonahydrate and 700 mg sulfur, add this mixture to 5 g 4,5-dimethoxy-2-nitrobromobenzene in 50 mL EtOH:water 95:5, reflux for 30 min, pour into ice-water, collect the solid, recrystallize from dichloromethane to give di(4,5-dimethoxy-2- nitrophenyl)sulfide as yellow needles (mp 231-232°). Add 15 mL concentrated HCl dropwise to 1.5 g di(4,5-dimethoxy-2-nitrophenyl)sulfide and 4.5 g tin powder stirred at 40-50° in 150 mL EtOH, reflux for 1 h, cool to room temperature, filter, add 1.17 g 5-formyl furyl-2-carboxylic acid methyl ester to the filtrate, reflux for 1 h, cool, filter, chromatograph the solid on silica gel with dichloromethane, recrystallize from EtOH to give 5-(5',6'-dimethoxybenzothiazolyl)-N-furan-2-carboxylic acid methyl ester as a yellow powder (mp 192-202°). Add 2 mL hydrazine hydrate (Caution! Hydrazine hydrate is a carcinogen!) to 800 mg 5-(5',6'-dimethoxybenzothiazolyl)-N-furan-2-carboxylic acid methyl ester in 20 mL EtOH, reflux for 30 min, collect the solid, wash with MeOH, dry under vacuum over phosphorus pentoxide to give 2-(5-hydrazinocarbonyl-2-furyl)-5,6-dimethoxybenzothiazole as a light yellow solid (mp 226-228°).)

HPLC VARIABLES

Column: 250 × 4.6 5 μm Wakosil-II 5C18 HG
Mobile phase: Gradient. MeCN:water from 70:30 to 75:25 over 25 min, to 100:0 over 15 min, maintain at 100:0.

SAMPLE
Matrix: cell suspensions

Sample preparation: Condition a 1 mL Bond Elut 5 μm ODS SPE cartridge with 2 mL diethyl ether, 2 mL MeOH, and 2 mL buffer. Condition a 1 mL 5 μm Bond Elut silica SPE cartridge with 2 mL MeOH:MeCN 15:85, with 2 mL acetone, and with 2 mL chloroform. Centrifuge at 4° at 12000 g for 10 min, acidify to pH 5.5 with 1% acetic acid, add to the ODS SPE cartridge, wash with 2 mL buffer, wash with 2 mL MeOH:buffer (pH 5.5), suck dry under vacuum for 2 min, wash with 2 mL petroleum ether, elute with 2 mL diethyl ether. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 20 μL MeOH, add 20 μL 1 mg/mL 9-anthroyldiazomethane in diethyl ether, heat at 37° for 6 h, evaporate to dryness under a stream of nitrogen, reconstitute with 200 μL chloroform, add to the silica SPE cartridge, wash with 3 mL chloroform, elute with 2 mL MeCN:MeOH 85:15. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 50 μL mobile phase, add 50 μL water, inject an aliquot. (Buffer was 0.0001% acetic acid adjusted to pH 5.5 with 1% NaOH. Synthesis of 9-anthryldiazomethane is as follows. Stir 10 g 9-anthraldehyde and 10 g 80% hydrazine hydrate in 150 mL EtOH at room temperature for 4 h, filter off the solid 9-anthraldehyde hydrazone and dry under vacuum. Dissolve 1 g 9-anthraldehyde hydrazone in 100 mL anhydrous ether, add 1 g activated manganese dioxide, add 500 μL saturated KOH in EtOH, stir for 3 h, filter off the manganese, evaporate the filtrate to give 9-anthryldiazomethane. Prepare activated manganese dioxide as follows. Stir a solution of 20 g potassium permanganate in 250 mL water at room temperature, add 10 g activated carbon (Nuchar C-190 or C-190N), stir for 16 h, filter (Buchner funnel), wash 4 times with 50 mL portions of water, dry in air, dry in an oven at 105-110° for 8-24 h (J.Org.Chem. 1970, 35, 3971).)

Matrix: enzyme incubations

Sample preparation: 2 mL Enzyme incubation + 2 mL MeOH, centrifuge. Remove the supernatant and add it to 2 mL 100 mM citric acid and 500 mg anhydrous sodium sulfate, extract twice with 5 mL portions of dichloromethane. Dry the extracts over anhydrous sodium sulfate and evaporate them to dryness under a stream of nitrogen, reconstitute with 100-200 μL 1.2 mg/mL p-bromophenacyl bromide in MeCN, add 0.5 μL diisopropylethylamine, let stand at room temperature for 1 h, inject an aliquot.

HPLC VARIABLES

Column: 250 × 4 μBondapak C18
Mobile phase: MeCN:water 50:50
Flow rate: 1.2
Detector: UV 254

CHROMATOGRAM

Retention time: 12
Limit of quantitation: <3 μg

OTHER SUBSTANCES

Extracted: dinoprostone, prostaglandin A2, prostaglandin B2, prostaglandin D2, 15-methylprostaglandin B2

KEY WORDS

derivatization

SAMPLE
Matrix: gastric mucosa
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 10 mL EtOH and 100 mL water. Homogenize gastric mucosa from three rats with 6 mL EtOH:50 mM pH 3.15 triethylammonium formate buffer 15:85 (cold), centrifuge at 300000 g for 15 min, resuspend the pellet in 3 mL EtOH:50 mM pH 3.15 triethylammonium formate buffer 15:85, centrifuge at 300000 g for 15 min. Combine the supernatants and add them to the SPE cartridge, wash with 50 mM pH 3.15 triethylammonium formate buffer 15:85, wash with 10 mL petroleum ether, elute with 10 mL methyl formate, store at -40°. Evaporate under helium, dissolve the residue in 100 μL diethyl ether with 2-3 drops MeOH, add 500 μL of a fresh solution of diazomethane, let stand in the dark at room temperature for 30 min, store in MeCN at -40°. (Prepare diazomethane from 1-methyl-3-nitro-1-nitrosoguanidine (Anal.Chem. 1973, 45, 2302).)

HPLC VARIABLES
Column: 150 × 4 5 μm Spherisorb ODS-2
Mobile phase: Gradient. A was 100 mM ammonium acetate adjusted to pH 3.5 with formic acid. B was MeCN:200 mM ammonium acetate buffer 2:1. A:B from 65:35 to 15:85 over 27 min.
Injection volume: 20

Detector: MS, Hewlett-Packard 5988A, thermospray, insertion probe 180-185°, SIM m/z 386

CHROMATOGRAM
Retention time: 24.8
Limit of detection: 230 pg

OTHER SUBSTANCES
Extracted: dinoprostone, prostaglandin D2, 6-keto-prostaglandin F1α

KEY WORDS
rat; SPE; derivatization; LC-MS

SAMPLE
Matrix: seminal fluid
Sample preparation: 1-5 μL Seminal fluid + 100 μL 5 μM IS in MeOH, mix, add 3 mL water to the supernatant, acidify to pH 3-4 with 100 mM HCl, extract with 7 mL ethyl acetate. Remove the ethyl acetate layer and evaporate it to dryness, reconstitute with MeOH. Evaporate to dryness in a clean tube, add 10 mg finely-powdered potassium bicarbonate:sodium sulfate 50:50, add 50 μL 0.4-1 mM 4-bromomethyl-7-acetoxycoumarin in acetone, add 50 μL 200 μM dibenzo-18-crown-6 in acetone, heat in the dark at 80° for 1 h, cool, inject a 20-40 μL aliquot. (Prepare 4-bromomethyl-7-acetoxycoumarin as follows. Reflux 50 g 7-hydroxy-4-methylcoumarin (β-methylumbelliferone) and 100 mL acetic anhydride for 1 h, cool, pour into 500 mL cold water, filter, dry the solid, recrystallize from EtOH to give 4-methyl-7-acetoxycoumarin. Reflux 10 g 4-methyl-7-acetoxycoumarin, 9 g N-bromosuccinimide, a little 2,2'-(azobis(2-methylpropionitrile) (α,α'-azobisisobutyronitrile, Eastman), and 100 mL carbon tetrachloride for 20 h, cool, evaporate under reduced

pressure to remove the solvent, wash the residue with water, filter, dry, recrystallize from ethyl acetate/cyclohexane to give 4-bromomethyl-7-acetoxycoumarin (mp 184-185°) (J. Chromatogr. 1982, 234, 121).)

HPLC VARIABLES

Column: 250 × 4 5 μm LiChrosorb RP-18
Mobile phase: Gradient. MeCN:water from 30:70 to 90:10 over 99 min (Concave 1 curve (64 min) using a Japan Spectroscopic Model GP-A30 solvent programmer).
Column temperature: 50
Flow rate: 1
Injection volume: 20-40
Detector: F ex 365 em 460 following post-column reaction. The effluent from the column mixed with 100 mM NaOH pumped at 0.4 mL/min and the mixture flowed through a 10 m × 0.5 mm ID stainless steel coil at 50° to the detector. (The prostaglandins are chromatographed as the coumarin derivatives then hydrolyzed in the post-column reactor to fluorescent 7-hydroxy-4-hydroxymethylcoumarin.)

CHROMATOGRAM

Retention time: 43
Internal standard: 16-methylprostaglandin $F_{1\alpha}$ (49)
Limit of detection: 10 fmole

OTHER SUBSTANCES

Extracted: dinoprostone, alprostadil

KEY WORDS

derivatization; post-column reaction

SAMPLE

Matrix: seminal fluid
Sample preparation: Mix 50 μL seminal fluid with 500 μL dilute HCl (pH 3.0) and 500 μL ethyl acetate, vortex. Remove the organic layer and evaporate it to dryness under reduced pressure, reconstitute the residue in 200 μL water, add to a Toyopak-ODS SPE cartridge, elute with 200 μL MeOH. 100 μL Eluate + 100 μL 100 mM 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide in water + 100 μL 1% aqueous pyridine + 100 μL 15 mM 2-(5-hydrazinocarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran in DMF, heat at 37° for 1 h, inject a 10 μL aliquot. (Synthesis of 2-(5-hydrazinocarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran is as follows. Slowly add 153 g freshly distilled phosphorus oxychloride to 73 g anhydrous DMF with stirring at room temperature, add 125 g sesamol in portions over 4 h, stir at room temperature overnight, pour into ice water, filter. Dissolve the solid in ether and wash with water, dry over anhydrous magnesium sulfate, evaporate to dryness, recrystallize from EtOH to give 2-hydroxy-4,5-methylenedioxybenzaldehyde as slightly-yellow crystals (mp 125-126°). Pass HCl gas into 15.6 g ethyl 2-thiophenecarboxylate, 4.5 g paraformaldehyde, and 3.4 g zinc chloride in 50 mL chloroform with stirring at 30° over 4 h. Pour into ice water and extract with 50 mL chloroform. Wash the chloroform layer 3 times with water, wash twice with aqueous sodium bicarbonate solution, dry over anhydrous sodium sulfate, evaporate to remove the solvent, distil at 86-94°/0.15 mm Hg to yield ethyl 5-chloromethyl thiophene-2-carboxylate as a colorless oil. Heat 3 g 2-hydroxy-4,5-methylenedioxybenzaldehyde, 3.68 g ethyl 5-chloromethyl thiophene-2-carboxylate, and 2.49 g potassium carbonate in 100 mL anhydrous DMF at 110° for 16 h, filter, evaporate the filtrate to dryness under reduced pressure, chromatograph the residue on silica gel with chloroform, recrystallize from chloroform:hexane 25:75 to give 2-(5-ethoxycarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran as yellow crystals (mp

124-126°). Heat 1.5 g 2-(5-ethoxycarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran and 1.2 g hydrazine hydrate in 15 mL DMF at 70° for 1 h (Caution! Hydrazine hydrate is a carcinogen and explodes on distillation in air!), add 10 g hydrazine hydrate, add 20 mL water, filter. Wash the solid with MeOH and dry it under reduced pressure to give 2-(5-hydrazinocarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran as a yellow powder (mp 262-263°).)

HPLC VARIABLES

SAMPLE

Matrix: solutions
Sample preparation: Condition a Sep-Pak silica SPE cartridge with 5 mL THF:water 95:5, 5 mL MeCN, and 5 mL dichloromethane. Prepare a solution in EtOH, add a 500 ng/mL solution of panacyl bromide in THF:MeCN 20:80, for each 1 mL of reaction mixture add 3 μL triethylamine, heat at 37° for 3 h, add 0.5 mL of the reaction mixture to the SPE cartridge, wash with 10 mL dichloromethane, elute with 3 mL MeCN:MeOH 85:15, evaporate the eluate to dryness under a stream of nitrogen, reconstitute in MeCN, inject an aliquot. (Synthesize panacyl bromide (p-(9-anthroyloxy)phenacyl bromide) as follows. Add 3.04 g benzyltrimethylammonium dichloroiodate to a solution of 500 mg 4'-hydroxyacetophenone in 50 mL dichloroethane and 20 mL MeOH, reflux for 10 h, remove the solvent by distillation, add 20 mL 5% sodium bisulfite to the residue, extract four times with 40 mL portions of ether, dry over anhydrous magnesium sulfate, evaporate to dryness under reduced pressure to give p-hydroxyphenacyl chloride (mp 151-152°) (Synthesis 1988, 545). Purify p-hydroxyphenacyl chloride by suspending 100 g in 1 L boiling toluene, filter, cool to obtain white crystals of p-hydroxyphenacyl chloride. Repeat this process a number of times to obtain more pure product. Reflux 10 g 9-anthracenecarboxylic acid in 150 mL redistilled thionyl chloride for 2 h, evaporate to dryness under reduced pressure at 30°, dissolve the residue in 150 mL dry toluene containing 11.5 g p-hydroxyphenacyl chloride, reflux for 2 h, evaporate to dryness under reduced pressure, recrystallize from 200 mL hot MeCN to give p-(9-anthroyloxy)phenacyl chloride as deep yellow crystals (mp 159.8-161.6°). Dissolve 2.5 g p-(9-anthroyloxy)phenacyl chloride in 25 mL THF:MeCN 20:80, add 8 g anhydrous LiBr, reflux briefly, cool to room temperature, filter, wash the solid with water to obtain p-(9-anthroyloxy)phenacyl bromide as deep yellow crystals (mp 173.3-173.6°) (Anal.Biochem. 1987, 165, 220).)

HPLC VARIABLES
Column: 300 × 3.9 fatty acid analysis column (Waters?)
Mobile phase: Gradient. MeCN:water:acetic acid from 56:44:0.1 to 65:35:0.1 over 15 min
Flow rate: 1.2
Detector: F ex 249 em 413 (cut-off filter) or UV 254

SAMPLE
Matrix: solutions
Sample preparation: Mix 100 μL of a 0.01-10 μg/mL solution in MeOH with 100 μL 1 mg/mL 1-pyrenyldiazomethane in ethyl acetate, let stand at room temperature for 1.5 h, inject a 5 μL aliquot. (Synthesis of 1-pyrenyldiazomethane is as follows. Suspend 5 g 1-pyrenecarboxaldehyde in 80 mL EtOH, add 3.4 g hydrazine monohydrate (Caution! Hydrazine monohydrate is a carcinogen!), stir at room temperature for 3 h, filter off the product and wash it with 50 mL cold EtOH, recrystallize from EtOH to obtain 1-pyrenecarboxaldehyde hydrazone as yellow crystals (mp 186-194° d). Add 6.55 g activated manganese dioxide to 2 g 1-pyrenecarboxaldehyde hydrazone in 300 mL diethyl ether, sonicate at room temperature for about 80 min (monitor by HPLC), filter, wash the solid with a little ether, evaporate the filtrate to obtain 1-pyrenyldiazomethane as red crystals. Prepare activated manganese dioxide as follows. Stir a solution of 20 g potassium permanganate in 250 mL water at room temperature, add 10 g activated carbon (Nuchar C-190 or C-190N), stir for 16 h, filter (Buchner funnel), wash 4 times with 50 mL portions of water, dry in air, dry in an oven at 105-110° for 8-24 h (J.Org.Chem. 1970, 35, 3971). 1-Pyrenyldiazomethane is also available from Molecular Probes, Eugene OR.)

SAMPLE

Matrix: solutions

Sample preparation: Mix sample with 400 μL 5 mM DBD-PZ in MeCN containing 70 mM diethylphosphorocyanidate, react for 6 h, inject a 1 μL aliquot. (Synthesis of 4-(N,N-dimethylaminosulfonyl)-7-N-piperazino-2,1,3-benzoxadiazole (DBD-PZ) is as follows. Dissolve 0.5 g magnesium sulfate heptahydrate and 6 g NaOH in 60 mL water, throughout the reaction keep the flask at about 20° with cold water cooling, add 15 mL 30% hydrogen peroxide, add 75 mL MeOH, add 12.1 g powdered benzoyl peroxide in one go, stir for 10 min, pour into 150 mL 20% sulfuric acid, extract three times with 50 mL portions of chloroform, determine peroxybenzoic acid concentration by iodometric titration (Tetrahedron 1967, 23, 3327). Slowly add 110 mL 1 M peroxybenzoic acid in chloroform to 7 g 2,6-difluoroaniline dissolved in 100 mL chloroform, stir at room temperature, when reaction is complete (iodometric titration) wash with 2% sodium thiosulfate, wash with 5% sodium carbonate, wash with water, dry over anhydrous sodium sulfate, evaporate to dryness under reduced pressure, recrystallize 2,6-difluoronitrosobenzene form EtOH (mp 108.5-109.5). Stir 8.5 g 2,6-difluoronitrosobenzene in 85 mL DMSO at room temperature and add a solution of 3.91 g sodium azide in 85 mL DMSO dropwise, let stand for about 1 h, add to a large volume of water, extract with ether, dry the extracts over anhydrous sodium sulfate, evaporate to dryness under reduced pressure and distil to give 4-fluoro-2,1,3-benzoxadiazole as a colorless oil (bp 83°/12 mm Hg) (J.Chem.Soc.(C) 1970, 1433). Add 11 mL chlorosulfonic acid dropwise to 3 g 4-fluoro-2,1,3-benzoxadiazole in 10 mL chloroform at 0-10° (use a calcium chloride drying tube), stir at room temperature for 1 h, reflux for 2 h, cool, slowly pour into ice water, remove the organic layer, extract the aqueous layer with chloroform, combine the organic layer, wash, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, take up the residue in 5 mL benzene

(Caution! Benzene is a carcinogen!), chromatograph on a 150 × 30 column of silica gel (100-200 mesh Kanto Chemical) with n-hexane:benzene 50:50, evaporate the appropriate fractions to give 4-(chlorosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (CBD-F) as pale yellow needles (mp 64-66°) (Anal. Chem. 1984. 56, 2461). Stir 0.76 g CBD-F in 70 mL MeCN at 0-10° and add 1 g dimethylamine hydrochloride in 10 mL 100 mM pH 10 borax dropwise, adjust pH to 5 with 1 M HCl, concentrate to about 10 mL under reduced pressure, extract three times with 200 mL portions of diethyl ether, wash with water, dry over anhydrous magnesium sulfate, evaporate under reduced pressure, chromatograph on a 500 × 20 column of silica gel with chloroform, isolate the appropriate fraction and re-chromatograph on the same column with ethyl acetate:benzene 1:2 to give 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole (DBD-F) as white needles (mp 124-125°) (yield = 1% !). On a Merck no. 5714 $60F_{254}$ tlc plate eluted with chloroform DBD-F has Rf 0.32 and lies between two other reaction products (Analyst 1989, 114, 413). It is also reported that DBD-F can be purchased from Tokyo Kasei (TCI America, Portland OR). Add 123 mg 4-(N,N-dimethylaminosulfonyl)-7-fluoro-2,1,3-benzoxadiazole in 20 mL MeCN dropwise to 129 mg piperazine in 20 mL MeCN at room temperature, stir for 30 min, evaporate under reduced pressure, dissolve residue in 50 mL 5% HCl, wash three times with 20 mL ethyl acetate, discard ethyl acetate extracts, adjust pH of aqueous solution to 13-14 with 5% NaOH, extract five times with 50 mL ethyl acetate, combine extracts, wash with 20 mL water, dry over anhydrous sodium sulfate, evaporate under vacuum to give 4-(N,N-dimethylaminosulfonyl)-7-N-piperazino-2,1,3-benzoxadiazole as orange crystals (mp 121-2°).)

SAMPLE

Matrix: solutions

Sample preparation: Mix 100 μL of a 100 μM solution of the carboxylic acid in water with 100 μL 100 mM 1-(3-methylaminopropyl)-3-ethylcarbodiimide in water, 100 μL 1% pyridine in water, and 100 μL 15 mM 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran in DMF, heat at 37° for 1 h, inject a 10 μL aliquot. (Synthesis of 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran is as follows. Add ethyl oxalyl chloride in ether to a solution of diazomethane in ether at 0° to give ethyl diazopyruvate (Caution! Diazo compounds are explosive and toxic!) (cf. Buehler,C.A.; Pearson,D.E. Survey of Organic Syntheses, Wiley, New York, 1970, p. 179). Heat 100 mg ethyl diazopyruvate, a few mg copper(II) acetylacetonate, and 400 μL chloroacetonitrile

in benzene at 60° overnight (Caution! Benzene is a carcinogen!), cool, add to sodium bicarbonate solution, extract with ether, dry the organic layer, evaporate, chromatograph on silica with petroleum ether:ethyl acetate 90:10, distil the product at 90°/12 mm Hg to give ethyl 2-chloromethyl-5-oxazolecarboxylate as an oil in 18% yield (US Patent 4 603 209 (July 29, 1986)). Add 2 mL phosphorus oxychloride dropwise to a solution of 2 g sesamol in 3 mL DMF at 0°, heat on a steam bath with frequent shaking for 1 h, cool in ice, add 50 mL saturated sodium acetate solution, heat on a steam bath for 30 min, cool, filter, recrystallize the solid from EtOH to give 2-hydroxy-4,5-methylenedioxybenzaldehyde as colorless needles (mp 125-126°) (Bull. Chem. Soc. Jpn. 1962, 35, 1321). Stir 1.4 g ethyl 2-chloromethyl-5-oxazolecarboxylate, 1.5 g 2-hydroxy-4,5-methylenedioxybenzaldehyde, 2 g potassium carbonate, and 50 mL anhydrous DMF at 120° overnight, cool, filter. Evaporate the filtrate to dryness under reduced pressure to give 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran as a colorless crystalline powder (mp 186°) (yield 39%). Reflux 260 mg 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran, 100 mg KOH, 20 mL EtOH, and 30 mL water for 2 h, concentrate under reduced pressure, dissolve the residue in 100 mL water, wash with ethyl acetate, treat the aqueous layer with activated carbon, acidify the aqueous layer to pH 2 with 2 M HCl. Filter the precipitate and recrystallize it from EtOH to give 2-(2-oxazole-5-carboxylic acid)-5,6-methylenedioxybenzofuran as a colorless crystalline powder (mp 294-295°). Reflux 150 mg 2-(2-oxazole-5-carboxylic acid)-5,6-methylenedioxybenzofuran and 5 mL thionyl chloride for 2 h, pour the reaction mixture into 300 mL petroleum ether. Filter the precipitate and dry it over KOH to give 2-(5-chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran (mp 290°) (Anal. Sci. 1989, 5, 525). 2-(5-Chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran is also available from Dojindo, Kumamoto, Japan. Add 2 mL hydrazine hydrate to a stirred solution of 2 g 2-(5-chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran in 20 mL anhydrous DMF (Caution! Hydrazine hydrate is a carcinogen!), stir at room temperature for 4 h, add 20 mL benzene (Caution! Benzene is a carcinogen!). Collect the precipitate and wash it with water and MeCN, recrystallize from DMF:benzene 50:50 to give 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran as an off-white crystalline solid (mp >220° d).)

Saito,M.; Chiyoda,Y.; Ushijima,T.; Sasamoto,K.; Ohkura,Y. 2-(5-Hydrazinocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran as a fluorescence derivatization reagent for carboxylic acids in high-performance liquid chromatography, *Anal.Sci.*, **1994**, *10*, 679–681.

SAMPLE

Matrix: solutions
Sample preparation: 100 μL 10 mM compound in MeOH + 100 μL 1% pyridine in MeOH + 100 μL 15 mM reagent in DMSO, 100 μL 100 mM 1-ethyl-3-(3-dimethylaminopro-

pyl)carbodiimide in MeOH, heat at 37° for 1 h, inject a 10 μL aliquot. (Reagent was 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-dimethoxybenzothiazole which was synthesized as follows. Add 10 mL concentrated nitric acid dropwise to 20 g 4-bromoveratrole in 60 mL acetic acid while keeping the temperature at 10-30° with occasional cooling, when the addition is complete pour the reaction mixture into ice-water. Collect the precipitate and dissolve it in 500 mL hot EtOH, add activated charcoal, filter, add 40 mL water to the filtrate to give 4,5-dimethoxy-2-nitrobromobenzene as a light yellow crystalline solid (mp 121-122°). Prepare sodium sulfide by melting together 5 g sodium sulfide nonahydrate and 700 mg sulfur, add this mixture to 5 g 4,5-dimethoxy-2-nitrobromobenzene in 50 mL EtOH:water 95:5, reflux for 30 min, pour into ice-water, collect the solid, recrystallize from dichloromethane to give di(4,5-dimethoxy-2-nitrophenyl)sulfide as yellow needles (mp 231-232°) (Anal. Sci. 1995, 11, 103). Add ethyl oxalyl chloride in ether to a solution of diazomethane in ether at 0° to give ethyl diazopyruvate (Caution! Diazo compounds are explosive and toxic!) (cf. Buehler,C.A.; Pearson,D.E. Survey of Organic Syntheses, Wiley, New York, 1970, p. 179). Heat 100 mg ethyl diazopyruvate, a few mg copper(II) acetylacetonate, and 400 μL chloroacetonitrile in benzene at 60° overnight (Caution! Benzene is a carcinogen!), cool, add to sodium bicarbonate solution, extract with ether, dry the organic layer, evaporate, chromatograph on silica with petroleum ether:ethyl acetate 90:10, distil the product at 90°/12 mm Hg to give ethyl 2-chloromethyl-5-oxazolecarboxylate as an oil in 18% yield (US Patent 4 603 209 (July 29, 1986)). Reflux 5.0 g ethyl 2-chloromethyl-5-oxazolecarboxylate and 11.7 g NaI in 80 mL acetone for 1 h, partition the reaction mixture between ethyl acetate and water. Wash the organic layer with water and dry it over anhydrous sodium sulfate, evaporate to give ethyl 2-iodomethyl-5-oxazolecarboxylate as a reddish-brown oil. Reflux 7.4 g ethyl 2-iodomethyl-5-oxazolecarboxylate and 21.5 g silver carbonate in 100 mL THF:water 70:30 for 4 h, filter through Celite, evaporate under reduced pressure, chromatograph on silica gel using benzene:ethyl acetate 95:5 to give ethyl 2-hydroxymethyl-5-oxazolecarboxylate (mp 60.5-62°). Stir 2.04 g oxalyl chloride in 15 mL dichloromethane at -50° under nitrogen, add 1.54 g DMSO in 3 mL dichloromethane, after 5 min add 1.4 g ethyl 2-hydroxymethyl-5-oxazolecarboxylate in 6 mL dichloromethane, stir for 15 min at -50°, add 5.7 mL triethylamine, allow to warm to room temperature, dilute with dichloromethane, wash with water, dry over anhydrous sodium sulfate, concentrate under reduced pressure, chromatograph on silica gel using benzene:ethyl acetate 95:5 to give ethyl 2-carboxaldehyde-5-oxazolecarboxylate (mp 71.5-73°). Add 11.3 mL concentrated HCl to 750 mg di(4,5-dimethoxy-2-nitrophenyl)sulfide stirred in 100 mL EtOH, add 3.3 g tin powder at 40-45°, stir for 1 h at 40-45°, dilute with 100 mL water, pass hydrogen sulfide gas through this solution (Caution! Hydrogen sulfide is highly toxic!), filter, concentrate the filtrate under reduced pressure to give 4,5-dimethoxy-2-aminothiophenol. Take up this compound in 30 mL EtOH:acetic acid 2:1 and add 750 mg ethyl 2-carboxaldehyde-5-oxazolecarboxylate, reflux for 1 h, collect the precipitate and recrystallize it from EtOH to give 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-dimethoxybenzothiazole as yellow needles (mp 200-201°). Add 381 mg 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-dimethoxybenzothiazole to 20 mL EtOH containing 3 mL DMF and 5 mL hydrazine hydrate, reflux for 1 h, collect the precipitate and wash it with EtOH, dry under vacuum to give 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-dimethoxybenzothiazole as a yellow powder (mp 255.5-280° (d)).)

SAMPLE

Matrix: blood

Sample preparation: 10 µL Serum + 44 µL MeOH + 1 µL pyridine, sonicate for 5 min, add 25 µL 100 mM reagent in DMF, add 20 µL 400 mM 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide in MeOH, let stand at 25° for 2 h, centrifuge, inject an aliquot. (Reagent

was 2-(5-hydrazinocarbonyl-2-furyl)-5,6-dimethoxybenzothiazole which was synthesized as follows. Pass dry hydrogen chloride into a mixture of 12.6 g methyl 2-furoate, 4.5 g paraformaldehyde, and 3.4 g anhydrous zinc chloride in 50 mL dry chloroform for 3 h while holding the reaction temperature at 30°. After cooling pour the contents of the flask into 100 mL cold water, remove the chloroform layer, extract the aqueous layer with chloroform (cf Coll. Czech. Chem. Commun. 1960, 25, 1058). Combine the chloroform layers, neutralize, dry over anhydrous calcium chloride, evaporate, distil to give 5-chloromethyl furyl-2-carboxylic acid methyl ester (bp 108°/4 mm Hg). Reflux 10 g 5-chloromethyl furyl-2-carboxylic acid methyl ester and 25 g silver carbonate in 100 mL THF: water 70:30 for 5 h, filter through Celite, concentrate the filtrate under reduced pressure, chromatograph the product on silica gel with chloroform to give 5-hydroxymethyl furyl-2-carboxylic acid methyl ester as a light yellow oil. Add a solution of 2.9 g 5-hydroxymethyl furyl-2-carboxylic acid methyl ester in 30 mL dichloromethane to 12 g pyridinium chlorochromate in 100 mL, dichloromethane, stir at room temperature for 4 h, evaporate to dryness under reduced pressure, chromatograph on silica with dichloromethane to give 5-formyl furyl-2-carboxylic acid methyl ester as a light yellow powder. Add 10 mL concentrated nitric acid dropwise to 20 g 4-bromoveratrole in 60 mL acetic acid while keeping the temperature at 10-30° with occasional cooling, when the addition is complete pour the reaction mixture into ice-water. Collect the precipitate and dissolve it in 500 mL hot EtOH, add activated charcoal, filter, add 40 mL water to the filtrate to give 4,5-dimethoxy-2-nitrobromobenzene as a light yellow crystalline solid (mp 121-122°). Prepare sodium sulfide by melting together 5 g sodium sulfide nonahydrate and 700 mg sulfur, add this mixture to 5 g 4,5-dimethoxy-2-nitrobromobenzene in 50 mL EtOH:water 95:5, reflux for 30 min, pour into ice-water, collect the solid, recrystallize from dichloromethane to give di(4,5-dimethoxy-2- nitrophenyl)sulfide as yellow needles (mp 231-232°). Add 15 mL concentrated HCl dropwise to 1.5 g di(4,5-dimethoxy-2-nitrophenyl)sulfide and 4.5 g tin powder stirred at 40-50° in 150 mL EtOH, reflux for 1 h, cool to room temperature, filter, add 1.17 g 5-formyl furyl-2-carboxylic acid methyl ester to the filtrate, reflux for 1 h, cool, filter, chromatograph the solid on silica gel with dichloromethane, recrystallize from EtOH to give 5-(5',6'-dimethoxybenzothiazolyl)-N-furan-2-carboxylic acid methyl ester as a yellow powder (mp 192-202°). Add 2 mL hydrazine hydrate (Caution! Hydrazine hydrate is a carcinogen!) to 800 mg 5-(5',6'-dimethoxybenzothiazolyl)-N-furan-2-carboxylic acid methyl ester in 20 mL EtOH, reflux for 30 min, collect the solid, wash with MeOH, dry under vacuum over phosphorus pentoxide to give 2-(5-hydrazinocarbonyl-2-furyl)-5,6-dimethoxybenzothiazole as a light yellow solid (mp 226-228°).)

SAMPLE

Matrix: enzyme incubations

Sample preparation: Condition a Sep-Pak silica SPE cartridge with dichloromethane. Centrifuge 1 mL enzyme incubation at 15000 g for 1 min, add 50 ng IS to the supernatant, add 1.5 mL cold (-20°) acetone, add 1.5 mL light petroleum, mix, discard the light petroleum layer, repeat the light petroleum wash. Adjust the pH of the aqueous phase to 3.5 with formic acid, extract twice with 1 mL portions of ethyl acetate. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 45°, reconstitute the residue in 1 mL 10 μg/mL panacyl bromide in MeCN:THF 80:20, add 1 μL triethylamine, mix, let stand at room temperature for 2 h, add to the SPE cartridge, wash with 20 mL dichloromethane, elute with 2 mL MeCN:MeOH 85:15. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 200 μL MeCN, inject a 20 μL aliquot. (Synthesize panacyl bromide (p-(9-anthroyloxy)phenacyl bromide) as follows. Add 3.04 g benzyltrimethylammonium dichloroiodate to a solution of 500 mg 4'-hydroxyacetophenone in 50 mL dichloroethane and 20 mL MeOH, reflux for 10 h, remove the solvent by distillation, add 20 mL 5% sodium bisulfite to the residue, extract four times with 40 mL portions of ether, dry over anhydrous magnesium sulfate, evaporate to dryness under reduced pressure to give p-hydroxyphenacyl chloride (mp 151-152°) (Synthesis 1988, 545). Purify p-hydroxyphenacyl chloride by suspending 100 g in 1 L boiling toluene, filter, cool to obtain white crystals of p-hydroxyphenacyl chloride. Repeat this process a number of times to obtain more pure product. Reflux 10 g 9-anthracenecarboxylic acid in 150 mL redistilled thionyl chloride for 2 h, evaporate to dryness under reduced pressure at 30°, dissolve the residue in 150 mL dry toluene containing 11.5 g p-hydroxyphenacyl chloride, reflux for 2 h, evaporate to dryness under reduced pressure, recrystallize from 200 mL hot MeCN to give p-(9-anthroyloxy)phenacyl chloride as deep yellow crystals (mp 159.8-161.6°). Dissolve 2.5 g p-(9-anthroyloxy)phenacyl chloride in 25 mL THF:MeCN 20:80, add 8 g anhydrous LiBr, reflux briefly, cool to room temperature, filter, wash the solid

with water to obtain p-(9-anthroyloxy)phenacyl bromide as deep yellow crystals (mp 173.3-173.6°) (Anal. Biochem. 1987, 165, 220).)

Matrix: gastric mucosa

Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 10 mL EtOH and 100 mL water. Homogenize gastric mucosa from three rats with 6 mL EtOH:50 mM pH 3.15 triethylammonium formate buffer 15:85 (cold), centrifuge at 300000 g for 15 min, resuspend the pellet in 3 mL EtOH:50 mM pH 3.15 triethylammonium formate buffer 15:85, centrifuge at 300000 g for 15 min. Combine the supernatants and add them to the SPE cartridge, wash with 50 mM pH 3.15 triethylammonium formate buffer 15:85, wash with 10 mL petroleum ether, elute with 10 mL methyl formate, store at -40°. Evaporate under helium, dissolve the residue in 100 μL diethyl ether with 2-3 drops MeOH, add 500 μL of a fresh solution of diazomethane, let stand in the dark at room temperature for 30 min, store in MeCN at -40°. (Prepare diazomethane from 1-methyl-3-nitro-1-nitrosoguanidine (Anal.Chem. 1973, 45, 2302).)

HPLC VARIABLES

Column: 150 × 4 5 μm Spherisorb ODS-2

Mobile phase: Gradient. A was 100 mM ammonium acetate adjusted to pH 3.5 with formic acid. B was MeCN:200 mM ammonium acetate buffer 2:1. A:B from 65:35 to 15:85 over 27 min.

Injection volume: 20

Detector: MS, Hewlett-Packard 5988A, thermospray, insertion probe 180-185°, SIM m/z 384

CHROMATOGRAM

Retention time: 26.7

Limit of detection: 110 pg

OTHER SUBSTANCES

Extracted: dinoprost, prostaglandin D2, 6-keto-prostaglandin F1α

KEY WORDS

rat; SPE; derivatization; LC-MS

REFERENCE

Abián,J.; Bulbena,O.; Gelpí,E. Thermospray liquid chromatography/mass spectrometry of prostaglandin methyl ester derivatives: application to the determination of prostaglandins E_2 and D_2 in rat gastric mucosa, *Biomed.Environ.Mass.Spectrom.*, **1988**, *16*, 215–219.

SAMPLE

Matrix: seminal fluid

Sample preparation: 1-5 μL Seminal fluid + 100 μL 5 μM IS in MeOH, mix, add 3 mL water to the supernatant, acidify to pH 3-4 with 100 mM HCl, extract with 7 mL ethyl acetate. Remove the ethyl acetate layer and evaporate it to dryness, reconstitute with MeOH. Evaporate to dryness in a clean tube, add 10 mg finely-powdered potassium bicarbonate:sodium sulfate 50:50, add 50 μL 0.4-1 mM 4-bromomethyl-7-acetoxycoumarin in acetone, add 50 μL 200 μM dibenzo-18-crown-6 in acetone, heat in the dark at 80° for 1 h, cool, inject a 20-40 μL aliquot. (Prepare 4-bromomethyl-7-acetoxycoumarin as follows. Reflux 50 g 7-hydroxy-4-methylcoumarin (β-methylumbelliferone) and 100 mL acetic anhydride for 1 h, cool, pour into 500 mL cold water, filter, dry the solid, recrystallize from EtOH to give 4-methyl-7-acetoxycoumarin. Reflux 10 g 4-methyl-7-acetoxycoumarin, 9 g N-bromosuccinimide, a little 2,2'-(azobis(2-methylpropionitrile) (α,α'-azobisisobutyronitrile, Eastman), and 100 mL carbon tetrachloride for 20 h, cool, evaporate under reduced pressure to remove the solvent, wash the residue with water, filter, dry, recrystallize from ethyl acetate/cyclohexane to give 4-bromomethyl-7-acetoxycoumarin (mp 184-185°) (J. Chromatogr. 1982, 234, 121).)

HPLC VARIABLES

Column: 250 × 4 5 μm LiChrosorb RP-18

Mobile phase: Gradient. MeCN:water from 30:70 to 90:10 over 99 min (Concave 1 curve (64 min) using a Japan Spectroscopic Model GP-A30 solvent programmer).

Column temperature: 50
Flow rate: 1
Injection volume: 20-40
Detector: F ex 365 em 460 following post-column reaction. The effluent from the column mixed with 100 mM NaOH pumped at 0.4 mL/min and the mixture flowed through a 10 m × 0.5 mm ID stainless steel coil at 50° to the detector. (The prostaglandins are chromatographed as the coumarin derivatives then hydrolyzed in the post-column reactor to fluorescent 7-hydroxy-4-hydroxymethylcoumarin.)

CHROMATOGRAM
Retention time: 46
Internal standard: 16-methylprostaglandin $F_{1\alpha}$ (49)
Limit of detection: 10 fmole

OTHER SUBSTANCES
Extracted: dinoprost, alprostadil

KEY WORDS
derivatization; post-column reaction

REFERENCE

SAMPLE
Matrix: seminal fluid
Sample preparation: Condition a Sep-Pak C18 SPE cartridge with 20 mL EtOH and 20 mL water. Dilute seminal fluid to 1 mL, adjust to pH 3.5 with aqueous formic acid, centrifuge, add the supernatant to the SPE cartridge, wash with 20 mL EtOH:water 15:85, wash with 20 mL water, remove excess water mechanically, wash with 20 mL hexane, elute with 4 mL methyl formate. Dry the eluate under a stream of nitrogen, add 10-20 μL reagent, vortex for 1 min, let stand at room temperature for 8 min, add 90-180 μL water, extract with an equal volume of ethyl acetate, centrifuge at 2000 g for 3 min, evaporate the organic layer to dryness under a stream of nitrogen, reconstitute, inject an aliquot (J. Chromatogr. 1985, 349, 431). (Prepare the reagent by stirring 100 mg pyridinium dichromate in 50 mL MeCN at room temperature for 1 h, centrifuge, use the supernatant (5 mM; 1.9 mg/mL), store at 5°, discard after 2 days (J. Chromatogr. 1983, 282, 435).)

HPLC VARIABLES
Column: 220 × 2.1 5 μm Spheri-5 C18
Mobile phase: Gradient. MeCN:0.5 mM formic acid 30:70 for 4.5 min, to 40:60 (step gradient).
Flow rate: 0.4
Injection volume: 1
Detector: UV 229

CHROMATOGRAM
Retention time: 9.2

OTHER SUBSTANCES
Extracted: alprostadil, 19-hydroxyprostaglandin E_1, 19-hydroxyprostaglandin E_2, oxoprostaglandin E_1, oxoprostaglandin E_2

KEY WORDS
derivatization; SPE

SAMPLE

Matrix: seminal fluid

Sample preparation: Mix 50 μL seminal fluid with 500 μL dilute HCl (pH 3.0) and 500 μL ethyl acetate, vortex. Remove the organic layer and evaporate it to dryness under reduced pressure, reconstitute the residue in 200 μL water, add to a Toyopak-ODS SPE cartridge, elute with 200 μL MeOH. 100 μL Eluate + 100 μL 100 mM 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide in water + 100 μL 1% aqueous pyridine + 100 μL 15 mM 2-(5-hydrazinocarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran in DMF, heat at 37° for 1 h, inject a 10 μL aliquot. (Synthesis of 2-(5-hydrazinocarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran is as follows. Slowly add 153 g freshly distilled phosphorus oxychloride to 73 g anhydrous DMF with stirring at room temperature, add 125 g sesamol in portions over 4 h, stir at room temperature overnight, pour into ice water, filter. Dissolve the solid in ether and wash with water, dry over anhydrous magnesium sulfate, evaporate to dryness, recrystallize from EtOH to give 2-hydroxy-4,5-methylenedioxybenzaldehyde as slightly-yellow crystals (mp 125-126°). Pass HCl gas into 15.6 g ethyl 2-thiophenecarboxylate, 4.5 g paraformaldehyde, and 3.4 g zinc chloride in 50 mL chloroform with stirring at 30° over 4 h. Pour into ice water and extract with 50 mL chloroform. Wash the chloroform layer 3 times with water, wash twice with aqueous sodium bicarbonate solution, dry over anhydrous sodium sulfate, evaporate to remove the solvent, distil at 86-94°/0.15 mm Hg to yield ethyl 5-chloromethyl thiophene-2-carboxylate as a colorless oil. Heat 3 g 2-hydroxy-4,5-methylenedioxybenzaldehyde, 3.68 g ethyl 5-chloromethyl thiophene-2-carboxylate, and 2.49 g potassium carbonate in 100 mL anhydrous DMF at 110° for 16 h, filter, evaporate the filtrate to dryness under reduced pressure, chromatograph the residue on silica gel with chloroform, recrystallize from chloroform:hexane 25:75 to give 2-(5-ethoxycarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran as yellow crystals (mp 124-126°). Heat 1.5 g 2-(5-ethoxycarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran and 1.2 g hydrazine hydrate in 15 mL DMF at 70° for 1 h (Caution! Hydrazine hydrate is a carcinogen and explodes on distillation in air!), add 10 g hydrazine hydrate, add 20 mL water, filter. Wash the solid with MeOH and dry it under reduced pressure to give 2-(5-hydrazinocarbonyl-2-thienyl)-5,6-methylenedioxybenzofuran as a yellow powder (mp 262-263°).)

HPLC VARIABLES

Column: 250 × 4 5 μm Wakosil ODS-II 5C18 HG

SAMPLE

Matrix: solutions

Sample preparation: Condition a Sep-Pak silica SPE cartridge with 5 mL THF:water 95:5, 5 mL MeCN, and 5 mL dichloromethane. Prepare a solution in EtOH, add a 500 ng/mL solution of panacyl bromide in THF:MeCN 20:80, for each 1 mL of reaction mixture add 3 μL triethylamine, heat at 37° for 3 h, add 0.5 mL of the reaction mixture to the SPE cartridge, wash with 10 mL dichloromethane, elute with 3 mL MeCN:MeOH 85:15, evaporate the eluate to dryness under a stream of nitrogen, reconstitute in MeCN, inject an aliquot. (Synthesize panacyl bromide (p-(9-anthroyloxy)phenacyl bromide) as follows. Add 3.04 g benzyltrimethylammonium dichloroiodate to a solution of 500 mg 4'-hydroxyacetophenone in 50 mL dichloroethane and 20 mL MeOH, reflux for 10 h, remove the solvent by distillation, add 20 mL 5% sodium bisulfite to the residue, extract four times with 40 mL portions of ether, dry over anhydrous magnesium sulfate, evaporate to dryness under reduced pressure to give p-hydroxyphenacyl chloride (mp 151-152°) (Synthesis 1988, 545). Purify p-hydroxyphenacyl chloride by suspending 100 g in 1 L boiling toluene, filter, cool to obtain white crystals of p-hydroxyphenacyl chloride. Repeat this process a number of times to obtain more pure product. Reflux 10 g 9-anthracenecarboxylic acid in 150 mL redistilled thionyl chloride for 2 h, evaporate to dryness under reduced pressure at 30°, dissolve the residue in 150 mL dry toluene containing 11.5 g p-hydroxyphenacyl chloride, reflux for 2 h, evaporate to dryness under reduced pressure, recrystallize from 200 mL hot MeCN to give p-(9-anthroyloxy)phenacyl chloride as deep yellow crystals (mp 159.8-161.6°). Dissolve 2.5 g p-(9-anthroyloxy)phenacyl chloride in 25 mL THF:MeCN 20:80, add 8 g anhydrous LiBr, reflux briefly, cool to room temperature, filter, wash the solid

with water to obtain p-(9-anthroyloxy)phenacyl bromide as deep yellow crystals (mp 173.3-173.6°) (Anal.Biochem. 1987, 165, 220).)

HPLC VARIABLES

SAMPLE
Matrix: solutions
Sample preparation: Condition a Sep-Pak silica SPE cartridge with dichloromethane. Dissolve 0.04-100 ng compound and 50 ng IS in 1 mL MeCN:THF 80:20, add 10 μg panacyl bromide, add 1 μL triethylamine, mix, let stand at room temperature for 2 h, add to the SPE cartridge, wash with 20 mL dichloromethane, elute with 2 mL MeCN:MeOH 85:15. Evaporate the eluate to dryness under a stream of nitrogen, reconstitute the residue in 200 μL MeCN, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4.6 Zorbax Sil
Mobile phase: Dichloromethane:MeCN:MeOH 90:9:1
Flow rate: 1.5
Injection volume: 20
Detector: F ex 280 em 400 (cutoff filter)

SAMPLE
Matrix: solutions
Sample preparation: Mix 100 µL of a 0.01-10 µg/mL solution in MeOH with 100 µL 1 mg/mL 1-pyrenyldiazomethane in ethyl acetate, let stand at room temperature for 1.5 h, inject a 5 µL aliquot. (Synthesis of 1-pyrenyldiazomethane is as follows. Suspend 5 g 1-pyrenecarboxaldehyde in 80 mL EtOH, add 3.4 g hydrazine monohydrate (Caution! Hydrazine monohydrate is a carcinogen!), stir at room temperature for 3 h, filter off the product and wash it with 50 mL cold EtOH, recrystallize from EtOH to obtain 1-pyrenecarboxaldehyde hydrazone as yellow crystals (mp 186-194° d). Add 6.55 g activated manganese dioxide to 2 g 1-pyrenecarboxaldehyde hydrazone in 300 mL diethyl ether, sonicate at room temperature for about 80 min (monitor by HPLC), filter, wash the solid with a little ether, evaporate the filtrate to obtain 1-pyrenyldiazomethane as red crystals. Prepare activated manganese dioxide as follows. Stir a solution of 20 g potassium permanganate in 250 mL water at room temperature, add 10 g activated carbon (Nuchar C-190 or C-190N), stir for 16 h, filter (Buchner funnel), wash 4 times with 50 mL portions of water, dry in air, dry in an oven at 105-110° for 8-24 h (J.Org.Chem. 1970, 35, 3971). 1-Pyrenyldiazomethane is also available from Molecular Probes, Eugene OR.)

SAMPLE

Matrix: solutions

Sample preparation: Mix 50 μL of a solution in DMF with 100 μL 62.5 mM N-hydroxysuccinimide in DMF and 100 μL 75 mM dicyclohexylcarbodiimide in DMF, let stand at 20° for 12 h, add 50 μL 2 mM coumarin 102 in DMSO, add 50 μL 0.5 mM luminarin 4 in DMSO, heat at 70° for 1 h, dilute 10-fold (or more) with DMSO, inject a 10 μL aliquot. (Luminarin 4, N-(4-aminobutyl)-2,3,6,7-tetrahydro-11-oxo-1H,5H,11H-[1]benzopyrano[6,7,8-ij]quinolizine-9-acetamide, may be obtained from Eurobio, Les Ulis, France. Synthesis is as follows. Reflux (with protection from moisture and with stirring) 2.12 g 8-hydroxyjulolidine, 2.22 g diethyl 1,3-acetonedicarboxylate (oxo-3-glutaric acid ethyl ester, Fluka), 1.71 g anhydrous zinc chloride, and 6 mL EtOH for 24 h, cool, add to 200 mL water, extract with 200 mL ethyl acetate, extract with 100 mL ethyl acetate. Combine the organic layers and wash them with water, dry over magnesium sulfate, evaporate to dryness, recrystallize from 5 parts ethyl acetate to give ethyl 2,3,6,7-tetrahydro-11-oxo-1H,5H,11H-[1]benzopyrano[6,7,8-ij]quinolizine-9-acetate. Heat 2 g of this compound with 42 mL 1.2% NaOH in water and 40 mL MeOH at 45° for 1 h, cool, wash with 50 mL chloroform, wash with 40 mL chloroform. Degas the aqueous phase and acidify it with 16 mL 3 M HCl, stir for 15 min, adjust pH to 6.5 with 13 mL 2.5 M NaOH, filter. Wash the precipitate with water and dry it to obtain 2,3,6,7-tetrahydro-11-oxo-1H,5H,11H-[1]benzopyrano[6,7,8-ij]quinolizine-9-acetic acid. Stir 11.26 g of this compound, 10.62 g disuccinimidyl oxalate (dihydroxysuccinimide carbonate), 3.81 g anhydrous triethylamine, and 560 mL dry MeCN protected from moisture at room temperature for 1 h, stir at 35-40° for 1 h, filter. Concentrate the filtrate and chromatograph on silica gel with dichloromethane:THF 50:50 to give luminarin 1 (21%). Stir 16.5 g luminarin 1 and 18.3 g 1,4-diaminobutane in 400 mL dry THF for 24 h, filter, evaporate the filtrate to dryness. Dissolve the residue in 100 mL dichloromethane and wash five times with 100 mL portions of water, evaporate to dryness, stir the residue with 25 mL dichloromethane to give luminarin 4 (US Pat. 5 151 517 (Sept. 9, 1992)).

HPLC VARIABLES

Column: 150 × 4.6 5 μm Spherisorb ODS-2

Mobile phase: MeCN:DMSO:5 (F) or 10 (chemiluminescence) mM pH 7 imidazole nitrate buffer 45:5:50 (F) or 45:0:55 (chemiluminescence)

Column temperature: 40 (chemiluminescence only)

Flow rate: 1.5 (F), 1.2 (chemiluminescence)

Injection volume: 10

Detector: F ex 390 em 470 (cut-off filter), Chemiluminescence. 1 mg/mL Bis(2,4,6-trichlorophenyl) oxalate in methyl acetate pumped at 0.25 mL/min and 400 mM hydrogen peroxide in THF pumped at 0.25 mL/min mixed in a 292 μL capillary tube at 40° and this mixture mixed with the column effluent. The resulting mixture flowed through a 60 μL PTFE capillary at 40° to a Kratos FS970 detector fitted with a 470 nm long-pass filter.

CHROMATOGRAM

Retention time: 4.5 (F), 10.5 (chemiluminescence)

Internal standard: coumarin 102 (Eastman) (9.0 (F), 15.0 (chemiluminescence))

Limit of detection: 300 fmole (F), 32 fmole (chemiluminescence)

OTHER SUBSTANCES
Simultaneous: isovaleric acid, nonanoic acid

KEY WORDS
derivatization

REFERENCE
Tod,M.; Prevot,M.; Chalom,J.; Farinotti,R.; Mahuzier,G. Luminarin 4 as a labelling reagent for carboxylic acids in liquid chromatography with peroxylate chemiluminescence detection, *J.Chromatogr.*, **1991**, *542*, 295–306.

SAMPLE
Matrix: solutions
Sample preparation: Mix 25 μL of an aqueous solution of fatty acids with 100 μL DMF: pyridine 93:7, add 50 μL 5 mM MPIB-hydrazide in DMF, add 100 μL 4 M (sic) 1-(3-dimethylaminopropyl)-3-ethylcarbodiimide, heat at 40° for 20 min, inject a 10 μL aliquot. (Synthesis of MPIB-hydrazide, 4-(1-methylphenanthro[9,10-d]imidazol-2-yl)benzohydrazide, is as follows. Stir 1 g 9,10-diaminophenanthrene and 800 mg methyl 4-formylbenzoate (terephthaldehydic acid methyl ester) in 200 mL EtOH at room temperature for 1 h, add 5 mL MeOH saturated with HCl, reflux under an inert gas for 2 h, cool, concentrate to 50 mL under reduced pressure, chromatograph the precipitate on a 200 × 35 column of 70-230 mesh silica gel (ca. 100 g; Merck) with chloroform, recrystallize from MeOH to give methyl 4-(phenanthro[9,10-d]imidazol- 2-yl)benzoate as colorless needles (mp 312-315°). Dissolve 500 mg methyl 4-(phenanthro[9,10-d]imidazol-2-yl)benzoate in 100 mL anhydrous MeOH, treat with a solution of diazomethane in ether, evaporate to dryness under reduced pressure, dissolve the residue in 20 mL chloroform, chromatograph on a 200 × 60 column of about 250 g 100 mesh silica gel with chloroform to give methyl 4-(1-methylphenanthro[9,10-d]imidazol-2-yl)benzoate as colorless needles (mp 199-201°). Dissolve 2 g methyl 4-(1-methylphenanthro[9,10-d]imidazol-2-yl)benzoate in 100 mL aqueous hydrazine hydrate (45%) (Caution! Hydrazine hydrate is a carcinogen and explodes on distillation in air!), heat at 100° for 1 h, recrystallize the precipitate from 95% EtOH to give MPIB-hydrazide (4-(1-methylphenanthro[9,10-d]imidazol-2- yl)benzohydrazide) (mp 291-293°).)

SAMPLE

Matrix: solutions

Sample preparation: Mix 100 μL of a 100 μM solution of the carboxylic acid in water with 100 μL 100 mM 1-(3-methylaminopropyl)-3-ethylcarbodiimide in water, 100 μL 1% pyridine in water, and 100 μL 15 mM 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran in DMF, heat at 37° for 1 h, inject a 10 μL aliquot. (Synthesis of 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran is as follows. Add ethyl oxalyl chloride in ether to a solution of diazomethane in ether at 0° to give ethyl diazopyruvate (Caution! Diazo compounds are explosive and toxic!) (cf. Buehler,C.A.; Pearson,D.E. Survey of Organic Syntheses, Wiley, New York, 1970, p. 179). Heat 100 mg ethyl diazopyruvate, a few mg copper(II) acetylacetonate, and 400 μL chloroacetonitrile in benzene at 60° overnight (Caution! Benzene is a carcinogen!), cool, add to sodium bicarbonate solution, extract with ether, dry the organic layer, evaporate, chromatograph on silica with petroleum ether:ethyl acetate 90:10, distil the product at 90°/12 mm Hg to give ethyl 2-chloromethyl-5-oxazolecarboxylate as an oil in 18% yield (US Patent 4 603 209 (July 29, 1986)). Add 2 mL phosphorus oxychloride dropwise to a solution of 2 g sesamol in 3 mL DMF at 0°, heat on a steam bath with frequent shaking for 1 h, cool in ice, add 50 mL saturated sodium acetate solution, heat on a steam bath for 30 min, cool, filter, recrystallize the solid from EtOH to give 2-hydroxy-4,5-methylenedioxybenzaldehyde as colorless needles (mp 125-126°) (Bull. Chem. Soc. Jpn. 1962, 35, 1321). Stir 1.4 g ethyl 2-chloromethyl-5-oxazolecarboxylate, 1.5 g 2-hydroxy-4,5-methylenedioxybenzaldehyde, 2 g potassium carbonate, and 50 mL anhydrous DMF at 120° overnight, cool, filter. Evaporate the filtrate to dryness under reduced pressure to give 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran as a colorless crystalline powder (mp 186°) (yield 39%). Reflux 260 mg 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran, 100 mg KOH, 20 mL EtOH, and 30 mL water for 2 h, concentrate under reduced pressure, dissolve the residue in 100 mL water, wash with ethyl acetate, treat the aqueous layer with activated carbon, acidify the aqueous layer to pH 2 with 2 M HCl. Filter the precipitate and recrystallize it from EtOH to give 2-(2-oxazole-5-carboxylic acid)-5,6-methylenedioxybenzofuran as a colorless crystalline powder (mp 294-295°). Reflux 150 mg 2-(2-oxazole-5-carboxylic acid)-5,6-methylenedioxybenzofuran and 5 mL thionyl chloride for 2 h, pour the reaction mixture into 300 mL petroleum ether. Filter the precipitate and dry it over KOH to give 2-(5-chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran (mp 290°) (Anal. Sci. 1989, 5, 525). 2-(5-Chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran is also available from Dojindo, Kumamoto, Japan. Add 2 mL hydrazine hydrate to a stirred solution of 2 g 2-(5-chlorocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran in 20 mL anhydrous DMF (Caution! Hydrazine hydrate is a carcinogen!), stir at room temperature for 4 h, add 20 mL benzene (Caution! Benzene is a carcinogen!). Collect the precipitate and wash it with water and MeCN, recrystallize from DMF:benzene 50:50 to give 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran as an off-white crystalline solid (mp >220° d).)

Saito,M.; Chiyoda,Y.; Ushijima,T.; Sasamoto,K.; Ohkura,Y. 2-(5-Hydrazinocarbonyl-2-oxazolyl)-5,6-methylenedioxybenzofuran as a fluorescence derivatization reagent for carboxylic acids in high-performance liquid chromatography, *Anal.Sci.*, **1994**, *10*, 679–681.

SAMPLE

Matrix: solutions

Sample preparation: 100 μL 10 mM compound in MeOH + 100 μL 1% pyridine in MeOH + 100 μL 15 mM reagent in DMSO, 100 μL 100 mM 1-ethyl-3-(3-dimethylaminopropyl)carbodiimide in MeOH, heat at 37° for 1 h, inject a 10 μL aliquot. (Reagent was 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-dimethoxybenzothiazole which was synthesized as follows. Add 10 mL concentrated nitric acid dropwise to 20 g 4-bromoveratrole in 60 mL acetic acid while keeping the temperature at 10-30° with occasional cooling, when the addition is complete pour the reaction mixture into ice-water. Collect the precipitate and dissolve it in 500 mL hot EtOH, add activated charcoal, filter, add 40 mL water to the filtrate to give 4,5-dimethoxy-2-nitrobromobenzene as a light yellow crystalline solid (mp 121-122°). Prepare sodium sulfide by melting together 5 g sodium sulfide nonahydrate and 700 mg sulfur, add this mixture to 5 g 4,5-dimethoxy-2-nitrobromobenzene in 50 mL EtOH:water 95:5, reflux for 30 min, pour into ice-water, collect the solid, recrystallize from dichloromethane to give di(4,5-dimethoxy-2-nitrophenyl)sulfide as yellow needles (mp 231-232°) (Anal. Sci. 1995, 11, 103). Add ethyl oxalyl chloride in ether to a solution of diazomethane in ether at 0° to give ethyl diazopyruvate (Caution! Diazo compounds are explosive and toxic!) (cf. Buehler,C.A.; Pearson,D.E. Survey of Organic Syntheses, Wiley, New York, 1970, p. 179). Heat 100 mg ethyl diazopyruvate, a few mg copper(II) acetylacetonate, and 400 μL chloroacetonitrile in benzene at 60° overnight (Caution! Benzene is a carcinogen!), cool, add to sodium bicarbonate solution, extract with ether, dry the organic layer, evaporate, chromatograph on silica with petroleum ether:ethyl acetate 90:10, distil the product at 90°/12 mm Hg to give ethyl 2-chloromethyl-5-oxazolecarboxylate as an oil in 18% yield (US Patent 4 603 209 (July 29, 1986)). Reflux 5.0 g ethyl 2-chloromethyl-5-oxazolecarboxylate and 11.7 g NaI in 80 mL acetone for 1 h, partition the reaction mixture between ethyl acetate and water. Wash the organic layer with water and dry it over anhydrous sodium sulfate, evaporate to give ethyl 2-iodomethyl-5-oxazolecarboxylate as a reddish-brown oil. Reflux 7.4 g ethyl 2-iodomethyl-5-oxazolecarboxylate and 21.5 g silver carbonate in 100 mL THF:water 70:30 for 4 h, filter through Celite, evaporate under reduced pressure, chromatograph on silica gel using benzene:ethyl acetate 95:5 to give ethyl 2-hydroxymethyl-5-oxazolecarboxylate (mp 60.5-62°). Stir 2.04 g oxalyl chloride in 15 mL dichloromethane at -50° under nitrogen, add 1.54 g DMSO in 3 mL dichloromethane, after 5 min add 1.4 g ethyl 2-hydroxymethyl-5-oxazolecarboxylate in 6 mL dichloromethane, stir for 15 min at -50°, add 5.7 mL triethylamine, allow to warm to room temperature, dilute with dichloromethane, wash with water, dry over anhydrous sodium sulfate, concentrate under reduced pressure, chromatograph on silica gel using benzene:ethyl acetate 95:5 to give ethyl 2-carboxaldehyde-5-oxazolecarboxylate (mp 71.5-73°). Add 11.3 mL concentrated HCl to 750 mg di(4,5-dimethoxy-2-nitrophenyl)sulfide stirred in 100 mL EtOH, add 3.3 g tin powder at 40-45°, stir for 1 h at 40-45°, dilute with 100 mL water, pass hydrogen sulfide gas through this solution (Caution! Hydrogen sulfide is highly toxic!), filter, concentrate the filtrate under reduced pressure to give 4,5-dimethoxy-2-aminothiophenol. Take up this compound in 30 mL EtOH:acetic acid 2:1 and add 750 mg ethyl 2-carboxaldehyde-5-oxazolecarboxylate, reflux for 1 h, collect the precipitate and recrystallize it from EtOH to give 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-dimethoxybenzothiazole as yellow needles (mp 200-201°). Add 381 mg 2-(5-ethoxycarbonyl-2-oxazolyl)-5,6-dimethoxybenzothiazole to 20 mL EtOH containing 3 mL DMF and 5 mL hydrazine hydrate, reflux for 1 h, collect the precipitate and wash it with EtOH, dry under vacuum to give 2-(5-hydrazinocarbonyl-2-oxazolyl)-5,6-dimethoxybenzothiazole as a yellow powder (mp 255.5-280° (d)).)

HPLC VARIABLES
Column: 250 × 4.6 5 μm Wakosil-II 5C18 HG
Mobile phase: Gradient. MeCN:water from 70:30 to 100:0 over 20 min, maintain at 100:0.
Column temperature: 40

SAMPLE
Matrix: tissue, urine
Sample preparation: Tissue. Homogenize 100 mg rat tissue with EtOH:100 mM HCl 80:20, centrifuge, wash the supernatant with petroleum ether, evaporate to dryness under reduced pressure, add 30 μg prednisolone, add 100 μL 2 mg/mL dansyl hydrazine in EtOH, add 100 μL EtOH:HCl 98:2, heat at 40° for 30 min, add 200 μL water, extract three times with 500 μL portions of ether. Combine the organic layers and evaporate them to dryness, reconstitute the residue in 10 μL MeCN, inject a 0.1 μL aliquot. Urine. Activate silica gel (Wako gel C-100) at 120° for 4 h, cool. Suspend 5 g activated silica in toluene:ethyl acetate 90:10, pour into a 200 × 10 glass column. 50 mL Human urine + 30 μg prednisolone, mix, adjust pH to 3 with 1 M HCl, extract twice with 50 mL portions of ethyl acetate, Combine the organic layers and wash them with 100 mL 10 mM HCl, wash with 100 mL water. Evaporate the organic layer to dryness under reduced pressure, reconstitute with a small amount of toluene:ethyl acetate 90:10, add to the column, wash with 10 mL toluene:ethyl acetate 90:10, wash with 10 mL MeOH:ethyl acetate 5:100, elute with 20 mL MeOH:ethyl acetate 50:50, evaporate the eluate to dryness, add 100 μL 2 mg/mL dansyl hydrazine in EtOH, add 100 μL EtOH:HCl 98:2, heat at 40° for 30 min, add 200 μL water, extract three times with 500 μL portions of ether. Combine the organic layers and evaporate them to dryness, reconstitute the residue in 10 μL MeCN, inject a 0.1 μL aliquot.

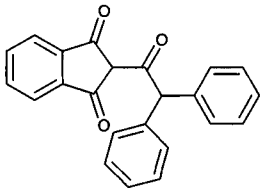
Diphenadione



Molecular formula: $C_{23}H_{16}O_3$
Molecular weight: 340.38
CAS Registry No.: 82-66-6
Merck Index: 3363

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 200.5

SAMPLE
Matrix: blood, tissue
Sample preparation: Blood or serum. 1 mL Blood or serum + 1 μg cianopramine + 1 mL water, vortex, add 1 mL 200 mM sodium carbonate, vortex, add 6 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 100 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer. Liver homogenate. 0.5 mL Liver homogenate + 10 μg cianopramine + 500 μL 2% sodium tetraborate + 8 mL hexane:1-butanol 95:5, gently agitate for 30 min, centrifuge at 2500 g for 5 min. Remove the organic layer and add it to 400 μL 0.2% phosphoric acid, agitate gently for 30 min, centrifuge for 5 min. Remove the organic layer and inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm RP-18 Newguard (Applied Biosystems)
Column: 100 × 4.6 5 μm Brownlee Spheri-5 RP-18
Mobile phase: MeCN:100 mM NaH_2PO_4:diethylamine 40:57.5:2.5
Flow rate: 2
Injection volume: 30
Detector: UV 220

CHROMATOGRAM
Retention time: 7.51
Internal standard: cianopramine (8.93)

OTHER SUBSTANCES
Simultaneous: amitriptyline, amoxapine, benztropine, brompheniramine, chlorpheniramine, chlorpromazine, clomipramine, cyproheptadine, desipramine, dothiepin, doxepin, fluoxetine, haloperidol, imipramine, loxapine, maprotiline, meperidine, mesoridazine, methadone, metoclopramide, mianserin, moclobemide, nomifensine, nordoxepin, norfluox-

etine, norpropoxyphene, northiaden, pentobarbital, pheniramine, promethazine, propoxyphene, propranolol, protriptyline, quinidine, quinine, thioridazine, thiothixene, tranylcypromine, trazodone, trihexyphenidyl, trimipramine, triprolidine

Noninterfering: dextromethorphan, norphetidine, phenoxybenzamine, prochlorperazine, trifluoperazine

Interfering: nortriptyline, sulforidazine

KEY WORDS

serum; whole blood; liver

REFERENCE

McIntyre,I.M.; King,C.V.; Skafidis,S.; Drummer,O.H. Dual ultraviolet wavelength high-performance liquid chromatographic method for the forensic or clinical analysis of seventeen antidepressants and some selected metabolites, *J.Chromatogr.*, **1993**, *621*, 215–223.

SAMPLE

Matrix: blood, urine

Sample preparation: Serum. 1 mL Serum + 100 μL 1 mM orthophosphoric acid + 100 μL 1 M NaOH + 5 mL hexane, rotate at 60 rpm for 15 min, centrifuge. Remove 4 mL of the organic layer and add it to 80 μL 1 mM orthophosphoric acid, vortex vigorously for 30 s, inject a 50 μL aliquot of the aqueous phase. Urine. Dilute 1:10 with drug-free urine. 1 mL Diluted urine + 100 μL 1 mM orthophosphoric acid + 1 mL saturated sodium borate (pH 10.2) + 5 mL hexane, rotate at 60 rpm for 15 min, centrifuge. Remove 4 mL of the organic layer and add it to 80 μL 1 mM orthophosphoric acid, vortex vigorously for 30 s, inject a 50 μL aliquot of the aqueous phase.

HPLC VARIABLES

Guard column: 20 × 4.6 5 μm Supelguard LC-CN cyanopropyl (Supelcosil)

Column: 150 × 4.6 5 μm Supelcosil LC-PCN cyanopropyl

Mobile phase: MeCN:MeOH:buffer 55:20:25 (Buffer was 2.6 g K_2HPO_4 in 1 L water, pH adjusted to 7.0 with 900 mM orthophosphoric acid.) (Optimize the separation by adjusting the pH of the mobile phase with a few drops of 1 M NaOH or 900 mM orthophosphoric acid.)

Flow rate: 2.5

Injection volume: 50

Detector: UV 205

CHROMATOGRAM

Retention time: 1.9

Internal standard: diphenhydramine

OTHER SUBSTANCES

Extracted: metabolites, nordiphenhydramine, meperidine, normeperidine

KEY WORDS

serum; diphenhydramine is IS

REFERENCE

Meatherall,R.C.; Guay,D.R.P.; Chalmers,J.L. Analysis of meperidine and normeperidine in serum and urine by high-performance liquid chromatography, *J.Chromatogr.*, **1985**, *338*, 141–149.

SAMPLE

Matrix: formulations

Sample preparation: Tablets. Grind 5 tablets to a fine powder, dissolve in 100 mL MeOH: 0.5% acetic acid 1:1, filter (paper), inject an aliquot. Suppositories. Cut up 3 suppositories, add to 100 mL MeOH:0.5% acetic acid 1:1, heat at 40° until all the fat melted, shake, filter (paper), inject a 25 μL aliquot. Liquid formulations. Dilute 10 mL formulation to 100 mL with MeOH:0.5% acetic acid 1:1, inject a 25 μL aliquot.

HPLC VARIABLES
Column: 300 × 4 μBondapak phenyl
Mobile phase: Gradient. A was 10 mM heptanesulfonic acid in 1 mM acetic acid. B was 10 mM heptanesulfonic acid and 1 mM acetic acid in MeOH. A:B from 60:40 to 25:75 over 30 min
Column temperature: 35
Flow rate: 1.75
Injection volume: 25
Detector: UV 225

CHROMATOGRAM
Retention time: 16

OTHER SUBSTANCES
Simultaneous: dipyrone (metamizol), adiphenine, promazine, ethyldiphenacetate, drofenine, impurities

KEY WORDS
tablets; suppositories; liquid formulations

REFERENCE
Facchini,G.; Zaccheo,F.; Nannetti,M. Simultaneous determination of hydrochloride salts of adiphenine, diphenhydramine, ethyldiphenacetate, drofenine and promazine by ion-pair HPLC, *Boll.Chim.Farm.*, **1983**, *122*, 405–411.

SAMPLE
Matrix: formulations
Sample preparation: Dilute with water.

HPLC VARIABLES
Column: Bakerbond nitrile
Mobile phase: MeCN:water:triethylamine 50:50:0.5, adjusted to pH 6.5 with glacial acetic acid.)
Flow rate: 1
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 5.8

KEY WORDS
saline; injections; stability-indicating

SAMPLE
Matrix: formulations
Sample preparation: Dilute with mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: ODS
Column: 250 × 4.6 5 μm Spherisorb ODS-1
Mobile phase: MeCN:100 mM pH 4.5 KH_2PO_4 40:60
Flow rate: 1.2
Injection volume: 20
Detector: UV 210

CHROMATOGRAM
Retention time: 18.8
Limit of detection: 105 ng/mL

OTHER SUBSTANCES
Simultaneous: methyl paraben, ondansetron, propyl paraben

KEY WORDS
injections; saline

REFERENCE
Ye,L.; Stewart,J.T. HPLC determination of an ondansetron and diphenhydramine mixture in 0.9% sodium chloride injection, *J.Liq.Chromatogr.Rel.Technol.*, **1996**, *19*, 711–718.

SAMPLE
Matrix: formulations, urine
Sample preparation: Tablets. Crush tablets, add 100 mL water and 30-40 mL MeCN, dissolve, add N,N-dimethylbenzylamine, make up to 250 or 500 mL with water, centrifuge an aliquot, inject a 20 μL aliquot of the supernatant. Urine. Inject a 100 μL aliquot of urine directly.

HPLC VARIABLES
Column: 150 × 4.6 Asahipak ODP-50 C18
Mobile phase: MeCN:200 mM pH 7.0 phosphate buffer 27:73
Flow rate: 0.8
Injection volume: 20-100
Detector: Chemiluminescence following post-column reaction. Oxidize a 1 mM tris(2,2'-bipyridine) ruthenium(II) hexachloride solution in 50 mM pH 5.5 acetate buffer to Ru(III) using a Princeton Applied Research polarographic analyzer with a platinum gauze working electrode, platinum wire auxiliary electrode, and a silver wire reference electrode, +950 mV. Pump the reagent solution at 0.28 mL/min and mix with the column effluent, allow to flow through detector. The chemiluminescence detector was a fluorescence detector with the light source removed.

CHROMATOGRAM
Retention time: 13
Internal standard: N,N-dimethylbenzylamine
Limit of detection: 210 ng/mL

OTHER SUBSTANCES
Simultaneous: brompheniramine, chlorpheniramine, pyrilamine, pheniramine

KEY WORDS
tablets

REFERENCE

SAMPLE
Matrix: solutions
Sample preparation: Prepare a 10 μg/mL solution in MeOH, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 125 × 4.9 Spherisorb S5W silica
Mobile phase: MeOH containing 10 mM ammonium perchlorate and 1 mL/L 100 mM NaOH in MeOH, pH 6.7
Flow rate: 2
Injection volume: 20
Detector: E, LeCarbone, V25 glassy carbon electrode, + 1.2 V

CHROMATOGRAM
Retention time: 3.9

OTHER SUBSTANCES
Also analyzed: acebutolol, acepromazine, acetophenazine, N-acetylprocainamide, albuterol, alprenolol, amethocaine, amiodarone, amitriptyline, antazoline, atenolol, azacyclonal, bamethan, benactyzine, benperidol, benzethidine, benzocaine, benzoctamine, benzphetamine, benzquinamide, bromhexine, bromodiphenhydramine, bromperidol, brompheniramine, brompromazine, buclizine, bufotenine, bupivacaine, buprenorphine, butacaine, butethamate, chlorcyclizine, chlorpheniramine, chlorphenoxamine, chlorprenaline, chlorpromazine, chlorprothixene, cimetidine, cinchonidine, cinnarizine, clemastine, clomipramine, clonidine, cocaine, cyclazocine, cyclizine, cyclopentamine, cyproheptadine, deserpidine, desipramine, dextromoramide, dextropropoxyphene, dicyclomine, diethylcarbamazine, diethylpropion, diethylthiambutene, dihydroergotamine, dimethindene, dimethothiazine, diphenoxylate, dipipanone, diprenorphine, dipyridamole, disopyramide, dothiepin, doxapram, doxepin, doxylamine, droperidol, ephedrine, ergocornine, ergocristine, ergocristinine, ergocryptine, ergometrine, ergosine, ergosinine, ergotamine, ethopropazine, etorphine, etoxeridine, fenethazine, fenfluramine, fenoterol, fentanyl, flavoxate, fluopromazine, flupenthixol, fluphenazine, flurazepam, haloperidol, hydroxyzine, hyoscine, ibogaine, imipramine, indapamine, iprindole, isothipendyl, isoxsuprine, ketanserin, laudanosine, lidocaine, lofepramine, loxapine, maprotiline, mecamylamine, meclophenoxate, meclozine, medazepam, mephentermine, mepivacaine, meptazinol, mepyramine, mesoridazine, metaraminol, methadone, methamphetamine, methapyrilene, methdilazene, methotrimeprazine, methoxamine, methoxyphenamine, methoxypromazine, methylephedrine, methylergonovine, methysergide, metoclopramide, metopimazine, metoprolol, mianserin, morazone, nadolol, nalorphine, naloxone, naphazoline, nicotine, nifedipine, nomifensine, nortriptyline, noscapine, orphenadrine, oxeladin, oxprenolol, oxymetazolin, papaverine, pargyline, pecazine, penbutolol, pentazocine, penthienate, pericyazine, perphenazine, phenadoxone, phenampromide, phenazocine, phenbutrazate, phendimet-

razine, phenelzine, phenglutarimide, phenindamine, pheniramine, phenmetrazine, phenomorphan, phenoperidine, phenothiazine, phenoxybenzamine, phentolamine, phenylephrine, phenyltoloxamine, physostigmine, piminodine, pimozide, pindolol, pipamazine, pipazethate, piperacetazine, piperidolate, pipradol, pirenzepine, piritramide, pizotifen, practolol, pramoxine, prazosin, prenylamine, prilocaine, primaquine, proadifen, procainamide, procaine, prochlorperazine, procyclidine, proheptazine, prolintane, promazine, promethazine, pronethalol, properidine, propiomazine, propranolol, prothipendyl, protriptyline, proxymetacaine, pseudoephedrine, pyrimethamine, quinidine, quinine, ranitidine, rescinnamine, sotalol, tacrine, terazosin, terbutaline, terfenadine, thenyldiamine, theophylline, thiethylperazine, thiopropazate, thioproperazine, thioridazine, thiothixene, thonzylamine, timolol, tocainide, tolpropamine, tolycaine, tranylcypromine, trazodone, trifluoperazine, trifluperidol, trimeperidine, trimeprazine, trimethobenzamide, trimethoprim, trimipramine, tripelennamine, triprolidine, tryptamine, verapamil, xylometazoline

SAMPLE
Matrix: solutions
Sample preparation: Inject a 20 μL aliquot of a 100-500 μg/mL solution in mobile phase.

HPLC VARIABLES
Column: 100 × 4.6 5 μm Hypersil C8 MOS 100A coated with phosphatidylcholine (95% pure soybean lecithin, Epikuron, Lucas Meyer & Co.) (Coat column by recycling a 1 mM solution of phosphatidylcholine in MeOH:water 80:20 for 24 h.)
Mobile phase: MeCN:35 mM pH 7.4 sodium phosphate buffer 40:60
Flow rate: 0.5–2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: k' 3.72

OTHER SUBSTANCES
Also analyzed: amoxicillin, antipyrine, carbamazepine, chlorpheniramine, chlorpromazine, clonidine, codeine, desipramine, dipyridamole, ephedrine, flufenamic acid, haloperidol, hydroxyzine, imipramine, indomethacin, lidocaine, megestrol acetate, metoprolol, nabumetone, nadolol, phenobarbital, phenol, promazine, propranolol, pyrilamine, quinidine, ropinirole, testosterone, thioridazine, tolfenamic acid, verapamil
Noninterfering: acetaminophen, aspirin, azathioprine, caffeine, carprofen, chlorambucil, cimetidine, fenoterol, flurbiprofen, ibuprofen, ketoprofen, ranitidine, salicylic acid, sulfamethoxazole, theophylline, thioguanine, tiaprofenic acid, trimethoprim, valproic acid

KEY WORDS
comparison with capillary electrophoresis

SAMPLE
Matrix: urine
Sample preparation: 500 μL Urine + N-ethylnordiazepam + chlorpheniramine + 100 μL buffer, centrifuge at 11000 g for 30 s, inject a 500 μL aliquot onto column A with mobile phase A, after 0.6 min backflush column A with mobile phase A to waste for 1.6 min, elute column A with 250 μL mobile phase B, with 200 μL mobile phase C, and with 1.15 mL mobile phase D. Elute column A to waste until drugs start to emerge then elute onto column B. Elute column B to waste until drugs started to emerge, then elute onto column C. When all the drugs have emerged from column B remove it from the circuit, elute column C with mobile phase D, monitor the effluent from column C. Flush column A with 7 mL mobile phase E, with mobile phase D, and mobile phase A. Flush column B with 5 mL mobile phase E then with mobile phase D. (Buffer was 6 M ammonium acetate adjusted to pH 8.0 with 2 M KOH.)

HPLC VARIABLES

Column: A 10 × 2.1 12-20 μm PRP-1 spherical poly(styrene-divinylbenzene) (Hamilton); B 10 × 3.2 11 μm Aminex A-28 (Bio-Rad); C 25 × 3.2 5 μm C8 (Phenomenex) + 150 × 4.6 5 μm silica (Macherey-Nagel)

Mobile phase: A 0.1% pH 8.0 potassium borate buffer; B 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid; C MeCN:buffer 40:60 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); D MeCN:buffer 33:67 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.); E MeCN:buffer 70:30 (Buffer was 6 mM KH_2PO_4 containing 5 mM tetramethylammonium hydroxide, and 2 mM dimethyloctylamine, pH adjusted to 6.50 with phosphoric acid.)

Column temperature: ambient (column A), 40 (columns B and C)

Flow rate: A 5; B-E 1

Injection volume: 500

Detector: UV 210, UV 235

CHROMATOGRAM

Retention time: k' 3.4

Internal standard: N-ethylnordiazepam (k' 2.1), chlorpheniramine (k' 5.9)

Limit of detection: 300 ng/mL

OTHER SUBSTANCES

Extracted: methadone, imipramine, flurazepam, amitriptyline, morphine, codeine, hydromorphone, hydrocodone, caffeine, cotinine, benzoylecgonine, secobarbital, oxazepam, phenobarbital, nordiazepam, diazepam, phenylpropanolamine, phentermine, amphetamine, phenmetrazine, lidocaine, ephedrine, pentazocine

Interfering: methamphetamine, desipramine, nortriptyline

SAMPLE

Matrix: urine

Sample preparation: 1 mL Urine + 0.5 mL 1% trichloroacetic acid, centrifuge at 5200 g for 10 min, filter (0.2 μm), inject 20 μL aliquot

HPLC VARIABLES

Column: 250 × 4 Lichrospher 5μm 60 RP-select B

Mobile phase: Gradient. MeCN:50 mM pH 3.2 potassium phosphate buffer from 10:90 to 50:50 over 15 min.

Flow rate: 1.5

Injection volume: 20

Detector: UV 190-370

CHROMATOGRAM

Retention time: 13

OTHER SUBSTANCES

Extracted: morphine, ephedrine, phenylpropanolamine, cocaine, nortriptyline, lidocaine, benzoylecgonine, norpropoxyphene, nordiazepam

Also analyzed: amitriptyline, amphetamine, meperidine, codeine, (different gradient)

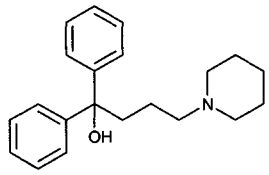
Diphenidol



Molecular formula: $C_{21}H_{27}NO$
Molecular weight: 309.45
CAS Registry No.: 972-02-1, 3254-89-5 (HCl), 26363-46-2 (pamoate)
Merck Index: 3369
Lednicer No.: 1 45

SAMPLE

Matrix: blood
Sample preparation: Add 600 μL 100 mM sodium carbonate to 100 μL plasma. Add 5 mL dichloromethane, shake on a reciprocal shaker for 10 min, centrifuge at 1000 g for 8 min, dry 4 mL of the lower organic phase in a rotary evaporator at 45°, dissolve the residue in 50 μL mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 150 × 4.6 Cosmosil 5C18-MS (Nacalai Tesque, Japan)
Mobile phase: MeOH:buffer 36:64 (Buffer was 0.3% triethylamine adjusted to pH 4.5 with phosphoric acid.)
Flow rate: 1.3
Injection volume: 20
Detector: UV 220

CHROMATOGRAM

Retention time: 14.8
Internal standard: diphenidol

OTHER SUBSTANCES

Extracted: epinastine

KEY WORDS

plasma; diphenidol is IS

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 285.5

SAMPLE
Matrix: formulations
Sample preparation: Dilute injection with mobile phase to a final concentration 1 mg/mL. Inject a 10 μL aliquot.

HPLC VARIABLES
Column: 300 × 3.9 10 μm μBondapak C18
Mobile phase: MeOH:acetate buffer 65:35 (Buffer was 2.38 g sodium acetate in 350 mL water adjusted to pH 5.1 ± 0.1 with 36% acetic acid.)
Flow rate: 1
Injection volume: 15
Detector: UV 276

CHROMATOGRAM
Retention time: 23
Limit of quantitation: 500 μg/mL

KEY WORDS
injections; stability indicating

REFERENCE

SAMPLE
Matrix: formulations
Sample preparation: Powder tablets, weigh out amount equivalent to about 75 mg dipyridamole, add 40 mg pyrimethamine, dissolve in 20 mL MeCN, add 40 mL mobile phase, filter (paper), wash filter with mobile phase, make up filtrate to 100 mL with mobile phase. Dilute a 5 mL aliquot to 50 mL with mobile phase, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 250 × 4 10 μm Nucleosil C18
Mobile phase: MeOH:MeCN:water:triethylamine 55:5:40:0.1, pH adjusted to 4.0 with phosphoric acid
Flow rate: 1.5
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 5.5
Internal standard: pyrimethamine (3.5)
Limit of quantitation: 7.5 μg/mL

OTHER SUBSTANCES
Simultaneous: aspirin

KEY WORDS
tablets

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES
Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dex-

tromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, disulfiram, dopamine, doxapram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylprednisolone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

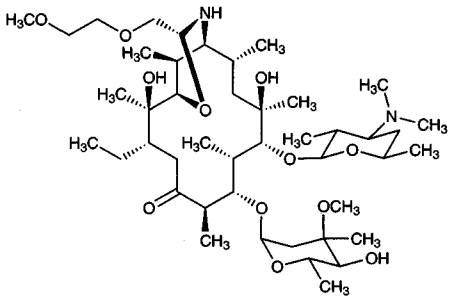
Dirithromycin



Molecular formula: $C_{42}H_{78}N_2O_{14}$
Molecular weight: 835.09
CAS Registry No.: 62013-04-1
Merck Index: 3418

SAMPLE

Matrix: blood
Sample preparation: 500 μL Plasma + 1 mL pH 10 buffer (Fisher SO-B-116) + 10 μL 25 μg/mL IS in MeOH, mix for 10 s, add 5 mL dichloromethane, mix for 10-15 s, centrifuge at 2000 rpm for 10 min, repeat the extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen, reconstitute the residue in 100 μL MeCN, inject a 40-60 μL aliquot.

HPLC VARIABLES

Column: 250 × 4.6 5 μm Sepralyte 2DP (Analytichem)
Mobile phase: MeCN:MeOH:water 60:10:30 containing 50 mM ammonium acetate, apparent pH 7.5
Column temperature: 40
Flow rate: 1
Injection volume: 40-60
Detector: E, ESA Coulochem Model 5100A, Model 5020 guard cell 1 V, Model 5011 analytical cell, first screening electrode 0.7 V, second electrode 0.9 V

CHROMATOGRAM

Retention time: 9
Internal standard: LY023907 (7)
Limit of detection: 10 ng/mL

OTHER SUBSTANCES

Extracted: erythromycylamine

KEY WORDS

plasma; dog

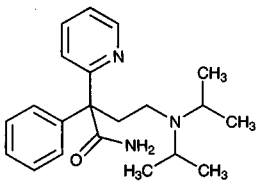
Disopyramide



Molecular formula: $C_{21}H_{29}N_3O$
Molecular weight: 339.48
CAS Registry No.: 3737-09-5, 22059-60-5 (phosphate)
Merck Index: 3424
Lednicer No.: 2 81

SAMPLE

Matrix: blood
Sample preparation: Alkalinize plasma with 1 M sodium hydroxide and extract with 1 mL chloroform (Caution! Chloroform is a carcinogen !). Centrifuge, remove organic layer and evaporate it to dryness under a stream of dry nitrogen. Reconstitute the residue in 200 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES

Column: 5 μm Brownlee CN
Mobile phase: MeCN:20 mM pH 4.0 monosodium phosphate 50:50
Flow rate: 1.0
Injection volume: 50
Detector: UV 207

CHROMATOGRAM

Internal standard: bidisomide
Limit of detection: 50 ng/mL

KEY WORDS

plasma; human; dog; pharmacokinetics

REFERENCE

SAMPLE

Matrix: blood
Sample preparation: To determine bound and unbound disopyramide mix 500 μL serum and 50 μL 30% trichloroacetic acid, centrifuge at 2000 g for 5 min. 100 μL supernatant + 25 μL 25 μg/mL benzocaine in water, vortex for 5 s, inject a 50 μL aliquot. To determine unbound disopyramide filter (Amicon Centrifree) while centrifuging at 2000 g for 10 min, 100 μL ultrafiltrate + 25 μL 25 μg/mL benzocaine in water, vortex for 5 s, inject a 50 μL aliquot.

HPLC VARIABLES

Column: 100 × 8 10 μm μBondapak Radial Pak C18
Mobile phase: MeCN:buffer 25:75 (Buffer was 1.36 g sodium acetate trihydrate in 1 L water, pH adjusted to 4.5 with glacial acetic acid.)
Flow rate: 3
Injection volume: 50
Detector: UV 254

CHROMATOGRAM

Retention time: 5
Internal standard: benzocaine (ethyl p-aminobenzoate) (9.5)
Limit of quantitation: 2500 ng/mL

OTHER SUBSTANCES
Simultaneous: lidocaine, quinidine
Noninterfering: acetaminophen, amitriptyline, aspirin, chlorazepate, chlordiazepoxide, chlorpromazine, desipramine, diazepam, diphenhydramine, digoxin, doxepin, ephedrine, ethosuximide, flurazepam, glutethimide, imipramine, meperidine, meprobamate, methamphetamine, N-desisopropyl disopyramide, nordiazepam, nortriptyline, oxazepam, prazepam, procainamide, propoxyphene, propranolol, theophylline, trimipramine

KEY WORDS
serum; ultrafiltrate

SAMPLE
Matrix: blood
Sample preparation: 200 μL Serum + 50 μL 16 μg/mL p-chlorodisopyramide in MeOH + 20 μL 1 M NaOH, vortex for 5 s, add 2 mL dichloromethane, shake for 5 min on a reciprocating shaker, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of air at 40°, reconstitute the residue in 200 μL 25 mM sulfuric acid, vortex for 5 s, inject a 20 μL aliquot.

HPLC VARIABLES
Guard column: 4 × 2 silica gel 200 (Wako)
Column: 250 × 4 5 μm Develosil 60-5 (Nomura Chemical)
Mobile phase: MeCN:water 70:30 containing 15 mM $(NH_4)_2HPO_4$, pH 7.8
Flow rate: 1
Injection volume: 20
Detector: UV 210

CHROMATOGRAM
Retention time: 13
Internal standard: p-chlorodisopyramide (9)
Limit of detection: 50 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Simultaneous: acetylprocainamide, atenolol, diltiazem, glycinexylidide, lidocaine, metoprolol, mexiletine, phenytoin, procainamide, propranolol, tocainide, verapamil

KEY WORDS
serum; pharmacokinetics

SAMPLE
Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform: isopropanol:n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min,

inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES

Column: 300 × 3.9 4 μm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 261

CHROMATOGRAM

Retention time: 4.01
Limit of detection: <120 ng/mL

SAMPLE

Matrix: blood, urine

Sample preparation: Blood. Mix 500 μL whole blood or plasma with 100 μL 1 M NaOH and 4 mL diethyl ether. Extract using a Labquake automatic shaker for 10 min, centrifuge at 1000 g for 5 min. Freeze the aqueous phase and remove the organic layer. Add 80 μL 100 mM phosphoric acid to the organic layer, vortex for 40 s, centrifuge, inject a 50 μL aliquot of the aqueous layer. Urine. Mix 500 μL urine with 2 mL 100 mM sodium carbonate and 4 mL diethyl ether. Extract using a Labquake automatic shaker for 10 min, centrifuge at 1000 g for 5 min. Freeze the aqueous phase and remove the organic layer. Add 80 μL 100 mM phosphoric acid to the organic layer, vortex for 40 s, centrifuge, inject a 50 μL aliquot of the aqueous layer.

HPLC VARIABLES

Column: 250 × 4.6 6 μm Zorbax TMS

Mobile phase: MeCN:triethylamine:50 mM ammonium dihydrogen phosphate 15:0.5:85, adjusted to pH 2.6 with 1 M phosphoric acid

Flow rate: 1.1

Injection volume: 50

Detector: UV 262

CHROMATOGRAM

Retention time: 11

Internal standard: disopyramide

OTHER SUBSTANCES

Extracted: pirmenol

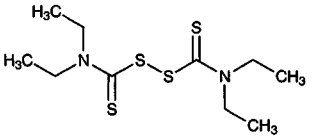
Disulfiram



Molecular formula: $C_{10}H_{20}N_2S_4$
Molecular weight: 296.55
CAS Registry No.: 97-77-8
Merck Index: 3428
Lednicer No.: 1 223

SAMPLE

Matrix: blood

Sample preparation: For disulfiram. Inject a 100 μL aliquot of plasma directly onto column A with mobile phase A and elute to waste, after 4 min backflush the contents of column A onto column B with mobile phase B, after another 4 min remove column A from the circuit, elute column B with mobile phase B and monitor the effluent. For metabolites diethyldithiocarbamate and methyl diethyldithiocarbamate. 1 mL Plasma + 10 mM pH 7.5 phosphate buffer containing 200 mM EDTA + 1 μL 2-mercaptoethanol + 1 μL ethyl iodide, mix for 30 s, heat at 40° for 30 min, inject a 100 μL aliquot onto column A with mobile phase A and elute to waste, after 4 min backflush the contents of column A onto column B with mobile phase B, after another 4 min remove column A from the circuit, elute column B with mobile phase B and monitor the effluent. (Unchanged disulfiram was not found in plasma but the metabolites were found.)

HPLC VARIABLES

Column: A 50 × 3.9 40 μm Perisorb RP-18 (Merck); B 250 × 3.9 7 μm LiChrosorb RP-18
Mobile phase: A 10 mM pH 7.5 phosphate buffer containing 5 mM EDTA; B MeCN:10 mM pH 7.5 phosphate buffer 60:40
Flow rate: 1
Injection volume: 100
Detector: UV 254

CHROMATOGRAM

Retention time: 18.3 (disulfiram), 12.5 (diethyldithiocarbamate), 10.5 (methyl diethyldithiocarbamate)
Limit of detection: 3.7 ng/mL (diethyldithiocarbamate), 3.3 ng/mL (methyl diethyldithiocarbamate), 3 ng/mL (disulfiram)

OTHER SUBSTANCES

Extracted: metabolites

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using

a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 216.9

CHROMATOGRAM
Retention time: 25.13

SAMPLE

Matrix: urine

Sample preparation: Adjust pH of 1-5 mL urine to 6.8 using 10 mM phosphate buffer, add 500 μL 100 mM lead (II) acetate solution, pump mixture onto column A at 1 mL/min and elute to waste, elute the contents of column A onto column B with mobile phase B, elute column B with mobile phase B and monitor the effluent from column B. (Before the next injection flush column A with 5 mL MeCN then 5 mL of a buffer containing 10 mM potassium citrate and 10 mM EDTA).

HPLC VARIABLES

Column: A 4 × 2.1 5 μm Hypersil ODS; B 200 × 2.1 5 μm Hypersil ODS

Mobile phase: MeCN:10 mM pH 5.3 acetate buffer 65:35

Flow rate: A 1; B 0.5

Injection volume: 1000-5000

Detector: UV 435 following post-column derivatization. The column effluent flowed through a 2 × 4.6 reactor filled with metallic copper and a 4 × 4.6 reactor with filled copper(II) phosphate to the detector. (Metallic copper was prepared by adding 1 g Cu(I)Cl to 2 g sodium borohydride in 20 mL water, wash precipitate twice with water and MeOH, suspend in MeOH, sonicate, dry on tissue paper, pack firmly into column, use immediately (J.Chromatogr. 1986,370,439) (reactor lifetime 2 days). Copper(II) phosphate was prepared by mixing equal volumes of 100 mM potassium hydrogenphosphate (sic) and 100 mM copper(II) sulfate, wash precipitate twice with water and MeOH, suspend precipitate in MeOH, sonicate for 20 min, dry, pack in column (reactor lifetime 2 weeks).)

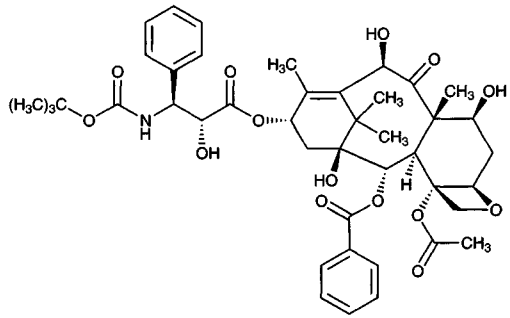
Docetaxel

Molecular formula: $C_{43}H_{53}NO_{14}$
Molecular weight: 807.89
CAS Registry No.: 114977-28-5
Merck Index: 3458



SAMPLE

Matrix: blood

Sample preparation: Condition a 100 mg IST endcapped cyano SPE cartridge (Sopachem BV, Netherlands) with 1 mL MeCN:triethylamine 100:0.1, 2 mL MeOH, and 2 mL 10 mM pH 5.0 ammonium acetate. Add 60 μL 10 μg/mL 2′-methylpaclitaxel in MeOH to 1200 μL plasma, mix for 20 s, centrifuge at 9500 g for 10 min, add 1 mL of the supernatant to the SPE cartridge at 0.4 mL/min. Wash with 2 mL 10 mM pH 5.0 ammonium acetate and 1 mL MeOH:water 20:80, elute with 500 μL MeCN:triethylamine 100:0.1, evaporate the eluate to dryness under a stream of nitrogen at 40°, reconstitute with 100 μL MeCN:MeOH:water 40:10:50 by mixing for 30 s, inject a 50 μL aliguot.

HPLC VARIABLES

Column: 150 × 4.6 5 μm APEX-Octyl (Jones Chromatography)
Mobile phase: MeCN:20 mM pH 5.0 ammonium acetate buffer 36.8:63.2
Flow rate: 1
Injection volume: 50
Detector: UV 227

CHROMATOGRAM

Retention time: 11.2
Internal standard: 2′-methylpaclitaxel (18.7)
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES

Extracted: metabolites
Noninterfering: acetaminophen, cimetidine, codeine, clemastine, diazepam, dexamethasone, diphenhydramine, flurazepam, oxazepam, paclitaxel, prednisolone, ranitidine

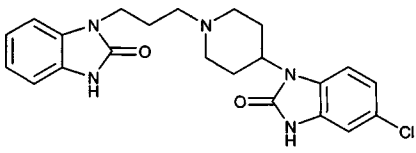
Domperidone



Molecular formula: $C_{22}H_{24}ClN_5O_2$
Molecular weight: 425.92
CAS Registry No.: 57808-66-9
Merck Index: 3476
Lednicer No.: 3 174

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 µL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) µL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 µm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 207.5

CHROMATOGRAM

Retention time: 12.355

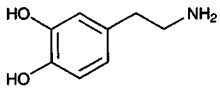
Dopamine



Molecular formula: $C_8H_{11}NO_2$
Molecular weight: 153.18
CAS Registry No.: 51-61-6, 62-31-7 (HCl)
Merck Index: 3479

SAMPLE

Matrix: blood
Sample preparation: Mix 450 μL plasma with 50 μL 310 μ g/L iso-homovanilic acid in antioxidant solution. Dialyze this solution using a Carnegie Medicin (Stockholm) microdialysis system. Perfuse 10 mm microdialysis probes with Ringer solution at 2 μ L/min. Collect dialysate for each plasma sample over 20 min in a vial containing 80 μL antioxidant solution, inject a 100 μL aliquot. (Antioxidant solution was 10 mM HCl containing 1 g/L sodium metabisulfite and 0.1 g/L Na2EDTA.)

HPLC VARIABLES

Guard column: 30 × 4 Bondapak C18/Corasil 37-50 μ m
Column: 250 × 4.8 5 μm ODS(Beckman,CA)
Mobile phase: MeOH:buffer 20:80 (Buffer was 70 mM pH 2.55 NaH_2PO_4 containing 2.08 mM sodium octanesulfonate and 80 μ M EDTA.)
Flow rate: 1
Injection volume: 100
Detector: E , Waters 460 containing an electrochemical cell fitted with a glassy carbon working electrode and an Ag/AgCl reference electrode; the detector potential is + 0.8 V°vs the reference electrode

CHROMATOGRAM

Retention time: 5.5
Internal standard: iso-homovanilic acid (10)
Limit of detection: 0.4 nM/L

OTHER SUBSTANCES

Extracted: dihydroxyphenylacetic acid, homovanilic acid, levodopa

KEY WORDS

plasma; pharmacokinetics; dialysate

SAMPLE

Matrix: blood
Sample preparation: 20 mL Whole blood + 1 mL 20 mg/mL EDTA solution containing 10 mg/mL sodium metabisulfite, mix, centrifuge at 4° at 4000 g for 10 min. Remove the plasma and add concentrated perchloric acid until the concentration of perchloric acid is 400 mM, mix, let stand in the cold for 15 min, centrifuge at 4° at 20000 g for 20 min. Adjust pH of 2 mL supernatant to 7.0 ± 0.2 with 500 mM KOH, add 400 μL 875 μg/mL o-phthalaldehyde in pH 10.40 ± 0.02 buffer (containing 2-mercaptoethanol ?), add 2 g NaCl, add 2 mL ethyl acetate, shake for 1 min, centrifuge at 3400 g, repeat the extraction. Combine the organic layers and add them to 2 mL 35 mM pH 10.0 ± 0.1 Na_2HPO_4 buffer, shake for 1 min, centrifuge at 3400 g, discard the aqueous layer, wash the ethyl acetate layer again with phosphate buffer. Reduce the ethyl acetate volume to 100 μL under a stream of nitrogen, inject a 10-50 μL aliquot.

HPLC VARIABLES
Guard column: Co:Pell ODS
Column: 300 × 4 10 μm μBondapak phenyl
Mobile phase: Gradient. MeCN:25 mM pH 5.10 NaH_2PO_4 buffer 25:75 for 15 min then MeOH:25 mM pH 5.10 NaH_2PO_4 buffer 45:55 (step gradient).
Column temperature: 26
Flow rate: 1.5
Injection volume: 10-50
Detector: F ex 340 em 480

CHROMATOGRAM
Retention time: 29
Internal standard: tyramine (44)
Limit of detection: 0.5 ng/mL

OTHER SUBSTANCES
Extracted: norepinephrine, serotonin

SAMPLE
Matrix: blood
Sample preparation: Plasma. 1 mL Plasma + 125 μL 2 ng/mL α-methylnorepinephrine + 1 mL buffer + 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol, shake for 2 min, centrifuge at 1000 g for 5 min, freeze in dry ice/acetone. Remove the organic phase and add it to 2 mL 1-octanol (saturated with 80 mM acetic acid) and 200 μL 80 mM acetic acid, shake, centrifuge at 1000 g for 5 min. Freeze the aqueous layer and remove the organic layer. Add 1 mL 10 mM HCl, 1 mL buffer, and 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol to the aqueous phase. Shake, centrifuge, freeze, remove the organic layer and add it to 2 mL 2 M pH 8.6 ammonia-ammonium chloride buffer containing 13.4 mM EDTA (but no complex). Freeze, remove the organic layer and add it to 2 mL 1-octanol and 150 μL 80 mM acetic acid, shake, centrifuge at 1000 g for 5 min. Freeze, remove the organic layer

and add the aqueous layer to 200 μL MeCN, 50 μL 1.75 M pH 6.95 bicine buffer containing 1% EDTA, 100 μL 100 mM 1,2-diphenylethylenediamine in 100 mM HCl, and 20 μL 20 mM potassium ferricyanide in water. Heat at 37° in the dark for 1 h, inject a 75 μL aliquot (keep it in the dark in the autosampler). Urine. 100 μL Urine + 1 mL 10 mM HCl + 125 μL 40 ng/mL α-methylnorepinephrine + 1 mL buffer + 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol, shake for 2 min, centrifuge at 1000 g for 5 min, freeze in dry ice/acetone. Remove the organic phase and add it to 2 mL 1-octanol (saturated with 80 mM acetic acid) and 200 μL 80 mM acetic acid, shake, centrifuge at 1000 g for 5 min. Freeze the aqueous layer and remove the organic layer. Add 1 mL 10 mM HCl, 1 mL buffer, and 5 mL n-heptane containing 4.6 mM tetraoctylammonium bromide and 10 mL/L 1-octanol to the aqueous phase. Shake, centrifuge, freeze, remove the organic layer and add it to 2 mL 1-octanol and 150 μL 80 mM acetic acid, shake, centrifuge at 1000 g for 5 min. Freeze, remove the organic layer and add the aqueous layer to 200 μL MeCN, 50 μL 1.75 M pH 6.95 bicine buffer containing 1% EDTA, 100 μL 100 mM 1,2-diphenylethylenediamine in 100 mM HCl, and 20 μL 20 mM potassium ferricyanide in water. Heat at 37° in the dark for 1 h, inject a 50 μL aliquot (keep it in the dark in the autosampler). (Buffer was a 2 M pH 8.6 ammonia-ammonium chloride buffer containing 8.9 mM diphenyl borate-ethanolamine complex and 13.4 mM EDTA.)

HPLC VARIABLES

Column: 100 × 4.6 3 μm PhaseSep C18 ODS2

Mobile phase: Gradient. A was MeCN:MeOH:50 mM pH 7.0 sodium acetate buffer 20:4:76. B was MeCN:MeOH:50 mM pH 7.0 sodium acetate buffer 60:10:30. A:B 40:60 for 3 min, go to 0:100 over 0.5 min, stay at 0:100 for another 4.5 min. (After the last sample flush column with 60 mL MeCN:MeOH:water 70:10:20.)

Flow rate: 1

Injection volume: 50-75

Detector: F ex 350 em 480

CHROMATOGRAM

Retention time: 5.5

Internal standard: α-methylnorepinephrine (2.5)

Limit of detection: 0.3-0.6 pg

OTHER SUBSTANCES

Simultaneous: norepinephrine, epinephrine, epinine

Interfering: α-methyldopa

KEY WORDS

plasma

SAMPLE

Matrix: blood

Sample preparation: 100 μL Plasma + 5 mg alumina + 10 μL 10 μM IS in 10 mM perchloric acid + 100 μL pH 8.7 Tris-HCl buffer, stir for 10 min, centrifuge at 3000 g for 1 min, discard the supernatant. Wash the alumina with two 500 μL portions of water, add 100 μL 100 mM perchloric acid, mix for 1 min, centrifuge at 3000 g for 1 min, inject a 50 μL aliquot of the supernatant. (Heat 20 g alumina (WA-4, Sigma) with 200 mL 2 M HCl at 100° for 1 h with gentle mixing, decant the supernatant, wash with twenty 200 mL portions of water, filter (Toyo Roshi No. 2 paper), dry at 120° overnight.)

HPLC VARIABLES
Column: 150 × 4.6 catecholpak (JASCO)
Mobile phase: MeCN:50 mM pH 3.20 potassium acetate:50 mM pH 3.20 potassium phosphate buffer 3:92.15:4.85 containing 1 mM sodium hexanesulfonate
Column temperature: 40
Flow rate: 0.5
Injection volume: 50
Detector: Chemiluminescence (Kenko filter Y-46) following post-column reaction. The column effluent mixed with reagent 1 pumped at 0.25 mL/min and the mixture flowed through a 15 m × 0.5 mm i.d. knitted PTFE coil at 80°. The effluent from the coil mixed with reagent 2 pumped at 1.4 mL/min and this mixture flowed to the detector. (Reagent 1 was 105 mM ethylenediamine (semiconductor grade) and 175 mM imidazole in MeCN:EtOH 90:10. Reagent 2 was 0.25 mM bis[4-nitro-2-(3,6,9-trioxadecyloxycarbonyl)phenyl] oxalate (Wako), 150 mM hydrogen peroxide, and 110 mM trifluoroacetic acid in dioxane:ethyl acetate 50:50 (Caution! Dioxane is a carcinogen!).)

CHROMATOGRAM
Retention time: 22
Internal standard: 3,4-dihydroxybenzylamine (17)
Limit of detection: 1 fmole

OTHER SUBSTANCES
Extracted: epinephrine, norepinephrine

SAMPLE
Matrix: blood, food, peptides, plants, tissue
Sample preparation: Hydrolyze peptide with 6 M HCl containing 0.2% 3,3'-thiodipropionic acid at 110° for 24 h, evaporate to dryness, reconstitute with 50-200 μL 0.1% HCl containing 0.2% 3,3'-thiodipropionic acid. Homogenize (Ultra-Turrax) 0.1-1 g food, tissue, plant material, lyophilized plasma, or lyophilized tissue in 10 mL 250 nM IS in 100 mM HCl containing 0.2% 3,3'-thiodipropionic acid at 20000 rpm for 2 min, sonicate for ≤30 min, centrifuge at 5000 g for 20 min, discard fat layer, filter (Millipore ultrafiltration insert (MW cutoff 5000) prewashed with 200 μL 100 mM HCl containing 0.2% 3,3'-thiodipropionic acid) 3 mL supernatant while centrifuging at 3500 g for 1 h. Mix 20 μL deproteinized sample (or 10 μL peptide hydrolysate) with 180 μL buffer, vortex, add 200 μL reagent, mix, heat at 70° for 15 min with mixing at 1 min and 12 min, cool in an ice bath for 5 min, centrifuge at 10000 g for 10 s, add 400 μL diluent, mix thoroughly, centrifuge at 15000 g for 5 min, inject a 10 μL aliquot of the supernatant. (Prepare buffer by dissolving 630 mg sodium bicarbonate in 40 mL water, adjusting pH to 8.6 with NaOH, and making up to 50 mL with water. Prepare reagent by sonicating 40 mg dabsyl chloride in 10 mL acetone for 10 min, then filtering into brown vials and storing at -20°. Prepare diluent by mixing 50 mL MeCN, 25 mL EtOH, and 25 mL mobile phase A.)

HPLC VARIABLES
Guard column: present but not specified
Column: 150 × 3.9 4 μm Novapak C18
Mobile phase: Gradient. A was DMF:9 mM NaH_2PO_4 containing 0.16% triethylamine, adjusted to pH 6.55 with phosphoric acid. B was MeCN:water 80:20. A:B 92:8 for 2 min, to 80:20 over 5 min (Waters convex curve 5), to 65:35 over 28 min (Waters concave curve 7), to 50:50 over 10 min, to 0:100 over 21 min, maintain at 0:100 for 11 min, return to initial conditions over 0.5 min, re-equilibrate for 12.5 min.
Column temperature: 50
Flow rate: 1
Injection volume: 10
Detector: UV 436

CHROMATOGRAM
Retention time: 69.05
Internal standard: norleucine (40.90), norvaline (35.06)

OTHER SUBSTANCES
Extracted: amino acids epinephrine, histamine, norepinephrine, taurine

KEY WORDS
rinse glass and plasticware with 70% EtOH and water and dry before use; derivatization; cheese; meat; sausage; fish; plasma

SAMPLE
Matrix: blood, urine
Sample preparation: Serum. Add 1 mL serum to 100 mg activated aluminum oxide suspended in 1 mL pH 8.7 Tris-HCl buffer, stir, let stand for 10 min. Discard the supernatant and wash the solid three times with 5 mL portions of water, wash the solid with 3 mL MeOH, dry under reduced pressure, elute with 3 mL 4 M acetic acid. Evaporate the eluate to dryness under reduced pressure, reconstitute the residue with 90 μL water, inject a 10 μL aliquot. Urine. 5 mL Urine + 5.3 mL 2 M HCl, heat at 100° for 20 min, cool to room temperature, add 1 mL 50 mM disodium EDTA, adjust the pH to 8.5 with dilute ammonia, add 500 mg 200 mesh aluminum oxide (Wako), shake for 10 min, filter, wash the solid with 10 mL water, elute with 5 mL 300 mM acetic acid, inject an aliquot of the eluate.

HPLC VARIABLES
Column: 250 × 3.6 10-25 μm Hitachi 3011 C resin
Mobile phase: 50 mM K_2HPO_4 containing 0.05% phosphoric acid
Column temperature: 45
Flow rate: 0.6
Injection volume: 10
Detector: F ex 383 em 486 following post-column reaction. The column effluent mixed with 1% 2-cyanoacetamide in water pumped at 0.5 mL/min and with buffer pumped at 1 mL/min and the mixture flowed through a 5 m × 0.5 mm ID PTFE coil at 100 ± 1° to the detector. (Buffer was 600 mM boric acid containing 750 mM KOH.)

CHROMATOGRAM
Retention time: 10
Limit of detection: 0.098 pmole

OTHER SUBSTANCES
Extracted: epinephrine, norepinephrine

SAMPLE
Matrix: blood, urine
Sample preparation: Condition a 150 μL Toyopak IC-SP S (sulfopropyl resin, H^+ form) SPE cartridge (Tosoh) with 10 mL water. Plasma. 700 μL Plasma + 50 μL 700 nM 3,4-dihydroxybenzylamine + 350 μL 2 M perchloric acid, mix, centrifuge at 4° at 1000 g for 15 min. Remove a 700 μL aliquot of the supernatant and add it to 30 μL 2 M potassium carbonate, centrifuge at 4° at 1000 g for 5 min. Add a 500 μL aliquot of the supernatant to the SPE cartridge, wash with 1 mL water, wash with 500 μL EtOH:water 50:50, wash with 5 mL water, elute with 500 μL 2 M sodium perchlorate, filter (0.2 μm), inject a 50 μL aliquot of the filtrate. Urine. Acidify urine collected over 24 h with 10 mL 6 M HCl. 500 μL Urine + 25 μL 10 μM 3,4-dihydroxybenzylamine + 25 μL 40 μM ferulic acid + 500 μL 1 M perchloric acid, mix, centrifuge at 4° at 1000 g for 15 min. Remove a 700 μL aliquot of the supernatant and add it to 30 μL 2 M potassium carbonate, centrifuge at 4°

at 1000 g for 5 min, add a 500 μL aliquot of the supernatant to the SPE cartridge, wash with 1.5 mL water, wash with 500 μL EtOH:water 50:50, wash with 5 mL water, elute with 500 μL 2 M sodium perchlorate, filter (0.2 μm), inject a 50 μL aliquot of the filtrate.; SPE

HPLC VARIABLES

Column: 150 × 4.6 5 μm TSK-gel ODS-80TM (Tosoh)

Mobile phase: Gradient. A was buffer. B was MeCN:MeOH:buffer 8:12:80, pH 3.1. A:B 100:0 for 4 min, to 60:40 over 8 min, to 0:100 over 2 min, maintain at 0:100 for 16 min, return to initial conditions (step gradient), re-equilibrate for 20 min. Buffer was 60 mM pH 3.1 citric acid containing 32 mM Na_2HPO_4, 1.7 mM sodium hexanesulfonate, and 0.1 mM disodium EDTA (J. Chromatogr. 1989, 467, 237).

Flow rate: 1

Injection volume: 50

Detector: F ex 345 em 480 following post-column reaction. The column effluent passed through a Hitachi 655A electrochemical detector with carbon cloth electrodes; working electrode at +0.68 V versus reference electrode (200 mM equimolar mixture of potassium hexacyanoferrate(II) and potassium hexacyanoferrate(III) containing 200 mM potassium nitrate and 200 mM KOH). The effluent from the electrochemical detector mixed with 20 mM meso-1,2-diphenylethylenediamine in 50 mM HCl pumped at 0.4 mL/min and with 1 M glycine containing 490 mM KOH and 3 mM potassium hexacyanoferrate(III) pumped at 0.4 mL/min. This mixture flowed through a 10 m × 0.47 mm ID coil at 80° to the detector (J. Chromatogr. 1989, 467, 237).

CHROMATOGRAM

Retention time: 18

Internal standard: 3,4-dihydroxybenzylamine (12.5)

Limit of detection: 2 nM (urine), 3 nM (plasma)

OTHER SUBSTANCES

Extracted: epinephrine, levodopa, metanephrine, 3-methoxytyramine, norepinephrine

SAMPLE
Matrix: dialysate
Sample preparation: Inject a 5 μL aliquot of dialysate.

HPLC VARIABLES
Column: 100 × 1 3 μm SepStik (BioAnalytical Systems, West Lafayette, IN)
Mobile phase: THF:50 mM NaH_2PO_4 24:76 containing 0.2 mM disodium EDTA, 3.7 mM 1-decanesulfonic acid, and 4.9 mM triethylamine, pH 5.5
Flow rate: 0.023
Injection volume: 5
Detector: E, (EG & G Princeton Applied, USA), Model MP 1304, glassy carbon electrode, first at +700 mV, second at 0 mV, Ag/AgCl reference electrode (BioAnalytical Systems, Model RE4); UV 225

CHROMATOGRAM
Retention time: 5
Limit of quantitation: 1 nM

OTHER SUBSTANCES
Simultaneous: cocaine (UV 225)

KEY WORDS
rat; brain; microdialysis; pharmacokinetics; microbore

REFERENCE

SAMPLE
Matrix: dialysate
Sample preparation: Mix 30 μL dialysate + 5 μL 200 mM perchloric acid, inject a 20 μL aliquot.

HPLC VARIABLES
Column: 80 × 4.6 3 μm HR-80 C18 (ESA)
Mobile phase: MeCN:MeOH:buffer 15:13:72 (Buffer was 75 mM NaH_2PO_4, 1.5 mM sodium dodecyl sulfate, 100 μL/L triethylamine, and 20 μm EDTA, adjusted to pH 5.6.)
Column temperature: 25
Flow rate: 1
Injection volume: 20
Detector: E, ESA Coulochem II, Model 5014 Microdialysis Cell with E1 -175 mV and E2 +175 mV, Pd reference electrode, Model 5020 Guard Cell EGC +300 mV

CHROMATOGRAM
Retention time: 5.2
Limit of detection: 400 fg

OTHER SUBSTANCES
Extracted: norepinephrine, epinephrine, serotonin

KEY WORDS
rat; brain; pharmacokinetics; use peek tubing and sample loop

REFERENCE

SAMPLE
Matrix: formulations
Sample preparation: Tablets. Grind tablets, weigh out a portion, dissolve in 50 mL mobile phase, sonicate, filter (No. 4 sintered glass plate), dilute, inject an aliquot. Capsules. Dissolve 10 capsules (without opening) in 100 mL mobile phase, sonicate, inject an aliquot. Injections, ampules, sprays. Dilute, inject an aliquot.

HPLC VARIABLES
Column: 120 × 4.6 Spherisorb C18 ODS-2
Mobile phase: Isopropanol:buffer 5:95 (Buffer was 100 mM sodium dodecyl sulfate containing 25 mM Na_2HPO_4, pH adjusted to 3.0 with HCl.)
Flow rate: 1
Injection volume: 20
Detector: UV 280

CHROMATOGRAM
Retention time: k' 5.5
Limit of detection: 7 ng/mL

OTHER SUBSTANCES
Simultaneous: carbidopa, epinephrine, hydrochlorothiazide, isoproterenol, levodopa, methyldopa, norepinephrine, phenylephrine

SAMPLE

Matrix: perfusate
Sample preparation: 30 μL Perfusate (artificial CSF) + 10 μL 200 mM perchloric acid. Mix a 25 μL aliquot with 12.5 μL reagent, let stand for 2 min, inject an aliquot. (Prepare a stock solution by dissolving 27 mg o-phthalaldehyde in 1 mL MeOH, add 5 μL β-mercaptoethanol, add 9 mL 100 mM pH 9.3 sodium tetraborate containing 10 μM EDTA. This solution is good for 5 days in a sealed amber bottle at room temperature. Prepare the working reagent by diluting 1 mL of the stock solution with 3 mL 100 mM pH 9.3 sodium tetraborate containing 10 μM EDTA, allow to stand for 24 h before use.)

HPLC VARIABLES

Column: two columns 150 × 4.6 5 μm M.S. Gel C18 (ESA)
Mobile phase: MeOH:buffer 8:92 adjusted to pH 3.0 with phosphoric acid (Buffer was 54 mM NaH_2PO_4 containing 1.24 mM sodium heptanesulfonate.)
Column temperature: 33
Flow rate: 1.2
Detector: E, ESA Coulochem Electrode Array System Model 5500, detector temp 33°, oxidation potential 70 mV

CHROMATOGRAM

Retention time: 5.57
Limit of quantitation: 0.5 ng/mL

OTHER SUBSTANCES

Extracted: apomorphine, hydralazine, isoproterenol, methoxamine, morphine, norepinephrine, phenylephrine

KEY WORDS

rat; derivatization

SAMPLE
Matrix: urine

Sample preparation: Add disodium EDTA and sodium metabisulfite to urine. 100 μL Urine + 2 mL water, vortex, add 1 mL reagent 1, add 5 mL reagent 2, shake vigorously for 2 min, centrifuge at 2000 g for 2 min, freeze in dry ice/acetone. Remove the organic layer and add it to 200 μL 80 mM acetic acid and 2 mL n-octanol saturated with acetic acid, shake vigorously for 2 min, centrifuge at 2000 g for 2 min, freeze in dry ice/acetone until the aqueous layer is just solid, remove the organic layer. Thaw out the aqueous layer and add it to 1 mL reagent 1 and 5 mL reagent 2, shake vigorously for 2 min, centrifuge at 2000 g for 2 min, freeze in dry ice/acetone. Remove the organic layer and add it to 200 μL 80 mM acetic acid and 2 mL n-octanol saturated with acetic acid, shake vigorously for 2 min, centrifuge at 2000 g for 2 min, freeze in dry ice/acetone until the aqueous layer is just solid, remove the organic layer. Thaw out the aqueous layer and add 100 μL Bicine buffer, 250 μL MeCN, and 100 μL 100 mM 1,2-diphenylethylenediamine in 100 mM HCl, vortex, add 20 μL 20 mM potassium ferricyanide, vortex, heat at 37° for 40 min, cool to room temperature, inject a 100 μL aliquot. (Prepare reagent 1 by dissolving 214 g ammonium chloride and 10 g disodium EDTA in 2 L water, adjust pH to 8.3-8.5 with concentrated ammonium hydroxide, add 4.0 g diphenylborate-ethanolamine complex, stir for several hours until a clear solution is obtained. Prepare reagent 2 by dissolving 2.5 g tetraoctylammonium bromide and 10 mL n-octanol (saturated with acetic acid) in 1 L n-heptane. Prepare Bicine buffer by dissolving 14.3 g Bicine (N,N-bis(2-hydroxyethyl)glycine) and 359 mg anhydrous sodium acetate in 45 mL water, stir overnight until dissolved, adjust pH to 7.30 with concentrated NaOH, make up to 50 mL with water. Note that concentration of 1,2-diphenylethylenediamine is not given in paper. Other authors have used 100 mM (J.Chromatogr. 1989, 487, 17; 1992, 574, 109; 1992, 583, 236).)

HPLC VARIABLES

Column: 150 × 4.6 5 μm Ultrasphere ODS
Mobile phase: Gradient. A was MeCN:MeOH:50 mM pH 7.0 sodium acetate buffer 40:10:50. B was MeCN:MeOH:50 mM pH 7.0 sodium acetate buffer 50:10:40. A:B 75:25 for 1 min, to 10:90 over 7 min, return to initial conditions over 1 min.

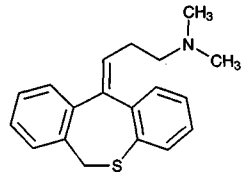
Dothiepin



Molecular formula: $C_{19}H_{21}NS$
Molecular weight: 295.45
CAS Registry No.: 113-53-1, 897-15-4 (HCl)
Merck Index: 3485
Lednicer No.: 3 239

SAMPLE

Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform: isopropanol:n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 μL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 μL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES

Column: 300 × 3.9 4 μm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 230

CHROMATOGRAM

Retention time: 6.82
Limit of detection: <120 ng/mL

SAMPLE

Matrix: blood, gastric contents, tissue, urine

Sample preparation: Blood, stomach contents. 1 mL Postmortem blood or stomach contents + 500 μL 1 M potassium carbonate + 8 mL n-hexane:ethyl acetate 7:3, extract on a rotary mixer for 8 min, centrifuge at 2500 rpm for 8 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at room temperature, dissolve the residue in 100 μL mobile phase, inject a 50 μL aliquot. Urine. 1 mL Urine + 200 μL concentrated HCl, heat at 100° for 1 h, cool, adjust pH to 9.5-10 with KOH pellets and 1 M potassium carbonate, add 8 mL n-hexane:ethyl acetate 7:3, extract on a rotary mixer for 8 min, centrifuge at 2500 rpm for 8 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at room temperature, dissolve the residue in 100 μL mobile phase, inject a 50 μL aliquot. Tissue. Add tissue to an equal volume isotonic saline, homogenize with an Ultra-Turraz mixer, remove a 2 g aliquot, add 8 mL n-hexane:ethyl acetate 7:3, extract on a rotary mixer for 8 min, centrifuge at 2500 rpm for 8 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at room temperature, dissolve the residue in 100 μL mobile phase, inject a 50 μL aliquot.

HPLC VARIABLES

Guard column: 10 × 2.1 Chrompack pellicular reverse phase

Column: 100 × 3 5 μm Chromspher C8

Mobile phase: Gradient. MeOH:water containing 0.125% isopropylamine from 30:70 to 75:25 over 15 min

Flow rate: 0.7

Injection volume: 50

Detector: UV 230

CHROMATOGRAM

Retention time: 14

OTHER SUBSTANCES

Simultaneous: trazodone, metabolites

SAMPLE

Matrix: blood, tissue, urine

Sample preparation: Serum, urine. 500 μL Serum or urine + 100 μL 2 μg/mL diazepam + 200 μL 20% sodium carbonate + 500 μL water + 3 mL n-hexane:isoamyl alcohol 98.5:

1.5, mix for 2 min, centrifuge at 1200 g for 5 min. Remove the organic phase and evaporate it under a gentle stream of nitrogen at about 40°. Dissolve the residue in 100 μL mobile phase, inject a 10 μL aliquot. Tissue. Homogenize 1 g sample with 9 mL 100 mM HCl and 100 μL 20 μg/mL diazepam, centrifuge at 15000 g for 10 min. Add 500 μL 20% sodium carbonate and 4 mL n-hexane:isoamyl alcohol 98.5:1.5 to 1 mL of the supernatant, mix for 5 min. Remove the organic phase and evaporate it under a gentle stream of nitrogen at about 40°. Dissolve the residue in 100 μL mobile phase, filter by microconcentrator (Microcon-30, Grace). Inject a 10 μL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 2 μm TSK gel Super-Octyl (A) or 100 × 4.6 5 μm Hypersil MOS-C8 (B), (Yokogawa, Japan)
Mobile phase: MeOH:20 mM pH 7 KH_2PO_4 60:40
Flow rate: 0.6
Injection volume: 1υ
Detector: UV 254

CHROMATOGRAM

Retention time: 10.6 (A), 19.7 (B)
Internal standard: diazepam (4.4, A)
Limit of quantitation: 50 ng/mL (serum, urine) (A), 500 ng/mL (tissue) (A)

OTHER SUBSTANCES

Extracted: amitriptyline, amoxapine, clomipramine, desipramine, doxepin, imipramine, maprotiline, melitracen, mianserin, nortriptyline
Noninterfering: barbital, carbamazepine, ethosuximide, hexobarbital, lofepramine, pentobarbital, phenobarbital, phenytoin, primidone, sulpiride, trimethadione, trimipramine

KEY WORDS

serum; brain; liver

SAMPLE

Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30

Detector: UV 200.5

Hill,D.W.; Kind,A.J. The effects of type B silica and triethylamine on the retention of drugs in silica based reverse phase high performance chromatography, *J.Liq.Chromatogr.*, **1993**, *16*, 3941–3964.

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 Zorbax RX
Mobile phase: Gradient. A was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 1 L water. B was 10 mL concentrated orthophosphoric acid and 7 mL triethylamine in 200 mL water, make up to 1 L with MeCN. A:B from 100:0 to 0:100 over 30 min, maintain at 0:100 for 5 min.
Column temperature: 30
Flow rate: 2
Detector: UV 210

OTHER SUBSTANCES
Also analyzed: acepromazine, acetaminophen, acetophenazine, albuterol, aminophylline, amitriptyline, amobarbital, amoxapine, amphetamine, amylocaine, antipyrine, aprobarbital, aspirin, atenolol, atropine, avermectin, barbital, benzocaine, benzoic acid, benzotropine, benzphetamine, berberine, bibucaine, bromazepan, brompheniramine, buprenorphine, buspirone, butabarbital, butacaine, butethal, caffeine, carbamazepine, carbromal, chloramphenicol, chlordiazepoxide, chloroquine, chlorothiazide, chloroxylenol, chlorphenesin, chlorpheniramine, chlorpromazine, chlorpropamide, chlortetracycline, cimetidine, cinchonidine, cinchonine, clenbuterol, clonazepam, clonixin, clorazepate, cocaine, codeine, colchicine, cortisone, coumarin, cyclazocine, cyclobenzaprine, cyclothiazide, cyheptamide, cymarin, danazol, danthron, dapsone, debrisoquine, desipramine, dexamethasone, dextromethorphan, dextropropoxyphene, diamorphine, diazepam, diclofenac, diethylpropion, diethylstilbestrol, diflunisal, digitoxin, digoxin, diltiazem, diphenhydramine, diphenoxylate, diprenorphine, dipyrone, disulfiram, doxepin, dronabinol, ephedrine, epinephrine, epinine, estradiol, estriol, estrone, ethacrynic acid, ethosuximide, etonitazene, etorphine, eugenol, famotidine, fenbendazole, fencamfamine, fenoprofen, fenproporex, fentanyl, flubendazole, flufenamic acid, flunitrazepam, 5-fluorouracil, fluoxymesterone, fluphenazine, furosemide, gentisic acid, gitoxigenin, glipizide, glunixin, glutethimide, glybenclamide, guaiacol, halazepam, haloperidol, hydrochlorothiazide, hydrocodone, hydrocortisone, hydromorphone, hydroxyquinoline, ibogaine, ibuprofen, iminostilbene, imipramine, indomethacin, isocarbostyril, isocarboxazid, isoniazid, isoproterenol, isoxsuprine, ivermectin, ketamine, ketoprofen, kynurenic acid, levorphanol, lidocaine, lorazepam, lormetazepam, loxapine, mazindol, mebendazole, meclizine, meclofenamic acid, medazepam, mefenamic acid, megestrol, mepacrine, meperidine, mephentermine, mephenytoin, mephesin, mephobarbital, mepivacaine, mescaline, mesoridazine, methadone, methamphetamine, methapyrilene, methaqualone, methazolamide, methocarbamol, methoxamine, methsuximide, methyl salicylate, methyldopa, methyldopamine, methylphenidate, methylpredni-

solone, methyltestosterone, methyprylon, metoprolol, mibolerone, morphine, nadolol, nalorphine, naloxone, naltrexone, naphazoline, naproxen, nefopam, niacinamide, nicotine, niacin, nifedipine, niflumic acid, nitrazepam, norepinephrine, nortriptyline, noscapine, nylidrin, oxazepam, oxycodone, oxymorphone, oxyphenbutazone, oxytetracycline, papaverine, pargyline, pemoline, pentazocine, pentobarbital, persantine, phenacetin, phenazocine, phenazopyridine, phencyclidine, phendimetrazine, phenelzine, pheniramine, phenobarbital, phenothiazine, phensuximide, phentermine, phenylbutazone, phenylephrine, phenylpropanolamine, piperocaine, prazepam, prednisolone, primidone, probenecid, progesterone, propiomazine, propranolol, propylparaben, pseudoephedrine, puromycin, pyrilamine, pyrithyldione, quazepam, quinaldic acid, quinidine, quinine, ranitidine, recinnamine, reserpine, resorcinol, saccharin, albuterol, salicylamide, salicylic acid, scopolamine, scopoletin, secobarbital, strychnine, sulfacetamide, sufadiazine, sulfadimethoxine, sulfaethidole, sulfamerazine, sulfamethazine, sulfamethoxizole, sulfanilamide, sulfapyridine, sulfasoxizole, sulindac, tamoxifen, temazepam, testosterone, tetracaine, tetracycline, tetramisole, thebaine, theobromine, theophylline, thiabendazole, thiamine, thiamylal, thiobarbituric acid, thioridazine, thiosalicylic acid, thiothixene, thymol, tolazamide, tolazoline, tobutamide, tolmetin, tranylcypromine, triamcinolone, tribenzylamine, trichloromethiazide, trifluoperazine, trihexyphenidyl, trimethoprim, tripelennamine, triprolidine, tropacocaine, tyramine, verapamil, vincamine, warfarin, yohimbine, zoxazolamine

SAMPLE

Matrix: solutions

HPLC VARIABLES

Column: 250 × 4.6 5 μm Supelcosil LC-DP (A) or 250 × 4 5 μm LiChrospher 100 RP-8 (B)
Mobile phase: MeCN:0.025% phosphoric acid:buffer 25:10:5 (A) or 60:25:15 (B) (Buffer was 9 mL concentrated phosphoric acid and 10 mL triethylamine in 900 mL water, adjust pH to 3.4 with dilute phosphoric acid, make up to 1 L.)
Flow rate: 0.6

Injection volume: 25
Detector: UV 229

CHROMATOGRAM

Retention time: 8.67 (A), 4.64 (B)

OTHER SUBSTANCES

Also analyzed: acebutolol, acepromazine, acetaminophen, acetazolamide, acetophenazine, albuterol, alprazolam, amitriptyline, amobarbital, amoxapine, antipyrine, atenolol, atropine, azatadine, baclofen, benzocaine, bromocriptine, brompheniramine, brotizolam, bupivacaine, buspirone, butabarbital, butalbital, caffeine, carbamazepine, cetirizine, chlorcyclizine, chlordiazepoxide, chlormezanone, chloroquine, chlorpheniramine, chlorpromazine, chlorpropamide, chlorprothixene, chlorthalidone, chlorzoxazone, cimetidine, cisapride, clomipramine, clonazepam, clonidine, clozapine, cocaine, codeine, colchicine, cyclizine, cyclobenzaprine, dantrolene, desipramine, diazepam, diclofenac, diflunisal, diltiazem, diphenhydramine, diphenidol, diphenoxylate, dipyridamole, disopyramide, dobutamine, doxepin, droperidol, encainide, ethidium bromide, ethopropazine, fenoprofen, fentanyl, flavoxate, fluoxetine, fluphenazine, flurazepam, flurbiprofen, fluvoxamine, furosemide, glutethimide, glyburide, guaifenesin, haloperidol, homatropine, hydralazine, hydrochlorothiazide, hydrocodone, hydromorphone, hydroxychloroquine, hydroxyzine, ibuprofen, imipramine, indomethacin, ketoconazole, ketoprofen, ketorolac, labetalol, levorphanol, lidocaine, loratadine, lorazepam, lovastatin, loxapine, mazindol, mefenamic acid, meperidine, mephenytoin, mepivacaine, mesoridazine, metaproterenol, methadone, methdilazine, methocarbamol, methotrexate, methotrimeprazine, methoxamine, methyldopa, methylphenidate, metoclopramide, metolazone, metoprolol, metronidazole, midazolam, moclobemide, morphine, nadolol, nalbuphine, naloxone, naphazoline, naproxen, nifedipine, nizatidine, norepinephrine, nortriptyline, oxazepam, oxycodone, oxymetazoline, paroxetine, pemoline, pentazocine, pentobarbital, pentoxifylline, perphenazine, pheniramine, phenobarbital, phenol, phenolphthalein, phentolamine, phenylbutazone, phenyltoloxamine, phenytoin, pimozide, pindolol, piroxicam, pramoxine, prazepam, prazosin, probenecid, procainamide, procaine, prochlorperazine, procyclidine, promazine, promethazine, propafenone, propantheline, propiomazine, propofol, propranolol, protriptyline, quazepam, quinidine, quinine, racemethorphan, ranitidine, remoxipride, risperidone, salicylic acid, scopolamine, secobarbital, sertraline, sotalol, spironolactone, sulfinpyrazone, sulindac, temazepam, terbutaline, terfenadine, tetracaine, theophylline, thiethylperazine, thiopental, thioridazine, thiothixene, timolol, tocainide, tolbutamide, tolmetin, trazodone, triamterene, triazolam, trifluoperazine, triflupromazine, trimeprazine, trimethoprim, trimipramine, verapamil, warfarin, xylometazoline, yohimbine, zopiclone

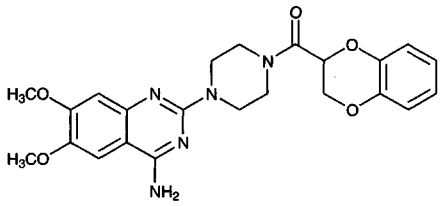
Doxazosin



Molecular formula: $C_{23}H_{25}N_5O_5$
Molecular weight: 451.48
CAS Registry No.: 74191-85-8, 77883-43-3 (mesylate)
Merck Index: 3489
Lednicer No.: 4 148

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 100 μL 2 M NaOH + IS, extract with 5 mL pentane: dichloromethane 2:1. Remove the organic layer and evaporate it to dryness under a gentle stream of nitrogen, reconstitute the residue in mobile phase, inject a 10 μL aliquot.

HPLC VARIABLES

Column: 100 × 2.1 10 μm Chiralpak AD (Chiral Technologies, Exton, PA)
Mobile phase: n-Hexane:isopropanol:diethylamine 70:30:0.1
Column temperature: 30
Flow rate: 0.2
Injection volume: 10
Detector: MS, SCIEX API 300 tandem mass, positive ion mode, nebulizer 440°, scan 452.0/344.0

CHROMATOGRAM

Retention time: 5.64 (R), 7.75 (S)
Internal standard: prazosin (4.50)

KEY WORDS

plasma; chiral; small-bore

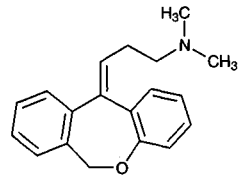
Doxepin



Molecular formula: $C_{19}H_{21}NO$
Molecular weight: 279.38
CAS Registry No.: 1668-19-5, 1229-29-4 (HCl), 4698-39-9 (E), 25127-31-5 (Z), 3607-18-9 (trans HCl)
Merck Index: 3492
Lednicer No.: 1 404

SAMPLE

Matrix: bile, blood, gastric contents, tissue, urine
Sample preparation: Chop 5-g tissue and homogenize (Ultra Turrax T25) at 8500, 9500, 13500, 20500, and 24000 rpm for 1 min each. Add homogenate to 20 mL water. Dilute blood, urine, gastric contents, and bile four times with water. Mix 4 mL sample with 2 mL 500 mM NaOH, vortex briefly, add 4 mL heptane:isoamyl alcohol 98.5:1.5 and mix for 15 min (Spiramix 10, Denley, UK). Separate the organic layer, add 4 mL heptane: isoamyl alcohol 98.5:1.5 to extraction sample, mix. Combine the organic layers and extract them with 2 mL 50 mM sulfuric acid. Make the acid layer alkaline with 1 mL 1.0 M pH 9.0 carbonate/bicarbonate buffer and mix with 2 mL toluene:isoamyl alcohol 85:15 for 15 min. Evaporate the organic layer to dryness, reconstitute the residue in 100 μL MeOH and inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 20 × 4.6 5 μm Apex II ODS
Column: 150 × 4.6 5 μm Apex II OD
Mobile phase: MeCN:pH 3 phosphate buffer:n-nonylamine 40-50:60:0.12
Flow rate: 1
Injection volume: 20
Detector: UV 254

CHROMATOGRAM

Retention time: 2.99
Internal standard: doxepin

OTHER SUBSTANCES

Extracted: amitriptyline, nortriptyline

KEY WORDS

liver; lung; muscle; urine; pericardial fluid; doxepin is IS

SAMPLE

Matrix: blood
Sample preparation: Condition a 1 mL 30 mg Oasis HLB SPE cartridge with 1 mL MeOH and 1 mL water. Acidify (?) mL serum with 20 μL phosphoric acid, vortex for 5 s, add to the SPE cartridge, wash with 1 mL MeOH :water 5:95, elute with 1 mL MeOH. Evaporate the eluate to dryness at 40° under a stream of nitrogen. Reconstitute the residue with 200 μL MeOH:20 mM pH 7 phosphate buffer 20:80, inject a 20 μL aliquot.

HPLC VARIABLES

Guard column: 20 × 3.9 Sentry
Column: 150 × 3.9 5 μm Symmetry C18 (Waters)

Mobile phase: MeOH:20 mM pH 7 potassium phosphate 70:30
Column temperature: 35
Flow rate: 1
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 10
Internal standard: nordoxepin (4.9)

OTHER SUBSTANCES
Extracted: metabolites, amitriptyline, nortriptyline

KEY WORDS
pig; serum; SPE

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 1 mL Serum + 200 μL 10 μg/mL protriptyline in water + 200 μL 80 g/L $NaHCO_3$ + 5 mL hexane, vortex for 15 s, centrifuge for 5 min. Remove the hexane layer and evaporate it in a stream of nitrogen at 60°. Reconstitute in 100 μL mobile phase, vortex for 15 s, inject a 50 μL aliquot.

HPLC VARIABLES
Column: 300 × 4 10 μm μBondapak CN
Mobile phase: MeCN:MeOH:5 mM phosphate buffer 60:15:25, adjusted to pH 7.0
Flow rate: 2
Injection volume: 50
Detector: UV 254

CHROMATOGRAM
Retention time: 3.03
Internal standard: protriptyline (12.20)
Limit of detection: 6 ng/mL

OTHER SUBSTANCES
Simultaneous: imipramine, trimipramine, amitriptyline, desmethyldoxepin, nortriptyline, desipramine, chlorpromazine, thioridazine, propranolol, propoxyphene, disopyramide, maprotiline
Noninterfering: caffeine, theophylline, salicylic acid, chlordiazepoxide, methaqualone, diazepam, acetaminophen, trifluoperazine
Interfering: procainamide

KEY WORDS
serum

SAMPLE
Matrix: blood

Sample preparation: Condition a Bond-Elut C18 column with 2 volumes MeOH then 2 volumes water. Add 1 mL serum then 200 μL 700 ng/mL promazine in MeOH:0.1 M HCl 13:87 to each column, wash with 2 volumes water, wash with 2 volumes 0.1 M acetic acid, wash with MeOH/water, add 200 μL 10 mM ammonium acetate in MeOH, wait for 30 s, elute with vacuum, repeat elution process two more times. Combine eluates and evaporate them to dryness at 56-8° under compressed air. Reconstitute with 200 μL mobile phase, vortex 10 s, inject 75-100 μL aliquot. (MeOH/water was 500 mL MeOH:water 65:35 plus 25 μL concentrated HCl.)

HPLC VARIABLES

Column: 250 × 4.6 5 μm Supelco silica
Mobile phase: EtOH:MeCN:t-butylamine 98:2:0.05 (Mix 1 gallon EtOH with 77 mL MeCN and 1.9 mL t-butylamine.)
Flow rate: 2
Injection volume: 75-100
Detector: UV 254

CHROMATOGRAM

Retention time: 3.6, 3.3 (cis isomer)
Internal standard: promazine (5.2)
Limit of detection: 2 ng/mL

OTHER SUBSTANCES

Extracted: amitriptyline, desipramine, desmethyldoxepin, imipramine, nortriptyline, protriptyline
Simultaneous: N-acetylprocainamide, procainamide, zimeldine, morphine, codeine, trifluoperazine, desmethyldisopyramide, 10-hydroxynortriptyline, prochlorperazine, oxaprotiline, 2-hydroxydesipramine, chlorpheniramine, maprotiline, norzimeldine, iminostilbene, desmethylchlordiazepoxide, buprion, diazepam, demoxepam, chlordiazepoxide, propoxyphene, dextropropoxyphene, cocaine, oxapam, trimipramine, mianserin, trimeprazine, loxepin, fluphenazine, methadone, trifluopromazine, phenteramine, chlorimipramine, perphenazine, quinidine
Noninterfering: thiopropazine
Interfering: thioridazine, hydroxyamoxapine, meperidine, chlorpromazine, disopyramide, amphetamine, 2-hydroxyimipramine, iprindole, pyrilamine, promethazine, prolixin, amoxapine

Lin,W.-N.; Frade,P.D. Simultaneous quantitation of eight tricyclic antidepressants in serum by high-performance liquid chromatography, *Ther.Drug Monit.*, **1987**, *9*, 448–455.

SAMPLE

Matrix: blood

Sample preparation: Inject 200 μL serum onto column A and elute with mobile phase A for 10 min then back-flush column A onto column B with mobile phase B for 4 min. Elute column B with mobile phase B and monitor the effluent. Remove column A from circuit and wash with MeCN:water 60:40 for 6 min then with mobile phase A for 10 min.

HPLC VARIABLES

Column: A 40 × 4 TSKprecolumn PW (Tosoh); B 150 × 4 TSKgel ODS-80TM (Tosoh)

Mobile phase: A 50 mM pH 7.5 potassium phosphate; B MeCN:100 mM pH 2.7 potassium phosphate 32.5:67.5, containing 0.2 g/L sodium 1-heptanesulfonate

Flow rate: 1

Injection volume: 200

Detector: UV 210

CHROMATOGRAM

Retention time: 9.5

Limit of detection: 10 ng/mL

OTHER SUBSTANCES

Simultaneous: amitriptyline, amoxapine, clomipramine, desipramine, imipramine, maprotiline, nortriptyline, trimipramine

KEY WORDS

serum; column-switching; use gradient to determine metabolites

REFERENCE

Matsumoto,K.; Kanba,S.; Kubo,H.; Yagi,G.; Iri,H.; Yuki,H. Automated determination of drugs in serum by column-switching high-performance liquid chromatography. IV. Separation of tricyclic and tetracyclic antidepressants and their metabolites, *Clin.Chem.*, **1989**, *35*, 453–456.

SAMPLE

Matrix: blood

Sample preparation: For each 1 mL plasma or serum add 10 μL 14 μg/mL trimipramine in MeOH. Inject serum or plasma directly onto column A with mobile phase A, elute with mobile phase A to waste. After 15 min elute column A onto column B (foreflush) with mobile phase B. After 2 min remove column A from the circuit, elute column B with mobile

phase B, monitor the effluent from column B. Re-equilibrate column A with mobile phase A.

HPLC VARIABLES

Column: A 20 × 4.6 10 μm Hypersil MOS C8; B 20 × 4.6 5 μm Hypersil CPS CN + 250 × 4.6 5 μm Nucleosil 100 CN
Mobile phase: A MeOH:water 5:95; B MeCN:MeOH:buffer 578:188:235 (Buffer was 10 mM K_2HPO_4 adjusted to pH 6.8 with 85% phosphoric acid.)
Flow rate: 1.5
Injection volume: 100
Detector: UV 214

CHROMATOGRAM

Retention time: 8.26
Internal standard: trimipramine (6.5)
Limit of detection: 1 ng/mL (with three injections onto column A before switching), 5-10 ng/mL

OTHER SUBSTANCES

Extracted: metabolites, desipramine, fluvoxamine, imipramine, maprotiline, nortriptyline
Noninterfering: chlordiazepoxide, clobazam, clozapine, diazepam, flurazepam, fluspirilene, haloperidol, nitrazepam, oxazepam, perazine, pimozide, spiroperidol, trifluperidol
Interfering: amitriptyline, clomipramine

KEY WORDS

plasma; serum; column-switching

SAMPLE

Matrix: blood
Sample preparation: Add 10 μL 20 μg/mL oxaprotiline in MeOH to 990 μL plasma or serum. Inject 100 μL plasma or serum onto column A with mobile phase A and elute to waste, after 15 min elute column A onto column B with mobile phase B for 2 min. Remove column A from circuit and re-equilibrate it with mobile phase A for 5 min. Chromatograph on column B with mobile phase B.

HPLC VARIABLES

Column: A 20 × 4.6 10 μm Hypersil MOS C8; B 20 × 4.6 5 μm Hypersil CPS CN + 250 × 4.6 5 μm Nucleosil 100 CN
Mobile phase: A MeOH:water 5:95; B MeOH:MeCN:10 mM pH 6.8 potassium phosphate buffer 188:578:235
Flow rate: 1.5
Injection volume: 100
Detector: UV 214

CHROMATOGRAM

Retention time: 8.3
Internal standard: oxaprotiline (9.5)
Limit of detection: 20 ng/mL

OTHER SUBSTANCES

Simultaneous: clozapine, fluvoxamine, metoclopramide, fluoxetine, imipramine, norfluoxetine, nortriptyline, desipramine, maprotiline

Noninterfering: haloperidol, spiroperidol, pimozide, fluspirilene, trifluperidol, perazine, chlordiazepoxide, clobazam, diazepam, nordiazepam, flurazepam, lorazepam, nitrazepam, oxazepam, carbamazepine
Interfering: amitriptyline, clomipramine

KEY WORDS
plasma; serum; column-switching

Härtter,S.; Wetzel,H.; Hiemke,C. Automated determination of fluvoxamine in plasma by column-switching high-performance liquid chromatography, *Clin.Chem.*, **1992**, *38*, 2082–2086.

SAMPLE
Matrix: blood
Sample preparation: Automated SPE by ASPEC system. Condition a C18 Clean-Up SPE cartridge (CEC 18111, Worldwide Monitoring) with 2 mL MeOH then 2 mL water. 1 mL Plasma + 1 mL 400 ng/mL protriptyline in water, vortex, add to column, wash with 3 mL water, wash with 3 mL 750 mL/L methanol. Elute with three aliquots of 300 μL 0.1 M ammonium acetate in MeOH. Add 0.5 mL 0.5 M NaOH and 4 mL 50 mL/L isopropanol in heptane to eluate, mix thoroughly. Allow 5 min for phase separation. Remove upper heptane phase and add it to 300 μL 0.1 M phosphoric acid (pH 2.5), mix, separate, inject a 100 μL aliquot of the aqueous phase.

HPLC VARIABLES
Guard column: LC-8-DB (Supelco)
Column: 150 × 4.6 LC-8-DB (Supelco)
Mobile phase: MeCN:buffer 35:65 (Buffer was 10 mL/L triethylamine in water adjusted to pH 5.5 with glacial acetic acid.)
Flow rate: 2
Injection volume: 100
Detector: UV 228

CHROMATOGRAM
Retention time: 3.2
Internal standard: protriptyline (4)

OTHER SUBSTANCES
Extracted: acetazolamide, amitriptyline, chlordiazepoxide, chlorimipramine, chlorpromazine, desipramine, dextromethorphan, diazepam, encainide, fentanyl, fluoxetine, flurazepam, hydroxyethylflurazepam, ibuprofen, imipramine, lidocaine, maprotiline, methadone, methaqualone, mexiletine, midazolam, norchlorimipramine, nordiazepam, nordoxepin, norfluoxetine, nortriptyline, norverapamil, pentazocine, promazine, propafenone, propoxyphene, propranolol, protriptyline, quinidine, temazepam, trimipramine, verapamil
Noninterfering: acetaminophen, acetylmorphine, amiodarone, amobarbital, amphetamine, bendroflumethiazide, benzocaine, benzoylecgonine, benzthiazide, butalbital, carbamazepine, chlorothiazide, clonazepam, cocaine, codeine, cotinine, cyclosporine, cyclothiazide, desalkylflurazepam, diamorphine, dicumerol, ephedrine, ethacrynic acid, ethanol, ethchlorvynol, ethosuximide, furosemide, glutethimide, hydrochlorothiazide, hydrocodone, hydroflumethiazide, hydromorphone, lorazepam, mephentermine, meprobamate, methamphetamine, metharbital, methoxsalen, methoxyphenteramine, methsuximide, methylcyclothiazide, metoprolol, MHPG, monoacetylmorphine, morphine, normethsuximide, oxazepam, oxycodone, oxymorphone, pentobarbital, phencyclidine, phenteramine, phenylephrine, phenytoin, polythiazide, primidone, prochlorperazine, salicylic acid, sulfanilamide, THC-COOH, theophylline, thiazolam, thiopental, thioridazine, tocainide, trichloromethiazide, trifluoperazine, valproic acid, warfarin
Interfering: diphenhydramine, flecainide, haloperidol, trazodone

KEY WORDS
plasma; SPE

SAMPLE
Matrix: blood
Sample preparation: 2 mL Serum + 75 μL MeCN containing 4 mg/mL amoxapine and 4 mg/mL loxapine + 2 mL 250 mM NaOH + 400 μL isoamyl alcohol, vortex vigorously, let stand for 5 min, add 10 mL heptane, shake vigorously for 1 h, centrifuge at >2000 g for 30 min. Remove the upper heptane layer and add it to 1 mL 100 mM pH 3 glycylglycine buffer, shake vigorously for 1 h, centrifuge at >2000 g for 30 min. Discard the heptane layer, add 1 mL 250 mM NaOH to the aqueous layer, add 5 mL n-pentane, shake for 1 h, centrifuge at 2000 g for 30 min. Remove the organic layer and evaporate it to dryness under educed pressure, reconstitute the residue in 70 μL mobile phase, vortex vigorously, centrifuge at 2000 g for 2-3 min, inject a 50 μL aliquot.

HPLC VARIABLES
Guard column: 40 μm pellicular silica (CEL Associates, Houston)
Column: 100 × 6 3 μm silica 80 Å (CEL Associates, Houston)
Mobile phase: MeCN:buffer 20:80 containing 21 mM n-nonylamine, pH 7.4-7.8 (Buffer was 25 mM Na_2HPO_4 adjusted to pH 3 with concentrated phosphoric acid.)
Flow rate: 1.6
Injection volume: 50
Detector: UV (wavelength not specified)

CHROMATOGRAM
Retention time: 14.70 (Z isomer), 16.40 (E isomer)

Internal standard: amoxapine (9.63), loxapine (22.68)
Limit of quantitation: 10 ng/mL

OTHER SUBSTANCES
Extracted: metabolites
Simultaneous: amitriptyline, chlorpromazine, clomipramine, desipramine, fluoxetine, imipramine, mianserin, nortriptyline, thioridazine, trimipramine
Noninterfering: diazepam

SAMPLE

Matrix: blood, tissue, urine

Sample preparation: Serum, urine. 500 μL Serum or urine + 100 μL 2 μg/mL diazepam + 200 μL 20% sodium carbonate + 500 μL water + 3 mL n-hexane:isoamyl alcohol 98.5:1.5, mix for 2 min, centrifuge at 1200 g for 5 min. Remove the organic phase and evaporate it under a gentle stream of nitrogen at about 40°. Dissolve the residue in 100 μL mobile phase, inject a 10 μL aliquot. Tissue. Homogenize 1 g sample with 9 mL 100 mM HCl and 100 μL 20 μg/mL diazepam, centrifuge at 15000 g for 10 min. Add 500 μL 20% sodium carbonate and 4 mL n-hexane:isoamyl alcohol 98.5:1.5 to 1 mL of the supernatant, mix for 5 min. Remove the organic phase and evaporate it under a gentle stream of nitrogen at about 40°. Dissolve the residue in 100 μL mobile phase, filter by microconcentrator (Microcon-30, Grace). Inject a 10 μL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 2 μm TSK gel Super-Octyl (A) or 100 × 4.6 5 μm Hypersil MOS-C8 (B), (Yokogawa, Japan)

Mobile phase: MeOH:20 mM pH 7 KH_2PO_4 60:40

Flow rate: 0.6

Injection volume: 10

Detector: UV 254

CHROMATOGRAM

Retention time: 8.5 (A), 10.3 (B)

Internal standard: diazepam (4.4, A)

Limit of quantitation: 50 ng/mL (serum, urine) (A), 500 ng/mL (tissue) (A)

OTHER SUBSTANCES

Extracted: amitriptyline, amoxapine, clomipramine, desipramine, dothiepin, imipramine, maprotiline, melitracen, mianserin, nortriptyline

Noninterfering: barbital, carbamazepine, ethosuximide, hexobarbital, lofepramine, pentobarbital, phenobarbital, phenytoin, primidone, sulpiride, trimethadione, trimipramine

KEY WORDS

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.

Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 206.4

CHROMATOGRAM
Retention time: 14.095

KEY WORDS
whole blood

SAMPLE
Matrix: hair
Sample preparation: Wash hair in water, rinse 3 times with MeOH, dry, weigh. 5-25 mg Washed hair + 1 mL 1 M NaOH, heat at 70° for 30 min, adjust pH to 9.5-10. 1 mL Extract + 1 μg protriptyline + 1 mL water + 1 mL 200 mM sodium carbonate buffer, mix, extract with hexane:butanol 95:5 for 20 min. Remove the organic layer and add it to 100 μL 0.2% orthophosphoric acid, mix for 20 min, inject a 30 μL aliquot of the aqueous layer.

HPLC VARIABLES
Guard column: 15 × 3.2 7 μm Newguard RP-18
Column: 100 × 4.6 Spheri-5 RP-C18
Mobile phase: MeCN:buffer 40:60 (Buffer was 1.2 L 100 mM pH 7.0 NaH_2PO_4 + 30 mL diethylamine.)
Flow rate: 2
Injection volume: 30
Detector: UV 214

CHROMATOGRAM
Internal standard: protriptyline (4)

OTHER SUBSTANCES
Extracted: amitriptyline, clomipramine, desipramine, dothiepin, haloperidol, imipramine, mianserin, nortriptyline

KEY WORDS
may be interferences

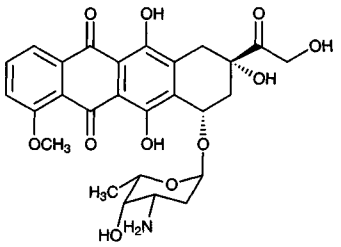
Doxorubicin



Molecular formula: $C_{27}H_{29}NO_{11}$
Molecular weight: 543.53
CAS Registry No.: 23214-92-8, 25316-40-9 (HCl)
Merck Index: 3495

SAMPLE

Matrix: bile, blood, feces, tissue, urine
Sample preparation: Homogenize tissue in 4% BSA in water to a final concentration of 0.05-2 g/mL. Homogenize feces in 4% BSA in water to a final concentration of 0.03-1 g/mL. Dilute feces homogenate 20-fold, urine 100-fold, and bile 20-fold with blank human plasma. 200 μL Sample + 200 μL 6% (w/v) pH 9.5 borate buffer + 100 μL 4 mg/mL IS in pH 2.05 water, vortex. Mix with 1 mL chloroform:1-propanol 20:80 for 5 min. (Caution! Chloroform is a carcinogen!) Centrifuge at 3000 g at 4° for 10 min. Remove the organic layer and evaporate it under reduced pressure at 43°. Reconstitute the residue in 100 μL MeCN:THF 40:1, vortex for 20 s, sonicate for 5 min. Add 300 μL water acidified to pH 2.05, vortex, inject a 50 μL aliquot.

HPLC VARIABLES

Guard column: 10 × 2 pellicular RP material
Column: 100 × 3 7μm Lichrosorb RP-8
Mobile phase: MeCN:THF:water adjusted to pH 2.05 with perchloric acid 30:1:80
Flow rate: 0.4
Injection volume: 50
Detector: F ex 460 em 550

CHROMATOGRAM

Retention time: 6
Internal standard: daunorubicin (12)
Limit of quantitation: 1.8-2.4 nM

OTHER SUBSTANCES

Extracted: metabolites

KEY WORDS

SAMPLE

Matrix: blood
Sample preparation: Condition an Oasis HLB SPE cartridge (Waters) with 1 mL mobile phase:water 1:3. 200 μL Plasma + 500 mL mobile phase:water 1:3 + 100 μL water, vortex, add to SPE cartridge, wash with 1 mL mobile phase:water 1:3, elute with 600 μL MeCN:mobile phase 1:1, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 200 × 4.6 10 μm LiChrosorb RP18

Mobile phase: MeCN:water 29:71 containing 50 mM Na_2HPO_4 and 0.05% (v/v) triethylamine adjusted to pH 4.6 with citric acid
Flow rate: 1.0
Injection volume: 20
Detector: E, ESA Coulochem II, Model 5014 high-performance analytical cell containing amperometric electrode +400 mV coupled with coulometric electrode -300 mV, palladium reference electrode

CHROMATOGRAM
Retention time: 12.0
Internal standard: epirubicin (9.4)

OTHER SUBSTANCES
Extracted: metabolites

KEY WORDS
plasma; SPE; pharmacokinetics

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma or blood + 3 mL 100 mM pH 9.5 ammonia-ammonium chloride buffer + 20 ng daunorubicin + 13.5 mL chloroform:MeOH 2:1, shake mechanically

for 30 min, centrifuge at 3000 g for 10 min, repeat the extraction with 9 mL chloroform. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 30°, reconstitute the residue in 3 mL chloroform:MeOH 2:1, evaporate this mixture, reconstitute the residue in 300 μL mobile phase, centrifuge a 75 μL aliquot at 10000 g for 1 min, inject the supernatant.

HPLC VARIABLES
Column: 250 × 4 5 μm STR ODS-M (Shimadzu)
Mobile phase: MeCN:buffer 30:70 (Buffer was 200 mM acetic acid-ammonium formate, pH 4.0.)
Column temperature: 22
Flow rate: 0.7
Injection volume: 75
Detector: F ex 470 em 550

CHROMATOGRAM
Retention time: 7.7
Internal standard: daunorubicin (16.2)
Limit of detection: 0.5 ng/mL

OTHER SUBSTANCES
Extracted: pirarubicin

SAMPLE
Matrix: blood
Sample preparation: 500 μL Plasma + 250 μL 100 ng/mL daunorubicin in mobile phase, extract with 3 mL MeCN for 10 min, add 100 mg NaCl, shake for 5 min, centrifuge at 995 g for 15 min, let stand at -20° for 1 h. Remove the supernatant and evaporate it to dryness under a stream of nitrogen at 60°, reconstitute the residue in 250 μL mobile phase, inject a 100 μL aliquot.

HPLC VARIABLES
Guard column: 10 × 4.6 10 μm Spherisorb phenyl
Column: 250 × 4.6 5 μm Spherisorb phenyl
Mobile phase: MeCN:30 mM citrate buffer adjusted to pH 4 with formic acid 30:70
Column temperature: 50
Flow rate: 1.5
Injection volume: 100
Detector: F ex 480 em 590

CHROMATOGRAM
Retention time: 6.45
Internal standard: daunorubicin (8.5)
Limit of detection: 0.5 ng/mL
Limit of quantitation: 2 ng/mL

OTHER SUBSTANCES
Extracted: pirarubicin, doxorubicinol

KEY WORDS
plasma; pharmacokinetics

SAMPLE
Matrix: blood, tissue
Sample preparation: Plasma. Mix plasma with four volumes daunorubicin aglycone in MeOH, centrifuge, inject a 100 μL aliquot of the supernatant. Tissue. Tissue + 1 volume MeOH + 2 volumes 1 M pH 8.5 Tris buffer, homogenize, let stand on ice for 15 min, add 7 volumes MeCN containing daunorubicin aglycone, vortex, let stand at room temperature for 15 min, centrifuge, inject a 100 μL aliquot of the supernatant.

HPLC VARIABLES
Guard column: 10 μm LiChrosorb RP-18
Column: 250 × 4.6 10 μm LiChrosorb RP-18
Mobile phase: Gradient. MeCN:buffer from 15:85 to 50:50 over 10 min, re-equilibrate at initial conditions for 15 min. (Buffer was 25 mM $(NH_4)H_2PO_4$ and 30 mM phosphoric acid.)
Flow rate: 1.5
Injection volume: 100
Detector: F ex 475 em 580

CHROMATOGRAM
Retention time: 9
Internal standard: daunorubicin aglycone (13.5)

Limit of quantitation: 1.5 pmole

OTHER SUBSTANCES
Extracted: metabolites, 13-dihydrodoxorubicin

KEY WORDS
plasma; mouse; lung

SAMPLE
Matrix: blood, urine
Sample preparation: Plasma. 150 μL Plasma + 150 μL MeCN, vortex for 10 s. Centrifuge at 3000 rpm for 5 min. Remove 200 μL of the organic layer, evaporate under reduced pressure, reconstitute the residue in 100 μL 100 mM pH 3 monobasic phosphate buffer. Inject a 10 μL aliquot. Urine. Directly inject a 10 μL aliquot of urine. (Silanize glassware with 3% dichlorodimethylsilane in toluene, rinse with MeOH before use.)

HPLC VARIABLES
Column: 150 × 4.6 5 μm TSK gel ODS/TM silica (Tosoh Co., Japan)
Mobile phase: MeCN:buffer 35:65 (Buffer was 100 mM monobasic phosphate (sic) containing 0.3% heptafluorobutyric acid, adjusted to pH 3 with NaOH. At the end of the analysis, wash the column with MeOH and MeOH:water 50:50.)
Flow rate: 1
Injection volume: 10
Detector: F ex 460 em 555

CHROMATOGRAM
Retention time: 5.5
Limit of detection: 25 nM
Limit of quantitation: 2.5 μM

A sensitive procedure for the quantitation of free and N-(2-hydroxypropyl)methacrylamide polymer-bound doxorubicin (PK1) and some of its metabolites, 13-dihydrodoxorubicin, 13-dihydrooxorubicinone and doxorubicinone, in human plasma and urine by reversed-phase HPLC with fluorimetric detection, *J.Pharm.Biomed.Anal.*, **1995**, *13*, 625–633.

SAMPLE
Matrix: blood, urine
Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES
Guard column: 20 mm long Symmetry C18
Column: 250 × 4.6 5 μm Symmetry C8 (Waters)
Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.
Column temperature: 30
Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)
Injection volume: 10-30
Detector: UV 232.2

SAMPLE

Matrix: blood
Sample preparation: Add 50 μL 5 μg/mL demeclocycline in 1 mM HCl to 250 μL plasma, add 50 μL 6% aqueous ascorbic acid solution, 1 mL phosphate-sulfite buffer, and 6 mL ethyl acetate, vortex for 2 min, centrifuge at 2600 g for 10 min. Transfer 5 mL of the organic phase to 100 μL 0.2% ascorbic acid in MeOH, evaporate to dryness under nitrogen, redissolve the residue in 300 μL mobile phase, add 4 mL n-hexane, vortex, centrifuge at 2600 g for 5 min, remove the hexane layer by aspiration, inject a 100 μL aliquot of the aqueous phase. (The phosphate-sulfite buffer (pH 6) was 25.2 g sodium sulfite and 36.3 g NaH_2PO_4 dihydrate in 100 mL .)

HPLC VARIABLES

Guard column: 4 × 4 5 μm LiChrospher RP-18
Column: 125 × 4 5 μm LiChrospher RP-18
Mobile phase: MeCN:70% perchloric acid:water 29.85:0.25:69.9 containing 0.6 mM disodium EDTA and 5 mM oxalic acid, pH adjusted to 2.5 with 1 M NaOH
Flow rate: 1
Injection volume: 100
Detector: UV 350

CHROMATOGRAM

Retention time: 7.15

Internal standard: demeclocycline (4.28)
Limit of detection: 100 ng/mL
Limit of quantitation: 200 ng/mL

OTHER SUBSTANCES
Extracted: degradation products

KEY WORDS
plasma; turkey

REFERENCE
Santos,M.D.; Vermeersch,H.; Remon,J.P.; Schelkens,M.; De Backer,P.; Ducatelle,R.; Haesebrouck,F. Validation of a high-performance liquid chromatographic method for the determination of doxycycline in turkey plasma, *J.Chromatogr.B*, **1996**, *682*, 301–308.

SAMPLE
Matrix: eggs, tissue
Sample preparation: Prepare a metal chelate affinity chromatography (MCAC) column by adding 1.5 mL of thoroughly mixed Chelating Sepharose Fast-Flow suspension in EtOH: water 20:80 (Pharmacia) to a 150 × 10 glass column, allow to drain, wash with three 2 mL portions of water, add 2 mL 10 mM copper(II) sulfate in water, wash with two 2 mL portions of water. Condition an SBD-RPS extraction membrane (3M Company, St. Paul, MN) with 2 mL MeOH and 2 mL 100 mM HCl. Add 20 mL 100 mM pH 4.0 sodium succinate buffer to 3 g pig kidney, pig muscle, cow liver, or whole chicken egg, vortex for 1 min and shake for 10 min on a horizontal shaker. Add 20 mL MeOH, sonicate for 5 min and centrifuge at 2666 g for 10 min at 4°. Filter the supernatant through a Whatman 541 filter paper. Add the clear supernatant to the MCAC column. Wash sequentially with 2 mL 100 mM sodium succinate buffer, 2 mL water, 2 mL MeOH, 2 mL water, and with 500 μL McIlvaine-EDTA-NaCl buffer. Elute with 3 mL McIlvaine-EDTA-NaCl buffer and adjust the eluate to pH 1.3 with 400 μL 4 M HCl. Add the eluate directly to the extraction membrane to prevent crystallization of EDTA. Wash the membrane with 1 mL 100 mM HCl and elute with four 250 μL portions of MeOH:25% ammonia 97:3, evaporate the eluate to dryness under the nitrogen at 40°. Reconstitute the dry residue with 250 μL 10 mM oxalic acid in water, vortex, sonicate. Inject a 100 μL aliquot. (The sodium succinate buffer was 100 mM succinic acid, pH adjusted to 4.0 with 10 M NaOH. Prepare the McIlvaine buffer by dissolving 12.9 g citric acid monohydrate and 10.9 g Na_2HPO_4 in 1 L water. The McIlvaine-EDTA-NaCl buffer was 100 mM EDTA and 500 mM NaCl in McIlvaine buffer. Protect all solutions from light.)

HPLC VARIABLES
Guard column: 5 × 3.0 PLRP-S (Polymer Laboratories)
Column: 250 × 4.6 8 μ PLRP-S (Polymer Laboratories)
Mobile phase: Gradient. A was 10 mM oxalic acid in water adjusted to pH 2.0 with 4 M HCl. B was MeCN. A:B from 85:15 to 60:40 over 16 min.
Flow rate: 1
Injection volume: 100
Detector: F ex 406 em 515 following post-column reaction. The column effluent mixed with reagent pumped at 1 mL/min and the mixture flowed through a 600 μL reaction coil to the detector. (Reagent was 5% zirconyl chloride octahydrate in water stored at 4°.)

CHROMATOGRAM
Retention time: 20
Limit of detection: 3.00 ng/g (pig kidney), 1.38 ng/g (pig muscle), 2.35 ng/g (cow liver), 0.80 ng/g chicken egg)
Limit of quantitation: 5 ng/g (pig kidney)

OTHER SUBSTANCES
Extracted: chlortetracycline, oxytetracycline, tetracycline

Also analyzed: demeclocycline

KEY WORDS
cow; liver; pig; kidney; muscle; chicken; metal chelate affinity chromatography; MCAC; SPE

REFERENCE

SAMPLE
Matrix: milk
Sample preparation: Fill a disposable polypropylene column (Bio-Rad Econo-Pac column) with Chelating Sepharose Fast Flow (Pharmacia) and condition it with 10 mL water, 1.5 mL 100 mM copper sulfate, and 100 mL water. Condition a 6 mL SupelClean ENVI-Chrom P SPE cartridge with 2 mL MeOH and 5 mL water. Homogenize 10 g tissue with 20-30 mL 100 mM pH 4 succinic acid buffer. Centrifuge the homogenate at 2000 g at 10° for 15-20 min. Add the supernatant to the metal chelate affinity column, wash sequentially with 5 mL 500 mM NaCl, 10 mL water, 10 mL MeOH, 10 mL water, and 3 mL McIlvaine buffer, discard the clear effluent. Elute with 8 mL McIlvaine-EDTA-NaCl buffer. Add the eluate to the SPE cartridge under gravity, rinse the column with 2.5 mL water, add the rinse to the SPE cartridge. Wash the SPE cartridge with 2.5 mL water. Dry the SPE cartridge by drawing air through it for 2-3 min. Elute with 5 mL MeOH. Evaporate the eluate to dryness under nitrogen at 40-50°, dissolve the residue in 1 mL water. Inject a 100 μL aliquot. (McIlvaine buffer was 500 mM NaCl and 100 mM EDTA (Carson, M.C. J. AOAC Int. 1993, 76, 329).)

HPLC VARIABLES
Column: 150 × 3.9 5 μm PLRP-S (Polymer Labs, USA)
Mobile phase: MeOH:5 mM oxalic acid 58:42
Flow rate: 0.5
Injection volume: 100
Detector: MS, HP 5989, NICI, high energy dynode, HP 59980B particle beam interface 60°, helium sheath 40-45 p.s.i., source 250°, quadrupole 100°, source pressure 1 Torr with methane reagent gas, m/z 378-483

CHROMATOGRAM
Retention time: 13.9

SAMPLE
Matrix: tissue
Sample preparation: Condition a 3 mL 500 mg Bond Elut C18 SPE cartridge with saturated aqueous disodium EDTA. Blend 5 g tissue with two 20 mL portions and one 10 mL portion of 100 mM pH 4.0 disodium EDTA-McIlvaine buffer at high speed, centrifuge at 850 g for 5 min each time. Combine the supernatants, centrifuge at 850 g for 15 min, filter. Add the filtrate to the SPE cartridge, wash with 20 mL water, air-dry by aspiration

for 5 min, elute with 10 mL ethyl acetate followed by 20 mL MeOH:ethyl acetate 5:95, evaporate the eluate to dryness under reduced pressure at 30°, dissolve the residue in 100 μL water, inject a 50 μL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 2 μm TSK Gel Super Octyl (Tosoh)
Mobile phase: MeCN:0.05% aqueous trifluoroacetic acid 20:80
Flow rate: 0.5
Injection volume: 50
Detector: MS, Finnigan MAT TSQ 7000 Triple-Stage Quadrupole, electrospray voltage 4.5 kV, gas sheath flow 483 kPa nitrogen, collision gas argon, collision offset -25 V, m/z 445

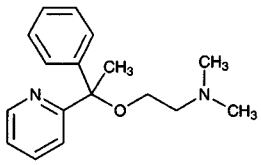
Doxylamine



Molecular formula: $C_{17}H_{22}N_2O$
Molecular weight: 270.37
CAS Registry No.: 469-21-6, 562-10-7 (succinate)
Merck Index: 3497
Lednicer No.: 1 44

SAMPLE

Matrix: blood
Sample preparation: 3 mL Plasma + 10 mL 300 mM NaOH + 5 mL dichloromethane, agitate in a rocking shaker at a slow speed for 15 min, centrifuge, remove the organic layer, repeat the extraction. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 40°, reconstitute the residue in 200 µL IS solution, vortex, centrifuge, inject an 80 µL aliquot. (Prepare the IS solution as follows. 20 mg Dextroamphetamine sulfate + 10 mL 300 mM NaOH + 20 mL dichloromethane, shake for 5 min, repeat the extraction. Combine the organic layers and make up to 50 mL with dichloromethane, dilute a 5 mL aliquot to 50 mL with dichloromethane, use this solution.)

HPLC VARIABLES

Column: 300 × 3.9 10 µm µPorasil
Mobile phase: Chloroform:MeCN:buffer 80:10:10 (Buffer was MeOH:ammonium hydroxide: ammonium chloride 57:2:1.)
Flow rate: 1.5
Injection volume: 80
Detector: UV 254

SAMPLE
Matrix: solutions

HPLC VARIABLES
Column: 250 × 4.6 Chirex 3020 (Phenomenex)
Mobile phase: Hexane:1,2-dichloroethane:EtOH/trifluoroacetic acid 60:35:5 (EtOH/trifluoroacetic acid was premixed 20:1.)
Flow rate: 0.7-1

Injection volume: 20
Detector: UV 262

KEY WORDS
chiral; α = 1.07 for enantiomers

REFERENCE
Cleveland,T. Pirkle-concept chiral stationary phases for the HPLC separation of pharmaceutical racemates, *J.Liq.Chromatogr.*, **1995**, *18*, 649–671.

SAMPLE
Matrix: urine
Sample preparation: Adjust pH of 2 mL urine to 6.0, extract three times with 10 mL aliquots of dichloromethane, evaporate to dryness under reduced pressure, reconstitute in MeOH, inject a 100 µL aliquot.

HPLC VARIABLES
Guard column: 50 × 4.6 50 µm Supelco LC-CN
Column: 250 × 4.6 5 µm Supelco LC-CN
Mobile phase: Gradient. A was MeOH:10 mM KH_2PO_4 5:95 containing 20 mM triethylamine, pH 7.3. B was MeOH:10 mM KH_2PO_4 95:5 containing 20 mM triethylamine, pH 7.3. A:B 100:0 for 10 min, to 0:100 over 2 min, maintain at 0:100 for 18 min, return to initial conditions over 2 min, re-equilibrate for 8 min.
Flow rate: 1
Injection volume: 100
Detector: UV 254 or radioactivity

CHROMATOGRAM
Retention time: 21.5

OTHER SUBSTANCES
Extracted: metabolites, degradation products

KEY WORDS
monkey

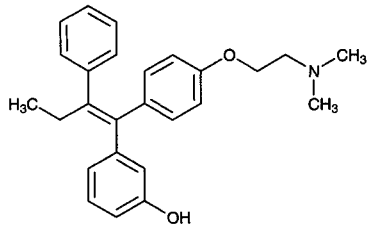
Droloxifene



Molecular formula: $C_{26}H_{29}NO_2$
Molecular weight: 387.52
CAS Registry No.: 82413-20-5
Merck Index: 3502

SAMPLE

Matrix: blood
Sample preparation: Mix serum with an equal volume of MeCN, mix, centrifuge, inject a 50 μL aliquot of the supernatant.

HPLC VARIABLES

Column: 150 × 4.6 3 μm ODS Hypersil
Mobile phase: MeCN:water 66:34 containing 3 mM acetic acid and 2 mM diethylamine
Flow rate: 1
Injection volume: 50
Detector: F ex 260 em 360 following post-column reaction. The column effluent flowed through a 10 m × 0.3 mm ID knitted PTFE coil irradiated with UV light at 254 nm to the detector.

CHROMATOGRAM

Retention time: 18.8
Limit of detection: 5 ng/mL

OTHER SUBSTANCES

Extracted: metabolites
Noninterfering: acetaminophen, atenolol, captopril, clodronate, dexamethasone, dextropropoxyphene, diazepam, doxycycline, econazole, enoxaparin, felodipine, flunitrazepam, furosemide, glibenclamide, indomethacin, insulin, isosorbide mononitrate, megestrol acetate, metoclopramide, mianserin, morphine, nitroglycerin, oxazepam, perphenazine, phenytoin, pivmecillinam, prochlorperazine, promethazine, ranitidine, tamoxifen

KEY WORDS

SAMPLE

Matrix: blood
Sample preparation: Condition a 100 mg Bond Elut benzenesulfonic acid (SCX) SPE cartridge with 1 mL MeOH:30% ammonium hydroxide 96.5:3.5, 1 mL MeOH, and 1 mL 1% acetic acid at 1 mL/min. Add 500 μL 1% acetic acid, 200 μL 2 ng/mL IS in mobile phase, and 200 μL plasma or serum sequentially to the SPE cartridge, wash with 1 mL water, wash with 1 mL MeOH, elute with 1 mL MeOH:30% ammonium hydroxide 96.5:3.5. Evaporate the eluate to dryness under a stream of nitrogen at 50° or reduced pressure at 75°, reconstitute with 100 μL mobile phase, vortex, centrifuge at 1000 g for 30 s, inject an 80 μL aliquot.

HPLC VARIABLES

Column: 100 × 4.6 3 μm C18 (Rainin)
Mobile phase: MeCN:50 mM sodium phosphate buffer 45:55, adjusted to pH 3.5 with phosphoric acid

Column temperature: 40
Flow rate: 2
Injection volume: 80
Detector: F ex 260 em 375 following post-column photolysis. The column effluent passed through a 3.1 m × 0.25 mm i.d. PTFE coil, where it was irradiated by a Beam Boost 254 nm photochemical reaction lamp, to the detector.

CHROMATOGRAM

Retention time: 3.1
Internal standard: (E)-α-[p-[2-(diethylamino)ethoxy]phenyl]-α'-ethyl-3-stilbenol (K 21.089 E, Klinge Pharma, Munich) (4.8)
Limit of detection: 10 pg/mL
Limit of quantitation: 25 pg/mL

OTHER SUBSTANCES

Extracted: metabolites

KEY WORDS

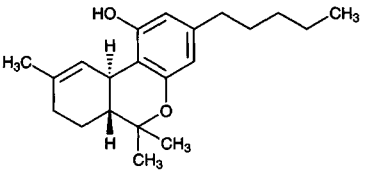
Dronabinol



Molecular formula: $C_{21}H_{30}O_2$
Molecular weight: 314.47
CAS Registry No.: 1972-08-3
Merck Index: 9349
Lednicer No.: 1 394; 4 209

SAMPLE

Matrix: blood

Sample preparation: Condition a 1 mL 200 mg Bond-Elut C18 SPE cartridge with 2 mL MeOH and 2 mL water. 1 mL Plasma + 2 mL 8 M urea, vortex for 5 s, add 2 mL MeOH, vortex for 5 s, add to SPE cartridge, pass through within 2-3 min, rinse sample tube with 2 mL water:MeOH:8 M urea 1:2:2 and add rinse to SPE cartridge, wash with 2 mL MeOH: water 1:1, wash with 1 mL 200 mM HCl, wash with 1 mL MeOH:water 1:1, wash with 1 mL 10 mM NaOH, wash with 3 mL MeOH:water 1:1, centrifuge for 10 min to remove remaining fluid, elute with 0.5 mL diethyl ether. Evaporate eluate to dryness at 40°, dissolve residue in 100 μL MeOH, vortex for 5 s, inject a 10 μL aliquot. (Purify 8 M urea by passing 50 mL through an activated 3 mL 500 mg Bond-Elut C18 SPE cartridge.)

HPLC VARIABLES

Guard column: 10 × 2.1 40 μm Chromsep pellicular C18 (Chrompack)
Column: 100 × 4.6 3 μm Chromsep C18 (Chrompack)
Mobile phase: THF:MeOH:5 mM pH 7.0 citrate buffer 7.5:68:24.5
Flow rate: 1
Injection volume: 10
Detector: E, Metrohm glassy carbon working electrode 3 mm diameter (polished daily for 1 min with 0.3 μm aluminum oxide powder), Ag/AgCl (3 M KCl) reference electrode, stainless steel auxiliary electrode, polarize working electrode for 20 min at + 960 mV then decrease to working potential of + 760 mV.

CHROMATOGRAM

Retention time: 14

SAMPLE

Matrix: blood, tissue
Sample preparation: Plasma. 1-2 mL Plasma + 10-20 μL (?) 55 μg/mL cannabinol + 5 mL MeOH, mix vigorously at 0°, centrifuge at 0° at 1000 g for 5 min, suspend the white gel-like precipitate in 3 mL ice-cold MeOH, centrifuge. Combine the supernatants and evaporate them to 2 mL under a stream of air at 65°, cool in ice-water for 10-20 min, centrifuge at 0° at 1000 g for 5 min. Combine the supernatants and add 2 mL dichloromethane, vortex, add 5 mL hexanes, vortex, centrifuge at 500 g for 5 min, remove the upper organic layer, extract the lower MeOH/water layer with 2 mL dichloromethane and 5 mL hexanes. Combine the upper organic layers and evaporate them to dryness under a stream of air at 65°, reconstitute the residue in 1 mL hexanes, evaporate to dryness under reduced pressure, reconstitute the residue in 200 μL hexanes, evaporate to dryness under reduced pressure, reconstitute with 20 μL MeOH (warm slightly if necessary), add 100 μL acetone, mix vigorously, cool in ice-water for 10 min, centrifuge at 0° at 1000 g for 5 min. Remove the supernatant and add it to 75 μL EtOH, dry under reduced pressure, reconstitute with 100 μL MeOH, inject a 75 μL aliquot. Tissue. Homogenize (tissue grinder mortar) 500 mg mouse brain with 3 mL ice-cold MeOH and 10-20 μL 55 μg/mL cannabinol at 0°, centrifuge at 0° at 1000 g for 5 min, suspend the pellet in 3 mL ice cold MeOH, centrifuge at 0° at 1000 g for 5 min. Combine the supernatants and evaporate them to 1.5 mL under a stream of air at 65°, cool in ice-water for 10-20 min, centrifuge at 0° at 1000 g for 5 min, suspend the pellet in 500 μL ice-cold MeOH:water 80:20, centrifuge. Combine the supernatants and add 2 mL dichloromethane, vortex, add 1 mL water, vortex, add 5 mL hexanes, vortex, centrifuge at 500 g for 5 min, remove the upper organic layer, extract the lower MeOH/water layer with 2 mL dichloromethane and 5 mL hexanes. Combine the upper organic layers and evaporate them to dryness under a stream of air at 65°, reconstitute the residue in 1 mL hexanes, evaporate to dryness under reduced pressure, reconstitute the residue in 200 μL hexanes, evaporate to dryness under reduced pressure, reconstitute with 20 μL MeOH (warm slightly if necessary), add 100 μL acetone, mix vigorously, cool in ice-water for 10 min, centrifuge at 0° at 1000 g for 5 min. Remove the supernatant and add it to 75 μL EtOH, dry under reduced pressure, reconstitute with 100 μL MeOH, inject a 75 μL aliquot.

HPLC VARIABLES

Guard column: 50 × 3.9 37-50 μm μBondapak C18/Corasil
Column: 300 × 3.9 μBondapak C18

Mobile phase: MeOH:water 85:15
Flow rate: 1.5
Injection volume: 75
Detector: UV 490 following post-column reaction. The column effluent mixed with the reagent pumped at 0.5 mL/min and the mixture flowed through a 4 m × 0.8 mm PTFE coil to the detector. (Prepare the reagent by dissolving 1 g Fast Blue Salt B in 160 mL water, adding 200 mL MeOH, and adding 40 mL 10% sodium nitrite in water. Stir for 30 min, filter (Whatman GF/C), filter (0.45 μm Gelman Metricel GA-6), discard after 5 h. Protect from light. At the end of each day flush the post-column reaction system with meOH: water 50:50, acetone, and MeOH:water 50:50.)

CHROMATOGRAM
Retention time: 7
Internal standard: cannabinol (6)
Limit of detection: 50 ng

OTHER SUBSTANCES
Extracted: 11-hydroxytetrahydrocannabinol

SAMPLE

Matrix: blood
Sample preparation: Condition a Supelclean LC-18 SPE cartridge (Supelco) with two 2 mL aliquots of MeOH, 2 mL water, and 2 mL 50 mM pH 6.9 ammonium acetate. add 1 mL plasma, wash with three 1 mL portions of 150 mM NaCl, wash with 50 μL MeOH, elute with 2 mL MeCN. Evaporate the eluate to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 μL MeCN, filter (0.45 μm), inject a 10 μL aliquot.

HPLC VARIABLES

Guard column: μBondapak C18
Column: 150 × 3.9 5 μm Novapak C18
Mobile phase: MeCN:10 mM pH 6.7 ammonium acetate 45:55
Flow rate: 1
Injection volume: 10
Detector: UV 250

CHROMATOGRAM

Retention time: 4.5
Internal standard: nitrazepam (2.5)
Limit of detection: 20 ng/mL

OTHER SUBSTANCES

Extracted: flunitrazepam

Noninterfering: atropine, phenoperidine, pancuronium

KEY WORDS
plasma; SPE; pharmacokinetics

REFERENCE

SAMPLE
Matrix: blood
Sample preparation: 1 mL Plasma + 100 µL 200 ng/mL IS in MeOH + 1 mL 50 mM pH 10 borate buffer, vortex briefly, add to an Extrelut 3 SPE cartridge, let stand for 5 min, elute with 15 mL hexane:dichloromethane 50:50. Add the eluate to 3 mL 50 mM sulfuric acid, mix for 10 min, centrifuge at 3000 g for 10 min. Remove the aqueous layer and add it to 6 mL hexane:dichloromethane 50:50, wash for 5 min, centrifuge. Make the aqueous layer basic with 150 µL 28% ammonia, extract twice with 3 mL hexane:dichloromethane 50:50. Combine the organic layers and evaporate them to dryness under a stream of nitrogen at 60°, reconstitute the residue in 100 µL mobile phase, inject a 20 µL aliquot.

HPLC VARIABLES
Guard column: 30 × 4.6 5 µm Spherisorb cyano
Column: 250 × 4.6 5 µm Ultrasphere cyano
Mobile phase: MeCN:buffer 60:40 (Buffer was 50 mM KH_2PO_4 adjusted to pH 6.5 with 28% ammonia.)
Flow rate: 1
Injection volume: 20
Detector: E, 5100 A Coulochem, 5020 guard cell 1.00 V, 5011 analytical cell, detector 1 0.55 V, detector 2 0.80 V, output of detector 2 is monitored

CHROMATOGRAM
Retention time: 10.9
Internal standard: methylrisperidone (R68808) (14.3)

OTHER SUBSTANCES
Extracted: chlorpromazine, clomipramine, cyamemazine, desipramine, flunitrazepam, haloperidol, imipramine, pipamperone, risperidone, trihexyphenidyl
Noninterfering: alprazolam, bromazepam, carbamazepine, chlorazepate, diazepam, diphenylhydantoin, estazolam, ethylbenzatropine, oxazepam, phenobarbital, triazolam, valproic acid

KEY WORDS
plasma; SPE

SAMPLE
Matrix: blood
Sample preparation: 2 mL Whole blood or plasma + 2 mL buffer + 5 mL chloroform: isopropanol:n-heptane 60:14:26, shake gently horizontally for 10 min, centrifuge at 2800 g for 10 min. Remove the lower organic layer and evaporate it to dryness under vacuum at 45°, reconstitute the residue in 100 µL mobile phase, centrifuge at 2800 g for 5 min, inject a 50 µL aliquot of the supernatant. (Buffer was saturated ammonium chloride solution 25% diluted with water, adjusted to pH 9.5 with 25% ammonia solution.)

HPLC VARIABLES

Column: 300 × 3.9 4 μm NovaPack C18
Mobile phase: MeOH:THF:buffer 65:5:30 (Buffer was 0.68 g/L (10 mM (sic)) KH_2PO_4 adjusted to pH 2.6 with concentrated orthophosphoric acid.) (At the end of each session wash the column with water for 1 h and MeOH for 1 h, re-equilibrate for 30 min.)
Column temperature: 30
Flow rate: 0.8
Injection volume: 50
Detector: UV 246

CHROMATOGRAM

Retention time: 4.65
Limit of detection: <120 ng/mL

SAMPLE

Matrix: blood, urine

Sample preparation: Add 1 mL whole blood or urine to Toxi-Tube A (Toxi-Lab, Irvine CA), add 3 mL water, mix by gentle inversion for 5 min, centrifuge at 1500 g for 5 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen at 40°, reconstitute the residue with 50 μL MeCN:water 50:50, vortex for 10 s, centrifuge at 7500 g for 2 min, inject a 10 (urine) or 30 (blood) μL aliquot. (The detector wavelength shown is the wavelength of maximum absorbance. This will not necessarily be the optimal wavelength for the separation. Multiple wavelengths from 200-350 nm can be scanned using a diode-array detector. Otherwise, 220 nm may be a reasonable choice for initial work. Matrix may interfere.)

HPLC VARIABLES

Guard column: 20 mm long Symmetry C18

Column: 250 × 4.6 5 μm Symmetry C8 (Waters)

Mobile phase: Gradient. A was 50 mM pH 3.8 sodium phosphate buffer. B was MeCN. A:B 85:15 for 6.5 min, 65:35 for 18.5 min, 20:80 for 3 min (step gradient), re-equilibrate at initial conditions for 7 min.

Column temperature: 30

Flow rate: 1 for 6.5 min, to 1.5 over 18.5 min, maintain at 1.5 for 3 min (re-equilibrate at 1.5 mL/min)

Injection volume: 10-30

Detector: UV 202.8

CHROMATOGRAM

Retention time: 21.18

SAMPLE

Matrix: formulations

HPLC VARIABLES

Column: 250 × 4.6 5 µm Zorbax SB-CN
Mobile phase: Gradient. A was MeCN:25 mM pH 3.0 potassium dihydrogen phosphate buffer 20:80. B was MeCN:25 mM pH 3.0 potassium dihydrogen phosphate buffer 75:25. A:B from 100:0 to 70:30 over 15 min, to 0:100 over 12 min
Flow rate: 1
Detector: UV 215

CHROMATOGRAM

Retention time: 21

OTHER SUBSTANCES
Extracted: impurities

KEY WORDS
pellets; stability-indicating

REFERENCE

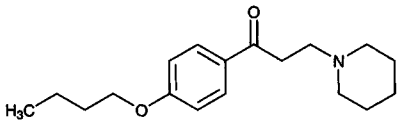
Dyclonine



Molecular formula: $C_{18}H_{27}NO_2$
Molecular weight: 289.42
CAS Registry No.: 586-60-7, 536-43-6 (HCl)
Merck Index: 3523

SAMPLE

Matrix: formulations
Sample preparation: 1 mL Sample + 18 mL THF:MeCN 30:70, adjust the pH to 6.0 with 1 M ammonium hydroxide, make up to 25 mL with 100 mM pH 6.0 ammonium acetate buffer, inject a 20 μL aliquot.

HPLC VARIABLES

Column: 300 × 3.9 10 μm μBondapak phenyl
Mobile phase: MeCN:THF:pH 6.0 ammonium acetate buffer 46:9:45
Flow rate: 2
Injection volume: 20
Detector: UV 282

CHROMATOGRAM

Retention time: 5.8

OTHER SUBSTANCES

Simultaneous: degradation products

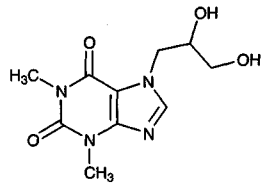
KEY WORDS

stability-indicating; oral spray; gel

REFERENCE

Bhagat,H.R.; Bhargava,H.N.; Williams,D.A. High-performance liquid chromatographic determination of dyclonine hydrochloride in the presence of its degradation products, *J.Pharm.Biomed.Anal.*, **1989**, *7*, 441–446.

Dyphylline



Molecular formula: $C_{10}H_{14}N_4O_4$
Molecular weight: 254.25
CAS Registry No.: 479-18-5
Merck Index: 3529

SAMPLE

Matrix: blood
Sample preparation: 1 mL Plasma + 100 µL 0.2 mg/mL β-hydroxyethyltheophylline in buffer + 100 µL 40% aqueous trichloroacetic acid, vortex for 30 s, let stand for 5 min, centrifuge at 2000 g for 15 min, inject a 25 µL aliquot of the supernatant. (Buffer was 10 mM sodium acetate adjusted to pH 4.0 with glacial acetic acid.)

HPLC VARIABLES

Column: 10 µm µBondapak C18
Mobile phase: MeCN:buffer 6:94 (Buffer was 10 mM sodium acetate adjusted to pH 4.0 with glacial acetic acid.)
Column temperature: 40
Flow rate: 2
Injection volume: 25
Detector: UV 274

CHROMATOGRAM

Retention time: 7.5
Internal standard: β-hydroxyethyltheophylline (9)
Limit of detection: 400 ng/mL

OTHER SUBSTANCES

Extracted: theophylline, caffeine, theobromine

KEY WORDS

plasma

REFERENCE

Valia,K.H.; Hartman,C.A.; Kucharczyk,N.; Sofia,R.D. Simultaneous determination of dyphylline and theophylline in human plasma by high-performance liquid chromatography, *J.Chromatogr.*, **1980**, *221*, 170–175.

SAMPLE

Matrix: blood
Sample preparation: 50 µL Serum + 50 µL 15 µg/mL β-hydroxyethyltheophylline in MeCN + 2 mL chloroform:isopropanol 95:5, mix for 30 s, centrifuge at 3000 g for 3 min. Remove the organic layer and evaporate it to dryness under a stream of nitrogen, reconstitute the residue in 50 µL MeOH, inject a 20 µL aliquot.

HPLC VARIABLES

Column: µBondapak C18
Mobile phase: MeCN:buffer 9.75:90.25 (Buffer was 100 mM KH_2PO_4 adjusted to pH 4.0 with phosphoric acid.) (At the end of each day clean with water for 20 min and MeOH for 30 min.)
Flow rate: 2
Injection volume: 20
Detector: UV 254

CHROMATOGRAM
Retention time: 4.8
Internal standard: β-hydroxyethyltheophylline (5.8)
Limit of detection: 500 ng/mL

OTHER SUBSTANCES
Extracted: caffeine
Simultaneous: acetaminophen, aspirin, salicylic acid, procainamide, N-acetylprocainamide
Noninterfering: benzoic acid
Interfering: ampicillin, theophylline (separated with MeCN:buffer 8:92)

KEY WORDS
serum

REFERENCE
Ou,C.-N.; Frawley,V.L. Theophylline, dyphylline, caffeine, acetaminophen, salicylate, acetylsalicylate, procainamide, and N-acetylprocainamide determined in serum with a single liquid-chromatographic assay, *Clin.Chem.*, **1982**, *28*, 2157–2160.

SAMPLE
Matrix: blood
Sample preparation: 250 μL Serum + 50 μL 30 μg/mL theophylline in water, vortex, add 1.5 g anhydrous sodium sulfite, add 2.5 mL chloroform:MeOH 90:10, shake vigorously for 30 s (work quickly to avoid forming a cake of sodium sulfite), centrifuge at 1000 g for 5 min. Remove the organic layer, filter (Whatman No. 1 paper pre-wetted with chloroform), rinse filter with 500 μL chloroform, evaporate the filtrate under a stream of nitrogen at 40°. Take up the residue in 100 μL dichloroethane and add it to 100 μL 100 mM ammonium carbonate, vortex for 10 s, centrifuge at 1000 g for 5 min, inject a 10 μL aliquot of the aqueous layer.

HPLC VARIABLES
Column: 250 × 4 10 μm LiChrosorb RP-8
Mobile phase: MeOH:buffer 25:75 (Buffer was 1.5 mL 1 M KH_2PO_4 in 750 mL water, adjust to pH 3.0 with 900 mM perchloric acid.)
Flow rate: 2
Injection volume: 10
Detector: UV 275

CHROMATOGRAM
Retention time: 3
Internal standard: theophylline (4.5) (alternatively, β-hydroxypropyltheophylline (3.7))
Limit of quantitation: 1000 ng/mL

OTHER SUBSTANCES
Simultaneous: theobromine, caffeine
Noninterfering: acetaminophen, acetazolamide, albuterol, amitriptyline, amobarbital, carbamazepine, diazoxide, disopyramide, ethosuximide, isoprenaline, nitrazepam, nortriptyline, oxazepam, pentobarbital, phenobarbital, phenytoin, primidone, procainamide, salicylic acid, sulthiame

KEY WORDS
serum; pharmacokinetics

REFERENCE
Paterson,N. High-performance liquid chromatographic method for the determination of diprophylline in human serum, *J.Chromatogr.*, **1982**, *232*, 450–455.

SAMPLE

Matrix: blood

Sample preparation: 500 μL Serum or plasma + 200 μL 100 mM pH 7.0 phosphate buffer + 3 mL 0.5 μg/mL 8-chlorotheophylline in isopropanol, stir at 40000 rpm for 5 s using dental micromotor with a PTFE mixing head, centrifuge at 3500 g for 2 min. Remove the supernatant and evaporate it to dryness under a stream of nitrogen at 60°, reconstitute the residue in 50 μL MeOH, inject a 10 μL aliquot.

HPLC VARIABLES

Guard column: 50 × 3.2 30-38 μm Co:Pell ODS
Column: 250 × 4.6 5 μm Ultrasphere ODS
Mobile phase: MeCN:MeOH:10 mM pH 5.2 sodium acetate buffer 6:3:91
Column temperature: 40
Flow rate: 1.5
Injection volume: 10
Detector: UV 274

CHROMATOGRAM

Retention time: 6.7
Internal standard: 8-chlorotheophylline (8.85)
Limit of detection: 200 ng/mL

OTHER SUBSTANCES

Extracted: theophylline, caffeine, proxyphylline, paraxanthine
Simultaneous: cefoxitin
Noninterfering: carbenicillin, cefoperazone, cephacetril, heparin, penicillin G, phenytoin, phenobarbital

KEY WORDS

plasma; serum; pharmacokinetics

SAMPLE

Matrix: blood

Sample preparation: Centrifuge, filter (0.45 μm), inject an aliquot.

HPLC VARIABLES

Column: 150 × 4.6 5 μm internal surface reversed phase Pinkerton, silica derivatized with glycine-phenylalanine-phenylalanine (Regis) (periodically reverse the column)
Mobile phase: 100 mM pH 6.8 phosphate buffer
Flow rate: 0.3
Injection volume: 10
Detector: UV 275

CHROMATOGRAM

Retention time: 8.43
Limit of detection: <1000 ng/mL

OTHER SUBSTANCES

Extracted: doxofylline, theophylline, caffeine
Noninterfering: acetaminophen, amitriptyline, amphetamine, atropine, benzoylecgonine, benztropine, caffeine, carbamazepine, carisoprodol, chlorpheniramine, chlorpromazine, chlorprothixene, cimetidine, cocaine, codeine, dextromethorphan, diazepam, diphenhy-

dramine, diphenoxilate, disopyramide, doxepin, doxylamine, emetine, erythromycin, flurazepam, glutethimide, hydrocortisone, hydromorphone, hydroxyzine, imipramine, lidocaine, loxapine, meperidine, meprobamate, methadone, methamphetamine, methapyrilene, methaqualone, methocarbamol, methylphenidate, nicotine, nordiazepam, nortriptyline, orphenadrine, papaverine, pentazocine, phenacetin, phencyclidine, phenmetrazine, phenolphthalein, phentermine, phenylpropanolamine, phenytoin, prazepam, procainamide, procaine, propoxyphene, propranolol, protriptyline, pseudoephedrine, pyrilamine, quinine, salicylamide, spironolactone, strychnine, terpin hydrate, thioridazine, thiothixene, triamterene, trifluoperazine, triflupromazine, trihexyphenidyl, trimeprazine, trimethobenzamide, trimethoprim, tripelennamine

KEY WORDS
